“As regards the removal of untouchability it has been authoritatively ruled several times that it is the duty of Hindus to expiate for their past sins and non-Hindus should have nothing to do with it But the Mahomedan and the Christian Congressmen have openly revolted against the dictum of Mr. Gandhi at Vaikorn and other places. Even such an unbiased leader as Mr. Yakub Hassan, presiding over a meeting called to present an address to me at Madras, openly enjoined upon Musalmans the duty of converting all the untouchables in India to Islam.”

But Mr. Gandhi said nothing by way of remonstrance either to the Muslims or to the Christians.

In his issue of July 1926 the Swami writes :

“There was another prominent fact to which I drew the attention of Mahatma Gandhi. Both of us went together one night to the Khilafat Conference at Nagpur. The Ayats (verses) of the Quran recited by the Maulanas on that occasion, contained frequent references to Jihad and killing of the Kaffirs. But when I drew his attention to this phase of the Khilafat movement, Mahatmaji smiled and said, ' They are alluding to the British Bureaucracy '. In reply I said that it was all subversive of the idea of non-violence and when the reversion of feeling came the

Mahomedan Maulanas would not refrain from using these verses against the Hindus.”

The Swami 's third instance relates to the Mopla riots. Writing in the *Liberator* of 26th August 1926 the Swami says :

“The first warning was sounded when the question of condemning the Moplas for their atrocities on Hindus came up in the Subjects Committee. The original resolution condemned the Moplas wholesale for the killing of Hindus and burning of Hindu homes and the forcible conversion to Islam. The Hindu members themselves *proposed* amendments till it was reduced to condemning only certain individuals who had been guilty of the above crimes. But some of the Moslem leaders could not bear this even. Maulana Fakir and other Maulanas, of course, opposed the resolution and there was no wonder. But I was surprised, an out-and-out Nationalist like Maulana Hasrat Mohani opposed the resolution on the ground that the Mopla country no longer remained Dar-ul-Aman but became Dar-ul-Harab and they suspected the Hindus of collusion with the British enemies of the Moplas. Therefore, the Moplas were right in presenting the Quran or sword to the Hindus. And if the Hindus became Mussalmans to save themselves from death, it was a voluntary change of faith and not forcible conversion—Well, even the harmless resolution condemning some of the Moplas was not unanimously passed but had to be accepted by a majority of votes only. There were other indications also, showing that the Mussalmans considered the Congress to be existing on their sufferance and if there was the least attempt to ignore their idiosyncracies the superficial unity would be scrapped asunder.”

The last one refers to the burning of the foreign cloth started by Mr. Gandhi. Writing in the *Liberator* of 31st August 1926 the Swamiji says:

“While people came to the conclusion, that the burning of foreign cloth was a religious duty of Indians and Messrs. Das, Nehru and other topmost leaders made bon-fire of cloth worth thousands, the Khilafat Musalmans got permission from Mahatmaji to *send all foreign cloth for the use* of the Turkish brethren. This again was a great shock to me. While

Mahatmaji stood adamant and did not have the least regard for Hindu feelings when a question of principle was involved, for the Moslem dereliction of duty, there was always a soft corner in his heart”

In the history of his efforts to bring about Hindu-Moslem unity mention must be made of two incidents. One is the Fast, which Mr. Gandhi underwent in the year 1924. It was a fast of 21 days. Before undertaking the fast Mr. Gandhi explained the reasons for it in a statement from which the following extracts are taken:

“The fact that Hindus and Musalmans, who were only two years ago apparently working together as friends, are now fighting like cats and dogs in some places, shows conclusively that the non-co-operation they offered was not non-violent. I saw the symptoms in Bombay, Chauri Chaura and in a host of minor cases. I did penance then. It had its effects *protanto*. But this Hindu-Muslim tension was unthinkable. It became unbearable on hearing of the Kohat tragedy. On the eve of my departure from Sabarmati for Delhi, Sarojinj Devi wrote to me that speeches and homilies on peace would not do. I must find out an effective remedy. She was right in saddling the responsibility on me. Had I not been instrumental in bringing into being the vast energy of the people? I must find the remedy if the energy proved self-destructive.

* * *

“I was violently shaken by Amethi, Sambhal and Gulbarga. I had read the reports about Amelhi and Sambhal prepared by Hindu and Musalman friends. I had learnt the joint finding of Hindu and Musalman friends who went to Gulbarga. I was writhing in deep pain and yet I had no remedy. The news of Kohal set the smouldering mass aflame. Something had got to be done. I passed two nights in restlessness and pain. On Wednesday I knew the remedy. I must do penance.

"It is a warning to the Hindus and Musalmans who have professed to love me. If they have loved me truly and if I have been deserving of their love, they will do penance with me for the grave sin of denying God in their hearts.

"The penance of Hindus and Mussalmans is not falling but retracting their steps. It is true penance for a Mussalman to harbour no ill-will for his Hindu brother and an equally true penance for a Hindu to harbour none for his Mussalman brother.

"I did not consult friends—not even Hakim Saheb who was close with me for a long time on Wednesday—not Maulana Mahomed Ali under whose roof I am enjoying the privilege of hospitality.

"But was it right for me to go through the last under a Mussalman roof? (Gandhi was at that time the guest of Mr. Mahomed Ali at Delhi). Yes, it was. The fast is not born out of ill-will against a single soul. My being under a Mussalman roof ensures it against any such interpretation. It is in the fitness of things that this fast should be taken up and completed in a Mussalman house.

"And who is Mahomed Ali? Only two days before the fast we had a discussion about a private matter in which I had told him what was mine was his and what was his was mine. Let me gratefully tell the public that I have never received warmer or better treatment than under Mahomed Ali's roof. Every want of mine is anticipated. The dominant thought of every one of his household is to make me and mine happy and comfortable. Doctors Ansari and Abdur Rehman have constituted themselves my medical advisers. They examine me daily. I have had many a happy occasion in my life. This is no less happy than the previous ones. Bread is not everything. I am experiencing here the richest love. It is more than bread *[or me]*.

"It has been whispered that by going so much with Mussalman friends, I make myself unfit to know the Hindu mind. The Hindu mind is myself. Surely I do not live amidst Hindus to know the Hindu mind when every fibre of my being is Hindu. My Hinduism must be a very poor thing if it cannot flourish under influences the most adverse.

I know instinctively what is necessary for Hinduism. But I must labour to discover the Mussalman mind. The closer I come to the best of Mussalmans, the juster I am likely to be in my estimate of the Mussalmans and their doings. I am striving to become the best cement between the two communities. My longing is to be able to cement the two with my blood, if necessary. But, before I can do so, I must prove to the Mussalmans that I love them as well as I love the Hindus. My religion teaches me to love all equally. May God help me to do so. My fast among other things is meant to qualify me for achieving that equal and selfless love.”

The fast produced Unity Conferences. But the Unity Conferences produced nothing except pious resolutions which were broken as soon as they were announced.

This short historical sketch of the part Mr. Gandhi played in bringing about Hindu-Moslem unity may be concluded by a reference to the attitude of Mr. Gandhi in the negotiations about the Communal Settlement. He offered the Muslims a blank cheque. The blank cheque only served to exasperate the Muslims as they interpreted it as an act of evasion. He opposed the separate electorates at the Round Table Conference. When they were given to the Muslims by the Communal Award, Mr. Gandhi and the Congress did not approve of them. But when it came to voting upon it, they took the strange attitude of neither approving it nor opposing it.

Such is the history of Mr. Gandhi's efforts to bring about Hindu-Moslem unity. What fruits did these efforts bear? To be able to answer this question it is necessary to examine the relationship between the two communities during 1920-40, the years during which Mr. Gandhi laboured so hard to bring about Hindu-Moslem unity. The relationship is well described in the Annual Reports on the affairs of India submitted year by year to Parliament by the Government of India under the old Government of India Act. It is on these reports ²⁸[f.28] that I have drawn for the facts recorded below.

Beginning with the year 1920 there occurred in that year in Malabar what is known as the Mopla Rebellion. It was the result of the agitation carried out by two Muslim organizations, the Khuddam-i-Kaba (servants of the Mecca Shrine) and the Central Khilafat Committee. Agitators actually preached the doctrine that India under the British Government was Dar-ul-Harab and that the Muslims must fight against it and if they could not, they must carry out the alternative principle of *Hijrat*. The Moplas were suddenly carried off their feet by this agitation. The outbreak was essentially a rebellion against the British Government. The aim was to establish the kingdom of Islam by overthrowing the British Government. Knives, swords and spears were secretly manufactured, bands of desperadoes collected for an attack on British authority. On 20th August a severe encounter took place between the Moplas and the British forces at Pinmangdi Roads were blocked, telegraph lines cut, and the railway destroyed in a number of places. As soon as the administration had been paralysed, the Moplas declared that Swaraj had been established. A certain Ali Mudaliar was proclaimed Raja, Khilafat flags were flown, and Ernad and Wallurana were declared Khilafat Kingdoms. As a rebellion against the British Government it was quite understandable. But what baffled most was the treatment accorded by the Moplas to the Hindus of Malabar. The Hindus were visited by a dire fate at the hands of the Moplas. Massacres, forcible conversions, desecration of temples, foul outrages upon women, such as ripping open pregnant women, pillage, arson and destruction—in short, all the accompaniments of brutal and unrestrained barbarism, were perpetrated freely by the Moplas upon the Hindus until such time as troops could be hurried to the task of restoring order through a difficult and extensive tract of the country. This was not a Hindu-Moslem riot. This was just a Bartholomew. The number of Hindus who were killed, wounded or converted, is not known. But the number must have been enormous.

In the year 1921-22 communal jealousy did not subside. The Muharram Celebrations had been attended by serious riots both in Bengal and in the Punjab. In the latter province in particular, communal feeling at Multan reached very serious heights, and although the casualty

list was comparatively small, a great deal of damage to property was done.

Though the year 1922-23 was a peaceful year the relations between the two communities were strained throughout 1923-24. But in no locality did this tension produce such tragic consequences as in the city of Kohat. The immediate cause of the trouble was the publication and circulation of a pamphlet containing a virulently anti-Islamic poem. Terrible riots broke out on the 9th and 10th of September 1924, the total casualties being about 155 killed and wounded. House property to the estimated value of Rs. 9 lakhs was destroyed, and a large quantity of goods were looted. As a result of this reign of terror the whole Hindu population evacuated the city of Kohat. After protracted negotiations an agreement of reconciliation was concluded between the two communities. Government giving an assurance that, subject to certain reservations, the prosecution pending against persons concerned in rioting should be dropped. With the object of enabling the sufferers to restart their businesses and rebuild their houses. Government sanctioned advances, free of interest in certain instances, amounting to Rs. 5 lakhs. But even after the settlement had been reached and evacuees had returned to Kohat there was no peace and throughout 1924-25 the tension between the Hindu and Musalman masses in various parts of the country increased to a lamentable extent. In the summer months, there was a distressing number of riots. In July, severe fighting broke out between Hindus and Musalmans in Delhi, which was accompanied by serious casualties. In the same month, there was a bad outbreak at Nagpur. August was even worse. There were riots at Lahore, at Lucknow, at Moradabad, at Bhagalpur and Nagpur in British India ; while a severe affray took place at Gulbarga in the Nizam's Dominions. September-October saw severe fighting at Lucknow, Shahajahanpur, Kankinarah and at Allahabad. The most terrible outbreak of the year being the one that took place at Kohat which was accompanied by murder, arson and loot.

In 1925-26 the antagonism between the Hindus and the Muslims became widespread. Very significant features of the Hindu-Muslim

rioting, which took place during this year were its wide distribution and its occurrence, in some cases, in small villages. Calcutta, the United Provinces, the Central Provinces and the Bombay Presidency were all scenes of riots, some of which led to regrettable losses of life. Certain minor and local Hindu festivals which occurred at the end of August, gave rise to communal trouble in Calcutta, in Berar, in Gujarat in the Bombay Presidency, and in the United Provinces. In some of these places there were actual clashes between the two communities, but elsewhere, notably at Kankinarah—one of the most thickly populated jute mill centres of Calcutta—serious rioting was prevented by the activity of the police. In Gujarat, Hindu-Muslim feeling was running high in these days and was marked by at least one case of temple desecration. The important Hindu festival of Ramlila, at the end of September, gave rise to acute anxiety in many places, and at Aligarh, an important place in the United Provinces, its celebration was marked by one of the worst riots of the year. The riot assumed such dangerous proportions that the police were compelled to fire in order to restore order, and five persons were killed, either by the police or by riots. At Lucknow, the same festival gave rise at one time to a threatening situation, but the local authorities prevented actual rioting. October saw another serious riot at Sholapur in the Bombay Presidency. There, the local Hindus were taking a car with Hindu idols through the city, and when they came near a mosque, a dispute arose between them and certain Muslims, which developed into a riot.

A deplorable rioting started in Calcutta in the beginning of April as an affray outside a mosque between Muslims and some Arya Samajists and continued to spread until 5th April, though there was only one occasion on which the police or military were faced by a crowd which showed determined resistance, namely, on the evening of the 5th April, when fire had to be opened. There was also a great deal of incendiarism and in the first three days of this incendiarism, the Fire Brigade had to deal with 110 fires. An unprecedented feature of the riots was the attacks on temples by Muslims and on mosques by Hindus which naturally led to intense bitterness. There were 44 deaths and 584 injured. There was a certain amount of looting and business was suspended, with great

economic loss to Calcutta. Shops began to reopen soon after the 5th, but the period of tension was prolonged by the approach of a Hindu festival on the 13th of April, and of the Id on the 14th. The Sikhs were to have taken out a procession on the 13th, but Government were unable to give them the necessary license. The apprehensions with regard to the 13th and 14th of April, fortunately, did not materialise and outward peace prevailed until 22nd April when it was abruptly broken as a result of a petty quarrel in a street, which restarted the rioting. Fighting between the mobs of the two communities, generally on a small scale, accompanied by isolated assaults and murders continued for six days. During this period there were no attacks on the temples and mosques and there was little arson or looting. But there were more numerous occasions, on which the hostile mobs did not immediately disperse on the appearance of the police and on 12 occasions it was necessary to open fire. The total number of casualties during this second phase of the rioting was 66 deaths and 391 injured. The dislocation of business was much more serious during the first riots and the closing of Marwari business houses was not without an effect on European business firms. Panic caused many of the markets to be wholly or partially closed and for two days the meat supply was practically stopped. So great was the panic that the removal of refuse in the disturbed area was stopped. Arrangements were, however, made to protect supplies, and the difficulty with the Municipal scavengers was overcome, as soon as the Municipality had applied to the police for protection. There was slight extension of the area of rioting, but no disturbances occurred in the mill area around Calcutta. Systematic raiding of the portions of the disturbed area, the arrest of hooligans, the seizure of weapons and the reinforcement of the police by the posting of British soldiers to act as special police officers had the desired effect, and the last three days of April, in spite of the continuance of isolated assaults and murders, witnessed a steady improvement in the situation. Isolated murders were largely attributable to hooligans of both communities and their persistence during the first as well as the second outbreak induced a general belief that these hooligans were hired assassins. Another equally persistent feature of the riots, namely, the distribution of inflammatory printed leaflets by both sides, together with the employment of hired

roughs, strengthened the belief that money had been spent to keep the riots going.

The year 1926-27 was one continuous period of communal riots. Since April 1926, every month witnessed affrays more or less serious between partizans of the two communities and only two months passed without actual rioting in the legal sense of the word. The examination of the circumstances of these numerous riots and affrays shows that they originated either in utterly petty and trivial disputes between individuals, as, for example, between a Hindu shopkeeper and a Mahomedan customer, or else, the immediate cause of trouble was the celebration of some religious festival or the playing of music by Hindu processionists in the neighbourhood of Mahomedan places of worship. One or two of the riots, indeed, were due to nothing more than strained nerves and general excitement. Of these, the most striking example occurred in Delhi on 24th June, when the bolting of a pony in a crowded street gave the impression that a riot had started, upon which both sides immediately attacked each other with brickbats and staves.

Including the two outbursts of rioting in Calcutta during April and May 1926, 40 riots took place during the twelve months ending with April 1st 1927, resulting in the death of 197 and injuries, more or less severe, to 1,598 persons. These disorders were widespread, but Bengal, the Punjab, and the United Provinces were the parts of India most seriously affected. Bengal suffered most from rioting, but on many occasions during the year, tension between Hindus and Mahomedans was high in the Bombay Presidency and also in Sind. Calcutta remained uneasy throughout the whole of the summer. On 1st June a petty dispute developed into a riot in which forty persons were hurt. After this, there was a lull in overt violence until July 15th on which day fell an important Hindu religious festival. During its celebration the passage of a procession, with bands playing in the neighbourhood of certain mosques, resulted in a conflict, in which 14 persons were killed and 116 injured. The next day saw the beginning of the important Mahomedan festival of Muharram. Rioting broke out on that day and, after a lull, was renewed on the 19th, 20th, 21st and 22nd. Isolated assaults and cases of

stabbing occurred on the 23rd, 24th and 25th. The total ascertained casualties during this period of rioting were 28 deaths and 226 injured. There were further riots in Calcutta on the 15th September and 16th October and on the latter day there was also rioting in the adjoining city of Howrah, during which one or two persons were killed and over 30 injured. The April and May riots had been greatly aggravated by incendiarism, but, happily, this feature was almost entirely absent from the later disorders and during the July riots, for example, the Fire Brigade was called upon to deal with only four incendiary fires.

Coming to the year 1927-28 the following facts stare us in the face. Between the beginning of April and the end of September 1927, no fewer than 25 riots were reported. Of these 10 occurred in the United Provinces, six in the Bombay Presidency, 2 each in the Punjab, the Central Provinces, Bengal, and Bihar and Orissa, and one in Delhi. The majority of these riots occurred during the celebration of a religious festival by one or other of the two communities, whilst some arose out of the playing of music by Hindus in the neighbourhood of mosques or out of the slaughter of cows by the Muslims. The total casualties resulting from the above disorders were approximately 103 persons killed and 1,084 wounded.

By far the most serious riot reported during the year was that which took place in Lahore between the 4th and 7th of May 1927. Tension between the two communities had been acute for some time before the outbreak, and the trouble when it came was precipitated by a chance collision between a Mahomedan and two Sikhs. The disorder spread with lightning speed and the heavy casualty list—27 killed 272 injured—was largely swollen by unorganised attacks on individuals. Police and troops were rushed to the scene of rioting quickly and it was impossible for clashes on a big scale to take place between hostile groups. Casual assassinations and assaults were however, reported, for two or three days longer before the streets and lanes of Lahore became safe for the solitary passerby.

After the Lahore riot in May, there was a lull for two months in inter-communal rioting, if we except a minor incident, which happened about

the middle of June in Bihar and Orissa ; but July witnessed no fewer than eight riots of which the most serious occurred in Multan in the Punjab, on the occasion of the annual Muharram celebrations. Thirteen killed and twenty-four wounded was the toll taken by this riot. But August was to see worse rioting still. In that month, nine riots occurred, two of them resulting in heavy loss of life. In a riot in Bettiah, a town in Bihar and Orissa, arising out of a dispute over a religious procession, eleven persons were killed and over a hundred injured, whilst the passage of a procession in front of a mosque in Bareilly in the United Provinces was the occasion of rioting in which fourteen persons were killed and 165 were injured. Fortunately, this proved to be the turning point in inter-communal trouble during the year, and September witnessed only 4 riots. One of these, however, the riot in Nagpur in the Central Provinces on September 4th was second only to Lahore riot in seriousness and in the damage which it caused. The spark, which started the fire, was the trouble in connection with a Muslim procession, but the materials for the combustion had been collected for some time. Nineteen persons were killed and 123 injured were admitted to hospitals as a result of this riot, during the course of which many members of the Muslim community abandoned their homes in Nagpur.

A feature of Hindu-Muslim relations during the year which was hardly less serious than the riots was the number of murderous outrages committed by members of one community against persons belonging to the other. Some of the most serious of these outrages were perpetrated in connection with the agitation relating to *Rangila Rasul* and *Risala Vartman*, two publications containing most scurrilous attack on the Prophet Muhammed and as a result of them, a number of innocent persons lost their lives, sometimes in circumstances of great barbarity. In Lahore a series of outrages against individuals led to a state of great excitement and insecurity during the summer of 1927.

The excitement over the *Rangila Rasul* ²⁹[f.29] case had by now travelled far from its original centre and by July had begun to produce unpleasant repercussions on and across the North-West Frontier. The first signs of trouble in this region became apparent early in June, and by

the latter part of July the excitement had reached its height. On the British side of the border, firm and tactful handling of the situation by the local authorities averted, what would have been a serious breach of the peace. Economic boycott of Hindus was freely advocated in the British Frontier Districts, especially in Peshawar, but this movement met with little success, and although the Hindus were maltreated in one or two villages, the arrest of the culprits, together with appropriate action under the Criminal Law, quickly restored order. Across the border however, the indignation, aroused by these attacks on the Prophet, gave rise to more serious consequences. The Frontier tribesmen are acutely sensitive to the appeal of religion and when a well-known Mullah started to preach against the Hindus among the Afridis and Shinwaris in the neighbourhood of the Khyber Pass, his words fell on fruitful ground. He called upon the Afridis and Shinwaris to expel all the Hindus living in their midst unless they declared in writing that they dissociated themselves from the doings of their co-religionists down country. The first to expel their Hindu neighbours were two clans of the Khyber Afridis, namely the Kuikhel and Zakkakhel, on the 22nd July. From these, the excitement spread among their Shinwari neighbours, who gave their Hindu neighbours notice to quit a few days later. However, after the departure of some of the Hindus, the Shinwaris agreed to allow the remainder to stay on. Some of the Hindus on leaving the Khyber were roughly handled. In two cases, stones were thrown, though happily without any damage resulting. In a third case, a Hindu was wounded and a large amount of property carried off, but this was recovered by Afridi Khassadars in full, and the culprits were fined for the offence. Thereafter, arrangements were made for the picketing of the road for the passage of any Hindu evacuating tribal territory. Under pressure from the Political Agent an Afridi *jirga* decided towards the end of July to suspend the Hindu boycott pending a decision in the Risala Vartman case. In the following week, however, several Hindu families, who had been living at Landi Kotal at the head of the Khyber Pass moved to Peshawar refusing to accept assurances of the tribal chiefs but leaving one person from each family behind to watch over their interests. All told, between four hundred and fifty Hindus, men, women and children, had come into Peshawar by the Middle of August, when the trouble was

definitely on the wane. Some of the Hindus were definitely expelled, some were induced to leave their homes by threats, some left from fear, some no doubt from sympathy with their neighbours. This expulsion and voluntary exodus from tribal territory were without parallel. Hindus had lived there for more generations than most of them could record as valued and respected, and, indeed, as essential members of the tribal system, for whose protection the tribesmen had been jealous, and whose blood feuds they commonly made their own. In all, about 450 Hindus left the Khyber during the excitement ; of these, about 330 had returned to their homes in tribal territory by the close of the year 1927. Most of the remainder had decided to settle, at any rate for the present, amid the more secure conditions of British India.

The year 1928-29 was comparatively more peaceful than the year 1927-28. His Excellency Lord Irwin, by his speeches to the Central Legislature and outside, had given a strong impetus to the attempts to find some basis for agreement between the two communities, on those questions of political importance, which were responsible for the strained relations between them. Fortunately the issues arising out of the inquiry by the Simon Commission which was appointed in 1929, absorbed a large part of the energy and attention of the different communities, with the result that less importance came to be attached to local causes of conflict, and more importance to the broad question of constitutional policy. Moreover, the legislation passed during the autumn session of the Indian Legislature in 1927 penalising the instigation of inter-communal hostility by the press, had some effect in improving the inter-communal disturbances. The number of riots during the twelve months ending with March 31st, 1929, was 22. Though the number of riots was comparatively small, the casualties,—swelled heavily by the Bombay riots,—were very serious, no fewer than 204 persons having been killed and nearly a thousand injured. Of these, the fortnight's rioting in Bombay accounts for 149 killed and 739 injured. Seven of these 22 riots, or roughly one-third of them, occurred on the day of the celebration of the annual Muslim festival of Bakr-i-Id at the end of May. The celebration of this festival is always a dangerous time in Hindu-Muslim relations. The Muslim regard it as a day of animal

sacrifice, and as the animal chosen is almost always a cow the slightest tension between the two communities is apt to produce an explosion. Of the Bakr-i-Id riots only two were serious and both of them took place in the Punjab. The first took place in a village in the Ambala District in which ten people were killed and nine injured. The other riot which took place in Softa village in the Gurgaon District in the Southern Punjab, attained considerable notoriety because of its sensational features. The village of Softa is about 27 miles south of Delhi and is inhabited by Muslims. This village is surrounded by villages occupied by Hindu cultivators who, on hearing that the Muslims of Softa intended to sacrifice a cow on the ' Id Day ', objected to the sacrifice of the particular cow selected on the ground that it had been accustomed to graze in fields belonging to the Hindu cultivators. The dispute over the matter assumed a threatening aspect and the Superintendent of Police of the district accordingly went with a small force of police, about 25 men in all, to try to keep peace. He took charge of the disputed cow and locked it up, but his presence did not deter the Hindu cultivators of a few neighbouring villages from collecting about a thousand people armed with pitchforks, spears and staves, and going to Softa. The Superintendent of Police and an Indian Revenue official, who were present in the village, assured the crowd that the cow, in connection with which the dispute had arisen would not be sacrificed, but this did not satisfy the mob which threatened to burn the whole village if any cow was sacrificed, and also demanded that the cow should be handed over to them. The Superintendent of Police refused to agree to this demand, whereupon the crowd became violent and began to throw stones at the police and to try to get round the latter into the village. The Superintendent of Police warned the crowd to disperse, but to no effect. He, therefore, fired one shot from his revolver as a further warning. Notwithstanding the crowd still continued to advance and the Superintendent had to order his party of police to fire. Only one volley was fired at first, but as this did not cause the retreat of the mob, two more volleys had to be fired before the crowd slowly dispersed, driving off some cattle belonging to the village.

While the police were engaged in this affair a few Hindu cultivators got into Softa at another place and tried to set fire to the village. They were, however, driven away by the police after they had inflicted injuries on three or four men. In all 14 persons were killed and 33 were injured. The Punjab Government deputed a judicial officer to enquire into this affair. His report, which was published on 6th July, justified the action of the police in firing on the mob and recorded the opinion that there was no reason to suppose that the firing was excessive or was continued after the mob had desisted from its unlawful aggression. Had the police not opened fire, the report proceeds, their own lives would have been in immediate danger, as also the lives of the people of Softa. Lastly, in the opinion of the officer writing the report, had Softa village been sacked, there would certainly have broken up, within 24 hours, a terrible communal conflagration in the whole of the surrounding country-side.

The riots of Kharagpur, an important railway centre not far from Calcutta, also resulted in serious loss of life. Two riots took place at Kharagpur, the first on the occasion of the Muharram celebration at the end of June and the second on the 1st September 1928, when the killing of a cow served as a cause. In the first riot 15 were killed and 21 injured, while in the second riot, the casualties were 9 killed and 35 wounded. But none of these riots is to be compared with those that raged in Bombay from the beginning to the middle of February, when, as we have seen, 149 persons were killed and well over 700 injured.

During the year 1929-30 communal riots, which had been so conspicuous and deplorable a feature of public life during the preceding years, were very much less frequent. Only 12 were of sufficient importance to be reported to Government of India, and of these only the disturbances in the City of Bombay were really serious. Starting on the 23rd of April they continued sporadically until the middle of May, and were responsible for 35 deaths and about 200 other casualties. An event which caused considerable tension in April was the murder at Lahore of Rajpal, whose pamphlet *Rangila Rasul*, containing a scurrilous attack on the Prophet of Islam, was responsible for much of the communal trouble in previous years, and also for a variety of legal and

political complications. Fortunately, both communities showed commendable restraint at the time of the murder, and again on the occasion of the execution and funeral of the convicted man ; and although feelings ran high no serious trouble occurred.

The year 1930-31 saw the eruption of the Civil Disobedience Movement It gave rise to riots and disturbances all over the country. They were mostly of a political character and the parties involved in them were the police and the Congress volunteers. But, as it always happens in India, the political disturbances took a communal twist. This was due to the fact that the Muslims refused to submit to the coercive methods used by Congress volunteers to compel them to join in Civil Disobedience. The result was that although the year began with political riots it ended in numerous and quite serious communal riots. The worst of these communal riots took place in and around Sukkur in Sind between the 4th and 11th of August and affected over a hundred villages. The outbreak in the Kishoreganj subdivision of Mymensingh District (Bengal) on the 12th/15th of July was also on a large scale. In addition, there were communal disturbances on the 3rd of August in Ballia (United Provinces) ; on the 6th of September in Nagpur, and on the 6th/7th September in Bombay ; and a Hindu-Christian riot broke out near Tiruchendur (Madras) on the 31st of October. On the 12th of February, in Amritsar, an attempt was made to murder a Hindu cloth merchant who had defied the picketers, and a similar outrage which was perpetrated the day before in Benares had very serious consequences. On this occasion, the victim was a Muslim trader, and the attack proved fatal; as a result, since Hindu-Muslim relations throughout most of Northern India were by this time very strained, a serious communal riot broke out and continued for five days, causing great destruction of property and numerous casualties. Among the other communal clashes during this period were the riots at Nilphamari (Bengal) on the 25th of January and at Rawalpindi on the 31st. Throughout Northern India communal relations had markedly deteriorated during the first two months of 1931, and already, in February, there had been serious communal rioting in Benares, This state of affairs was due chiefly to the increasing exasperation created among Muslims by the paralysis of trade

and the general atmosphere of unrest and confusion that resulted from Congress activities. The increased importance which the Congress seemed to be acquiring as a result of the negotiations with the Government aroused in the Muslims serious apprehensions and had the effect of worsening the tension between the two communities. During March, this tension, in the United Provinces at any rate, became greatly increased. Between the 14th and 16th there was serious rioting in the Mirzapur District, and on the 17th, trouble broke out in Agra and continued till the 20th. There was also a communal riot in Dhanbad (Bengal) on the 28th, and in Amritsar District on the 30th ; and in many other parts of the country, the relations between members of the two communities had become extremely strained.

In Assam, the communal riot which occurred at Digboi in Lakhimpur District, resulted in deaths of one Hindu and three Muslims. In Bengal, a communal riot took place in the Asansol division during the Muharram festival. In Bihar and Orissa there was a certain amount of communal tension during the year, particularly in Saran. Altogether there were 16 cases of communal rioting and unlawful assembly. During the Bakr-i-Id festival a clash occurred in the Bhabua sub-division of Shahabad. Some 300 Hindus collected in the mistaken belief that a cow had been sacrificed. The local officers had succeeded in pacifying them when a mob of about 200 Muhammedans armed with lathis, spears and swords, attacked the Hindus, one of whom subsequently died. The prompt action of the police and the appointment of a conciliation committee prevented the spread of the trouble. The Muharram festival was marked by two small riots in Monghyr, the Hindus being the aggressors on one occasion and the Muslims on the other. In the Madras Presidency there were also several riots of a communal nature during the year and the relations between the communities were in places distinctly strained. The most serious disturbance of the year occurred at Vellore on the 8th of June, as a result of the passage of a Muslim procession with Tazias near a Hindu temple ; so violent was the conflict between members of the two communities that the police were compelled to open fire in order to restore order ; and sporadic fighting continued in the town during the next two or three days. In Salem town,

owing to Hindu-Muslim tension a dispute arose on the 13th of July, as to who had been the victor at a largely attended Hindu-Muslim wrestling match at Shevapat. Another riot occurred in October at Kitchipalaiyam near Salem town ; the trouble arose from a few Muslims disturbing a street game played by some young Hindus. Hindu-Muslim disturbances also arose in Polikal village, Kurnool District, on the 15th of March, owing to a dispute about the route of a Hindu procession, but the rioters were easily dispersed by a small force of police. In the Punjab there were 907 cases of rioting during the year as compared with 813 in 1929. Many of them were of a communal character, and the tension between the two principal communities remained acute in many parts of the Province. In the United Provinces, although communal tension during 1930 was not nearly so acute as during the first 3 months of 1931, and was for a while overshadowed by the excitement engendered by the Civil Disobedience Movement, indications of it were fairly numerous, and the causes of disagreement remained as potent as ever. In Dehra Dun and Bulandshahr there were communal riots of the usual type, and a very serious riot occurred in Ballia city as a result of a dispute concerning the route taken by a Hindu procession, which necessitated firing by the police. Riots also occurred in Muttra, Azamgarh, Mainpuri and several other places.

Passing on to the events of the year 1931-32, the progress of constitutional discussions at the R. T. C. had a definite reaction in that it bred a certain nervousness among the Muslim and other minority communities as to their position under a constitution functioning on the majority principle. The first session of the Round Table Conference afforded the first "close-up" of the constitutional future. Until then the ideal of Dominion Status had progressed little beyond a vague and general conception, but the declaration of the Princes at the opening of the Conference had brought responsibility at the Centre, in the form of a federal government, within definite view. The Muslims, therefore, felt that it was high time for them to take stock of their position. This uneasiness was intensified by the Irwin-Gandhi settlement, which accorded what appeared to be a privileged position to the Congress, and Congress elation and pose of victory over the Government did not tend

to ease Muslim misgivings. Within three weeks of the "pact" occurred the savage communal riots at Cawnpore, which significantly enough began with the attempts of Congress adherents to force Mahomedan shopkeepers to observe a *hartal* in memory of Bhagat Singh who was executed on 23rd March. On 24th March began the plunder of Hindu shops. On the 25th there was a blaze. Shops and temples were set fire to and burnt to cinders. Disorder, arson, loot, murder, spread like wild fire. Five hundred families abandoned their houses and took shelter in villages. Dr. Ramchandra was one of the worst sufferers. All members of his family, including his wife and aged parents, were killed and their bodies thrown into gutters. In the same slaughter Mr. Ganesh Shankar Vidyarthi lost his life. The Cawnpore Riots Inquiry Committee in its report states that the riot was of unprecedented violence and peculiar atrocity, which spread with unexpected rapidity through the whole city and even beyond it. Murders, arson and looting were widespread for three days, before the rioting was definitely brought under control. Afterwards it subsided gradually. The loss of life and property was great. The number of verified deaths was 300; but the death roll is known to have been larger and was probably between four and five hundred. A large number of temples and mosques were desecrated or burnt or destroyed and a very large number of houses were burnt and pillaged.

This communal riot, which need never have occurred but for the provocative conduct of the adherents of the Congress, was the worst which India has experienced for many years. The trouble, moreover, spread from the city to the neighbouring villages, where there were sporadic communal disturbances for several days afterwards.

The year 1932-33 was relatively free from communal agitations and disturbances. This welcome improvement was doubtless in some measure due to the suppression of lawlessness generally and the removal of uncertainty in regard to the position of the Muslims under the new constitution.

But in 1933-34 throughout the country communal tension had been increasing and disorders which occurred not only on the occasion of such festivals as Holi, Id and Muharram, but also many resulting from

ordinary incidents of every-day life indicated, that there had been a deterioration in communal relations since the year began. Communal riots during Holi occurred at Benares and Cawnpore in the United Provinces, at Lahore in the Punjab, and at Peshawar. Bakr-i-Id was marked by serious rioting at Ayodhya, in the United Provinces over cow sacrifice, also at Bhagalpore in Bihar and Orissa and at Cannanore in Madras. A serious riot in the Ghazipur District of the United Provinces also resulted in several deaths. During April and May there were Hindu-Muslim riots at several places in Bihar and Orissa, in Bengal, in Sind and Delhi, some of them provoked by very trifling incidents, as for instance, the unintentional spitting by a Muslim shopkeeper of Delhi upon a Hindu passer-by. The increase in communal disputes in British India was also reflected in some of the States where similar incidents occurred.

The position with regard to communal unrest during the months from June to October was indicative of the normal, deep-seated antagonism between the two major communities. June and July months, in which no Hindu or Muhammedan festival of importance took place, were comparatively free from riots, though the situation in certain areas of Bihar necessitated the quartering of additional police. A long-drawn-out dispute started in Agra. The Muslims of this city objected to the noise of religious ceremonies in certain Hindu private houses which they said disturbed worshippers at prayers in a neighbouring mosque. Before the dispute was settled, riots occurred on the 20th July and again on the 2nd September, in the course of which 4 persons were killed and over 80 injured. In Madras a riot, on the 3rd September resulting in one death and injuries to 13 persons was occasioned by a book published by Hindus containing alleged reflections on the Prophet. During the same month minor riots occurred in several places in the Punjab and the United Provinces.

In 1934-35 serious trouble arose in Lahore on the 29th June as a result of a dispute between Muslims and Sikhs about a mosque situated within the precincts of a Sikh temple known as the Shahidganj Gurudwara. Trouble had been brewing for some time. Ill-feeling became intensified

when the Sikhs started to demolish the Mosque despite Muslim protests. The building had been the subject of prolonged litigation, which has confirmed the Sikh right of possession.

On the night of the 29th June a crowd of 3 or 4 thousand Muslims assembled in front of the Gurudwara. A struggle between this crowd and the Sikhs inside the Gurudwara was only averted by the prompt action of the local authorities. They subsequently obtained an undertaking from the Sikhs to refrain from further demolition. But during the following week, while strenuous efforts were being made to persuade the leaders to reach an amicable settlement, the Sikhs under pressure of extremist influence again set about demolishing the mosque. This placed the authorities in a most difficult position. The Sikhs were acting within their legal rights. Moreover the only effective method of stopping demolition would have been to resort to firing. As the building was full of Sikhs and was within the precincts of a Sikh place of worship, this would not only have caused much bloodshed but, for religious reasons, would have had serious reactions on the Sikh population throughout the Province. On the other hand, inaction by Government was bound to cause great indignation among the Muslims, for religious reasons : and it was expected that this would show itself in sporadic attacks on the Sikhs and perhaps on the forces of Government.

It was hoped that discussions between leaders of the two communities would effect some rapprochement, but mischief-makers inflamed the minds of their co-religionists. Despite the arrest of the chief offenders, the excitement increased. The Government's gesture in offering to restore to the Muslims another mosque which they had purchased years ago proved unavailing. The situation took a further turn for the worse on the 19th July and during the following two days the situation was acutely dangerous. The Central Police station was practically besieged by the huge crowds, which assumed a most menacing attitude. Repeated attempts to disperse them without the use of firearms failed and the troops had to fire twice on the 20th July and eight times on the 21st. In all 23 rounds were fired and 12 persons

killed. Casualties, mostly of a minor nature, were numerous amongst the military and police.

As a result of the firing, the crowds dispersed and did not reassemble. Extra police were brought in from other Provinces and the military garrisons were strengthened. Administrative control was re-established rapidly, but the religious leaders continued to fan the embers of the agitation. Civil litigation was renewed and certain Muslim organisations framed some extravagant demands.

The situation in Lahore continued to cause anxiety up to the close of the year. On the 6th November, a Sikh was mortally wounded by a Muslim. Three days later a huge Sikh-Hindu procession was taken out. The organisers appeared anxious to avoid conflict but nonetheless one serious clash occurred. This was followed by further rioting on the next day. But for the good work of the police and the troops, in breaking up the fights quickly, the casualties might have been very large.

On the 19th March 1935 a serious incident occurred in Karachi after the execution of Abdul Quayum, the Muslim who had murdered Nathuramal, a Hindu, already referred to as the writer of a scurrilous pamphlet about the Prophet. Abdul Quayum's body was taken by the District Magistrate, accompanied by a police party, to be handed over to the deceased's family for burial outside the city. A huge crowd, estimated to be about 25,000 strong, collected at the place of burial. Though the relatives of Abdul Quayum wished to complete the burial at the cemetery, the most violent members of the mob determined to take the body in procession through the city. The local authorities decided to prevent the mob entering, since this would have led to communal rioting. All attempts of the police to stop the procession failed, so a platoon of the Royal Sussex Regiment was brought in to keep peace. It was forced to open fire at short range to stop the advance of the frenzied mob and to prevent itself from being overwhelmed. Forty-seven rounds were fired by which 47 people were killed and 134 injured. The arrival of reinforcements prevented further attempts to advance. The wounded were taken to the Civil Hospital and the body of Abdul Quayum was then interred without further trouble.

On the 25th August 1935 there was a communal riot at Secunderabad.

In the year 1936 there were four communal riots. On the 14th April there occurred a most terrible riot at Firozabad in the Agra District. A Muslim procession was proceeding along the main bazar and it is alleged that bricks were thrown from the roofs of Hindu houses. This enraged the Muslims in the procession who set fire to the house of a Hindu, Dr. Jivaram, and the adjacent temple of Radha Krishna. The inmates of Dr. Jivaram's house in addition to 11 Hindus including 3 children were burnt to death. A second Hindu-Muslim riot broke out in Poona in the Bombay Presidency on 24th April 1936. On the 27th April there occurred a Hindu-Muslim riot in Jamalpur in the Monghyr District. The fourth Hindu-Muslim riot of the year took place in Bombay on the 15th October 1936.

The year 1937 was full of communal disturbances. On the 27th March 1937 there was a Hindu-Muslim riot at Panipat over the Holi procession and 14 persons were killed. On the 1st May 1937 there occurred a communal riot in Madras in which 50 persons were injured. The month of May was full of communal riots which took place mostly in the C. P. and the Punjab. One that took place in Shikarpur in Sind caused great panic. On 18th June there was a Sikh-Muslim riot in Amritsar. It assumed such proportions that British troops had to be called out to maintain order.

The year 1938 was marked by two communal riots—one in Allahabad on 26th March and another in Bombay in April.

There were 6 Hindu-Muslim riots in 1939. On the 21st January there was a riot at Asansol in which one was killed and 18 injured. It was followed by a riot in Cawnpore on the 11th February in which 42 were killed, 200 injured and 800 arrested. On the 4th March there was a riot at Benares followed by a riot at Cassipore near Calcutta on the 5th March. On 19th June there was again a riot at Cawnpore over the Rathajatra procession.

A serious riot occurred on 20th November 1939 in Sukkur in Sind. The riot was the culmination of the agitation by the Muslims to take

possession, even by force, of a building called Manzilgah which was in the possession of Government as Government property and to the transfer of which the Hindus had raised objections. Mr. E. Weston—now a judge of the Bombay High Court—who was appointed to investigate into the disturbances gives ³⁰[f.30] the following figures of the murdered and the wounded :

Taluka.	Murders committed.		Persons injured.		Persons Subsequently died from injuries.	
	Hindus.	Muslims.	Hindus.	Muslims.	Hindus.	Muslims.
Sukkur Town	20	12	11	11	1	
Sukkur Taluka	2	2	23		5	
Shikarpur Taluka	5		11		2	
Garhi Yasin Taluka	24		4			
Rohri Taluka	10		3			
Pano Akil Taluka	6		1			
Ghorki Taluka	1		1			
Mirpur			1			

Mathelo Taluka						
Ubauro Taluka	4		3	1	1	
	14 2	1 4	58	12	9	

Of the many gruesome incidents recorded by him the following may be quoted:

“The most terrible of all the disturbances occurred on the night of the 20th at Gosarji village which is eight miles from Sukkur and sixteen from Shikarpur. According to an early statement sent by the District Magistrate to Government, admittedly incomplete, 27 Hindus were murdered there that night. According to the witnesses examined the number was 37.

“Pamanmal, a contractor of Gosarji states that at the time of satyagraha the leading Hindus of Gosarji came in deputation to the leading zemindar of the locality Khan Sahib Amirbux who was then at Sukkur. He reassured them and said he was responsible for their safety. On the 20th Khan Sahib Amirbux was at Gosarji, and that morning Mukhi Mahrumal was murdered there. The Hindus went to Khan Sahib Amirbux for protection and were again reassured, but that night wholesale murder and looting took place. Of the 37 murdered, seven were women. Pamanmal states that the following morning he went to the Sub-Inspector of Bagerji, which is one mile from Gosarji, but he was abused and driven from the thana. He then went to Shikarpur and complained to the panchayat, but did not complain to any officer there. I may mention that the Sub-Inspector of Bagerji was afterwards prosecuted under section 211, Indian Penal Code, and has been convicted for failure to make arrests in connection with murders at Gosarji.

“As Khan Sahib Amirbux, the zemindar, who was said to have given assurance of protection to the Hindus of Bagerji, was reported to be

attending the Court, he was called and examined as a Court witness. He states that he lives half a mile from Gosarji village. The Sub-Inspector of Bagerji came to Gosarji on the 20th after the murder of Mehrumal, and he acted as a mashir. He says that the Hindus did not ask for help and there was no apprehension of trouble. On the night of the 20th he was not well, and he heard nothing of the murders. He admits that he had heard of the Manzilgah evacuation. Later in his evidence he admits that he told the villagers of Gosarji to be on the alert as there was trouble in Sukkur, and he says he had called the panchayat on the evening of the 19th. He went to Gosarji at sunrise on the 21st after the murders. He admits that he is regarded as the protector of Gosarji.”

Mr. Weston adds ³¹[f.31] :—

“I find it impossible to believe the evidence of this witness. I have no doubt that he was fully aware that there was trouble in Gosarji on the night of 20th and preferred to remain in his house.”

Who can deny that this record of rioting presents a picture which is grim in its results and sombre in its tone? But being chronological in order, the record might fail to give an idea of the havoc these riots have caused in any given Province and the paralysis it has brought about in its social and economic life. To give an idea of the paralysis caused by the recurrence of riots in a Province I have recast the record of riots for the Province of Bombay. When recast the general picture appears as follows :

Leaving aside the Presidency and confining oneself to the City of Bombay, there can be no doubt that the record of the city is the blackest. The first Hindu-Muslim riot took place in 1893. This was followed by a long period of communal peace which lasted upto 1929. But the years that have followed have an appalling story to tell. From February 1929 to April 1938—a period of nine years—there were no less than 10 communal riots. In 1929 there were two communal riots. In the first, 149 were killed and 739 were injured and it lasted for 36 days. In the second riot 35 were killed, 109 were injured and it continued for

22 days. In 1930 there were two riots. Details as to loss of life and its duration are not available. In 1932 there were again two riots. The first was a small one. In the second 217 were killed, 2,713 were injured and it went on for 49 days. In 1933 there was one riot, details about which are not available. In 1936 there was one riot in which 94 were killed, 632 were injured and it continued to rage for 65 days. In the riot of 1937, 11 were killed, 85 were injured and it occupied 21 days. The riot of 1938 lasted for 2 1/2 hours only but within that time 12 were killed and a little over 100 were injured. Taking the total period of 9 years and 2 months from February 1929 to April 1938 the Hindus and Muslims of the City of Bombay alone were engaged in a sanguinary warfare for 210 days during which period 550 were killed and 4,500 were wounded. This does not of course take into consideration the loss of property which took place through arson and loot.

V

Such is the record of Hindu-Muslim relationship from 1920 to 1940. Placed side by side with the frantic efforts made by Mr. Gandhi to bring about Hindu-Muslim unity, the record makes most painful and heart-rending reading. It would not be much exaggeration to say that it is a record of twenty years of civil war between the Hindus and the Muslims in India, interrupted by brief intervals of armed peace.

In this civil war men were, of course, the principal victims. But women did not altogether escape molestation. It is perhaps not sufficiently known how much women have suffered in communal hostilities. Data relating to the whole of India are not available. But some data relating to Bengal exist.

On the 6th September 1932 questions were asked in the old Bengal Legislative Council regarding the abduction of women in the Province of Bengal. In reply, the Government of the day stated that between 1922 to 1927, the total number of women abducted was 568. Of these, 101 were unmarried and 467 were married. Asked to state the community to which the abducted women belonged, it was disclosed that out of 101 unmarried women 64 were Hindus, 29 Muslims, 4

Christians, and 4 non-descript : and that out of 467 married women 331 were Hindus, 122 Muslims, 2 Christians and 12 non-descript. These figures relate to cases which were reported or if reported were not detected. Usually, about 10 p.c. of the cases are reported or detected and 90 p.c. go undetected. Applying this proportion to the facts disclosed by the Bengal Government, it may be said that about 35,000 women were abducted in Bengal during the short period of five years between 1922-27.

The attitude towards women-folk is a good index of the friendly or unfriendly attitude between the two communities. As such, the case which happened on 27th June 1936 in the village of Govindpur in Bengal makes very instructive reading. The following account of it is taken from the opening speech ³²[f.32] of the Crown counsel when the trial of 40 Mahomedan accused began on the 10th August 1936. According to the prosecution :

“There lived in Govindpur a Hindu by name Radha Vallabh. He had a son Harendra. There lived also in Govindpur a Muslim woman whose occupation was to sell milk. The local Musalmans of the village suspected that Harendra had illicit relationship with this Muslim milk woman. They resented that a Muslim woman should be in the keeping of a Hindu and they decided to wreak their vengeance on the family of Radha Vallabh for this insult. A meeting of the Musalmans of Govindpur was convened and Harendra was summoned to attend this meeting. Soon after Harendra went to the meeting, cries of Harendra were heard. It was found that Harendra was assaulted and was lying senseless in the field where the meeting was held. The Musalmans of Govindpur were not satisfied with this assault. They informed Radha Vallabh that unless he, his wife and his children embraced Islam the Musalmans did not feel satisfied for the wrong his son had done to them. Radha Vallabh was planning to send away to another place his wife and children. The Musalmans came to know this plan. Next day when Kusum, the wife of Radha Vallabh, was sweeping the courtyard of her house, some Mahomedans came, held down Radha Vallabh and some spirited away Kusum, After having taken her to some distance

two Mahomedans by name Laker and Mahaxar raped her and removed her ornaments. After some time, she came to her senses and ran towards her home. Her assailants again pursued her. She succeeded in reaching her home and locking herself in. Her Muslim assailants broke open the door, caught hold of her and again carried her away on the road. It was suggested by her assailants that she should be again raped on the street. But with the help of another woman by name Rajani, Kusum escaped and took shelter in the house of Rajani. While she was in the house of Rajani the Musalmans of Govindpur paraded her husband Radha Vallabh in the streets in complete disgrace. Next day the Musalmans kept watch on the roads to and from Govindpur to the Police Station to prevent Radha Vallabh and Kusum from giving information of the outrage to the Police.”

These acts of barbarism against women, committed without remorse, without shame and without condemnation by their fellow brethren show the depth of the antagonism which divided the two communities. The tempers on each side were the tempers of two warring nations. There was carnage, pillage, sacrilege and outrage of every species, perpetrated by Hindus against Musalmans and by Musalmans against Hindus—more perhaps by Musalmans against Hindus than by Hindus against Musalmans. Cases of arson have occurred in which Musalmans have set fire to the houses of Hindus, in which whole families of Hindus, men, women and children were roasted alive and consumed in the fire, to the great satisfaction of the Muslim spectators. What is astonishing is that these cold and deliberate acts of rank cruelty were not regarded as atrocities to be condemned but were treated as legitimate acts of warfare for which no apology was necessary. Enraged by these hostilities, the editor of the *Hindustan*—a Congress paper—writing in 1926 used the following language to express the painful truth of the utter failure of Mr. Gandhi's efforts to bring about Hindu-Muslim unity. In words of utter despair the editor said ³³[f.33] :

“There is an immense distance between the India of to-day and India a nation, between an uncouth reality which expresses itself in murder and arson and that fond fiction which is in the imagination of patriotic if

self-deceiving men. To talk about Hindu-Muslim unity from a thousand platforms or to give it blazoning headlines is to perpetrate an illusion whose cloudly structure dissolves itself at the exchange of brick-bats and the desecration of tombs and temples. To sing a few pious hymns of peace and goodwill *a la Naidu*. . . . will not benefit the country. The President of the Congress has been improvising on the theme of Hindu-Muslim unity, so dear to her heart, with brilliant variations, which does credit to her genius but leaves the problem untouched. The millions in India can only respond when the unity song is not only on the tongues of the leaders but in the hearts of the millions of their countrymen.”

Nothing I could say can so well show the futility of any hope of Hindu-Muslim unity. Hindu-Muslim unity upto now was at least in sight although it was like a mirage. Today it is out of sight and also out of mind. Even Mr. Gandhi has given up what, he perhaps now realizes, is an impossible task.

But there are others who notwithstanding the history of the past twenty years, believe in the possibility of Hindu-Muslim unity. This belief of theirs seems to rest on two grounds. Firstly/they believe in the efficacy of a Central Government to mould diverse set of people into one nation. Secondly, they feel that the satisfaction of Muslim demands will be a sure means of achieving Hindu-Muslim unity.

It is true that Government is a unifying force and that there are many instances where diverse people have become unified into one homogeneous people by reason of their being subjected to a single Government. But the Hindus, who are depending upon Government as a unifying force seem to forget that there are obvious limits to Government acting as a unifying force. The limits to Government working as a unifying force are set by the possibilities of fusion among the people. In a country where race, language and religion do not stand in the way of fusion. Government is most effective as a unifying force. On the other hand, in a country where race, language and religion put an effective bar against fusion, Government can have no effect as a unifying force. If the diverse people in France, England, Italy and Germany became unified nations by reason of a common Government,

it was because neither race, language nor religion obstructed the unifying process of Government. On the other hand, if the people in Austria, Hungary, Czechoslovakia and Turkey failed to be unified, although under a common Government, it was because race, language and religion were strong enough to counter and nullify the unifying power of Government. No one can deny that race, language and religion have been too dominant in India to permit the people of India to be welded into a nation by the unifying force of a common Government. It is an illusion to say that the Central Government in India has moulded the Indian people into a nation. What the Central Government has done, is to tie them together by one law and to house them together in one place, as the owner of unruly animals does, by tying them with one rope and keeping them in one stable. All that the Central Government has done is to produce a kind of peace among Indians. It has not made them one nation.

It cannot be said that time has been too short for unification to take place. If one hundred and fifty years of life under a Central Government does not suffice, eternity will not suffice. For this failure the genius of the Indians alone is responsible. There is among Indians no passion for unity, no desire for fusion. There is no desire to have a common dress. There is no desire to have a common language. There is no will to give up what is local and particular for something which is common and national. A Gujarati takes pride in being a Gujarati, a Maharashtrian in being a Maharashtrian, a Punjabi in being a Punjabi, a Madrasi in being a Madrasi and a Bengali in being a Bengali. Such is the mentality of Hindus, who accuse the Musalman of want of national feeling when he says "I am a Musalman first and Indian afterwards". Can any one suggest that there exists anywhere in India even among the Hindus an instinct or a passion that would put any semblance of emotion behind their declaration "*Civis Indianus sum*", or the smallest consciousness of a moral and social unity, which desires to give expression by sacrificing whatever is particular and local in favour of what is common and unifying? There is no such consciousness and no such desire. Without such consciousness and no such desire, to depend upon Government to bring about unification is to deceive oneself.

Regarding the second, it was no doubt the opinion of the Simon Commission:

"That the communal riots were a manifestation of the anxieties and ambitions aroused in both the communities by the prospects of India's political Future. So long as authority was firmly established in British hands and self-government was not thought of, Hindu-Muslim rivalry was confined within a narrower field. This was not merely because the presence of a neutral bureaucracy discouraged strife. A further reason was that there was little for members of one community to fear from the predominance of the other. The comparative absence of communal strife in the Indian States today may be similarly explained. Many, who are well acquainted with conditions in British India a generation ago, would testify that at that epoch so much good feeling had been engendered between the two sides that communal tension as a threat to civil peace was at a minimum. But the coming of the Reforms and the anticipation of what may follow them have given new point to Hindu-Muslim competition. The one community naturally lays claim to the rights of a majority and relies upon its qualifications of better education and greater wealth ; the other is all the more determined on those accounts to secure effective protection for its members, and does not forget that it represents the previous conquerors of the country. It wishes to be assured of adequate representation and of a full share of official posts."

Assuming that to be a true diagnosis, assuming that Muslim demands are reasonable, assuming that the Hindus were prepared to grant them—and these are all very big assumptions—it is a question whether a true union between Hindus and Muslims can take place through political unity, resulting from the satisfaction of Muslim political demands. Some people seem to think that it is enough if there is a political unity between Hindus and Muslims. I think this is the greatest delusion. Those who take this view seem to be thinking only of how to bring the Muslims to join the Hindus in their demands on the British for Dominion Status or Independence as the mood of the moment be. This, to say the least, is a very shortsighted view. How to make the Muslims

join the Hindus in the latter's demands on the British is comparatively a very small question. In what spirit will they work the constitution? Will they work it only as aliens by an unwanted tie or will they work it as true kindreds, is the more important question. For working it as true kindreds, what is wanted is not merely political unity but a true union of heart and soul, in other words, social unity. Political unity is worth nothing, if it is not the expression of real union. It is as precarious as the unity between persons, who without being friends become allies of each other. How very precarious it always is, is best illustrated by what has happened between Germany and Russia. Personally, I do not think that a permanent union can be made to depend upon the satisfaction of mere material interests. Pacts may produce unity. But that unity can never ripen into union. A pact as a basis for a union is worse than useless. As its very nature indicates, a pact is separative in character. A pact cannot produce the desire to accommodate, it cannot instil the spirit of sacrifice, nor can it bind the parties to the main objective. Instead of accommodating each other, parties to a pact strive to get, as much as possible, out of each other. Instead of sacrificing for the common cause, parties to the pact are constantly occupied in seeing that the sacrifice made by one is not used for the good of the other. Instead of fighting for the main objective, parties to the pact are for ever engaged in seeing that in the struggle for reaching the goal the balance of power between the parties is not disturbed. Renan spoke the most profound truth when he said :

"Community of interests is assuredly a powerful bond between men. But nevertheless can interests suffice to make a nation? I do not believe it. Community of interests make commercial treaties. There is a sentimental side to nationality; it is at once body and soul ; a Zollverein is not a fatherland."

Equally striking is the view of James Bryce, another well-known student of history. According to Bryce,

"The permanence of an institution depends not merely on the material interests that support it, but on its conformity to the deep-rooted sentiment of the men for whom it has been made. When it

draws to itself and provides a fitting expression for that sentiment, the sentiment becomes thereby not only more vocal but actually stronger, and in its turn imparts a fuller vitality to the institution.”

These observations of Bryce were made in connection with the foundation of the German Empire by Bismarck who, according to Bryce, succeeded in creating a durable empire because it was based on a sentiment and that this sentiment was fostered

“... most of all by what we call the instinct or passion for nationality, the desire of a people already conscious of a moral and social unity, to see such unity expressed and realize under a single government, which shall give it a place and name among civilized suites”.

What is it that produces this moral and social unity which gives permanence and what is it that drives people to see such unity expressed and realized under a single government, which shall give it a place and a name among civilized states?

No one is more competent to answer this question than James Bryce. It was just such a question he had to consider in discussing the vitality of the Holy Roman Empire as contrasted with the Roman Empire. If any Empire can be said to have succeeded in bringing about political unity among its diverse subjects it was the Roman Empire. Paraphrasing for the sake of brevity the language of Bryce :—The gradual extension of Roman citizenship through the founding of colonies, first throughout Italy and then in the provinces, the working of the equalized and equalizing Roman Law, the even pressure of the government on all subjects, the movements of population, caused by commerce and the slave traffic, were steadily assimilating the various peoples. Emperors, who were for the most part natives of the provinces, cared little to cherish Italy or even after the days of the Antonines, to conciliate Rome. It was their policy to keep open for every subject a career by whose freedom they had themselves risen to greatness. Annihilating distinctions of legal status among freemen, it completed the work, which trade and literature and toleration to all beliefs but one were already performing. No quarrel of race or religions disturbed that calm, for all

national distinctions were becoming merged in the idea of a common Empire.

This unity produced by the Roman Empire was only a political unity. How long did this political unity last? In the words of Bryce:

"Scarcely had these slowly working influences brought about this unity, when other influences began to threaten it. New foes assailed the frontiers ; while the loosening of the structure within was shown by the long struggles for power which followed the death or deposition of each successive emperor. In the period of anarchy after the fall of Valerian, generals were raised by their armies in every part of the Empire, and ruled great provinces as monarchs apart, owing no allegiance to the possessor of the capital. The breaking-up of the western half of the Empire into separate kingdoms might have been anticipated by two hundred years, had there not arisen in Diocletian a prince active and skilful enough to bind up the fragments before they had lost all cohesion, meeting altered conditions by new remedies. The policy he adopted by dividing and localizing authority recognized the fact that the weakened heart could no longer make its pulsations felt to the body's extremities. He parcelled out the supreme power among four monarchs, ruling as joint emperors in four capitals, and then sought to give it a fictitious strength by surrounding it with an oriental pomp which his earlier predecessors would have scorned. . . . The prerogative of Rome was menaced by the -rivalry of Nicomedia, and the nearer greatness of Milan."

It is, therefore, evident that political unity was not enough to give permanence and stability to the Roman Empire and as Bryce points out that "the breaking-up of the western half (of the Roman Empire) into separate kingdoms might have been anticipated by two hundred years, had the barbarian tribes on the border been bolder, or had there not arisen in Diocletian a prince active and skilful enough to bind up the fragments before they had lost all cohesion, meeting altered conditions by new remedies". But the fact is that the Roman Empire which was tottering and breaking into bits and whose political unity was not enough to bind it together did last for several hundred years as one

cohesive unit after it became the Holy Roman Empire. As Prof. Marvin points out ³⁴[f.34] :

“The unity of the Roman Empire was mainly political and military. It lasted for between four and Five hundred years. The unity which supervened in the Catholic Church was religious and moral and endured for a thousand years.”

The question is what made the Holy Roman Empire more stable than the Roman Empire could ever hope to be? According to Bryce it was a common religion in the shape of Christianity and a common religious organization in the shape of the Christian Church which supplied the cement to the Holy Roman Empire and which was wanting in the Roman Empire. It was this cement which gave to the people of the Empire a moral and social unity and made them see such unity expressed and realized under a single government.

Speaking of the unifying effect of Christianity as a common religion Bryce says:

“It is on religion that the in most and deepest life of a nation rests. Because Divinity was divided, humanity had been divided, likewise ; the doctrine of the unity of God now enforced the unity of man, who had been created in His image. The first lesson of Christianity was love, a love that was to join in one body those whom suspicion and prejudice and pride of race had hitherto kept apart. There was thus formed by the new religion a community of the faithful, a Holy Empire, designed to gather all men into its bosom, and standing opposed to the manifold polytheisms of the older world, exactly as the universal sway of the Caesars was contrasted with the innumerable kingdoms and city republics that had gone before it”³⁵[f.35]

If what Bryce has said regarding the instability of the Roman Empire and the comparatively greater stability of its successor, the Holy Roman Empire, has any lesson for India and if the reasoning of Bryce that the Roman Empire was unstable because it had nothing more than political unity to rely on, and that the Holy Roman Empire was more stable, because it rested on the secure foundation of moral and social unity,

produced by the possession of a common faith, is valid reasoning and embodies human experience, then it is obvious that there can be no possibility of a union between Hindus and Muslims. The cementing force of a common religion is wanting. From a spiritual point of view, Hindus and Musalmans are not merely two classes or two sects such as Protestants and Catholics or Shaivas and Vaishnavas. They are two distinct species. In this view, neither the Hindu nor the Muslim can be expected to recognize that humanity is an essential quality present in them both, and that they are not many but one and that the differences between them are no more than accidents. For them Divinity is divided and with the division of Divinity their humanity is divided and with the division of humanity they must remain divided. There is nothing to bring them in one bosom.

Without social union, political unity is difficult to be achieved. If achieved, it would be as precarious as a summer sapling, liable to be uprooted by the gust of a hostile wind. With mere political unity, India may be a State. But to be a State is not to be a nation and a State, which is not a nation, has small prospects of survival in the struggle for existence. This is especially true where nationalism—the most dynamic force of modern times—is seeking everywhere to free itself by the destruction and disruption of all mixed states. The danger to a mixed and composite state, therefore, lies not so much in external aggression as in the internal resurgence of nationalities which are fragmented, entrapped, suppressed and held against their will. Those who oppose Pakistan should not only bear this danger in mind but should also realize that this attempt on the part of suppressed nationalities to disrupt a mixed state and to found a separate home for themselves, instead of being condemned, finds ethical justification from the principle of self-determination.

CHAPTER VII

MUSLIM ALTERNATIVE TO PAKISTAN

I

The Hindus say they have an alternative to Pakistan. Have the Muslims also an alternative to Pakistan? The Hindus say yes, the Muslims say no. The Hindus believe that the Muslim proposal for Pakistan is only a bargaining manoeuvre put forth with the object of making additions to the communal gains already secured under the Communal Award. The Muslims repudiate the suggestion. They say there is no equivalent to Pakistan and, therefore, they will have Pakistan and nothing but Pakistan. It does seem that the Musalmans are devoted-to Pakistan and are determined to have nothing else and that the Hindus in hoping for an alternative are merely indulging in wishful thinking. But assuming that the Hindus are shrewd enough in divining what the Muslim game is, will the Hindus be ready to welcome the Muslim alternative to Pakistan? The answer to the question must, of course, depend upon what the Muslim alternative is.

What is the Muslim alternative to Pakistan? No one knows. The Muslims, if they have any, have not disclosed it and perhaps will not disclose it till the day when the rival parties meet to revise and settle the terms on which the Hindus and the Muslims are to associate with each other in the future. To be forewarned is to be forearmed. It is, therefore, necessary for the Hindus to have some idea of the possible Muslim alternative to enable them to meet the shock of it; for the alternative cannot be better than the Communal Award and is sure to be many degrees worse.

In the absence of the exact alternative proposal one can only make a guess. Now one man's guess is as good as that of another, and the party concerned has to choose on which of these he will rely. Among the likely guesses, my guess is that the Muslims will put forth as their alternative some such proposal as the following :—

"That the future constitution of India shall provide:

(i) That the Muslims shall have 50% representation in the Legislature, Central as well as Provincial, through separate electorates.

(ii) That 50% of the Executive in the Centre as well as in the Provinces shall consist of Muslims.

(iii) That in the Civil Service 50% of the posts shall be assigned for the Muslims.

(iv) That in the Fighting Forces the Muslim proportion shall be one half, both in the ranks and in the higher grades.

(v) That Muslims shall have 50% representation in all public bodies, such as councils and commissions, created for public purposes.

(vi) That Muslims shall have 50% representation in all international organizations in which India will participate.

(vii) That if the Prime Minister be a Hindu, the Deputy Prime Minister shall be a Muslim.

(viii) That if the Commander-in-Chief be a Hindu, the Deputy Commander-in-Chief shall be a Muslim.

(ix) That no changes in the Provincial boundaries shall be made except with the consent of 66% of the Muslim members of the Legislature.

(x) That no action or treaty against a Muslim country shall be valid unless the consent of 66% of the Muslim members of the Legislature is obtained.

(xi) That no law affecting the culture or religion or religious usage of Muslims shall be made except with the consent of 66% of the Muslim members of the Legislature.

(xii) That the national language for India shall be Urdu. (xiii) That no law prohibiting or restricting the slaughter of cows or the propagation of and conversion to Islam shall be valid unless it is passed with the consent of 66% of the Muslim members of the Legislature.

(xiv) That no change in the constitution shall be valid unless the majority required for effecting such changes also includes a 66% majority of the Muslim members of the Legislature.

This guess of mine is not the result of imagination let loose. It is not the result of a desire to frighten the Hindus into an unwilling and hasty

acceptance of Pakistan, If I may say so, it is really an intelligent anticipation based upon available data coming from Muslim quarters.

An indication of what the Muslim alternative is likely to be, is obtainable from the nature of the Constitutional Reforms which are contemplated for the Dominions of His Exalted Highness the Nizam of Hyderabad.

The Hyderabad scheme of Reforms is a novel scheme. It rejects the scheme of communal representation obtaining in British India. In its place is substituted what is called Functional Representation, i.e. representation by classes and by professions. The composition of the Legislature which is to consist of 70 members is to be as follows :—

<i>Elected</i>		<i>Nominated</i>	
Agriculture	12	Illakas	8
Patidars 8		Sarf-i-Khas 2	
Tenants 4		Paigahs 3	
Women	1		
Graduates	1	Peshkari 1	
University	1		
Jagirdars	2	Salar Jung 1	
Maashdars	1		
Legal	2	Samasthans 1	
Medical	2		
Western 1		Officials	18
		Rural Arts and Crafts	1

Oriental 1		Backward Classes	1
Teaching	1	Minor Unrepresented	3
Commerce	1	Classes.	
Industries	2	Others	6
Banking	2		
Indigenous 1	1		
Co-operative and			
Joint Stock 1	1		
Organized Labour	1		
Harijan	1		
District Municipalities	1		
City Municipality	1		
Rural Boards	1		
Total	33	Total	. 37

Whether the scheme of functional representation will promote better harmony between the various classes and sections than communal representation does is more than doubtful. In addition to perpetuating existing social and religious divisions, it may quite easily intensify class struggle by emphasizing class consciousness. The scheme appears innocuous but its real character will come out when every class will demand representation in proportion to its numbers. Be that as it may, functional representation is not the most significant feature of the Hyderabad scheme of Reforms. The most significant feature of the scheme is the proposed division of seats between Hindus and

Muslims in the new Hyderabad Legislature. Under the scheme as approved by H. E. H. the Nizam, communal representation is not altogether banished. It is retained along with functional representation. It is to operate through joint electorates. But there is to be equal representation for "the two majority communities" on every ³⁶[f.36] elective body including the legislature and no candidate can succeed unless, he secures 40 percent, of the votes polled by members of his community. This principle of equal representation to Hindus and Muslims irrespective of their numbers ³⁷[f.37] is not only to apply to every elective body but it is to apply to both elected as well as nominated members of the body.

In justification of this theory of equal representation it is stated that:

"The importance of the Muslim community in the state, by virtue of its historical position and its status in the body politic, is so obvious that it cannot be reduced to the status of a minority in the Assembly."

Quite recently there have appeared in the press ³⁸[f.38] the proposals formulated by one Mr. Mir Akbar Ali Khan calling himself the leader of the Nationalist Party as a means of settling the Hindu-Muslim problem in British India. They are as follows :—

(1) The future Constitution of India must rest upon the broad foundation of adequate military defence of the country and upon making the people reasonable military minded. The Hindus must have the same military mindedness as the Muslims.

(2) The present moment offers a supreme opportunity for the two communities to ask for the defence of India to be made over to them. The Indian Army must consist of an equal number of Hindus and Muslims and no regiment should be on a communal, as distinguished from regional basis.

(3) The Governments in the Provinces and at the Centre should be wholly National Governments composed of men who are reasonable military minded. Hindu and Muslim Ministers should be equal in number in the Central as well as all Provincial cabinets; other important

minorities might wherever necessary be given special representation. This scheme will function most satisfactorily with joint electorates, but in the present temper of the country separate electorates might be continued. The Hindu Ministers must be elected by the Hindu members of the legislature and the Muslim Ministers by the Muslim members.

(4) The Cabinet is to be removable only *on* an express vote of no-confidence, against the Cabinet as a whole, passed by a majority of 2/3rd of the whole house which majority must be of Hindus and Muslims taken separately.

(5) The religion, language, script and personal law of each community should be safeguarded by a paramount constitutional check enabling the majority of members, representing that community in the legislature to place a veto on any legislative or other measure affecting it. A similar veto must be provided against any measure designed or calculated to affect adversely the economic well-being of any community.

(6) An adequate communal representation in the services must be agreed to as a practical measure of justice in administration and in the distribution patronage.

If the proposals put forth by a Muslim leader of the Nationalist Party in Hyderabad State is an indication of the direction in which the mind of the Muslims in British India is running, then, the guess I have made as to what is likely to be the alternative to Pakistan derives additional support.

II

It is true that in the month of April 1940 a Conference of Muslims was held in Delhi under the grandiloquent name of "The Azad Muslim Conference." The Muslims who met in the Azad Conference were those who were opposed to the Muslim League as well as to the Nationalist Muslims. They were opposed to the Muslim League firstly, because of their hostility to Pakistan and secondly because they did not want to depend upon the British Government for the protection of their rights

³⁹[f.39] They were also opposed to the Nationalist Musalmans (i. e. Congressites out and out) because they were accused of indifference to the cultural and religious rights of the Muslims. ⁴⁰[f.40]

With all this the Azad Muslim Conference was hailed by the Hindus as a Conference of friends. But the resolutions passed by the Conference leave very little to choose between it and the League. Among the resolutions passed by the Azad Muslim Conference the following three bear directly upon the issue in question.

The first of these runs as follows :—

“This conference, representative of Indian Muslims who desire to secure the fullest freedom of the country, consisting of delegates and representatives of every province, after having given its fullest and most careful consideration to all the vital questions affecting the interest of the Muslim community and the country as a whole declares the following:—

“India will have geographical and political boundaries of an individual whole and as such is the common homeland of all the citizens irrespective of race or religion who are joint owners of its resources. All nooks and comers of the country are hearths and homes of Muslims who cherish the historic eminence of their religion and culture which are dearer to them than their lives. From the national point of view every Muslim is an Indian. The common rights of all residents of the country and their responsibilities, in every walk of life and in every sphere of human activity are the same. The Indian Muslim by virtue of these rights and responsibilities, is unquestionable an Indian national and in every part of the country is entitled to equal privileges with that of every Indian national in every sphere of governmental, economic and other national activities and in public services. For that very reason Muslims own equal responsibilities with other Indians for striving and making sacrifices to achieve the country's independence. This is a self-evident proposition, the truth of which no right thinking Muslim will question. This Conference declares unequivocally and with all emphasis at its command that the

goal of Indian Muslims is complete independence along with protection of their religion and communal rights, and that they are anxious to attain this goal as early as possible. Inspired by this aim they have in the past made great sacrifices and are ever ready to make greater sacrifices.

"The Conference unreservedly and strongly repudiates the baseless charge levelled against Indian Muslims by the agents of British Imperialism and others that they are an obstacle in the path of Indian freedom and emphatically declares that the Muslims are fully alive to their responsibilities and consider *it* inconsistent with their traditions and derogatory to their honour to lag behind others in the struggle for independence."

By this Resolution they repudiated the scheme of Pakistan. Their second Resolution was in the following terms:—

"This is the considered view of this Conference that only that constitution for the future Government of India would be acceptable to the people of India which is framed by the Indians themselves elected by means of adult franchise. The constitution should fully safeguard all the legitimate interests of the Muslims in accordance with the recommendations of the Muslim members of the Constituent Assembly. The representatives of other communities or of an outside power would have no right to interfere in the determination of these safeguards."

By this Resolution the Conference asserted that the safeguards for the Muslims must be determined by the Muslims alone. Their third Resolution was as under:—

“Whereas in the future constitution of India it would be essential, in order to ensure stability of government and preservation of security, that every citizen and community should feel satisfied, this Conference considers it necessary that a scheme of safeguards as regards vital manors mentioned below should be prepared to the satisfaction of the Muslims.

“This Conference appoints a board consisting of 27 persons. This board, after the fullest investigation, consultation and consideration, shall make its recommendations for submission to the next session of this Conference, so that the Conference may utilise the recommendations as a means of securing a permanent national settlement of the communal question. This recommendation should be submitted within two months. The matters referred to the board are the following:

"1. The protection of Muslim culture, personal law and religious rights.

"2. Political rights of Muslims and their protection.

"3. The formation of future constitution of India to be non-unitary and federal, with absolutely essential and unavoidable powers for the Federal Government.

"The provision of safeguards for the economic, social and cultural rights of Muslims and for their share in public services

"The board will be empowered to fill up any vacancy in a suitable manner. The board will have the right to co-opt other members. It will be empowered also to consult other Muslim bodies and if it considers necessary, any responsible organisation in the country. The 27 members of the board will be nominated by the president.

"The quorum for the meeting will be nine.

"Since the safeguards of the communal rights of different communities will be determined in the constituent assembly referred to in the resolution which this Conference has passed, this Conference considers it necessary to declare that Muslim members of this constituent will be elected by Muslims themselves."

We must await the report ⁴¹[f.41] of this board to know what safeguards the Azad Muslim Conference will devise for the safety and protection of Muslims. But there appears no reason to hope that they will not be in favour of what I have guessed to be the likely alternative

for Pakistan. It cannot be overlooked that the Azad Muslim Conference was a body of Muslims who were not only opposed to the Muslim League but were equally opposed to the Nationalist Muslims. There is, therefore, no ground to trust that they will be more merciful to the Hindus than the League has been *or* will be.

Supposing my guess turns out to be correct, it would be interesting to know what the Hindus will have to say in reply. Should they prefer such an alternative to Pakistan? Or should they rather prefer Pakistan to such an alternative? Those are questions which I must leave the Hindus and their leaders to answer. All I would like to say in this connection is that the Hindus before determining their attitude towards this question should note certain important considerations.

In particular they should note that there is a difference between *Macht Politic*⁴² [f.42] and *Gravamin Politic*⁴³ [f.43] ; that there is a difference between *Communitas Communitatum* and a nation of nations; that there is a difference between safeguards to allay apprehensions of the weak and contrivances to satisfy the ambition for power of the strong; that there is a difference between providing safeguards and handing over the country. Further, they should also note that what may with safety be conceded to *Gravamin Politic* may not be conceded to *Macht Politic*. What may be conceded with safety to a community may not be conceded to a nation and what may be conceded with safety to the weak to be used by it as a weapon of defence may not be conceded to the strong who may use it as a weapon of attack.

These are important considerations and, if the Hindus overlook them, they will do so at their peril. For the Muslim alternative is really a frightful and dangerous alternative.

CHAPTER IX

LESSONS FROM ABROAD

Hindus who will not yield to the demand of the Muslims for the division of India into Pakistan and Hindustan and would insist upon maintaining the geographical unity of India without counting the cost will do well to study the fate that has befallen other countries which, like India, harboured many nations and sought to harmonise them.

It is not necessary to review the history of all such countries. It is enough to recount here the story of two, Turkey and Czechoslovakia.

I

To begin with Turkey. The emergence of the Turks in history was due to the fact that they were driven away by the Mongols from their home in Central Asia, somewhere between 1230-40 A.D., which led them to settle in north-west Anatolia. Their career as the builders of the Turkish Empire began in 1326 with the conquest of Brusa. In 1360-61, they conquered Thrace from the Aegean to the Black Sea; in 1361-62, the Byzantine Government of Constantinople accepted their supremacy. In 1369 Bulgaria followed suit. In 1371-72 Macedonia was conquered. In 1373 Constantinople definitely accepted Ottoman sovereignty. In 1389 Servia was conquered, in 1430 Salonica, in 1453 Constantinople, in 1461 Trebizond, in 1465 Quraman, and in 1475 Kaffa and Tana were annexed. After a short lull, they conquered Mosul in 1514, Syria, Egypt, the Hijaz and the Yaman in 1516-17 and Belgrade in 1521. This was followed in 1526 by victory over the Hungarians at Mohacz. In 1554 took place the first conquest of Baghdad and in 1639 the second Conquest of Baghdad. Twice they laid siege to Vienna, first in 1529 and again in 1683 with a view to extend their conquest beyond. But on both occasions they were repulsed with the result that their expansion in Europe was completely checked forever.

Still the countries they conquered between 1326 and 1683 formed a vast empire. A few of these territories the Turks had lost to their enemies thereafter, but taking the extent of the Turkish Empire as it stood in 1789 on the eve of the French Revolution, it comprised (1) the Balkans, south of the Danube, (2) Asia Minor, the Levant and the

neighbouring islands (i.e., Cyprus), (3) Syria and Palestine, (4) Egypt, and (5) North Africa from Egypt to Morocco.

The tale of the disruption of the Turkish Empire is easily told. The first to break away *de facto*, if not *de jure*, was Egypt in 1769. The next were the Christians in the Balkans. Bessarabia was taken by Russia in 1812 after a war with Turkey. In 1812 Serbia rebelled with the aid of Russia and the Turks were obliged to place Serbia under a separate government. In 1829 similar concessions were granted to two other Danubian provinces, Moldavia and Wallachia. As a result of the Greek war of independence which lasted between 1822-29, Greece was completely freed from the Turkish rule and the Greek independence was recognised by the Powers in 1832. Between 1875-77 there was turmoil amongst the Balkans. There was a revolt in Bosnia and Herzegovina and the Bulgarians resorted to atrocities against the Turks, to which the Turks replied with atrocities in equal measure. As a result, Serbia and Montenegro declared war on Turkey and so did Russia. By the Treaty of Berlin, Bulgaria was given self-government under Turkey and Eastern Rumania was to be ruled by Turkey under a Christian Governor. Russia gained Kars and Batourn. Dobrudja was given to Rumania. Bosnia and Herzegovina were assigned to Austria for administration and England occupied Cyprus. In 1881 Greece gained Thessaly and France occupied Tunis. In 1885 Bulgaria and Eastern Rumania were united into one state.

The story of the growth and decline of the Turkish Empire upto 1906 has been very graphically described by Mr. Lane Poole in the following words ⁴⁴[f.44] :—

"In its old extent, when the Porte ruled not merely the *narrow* territory now called Turkey in Europe, but Greece, Bulgaria and Eastern Rumania, Rumania, Serbia, Bosnia and Herzegovina, with the Crimea and a portion of Southern Russia, Egypt, Syria, Tripoli, Tunis, Algiers and numerous islands in the Mediterranean, not counting the vast but mainly desert tract of Arabia, the total population (at the present time) would be over fifty millions, or nearly twice that of Europe without Russia. One by one her provinces have been taken away. Algiers and

Tunis have been incorporated with France, and this 175,000 square miles and five million inhabitants have transferred their allegiance. Egypt is practically independent, and this means a loss of 500,000 miles and over six millions of inhabitants. Asiatic Turkey alone has suffered comparatively little diminution. This forms the bulk of *tier* present dominions, and comprises about 680,000 square miles, and over sixteen millions of population. In Europe her losses have been almost as severe as in Africa where Tripoli alone remains to her. Serbia and Bosnia are administered by Austria and thereby nearly 40,000 miles and three and a half millions of peoples have become Austrian subjects. Wallachia and Moldavia are united in the independent kingdom of Rumania, diminishing the extent of Turkey by 46,000 miles and over five millions of inhabitants. Bulgaria is a dependent state over which the Ports has no real control and Eastern Rumania has lately *de facto* become part of Bulgaria and the two contain nearly 40,000 square miles, and three millions of inhabitants. The kingdom of Greece with its 25,000 miles and two million population has long been separated from its parent. In Europe where the Turkish territory once extended to 230,000 miles, with a population of nearly 20 millions, it now reaches only the total of 66 thousand miles and a population of four and a half millions. It has lost nearly three-fourths of its land, and about the same proportion of its people."

Such was the condition of Turkey in 1907. What has befallen her since then is unfortunately the worst part of her story. In 1908 taking advantage of the revolution brought about by the Young Turks, Austria annexed Bosnia and Herzegovina and Bulgaria declared her independence. In 1911 Italy took possession of Tripoli and in 1912 France occupied Morocco. Encouraged by the successful attack of Italy in 1912, Bulgaria, Greece, Serbia and Montenegro formed themselves into a Balkan League and declared war on Turkey. In this war, known as the first Balkan War, Turkey was completely defeated. By the Treaty of London(1913) the Turkish territory in Europe was reduced to a narrow strip round Constantinople. But the treaty could not take effect because the victors could not agree on the distribution of the spoils of victory. In 1913 Bulgaria declared war on the rest of the Balkan League and

Rumania declared war on Bulgaria in the hope of extending her territory. Turkey also did the same. By the Treaty of Bukharest (1913), which ended the second Balkan War, Turkey recovered Adrianople and got Thrace from Bulgaria. Serbia obtained Northern Macedonia and Greece obtained Southern Macedonia (including Salonika), while Montenegro enlarged her territory at the expense of Turkey. By 1914 when the Great European War came on, the Balkans had won their independence from Turkey and the area in Europe that remained under the Turkish Empire was indeed a very small area round about Constantinople and her possessions in Asia. So far as the African continent is concerned, the Sultan's power over Egypt and the rest of North Africa was only nominal, for the European Powers had established real control therein. In the Great War of 1914 the overthrow of Turkey was complete. All the provinces from the Mediterranean to the Persian Gulf were overrun, and the great cities of Baghdad, Jerusalem, Damascus and Aleppo were captured. In Europe the allied troops occupied Constantinople. The Treaty of Sevres, which brought the war with Turkey to a close, sought to deprive her of all her outlying provinces and even of the fertile plains of Asia Minor. Greek claim for territory was generously allowed at the expense of Turkey in Macedonia, Thrace and Asia Minor and Italy was to receive Adalia and a large tract in the South. Turkey was to be deprived of all her Arab provinces in Asia, Iraq, Syria, Palestine, Hedjaz and Nejd. There was left to Turkey only the capital, Constantinople, and separated from this city, by a "neutral zone of the straits," part of the barren plateau of Anatolia. The treaty though accepted by the Sultan was fiercely attacked by the Nationalist Party under Kemal Pasha. When the Greeks advanced to occupy their new territory, they were attacked and decisively beaten. At the end of the war with Greece, which went on from 1920 to 1922, the Turks had reoccupied Smyrna. As the allies were not prepared to send armies to help the Greeks, they were forced to come to terms with the Nationalist Turks. At the conference at Mudania the Greeks agreed to revise the terms of the Treaty of Sevres, which was done by the Treaty of Lausanne in 1923 which granted the demands of Turkey except in Western Thrace. The rest of the Treaty of Sevres was accepted by the Turks which meant the loss of her Arab provinces in Asia. Before the

War of 1914, Turkey had lost all her provinces in Europe. After the War, she lost her provinces in Asia. As a result of the dismemberment of the old Turkish Empire, what now remains of it is the small state called the Republic of Turkey with an area which is a minute fraction of the old Empire ⁴⁵[f.45].

II

Take the case of Czechoslovakia. It is the creation of the Treaty of Trianon which followed the European War of 1914. None of the peace treaties was more drastic in its terms than the Treaty of Trianon. Says Prof. Macartney, "By it Hungary was not so much mutilated as dismembered. Even if we exclude Croatia, Slavonia, which had stood only in a federal relationship to the other lands of the Holy Crown—although one of eight hundred years' standing—Hungary proper was reduced to less than one-third (32.6 per cent.) of her pre-war area, and a little over two-fifths (41.6 per cent.) of her population. Territories and peoples formerly Hungarian were distributed among no less than seven states." Of these states, there was one which did not exist before. It was a new creation. That was the state of Czechoslovakia.

The area of the Republic of Czechoslovakia was 54,244 square miles and the population was about 13,613,172. It included the territories formerly known as Bohemia, Moravia, Slovakia and Ruthenia. It was a composite state which included in its bosom three principal nationalities, (i) Czechs occupying Bohemia and Moravia, (ii) Slovaks occupying Slovakia and (iii) Ruthenians in occupation of Ruthenia.

Czechoslovakia proved to be a very short-lived state. It lived exactly for two decades. On the 15th March 1939 it perished or rather was destroyed as an independent state. It became a protectorate of Germany. The circumstances attending its expiry were of a very bewildering nature. Her death was brought about by the very Powers which had given it birth. By signing the Munich Pact on 30th September 1938—of which the protectorate was an inevitable consequence. Great Britain, France and Italy assisted Germany, their former enemy of the Great War, to conquer Czechoslovakia, their former ally. All the work

of the Czechs of the past century to gain freedom was wiped off. They were once more to be the slaves of their former German overlords.

III

What are the reasons for the disruption of Turkey?

Lord Eversley in his *Turkish Empire* ⁴⁶[f.46] has attempted to give reasons for the decay of Turkey, some internal, some external. Among the internal causes there were two. First the degeneracy of the Ottoman dynasty. The supreme power fell into the hands either of the Vazirs of the Sultans or more often in the hands of women of the harem of the Sultan. The harem was always in antagonism to the official administration of the Porte, which ostensibly carried on the administration of the state under the direction of the Sultan. The officials of every degree from the highest to the lowest were interested in the sale of all offices, civil and military, to the highest bidders. For securing their object, they found it expedient to bribe the inmates of the harem and thereby win the assent of the Sultans. The harem thus became the centre from which corruption spread throughout the Turkish Empire and which was one of the main causes of its decay. The second main cause of the decadence of the Turkish Empire was the deterioration of its armies due to two causes. During the last 300 years the army had lost the elan and the daring by which the Ottomans won their many victories in the early period of their career. The loss of this elan and daring by the Turkish army was due to the composition of the army, recruitment to which was restricted to Turks and Arabs, and also to the diminution of opportunities of plunder and the hope of acquiring lands for distribution among the soldiers as an incentive to victory and valour in the latter period when the Empire was on the defensive and when it was no longer a question of making fresh conquests, but of retaining what had already been won,

Among the external causes of the disruption of Turkey, the chief one is said to be the rapacity of the European nations. But this view omits to take note of the true cause. The true and the principal cause of the disruption of Turkey was the growth of the spirit of nationalism among

its subject peoples. The Greek revolt, the revolts of the Serbs, Bulgarians and other Balkans against the Turkish authority were no doubt represented as a conflict between Christianity and Islam. That is one way of looking at it, but only a superficial way. These revolts were simply the manifestations of the spirit of nationalism by which they were generated. These revolts no doubt had for their immediate causes Turkish misrule, Christian antipathy to Islam and the machinations of European nations. But this does not explain the real force which motivated them. The real motive force was the spirit of nationalism and their revolts were only a manifestation of this inner urge brought on by it. That it was nationalism which had brought about the disruption of Turkey is proved by the revolt of the Arabs in the last war and their will to be independent. Here there was no conflict between Islam and Christianity, nor was the relationship between the two that of the oppressor and the oppressed. Yet, the Arab claimed to be freed from the Turkish Empire. Why? Because he was moved by Arab nationalism and preferred to be an Arab nationalist to being a Turkish subject. What is the cause of the destruction of Czechoslovakia?

The general impression is that it was the result of German aggression. To some extent that is true. But it is not the whole truth. If Germany was the only enemy of Czechoslovakia, all that she would have lost was the fringe of her borderland which was inhabited by the Sudeten Germans. German aggression need have cost her nothing more. Really speaking the destruction of Czechoslovakia was brought about by an enemy within her own borders. That enemy was the intransigent nationalism of the Slovaks who were out to break up the unity of the state and secure the independence of Slovakia.

The union of the Slovaks with the Czechs, as units of a single state, was based upon certain assumptions. First, the two were believed to be so closely akin as to be one people, and that the Slovaks were only a branch of Czechoslovaks. Second, the two spoke a single *Czechoslovak * language. Third, there was no separate Slovak national consciousness. Nobody examined these assumptions at the time, because the Slovaks themselves desired this union, expressing their wish

in 1918 by formal declaration of their representatives at the Peace Conference. This was a superficial and hasty view of the matter. As Prof. Macartney ⁴⁷[f.47] points out.

" . . . ' the central political fact which emerges from the consideration of this history (of the relations between the Czechs and Slovaks) for the purposes of the present age is the final crystallization of a Slovak national consciousness , . . . ! ' The genuine and uncompromising believers in a single indivisible Czechoslovak language and people were certainly never so large, at least in Slovakia, as they were made to appear. Today they have dwindled to a mere handful, under the influence of actual experience of *the* considerable differences which exist between the Czechs and the Slovaks. At present Slovak is in practice recognized by the Czechs themselves as the official language of Slovakia. The political and national resistance has been no less tenacious, and to-day the name of ' Czechoslovakia ' is practically confined to official documents and to literature issued for the benefit of foreigners. During many weeks in the country I only remember hearing one person use the term for herself; this was a half German, half-Hungarian girl, who used it in a purely political sense, meaning that she thought irridentism futile. No Czech and no Slovak feels or calls himself, when speaking naturally, anything but a Czech or a Slovak as the case may be."

This national consciousness of the Slovaks, which was always alive, began to burst forth on seeing that the Sudeten Germans had made certain demands on Czechoslovakia for autonomy. The Germans sought to achieve their objective by the application of gangster morality to international politics, saying "Give us what we ask or we shall burst up your shop." The Slovaks followed suit by making their demands for autonomy but with a different face. They did not resort to gangster methods but modulated their demands to autonomy only. They had eschewed all idea of independence, and, in the proclamation issued on October 8 by Dr. Tiso, the leading man in the autonomist movement in Slovakia, it was said "We shall proceed in the spirit of our motto, for God and the Nation, in a Christian and national spirit." Believing in their

bona fides and desiring to give no room to the *Gravamin Politic* of which the Slovaks were making full use to disturb the friendly relations between the Czechs and the Slovaks, the National Assembly in Prague passed an Act in November 1938—immediately after the Munich Pact—called the "Constitutional Act on the Autonomy of Slovakia." Its provisions were of a far-reaching character. There was to be a separate parliament for Slovakia and this parliament was to decide the constitution of Slovakia within the framework of the legal system of the Czechoslovak Republic. An alteration in the territory of Slovakia was to be with the consent of the two-third majority in the Slovak parliament. The consent of the Slovak parliament was made necessary for international treaties which exclusively concerned Slovakia. Officials of the central state administration in Slovakia were to be primarily Slovaks. Proportional representation of Slovakia was guaranteed in all central institutions, councils, commissions and other organizations. Similarly, Slovakia was to be proportionally represented on all international organizations in which the Czechoslovak Republic was called upon to participate. Slovak soldiers, in peace time, were to be stationed in Slovakia as far as possible. As far as legislative authority was concerned all subjects which were strictly of common concern were assigned to the parliament of Czechoslovakia. By way of guaranteeing these rights to the Slovaks, the Constitution Act provided that the decision of the National Assembly to make constitutional changes shall be valid only if the majority constitutionally required for such changes includes also a proportionate majority of the members of the National Assembly elected in Slovakia. Similarly, the election of the President of the Republic required the consent not merely of the constitutionally determined majority of the members of the parliament, but also of a proportionate majority of the Slovak members. Further to emphasize that the central government must enjoy the confidence of the Slovaks it was provided by the constitution that one-third of the Slovak members of parliament may propose a motion of 'No Confidence.'

These constitutional changes introduced, much against the will of the Czechs, a hyphen between the Czechs and the Slovaks which did not exist before. But it was done in the hope that, once the relatively minor

quarrels between the two were got out of the way, the very nationalism of the Slovaks was more likely to bring them closer to the Czechs than otherwise. With the constitutional changes guaranteeing an independent status to Slovakia and the fact that the status so guaranteed could not be changed without the consent of the Slovaks themselves, there was no question of the Slovaks ever losing their national identity through submergence by the Czechs. The autonomy introduced by the hyphen separated the cultural waters and saved the Slovaks from losing their colour.

The first Slovak parliament elected under the new constitution was opened on January 18, 1939, and Dr. Martin Sokol, the President of the parliament, declared, "The period of the Slovak's struggle for freedom is ended. Now begins the period of national rebirth." Other speeches made on the occasion indicated that now that Slovakia had its autonomy the Slovaks would never feel animosity towards the Czechs and that both would loyally abide by the Czecho-Slovak State.

Not even a month elapsed since the inauguration of the Slovak parliament before the Slovak politicians began their battle against the hyphen and for complete separation. They made excited speeches in which they attacked the Czechs, talked about Czech oppression and demanded a completely independent Slovakia. By the beginning of March, the various forms of separatism in Slovakia were seriously threatening the integrity of the Czechoslovak State. On March 9 it was learnt that Tiso, the Slovak Premier, had decided to proclaim the independence of Slovakia. On the 10th, in anticipation of such an act, troops were moved in Slovakia and Tiso, the Prime Minister, was dismissed along with other Slovak ministers by the President of the Republic, Dr. Hacha. On the next day Tiso, supposed to be under police supervision, telephoned to Berlin and asked for help. On Monday Tiso and Hitler met and had an hour and a half talk in Berlin. Immediately after the talk with Hitler, Tiso got on the phone to Prague and passed on the German orders.

They were:—

- (i) (i) All Czech troops to be withdrawn from Slovakia;
- (ii) (ii) Slovakia to be an independent state under German protection;
- (iii) (iii) The Slovak parliament to be summoned by President Hacha to hear the proclamation of independence.

There was nothing that President Hacha and the Prague Government could do except say ' yes ' for they knew very well that dozens of divisions of German troops were massed round the defenceless frontiers of Czechoslovakia ready to march in at any moment if the demands made by Germany in the interest of and at the instance of Slovakia were refused. Thus ended the new state of Czechoslovakia.

IV

What is the lesson to be drawn from the story of these two countries?

There is some difference as to how the matters should be put. Mr. Sydney Brooks would say that the cause of these wars of disruption is nationalism, which according to him is the enemy of the universal peace. Mr. Norman Angell, on the other hand, would say it is not nationalism but the threat to nationalism which is the cause. To Mr. Robertson nationalism is an irrational instinct, if not a positive hallucination, and the sooner humanity got rid of it the better for all.

In whatever way the matter is put and howsoever ardently one may wish for the elimination of nationalism, the lesson to be drawn is quite clear: that nationalism is a fact which can neither be eluded nor denied. Whether one calls it an irrational instinct or positive hallucination, the fact remains that it is a potent force which has a dynamic power to disrupt empires. Whether nationalism is the cause or the threat to nationalism is the cause, is a difference of emphasis only. The real thing is to recognize, as does Mr. Toynbee, that "nationalism is strong enough to produce war in spite of us. It has terribly proved itself to be no outworn creed, but a vital force to be reckoned with." As was pointed out by him, "the right reading of nationalism has become an affair of life and death." It was not only so for Europe. It was so for Turkey. It was so for Czechoslovakia. And what was a question of life and death to

them could not but be one of life and death to India. Prof. Toynbee pleaded, as was done before him by Guizot, for the recognition of nationality as the necessary foundation of European peace. Could India ignore to recognize this plea? If she does, she will be acting at her peril. That nationalism is a disruptive force is not the only lesson to be learnt from the history of these two countries. Their experience embodies much else of equal if not of greater significance. What that is, will be evident if certain facts are recalled to memory.

The Turks were by no means as illiberal as they are painted. They allowed their minorities a large measure of autonomy. The Turks had gone far towards solving the problem of how people of different communities with different social heritages are to live together in harmony when they are geographically intermingled. The Ottoman Empire had accorded, as a matter of course, to the non-Muslim and non-Turkish communities within its frontiers a degree of territorial as well as cultural autonomy which had never been dreamt of in the political philosophy of the West. Ought not the Christian subjects to have been satisfied with this? Say what one may, the nationalism of Christian minorities was not satisfied with this local autonomy. It fought for complete freedom and in that fight Turkey was slit open.

The Turks were bound to the Arabs by the tie of religion. The religious tie of Islam is the strongest known to humanity. No social confederacy can claim to rival the Islamic brotherhood in point of solidarity-. Add to this the fact that while the Turk treated his Christian subjects as his inferior, he acknowledged the Arab as his equal. All non-Muslims were excluded from the Ottoman army. But the Arab soldiers and officers served side by side with Turks and Kurds. The Arab officer class, educated in Turkish school, served in military and civil capacities on the same terms as the Turks. There was no derogating distinction between the Turk and the Arab, and there was nothing to prevent the Arab from rising to the highest rank in the Ottoman services. Not only politically but even socially the Arab was treated as his equal by the Turk and Arabs married Turkish wives and Turks married Arab wives. Ought not the Arabs to have been satisfied with this Islamic brotherhood of Arabs

and Turks based on fraternity, liberty and equality? Say what one may, the Arabs were not satisfied. Arab nationalism broke the bonds of Islam and fought against his fellow Muslim, the Turk, for its independence. It won, but Turkey was completely dismantled.

As to Czechoslovakia, she began with the recognition that both the Czechs and the Slovaks were one people. Within a few years, the Slovaks claimed to be a separate nation. They would not even admit that they were a branch of the same stock as the Czechs. Their nationalism compelled the Czechs to recognize the fact that they were a distinct people. The Czechs sought to pacify the nationalism of the Slovaks by drawing a hyphen as a mark indicating distinctness. In place of Czechoslovakia they agreed to have Czecho-Slovakia. But even with the hyphen the Slovak nationalism remained discontented. The act of autonomy was both, a hyphen separating them from the Czechs as well as a link joining them with the Czechs. The hyphen as making separation was welcome to the Slovaks but as making a link with the Czechs was very irksome to them. The Slovaks accepted the autonomy with its hyphen with great relief and promised to be content and loyal to the state. But evidently this was only a matter of strategy. They did not accept it as an ultimate end. They accepted it because they thought that they could use it as a vantage ground for destroying the hyphen which was their main aim and convert autonomy into independence. The nationalism of the Slovaks was not content with a hyphen. It wanted a bar in place of the hyphen. Immediately the hyphen was introduced, they began their battle to replace the hyphen between the Czechs and the Slovaks by a bar. They did not care what means they should employ. Their nationalism was so wrong-headed and so intense that when they failed they did not hesitate to call the aid of the Germans.

Thus a deeper study of the disruption of Turkey and Czechoslovakia shows that neither local autonomy nor the bond of religion is sufficient to withstand the force of nationalism, once it is set on the go.

This is a lesson which the Hindus will do well to grasp. They should ask themselves : if the Greek, Balkan and Arab nationalism has blown up the Turkish State and if Slovak nationalism has caused the

dismantling of Czechoslovakia, what is thereto prevent Muslim nationalism from disrupting the Indian State? If experience of other countries teaches that this is the inevitable consequence of pent-up nationalism, why not profit by their experience and avoid the catastrophe by agreeing to divide India into Pakistan and Hindustan? Let the Hindus take the warning that if they refuse to divide India into two before they launch on their career as a free people, they will be sailing in those shoal waters in which Turkey, Czechoslovakia and many others have foundered. If they wish to avoid shipwreck in mid-ocean, they must lighten the draught by throwing overboard all superfluous cargo. They will ease the course of their voyage considerably if they—to use the language of Prof. Toynbee—reconcile themselves to making jetsam of less cherished and more combustible cargo.

V

Will the Hindus really lose if they agree to divide India into two, Pakistan and Hindus'?

With regard to Czechoslovakia it is instructive to note the real feelings of its government on the loss of their territory caused by the Munich Pact. They were well expressed by the Prime Minister of Czechoslovakia in his message to the people of Czechoslovakia. In it he said ⁴⁸[f.48] :—

“Citizens and soldiers.... I am living through the hardest hour of my life; I am carrying out the most painful task, in comparison with which death would be easy. But precisely because I have flight and because I know under what conditions a war is won, must tell you frankly... that the forces opposed to us at this moment compel us to recognize their superior strength and to act accordingly....

"In Munich four European Great Powers met and decided to demand of us the acceptance of new frontiers, according to which the German areas of our State would be taken away. We had the choice between desperate and hopeless defence, which would have meant the sacrifice not only of the adult generation but also of women and children, and the acceptance of conditions which in their ruthlessness, and because they were imposed by pressure without war, have no parallel in history.

We desired to make a contribution to peace; we would gladly have made it But not by any means in the way it has been fenced upon us.

“But we were abandoned, and were alone.... Deeply moved, all your leaders considered, together with the army and the President of the Republic, all the possibilities which remained. *They recognized that in choosing between narrower frontiers and the death of the nation it was their sacred duty to save the life of our people, so that we may not emerge weakened from these terrible limes, and so that we may remain certain that our nation will gather itself together again, as it has done so often in the past. Let us all see that our State re-establishes itself soundly within its new frontiers, and that its population is assured of a new life of peace and fruitful labour.* With your help we shall succeed. We rely upon you, and you have confidence in us.”

It is evident that the Czechs refused to be led by the force of historic sentiment. They were ready to have narrower frontiers and a smaller Czechoslovakia to the ultimate destruction of their people.

With regard to Turkey the prevalent view was the one that was expressed in 1853 by the Czar Nicholas I, during a conversation with British Ambassador in St. Petersburg in which he said”We have on our hand a sick man—a very sick man He may suddenly die upon our hands.”From that day the imminent decease of Turkey, the sick man of Europe was awaited by all his neighbours. The shedding of the territories was considered as the convulsions of a dying man who is alleged to have breathed his last by affixing his signature to the Treaty of Sevres.

Is this really a correct view to take of Turkey in the process of dissolution? It is instructive to note the comments of Arnold Toynbee on this view. Referring to the Czar's description of Turkey as the sick man who may suddenly die, he says ⁴⁹[f.49]:

“In this second and more sensational part of his diagnosis Czar Nicholas went astray because he did not understand the nature of the symptoms. If a person totally ignorant of natural history stumbled upon a snake in course of shedding its skin, he would pronounce dogmatically that the creature could not possible recover. He could point out that

when a man (or other mammal) has the misfortune to lose his skin, he is never known to survive. Yet while it is perfectly true that the leopard cannot change his spots nor the Ethiopian his skin, a wider study would have informed our amateur naturalist that a snake can do both and does both habitually. Doubtless, even for the snake, the process is awkward and uncomfortable. He becomes temporarily torpid, and in this condition he is dangerously at the mercy of his enemies. Yet, if he escapes the kites and crows until his metamorphosis is complete, he not only recovers his health but renews his youth with the replacement of his mortal coils. This is the recent experience of the Turk, and 'moulting snake' is better simile than sick man for a description of his distemper."

In this view, the loss of her possessions by Turkey is the removal of an anomalous excrescence and the gain of a new skin. Turkey is certainly homogeneous and has no fear of any disruption from within.

The Muslim areas are an anomalous excrescence on Hindustan and Hindustan is an anomalous excrescence on them. Tied together they will make India the sick man of Asia. Welded together they will make India a heterogeneous unit. If Pakistan has the demerit of cutting away parts of India, it has also the merit of introducing harmony in place of conflict.

Severed into two, each becomes a more homogeneous unit. The homogeneity of the two areas is obvious enough. Each has a cultural unity. Each has a religious unity. Pakistan has a linguistic unity. If there is no such unity in Hindustan, it is possible to have it without any controversy as to whether the common language should be Hindustani, Hindi or Urdu. Separated, each can become a strong and well-knit state. India needs a strong Central Government. But it cannot have it so long as Pakistan remains a part of India. Compare the structure of the Federal Government as embodied in the Government of India Act, 1935, and it will be found, that the Central Government as constituted under it is an effete ramshackle thing with very little life in it.⁵⁰[f.50] As has already been pointed out, this weakening of the Central Government is brought about by the desire to placate the Muslim Provinces who wish to be independent of the authority of the Central

Government on the ground that the Central Government is bound to be predominantly Hindu in character and composition. When Pakistan comes into being these considerations can have no force. Hindustan can then have a strong Central Government and a homogeneous population, which are necessary elements for the stability of the state and neither of which will be secured unless there is severance of Pakistan from Hindustan.

Chapter XI : Communal aggression

PART IV

PAKISTAN AND THE MALAISE

The Hindu-Muslim problem has tow aspects to it. In its first aspect, the problem that presents itself is the problem of two separate communities facing each other and seeking adjustment of their respective right and privileges. In its other aspect, the problem is the problem of the reflex influences which this separation and conflict produces upon each of them. In the course of the foregoing discussion we have looked at the project of Pakistan in relation to the first of the aspects of the Hindu-Muslim

problem. We have not examined the project of Pakistan in relation to the second aspect of that problem. Yet, such an examination is necessary because that aspect of the Hindu-Muslim problem is not unimportant. It is a very superficial if not an incomplete view to stop with the problem of the adjustment of their claims. It cannot be overlooked that their lot is cast together as such they have to participate in a course of common activity whether they like it or not. And if in this common activity they face each other as two combatants do, then their actions and reactions are worth study, for they affect both and produce a state of affairs from which if it is a deceased state, the question of escape must be faced. A study of the situation shows that the actions and reactions have produced a malaise which exhibits itself in three ways :(1) Social Stagnation, (2) Communal Aggression, and (3) National Frustration of Political 'Destiny. This malaise is a grave one. Will Pakistan be a remedy for the malaise? Or, will it aggravate the malaise? The following chapters are devoted to the consideration of these questions.

CHAPTER X

SOCIAL STAGNATION

I

The social evils which characterize the Hindu Society, have been well known. The publication of *Mother India* by Miss Mayo gave these evils the widest publicity. But while *Mother India* served the purpose of exposing the evils and calling their authors at the bar of the world to answer for their sins, it created the unfortunate impression throughout the world that while the Hindus were grovelling in the mud of these social evils and were conservative, the Muslims in India were free from them, and as compared to the Hindus, were a progressive people. That, such an impression should prevail, is surprising to those who know the Muslim Society in India at close quarters.

One may well ask if there is any social evil which is found among the Hindus and is not found among the Muslims?

Take child-marriage. The Secretary of the Anti-Child-marriage Committee, constituted by the All-India Women's Conference,

published a bulletin which gives the extent of the evil of child-marriage in the different communities in the country. The figures which were taken from the Census Report of 1931 areas follows :—

TABLE

MARRIED FEMALES AGED 0-15 PER 1000 FEMALES OF THAT AGE

	Hin dus	Musl ims	Jai ns	Sik hs	Chris tians
1881	208	153	18 9	170	33
1891	193	141	17 2	143	37
1901	186	131	16 4	101	38
1911	184	123	13 0	88	39
1921	170	III	11 7	72	32
2931	199	186	12 5	80	43

Can the position among the Musalmans so far as child-marriage goes, be considered better than the position among the Hindus?

Take the position of women. It is insisted by Muslims that the legal rights given to Muslim women, ensure them a greater measure of independence than allowed to other Eastern women, for example, Hindu women, and are in excess of the rights given to women in some

Western countries. Reliance is placed on some of the provisions of the Muslim Law.

Firstly, it is said the Muslim Law does not fix any age for marriage, and recognizes the right of a girl to marry any time. Further, except where the marriage is celebrated by the father or the grandfather, a Muslim girl, if given in marriage in childhood, has the power to repudiate her marriage on attaining puberty.

Secondly, it is held out that marriage among the Musalmans is a contract. Being a contract, the husband has a right to divorce his wife and the Muslim Law has provided ample safeguards for the wife which, if availed of, would place the Muslim wife on the same footing as the husband in the matter of divorce. For, it is claimed that the wife under the Muslim Law can, at the time of the marriage, or even thereafter in some cases, enter into a contract by which she may under certain circumstances obtain a divorce.

Thirdly, the Mahomedan Law requires that a wife can claim from her husband, by way of consideration for the surrender of her person, a sum of money or other property—known as her "dower". The dower may be fixed even after marriage and if no amount is fixed, the wife is entitled to proper dower. The amount of dower is usually split into two parts, one is called "prompt" which is payable on demand, and the other "deferred" which is payable on dissolution of marriage by death or divorce. Her claim for dower will be treated as a debt against the husband's estate. She has complete dominion over her dower which is intended to give her economic independence. She can remit it or she can appropriate the income of it as she pleases.

Granting all these provisions of law in her favour, the Muslim woman is the most helpless person in the world. To quote an Egyptian Muslim leader :—

"Islam has set its seal of inferiority upon her, and given the sanction of religion to social customs which have deprived her of the full opportunity for self-expression and development of personality."

No Muslim girl has the courage to repudiate her marriage, although it may be open to her on the ground that she was a child and that it was brought about by persons other than her parents. No Muslim wife will think it proper to have a clause entered into her marriage contract reserving her the right to divorce. In that event, her fate is "once married, always married." She cannot escape the marriage tie, however irksome it may be. While she cannot repudiate the marriage, the husband can always do it without having to show any cause. Utter the word "*Tallak*" and observe continence for three weeks and the woman is cast away. The only restraint on his caprice is the obligation to pay dower. If the dower has already been remitted, his right to divorce is a matter of his sweet will.

This latitude in the matter of divorce destroys that sense of security which is so fundamental for a full, free and happy life for a woman. This insecurity of life, to which a Muslim woman is exposed, is greatly augmented by the right of polygamy and concubinage, which the Muslim Law gives to the husband.

Mahomedan Law allows a Muslim to marry four wives at a time. It is not unoften said that this is an improvement over the Hindu Law which places no restriction on the number of wives a Hindu can have at any given time. But it is forgotten that in addition to the four legal wives, the Muslim Law permits a Mahomedan to cohabit with his female slaves. In the case of female slaves nothing is said as to the number. They are allowed to him without any restriction whatever and without any obligation to marry them.

No words can adequately express the great and many evils of polygamy and concubinage and especially as a source of misery to a Muslim woman. It is true that because polygamy and concubinage are sanctioned, one must not suppose they are indulged in by the generality of Muslims; still the fact remains that they are privileges which are easy for a Muslim to abuse to the misery and unhappiness of his wife. Mr. John J. Pool, no enemy of Islam, observes

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_1¹:—

"This latitude in the matter of divorce is very greatly taken advantage of by some Mohamedans. Slohart, commenting on this subject in his book, *Islam, and its Founder*, says: 'Some Mohamodans make a habit of continually changing their wives. We read of young men who have had twenty and thirty wives, a new one every three months: and thus it comes about that women are liable to be indefinitely transferred from one man to another, obliged to accept a husband and a home whenever they can find one, or in case of destitution, to which divorce may have driven them, to resort to other more degrading means of living. Thus while keeping the strict letter of the law, and possessing only one or certainly not more than four wives, unscrupulous characters may yet by divorce obtain in a lifetime as many wives as they please.

"In another way also a Mohammedan may really have more than four wives, and yet keep within the law. This is by means of living with concubines, which the Koran expressly permits. In that *sura* which allows four wives, the words are added, 'of the slaves which ye shall have acquired.' Then *in* the 70th *suru*. it is revealed that it is no sin to live with slaves. The very words are: 'The slaves which their right hands possess, as to them they shall be blameless.' At the present day, as in days past, in multitudes of Mohamedan homes, slaves are found; as Muir says, in his *Life of Mahomet* 'so long as this unlimited permission of living with their female slaves continues, it cannot be expected that there will be any hearty attempt to put a stop to slavery in Mohamedan countries.' Thus the Koran, in this matter of slavery, is the enemy of the mankind. And women, as usual, are the greater sufferers.'

Take the caste system. Islam speaks of brotherhood. Everybody infers that Islam must be free from slavery and caste. Regarding slavery nothing needs to be said. It stands abolished now by law. But while it existed much of its support was derived from Islam and Islamic countries.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm -_msocom_2](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan%20or%20the%20Partition%20of%20India%20PART%20IV.htm_-_msocom_2)² While the prescriptions by the Prophet regarding the just and humane treatment of slaves contained in the

Koran are praiseworthy, there is nothing whatever in Islam that lends support to the abolition of this curse. As Sir W. Muir has well said
³mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_3 :—

"...rather, while lightening, lie riveted the fetter.... There is no obligation on a Muslim to release his slaves. ..."

But if slavery has gone, caste among Musalmans has remained. As an illustration one may take the conditions prevalent among the Bengal Muslims. The Superintendent of the

Census for 1901 for the Province of Bengal records the following interesting facts regarding the Muslims of Bengal :—

“The conventional division of the Mahomedans into four tribes— Sheikh, Saiad, Moghul and Pathan—has very little application to this Province (Bengal). The Mahomedans themselves recognize two main social divisions, (1) Ashraf or Sharaf and (2) Ajlaf. Ashraf means ' noble ' and includes all undoubted descendants of foreigners and converts from high caste Hindus. All other Mahomedans including the occupational groups and all converts of lower ranks, are known by the contemptuous terms, ' Ajlaf , ' wretches ' or ' mean people ': they are also called Kamina or Itar, ' base ' or Rasil, a corruption of Rizal, ' worthless '. In some places a third class, called Arzal or ' lowest of all ', is added. With them no other Mahomedan would associate, and they are forbidden to enter the mosque to use the public burial ground.

"Within these groups there are castes with social precedence of exactly the same nature as one finds among the Hindus.

' 1. *Ashraf* or better class Mahomedans.

(1) Saiads.

(2) Sheikhs.

(3) Pathans.

(4) Moghul.

(5) Mallik.

(6) Mirza.

II. *Ajlaf* or lower class Mahomedans.

(1)(1) Cultivating Sheikhs, and others who were originally Hindus but who do not belong to any functional group, and have not gained admittance to the Ashraf Community, e.g. Pirali and Thakrai.

(2) Darzi, Jolaha, Fakir, and Rangrez.

(3) Barhi, Bhalhiara, Chik, Churihar, Dai, Dhawa, Dhunia, Gaddi, Kalal, Kasai, Kula Kunjara, Laheri, Mahifarosh, Mallah, Naliya, Nikari.

(4) Abdal, Bako, Bediya, Bhal, Chamba, Dafali, Dhobi, Hajjam, Mucho, Nagarchi, Nal, Panwaria, Madaria, Tunlia.

III. *Arzal* or degraded class. Bhanar, Halalkhor, Hijra, Kasbi, Lalbegi, Maugia, Mchlar."

The Census Superintendent mentions another feature of the Muslim social system, namely, the prevalence of the "panchayat system." He states :—

"The authority of the panchayat extends to social as well as trade matters and... marriage with people of other communities is one of offences of which the governing body takes cognizance. The result is that these groups are often as strictly endogamous as Hindu castes. The prohibition on inter-marriage extends to higher as well as to lower castes, and a Dhuina, for example, may marry no one but a Dhuina. If this rule is transgressed, the offender is at once hauled up before the panchayat and ejected ignominiously from his community. A member of one such group cannot ordinarily gain admission to another, and he retains the designation of the community in which he was born even if he abandons its distinctive occupation and takes to other means of livelihood.... thousands of Jolahas are butchers, yet they are still known as Jolahas."

Similar facts from other Provinces of India could be gathered from their respective Census Reports and those who are curious may refer to them. But the facts for Bengal are enough to show that the Mahomedans observe not only caste but also untouchability.

There can thus be no manner of doubt that the Muslim Society in India is afflicted by the same social evils as afflict the Hindu Society. Indeed, the Muslims have all the social evils of the Hindus and something more. That something more is the compulsory system of *purdah* for Muslim women.

As a consequence of the *purdah* system a segregation of the Muslim women is brought about. The ladies are not expected to visit the outer rooms, verandahs or gardens, their quarters are in the back-yard. All of them, young and old, are confined in the same room. No male servant can work in their presence. A woman is allowed to see only her sons, brothers, father, uncles and husband, or any other near relation who may be admitted to a position of trust. She cannot go even to the mosque to pray and must wear *burka* (veil) whenever she has to go out. These *burka* women walking in the streets is one of the most hideous sights one can witness in India. Such seclusion cannot but have its deteriorating effects upon the physical constitution of Muslim women. They are usually victims to anaemia, tuberculosis and pyorrhoea. Their bodies are deformed, with their backs bent, bones protruded, hands and feet crooked. Ribs, joints and nearly all their bones ache. Heart palpitation is very often present in them. The result of this pelvic deformity is untimely death at the time of delivery. *Purdah* deprives Muslim women of mental and moral nourishment. Being deprived of healthy social life, the process of moral degeneration must and does set in. Being completely secluded from the outer world, they engage their minds in petty family quarrels with the result that they become narrow and restricted in their outlook.

They lag behind their sisters from other communities, cannot take part in any outdoor activity and are weighed down by a slavish mentality and an inferiority complex. They have no desire for knowledge, because they are taught not to be interested in anything outside the four walls of the

house. *Purdah* women in particular become helpless, timid, and unfit for any fight in life. Considering the large number of *purdah* women among Muslims in India, one can easily understand the vastness and seriousness of the problem of *purdah*

⁴ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_4

The physical and intellectual effects of *purdah* are nothing as compared with its effects on morals. The origin of *purdah* lies of course in the deep-rooted suspicion of sexual appetites in both sexes and the purpose is to check them by segregating the sexes. But far from achieving the purpose, *purdah* has adversely affected the morals of Muslim men. Owing to *purdah* a Muslim has no contact with any woman outside those who belong to his own household. Even with them his contact extends only to occasional conversation. For a male there is no company of and no commingling with the females except those who are children or aged. This isolation of the males from females is sure to produce bad effects on the morals of men. It requires no psychoanalyst to say that a social system which cuts off all contact between the two sexes produces an unhealthy tendency towards sexual excesses and unnatural and other morbid habits and ways.

The evil consequences of *purdah* are not confined to the Muslim community only. It is responsible for the social segregation of Hindus from Muslims which is the bane of public life in India. This argument may appear far fetched and one is inclined to attribute this segregation to the unsociability of the Hindus rather than to *purdah* among the Muslims. But the Hindus are right when they say that it is not possible to establish social contact between Hindus and Muslims because such contact can only mean contact between women from one side and men from the other ⁵ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_5

Not that *purdah* and the evils consequent thereon are not to be found among certain sections of the Hindus in certain parts of the country. But the point of distinction is that among the Muslims, *purdah* has a religious sanctity which it has not with the Hindus. *Purdah* has deeper

roots among the Muslims than it has among the Hindus and can only be removed by facing the inevitable conflict between religious injunctions and social needs. The problem of *purdah* is a real problem with the Muslims—apart from its origin—which it is not with the Hindus. Of any attempt by the Muslims to do away with it, there is no evidence.

There is thus a stagnation not only in the social life but also in the political life of the Muslim community of India. The Muslims have no interest in politics as such. Their predominant interest is religion. This can be easily seen by the terms and conditions that a Muslim constituency makes for its support to a candidate fighting for a seat. The Muslim constituency does not care to examine the programme of the candidate. All that the constituency wants from the candidate is that he should agree to replace the old lamps of the masjid by supplying new ones at his cost, to provide a new carpet for the masjid because the old one is torn, or to repair the masjid because it has become dilapidated. In some places a Muslim constituency is quite satisfied if the candidate agrees to give a sumptuous feast and in other if he agrees to buy votes for so much a piece. With the Muslims, election is a mere matter of money and is very seldom a matter of social programme of general improvement. Muslim politics takes no note of purely secular categories of life, namely, the differences between rich and poor, capital and labour, landlord and tenant, priest and layman, reason and superstition. Muslim politics is essentially clerical and recognizes only one difference, namely, that existing between Hindus and Muslims. None of the secular categories of life have any place in the politics of the Muslim community and if they do find a place—and they must because they are irrepressible—they are subordinated to one and the only governing principle of the Muslim political universe, namely, religion.

II

The existence of these evils among the Muslims is distressing enough. But far more distressing is the fact that there is no organized movement of social reform among *the* Musalmans of India on a scale sufficient to bring about their eradication. The Hindus have their social evils. But there is this relieving feature about them—namely, that some of them

are conscious of their existence and a few of them are actively agitating for their removal. The Muslims, on the other hand, do not realize that they are evils and consequently do not agitate for their removal. Indeed, they oppose any change in their existing practices. It is noteworthy that the Muslims opposed the Child-Marriage Bill brought in the Central Assembly in 1930, whereby the age for marriage of a girl was raised to 14 and of a boy to 18 on the ground that it was opposed to the Muslim canon law. Not only did they oppose the bill at every stage but that when it became law they started a campaign of Civil Disobedience against that Act. Fortunately the Civil Disobedience campaign of the Muslims against the Act did not swell and was submerged in the Congress Civil Disobedience campaign which synchronized with it. But the campaign only proves how strongly the Muslims are opposed to social reform.

The question may be asked why are the Muslims opposed to social reform?

The usual answer given is that the Muslims all over the world are an unprogressive people. This view no doubt accords with the facts of history. After the first spurts of their activity the scale of which was undoubtedly stupendous leading to the foundations of vast empires—the Muslims suddenly fell into a strange condition of torpor, from which they never seem to have become awake. The cause assigned for this torpor by those, who have made a study of their condition, is said to be the fundamental assumption made by all Muslims that Islam is a world religion, suitable for all people, for all times and for all conditions. It has been contended that :—

"The Musalman, remaining faithful to his religion, has not progressed; he has remained stationary in a world of swiftly moving modern forces. It is, indeed, one of the salient features of Islam that it immobilizes in their native barbarism, the races whom it enslaves. It is fixed in a crystallization, inert and impenetrable. It is unchangeable; and political, social or economic changes have no repercussion upon it.

“Having been taught that outside Islam there can be no safety;

outside its law no truth and outside its spiritual message there is no happiness, the Muslim has become incapable of conceiving any other condition than his own, any other mode of thought than the Islamic thought. He firmly believes that he has arrived at an unequalled pitch of perfection; that he is the sole possessor of true faith, of the true doctrine, the true wisdom ; that he alone is in possession of the truth—no relative truth subject to revision, but absolute truth.

“The religious law of the Muslims has had the effect of imparting to the very diverse individuals of whom the world is composed, a unity of thought, of feeling, of ideas, of judgement.”

It is urged that this uniformity is deadening and is not merely imparted to the Muslims, but is imposed upon them by a spirit of intolerance which is unknown anywhere outside the Muslim world for its severity and its violence and which is directed towards the suppression of all rational thinking which is in conflict with the teachings of Islam. As Renan observes ⁶[f.6]:—

“Islam is a close union of the spiritual and the temporal; it is the reign of a dogma, it is the heaviest chain that humanity has ever borne.... Islam has its beauties as a religion;... But to the human reason Islamism has only been injurious. The minds that it has shut from the light were, no doubt, already closed in their own internal limits; but it has persecuted free thought, I shall not say more violently than other religions, but more effectually. It has made of the countries that it has conquered 9 closed field to the rational culture of the mind. What is, in fact -essentially distinctive of the Musalman is his hatred of science, his persuasion that research is useless, frivolous, almost impious—the natural sciences, because they are attempts at rivalry with God; the historical sciences, because they apply to times anterior to Islam, they may revive ancient heresies. Renan concludes by saying:—

"Islam, in treating science as an enemy, is only consistent, but it is a dangerous thing to be consistent. To its own misfortune Islam has been successful. By slaying science it has slain itself; and is condemned in the world to a complete inferiority."

This answer though obvious, cannot be the true answer. If it were the true answer, how are we to account for the stir and ferment that is going on in all Muslim countries outside India, where the spirit of inquiry, the spirit of change and the desire to reform are noticeable in every walk of life. Indeed, the social reforms which have taken place in Turkey have been of the most revolutionary character. If Islam has not come in the way of the Muslims of these countries, why should it come in the way of the Muslims of India? There must be some special reason for the social and political stagnation of the Muslim community in India.

What can that special reason be? It seems to me that the reason for the absence of the spirit of change in the Indian Musalman is to be sought in the 'peculiar position he occupies in India. He is placed in a social environment which is predominantly Hindu. That Hindu environment is always silently but surely encroaching upon him. He feels that it is demusalmanizing him. As a protection against this gradual weaning away he is led to insist on preserving everything that is Islamic without caring to examine whether it is helpful or harmful to his society. Secondly, the Muslims in India are placed in a political environment which is also predominantly Hindu. He feels that he will be suppressed and that political suppression will make the Muslims a depressed class. It is this consciousness that he has to save himself from being submerged by the Hindus socially and-politically, which to my mind is the primary cause why the Indian Muslims as compared with their fellows outside are backward in the matter of social reform. Their energies are directed to maintaining a constant struggle against the Hindus for seats and posts in which there is no time, no thought and no room for questions relating to social reform. And if there is any, it is all overweighed and suppressed by the desire, generated by pressure of communal tension, to close the ranks and offer a united front to the menace of the Hindus and Hinduism by maintaining their socio-religious unity at any cost.

The same is the explanation of the political stagnation in the Muslim community of India. Muslim politicians do not recognize secular categories of life as the basis of their politics because to them it means the weakening of the community in its fight against the Hindus. The

poor Muslims will not join the poor Hindus to get justice from the rich. Muslim tenants will not join Hindu tenants to prevent the tyranny of the landlord. Muslim labourers will not join Hindu labourers in the fight of labour against capital. Why? The answer is simple. The poor Muslim sees that if he joins in the fight of the poor against the rich, he may be fighting against a rich Muslim. The Muslim tenant feels that if he joins in the campaign against the landlord, he may have to fight against a Muslim landlord. A Muslim labourer feels that if he joins in the onslaught of labour against capital, he will be injuring a Muslim mill-owner. He is conscious that any injury to a rich Muslim, to a Muslim landlord or to a Muslim mill-owner, is a disservice to the Muslim community, for it is thereby weakened in its struggle against the Hindu community.

How Muslim politics has become perverted is shown by the attitude of the Muslim leaders to the political reforms in the Indian States. The Muslims and their leaders carried on a great agitation for the introduction of representative government in the Hindu State of Kashmir. The same Muslims and their leaders are deadly opposed to the introduction of representative governments in other Muslim States. The reason for this strange attitude is quite simple. In all matters, the determining question with the Muslims is how it will affect the Muslims *vis-a-vis* the Hindus. If representative government can help the Muslims, they will demand it, and fight for it. In the State of Kashmir the ruler is a Hindu, but the majority of the subjects are Muslims. The Muslims fought *for* representative government in Kashmir, because representative government in Kashmir meant the transfer of power from a Hindu king to the Muslim masses. In other Muslim States, the ruler is a Muslim but the majority of his subjects are Hindus. In such States representative government means the transfer of power from a Muslim ruler to the Hindu masses, and that is why the Muslims support the introduction of representative government in one case and oppose it in the other. The dominating consideration with the Muslims is not democracy. The dominating consideration is how democracy with majority rule will affect the Muslims in their struggle against the Hindus. Will it strengthen them or will it weaken them? If democracy weakens them, they will not

have democracy. They will prefer the rotten state to continue in the Muslim States rather than weaken the Muslim ruler in his hold upon his Hindu subjects.

The political and social stagnation in the Muslim community can be explained by one and only one reason. The Muslims think that the Hindus and Muslims must perpetually struggle; the Hindus to establish their dominance over the Muslims and the Muslims to establish their historical position as the ruling community—that in this struggle the strong will win, and to ensure strength they must suppress or put in cold storage everything which causes dissension in their ranks.

If the Muslims in other countries have undertaken the task of reforming their society and the Muslims of India have refused to do so, it is because the former are free from communal and political clashes with rival communities, while the latter are not.

III

It is not that this blind spirit of conservatism which does not recognize the need of repair to the social structure has taken hold of the Muslims only. It has taken hold of the Hindus also. The Hindus at one time did recognize that without social efficiency no permanent progress in other fields of activity was possible, that, owing to the mischief wrought by evil customs Hindu Society was not in a state of efficiency and that ceaseless efforts must be made to eradicate these evils. It was due to the recognition of this fact that the birth of the National Congress was accompanied by the foundation of the Social Conference. While the Congress was concerned with defining the weak points in the political organisation of the country, the Social Conference was engaged in removing the weak points in the social organisation of the Hindu Society. For some time, the Congress and the Conference worked as two wings of one common body and held their annual sessions in the same pandal. But soon the two wings developed into two parties, a Political Reform Party and a Social Reform Party, between whom raged fierce controversy. The Political Reform Party supported the National Congress and the Social Reform Party supported the Social Conference.

The two bodies became two hostile camps. The point at issue was whether social reform should precede political reform. For a decade the forces were evenly balanced and the battle was fought without victory to either side. It was, however, evident that the fortunes of the Social Conference were ebbing fast. The gentlemen who presided over the sessions of the Social Conference lamented that the majority of the educated Hindus were for political advancement and indifferent to social reform and that while the number of those who attended the Congress was very large and the number who did not attend but who sympathized with it even larger, the number of those who attended the Social Conference was very much smaller. This indifference, this thinning of its ranks was soon followed by active hostility from the politicians, like the late Mr. Tilak. In course of time, the party in favour of political reform won and the Social Conference vanished and was forgotten,⁷ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_7 With it also vanished from the Hindu Society the urge for social reform. Under the leadership of Mr. Gandhi, the Hindu Society, if it did not become a political mad-house, certainly became mad after politics. Non-co-operation, Civil Disobedience, and the cry for Swaraj took the place which social reform once had in the minds of the Hindus. In the din and dust of political agitation, the Hindus do not even know that there are any evils to be remedied. Those who are conscious of it, do not believe that social reform is as important as political reform, and when forced to admit its importance argue that there can be no social reform unless political power is first achieved. They are so eager to possess political power that they are impatient even of propaganda in favour of social reform, as it means so much time and energy deducted from political propaganda. A correspondent of Mr. Gandhi put the point of view of the Nationalists very appropriately, if bluntly, when he wrote ⁸[f.8] to Mr. Gandhi, saying:—

“Don't 'you think that it is impossible to achieve any great reform without winning political power? The present economic structure has got to be tackled? No reconstruction is possible without political reconstruction and I am afraid all this talk of polished and unpolished rice, balanced diet and so on and so forth is mere moonshine.”

The Social Reform Party, led by Ranade, died leaving the field to the Congress. There has grown up among the Hindus another party which is also a rival to the Congress. It is the Hindu Maha Sabha. One would expect from its name that it was a body for bringing about the reform of Hindu Society. But it is not. Its rivalry with the Congress has nothing to do with the issue of social reform *vs.* political reform. Its quarrel with the Congress has its origin in the pro-Muslim policy of the Congress. It is organized for the protection of Hindu rights against Muslim encroachment. Its plan is to organize the Hindus for offering a united front to the Muslims. As a body organized to protect Hindu rights it is all the time engaged in keeping an eye on political movements, on seats and posts. It cannot spare any thought for social reform. As a body keen on bringing about a united front of all Hindus, it cannot afford to create dissensions among its elements which would be the case if it undertook to bring about social reforms. For the sake of the consolidation of the Hindu rank and file, the Hindu Maha Sabha is ready to suffer all social evils to remain as they are. For the sake of consolidation of the Hindus, it is prepared to welcome the Federation as devised by the Act of 1935 in spite of

its many iniquities and defects. For the same purpose, the Hindu Maha Sabha favours the retention of the Indian States, with their administration as it is. 'Hands off the Hindu States' has been the battle-cry of its President. This attitude is stranger than that of the Muslims. Representative government in Hindu States cannot do harm to the Hindus. Why then should the President of the Hindu Maha Sabha oppose it? Probably because it helps the Muslims, whom he cannot tolerate.

IV

To what length this concern for the conservation of their forces can lead the Hindus and the Musalmans cannot be better illustrated than by the debates on the Dissolution of Muslim Marriage Act VIII of 1939 in the Central Assembly. Before 1939, the law was that apostasy of a male or a female married under the Muslim law *ipso facto* dissolved the marriage with the result that if a married Muslim woman changed her

religion, she was free to marry a person professing her new religion. This was the rule of law enforced by the courts, throughout India at any rate, for the last 60 years.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_9⁹

This law was annulled by Act VIII of 1939, section 4 of which reads as follows:—

“The renunciation of Islam by a married Muslim woman or her conversion to a faith other than Islam shall not by itself operate to dissolve her marriage:

Provided that after such renunciation or conversion the woman shall be entitled to obtain a decree for the dissolution of marriage on any of the grounds mentioned in section 2:

Provided further that the provision of this section shall not apply to a woman converted to Islam from some other faith who re-embraces her former faith.”

According to this Act, the marriage of a married Muslim woman is not dissolved by reason of her conversion to another religion. All that she gets is a right of divorce. It is very intriguing to find that section 2 does not refer to conversion or apostasy as a ground for divorce. The effect of the law is that a married Muslim woman has no liberty of conscience and is tied for ever to her husband whose religious faith may be quite abhorrent to her.

The grounds urged in support of this change are well worth attention. The mover of the Bill, Quazi Kazmi, M.L.A. adopted a very ingenious line of argument in support of the change. In his speech ¹⁰[f.10] on the motion to refer the Bill he said:—

“Apostasy was considered by Islam, as by any other religion, as a great crime, almost amounting to a crime against the State. It is not novel for the religion of Islam to have that provision. If we look up the older Acts of any nation, we will find that similar provision also exists in other Codes as well. For the male a severer punishment was awarded, that of

death, and for females, only the punishment of imprisonment was awarded. This main provision was that because it was a sin, it was a crime, it was to be punished, and the woman was to be deprived of her status as wife. It was not only this status that she lost, but she lost all her suit us in society; she was deprived of her property and civil rights as well. But we find that as early as 1850 an Act was passed here, called the Caste Disabilities Removal Act of 1850, Act XXI of 1850.....

“... by this Act, the forfeiture of civil rights that could be imposed on a woman on her apostasy has been taken away. She can no longer be subjected to any forfeiture of property or her right of inheritance or anything of the kind. The only question is that the Legislature has come to her help, it has given her a certain amount of liberty of thought, some kind of liberty of religion to adopt any faith she likes, and has removed the forfeiture clause from which she could suffer, and which was a restraint upon her changing the faith. The question is how far we are entitled after that to continue placing the restriction on her status as a wife. Her status as a wife is of some importance in society. She belongs to some family, she has got children, she has got other connections too. If she has got a liberal mind, she may not like to continue the same old religion. If she changes her religion, why should we, according to our modern ideas, inflict upon her a further penalty that she will cease to be the wife of her husband. I submit, in these days when we are advocating freedom of thought and freedom of religion, when we are advocating inter-marriages between different communities, it would be inconsistent for us to support a provision that a mere change of faith or change of religion would entail forfeiture of her rights as the wife of her husband. So, from a modern point of view, I have got no hesitation in saying that we cannot, in any way, support the contrary proposition that apostasy must be allowed to finish her relationship with her husband. But that is only one part of the argument.

"Section 32 of the Parsi Marriage and Divorce Act, 1936, is to the effect that a married woman may sue for divorce on the grounds 'that the defendant has ceased to be a Parsi'

“There are two things apparent from this. the first is, that it is a ground

for dissolution, not from any religious idea or religious sentiment, because, if two years have passed after the conversion and if plaintiff does not object, then either the male or female has no right to sue for dissolution of marriage. The second thing is, that it is the plaintiff who has got the complaint that the other party has changed the religion, who has got the right of getting the marriage dissolved..... In addition to this Act, as regards other communities we can have an idea of the effect of conversion on marriage tie from the Native Converts ' Marriage Dissolution Act, Act XXI of 1886 It applies to all the communities of India, and this legislation recognises the fact that mere conversion of an Indian to Christianity would not dissolve the marriage but he will have the right of going to a law court and saying that the other party, who is not converted, must perform the marital duties in respect of him..... then they are given a year's time and the judge directs that they shall have an interview with each other in the presence of certain other persons to induce them to resume their conjugal relationship, and if they do not agree, then on the ground of desecration the marriage is dissolved. The marriage is dissolved no doubt, but not on the ground of change of faith.So, every community in India has got this accepted principle that conversion to another religion cannot amount to a dissolution of marriage."

Syed Gulam Bikh Nairang, another Muslim member of the Assembly and a protagonist of the Bill, was brutally frank. In support of the principle of the Bill he said ¹¹[f.11] :—

“For a very long lime the courts in British India have held without reservation and qualification that under all circumstances apostasy automatically and immediately puts an end to the married slate without any judicial proceedings, any decree of court, or any other ceremony. That has been the position which was taken up by the Courts. Now, there are three distinct views of *Hanafi jurists* on the point. One view which is attributed to the Bokhara jurists was adopted and even that not in its entirety but in what I may call a mutilated and maimed condition. What that Bokhara view is has been already stated by Mr. Kazmi and some other speakers. The Bokhara jurists say that marriage

is dissolved by apostasy. In fact, I should be more accurate in saying— I have got authority for that—that it is, according to the Bokhara view, not dissolved but suspended. The marriage is suspended but the wife is then kept in custody or confinement till she repents and embraces Islam again, and then she is induced to marry the husband, whose marriage was only suspended and not put an end to or cancelled. The second view is that on apostasy a married Muslim woman ceases to be the wife of her husband but becomes his bond woman. One view, which is a sort of corollary to this view, is that she is not necessarily the bond woman of her ex-husband but she becomes the bond woman of the entire Muslim community and anybody can employ her as a bond woman. The third view, that of the Ulema of Samarkand and Balkh, is that the marriage tie is not affected by such apostasy and that the woman still continues to be the wife of the husband. These are the three views. A portion of the first view, the Bokhara view, was taken hold of by the Courts and rulings after rulings were based on that portion.

“This House is well aware that it is not only in this solitary instance that judicial error is sought to be corrected by legislation, but in many other cases, too, there have been judicial errors or conflicts of judicial opinion or uncertainties and vagueness of law. Errors of judicial view are being constantly corrected by legislation. In this particular matter there has been an error after error and a tragedy of errors. To show me those rulings is begging the question. Surely, it should be realized that it is no answer to my Bill that because the High Courts have decided against me, I have no business to come to this House and ask it to legislate this way or that way.”

Having regard to the profundity of the change, the arguments urged in support of it were indeed very insubstantial. Mr. Kazmi failed to realize that if there was a difference between the divorce law relating to Parsis, Christians and Muslims, once it is established that the conversion is genuine, the Muslim law was in advance of the Parsi and the Christian law and instead of making the Muslim law retrograde, the proper thing ought to have been to make the Parsi and the Christian law progress.

Mr. Nairang did not stop to inquire that, if there were different schools of thought among the Muslim jurists, whether it was not more in consonance with justice to adopt the more enlightened view which recognized the freedom of the Muslim woman and not to replace it by the barbaric one which made her a bonds-woman.

Be that as it may, the legal arguments had nothing to do with the real motive underlying the change. The real motive was to put a stop to the illicit conversion of women to alien faiths, followed by immediate and hurried marriages with some one professing the faith she happened to have joined, with a view to locking her in the new community and preventing her from going back to the community to which she originally belonged. The conversion of Muslim woman to Hinduism and of Hindu woman to Islam looked at from a social and political point of view cannot but be fraught with tremendous consequences. It means a disturbance in the numerical balance between the two communities. As the disturbance was being brought about by the abduction of women, it could not be overlooked. For woman is at once the seed-bed of and the hothouse for nationalism in a degree that man can never be.¹²

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_12 These conversions of women and their subsequent marriages were there-fore regarded, and rightly, as a series of depredations practised by Hindus against Muslims and by Muslims against Hindus with a view to bringing about a change in their relative numerical strength. This abominable practice of woman-lifting had become as common as cattle-lifting and, with its obvious danger to communal balance, efforts had to be made to stop it. That this was the real reason behind this legislation can be seen from the two provisions to section 4 of the Act. In proviso I the Hindus concede to the Musalmans that if they convert a woman who was originally a Muslim she will remain bound to her former Muslim husband notwithstanding her conversion. By proviso 2 the Muslims concede to the Hindus that if they convert a Hindu married woman and she is married to a Musalman, her marriage will be deemed to be dissolved if she renounces Islam and she will be free to return to her Hindu fold. Thus what underlies the change in law is the desire to keep the numerical balance and it is for

this purpose that the rights of women were sacrificed.

There are two other features of this malaise which have not been sufficiently noted.

One such feature is the jealousy with which one of them looks upon any reform by the other in its social system. If the effect of such reform is to give it increase of strength for resistance, it at once creates hostility.

Swami Shradhanand relates a very curious incident which well illustrates this attitude. Writing in the *Liberator*¹³[f.13] his recollections, he refers to this incident. He says :—

“Mr. Ranade was there. . . . to guide the Social Conference to which the title of ' National ' was for the first and last time given. It was from the beginning a Hindu Conference in all walks of life. The only Mahomedan delegate who joined the National Social Conference was a Mufti Saheb of Barreily. Well! The conference began when the resolution in favour of remarriage of child-widows was moved by a Hindu delegate and by me. Sanalanist Pandits opposed it. Then the Mufti asked permission to speak. The laic Baijnalh told Mufti Saheb that as the resolution concerned the Hindus only, he need not speak. At this the Mufti flared up.

“There was no loophole left for the President and Mufti Saheb was allowed to have his say. Mufti Saheb's argument was that as Hindu Shastras did not allow remarriage, it was a sin to press for it. Again, when the resolution about the reconversion of those who had become Christians and Musalmans came up. Mufti Saheb urged that when a man abandoned the Hindu religion he ought not to be allowed to come back.”

Another illustration would be the attitude of the Muslims towards the problem of the Untouchables. The Muslims have always been looking at the Depressed Classes with a sense of longing and much of the jealousy between Hindus and Muslims arises out of the fear of the latter that the former might become stronger by assimilating the Depressed Classes. In 1909 the Muslims took the bold step of suggesting that the Depressed

Classes should not be enrolled in the census as Hindus. In 1923 Mr. Mahomed Ali in his address as the President of the Congress went much beyond the position taken by the Muslims in 1909. He said:—

"The quarrels about ALAMS and PIPAL trees and musical processions are truly childish ; but there is one question which can easily furnish a ground for complaint of unfriendly action if communal activities are not amicably adjusted. It is the question of the conversion of the Suppressed Classes, if Hindu society does not speedily absorb them. The Christian missionary is already busy and no one quarrels with him. But the moment some Muslim Missionary Society is organized for the same purpose there is every likelihood of an outcry in the Hindu press. It has been suggested to me by an influential and wealthy gentleman who is able to organize a Missionary Society on a large scale for the conversion of the Suppressed Classes, that it should be possible to reach a settlement with leading Hindu gentlemen and divide the country into separate areas where Hindu and Muslim missionaries could respectively work, each community preparing for each year, or longer unit of time if necessary, an estimate of the numbers it is prepared to absorb or convert. These estimates would, of course, be based on the number of workers and funds each had to spare, and tested by the actual figures of the previous period. In this way each community would be free to do the work of absorption and conversion, or rather, of reform without chances of collision with one another. I cannot say in what light my Hindu brethren will take it and I place this suggestion tentatively in all frankness and sincerity before them. All that I say for myself is that I have seen the condition of the ' Kali Praja ' in the Baroda Slate and of the Gonds in the Central Provinces and I frankly confess it is a reproach to us all. If the Hindus will not absorb them into their own society, others will and must, and then the orthodox Hindu loo will cease to treat them as untouchables. Conversion seems to transmute them by a strong alchemy. But does this not place a premium upon conversion?"

The other feature is the "preparations" which the Muslims and Hindus are making against each other without abatement. It is like a race in

armaments between two hostile nations. If the Hindus have the Benares University, the Musalmans must have the Aligarh University. If the Hindus start Shudhi movement, the Muslims must launch the Tablig movement. If the Hindus start Sangathan, the Muslims must meet it by Tanjim. If the Hindus have the R. S. S.,¹⁴[f.14] the Muslims must reply by organizing the Khaksars. This race in social armament and equipment is run with the determination and apprehension characteristic of nations which are on the war path. The Muslims fear that the Hindus are subjugating them. The Hindus feel that the Muslims are engaged in reconquering them. Both appear to be preparing for war and each is watching the "preparations" of the other.

Such a state of things cannot but be ominous. It is a vicious circle. If the Hindus make themselves stronger, the Musalmans feel menaced. The Muslims endeavour to increase their forces to meet the menace and the Hindus then do the same to equalize the position. As the preparations proceed, so does the suspicion, the secrecy, and the plotting. The possibilities of peaceful adjustment are poisoned at the source and precisely because everyone is fearing and preparing for it that "war" between the two tends to become inevitable. But in the situation in which they find themselves, for the Hindus and the Muslims not to attend to anything, except to prepare themselves to meet the challenge of each other, is quite natural. It is a struggle for existence and the issue, that counts, is survival and not the quality or the plane of survival.

Two things must be said to have emerged from this discussion. One is that the Hindus and the Muslims regard each other as a menace. The second is that to meet this menace, both have suspended the cause of removing the social evils with which they are infested. Is this a desirable state of things? If it is not how then can it be ended?

No one can say that to have the problems of social reform put aside is a desirable state of things. Wherever there are social evils, the health of the body politic requires that they shall be removed before they become the symbols of suffering and injustice. For it is the social and economic evils which everywhere are the parent of revolution or decay. Whether

social reform should precede political reform or political reform should precede social reform may be a matter of controversy. But there can be no two opinions on the question that the sole object of political power is the use to which it can be put in the cause of social and economic reform. The whole struggle for political power would be a barren and bootless effort if it was not justified by the feeling that, because of the want of political power, urgent and crying social evils are eating into the vitals of society and are destroying it. But suppose the Hindus and the Muslims somehow come into possession of political power, what hope is there that they will use it for purposes of social reform? There is hardly any hope in that behalf. So long as the Hindus and the Muslims regard each other as a menace, their attention will be engrossed in preparations for meeting the menace. The exigencies of a common front by Musalmans against Hindus and by Hindus against Musalmans generate—and is bound to generate—a conspiracy of silence over social evils. Neither the Muslims nor the Hindus will attend to them even though the evils may be running sores and requiring immediate attention, for the simple reason that they regard every measure of social reform as bound to create dissension and division and thereby weaken the ranks when they ought to be closed to meet the menace of the other community. It is obvious that so long as one community looks upon the other as a menace there will be no social progress and the spirit of conservatism will continue to dominate the thoughts and actions of both.

How long will this menace last? It is sure to last as long as the Hindus and Muslims are required to live as members of one country under the mantle of a single constitution. For, it is the fear of the single constitution with the possibility of the shifting of the balance—for nothing can keep the balance at the point originally fixed by the constitution—which makes the Hindus a menace to the Muslims and the Muslims a menace to the Hindus. If this is so, Pakistan is the obvious remedy. It certainly removes the chief condition which makes for the menace. Pakistan liberates both the Hindus and the Muslims from the fear of enslavement of and encroachment against each other. It removes, by providing a separate constitution for each, Pakistan and

Hindustan, the very basis which leads to this perpetual struggle for keeping a balance of power in the day-to-day life and frees them to take in hand those vital matters of urgent social importance which they are now forced to put aside in cold storage, and improve the lives of their people, which after all is the main object of this fight for Swaraj.

Without some such arrangement, the Hindus and the Muslims will act and react as though they were two nations, one fearing to be conquered by the other. Preparations for aggression will 'always have precedence over social reform, so that the social stagnation which has set in must continue. This is quite natural and no one need be surprised at it. For, as Bernard Shaw pointed out:—

“A conquered nation is like a man with cancer ; he can think of nothing else A healthy nation is as unconscious of its nationality as a healthy man of his bones. But if you break a nation's nationality it will think of nothing else but getting it set again. It will listen to no reformer, to no philosopher, to no preacher until the demand of the nationalist is granted. It will attend to no business, however vital, except the business of unification and liberation.”

Unless there is unification of the Muslims who wish to separate from the Hindus and unless there is liberation of each from the fear of domination by the other, there can be no doubt that this malaise of social stagnation will not be set right.

CHAPTER XI

COMMUNAL AGGRESSION

Even a superficial observer cannot fail to notice that a spirit of aggression underlies the Hindu attitude towards the Muslim and the Muslim attitude towards the Hindu. The Hindu's spirit of aggression is a new phase which he has just begun to cultivate. The Muslim's spirit of aggression is his native endowment and is ancient as compared with that of the Hindu. It is not that the Hindu, if given time, will not pick up and overtake the Muslim. But as matters stand to-day, the Muslim in this exhibition of the spirit of aggression leaves the Hindu far behind.

Enough has been said about the social aggression of the Muslims in the chapter dealing with communal riots. It is necessary to speak briefly of the political aggression of the Muslims. For this political aggression has created a malaise which cannot be overlooked.

Three things are noticeable about this political aggression of the Muslims.

First is the ever-growing catalogue of the Muslim's political demands. Their origin goes back to the year 1892.

In 1885 the Indian National Congress was founded. It began with a demand for good government as distinguished from self-government. In response to this demand the British Government felt the necessity of altering the nature of the Legislative Councils, Provincial and Central, established under the Act of 1861. In that nascent stage of Congress agitation, the British Government did not feel called upon to make them fully popular. It thought it enough to give them a popular colouring. Accordingly the British Parliament passed in 1892 what is called the Indian Councils Act. This Act is memorable for two things. It was in this Act of 1892 that the British Government for the first time accepted the semblance of the principle of popular representation as the basis for the constitution of the Legislatures in India. It was not a principle of election. It was a principle of nomination, only it was qualified by the requirement that before nomination a person must be selected by important public bodies such as municipalities, district boards, universities and the associations of merchants, etc. Secondly, it was in the legislatures that were constituted under this Act that the principle of separate representation for Musalmans was for the first time introduced in the political constitution of India.

The introduction of this principle is shrouded in mystery. It is a mystery because it was introduced so silently and so stealthily. The principle of separate representation does not find a place in the Act. The Act says nothing about it. It was in the directions—but not in the Act—issued to those charged with the duty of framing regulations as to the classes and interests to whom representation was to be given that the

Muslims were named as a class to be provided for.

It is a mystery as to who was responsible for its introduction. This scheme of separate representation was not the result of any demand put forth by any organized Muslim association. In whom did it then originate? It is suggested ¹[f.15]⁵ that it originated with the Viceroy, Lord Dufferin, who, as far back as the year 1888, when dealing with the question of representation in the Legislative Councils, emphasized the necessity that in India representation will have to be, not in the way representation is secured in England, but representation by interests. Curiosity leads to a further question, namely, what could have led Lord Dufferin to propose such a plan? It is suggested ¹⁶[f.16] that the idea was to wean ¹⁷[f.17] away the Musalmans from the Congress which had already been started three years before. Be that as it may, it is certain that it is by this Act that separate representation for Muslims became, for the first time, a feature of the Indian Constitution. It should, however, be noted that neither the Act nor the Regulations conferred any right of selection upon the Muslim community, nor did the Act give the Muslim community a right to claim a fixed number of seats. All that it did was to give the Muslims the right to separate representation.

Though, to start with, the suggestion of separate representation came from the British, the Muslims did not fail to appreciate the social value of separate political rights with the result that when in 1909 the Muslims came to know that the next step in the reform of the Legislative Councils was contemplated, they waited of their own accord in deputation ¹⁸[f.18] upon the Viceroy, Lord Minto, and placed before him the following demands :—

- (i) (i) Communal representation in accordance with their numerical strength, social position and local influence, on district and municipal boards.
- (ii) (ii) An assurance of Muhammadan representation on the governing bodies of Universities.
- (iii) (iii) Communal representation on provincial councils, election being by special electoral colleges composed of Muhammadan landlords, lawyers, merchants, and representatives

of other important interests, University graduates of a certain standing and members of district and municipal boards.

- (iv) (iv) The number of Muhammadan representatives in the Imperial Legislative Council should not depend on their numerical strength, and Muhammadans should never be in an ineffective minority. They should be elected as far as possible (as opposed to being nominated), election being by special Muhammadan colleges composed of landowners, lawyers, merchants, members of provincial councils, Fellows of Universities, etc.

These demands were granted and given effect to in the Act of 1909. Under this Act the Muhammadans were given (1) the right to elect their representatives, (2) the right to elect their representatives by separate electorates, (3) the right to vote in the general electorates as well, and (4) the right to weightage in representation. The following table shows the proportion of representation- secured to the Muslims in the Legislatures by the Act of 1909 and the Regulations made thereunder :—

Composition of Legislative Councils under the act of 1909 showing Communal Proportion between Hindus and Muslims

As sa m	30	25	1	1 1	9	2	-	9	4	1	1 4	25

The provisions were applied to all Provinces except the Punjab and the C. P. It was not applied to the Punjab because such special protection was considered unnecessary for the Musalmans of the Punjab and it was not applied to the C. P. because it had no Legislative Council at the time.²⁰[f.20]

In October 1916, 19 members of the Imperial Legislative Council presented the Viceroy (Lord Cheirnsford) a memorandum demanding a reform of the Constitution. Immediately the Muslims came forward with a number of demands on behalf of the Muslim community. These were :—

- (i) (i) The extension of the principle of separate representation to the Punjab and the C. P.
- (ii) (ii) Fixing the numerical strength of the Muslim representatives in the Provincial and Imperial Legislative Councils.
- (iii) (iii) Safeguards against legislation affecting Muslims, their religion and religious usages.

The negotiations following upon these demands resulted in agreement between the Hindus and the Muslims which is known as the Lucknow Pact. It may be said to contain two clauses. One related to legislation,

under which it was agreed that :—

“No Bill, nor any clause thereof, nor a resolution introduced by a nonofficial affecting one or other community (which question is to be determined by the members of that community in the Legislative Council concerned) shall be' proceeded with, if three-fourths of the members of that community in the particular Council, Imperial and Provincial, oppose the Bill or any clause thereof or the resolution.”

The other clause related to the proportion of Muslim representation. With regard to the Imperial Legislative Council the Pact provided :—

"That one-third of the Indian elected members should be Muhammadans, elected by separate electorates in the several Provinces, in the proportion, as nearly as might be, in which they were represented on the provincial legislative councils by separate Muhammadan electorates."

In the matter of Muslim representation in the Provincial Legislative Councils it was agreed that the proportion of Muslim representation should be as follows ²¹ [f.21] :—

Percentage of elected Indian
Members to the Provincial
Legislature

Punjab	50
United Provinces	30
Bengal	40
Bihar and Orissa	25
Central Province	15
Madras	15

Bombay	33
--------	----

While allowing this proportion of seats to the Muslims, the right to second vote in the general electorates which they had under the arrangement of 1909 was taken away.

The Lucknow Pact was adversely criticized by the Montagu Chelmsford Report. But being an agreement between the parties Government did not like to reject it and to substitute in its place its own decision. Both clauses of the agreement were accepted by Government and embodied in the Government of India Act of 1919. The clause relating to legislation was given effect to but in a different form. Instead of leaving it to the members of the Legislature to oppose it, it was provided' ²²[f.22] ' that legislation affecting the religion or religious rites and usages of any class of British subjects in India shall not be introduced at any meeting of either Chamber of the Indian Legislature without the previous sanction of the Governor-General.

The clause relating to representation was accepted by the Government, though in the opinion of the Government the Punjab and Bengal Muslims were not fairly treated.

The effect of these concessions can be seen by reference to the composition of the Legislatures constituted under the Government of India Act, 1919, which was as follows :—

Composition of the Legislatures

	Sta- tu- tor y Mi	Elected Members	Nominat ed Members	Ac tu- al T ota

----------	--	--	--	--	--

This table does not show quite clearly the weightage obtained by the Muslims under the Lucknow Pact. It was worked out by the Government of India in their despatch ²⁵ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_25 on the Report of Franchise Committee of which Lord Southborough was the Chairman. The following table is taken from that despatch which shows that the Muslims got a weightage under the Lucknow Pact far in excess of what Government gave them in 1909.

	Muslim percenta ge of Populati on	Percentage of Muslim seats Proposed	Perc entage (2) of (1)
	(1)	(2)	(3)
Bengal	52.6	40	76

Provinces			
-----------	--	--	--

In 1927 the British Government announced the appointment of the Simon Commission to examine the working of the Indian Constitution and to suggest further reforms. Immediately the Muslims came forward with further political demands. These demands were put forth from various Muslim platforms such as the Muslim League, All-India Muslim Conference, All-Parties Muslim Conference, Jamiat-ul-Ulema and the Khilafat Conference. The demands were substantially the same. It would suffice to state those that were formulated by Mr. Jinnah ²⁶[f.26] on behalf of the Muslim League.

They were in the following terms :—

1. 1. The form of the future Constitution should be federal with residuary powers vested in the provinces.
2. 2. A uniform measure of autonomy should be granted to all provinces.
3. 3. All legislatures in the country and other elected bodies should be reconstituted on the definite principle of adequate and effective representation of minorities in every province without reducing the majority of any province to a minority or even equality.
4. 4. In the Central Legislature, Muslim representation should not be less than one-third.
5. 5. The representation of communal groups should continue to be by means of separate electorates as at present, provided that it should be open to any community at any time to abandon its separate electorate in favour of joint electorates.
6. 6. Any territorial redistribution that might at any time be necessary should not in any way affect the Muslim majority in the Punjab, Bengal and North-West Province.
7. 7. Full religious liberty, that is, liberty of belief, worship, observances, propaganda, association and education should be guaranteed to all communities.
8. 8. No bill or resolution, or any part thereof, should be passed in

any legislature or any other elected body if three-fourths of the members of any community in that particular body oppose such bill or resolution or part thereof on the ground that it would be injurious to the interests of that community or, in the alternative, such other method as may be devised or as may be found feasible and practicable to deal with such cases.

9. 9. Sind should be separated from the Bombay Presidency.

10. 10.

Reforms should be introduced in the North-West Frontier Province and Baluchistan on the same footing as in other provinces.

11. 11.

II. Provision should be made in the Constitution giving the Muslims an adequate share along with other Indians in all the Services of the State and in self-governing bodies, having due regard to the requirements of efficiency.

12. 12.

The constitution should embody adequate safeguards for the protection of Muslim religion, culture and personal law, and the promotion of Muslim education, language, religion, personal laws, Muslim charitable institutions, and for their due share in grants-in-aid given by the State and by self-governing bodies.

13. 13.

No Cabinet, either Central or Provincial, should be formed without there being a proportion of Muslim Ministers of at least one-third.

14. 14.

No change to be made in the Constitution by the Central Legislature except with the concurrence of the States constituting the Indian Federation.

15. 15.

That in the present circumstances the representation of Musalmans in the different legislatures of the country and of the other elected bodies through separate electorates is inevitable, and, further, Government being pledged not to deprive the Musalmans of this right, it cannot be taken away without their consent, and so long as the Musalmans are not satisfied that their rights and interests are

safeguarded in the manner specified above (or herein) they would in no way consent to the establishment of joint electorates with or without conditions.

Note:—The question of excess representation of Musalmans over and above their population in the provinces where they are in minority to be considered hereafter.

This is a consolidated statement of Muslim demands. In it there are some which are old, and some which are new. The old ones are included because the aim is to retain the advantages accruing therefrom. The new ones are added in order to remove the weaknesses in the Muslim position. The new ones are five in number: (1) Representation in proportion to population to Muslim majorities in the Punjab and Bengal, (2) One-third representation to Muslims in the cabinets both Central and Provincial, (3) Adequate representation of Muslims in the Services, (4) Separation of Sind from the Bombay Presidency and the raising of N.-W. F. P. and Baluchistan to the status of self-governing provinces, and (5) Vesting of residuary powers in the provinces instead of in the Central Government.

These new demands are self-explanatory except perhaps I, 4 and 5. The object of demands I and 4 was to place, in four provinces, the Muslim community in a statutory majority where it had only communal majority, as a force counteracting the six provinces in which the Hindu community happened to be in a majority. This was insisted upon as a guarantee of good treatment by both the communities of its minorities. The object of demand No. 5 was to guarantee Muslim rule in Sind, N.-W. F. P., the Punjab and Bengal. But a Muslim majority rule in these Muslim Provinces, it was feared, would not be effective if they remained under the control of the Central Government which could not but be in the hand of the Hindus. To free the Muslim Provinces from the control of the Hindu Government at the Centre was the object for which demand No. 5 was put forth.

These demands were opposed by the Hindus. There may not be much in this. But what is significant is that they were also rejected by the Simon Commission. The Simon Commission, which was by no means

unfriendly to the Muslims, gave some very cogent reasons for rejecting the Muslim demands. It said ²⁷[f.27] :—

“This claim goes to the length of seeking to preserve the full security for representation now provided for Muslims in these six provinces and at the same time to enlarge in Bengal and the Punjab the present proportion of seats secured to the community by separate electorates to figures proportionate to their ratio of population. This would give Muhammadans a fixed and unalterable majority of the general constituency seats in both provinces. We cannot go so far. The continuance of the present scale of weightage in the six provinces could not—in the absence of a new general agreement between the communities—equitably be combined with so great a departure from the existing allocation in Bengal and the Punjab.

“It would be unfair that Muhammadans should retain the very considerable weightage they enjoy in the six provinces, and that there should at the same time be imposed, in face of Hindu and Sikh opposition, a definite Muslim majority in the Punjab and Bengal unalterable by any appeal to the electorate.....”

'Notwithstanding the opposition of the Hindus and the Sikhs and the rejection by the Simon Commission, the British Government when called upon to act as an arbiter granted the Muslims all their demands old and new.

By a Notification ²⁸[f.28] in the *Gazette of India* 25th January 1932 the Government of India, in exercise of the powers conferred by sub-section (2) of section 52 A of the Government of India Act, 1916, declared that the N.-W. F. Province shall be treated as a Governor's Province. ²⁹[f.29] By an Order in Council, issued under the provisions contained in sub-section (1) of section 289 of the Government of India Act of 1935, Sind was separated from Bombay as from 1st April 1936 and declared to be a Governor's Province to be known as the province of Sind. By the Resolution issued by the Secretary of State for India and published on 7th July 1934 the Muslim share in the public services was fixed at 25 per cent. of all appointments Imperial and Provincial. With

regard to residuary powers, it is true that the Muslim demand that they should be vested in the Provinces was not accepted. But in another sense the Muslim demand in this respect may be deemed to have been granted. The essence of the Muslim demand was that the residuary powers should not be vested in the Centre, which, put in different language, meant that they should not be in the hands of the Hindus. This is precisely what is done by section 104 of the Government of India Act, 1935, which vests the residuary powers in the Governor-General to be exercised in his discretion. The demand for 33 1/3 per cent. representation in the Cabinets, Central and Provincial, was not given effect to by a legal provision in the Act. The right of Muslims to representation in the Cabinets was however accepted by the British Government and provision for giving effect to it was made in the Instruments of Instructions issued to the Governors and Governor-General. As to the remaining demand which related to a statutory majority in the Punjab and Bengal, the demand was given effect to by the Communal Award. True, a statutory majority in the whole House has not been given to the Muslims and could not be given having regard to the necessity for providing representation to other interests. But a statutory majority as against Hindus has been given to the Muslims of the Punjab and Bengal without touching the weightages obtained by the Muslim minorities under the Lucknow Pact.

These political grants to the Muslim community by the British Government lacked security and it was feared by the Muslims that pressure might be brought upon them or upon His Majesty's Government by the Hindus to alter the terms of the grants to the prejudice of the Muslims. This fear was due to two reasons. One was the success of Mr. Gandhi in getting that part of the Award which related to the Depressed Classes revised by means of the pressure of a fast unto death.³⁰[f.30] Some people encouraged by this success actually agitated for revision of that part of the Award which related to the Muslims and some Muslims were even found to be in favour of entering into such negotiations³¹[f.31]. This alarmed the Muslim community. The other reason for the fear of revision of the terms of the grants arose out of certain amendments in the clauses in the Government of

India Bill which were made in the House of Commons permitting such revision under certain conditions. To remove these fears and to give complete security to the Muslims against hasty and hurried revision of the grants, His Majesty's Government authorized the Government of India to issue the following communiqué ³²[f.32] :—

“It has come to the notice of His Majesty's Government that the impression is prevalent that what is now Clause 304 of the Government of India Bill (numbered 285 in the Bill as first introduced and 299 in the Bill as amended by the Commons in Committee) has been amended during the passage of the Bill through the Commons in such a way as to give His Majesty's Government unfettered power to alter at any time they may think fit the constitutional provisions based upon what is commonly known as Government's Communal Award.

“His Majesty's Government think it desirable to give the following brief explanation both of what they consider is the practical effect of Clause 304 in relation to any change in the Communal Award and of their own policy in relation to any such change.

-”Under this Clause there is conferred on the Governments and Legislatures in India, after the expiry of ten years, the right of initiating a proposal to modify the provisions and regulating various matters relating to the constitution of the Legislature, including such questions as were covered by the Communal Award.

”The Clause also imposes on the Secretary of State the duty of laying before Parliament from the Governor-General or the Governor as the case may be his opinion as to the proposed amendment and in particular as to the effect which it would have on the interests of any minority and of informing Parliament of any action which he proposed to take.

”Any change in the constitutional provisions resulting from this procedure can be effected by an Order in Council, but this is subject to the proviso that the draft of the proposed Order has been affirmatively approved by both Houses of Parliament by a resolution. The condition is secured by Clause 305 of the Bill.

“Before the expiry of ten years there is no similar constitutional initiative residing in the Governments and the Legislatures of India. Power is, however, conferred by the Clause to make such a change by an Order in Council (always with the approval of both Houses of Parliament) even before the end of ten years, but within the first ten years (and indeed subsequently, if the initiative has not come from the Legislatures of India) it is incumbent upon the Secretary of State to consult the Governments and the Legislatures of India who will be affected (unless the change is of a minor character) before any Order in Council is laid before Parliament for its approval.

“The necessity for the powers referred to in the preceding paragraph is due to such reasons as the following :—

“(a) It is impossible to foresee when the necessity may arise for amending minor details connected with the franchise and the constitution of legislatures, and for such amendment it will be clearly disadvantageous to have no method available short of a fresh amending Act of Parliament, nor is it practicable statutorily to separate such details from the more important matter such as the terms of the Communal Award;

“(b) It might also become desirable, in the event of a unanimous agreement between the communities in India, to make a modification in the provisions based on the Communal Award ; and for such an agreed change it would also be disadvantageous to have no other method available than an amending Act of Parliament.

“Within the range of the Communal Award His Majesty's Government would not propose, in the exercise of any power conferred by this Clause, to recommend to Parliament any change unless such changes had been agreed to between the communities concerned.

“In conclusion. His Majesty's Government would again emphasise the fact that none of the powers in Clause 304 can, in view of the provisions in Clause 305, be exercised unless both Houses of

Parliament agreed by an affirmative resolution."

.After taking into account what the Muslims demanded at the R. T. C. and what was conceded to them, any one could have thought that the limit of Muslim demands was reached and that the 1932 settlement was a final settlement. But, it appears that even with this the Musalmans are not satisfied. A further list of new demands for safeguarding the Muslim position seems to be ready. In the controversy that went on between Mr. Jinnah and the Congress in the year 1938, Mr. Jinnah was asked to disclose his demands which he refused to do. But these demands have come to the surface in the correspondence that passed between Pandit Nehru and Mr. Jinnah in the course of the controversy and they have been tabulated by Pandit Nehru in one of his letters to Mr. Jinnah. His tabulation gives the following items as being matters of disputes and requiring settlement ³³ [f.33]:—

- (1) The fourteen points formulated by the Muslim League in 1929.
- (2)(2) The Congress should withdraw all opposition to the Communal Award and should not describe it as a negation of nationalism.
- (3)(3) The share of the Muslims in the state services should be definitely fixed in the constitution by statutory enactment.
- (4)(4) Muslim personal law and culture should be guaranteed by statute.
- (5)(5) The Congress should take in hand the agitation in connection with the Sahidganj Mosque and should use its moral pressure to enable the Muslims to gain possession of the Mosque.
- (6)(6) The Muslims' right to call Azan and perform their religious ceremonies should not be fettered in any way.
- (7)(7) Muslims should have freedom to perform cow-slaughter.
- (8)(8) Muslim majorities in the Provinces, where such majorities exist at present, must not be affected by any territorial re-distribution or adjustments.
- (9)(9) The 'Bande Mataram' song should be given up.
- (10)(10) Muslims want Urdu to be the national language of India and they desire to have statutory guarantees that the use of Urdu shall not be curtailed or damaged.

- (11) (11) Muslim representation in the local bodies should be governed by the principles underlying the Communal Award, that is, separate electorates and population strength.
- (12) (12) The tricolour flag should be changed or alternately the flag of the Muslim League should be given equal importance.
- (13) (13) Recognition of the Muslim League as the one authoritative and representative organization of Indian Muslims.
- (14) (14) Coalition Ministries should be formed.

With this new list, there is no knowing where the Muslims are going to stop in their demands. Within one year, that is, between 1938 and 1939, one more demand and that too of a substantial character, namely 50 per cent. share in every thing, has been added to it. In this catalogue of new demands there are some which on the face of them are extravagant and impossible, if not irresponsible. As an instance, one may refer to the demand for fifty-fifty and the demand for the recognition of Urdu as the national language of India. In 1929, the Muslims insisted that in allotting seats in Legislatures, a majority shall not be reduced to a minority or equality. ³⁴

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_34 This principle, enunciated by themselves, it is now demanded, shall be abandoned and a majority shall be reduced to equality. The Muslims in 1929 admitted that the other minorities required protection and that they must have it in the same manner as the Muslims. The only distinction made between the Muslims and other minorities was as to the extent of the protection. The Muslims claimed a higher degree of protection than was conceded to the other minorities on the ground of their political importance. The necessity and adequacy of protection for the other minorities the Muslims never denied. But with this new demand of 50 per cent. the Muslims are not only seeking to reduce the Hindu majority to a minority but they are also cutting into the political rights of the other minorities. The Muslims are now speaking the language of Hitler and claiming a place in the sun as Hitler has been doing for Germany. For their demand for 50 per cent. is nothing but a counterpart of the German claims for *Deutschland Uber Alles and Lebenraum for Themselves*, irrespective of what happens to other

minorities.

Their claim for the recognition of Urdu as the national language of India is equally extravagant. Urdu is not only not spoken all, over India but is not even the language of all the Musalmans of India. Of the 68 millions of Muslims ³⁵[f.35] only 28 millions speak Urdu. The proposal of making Urdu the national language means that the language of 28 millions of Muslims is to be imposed particularly upon 40 millions of Musalmans or generally upon 322 millions of Indians.

It will thus be seen that every time a proposal for the reform of the constitution comes forth, the Muslims are there, ready with some new political demand or demands. The only check upon such indefinite expansion of Muslim demands is the power of the British Government, which must be the final arbiter in any dispute between the Hindus and the Muslims. Who can confidently say that the decision of the British will not be in favour of the Muslims if the dispute relating to these new demands was referred to them for arbitration? The more the Muslims demand the more accommodating the British seem to become. At any rate, past experience shows that the British have been inclined to give the Muslims more than what the Muslims had themselves asked. Two such instances can be cited.

One of these relates to the Lucknow Pact. The question was whether the British Government should accept the Pact. The authors of the Montagu-Chelmsford Report were disinclined to accept it for reasons which were very weighty. Speaking of the weightages granted to the Muslims by the Lucknow Pact, the authors' of the Joint Report observed ³⁶ [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_36:—](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_36:)

“Now a privileged position of this kind is open to the objection, that if any other community here after makes good a claim to separate representation, it can be satisfied only by deducting the non-Muslim seats, or by a rateable deduction from both Muslim and non-Muslim ; and Hindu and Muslim opinion are not likely to agree which process should be adopted. While, therefore, for reasons that we explain

subsequently we assent to the maintenance of separate representation for Muhammadans, we are bound to reserve our approval of the particular proposals set before us, until we have ascertained what the effect upon other interests will be, .. and have made fair provision for them."

Notwithstanding this grave flaw in the Lucknow Pact, the Government of India, in its despatch referred to above, recommended that the terms of the Pact should be improved in so far as it related to the Muslims of Bengal. Its reasons make a strange reading. It argued that :—

“The Muhammadan representation which they the authors of the Pact] propose for Bengal is manifestly insufficient It is questionable whether the claims of the Muhammadan population of Eastern Bengal were adequately pressed when the Congress-League compact was in the making. They are conspicuously a backward and impoverished community. The repartition of the presidency in 1912 came as a severe disappointment to them, and we should be very loath to fail in seeing that their interests are now generously secured. In order to give the Bengal Muslims a representation proportionate to their numbers, and no more, we should allot them 44 instead of 34 seats [due to them under the Pact].”

This enthusiasm for the Bengal Muslims shown by the Government of India was not shared by the British Government It felt that as the number of seats given to the Bengal Muslims was the result of an agreement, any interference to improve the bargain when there was no dispute about the genuineness of the agreement, could not but create the impression that the British Government was in some special sense and for some special reason the friend of the Muslims. In suggesting this augmentation in the seats, the Government of India forgot to take note of the reason why the Muslims of the Punjab and Bengal were not given by the Pact seats in proportion to their population. The Lucknow Pact was based upon the principle, now thrown to the winds, that a community as such was not entitled to political protection. A community was entitled to protection when it was in a minority. That

was the principle underlying the Lucknow Pact. The Muslim community in the Punjab and Bengal was not in a minority and, therefore, was not entitled to the same protection which it got in other Provinces where it was in a minority. Notwithstanding their being in a majority, the Muslims of the Punjab and Bengal felt the necessity of separate electorates. According to the principle underlying the Pact they could qualify themselves for this only by becoming a minority which they did by agreeing to a minority of seats. This is the reason why the Muslims of Bengal and the Punjab did not get the majority of seats they were entitled to on the population basis. ³⁷[f.37]

The proposal of the Government of India to give to the Bengal Muslims more than what they had asked for did not go through. But the fact that they wanted to do so remains as evidence of their inclinations.

The second occasion when the British Government as an arbiter gave the Muslims more than they asked for was when the Communal Decision was given in 1932. Sir Muhammad Shafi made two different proposals in the Minorities Sub-Committee of the R. T. C. In his speech on 6th January 1931, Sir Muhammad Shafi put forth the following proposal as a basis for communal settlement ³⁸[f.38]:—

“We are prepared to accept joint electorates on the conditions named by me : Firstly, that the rights at present enjoyed by the Musalmans in the minority Provinces should be continued to them; that in the Punjab and in Bengal they should have two joint electorates and representation on a population basis; that there should be the principle of reservation of seats coupled with Maulana Mahomed Ali's condition. ³⁹[f.39]

In his speech on 14th January 1931 before the same Committee he made a different offer. He said ⁴⁰[f.40] :—

“To-day I am authorized to make this offer : that in the Punjab the Musalmans should have through communal electorates 49 per cent. of the entire number of seats in the whole House, and should have liberty to contest the special constituencies which it is proposed to create in that Province : so far as Bengal is concerned that Musalmans should

have through communal electorates 46 percent, representation in the whole House, and should have the liberty to contest the special constituencies which it is proposed to create in that Province; in so far as the minority Provinces are concerned, the Musalmans should continue to enjoy the weightage which they have at present through separate electorates, similar weightage to be given to our Hindu brethren in Sind, and to our Hindu and Sikh brethren in the North-West Frontier Province. If at any time hereafter two-thirds of the representatives of any community in any Provincial Legislative Council or in the Central Legislative Council desire to give up communal electorates and to accept joint electorates then there after the system of joint electorates should come into being."

The difference between the two proposals is clear."Joint electorates, if accompanied by statutory majority. If statutory majority was refused, then a minority of seats with separate electorates."The British Government took statutory majority from the first demand and separate electorates from the second demand and gave the Muslims both when they had not asked for both.

The second thing that is noticeable among the Muslims is the spirit of exploiting the weaknesses of the Hindus. If the Hindus object to anything, the Muslim policy seems to be to insist upon it and give it up only when the Hindus show themselves ready to offer a price for it by giving the Muslims some other concessions. As an illustration of this, one can refer to the question of separate and joint electorates. The Hindus have been to my mind utterly foolish in fighting over joint electorates especially in Provinces in which the Muslims are in a minority. Joint electorates can never suffice for a basis for nationalism. Nationalism is not a matter of political nexus or cash nexus, for the simple reason that union cannot be the result of calculation of mere externals. Where two communities live a life which is exclusive and self-enclosed for five years, they will not be one, because, they are made to come together on one day in five years for the purposes of voting in an election. Joint electorates may produce the enslavement of the minor community by the major community : but by themselves they cannot

produce nationalism. Be that as it may, because the Hindus have been insisting upon joint electorates the Muslims have been insisting upon separate electorates. That this insistence is a -matter of bargain only can be seen from Mr. Jinnah's 14 points ⁴¹[f.41] and the solution ⁴²mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E1.Pakistan or the Partition of India PART IV.htm - _msocom_42 passed in the Calcutta session of the All-India Muslim League held on 30th December 1927. Therein it was stipulated that only when the Hindus agreed to the separation of Sind and to the raising of the N.-W. F. P. to the status of a self-governing Province the Musalmans would consent to give up separate electorates. ⁴³[f.43] The Musalmans evidently did not regard separate electorates as vital. They regarded them as a good *quid pro quo* for obtaining their other claims.

Another illustration of this spirit of exploitation is furnished by the Muslim insistence upon cow-slaughter and the stoppage of music before mosques. Islamic law does not insist upon the slaughter of the cow for sacrificial purposes and no Musalman, when he goes to Haj, sacrifices the cow in Mecca or Medina. But in India they will not be content with the sacrifice of any other animal. Music may be played before a mosque in all Muslim countries without any objection. Even in Afghanistan, which is not a secularized country, no objection is taken to music before a mosque. But in India the Musalmans must insist upon its stoppage for no other reason except that the Hindus claim a right to it.

The third thing that is noticeable is the adoption by the Muslims of the gangster's method in politics. The riots are a sufficient indication that gangsterism has become a settled part of their strategy in politics. They seem to be consciously and deliberately imitating the Sudeten Germans in the means employed by them against the Czechs. ⁴⁴[f.44] So long as the Muslims were the aggressors, the Hindus were passive, and in the conflict they suffered more than the Muslims did. But this is no longer true. The Hindus have learned to retaliate and no longer feel any compunction in knifing a Musalman. This spirit of retaliation bids fair to produce the ugly spectacle of gangsterism against gangsterism.

How to meet this problem must exercise the minds of all concerned. There are the simple-minded Hindu Maha Sabha patriots who believe

that the Hindus have only to make up their minds to wipe the Musalmans and they will be brought to their senses. On the other hand, there are the Congress Hindu Nationalists whose policy is to tolerate and appease the Musalmans by political and other concessions, because they believe that they cannot reach their cherished goal of independence unless the Musalmans back their demand. The Hindu Maha Sabha plan is no way to unity. On the contrary, it is a sure block to progress. The slogan of the Hindu Maha Sabha President— Hindustan for Hindus— is not merely arrogant but is arrant nonsense. The question, however, is : is the Congress way the right way? It seems to me that the Congress has failed to realize two things. The first thing which the Congress has failed to realize is that there is a difference between appeasement and settlement, and that the difference is an essential one. Appeasement means buying off the aggressor by conniving at his acts of murder, rape, arson and loot against innocent persons who happen for the moment to be the victims of his displeasure. On the other hand, settlement means laying down the bounds which neither party to it can transgress. Appeasement sets no limits to the demands and aspirations of the aggressor. Settlement does. The second thing the Congress has failed to realize is that the policy of concession has increased Muslim aggressiveness, and what is worse, Muslims interpret these concessions as a sign of defeatism on the part of the Hindus and the absence of the will to resist. This policy of appeasement will involve the Hindus in the same fearful situation in which the Allies found themselves as a result of the policy of appeasement which they adopted towards Hitler. This is another malaise, no less acute than the malaise of social stagnation. Appeasement will surely aggravate it. The only remedy for it is a settlement. If Pakistan is a settlement, it is a proposition worth consideration. As a settlement it will do away with this constant need of appeasement and ought to be welcomed by all those who prefer the peace and tranquillity of a settlement to the insecurity due to the growing political appetite shown by the Muslims in their dealings with the Hindus.

CHAPTER XII

NATIONAL FRUSTRATION

I

Suppose an Indian was asked, what is the highest destiny you wish for your country, what would be his answer? The question is important, and the answer cannot but be instructive.

There can be no doubt that other things being equal, a hundred per cent Indian, proud of his country, would say, "An integral and independent India is my ideal of India's destiny ^ It will be equally true to say that unless this destiny was accepted by both Hindus as well as Muslim, the ideal can only convey a pious wish, and can never take a concrete form. Is it only a pious wish of some or is it a goal to be pursued by all?

So far as profession of political aims goes, all parties seem to be in agreement inasmuch as all of them have declared that the goal of India's political evolution is independence. The Congress was the first to announce that it aim was to achieve political independence for India. In its Madras session, held in December 1927, the creed of the Congress was defined in a special resolution to the effect that the goal of the Indian people ⁴⁵mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_1 was complete national independence. The Hindu Maha Sabha until 1932 was content to have Responsible Government as the goal of India's political evolution. It made no change in its political creed till 1937 when in its session held at Ahmedabad it declared that the Hindu Maha Sabha believed in "Poorna Swaraj".i.e., absolute independence for India. The Muslim League declared its political creed in 1912 to be the establishment of Responsible Government in India. In 1937 it made a similar advance by changing its creed from Responsible Government to Independence and thereby brought itself in line with the Congress and the Hindu Maha Sabha.

The independence defined by the three political bodies means freedom from British Imperialism. But an agreement on freedom from the yoke of British Imperialism is not enough. There must be an agreement upon maintaining an independent India. For this, there must be an agreement that India shall not only be free and independent of the British but that her freedom and independence shall be maintained as against any other foreign power. Indeed, the obligation to maintain her freedom is more important than merely winning freedom from the British. But on this more important obligation there does not seem to be the same unanimity. At any rate, the attitude of the Muslims on this point has not been very assuring. It is obvious from the numerous utterances of Muslim leaders that they do not accept the obligation to maintain India's freedom. I give below two such utterances. In a meeting held in Lahore in 1925 Dr. Kitchlew said [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_2:—](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_2:)

“The Congress was lifeless till the Khilafat Committee put life in it. When the Khilafat Committee joined it, it did in one year what the Hindu Congress had not done in 40 years. The Congress also did the work of uplifting the seven crores of untouchables. This was purely a work for the Hindus, and yet the money of the Congress was spent on it. Mine and my Musalman brethren's money was spent on it like water. But the brave Musalmans did not mind. Then why should the Hindus quarrel with us when we Musalmans take up the Tanzim work and spend on it money that belongs neither to the Hindus nor to the Congress?”

“If we remove British rule from this country and establish Swaraj, and if the Afghans or other Muslims invade India, then we Muslims will oppose them and sacrifice all our sons in order to save the country from the invasion. But one thing I shall declare plainly. Listen, my dear Hindu brothers, listen very attentively ! If you put obstacles in the path of our . Tanzirn movement, and do not give us our rights, we shall make common cause with Afghanistan or some other Musalman power and establish our rule in this country.”

Maulana Azad Sobhani in his speech⁴⁷ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_3 made on the 27th January 1939 at Sylhet expressed sentiments which are worthy of attention. In reply to the question of a Maulana, Maulana Azad Sobhani said :— .

“If there is any eminent leader in India who is in favour of driving out the English from this country, then I am that leader. In spite of this I want that there should be no fight with the English on behalf of the Muslim League. Our big fight is with 22 crores of Hindu enemies, who constitute the majority. Only 4 1/2 crores of Englishmen have practically swallowed the whole world by becoming powerful. And if these 22 crores of Hindus who are equally advanced in learning, intelligence and wealth as in numbers, if they become powerful, then these Hindus will swallow Muslim India and gradually even Egypt, Turkey, Kabul, Mecca, Medina and other Muslim principalities, like Yajuj-Majuj (it is so mentioned in Koran that before the destruction of the world, they will appear on the earth and will devour whatever they will find).

“The English are gradually becoming weak. . . . they will go away from India in the near future. So if we do not fight the greatest enemies of Islam, the Hindus, from now on and make them weak, then they will not only establish *Ramrajya* in India but also gradually spread all over the world. It depends on the 9 crores of Indian Muslims either to strengthen or to weaken them (the Hindus). So it is the essential duty of every devout Muslim to fight on by joining the Muslim League so that the Hindus may not be established here and a Muslim rule may be established in India as soon as the English depart.

“Though the English are the enemies of the Muslims yet for the present our fight is not with the English. At first we have to come to some understanding with the Hindus through the Muslim League. Then we shall be easily able to drive out the English and establish Muslim rule in India.

“Be careful! Don't fall into the trap of Congress Maulvis ; because the

Muslim world is never safe in the hands of 22 crores of Hindu enemies.”

According to the summary of the speech given by the correspondent of the *Anand Bazar Patrika* Maulana Azad Sobhani then narrated various imaginary incidents of oppressions on Muslims in Congress provinces.

“He said that when the Congress accepted ministry after the introduction of Provincial Autonomy, he felt that Muslim interests were not safe in the hands of the Hindu-dominated Congress; but the Hindu leaders felt indifferently and so he left the Congress and joined the League. What he had feared has been put in reality by the Congress ministers. This forestalling of the future is called politics. He was, therefore, a great politician. He was again linking that before India became independent some sort of understanding had to be arrived at with the Hindus either by force or in a friendly way. Otherwise, the Hindus, who had been the slaves of the Muslims for 700 years, would enslave the Muslims.”

The Hindus are aware of what is passing in the mind of the Muslims and dread the possibility of Muslims using independence to enslave them. As a result Hindus are lukewarm towards making independence as the goal of India's political evolution. These are not the fears of those who are not qualified to judge. On the contrary, the Hindus who have expressed their apprehensions as to the wisdom of heading for independence are those who are eminently qualified by their contact with Muslim leaders to express an opinion.

Mrs. Annie Besant
saysmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_4:—

“Another serious question arises with regard to the Muhammadans of India. If the relation between Muslims and Hindus were as it was in the Lucknow days, this question would not be so urgent, though it would even then have almost certainly arisen, sooner or later, in an Independent India. But since the Khilafat agitation, things have changed and it has been one of the many injuries inflicted on India by

the encouragement of the Khilafat crusade, that the inner Muslim feeling of hatred against ' unbelievers ' has sprung up, naked and unashamed, as in the years gone by. We have seen revived, as guide in practical politics, the old Muslim religion of the sword, we have seen the dragging out of centuries of forgetfulness, the old exclusiveness, claiming the Jazirut-Arab, the island of Arabia, as a holy land which may not be trodden by the polluting foot of a non-Muslim, we have heard Muslim leaders declare that if the Afghans invaded India, they would join their fellow believers, and would slay Hindus who defended their motherland against the foe: we have been forced to see that the primary allegiance of Musalmans is to Islamic countries, not to our motherland; we have learned that their dearest hope is to establish the ' Kingdom of God ', not God as Father of the world, loving all his creatures, but as a God seen through Musalman spectacles resembling in his command through one of the prophets, as to the treatment of unbeliever—the Mosaic *JEHOVA* of the early Hebrews, when they were fighting as did the early Muslims, for freedom to follow the religion given to them by their prophet. The world has gone beyond such so-called theocracies, in which God's commands are given through a man. The claim now put forward by Musalman leaders that they must obey the laws of their particular prophet above the laws of the State in which they live, is subversive of civic order and the stability of the State; it makes them bad citizens for their centre of allegiance is outside the nation and they cannot, while they hold the views proclaimed by Maulanas Mahomed Ali and Shaukat Ali, to name the most prominent of these Muslim leaders, be trusted by their fellow citizens. If India were independent the Muslim part of the population—for the ignorant masses would follow those who appealed to them in the name of their prophet—would become an immediate peril to Indian's freedom. Allying themselves with Afghanistan, Baluchistan, Persia, Iraq, Arabia, Turkey and Egypt and with such of the tribes of Central Asia who are Musalmans, they would rise to place India under the Rule of Islam—those in ' British India ' being helped by the Muslims in Indian States—and would establish Musalman rule. We had thought that Indian Musalmans were loyal to their motherland, and indeed, we still hope that some of the educated class might strive

to prevent such a Musalman rising ; but they are too few for effective resistance and would be murdered as apostates. Malabar has taught us what Islamic rule still means, and we do not want to see another specimen of the ' Khilafat Raj ' in India. How much sympathy with the Moplas is felt by Muslims outside Malabar has been proved by the defence raised for them by their fellow believers, and by Mr. Gandhi himself, who stated that they had acted as they believed that religion taught them to act. I fear that that is true; but there is no place in a civilised land for people who believe that their religion teaches them to murder, rob, rape, burn, or drive away out of the country those who refuse to apostatise from their ancestral faiths, except in its schools, under surveillance, or in its gaols. The Thugs believed that their particular form of God commanded them to strangle people—especially travellers with money. Such ' Laws of God ' cannot be allowed to override the laws of a civilised country, and people living in the twentieth century must either educate people who hold these Middle Age views, or else exile them. Their place is in countries sharing their opinions, where they can still use such arguments against any who differ from them—as indeed, Persia and with the Parsis long ago, and the Bahaists in our own time. In fact, Muslim sects are not safe in a country ruled by orthodox Muslims. British rule in India has protected the freedom of all sects : Shiahs, Sunnis, Sufis, Bahaists live in safely under her sceptre, although it cannot protect any of them from social ostracism, where it is in a minority. Musalmans are more free under British rule, than in countries where there are Muslim rulers. In thinking of an Independent India, the menace of Muhammadan rule has to be considered.”

Similar fear was expressed by Lala Lajpatrai in a letter⁴⁹ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_5 to Mr. C. R. Das —

“There is one point more which has been troubling me very much of late and one which I want you to think carefully and that is the question of Hindu-Mohamedan unity. I have devoted most of my time during the last six months to the study of Muslim history and Muslim

Law and I am inclined to think, it is neither possible nor practicable. Assuming and admitting the sincerity of the Mohamedan leaders in the Non-cooperation movement, I think their religion provides an effective bar to anything of the kind. You remember the conversation, I reported to you in Calcutta, which I had with Hakim Ajmalkhan and Dr. Kitchlew. There is no finer Mohamedan in Hindustan than Hakimsaheb but can any other Muslim leader override the Quran? I can only hope that my reading of Islamic Law is incorrect, and nothing would relieve me more than to be convinced that it is so. But if it is right then it comes to this that although we can unite against the British we cannot do so to rule Hindustan on British lines, we cannot do so to rule Hindustan on democratic lines. What is then the remedy? I am not afraid of seven crores in Hindustan but I think the seven crores of Hindustan plus the armed hosts of Afghanistan, Central Asia, Arabia, Mesopotamia and Turkey will be irresistible. I do honestly and sincerely believe in the necessity or desirability of Hindu-Muslim unity. I am also fully prepared to trust the Muslim leaders, but what about the injunctions of the Quran and Hadis? The leaders cannot override them. Are we then doomed? I hope not. I hope learned mind and wise head will find some way out of this difficulty.”

In 1924 the editor of a Bengalee paper had an interview with the poet Dr. Rabindra Nath Tagore. The report of this interview states ⁵⁰[f.6]:—

“..... another very important factor which, according to the poet, was making it almost impossible for the Hindu-Mohamedan unity to become an accomplished fact was that the Mohamedans could not confine their patriotism to any one country.. ... The poet said that he had very frankly asked many Mohamedans whether, in the event of any Mohamedan power invading India, they would stand side by side with their Hindu neighbours to defend their common land. He could not be satisfied with the reply he got from them. He said that he could definitely state that even such men as Mr. Mahomed Ali had declared that under no circumstances was it permissible for any Mohamedan, whatever his country might be, to stand against any other Mohamedan.”

II

If independence is impossible, then the destiny acceptable to a hundred per cent. Indian as the next best would be for India to have the status of a Dominion within the British Empire. Who would be content with such a destiny? I feel certain that left to themselves the Musalmans will not be content with Dominion Status while the Hindus most certainly will. Such a statement is sure to jar on the ears of Indians and Englishmen. The Congress being loud and vociferous in its insistence of independence, the impression prevails that the Hindus are for independence and the Muslims are for Dominion Status. Those who were present at the R. T. C., could not have failed to realize how strong a hold this impression had taken of the English mind and how the claims and interests of the Hindus suffered an injury because of the twin cries raised by the Congress, namely, independence and repudiation of debts. Listening to these cries. Englishmen felt that the Hindus' were the enemies of the British and the Muslims, who did not ask either for independence or repudiation, were their friends. This impression, however true it may be in the light of the avowed plans of the Congress, is a false impression created by false propaganda. For, there can be no doubt that the Hindus are at heart for Dominion Status and that the Muslims are at heart for Independence. If proof is wanted there is an abundance of it.

The question of independence was first raised in 1921. In that year the Indian National Congress, the All-India Khilafat Conference and the All-India Muslim League held their annual sessions in the city of Ahmedabad. Each had a resolution in favour of Independence moved in its session. It is interesting to note the fate which the resolution met at the hands of the Congress, the Khilafat Conference and the Muslim League.

The President of the Congress was Hakim Ajmal Khan who acted for Mr. C. R. Das, who though duly elected could not preside owing to his arrest by Government before the session commenced. In the session of the Congress, Maulana Hasrat Mohani moved a resolution pressing for a change in the creed of the Congress. The following is the summary of

the proceedings ⁵¹[f.7] relating to the resolution :—

"Maulana Hasrat Mohani in proposing his resolution on complete independence made a long and impassioned speech in Urdu. He said, although they had been promised Swaraj last year, the redress of the Khilafat and the Punjab wrongs within a year, they had so far achieved nothing of the sort. Therefore it was no use sticking to the programme. If remaining within the British Empire or the British Commonwealth they could not have freedom, he felt that, if necessary, they should not hesitate to go out of it. In the words of Lok. Tilak ' liberty was their birth-right ', and any Government which denied this elementary right of freedom of speech and freedom of action did not deserve allegiance from the people. Home Rule on Dominion lines or Colonial Self-Government could not be a substitute to them for their inborn liberty. A Government which could clap into jail such distinguished leaders of the people as Mr. Chitta Ranjan Das, Pandit Motilal Nehru, Lala Lajpat Rai and others, had forfeited all claim to respect from the people. And since the end of the year did not bring them Swaraj nothing should prevent them from taking the only course left open to them now, that of winning their freedom free from all foreign control. The resolution reads as follows :—

“ The object of the Indian National Congress is the attainment of Swaraj or complete independence free from all foreign control by the people of India by all legitimate and peaceful means.”

After several delegates had spoken in favour of it, Mr. Gandhi came forward to oppose the resolution. In opposing the resolution, Mr. Gandhi said :—

“Friends, I have said only a few words in Hindi in connection with the proposition of Mr. Hasrat Mohani. All I want to say to you in English is that the levity with which that proposition has been taken by some of you has grieved me. It has grieved me because it shows lack of responsibility. As responsible men and women we should go back to the days of Nagpur and Calcutta and we should remember what we did only an hour ago. An hour ago we passed a resolution which actually

contemplates a final settlement of the Khilafat and the Punjab wrongs and transference of the power from the hands of the bureaucracy into the hands of the people by certain definite means. Are you going to rub the whole of that position from your mind by raising a false issue and by throwing a bombshell in the midst of the Indian atmosphere? I hope that those of you who have voted for the previous resolution, will think fifty times before taking up this resolution and voting for it. We shall be charged by the thinking portion of the world that we do not know really where we are. Let us understand, too, our limitations. Let Hindus and Musalmans have absolute, indissoluble unity. Who is here who can say today with confidence : ' Yes Hindu-Muslim unity has become an indissoluble factor of Indian Nationalism? ' Who is here who can tell me that the Parsis and the Sikhs and the Christians and the Jews and the untouchables about whom you heard this afternoon—who will tell me that those very people will not rise against any such idea? Think therefore fifty times before you take a step which will redound not to your credit, not to your advantage, but which may cause you irreparable injury. Let us first of all gather up our strength ; let us first of all sound our own depths. Let us not go into waters whose depths we do not know, and this proposition of Mr. Hasrat Mohani lands you into depths unfathomable. I ask you in all confidence to reject that proposition, if you believe in the proposition that you passed only an hour ago. The proposition now before you rubs off the whole of the effect of the proposition that you passed only a moment ago. Are creeds such simple things like clothes which a man can change at will? For creeds people die, and for creeds people live from age to age. Are you going to change the creed which with all deliberation and after great debate in Nagpur, you accepted? There was no limitation of one year when you accepted that creed. It is an extensive creed; it takes in all, the weakest and the strongest, and you will deny yourselves the privilege of Clothing the weakest amongst yourselves with protection if you accept this limited creed of Maulana Hasrat Mohani, which does not admit the weakest of your brethren. I, therefore, ask you in all confidence to reject his proposition.”

The resolution when put to vote was declared to be lost.

The session of the All-India Khilafat Conference was presided over also by Hakim Ajmal Khan. A resolution in favour of independence was also moved in the subjects committee of this Conference. What happened to the resolution is clear from the following summary of its proceedings. The report of the proceedings says ⁵²[f.8] :—

“Before the Conference adjourned at eleven in the night till the next day the President, Hakim Ajmalkhan, announced that the Subjects Committee of the Conference had, on the motion of Mr. Azad Sobhani, supported by Mr. Hasrat Mohani, by a majority resolved to ask all Mohammedans and other communities to endeavour to destroy British imperialism and secure complete independence.

“This resolution stated that whereas through the persistent policy and attitude of the British Government it cannot be expected that British Imperialism would permit the Jazirat-ul-Arab and the Islamic world to be completely free from the influence and control of non-Muslims, which means that the Khilafat cannot be secured to the extent that the Shariat demands its safety, therefore, in order to secure permanent safety of the Khilafat and the prosperity of India, it is necessary to endeavour to destroy British Imperialism. This Conference holds the view that the only way to make this effort is, for the Muslims, conjointly with other inhabitants of India, to make India completely free, and that this Conference is of opinion that Muslim opinion about Swaraj is the same, that is, complete independence, and it expects that other inhabitants of India would-also hold the same point of view.

“On the Conference resuming its sitting on the second day, December 27th, 1921, a split was found to have taken place in the camp over this resolution about independence. When Mr. Hasrat Mohani was going to move his resolution declaring as their goal, independence and the destruction of British Imperialism, objection was taken to its consideration by a member of the Khilafat Subjects Committee on the ground that according to their constitution no motion which contemplated a change in their creed could be taken as adopted, unless it was voted for in the Subjects Committee by a majority of two-third.

“The President, Hakim Ajmalkhan, upheld this objection and ruled the independence motion out of order.

“Mr. Hasrat Mohani strongly protested and pointed out that the President had disallowed a similar objection by the same member in the Subjects Committee, while he had allowed it in the open Conference. He said that the President had manoeuvred to rule his motion out of order in order to stand in their way of declaring from that Conference that their Swaraj meant complete independence.”

The President of the All-India Muslim League was Maulana Hasrat Mohani. The report of the proceedings of the League bearing on the resolution says ⁵³[f.9] :—

“The Muslim League met at 9 p.m. on 31st December 1921. After it had passed some non-contentious resolutions the President Hasrat Mohani made an announcement amidst applause that he proposed that the decision of the Subjects Committee rejecting his resolution regarding the attainment of independence and destruction of British Imperialism would be held as final and representing the opinion of the majority in the League, but that in view of the great importance of the subject he would allow a discussion on that resolution without taking any vote.

“Mr. Azad Sobhani, who had moved the resolution in the Subjects Committee, also moved it in the League. He said he believed in Hindu-Muslim unity as absolutely essential, in non-violent non-cooperation as the only way to fight their battle and Mr. Gandhi was fully deserving the dictatorship which had been invested on him by the Congress but that he also believed that British Imperialism was the greatest danger to India and the Muslim world and must be destroyed by placing before them an ideal of independence.

“Mr. Azad Sobhani was followed by several speakers who supported him in the same vein. .

“The Hon'ble Mr. Raza Ali announced that the reason for the ruling of the President was that the League did not want to take a step which

the Congress had not taken. He warned them against saying big things without understanding them and reminded the audience that India was at present not ready for maintaining liberty even if it was attained.

“He asked, who would, for instance, be their Commander-in-Chief if the British left tomorrow. (A voice, ' Enver Pasha '.)

“The speaker emphatically declared that he would not tolerate any foreigner. He wanted an Indian Commander-in-Chief.”

The question of Independence was again raised at the Congress session held in March 1923 at Coconada but with no success.

In 1924 Mr. Gandhi presiding over the Congress session held in Belgaum said:—

“In my opinion, if the British Government mean what they say and honestly help us to equality, it would be a greater triumph than a complete severance of the British connection. I would, therefore, strive for Swaraj within the Empire but would not hesitate to sever all connection if it became a necessity through Britain's own fault. I would thus throw the burden of separation on the British people.”

In 1925 Mr. C. R. Das again took up the theme. In his address to the Bengal Provincial Conference held in May of that Year he, with the deliberate object of giving a deadly blow to the idea of independence, took particular pains to show the inferiority of the idea of Independence as compared with that of Dominion Status:—

“..... Independence, to my mind, is a narrowed ideal than that of Swaraj. It implies, it is true, the negative of the dependence ; but by itself it gives us no positive ideal. I do not for a moment suggest that independence is not consistent with Swaraj. But what is necessary is not mere independence but the establishment of Swaraj. India may be independent tomorrow in the sense that the British people may leave us to our destiny but that will not necessarily give us what I understand by Swaraj. As I pointed out in my Presidential address at Gaya, India presents an interesting but a complicated problem of consolidating the many apparently conflicting elements which go to make up the Indian

people. This work of consolidation is a long process, may even be a weary process; but without this no Swaraj is possible.

“Independence, in the second place, does not give you that idea of order which is the essence of Swaraj. The work of consolidation which I have mentioned means the establishment of that order. But it be clearly understood that what is sought to be established must be consistent with the genius, the temperament and the traditions of the Indian people. To my mind, Swaraj implies, firstly, that we must have the freedom of working out the consolidation of the diverse elements of the Indian people ; secondly, we must proceed with this work on National lines, not going back two thousand years ago, but going forward in the light and in the spirit of our national genius and temperament.

“Thirdly, in the work before us, we must not be obstructed by any foreign power. What then we have to fix upon in the matter of ideal is what I call Swaraj and not mere independence which may be the negation of Swaraj. When we are asked as to what is our national ideal of freedom, the only answer which is possible to give is Swaraj. I do not like either Home Rule or Self-Government Possibly they come within what I have described as Swaraj. But my culture somehow or other is antagonistic to the word ' rule '—be it Home Rule or Foreign Rule.”

“Then comes the question as to whether this ideal is to be realised within the Empire or outside? The answer which the Congress has always given is ' within the Empire if the Empire will recognise our right ' and ' outside the Empire, if it does not '. We must have opportunity to live our life,—opportunity *for* self-realization, self-development, and self-fulfilment. The question is of living our life. If the Empire furnishes sufficient scope for the growth and development of our national life the Empire idea is to be preferred. If, on the contrary, the Empire like the Car of Jagannath crushes our life in the sweep of its imperialistic march, there will be justification for the

idea of the establishment of Swaraj outside the Empire.

"Indeed, the Empire idea gives us a vivid sense of many advantages. Dominion Status is in no sense servitude. It is essentially an alliance by consent of those who form part of the Empire for material advantages in the real spirit of co-operation. Free alliance necessarily carries with it the right of separation. Before the War it was generally believed that it is only as a great confederation that the Empire or its component parts can live. It is realised that under modern conditions no nation can live in isolation and the Dominion Status, while it affords complete protection to each constituent composing the great Commonwealth of Nations called the British Empire, secures to each the right to realise itself, develop itself and fulfil itself and therefore it expresses and implies all the elements of Swaraj which I have mentioned.

"To me the idea is specially attractive because of its deep spiritual significance. I believe in world peace, in the ultimate federation of the world ; and I think that the great Commonwealth of Nations called the British Empire—a federation of diverse races, each with its distinct life, distinct civilization, its distinct mental outlook—if properly led with statesmen at the helm is bound to make lasting contribution to the great problem that awaits the statesmen, the problem of knitting the world into the greatest federation the mind can conceive—the federation of the human race. But if only properly led with statesmen at the helm ;—for the development of the idea involves apparent sacrifice on the part of the constituent nations and it certainly involves the giving up for good the Empire idea with its ugly attribute of domination. I think it is for the good of India, for the good of the world that India should strive for freedom within the Commonwealth and so serve the cause of humanity."

Mr. Das not only insisted that Dominion Status was better than Independence but went further and got the Conference to pass the following resolution on the goal of India's political evolution:—

"1. This Conference declares that the National ideal of Swaraj involves the right of the Indian Nation to live its own life, to have the

opportunity of self-realization, self-development and self-fulfilment and the liberty to work for the consolidation of the diverse elements which go to make up the Indian Nation unimpeded and unobstructed by any outside domination.

“2. That if the British Empire recognises such right and does not obstruct the realisation of Swaraj and is prepared to give such opportunity and undertakes to make the necessary sacrifices to make such rights effective, this Conference calls upon the Indian Nation to realise its Swaraj within the British Commonwealth.”

It may be noted that Mr. Gandhi was present throughout the session. But there was no word of dissent coming from him. On the contrary, he approved of the stand taken by Mr. Das.

With these facts, who can doubt that the Hindus are for Dominion Status and the Muslims are for Independence? But if there be any doubt still remaining, the repercussions in Muslim quarters over the Nehru Committee's Report in 1928 must dissolve it completely. The Nehru Committee appointed by the Congress to frame a constitution for India accepted Dominion Status as the basis for India's constitution and rejected independence. It is instructive to note the attitude adopted by the Congress and the Muslim political organizations in the country towards the Nehru Report.

The Congress in its session held at Calcutta in 1928 passed a resolution moved by Mr. Gandhi which was in the following terms:—

“This Congress, having considered the constitution recommended by the All-Parties Committee Report, welcomes it as a great contribution towards the solution of India's political and communal problems, and congratulates the Committee on the virtual unanimity of its recommendations and, whilst adhering to the resolution relating to complete independence passed at the Madras Congress approves of the constitution drawn up by the Committee as a great step in political advance, especially as it represents the largest measure of agreement attained among the important parties in the country.

“Subject to the exigencies of the political situation this Congress will adopt the constitution in its entirety if it is accepted by the British Parliament on or before December 31, 1929, but in the event of its non-acceptance by that date or its earlier rejection. Congress will organise a non-violent non-co-operation by advising the country to refuse taxation or in such other manner as may be decided upon. Consistently with the above, nothing in this resolution shall interfere with the carrying on, in the name of the Congress, of the propaganda for complete independence.”

This shows that Hindu opinion is not in favour of Independence but in favour of Dominion. Status. Some will take exception to this statement. It may be asked what about the Congress resolution of 1927? It is true that the Congress in its Madras session held in 1927 did pass the following resolution moved by Pandit Jawaharlal Nehru:—

“This Congress declares the goal of the Indian people to be complete National Independence”.

But there is enough evidence to support the contention that this resolution did not and does not speak the real mind of the Hindus in the Congress.

The resolution came as a surprise. There was no indication of it in the speech of Dr. Ansari ⁵⁴[f.10] who presided over the 1927 session. The Chairman ⁵⁵[f.11] of the Reception Committee only referred to it in passing, not as an urgent but a contingent line of action.

There was no forethought about the resolution. It was the result of a coup and the coup was successful because of three, factors.

In the first place, there was then a section in the Congress which was opposed to the domination of Pandit Motilal Nehru and Mr. Gandhi, particularly the former. This group was led by Mr. Srinivas Iyengar who was the political rival of Pandit Motilal. They were searching for a plan which would destroy the power and prestige of Pandit Motilal and Mr. Gandhi. They knew that the only way to win people to their side was to take a more extreme position and to show that their rivals were really

moderates, and as moderation was deemed by Congressmen to be a sin, they felt that this plan was sure to succeed. They made the goal of India the battle-ground, and knowing that Pandit Motilal and Gandhi were for Dominion Status, put forth the goal of Independence. In the second place, there was a section in the Congress which was led by Mr. Vithalbhai Patel. This section was in touch with the Irish Sinn Fein party and was canvassing its help in the cause of India. The Irish Sinn Fein party was not willing to render any help unless the Indians declared that their goal was Independence. This section was anxious to change the goal from Dominion Status to Independence in order to secure Irish help. To these two factors was added a third, namely, the speech made by Lord Birkenhead, the then Secretary of State for India, on the occasion of the appointment of the Simon Commission when he taunted the Indians on their incapacity to produce a constitution. The speech was regarded as a great insult by Indian politicians. It is the combination of these three factors which was responsible for the passing of this resolution. Indeed, the resolution was passed more from the motive ⁵⁶[f.12] of giving a fitting reply to Lord Birkenhead than from the motive of defining the political goal of the country and if Mr. Gandhi and Pandit Motilal Nehru kept quiet it was largely because the storm created by the intemperate language of Lord Birkenhead against Indians was so great that they thought it wise to bow to it rather than engage upon the task of sweeping it off which they would have otherwise easily done.

That this resolution did not speak the real mind of the Hindus in the Congress is beyond doubt. Otherwise, it is not possible to explain how the Nehru Committee could have flouted the Madras resolution of 1927 by adopting Dominion Status as the basis of the constitutional structure framed by it. Nor is it possible to explain how the Congress adopted Dominion Status in 1928 if it had really accepted ⁵⁷ [f.13] independence in 1927 as the resolution says. The clause in the resolution that the Congress would accept Dominion Status if given before 31st December 1929, if not, it would change its faith from Dominion Status to Independence was only a face-saving device and did not connote a real change of mind. For time can never be of the essence in a matter of

such deep concern as the political destiny of the country.

That notwithstanding the resolution of 1927, the Congress continued to believe in Dominion Status and did not believe in Independence, is amply borne out by the pronouncements made from time to time by Mr. Gandhi who is the oracle of the Congress. Anyone, who studies Mr. Gandhi's pronouncements on this subject from 1929 onwards, cannot help feeling that Mr. Gandhi has not been happy about the resolution on Independence and that he has ever since felt necessary to wheel the Congress back to Dominion Status. He began with the gentle process of interpreting it away. The goal was first reduced from Independence to substance of Independence. From substance of Independence it was reduced to equal partnership and from equal partnership it was brought back to its original position. The wheel completed the turn when Mr. Gandhi in 1937 gave the following letter to Mr. Pollock for the information of the English people :—

“Your question is whether I retain the same opinion as I did at the Round Table Conference in 1931. I said then, and repeat now, that, so far as I am concerned, if Dominion Status were offered to India in terms of the Statute of Westminster, i.e., the right to secede at will, I would unhesitatingly accept,”⁵⁸[f.14]

Turning to the pronouncements of Muslim political organizations on the Nehru Report it is interesting to note the reasons given by them for its rejection. These reasons are wholly unexpected. No doubt some Muslim organizations such as the Muslim League rejected the Report because it recommended the abolition of separate electorates. But that was certainly not the reason why it was condemned by the Khilafat Conference or the Jamiat-ul-Ulema— the two Muslim organizations which went with the Congress through the same fiery ordeal of non-cooperation and civil disobedience and whose utterances expressed far more truly the real opinion of Muslim masses on the issues relating to the political affairs of the country than did the utterances of any other Muslim organization.

Maulana Mahomed Ali set out his reasons for the rejection of the

Nehru Report in his Presidential address to the All-India Khilafat Conference held in Calcutta in 1928. He said :-- ⁵⁹
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_15

"[I] was a member of the Indian National Congress, its Working Committee, the All-India Muslim League and [I] have come to the Khilafat Conference to express (my views) on the important political issues of the time, which should have the serious attention of the whole Muslim community.

“In the All-Parties Convention he had said that India should have complete independence and there was no communalism in it. Yet he was being heckled at every moment and stopped during his speech at every step.

“The Nehru Report had as its preamble admitted the bondage of servitude. . . . Freedom and Dominion Status were widely divergent things....

"I ask, when you boast of your nationalism and condemn communalism, show me a country in the world like your India—your nationalist India.

“You make compromises in your constitution every day with false doctrines, immoral conceptions and wrong ideas but you make no compromise with our communalists — with separate electorates and reserved seats. Twenty-five per cent. is our portion of population and yet you will not give us 33 per cent. in the Assembly. You are a Jew, a Bania. But to the English you give the status of your dominion.”

The conference passed a short resolution in the following pithy terms:—

“This Conference declares once more that complete independence is

our goal”.

Maulana Hasrat Mohani, as President of the Jamiat-ul-Ulema Conference held in Allahabad in 1931, gave the same reasons for condemning the Nehru Report in words measured but not less scathing. Said ⁶⁰ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_16 the Maulana :—

“My political creed with regard to India is now well known to everybody. I cannot accept anything short of complete independence, and, that too, on the model of the United States of America or the Soviet Russia which is essentially (1) democratic, (2) federal and (3) centrifugal, and in which the rights of Muslim minorities are safeguarded.

“For some time the Jamial-ul-Ulema of Delhi held fast to the creed of complete independence and it was mostly for this reason that it repudiated the Nehru Report which devised a unitary constitution instead of a federal one. Besides, when, after the Lahore session, the Congress, at the instance of Mahatma Gandhi, declared the burial of the Nehru Report on the banks of the Ravi and the resolution of complete independence was unanimously agreed upon, the Delhi Jamiat ventured to co-operate with the Congress and its programme of civil disobedience simply because it was the duty of every Indian, Hindu or Muslim, to take part in the struggle for independence.

“But unfortunately Gandhiji very soon went back upon his words and (1) while yet in jail he told the British journalist Mr. Slocombe that by complete independence he meant only the substance of independence, (2) besides, when he was released on expressing his inclination for compromise he devised the illusory term of ' Purna Swaraj ' in place of complete independence and openly declared that in ' Purna Swaraj ' there was no place for severance of the British connection, (3) by making a secret pact with Lord Irwin he definitely adopted the ideal of Dominion Status under the British Crown.

“After this change of front by Gandhiji the Delhi Jamiat ought to have desisted from blindly supporting the Mahatma. and like the

Nehru Report it should have completely rejected this formula of the Congress Working Committee by which the Nehru Report was sought to be revived at Bombay.

“But we do not know what unintelligible reasons induced the Delhi Jamial-ul-Ulema to adopt 'Purna Swaraj' as their ideal, in spite of the knowledge that it does not mean complete independence but something even worse than complete independence. And the only explanation for adopting this creed is said to be that, although Gandhiji has accepted Dominion Status, he still insists that Britain should concede the right of secession from the British Empire to the Indians.

“Although it is quite deaf that insistence on this right has no better worth than the previous declaration of complete independence, in other words, just as Gandhiji insisted on complete independence with the sole object of forcing the British Government to accede to the demand of Dominion Status, which was the sole ultimate aim of the Mahatma, in the same way the leaders of the Congress insisted upon the right of secession with the object of extorting the largest measure of political rights from the British people who might not go beyond a certain limit in displeasing them. Otherwise Gandhiji and his followers know it full well that even if this right of secession is given to Indians, it would perhaps be never put into practice.

“If someone considers this contention of mine to be based on suspicion and contends that the Congress will certainly declare for secession from the Empire whenever there is need of it, I will ask him to let me know what will be the form of Indian Government after the British connection is withdrawn. It is clear that no one can conceive of a despotic form and a democratic form, whether it be unitary or federal but centripetal, will be nothing more than Hindu Raj which the Musalmans can in no circumstances accept. Now remains only one form, viz., after complete withdrawal of the British connection India with its autonomous Provinces and States forms into united centrifugal democratic government on the model of the United States Republic or Soviet Russia. But this can never be acceptable to the Mahasabhaite

Congress or a lover of Britain like Mahatma Gandhi.

“Thus the Jamial-ul-Ulema of Delhi after washing its hands of complete independence has stultified itself, but thank God the Ulemas of Cawnpore, Lucknow, Badaun, etc., still hold last to their pledge and will remain so, God willing. Some weak-kneed persons urge against this highest ideal that, when it is not possible for the present to attain it, there is no use talking about it. We say to them that it is not at all useless but rather absolutely necessary, for if the highest ideal is not always kept before view, it is liable to be forgotten.

“We must, therefore, oppose Dominion Status in all circumstances as this is not the half-way house or part of our ultimate aim, but its very negation and rival. If Gandhiji reaches England and the Round Table Conference is successfully concluded, giving India Dominion Stylus of any kind, with or without safeguards, the conception of complete independence will completely vanish or at any rate will not be thought of for a very long time to come.”

The All-India Khilafat Conference and the Jamiat-ul-Ulema were surely extremist bodies avowedly anti-British. But the All-India Muslim Conference was not at all a body of extremists or anti-British Musalmans. Yet the U. P. Branch of it in its session held at Cawnpore on 4th November 1928 passed the following resolution :—

“In the opinion of the All-Panics U. P. Muslim Conference, Musalmans of India stand for the goal of complete independence, which shall necessarily take the form of a federal republic.”

In the opinion of the mover, Islam always taught freedom, and for the matter of that the Muslims of India would fail in their religious duty, if they were against complete independence. Indian Muslims were poor, yet they were, the speaker was sure, devoted to Islam more than any other people on earth.

In this Conference an incident ⁶¹[f.17] of some interest occurred in the Subjects Committee when Maulana Azad Sobhani proposed that the Conference should declare itself in favour of complete independence.

Khan Bahadur Masoodul Hassan and some other persons, objected to such declaration, which, in their opinion, would go against the best interests of Musalmans. Upon this, a number of women from their *pardah* gallery sent a written statement to the President saying that if men had not the courage to stand for complete independence, women would come out *of pardah*, and take their place in the struggle for independence.

III

Notwithstanding this difference in their ultimate destiny, an attempt is made to force the Hindus and Muslims to live in one country, as one people, bound by the political ties of a single constitution. Assuming that this is done and that the Muslims are somehow manoeuvred into it, what guarantee is there that the constitution will not break down?

The successful working of a Parliamentary Government assumes the existence of certain conditions. It is only when these conditions exist that Parliamentary Government can take roots. One such condition was pointed out by the late Lord Balfour when in 1925 he had an occasion to discuss the political future of the Arab peoples in conversation with his niece Blanche Dugdale.

In the course of this conversation he said ⁶²
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_18:___

“It is partly the fault of the British nation— and of the Americans ; we can't exonerate them from blame either—that this idea of 'representative government ' has got into the heads of nations who haven't the smallest notion of what its basis must be. It's difficult to explain, and the Anglo-Saxon races are bad at exposition. Moreover we know it so well ourselves that it does not strike us as necessary to explain it. I doubt if you *would find it* written in any book on the British Constitution that the whole essence of British Parliamentary Government lies in the *intention to make the thing work*. We take that for granted. We have spent hundreds of years in elaborating a system that

rests on that alone. It is so deep in us that we have lost sight of it. But it is not so obvious to others. These peoples — Indians, Egyptians, and so on — study our learning. They read our history, our philosophy, and politics. They learn about our parliamentary methods of obstruction, but nobody explains to them that when it comes to the point, all our parliamentary pities are determined that the machinery shan't stop. 'The king's government must go on 'as the Duke of Wellington said. But their idea is that the function of opposition is to stop the machine. Nothing easier, of course, but hopeless.”

Asked why the opposition in England does not go to the length of stopping the machine, he said :__

“Our whole political machinery presupposes a people. fundamentally at one.”

Laski has well summarized these observations of Balfour on the condition necessary for the successful working of Parliamentary Government when he says ⁶³[f.19] :

“The strength of Parliamentary Government is exactly measured by the unity of political parties upon its fundamental objects.”

Having stated the condition necessary for the successful working of the machinery of representative government it will be well to examine whether these conditions are present in India.

How far can we say that there is an intention in the Hindus and the Muslims to make representative government work? To prove the futility and unworkability of representative and responsible government, it is enough even if one of the two parties shows an intention to stop the machinery of government. If such an intention is enough, then it does not matter much whether it is found in the Hindus or in the Muslims. The Muslims being more outspoken than the Hindus, one gets to know their mind more than one gets to know the mind of the Hindus. How the Muslim mind will work and by what factors it is likely to be swayed will be clear if the fundamental tenets of Islam which dominate Muslim politics and the views expressed by prominent Muslims bearing on

Muslim attitude towards an Indian Government are taken into consideration. Certain of such religious tenets of Islam and the views of some of the Muslim leaders are given below to enable all those who are capable of looking at things dispassionately, to judge for themselves whether the condition postulated by Balfour can be said to exist in India.

Among the tenets one that calls for notice is the tenet of Islam which says that in a country which is not under Muslim rule wherever there is a conflict between Muslim law and the law of the land, the former must prevail over the latter and a Muslim will be justified in obeying the Muslim law and defying the law of the land.

What the duty of the Musalmans is in such cases was well pointed out by Maulana Mahomed Ali in the course of his statement made in 1921 before the Committing Magistrate of Karachi in answer to the charges for which he was prosecuted by the Government. The prosecution arose out of a resolution passed at the session of the All-India Khilafat Conference held in Karachi on 8th July 1921 at which Mr. Mahomed Ali presided and introduced the resolution in question.

The resolution was as follows :—

“This meeting clearly proclaims that it is in every way religiously unlawful for a Musalman at the present moment to continue in the British Army, or to enter the Army, or to induce others to join the Army. And it is the duty of all Musalmans in general and of the Ulemas in particular to see that these religious commandments are brought home to every Musalman in the Army.”

Along with Maulana Mahomed Ali six other persons ⁶⁴[f.20] were prosecuted under Section 120-B read with Section 131, L P. C. and under Section 505 read with Section 114 and Section 505 read with Section 117, 1. P. C. Maulana Mahomed Ali in justification of his plea of not guilty, said ⁶⁵[f.21] :—

“After all what is the meaning of this precious prosecution. By whose convictions are we to be guided, we the Musalmans and the Hindus of

India? Speaking as a Musalman, if I am supposed to err from the right path, the only way to convince me of my error is to refer me to the Holy Koran or to the authentic traditions of the last Prophet—on whom be peace and God's benediction—or the religious pronouncements of recognized Muslim divines, past and present, which purport to be based on these two original sources of Islamic authority demands from me in the present circumstances, the precise action for which a Government, that does not like to be called satanic, is prosecuting me to-day.

"If that which I neglect, becomes by my neglect a deadly sin, and is yet a crime when I do not neglect it, how am I to consider myself safe in this country?

"I must either be a sinner or a criminal..... Islam recognizes one sovereignty alone, the sovereignty of God, which is supreme and unconditional, indivisible and inalienable. . . .

"The only allegiance a Musalman, whether civilian or soldier, whether living under a Muslim or under a non-Muslim administration, is commanded by the Koran to acknowledge is his allegiance to God, to his Prophet and to those in authority from among the Musalmans chief among the last mentioned being of course that Prophet's successor or commander of the faithful..... This doctrine of unity is not a mathematical formula elaborated by abstruse thinkers but a work-a-day belief of every Musalman learned or unlettered..... Musalmans have before this also and elsewhere too, lived in peaceful subjection to non-Muslim administrations. But the unalterable rule is and has always been that as Musalmans they can obey only such laws and orders issued by their secular rulers as do not involve disobedience to the commandments of God who in the expressive language of the Holy Koran is ' the all-ruling ruler '. These very clear and rigidly definite limits of obedience are not laid down with regard to the authority of non-Muslim administration only. On the contrary they are of universal application and can neither be enlarged nor reduced in any case."This must make anyone wishing for a stable government very apprehensive.

But this is nothing to the Muslim tenets which prescribe when a country is a motherland to the Muslim and when it is not.

According to Muslim Canon Law the world is divided into two camps, Dar-ul-Islam (abode of Islam) and Dar-ul-Harb (abode of war). A country is Dar-ul-Islam when it is ruled by Muslims. A country is Dar-ul-Harb when Muslims only reside in it but are not rulers of it. That being the Canon Law of the Muslims, India cannot be the common motherland of the Hindus *and* the Musalmans. It can be the land of the Musalmans—but it cannot be the land of the 'Hindus and the Musalmans living as equals'. Further, it can be the land of the Musalmans only when it is governed by the Muslims. The moment the land becomes subject to the authority of a non-Muslim power, it ceases to be the land of the Muslims. Instead of being Dar-ul-Islam it becomes Dar-ul-Harb.

It must not be supposed that this view is only of academic interest. For it is capable of becoming an active force capable of influencing the conduct of the Muslims. It did greatly influence the conduct of the Muslims when the British occupied India. The British occupation raised no qualms in the minds of the Hindus. But so far as the Muslims were concerned, it at once raised the question whether India was any longer a suitable place of residence for Muslims. A discussion was started in the Muslim community, which Dr. Titus says lasted for half a century, as to whether India was Dar-ul-Harb or Dar-ul-Islam. Some of the more zealous elements, under the leadership of Sayyed Ahmad, actually did declare a holy war, preached the necessity of emigration (*Hijrat*) to lands under Muslim rule, and carried their agitation all over India.

It took all ingenuity of Sir Sayyed Ahmad, the founder of the Aligarh movement, to persuade the Indian Musalmans not to regard India under the British as Dar-ul-Harb merely because it was not under Muslim rule. He urged upon the Muslims to regard it as Dar-ul-Islam, because the Muslims were perfectly free to exercise all the essential rites and ceremonies of their religion. The movement for *Hijrat* for the time being died down. But the doctrine that India was Dar-ul-Harb had not been given up. It was again preached by Muslim patriots during 1920-21,

when the Khilafat agitation was going on. The agitation was not without response from the Muslim masses and there was a goodly number of Muslims who not only showed themselves ready to act in accordance with the Muslim Canon Law but actually abandoned their homes in India and crossed over to Afghanistan.

It might also be mentioned *that Hijrat* is not the only way of escape to Muslims who find themselves in a Dar-ul-Harb. There is another injunction of Muslim Canon Law called *Jihad* (crusade) by which it becomes "incumbent on a Muslim ruler to extend the rule of Islam until the whole world shall have been brought under its sway. The world, being divided into two camps, Dar-ul-Islam (abode of Islam), Dar-ul-Harb (abode of war), all countries come under one category or the other. Technically, it is the duty of the Muslim ruler, who is capable of doing so, to transform Dar-ul-Harb into Dar-ul-Islam." And just as there are instances of the Muslims in India resorting to *Hijrat*, there are instances showing that they have not hesitated to proclaim *Jihad*. The curious may examine the history of the Mutiny of 1857 and if he does, he will find that, in part, at any rate, it was really *a Jihad* proclaimed by the Muslims against the British, and that the Mutiny so far as the Muslims were concerned was a recrudescence of revolt which had been fostered by Sayyed Ahmad who preached to the Musalmans for several decades that owing to the occupation of India by the British the country had become a Dar-ul-Harb. The Mutiny was an attempt by the Muslims to reconvert India into a Dar-ul-Islam. A more recent instance was the invasion of India by Afghanistan in 1919. It was engineered by the Musalmans of India who led by the Khilafatists' antipathy to the British Government sought the assistance of Afghanistan to emancipate India. ⁶⁶[f.22] Whether the invasion would have resulted in the emancipation of India or whether it would have resulted in its subjugation, it is not possible to say because the invasion failed to take effect. Apart from this, the fact remains that India, if not exclusively under Muslim rule, is a Dar-ul-Harb and the Musalmans according to the tenets of Islam are justified in proclaiming a *Jihad*.

Not only can they proclaim *Jihad* but they can call the aid of a foreign

Muslim power to make *Jihad* a success, or if the foreign Muslim power intends to proclaim a *Jihad*, help that power in making its endeavour a success. This was clearly explained by Mr. Mahomed Ali in his address to the Jury in the Sessions Court. Mr. Mahomed Ali said :—

“But since the Government is apparently uninformed about the manner in which our Faith colours and is meant to colour all our actions, including those which, for the sake of convenience, are generally characterised as mundane, one thing must be made clear, and it is this: Islam does not permit the believer to pronounce an adverse judgement against another believer without more convincing proof; and we could not, of course, fight against our Muslim brothers without making sure that they were guilty of wanton aggression, and did not take up arms in defence of their faith”. (This was in relation to the war that was going on between the British and the Afghans in 1919.)”Now our position is this. Without better proof of the Amir's malice or madness we certainly do not want Indian soldiers, including the Musalmans, and particularly with our own encouragement and assistance, to attack Afghanistan and effectively occupy it first, and then be a prey to more perplexity and perturbation afterwards.

“But if on the contrary His Majesty the Amir has no quarrel with India and her people and if his motive must be attributed, as the Secretary of State has publicly said, to the unrest which exists throughout the Mahomedan world, an unrest with which he openly professed to be in cordial sympathy, that is to say, if impelled by the same religious motive that has forced Muslims to contemplate *Hijrat*, the alternative of the weak, which is all that is within our restricted means. His Majesty has been forced to contemplate *Jihad*, the alternative of those comparatively stronger which he may have found within his means; if he has taken up the challenge of those who believed in force and yet more force, and he intends to try conclusions with those who require Musalmans to wage war against the Khilafat and those engaged in *Jihad*; who are in wrongful occupation of the Jazirut-ul-Arab and the holy places ; who aim at the weakening of Islam ; discriminate against it, and deny to us full freedom to advocate its cause ; then the clear law of Islam-requires that in the

first place, in no case whatever should a Musalman render anyone any assistance against him ; and in the next place if the *Jihad* approaches my region every Musalman in that region must join the Mujahidin and assist them to the best of his or her power.

“Such is the clear and undisputed law of Islam ; and we had explained this to the Committee investigating our case when it had put to us a question about the religious duty of a Muslim subject of a non-Muslim power when *Jihad* had been declared against it, long before there was any notion of trouble on the Frontiers, and when the late Amir was still alive”.

A third tenet which calls for notice as being relevant to the issue is that Islam does not recognize territorial affinities. Its affinities are social and religious and therefore extraterritorial. Here again Maulana Mahomed Ali will be the best witness. When he was committed to the Sessions Court in Karachi Mr. Mahomed Ali addressing the Jury said :—

“One thing has to be made clear as we have since discovered that the doctrine to which we shall now advert is not so generally known in non-Muslim and particularly in official circles as it ought to be. A Musalman's faith does not consist merely in believing in a set of doctrines and living up to that belief himself; he must also exert himself to the fullest extent of his power, of course without resort to any compulsion, to the end that others also conform to the prescribed belief and practices. This is spoken of in the Holy Koran *as Amribilmaroof and Nabi anilmunkar* , and certain distinct chapters of the Holy Prophet's traditions relate to this essential doctrine of Islam. A Musalman cannot say : ' I am not my brother's keeper ' , for in a sense he is and his own salvation cannot be assured to him unless he exhorts others also to do good and dehort them against doing evil. If therefore any Musalman is being compelled to wage war against the Mujahid of Islam, he must not only be a conscientious objector himself, but must, if he values his own salvation, persuade his brothers also at whatever risk to himself to take similar objection. Then and not until then, can he hope for salvation. This is our belief as well as the belief of every other Musalman and in our humble way we seek to live

up to it; and if we are denied freedom to inculcate this doctrine, we must conclude that the land, where this freedom does not exist, is not safe for Islam.”

This is the basis of Pan-Islamism. It is this which leads every Musalman in India to say that he is a Muslim first and Indian afterwards. It is this sentiment which explains why the Indian Muslim has taken so small a part in the advancement of India but has spent himself to exhaustion ⁶⁷ [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_23](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan_or_the_Partition_of_India_PART_IV.htm_-_msocom_23) by taking up the cause of Muslim countries and why Muslim countries occupy the first place and India occupies a second place in his thoughts. His Highness the Aga Khan justifies it by saying ⁶⁸[f.24]:—

“This is a right and legitimate Pan-Islamism to which every sincere and believing Mahomedan belongs—that is, the theory of the spiritual brotherhood and unity of the children of the Prophet. It is a deep, perennial element in that Perse-Arabian culture, that great family of civilization to which we gave the name Islamic in the first chapter. It connotes charity and good-will towards fellow-believers everywhere from China to Morocco, from the Volga to Singapore. It means an abiding interest in the literature of Islam, in her beautiful arts, in her lovely architecture, in her entrancing poetry. It also means a true reformation—a return to the early and pure simplicity of the faith, to its preaching by persuasion and argument, to the manifestation of a spiritual power in individual lives, to beneficent activity of mankind. The natural and worthy spiritual movement makes not only the Master and His teaching but also His children of all climes an object of affection to the Turk or the Afghan, to the Indian or the Egyptian. A famine or a desolating fire in the Muslim quarters of Kashgar or Sarajevo would immediately draw the sympathy and material assistance of the Mahomedan of Delhi or Cairo. The real spiritual and cultural unity of Islam must ever grow, for to the follower of the Prophet it is the foundation of the life of the soul.”

If this spiritual Pan-Islamism seeks to issue forth in political Pan-Islamism, it cannot be said to be unnatural. It is perhaps that feeling

which was in the mind of the Aga Khan when he said ⁶⁹[f.25] :—

“It is for the Indian patriot to recognise that Persia, Afghanistan and possibly Arabia must sooner or later come within the orbit of some Continental Power—such as Germany, or what may grow out of the break up of Russia—or must throw in their lot with that of the Indian Empire, with which they have so much more genuine affinity. The world forces that move small States into closer contact with powerful neighbours, though so far most visible in Europe, will inevitably make themselves felt in Asia. Unless she is willing to accept the prospect of having powerful and possibly inimical neighbours to watch, and the heavy military burdens thereby entailed, India cannot afford to neglect to draw her Mahomedan neighbour States to herself by the ties of mutual interest and goodwill.

“In a word, the path of beneficent and growing union must be based on a federal India, with every member exercising her individual rights, her historic peculiarities and natural interests, yet protected by a common defensive system and customs union from external danger and economic exploitation by stronger forces. Such a federal India would promptly bring Ceylon to the bosom of her natural mother, and the further developments we have indicated would follow. We can build a great South Asiatic Federation by now laying the foundations wide and deep on justice, on liberty, and on recognition for every race, every religion, and every historical entity.

“A sincere policy of assisting both Persia and Afghanistan in the onward march which modern conditions demand, will raise two natural ramparts for India in the north-west that neither German nor Slav, Turk nor Mongol, can ever hope to destroy. They will be drawn of their own accord towards the Power which provides the object lesson of a healthy form of federalism in India, with real autonomy for each province, with the internal freedom of principalities assured, with a revived and liberalised kingdom of Hyderabad, including the Berars, under the Nizam. They would see in India freedom and order, autonomy and yet Imperial union, and would appreciate for themselves the advantages of a confederation assuring the continuance of internal self-government

buttressed by goodwill, the immense and unlimited strength of that great Empire on which the sun never sets. The British position of Mesopotamia and Arabia also, whatever its nominal form may be, would be infinitely strengthened by the policy I have advocated.”

The South Asiatic Federation was more for the good of the Muslim countries such as Arabia, Mesopotamia and Afghanistan than for the good of India,⁷⁰ [f.26] This shows how very naturally the thoughts of Indian Musalmans are occupied by considerations of Muslim countries other than those of India.

Government is based on obedience to authority. But those, who are eager to establish self-government of Hindus and Muslims, do not seem to have stopped to inquire on what such obedience depends and how far such obedience would be forthcoming in the usual course and in moments of crisis. This is a very important question. For, if obedience fails, self-government means working together and not working under. That may be so in an ideal sense. But in practical and work-a-day world, if the elements brought under one representative government are disproportionate in numbers, the minor section will have to work under the major section and whether it works under the major section or not will depend upon how far it is disposed to obey the authority of the government carried on by the major section. So important is this factor in the success of self-government that Balfour may be said to have spoken only part of the truth when he made its success dependent upon parties being fundamentally atone. He failed to note that willingness to obey the authority of Government is a factor equally necessary for the success of any scheme of self-government.

The importance of this second condition, the existence of which is necessary for a successful working of parliamentary government, has been discussed by ⁷¹[f.27] James Bryce. While dealing with the basis of political cohesion, Bryce points out that while force may have done much to build up States, force is only one among many factors and not the most important. In creating, moulding, expanding and knitting together political communities what is more important than force is obedience. This willingness to obey and comply with the sanctions of a

government depends upon certain psychological attributes of the individual citizens and groups. According to Bryce the attitude which produces obedience are indolence, deference, sympathy, fear and reason. All are not of the same value. Indeed they are relative in their importance as causes producing a disposition to obey. As formulated by Bryce, in the sum total of obedience the percentage due to fear and to reason respectively is much less than that due to indolence and less also than that due to deference or sympathy. According to this view deference and sympathy are, therefore, the two most powerful factors which predispose a people to 'obey the authority of its government.

Willingness to render obedience to the authority of the government is as essential for the stability of government as the unity of political parties on the fundamentals of the state. It is impossible for any sane person to question the importance of obedience in the maintenance of the state. To believe in civil disobedience is to believe in anarchy.

How far will Muslims obey the authority of a government manned and controlled by the Hindus? The answer to this question need not call for much inquiry. To the Muslims a Hindu is a Kaffir. ⁷²[f.28] A Kaffir is not worthy of respect. He is low-born and without status. That is why a country which is ruled by a Kaffir is Dar-ul-Harb to a Musalman. Given this, no further evidence seems to be necessary to prove that the Muslims will not obey a Hindu government. The basic feelings of deference and sympathy, which predispose persons to obey the authority of government, do not simply exist. But if proof is wanted, there

is no dearth of it. It is so abundant that the problem is what to tender and what to omit.

In the midst of the Khilafat agitation when the Hindus were doing so much to help the Musalmans, the Muslims did not forget that as compared with them the Hindus were a low and an inferior race. A Musalman wrote ⁷³[f.29] in the Khilafat paper called *Insaf*:—

“What is the meaning of Swami and Mahatma? Can Muslims use in speech or writing these words about non-Muslims? He says that Swami

means ' Master ', and ' Mahatma ' means ' possessed of the highest spiritual powers ' and is equivalent to ' Ruh-i-aazam ', and the supreme spirit.”

He asked the Muslim divines to decide by an authoritative fatwa whether it was lawful for Muslims to call non-Muslims by such deferential and reverential titles.

A remarkable incident was reported ⁷⁴[f.30] in connection with the celebration of Mr. Gandhi's release from gaol in 1924 at the Tibbia College of Yunani medicine run by Hakim Ajmal Khan at Delhi. According to the report, a Hindu student compared Mr. Gandhi to Hazarat Isa (Jesus) and at this sacrilege to the Musalman sentiment all the Musalman students flared up and threatened the Hindu student with violence, and, it is alleged, even the Musalman professors joined with their co-religionists in this demonstration of their outraged feelings.

In 1923 Mr. Mahomed Ali presided over the session of the Indian National Congress. In this address he spoke of Mr. Gandhi in the following terms :

“Many have compared the Mahatma's teachings, and latterly his personal sufferings, to those of Jesus (on whom be peace). When Jesus contemplated the world at the outset of his ministry he was called upon to make his choice of the weapons of reform. The idea of being all-powerful by suffering and resignation, and of triumphing over force by purity of heart, is as old as the days of Abel and Cain, the first progeny of man.....

“Be that as it may, it was just as peculiar to Mahatma Gandhi also ;but it was reserved for a Christian Government to treat as felon the most Christ like man of our time (*Shame, Shame*) and to penalize as a disturber of the public peace the one man engaged in public affairs who comes nearest to the Prince of Peace. The political conditions of India just before the advent of the Mahatma resembled those of Judea on the eve of the advent of Jesus, and the prescription that he offered to those in search of a remedy for the ills of India was the same that Jesus had dispensed before in Judea. Self-purification through

suffering ; a moral preparation for the responsibilities of government ; self-discipline as the condition precedent of Swaraj—this was Mahatma's creed and conviction ; and those of us, who have been privileged to have lived in the glorious year that culminated in the Congress session at Ahmedabad, have seen what a remarkable and rapid change he wrought in the thoughts, feelings and actions of such large masses of mankind.”

A year after, Mr. Mahomed Ali speaking at Aligarh and Ajmere said :

“However pure Mr. Gandhi's character may be, he must appear to me from the point of view of religion inferior to any Musalman, even though he be without character.”

The statement created a great stir. Many did not believe that Mr. Mahomed Ali, who testified to so much veneration for Mr. Gandhi, was capable of entertaining such ungenerous and contemptuous sentiments about him. When Mr. Mahomed Ali was speaking at a meeting held at Aminabad Park in Lucknow, he was asked whether the sentiments attributed to him were true. Mr. Mahomed Ali without any hesitation or compunction

replied 75

[f.31] mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_32:

“Yes, according to my religion and creed, I do hold an adulterous and a fallen Musalman to be better than Mr. Gandhi.”

It was suggested ⁷⁷[f.33] at the time that Mr. Mahomed Ali had to recant because the whole of the orthodox Muslim community had taken offence for his having shown such deference to Mr. Gandhi, who was a Kaffir, as to put him on the same pedestal as Jesus. Such praise of a Kaffir, they felt, was forbidden by the Muslim Canon Law.

In a manifesto ⁷⁸[f.34] on Hindu-Muslim relations issued in 1928 Khwaja Hasan Nizami declared :

“Musalmans are separate from Hindus ; they cannot unite with the Hindus. After bloody wars the Musalmans conquered India, and the English took India from them. The Musalmans are one united nation

and they alone will be masters of India. They will never give up their individuality. They have ruled India for Hundreds of years, and hence they have a prescriptive right over the country. The Hindus are a minor community in the world. They are never free from internecine quarrels ; they believe in Gandhi and worship the cow ; they are polluted by taking other people's water. The Hindus do not care for self-government ; they have no time to spare for it; let them go on with their internal squabbles. What capacity have they for ruling over men? The Musalmans did rule, and the Musalmans will rule.”

Far from rendering obedience to Hindus, the Muslims seem to be ready to try conclusions with the Hindus again. In 1926 there arose a controversy as to who really won the third battle of Panipat, fought in 1761. It was contended for the Muslims that it was a great victory for them because Ahmad Sha Abdali had 1 lakh of soldiers while the Mahrattas had 4 to 6 lakhs. The Hindus replied that it was a victory to them—a victory to vanquished—because it stemmed the tide of Muslim invasions. The Muslims were not prepared to admit defeat at the hands of Hindus and claimed that they will always prove superior to the Hindus. To prove the eternal superiority of Muslims over Hindus it was proposed by one Maulana Akbar Shah Khan of Najibabad in all seriousness, that the Hindus and Muslims should fight, under test conditions, fourth battle on the same fateful plain of Panipat. The Maulana accordingly issued ⁷⁹[f.35] a challenge to Pandit Madan Mohan Malaviya in the following terms :

“If you Malaviyaji, are making efforts to falsify the result at Panipat, I shall show you an easy and an excellent way (of testing it). Use your well-known influence and induce the British Government to permit the fourth battle of Panipat to be fought without hindrance from the authorities. I am ready to provide. . . . a comparative test of the valour and fighting spirit of the Hindus and the Musalmans.... .As there are seven crores of Musalmans in India, I shall arrive on a fixed date on the plain of Panipat with 700 Musalmans representing the seven crores of Muslims in India and as there are 22 crores of Hindus I allow you to come with 2,200 Hindus. The proper thing is not to use cannon,

machine guns or bombs : only swords and javelins and spears, bows and arrows and daggers should be used. If you cannot accept the post of generalissimo of the Hindu host, you may give it to any descendant of Sadashivrao ⁸⁰[f.36] or Vishwasrao so that their scions may have an opportunity to avenge the defeat of their ancestors in 1761. But any way do come as a spectator ; for on seeing the result of this battle you will have to change your views, and I hope there will be then an end of the present discord and fighting in the country. . . . In conclusion I beg to add that among the 700 men that I shall bring there will be no Pathans or Afghans as you are mortally afraid of them. So I shall bring with me only Indian Musalmans of good family who are staunch adherents of Shariat.”

IV

Such are the religious beliefs, social attitudes and ultimate destinies of the Hindus and Muslims and their communal and political manifestations. These religious beliefs, social attitudes and views regarding ultimate destinies constitute the motive force which determines the lines of their action, whether they will be cooperative or conflicting. Past experience shows that they are too irreconcilable and too incompatible to permit Hindus and Muslims ever forming one single nation or even two harmonious parts of one whole. These differences have the sure effect not only of keeping them asunder but also of keeping them at war. The differences are permanent and the Hindu-Muslim problem bids fair to be eternal. To attempt to solve it on the footing that Hindus and Muslims are one or if they are not one now they will be one hereafter is bound to be a barren occupation—as barren as it proved to be in the case of Czechoslovakia. On the contrary, time has come when certain facts must be admitted as beyond dispute, however unpleasant such admission may be.

In the first place, it should be admitted that every possible attempt to bring about union between Hindus and Muslims has been made and that all of them have failed.

The history of these attempts may be said to begin with the year 1909.

The demands of the Muslim deputation, if they were granted by the British, were assented to by the Hindus, prominent amongst whom was Mr. Gokhale. He has been blamed by many Hindus for giving his consent to the principle of separate electorates. His critics forget that withholding consent would not have been a part of wisdom. For, as has been well said by Mr. Mahomed Ali :—

“... paradoxical as it may seem, the creation of separate electorates was hastening the advent of Hindu-Muslim unity. For the first time a real franchise, however restricted, was being offered to Indians, and if Hindus and Musalmans remained just as divided as they had hitherto been since the commencement of the British rule, and often hostile to one another, mixed electorates would have provided the best battleground for inter-communal strifes, and would have still further widened the gulf separating the two communities. Each candidate for election would have appealed to his own community for votes and would have based his claims for preference on the intensity of his ill-will towards the rival community, however, disguised this may have been under some such formula as 'the defence of his community's interest'. Bad as this would have been, the results of an election in which the two communities were not equally matched would have been even worse, for the community that failed to get its representative elected would have inevitably borne a yet deeper grudge against its successful rival. Divided as the two communities were, there was no chance for any political principles coming into prominence during the elections. The creation of separate electorates did a great deal to stop this inter-communal warfare, though I am far from oblivious of the fact that when inter-communal jealousies are acute the men that are more likely to be returned even from communal electorates are just those who are noted for the ill-will towards the rival community.”

But the concession in favour of separate electorates made by the Hindus in 1909 did not result in Hindu-Muslim unity. Then came the Lucknow Pact in 1916. Under it the Hindus gave satisfaction to the Muslims on every count. Yet, it did not produce any accord between the two. Six years later, another attempt was made to bring about Hindu-Muslim unity. The All-India Muslim League at its annual session held at Lucknow in March 1923 passed a resolution 81 [f.37] urging the establishment of a national pact to ensure unity and harmony among the various communities and sects in India and appointed a committee to

collaborate with committees to be appointed by other organizations. The Indian National Congress in its special session held in September 1923 at Delhi under the presidentship of Maulana Abul Kalam Azad passed a resolution reciprocating the sentiments expressed by the League. The Congress resolved to appoint two committees (1) to revise the constitution and (2) to prepare a draft of a national pact. The report ⁸²[f.38] of the committee on the Indian National Pact was signed by Dr. Ansari and Lala Lajpat Rai and was presented at the session of the Congress held at Coconada in 1923. Side by side with the making of the terms of the Indian National Pact there was forged the Bengal Pact ⁸³[f.39] by the Bengal Provincial Congress Committee with the Bengal Muslims under the inspiration of Mr. C. R. Das. Both the Indian National Pact and the Bengal Pact came up for discussion ⁸⁴[f.40] in the Subjects Committee of the Congress. The Bengal Pact was rejected by 678 votes against 458. With regard to the National Pact, the Congress resolved ⁸⁵[f.41] that the Committee do call for further opinions on the draft of the Pact prepared by them and submit their report by 31st March 1924 to the A. 1. C. C. for its consideration. The Committee, however, did not proceed any further in the matter. This was because the feeling among the Hindus against the Bengal Pact was so strong that according to Lala Lajpat Rai ⁸⁶[f.42] it was not considered opportune to proceed with the Committee's labours. Moreover, Mr. Gandhi was then released from jail and it was thought that he would take up the question. Dr. Ansari, therefore, contented himself with handing over to the A. 1. C. C. the material he had collected.

Mr. Gandhi took up the threads as soon as he came out of the gaol. In November 1924 informal discussions were held in Bombay. As a result of these discussions, an All-Parties Conference was constituted and a committee was appointed to deal with the question of bringing about unity. The Conference was truly an All-Parties Conference inasmuch as the representatives were drawn from the Congress, the Hindu Maha Sabha, the Justice Party, Liberal Federation, Indian Christians, Muslim League, etc. On the 23rd January 1925, a meeting of the committee ⁸⁷[f.43] appointed by the All-Parties Conference was held in Delhi at the Western Hotel. Mr. Gandhi presided. On the 24th January the

committee appointed a representative sub-committee consisting of 40 members (a) to frame such recommendations as would enable all parties to join the Congress, (b) to frame a scheme for the representation of all communities, races and sub-divisions on the legislative and other elective bodies under Swaraj and recommended the best method of securing a just and proper representation of the communities in the services without detriment to efficiency, and (c) to frame a scheme of Swaraj that will meet the present needs of the country. The committee was instructed to report on or before the 15th February. In the interest of expediting the work some members formed themselves into a smaller committee for drawing up a scheme of Swaraj leaving the work of framing the scheme of communal representation to the main committee.

The Swaraj sub-committee under the chairmanship of Mrs. Besant succeeded in framing its report on the constitution and submitted the same to the general committee of the All-Parties Conference. But the sub-committee appointed to frame a scheme of communal representation met at Delhi on the 1st March and adjourned *sine die* without coming to any conclusion. This was due to the fact that Lala Lajpat Rai and other representatives of the Hindus would not attend the meeting of the subcommittee. Mr. Gandhi and Pandit Motilal Nehru issued the following statement ⁸⁸[f.44]:—

“Lala Lajpat Rai had asked for a postponement by reason of the inability of Messrs. Jayakar, Srinivas Iyengar and Jai Ram Das to attend. We were unable to postpone the meeting on our own responsibility. We, therefore, informed Lala Lajpat Rai that the question of postponement be placed before the meeting. This was consequently done but apart from the absence of Lala Lajpat Rai and of the gentlemen named by him the attendance was otherwise also too meagre for coming to any decision. In our opinion there was moreover no material for coming to any definite conclusions nor is there likelihood of any being reached in the near future.”

There is no doubt that this statement truly summed up the state of mind of the parties concerned. The late Lala Lajpat Rai, the spokesman

of the Hindus on the committee, had already said in an article in the *Leader* of Allahabad that there was no immediate hurry for a fresh pact and that he declined to accept the view that a Hindu majority in some provinces and a Muslim majority in others was the only way to Hindu-Muslim unity.

The question of Hindu-Muslim unity was again taken up in 1927. This attempt was made just prior to the Simon Commission inquiry, in the hope that it would be successful as the attempt made prior to the Montagu-Chelmsford inquiry in 1916 and which had fructified in the Lucknow Pact. As a preliminary, a conference of leading Muslims was held in Delhi on the 20th March 1927 at which certain proposals ⁸⁹[f.45] for safeguarding the interest of the Muslims were considered. These proposals, which were known as the Delhi proposals, were considered by the Congress at its session held in Madras in December 1927. At the same time, the Congress, passed a resolution ⁹⁰[f.46] authorizing its Working Committee to confer with similar committees to be appointed by other organizations to draft a Swaraj constitution for India. The Liberal Federation and the Muslim League passed similar resolutions appointing their representatives to join in the deliberations. Other organizations were also invited by the Congress Working Committee to send their spokesmen. The All-Parties Conference, ⁹¹[f.47] as the committee came to be called, met on 12th February 1928 and appointed a sub-committee to frame a constitution. The committee prepared a report with a draft of the constitution—which is known as the Nehru Report. The report was placed before the All-Parties Convention which met under the presidentship of Dr. Ansari on 22nd December 1928 at Calcutta just prior to the Congress session. On the 1st January 1929 the Convention adjourned *sine die* without coming to any agreement, on any question, not even on the communal question.

This is rather surprising because the points of difference between the Muslim proposals and the proposals made in the Nehru Committee report were not substantial. This is quite obvious from the speech ⁹²[f.48] of Mr. Jinnah in the All-Parties Convention in support of his amendments. Mr. Jinnah wanted four amendments to be made in the

report of the Nehru Committee. Speaking on his first amendment relating to the Muslim demand for $33\frac{1}{3}$ per cent. representation in the Central Legislature, Mr. Jinnah said :—

“The Nehru Report has stated that according to the scheme which they propose the Muslims are likely to get one-third in the Central Legislature and perhaps more, and it is argued that the Punjab and Bengal will get much more than their population proportion. What we feel is this. If one-third is going to be obtained by Muslims, then the method which you have adopted is not quite fair to the provinces where the Muslims are in a minority because the Punjab and Bengal will obtain more than their population basis in the Central Legislature. You are going to give to the rich more and keeping the poor according to population. It may be sound reasoning but it is not wisdom.

“Therefore, if the Muslims are, as the Nehru Report suggest, to get one-third, or more, they cannot give the Punjab or Bengal more, but let six or seven extra seats be distributed among provinces which are already in a very small minority, such as, Madras and Bombay, because, remember, if Sind is separated, the Bombay Province will be reduced to something like 8 per cent. There are other provinces where we have small minorities. This is the reason why we say, fix one-third and let it be distributed among Muslims according to our own adjustment.”

His second amendment related to the reservation of seats on population basis in the Punjab and in the Bengal, i.e., the claim to a statutory majority. On this Mr. Jinnah said :—

“You remember that originally proposals emanated from certain Muslim leaders in March 1927 known as the ' Delhi Proposals. ' They were dealt with by the A. I. C. C. in Bombay and at the Madras Congress and the Muslim League in Calcutta last year substantially endorsed at least this part of the proposal. I am not going into the detailed arguments. It really reduces itself into one proposition, that the voting strength of Mahomedans in the Punjab and Bengal, although they are in a majority, is not in proportion to their population. That was one of the reasons. The Nehru Report has now

found a substitute and they say that if adult franchise is established then there is no need for reservation, but in the event of its not being established we want to have no doubt that in that case there should be reservation for Muslims in the Punjab and Bengal, according to their population, but they shall not be entitled to additional seats.”

His third amendment was in regard to residuary powers which the Nehru Committee had vested in the Central Government. In moving his amendment that they should be lodged in the Provincial Government Mr. Jinnah pleaded :—

“Gentlemen, this is purely a constitutional question and has nothing to do with the communal aspect. We strongly hold—I know Hindus will say Muslims are carried away by communal consideration—we strongly hold the view that, if you examine this question carefully, we submit that the residuary powers should rest with the province.”

His fourth amendment was concerned with the separation of Sind. The Nehru Committee had agreed to the separation of Sind but had subjected it to one proviso, namely, that the separation should come “only on the establishment of the system of government outlined in the report”. Mr. Jinnah in moving for the deletion of the proviso said :—

“We feel this difficulty. . . . Suppose the Government choose, within the next six months, or a year or two years, to separate Sind before the establishment of a government under this constitution, are the Mahomedans to say, ' we do not want it ' So long as this clause stands its meaning is that Mahomedans should oppose its separation until simultaneously a government is established under this constitution. We say delete these words and I am supporting my argument by the fact that you do not make such a remark about the N.-W. F. Province. . . . The Committee says it cannot accept it as the resolution records an agreement arrived at by parties who signed at Lucknow. With the utmost deference to the members of the Committee I venture to say that that is not valid ground. . . . Are we bound, in this Convention, bound because a particular resolution was

passed by an agreement between certain persons?"

These amendments show that the gulf between the Hindus and Muslims was not in any way a wide one. Yet there was no desire to bridge the same. It was left to the British Government to do what the Hindus and the Muslims failed to do and it did it by the Communal Award.

The Poona Pact between the Hindus and the Depressed Classes gave another spurt to the efforts to bring about unity. ⁹³[f.49] During the months of November and December 1932 Muslims and Hindus did their best to come to some agreement. Muslims met in their All-Parties Conferences, Hindus, Muslims and Sikhs met in Unity Conferences. Proposals and counter-proposals were made but nothing came out of these negotiations to replace the Award by a Pact and they were in the end abandoned after the Committee had held 23 sittings.

Just as attempts were made to bring about unity on political questions, attempts were also made to bring about unity on social and religious questions such as :—

(1) Cow slaughter, (2) music before the Mosques and (3) conversions over which differences existed. The first attempt in this direction was made in 1923 when the Indian National Pact was proposed. It failed. Mr. Gandhi was then in gaol. Mr. Gandhi was released from gaol on the 5th February 1924. Stunned by the destruction of his work for Hindu-Muslim unity, Mr. Gandhi decided to go on a twenty-one days' fast, holding himself morally responsible for the murderous riots that had taken place between Hindus and Muslims. Advantage was taken of the fast to gather leading Indians of all communities at a Unity Conference ⁹⁴ [f.50] which was attended also by the Metropolitan of Calcutta. The Conference held prolonged sittings from September 26th to October 2nd, 1924. The members of the Conference pledged themselves to use their utmost endeavours to enforce the principles of freedom of conscience and religion and condemn any deviation from them even under provocation. A Central National Panchayat was appointed with Mr. Gandhi as the chairman. The Conference laid down certain

fundamental rights relating to liberty of holding and expressing religious beliefs and following religious practices, sacredness of places of worship, cow slaughter, and music before mosques, with a statement of the limitations they must be subject to. This Unity Conference did not produce peace between the two communities. It only produced a lull in the rioting which had become the order of the day. Between 1925 and 1926, rioting was renewed with an intensity and malignity unknown before. Shocked by this rioting, Lord Irwin, the then Viceroy of India, in his address to the Central Legislature on 29th August 1927 made an appeal to the two communities to stop the rioting and establish amity. Lord Irwin's exhortation to establish amity was followed by another Unity Conference which was known as the Simla Unity Conference.⁹⁵[f.51] This Unity Conference met on the 30th August 1927 and issued an appeal beseeching both the communities to support the leaders in their efforts to arrive at a satisfactory settlement. The Conference appointed a Unity Committee which sat in Simla from 16th to 22nd September under the chairmanship of Mr. Jinnah. No conclusions were reached on any of the principal points involved in the cow and music questions and others pending before the Committee were not even touched. Some members felt that the Committee might break up. The Hindu members pressed that the Committee should meet again on some future convenient date. The Muslim members of the Committee were first divided in their opinion, but at last agreed to break up the Committee and the President was requested to summon a meeting if he received a requisition within six weeks from eleven specified members. Such a requisition never came and the Committee never met again.

The Simla Conference having failed, Mr. Srinivas Iyengar, the then President of the Congress, called a special conference of Hindus and Muslims which sat in Calcutta on the 27th and 28th October 1927. It came to be known as the Calcutta Unity Conference.⁹⁶[f.52] The Conference passed certain resolutions on the three burning questions. But the resolution had no support behind them as neither the Hindu Maha Sabha nor the Muslim League was represented at the Conference.

At one time it was possible to say that Hindu-Muslim unity was an

ideal which not only must be realized but could be realized and leaders were blamed for not making sufficient efforts for its realization. Such was the view expressed in 1911 even by Maulana Mahomed Ali who had not then made any particular efforts to achieve Hindu-Muslim unity. Writing in the *Comrade* of 14th January 1911 Mr. Mahomed Ali said⁹⁷[f.53]:

“We have no faith in the cry that India is united. If India was united where was the need of dragging the venerable President of this year's Congress from a distant home? The bare imagination of a feast will not dull the edge of hunger. We have less faith still in the sanctimoniousness that transmutes in its subtle alchemy a rapacious monopoly into fervent patriotism. . . .the person we love best, fear the most, and trust the least is the impatient idealist. Goethe said of Byron that he was a prodigious poet, but that when he reflected he was a child. Well, we think no better and no worse of the man who combines great ideals and a greater impatience. So many efforts, well meaning as well as ill-begotten, have failed in bringing unity to this distracted land, that we cannot spare even cheap and scentless flowers of sentiment for the grave of another ill-judged endeavour. We shall not make the mistake of gumming together pieces of broken glass, and then cry over the unsuccessful result, or blame the refractory material. In other words, we shall endeavour to face the situation boldly, and respect facts, howsoever ugly and ill-favoured. It is poor statesmanship to slur over inconvenient realities, and not the least important success in achieving unity is the honest and frank recognition of the deep-seated prejudices that hinder it and the yawning differences that divide.”

Looking back on the history of these 30 years, one can well ask whether Hindu-Muslim unity has been realized? Whether efforts have not been made for its realization? And whether any efforts remain to be made? The history of the last 30 years shows that Hindu-Muslim unity has not been realized. On the contrary, there now exists the greatest disunity between them: that efforts—sincere and persistent—have been made to achieve it and that nothing now remains to be done to achieve it except surrender by one party to the other. If anyone, who is not in

the habit of cultivating optimism where there is no justification for it, said that the pursuit of Hindu-Muslim unity is like a mirage and that the idea must now be given up, no one can have the courage to call him a pessimist or an impatient idealist. It is for the Hindus to say whether they will engage themselves in this vain pursuit in spite of the tragic end of all their past endeavours or give up the pursuit of unity and try for a settlement on another basis.

In the second place, it must be admitted that the Muslim point of view has undergone a complete revolution. How complete the revolution is can be seen by reference to the past pronouncements of some of those who insist on the two-nation theory and believe that Pakistan is the only solution of the Hindu-Muslim problem. Among these Mr. Jinnah, of course, must be accepted as the foremost. The revolution in his views on the Hindu-Muslim question is striking, if not staggering. To realize the nature, character and vastness of this revolution it is necessary to know his pronouncements in the past relating to the subject so that they may be compared with those he is making now.

A study of his past pronouncement may well begin with the year 1906 when the leaders of the Muslim community waited upon Lord Minto and demanded separate electorates for the Muslim community. It is to be noted that Mr. Jinnah was not a member of the deputation. Whether he was not invited to join the deputation or whether he was invited to join and declined is not known. But the fact remains that he did not lend his support to the Muslim claim to separate representation when it was put forth in 1906.

In 1918 Mr. Jinnah resigned his membership of the Imperial Legislative Council as a protest against the Rowlatt Bill. ⁹⁸[f.54] In tendering his resignation Mr. Jinnah said :

“I feel that under the prevailing conditions, I can be of no use to my people in the Council, nor consistently with one's self-respect is cooperation possible with a Government that shows such utter disregard for the opinion of the representatives of the people at the Council Chamber and the feelings and the sentiments of the people

outside." In 1919 Mr. Jinnah gave evidence before the Joint Select Committee appointed by Parliament on the Government of India Reform Bill, then on the anvil. The following views were expressed by him in answer to questions put by members of the Committee on the Hindu-Muslim question.

EXAMINED BY MAJOR ORMSBY-GORE.

Q. 3806.—You appear on behalf of the Moslem League— that is, on behalf of the only widely extended Mohammedan organisation in India?—Yes.

Q. 3807.—I was very much struck by the fact that neither in your answers to the questions nor in your opening speech this morning did you make any reference to the special interest of the Mohammedans in India: is that because you did not wish to say anything?—No, but because I take it the Southborough Committee have accepted that, and I left it to the members of the Committee to put any questions they wanted to. I took a very prominent part in the settlement of Lucknow. I was representing the Musalmans on that occasion.

Q. 3809.—On behalf of the All-India Moslem League, you ask this Committee to reject the proposal of the Government of India?—I am authorised to say that—to ask you to reject the proposal of the Government of India with regard to Bengal [i.e., to give the Bengal Muslims more representation than was given them by the Lucknow Pact].

Q. 3810.—You said you spoke from the point of view of India. You speak really as an Indian Nationalist?—I do.

Q. 3811.—Holding that view, do you contemplate the early disappearance of separate communal representation of the Mohammedan community?—I think so.

Q. 3812.—That is to say, at the earliest possible moment you wish to do away in political life with any distinction between Mohammedans and Hindus?—Yes. Nothing will please me more than when that day comes.

Q. 3813.—You do not think it is true to say that the Mohammedans of India have many special political interests not merely in India but outside India, which they are always particularly anxious to press as a distinct Mohammedan community? —There are two things. In India the Mohammedans have very few things really which you can call matters of special interest for them—I mean secular things.

Q. 3814.—I am only referring to them, of course?—And therefore that is why I really hope and expect that the day is not very far distant when these separate electorates will disappear.

Q. 3815.—It is true, at the same time, that the Mohammedans in India take a special interest in the foreign policy of the Government of India?—They do ; a very,—No, because what you propose to do is to frame very keen interest and the large majority of them hold very strong sentiments and very strong views.

Q. 3816.—Is that one of the reasons why you, speaking on behalf of the Mohammedan community, are so anxious to get the Government of India more responsible to an electorate?—No.

Q. 3817.—Do you think it is possible, consistently with remaining in the British Empire, for India to have one foreign policy and for His Majesty, as advised by his Ministers in London, to have another?—Let me make it clear. It is not a question of foreign policy at all. What the Moslems of India feel is that it is a very difficult position for them. Spiritually, the Sultan or the Khalif is their head.

Q. 3818.—Of one community?—Of the Sunni sect, but that is the largest; it is in an overwhelming majority all over India. The Khalif is the only rightful custodian of the Holy Places according to our view, and nobody else has a right. What the Moslems feel very keenly is this, that the Holy Places should not be severed from the Ottoman Empire—that they should remain with the Ottoman Empire under the Sultan.

Q. 3819.—I do not want to get away from the Reform Bill on to foreign policy.—I say it has nothing to do with foreign policy. Your point is whether in India the Muslims will adopt a certain attitude with

regard to foreign policy in matters concerning Moslems all over the world.

Q. 3820.—My point is, are they seeking for some control over the Central Government in order to impress their views on foreign policy on the Government of India?—No.

EXAMINED BY MR. BENNETT

Q. 3853.—.....Would it not be an advantage in the case of an occurrence of that kind [i.e., a communal riot] if the maintenance of law and order were left with the executive side of the Government?—I do not think so, if you ask me, but I do not want to go into unpleasant matters, as you say.

Q. 3854.—It is with no desire to bring up old troubles that I ask the question ; I would like to forget them?—If you ask me, very often these riots are based on some misunderstanding, and it is because the police have taken one side or the other, and that has enraged one side or the other. I know very well that in the Indian States you hardly ever hear of any Hindu-Mohammedan riots, and I do not mind telling the Committee, without mentioning the name, that I happened to ask one of the ruling Princes, "How do you account for this?" and he told me, "As soon as there is some trouble we have invariably traced it to the police, through the police taking one side or the other, and the only remedy we have found is that as soon as we come to know we move that police officer from that place, and there is an end of it."

Q. 3855.—That is useful piece of information, but the fact remains that these riots have been inter-racial, Hindu on the one side and Mohammedan on the other. Would it be an advantage at a time like that the Minister, the representative of one community or the other, should be in charge of the maintenance of law and order?—Certainly.

Q. 3856.—It would?—If I thought otherwise I should be casting a reflection on myself. If I was the Minister, I would make bold to say that nothing would weigh with me except justice, and what is right. Q. 3857.—I can understand that you would do more than justice to the

other side; but even then, there is what might be called the subjective side. It is not only that there is impartiality, but there is the view which may be entertained by the public, who may harbour some feeling of suspicion?—With regard to one section or the other, you mean they would feel that an injustice was done to them, or that justice would not be done?

Q. 3858.—Yes; that is quite apart from the objective part of it?—My answer is this: That these difficulties are fast disappearing. Even recently, in the whole district of Thana, Bombay, every officer was an Indian officer from top to bottom, and I do not think there was a single Mohammedan—they were all Hindus—and I never heard any complaint Recently that has been so. I quite agree with you that ten years ago there was that feeling what you are now suggesting to me, but it is fast disappearing.

EXAMINED BY LORD ISLINGTON

Q. 3892.—..... You said just now about the communal representation, I think in answer to Major Ormsby-Gore, that you hope in a very few years you would be able to extinguish communal representation, which was at present proposed to be established and is established in order that Mahommedans may have their representation with Hindus. You said you desired to see that. How soon do you think that happy state of affairs is likely to be realized?—I can only give you certain facts : I cannot say anything more than that: I can give you this which will give you some idea: that in 1913, at the All-India Moslem League sessions at Agra, we put this matter to the test whether separate electorates should be insisted upon or not by the Mussalmans, and we got a division, and that division is based upon Provinces ; only a certain number of votes represent each Province, and the division came to 40 in favour of doing away with the separate electorate, and 80 odd—I do not remember the exact number—were for keeping the separate electorate. That was in 1913. Since then I have had many opportunities of discussing this matter with various Mussulman leaders ; and they are changing their angle of vision with regard to this matter. I cannot give you the period, but I think it cannot last very long. Perhaps the next

inquiry may hear something about it.

Q. 3893.—You think at the next inquiry the Mahommedans will ask to be absorbed into the whole?—Yes, I think the next inquiry will probably hear something about it.

Although Mr. Jinnah appeared as a witness on behalf of the Muslim League, he did not allow his membership of the League to come in the way of his loyalty to other political organizations in the country. Besides being a member of the Muslim League, Mr. Jinnah was a member of the Home Rule League and also of the Congress. As he said in his evidence before the Joint Parliamentary Committee, he was a member of all three bodies although he openly disagreed with the Congress, with the Muslim League and that there were some views which the Home Rule League held which he did not share. That he was an independent but a nationalist, is shown by his relationship with the Khilafatist Musalmans. In 1920 the Musalmans organized the Khilafat Conference. It became so powerful an organization that the Muslim League went under and lived in a state of suspended animation till 1924. During these years no Muslim leader could speak to the Muslim masses from a Muslim platform unless he was a member of the Khilafat Conference. That was the only platform for Muslims to meet Muslims. Even then Mr. Jinnah refused to join the Khilafat Conference. This was no doubt due to the fact that then he was only a statutory Musalman with none of the religious fire of the orthodox which he now says is burning within him. But the real reason why he did not join the Khilafat was because he was opposed to the Indian Musalmans engaging themselves in extra-territorial affairs relating to Muslims outside India.

After the Congress accepted non-co-operation, civil disobedience and boycott of Councils, Mr. Jinnah left the Congress. He became its critic but never accused it of being a Hindu body. He protested when such a statement was attributed to him by his opponents. There is a letter by Mr. Jinnah to the Editor of the *Times of India* written about the time which puts in a strange contrast the present opinion of Mr. Jinnah about the Congress and his opinion in the past. The letter ⁹⁹[f.55] reads as follows :—

“To the Editor of”The Times of India”

Sir,—I wish again to correct the statement which is attributed to me and to which you have given currency more than once and now again repeated by your correspondent ' Banker 'in the second column of your issue of the 1st October that I denounced the Congress as ' a Hindu Institution '. I publicly corrected this misleading report of my speech in your columns soon after it appeared ;but it did not find a place in the columns of your paper and so may I now request you to publish this and oblige.”

After the Khilafat storm had blown over and the Muslims had shown a desire to return to the internal politics of India, the Muslim League was resuscitated. The session of the League held in Bombay on 30th December 1924 under the presidentship of Mr. Raza Ali was a lively one. Both Mr. Jinnah and Mr. Mahomed Ali took part in it. ¹⁰⁰[f.56]

In this session of the League, a resolution was moved which affirmed the desirability of representatives of the various Muslim associations of India representing different shades of political thought meeting in a conference at an early date at Delhi or at some other central place with a view to develop”a united and sound practical activity”to supply the needs of the Muslim community. Mr. Jinnah in explaining the resolution said ¹⁰¹[f.57]:—

“The object was to organize the Muslim community, not with a view to quarrel with the Hindu community, but with a view to unite and cooperate with it for their motherland. He was sure once they had organized themselves they would join hands with the Hindu Maha Sabha and declare to the world that Hindus and Mahomedans are brothers.”

The League also passed another resolution in the same session for appointing a committee of 33 prominent Musalmans to formulate the political demands of the Muslim community. The resolution was moved by Mr. Jinnah. In moving the resolution, Mr. Jinnah ¹⁰²[f.58] :—

"Repudiated the charge that he was standing on the platform of the

League as a communalist. He assured them that he was, as ever, a nationalist. Personally he had no hesitation. He wanted the best and the fittest men to represent them in the Legislatures of the land (Hear, Hear and Applause). But unfortunately his Muslim compatriots were not prepared to go as far as he. He could not be blind to the situation. The fact was that there was a large number of Muslims who wanted representation separately in Legislatures and in the country's Services. They were talking of communal unity, but where was unity? It had to be achieved by arriving at some suitable settlement. He knew he said amidst deafening cheers, that his fellow-religionists were ready and prepared to fight for Swaraj, but wanted some safeguards. Whatever his view, and they knew that as a practical politician he had to take stock of the situation, the real block to unity was not the communities themselves, but a few mischief makers on both sides.”

And he did not thus hesitate to arraign mischief makers in the sternest possible language that could only emanate from an earnest nationalist. In his capacity as the President of the session of the League held in Lahore on 24th May 1924 he said ¹⁰³
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_59:—

“If we wish to be free people, let us unite, but if we wish to continue slaves of Bureaucracy, let us fight among ourselves and gratify petty vanity over petty matters. Englishmen being our arbiters.”

In the two All-Parties Conferences, one held in 1925 and the other in 1928, Mr. Jinnah was prepared to settle the Hindu-Muslim question on the basis of joint electorates. In 1927 he openly said ¹⁰⁴[f.60] from the League platform :—

“I am not wedded to separate electorates, although I must say that the overwhelming majority of the Musalmans firmly and honestly believe that it is the only method by which they can be sure.”

In 1928, Mr. Jinnah joined the Congress in the boycott of the Simon Commission. He did so even though the Hindus and Muslims had failed to come to a settlement and he did so at the cost of splitting the League

into two.

Even when the ship of the Round Table Conference was about to break on the communal rock, Mr. Jinnah resented being named as a communalist who was responsible for the result and said that he preferred an agreed solution of the communal problem to the arbitration of the British Government. Addressing the U. P. Muslim Conference held at Allahabad on 8th August ¹⁰⁵[f.61] 1931 Mr. Jinnah said :—

“The first thing that I wish to tell you is that it is now absolutely essential and vital that Muslims should stand united. For Heaven's sake close all your ranks and files and stop this internecine war. I urged this most vehemently and I pleaded to the best of my ability before Dr. Ansari, Mr. T. A. K. Sherwani, Maulana Abul Kalam Azad and Dr. Syed Mahmud. I hope that before I leave the shores of India I shall hear the good news that whatever may be our differences ; whatever may be our convictions between ourselves, this is not the moment to quarrel between ourselves.

“Another thing I want to tell you is this. There is a certain section of the press, there is a certain section of the Hindus, who constantly misrepresent me in various ways. I was only reading the speech of Mr. Gandhi this morning and Mr. Gandhi said that he loves Hindus and Muslims alike. I again say standing here on this platform that although I may not put forward that claim but I do put forward this honestly and sincerely that I want fair play between the two communities.”

Continuing further Mr. Jinnah said:”As to the most important question, which to my mind is the question of Hindu-Muslim settlement—all I can say to you is that I honestly believe that the Hindus should concede to the Muslims a majority in the Punjab and Bengal and if that is conceded, I think a settlement can be arrived at in a very short time.

”The next question that arises is one of separate vs. joint electorates. As most of you know, if a majority is conceded in the Punjab and Bengal, I would personally prefer a settlement on the basis of joint

electorate. (Applause.) But I also know that there is a large body of Muslims—and I believe a majority of Muslims—who are holding on to separate electorate. My position is that I would rather have a settlement even on the footing of separate electorate, hoping and trusting that when we work our new constitution and when both Hindus and Muslims get rid of distrust, suspicion and fears and when they get their freedom we would rise to the occasion and probably separate electorate will go sooner than most of us think.

“Therefore I am for a settlement and peace among the Muslims first; I am for a settlement and peace between the Hindus and Mahommedans. This is not a time for argument, not a time for propaganda work and not a time for embittering feelings between the two communities, because the enemy is at the door of both of us and I say without hesitation that if the Hindu-Muslim question is not settled, I have no doubt that the British will have to arbitrate and that he who arbitrates will keep to himself the substance of power and authority. Therefore, I hope they will not vilify me. After all, Mr. Gandhi himself says that he is willing to give the Muslims whatever they want, and my only sin is that I say to the Hindus give to the Muslims only 14 points, which is much less than the 'blank cheque' which Mr. Gandhi is willing to give. I do not want a blank cheque, why not concede the 14 points? When Pandit Jawaharlal Nehru says: 'Give us a blank cheque' when Mr. Patel says: 'Give us a blank cheque and we will sign it with a Swadeshi pen on a Swadeshi paper' they are not communalists and I am a communalist! I say to Hindus not to misrepresent everybody. I hope and trust that we shall be yet in a position to settle the question which will bring peace and happiness to the millions in our country.

“One thing more I want to tell you and I have done. During the time of the Round Table Conference,—it is now an open book and anybody who cares to read it can learn for himself—I observed the one and the only principle and it was that when I left the shores of Bombay I said to the people that I would hold the interests of India sacred, and believe me—if you care to read the proceedings of the Conference, I am not bragging because I have done my duty—that I

have loyally and faithfully fulfilled my promise to the fullest extent and I venture to say that if the Congress or Mr. Gandhi can get anything more than I fought for, I would congratulate them.

“Concluding Mr. Jinnah said that they must come to a settlement, they must become friends eventually and he, therefore, appealed to the Muslims to show moderation, wisdom and conciliation, if possible, in the deliberation that might take place and the resolution that might be passed at the Conference.”

As an additional illustration of the transformation in Muslim ideology, I propose to record the opinions once held by Mr. Barkat Ali who is now a follower of Mr. Jinnah and a staunch supporter of Pakistan.

When the Muslim League split-into two over the question of cooperation with the Simon Commission, one section led by Sir Mahommad Shafi favouring co-operation and another section led by Mr. Jinnah supporting the Congress plan of boycott, Mr. Barkat Ali belonged to the Jinnah section of the League. The two wings of the League held their annual sessions in 1928 at two different places. The Shafi wing met in Lahore and the Jinnah wing met in Calcutta. Mr. Barkat Ali, who was the Secretary of the Punjab Muslim League, attended the Calcutta session of the Jinnah wing of the League and moved the resolution relating to the communal settlement. The basis of the settlement was joint electorates. In moving the resolution Mr. Barkat Ali said ¹⁰⁶ [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_62:—](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_62:)

“For the first time in the history of the League there was a change in its angle of vision. We are offering by this change a sincere hand of fellowship to those of our Hindu countrymen who have objected to the principle of separate electorates.”

In 1928 there was formed a Nationalist Party under the leadership of Dr. Ansari. ¹⁰⁷[f.63] The Nationalist Muslim Party was a step in advance of the Jinnah wing of the Muslim League and was prepared to accept the Nehru Report, as it was, without any amendments—not even those which Mr. Jinnah was insisting upon. Mr. Barkat Ali, who in 1927 was

with the Jinnah wing of the League, left the same as not being nationalistic enough and joined the Nationalist Muslim Party of Dr. Ansari. How great a nationalist Mr. Barkat Ali then was can be seen by his trenchant and vehement attack on Sir Muhammad Iqbal for his having put forth in his presidential address to the annual session of the All-India Muslim League held at Allahabad in 1930 a scheme ¹⁰⁸[f.64] for the division of India which is now taken up by Mr. Jinnah and Mr. Barkat Ali and which goes by the name of Pakistan. In 1931 there was held in Lahore the Punjab Nationalist Muslim Conference and Mr. Barkat Ali was the Chairman of the Reception Committee. The views he then expressed on Pakistan are worth recalling ¹⁰⁹[f.65] Reiterating and reaffirming the conviction and the political faith of his party, Malik Barkat Ali, Chairman of the Reception Committee of the Conference, said :

“We believe, first and foremost in the full freedom and honour of India. India, the country of our birth and the place with which all our most valued and dearly cherished associations are knit, must claim its first place in our affection and in our desires. We refuse to be parties to that sinister type of propaganda which would try to appeal to ignorant sentiment by professing to be Muslim first and Indian afterwards. To us a slogan of this kind is not only bare, meaningless cant, but downright mischievous. We cannot conceive of Islam in its best and last interests as in any way inimical to or in conflict with the best and permanent interests of India. India and Islam in India are identical, and whatever is to the detriment of India must, from the nature of it, be detrimental to Islam whether economically, politically, socially or even morally. Those politicians, therefore, are a class of false prophets and at bottom the foes of Islam, who talk of any inherent conflict between Islam and the welfare of India. Further, howsoever much our sympathy with our Muslim brethren outside India, i.e., the Turks and the Egyptians or the Arabs,—and it is a sentiment which is at once noble and healthy,—we can never allow that sympathy to work to the detriment of the essential interests of India. Our sympathy, in fact, with those countries can only be valuable to them, if India as the source, nursery and fountain of that sympathy,

is really great. And if ever the lime comes, God forbid, when any Muslim Power from across the Frontier chooses to enslave India and snatch away the liberties of its people, no amount of pan-Islamic feeling, whatever it may mean, can stand in the way of Muslim India fighting shoulder to shoulder with non-Muslim India in defence of its liberties.

“Let there be, therefore, no misgivings of any kind in that respect in any non-Muslim quarters. I am conscious that a certain class of narrow-minded Hindu politicians is constantly harping on the bogey of an Islamic danger to India from beyond the N.-W. Frontier passes but I desire to repeat that such statements and such fears are fundamentally wrong and unfounded. Muslim India shall as much defend India's liberties as non-Muslim India, even if the invader happens to be a follower of Islam.

“Next, we not only believe in a free India but we also believe in a united India—not the India of the Muslim, not the India of the Hindu or of the Sikh, not the India of this community or of that community but the India of all. And as this is our abiding faith, we refuse to be parties to any division of the India of the future into a Hindu or a Muslim India. However much the conception of a Hindu and a Muslim India may appeal and send into frenzied ecstasies abnormally orthodox mentalities of their party, we offer our full throated opposition to it, not only because it is singularly unpractical and utterly obnoxious but because it not only sounds the death-knell of all that is noble and lasting in modern political activity in India, but is also contrary to and opposed to India's chief historical tradition.

“India was one in the days of Asoka and Chandragupta and India remained one even when the sceptre and rod of Imperial sway passed from Hindu into Moghul or Muslim hands. And India shall remain one when we shall have attained the object of our desires and reached those uplands of freedom, where all the light illuminating us shall not be reflected glory but shall be light proceeding direct as it were from our very faces.

“The conception of a divided India, which Sir Muhammad Iqbal put forward recently in the course of his presidential utterance from the platform of the League at a time when that body had virtually become extinct and ceased to represent free Islam—I am glad to be able to say that Sir Muhammad Iqbal has since recanted it—must not therefore delude anybody into thinking that it is Islam's conception of the India to be. Even if Dr. Sir Muhammad Iqbal had not recanted it as something which could not be put forward by any sane person, I should have emphatically and unhesitatingly repudiated it as something foreign to the genius and the spirit of the rising generation of Islam, and I really deem it a proud duty to affirm today that not only must there be no division of India into communal provinces but that both Islam and Hinduism must run coterminously with the boundaries of India and must not be cribbed, cabined and confined within any shorter bounds. To the same category as Dr. Iqbal's conception of a Muslim India and a Hindu India, belongs the sinister proposals of some Sikh communalists to partition and divide the Punjab.

“With a creed so expansive, namely a free and united India with its people all enjoying in equal measure and without any kinds of distinctions and disabilities the protection of laws made by the chosen representatives of the people on the widest possible basis of a true democracy, namely, adult franchise, and through the medium of joint electorates—and an administration charged with the duty of an impartial execution of the laws, fully accountable for its actions, not to a distant or remote Parliament of foreigners but to the chosen representatives of the land,—you would not expect me to enter into the details and lay before you, all the colours of my picture. And I should have really liked to conclude my general observations on the aims and objects of the Nationalist Muslim Party here, were it not that the much discussed question of joint or separate electorates, has today assumed proportions where no public man can possibly ignore it.

“Whatever may have been the value or utility of separate electorates at a time when an artificially manipulated high-propertied franchise had the effect of converting a majority of the people in the population

of a province into a minority in the electoral roll, and when communal passions and feelings ran particularly high, universal distrust poisoning the whole atmosphere like a general and all-pervading miasma,—we feel that in the circumstances of today and in the India of the future, separate electorates should have no place whatever.”

Such were the views Mr. Jinnah and Mr. Barkat Ali held on nationalism, on separate electorates and on Pakistan. How diametrically opposed are the views now held by them on these very problems?

So far I have laboured to point out things, the utter failure of the attempts made to bring about Hindu-Muslim unity and the emergence of a new ideology in the minds of the Muslim leaders. There is also a third thing which I must discuss in the present context for reasons arising both from its relevance as well as from its bearing on the point under consideration, namely whether the Muslim ideology has behind it a justification which political philosophers can accept.

Many Hindus seem to hold that Pakistan has no justification. If we confine ourselves to the theory of Pakistan there can be no doubt that this is a greatly mistaken view. The philosophical justification for Pakistan rests upon the distinction between a community and a nation. In the first, place, it is recognized comparatively recently. Political philosophers for a long time were concerned, mainly, with the controversy summed up in the two questions, how far should the right of a mere majority to rule the minority be accepted as a rational basis for government and how far the legitimacy of a government be said to depend upon the consent of the governed. Even those who insisted, that the legitimacy of a government depended upon the consent of the governed, remained content with a victory for their proposition and did not care to probe further into the matter. They did not feel the necessity for making any distinctions within the category of the "governed". They evidently thought that it was a matter of no moment whether those who were included in the category of the governed formed a community or a nation. Force of circumstances has, however, compelled political philosophers to accept this distinction. In the second place, it is not a mere distinction without a difference. It is a distinction which is

substantial and the difference is consequentially fundamental. That this distinction between a community and a nation is fundamental, is clear from the difference in the political rights which political philosophers are prepared to permit to a community and those they are prepared to allow to a nation against the Government established by law. To a community they are prepared to allow only the right of insurrection. But to a nation they are willing to concede the right of disruption. The distinction between the two is as obvious as it is fundamental. A right of insurrection is restricted only to insisting on a change in the mode and manner of government. The right of disruption is greater than the right of insurrection and extends to the secession of a group of the members of a State with a secession of the portion of the State's territory in its occupation. One wonders what must be the basis of this difference. Writers on political philosophy, who have discussed this subject, have given their reasons for the justification of a Community's right to insurrection ¹¹⁰[f.66] and of a nation's right to demand disruption. ¹¹¹[f.67] The difference comes to this : a community has a right to safeguards, a nation has a right to demand separation. The difference is at once clear and crucial. But they have not given any reasons why the right of one is limited to insurrection and why that of the other extends to disruption. They have not even raised such a question. Nor are the reasons apparent on the face of them. But it is both interesting and instructive to know why this difference is made. To my mind the reason for this difference pertains to questions of ultimate destiny. A state either consists of a series of communities or it consists of a series of nations. In a state, which is composed of a series of communities, one community may be arrayed against another community and the two may be opposed to each other. But in the matter of their ultimate destiny they feel they are one. But in a state, which is composed of a series of nations, when one nation rises against the other, the conflict is one as to differences of ultimate destiny. This is the distinction between communities and nations and it is this distinction which explains the difference in their political rights. There is nothing new or original in this explanation. It is merely another way of stating why the community has one kind of right and the nation another of quite a different kind. A community has a right of insurrection

because it is satisfied with it. All that it wants is a change in the mode and form of government. Its quarrel is not over any difference of ultimate destiny. A nation has to be accorded the right of disruption because it will not be satisfied with mere change in the form of government. Its quarrel is over the question of ultimate destiny. If it will not be satisfied unless the unnatural bond that binds them is dissolved, then prudence and even ethics demands that the bond shall be dissolved and they shall be freed each to pursue its own destiny.

V

While it is necessary to admit that the efforts at Hindu-Muslim unity have failed and that the Muslim ideology has undergone a complete revolution, it is equally necessary to know the precise causes which have produced these effects. The Hindus say that the British policy of divide and rule is the real cause of this failure and of this ideological revolution. There is nothing surprising in this. The Hindus having cultivated the Irish mentality to have no other politics except that of being always against the Government, are ready to blame the Government for everything including bad weather. But time has come to discard the facile explanation so dear to the Hindus. For it fails to take into account two very important circumstances. In the first place, it overlooks the fact that the policy of divide and rule, allowing that the British do resort to it, cannot succeed unless there are elements which make division possible, and further if the policy succeeds for such a long time, it means that the elements which divide are more or less permanent and irreconcilable and are not transitory or superficial. Secondly, it forgets that Mr. Jinnah, who represents this ideological transformation, can never be suspected of being a tool in the hands of the British even by the worst of his enemies. He may be too self-opinionated, an egotist without the mask and has perhaps a degree of arrogance which is not compensated by any extraordinary intellect or equipment. It may be on that account he is unable to reconcile himself to a second place and work with others in that capacity for a public cause. He may not be over-flowing with ideas although he is not, as his critics make him out to be, an empty-headed dandy living upon the ideas of others. It may be

that his fame is built up more upon art and less on substance. At the same time, it is doubtful if there is a politician in India to whom the adjective incorruptible can be more fittingly applied. Anyone who knows what his relations with the British Government have been, will admit that he has always been their critic, if indeed, he has not been their adversary. No one can buy him. For it must be said to his credit that he has never been a soldier of fortune. The customary Hindu explanation fails to account for the ideological transformation of Mr. Jinnah.

What is then the real explanation of these tragic phenomena, this failure of the efforts for unity, this transformation in the Muslim ideology?

The real explanation of this failure of Hindu-Muslim unity lies in the failure to realize that what stands between the Hindus and Muslims is not a mere matter of difference, and that this antagonism is not to be attributed to material causes. It is formed by causes which take their origin in historical, religious, cultural and social antipathy, of which political antipathy is only a reflection. These form one deep river of discontent which, being regularly fed by these sources, keeps on mounting to a head and overflowing its ordinary channels. Any current of water flowing from another source however pure, when it joins it, instead of altering the colour or diluting its strength becomes lost in the main stream. The silt of this antagonism which this current has deposited, has become permanent and deep. So long as this silt keeps on accumulating and so long as this antagonism lasts, it is unnatural to expect this antipathy between Hindus and Muslims to give place to unity.

Like the Christians and Muslims in the Turkish Empire, the Hindus and Muslims of India have met as enemies on many fields, and the result of the struggle has often brought them into the relation of conquerors and conquered. Whichever party has triumphed, a great gulf has remained fixed between the two and their enforced political union either under the Moghuls or the British instead of passing over, as in so many other cases, into organic unity, has only accentuated their mutual

antipathy. Neither religion nor social code can bridge this gulf. The two faiths are mutually exclusive and whatever harmonies may be forged in the interest of good social behaviour, at their core and centre they are irreconcilable. There seems to be an inherent antagonism between the two which centuries have not been able to dissolve. Notwithstanding the efforts made to bring the creeds together by reformers like Akbar and Kabir, the ethical realities behind each have still remained, to use a mathematical phrase, which nothing can alter or make integers capable of having a common denominator. A Hindu can go from Hinduism to Christianity without causing any commotion or shock. But he cannot pass from Hinduism to Islam without causing a communal riot, certainly not without causing qualms. That shows the depth of the antagonism which divides the Hindus from the Musalmans.

If Islam and Hinduism keep Muslims and Hindus apart in the matter of their faith, they also prevent their social assimilation. That Hinduism prohibits intermarriage between Hindus and Muslims is quite well known. This narrow-mindedness is not the vice of Hinduism only. Islam is equally narrow in its social code. It also prohibits intermarriage between Muslims and Hindus. With these social laws there can be no social assimilation and consequently no socialization of ways, modes and outlooks, no blunting of the edges and no modulation of age-old angularities.

There are other defects in Hinduism and in Islam which are responsible for keeping the sore between Hindus and Muslims open and running. Hinduism is said to divide people and in contrast Islam is said to bind people together. This is only a half truth. For Islam divides as inexorably as it binds. Islam is a close corporation and the distinction that it makes between Muslims and non-Muslims is a very real, very positive and very alienating distinction. The brotherhood of Islam is not the universal brotherhood of man. It is brotherhood of Muslims for Muslims only. There is a fraternity but its benefit is confined to those within that corporation. For those who are outside the corporation, there is nothing but contempt and enmity. The second defeat of Islam is that it is a system of *social* self-government and is incompatible with *local*

self-government, because the allegiance of a Muslim does not rest on his domicile in the country which is his but on the faith to which he belongs. To the Muslim *ibi bene ibi patria* is unthinkable. Wherever there is the rule of Islam, there is his own country. In other words, Islam can never allow a true Muslim to adopt India as his motherland and regard a Hindu as his kith and kin. That is probably the reason why Maulana Mahomed Ali, a great Indian but a true Muslim, preferred to be buried in Jerusalem rather than in India.

The real explanation of the ideological transformation of the Muslim leaders is not to be attributed to any dishonest drift in their opinion. It appears to be the dawn of a new vision pointing to a new destiny symbolized by a new name, Pakistan. The Muslims appear to have started a new worship of a new destiny for the first time. This is really not so. The worship is new because the sun of their new destiny which was so far hidden in the clouds has only now made its appearance in full glow. The magnetism of this new destiny cannot but draw the Muslims towards it. The pull is so great that even men like Mr. Jinnah have been violently shaken and have not been able to resist its force. This destiny spreads itself out in a concrete form over the map of India. No one, who just looks at the map, can miss it. It lies there as though it is deliberately planned by Providence as a separate National State for Muslims. Not only is this new destiny capable of being easily worked out and put in concrete shape but it is also catching because it opens up the possibilities of realizing the Muslim idea of linking up all the Muslim kindred in one Islamic State and thus avert the danger of Muslims in different countries adopting the nationality of the country to which they belong and thereby bring about the disintegration of the Islamic brotherhood.¹¹² mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40E2.Pakistan or the Partition of India PART IV.htm - _msocom_68 With the separation of Pakistan from Hindustan, Iran, Iraq, Arabia, Turkey and Egypt are forming a federation of Muslim countries constituting one Islamic State extending from Constantinople down to Lahore. A Musalman must be really very stupid if he is not attracted by the glamour of this new destiny and completely transformed in his view of the place of Muslims in the Indian cosmos.

So obvious is the destiny that it is somewhat surprising that the Muslims should have taken so long to own it up. There is evidence that some of them knew this to be the ultimate destiny of the Muslims as early as 1923. In support of this, reference may be made to the evidence of Khan Saheb Sardar M. Gul Khan who appeared as a witness before the North-West Frontier Committee appointed in that year by the Government of India under the chairmanship of Sir Dennis Bray, to report upon the administrative relationship between the Settled Districts of the N.-W.F. Province and the Tribal Area and upon the amalgamation of the Settled Districts with the Punjab. The importance of his evidence was not realized by any member of the Committee except Mr. N. M. Samarth who was the one member who drew pointed attention to it in his Minority Report. The following extracts from his report illuminate a dark comer in the history of the evolution of this new destiny. ¹¹³[f.69] Says Mr. Samarth :—

“There was not before the Committee another witness who could claim to speak with the authority of personal knowledge and experience of not only the North-West Frontier Province and Independent Territory but Baluchistan, Persia and Afghanistan, which this witness could justly lay claim to. It is noteworthy that he appeared before the Committee as a witness in his capacity as ' President, Islamic Anjuman, Dera Ismail Khan '. This witness (Khan Saheb Sardar Muhammad Gul Khan) was asked by me: ' Now suppose the Civil Government of the Frontier Province is so modelled as to be on the same basis as in Sind, then this Province will be part and parcel of the Punjab as Sind is of the Bombay Presidency. What have you to say to it?' He gave me, in the course of his reply, the following straight answer: 'As far as Islam is concerned and the Mahommedan idea of the League of Nations goes, I am against it. ' On this answer, I asked him some further questions to which he gave me frank, outspoken replies without mincing matters. I extract the pertinent portions below :—

' Q.—The idea at the back of your Anjuman is the Pan-Islamic idea which is that Islam is a League of Nations and as such amalgamating

this Province with the Punjab will be detrimental, will be prejudicial, to that idea. That is the dominant idea at the back of those who think with you? Is it so?

A.—It is so, but I have to add something. Their idea is that the Hindu-Muslim unity will never become a fact, it will never become a *fait accompli*, and they think that this Province should remain separate and a link between Islam and Britannic Commonwealth. In fact, when I am asked what my opinion is—1, as a member of the Anjuman, am expressing this opinion—we would very much rather see the separation of the Hindus and Muhammadans, 23 crores of Hindus to the south and 8 crores of Muslims to the north. Give the whole portion from Raskumarit ¹¹⁴ [f.70] to Agra to Hindus and from Agra to Peshawar to Muhammadans, I mean transmigration from one place to the other. This is an idea of exchange. It is not an idea of annihilation. Bolshevism at present does away with the possession of private property. It nationalizes the whole thing and this is an idea which of course appertains to only exchange. This is of course impracticable. But if it were practicable, we would rather want this than the other.

'Q.—That is the dominant idea which compels you not to have amalgamation with the Punjab? '

A.—Exactly.

Q.—When you referred to the Islamic League of Nations, I believe you had the religious side of it more prominently in your mind than the political side?

'A.—Of course political Anjuman is apolitical thing. Initially, of course, anything Muhammadan is religious, but of course Anjuman is a political association.

' Q.—I am not referring to your Anjuman but I am referring to 'the Musalmans. I want to know what the Musalmans think of this Islamic League of Nations, what have they most prominently in mind, is it the religious side or the political side? ' A.—Islam, as you know, is both

religious and political.

Q.—Therefore politics and religion are intermingled?

A.—Yes, certainly '.

Mr. Samarth used this evidence for the limited purpose of showing that to perpetuate a separate Pathan Province by refusing to amalgamate the N.-W. F. P. with the Punjab was dangerous in view of the Pathan's affiliations with Afghanistan and with other Muslim countries outside India. But this evidence also shows that the idea underlying the scheme of Pakistan had taken birth sometime before 1923.

In 1924 Mr. Mahomed Ali speaking on the resolution on the extension of the Montagu-Chelmsford Reforms to the N.-W. F. Province, which was moved in the session of the Muslim League held in Bombay in that year is said to have suggested ¹¹⁵[f.71] that the Mahomedans of the Frontier Province should have the right of self-determination to choose between an affiliation with India or with Kabul. He also quoted a certain Englishman who had said that if a straight line be drawn from Constantinople to Delhi, it will disclose a Mahomedan corridor right up to Shaharanpur. It is possible that Mr. Mahomed Ali knew the whole scheme of Pakistan which came out in the evidence of the witness referred to by Mr. Samarth and in an unguarded moment gave out what the witness had failed to disclose, namely, the ultimate linking of Pakistan to Afghanistan.

Nothing seems to have been said or done by the Muslims about this scheme between 1924 and 1930. The Muslims appear to have buried it and conducted negotiations with the Hindus for safeguards, as distinguished from partition, on the basis of the traditional one-nation theory. But in 1930 when the Round Table Conference was going on, certain Muslims had formed themselves into a committee with headquarters in London for the purpose of getting the R. T. C. to entertain the project of Pakistan. Leaflets and circulars were issued by the committee and sent round to members of the R. T. C. in support of

Pakistan. Even then nobody took any interest in it, and the Muslim members of the R. T. C. did not countenance it in any way. ¹¹⁶[f.72]

It is possible that the Muslims in the beginning, thought that this destiny was just a dream incapable of realization. It is possible that later on when they felt that it could be a reality they did not raise any issue about it because they were not sufficiently well organized to compel the British as well as the Hindus to agree to it. It is difficult to explain why the Muslims did not press for Pakistan at the R. T. C. Perhaps they knew that the scheme would offend ¹¹⁷[f.73] the British and as they had to depend upon the British for a decision on the 14 points of dispute between them and the Hindus, the Musalmans, perfect statesmen as they are and knowing full well that politics, as Bismarck said, was always the game of the possible, preferred to wait and not to show their teeth till they had got a decision from the British in their favour on the 14 points of dispute.

There is another explanation for this delay in putting forth the scheme of Pakistan. It is far more possible that the Muslim leaders did not until very recently know the philosophical justification for Pakistan. After all, Pakistan is no small move on the Indian political chess-board. It is the biggest move ever taken, for it involves the disruption of the state. Any Mahomedan, if he had ventured to come forward to advocate it, was sure to have been asked what moral and philosophical justification he had in support of so violent a project. The reason why they had not so far discovered what the philosophical justification for Pakistan is, equally understandable. The Muslim leaders were, therefore, speaking of the Musalmans of India as a community or a minority. They never spoke of the Muslims as a nation. The distinction between a community and a nation is rather thin, and even if it is otherwise, it is not so striking in all cases. Every state is more or less a composite state and there is, in most of them, a great diversity of populations, with varying languages, religious codes and social traditions, forming a congeries of loosely associated groups. No state is ever a single society, an inclusive and permeating body of thought and action. Such being the case, a group may mistakenly call itself a community even when it has in it the

elements of being a nation. Secondly, as has been pointed out earlier, a people may not be possessed of a national consciousness although there may be present all the elements which go to make a nation.

Again from the point of view of minority rights and safeguards this difference is unimportant. Whether the minority is a community or a nation, it is a minority and the safeguards for the protection of a minor nation cannot be very different from the safeguards necessary for the protection of a minor community. The protection asked for is against the tyranny of the majority, and once the possibility of such a tyranny of the majority over a minority is established, it matters very little whether the minority driven to ask for safeguards is a community or is a nation. Not that there is no distinction between a community and a nation. The difference indeed is very great, it may be summed up by saying that a community, however different from and however opposed to other communities, major or minor, is one with the rest in the matter of the ultimate destiny of all. A nation, on the other hand, is not only different from other components of the state but it believes in and cherishes a different destiny totally antagonistic to the destiny entertained by other component elements in the state. The difference appears to me so profound that speaking for myself I would not hesitate to adopt it as a test to distinguish a community from a nation. A people who, notwithstanding their differences accept a common destiny for themselves as well as for their opponents, are a community. A people who are not only different from the rest but who refuse to accept for themselves the same destiny which others do, are a nation. It is this acceptance or non-acceptance of a common destiny which alone can explain why the Untouchables, the Christians and the Parsis are in relation to the Hindus only communities and why the Muslims are a nation. Thus, from the point of view of harmony in the body politic the difference is in the most vital character as the difference is one of ultimate destiny. The dynamic character of this difference is undeniable. If it persists, it cannot but have the effect of rending the State in fragments. But so far as safeguards are concerned, there cannot be any difference between a nation and a community. A community is entitled to claim the same rights and safeguards as a nation can.

The delay in discovering the philosophical justification for Pakistan is due to the fact that the Muslim leaders had become habituated to speaking of Muslims as a community and as a minority. The use of this terminology took them in a false direction and brought them to a dead end. As they acknowledged themselves to be a minority community, they felt that there was nothing else open to them except to ask for safeguards which they did and with which they concerned themselves for practically half a century. If it had struck them that they need not stop with acknowledging themselves to be a minority, but that they could proceed further to distinguish a minority which is a community from a minority which is a nation, they might have been led on to the way to discover this philosophical justification for Pakistan. In that case, Pakistan would, in all probability, have come much earlier than it has done.

Be that as it may, the fact remains that the Muslims have undergone a complete transformation and that the transformation is brought about not by any criminal inducement but by the discovery of what is their true and ultimate destiny. To some, this suddenness of the transformation may give a shock. But those who have studied the course of Hindu-Muslim politics for the last twenty years, cannot but admit feeling that this transformation, this parting of the two, was on the way. For the course of Hindu-Muslim politics has been marked by a tragic and ominous parallelism. The Hindus and Muslims have trodden parallel paths. No doubt, they went in the same direction. But they never travelled the same road. In 1885, the Hindus started the Congress to vindicate the political rights of Indians as against the British. The Muslims refused to be lured by the Hindus into joining the Congress. Between 1885 and 1906 the Muslims kept out of this stream of Hindu politics. In 1906 they felt the necessity for the Muslim community taking part in political activity. Even then they dug their own separate channel for the flow of Muslim political life. The flow was to be controlled by a separate political organization called the Muslim League. Ever since the formation of the Muslim League the waters of Muslim politics have flown in this separate channel. Except on rare occasions, the Congress and the League have lived apart and have worked apart. Their aims and

objects have not always been the same. They have even avoided holding their annual sessions at one and the same place, lest the shadow of one should fall upon the other. It is not that the League and the Congress have not met. The two have met but only for negotiations, a few times with success and most times without success. They met in 1916 at Lucknow and their efforts were crowned with success. In 1925 they met but without success. In 1928 a section of the Muslims were prepared to meet the Congress. Another section refused to meet. It rather preferred to depend upon the British. The point is, they have met but have never merged. Only during the Khilafat agitation did the waters of the two channels leave their appointed course and flow as one stream in one channel. It was believed that nothing would separate the waters which God was pleased to join. But that hope was belied. It was found that there was something in the composition of the two waters which would compel their separation. Within a few years of their confluence and as soon as the substance of the Khilafat cause vanished—the water from the one stream reacted violently to the presence of the other, as one does to a foreign substance entering one's body. Each began to show a tendency to throw out and to separate from the other. The result was that when the waters did separate, they did with such impatient velocity and determined violence—if one can use such language in speaking of water—against each other that thereafter they have been flowing in channels far deeper and far more distant from each other than those existing before. Indeed, the velocity and violence with which the two waters have burst out from the pool in which they had temporarily gathered have altered the direction in which they were flowing. At one time their direction was parallel. Now they are opposite. One is flowing towards the east as before. The other has started to flow in the opposite direction, towards the west. Apart from any possible objection to the particular figure of speech, I am sure, it cannot be said that this is a wrong reading of the history of Hindu-Muslim politics. If one bears this parallelism in mind, he will know that there is nothing sudden about the transformation. For if the transformation is a revolution, the parallelism in Hindu-Muslim politics marks the evolution of that revolution. That Muslim politics should have run a parallel course and should never have merged in the Hindu current of politics is a strange fact of modern

Indian history. In so segregating themselves the Muslims were influenced by some mysterious feeling, the source of which they could not define and guided by a hidden hand which they could not see but which was all the same directing them to keep apart from Hindus. This mysterious feeling and this hidden hand was no other than their pre-appointed destiny, symbolized by Pakistan, which, unknown to them, was working within them. Thus viewed, there is nothing new or nothing sudden in the idea of Pakistan. The only thing that has happened is that, what was indistinct appears now in full glow, and what was nameless has taken a name.

VI

Summing up the whole discussion, it appears that an integral India is incompatible with an independent India or even with India as a dominion. On the footing that India is to be one integral whole there is a frustration of all her hopes of freedom writ large on her future. There is frustration, if the national destiny is conceived in terms of independence, because the Hindus will not follow that path. They have reason not to follow it. They fear that that way lies the establishment of the domination of the Muslims over the Hindus. The Hindus see that the Muslim move for independence is not innocent. It is to be used only to bring the Hindus out of the protecting shield of the British Empire in the open and then by alliance with the neighbouring Muslim countries and by their aid subjugate them. ' For the Muslims independence is not the end. It is only a means to establish Muslim Raj. There is frustration if the national destiny is conceived of in terms of Dominion Status because the Muslims will not agree to abide by it. They fear that under Dominion Status, the Hindus will establish Hindu Raj over them by taking benefit of the principle of one man one vote and one vote one value, and that however much the benefit of the principle is curtailed by weightage to Muslims, the result cannot fail to be a government of the Hindus, by the Hindus and therefore for the Hindus. Complete frustration of her destiny therefore seems to be the fate of India if it is insisted that India shall remain as one integral whole.

It is a question to be considered whether integral India is an ideal

worth fighting for. In the first place, even if India remained as one integral whole it will never be an organic whole. India may in name continue to be known as one country, but in reality it will be two separate countries—Pakistan and Hindustan—joined together by a forced and artificial union. This will be specially so under the stress of the two-nation theory. As it is, the idea of unity has had little hold on the Indian world of fact and reality, little charm for the common Indian, Hindu or Muslim, whose vision is bounded by the valley in which he lives. But it did appeal to the imaginative and unsophisticated minds on both sides. The two-nation theory will not leave room even for the growth of that sentimental desire for unity. The spread of that virus of dualism in the body politic must some day create a mentality which is sure to call for a life and death struggle for the dissolution of this forced union. If by reason of some superior force the dissolution does not take place, one thing is sure to happen to India—namely, that this continued union will go on sapping her vitality, loosening its cohesion, weakening its hold on the love and faith of her people and preventing the use, if not retarding the growth, of its moral and -material resources. India will be an anaemic and sickly state, ineffective, a living corpse, dead though not buried.

The second disadvantage of this forced union will be the necessity for finding a basis for Hindu-Muslim settlement. How difficult it is to reach a settlement no one needs to be told. Short of dividing India into Pakistan and Hindustan what more can be offered—without injury to the other interests in the country,—than what has already been conceded with a view to bring about a settlement, it is difficult to conceive. But whatever the difficulties, it cannot be gainsaid that if this forced union continues, there can be no political advance for India unless it is accompanied by communal settlement. Indeed, a communal settlement—rather an international settlement for now and hereafter the Hindus and the Muslims must be treated as two nations—will remain under this scheme of forced union a condition precedent for every inch of political progress.

There will be a third disadvantage of this forced political union. It

cannot eliminate the presence of a third party. In the first place the constitution, if one comes in existence, will be a federation of mutually suspicious and unfriendly states. They will of their own accord want the presence of a third party to appeal to in cases of dispute. For their suspicious and unfriendly relationship towards each other will come in the way of the two nations ever reaching satisfaction by the method of negotiation. India will not have in future even that unity of opposition to the British which used to gladden the hearts of so many in the past. For the two nations will be more opposed to each other than before, ever to become united against the British. In the second place, the basis of the constitution will be the settlement between the Hindus and the Muslims and for the successful working of such a constitution the presence of a third party, and be it noted, with sufficient armed force, will be necessary to see that the settlement is not broken.

All this, of course, means the frustration of the political destiny, which both Hindus and Muslims profess to cherish and the early consummation of which they so devoutly wish. What else, however, can be expected if two warring nations are locked in the bosom of one country and one constitution?

Compare with this dark vista, the vista that opens out if India is divided into Pakistan and Hindustan. The partition opens the way to a fulfilment of the destiny each may fix for itself. Muslims will be free to choose for their Pakistan independence or dominion status, whatever they think good for themselves. Hindus will be free to choose for their Hindustan independence or dominion status, whatever they may think wise for their condition. The Muslims will be freed from the nightmare of Hindu Raj. Thus the path of political progress becomes smooth for both. The fear of the object being frustrated gives place to the hope of fulfilment. Communal settlement must remain a necessary condition precedent, if India, as one integral whole, desires to make any political advance. But Pakistan and Hindustan are free from the rigorous trammels of such a condition precedent and even if a communal settlement with minorities remained to be a condition precedent it will not be difficult to fulfil. The path of each is cleared of this obstacle.

There is another advantage of Pakistan which must be mentioned. It is generally admitted that there does exist a kind of antagonism between Hindus and Muslims which if not dissolved will prove ruinous to the peace and progress of India. But, it is not realized that the mischief is caused not so much by the existence of mutual antagonism as by the existence of a common theatre for its display. It is the common theatre which calls this antagonism into action. It cannot but be so. When the two are called to participate in acts of common concern what else can happen except a display of that antagonism which is inherent in them. Now the scheme of Pakistan has this advantage, namely, that it leaves no theatre for the play of that social antagonism which is the cause of disaffection among the Hindus and the Muslims. There is no fear of Hindustan and Pakistan suffering from that disturbance of peace and tranquillity which has torn and shattered India for so many years. Last, but by no means least, is the elimination of the necessity of a third party to maintain peace. Freed from the trammels which one imposes upon the other by reason of this forced union, Pakistan and Hindustan can each grow into a strong stable State with no fear of disruption from within. As two separate entities, they can reach their respective destinies which as parts of one whole they never can.

Those who want an integral India must note what Mr. Mahomed Ali as President of the Congress in 1923 said. Speaking about the unity among Indians, Mr. Mahomed Ali said :—

"Unless some new force other than the misleading unity of opposition unites this vast continent of India, it will remain a geographical misnomer."

Is there any new force which remains to be harnessed? All other forces having failed, the Congress, after it became the Government of the day, saw a new force in the plan of *mass contact*. It was intended to produce political unity between Hindus and Muslim masses by ignoring or circumventing the leaders of the Muslims. In its essence, it was the plan of the British Conservative Party to buy Labour with "Tory gold". The plan was as mischievous as it was futile. The Congress forgot that there are things so precious that no owner, who knows their value, will part

with and any attempt to cheat him to part with them is sure to cause resentment and bitterness. Political power is the most precious thing in the life of a community especially if its position is constantly being challenged and the community is required to maintain it by meeting the challenge. Political power is the only means by which it can sustain its position. To attempt to make it part with it by false propaganda, by misrepresentation or by the lure of office or of gold is equivalent to disarming the community, to silencing its guns and to making it ineffective and servile. It may be a way of producing unity. But the way is despicable for it means suppressing the opposition by a false and unfair method. It cannot produce any unity. It can only create exasperation, bitterness and hostility. ¹¹⁸[f.74] This is precisely what the *mass contact* plan of the Congress did. For there can be no doubt that this mad plan of mass contact has had a great deal to do with the emergence of Pakistan.

It might be said that it was unfortunate that mass contact was conceived and employed as a political lever and that it might have been used as a force for social unity with greater success. But could it have succeeded in breaking the social wall which divides the Hindus and the Muslims? It cannot but be matter of the deepest regret to every Indian that there is no social tie to draw them together. There is no inter-dining and no inter-marriage between the two. Can they be introduced? Their festivals are different. Can the Hindus be induced to adopt them or join in them? Their religious notions are not only divergent but repugnant to each other so that on a religious platform, the entry of the one means the exit of the other. Their cultures are different; their literatures and their histories are different. They are not only different, but so distasteful to each other, that they are sure to cause aversion and nausea. Can anyone make them drink from the same fount of these perennial sources of life? No common meeting ground exists. None can be cultivated. There is not even sufficient physical contact, let alone their sharing a common cultural and emotional life. They do not live together. Hindus and Muslims live in separate worlds of their own. Hindus live in villages and Muslims in towns in those provinces where the Hindus are in a majority. Muslims live in villages and Hindus in towns in those

provinces where the Muslims are in a majority. Wherever they live, they live apart. Every town, every village has its Hindu quarters and Muslim quarters, which are quite separate from each other. There is no common continuous cycle of participation. They meet to trade or they meet to murder. They do not meet to befriend one another. When there is no call to trade or when there is no call to murder, they cease to meet. When there is peace, the Hindu quarters and the Muslim quarters appear like two alien settlements. The moment war is declared, the settlements become armed camps. The periods of peace and the periods of war are brief. But the interval is one of continuous tension. What can mass contact do against such barriers? It cannot even get over on the other side of the barrier, much less can it produce organic unity.

Chapter XIV : The problems of Pakistan

Chapter XV : Who can decide?

EPILOGUE

PART V

Different people have thought differently of what has been said in the foregoing pages on the question of 'Pakistan'. One set of people have alleged that I have only stated

the two sides of the issue and the problems arising out of it but have not expressed my personal views on either of them. This is not correct. Anyone who has read the preceding parts will have to admit that I have expressed my views in quite positive terms, if not on all, certainly on many questions. In particular I may refer to two of the most important ones in the controversy, namely, Are the Muslims a Nation, and Have they a case for Pakistan. There are others whose line of criticism is of a different sort. They do not complain that I have failed to express my personal views. What they complain is that in coming to my conclusions I have relied on propositions as though they were absolute in their application and have admitted no exception. I am told, "Have you not stated your conclusions in too general terms? Is not a general proposition subject to conditions and limitations? Have you not disposed of certain complicated problems in a brief and cavalier fashion? Have you shown how Pakistan can be brought into existence in a just and peaceful manner?" Even this criticism is not altogether correct. It is not right to say that I have omitted to deal with these points. It may be that my treatment of them is brief, and scattered. However, I am prepared to admit that there is much force in this criticism and I am in duty bound to make good the default. This part is therefore intended and is devoted to the consideration of the following subjects :—

1. 1. *What are the limiting considerations which affect the Muslim case for Pakistan?*
2. 2. *What are the problems of Pakistan? and what is their solution?*
3. 3. *Who has the authority to decide the issue of Pakistan?*

CHAPTER XIII

MUST THERE BE PAKISTAN?

I

With all that has gone before, the sceptic, the nationalist, the conservative and the old-world Indian will not fail to ask "Must there be Pakistan?" No one can make light of such an attitude. For the problem of Pakistan is indeed very grave and it must be admitted that the question is not only a relevant and fair one to be put to the Muslims and to their protagonists but it is also important. Its importance lies in the fact that the limitations on the case for Pakistan are so considerable in

their force that they can never be easily brushed aside. A mere statement of these limitations should be enough to make one feel the force they have. It is writ large on the very face of them. That being so, the burden of proof on the Muslims for establishing an imperative need in favour of Pakistan is very heavy. Indeed the issue of Pakistan or to put it plainly of partitioning India, is of such a grave character that the Muslims will not only have to discharge this burden of proof but they will have to adduce evidence of such a character as to satisfy the conscience of an international tribunal before they can win their case. Let us see how the case for Pakistan stands in the light of these limitations.

II

Must there be Pakistan because a good part of the Muslim population of India happens to be concentrated in certain defined areas which can be easily severed from the rest of India? Muslim population is admittedly concentrated in certain well defined areas and it may be that these areas are severable. But what of that? In considering this question one must never lose sight of the fundamental fact that nature has made India one single geographical unit. Indians are of course quarrelling and no one can prophesy when they will stop quarrelling. But granting the fact, what does it establish? Only that Indians are a quarrelsome people. It does not destroy the fact that India is a single geographical unit. Her unity is as ancient as Nature. Within this geographic unit and covering the whole of it there has been a cultural unity from time immemorial. This cultural unity has defied political and racial divisions. And at any rate for the last hundred and fifty years all institutions—cultural, political, economic, legal and administrative—have been working on a single, uniform spring of action. In any discussion of Pakistan the fact cannot be lost sight of, namely, that the starting point, if not the governing factor, is the fundamental unity of India. For it is necessary to grasp the fact that there are really two cases of partition which must be clearly distinguished. There is a case in which the starting point is a pre existing state of separation so that partition is only a dissolution of parts which were once separate and which were subsequently joined together. This case is quite different from another in which the starting point at all

times is a state of unity. Consequently partition in such a case is the severance of a territory which has been one single whole into separate parts. Where the starting point is not unity of territory, i.e., where there was disunity before there was unity, partition—which is only a return to the original—may not give a mental shock. But in India the starting point is unity. Why destroy its unity now, simply because some Muslims are dissatisfied? Why tear it when the unit is one single whole from historical times?

III

Must there be Pakistan because there is communal antagonism between the Hindus and the Muslims? That the communal antagonism exists nobody can deny. The question however is, is the antagonism such that there is no will to live together in one country and under one constitution? Surely that will to live together was not absent till 1937. During the formulation of the provisions of the Government of India Act, 1935, both Hindus and Musalmans accepted the view that they must live together under one constitution and in one country and participated in the discussions that preceded the passing of the Act. And what was the state of communal feeling in India between—say 1920 and 1935? As has been recorded in the preceding pages, the history of India from 1920 up to 1935 has been one long tale of communal conflict in which the loss of life and loss of property had reached a most shameful limit. Never was the communal situation so acute as it was between this period of 15 years preceding the passing of the Government of India Act, 1935, and yet this long tale of antagonism did not prevent the Hindus and the Musalmans from agreeing to live in a single country and under a single constitution. Why make so much of communal antagonism now?

Is India the only country where there is communal antagonism? What about Canada? Consider what Mr. Alexander Brady ¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40F.Pakistan or the Partition of India PART V.htm - _msocom_1 has to say on the relations between the English and the French in Canada :—

“Of the four original provinces, three. Nova Scotia, New Brunswick and Ontario had populations substantially of the same Anglo-Saxon stock and traditions. Originally a by-product of the American Revolution, these colonies were established by the 50,000 United Empire Loyalists who trekked north from persecution and cut their settlements out of the wilderness. Previous to the American Revolution, Nova Scotia had received a goodly number of Scotch and American settlers, and in all the colonies after the Revolution the Loyalist settlements were reinforced by immigrants from Great Britain and Ireland.”

* * * *

“Very different was the province of Quebec. French Canada in 1867 was a cultural unit by itself, divorced from the British communities, by the barriers of race, language and religion. Its life ran in a different mould. Stirred by a Catholic faith mediaeval in its intensity, it viewed with scant sympathy the mingled Puritanism and other-worldliness of a Protestantism largely Calvinistic. The religious faiths of the two peoples were indeed poles apart. In social, if not always in religious, outlook, English Protestantism tended towards democracy, realism and modernism: the Catholicism of the French leaned to paternalism, idealism and a reverence for the past.”

* * * *

“What French Canada was in 1867 it remains substantially today. It still cherishes beliefs, customs, and institutions which have little hold on the English provinces. It has distinctive thought and enthusiasm, and its own important values. Its attitude, for example, on marriage and divorce is in conflict with the dominant view, not merely of the rest of Canada, but of the remainder of Anglo-Saxon-North-America.”

* * * *

“The infrequency of intercourse between the two peoples is illustrated in Canada's largest city, Montreal. About 63 per cent. of the population is French and 24 per cent British. Here, if anywhere, is ample scope for association, but in fact they remain apart and distinct except where business and politics force them together. They have their own residential sections; their own shopping centres, and if either is more notable for racial reserve, it is the English.”

* * * *

“The English-speaking residents of Montreal, as a whole, have made no effort to know their French-speaking fellow citizens, to learn their language, to understand their traditions and their aspirations, to observe with a keen eye and a sympathetic mind their qualities and their defects. The separation of the two peoples is encouraged by the barrier of language. There is a wealth of significance in the fact revealed by the census of 1921 ; viz., that about 50 per cent. of the Canadians of French origin were unable to speak English and 95 per cent. of those of British origin were unable to speak French. Even in Montreal, 70 per cent. of the British could not speak French and 34 per cent. of the French could not speak English. The absence of a common language maintains a chasm between the two nationalities and prevents fusion.

“The significance of Confederation is that it provided an instrument of government which enabled the French, while retaining their distinct national life, to become happy partners with the British and attain a Canadian super-nationality, embracing a loyalty extending beyond their own group to that of the Dominion as a whole.”

* * * *

“While the federal system successfully opened the path for a wider nationality in Canada, the co-operation which it sponsored has at times been subjected to severe strain by the violent clash of opinion between the French and the British. The super-nationality has indeed often been reduced to a shadow.”

What about South Africa? Let those who do not know the relationship between the Boers and the British ponder over what Mr. E. H. Brooks² mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40F.Pakistan or the Partition of India PART V.htm - _msocom_2 has to say :—

“How far is South African nationalism common to both the white races of South Africa? There is, of course, a very real and intense Afrikaner nationalism ; but it is, generally speaking, a sentiment confined to one of the white races, and characterised, significantly enough, by a love of the Afrikans language, the tongue of the early settlers from Holland, as modified slightly by Huguenot and German influence, and greatly by the passage of time. Afrikaner nationalism has a tendency to be exclusive, and has little place for the man who, while in every way a devoted son of South Africa, is wholly or mainly English-speaking.”

* * * *

“Is there a South African nation today?”

“There are certain factors in South African life which militate against an affirmative answer.”

* * * *

“Among English-speaking South Africans there are found many tendencies inclined to hinder the cause of national unity. With all the great virtues of the race they have its one cardinal defect—a lack of imagination, a difficulty in putting one's self in the other man's place. Nowhere does this come out more clearly than in the language question.

Until recently comparatively few English-speaking South Africans have studied Africans except as a business proposition or (as in the Civil Service) more or less under compulsion; and fewer still have used it conversationally. Many have treated it with open contempt—a contempt in inverse proportion to their knowledge of it—and the majority with mere tolerance, exasperated or amused according to temperament."

Another witness on the same point may be heard. He is Mr. Manfred Nathan. ³ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/40F.Pakistan or the Partition of India PART V.htm - _msocom_3 This is what he has to say on the relations between the Boers and the British in South Africa :—

"They are also, in the main, both of them Protestant peoples—although this is not of too great importance nowadays, when differences of religion do not count for much. They engage freely in commercial transactions with each other."

* * * *

"Nevertheless it cannot with truth be said that hitherto there has been absolutely free social intercourse between these two great sections of the white population. It has been suggested that this is partly due to the fact that in the large urban centres the population is predominantly English, and that the townfolk know little of the people in the country and their ways of life. But even in the country towns, though there is, as a rule, much greater friendliness, and much hospitality shown by Boers to visitors, there is not much social intercourse between the two sections apart from necessary business or professional relationship, and such social functions, charitable or public, as require co-operation."

Obviously India is not the only place where there is communal antagonism. If communal antagonism does not come in the way of the French in Canada living in political unity with the English, if it does not come in the way of the English in South Africa living in political unity with the Dutch, if it does not come in the way of the French and the Italians in Switzerland living in political unity with the Germans why then should it be impossible for the Hindus and the Muslims to agree to live together under one constitution in India?

IV

Must there be Pakistan because the Muslims have lost faith in the Congress majority? As reasons for the loss of faith Muslims cite some instances of tyranny and oppression practised by the Hindus and connived at by the Congress Ministries during the two years and three months the Congress was in office. Unfortunately Mr. Jinnah did not persist in his demand for a Royal Commission to inquire into these grievances. If he had done it we could have known what truth there was in these complaints. A perusal of these instances, as given in the reports ⁴mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40F.Pakistan or the Partition of India PART V.htm - _msocom_4 of the Muslim League Committees, leaves upon the reader the impression that although there may be some truth in the allegations there is a great deal which is pure exaggeration. The Congress Ministries concerned have issued statements repudiating the charges. It may be that the Congress during the two years and three months that it was in office did not show statesmanship, did not inspire confidence in the minorities, nay tried to suppress them. But can it be a reason for partitioning India? Is it not possible to hope that the voters who supported the Congress last time will grow wiser and not support the Congress? Or may it not be that if the Congress returns to office it will profit by the mistakes it has made, revise its mischievous policy and thereby allay the fear created by its past conduct?

V

Must there be Pakistan because the Musalmans are a nation? It is a pity that Mr. Jinnah should have become a votary and champion of Muslim Nationalism at a time when the whole world is decrying against the evils of nationalism and is seeking refuge in some kind of international organization. Mr. Jinnah is so obsessed with his new-found faith in Muslim Nationalism that he is not prepared to see that there is a distinction between a society, parts of which are disintegrated, and a society parts of which have become only loose, which no sane man can

ignore. When a society is disintegrating—and the two nation theory is a positive disintegration of society and country—it is evidence of the fact that there do not exist what Carlyle calls "organic filaments"—i.e., the vital forces which work to bind together the parts that are cut asunder. In such cases disintegration can only be regretted. It cannot be prevented. Where, however, such organic filaments do exist, it is a crime to overlook them and deliberately force the disintegration of society and country as the Muslims seem to be doing. If the Musalmans want to be a different nation it is not because they have been but because they want to be. There is much in the Musalmans which, if they wish, can roll them into a nation. But isn't there enough that is common to both Hindus and Musalmans, which if developed, is capable of moulding them into one people? Nobody can deny that there are many modes, manners, rites and customs which are common to both. Nobody can deny that there are rites, customs and usages based on religion which do divide Hindus and Musalmans. The question is, which of these should be emphasized. If the emphasis is laid on things that are common, there need be no two nations in India. If the emphasis is laid on points of difference, it will no doubt give rise to two nations. The view that seems to guide Mr. Jinnah is that Indians are only a people and that they can never be a nation. This follows the line of British writers who make it a point of speaking of Indians as the people of India and avoid speaking of the Indian nation. Granted Indians are not a nation, that they are only a people. What of that? History records that before the rise of nations as great corporate personalities, there were only peoples. There is nothing to be ashamed of if Indians are no more than a people. Nor is there any cause for despair that the people of India—if they wish—will not become one nation. For, as Disraeli said, a nation is a work of art and a work of time. If the Hindus and Musalmans agree to emphasize the things that bind them and forget those that separate them there is no reason why in course of time they should not grow into a nation. It may be that their nationalism may not be quite so integrated as that of the French or the Germans. But they can easily produce a common state of mind on common questions which is the sum total which the spirit of nationalism helps to produce and for which it is so much prized. Is it right for the Muslim League to emphasize only differences and ignore

altogether the forces that bind? Let it not be forgotten that if two nations come into being it will not be because it is predestined. It will be the result of deliberate design.

The Musalmans of India as I have said are not as yet a nation in the de jure or de facto sense of the term and all that can be said is that they have in them the elements necessary to make them a nation. But granting that the Musalmans of India are a nation, is India the only country where there are going to be two nations? What about Canada? Everybody knows that there are in Canada two nations, the English and the French. Are there not two nations in South Africa, the English and the Dutch? What about Switzerland? Who does not know that there are three nations living in Switzerland, the Germans, the French and the Italians? Have the French in Canada demanded partition because they are a separate nation? Do the English claim partition of South Africa because they are a distinct nation from the Boers? Has anybody ever heard that the Germans, the French and the Italians have ever agitated for the fragmentation of Switzerland because they are all different nations? Have the Germans, the French and the Italians ever felt that they would lose their distinctive cultures if they lived as citizens of one country and under one constitution? On the contrary, all these distinct nations have been content to live together in one country under one constitution without fear of losing their nationality and their distinctive cultures. Neither have the French in Canada ceased to be French by living with the English, nor have the English ceased to be English by living with the Boers in South Africa. The Germans, the French and the Italians have remained distinct nations notwithstanding their common allegiance to a common country and a common constitution. The case of Switzerland is worthy of note. It is surrounded by countries, the nationalities of which have a close religious and racial affinity with the nationalities of Switzerland. Notwithstanding these affinities the nationalities in Switzerland have been Swiss first and Germans, Italians and French afterwards.

Given the experience of the French in Canada, the English in South Africa and the French and the Italians in Switzerland, the questions that

arise are, why should it be otherwise in India? Assuming that the Hindus and the Muslims split into two nations, why cannot they live in one country and under one constitution? Why should the emergence of the two-nation theory make partition necessary? Why should the Musalmans be afraid of losing their nationality and national culture by living with the Hindus? If the Muslims insist on separation, the cynic may well conclude that there is so much that is common between the Hindus and the Musalmans that the Muslim leaders are afraid that unless there is partition whatever little distinctive Islamic culture is left with the Musalmans will eventually vanish by continued social contact with the Hindus with the result that in the end instead of two nations there will grow up in India one nation. If the Muslim nationalism is so thin then the motive for partition is artificial and the case for Pakistan loses its very basis.

VI

Must there be Pakistan because otherwise Swaraj will be a Hindu Raj? The Musalmans are so easily carried away by this cry that it is necessary to expose the fallacies underlying it.

In the first place, is the Muslim objection to Hindu Raj a conscientious objection or is it a political objection. If it is a conscientious objection all one can say is that it is a very strange sort of conscience. There are really millions of Musalmans in India who are living under unbridled and uncontrolled Hindu Raj of Hindu Princes and no objection to it has been raised by the Muslims or the Muslim League. The Muslims had once a conscientious objection to the British Raj. Today not only have they no objection to it but they are the greatest supporters of it. That there should be no objection to British Raj or to undiluted Hindu Raj of a Hindu Prince but that there should be objection to Swaraj for British India on the ground that it is Hindu Raj as though it was not subjected to checks and balances is an attitude the logic of which it is difficult to follow.

The political objections to Hindu Raj rest on various grounds. The first ground is that Hindu society is not a democratic society. True, it is

not It may not be right to ask whether the Muslims have taken any part in the various movements for reforming Hindu society as distinguished from proselytising. But it is right to ask if the Musalmans are the only sufferers from the evils that admittedly result from the undemocratic character of Hindu society. Are not the millions of Shudras and non-Brahmins or millions of the Untouchables, suffering the worst consequences of the undemocratic character of Hindu society? Who benefits from education, from public service and from political reforms except the Hindu governing class—composed of the higher castes of the Hindus—which form not even 10 per cent. of the total Hindu population? Has not the governing class of the Hindus, which controls Hindu politics, shown more regard for safeguarding the rights and interests of the Musalmans than they have for safeguarding the rights and interests of the Shudras and the Untouchables? Is not Mr. Gandhi, who is determined to oppose any political concession to the Untouchables, ready to sign a blank cheque in favour of the Muslims? Indeed, the Hindu governing class seems to be far more ready to share power with the Muslims than it is to share power with the Shudras and the Untouchables. Surely, the Muslims have the least ground to complain of the undemocratic character of Hindu society.

Another ground on which the Muslim objection to Hindu Raj rests is that the Hindus are a majority community and the Musalmans are a minority community. True. But is India the only country where such a situation exists? Let us compare the conditions in India with the conditions in Canada, South Africa and Switzerland. First, take the distribution of population. In Canada ⁵mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40F.Pakistan or the Partition of India PART V.htm - _msocom_5 out of a total population of 10,376,786 only 2,927,990 are French. In South Africa ⁶mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40F.Pakistan or the Partition of India PART V.htm - _msocom_6 the Dutch number 1,120,770 and the English are only 783,071. In Switzerland ⁷[f.7] out of the total population of 4,066,400 the Germans are 2,924,313, the French 831,097 and the Italians 242,034.

This shows that the smaller nationalities have no fear of being placed under the Raj of a major community. Such a notion seems to be quite

foreign to them. Why is this so? Is it because there is no possibility of the major nationality establishing its supremacy in those centres of power and authority, namely the Legislature and in the Executive? Quite the contrary. Unfortunately no figures are available to show the actual extent of representation which the different major and minor nationalities have in Switzerland, Canada and South Africa. That is because there is no communal reservation of seats such as is found in India. Each community is left to win in a general contest what number of seats it can. But it is quite easy to work out the probable number of seats which each nationality can obtain on the basis of the ratio of its population to the total seats in the Legislature Proceeding on this basis what do we find? In Switzerland the total representatives in the Lower House is 187. Out of them the German population has a possibility of winning 138, French 42 and Italians only 7 seats. In South Africa out of the total of 153, there is a possibility of the English gaining 62, and the Dutch 94 seats. In Canada the total is 245. Of these the French ⁸ [f.8] have only 65. On this basis it is quite clear that in all these countries there is a possibility of the major nationality establishing its supremacy over the minor nationalities. Indeed, one may go so far as to say that speaking de jure and as a mere matter of form in Canada the French are living under the British Raj, the English in South Africa under the Dutch Raj, and the Italians and French in Switzerland under the German Raj. But what is the position de facto? Have Frenchmen in Canada raised a cry that they will not live under British Raj? Have Englishmen in South Africa raised a cry that they will not live under Dutch Raj? Have the French and Italians in Switzerland any objection to living under the German Raj? Why should then the Muslims raise this cry of Hindu Raj?

Is it proposed that the Hindu Raj should be the rule of a naked communal majority? Are not the Musalmans granted safeguards against the possible tyranny of the Hindu majority? Are not the safeguards given to the Musalmans of India wider and better than the safeguards which have been given to the French in Canada, to the English in South Africa and to the French and the Italians in Switzerland? To take only one item from the list of safeguards. Haven't the Musalmans got an

enormous degree of weightage in representation in the Legislature? Is weightage known in Canada, South Africa or Switzerland? And what is the effect of this weightage to Muslims? Is it not to reduce the Hindu majority in the Legislature? What is the degree of reduction? Confining ourselves to British India and taking account only of the representation granted to the territorial constituencies, Hindu and Muslim, in the Lower House in the Central Legislature under the Government of India Act, 1935, it is clear that out of a total of 187, the Hindus have 105 seats and the Muslims have 82 seats. Given these figures one is forced to ask where is the fear of the Hindu Raj?

If Hindu Raj does become a fact, it will, no doubt, be the greatest calamity for this country. No matter what the Hindus say, Hinduism is a menace to liberty, equality and fraternity. On that account it is incompatible with democracy. Hindu Raj must be prevented at any cost. But is Pakistan the true remedy against it? What makes communal Raj possible is a marked disproportion in the relative strength of the various communities living in a country. As pointed out above, this disproportion is not more marked in India than it is in Canada, South Africa and Switzerland. Nonetheless there is no British Raj in Canada, no Dutch Raj in South Africa, and no German Raj in Switzerland. How have the French, the English and the Italians succeeded in preventing the Raj of the majority community being established in their country? Surely not by partition : What is their method? Their method is to put a ban on communal parties in politics. No community in Canada, South Africa or Switzerland ever thinks of starting a separate communal party. What is important to note is that it is the minority nations which have taken the lead in opposing the formation of a communal party. For they know that if they form a communal political party the major community will also form a communal party and the majority community will thereby find it easy to establish its communal Raj. It is a vicious method of self-protection. It is because the minority nations are fully aware how they will be hoisted on their own petard that they have opposed the formation of communal political parties.

Have the Muslims thought of this method of avoiding Hindu Raj. Have they considered how easy it is to avoid it? Have they considered how futile and harmful the present policy of the League is? The Muslims are howling against the Hindu Maha Sabha and its slogan of Hindudom and Hindu Raj. But who is responsible for this? Hindu Maha Sabha and Hindu Raj are the inescapable nemesis which the Musalmans have brought upon themselves by having a Muslim League. It is action and counter-action. One gives rise to the other. Not partition, but the abolition, of the Muslim League and the formation of a mixed party of Hindus and Muslims is the only effective way of burying the ghost of Hindu Raj. It is, of course, not possible for Muslims and other minority parties to join the Congress or the Hindu Maha Sabha so long as the disagreement on the question of constitutional safeguards continues. But this question will be settled, is bound to be settled and there is every hope that the settlement will result in securing to the Muslims and other minorities the safeguards they need. Once this consummation, which we so devoutly wish, takes place nothing can stand in the way of a party re-alignment, of the Congress and the Maha Sabha breaking up and of Hindus and Musalmans forming mixed political parties based on an agreed programme of social and economic regeneration, and thereby avoid the danger of both Hindu Raj or Muslim Raj becoming a fact. Nor should the formation of a mixed party of Hindus and Muslims be difficult in India. There are many lower orders in the Hindu society whose economic, political and social needs are the same as those of the majority of the Muslims and they would be far more ready to make a common cause with the Muslims for achieving common ends than they would with the high caste of Hindus who have denied and deprived them of ordinary human rights for centuries. To pursue such a course cannot be called an adventure. The path along that line is a well trodden path. Is it not a fact that under the Montagu-Chelmsford Reforms in most Provinces, if not in all, the Muslims, the Non-Brahmins and the Depressed Classes united together and worked the reforms as members of one team from 1920 to 1937? Herein lay the most fruitful method of achieving communal harmony among Hindus and Muslims and of destroying the danger of a Hindu Raj. Mr. Jinnah could have easily pursued this line. Nor was it difficult for Mr. Jinnah to succeed in it.

Indeed Mr. Jinnah is the one person who had all the chances of success on his side if he had tried to form such a united non-communal party. He has the ability to organize. He had the reputation of a nationalist. Even many Hindus who were opposed to the Congress would have flocked to him if he had only sent out a call for a united party of like-minded Hindus and Muslims. What did Mr. Jinnah do? In 1937 Mr. Jinnah made his entry into Muslim politics and strangely enough he regenerated the Muslim League which was dying and decaying and of which only a few years ago he would have been glad to witness the funeral. However regrettable the starting of such a communal political party may have been, there was in it one relieving feature. That was the leadership of Mr. Jinnah. Everybody felt that with the leadership of Mr. Jinnah the League could never become a merely communal party. The resolutions passed by the League during the first two years of its new career indicated that it would develop into a mixed political party of Hindus and Muslims. At the annual session of the Muslim League held at Lucknow in October 1937 altogether 15 resolutions were passed. The following two are of special interest in this connection.

Resolution ⁹[f.9] No. 7:

“This meeting of the All India Muslim League deprecates and protests against the formation of Ministries in certain Provinces by the Congress parties in flagrant violation of the letter and the spirit of the Government of India Act, 1935, and Instrument of Instructions and condemns the Governors for their failure to enforce the special powers entrusted to them for the safeguards of the interest of the Musalmans and other important minorities”

Resolution* No. 8:

“Resolved that the object of the All India Muslim League shall be the establishment in India of Full Independence in the form of federation of free democratic states in which the rights and interests of the Musalmans and other minorities are adequately and effectively safeguarded in the constitution.”

Equal number of resolutions were passed at the next annual session of the League held at Patna in December 1938. Resolution* No. 10 is noteworthy. It reads as follows :—

"The All India Muslim League reiterates its view that the scheme of Federation embodied in the Government of India Act, 1935, is not acceptable, but in view of the further developments that have taken place or may take place from time to time it hereby authorises the President of the All India Muslim League to adopt such course as may be necessary with a view to explore the possibility of a suitable alternative which will safeguard the interests of the Musalmans and other minorities in India." By these resolutions Mr. Jinnah showed that he was for a common front between the Muslims and other non-Muslim minorities. Unfortunately the catholicity and statesmanship that underlies these resolutions did not last long. In 1939 Mr. Jinnah took a somersault and outlined the dangerous and disastrous policy of isolation of the Musalmans by passing that notorious resolution in favour of Pakistan. What is the reason for this isolation? Nothing but the change of view that the Musalmans were a nation and not a community !! One need not quarrel over the question whether the Muslims are a nation or a community. But one finds it extremely difficult to understand how the mere fact that the Muslims are a nation makes political isolation a safe and sound policy? Unfortunately Muslims do not realize what disservice Mr. Jinnah has done to them by this policy. But let Muslims consider what Mr. Jinnah has achieved by making the Muslim League the only organization for the Musalmans. It may be that it has helped him to avoid the possibility of having to play the second fiddle. For inside the Muslim camp he can always be sure of the first place for himself. But how does the League hope to save by this plan of isolation the Muslims from Hindu Raj? Will Pakistan obviate the establishment of Hindu Raj in Provinces in which the Musalmans are in a minority? Obviously it cannot. This is what would happen in the Muslim minority Provinces if Pakistan came. Take an all-India view. Can Pakistan prevent the establishment of Hindu Raj at the centre over Muslim minorities that will remain Hindustan? It is plain that it cannot. What good is Pakistan then? Only to prevent

Hindu Raj in Provinces in which the Muslims are in a majority and in which there could never be Hindu Raj !! To put it differently Pakistan is unnecessary to Muslims where they are in a majority because there, there is no fear of Hindu Raj. It is worse than useless to Muslims where they are in a minority, because Pakistan or no Pakistan they will have to face a Hindu Raj. Can politics be more futile than the politics of the Muslim League? The Muslim League started to help minority Muslims and has ended by espousing the cause of majority Muslims. What a perversion in the original aim of the Muslim League ! What a fall from the sublime to the ridiculous ! Partition as a remedy against Hindu Raj is worse than useless.

VI

These are some of the weaknesses in the Muslim case for Pakistan which have occurred to me. There might be others which have not struck me. But the list as it is, is quite a formidable one. How do the Muslims propose to meet them? That is a question for the Muslims and not for me. My duty as a student of the subject extends to setting forth these weaknesses. That I have done. I have nothing more to answer for.

There are, however, two other questions of such importance that this discussion cannot be closed with any sense of completeness without reference to them. The purpose of these questions is to clear the ground between myself and my critics. Of these questions, one I am entitled to ask the critics, the other the critics are entitled to ask me.

Beginning with the first question, what I feel like asking the critics is, what good do they expect from a statement of these weaknesses? Do they expect the Musalmans to give up Pakistan if they are defeated in a controversy over the virtues of Pakistan? That of course depends upon what method is adopted to resolve this controversy. The Hindus and the Musalmans may follow the procedure which Christian missionaries had set up in early times in order to secure converts from amongst the Hindus. According to this procedure a day was appointed for a disputation, which was open to public, between a Christian missionary and a Brahmin, the former representing the Christian religion and the

latter holding himself out as the protagonist of the Hindu religion with the condition that whoever failed to meet the case against his religion was bound to accept the religion of the other. If such a method of resolving the dispute between the Hindus and the Muslims over the issue of Pakistan was agreed upon there may be some use in setting out this string of weaknesses. But let it not be forgotten that there is another method of disposing of a controversy which maybe called Johnsonian after the manner which Dr. Johnson employed in dealing with arguments of Bishop Berkeley. It is recorded by Boswell that when he told Dr. Johnson that the doctrine of Bishop Berkeley that matter was non-existent and that everything in the universe was merely ideal, was only an ingenious sophistry but that it was impossible to refute it. Dr. Johnson with great alacrity answered, striking his foot with mighty force against a large stone, till he rebounded from it saying, "I refute it thus." It may be that the Musalmans will agree, as most rational people do, to have their case for Pakistan decided by the tests of reason and argument. But I should not be surprised if the Muslims decided to adopt the method of Dr. Johnson and say "Damn your arguments ! We want Pakistan." In that event the critic must realize that any reliance placed upon the limitations for destroying the case for Pakistan will be of no avail. It is therefore no use being jubilant over the logic of these objections to Pakistan.

Let me now turn to the other question which I said the critic is entitled to put to me. What is my position regarding the issue of Pakistan in the light of the objections, which I have set out? I have no doubts as to my position. I hold firmly that, subject to certain conditions, detailed in the chapters that follow, if the Musalmans are bent on having Pakistan then it must be conceded to them. I know my critics will at once accuse me of inconsistency and will demand reasons for so extraordinary a conclusion— extraordinary because of the view expressed by me in the earlier part of this chapter that the Muslim case for Pakistan has nothing in it which can be said to carry the compelling force which the decree of an inexorable fate may be said to have. I withdraw nothing from what I have said as to the weaknesses in the Muslim case for Pakistan. Yet I hold that if the Muslims must have Pakistan there is no escape from

conceding it to them. As to the reasons which have led me to that conclusion I shall not hesitate to say that the strength or weakness of the logic of Pakistan is not one of them. In my judgement there are two governing factors which must determine the issue. First is the defence of India and second is the sentiment of the Muslims. I will state why I regard them as decisive and how in my opinion they tell in favour of Pakistan.

To begin with the first. One cannot ignore that what is important is not the winning of independence but the having of the sure means of maintaining it. The ultimate guarantee of the independence of a country is a safe army—an army on which you can rely to fight for the country at all time and in any eventuality. The army in India must necessarily be a mixed army composed of Hindus and Muslims. If India is invaded by a foreign power, can the Muslims in the army be trusted to defend India? Suppose invaders are their co-religionists. Will the Muslims side with the invaders or will they stand against them and save India? This is a very crucial question. Obviously, the answer to this question must depend upon to what extent the Muslims in the army have caught the infection of the two-nation theory, which is the foundation of Pakistan. If they are infected, then the army in India cannot be safe. Instead of being the guardian of the independence of India, it will continue to be a menace and a potential danger to its independence. I confess I feel aghast when I hear some Britishers argue that it is for the defence of India that they must reject Pakistan. Some Hindus also sing the same tune. I feel certain that either they are unaware as to what the determining factor in the independence of India is or that they are talking of the defence of India not as an independent country responsible for its own defence but as a British possession to be defended by them against an intruder. This is a hopelessly wrong angle of vision. The question is not whether the British will be able to defend India better if there was no partition of India. The question is whether Indians will be able to defend a free India. To that, I repeat, the only answer is that Indians will be able to defend a free India on one and one condition alone—namely, if the army in India remains non-political, unaffected by the poison of Pakistan. I want to warn Indians against the

most stupid habit that has grown up in this country of discussing the question of Swaraj without reference to the question of the army. Nothing can be more fatal than the failure to realize that a political army is the greatest danger to the liberty of India. It is worse than having no army.

Equally important is the fact that the army is the ultimate sanction which sustains Government in the exercise of its authority inside the country, when it is challenged by a rebellious or recalcitrant element. Suppose the Government of the day enunciates a policy which is vehemently opposed by a section of the Muslims. Suppose the Government of the day is required to use its army to enforce its policy. Can the Government of the day depend upon the Muslims in the army to obey its orders and shoot down the Muslim rebels? This again depends upon to what extent the Muslims in the army have caught the infection of the two-nation theory. If they have caught it, India cannot have a safe and secure Government.

Turning to the second governing factor the Hindus do not seem to attach any value to sentiment as a force in politics. The Hindus seem to rely upon two grounds to win against the Muslims. The first is that even if the Hindus and the Muslims are two nations, they can live under one state. The other is that the Muslim case for Pakistan is founded on strong sentiment rather than upon clear argument. I don't know how long the Hindus are going to fool themselves with such arguments. It is true that the first argument is not without precedent. At the same time it does not call for much intelligence to see that its value is extremely limited. Two nations and one state is a pretty plea. It has the same attraction which a sermon has and may result in the conversion of Muslim leaders. But instead of being uttered as a sermon if it is intended to issue it as an ordinance for the Muslims to obey it will be a mad project to which no sane man will agree. It will, I am sure, defeat the very purpose of Swaraj. The second argument is equally silly. That the Muslim case for Pakistan is founded on sentiment is far from being a matter of weakness; it is really its strong point. It does not need deep understanding of politics to know that the workability of a constitution

is not a matter of theory. It is a matter of sentiment. A constitution like clothes must suit as well as please. If a constitution does not please, then, however perfect it may be, it will not work. To have a constitution which runs counter to the strong sentiments of a determined section is to court disaster if not to invite rebellion.

It is not realized by the Hindus that, assuming there is a safe army, rule by armed forces is not the normal method of governing a people. Force, it cannot be denied, is the medicine of the body politic and must be administered when the body politic becomes sick. But just because force is the medicine of the body politic it cannot be allowed to become its daily bread. A body politic must work as a matter of course by springs of action which are natural. This can happen only when the different elements constituting the body politic have the will to work together and to obey the laws and orders passed by a duly constituted authority. Suppose the new constitution for a United India contained in it all the provisions necessary to safeguard the interests of the Muslims. But suppose the Muslims said "Thank you for your safeguards, we don't want to be ruled by you"; and suppose they boycott the Legislatures, refuse to obey laws, oppose the payment of taxes ; what is to happen? Are the Hindus prepared to extract obedience from Muslims by the use of Hindu bayonets? Is Swaraj to be an opportunity to serve the people or is it to be an opportunity for Hindus to conquer the Musalmans and for the Musalmans to conquer the Hindus? Swaraj must be a Government of the people by the people and for the people. This is the *raison d'etre* of Swaraj and the only justification for Swaraj. If Swaraj is to usher in an era in which the Hindus and the Muslims will be engaged in scheming against each other, the one planning to conquer its rival, why should we have Swaraj and why should the democratic nations allow such a Swaraj to come into existence? It will be a snare, a delusion and a perversion.

The non-Muslims do not seem to be aware that they are presented with a situation in which they are forced to choose between various alternatives. Let me state them. In the first place they have to choose between Freedom of India and the Unity of India. If the non-Muslims

will insist on the Unity of India they put the quick realization of India's freedom into jeopardy. The second choice relates to the surest method of defending India, whether they can depend upon Muslims in a free and united India to develop and sustain along with the non-Muslims the necessary will to defend the common liberties of both: or whether it is better to partition India and thereby ensure the safety of Muslim India by leaving its defence to the Muslims and of non-Muslim India by leaving its defence to non-Muslims.

As to the first, I prefer Freedom of India to the Unity of India. The Sinn Feinners who were the staunchest of nationalists to be found anywhere in the world and who like the Indians were presented with similar alternatives chose the freedom of Ireland to the unity of Ireland. The non-Muslims who are opposed to partition may well profit by the advice tendered by the Rev. Michael O'Flanagan, at one time Vice-President of the Feinns to the Irish Nationalists on the issue of the partition of Ireland. ¹⁰[f.10] Said the Rev. Father :—

“If we reject Home Rule rather than agree to the exclusion of the Unionist parts of Ulster, what case have we to put before the world? We can point out that Ireland is an island with a definite geographical boundary. That argument might be all right if we were appealing to a number of Island nationalities that had themselves definite geographical boundaries. Appealing, as we are, to continental nations with shifting boundaries, that argument will have no force whatever. National and geographical boundaries scarcely ever coincide. Geography would make one nation of Spain and Portugal; history has made two of them. Geography did its best to make one nation of Norway and Sweden ; history has succeeded in making two of them. Geography has scarcely anything to say to the number of nations upon the North American continent; history has done the whole thing. If a man were to try to construct a political map of Europe out of its physical map, he would find himself groping in the dark. Geography has worked hard to make one nation out of Ireland; history has worked against it. The island of Ireland and the national unit of Ireland

simply do not coincide. In the last analysis the test of nationality is the wish of the people."

These words have emanated from a profound sense of realism which we in India so lamentably lack.

On the second issue I prefer the partitioning of India into Muslim India and non-Muslim India as the surest and safest method of providing for the defence of both. It is certainly the safer of the two alternatives. I know it will be contended that my fears about the loyalty of the Muslims in the army to a Free and United India arising from the infection of the two nation theory is only an imaginary fear. That is no doubt true. That does not militate against the soundness of the choice I have made. I may be wrong. But I certainly can say without any fear of contradiction that, to use the words of Burke, it is better to be ridiculed for too great a credulity than to be ruined by too confident a sense of security. I don't want to leave things to chance. To leave so important an issue, as the defence of India, to chance is to be guilty of the grossest crime.

Nobody will consent to the Muslim demand for Pakistan unless he is forced to do so. At the same time, it would be a folly not to face what is inevitable and face it with courage and common sense. Equally would it be a folly to lose the. Part one can retain in the vain attempt of preserving the whole.

These are the reasons why I hold that if the Musalman will not yield on the issue of Pakistan then Pakistan must come. So far as I am concerned the only important question is : Are the Musalmans determined to have Pakistan? Or is Pakistan a mere cry? Is it only a passing mood? Or does it represent their permanent aspiration? On this there may be difference of opinion. Once it becomes certain that the Muslims want Pakistan there can be no doubt that the wise course would be to concede the principle of it.

CHAPTER XIV

THE PROBLEMS OF PAKISTAN

I

Among the many problems to which the partition of India into Pakistan and Hindustan must give rise will be the following three problems:—

- (1) (1) The problem of the allocation of the financial assets and liabilities of the present Government of India,
- (2) (2) The problem of the delimitation of the areas, and
- (3) (3) The problem of the transfer of population from Pakistan to Hindustan and vice versa.

Of these problems the first is consequential, in the sense, that it would be worth while to consider it only when the partition of India has been agreed to by the parties concerned. The two other problems stand on a different footing. They are conditions precedent to Pakistan in the sense that there are many people who will not make up their mind on Pakistan unless they are satisfied that some reasonable and just solution of them is possible. I will, therefore, confine myself to the consideration only of the last two problems of Pakistan.

II

On the question of the boundaries of Pakistan we have had so far no clear and authoritative statement from the Muslim League. In fact it is one of the complaints made by the Hindus that while Mr. Jinnah has been carrying on a whirlwind campaign in favour of Pakistan, which has resulted in fouling the political atmosphere in the country, Mr. Jinnah has not thought fit to inform his critics of the details regarding the boundaries of his proposed Pakistan. Mr. Jinnah's argument has all along been that any discussion regarding the boundaries of Pakistan is premature and that the boundaries of Pakistan will be a matter for discussion when the principle of Pakistan has been admitted. It may be a good rhetorical answer, but it certainly does not help those who wish to apply their mind without taking sides to offer whatever help they can to bring about a peaceful solution of this problem. Mr. Jinnah seems to be under the impression that if a person is committed to the principle of

Pakistan he will be bound to accept Mr. Jinnah's plan of Pakistan. There cannot be a greater mistake than this. A person may accept the principle of Pakistan, which only means the partition of India. But it is difficult to understand how the acceptance of this principle can commit him to Mr. Jinnah's plan of Pakistan. Indeed if no plan of Pakistan is satisfactory to him he will be quite free to oppose any form of Pakistan although he may be in favour of the principle of Pakistan. The plan of Pakistan and the principle of Pakistan are therefore two quite distinct propositions. There is nothing wrong in this view. By way of illustration it may be said that the principle of self-determination is like an explosive substance. One may agree in principle to its use when the necessity and urgency of the occasion is proved. But no one can consent to the use of the dynamite without first knowing the area that is intended to be blown up. If the dynamite is going to blow up the whole structure or if it is not possible to localize its application to a particular part he may well refuse to apply the dynamite and prefer to use some other means of solving the problem. Specifications of boundary lines seem therefore to be an essential preliminary for working out in concrete shape the principle of Pakistan. Equally essential it is for a bona fide protagonist of Pakistan not to hide from the public the necessary particulars of the scheme of Pakistan. Such contumacy and obstinacy as shown by Mr. Jinnah in refusing to declare the boundaries of his Pakistan is unforgivable in a statesman. Nevertheless those who are interested in solving the question of Pakistan need not wait to resolve the problems of Pakistan until Mr. Jinnah condescends to give full details. Only one has to carry on the argument on the basis of certain assumptions. In this discussion I will assume that what the Muslim League desires is that the boundaries of the Western Pakistan should be the present boundaries of the Provinces of the North-West Frontier, the Punjab, Sind and Baluchistan, and that the boundaries of Eastern Pakistan should be the boundaries of the present Province of Bengal with a few districts of Assam thrown in.

III

The question for consideration therefore is : Is this a just claim? The claim is said to be founded on the principle of self-determination. To be

able to assess the justice of this claim it is necessary to have a clear understanding of the scope and limitations of the principle of self-determination. Unfortunately, there seems to be a complete lack of such an understanding. It is therefore necessary to begin with the question : What is the de facto and de jure' connotation of this principle of self-determination? The term self-determination has become current since the last few years. But it describes something which is much older. The idea underlying self-determination has developed along two different lines. During the 19th century self-determination meant the right to establish a form of government in accordance with the wishes of the people. Secondly, self-determination has meant the right to obtain national independence from an alien race irrespective of the form of government. The agitation for Pakistan has reference to self-determination in its second aspect.

Confining the discussion to this aspect of Pakistan it seems to me essential that the following points regarding the issue of self-determination should be borne in mind.

In the first place, self-determination must be by the people. This point is too simple even to need mention. But it has become necessary to emphasize it. Both the Muslim League and the Hindu Maha Sabha seem to be playing fast and loose with the idea of self-determination. An area is claimed by the Muslim League for inclusion in Pakistan because the people of the area are Muslims. An area is also claimed for being included in Pakistan because the ruler of the area is a Muslim though the majority of the people of that area are non-Muslims. The Muslim League is claiming the benefit of self-determination in India. At the same time the League is opposed to self-determination being applied to Palestine. The League claims Kashmir as a Muslim State because the majority of people are Muslims and also Hyderabad because the ruler is Muslim. In like manner the Hindu Maha Sabha claims an area to be included in Hindustan because the people of the area are non-Muslims. It also comes forward to claim an area to be a part of Hindustan because the ruler is a Hindu though the majority of the people are Muslims. Such strange and conflicting claims are entirely due to the fact

that either the parties to Pakistan, namely, the Hindus and the Muslims do not understand what self-determination means or are busy in perverting the principle of self-determination to enable them to justify themselves in carrying out the organized territorial loot in which they now seem to be engaged. India will be thrown into a state of utter confusion whenever the question of reorganization of its territories comes up for consideration if people have no exact notions as to what self-determination involves and have not the honesty to stand by the principle and take the consequences whatever they be. It is, therefore, well to emphasize what might be regarded as too simple to require mention, namely, that self-determination is a determination by the people and by nobody else.

The second point to note is the degree of imperative character with which the principle of self-determination can be said to be invested. As has been said by Mr. O' Connor ¹¹[f.11] :

“The doctrine of self-determination is not a universal principle at all. The most that can be said about it is that generally speaking, it is a sound working rule, founded upon justice, making for harmony and peace and for the development of people in their own fashion, which, again generally speaking, is the best fashion. But it must yield to circumstances, of which size and geographical situation are some of the most important. Whether the rule should prevail against the circumstances or the circumstances against the rule can be determined only by the application of one's common sense or sense of justice, or, as a Benthamite would prefer to put it, by reference to the greatest good of the greatest number— all these three, if properly understood, are really different methods of expressing the same thing. In solving a particular case very great difficulties may arise. There are facts one way and facts another way. Facts of one kind may make a special appeal to some minds, little or none to others. The problem may be of the kind that is called imponderable, that is to say, no definite conclusion that will be accepted by the generality of the mankind may be possible. There are cases in which it is no more possible to say that a nation is right in its claim to interfere with the self-determination of another

nation than that it is to say that it is wrong. It is a matter of opinion, upon which honest and impartial minds may differ."

There are two reasons why this must be so. Firstly, nationality is not such a sacrosanct and absolute principle as to give it the character of a categorical imperative, over-riding every other consideration. Secondly, separation is not quite so essential for the maintenance and preservation of a distinct nationality.

There is a third point to be borne in mind in connection with the issue of self-determination. Self-determination for a nationality may take the form of cultural independence or may take the form of territorial independence. Which form it can take must depend upon the territorial layout of the population. If a nationality lives in easily severable and contiguous areas, other things being equal, a case can be made out for territorial independence. But where owing to an inextricable intermingling the nationalities are so mixed up that the areas they occupy are not easily severable, then all that they can be entitled to is cultural independence. Territorial separation in a case like this is an impossibility. They are doomed to live together. The only other alternative they have is to migrate.

IV

Having defined the scope and limitations of the idea of self-determination we can now proceed to deal with the question of boundaries of Pakistan. How does the claim of the Muslim League for the present boundary to remain the boundaries of Pakistan stand in the light of these considerations? The answer to this question seems to me quite clear. The geographical layout seems to decide the issue. No special pleading of any kind is required. In the case of the North-West Frontier Province, Baluchistan and Sind, the Hindus and the Muslims are intermixed. In these Provinces a case for territorial separation for the Hindus seems to be impossible. They must remain content with cultural independence and such political safeguards as may be devised for their safety. The case of the Punjab and Bengal stands on a different footing. A glance at the map shows that the layout of the population of the

Hindus and the Muslims in these two Provinces is totally different from what one finds in the other three Provinces. The non-Muslims in the Punjab and Bengal are not found living in small islands in the midst of and surrounded by a vast Muslim population spread over the entire surface as is the case with the North-West Frontier Province, Baluchistan and Sind. In Bengal and the Punjab the Hindus occupy two different areas contiguous and severable. In these circumstances, there is no reason for conceding what the Muslim League seems to demand, namely, that the present boundaries of the Punjab and Bengal shall continue to be the boundaries of Western Pakistan and Eastern Pakistan.

Two conclusions necessarily follow from the foregoing discussion. One is that the non-Muslims of the Punjab and Bengal have a case for exclusion from Pakistan by territorial severance of the areas they occupy. The other is that the non-Muslims of North-West Frontier Province, Baluchistan and Sind have no case for exclusion and are only entitled to cultural independence and political safeguards. To put the same thing in a different way it may be said that the Muslim League claim for demanding that the boundaries of Sind, North-West Frontier and Baluchistan shall remain as they are cannot be opposed. But that in the case of the Punjab and Bengal such a claim is untenable and that the non-Muslims of these Provinces, if they desire, can claim that the territory they occupy should be excluded by a redrawing of the boundaries of these two Provinces.

V

One should have thought that such a claim by the non-Muslim minorities of the Punjab and Bengal for the redrawing of the boundaries would be regarded by the Muslim League as a just and reasonable claim. The possibility of the redrawing of boundaries was admitted in the Lahore Resolution of the Muslim League passed in March 1940. The Resolution ¹²[f.12] said :—

“The establishment of completely independent States formed by demarcating geographically contiguous units into regions which shall

be so constituted, with such territorial readjustments as may be necessary, that the areas in which the Musalmans are numerically in a majority, as in the north-western and eastern zones of India, shall be grouped together to constitute independent States as Muslim free national homelands in which the constituent units shall be autonomous and sovereign.”

That this continued to be the position of the Muslim League is clear from the resolution passed by the Muslim League on the Cripps Proposals as anyone who cares to read it will know. But there are indications that Mr. Jinnah has changed his view. At a public meeting held on 16th November 1942 in Jullunder Mr. Jinnah is reported to have expressed himself in the following terms:—

“The latest trick—I call it nothing but a trick—to puzzle and to mislead the ignorant masses purposely, and those playing the game understand it, is, why should the right of self-determination be confined to Muslims only and why not extend it to other communities? Having said that all have the right of self-determination, they say the Punjab must be divided into so many bits ; likewise the North-West Frontier Province and Sind. Thus there will be hundreds of Pakistans.

SUB-NATIONAL GROUPS ¹³[f.13]

“Who is the author of this new formula that every community has the right of self-determination all over India? Either it is colossal ignorance or mischief and trick. Let me give them a reply, that the Musalmans claim the right of self-determination because they are a national group on a given territory which is their homeland and in the zones where they are in a majority. Have you known anywhere in history that national groups scattered all over have been given a State? Where are you going to get a State for them? In that case you have got 14 per cent. Muslims in the United Provinces. Why not have a State for them? Muslims in the United Provinces are not a national group; they are scattered. Therefore in constitutional language they are

characterized as a sub-national group who cannot expect anything more than what is due from any civilized Government to a minority. I hope I have made the position clear. The Muslims are not a sub-national group; it is their birthright to claim and exercise the right of self-determination."

Mr. Jinnah has completely missed the point. The point raised by his critics was not with regard to the non-Muslim minorities in general. It had reference to the non-Muslim minorities in the Punjab and Bengal. Does Mr. Jinnah propose to dispose of the case of non-Muslim minorities who occupy a compact and an easily severable territory by his theory of a sub-nation? If that is so, then one is bound to say that a proposition cruder than his it would be difficult to find in any political literature. The concept of a sub-nation is unheard of. It is not only an ingenious concept but it is also a preposterous concept. What does the theory of a subnation connote? If I understand its implications correctly, it means a sub-nation must not be severed from the nation to which it belongs even when severance is possible: it means that the relations between a nation and a sub-nation are no higher than the relations which subsist between a man and his chattels, or between property and its incidents. Chattels go with the owner, incidents go with property, so a sub-nation goes with a nation. Such is the chain of reasoning in Mr. Jinnah's argument. But does Mr. Jinnah seriously wish to argue that the Hindus of the Punjab and Bengal are only chattels so that they must always go wherever the Muslims of the Punjab and the Muslims of Bengal choose to drive them? Such an argument will be too absurd to be entertained by any reasonable man. It is also the most illogical argument and certainly it should not be difficult for so mature a lawyer as Mr. Jinnah, to see the illogicality of it. If a numerically smaller nation is only a sub-nation in relation to a numerically larger nation and has no right to territorial separation, why can it not be said that taking India as a whole the Hindus are a nation and the Muslims a sub-nation and as a sub-nation they have no right to self-determination or territorial separation?

Already there exists a certain amount of suspicion with regard to the banafides of Pakistan. Rightly or wrongly, most people suspect that

Pakistan is pregnant with mischief. They think that it has two motives, one immediate, the other ultimate. The immediate motive, it is said, is to join with the neighbouring Muslim countries and form a Muslim Federation. The ultimate motive is for the Muslim Federation to invade Hindustan and conquer or rather reconquer the Hindu and re-establish Muslim Empire in India. Others think that Pakistan is the culmination of the scheme of hostages which lay behind the demand, put forth by Mr. Jinnah in his fourteen points, for the creation of separate Muslim Provinces. Nobody can fathom the mind of the Muslims and reach the real motives that lie behind their demand for Pakistan. The Hindu opponents of Pakistan if they suspect that the real motives of the Muslims are different from the apparent ones, may take note of them and plan accordingly. They cannot oppose Pakistan because the motives behind it are bad. But they are entitled to ask Mr. Jinnah, Why does he want to have a communal problem within Pakistan? However vicious may be the motives behind Pakistan it should possess at least one virtue. The ideal of Pakistan should be not to have a communal problem inside it. This is the least of virtues one can expect from Pakistan. If Pakistan is to be plagued by a communal problem in the same way as India has been, why have Pakistan at all? It can be welcomed only if it provides an escape from the communal problem. The way to avoid it is to arrange the boundaries in such a way that it will be an ethnic State without a minority and a majority pitched against each other. Fortunately it can be made into an ethnic State if only Mr. Jinnah will allow it. Unfortunately Mr. Jinnah objects to it. Therein lies the chief cause for suspicion and Mr. Jinnah, instead of removing it, is deepening it by such absurd, illogical and artificial distinctions as nations and sub-nations.

Rather than resort to such absurd and illogical propositions and defend what is indefensible and oppose what is just, would it not be better for Mr. Jinnah to do what Sir Edward Carson did in the matter of the delimitation of the boundaries of Ulster? As all those who know the vicissitudes through which the Irish Home Rule question passed know that it was at the Craigavon meeting held on 23rd September 1911 that Sir Edward Carson formulated his policy that in Ulster there will be a government of Imperial Parliament or a Government of Ulster but

never a Home Rule Government. As the Imperial Parliament was proposing to withdraw its government, this policy meant the establishment of a provisional government for Ulster. This policy was embodied in a resolution passed at a joint meeting of delegates representing the Ulster Unionist Council, the County Grand Orange Lodges and Unionist Clubs held in Belfast on 25th September 1911. The Provisional Government of Ulster was to come into force on the day of the passing of the Home Rule Bill. An important feature of this policy was to invest the Provisional Government with a jurisdiction over all "those districts which they (Ulsterites) could control."

The phrase "those districts which they could control" was no doubt meant to include the whole of the administrative division of Ulster. Now this administrative division of Ulster included nine counties. Of these three were overwhelmingly Catholic. This meant the compulsory retention of the three Catholic counties under Ulster against their wishes. But what did Sir Edward Carson do in the end? It did not take long for Sir Edward Carson to discover that Ulster with three overwhelmingly Catholic districts would be a liability, and with all the courage of a true leader he came out with a declaration that he proposed to cut down his losses and make Ulster safe. In his speech in the House of Commons on the 18th of May 1920 he announced that he was content with six counties only. The speech that he made on that occasion giving his reasons why he was content only with six counties is worth quoting. This is what he said ¹⁴[f.14] :—

"The truth is that we came to the conclusion after many anxious hours and anxious days of going into the whole matter, almost parish by parish and townland by townland, that we would have no chance of successfully starting a Parliament in Belfast which would be responsible for the government of Donegal, Caven and Monaghan. It would be perfectly idle for us to come here and pretend that we should be in a position to do so. We should like to have the very largest areas possible, naturally. That is a system of land grabbing that prevails in all countries for widening the jurisdiction of the various governments that are set up ; but there is no use in our undertaking a government which

we know would be a failure if we were saddled with these three counties."

These are wise, sagacious and most courageous words. The situation in which they were uttered has a close parallel with the situation that is likely to be created in the Punjab and Bengal by the application of the principle of Pakistan. The Muslim League and Mr. Jinnah if they want a peaceful Pakistan should not forget to take note of them. It is no use asking the non-Muslim minorities in the Punjab and Bengal to be satisfied with safeguards. If the Musalmans are not prepared to be content with safeguards against the tyranny of Hindu majority why should the Hindu minorities be asked to be satisfied with the safeguards against the tyranny of the Muslim majority? If the Musalmans can say to the Hindus "Damn your safeguards, we don't want to be ruled by you"—an argument which Carson used against Redmond—the same argument can be returned by the Hindus of the Punjab and Bengal against the Muslim offer to be content with safeguards.

The point is that this attitude is not calculated to lead to a peaceful solution of the problem of Pakistan. Sabre-rattling or show of force will not do. In the first place, this is a game which two can play. In the second place, arms may be an element of strength. But to have arms is not enough. As Rousseau said : "The strongest is never strong enough to be always master, unless he transforms his might into right, and obedience into duty." Only ethics can convert might into right and obedience into duty. The League must see that its claim for Pakistan is founded on ethics.

VI

So much for the problem of boundaries. I will now turn to the problem of the minorities which must remain within Pakistan even after boundaries are redrawn. There are two methods of protecting their interests.

First is to provide safeguards in the constitution for the protection of the political and cultural rights of the minorities. To Indians this is a familiar matter and it is unnecessary to enlarge upon it.

Second is to provide for their transfer from Pakistan to Hindustan. Many people prefer this solution and would be ready and willing to consent to Pakistan if it can be shown that an exchange of population is possible. But they regard this as a staggering and a baffling problem. This no doubt is the sign of a panic-stricken mind. If the matter is considered in a cool and calm temper it will be found that the problem is neither staggering nor baffling.

To begin with consider the dimensions of the problem. On what scale is this transfer going to be? In determining the scale one is bound to take into account three considerations. In the first place, if the boundaries of the Punjab and Bengal are redrawn there will be no question of transfer of population so far as these two Provinces are concerned. In the second place, the Musalmans residing in Hindustan do not propose to migrate to Pakistan nor does the League want their transfer. In the third place, the Hindus in the North-West Frontier Province, Sind and Baluchistan do not want to migrate. If these assumptions are correct, the problem of transfer of population is far from being a staggering problem. Indeed it is so small that there is no need to regard it as a problem at all.

Assuming it does become a problem, will it be a baffling problem? Experience shows that it is not a problem which it is impossible to solve. To devise a solution for such a problem it might be well to begin by asking what are the possible difficulties that are likely to arise in the way of a person migrating from one area to another on account of political changes. The following are obvious enough : (1) The machinery for effecting and facilitating the transfer of population. (2) Prohibition by Government against migration. (3) Levy by Government of heavy taxation on the transfer of goods by the migrating family. (4) The impossibility for a migrating family to carry with it to its new home its immovable property. (5) The difficulty of obviating a resort to unfair practices with a view to depress unduly the value of the property of the migrating family. (6) The fear of having to make good the loss by not being able to realize the full value of the property by sale in the market. (7) The difficulty of realizing pensionary and other charges due to the

migrating family from the country of departure. (8) The difficulty of fixing the currency in which payment is to be made. If these difficulties are removed the way to the transfer of population becomes clear.

The first three difficulties can be easily removed by the two States of Pakistan and Hindustan agreeing to a treaty embodying an article in some such terms as follows :—

“The Governments of Pakistan and Hindustan agree to appoint a Commission consisting of equal number of representatives and presided over by a person who is approved by both and who is not a national of either.

“The expense of the Commission and of its Committees both on account of its maintenance and its operation shall be borne by the two Governments in equal proportion.

“The Government of Pakistan and the Government of Hindustan hereby agree to grant to all their nationals within their territories who belong to ethnic minorities the right to express their desire to emigrate.

“The Governments of the States above mentioned undertake to facilitate in every way the exercise of this right and to interpose no obstacles, directly or indirectly, to freedom of emigration. All laws and regulations whatsoever which conflict with freedom of emigration shall be considered as null and void.”

The fourth and the fifth difficulties which relate to transfer of property can be effectually met by including in the treaty articles the following terms:

“Those who, in pursuance of these articles, determine to take advantage of the right to migrate shall have the right to carry with them or to have transported their movable property of any kind without any duty being imposed upon them on this account.

“So far as immovable property is concerned it shall be liquidated by the Commission in accordance with the following provisions:

(1) The Commission shall appoint a Committee of Experts to estimate the value of the immovable property of the emigrant. The emigrant interested shall have a representative chosen by him on the Committee.

(2) The Commission shall take necessary measures with a view to the sale of immovable property of the emigrant"

As for the rest of the difficulties relating to reimbursement for loss, for payment of pensionary and charges for specifying the currency in which payments are to be made the following articles in the treaty should be sufficient to meet them :

“(1) The difference in the estimated value and the sale price of the immovable property of the emigrant shall be paid in to the Commission by the Government of the country of departure as soon as the former has notified it of the resulting deficiency. One-fourth of this payment may be made in the money of the country of departure and three-fourths in gold or short term gold bonds.

“(2) The Commission shall advance to the emigrants the value of their immovable property determined as above.

“(3) All civil or military pensions acquired by an emigrant at the date of the signature of the present treaty shall be capitalized at the charge of the debtor Government, which must pay the amount to the Commission for the account of its owners.

“(4) The funds necessary to facilitate emigration shall be advanced by the States interested in the Commission."

Are not these provisions sufficient to overcome the difficulties regarding transfer of population? There are of course other difficulties. But even those are not insuperable. They involve questions of policy. The first question is : is the transfer of population to be compulsory or is it to be voluntary? The second is : is this right to State-aided transfer to be open to all or is it to be restricted to any particular class of persons? The third is : how long is Government going to remain liable to be bound by these provisions, particularly the provision for making

good the loss on the sale of immovable property? Should the provisions be made subject to a time limit or should the liability be continued indefinitely?

With regard to the first point, both are possible and there are instances of both having been put into effect. The transfer of population between Greece and Bulgaria was on a voluntary basis while that between Greece and Turkey was on a compulsory basis. Compulsory transfer strikes one as being *prima facie* wrong. It would not be fair to compel a man to change his ancestral habitat if he does not wish to, unless the peace and tranquility of the State is likely to be put in jeopardy by his continuing to live where he is or such transfer becomes necessary in his own interest. What is required is that those who want to transfer should be able to do so without impediment and without loss. I am therefore of opinion that transfer should not be forced but should be left open for those who declare their intention to transfer.

As to the second point, it is obvious that only members of a minority can be allowed to take advantage of the scheme of State-aided transfer. But even this restriction may not be sufficient to exclude all those who ought not to get the benefit of this scheme. It must be confined to certain well defined minorities who on account of ethnic or religious differences are sure to be subjected to discrimination or victimization.

The third point is important and is likely to give rise to serious difference of opinion. On a fair view of the matter it can be said that it is quite unreasonable to compel a Government to keep open for an indefinite period the option to migrate at Government cost. There is nothing unfair in telling a person that if he wants to take advantage of the provisions of the scheme of State-aided migration contained in the forgoing articles, he must exercise his option to migrate within a stated period and that if he decides to migrate after the period has elapsed he will be free to migrate but it will have to be at his own cost and without the aid of the State. There is no inequity in thus limiting the right to State aid. State-aid becomes a necessary part of the scheme because the migration is a resultant consequence of political changes over which individual citizens have no control. But migration may not be the result

of political change. It may be for other causes, and when it is for other causes, aid to the emigrant cannot be an obligation on the State. The only way to determine whether migration is for political reasons or for private reasons is to relate it to a definite point of time. When it takes place within a defined period from the happening of a political change it may be presumed open for an indefinite period the option to migrate at Government cost. There is nothing unfair in telling a person that if he wants to take advantage of the provisions of the scheme of State-aided migration contained in the foregoing articles, he must exercise his option to migrate within a stated period and that if he decides to migrate after the period has elapsed he will be free to migrate but it will have to be at his own cost and without the aid of the State. There is no inequity in thus limiting the right to State-aid. State-aid becomes a necessary part of the scheme because the migration is a resultant consequence of political changes over which individual citizens have no control. But migration may not be the result of political change. It may be for other causes, and when it is for other causes, aid to the emigrant cannot be an obligation on the State. The only way to determine whether migration is for political reasons or for private reasons is to relate it to a definite point of time. When it takes place within a defined period from the happening of a political change it may be presumed to be political. When it occurs after the period it may be presumed to be for private reasons. There is nothing unjust in this. The same rule of presumption governs the cases of civil servants who, when a political change takes place, are allowed to retire on proportionate pensions if they retire within a given period but not if they retire after it has lapsed.

If the policy in these matters is as I suggest it should be, it may be given effect to by the inclusion of the following articles in the treaty:

“The right to voluntary emigration may be exercised under this treaty by any person belonging to an ethnic minority who is over 18 years of age.

“A declaration made before the Commission shall be sufficient evidence of intention to exercise the right.

“The choice of the husband shall carry with it that of the wife, the option of parents or guardians that of their children or wards aged less than 18 years.

“The right to the benefit provided by this treaty shall lapse if the option to migrate is not exercised within a period of 5 years from the date of signing the treaty.

“The duties of the Commission shall be terminated within six months after the expiration of the period of five years from the date when the Commission starts to function.”

What about the cost? The question of cost will be important only if the transfer is to be compulsory. A scheme of voluntary transfer cannot place a very heavy financial burden on the State. Men love property more than liberty. Many will prefer to endure tyranny at the hands of their political masters than change the habitat in which they are rooted. As Adam Smith said, of all the things man is the most difficult cargo to transport. Cost therefore need not frighten anybody.

What about its workability? The scheme is not new. It has been tried and found workable. It was put into effect after the last European War, to bring about a transfer ¹⁵ [f.15] of population between Greece and Bulgaria and Turkey and Greece. Nobody can deny that it has worked, has been tried and found workable. The scheme I have outlined is a copy of the same scheme. It had the effect of bringing about a transfer* of population between Greece and Bulgaria and Turkey and Greece. Nobody can deny that it was worked with signal success. What succeeded elsewhere may well be expected to succeed in India.

The issue of Pakistan is far from simple. But it is not so difficult as it is made out to be provided the principle and the ethics of it are agreed upon. If it is difficult it is only because it is heart-rending and nobody wishes to think of its problems and their solutions as the very idea of it is so painful. But once sentiment is banished and it is decided that there shall be Pakistan, the problems arising out of it are neither staggering nor baffling.

CHAPTER XV

WHO CAN DECIDE?

There are two sides to the question of Pakistan, the Hindu side and the Muslim side. This cannot be avoided. Unfortunately however the attitude of both is far from rational. Both are deeply embedded in sentiment. The layers of this sentiment are so thick that reason at present finds it extremely difficult to penetrate. Whether these opposing sentiments will wither away or they will thicken, time and circumstances alone can tell. How long Indians will have to wait for the melting of the snow no one can prophesy. But one thing is certain that 'until this snow melts freedom will have to be put in cold storage. I am sure there must be many millions of thinking Indians who are dead opposed to this indefinite postponement of Indian freedom till an ideal and a permanent solution of Pakistan is found. I am one of them. I am one of those who hold that if Pakistan is a problem and not a pose there is no escape and a solution must be found for it. I am one of those who believe that what is inevitable must be faced. There is no use burying one's head in the sand and refusing to take notice of what is happening round about because the sound of it hurts one's sentiments. I am also one of those who believe that one must, if one can, be ready with a solution long before the hour of decision arrives. It is wise to build a bridge if one knows that one will be forced to cross the river.

The principal problem of Pakistan is : who can decide whether there shall or shall not be Pakistan? I have thought over the subject for the last three years, and I have come to some conclusions as to the proper answer to this question. These conclusions I would like to share with others interested in the solution of the problem so that they may be further explored. To give clarity to my conclusions, I have thought that it would serve the purpose better if I were to put them, in the form of an Act of Parliament. The following is the draft of the Act which embodies my conclusions:—

Government of India (Preliminary Provisions) Act

Be it enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same as follows :—

- I.—(1) If within six months from the date appointed in this behalf a majority of the Muslim members of the Legislatures of the Provinces of the North-West Frontier, the Punjab, Sind and Bengal pass a resolution that the predominantly Muslim areas be separated from British India, His Majesty shall cause a poll to be taken on that question of the Muslim and the non-Muslim electors of these Provinces and of Baluchistan in accordance with the provisions of this Act.
- (2) The question shall be submitted to the electors in these Provinces in the following form :— (i) Are you in favour of separation from British India? (U) Are you against separation?
- (3) The poll of Muslim and non-Muslim electors shall be taken separately.
- II.—(1) If on a result of the poll, a majority of Muslim electors are found to be in favour of separation and a majority of non-Muslim electors against separation, His Majesty shall by proclamation appoint a Boundary Commission for the purpose of preparing a list of such districts and areas in these Provinces in which a majority of inhabitants are Muslims. Such districts and areas shall be called Scheduled Districts.
- (2) The Scheduled Districts shall be collectively designated as Pakistan and the rest of British India as Hindustan. The Scheduled Districts lying in the North-west shall be called the State of Western Pakistan and those lying in the North-east shall be called Eastern Pakistan.
- ///.—(1) After the findings of the Boundary Commission have become final either by agreement or the award of an Arbitrator,

His Majesty shall cause another poll to be taken of the electors of the Scheduled Districts.

- (2) The following shall be the form of the questions submitted to the electors :— (i) Are you in favour of separation forthwith? (U) Are you against separation forthwith?

IV.—(I) If the majority is in favour of separation forthwith it shall be lawful for His Majesty to make arrangements for the framing of two separate constitutions, one for Pakistan and the other for Hindustan.

- (2) The New States of Pakistan and Hindustan shall commence to function as separate States on the day appointed by His Majesty by proclamation issued in that behalf.

- (3) If the majority are against separation forthwith it shall be lawful for His Majesty to make arrangements for the framing of a single constitution for British India as a whole.

V.— No motion for the separation of Pakistan. If the poll under the last preceding section has been against separation forthwith and no motion for incorporation of Pakistan into Hindustan if the poll under the last preceding section has been in favour of separation forthwith shall be entertained until ten years have elapsed from the date appointed by His Majesty for putting into effect the new constitution for British India or the two separate constitutions for Pakistan and Hindustan.

VI.—(1) In the event of two separate constitutions coming into existence under Section Four it shall be lawful for His Majesty to establish as soon as may be after the appointed day, a Council of India with a view to the eventual establishment of a constitution for the whole of British India, and to bringing about harmonious action between the Legislatures and Governments of Pakistan and Hindustan, and to the promotion of mutual intercourse and uniformity in relation to matters affecting the whole of British India, and to providing for the administration of services which

the two parliaments mutually agree should be administered uniformly throughout the whole of British India, or which by virtue of this Act are to be so administered.

- (2) Subject as hereinafter provided, the Council of India shall consist of a President nominated in accordance with instructions from His Majesty and forty other persons, of whom twenty shall be members representing Pakistan and twenty shall be members representing Hindustan.
- (3) The members of the Council of India shall be elected in each case by the members of the Lower Houses of the Parliament of Pakistan or Hindustan.
- (4) The election of members of the Council of India shall be the first business of the Legislatures of Pakistan and Hindustan.
- (5) A member of the Council shall, on ceasing to be a member of that House of the Legislature of Pakistan or Hindustan by which he was elected a member of the Council, cease to be a member of the Council : Provided that, on the dissolution of the Legislature of Pakistan or Hindustan, the persons who are members of the Council shall continue to hold office as members of the Council until a new election has taken place and shall then retire unless re-elected.
- (6) The President of the Council shall preside at each meeting of the Council at which he is present and shall be entitled to vote in case of an equality of votes, but not otherwise.
- (7) The first meeting of the Council shall be held at such time and place as may be appointed by the President.
- (8) The Council may act notwithstanding a deficiency in their number, and the quorum of the Council shall be fifteen.
- (9) Subject as aforesaid, the Council may regulate their own procedure, including the delegation of powers to committees.

(10) The constitution of the Council of India may from time to time be varied by identical Acts passed by the Legislature of Pakistan and the Legislature of Hindustan, and the Acts may provide for all or any of the members of the Council of India being elected by parliamentary electors, and determine the constituencies by which the several elective members are to be returned and the number of the members to be returned by the several constituencies and the method of election.

VII.—(1) The Legislatures of Pakistan and Hindustan may, by identical Acts, delegate to the Council of India any of the powers of the Legislatures and Government of Pakistan and Hindustan, and such Acts may determine the manner in which the powers so delegated are to be exercisable by the Council.

(2) The powers of making laws with respect to railways and waterways shall, as from the day appointed for the operation of the new constitution, become the powers of the Council of India and not of Pakistan or Hindustan : Provided that nothing in this subsection shall prevent the Legislature of Pakistan or Hindustan making laws authorising the construction, extension, or improvement of railways and waterways where the works to be constructed are situate wholly in Pakistan or Hindustan as the case may be.

(3) The Council may consider any questions which may appear in any way to bear on the welfare of both Pakistan and Hindustan, and may, by resolution, make suggestions in relation thereto as they may think proper, but suggestions so made shall have no legislative effect.

(4) It shall be lawful for the Council of India to make recommendations to the Legislatures of Pakistan and Hindustan as to the advisability of passing identical Acts delegating to the Council of India the administration of any all-India subject, with a view to avoiding the necessity of administering them separately in Pakistan or Hindustan.

(5) It shall be lawful for either Legislature at any time by Act to deprive the delegation to the Council of India of any powers which are in pursuance of such identical Acts as aforesaid for the time being delegated to the Council and thereupon the powers in question shall cease to be exercisable by the Council of India and shall become exercisable in parts of British India within their respective jurisdictions by the Legislatures and Governments of Pakistan and Hindustan and the Council shall take such steps as may be necessary to carry out the transfer, including adjustments of any funds in their hands or at their disposal.

VIII.—(1) If at the end of ten years after coming into operation of a constitution for British India as prescribed by Section IV—(3) a petition is presented to His Majesty by a majority of the Muslim members representing the Scheduled Districts in the Provincial and Central Legislatures demanding a poll to be taken with regard to the separation of Pakistan from Hindustan, His Majesty shall cause a poll to be taken. (2) The following shall be the form of the questions submitted to the electors :— d) Are you in favour of separation of Pakistan from Hindustan?

(ii) Are you against the separation of Pakistan from Hindustan?

IX.— If the result of the poll is in favour of separation it shall be lawful for His Majesty to declare by an Order-in-Council that from a day appointed in that behalf Pakistan shall cease to be a part of British India, and dissolve the Council of India.

X.—(1) Where two constitutions have come into existence under circumstances mentioned in Section IV it shall be lawful for His Majesty to declare by an Order-in-Council that Pakistan shall cease to be a separate State and shall form part of Hindustan. Provided that no such order shall be made until ten years have elapsed from the commencement of the separate constitution for Pakistan. Provided also that no such declaration shall be made unless the Popular Legislatures of Pakistan and Hindustan have passed Constituent Acts as are provided for in Section X—(2).

(2) The popular Legislatures of Pakistan and Hindustan may, by identical Acts agreed to by an absolute majority of members at the third reading (hereinafter referred to as Constituent Acts), establish, in lieu of the Council of India, a Legislature for United India, and may determine the number of members thereof and the manner in which the members are to be appointed or elected and the constituencies for which the several elective members are to be returned, and the number of members to be returned by the several constituencies, and the method of appointment or election, and the relations of the two Houses if provided for to one another.

XI.—(1) On the date of the union of Pakistan and Hindustan the Council of India shall cease to exist and there shall be transferred to the Legislature and Government of India all powers then exercisable by the Council of India.

(2) There shall also be transferred to the Legislature and Government of British India all the powers and duties of the Legislatures and Government of Pakistan and Hindustan, including all powers as to taxation, and those Legislatures and Government shall cease to exist.

XII.—(1) A poll under this Act shall be taken by ballot in the same manner so far as possible as a poll of electors for the election of a member to serve in a Legislature and His Majesty may make rules adopting the election laws for the purpose of the taking of the poll.

(2) An elector shall not vote more than once at the poll, although registered in more than one place.

(3) Elector means every adult male and female residing in the Provinces of North-West Frontier, the Punjab, Sind, and Bengal and in Baluchistan.

XIII.— This Act may be called the Indian Constitution

(Preliminary Provisions) Act, 194 .

I do not think .that any detailed explanation is necessary for the reader to follow and grasp the conclusions I have endeavoured to embody in this skeleton Act. Perhaps it might be advantageous if I bring out some of the salient features of the proposals to which the projected statute of Parliament is intended to give effect by comparing them with the Cripps proposals.

In my opinion it is no use for Indians to ask and the British Parliament to agree to proceed forthwith to pass an Act conferring Dominion Status or Independence without first disposing of the issue of Pakistan. The Pakistan issue must be treated as a preliminary issue and must be disposed of one way or the other. This is why I have called the proposed Act "The Government of India (Preliminary Provisions) Act." The issue of Pakistan being one of self-determination must be decided by the wishes of the people. It is for this that I propose to take a poll of the Muslims and non-Muslims in the predominantly Muslim Provinces. If the Majority of the Muslims are in favour of separation and a majority of non-Muslims are against separation, steps must be taken to delimit the areas wherever it is possible by redrawing provincial boundaries on ethnic and cultural lines by separating the Muslim majority districts from the districts in which the majority consists of non-Muslims. A Boundary Commission is necessary for this purpose. So a Boundary Commission is provided for in the Act. It would be better if the Boundary Commission could be international in its composition.

The scheme of separate referenda of Muslims and non-Muslims is based on two principles which I regard as fundamental. The first is that a minority can demand safeguards for its protection against the tyranny of the majority. It can demand them as a condition precedent. But a minority has no right to put a veto on the right of the majority .to decide on questions of ultimate destiny. This is the reason why I have confined the referendum on the establishment of Pakistan to Muslims only. The second is that a communal majority cannot claim a communal minority to submit itself to its dictates. Only a political majority may be permitted to rule a political minority. This principle has been modified in India where a communal minority is placed under a communal

majority subject to certain safeguards. But this is as regards the ordinary question of social, economic and political importance. It has never been conceded and can never be conceded that a communal majority has a right to dictate to a communal minority on an issue which is of a constitutional character. That is the reason why I have provided a separate referendum of non-Muslims only, to decide whether they prefer to go in Pakistan or come into Hindustan.

After the Boundary Commission has done its work of delimiting the areas, various possibilities can arise. The Musalmans may stop with the delimitation of the boundaries of Pakistan. They may be satisfied that after all the principle of Pakistan has been accepted—which is what delimitation means. Assuming that the Musalmans are not satisfied with mere delimitation but want to move in the direction of establishing Pakistan there are two courses open to them. They may want to establish Pakistan forthwith or they may agree to live under a common Central Government for a period of say ten years and put the Hindus on their trial. Hindus will have an opportunity to show that the minorities can trust them. The Muslims will learn from experience how far their fears of Hindu Raj are justified. There is another possibility also. The Musalmans of Pakistan having decided to separate forthwith may after a period become so disgusted with Pakistan that they might desire to come back and be incorporated in Hindustan and be one people subject to one single constitution.

These are some of the possibilities I see. These possibilities should in my judgement be kept open for time and circumstances to have their effect. It seems to me to be wrong to say to the Musalmans if you want to remain as part of India then you can never go out or if you want to go then you can never come back. I have in my scheme kept the door open and have provided for both the possibilities in the Act (1) for union after a separation of ten years, (2) for separation for ten years and union there after. I personally prefer the second alternative although I have no strong views either way. It would be much better that the Musalmans should have the experience of Pakistan. A union after an experience of Pakistan is bound to be stable and lasting. In case Pakistan

comes into existence forthwith, it seems to me necessary that the separation should not altogether be a severance, sharp and complete. It is necessary to maintain live contact between Pakistan and Hindustan so as to prevent any estrangement growing up and preventing the chances of reunion. A Council of India is accordingly provided for in the Act. It cannot be mistaken for a federation. It is not even a confederation. Its purpose is to do nothing more than to serve as a coupling to link Pakistan to Hindustan until they are united under a single constitution.

Such is my scheme. It is based on a community-wise plebiscite. The scheme is flexible. It takes account of the fact that the Hindu sentiment is against it. It also recognizes the fact that the Muslim demand for Pakistan may only be a passing mood. The scheme is not a divorce. It is only a judicial separation. It gives to the Hindus a term. They can use it to show that they can be trusted with authority to rule justly. It gives the Musalmans a term to try out Pakistan.

It might be desirable to compare my proposals with those of Sir Stafford Cripps. The proposals were given out as a serial story in parts. The draft Declaration issued on 29th March 1943 contained only the following :—

“His Majesty's Government therefore make the following terms:—

(a) Immediately upon cessation of hostilities steps shall be taken to set up in India in manner described hereafter an elected body charged with the task of framing a new constitution for India.

(b) Provision shall be made, as set out below, for participation of Indian States in the constitution-making body.

(c) His Majesty's Government undertake to accept and implement forthwith the constitution so framed subject only to:

(i) The right of any province of British India that is not prepared to accept the new constitution to retain its present constitutional position, provision being made for its subsequent accession if it so decides.

With such non-acceding provinces should they so desire. His Majesty's Government will be prepared to agree upon a new constitution giving them the same full status as the Indian Union and arrived at by a procedure analogous to that here laid down."

Particulars of accession and secession were given in his broadcast. They were in the following terms :—

“That constitution-making body will have as its object the framing of a single constitution for the whole of India—that is, of British India, together with such of the Indian States as may decide to join in.

“But we realize this very simple fact. If you want to persuade a number of people who are inclined to be antagonistic to enter the same room, it is unwise to tell them that once they go in there is no way out, they are to be forever locked in together.

“It is much wiser to tell them they can go in and if they find they can't come to a common decision, then there is nothing to prevent those who wish, from leaving again by another door. They are much more likely all to go in if they have knowledge that they can by their free will go out again if they cannot agree.

“Well, that is what we say to the provinces of India. Come together to frame a common constitution—if you find after all your discussion and all the give and take of a constitution-making assembly that you cannot overcome your differences and that some provinces are still not satisfied with the constitution, then such provinces can go out and remain out if they wish and just the same degree of self-government and freedom will be available for them as for the Union itself, that is to say complete self-government.”

To complete the picture further details were added at the Press Conference. Explaining the plan for accession or secession of provinces Sir Stafford Cripps said :—

“If at the end of the Constituent Assembly proceedings, any province or provinces did not wish to accept the new constitution and join the Union, it was free to keep out—provided the Provincial Assembly of

that province, by a substantial vote say not less than 60 per cent., decided against accession. If it was less than 60 per cent, the minority could claim a plebiscite of the whole province for ascertaining the will of the people. In the case of the plebiscite, a bare majority would be enough. Sir Stafford explained that for completing accession there would have to be a positive vote from the Provincial Assembly concerned. The non-acceding province could, if they wanted, combine into a separate union through a separate Constituent Assembly, but in order to make such a Union practicable they should be geographically contiguous."

The main difference between my plan and that of Sir Stafford Cripps is quite obvious. For deciding the issue of accession or secession which is only another way of saying, will there be or will there not be Pakistan, Sir Stafford Cripps took the Province as a deciding unit. I have taken community as the deciding unit. I have no doubt that Sir Stafford adopted a wrong basis. The Province can be a proper unit if the points of dispute were interprovincial. For instance, if the points of dispute related to questions such as distribution of taxation, of water, etc., one could understand the Province as a whole or a particular majority in that Province having the right to decide. But the dispute regarding Pakistan is an inter-communal problem which has involved two communities in the same Province. Further the issue in the dispute is not on what terms the two communities will agree to associate in a common political life. The dispute goes deeper and raises the question whether the communities are prepared at all to associate in a common political life. It is a communal difference in its essence and can only be decided by a community-wise plebiscite.

IV

I do not claim any originality for the solution I have proposed. The ideas which underlie it are drawn from three sources, from the Irish Unity Conference at which Horace Plunket presided, from the Home Rule Amending Bill of Mr. Asquith and from the Government of

Ireland Act of 1920. It will be seen that my solution of the Pakistan problem is the result of pooled wisdom. Will it be accepted? There are four ways of resolving the conflict which is raging round the question of Pakistan. First is that the British Government should act as the deciding authority. Second is that the Hindus and the Muslims should agree. Third is to submit the issue to an International Board of Arbitration and the fourth is to fight it out by a Civil War.

Although India today is a political mad-house there are I hope enough sane people in the country who would not allow matters to reach the stage of Civil War. There is no prospect of an agreement between political leaders in the near future. The A.I.C.C. of the Indian National Congress at a meeting in Allahabad held in April 1942 on the motion of Mr. Jagat Narayan Lal resolved ¹⁶ not to entertain the proposal for Pakistan. Two other ways are left to have the problem solved. One is by the people concerned ; the other is by international arbitration. This is the way I have suggested. I prefer the former. For various reasons this seems to me the only right course. The leaders having failed to resolve the dispute it is time it was taken to the people for decision. Indeed, it is inconceivable how an issue like that of partition of territory and transference of peoples' allegiance from one government to another can be decided by political leaders. Such things are no doubt done by conquerors to whom victory in war is sufficient authority to do what they like with the conquered people. But we are not working under such a lawless condition. In normal times when constitutional procedure is not in abeyance the views of political leaders cannot have the effect which the fiats of dictators have. That would be contrary to the rule of democracy. The highest value that can be put upon the views of leaders is to regard them as worthy to be placed on the agenda. They cannot replace or obviate the necessity of having the matter decided by the people. This is the position which was taken by Sir Stafford Cripps. The stand taken by the Muslim League was, let there be Pakistan because the Muslim League has decided to have it. That position has been negatived by the Cripps proposals and quite rightly. The Muslim League is

recognized by the Cripps proposals only to the extent of having a right to propose that Pakistan as a proposition be considered. It has not been given the right to decide. Again it does not seem to have been realized that the decision of an All-India body like the Congress which does not carry with it the active consent of the majority of the people, immediately affected by the issue of Pakistan, cannot carry the matter to solution. What good can it do if Mr. Gandhi or Mr. Rajagopalachariar agreeing or the All-India Congress Committee resolving to concede Pakistan, if it was opposed by the Hindus of the Punjab, or Bengal. Really speaking it is not the business of the people of Bombay or Madras to say, 'let there be Pakistan' It must be left to be decided by the people who are living in those areas and who will have to bear the consequences of so violent, so revolutionary and so fundamental a change in the political and economic system with which their lives and fortunes have been closely bound up for so many years. A referendum by people in the Pakistan Provinces seems to me the safest and the most constitutional method of solving the problem of Pakistan.

But I fear that solving the question of Pakistan by a referendum of the people howsoever attractive may not find much favour with those who count. Even the Muslim League may not be very enthusiastic about it. This is not because the proposal is unsound. Quite the contrary. The fact is that there is another solution which has its own attractions. It calls upon the British Government to establish Pakistan by the exercise of its sovereign authority. The reason why this solution may be preferred to that which rests on the consent of the people is that it is simple and involves no such elaborate procedure as that of a referendum to the people and has none of the uncertainties involved in a referendum. But there is another ground why it is preferred, namely, that there is a precedent for it. The precedent is the Irish precedent and the argument is that if the British Government by virtue of its sovereign authority divided Ireland and created Ulster why cannot the British Government divide India and create Pakistan?

The British Parliament is the most sovereign legislative body in the world. De L'home, a French writer on English Constitution, observed

that there is nothing the British Parliament cannot do except make man a woman and woman a man. And although the sovereignty of the British Parliament over the affairs of the Dominions is limited by the Statute of Westminster it is still unlimited so far as India is concerned. There is nothing in law to prevent the British Parliament from proceeding to divide India as it did in the case of Ireland. It can do it, but will it do it? The question is not one of power but of will.

Those who urge the British Government to follow the precedent in Ireland should ask what led the British Government to partition Ireland. Was it the conscience of the British Government which led them to sanction the course they took or was it forced upon them by circumstances to which they had to yield? A student of the history of Irish Home Rule will have to admit that the partition of Ireland was not sanctioned by conscience but by the force of circumstances. It is not often clearly realized that no party to the Irish dispute wanted partition of Ireland. Not even Carson, the Leader of Ulster. Carson was opposed to Home Rule but he was not in favour of partition. His primary position was to oppose Home Rule and maintain the integrity of Ireland. It was only as a second line of defence against the imposition of Home Rule that he insisted on partition. This will be quite clear from his speeches both inside and outside the House of Commons. Asquith's Government on the other side was equally opposed to partition. This may be seen from the proceedings in the House of Commons over the Irish Home Rule Bill of 1912. Twice amendments were moved for the exclusion of Ulster from the provisions of the Bill, once in the Committee stage by Mr. Agar-Roberts and again on the third reading by Carson himself. Both the times the Government opposed and the amendments were lost.

Permanent partition of Ireland was effected in 1920 by Mr. Lloyd George in his Government of Ireland Act. Many people think that this was the first time that partition of Ireland was thought of and that it was due to the dictation of the Conservative—Unionists in the Coalition Government of which Mr. Lloyd George was the nominal head. It may be true that Mr. Lloyd George succumbed to the influence of the

predominant party in his coalition. But it is not true that partition was thought of in 1920 for the first time. Nor is it true that the Liberal Party had not undergone a change and shown its readiness to favour partition as a possible solution. As a matter of fact partition as a solution came in 1914 six years before Mr. Lloyd George's Act when the Asquith Government, a purely Liberal Government, was in office. The real cause which led to the partition of Ireland can be understood only by examining the factors which made the Liberal Government of Mr. Asquith change its mind. I feel certain that the factor which brought about this change in the viewpoint of the Liberal Government was the Military crisis which took place in March 1914 and which is generally referred to as the "Curragh Incident". A few facts will be sufficient to explain what the "Curragh Incident" was and how decisive it was in bringing about a change in the policy of the Asquith Government.

To begin at a convenient point the Irish Home Rule Bill had gone through all its stages by the end of 1913. Mr. Asquith who had been challenged that he was proceeding without a mandate from the electorate had however given an undertaking that the Act would not be given effect to until another general election had been held. In the ordinary course there would have been a general election in 1915 if the War had not supervened. But the Ulstermen were not prepared to take their chance in a general election and started taking active steps to oppose Home Rule. They were not always very scrupulous in choosing their means and their methods and under the seductive pose that they were fighting against the Government which was preventing them from remaining loyal subjects of the King they resorted to means which nobody would hesitate to call shameless and nefarious. There was one Maginot Line on which the Ulstermen always depended for defeating Home Rule. That was the House of Lords. But by the Parliament Act of 1911 the House of Lords had become a Wailing Wall neither strong nor high. It had ceased to be a line of defence to rely upon. Knowing that the Bill might pass notwithstanding its rejection by the House of Lords, feeling that in the next election Asquith might win, the Ulstermen had become desperate and were searching for another line of defence. They found it in the Army. The plan was twofold. It included the project of

getting the House of Lords to hold up the Annual Army Act so as to ensure that there would be no Army in existence to be used against Ulster. The second project was to spread their propaganda—That Home Rule will be Home Rule—in the Army with a view to preparing the Army to disobey the Government in case Government decided to use the Army for forcing Home Rule on Ireland. The first became unnecessary as they succeeded easily in bringing about the second. This became clear in March 1914 when there occurred the Curragh Incident. The Government had reasons to suspect that certain Army depots in Ireland were likely to be raided by the Unionist Volunteers. On March 20th, orders were sent to Sir Arthur Paget, Commander-in-Chief of the Forces in Ireland, to take steps to safeguard these depots. His reply was a telegram to the effect that officers were not prepared to obey and were resigning their commissions and it was feared that men would refuse to move. General Sir Hubert Gough had refused to serve against the Ulster Unionists and his example had been followed by others. The Government realized that the Army had become political,¹⁷[f.17] nay, partisan. It took fright and decided in favour of partition acting on the well-known maxim that wisdom is the better part of valour. What made Asquith change his position was not conscience but the fright of the Army rebelling. The fright was so great that no one thereafter felt bold enough to challenge the Army and enforce Home Rule without partition.

Can His Majesty's Government be depended upon to repeat in India what it did in Ireland? I am unable to answer the question. But two things I will say. The first thing is that His Majesty's Government knows full well what have been the consequences of this partition of Ireland. The Irish Free State has become the most irreconcilable enemy of Great Britain. The enmity knows no limits. The wound caused by partition will never be healed so long as partition remains a settled fact. The Partition of Ireland cannot but be said to be morally indefensible inasmuch as it was the result not of the consent of the people but of superior force. It was as bad as the murder of Duncan by Macbeth. The blood stains left on His Majesty's Government are as deep as those on Lady Macbeth and of which Lady Macbeth said that "All the perfumes of Arabia" had

failed to remove the stink. That His Majesty's Government does not like to be responsible for the execution of another deed of partition is quite clear from its policy with the Jew-Arab problem in Palestine. It appointed the Peel Commission to investigate. The Commission recommended partition of Palestine. The Government accepted ¹⁸[f.18] it in principle as the most hopeful line of solving the deadlock. Suddenly the Government realized the gravity of forcing such a solution on the Arabs and appointed another Royal Commission called the Woodhead Commission which condemned partition and opened an easy way to a Government which was anxious to extricate itself from a terrible position. The partition of Ireland is not a precedent worthy to be followed. It is an ugly incident which requires to be avoided. It is a warning and not an example. I doubt very much if His Majesty's Government will partition India on its own authority at the behest of the Muslim League.

And why should His Majesty's Government oblige the Muslim League? In the case of Ulster there was the tie of blood which made a powerful section of the British politicians take the side of Ulster. It was this tie of blood which made Lord Curzon say "You are compelling Ulster to divorce her present husband, to whom she is not unfaithful and you are compelling her to marry someone else who she cordially dislikes, with whom she does not want to live." There is no such kinship between His Majesty's Government and the Muslim League and it would be a vain hope for the League to expect His Majesty's Government to take her side.

The other thing I would like to say is that it would not be in the interests of the Muslim League to achieve its object by invoking the authority of His Majesty's Government to bring about the partition of India. In my judgement more important than getting Pakistan is the procedure to be adopted in bringing about Pakistan if the object is that after partition Pakistan and Hindustan should continue as two friendly States with goodwill and no malice towards each other.

What is the procedure which is best suited for the realization of this end? Everyone will agree that the procedure must be such that it must

not involve victory to one community and humiliation to the other. The method must be of peace with honour to both sides. I do not know if there is another solution better calculated to achieve this end than the decision by a referendum of the people. I have made my suggestion as to which is the best course. Others also will come forth with theirs. I cannot say that mine is the best. But whatever the suggestion be unless good sense as well as a sense of responsibility is brought to bear upon the solution of this question it will remain a festering sore.

EPILOGUE

Here I propose to stop. For I feel that I have said all that I can say about the subject. To use legal language I have drawn the pleadings. This I may claim to have done at sufficient length. In doing so, I have adopted that prolix style so dear to the Victorian lawyers, under which the two sides plied one another with plea and replication, rejoinder and rebutter, surrejoinder and surrebutter and so on. I have done this deliberately with the object that a full statement of the case for and against Pakistan may be made. The foregoing pages contain the pleadings. The facts contained therein are true to the best of my knowledge and belief. I have also given my findings. It is now for Hindus and Muslims to give theirs.

To help them in their task it might be well to set out the issues. On the pleadings the following issues seem to be necessary issues:

- (1)(1) Is Hindu-Muslim unity necessary for India's political advancement? If necessary, is it still possible of realization notwithstanding the new ideology of the Hindus and the Muslims being two different nations?
- (2)(2) If Hindu-Muslim unity is possible, should it be reached by appeasement or by settlement?

- (3)(3) If it is to be achieved by appeasement, what are the new concessions that can be offered to the Muslims to obtain their willing co-operation, without prejudice to other interests?
- (4)(4) (4) If it is to be achieved by a settlement, what are the terms of that - settlement? If there are only two alternatives, (i) Division of India into Pakistan and Hindustan, or (ii) Fifty-fifty share in Legislature, Executive and the Services, which alternative is preferable?
- (5)(5) Whether India, if she remained one integral whole, can rely upon both Hindus and Musalmans to defend her independence, assuming it is won from the British?
- (6)(6) Having regard to the prevailing antagonism between Hindus and Musalmans and having regard to the new ideology demarcating them as two distinct nations and postulating an opposition in their ultimate destinies, whether a single constitution for these two nations can be built in the hope that they will show an intention to work it and not to stop it?
- (7)(7) On the assumption that the two-nation theory has come to stay, will not India as one single unit become an incoherent body without organic unity, incapable of developing into a strong united nation bound by a common faith in a common destiny and therefore likely to remain a feeble and sickly country, easy to be kept in perpetual subjection either of the British or-of any other foreign power?
- (8)(8) If India cannot be one united country, is it not better that Indians should help India in the peaceful dissolution of this incoherent whole into its natural parts, namely, Pakistan and Hindustan?
- (9)(9) Whether it is not better to provide for the growth of two independent and separate nations, a Muslim nation inhabiting Pakistan and a Hindu nation inhabiting Hindustan, than pursue the vain attempt to keep India as one undivided country in the false hope that Hindus and Muslims will some day be one and occupy it as the members of one nation and sons of one motherland?

Nothing can come in the way of an Indian getting to grips with these issues and reaching his own conclusions with the help of the material contained in the foregoing pages except three things : (1) A false sentiment of historical patriotism, (2) a false conception of the exclusive ownership of territory and (3) absence of willingness to think for oneself. Of these obstacles, the last is the most difficult to get over. Unfortunately thought in India is rare and free thought is rarer still. This is particularly true of Hindus. That is why a large part of the argument of this book has been addressed to them. The reasons for this are obvious. The Hindus are in a majority. Being in a majority, their view point must count! There is not much possibility of peaceful solution if no attempt is made to meet their objections rational or sentimental. But there are special reasons which have led me to address so large a part of the argument to them and which may not be quite so obvious to others. I feel that those Hindus who are guiding the destinies of their fellows have lost what Carlyle calls "the Seeing Eye" and are walking in the glamour of certain vain illusions, the consequences of which must, I fear, be terrible for the Hindus. The Hindus are in the grip of the Congress and the Congress is in the grip of Mr. Gandhi. It cannot be said that Mr. Gandhi has given the Congress the right lead. Mr. Gandhi first sought to avoid facing the issue by taking refuge in two things. He started by saying that to partition India is a moral wrong and a sin to which he will never be a party. This is a strange argument. India is not the only country faced with the issue of partition or shifting of frontiers based on natural and historical factors to those based on the national factors. Poland has been partitioned three times and no one can be sure that there will be no more partition of Poland. There are very few countries in Europe which have not undergone partition during the last 150 years. This shows that the partition of a country is neither moral nor immoral. It is unmoral. It is a social, political or military question. Sin has no place in it.

As a second refuge Mr. Gandhi started by protesting that the Muslim League did not represent the Muslims and that Pakistan was only a fancy

of Mr. Jinnah. It is difficult to understand how Mr. Gandhi could be so blind as not to see how Mr. Jinnah's influence over the Muslim masses has been growing day by day and how he has engaged himself in mobilizing all his forces for battle. Never before was Mr. Jinnah a man for the masses. He distrusted them. ¹⁹[f.19] To exclude them from political power he was always for a high franchise. Mr. Jinnah was never known to be a very devout, pious or a professing Muslim. Besides kissing the Holy Koran as and when he was sworn in as an M.L.A., he does not appear to have bothered much about its contents or its special tenets. It is doubtful if he frequented any mosque either out of curiosity or religious fervour. Mr. Jinnah was never found in the midst of Muslim mass congregations, religious or political.

Today one finds a complete change in Mr. Jinnah. He has become a man of the masses. He is no longer above them. He is among them. Now they have raised him above themselves and call him their Qaid-e-Azam. He has not only become a believer in Islam, but is prepared to die for Islam. Today, he knows more of Islam than mere *Kalama*. Today, he goes to the mosque to hear *Khutba* and takes delight in joining the *Id* congregational prayers. Dongri and Null Bazaar once knew Mr. Jinnah by name. Today they know him by his presence. No Muslim meeting in Bombay begins or ends without Allah-ho-Akbar and Long Live Qaid-e-Azam. In this Mr. Jinnah has merely followed King Henry IV of France—the unhappy father-in-law of the English King Charles I. Henry IV was a Huguenot by faith. But he did not hesitate to attend mass in a Catholic Church in Paris. He believed that to change his Huguenot faith and go to mass was an easy price to pay for the powerful support of Paris. As Paris became worth a mass to Henry IV, so have Dongri and Null Bazaar become worth a mass to Mr. Jinnah and for similar reason. It is strategy ; it is mobilization. But even if it is viewed as the sinking of Mr. Jinnah from reason to superstition, he is sinking with his ideology which by his very sinking is spreading into all the different strata of Muslim society and is becoming part and parcel of its mental make-up. This is as clear as anything could be. The only basis for Mr.

Gandhi's extraordinary view is the existence of what are called Nationalist Musalmans. It is difficult to see any real difference between the communal Muslims who form the Muslim League and the Nationalist Muslims. It is extremely doubtful whether the Nationalist Musalmans have any real community of sentiment, aim and policy with the Congress which marks them off from the Muslim League. Indeed many Congressmen are alleged to hold the view that there is no difference between the two and that the Nationalist Muslim inside the Congress are only an outpost of the communal Muslims. This view does not seem to be quite devoid of truth when one recalls that the late Dr. Ansari, the leader of the Nationalist Musalmans, refused to oppose the Communal Award although it gave the Muslims separate electorates in teeth of the resolution passed by the Congress and the Nationalist Musalmans. Nay, so great has been the increase in the influence of the League among the Musalmans that many Musalmans who were opposed to the League have been compelled to seek for a place in the League or make peace with it. Anyone who takes account of the turns and twists of the late Sir Sikandar Hyat Khan and Mr. Faziul Huq, the late Premier of Bengal, must admit the truth of this fact. Both Sir Sikandar and Mr. Fazlul Huq were opposed to the formation of branches of the Muslim League in their Provinces when Mr. Jinnah tried to revive it in 1937. Notwithstanding their opposition, when the branches of the League were formed in the Punjab and in Bengal within one year both were compelled to join them. It is a case of those coming to scoff remaining to pray. No more cogent proof seems to be necessary to prove the victory of the League.

Notwithstanding this Mr. Gandhi instead of negotiating with Mr. Jinnah and the Muslim League with a view to a settlement, took a different turn. He got the Congress to pass the famous Quit India Resolution on the 8th August 1942. This Quit India Resolution was primarily a challenge to the British Government. But it was also an attempt to do away with the intervention of the British Government in the discussion of the Minority question and thereby securing for the Congress a free hand to settle it on its own terms and according to its own lights. It was in effect, if not in intention, an attempt to win

independence by bypassing the Muslims and the other minorities. The Quit India Campaign turned out to be a complete failure.

It was a mad venture and took the most diabolical form. It was a scorch-earth campaign in which the victims of looting, arson and murder were Indians and the perpetrators were Congressmen. Beaten, he started a fast for twenty-one days in March 1943 while he was in gaol with the object of getting out of it. He failed. Thereafter he fell ill. As he was reported to be sinking the British Government released him for fear that he might die on their hand and bring them ignominy. On coming out of gaol, he found that he and the Congress had not only missed the bus but had also lost the road. To retrieve the position and win for the Congress the respect of the British Government as a premier party in the country which it had lost by reason of the failure of the campaign that followed up the Quit India Resolution, and the violence which accompanied it, he started negotiating with the Viceroy. Thwarted in that attempt, Mr. Gandhi turned to Mr. Jinnah. On the 17th July 1944 Mr. Gandhi wrote to Mr. Jinnah expressing his desire to meet him and discuss with him the communal question. Mr. Jinnah agreed to receive Mr. Gandhi in his house in Bombay. They met on the 9th September 1944. It was good that at long last wisdom dawned on Mr. Gandhi and he agreed to see the light which was staring him in the face and which he had so far refused to see.

The basis of their talks was the offer made by Mr. Rajagopalachariar to Mr. Jinnah in April 1944 which, according to the somewhat incredible²⁰[f.20] story told by Mr. Rajagopalachariar, was discussed by him with Mr. Gandhi in March 1943 when he (Mr. Gandhi) was fasting in gaol and to which Mr. Gandhi had given his full approval. The following is the text of Mr. Rajagopalachariar's formula popularly spoken of as the C. R. Formula:—

- (1)(1) *Subject to the terms set out below as regards the constitution for Free India, the Muslim League endorses the Indian demand for Independence and will co-operate with the Congress in the formation of a provisional interim government for the transitional period.*

- (2)(2) *After the termination of the war, a commission shall be appointed for demarcating contiguous districts in the north-west and east of India, wherein the Muslim population is in absolute majority. In the areas thus demarcated, a plebiscite of all the inhabitants held on the basis of adult suffrage or other practicable franchise shall ultimately decide the issue of separation from Hindustan. If the majority decide in favour of forming a sovereign State separate from Hindustan, such decision shall be given effect to, without prejudice to the right of districts on the border to choose to join either State.*
- (3)(3) *It will be open to all parties to advocate their points of view before the plebiscite is held.*
- (4)(4) *In the event of separation, mutual agreements shall be entered into for safeguarding defence, and commerce and communications and for other essential purposes.*
- (5)(5) *Any transfer of population shall only be on an absolutely voluntary basis.*
- (6)(6) *These terms shall be binding only in case of transfer by Britain of full power and responsibility for the governance of India.*

The talks which began on the 9th September were carried on over a period of 18 days till 27th September when it was announced that the talks had failed. The failure of the talks produced different reactions in the minds of different people. Some were glad, others were sorry. But as both had been, just previous to the talks, worsted by their opponents in their struggle for supremacy, Gandhi by the British and Jinnah by the Unionist Party in the Punjab, and had lost a good deal of their credit the majority of people expected that they would put forth some constructive effort to bring about a solution. The failure may have been due to the defects of personalities. But it must however be said that failure was inevitable having regard to certain fundamental faults in the C. R. Formula. In the first place, it tied up the communal question with the political question in an indissoluble knot. No political settlement, no communal settlement, is the strategy on which the formula proceeds. The formula did not offer a solution. It invited Mr. Jinnah to enter into a deal. It was a bargain—"If you help us in getting independence, we shall be glad to consider your proposal for Pakistan." I don't know from where Mr. Rajagopalachariar got the idea that this was the best means of getting independence. It is possible that he borrowed it from the old Hindu kings of India who built up alliance for protecting their

independence against foreign enemies by giving their daughters to neighbouring princes. Mr. Rajagopalachariar forgot that such alliances brought neither a good husband nor a permanent ally. To make communal settlement depend upon help rendered in winning freedom is a very unwise way of proceeding in a matter of this kind. It is a way of one party drawing another party into its net by offering communal privileges as a bait. The C. R. Formula made communal settlement an article for sale.

The second fault in the C. R. Formula relates to the machinery for giving effect to any agreement that may be arrived at. The agency suggested in the C. R. Formula is the Provisional Government. In suggesting this Mr. Rajagopalachariar obviously overlooked two difficulties. The first thing he overlooked is that once the Provisional Government was established, the promises of the contracting parties, to use legal phraseology, did not remain concurrent promises. The case became one of the executed promise against an executory promise. By consenting to the establishment of a Provisional Government, the League would have executed its promise to help the Congress to win independence. But the promise of the Congress to bring about Pakistan would remain executory. Mr. Jinnah who insists, and quite rightly, that the promises should be concurrent could never be expected to agree to place himself in such a position. The second difficulty which Mr. Rajagopalachariar has overlooked is what would happen if the Provisional Government failed to give effect to the Congress part of the agreement. Who is to enforce it? The Provisional Government is to be a sovereign government, not subject to superior authority. If it was unwilling to give effect to the agreement, the only sanction open to the Muslims would be rebellion. To make the Provisional Government the agency for forging a new Constitution, for bringing about Pakistan, nobody will accept. It is a snare and not a solution.

The only way of bringing about the constitutional changes will be through an Act of Parliament embodying provisions agreed upon by the important elements in the national life of British India. There is no other way.

There is a third fault in the C. R. Formula. It relates to the provision for a treaty between Pakistan and Hindustan to safeguard what are called matters of common interests such as Defence, Foreign Affairs, Customs, etc. Here again Mr. Rajagopalachariar does not seem to be aware of obvious difficulties. How are matters of common interest to be safeguarded? I see only two ways. One is to have a Central Government vested with Executive and Legislative authority in respect of these matters. This means Pakistan and Hindustan will not be sovereign States. Will Mr. Jinnah agree to this? Obviously he does not. The other way is to make Pakistan and Hindustan sovereign States and to bind them by a treaty relating to matters of common interests. But what is there to ensure that the terms of the treaty will be observed? As a sovereign State Pakistan can always repudiate it even if it was a Dominion. Mr. Rajagopalachariar obviously drew his inspiration in drafting this clause from the Anglo-Irish Treaty of 1922. But he forgot the fact that the treaty lasted so long as Ireland was not a Dominion and that as soon as it became a Dominion it repudiated the treaty and the British Parliament stood silent and grinned, for it knew that it could do nothing.

One does not mind very much that the talks failed. What one feels sorry for is that the talks failed giving us a clear idea of some of the questions about which Mr. Jinnah has been observing discreet silence in his public utterances, though he has been quite outspoken about them in his private talks. These questions are— (1) Is Pakistan to be conceded because of the Resolution of the Muslim League? (2) Are the Muslims, as distinguished from the Muslim League, to have no say in the matter? (3) What will be the boundaries of Pakistan? Whether the boundaries will be the present administrative boundaries of the Punjab and Bengal or whether the boundaries of Pakistan will be ethnological boundaries? (4) What do the words "subject to such territorial adjustments as may be necessary" which occur in the Lahore Resolution mean? What were the territorial adjustments the League had in mind? (5) What does the word "finally" which occurs in the last part of the Lahore Resolution mean? Did the League contemplate a transition period in which Pakistan will not be an independent and sovereign State? (6) If Mr. Jinnah's

proposal that the boundaries of Eastern and Western Pakistan are to be the present administrative boundaries, will he allow the Scheduled Castes, or, if I may say so, the non-Muslims in the Punjab and Bengal to determine by a plebiscite whether they wish to be included in Mr. Jinnah's Pakistan and whether Mr. Jinnah would be prepared to abide by the results of the plebiscite of the non-Muslim elements in the Punjab and Bengal?

(7) Does Mr. Jinnah want a corridor running through U. P. and Bihar to connect up Eastern Pakistan to Western Pakistan? It would have been a great gain if straight questions had been put to Mr. Jinnah and unequivocal answers obtained. But instead of coming to grips with Mr. Jinnah on these questions, Mr. Gandhi spent his whole time proving that the C. R. Formula is substantially the same as the League's Lahore Resolution—which was ingenious if not nonsensical and thereby lost the best opportunity he had of having these questions clarified.

After these talks Mr. Gandhi and Mr. Jinnah have retired to their pavilions as players in a cricket match do after their game is over, as though there is nothing further to be done. There is no indication whether they will meet again and if so when. What next? is not a question which seems to worry them. Yet it is difficult to see how India can make any political advance without a solution of the question which one may refuse to discuss. It does not belong to that class of questions about which people can agree to differ. It is a question for which solution will have to be found. How? It must be by agreement or by arbitration. If it is to be by agreement, it must be the result of negotiations—of give and take and not of surrender by one side to the other. That is not agreement. It is dictation. Good sense may in the end prevail and parties may come to an agreement. But agreement may turn out to be a very dilatory way. It may take long before good sense prevails. How long one cannot say. The political freedom of India is a most urgent necessity. It cannot be postponed and yet without a solution of the communal problem it cannot be hastened. To make it dependent on agreement is to postpone its solution indefinitely.

Another expeditious method must be found. It seems to me that arbitration by an International Board is the best way out. The disputed points in the minorities problem including that of Pakistan should be remitted to such a Board. The Board should be constituted of persons drawn from countries outside the British Empire. Each statutory minority in India—Muslims, Scheduled Castes, Sikhs, Indian Christians—should be asked to select its nominee to this Board of Arbitration. These minorities as also the Hindus should appear before the Board in support of their demands and should agree to abide by the decision given by the Board. The British should give the following undertakings :—

- (1)(1) That they will have nothing to do with the communal settlement. It will be left to agreement or to a Board of Arbitration.
- (2)(2) They will implement the decision of the Board of Arbitration on the communal question by embodying it in the Government of India Act.
- (3)(3) That the award of the International Board of Arbitration would be regarded by them as a sufficient discharge of their obligations to the minorities in India and would agree to give India Dominion Status.

The procedure has many advantages. It eliminates the fear of British interference in the communal settlement which has been offered by the Congress as an excuse for its not being able to settle the communal problem. It is alleged that, as there is always the possibility of the minorities getting from the British something more than what the Congress thinks it proper to give, the minorities do not wish to come to terms with the Congress. The proposal has a second advantage. It removes the objection of the Congress that by making the constitution subject to the consent of the minorities, the British Government has placed a veto in the hands, of the minorities over the constitutional progress of India. It is complained that the minorities can unreasonably withhold their consent or they can be prevailed upon by the British Government to withhold their consent as the minorities are suspected by the Congress to be mere tools in the hands of the British Government. International arbitration removes completely every ground

of complaint on this account. There should be no objection on the part of the minorities. If their demands are fair and just no minority need have any fear from a Board of International Arbitration. There is nothing unfair in the requirement of a submission to arbitration. It follows the well known rule of law, namely, that no man should be allowed to be a judge in his own case. There is no reason to make any exception in the case of a minority. Like an individual it cannot claim to sit in judgement over its own case. What about the British Government? I cannot see any reason why the British Government should object to any part of this scheme. The Communal Award has brought great odium on the British. It has been a thankless task and the British should be glad to be relieved of it. On the question of the discharge of their responsibilities for making adequate provision for the safety and security of certain communities in respect of which they have regarded themselves as trustees before they relinquish their sovereignty what more can such communities ask than the implantation in the constitution of safeguards in terms of the award of an International Board of Arbitration? There is only one contingency which may appear to create some difficulty for the British Government in the matter of enforcing the award of the Board of Arbitration. Such a contingency can arise if any one of the parties to the dispute is not prepared to submit its case to arbitration.

In that case the question will be: will the British Government be justified in enforcing the award against such a party? I see no difficulty in saying that the British Government can with perfect justice proceed to enforce the award against such a party. After all what is the status of a party which refuses to submit its case to arbitration? The answer is that such a party is an aggressor. How is an aggressor dealt with? By subjecting him to sanctions. Implementing the award of the Board of Arbitration in a constitution against a party which refuses to go to arbitration is simply another name for the process of applying sanctions against an aggressor. The British Government need not feel embarrassed in following this process if the contingency should arise. For it is a well recognized process of dealing with such cases and has the imprimatur of the League of Nations which evolved this formula when

Mussolini refused to submit to arbitration his dispute with Abyssinia. What I have proposed may not be the answer to the question : What next? I don't know what else can be. All I know is that there will be no freedom for India without an answer. It must be decisive, it must be prompt and it must be satisfactory to the parties concerned.

APPENDIX XII

**Address# presented to H. E. Lord Minto, Viceroy and
Governor General of India**

By

A Deputation of the Muslim Community of India on 1st October 1906
at Simla

ADDRESS

“May it please your excellency,—Availing ourselves of the permission accorded to us, we, the undersigned nobles, jagirdars, taluqdars, lawyers, zemindars, merchants and others representing a large body of the Mahomedan subjects of His Majesty the King-Emperor in different parts of India, beg most respectfully to approach your Excellency with the following address for your favourable consideration.

#This document has a great importance and significance in the history of India. It marks the beginning of the British Government's policy of giving favourable treatment to the Muslims in the administration of India which, it is alleged, was intended to wean them away from the Congress and to create a breach and disunity between the Hindus and the Musalmans. It has also acquired a certain amount of notoriety in the minds of the Indians in view of the statement made by late Maulana Mohammad Ali in his address as President of the Congress, stating that “it was a command performance”, meaning thereby that the address was arranged by the British Government. On this account there has been a great deal of curiosity on the part of many Indians to know the text of the address and the reply given by Lord Minto. I had made a long search to obtain the same. I had even approached elderly Muslim politicians prominent in those days for a copy but none of them had it or knew where it was available. Newspapers of that day do not appear to have carried the text of the address and the reply. I was however lucky to get a copy of it from my

friend Sir Raza Ali, M.L.A. (Central), who happened to have kept a cutting of the *Indian Daily Telegraph*—a paper then published from Lucknow but had long ago become defunct, in which the full text of the address as well as of the reply was printed. I am grateful to Sir Raza Ali for a loan of the cutting. As the document marks a historic event in the political history of British administration in India, it might be of some interest to reproduce details about the function which the Simla correspondent of the *Indian Daily Telegraph* had published in its issue of October 3rd, 1906. Says the correspondent:—

The representatives of the Mahomedan community who were to present the address to His Excellency the Viceroy this morning at Viceregal Lodge collected in the Ballroom at 11 A.M. They numbered thirty-five and were seated in a horse-shoe facing His Excellency's chair. Precisely at 11 A.M. Lord Minto, preceded by his staff, entered the room, all standing to receive him. His Excellency was taken round and personally introduced to each member by the Aga Khan. The Khalifa from Patiala then asked, permission for the presentation of the address and the Aga Khan then advanced and facing His Excellency read the petition given below, all the representatives standing."

Those who formed the deputation were:—His Highness Aga Sir Sultan Mahomed Shah Aga Khan, G.C.I.E., (Bombay), Shahzadah Bakhtiar Shah, O.I.E., Head of the Mysore family, Calcutta; Hon'ble Malik Omar Hayat Khan, C.I.E., Lieutenant 17th Prince of Wales' Tiwana Lancers, Tiwana, Shahpur (Punjab) ; Hon'ble Khan Bahadur Mian Mohomed Shah Din, Bar.-at-Law, Lahore; Hon'ble Maulvi Sharfuddin, Bar.-at-Law, Patna; Khan Bahadur Syed Nawab Ali Chowdhury, Mymensingh (Eastern Bengal); Nawab Bahadur Syed Amir Husan Khan. C.I.E., Calcutta; Naseer Hussain Khan Khayal, Calcutta; Khan Bahadur Mirza Shujaat Ali Beg; Persian Consul-General, Murshidabad, Calcutta (Bengal); Syed Ali Imam, Bar.-at-Law, Patna (Behar); Nawab Sarfraz Husain Khan, Patna (Behar); Khan Bahadur Ahmad Mohiuddin Khan. Stipendiary of the Carnatic family (Madras): Maulvi Rafiuddin Ahmed, Bar.-at-Law (Bombay) ; Ebrahimbhoy. Adamji Peerbhoy, General Merchant (Bombay) ; Mr. Abdur Rahim, Bar.-at-Law, Calcutta: Syed Allah-dad Shah, Special Magistrate and Vice-President, Zamindars' Association, Khairpore (Sindh); Maulana H. M. Malak, Head of Mehdi Bazh Bohras, Nagpur (Central Provinces) ; Mushir-ud-Doula Mumtazal-ul-Mulk Khan Bahadur Khalifa Syed Moha-med Hussain, Member of the State Council of Patiala (Punjab); Khan Bahadur Col. Abdul Majid Khan, Foreign Minister, Patiala (Punjab); Khan Bahadur Khwaja Kusuf Shah, Hony. Magistrate, Arnritsar (Punjab) ; Mian Mahomed Shafi, Bar.-at-Law, Lahore (Punjab); Shaikh Ghulam Sadik, Arnritsar (Punjab); Hakim Mohamed Ajmul Khan, Delhi (Punjab); Munshi Ihtisham Ali, Zamindar and Rais,. Kakori

(Oudh); Syed Nabi Ullah, Bar.-at-Law, Rais Kara, Dist. Allahabad; Maulvi Syed Karamat Husain, Bar.-at-Law, Allahabad; Syed Abdulraoof, Bar.-at-Law, Allahabad; Munshi Abdur Salam Khan, retired Sub-Judge, Rampur; Khan Bahadur Mohamad Muzammil Ullah Khan, Zamindar, Secretary, Zamindars' Association, United Provinces, and Joint Secretary, M. A. O. College Trustees. Aligarh; Haji Mohamed Ismail Khan, Zamindar, Aligarh; Sahabzadas Aitab Ahmad Khan, Bar.-at-Law. Aligarh; Maulvi Mushtaq Hussain, Rais, Arnroha, United Provinces; Maulvi Habibul Rahaman Khan, Zamindar, Bhikhanpur, United Provinces; Nawab Syed Sirdar Ali Khan. son of the late Nawab Sirdar Diler-UI-mulk Bahadur, C.I.E., Hyderabad (Deccan); Maulvi Syed Mahdee Ally Khan (Muhsin-ul-Mulk), Hony. Secretary, M. A. O. College. Aligarh, Etawah, United Provinces.

The following gentlemen intended to have attended the presentation of the address to the Viceroy, but were prevented by illness or other causes:— Hon'ble Nawab Khwaja Salimulla, Nawab of Dacca, Hon'ble Nawab Haji Mohamed Fateh Ali Khan, Qazel-bash, Lahore; Hon'ble Syed Zainul-Edros, Surat, Khan Bahadur Kasim Mir Ghayas-uddin Peerzadah of Broach; Khan Bahadur Raja Jahandad of Hazara and Shaik Shahid Hussain of Lucknow. The correspondent of the *Telegraph* adds:—

Lady Minto, the Ladies Elliot and the Hon. Mrs. Hewett were present at the function.

At the presentation of the address today most of the deputies wore ordinary European dress with a fez as distinguishing head-dress, but the Patiala representatives, Lieut. Hon. Malik Omar Hayat Khan, Khan Bahadur Ali Choudhary, Khan Bahadur Ahmad Mohiuddin Khan and a few others, were in Indian dress, while a few others wore uniforms with gold lace. His Excellency the Viceroy was in morning dress with the Order of the Star of India on his frock coat.

GARDEN PARTY AT VICEREGAL LODGE

This afternoon a garden party was held in the Viceregal Lodge grounds when the Mahomedan representatives were received by the Viceroy, who spoke with each deputy individually.

The Hon. Mr. Baker, Financial Secretary, has invited the following Bengal gentlemen of the Mahomedan deputation to lunch tomorrow :—

Nawab Amir Hosein, Mirza Shujat Ali, Nawab Nasar Hossein, Hon. Shurfuddin and Ali Imam.

We fully realise and appreciate the incalculable benefits conferred by British rule on the teeming millions belonging to diverse races and professing diverse religions who form the population of the vast continent of India, and have every reason to be grateful for the peace, security, personal freedom and liberty of worship that we now enjoy. Further, from the wise and enlightened character of the Government, we have every reasonable ground for anticipating that these benefits will be progressive, and that India will in the future occupy an increasingly important position in the comity of nations.

One of the most important characteristics of British policy in India is the increasing deference that has so far as possible been paid from the first to the views and wishes of the people of the country in matters affecting their interests, with due regard always to the diversity of race and religion which forms such an important feature of all Indian progress.

Claims of the Community

Beginning with the confidential and unobtrusive method of consulting influential members of important communities in different parts of the country, this principle was gradually extended by the recognition of the right of recognised political or commercial organisations to communicate to the authorities their criticisms and views on measures of public importance, and finally by the nomination and election of direct representatives of the people in Municipalities, District Boards, and above all in the Legislative Chambers of the country. This last element is, we understand, about to be dealt with by the Committee appointed by your Excellency with the view of giving it further extension, and it is with reference mainly to our claim to a fair share in such extended representation and some other matters of importance affecting the interests of our community, that we have ventured to approach your Excellency on the present occasion.

Past Traditions

The Mahomedans of India number, according to the census taken in the year 1901, over sixty-two millions or between one-fifth and one-fourth of the total population of His Majesty's Indian dominions, and if a reduction be made for the uncivilised portions of the community enumerated under the heads of ani-mist and other minor religions, as well as for those classes who are ordinarily classified as Hindus but properly speaking are not Hindus at all, the proportion of Mahomedans to the Hindu majority becomes much larger. We therefore desire to submit that under any system of representation extended or limited a community in itself more numerous than the entire population of any first class European power except Russia may justly lay claim to adequate recognition as an important factor in the State.

We venture, indeed, with your Excellency's permission to go a step further, and urge that the position accorded to the Mahomedan community in any kind of representation, direct or indirect, and in all other ways affecting their status and influence should be commensurate, not merely with their numerical strength, but also with their political importance and the value of the contribution which they make to the defence of the empire, and we also hope that your Excellency will in this connection be pleased to give due consideration to the position which they occupied in India a little more than hundred years ago and of which the traditions have naturally not faded from their minds.

The Mahomedans of India have always placed implicit reliance on the sense of justice and love of fair dealing that have characterised their rulers, and have in consequence abstained from pressing their claims by methods that might prove at all embarrassing, but earnestly as we desire that the Mahomedans of India should not in the future depart from that excellent and time-honoured tradition, recent events have stirred up feelings, especially among the younger generation of Mahomedans) which might, in certain circumstances and under certain contingencies easily pass beyond the control of temperate counsel and sober guidance.

We therefore pray that the representations we herewith venture to submit, after a careful consideration of the views and wishes of a large

number of our co-religionists in all parts of India, may be favoured with your excellency's earnest attention.

European representative institutions

We hope your excellency will pardon our stating at the outset that representative institutions of the European type are new to the Indian people; many of the most thoughtful members of our community in fact consider that the greatest care, forethought and caution will be necessary if they are to be successfully adapted to the social, religious and political conditions obtaining in India, and that in the absence of such care and caution their adoption is likely, among other evils, to place our national interests at the mercy of an unsympathetic majority. Since, however, our rulers have, in pursuance of the immemorial instincts and traditions, found it expedient to give these institutions an increasingly important place in the Government of the country, we Mahomedans, cannot any longer in justice to our own national interests hold aloof from participating in the conditions to which their policy has given rise. While, therefore, we are bound to acknowledge with gratitude that such representation as the Mahomedans of India have hitherto enjoyed has been due to a sense of justice and fairness on the part of your Excellency and your illustrious predecessor in office and the heads of Local Governments by whom the Mahomedan members of Legislative Chambers have almost without exception been nominated, we cannot help observing that the representation thus accorded to us has necessarily been inadequate to our requirements, and has not always carried with it the approval of those whom the nominees were selected to represent. This state of things was probably under existing circumstances unavoidable, for while on the one hand the number of nominations reserved to the Viceroy and Local Governments has necessarily been strictly limited, the selection on the other hand of really representative men, has, in the absence of any reliable method of ascertaining the direction of popular choice, been far from easy.

The Results of Election

As for the results of election, it is most unlikely that the name of any Mahomedan candidate will ever be submitted for the approval of Government by the electoral bodies as now constituted unless he is in sympathy with the majority in all matters of importance. Nor can we in fairness find fault with the desire of our non-Muslim fellow-subjects to take full advantage of their strength and vote only for members of their own community, or for persons who, if not Hindus, are expected to vote with the Hindu majority on whose goodwill they would have to depend for their future re-election. It is true that we have many and important interests in common with our Hindu fellow-countrymen and it will always be a matter of the utmost satisfaction to us to see these interests safeguarded by the presence in our Legislative Chambers of able supporters of these interests, irrespective of their nationality.

A DISTINCT COMMUNITY

Still, it cannot be denied that we Mahomedans are a distinct community with additional interests of our own which are not shared by other communities, and these have hitherto suffered from the fact that they have not been adequately represented. Even in the provinces in which the Mahomedans constitute a distinct majority of the population, they have too often been treated as though they were inappreciably small political factors that might without unfairness be neglected. This has been the case, to some extent, in the Punjab, but in a more marked degree in Sind and in Eastern Bengal.

Before formulating our views with regard to the election of representatives, we beg to observe that the political importance of a community to a considerable extent gains strength or suffers detriment according to the position that the members of that community occupy in the Service of the State. If, as is unfortunately the case with the Mahomedans, they are not adequately represented in this manner, they lose in the prestige and influence which are justly their due.

Employment in Government Service

We therefore pray that Government will be graciously pleased to provide that both in the gazetted and the subordinate and ministerial services of all Indian provinces a due proportion of Mahomedans shall always find place. Orders of like import have at times been issued by Local Governments in some provinces, but have not, unfortunately, in all cases been strictly observed on the ground that qualified Mahomedans were not forthcoming. This allegation, however well founded it may have been at one time, is, we submit, no longer tenable now, and wherever the will to employ them is not wanting the supply of qualified Mahomedans, we are happy to be able to assure your excellency, is equal to the demand.

The Competitive Element

Since, however, the number of qualified Mahomedans has increased, a tendency is unfortunately perceptible to reject them on the ground of relatively superior qualifications having to be given precedence. This introduces something like the competitive element in its worst form, and we may be permitted to draw your Excellency's attention to the political significance of the monopoly of all official influence by one class. We may also point out in this connection that the efforts of Mahomedan educationists have from the very outset of the educational movement among them been strenuously directed towards the development of character, and this we venture to think is of greater importance than mere mental alertness in the making of good public servants.

Mahomedans on the Bench

We venture to submit that the generality of Mahomedans in all parts of India feel aggrieved that Mahomedan Judges are not more frequently appointed to the High Courts and Chief Courts of Judicature. Since the creation of these Courts only three Mahomedan lawyers have held these honourable appointments, all of whom have fully justified their elevation to the Bench. At the present moment there is not a single Mahomedan Judge sitting on the Bench of any of these Courts, while there are three Hindu Judges in the Calcutta High Court, where the proportion of Mahomedans in the population is very large, and two in the Chief Court

of the Punjab, where the Mahomedans form the majority of the population. It is not, therefore, an extravagant request on our part that a Mahomedan should be given a seat on the Bench of each of the High Courts and Chief Courts. Qualified Mahomedan lawyers eligible for these appointments can always be found, if not in one province then in another. We beg permission further to submit that the presence on the Bench of these Courts of a Judge learned in the Mahomedan Law will be a source of considerable strength to the administration of justice.

Municipal Representation

As Municipal and District Boards have to deal with important local interests affecting to a great extent the health, comfort, educational needs and even the religious concerns of the inhabitants, we shall, we hope, be pardoned if we solicit for a moment your Excellency's attention to the position of Mahomedans thereon before passing to higher concerns. These institutions form, as it were, the initial rungs in the ladder of self-government, and it is here that the principle of representation is brought home intimately to the intelligence of the people, yet the position of Mahomedans on these Boards is not at present regulated by any guiding principle capable of general application, and practice varies in different localities. The Aligarh Municipality, for example, is divided into six wards and each ward returns one Hindu and one Mahomedan Commissioner, and the same principle we understand is adopted in a number of Municipalities in the Punjab and elsewhere, but in a good many places the Mahomedan tax-payers are not adequately represented. We would, therefore, respectfully suggest that the local authority should in every case be required to declare the number of Hindus and Mahomedans entitled to seats on Municipal and District Boards, such proportion to be determined in accordance with the numerical strength, social status, local influence and special requirements of either community. Once their relative proportion is authoritatively determined, we would suggest that either community should be allowed severally to return their own representatives as is the practice in many towns in the Punjab.

Fellows of Universities

We would also suggest that the Senates and Syndicates of Indian Universities might be similarly dealt with, that is to say, there should, so far as possible, be an authoritative declaration of the proportion in which Mahomedans are entitled to be represented in either body.

Nomination to Provincial Councils

We now proceed to the consideration of the question of our representation in the Legislative Chambers of the country. Beginning with the Provincial Councils, we would most respectfully suggest that as in the case of Municipalities and District Boards the proportion of Mahomedan representatives entitled to seats should be determined and declared with due regard to the important considerations which we have ventured to point out in paragraph 5 of this address, and that the important Mahomedan landowners, lawyers, merchants and representatives of other important interests, the Mahomedan members of District Boards and Municipalities and the Mahomedan graduates of universities of a certain standing, say five years, should be formed into Electoral Colleges and be authorised, *in* accordance with such rules of procedure as your excellency's Government may be pleased to prescribe in that behalf, to return the number of members that maybe declared to be eligible.

The Viceroy's Council

With regard to the Imperial Legislative Council whereon the due representation of Mahomedan interests is a matter of vital importance, we crave leave to suggest (1) that in the cadre of the Council the proportion of Mahomedan representatives should not be determined on the basis of the numerical strength of the community, and that in any case the Mahomedan representatives should never be an ineffective minority; (2) that as far as possible, appointment by election should be given preference over nomination; (3) that for the purposes of choosing Mahomedan members, Mahomedan landowners, lawyers, merchants and representatives of other important interests of a status to be subsequently determined by your Excellency's Government, Mahomedan members of the Provincial Councils and Mahomedan fellows of universities should be

invested with electoral powers to be exercised in accordance with such procedure as may be prescribed by your Excellency's Government in that behalf.

The Executive Council

An impression has lately been gaining ground that one or more Indian Members may be appointed on the Executive Council of the Viceroy. In the event of such appointment being made we beg that the claims of Mahomedans in that connection may not be overlooked. More than one Mahomedan, we venture to say, will be found in the country fit to serve with distinction in that august chamber.

A Mahomedan University

We beg to approach your Excellency on a subject which must closely affect our national welfare. We are convinced that our aspirations as a community and our future progress are largely dependent on the foundation of a Mahomedan University which will be the centre of our religious and intellectual life. We therefore most respectfully pray that your Excellency will take steps to help us in an undertaking in which our community is so deeply interested.

In conclusion, we beg to assure your Excellency that in assisting the Mahomedan subjects of His Majesty at this stage in the development of Indian affairs in the directions indicated in the present address, your Excellency will be strengthening the basis of their unswerving loyalty to the Throne and laying the foundation of their political advancement and national prosperity, and your Excellency's name will be remembered with gratitude by their posterity for generations to come, and we feel confident that your Excellency will be gracious enough to give due consideration to our prayers. We have the honour to subscribe ourselves) Your Excellency's most obedient and humble servants.

LORD MINTO'S REPLY

Appreciation of Mahomedan aspirations

After the address; His Excellency rose and delivered a most sympathetic reply, which was frequently punctuated with cheers and cries of "Hear, hear" from the members of the deputation, particularly when his Excellency declared that he was entirely in accord with the views of the deputation that any electoral system must take cognizance of the various religious beliefs of this great Empire and that the British Government would always in the future as in the past safeguard the political rights of the different communities entrusted to their charge. The Viceroy concluded by thanking the deputation for affording him the unique opportunity of meeting so many representative men.

The Viceroy said :—

Your Highness and Gentlemen, Allow me before I attempt to reply to the many considerations your address embodies, to welcome you heartily to Simla. Your presence here to-day is very full of meaning. To the document which you have presented me are attached the signatures of nobles, of Ministers of various States, of great landowners, of lawyers, of merchants and of many others of His Majesty's subjects. I welcome the representative character of your deputation as expressing the views and aspirations of the enlightened Muslim community of India. I feel that all you have said emanates from a representative body basing its opinions on a matured consideration of the existing political conditions of India, totally apart from the small personal or political sympathies and antipathies of scattered localities, and I am grateful to you for the opportunity you are affording me of expressing my appreciation of the just aims of the followers of Islam and their determination to share in the political history of our Empire.

As your Viceroy, I am proud of the recognition you express of the benefits conferred by British rule on the diverse races of many creeds who go to form the population of this huge continent. You yourselves, the descendants of a conquering and ruling race, have told me to-day of your gratitude for the personal freedom, the liberty of worship, the general peace and the hopeful future which British administration has secured for India.

Help in the Past

It is interesting to look back on early British efforts to assist the Mahomedan population to qualify themselves for the public service. In 1782 Warren Hastings founded the Calcutta Madrasah with the intention of enabling its students to compete on more equal terms with the Hindus for employment under Government. In 1811 my ancestor, Lord Minto, advocated improvements in the Madrassah and the establishment of Mahomedan Colleges at other places throughout India. In later years the efforts of the Mahomedan Association led to the Government resolution of 1885 dealing with the educational position of the Mahomedan community and their employment in the public service, whilst Mahomedan educational effort has culminated in the College of Aligarh that great institution which the noble and broad-minded devotion of Sir Syed Ahmed Khan has dedicated to his co-religionists.

The Aligarh College

It was in July 1877 that Lord Lytton laid the foundation stone of Aligarh, when Sir Syed Ahmed Khan addressed these memorable words to the Viceroy : "The personal honour which you have done me assures me of a great fact and fills me with feelings of a much higher nature than mere personal gratitude. I am assured that you, who upon this occasion represent the British rule, have sympathies with our labours and this assurance is very valuable and a source of great happiness. At my time of life it is a comfort to me to feel that the undertaking which has been for many years, and is now the sole object of my life has roused on the one hand the energies of my own countrymen, and on the other has won the sympathy of our British fellow-subjects and the support of our rulers, so that when the few years I may still be spared are over, and when I shall be no longer amongst you, the College will still prosper and succeed in educating my countrymen to have the same affection for their country, the same feelings of loyalty for the British rule, the same appreciation of its blessings, the same sincerity of friendship with our British fellow-subjects as have been the ruling feelings of my life."

Sir Syed's Influence

Aligarh has won its laurels. Its students have gone forth to fight the battle of life strong in the tenets of their own religion, strong in the precepts of loyalty and patriotism, and now when there is much that is critical in the political future of India the inspiration of Sir Syed Ahmed Khan and the teachings of Aligarh shine forth brilliantly in the pride of Mahomedan history, in the loyalty, commonsense and sound reasoning so eloquently expressed in your address. But, gentlemen, you go on to tell me that sincere as your belief is in the justice and fair dealings of your rulers, you cannot but be aware that "recent events" have stirred up feelings amongst the younger generation of Mahomedans which might pass beyond the control of temperate counsel and sober guidance."

Policy in Eastern Bengal

Now I have no intention of entering into any discussion upon the affairs of Eastern Bengal and Assam, yet I hope that without offence to anyone I may thank the Mahomedan community of the new Province for the moderation and self-restraint they have shown under conditions which were new to them, and as to which there has been inevitably much misunderstanding, and that I may at the same time sympathise with all that is sincere in Bengalee sentiments. But above all, what I would ask you to believe is that the course the Viceroy and the Government of India have pursued in connection with the affairs of the new Province, the future of which is now I hope assured, has been dictated solely by a regard for what has appeared best for its present and future populations as a whole, irrespective of race or creed and that the Mahomedan community of Eastern Bengal and Assam can rely as firmly as ever on British justice and fairplay for the appreciation of its loyalty and the safeguarding of its interests.

The unrest in India

You have addressed me, gentlemen, at a time when the political atmosphere is full of change. We all feel it would be foolish to attempt to deny its existence, hopes and ambitions new to India are making themselves felt. We cannot ignore them—we should be wrong to wish to do so—but to what is all this unrest due? Not to the discontent of misgoverned millions —I defy anyone honestly to assert that — not to say uprising of a disaffected people.

Fruits of Western Education

It is due to that educational growth in which only a very small portion of the population has as yet shared, of which British rule first sowed the seed and the fruits of which British rule is now doing its best to foster and to direct. There may be many tares in the harvest we are now reaping. The Western grain which we have sown may not be entirely suitable to the requirements of the people of India but the educational harvest will increase as years go on, and the healthiness of the nourishment it gives will depend on the careful administration and distribution of its products. You need not ask my pardon, gentlemen, for telling me that "Representative institutions of the European type are entirely new to the people of India" or that their introduction here requires the most earnest thought and care. I should be very far from welcoming all the political machinery of the Western world amongst the hereditary instincts and traditions of Eastern races. Western breadth of thought, the teachings of Western civilisation, the freedom of British individuality can do much for the people of India, but I recognise with you that they must not carry with them an impracticable insistence of the acceptance of political methods.

Political Future of Mahomedans

And now, gentlemen, I come to your own position in respect to the political future; the position of the Mahomedan community for whom you speak. You will, I feel sure, recognise that it is impossible for me to follow you through any detailed consideration of the conditions and the share that the community has a right to claim in the administration of

public affairs. I can at present only deal with generalities. The points which you have raised are before the Committee, which, as you know, I have lately appointed to consider the question of presentation (? representation), and I will take care that your address is submitted to them, but at the same time I hope I may be able to reply to the general tenor of your remarks without in any way forestalling the Committee's report.

The Question of Representation

The pith of your address, as I understand it, is a claim that in any system of representation whether it affects a Municipality, a District Board or a Legislative Council, in which it is proposed to introduce or increase an electoral organisation, the Mahomedan community should be represented as a community. You point out that in many cases electoral bodies, as now constituted, cannot be expected to return a Mahomedan candidate, and that if by chance they did so it could only be at the sacrifice of such a candidate's view to those of a majority opposed to his own community whom he would in no way represent, and you justly claim that your numerical strength both in respect to the political importance of your community and the service it has rendered to the Empire entitle you to consideration. I am entirely in accord with you ; please do not misunderstand me. I make no attempt to indicate by what means the representation of communities can be obtained, but I am as firmly convinced as I believe you to be that any electoral representation in India would be doomed to mischievous failure which aimed at granting a personal enfranchisement regardless of the beliefs and traditions of the communities composing the population of this continent. The great mass of the people of India have no knowledge of representative institutions. I agree with you, gentlemen, that the initial rungs in the ladder of self-government are to be found in the Municipal and District Boards and that it is in that direction that we must look for the gradual political education of the people.

An Assurance

In the meantime I can only say to you that the Mahomedan community may rest assured that their political rights and interests as a community will be safeguarded in any administrative reorganization with which I am concerned and that you and the people of India may rely upon the British Raj to respect, as it has been its pride to do, the religious beliefs and the national traditions of the myriads composing the population of His Majesty's Indian Empire.

Your Highness and Gentlemen, I sincerely thank you for the unique opportunity your deputation has given me of meeting so many distinguished and representative Mahomedans. I deeply appreciate the energy and interest in public affairs which have brought you here from great distances, and I only regret that your visit to Simla is necessarily so short.

APPENDIX XVIII

COMMUNAL AWARD BY HIS MAJESTY'S GOVERNMENT—1932

In the statement made by the Prime Minister on 1st December last on behalf of His Majesty's Government at the close of the second session of the Round Table Conference, which was immediately afterwards endorsed by both Houses of Parliament, it was made plain that if the communities in India were unable to reach a settlement acceptable to all parties on the communal questions which the Conference had failed to solve His Majesty's Government were determined that India's constitutional advance should not on that account be frustrated, and that they would remove this obstacle by devising and applying themselves a provisional scheme.

²mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40G3.Pakistan or the Partition of India APPENDIX.htm - _msocom_1⁴

2. On the 19th March last His Majesty's Government, having been informed that the continued failure of the communities to reach agreement was blocking the progress of the plans for the framing of a new Constitution, stated that they were engaged upon a careful re-examination of the difficult and controversial questions which arise. They are now satisfied that without a decision of at least some aspects of the problems connected with the position of minorities under the new Constitution, no further progress can be made with the framing of the Constitution.

3. His Majesty's Government have accordingly decided that they will include provisions to give effect to the scheme set out below in the proposals relating to the Indian Constitution to be laid in due course before Parliament. The scope of this scheme is purposely confined to the arrangements to be made for the representation of the British Indian communities in the Provincial Legislatures, consideration of representation in the Legislature at the Centre being deferred for the

reason given in paragraph 20 below. The decision to limit the scope of the scheme implies no failure to realise that the framing of the Constitution will necessitate the decision of a number of the problems of great importance to minorities, but has been taken in the hope that once a pronouncement has been made upon the basic questions of method and proportions of representation the communities themselves may find it possible to arrive at a *modus vivendi* on other communal problems, which have not as yet received the examination they require.

4. His Majesty's Government wish it to be most clearly understood that they themselves can be no parties to any negotiations which may be initiated with a view to the revision of their decision, and will not be prepared to give consideration to any representation aimed at securing the modification of it which is not supported by all the parties affected. But they are most desirous to close no door to an agreed settlement should such happily be forthcoming. If, therefore before a new Government of India Act has passed into law, they are satisfied that the communities who are concerned are mutually agreed upon a practicable alternative scheme, either in respect of any one or more of the Governors' Provinces or in respect of the whole of the British India, they will be prepared to recommend to Parliament that that alternative should be submitted for the provisions now outlined.

5. Seats in the Legislative Councils in the Governors' Provinces, or in the Lower House if there is an Upper Chamber, will be allocated as shown in the annexed table.

²⁵mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/40G3.Pakistan or the Partition of India APPENDIX.htm - _msocom_2

6. Election to the seats allotted to Muhammadan, European and Sikh constituencies will be by voters voting in separate communal electorates covering between them the whole area of the Province (apart from any portions which may in special cases be excluded from the electoral area as "backward").

Provision will be made in the Constitution itself to empower a revision of this electoral arrangement (and the other similar arrangements mentioned below) after 10 years with the assent of the communities affected, for the ascertainment of which suitable means will be devised.

7. All qualified electors, who are not voters either in a Muhammadan) Sikh, Indian Christian (see paragraph 10 below), Anglo-Indian (see

paragraph II below) or European constituency, will be entitled to vote in a general constituency.

8. Seven seats will be reserved for Mahrattas in certain selected plural member general constituencies in Bombay.

9. Members of the "depressed classes" qualified to vote will vote in a general constituency. In view of the fact that for a considerable period these classes would be unlikely, by this means alone, to secure any adequate representation in the Legislature, a number *of* special seats will be assigned to them as shown in the table. These seats will be filled by election from special constituencies in which only members of the "depressed classes" electorally qualified will be entitled to vote. Any person voting in such a special constituency will, as stated above, be also entitled to vote in a general constituency. It is intended that these constituencies should be formed in selected areas where the Depressed Classes are most numerous, and that, except in Madras, they should not cover the whole area of the Province.

In Bengal it seems possible that in some general constituencies a majority of the voters will belong to the Depressed Classes. Accordingly, pending further investigation, no number has been fixed for the members to be returned from the special Depressed Class constituencies in that Province. It is intended to secure that the Depressed Classes should obtain not less than 10 seats in the Bengal Legislature.

The precise definition in each Province of those who (if electorally qualified) will be entitled to vote in the special Depressed Class constituencies has not yet been finally determined. It will be based as a rule on the general principles advocated in the Franchise Committee's Report. Modification may, however, be found necessary in some Provinces in Northern India where the application of the general criteria of untouchability might result in a definition unsuitable in some respects to the special conditions *of* the Province.

His Majesty's Government do not consider that these special Depressed Class constituencies will be required for more than a limited time. They intend that the Constitution shall provide that they shall come to an end after 20 years if they have not previously been abolished under the general powers of electoral revision referred to in paragraph 6.

10. Election to the seats allotted to Indian Christians will be by voters voting in separate communal electorates. It seems almost certain that practical difficulties will, except possibly in Madras, prevent the formation of Indian Christian constituencies covering the whole area of the Province, and that accordingly special Indian Christian constituencies will have to be formed only in one or two selected areas in the Province. Indian Christian voters in these areas will not vote in a general constituency. Indian Christian voters outside these areas will vote in a general constituency. Special arrangements may be needed in Bihar and Orissa, where a considerable proportion of the Indian Christian community belongs to the aboriginal tribes.

11. Election to the seats allotted to Anglo-Indians will be by voters voting in separate communal electorates. It is at present intended, subject to investigation of any practical difficulties that may arise, that the Anglo-Indian constituencies shall cover the whole area of each Province, a postal ballot being employed; but no final decision has yet been reached.

12. The method of filling the seats assigned for representatives from backward areas is still under investigation, and the number of seats so assigned should be regarded as provisional pending a final decision as to the constitutional arrangements to be made in relation to such areas.

13. His Majesty's Government attach great importance to securing that the new legislatures should contain at least a small number of women members. They feel that at the outset this object could not be achieved without creating a certain number of seats specially allotted to women. They also feel that it is essential that women members should not be drawn disproportionately from one community. They have been unable to find any system which would avoid this risk, and would be consistent with the rest of the scheme for representation which they have found it necessary to adopt, except that of limiting the electorate for each special women's seat to voters from one community.

²⁶mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40G3.Pakistan or the Partition of India APPENDIX.htm - _msocom_3 The special women's seats have accordingly been specifically divided, as shown in the table, between the various communities. The precise electoral machinery to be employed in these special constituencies is still under consideration.

14. The seats allotted to "Labour" will be filled from noncommunal constituencies. The electoral arrangements have still to be determined, but it is likely that in most Provinces the Labour constituencies will be

partly trade union and partly special constituencies as recommended by the Franchise Committee.

15. The special seats allotted to Commerce and Industry, Mining and Planting will be filled by election through Chambers of Commerce and various Associations. The details of the electoral arrangements for these seats must await further investigation.

16. The special seats allotted to Land-holders will be filled by election by special Land-holders' constituencies.

17. The method to be employed for election to the University seats is still under consideration.

18. His Majesty's Government have found it impossible in determining these questions of representation in the Provincial Legislatures to avoid entering into considerable detail. There remains, nevertheless, the determination of the constituencies. They intend that this task should be undertaken in India as early as possible.

It is possible that in some instances delimitation of constituencies might be materially improved by slight variations from the numbers of seats now given. His Majesty's Government reserve the right to make such slight variations, for such purpose, provided that they would not materially affect the essential balance between communities. No such variations will, however, be made in the case of Bengal and Punjab.

19. The question of the composition of Second Chambers in the Provinces has so far received comparatively little attention in the constitutional discussions and requires further consideration before a decision is reached as to which Provinces shall have a Second Chamber or a scheme is drawn up for their composition.

His Majesty's Government consider that the composition of the Upper House in a Province should be such as not to disturb in any essential the balance between the communities resulting from the composition of the Lower House.

20. His Majesty's Government do not propose at present to enter into the question of the size and composition of the Legislature at the Centre, since this involves among other questions that of representation of the Indian States which still needs further discussion. They will; of course,

when considering the composition, pay full regard to the claims of all communities for adequate representation therein.

21. His-Majesty's Government have already accepted the principle that Sind should be constituted a separate Province, if satisfactory means of financing it can be found. As the financial problems involved still have to be reviewed in connection with other problems of federal finance, His Majesty's Government have thought preferable to include, at this stage, figures for a Legislature for the existing Province of Bombay, in addition to the schemes for separate Legislatures for Bombay Presidency proper and Sind.

22. The figures given for Bihar and Orissa relate to the existing Province. The question of constituting a separate Province of Orissa is still under investigation.

23. The inclusion in the table of figures relating to a Legislature for the Central Provinces including Berar does not imply that any decision has yet been reached regarding the future constitutional position of Berar.

London,

4th August, 1932.

(a) The composition of the bodies through which election to these seats will be conducted, though in most cases neither predominantly European or predominantly Indian, will not be statutorily fixed. It is, accordingly, not possible in each Province to state with certainty how many Europeans and Indians respectively will be returned. It is, however, expected that, initially, the numbers will be approximately as follows:— Madras, 4 Europeans, 2 Indians; Bombay (including Sind), 6 Europeans, 3 Indians; Bengal, 14 Europeans, 5 Indians; United Provinces, 2 Europeans, 1 Indian; Punjab, 1 Indian; Bihar and Orissa, 2 Europeans, 2 Indians; Central Provinces including Berar, 1 European, 1 Indian; Assam, 8 Europeans, 8 Indians; Bombay without Sind, 4 Europeans, 8 Indians; Sind, 1 European, 1 Indian.

(b) Seven of these seats will be reserved for Mahrattas.

(c) As explained in paragraph 0 of the statement, the number of special Depressed Class seats in Bengal—which will not exceed 10—has not yet been fixed. The number of General seats will be 80, less the number of special Depressed Class seats.

(d) One of these seats is a Tumandar's seat. The four Land-holder's seats will be filled from special constituencies with joint electorates. It is probable, from the distribution of the electorate, that the members returned will be one Hindu, one Sikh, and two Muhammadans.

(e) This woman's seat will be filled from a non-communal constituency at Shillong.

"Then there was the question of the representation of communities in the Centre, particularly of the Muslim community. There, I think, I can say definitely—1 think I have said it indirectly very often before — that the Government consider that the Muslim community should have a representation 33 1/3 percent in the Federal Centre. As far as Indian India is concerned that must be a matter for arrangement between the communities affected and the princes, but, so far as the British Government has any part in the question we will, at any time, give our

good offices to making it as easy as possible for the arrangement between those parties with regard to the future allocation of seats."

APPENDIX XX

POONA PACT

²⁸ mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/40G4.Pakistan or the Partition of India APPENDIX.htm - _msocom_2

(1) There shall be seats reserved for the Depressed Classes out of the general electorate seats in the Provincial Legislatures as follows:—

Madras 30; Bombay with Sind 15; Punjab 8; Bihar and Orissa 18; Central Provinces 20; Assam 7; Bengal 30; United Provinces 20; Total 148.

These figures are based on the total strength of the Provincial Councils, announced in the Prime Minister's decision.

(2) Election to these seats shall be by joint electorates subject, however, to the following procedure:

All the members of the Depressed Classes registered in the general electoral roll in a constituency will form an electoral college, which will elect a panel of four candidates belonging to the Depressed Classes for each of such reserved seats, by the method of the single vote; the four persons getting the highest number of votes in such primary election, shall be candidates for election by the general electorate.

(3) Representation of the Depressed Classes in the Central Legislature shall likewise be on the principle of joint electorates and reserved seats by the method of primary election in the manner provided for in Clause two above, for their representation in the Provincial Legislatures.

(4) In the Central Legislature, eighteen percent of the seats allotted to the general electorate for British India in the said Legislature shall be reserved for the Depressed Classes.

(5) The system of primary election to a panel of candidates for election to the Central and Provincial Legislatures, as herein before mentioned,

shall come to an end after the first ten years, unless terminated sooner by mutual agreement under the provision of Clause six below.

(6) The system of representation of the Depressed Classes by reserved seats in the Provincial and Central Legislatures as I provided for in Clauses 1 and 4 shall continue until determined by mutual agreement between the communities concerned in the settlement.

(7) Franchise for the Central and Provincial Legislature's for the Depressed Classes shall be as indicated in the Lothian Committee Report.

(8) There shall be no disabilities attaching to anyone on the ground of his being a member of the Depressed Classes in regard to any elections to local bodies or appointment to the Public Services. Every endeavour shall be made to secure fair representation of the Depressed Classes in these respects, subject to such educational qualifications as may be laid down for appointment to the Public Services.

(9) In every province, out of the educational grant an adequate sum shall be earmarked for providing educational facilities to the members of the Depressed Classes.

COMMUNAL REPRESENTATION IN SERVICES
GOVERNMENT OF INDIA RESOLUTION

²⁹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40G4.Pakistan or the Partition of India APPENDIX.htm - _msocom_3

Establishments

the 4th July 1934

SECTION I—GENERAL

No. F. 14/17-B./33.—In accordance with undertakings given in the Legislative Assembly the Government of India have carefully reviewed the results of the policy followed since 1925 of reserving a certain percentage of direct appointments to Government service for the redress of communal inequalities. It has been represented that though this policy was adopted mainly with the object of securing increased representation for Muslims in the public services, it has failed to secure for them their due share of appointments and it has been contended that this position cannot be remedied unless a fixed percentage of vacancies is reserved for Muslims. In particular, attention has been drawn to the small number of Muslims in the Railway services, even on those railways which run through areas in which Muslims form a high percentage of the total population.

The review of the position has shown that these complaints are justified, and the Government of India are satisfied by the enquiries they have made that the instructions regarding recruitment must be revised with a view to improving the position of Muslims in the services.

2. In considering this general question the Government of India have also to take into account the claims of Anglo-Indians and Domiciled Europeans and of the depressed classes. Anglo-Indians have always held a large percentage of appointments in certain branches of the public service and it has been recognised that, in view of the degree to which the community has been dependent on this employment, steps must be taken to prevent in the new conditions anything in the nature of a rapid displacement of Anglo-Indians from their existing positions, which might occasion a violent dislocation of the economic structure of the community. The instructions which follow in regard to the employment

of Anglo-Indians and Domiciled Europeans in certain departments are designed to give effect to this policy.

3. In regard to the depressed classes it is common ground that all reasonable steps should be taken to secure for them a fair degree of representation in the public services. The intention of caste Hindus in this respect was formally stated in the Poona Agreement of 1932 and His Majesty's Government in accepting that agreement took due note of this point. In the present state of general education in these classes the Government of India consider that no useful purpose will be served by reserving for them a definite percentage of vacancies out of the number available for Hindus as a whole, but they hope to ensure that duly qualified candidates from the depressed classes are not deprived of fair opportunities of appointment merely because they cannot succeed in open competition.

4. The Government of India have also considered carefully the position of minority communities other than those mentioned above and are satisfied that the new rules will continue to provide for them, as at present, a reasonable degree of representation in the services.

SECTION II—SCOPE OF RULES

5. The Government of India propose to prescribe annual returns in order to enable them to watch the observance of the rules laid down below.

6. The general rules which the Government of India have with the approval of the Secretary of State adopted with the purpose of securing these objects are explained below. They relate only to direct recruitment and not to recruitment by promotion which will continue to be made as at present solely on merit. They apply to the Indian Civil Service, the Central Services, Class I and Class II, and the Subordinate Services under the administrative control of the Government of India with the exception of a few services and posts for which high technical or special qualifications are required, but do not apply to recruitment for these Services in the province of Burma. In regard to the Railways, they apply to all posts other than those of inferior servants or labourers on the four State-managed Railways, and the administrations of the Company-

managed Railways will be asked to adopt similar rules for the services on these Railways.

SECTION III—

RULES FOR SERVICES RECRUITED ON AN ALL-INDIA BASIS

7. (1) For the Indian Civil Service and the Central and Subordinate Services to which recruitment is made on an All-India basis, the following rules will be observed:—

(i) 25 percent of all vacancies to be filled by direct recruitment of Indians, will be reserved for Muslims and $8\frac{1}{3}$ percent for other minority communities.

(ii) When recruitment is made by open competition, if Muslims or the other minority communities obtain less than these percentages, these percentages will be secured to them by means of nomination; if, however, Muslims obtain more than their reserved percentage in open competition, no reduction will be made in the percentage reserved for other minorities, while if the other minorities obtain more than their reserved percentage in open competition, no reduction will be made in the percentage reserved for Muslims.

(iii) If members of the other minority communities obtain less than their reserved percentage in open competition and if duly qualified candidates are not available for nomination, the residue of the $8\frac{1}{3}$ percent will be available for Muslims.

(iv) The percentage of $8\frac{1}{3}$ reserved for the other minorities will not be distributed among them in any fixed proportion.

(v) In all cases a minimum standard of qualification will be imposed and the reservations are subject to this condition.

(vi) In order to secure fair representation for the depressed classes duly qualified members of these classes may be nominated to a public service, even though recruitment to that service is being made by competition. Members of these classes, if appointed by nomination,

will not count against the percentages reserved in accordance with clause (i) above.

(2) For the reasons given in paragraph 2 of this Resolution, the Government of India have paid special attention to the question of Anglo-Indians and Domiciled Europeans in the gazetted posts on the Railways for which recruitment is made on an All-India basis. In order to maintain approximately their present representation in these posts the Anglo-Indian and Domiciled European community will require to obtain about 9 percent of the total vacancies available to members of Indian communities. The Government of India have satisfied themselves that at present the community is obtaining by promotions to these gazetted posts and by direct recruitment to them more than 9 percent, of these vacancies. In these circumstances, it has been decided that no special reservation is at present required. If and when the community is shown to be receiving less than 9 percent of the vacancies, it will be considered what adjustments in regard to direct recruitment may be required to safeguard their legitimate interests.

SECTION IV—RULES FOR SERVICES RECRUITED LOCALLY

(3) In the case of all services to which recruitment is made by local areas and not on an All-India basis, e.g., subordinate posts in the Railways, Posts and Telegraphs Department, Customs Service, Income-tax Department, etc., the general rules prescribed above will apply subject to the following modifications:—

(1) The total reservation for India as a whole of- 25 percent for Muslims and of $8\frac{1}{3}$ percent for other minorities will be obtained by fixing a percentage for each Railway or local area or circle having regard to the population ratio of Muslims and other minority communities in the area and the rules for recruitment adopted by the local Government of the area concerned;

(2) In the case of the Railways and Posts and Telegraphs Department and Customs Service in which the Anglo-Indian and Domiciled European community is at present principally employed special provisions described in the next paragraph are required in order to give effect to the policy stated in paragraph 2 above.

9. (1) (a) The Anglo-Indian and Domiciled European community at present holds 8.8 percent of the subordinate posts on the Railways. To safeguard their position 8 percent of all vacancies to be filled by direct recruitment will be reserved for members of this community. This total percentage will be obtained by fixing a separate percentage (i) for each Railway having regard to the number of members of this community at present employed, (ii) for each branch or department of the Railway service, so as to ensure that Anglo-Indians continue to be employed in those branches in which they are at present principally employed, e.g., the Mechanical Engineering, Civil Engineering and Traffic Departments. No posts in the higher grades of the subordinate posts will be reserved, and promotion to these grades will be made, as at present, solely on merit.

(b) The reservation of 25 percent for Muslims and 8 percent for Anglo-Indians makes it necessary to increase the reservation of $33 \frac{1}{3}$ percent, hitherto adopted for all minority communities, in order to safeguard the interests of minorities other than Muslims and Anglo-Indians. It has been decided, therefore, to reserve for them 6 percent of vacancies filled by direct recruitment, which is approximately the percentage of posts held by members of these communities at present. This total reservation will be obtained in the manner prescribed in paragraph 8 (1) of this Resolution and will not be further sub-divided among the minority communities.

(2) In the Posts and Telegraphs Department the same principles will be followed as in the case of the Railways for safeguarding the interests of the Anglo-Indian and Domiciled European community which at present holds about 2'2 percent of all subordinate posts. It has been ascertained that if a reservation is made for this community of 5 percent of the vacancies in the branches, departments or categories which members of this community may reasonably be expected to enter, it will result in securing for them a percentage equal to slightly less than the percentage of subordinate posts which they at present hold. In the departments or branches in which a special reservation is made for Anglo-Indians the reservation of vacancies for other minorities will be fixed so as to be equal approximately to the percentage of subordinate posts at present held by them. The total reservation for Anglo-Indians and other minority communities, other than Muslims, will in any case be not less than $8 \frac{1}{3}$ percent

(3) Anglo-Indians are at present largely employed in subordinate posts in the Appraising Department and in the Superior Preventive Service at

the major ports. For the former department special technical qualifications are required, and in accordance with the general principles indicated in paragraph 6 of this Resolution it will be excluded from the operation of these rules.

III the Preventive Service special qualifications are required, and the present system of recruitment whereby posts are reserved for Anglo-Indians will be maintained.

ORDER.—Ordered that this Resolution be communicated to all Local Governments and Administrations and the several Departments of the Government of India, for information (and guidance) and that it be also published in the *Gazette of India*.

M. G. HALLET,

Secretary to the Government of India.

APPENDIX XXIV

GOVERNMENT OF INDIA RESOLUTION OF 1943 ON COMMUNAL REPRESENTATION OF SCHEDULED CASTES IN THE SERVICES

HOME DEPARTMENT

RESOLUTION

New Delhi, the 11th August 1943

No. 23/5/42-Ests(S).—In pursuance of the undertaking given in the Central Legislative Assembly in 1942, the Government of India have carefully reviewed the policy which they have followed since 1934 in

regard to the representation of Depressed Classes, since described in the Government of India Act, 1935 as 'Scheduled Castes', in services under their administrative control. In their Resolution No. F. 14/17-B/33, dated the 4th July 1934, the Government of India stated that in the then state of general education among these classes they did not consider that any useful purpose would be served by reserving for them a definite percentage of vacancies. In order, however, to secure fair representation for Scheduled Castes they directed that duly qualified members of these classes might be nominated to a public service even though recruitment to that service was being made by competition. Various measures have been taken since then to secure increased representation of the Scheduled Castes in the public services. The results obtained so far have, however, not been substantial. While the Government of India recognise that this is mainly due to the difficulty of getting suitably qualified candidates, they now consider that the reservation of a definite percentage of vacancies might provide the necessary stimulus to candidates of these castes to obtain better qualifications and thus make themselves eligible for various Government posts and services. It is believed that the grant of age concessions and the reduction of prescribed fees might also help to secure qualified candidates from among members of the Scheduled Castes. The Government of India have accordingly decided to prescribe the rules mentioned in paragraph 4 below.

2. On the basis of the proportion which the population of the Scheduled Castes bears to the population of the other communities entitled to a share in the present unreserved vacancies, the Scheduled Castes would be entitled to 12.75 percent out of the total number of such vacancies. It is, however, not likely that sufficient number of candidates from the Scheduled Castes would be forthcoming to fill the full number of vacancies to which they are entitled on a population basis. The Government of India have, therefore, come to the conclusion that for the present it will be sufficient to reserve a somewhat smaller percentage, *viz.*, 8 1/3. They propose to consider the question of raising this percentage as soon as a sufficient number of qualified candidates from these classes are found to be available.

3. The rules mentioned below will apply only to direct recruitment and not to recruitment by promotion which will continue to be made as at present without reference to communal considerations. They will apply to Central Services (Class I and Class II) and the Subordinate Services under the administrative control of the Government of India with the exception

of a few services and posts for which highly technical or special qualifications are required and which have been excluded from the purview of the communal representation orders contained in their Resolution No. F. 14/17-B/33, dated the 4th July 1934. In regard to the Railways, the rules will apply to all posts other than those of inferior servants and labourers. The administrations of the Company-managed Railways will be asked to adopt similar rules for the services on those Railways.

4. The following rules will therefore be observed in future in order to secure better representation of the Scheduled Castes in public services :—

(1) 8 1/3 percent of all vacancies to be filled by direct recruitment of Indians in the Central and Subordinate Services to which recruitment is made on an all-India basis will be reserved for Scheduled Castes candidates.

(2) In the case of services to which recruitment is made by local areas or circles and not on an all-India basis, *e.g.*, subordinate posts in the Railways, Posts and Telegraphs Department, the Customs Services, the Income-Tax Department, etc., the total reservation for India as a whole of 8 1/3 percent of vacancies for Scheduled Castes candidates will be obtained by fixing a percentage for each local area or circle having regard to the population of Scheduled Castes in the area or circle concerned and the rules for recruitment adopted by the Provincial Government of the area or circle concerned.

(3) When recruitment is made by open competition and Scheduled Castes candidates obtain fewer vacancies than are reserved for them, the difference will, if possible, be made up by the nomination of duly qualified candidates of those castes.

(4) If Scheduled Castes candidates obtain less than the number of vacancies reserved for them in open competition and duly qualified candidates of these castes are not available, or not available in sufficient numbers, for nomination, the remaining vacancies reserved for such candidates will be treated as unreserved ; but a corresponding number of vacancies will be reserved for them in that *year* under clause (1) or clause (2) above.

(5) If duly qualified candidates of the Scheduled Castes are again not available to fill the vacancies carried forward from the previous year

under clause (4) the vacancies not filled by them will be treated as unreserved.

(6) In all cases) a minimum standard of qualification will be prescribed and the reservation will be subject to this condition.

(7) The maximum age limit prescribed for appointment to a service or post will be increased by three years in the case of candidates belonging to the Scheduled Castes.

(8) The fees prescribed for admission to any examination or selection will be reduced to one-fourth in the case of candidates belonging to the Scheduled Castes.

(9) The orders contained in the foregoing rules will also apply to temporary vacancies lasting three months or longer, including vacancies in permanent posts filled temporarily by persons not permanently employed in Government service.

(10) For the purposes of these rules a person shall be held to be a member of the Scheduled Castes if he belongs to a caste which under the Government of India (Scheduled Castes) Order, 1936, has been declared to be a Scheduled Caste for the area in which he and his family ordinarily reside.

Order.—Ordered that a copy of this Resolution be communicated to all Chief Commissioners, the several Departments of the Government of India, the Director, Intelligence Bureau, and the Federal Public Service Commission for information and guidance; to the Political Department, the Crown Finance Department, the Secretary to the Governor-General (Public), the Secretary to the Governor-General (Reforms), the Secretary to the Governor-General (Personal), the Legislative Assembly Department, the Federal Court, the Military Secretary to His Excellency the Viceroy, and all Provincial Governments for information, and also that the Resolution be published in the *Gazette of India*.

E. CONRAN-SMITH, Secy.

APPENDIX XXV

CRIPPS PROPOSALS

Published on March 29, 1941

DRAFT DECLARATION FOR DISCUSSION WITH INDIAN LEADERS

His Majesty's Government having considered the anxieties expressed in this country and in India as to the fulfilment of promises made in regard to the future of India have decided to lay down in precise and clear terms the steps which they propose shall be taken for the earliest possible realisation of self-government in India. The object is the creation of a new Indian Union which shall constitute a Dominion associated with the United Kingdom and other Dominions by a common allegiance to the Crown but equal to them in every respect, in no way subordinate in any aspect of its domestic or external affairs.

His Majesty's Government, therefore, make the following Declaration:

- (a) (a) Immediately upon cessation of hostilities steps shall be taken to set up in India in manner described hereafter an elected body charged with the task of framing a new Constitution for India.
- (b) (b) Provision shall be made, as set out below, for participation of Indian States in the Constitution-making body.
- (c) (c) His Majesty's Government undertake to accept and implement forthwith the Constitution so framed subject only to:—
 - (i) (i) The right of any Province of British India that is not prepared to accept the new Constitution to retain its present constitutional position, provision being made for its subsequent accession if it so decides.

With such non-acceding Provinces, should they so desire, His Majesty's Government will be prepared to agree upon a new Constitution giving them the same full status as the Indian Union and arrived at by a procedure analogous to that here laid down.

- (ii) (ii) The signing of a Treaty which shall be negotiated between His Majesty's Government and the Constitution-making body. This Treaty will cover all necessary matters arising out of the complete transfer of responsibility from British to Indian hands; it will make provision, in accordance with undertakings given by His Majesty's

Government, for the protection of racial and religious minorities ; but will not impose any restriction on the power of the Indian Union to decide in future its relationship to other Member States of the British Commonwealth.

Whether or not an Indian State elects to adhere to the Constitution it will be necessary to negotiate a revision of its Treaty arrangements so far as this may be required in the new situation.

- (d)(d) The Constitution-making body shall be composed as follows unless the leaders of Indian opinion in the principal communities agree upon some other form before the end of hostilities :—

Immediately upon the result being known of Provincial elections which will be necessary at the end of hostilities, the entire membership of the Lower Houses of Provincial Legislatures shall as a single electoral college proceed to the election of the Constitution-making body by the system of provincial representation. This new body shall be in number about 1/10th of the number of the electoral college.

Indian States shall be invited to appoint representatives in the same proportion to their total population as in the case of representatives of British India as a whole and with the same powers as British Indian members.

- (e)(e) During the critical period which now faces India and until the New Constitution can be framed His Majesty's Government must inevitably bear the responsibility for and retain the control and direction of the defence of India as part of their world war effort, but the task of organising to the full the military, moral and material resources of India must be the responsibility of the Government of India with the co-operation of the people of India. His Majesty's Government desire and invite the immediate and effective participation of the leaders of the principal sections of the Indian people in the counsels of their country, of the Commonwealth and of the United Nations. Thus they will be enabled to give their active and constructive help in the discharge of a task which is vital and essential for the future freedom of India.

(f)

PARAMOUNTCY AND THE CLAIM OF THE INDIAN STATES TO BE INDEPENDENT

The announcement by Travancore and Hyderabad to declare themselves Independent Sovereign States on 15th of August when India becomes a dominion and the inclination shown by other States to follow their example has created a new problem. The problem is a crucial one and requires to be seriously considered. There are two aspects to the question. Can the States declare themselves Independent? Should they declare themselves Independent?

To begin with the first. The basis of the claim made by the States for a right to declare themselves independent lies in the Statement of 12th May 1946 issued by the Cabinet Mission in which they say that the British Government could not and will not in any circumstances transfer paramountcy to an Indian Government which means that the rights of the States which follow from their relationship to the Crown will no longer exist and that all the rights surrendered by the States to the paramount power will return to the States. The Statement of the Cabinet Mission that the Crown could not transfer paramountcy is obviously not a statement of political policy. It is a statement of law. The question is, is this a correct statement of the law as it applies to the States?

There is nothing original in the proposition set out by the Cabinet Mission. It is a mere repetition of the view propounded by the Butler Committee appointed in 1929 to examine the relationship between the Crown and the Indian States.

As students of the subject know the Princes in the stand they took before the Butler Committee contended for two propositions :—

- (i) That Paramountcy could not override the *terms* and conditions contained in the Treaties between the Princes and the States but was limited by them.
- (ii) That the relations embodied in Paramountcy were of a personal nature between the Crown and the Princes and could not, therefore, be transferred by the Crown to an Indian Government without the consent of the Princes.

The Butler Committee repudiated the first of these two contentions. It put the matter in most ruthless language by declaring that Paramountcy was Paramount and was not limited by any terms contained in the Treaties. As regards the second contention, strangely enough, the Butler Committee upheld. Whether it was to appease the Princes who were

annoyed with the Committee for turning down the Princes' contention regarding Paramountcy it is no use speculating. The fact, however, remains that it gave immense satisfaction to the Political Department of the Government of India and to the Princes.

The doctrine that Paramountcy cannot be transferred to an Indian Government is a most mischievous doctrine and is based upon an utter misunderstanding of the issues involved. The doctrine is so unnatural that the late Prof. Holdsworth, author of the History of English Law, had to exercise a great deal of ingenuity in defending it in the pages of the Law Quarterly Review for October 1930. Unfortunately, no Indian student of Constitutional Law has ever bothered to controvert his views with the result that they have remained as the last and final word on the subject. No wonder the Cabinet Mission adopted them as valid and acted upon them in settling the issue of British India *vs.* Indian States. It is a pity that the Congress Working Committee, which was negotiating with the Cabinet Mission for a settlement, did not challenge the proposition enunciated by the Mission in regard to Paramountcy. But these circumstances cannot take away the right of Indians to examine the matter *de novo* and come to their own independent judgement and stand for it if they are convinced that their view is the right view, no matter what the Cabinet Mission has said.

The case against the position taken by the Cabinet Mission in regard to Paramountcy can be stated in the following propositions :—

(1) Paramountcy merely is another name for what is called the prerogative of the Crown. It is true that Paramountcy as a prerogative of the Crown differs from the ordinary prerogative of the Crown in two respects—(a) The basis of the ordinary prerogative of the Crown lies in Common Law as distinguished from Statute Law while the basis of the Prerogative arising from Paramountcy lies in treaties supplemented by *usage*, (b) the Common Law prerogative of the Crown extends to all the subjects of the Crown resident in the King's dominions and over aliens temporarily resident therein while Paramountcy as a prerogative extends only over the Indian States. Paramountcy is no doubt a distinct part of the prerogative of the Crown. Nonetheless, the fact remains that Paramountcy is a prerogative of the Crown.

(2) Being the prerogative of the King, the exercise of Paramountcy is subject to that part of the Municipal Law which is called the law of the Constitution

(3) According to the principle of the Constitutional Law, while the

prerogative vests in the King, the King has no discretion in the exercise of his prerogative but can exercise it only in accordance with the advice given to him by his Ministers. The King cannot exercise it independently of the advice of his Ministers.

The last proposition enunciated above requires further elaboration. For, it may be asked on the advice of which Ministry is the Crown to act. The answer is on the advice of the Ministry of the Dominion concerned. Before the Statute of Westminster the British Empire constituted one single Dominion. Consequently, in the matter of the exercise of its prerogative rights, the Crown acted on the advice of the British Cabinet. After the passing of the Statute of Westminster which carved out Canada, Australia, South Africa and Ireland as separate Dominions, the Crown, in the exercise of its prerogative rights acts on the advice of the Cabinet of the Dominion concerned. It is bound to do so. It cannot do otherwise. It follows that when India becomes a Dominion, the Crown will be bound to act in the exercise of its prerogative rights, *i.e.*, Paramountcy on the advice of the Indian Cabinet.

The protagonists of the theory, that Paramountcy cannot be transferred to the Government of India, rely on the omission from the Government of India Act 1935 of the provisions of section 39 of the Government of India Act of 1933 (they were reproduced in section 33 of the Government of India Acts, 1915—19) according to which the civil and military Government of India (as distinguished from the civil and military Government of British India) is vested in the Governor General in Council and argue that the omission is evidence in support of the conclusion that Paramountcy could not be transferred to an Indian Government. To say the least the argument is purile. The Existence or non-existence of such a provision in the Government of India Act is quite beside the point and proves nothing. The non-existence of the clause does not prove that India can under no circumstances claim the right to advise the Crown in regard to the exercise of Paramountcy. Its existence in the Government of India Act does not mean that such a power was vested in it during 1833 to 1935 when it formed part of the Act for, that very clause contained the proviso whereby the Governor-General in Council was required to pay due obedience to all such orders as may be issued from the Secretary of State which means, even during 1833 to 1935, the ultimate authority to advise the Crown in the matter of the exercise of the prerogative was the Secretary of State for India in British India.

The different methods of disposing of Paramountcy adopted in the

various Acts passed by Parliament relating to the governance of India between the 1833 to 1935 do not and cannot in any way affect the claim of the Indian people to advise the Crown in the exercise of Paramountcy. Under the Constitutional Law of the Empire only when a country has become a dominion, that it can claim the right to advise the Crown and the fact that before it became a dominion the Crown was differently advised is no bar to its claim. In the 1935 Act, India was not a country with responsible Government. But even if it was, India could not have claimed to advise the Crown in regard to the exercise of its prerogative rights regarding Indian States. This is because the Constitutional Law of the British Empire makes difference between responsible Government and Dominion Status. In responsible Government, the right of the Cabinet to advise the Crown and the obligation of the Crown to accept it is confined to cases of the exercise of the prerogative arising out of the internal affairs of the country. As to external affairs the British Cabinet retained the right to advise the Crown. But in the case of a Dominion, the Crown is bound to accept the advise of the Ministry with regard to all cases of the exercise of the prerogative whether it relates to internal affairs or external affairs. That is why a dominion can make a treaty with a foreign country without the intervention of the British Cabinet. The fact that the Government of India was not permitted to advise the Crown in the exercise of its rights of Paramountcy does not mean that there is any inherent Constitutional incapacity which disentitles her from claiming the right to advise. The moment India gets the Status of a Dominion it automatically acquires the capacity to advise the Crown on Paramountcy. What has been stated above is no more than a summary of the Constitutional Law of the British Empire and the process of its evolution showing how a part of the Empire which acquires the Status of a Dominion becomes vested with the exclusive right to advise the Crown in the exercise of its prerogative. Why should this right be denied to India when she becomes a Dominion it is difficult to understand. On parity of reasoning, India should get the right to advise the Crown in the exercise of its prerogative as did Canada, Australia, South Africa and Ireland. That Prof. Holdsworth came to a different conclusion is due not to any difference in the fundamental propositions of Constitutional Law stated above. Indeed he accepts them in toto. The reason why he came to a different conclusion is because he posed quite a different question for argument. The question posed by Prof. Holdsworth was whether the Crown could cede or transfer Paramountcy to an Indian Government.

This is not the real issue. The real issue is whether the Indian Dominion can claim the advise to the Crown in the exercise of Paramountcy. In other words, we are not concerned with the question whether Paramountcy could be transferred. The issue with which we are concerned is how Paramountcy can be exercised. I am sure that if Prof. Holdsworth had realised what the real issue was, he could not have come to a different conclusion.

So far I have dealt with one part of the Cabinet Mission's statement where they say that the Crown could not transfer Paramountcy to an Indian Government. There remains for consideration the other parts of their statement in which they say that the Crown will not transfer Paramountcy to an Indian Government. According to the Cabinet Mission, Paramountcy will lapse. This is a most astounding statement and runs contrary to another well-established principle of the Constitutional Law. According to this principle, the King cannot surrender or abandon his prerogative rights. If the Crown cannot transfer Paramountcy the Crown cannot also abandon it. The validity of this principle was admitted by the Privy Council in *The Queen vs. Eduljee Byramjee* decided in 1840 and reported in 5 Moore's P.C. p. 276 wherein they said (p. 294) that the Crown could not even by charter part with its prerogative. It is, therefore, obvious that the statement made by the Cabinet Mission that the Crown will not exercise Paramountcy is contrary to the Constitutional Law by which the Empire is governed. The Crown must continue to exercise Paramountcy. It is of course true that the Crown can surrender its prerogative if permitted to do so by express statutory authority. The question is whether it would be legal and proper for the British Parliament to make a Law permitting the abandoning of Paramountcy. It would be open, I am sure, for Indians to argue that such a step by the British Parliament would neither be proper nor legal. It would not be legal for the simple reason that after India becomes Dominion, the Statute abrogating Paramountcy can be passed by the Dominion Parliament of India and the British Parliament would have no jurisdiction in this matter at all. Again a Statute passed by the Parliament of the Great Britain abrogating Paramountcy would be improper. The reason is obvious. The army is the ultimate sanction for Paramountcy. This army has been the Indian Army for which British India has paid all along. Without the powerful army maintained by British India which was placed at the disposal of the Crown through his agent the Viceroy and Governor-General of India, the Crown would never have been able to build up and conserve the powers of

Paramourcy. These powers are of the nature of a Trust held by the Crown for the benefit of the people of India and it would be a gross breach of trust on the part of the British Parliament to pass a statute destroying this trust. Paramourcy is an advantage which is secured to it by treaty with the Princes. Independent India can, therefore, make valid claim for the inheritance of Paramourcy.

A question may be asked: What happens when India become Independent. The Crown disappears and the question of advising the Crown does not remain. Can Independent India claim to inherit the prerogative rights of the Crown? The answer is yes. She can. Independent India will be a succession State. For an answer to this question one must look to the provisions of International Law relating to succession among States. Oppenheim admits that a succeeding State can inherit certain rights of the preceding State. From Hall's International Law, it would appear that among other things, property and advantages secured to it by treaty can be inherited by a succession State. India as a succession State she can inherit certain rights. On this point the following extracts from Hall's International Law are relevant:

“And as the old State continues its life uninterruptedly, it possesses everything belonging to it as a person, which it has not expressly lost; so that property and advantages secured to it by treaty, which are enjoyed by it as a personal whole, or by its subjects in virtue of their being members of that whole, continue to belong to it. On the other hand, rights possessed in respect of the lost territory, including rights under treaties relating to cessions of territory and demarcations of boundary, obligations contracted with reference to it alone, and property which is within it, and has, therefore, a local character, or which, though not within it, belongs to state institutions localised there, transfer themselves to the new state person.”

The conclusion is that the Indian States will continue to be in the same position when India becomes Independent as they are now. They will be sovereign States to the extent they are, but they cannot be independent States so long as they remain under the suzerainty, as they must be, either of the Crown, if India remains a Dominion and under the suzerainty of the succession State, if India becomes independent. While the suzerainty remains they can never be independent. The States may declare themselves independent. But they must realise that while the suzerainty lasts and it must continue even when India becomes independent, India will not recognise their independence nor can a foreign State accord them the status of an independent State. The only

way by which, the Indian States can be free themselves from Paramountcy would be to bring about a merger of sovereignty and suzerainty. That can happen only when the Indian States join the Indian Union as constituent units thereof. The States' spokesmen ought to know this. But as they seem to have forgotten it is necessary to remind them of what happened at the R T C. In the beginning, the States were not prepared to join the Federation. They agreed to join the Federation when they came to know that the Butler Committee had laid down the doctrine that Paramountcy was Paramount. This change of attitude was due to the realisation that to the extent the powers comprised in Paramountcy were handed over to the Federation to that extent Paramountcy would vanish. In fact, as most of us know, the Princes did raise the question to the then Secretary of State and asked him that the scope of Paramountcy should be limited to, by excluding the subjects included in List No. 1. The then Secretary of State had no answer to give and silenced the Princes by frowning upon them. Apart from the attitude of the then Secretary of State, the point remains that the Princes had seen the point that the dissolution of Paramountcy lay in joining the Federation. That point remains as valid now as it was then. It would be wise on the part of the Indian States to follow that line and not to pursue the mirage of independence. The people of India should, therefore, repudiate the proposition enunciated by the Cabinet Mission that Paramountcy will lapse. They should insist that Paramountcy cannot lapse and that they are the heirs to that Paramountcy and will continue to exercise it, *vis-a-vis* such Indian States as do not join the Union even after the British have left. The States, on the other hand, should realise that their existence as Sovereign Indian States will not be worth 5 years purchase. It is in the interest of the Princes that they should join the Union and become Constitutional monarchs. Any Dewan who advises his Prince not to join the Union is really acting as the enemy of the Prince. The joining of the Federation will no doubt involve the introduction of responsible Government but it has this advantage, *viz.*, that the Union will guarantee to the Princes the rights relating to dynastic succession which is the most that a Prince can expect. To be independent and to hope to get recognition and protection from the UNO is to live in one's own paradise. It is doubtful if the UNO will give recognition to Indian States ignoring the claim by India of suzerainty over them. But even if that happens, the UNO will never grant any assistance to an Indian State from external aggression or internal commotion without insisting that the State should first

introduce responsible Government within its area. All these things are writ large on the wall. He who runs may read it. Those who refuse to read it will no doubt share the fate which befalls all those who are blinded by their self-interest.

PHILOSOPHY OF HINDUISM

Contents

Chapter 1 Philosophy of Hinduism

Does Hinduism recognize Equality?

How does Hinduism stand in this matter?

Does Hinduism recognise Fraternity?

What is the value of such a religion to man?

On what level does Hindu morality stand?

Of what use is this philosophy of the Upanishadas?

(The script published in the Writings and Speeches, vol. 3 published by Government of Maharashtra did not have any chapter names. It was divided in I to VI parts. For the sake of readership convenience we are providing additional hyperlinks to some paras by way of projecting some questions in the text.)

Editorial Note:

This script on Philosophy of Hinduism was found as a well-bound copy which we feel is complete by itself. The whole script seems to be a Chapter of one big scheme. This foolscap original typed copy consists of 169 pages.— Editors

CHAPTER I

Philosophy of Hinduism

I

What is the philosophy of Hinduism? This is a question which arises in its logical sequence. But apart from its logical sequence its importance is such that it can never be omitted from consideration. Without it no one can understand the aims and ideals of Hinduism.

It is obvious that such a study must be preceded by a certain amount of what may be called clearing of the ground and defining of the terms involved.

At the outset it may be asked what *does* this proposed title comprehend? Is this title of the Philosophy of Hinduism of the same nature as that of the Philosophy of Religion? I wish I could commit

myself one way or the other on this point. Indeed I cannot. I have read a good deal on the subject, but I confess I have not got a clear idea of what is meant by Philosophy of Religion. This is probably due to two facts. In the first place while religion is something definite, there is nothing definite* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_1 as to what is to be included in the term philosophy. In the second place Philosophy and Religion have been adversaries if not actual antagonists as may be seen from the story of the philosopher and the theologian. According to the story, the two were engaged in disputation and the theologian accused the philosopher that he was "like a blind man in a dark room, looking for a black cat which was not there". In reply the philosopher charged the theologian saying that "he was like a blind man in the dark room, looking for a black cat which was not there but he declared to have found there". Perhaps it is the unhappy choice of the title — Philosophy of Religion—which is responsible for causing confusion in the matter of the exact definition of its field. The nearest approach to an intelligible statement as to the exact subject matter of Philosophy of Religion I find in Prof. Pringle-Pattison who observes mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_2 :—

"A few words may be useful at the outset as an indication of what we commonly mean by the Philosophy of Religion. Plato described philosophy long ago as the synoptic view of things. That is to say, it is the attempt to see things together—to keep all the main features of the world in view, and to grasp them in their relation to one another as parts of one whole. Only thus can we acquire a sense of proportion and estimate aright the significance of any particular range of facts for our ultimate conclusions about the nature of the world-process and the world-ground. Accordingly, the philosophy of any particular department of experience, the Philosophy of Religion, the Philosophy of Art, the Philosophy of Law, is to be taken as meaning an analysis and interpretation of the experience in question in its bearing upon our view of man and the world in which he lives. And when the facts upon which we concentrate are so universal, and in their nature so remarkable, as those disclosed by the history of religion—the philosophy of man's religious experience—cannot but exercise a determining influence upon our general philosophical conclusions. In fact with many writers the particular discussion tends to merge in the more general."

"The facts with which a philosophy of religion has to deal are supplied

by the history of religion, in the most comprehensive sense of that term. As Tiele puts it, "all religions of the civilised and uncivilised world, dead and living", is a 'historical and psychological phenomenon' in all its manifestations. These facts, it should be noted, constitute the data of the philosophy of religion; they do not themselves constitute a 'philosophy' or, in Tiele's use of the term, a 'science' of religion. 'If, he says, I have minutely described all the religions in existence, their doctrines, myths and customs, the observances they inculcate, and the organisation of their adherents, tracing the different religions from their origin to their bloom and decay, I have merely. Collected the materials with which the science of religion works'. 'The historical record, however complete, is not enough; pure history is not philosophy. To achieve a philosophy of religion we should be able to discover in the varied manifestations a common principle to whose roots in human nature we can point, whose evolution we can trace by intelligible-stages from lower to higher and more adequate forms, as well as its intimate relations with the other main factors in human civilisation".

If this is Philosophy of Religion it appears to me that it is merely a different name for that department of study, which is called comparative religion with the added aim of discovering a common principle in the varied manifestations of religion. Whatever be the scope and value of such a study, I am using the title Philosophy of Religion to denote something quite different from the sense and aim given to it by Prof. Pringle-Pattison. I am using the word Philosophy in its original sense, which was two-fold. It meant teachings as it did when people spoke of the philosophy of Socrates or the philosophy of Plato. In another sense it meant critical reason used in passing judgements upon things and events. Proceeding on this basis Philosophy of Religion is to me not a merely descriptive science. I regard it as being both descriptive as well as normative. In so far as it deals with the teachings of a Religion, Philosophy of Religion becomes a descriptive science. In so far as it involves the use of critical reason for passing judgement on those teachings, the Philosophy of Religion becomes a normative science. From this it will be clear what I shall be concerned with in this study of the Philosophy of Hinduism. To be explicit I shall be putting Hinduism on its trial to assess its worth as a way of life.

Here is one part of the ground cleared. There remains another part to be cleared. That concerns the ascertainment of the factors concerned and the definitions of the terms I shall be using.

A study of the Philosophy of Religion it seems to me involves the

determination of three dimensions. I call them dimensions because they are like the unknown quantities contained as factors in a product. One must ascertain and define these dimensions of the Philosophy of Religion if an examination of it is to be fruitful.

Of the three dimensions, Religion is the first. One must therefore define what he understands by religion in order to avoid argument being directed at cross-purposes. This is particularly necessary in the case of Religion for the reason that there is no agreement as to its exact definition. This is no place to enter upon an elaborate consideration of this question. I will therefore content myself by stating the meaning in which I am using the word in the discussion, which follows.

I am using the word Religion to mean Theology. This will perhaps be insufficient for the purposes of definition. For there are different kinds of Theologies and I must particularise which one I mean. Historically there have been two Theologies spoken of from ancient times. *Mythical* theology and *Civil* theology. The Greeks who distinguished them gave each a definite content. By *Mythical* theology they meant the tales of gods and their doings told in or implied by current imaginative literature. *Civil* theology according to them consisted of the knowledge of the various feasts and fasts of the State Calendar and the ritual appropriate to them. I am not using the word theology in either of these two senses of that word. I mean by theology *natural theology* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_3 which is the doctrine of God and the divine, as an integral part of the theory of nature. As traditionally understood there are three theses which 'natural theology' propounds. (1) That God exists and is the author of what we call nature or universe (2) That God controls all the events which make nature and (3) God exercises a government over mankind in accordance with his sovereign moral law.

I am aware there is another class of theology known as *Revealed Theology*—spontaneous self disclosure of divine reality—which may be distinguished from *Natural theology*. But this distinction does not really matter. For as has been pointed out mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_4 that a revelation may either "leave the results won by *Natural theology* standing without modifications, merely supplementing them by further knowledge not attainable by unassisted human effort" or it "may transform *Natural theology* in such a way that all the truths of natural theology would acquire richer and deeper meaning when seen in the light of a true revelation." But the view that a genuine *natural theology* and

a genuine *revelation theology* might stand in real contradiction may be safely excluded as not being possible.

Taking the three thesis of Theology namely (1) the existence of God, (2) God's providential government of the universe and (3) God's moral government of mankind, I take Religion to mean the propounding of an ideal scheme of divine governance the aim and object of which is to make the social order in which men live a moral order. This is what I understand by Religion and this is the sense in which I shall be using the term Religion in this discussion.

The second dimension is to know the ideal scheme for which a Religion stands. To define what is the fixed, permanent and dominant part in the religion of any society and to separate its essential characteristics from those which are unessential is often very difficult. The reason for this difficulty in all probability lies in the difficulty pointed out by Prof. Robertson Smith mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/17.Philosophy of Hinduism.htm - _msocom_5 when he says:—

"The traditional usage of religion had grown up gradually in the course of many centuries, and reflected habits of thought, characteristic of very diverse stages of man's intellectual and moral development. No conception of the nature of the gods could possibly afford the clue to all parts of that motley complex of rites and ceremonies which the later paganism had received by inheritance, from a series of ancestors in every state of culture from pure savagery upwards. The record of the religious thought of mankind, as it is embodied in religious institutions, resembles the geological record of the history of the earth's crust; the new and the old are preserved side by side, or rather layer upon layer".

The same thing has happened in India. Speaking about the growth of Religion in India, says Prof. Max Muller :—

"We have seen a religion growing up from stage to stage, from the simplest childish prayers to the highest metaphysical abstractions. In the majority of the hymns of the Veda we might recognise the childhood; in the Brahmanas and their sacrificial, domestic and moral ordinances the busy manhood; in the Upanishads the old age of the Vedic religion. We could have well understood if, with the historical progress of the Indian mind, they had discarded the purely childish prayers as soon as they had arrived at the maturity of the Brahamans; and if, when the vanity of sacrifices and the real character of the old god's had once been recognised, they would have been superseded by the more exalted religion of the Upanishads. But it was not so. Every religious thought

that had once found expression in India, that had once been handed down as a sacred heirloom, was preserved, and the thoughts of the three historical periods, the childhood, the manhood, and the old age of the Indian nation, were made to do permanent service in the three stages of the life of every individual. Thus alone can we explain how the same sacred code, the Veda, contains not only the records of different phases of religious thought, but of doctrines which we may call almost diametrically opposed to each other.”

But this difficulty is not so great in the case of Religions which are *positive* religions. The fundamental characteristic of *positive* Religions, is that they have not grown up like primitive religions, under the action of unconscious forces operating silently from age to age, but trace their origin to the teaching of great religious innovators, who spoke as the organs of a divine revelation. Being the result of conscious formulations the philosophy of a religion which is positive is easy to find and easy to state. Hinduism like Judaism, Christianity and Islam is in the main a positive religion. One does not have to search for its scheme of divine governance. It is not like an unwritten constitution. On the Hindu scheme of divine governance is enshrined in a written constitution and any one who cares to know it will find it laid bare in that Sacred Book called the Manu Smriti, a divine Code which lays down the rules which govern the religious, ritualistic and social life of the Hindus in minute detail and which must be regarded as the Bible of the Hindus and containing the philosophy of Hinduism.

The third dimension in the philosophy of religion is the criterion mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_6 to be adopted for judging the value of the ideal scheme of divine governance for which a given Religion stands. Religion must be put on its trial. By what criterion shall it be judged? That leads to the definition of the norm. Of the three dimensions this third one is the most difficult one to be ascertained and defined.

Unfortunately the question does not appear to have been tackled although much has been written on the philosophy of Religion and certainly no method has been found for satisfactorily dealing with the problem. One is left to one's own method for determining the issue. As for myself I think it is safe to proceed on the view that to know the philosophy of any movement or any institution one must study the revolutions which the movement or the institution has undergone. Revolution is the mother of philosophy and if it is not the mother of philosophy it is a lamp which illuminates philosophy. Religion is no

exception to this rule. To me therefore it seems quite evident that the best method to ascertain the criterion by which to judge the philosophy of Religion is to study the Revolutions which religion has undergone. That is the method which I propose to adopt.

Students of History are familiar with one Religious Revolution. That Revolution was concerned with the sphere of Religion and the extent of its authority. There was a time when Religion had covered the whole field of human knowledge and claimed infallibility for what it taught. It covered astronomy and taught a theory of the universe according to which the earth is at rest in the center of the universe, while the sun, moon, planets and system of fixed stars revolve round it each in its own sphere. It included biology and geology and propounded the view that the growth of life on the earth had been created all at once and had contained from the time of creation onwards, all the heavenly bodies that it now contains and all kinds of animals of plants. It claimed medicine to be its province and taught that disease was either a divine visitation as punishment for sin or it was the work of demons and that it could be cured by the intervention of saints, either in person or through their holy relics; or by prayers or

pilgrimages; or (when due to demons) by exorcism and by treatment which the demons (and the patient) found disgusting. It also claimed physiology and psychology to be its domain and taught that the body and soul were two distinct substances.

Bit by bit this vast Empire of Religion was destroyed. The Copernican Revolution freed astronomy from the domination of Religion. The Darwinian Revolution freed biology and geology from the trammels of Religion. The authority of theology in medicine is not yet completely destroyed. Its intervention in medical questions still continues. Opinion on such subjects as birth control, abortion and sterilisation of the defective are still influenced by theological dogmas. Psychology has not completely freed itself from its entanglements. None the less Darwinism was such a severe blow that the authority of theology was shattered all over to such an extent that it never afterwards made any serious effort to remain its lost empire.

It is quite natural that this disruption of the Empire of Religion should be treated as a great Revolution. It is the result of the warfare which science waged against theology for 400 years, in which many pitched battles were fought between the two and the excitement caused by them was so great that nobody could fail to be impressed by the revolution that was blazing on.

There is no doubt that this religious revolution has been a great blessing. It has established freedom of thought. It has enabled society "to assume control of itself, making its own the world it once shared with superstition, facing undaunted the things of its former fears, and so carving out for itself, from the realm of mystery in which it lies, a sphere of unhampered action and a field of independent thought". The process of secularisation is not only welcomed by scientists for making civilisation—as distinguished from culture—possible, even Religious men and women have come to feel that much of what theology taught was unnecessary and a mere hindrance to the religious life and that this chopping of its wild growth was a welcome process.

But for ascertaining the norm for judging the philosophy of Religion we must turn to another and a different kind of Revolution which Religion has undergone. That Revolution touches the nature and content of ruling conceptions of the relations of God to man, of Society to man and of man to man. How great was this revolution can be seen from the differences which divide savage society from civilized society.

Strange as it may seem no systematic study of this Religious Revolution has so far been made. None the less this Revolution is so great and so immense that it has brought about a complete transformation in the nature of Religion as it is taken to be by savage society and by civilised society although very few seem to be aware of it.

To begin with the comparison between savage society and civilised society.

In the religion of the savage one is struck by the presence of two things. First is the performance of rites and ceremonies, the practice of magic or tabu and the worship of fetish or totem. The second thing that is noticeable is that the rites, ceremonies, magic, tabu, totem and fetish are conspicuous by their connection with certain occasions. These occasions are chiefly those, which represent the crises of human life. The events such as birth, the birth of the first born, attaining manhood, reaching puberty, marriage, sickness, death and war are the usual occasions which are marked out for the performance of rites and ceremonies, the use of magic and the worship of the totem.

Students of the origin and history of Religion have sought to explain the origin and substance of religion by reference to either magic, tabu and totem and the rites and ceremonies connected therewith, and have deemed the occasions with which they are connected as of no account. Consequently we have theories explaining religion as having arisen in magic or as having arisen in *fetishism*. Nothing can be a greater error than

this. It is true that savage society practices magic, believes in tabu and worships the totem. But it is wrong to suppose that these constitute the religion or form the source of religion. To take such a view is to elevate what is incidental to the position of the principal. The principal thing in the Religion of the savage are the elemental facts of human existence such as life, death, birth, marriage etc. Magic, tabu, totem are things which are incidental. Magic, tabu, totem, fetish etc., are not the ends. They are only the means. The end is life and the preservation of life. Magic, tabu etc., are resorted to by the savage society not for their own sake but to conserve life and to *exercise* evil influences from doing harm to life. Thus understood the religion of the savage society was concerned with life and the preservation of life and it is these life processes which constitute the substance and source of the religion of the savage society. So great was the concern of the savage society for life and the preservation of life that it made them the basis of its religion. So central were the life processes in the religion of the savage society that everything, which affected them, became part of its religion. The ceremonies of the savage society were not only concerned with the events of birth, attaining of manhood, puberty, marriage, sickness, death and war they were also concerned with food. Among pastoral peoples the flocks and herds are sacred. Among agricultural peoples seedtime and harvest are marked by ceremonials performed with some reference to the growth and the preservation of the crops. Likewise drought, pestilence, and other strange, irregular phenomena of nature occasion the performance of ceremonials. Why should such occasions as harvest and famine be accompanied by religious ceremonies? Why is magic, tabu, totem be of such importance to the savage. The only answer is that they all affect the preservation of life. The process of life and its preservation form the main purpose. Life and preservation of life is the core and centre of the Religion of the savage society. As pointed out by Prof. Crawley the religion of the savage begins and ends with the affirmation and conservation of life.

In life and preservation of life consists the religion of the savage. What is however true of the religion of the savage is true of all religions wherever they are found for the simple reason that constitutes the essence of religion. It is true that in the present day society with its theological refinements this essence of religion has become hidden from view and is even forgotten. But that life and the preservation of life constitute the essence of religion even in the present day society is beyond question. This is well illustrated by Prof. Crowley. When

speaking of the religious life of man in the present day society, he says how—

"a man's religion does not enter into his professional or social hours, his scientific or artistic moments; practically its chief claims are settled on one day in the week from which ordinary worldly concerns are excluded. In fact, his life is in two parts; but the moiety with which religion is concerned is the elemental. Serious thinking on ultimate questions of life and death is, roughly speaking, the essence of his Sabbath; add to this the habit of prayer, giving the thanks at meals, and the subconscious feeling that birth and death, continuation and marriage are rightly solemnised by religion, while business and pleasure may possibly be consecrated, but only metaphorically or by an overflow of religious feeling."

Comparing this description of the religious concerns of the man in the present day society with that of the savage, who can deny that the religion is essentially the same, both in theory and practice whether one speaks of the religion of the savage society or of the civilised society.

It is therefore clear that savage and civilised societies agree in one respect. In both the central interests of religion—namely in the life processes by which individuals are preserved and the race maintained—are the same. In this there is no real difference between the two. But they differ in two other important respects.

In the first place in the religion of the savage society there is no trace of the idea of God. In the second place in the religion of the savage society there is no bond between morality and Religion. In the savage society there is religion without God. In the savage society there is morality but it is independent of Religion.

How and when the idea of God became fused in Religion it is not possible to say. It may be that the idea of God had its origin in the worship of the Great Man in Society, the Hero—giving rise to theism—with its faith in its living God. It may be that the idea of God came into existence as a result of the purely philosophical speculation upon the problem as to who created life—giving rise to Deism—with its belief in God as Architect of the Universe.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - [_msocom_7](#) In any case the idea of God is not integral to Religion. How it got fused into Religion it is difficult to explain. With regard to the relation between Religion and Morality this much may be safely said. Though the relation between God and Religion is not quite integral, the relation between Religion and morality is. Both religion and

morality are connected with the same elemental facts of human existence—namely life, death, birth and marriage. Religion consecrates these life processes while morality furnishes rules for their preservation. Religion in consecrating the elemental facts and processes of life came to consecrate also the rules laid down by Society for their preservation. Looked at from this point it is easily explained why the bond between Religion and Morality took place. It was more intimate and more natural than the bond between Religion and God. But when exactly this fusion between Religion and Morality took place it is not easy to say.

Be that as it may, the fact remains that the religion of the Civilised Society differs from that of the Savage Society into two important features. In civilised society God comes in the scheme of Religion. In civilised society morality becomes sanctified by Religion.

This is the first stage in the Religious Revolution I am speaking of. This Religious Revolution must not be supposed to have been ended here with the emergence of these two new features in the development of religion. The two ideas having become part of the constitution of the Religion of the Civilised Society have undergone further changes which have revolutionized their meaning and their moral significance. The second stage of the Religious Revolution marks a very radical change. The contrast is so big that civilized society has become split into two, antique society and modern society, so that instead of speaking of the religion of the civilised society it becomes necessary to speak of the religion of antique society as against the religion of modern society.

The religious revolution, which marks off antique society from modern society, is far greater than the religious revolution, which divides savage society from civilised society. Its dimensions will be obvious from the differences it has brought about in the conceptions regarding the relations between God, Society and Man. The first point of difference relates to the composition of society. Every human being, without choice on his own part, but simply in virtue of his birth and upbringing, becomes a member of what we call a *natural* society. He belongs that is to a certain family and a certain nation. This membership lays upon him definite obligations and duties which he is called upon to fulfil as a matter of course and on pain of social penalties and disabilities while at the same time it confers upon him certain social rights and advantages. In this respect the ancient and modern worlds are alike. But in the words

of

Prof.

Smithmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy

of

Hinduism.htm - _msocom_8:—

"There is this important difference, that the tribal or national societies of the ancient world were not strictly natural in the modern sense of the word, for the gods had their part and place in them equally with men. The circle into which a man was born was not simply a group of kinsfolk and fellow citizens, but embraced also certain divine beings, the gods of the family and of the state, which to the ancient mind were as much a part of the particular community with which they stood connected as the human members of the social circle. The relation between the gods of antiquity and their worshippers was expressed in the language of human relationship, and this language was not taken in a figurative sense but with strict literalness. If a god was spoken of as father and his worshippers as his offspring, the meaning was that the worshippers were literally of his stock, that he and they made up one natural family with reciprocal family duties to one another. Or, again, if the god was addressed as king, and worshippers called themselves his servants, they meant that the supreme guidance of the state was actually in his hands, and accordingly the organisation of the state included provision for consulting his will and obtaining his direction in all weighty matters, also provision for approaching him as king with due homage and tribute.

"Thus a man was born into a fixed relation to certain gods as surely as he was born into relation to his fellow men; and his religion, that is, the part of conduct which was determined by his relation to the gods, was simply one side of the general scheme of conduct prescribed for him by his position as a member of society. There was no separation between the spheres of religion and of ordinary life. Every social act had a reference to the gods as well as to men, for the social body was not made up of men only, but of gods and men."

Thus in ancient Society men and their Gods formed a social and political as well as a religious whole. Religion was founded on kinship between the God and his worshippers. Modern Society has eliminated God from its composition. It consists of men only.

The second point of difference between antique and modern society relates to the bond between God and Society. In the antique world the various communities

"believed in the existence of many Gods, for they accepted as real the Gods of their enemies as well as their own, but they did not worship the strange Gods from whom they had no favour to expect, and on whom their gifts and offerings would have been thrown away.... Each

group had its own God, or perhaps a God and Goddess, to whom the other Gods bore no relation whatever,"mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_9

The God of the antique society was an exclusive God. God was owned by and bound to one singly community. This is largely to be accounted for by

"the share taken by the Gods in the feuds and wars of their worshippers. The enemies of the God and the enemies of his people are identical; even in the Old Testament 'the enemies of Jehovah' are originally nothing else than the enemies of Israel. In battle each God fights for his own people, and to his aid success is ascribed ; Chemosh gives victory to Moab, and Asshyr to Assyria ; and often the divine image or symbol accompanies the host to battle. When the ark was brought into the camp of Israel, the Philistines said,"Gods are come into the camp ; who can deliver us from their own practice, for when David defeated them at Baalperazirm, part of the booty consisted in their idols which had been carried into the field. When the Carthaginians, in their treaty with Phillip of Macedon, speak of"the Gods that take part in the campaign,"they doubtless refer to the inmates of the sacred tent which was pitched in time of war beside the tent of the general, and before which prisoners were sacrificed after a victory. Similarly an Arabic poet says,"Yaguth went forth with us against Morad"; that is, the image of the God Yaguth was carried into the fray".

This fact had produced a solidarity between God and the community.

"Hence, on the principle of solidarity between Gods and their worshippers, the particularism characteristic of political society could not but reappear in the sphere of religion. In the same measure as the God of a clan or town had indisputable claim to the reverence and service of the community to which he belonged, he was necessarily an enemy to their enemies and a stranger to those to whom they were strangers".mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_10

God had become attached to a community, and the community had become attached to their God. God had become the God of the Community and the Community had become the chosen community of the God.

This view had two consequences. Antique Society never came to conceive that God could be universal God, the God of all. Antique

Society never could conceive that there was any such thing as humanity in general.

The third point of difference between ancient and modern society, has reference to the conception of the fatherhood of God. In the antique Society God was the Father of his people but the basis of this conception of Fatherhood was deemed to be physical.

"In heathen religions the Fatherhood of the Gods is physical fatherhood. Among the Greeks, for example, the idea that the Gods fashioned men out of clay, as potters fashion images, is relatively modern. The older conception is that the races of men have Gods for their ancestors, or are the children of the earth, the common mother of Gods and men, so that men are really of the stock or kin of the Gods. That the same conception was familiar to the older Semites appears from the Bible. Jeremiah describes idolaters as saying to a stock, 'Thou art my father ; and to a stone, 'Thou has brought me forth. In the ancient poem, Num. xxi. 29, 'The Moabites are called the sons and daughters of Chemosh, and at a much more recent date the prophet Malachi calls a heathen woman "the daughter of a strange God". These phrases are doubtless accommodations to the language, which the heathen neighbours of Israel used about themselves. In Syria and Palestine each clan, or even complex of clans forming a small independent people, traced back its origin to a great first father ; and they indicate that, just as in Greece this father or progenitor of the race was commonly identified with the God of the race. With this it accords that in the judgment of most modern enquirers several names of deities appear in the old genealogies of nations in the Book of Genesis. Edom, for example, the progenitor of the Edomites, was identified by the Hebrews with Esau the brother of Jacob, but to the heathen he was a God, as appears from the theophorous proper name Obededom, "worshipper of Edom", the extant fragments of Phoenician and Babylonian cosmogonies date from a time when tribal religion and the connection of individual Gods with particular kindreds was forgotten or had fallen into the background. But in a generalized form the notion that men are the offspring of the Gods still held its ground. In the Phoenician cosmogony of Philo Bablius it does so in a confused shape, due to the authors euhemerism, that is, to his theory that deities are nothing more than deified men who had been great benefactors to their species. Again, in the Chaldaean legend preserved by Berossus, the belief that men are of the blood of the Gods is expressed in a form too crude not to be very ancient; for animals as well as men are said to have

been formed out of clay mingled with the blood of a decapitated deity.” mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_11

This conception of blood kinship of Gods and men had one important consequence. To the antique world God was a human being and as such was not capable of absolute virtue and absolute goodness. God shared the physical nature of man and was afflicted with the passions infirmities and vices to which man was subject. The God of the antique world had all the wants and appetites of man and he often indulged in the vices in which many revelled. Worshipers had to implore God not to lead them into temptations.

In modern Society the idea of divine fatherhood has become entirely dissociated from the physical basis of natural fatherhood. In its place man is conceived to be created in the image of God ; he is not deemed I to be begotten by God. This change in the conception of the fatherhood of God looked at from its moral aspect has made a tremendous difference in the nature of God as a Governor of the Universe. God with his physical basis was not capable of absolute good and absolute virtue. With God wanting in righteousness the universe could not insist on righteousness as an immutable principle. This dissociation of God from physical contact with man has made it possible for God to be conceived of as capable of absolute good and absolute virtue.

The fourth point of difference relates to the part religion plays when a change of nationality takes place.

In the antique world there could be no change of nationality unless it was accompanied by a change of Religion. In the antique world, “It was impossible for an individual to change his religion without changing his nationality, and a whole community could hardly change its religion at all without being absorbed into another stock or nation. Religions like political ties were transmitted from father to son ; for a man could not choose a new God at will ; the Gods of his fathers were the only deities on whom he could count as friendly and ready to accept his homage, unless he forswore his own kindred and was received into a new circle of civil as well as religious life.”

How change of religion was a condition precedent to a Social fusion is well illustrated by the dialogue between Naomi and Ruth in the Old Testament.

"Thy Sister" says Naomi to Ruth, "is gone back unto her people and unto her Gods"; and Ruth replies, "Thy people shall be my people and thy God my God."

It is quite clear that in the ancient world a change of nationality involved a change of cult. Social fusion meant religious fusion.

In modern society abandonment of religion or acceptance of another is not necessary for social fusion. This is best illustrated by what is in modern terminology and naturalisation, whereby the citizen of one state abandons his citizenship of the state and becomes a citizen of new state. In this process of naturalisation religion has no place. One can have a social fusion which is another name for naturalisation without undergoing a religious fusion.

To distinguish modern society from antique society it is not enough to say that Modern Society consists of men only. It must be added that it consists of men who are worshippers of different Gods.

The fifth point of difference relates to the necessity of knowledge as to the nature of God as part of religion.

“From the antique point of view, indeed the question what the Gods are in themselves is not a religious but a speculative one ; what is requisite to religion is a practical acquaintance with the rules on which the deity acts and on which he expects his worshippers to frame their conduct—what in 2 Kings xvii. 26 is called the”manner”or rather the”customary law”(misphat) of the God of the land. This is true even of the religion of Israel. When the prophets speak of the knowledge of the laws and principles of His government in Israel, and a summary expression for religion as a whole is”the knowledge and fear of Jehovah,”i.e. the knowledge of what Jehovah prescribes, combined with a reverent obedience. An extreme skepticism towards all religious speculation is recommended in the Book of Ecclesiastes as the proper attitude of piety, for no amount of discussion can carry a man beyond the plain rule, to”fear God and keep His Commandments”. This counsel the author puts into the mouth of Solomon, and so represents it, not unjustly, as summing up the old view of religion, which in more modern days had unfortunately begun to be undermined.”

The sixth point of difference relates to the place of belief in Religion.

In ancient Society :—

"Ritual and practical usages were, strictly speaking, the sum total of ancient religions. Religion in primitive times was not a system of belief with practical applications ; it was a body of fixed traditional practices, to which every member of society conformed as a matter of course. Men would not be men if they agreed to do certain things without having a reason for their action ; but in ancient religion the reason was not first formulated as a doctrine and then expressed in practice, but

conversely, practice preceded doctrinal theory. Men form general rule of conduct before they begin to express general principles in words ; political institutions are older than political theories and in like manner religious institutions are older than religious theories. This analogy is not arbitrarily chosen, for in fact the parallelism in ancient society between religious and political institutions is complete. In each sphere great importance was attached to form and precedent, but the explanation why the precedent was followed consisted merely of legend as to its first establishment. That the precedent, once established, was authoritative did not appear to require any proof. The rules of society were based on precedent, and the continued existence of the society was sufficient reason why a precedent once set should continue to be followed.”

The seventh point of difference relates to the place of individual conviction in Religion. In ancient Society :—

"Religion was a part of the organized social life into which a man was born, and to which he conformed through life in the same unconscious way in which men fall into any habitual practice of the society in which they live. Men took the Gods and their worship for granted, just as they took the other usages of the state for granted, and if they reason or speculated about them, they did so on the presupposition that the traditional usages were fixed things, behind which their reasoning must not go, and which no reasoning could be allowed to overturn. To us moderns religion is above all a matter of individual conviction and reasoned belief, but to the ancients it was a part of the citizen's public life, reduced to fixed forms, which he was not bound to understand and was not at liberty to criticize or to neglect. Religious non-conformity was an offence against the state; for if sacred tradition was tampered with the bases of society were undermined, and the favour of the Gods was forfeited. But so long as the prescribed forms were duly observed, a man was recognized as truly pious, and no one asked how his religion was rooted in his heart or affected his reason. Like political duty, of which indeed it was a part, religion was entirely comprehended in the observance of certain fixed rules of outward conduct."

The eighth point of difference pertains to the relation of God to Society and man, of Society to Man in the matter of God's Providence.

First as to the difference in the relation of God to Society. In this connection three points may be noted. The faith of the antique world

"Sought nothing higher than a condition of physical *bien etre*. . . . The good things desired of the Gods were the blessings of earthly life, not spiritual but carnal things."What the antique societies asked and believed

themselves to receive from their God lay mainly in the following things :

"Abundant harvests, help against their enemies and counsel by oracles or soothsayers in matters of natural difficulty."In the antique world

"Religion was not the affair of the individual but of the Community. . . . It was the community, and not the individual, that was sure of the permanent and the unfailing hand of the deity."Next as to the difference in the relation of God to man.

"It was not the business of the Gods of heathenish to watch, by a series of special providence, over the welfare of every individual. It is true that individuals laid their private affairs before the Gods, and asked with prayers and views for strictly personal blessings. But they did this just as they might crave a personal boon from a king, or as a son craves a boon from a father, without expecting to get all that was asked. What the Gods might do in this way was done as a matter of personal favour, and was no part of their proper function as heads of the community."

"The Gods watched over a man's civic life, they gave him his share in public benefits, the annual largess of the harvest and the vintage, national peace or victory over enemies, and so forth, but they were not sure helpers in every private need, and above all they would not help him in matters that were against the interests of the community as a whole. There was therefore a whole region of possible needs and desires for which religion could and would do nothing."Next the difference in the attitude of God and Society to man.

In the antique world Society was indifferent to individual welfare. God as no doubt bound to Society. But

"The compact between the God and his worshippers was not held to pledge the deity to make the private cares of each member of the Community his own."

"The benefits expected of God were of a public character affecting the whole community, especially fruitful seasons, increase of flocks of herds and success in war. So long as community flourished the fact that an individual was miserable reflected no discredit on divine providence."

On the contrary the antique world looked upon the misery of a man as proof.

"That the sufferer was an evil-doer, justly hateful to the Gods. Such a man was out of place among the happy and the prosperous crowd that assembled on feast days before the alter."It is in accordance with this view that the leper and the mourner were shut out from the exercise of religion as well as from the privileges of social life and their food was not brought into the house of God.

As for conflict between individual and individual and between society and the individual God had no concern. In the antique world :

"It was not expected that (God) should always be busy righting human affairs. In ordinary matters it was men's business to help themselves and their own kins folk, though the sense that the God was always near, and could be called upon at need, was a moral force continually working in some degree for the maintenance of social righteousness and order. The strength of this moral force was indeed very uncertain, for it was always possible for the evil-doer to flatter himself that his offence would be overlooked." In the antique world man did not ask God to be righteous to him.

"Whether in civil or in profane matters, the habit of the old world was to think much of the community and little of the individual life, and no one felt this to be unjust even though it bore hardly on himself. The God was the God of the national or of the tribe, and he knew and cared for the individual only as a member of the community."

That was the attitude that man in the antique world took of his own private misfortune. Man came to rejoice before his God and "in rejoicing before his God man rejoiced with and for the welfare of his kindred, his neighbours and his country, and, in renewing by solemn act of worship the bond that united him to God, he also renewed the bonds of family, social and national obligation." Man in the antique world did not call upon his maker to be righteous to him.

Such is this other Revolution in Religion. There have thus been two Religious Revolutions. One was an external Revolution. The other was an internal Revolution. The External Revolution was concerned with the field within which the authority of Religion was to prevail. The Internal Revolution had to do with the changes in Religion as a scheme of divine Governance for human society. The External Revolution was not really a Religious Revolution at all. It was a revolt of science against the extra territorial jurisdiction assumed by Religion over a field which did not belong. The Internal Revolution was a real Revolution or may be compared to any other political Revolution, such as the French Revolution or the Russian Revolution. It involved a constitutional change. By this Revolution the Scheme of divine governance came to be altered, amended and reconstituted.

How profound have been the changes which this internal Revolution, has made in the antique scheme of divine governance can be easily seen. By this Revolution God has ceased to be a member of a community. Thereby he has become impartial. God has ceased to be the Father of

Man in the physical sense of the word. He has become the creator of the Universe. The breaking of this blood bond has made it possible to hold that God is good. By this Revolution man has ceased to be a blind worshipper of God doing nothing but obeying his commands. Thereby man has become a responsible person required to justify his belief in God's commandments by his conviction. By this Revolution God has ceased to be merely the protector of Society and social interests in gross have ceased to be the center of the divine Order. Society and man have changed places as centers of this divine order. It is man who has become the center of it.

All this analysis of the Revolution in the Ruling concepts of Religion as a scheme of divine governance had one purpose namely to discover the norm for evaluating the philosophy of a Religion. The impatient reader may not ask where are these norms and what are they? The reader may not have found the norms specified by their names in the foregoing discussion. But he could not have failed to notice that the whole of this Religious Revolution was raging around the norms for judging what is right and what is wrong. If he has not, let me make explicit what has been implicit in the whole of this discussion. We began with the distinction between antique society and modern society as has been pointed out they differed in the type of divine governance they accepted as their Religious ideals. At one end of the Revolution was the antique society with its Religious ideal in which the end was Society. At the other end of the Revolution is the modern Society with its Religious ideal in which the end is the individual. To put the same fact in terms of the norm it can be said that the norm or the criterion, for judging right and wrong in the Antique Society was *utility* while the norm or the criterion for judging right and wrong in the modern Society is *Justice*. The Religious Revolution was not thus a revolution in the religious organization of Society resulting in the shifting of the center—from society to the individual—it was a revolution in the norms.

Some may demur to the norms I have suggested. It may be that it is a new way of reaching them. But to my mind there is no doubt that they are the real norms by which to judge the philosophy of religion. In the first place the norm must enable people to judge what is right and wrong in the conduct of men. In the second place the norm must be appropriate to current notion of what constitutes the moral good. From both these points of view they appear to be the true norms. They enable us to judge what is right and wrong. They are appropriate to the society which adopted them. Utility as a criterion was appropriate to the antique

world in which society being the end, the moral good was held to be something which had social utility. Justice as a criterion became appropriate to the Modern World in which individual being the end, the moral good was held to be something which does justice to the individual. There may be controversy as to which of the two norms is morally superior. But I do not think there can be any serious controversy that these are not the norms. If it is said that these norms are not transcendental enough ; my reply is that if a norm whereby one is to judge the philosophy of religion must be Godly, it must also be earthly. At any rate these are the norms I propose to adopt in examining the philosophy of Hinduism.

II

This is a long detour. But it was a necessary preliminary to any inquiry into the main question. However, when one begins the inquiry one meets with an initial difficulty. The Hindu is not prepared to face the inquiry. He either argues that religion is of no importance or he takes shelter behind the view—fostered by the study of comparative Religion—that all religions are good. There is no doubt that both these views are mistaken and untenable.

Religion as a social force cannot be ignored. Religion has been aptly described by Hebert Spencer as "the weft which everywhere crosses the warp of history". This is true of every Society. But Religion has not only crossed everywhere the warp of Indian History it forms the warp and woof of the Hindu mind. The life of the Hindu is regulated by Religion at every moment of his life. It orders him how during life he should conduct himself and how on death his body shall be disposed of. It tells him how and when he shall indulge in his sexual impulses. It tells him what ceremonies are to be performed when a child is born—how he should name, how he should cut the hair on its head, how he should perform its first feeding. It tells him what occupation he can take to, what woman he should marry. It tells him with whom he should dine and what food he should eat, what vegetables are lawful and what are forbidden. It tells how he should spend his day, how many times he should eat, how many times he should pray. There is no act of the Hindu which is not covered or ordained by Religion. It seems strange that the educated Hindus should come to look upon it as though it was a matter of indifference.

Besides, Religion is a social force. As I have pointed out Religion stands for a scheme of divine governance. The scheme becomes an ideal

for society to follow. The ideal may be non-existent in the sense that it is something which is constructed. But although non-existent, it is real. For an ideal it has full operative force which is inherent in every ideal. Those who deny the importance of religion not only forget this, they also fail to realize how great is the potency and sanction that lies behind a religious ideal as compared with that of a purely secular ideal. This is probably due to the lag which one sees between the real and the ideal which is always present whether the ideal is religious or secular. But the relative potency of the two ideals is to be measured by another test—namely their power to override the practical instincts of man. The ideal is concerned with something that is remote. The practical instincts of man are concerned with the immediate present. Now placed as against the force of the practical instincts of man the two ideals show their difference in an unmistakable manner. The practical instincts of man do yield to the prescriptions of a religious ideal however much the two are opposed to each other. The practical instincts of man do not on the other hand yield to the secular ideal if the two are in conflict. This means that a religious ideal has a hold on mankind, irrespective of an earthly gain. This can never be said of a purely secular ideal. Its power depends upon its power to confer material benefit. This shows how great is the difference in the potency and sanction of the two ideals over the human mind. A religious ideal never fails to work so long as there is faith in that ideal. To ignore religion is to ignore a live wire.

Again to hold that all religions are true and good is to cherish a belief which is positively and demonstrably wrong. This belief, one is sorry to say, is the result of what is known as the study of comparative religion. Comparative religion has done one great service to humanity. It has broken down the claim and arrogance of revealed religions as being the only true and good religions of study. While it is true that comparative religion has abrogated the capricious distinction between true and false religions based on purely arbitrary and a priori considerations, it has brought in its wake some false notions about religion. The most harmful one is the one I have mentioned namely that all religions are equally good and that there is no necessity of discriminating between them. Nothing can be a greater error than this. Religion is an institution or an influence and like all social influences and institutions, it may help or it may harm a society which is in its grip. As pointed out by Prof. Tiele [Tiele](http://msitstore.c:\important\writing_of_babasaheb.chm:/17.Philosophy of Hinduism.htm) msitstore.c:\important\writing_of_babasaheb.chm:/17.Philosophy of Hinduism.htm - msocom_12 religion is

"one of the mightiest motors in the history of mankind, which formed

as well as tore asunder nations, united as well as divided empires, which sanctioned the most atrocious and barbarous deeds, the most libinous customs, inspired the most admirable acts of heroism, self renunciation, and devotion, which occasioned the most sanguinary wars, rebellions and persecutions, as well as brought about the freedom, happiness and peace of nations—at one time a partisan of tyranny, at another breaking its chains, now calling into existence and fostering a new and brilliant civilization, then the deadly foe to progress, science and art."

A force which shows such a strange contrast in its result can be accepted as good without examining the form it takes and the ideal it serves. Everything depends upon what social ideal a given religion as a divine scheme of governance hold out. This is a question which is not avowed by the science of comparative religion. Indeed it begins where comparative religion ends. The Hindu is merely trying to avoid it by saying that although religions are many they are equally good. For they are not.

However much the Hindu may seek to burke the inquiry into the philosophy of Hinduism there is no escape. He must face it.

III

Now to begin with the subject. I propose to apply both the tests, the test of justice and the test of utility to judge the philosophy of Hinduism. First I will apply the test of justice. Before doing so I want to explain what I mean by the principle of justice.

No one has expounded it better than Professor Bergbonmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_13. As interpreted by him the principle of justice is a compendious one and includes most of the other principles which have become the foundation of a moral order. Justice has always evoked ideas of equality, of proportion of "compensation". Equity signifies equality. Rules and regulations, right and righteousness are concerned with equality in value. If all men are equal, all men are of the same essence and the common essence entitled them to the same fundamental rights and to equal liberty.

In short justice is simply another name for liberty equality and fraternity. It is in this sense I shall be usingmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_14 justice as a criterion to judge Hinduism.

Which of these tenets does Hinduism recognize? Let us take the question one by one.

1. Does Hinduism recognize Equality?

The question instantaneously brings to one's mind the caste system. One striking feature of the caste system is that the different castes do not stand as an horizontal series all on the same plane. It is a system in which the different castes are placed in a vertical series one above the other. Manu may not be responsible for the creation of caste. Manu preached the sanctity of the Varna and as I have shown Varna is the parent of caste. In that sense Manu can be charged with being the progenitor if not the author of the Caste System. Whatever be the case as to the guilt of Manu regarding the Caste System there can be no question that Manu is responsible for upholding the principle of gradation and rank.

In the scheme of Manu the Brahmin is placed at the first in rank. *Below* him is the Kshatriya. *Below* Kshatriya is the Vaishya. *Below* Vaishya is the Shudra and *Below* Shudra is the Ati-Shudra (the Untouchables). This system of rank and gradation is, simply another way of enunciating the principle of inequality so that it may be truly said that Hinduism does not recognize equality. This inequality in status is not merely the inequality that one sees in the warrant of precedence prescribed for a ceremonial gathering at a King's Court. It is a permanent social relationship among the classes to be observed—to be enforced—at all times in all places and for all purposes. It will take too long to show how in every phase of life Manu has introduced and made inequality the vital force of life. But I will illustrate it by taking a few examples such as slavery, marriage and Rule of Law.

Manu recognizes [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/17.Philosophy of Hinduism.htm - _msocom_15](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/17.Philosophy_of_Hinduism.htm_-_msocom_15) Slavery. But he confined it to the Shudras. Only Shudras could be made slaves of the three higher classes. But the higher classes could not be the slaves of the Shudra.

But evidently practice differed from the law of Manu and not only Shudras happened to become slaves but members of the other three classes also become slaves. When this was discovered to be the case a new rule was enacted by a Successor of Manu namely Narada [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/17.Philosophy of Hinduism.htm - _msocom_16](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/17.Philosophy_of_Hinduism.htm_-_msocom_16). This new rule of Narada runs as follows :—

V 39. In the inverse order of the four castes slavery is not ordained except where a man violates the duties peculiar to his caste. Slavery (in that respect) is analogous to the condition of a wife."

Recognition of slavery was bad enough. But if the rule of slavery had

been left free to take its own course it would have had at least one beneficial effect. It would have been a levelling force. The foundation of caste would have been destroyed. For under it a Brahmin might have become the slave of the Untouchable and the Untouchable would have become the master of the Brahmin. But it was seen that unfettered slavery was an equalitarian principle and an attempt was made to nullify it. Manu and his successors therefore while recognising slavery ordain that it shall not be recognised in its inverse order to the Varna System. That means that a Brahmin may become the slave of another Brahmin. But he shall not be the slave of a person of another Varna i.e. of the Kshatriya, Vaishya, Shudra, or Ati-Shudra. On the other hand a Brahmin may hold as his slave any one belonging to the four Varnas. A Kshatriya can have a Kshatriya, Vaisha, Shudra and Ati-Shudra as his slaves but not one who is a Brahmin. A Vaishya can have a Vaishya, Shudra and Ati-Shudra as his slaves but not one who is a Brahmin or a Kshatriya. A Shudra can hold a Shudra and Ati-shudra can hold an Ati-Shudra as his slave but not one who is a Brahmin, Kshatriya, Vaishya or Shudra.

Consider Manu on marriage. Here are his rules governing intermarriage among the different classes. Manu says :—

III. 12."For the first marriage of the twice born classes, a woman of the same class is recommended but for such as are impelled by inclination to marry again, women in the direct order of the classes are to be preferred."

III. 13."A Shudra woman only must be the wife of Shudra : she and a Vaisya, of a Vaisya; they two and a Kshatriya, of a Kshatriya ; those two and a Brahmani of a Brahman."

Manu is of course opposed to intermarriage. His injunction is for each class to marry within his class. But he does recognize marriage outside the defined class. Here again he is particularly careful not to allow intermarriage to do harm to his principle of inequality among classes. Like Slavery he permits intermarriage but not in the inverse order. A Brahmin when marrying outside his class may marry any woman from any of the classes below him. A Kshatriya is free to marry a woman from the two classes next below him namely the Vaishya and Shudra but must not marry a woman from the Brahmin class which is above him. A Vaishya is free to marry a woman from the Shudra Class which is next below him. But he cannot marry a woman from the Brahmin and the Kshatriya Class which are above him.

Why this discrimination? The only answer is that Manu was most

anxious to preserve the rule of inequality which was his guiding principle.

Take Rule of Law. Rule of Law is generally understood to mean equality before law. Let any one interested to know what Manu has to say on the point ponder over the following Rules extracted from his code which for easy understanding I have arranged under distinct headings.

As to witnesses.—According to Manu they are to be sworn as follows :—

VIII. 87."In the forenoon let the judge, being purified, severally call on the twice-born, being purified also, to declare the truth, in the presence of some image, a symbol of the divinity and of Brahmins, while the witnesses turn their faces either to the north or to the east."

VIII. 88."To a Brahman he must begin with saying, 'Declare ; to a Kshatriya, with saying, ' Declare the truth ' ; to a Vaisya, with comparing perjury to the crime of stealing kine, grain or gold ; to a Sudra, with comparing it in some or all of the following sentences, to every crime that men can commit."

VIII. 113."Let the judge cause a priest to swear by his veracity ; a soldier, by his horse, or elephant, and his weapons ; a merchant, by his kine, grain, and gold ; a mechanic or servile man, by imprecating on his own head, if he speak falsely, all possible crimes ;"

Manu also deals with cases of witnesses giving false evidence. According to Manu giving false evidence is a crime, says Manu :—

VIII. 122."Learned men have specified these punishments, which were ordained by sage legislators for perjured witnesses, with a view to prevent a failure of justice and to restrain iniquity."

VIII. 123."Let a just prince banish men of the three lower classes, if they give false evidence, having first levied the fine ; but a Brahman let him only banish."But Manu made one exception :—

VIII. 1 12."To women, however, at a time of dalliance, or on a proposal of marriage, in the case of grass or fruit eaten by a cow, of wood taken for a sacrifice, or of a promise made for the preservation of a Brahman, it is deadly sin to take a light oath."As parties to proceedings—Their position can be illustrated by quoting the ordinances of Manu relating to a few of the important criminal offences dealt with by Manu. Take the offence of Defamation. Manu says :—

VIII. 267."A soldier, defaming a priest, shall be fined a hundred panas, a merchant, thus offending, an hundred and fifty, or two hundred; but, for such an offence, a mechanic or servile man shall be shipped."

III. 268."A priest shall be fined fifty, if he slander a soldier; twenty five, if a merchant ; and twelve, if he slander a man of the servile class."Take the offence of Insult—Manu says:—

VIII. 270."A once born man, who insults the twice-born with gross invectives, ought to have his tongue slit ; for he sprang from the lowest part of Brahma."

VIII. 271."If he mention their names and classes with contumely, as if he say,"Oh Devadatta, though refuse of Brahmin", an iron style, ten fingers long, shall be thrust red into his mouth."

VIII. 272."Should he, through pride, give instruction to priests concerning their duty, let the king order some hot oil to be dropped into his mouth and his ear."Take the offence of Abuse—Manu says :—

VIII. 276."For mutual abuse by a priest and a soldier, this fine must be imposed by a learned king; the lowest amercement on the priest, and the middle-most on the soldier."

VIII. 277."Such exactly, as before mentioned, must be the punishment a merchant and a mechanic, in respect of their several classes, except the slitting of the tongue ; this is a fixed rule of punishment."Take the offence of Assault—Manu propounds :—

VIII. 279."With whatever member a low-born man shall assault or hurt a superior, even that member of his must be slit, or cut more or less in proportion to the injury ; this is an ordinance of Manu."

VIII. 280."He who raises his hand or a staff against another, shall have his hand cut ; and he, who kicks another in wrath, shall have an incision made in his foot."Take the offence of Arrogance—According to Manu:—

VIII. 281."A man of the lowest class, who shall insolently place himself on the same seat with one of the highest, shall either be banished with a mark on his hinder parts, or the king, shall cause a gash to be made on his buttock."

VIII. 282."Should he spit on him through price, the king shall order both his lips to be gashed; should he urine on him, his penis: should he break wing against him, his anus."

VIII. 283."If he seize the Brahman by the locks, or by the feet, or by the beard, or by the throat, or by the scrotum, let the king without hesitation cause incisions to be made in his hands."Take the offence of Adultery. Says Manu:—

VIII. 359."A man of the servile class, who commits actual adultery with the wife of a priest, ought to suffer death; the wives, indeed, of all the four classes must ever be most especially guarded."

VIII. 366."A low man, who makes love to a damsel of high birth, ought to be punished corporal; but he who addresses a maid of equal rank, shall give the nuptial present and marry her, if her father please."

VIII. 374."A mechanic or servile man, having an adulterous connection with a woman of a twice-born class, whether guarded at home or unguarded, shall thus be punished ; if she was unguarded, he shall lose the part offending, and his whole substance ; if guarded, and a priestess, every thing, even his life."

VIII. 375."For adultery with a guarded priestess, a merchant shall forfeit all his wealth after imprisonment for a year; a soldier shall be fined a thousand panas, and he be shaved with the urine of an ass."

VIII. 376."But, if a merchant or soldier commit adultery with a woman of the sacerdotal class, whom her husband guards not at home, the king shall only fine the merchant five hundred, and the soldier a thousand;"

VIII. 377."Both of them, however, if they commit that offence with a priestess not only guarded but eminent for good qualities, shall be punished like men of the servile class, or be burned in a fire of dry grass or reeds."

VIII. 382."If a merchant converse criminally with a guarded woman of the military, or a soldier with one of the mercantile class, they both deserve the same punishment as in the case of a priestess unguarded."

VIII. 383."But a Brahman, who shall commit adultery with a guarded woman of those two classes, must be fined a thousand panas ; and for the life offence with a guarded woman of the servile class, the fine of a soldier or a merchant shall be also one thousand."

VIII. 384."For adultery with a woman of the military class, if guarded, the fine of a merchant is five hundred ; but a soldier, for the converse of that offence, must be shaved with urine, or pay the fine just mentioned."

VIII. 385."A priest shall pay five hundred panas if he connect himself criminally with an unguarded woman of the military, commercial, or servile class, and a thousand, for such a connection with a woman of a vile mixed breed."

Turning to the system of punishment for offences Manu's Scheme throws an interesting light on the subject. Consider the following ordinances :—

VIII. 379."Ignominious tonsure is ordained, instead of capital punishment, for an adulterer of the priestly class, where the punishment of other classes may extend to Loss of life."

VIII. 380."Never shall the king slay a Brahman, though convicted of all possible crimes ; let him banish the offender from his realm, but with

all his property secure, and his body unhurt."

XI. 127."For killing intentionally a virtuous man of the military class, the penance must be a fourth part of that ordained for killing a priest ; for killing a Vaisya, only an eighth, for killing a Sudra, who had been constant in discharging his duties, a sixteenth part."

XI. 128."But, if a Brahmen kill a Kshatriya without malice, he must, after a full performance of his religious rites, give the priests one bull together with a thousand cows."

XI. 129."Or he may perform for three years the penance for slaying a Brahmen, mortifying his organs of sensation and action, letting his hair grow long, and living remote from the town, with the root of a tree for his mansion."

XI. 130."If he kill without malice a Vaisya, who had a good moral character, he may perform the same penance for one year, or give the priests a hundred cows and a bull."

XI. 131."For six months must he perform this whole penance, if without intention he kill a Sudra ; or he may give ten white cows and a bull to the priests."

VIII. 381."No greater crime is known on earth than slaying a Brahman ; and the king, therefore, must not even form in his mind an idea of killing a priest."

VIII. 126."Let the king having considered and ascertained the frequency of a similar offence, the place and time, the ability of the criminal to pay or suffer and the crime itself, cause punishment to fall on those alone, who deserves it."

VIII. 124."Manu, son of the Self-existent, has named ten places of punishment, which are appropriated to the three lower classes, but a Brahman must depart from the realm unhurt in any one of them."

VIII. 125."The part of generation, the belly, the tongue, the two hands, and, fifthly, the two feet, the eye, the nose, both ears, the property, and, in a capital case, the whole body."How strange is the contrast between Hindu and Non-Hindu criminal jurisprudence? How inequality is writ large in Hinduism as seen in its criminal jurisprudence? In a penal code charged with the spirit of justice we find two things—a section dealing defining the crime and a prescribing a rational form of punishment for breach of it and a rule that all offenders are liable to the same penalty. In Manu what do we find? First an irrational system of punishment. The punishment for a crime is inflicted on the organ concerned in the crime such as belly, tongue, nose, eyes, ears, organs of generation etc., as if the offending organ was a sentient being having a will for its own and had

not been merely a servitor of human being. Second feature of Manu's penal code is the inhuman character of the punishment which has no proportion to the gravity of the offence. But the most striking feature of Manu's Penal Code which stands out in all its nakedness is the inequality of punishment for the same offence. Inequality designed not merely to punish the offender but to protect also the dignity and to maintain the baseness of the parties coming to a Court of Law to seek justice in other words to maintain the social inequality on which his whole scheme is founded.

So far I have taken for illustrations such matters as serve to show * how Manu has ordained social inequality. I now propose to take other matters dealt with by Manu in order to illustrate that Manu has also ordained Religious inequality. These are matters which are connected with what are called sacraments and Ashrams.

The Hindus like the Christians believe in sacraments. The only difference is that the Hindus have so many of them that even the Roman Catholic Christians would be surprised at the extravagant number observed by the Hindus. Originally their number was forty and covered the most trivial as well as the most important occasions in a person's life. First they were reduced to twenty. Later on it was reduced to sixteen [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_17](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy_of_Hinduism.htm_-_msocom_17) and at that figure the sacraments of the Hindus have remained stabilized.

Before I explain how at the core of these rules of sacraments there lies the spirit of inequality the reader must know what the rules are. It is impossible to examine all. It will be enough if I deal with a few of them. I will take only three categories of them, those relating with Initiation, Gayatri and Daily Sacrifices.

First as to Initiation. This initiation is effected by the investiture of a person with the sacred thread. The following are the most important rules of Manu regarding the sacrament of investiture.

II. 36."In the eighth year from the conception of a Brahman, in the eleventh from that of a Kshatriya, and in the twelfth from that of a Vaisya, let the father invest the child with the mark of his class."

II. 37."Should a Brahman, or his father for him, be desirous of his advancement in sacred knowledge ; a Kshatriya, of extending his power; or a Vaisya of engaging in mercantile business; the investiture may be made in the fifth, sixth, or eighth years respectively."

II. 38."The ceremony of investiture hallowed by the Gayatri must not be delayed, in the case of a priest, beyond the sixteenth year ; nor in that

of a soldier, beyond the twenty second ; nor in that of a merchant, beyond the twenty fourth."

II. 39."After that, all youths of these three classes, who have not been invested at the proper time, become vratyas, or outcasts, degraded from the Gayatri, and condemned by the virtuous."

II. 147."Let a man consider that as a mere human birth, which his parents gave him for their mutual gratification, and which he receives after lying in the womb."

II. 148."But that birth which his principal acharya, who knows the whole Veda, procures for him by his divine mother the Gayatri, is a true birth ; that birth is exempt from age and from death."

II. 169."The first birth is from a natural mother; the second, from the ligation of the zone ; the third from the due performance of the sacrifice ; such are the births of him who is usually called twice-born, according to a text of the Veda."

II. 170."Among them his divine birth is that, which is distinguished by the ligation of the zone, and sacrificial cord ; and in that birth the Gayatri is his mother, and the Acharya, his father."Then let me come to Gayatri. It is a Mantra or an invocation of special spiritual efficacy. Manu explains what it is. II. 76."Brahma milked out, as it were, from the three Vedas, the letter A, the letter U, and the letter M which form by their coalition the trilateral monosyllable, together with three mysterious words, bhur, bhuvah, swer, or earth, sky, heaven."

II. 77."From the three Vedas, also the Lord of creatures, incomprehensibly exalted, successively milked out the three measures of that ineffable text, be ginning with the word tad, and entitled Savitri or Gayatri."

II. 78."A priest who shall know the Veda, and shall pronounce to himself, both morning and evening, that syllable and that holy text preceded by the three words, shall attain the sanctity which the Veda confers."

II. 79."And a twice born man, who shall a thousand times repeat those three (or om, the vyahritis, and the gayatri,) apart from the multitude, shall be released in a month even from a great offence, as a snake from his slough."

II. 80."The priest, the soldier, and the merchant, who shall neglect this mysterious text, and fail to perform in due season his peculiar acts of piety, shall meet with contempt among the virtuous."

11.81" The great immutable words, preceded by the trilateral syllable, and followed by the Gayatri which consists of three measures, must be

considered as the mouth, or principal part of the Veda."

II. 82."Whoever shall repeat, day by day, for three years, without negligence, that sacred text, shall hereafter approach the divine essence, move as freely as air, and assume an ethereal form."

II. 83."The triliteral monosyllable is an emblem of the Supreme, the suppressions of breath with a mind fixed on God are the highest devotion ; but nothing is more exalted than the gayatri ; a declaration of truth is more excellent than silence."

II. 84."All rights ordained in the Veda, oblations to fire, and solemn sacrifices pass away; but that which passes not away, is declared to be the syllable om, thence called acshare ; since it is a symbol of God, the Lord of created beings."

II. 85."The act of repeating his Holy Name is ten times better than the appointed sacrifice: an hundred times better when it is heard by no man ; and a thousand times better when it is purely mental."

II. 86."The four domestic sacraments which are accompanied with the appointed sacrifice, are not equal, though all be united, to a sixteenth part of the sacrifice performed by a repetition of the gayatri."Now to the Daily Sacrifices.

III. 69."For the sake of expiating offences committed ignorantly in those places mentioned in order, the five great sacrifices were appointed by eminent sages to be performed each day by such as keep house."

III. 70."Teaching (and studying) the scripture is the sacrifice to the Veda; offering cakes and water, the sacrifice to the Manes, an oblation to fire, the sacrifice to the Deities; giving rice or other food to living creatures, the sacraments of spirits; receiving guests with honour, the sacrifice to men."

III. 71."Whoever omits not those five great sacrifices, if he has ability to perform them, is untainted by the sons of the five slaughtering places, even though he constantly resides at home."

Turning to the Ashramas. The Ashram theory is a peculiar feature of the philosophy of Hinduism. It is not known to have found a place in the teachings of any other religion. According to the Ashram theory life is to be divided into four stages called *Brahmachari*, *Grahastha*, *Vanaprastha* and *Sannyas*. In the Brahmachari stage a person is unmarried and devotes his time to the study and education. After this stage is over he enters the stage of a Grahastha i.e. he marries, rears a family and attends to his worldly welfare. Thereafter he enters the third stage and is then known as a Vanaprastha. As a Vanaprastha he dwells in the forest as a hermit but without severing his ties with his family or

without abandoning his rights to his worldly goods. Then comes the fourth and the last stage—that of Sannyas—which means complete renunciation of the world in search of God. The two stages of Brahmachari and Grahastha are natural enough. The two last stages are only recommendatory. There is no compulsion about them. All that Manu lays down is as follows:

VI. 1. A twice born who has thus lived according to the law in the order of householders, may, taking a firm resolution and keeping his organs in subjection, dwell in the forest, duly (observing the rules given below.)

VI. 2. When a householder sees his (skin) wrinkled, and (his hair) white, and the sons of his son, then he may resort to the forest.

VI. 3. Abandoning all food raised by cultivation, all his belongings, he may depart into the forest, either committing his wife to his sons, or accompanied by her.

VI. 33. But having passed the third part of (a man's natural term of) life in the forest, he may live as an ascetic during the fourth part of his existence, after abandoning all attachment to worldly objects.

The inequality embodied in these rules is real although it may not be quite obvious. Observe that all these sacraments and Ashramas are confined to the twice-born. The Shudras are excluded mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_18 from their benefit. Manu of course has no objection to their undergoing the forms of the ceremonies. But he objects to their use of the Sacred Mantras in the performance of the ceremonies. On this Manu says: — X. 127. "Even Shudras, who were anxious to perform (their entire duty, and knowing what they should perform, imitate the practice of good men in the household sacraments, but without any holy text, except those containing praise and salutation, are so far from sinning, that they acquire just applause." See the following text of Manu for women: — -

II. 66. "The same ceremonies, except that of the sacrificial thread, must be duly performed for women at the same age and in the same order, that the body may be made perfect; but without any text from the Veda."

Why does Manu prohibit the Shudras from the benefit of the Sacraments? His interdict against the Shudras becoming a Sannyasi is a puzzle. Sannyas means and involves renunciation, abandonment of worldly object. In legal language Sannyas is interpreted as being equivalent to civil death. So that when a man becomes a Sannyasi he is

treated as being dead from that moment and his heir succeeds immediately. This would be the only consequence, which would follow if a Shudra become a Sannyasi. Such a consequence could hurt nobody except the Shudra himself. Why then this interdict? The issue is important and I will quote Manu to explain the significance and importance of the Sacraments and Sannyas. Let us all ponder over the following relevant texts of Manu :

II. 26. With holy rites, prescribed by the Veda, must the ceremony on conception and other sacraments be performed for twice-born men, which sanctify the body and purify (from sin) in this (life) and after death.

II. 28. By the study of the Veda, by vows, by burnt oblations, by (the recitation of) sacred texts, by the (acquisition of the) three sacred Vedas, by offering (to the gods Rishis and Manes), by (the procreation of) sons, by the Great Sacrifices, and by (Srauta) rites this (human) body is made fit for (union with) Bramha. This is the aim and object of the Samskaras. Manu also explains the aim and object of Sannyas.

VI. 81. He (the Sannyasi) who has in this manner gradually given up all attachments and is freed from all the pairs (of opposites), reposes in Brahman alone.

VI. 85. A twice born man who becomes an ascetic, after the successive performance of the above-mentioned acts, shakes off sin here below and reaches the highest Brahman. From these texts it is clear that according to Manu himself the object of the sacraments is to sanctify the body and purify it from sin in this life and hereafter and to make it fit for union with God. According to Manu the object of Sannyas to reach and repose in God. Yet Manu says that the sacraments and Sannyas are the privileges of the higher classes. They are not open to the Shudra. Why? Does not a Shudra need sanctification of his body, purification of his soul? •Does not a Shudra need to have an aspiration to reach God? Manu probably would have answered these questions in the affirmative. Why did he then make such rules. The answer is that he was a staunch believer in social inequality and he knew the danger of admitting religious Equality. If I am equal before God why am I not equal on earth? Manu was probably terrified by this question. Rather than admit and allow religious equality to affect social inequality he preferred to deny religious equality.

Thus in Hinduism you will find both social inequality and religious inequality imbedded in its philosophy.

To prevent man from purifying himself from sin!! To prevent man

from getting near to God!! To any rational person such rules must appear to be abnominal and an indication of a perverse mind. It is a glaring instance of how Hinduism is a denial not only of equality but how it is denial of the sacred character of human personality.

This is not all. For Manu does not stop with the non-recognition of human personality. He advocates a deliberate debasement of human personality. I will take only two instances to illustrate this feature of the philosophy of Hinduism.

All those who study the Caste System are naturally led to inquire into the origin of it. Manu being the progenitor of Caste had to give an explanation of the origin of the various castes. What is the origin which Manu gives? His explanation is simple. He says that leaving aside the four original castes the rest are simply baseborn!! He says they are the progeny of fornication and adultery between men and women of the four original castes. The immorality and looseness of character among men and women of the four original castes must have been limitless to account for the rise of innumerable castes consisting of innumerable souls!! Manu makes the wild allegation without stopping to consider what aspersions he is casting upon men and women of the four original castes. For if the chandals—the old name for the Untouchables—are the progeny of a Brahman female and a Shudra male then it is obvious that to account for such a large number of Chandals it must be assumed that every Brahman woman was slut and a whore and every Shudra lived an adulterous life with complete abandon. Manu in his mad just for debasing the different castes by ascribing to them an ignoble origin seems deliberately to pervert historical facts. I will give only two illustrations. Take Manu's origin of *Magadha* and *Vaidehik* and compare it with the origin of the same castes as given by Panini the great Grammarian. Manu says that *Magadha* is a caste which is born from sexual intercourse between Vaishya male and Kshatriya female. Manu says that *Vaidehik* is a caste which is born from sexual intercourse between a Vaishya male and a Brahmin female. Now turn to Panini. Panini says that *Magadha* means a person who is resident of the country known as *Magadha*. As to *Vaidehik* Panini says that *Vaidehik* means a person who is resident of the country known as *Videha*. What a contrast!! How cruel it is. Panini lived not later than 300 B.C. Manu lived about 200A.D. How is it that people who bore no stigma in the time of Panini became so stained in the hands of Manu? The answer is that Manu was bent on debasing them. Why Manu was bent on deliberately debasing people is a task which is still awaiting

explorationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_19 In the meantime we have the strange contrast that while Religion everywhere else is engaged in the task of raising and ennobling mankind Hinduism is busy in debasing and degrading it.

The other instance I want to use for illustrating the spirit of debasement which is inherent in Hinduism pertains to rules regarding the naming of a Hindu child.

The names among Hindus fall into four classes. They are either connected with (i) family deity (ii) the month in which the child is born (iii) with the planets under which a child is born or (iv) are purely temporal i.e. connected with business. According to Manu the temporal name of a Hindu should consist of two parts and Manu gives directions as to what the first and the second part should denote. The second part of a Brahmin's name shall be a word implying happiness ; of a Kshatriya's a word implying protection; of a Vaishya's a term expressive of prosperity and of a Shudra's an expression denoting service. Accordingly the Brahmins have *Sharma* (happiness) or *Deva* (God), the Kshatriyas have *Raja* (authority) or *Verma* (armour), the Vaishyas have *Gupta* (gifts) or *Datta* (Giver) and the Shudras have *Das* (service) for the second part of their names. As to the first part of their names Manu says that in the case of a Brahmin it should denote something auspicious, in the case of a Kshatriya something connected with power, in the case of a Vaishya something connected with wealth. But in the case of a Shudra Manu says the first part of his name should denote something contemptible!! Those who think that such a philosophy is incredible would like to know the exact reference. For their satisfaction I am reproducing the following texts from Manu. Regarding the naming ceremony Manu says :—

II. 30. Let (the father perform or) cause to be performed the namadheya (the rite of naming the child), on the tenth or twelfth (day after birth), or on a lucky lunar day, in a lucky muhurta under an auspicious constellation.

II. 31. Let (the first part of) a Brahman's name (denote) something auspicious, a Kshatriya's name be connected with power, and a Vaishya's with wealth, but a Shudra's (express something) contemptible.

II. 32. (The second part of) a Brahman's (name) shall be (a word) implying happiness, of a Kshatriya's (a word) implying protection, of a Vaishya's (a term) expressive of thriving, and of a Shudra's (an expression) denoting service.

Manu will not tolerate the Shudra to have the comfort of a high

sounding name. He must be contemptible both in fact and in name.

Enough has been said to show how Hinduism is a denial of equality both social as well as religious and how it is also a degradation of human personality. Does Hinduism recognise liberty?

Liberty to be real must be accompanied by certain social conditions mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_20.

In the first place there should be social equality."Privilege tilts the balance of social action in favour of its possessors. The more equal are the social rights of citizens, the more able they are to utilise their freedom... If liberty is to move to its appointed end it is important that there should be equality."

In the second place there must be economic security."A man may be free to enter any vocation he may choose. . . . Yet if he is deprived of security in employment he becomes a prey of mental and physical servitude incompatible with the very essence of liberty... The perpetual fear of the morrow, its haunting sense of impending disaster, its fitful search for happiness and beauty which perpetually eludes, shows that without economic security, liberty is not worth having. Men may well be free and yet remain unable to realise the purposes of freedom".

In the third place there must be knowledge made available to all. In the complex world man lives at his peril and he must find his way in it without losing his freedom.

"There can, under these conditions, be no freedom that is worthwhile unless the mind is trained to use its freedom. (Given this fact) the right of man to education becomes fundamental to his freedom. Deprive a man of knowledge and you will make him inevitably the slave of those more fortunate than himself... deprivation of knowledge is a denial of the power to use liberty for great ends. An ignorant man may be free. . . . (But) he cannot employ his freedom so as to give him assurance of happiness."

Which of these conditions does Hinduism satisfy? How Hinduism is a denial of equality has already been made clear. It upholds privilege and inequality. Thus in Hinduism the very first condition for liberty is conspicuous by its absence.

Regarding economic security three things shine out in Hinduism. In the first place Hinduism denies freedom of a vocation. In the Scheme of Manu each man has his avocation preordained for him before he is born. Hinduism allows no choice. The occupation being preordained it has no relation to capacity nor to inclination.

In the second place Hinduism compels people to serve ends chosen by others. Manu tells the Shudra that he is born to serve the higher classes. He exhorts him to make that his ideal. Observe the following rules lay down by Manu.

X. 121. If a Shudra (unable to subsist by serving Brahmanas) seeks a livelihood, he may serve Kshatriyas, or he may also seek to maintain himself by attending on a wealthy Vaishya.

X. 122. But let a Shudra serve Brahmans....

Manu does not leave the matter of acting upto the ideal to the Shudra. He goes a step further and provides that the Shudra does not escape or avoid his destined task. For one of the duties enjoined by Manu upon the King is to see that all castes including the Shudra to discharge their appointed tasks.

VIII. 410."The king should order each man of the mercantile class to practice trade, or money lending, or agriculture and attendance on cattle ; and each man of the servile class to act in the service of the twice born."

VIII. 418."With vigilant care should the king exert himself in compelling merchants and mechanics to perform their respective duties ; for, when such men swerve from their duty, they throw this world into confusion."

Failure to maintain was made an offence in the King punishable at Law.

VIII. 335."Neither a father, nor a preceptor, nor a friend, nor a mother, nor a wife, nor a son, nor a domestic priest must be left unpunished by the King, if they adhere not with firmness to their duty."

VIII. 336."Where another man of lower birth would be fined one pana, the king shall be fined a thousand, and he shall give the fine to the priests, or cast it into the river, this is a sacred rule."These rules have a two-fold significance, spiritual as well as economic. In the spiritual sense they constitute the gospel of slavery. This may not be quite apparent to those who know slavery only by its legal outward form and not by reference to its inner meaning. With reference to its inner meaning a slave as defined by Plato means a person who accepts from another the purposes which control his conduct. In this sense a slave is not an end in him. He is only a means for filling the ends desired by others. Thus understood the Shudra is a slave. In their economic significance the Rules put an interdict on the economic independence of the Shudra. A Shudra, says Manu, must serve. There may not be much in that to complain of. The wrong however consists in that the rules require him

to serve others. He is not to serve himself, which means that he must not strive after economic independence. He must forever remain economically dependent on others. For as Manu says:—

1. 91. One occupation only the lord prescribed to the Shudra to serve meekly even these other three castes. In the third place Hinduism leaves no scope for the Shudra to accumulate wealth. Manu's rules regarding the wages to be paid to the Shudra when employed by the three higher classes are very instructive on this point. Dealing with the question of wages to the Shudras, Manu says :—

X. 124."They must allot to him (Shudra) out of their own family property a suitable maintenance, after considering his ability, his industry, and the number of those whom he is bound to support."

X. 125."The remnants of their food must be given to him, as well as their old clothes, the refuse of their grain, and their old household furniture.

This is Manu's law of wages. It is not a minimum wage law. It is a maximum wage law. It was also an iron law fixed so low that there was no fear of the Shudra accumulating wealth and obtaining economic security. But Manu did not want to take chances and he went to the length of prohibiting the Shudra from accumulating property. He says imperatively:—

X. 129. No collection of wealth must be made by a Shudra even though he be able to do it; for a Shudra who has acquired wealth gives pain to Brahmans.

Thus in Hinduism, there is no choice of avocation. There is no economic independence and there is no economic security. Economically, speaking of a Shudra is a precarious thing.

In the matter of the spread of knowledge two conditions are prerequisites. There must be formal education. There must be literacy. Without these two, knowledge cannot spread. Without formal education it is not possible to transmit all the resources and achievements of a complex society. Without formal education the accumulated thought and experience relating to a subject cannot be made accessible to the young and which they will never get if they were left to pick up their training in informal association with others. Without formal education he will not get new perceptions. His horizon will not be widened and he will remain an ignorant slave of his routine work. But formal education involves the establishment of special agencies such as schools, books, planned materials such as studies etc. How can any one take advantage of these special agencies of formal education unless he is literate and

able to read and write? The spread of the arts of reading and writing i.e. literacy and formal education go hand in hand. Without the existence of two there can be no spread of knowledge.

How does Hinduism stand in this matter?

The conception of formal education in Hinduism is of a very limited character. Formal education was confined only to the study of the Vedas. That was only natural. For the Hindus believed that there was no knowledge outside the Vedas. That being so formal education was confined to the study of the Vedas. Another consequence was that the Hindu recognised that its only duty was to study in the schools established for the study of the Vedas. These schools benefited only the Brahmins. The State did not hold itself responsible for opening establishments for the study of arts and sciences, which concerned the life of the merchant and the artisan. Neglected by the state they had to shift for themselves.

Each class managed to transmit to its members the ways of doing things it was traditionally engaged in doing. The duties of the Vaishya class required that a young Vaishya should know the rudiments of commercial geography, arithmetic, some languages as well as the practical details of trade. This he learned from his father in the course of the business. The Artisan's class or the Craftsman who sprang out of the `Shudra class also taught the arts and crafts to their children in the same way. Education was domestic. Education was practical. It only increased the skill to do a *particular* thing. It did not lead to new perceptions. It did not widen horizon, with the result that the practical education taught him only an isolated and uniform way of acting so that in a changing environment the skill turned out to be gross ineptitude. Illiteracy became an inherent part of Hinduism by a process which is indirect but integral to Hinduism. To understand this process it is necessary to draw attention to rules framed by Manu in regard to the right to teach and study the Vedas. They are dealt with in the following Rules.

1. 88. To the Brahmanas he (the creator) assigned *teaching* and *studying* the Veda.

1. 89. The Kshatriya he (the creator) commanded to *study* the Veda.

1. 90. The Vaishya he (the creator) commanded. to study the Veda.

II. 116. He who shall acquire knowledge of the Veda without the assent of his preceptor, incurs the guilt of stealing the scripture, and shall sink to the region of torment."

IV. 99. He (the twice born) must never read (the Veda). in the presence of the Shudras.

IX. 18. Women have no business with the text of the *Veda*. XI. 199. A twice born man who has..... (improperly) divulged the Veda (i.e. to Shudras and women) (commits sin), atones for his offence, if he subsists a year on barley. In these texts there are embodied three distinct propositions. The Brahmin, Kshatriya and Vaishya can study the Vedas. Of these the Brahmins alone have the right to teach the Vedas. But in the case of the Shudra he has not only not to study the Vedas but he should not be allowed to hear it read.

The successors of Manu made the disability of the Shudra in the matter of the study of the Veda into an offence involving dire penalties. For instance Gautama says:

XII. 4. If the Shudra intentionally listens for committing to memory the Veda, then his ears should be filled with (molten) lead and lac ; if he utters the Veda, then his tongue should be cut off; if he has mastered the Veda his body should be cut to pieces. To the same effect is Katyayana.

The ancient world may be said to have been guilty for failing to take the responsibility for the education of the masses. But never has any society been guilty of closing to the generality of its people the study of the books of its religion. Never has society been guilty of prohibiting the mass of its people from acquiring knowledge. Never has society made any attempt to declare that any attempt made by the common man to acquire knowledge shall be punishable as a crime. Manu is the only divine law giver who has denied the common man the right to knowledge.

But I cannot wait to dilate upon this. I am more immediately concerned in showing how the prohibition against the study of the Vedas to the mass of the people came to give rise to illiteracy and ignorance in secular life. The answer is easy. It must be realized that reading and writing have an integral connection with the teaching and study of the Vedas. Reading and writing were arts necessary for those who were free and privileged to study the Vedas. They were not necessary to those who were not free to do so. In this way reading and writing became incidental to the study of the Vedas. The result was that the theory of Manu regarding the rights and prohibitions in the matter of the teaching and the study of Vedas came to be extended to the arts of reading and writing. Those who had the right to study the Vedas were accorded the right to read and write. Those who had no right to study

the Vedas were deprived of the right to read and write. So that it can be rightly said according to the law of Manu reading and writing has become the right of the high class few and illiteracy has become the destiny of the low class many.

Only a step in the process of this analysis will show how Manu by prohibiting literacy was responsible for the general ignorance in which the masses came to be enveloped.

Thus Hinduism far from encouraging spread of knowledge is a gospel of darkness.

Taking these facts into consideration Hinduism is opposed to the conditions in which liberty can thrive. It is therefore denial of liberty.

IV

Does Hinduism recognise Fraternity?

There are two forces prevalent in Society. Individualism and Fraternity. Individualism is ever present. Every individual is ever asking "I and my neighbours, are we all brothers, are we even fiftieth cousins, am I their keeper, why should I do right to them" and under the pressure of his own particular interests acting as though he was an end to himself, thereby developing a non-social and even an anti-social self. Fraternity is a force of opposite character. Fraternity is another name for fellow feeling. It consists in a sentiment which leads an individual to identify himself with the good of others whereby "the good of others becomes to him a thing naturally and necessarily to be attended to like any of the physical conditions of our existence". It is because of this sentiment of fraternity that the individual does not "bring himself to think of the rest of his fellow-creatures as struggling rivals with him for the means of happiness, whom he must desire to see defeated in their object in order that he may succeed in his own." Individualism would produce anarchy. It is only fraternity, which prevents it and helps to sustain the moral order among men. Of this there can be no doubt.

How does this sentiment of Fraternity of fellow feeling arise? J. S. Mill says that this sentiment is a natural sentiment.

"The social state is at once so natural, so necessary, and so habitual to man, that, except in some unusual circumstances or by an effort of voluntary abstraction he never conceives himself otherwise than as a member of a body; and this association is riveted more and more, as mankind are further removed from the state of savage independence. Any condition, therefore, which is essential to a state of society,

becomes more and more an inseparable part of every person's conception of the state of things which he is born into, and which is the destiny of a human being. Now, society between human beings, except in the relation of master and slave, is manifestly impossible on any other footing than that the interests of all are to be consulted. Society between equals can only exist on the understanding that the interests of all are to be regarded equally. And since in all states of civilisation, every person, except an absolute monarch, has equals, every one is obliged to live on these terms with some body; and in every age some advance is made towards a state in which it will be impossible to live permanently on other terms with any body. In this way people grow up unable to conceive as possible to them a state of total disregard of other people's interests."

Does this sentiment of fellow feeling find a place among the Hindus? The following facts throw a flood of light on this question.

The first fact that strikes one is the number of castes. No body has made an exact computation of their number. But it is estimated that total is not less than 2000. It might be 3000. This is not the only distressing aspect of this fact. There are others. Castes are divided into sub-castes. Their number is legion. The total population of the Brahmin Caste is about a crore and a half. But there are 1886 sub-castes of the Brahmin Caste. In the Punjab alone the Saraswat Brahmins of the Province of Punjab are divided into 469 sub-castes. The Kayasthas of Punjab are divided into 590 sub-castes. One could go on giving figures to show this infinite process of splitting social life into small fragments.

The third aspect of this splitting process is the infinitely small fragments into which the Castes are split. Some of the Baniya sub-castes can count no more than 100 families. They are so inter related they find extremely difficult to marry within their castes without transgressing the rules of consanguinity.

It is noteworthy what small excuses suffice to bring about this splitting.

Equally noteworthy is the hierarchical character of the Caste System. Castes form an hierarchy in which one caste is at the top and is the highest, another at the bottom and it is the lowest and in between there are castes every one of which is at once above some castes and below some castes. The caste system is a system of gradation in which every caste except the highest and the lowest has a priority and precedence over some other castes.

How is this precedence or this superiority determined? This order of

superiority and inferiority or this insubordination is determined by Rules (1) which are connected with religious rites and (2) which are connected with commensuality.

Religion as a basis of Rules of precedence manifests itself in three ways. Firstly through religious ceremonies, secondly through incantations that accompany the religious ceremonies and thirdly through the position of the priest.

Beginning with the ceremonies as a source of rules of precedence it should be noted that the Hindu Scriptures prescribe sixteen religious ceremonies. Although those are Hindu ceremonies every Hindu Caste cannot by right claim to perform all the sixteen ceremonies. Few can claim the right to perform all. Some are allowed to perform certain ceremonies, some are not allowed to perform certain of the ceremonies. For instance take the ceremony of Upanayan, wearing of the sacred thread. Some castes can't. Precedence follows this distinction in the matter of right to perform the ceremonies. A caste which can claim to perform all the ceremonies is higher in status than the caste which has a right to perform a few.

Turning to the Mantras, it is another source for rules of precedence. According to the Hindu Religion the same ceremony can be performed in two different ways. (1) Vedokta and (2) Puranokta. In the Vedokta form the ceremonies are performed with Mantras (incantations) from the Vedas. In the Puranokta form the ceremony is performed with Mantras (incantations) from the Puranas. Hindu Religious Scriptures fall into two distinct categories (1) The Vedas which are four, and (2) the Puranas which are eighteen. Although they are all respected as scriptures they do not all have the same sanctity. The Vedas have the highest sanctity and the Puranas have the lowest sanctity. The way the Mantras give rise to social precedence will be obvious if it is borne in mind that not every caste is entitled to have the ceremony performed in the Vedokta form. Three castes may well claim the right to the performance of one of the sixteen ceremonies. But it will be that one of it is entitled to perform it in the Vedokta form, another in the Puranokta form. Precedence goes with the kind of Mantra that a caste is entitled to use in the performance of a religious ceremony. A caste which is entitled to use Vedic Mantras is superior to a caste which is entitled to use only Puranokta Mantras.

Taking the priest as a second source of precedence connected with Religion, Hinduism requires the instrumentality of a priest for the derivation of the full benefit from the performance of a religious

ceremony. The priest appointed by the scripture is the Brahmin. A Brahmin therefore is indispensable. But the scriptures do not require - that a Brahmin shall accept the invitation of any and every Hindu irrespective of his caste to officiate at a religious ceremony. The invitation of which caste he will accept and of which he will refuse is a matter left to the wishes of the Brahmin. By long and well-established custom it is now settled at which caste he will officiate and at which caste he will not. This fact has become the basis of precedence as between castes. The caste at which a Brahmin will officiate is held as superior to a caste at whose religious functions a Brahmin will not officiate.

The second source for rules of precedence is commonality. It will be noticed that rules of marriage have not given rise to rules of precedence as rules of commonality have. The reason lies in the distinction between the rules prohibiting intermarriage and inter-dining. That difference is obvious. The prohibition on intermarriage is such that it cannot only be respected but it can be carried out quite strictly. But the prohibition of inter-dining creates difficulties. It cannot be carried out quite strictly in all places and under all circumstances. Man migrates and must migrate from place to place. In every place he happens to go he may not find his caste-men. He may find himself landed in the midst of strangers. Marriage is not a matter of urgency but food is. He can wait for getting himself married till he returns to the Society of his caste-men. But he cannot wait for his food. He must find it from somewhere and from someone. Question arises from which caste he can take food, if he has to. The rule is that he will take food from a caste above him but will not take food from a caste, which is below him. There is no way of finding how it came to be decided that a Hindu can take food from one caste and not from another. By long series of precedent every Hindu knows from what caste he can take food and from what caste he cannot. This is determined chiefly by the rule followed by the Brahmin. A caste is higher or lower according as the Brahmin takes from it food or not. In this connection the Brahmin has a very elaborate set of rules in the matter of food and water. (1) He will take only water from some and not from others. (2) A Brahmin will not take food cooked in water by any caste. (3) He will take only food cooked in oil from some castes. Again he has a set of rules in the matter of the vessels, in which he will accept food and water. He will take food or water in an earthen vessel from some castes, only in metallic vessel from some and only in glass vessel from others. This goes to determine the level of the castes. If he takes

food cooked in oil from a caste its status is higher than the caste from which he will not. If he takes water from a caste its status is higher than the caste from which he will not. If he takes water in a metallic vessel that caste is higher than the caste from which he will take water in an earthen vessel. Both these castes are higher than the caste from which he will take water in a glass vessel. Glass is a substance which is called (Nirlep) (which conserves no stain) therefore a Brahmin can take water in it even from the lowest. But other metals do conserve stains. Contaminating character of the stain depends upon the status of the person who has used it. That status depends upon the Brahmins will to accept water in that vessel. These are some of the factors which determine the place and status of a caste in this Hindu hierarchical system of castes.

This hierarchical organisation of the caste system is responsible for producing a social psychology, which is noteworthy. In the first place it produces a spirit of rivalry among the different castes for dignity. Secondly it produces an ascending scale of hatred and descending scale of contempt.

This social psychology of mutual hatred and contempt is well illustrated by the innumerable proverbs that are flying about in India. As examples I record a few of them.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_21

This spirit of hatred and contempt has not only found its place in proverbs but it has found its place in Hindu literature also. I refer to a Scripture known as the *Sahyadrikband*. It is one of the Puranas which form a part of the Hindu Sacred literature. But its subject matter is totally foreign to the subject matter of other Puranas. It deals with the *origin of the different castes. In doing so it assigns noble origin to other castes while it assigns to the Brahmin caste the filthiest origin. It was a revenge on Manu. It was worst lampoon on the Brahmins as a caste. The Peshwas very naturally ordered its destruction. Some survived the general destruction.

I will just record one more fact before I put the question. Present day Hindus are probably the strongest opponents of Marxism. They are horrified at its doctrine of class struggle. But they forget that India has been not merely the land of class struggle but she has been the land of class wars.

The bitterest class war took place between the Brahmins and the Kshatriyas. The classical literature of the Hindus abounds in reference

to class wars between these two Varnas.

The first recorded conflict was between the Brahmins and King Vena. Vena was the son of King Anga, of the race of Atri and was born of Sunitha, the daughter of Mrityu (Death). This son of the daughter of Kala (death), owing to the taint derived from his maternal grandfather, threw his duties behind his back, and lived in covetousness under the influence of desire. This king established an irreligious system of conduct; transgressing the ordinances of the Veda, he was devoted to lawlessness. In his reign men lived without study of the sacred books and the gods had no soma-libations to drink at sacrifices. 'I' he declared, 'am the object, and the performer of sacrifice, and the sacrifice itself; it is to me that sacrifice should be presented, and oblation offered'. This transgressor of the rules of duty, who arrogated to himself what was not his due, was then addressed by all the great rishis, headed by Marichi. 'We are about to consecrate ourselves for a ceremony which shall last for many years, practice not unrighteousness, O Vena : this is not the eternal rule of duty. Thou art in every deed a Prajapati of Atri's race, and thou has engaged to protect thy subjects.' The foolish Vena, ignorant of what was right, laughingly answered those great rishis who had so addressed him ; ' Who but myself is the ordained of duty or whom ought I to obey? Who on earth equals me in sacred knowledge, in prowess, in austere fervour, in truth? Yes who are deluded and senseless know not that I am the source of all beings and duties. Hesitate not to believe that I, if I willed, could burn up the earth, or deluge it with water, or close up heaven and earth. ' When owing to his delusion and arrogance Vena could not be governed then the mighty rishis becoming incensed, seized the vigorous and struggling king, and rubbed his left thigh. From this thigh, so rubbed, was produced a black man, very short in stature, who, I being alarmed, stood with joined hands. Seeing that he was agitated, Atri said to him ' Sit down' (Nishada). He became the founder of the race of the Nishadas, and also progenitor of the Dhivaras (fishermen), who sprang from the corruption of Vena. So two were produced from him the other inhabitants of the Vindhya range, the Tukharas and Tumburas, who are prone to lawlessness. Then the mighty sages, excited and incensed, again rubbed the right hand of Vena, as men do the Arani wood, and from it arose Pritha, respondent in body, glowing like the manifested Agni.'""The son of Vena (Pritha) then, with joined hands, addressed the great Rishis: 'A very slender understanding for perceiving the principles of duty has been given to me by nature; tell me truly how I must employ it. Doubt not that I shall perform whatever

thy shall declare to me as my duty, and its object '. Then those gods and great I rishis said to him: ' Whatever duty is enjoined perform it without hesitation, disregarding what though mayest like or dislike, looking on all creatures with an equal eye, putting far from thy lust, anger, cupidity and pride. Restrain by the strength of thin arm all those men who swerve from righteousness, having a constant regard to duty. And in thought, act, and word take upon thyself, and continually renew, the engagement to protect the terrestrial Brahman (Veda or Brahmins?). . . .
.. And promise that thou wilt exempts the Brahmans from punishment, and preserve society from the confusion of Castes '. The son of Vena then replied to the gods, headed by the rishis : ' The great Brahmans, the chief of men, shall be revered by me '. `So be it,' rejoined those declare of the Veda. Sukra, the depository of divine knowledge, became his Purohita ; the Balakhilyas and Sarasvatyas his ministers; and the venerable Garga, the great rishi, his astrologer.

The second recorded conflict took place between the Brahmans and the Kshatriya king Pururavas. A brief reference to it occurs in the Adiparva of the Mahabharat.

Pururavas was born of Ila. Ruling over thirteen islands of the ocean, and surrounded by beings who were all superhuman, himself a man of great renown, Pururavas, intoxicated by his prowess engaged in a conflict with the Brahmans, and robbed them of their jewels, although they loudly remonstrated. Sanatkumara came from Brahma's heaven, and addressed to him an admonition, which however, he did not regard. Being then straightway cursed by the incensed rishis, he perished, this covetous monarch, who, through pride of power, had lost his understanding. This glorious being (virat), accompanied Urvasi, brought down for the performance of sacred rites the fires which existed in the heaven of the Gandharvas, properly distributed into three.

A third collision is reported to have occurred between the Brahmans and King Nahusha. The story is given in great details in the Udyogaparva of the Mahabharat. It is there recorded:

"After his slaughter of the demon Vrittra, Indra became alarmed at the idea of having taken the life of a Brahmin (for Vrittra was regarded as such), and hid himself in waters. In consequence of the disappearance of the king of gods, all affairs, celestial as well as terrestrial, fell into confusion. The rishis and Gods then applied to Nahusha to be their king. After at first excusing himself on the plea of want of power, Nahusha at length, in compliance with their solicitations, accepted the high function. Up to the period of his elevation he had led a virtuous

life, but he now became addicted to amusement and sensual pleasure; and even aspired to the possession of Indrani, Indra's wife, whom he had happened to see. The queen resorted to the Angiras Vrihaspati, the preceptor of the Gods, who engaged to protect her. Nahusha was greatly incensed on hearing of this interference; but the Gods endeavoured to pacify him, and pointed out the immorality of appropriating another person's wife. Nahusha, however, would listen to no remonstrance, and insisted that in his adulterous designs he was not worse than Indra himself; "The renowned Ahalya, a rish's wife, was formerly corrupted by Indra in her husband's lifetime; why was he not prevented by you? And many barbarous acts, and unrighteous deeds, and frauds were perpetrated of by old Indra; Why was he not prevented by you?" The Gods, urged by Nahusha, then went to bring Indrani; but Vrihaspati would not give her up. At his recommendation, however, she solicited Nahusha for some delay, till she should ascertain what had become of her husband. This request was granted. The Gods next applied to Vishnu on behalf of Indra ; and Vishnu promised that if Indra would sacrifice to him, he should be purged from his guilt, and recover his dominion, while Nahusha would be destroyed. Indra sacrificed accordingly; and the result is thus told ; "Having divided the guilt of Brahmanicide among trees, rivers, mountains, the earth, women and the elements, Vasava (Indra), lord of the Gods, became freed from suffering and sin, and self governed." Nahusha was by this means, shaken from his place. But he must have speedily regained his position, as we are told that Indra was again ruined, and became invisible. Indrani now went in search of her husband; and by the help of Upasriti (the Goddess of night and revealer of secrets) discovered him existing in a very subtle form in the stem of a lotus growing in a lake situated in a continent within an ocean north of the Himalaya. She made known to him the wicked intention of Nahusha, and entreated him to exert his power, rescue her from danger, and resume his dominion. Indra declined any immediate interposition on the plea of Nahusha's superior strength; but suggested to his wife a device by which the usurper might be hurled from his position. She was recommended to say to Nahusha that "if he would visit her on a celestial vehicle borne by rishis, she would with pleasure submit herself to him". The question of the Gods accordingly went to Nahusha, by whom she was graciously received, and made this proposal: "I desire for thee, king of the Gods, a vehicle hitherto unknown, such as neither Vishnu, nor Rudra, nor the asuras, nor the rakshases employ. Let the eminent rishis, all united, bear thee,

lord, in a car; this idea pleases me". Nahusha receives favourably this appeal to his vanity, and in the course of his reply thus gives utterance to his self congratulation:"He is a personage of no mean prowess who makes the *Munis* his bearers. I am a fervid devotee of great might, lord of the past, the future and the present. If I were angry the world would no longer stand; on me everything depends.... Wherefore, O Goddess I shall, without doubt, carry out what you propose. The seven rishis, and all the Brahman rishis, shall carry me. Behold beautiful Goddess, my majesty and my prosperity."The narrative goes on:"Accordingly this wicked being, irreligious, violent, intoxicated by the force of conceit, and arbitrary in his conduct, attached to his car the rishis, who submitted to his commands, and compelled them to bear him". Indrani then again resorts to Vrihaspati, who assures her that vengeance will soon overtake Nahusha for his presumption; and promises that he will himself perform a sacrifice with a view to the destruction of the oppressor, and the discovery of Indra's lurking place. Agni is then sent to discover and bring Indra to Vrihaspati ; and the latter, on Indra's arrival, informs him of all that had occurred during his absence. While Indra with Kuvera, Yama, Soma, and Varuna, was devising means for the destruction of Nahusha, the sage Agastya came up, congratulated Indra on the fall of his rival, and proceeded to relate how it had occurred:"Wearied with carrying the sinner Nahusha, the eminent divine rishis, and the spotless brahman-rishis asked that divine personage Nahusha (to solve) a difficulty: 'Dost thou, Vasava, most excellent of conquerors, regard as authoritative or not those Brahmana texts which are recited at the immolation of king?' 'No', replied Nahusha, whose understanding was enveloped in darkness. The rishis rejoined: 'Engaged in unrighteousness, thou attainest not unto righteousness: these texts, which were formerly uttered by great rishis, are regarded by us as authoritative. 'The (proceeds Agastya) disputing with the munis, impelled by unrighteousness, touched me on the head with his foot. In consequence of this the king's glory was smitten and his prosperity departed. When he had instantly become agitated and oppressed with fear, I said to him, ' Since thou, O fool, condiments that sacred text, always held in honor, which has been composed by former sages, and employed by Brahman-rishis, and hast touched my head with thy foot, and employest the Brahma—like and irresistible rishis as bearers to carry thee,—therefore, short of thy lustre and all thy merit exhausted, sink down, sinner, degraded from heaven to earth. For then thousand years thou shalt crawl in the form of a huge serpent. When that period is completed,

thou shalt again ascend to heaven. `So fell that wicked wretch from the sovereignty of the Gods."

Next there is a reference to the conflict between King Nimi and the Brahmins. The Vishnu Puran relates the story as follows :—

"Nimi had requested the Brahman-rishi Vasishtha to officiate at a sacrifice, which was to last a thousand years, Vasishtha in reply pleaded a pre-engagement to Indra for five hundred years, but promised to return at the end of that period. The king made no remark, and Vasishtha went away, supposing that he had assented to this arrangement. On his return, however, the priest discovered that Nimi had retained Gautama (who was equal with Vasishtha a Brahman-rishi) and others to perform the sacrifices ; and being incensed at the neglect to give him notice of what was intended, he cursed the king, who was then asleep, to lose his corporeal form. When Nimi awoke and learnt that he had been cursed without any previous warning, he retorted, by uttering a similar curse on Vasishtha, and then died. In consequence of this curse the vigour of Vasishtha, however, received from them another body when their seed had fallen from them at the sight of Urvasi. Nimi's body was embalmed.

At the close of the sacrifice which he had begun, the Gods were willing, on the intercession of the priests, to restore him to life, but he declined the offer, and was placed by the deities, according to his desire, in the eyes of all living creatures. It is in consequence of this fact that they are always opening the shutting. (nimishas means "the twinkling of the eye")."Manu mentions another conflict between the Brahmins and King Sumukha. But of this no details are available.

These are instances of conflict between the Brahmins and the Kshatriya Kings. From this it must not be supposed that the Brahmins and the Kshatriyas as two classes did not clash. That there were clashes between these two classes as distinguished from conflicts with kings is abundantly proved by material the historic value of which cannot be doubted. Reference may be made to three events.

First is the contest between two individuals Vishvamitra the Kshatriya and Vasishtha the Brahmin. The issue between the two was whether a Kshatriya can claim Brahmahood. The story is told in Ramayana and is as follows :—"There was formerly, we are told, a king called Kusa, son of Prajapati, who had a son called Kushanabha, who was father of Gadhi, the father of Visvamitra. The latter ruled the earth for many thousand years. On one occasion, when he was making a circuit of the earth, he came to Vasishtha's hermitage, the pleasant abode of many saints, sages,

and holy devotees, where, after at first declining he allowed himself to be hospitably entertained with his followers. Visvamitra, however, coveting the wondrous cow, which had supplied all the dainties of the feast, first of all asked that she should be given to him in exchange for a hundred thousand common cows, adding that "she was a gem, that gems were the property of the king, and that, therefore, the cow was his by right". On this price being refused the king advances immensely in his offers, but all without effect.

He then proceeds very ungratefully and tyrannically, it must be allowed—to have the cow removed by force, but she breaks away from his attendants, and rushes back to her master, complaining that he was deserting her. He replied that he was not deserting her, but that the king was much more powerful than he. She answers, "Men do not ascribe strength to a Kshatriya; the Brahmins are stronger. The Strength of Brahmins is divine, and superior to that of Kshatriya. Thy strength is immeasurable. Visvamitra, though of great vigour, is not more powerful than thou. Thy energy is invincible. Commission me, who have been acquired by the Brahmanical power, and I will destroy the pride, and force, and attempt of this wicked prince".

She accordingly by her bellowing creates hundreds of Pahlavas, who destroy the entire host of Visvamitra, but are slain by him in their turn. Sakas and Yavans, of great power and valour, and well armed, were then produced who consumed the king's soldiers, but were routed by him. The cow then calls into existence by her bellowing, and from different parts of her body, other warriors of various tribes, who again destroyed Visvamitra's entire army, foot soldiers, elephants, horses, chariots, and all."A hundred of the monarch's sons, armed with various weapons, then rushed in great fury on Vashishtha, but were all reduced to ashes in a moment by the blast of that sage's mouth. Vishvamitra, being thus utterly vanquished and humbled, appointed one of his sons to be regent, and travelled to the Himalaya, where he betook himself to austerities, and thereby obtained a vision of Mahadeva, who at his desire revealed to him the science of arms in all its branches, and gave him celestial weapons with which, elated and full of pride, he consumed the hermitage of Vashishtha, and put its inhabitants to flight.

Vashishtha then threatens Vishvamitra and uplifts his Brahminical mace. Vishvamitra too, raises his fiery weapon and calls out to his adversary to stand. Vashishtha bids him to show his strength, and boasts that he will soon humble his pride. He asks : "What comparison is there between a Kshatriya's might, and the great might of a Brahman? Behold,

thou contemptible Kshatriya, my divine Brahmanical power".

The dreadful fiery weapon uplifted by the son of Gadhi was then quenched by the rod of the Brahman, as fire is by water. Many and various other celestial missiles, as the nooses of Brahma, Kala (time), and Varuna, the discus of Vishnu, and the trident Siva, were hurled by Vishvamitra at his antagonist, but the son of Brahma swallowed them up in his all-devouring mace. Finally, to the intense consternation of all the Gods, the warrior shot off the terrific weapon of Brahma (Brahmastra) ; but this was equally ineffectual against the Brahmanical sage. Vashishtha had now assumed a direful appearance: 'Jets of fire mingled with smoke darted from the pores of his body; the Brahminical mace blazed in his hand like a smokeless mundane conflagration, or a second sceptre of Yama".

Being appeased, however, by the munis, who proclaimed his superiority to his rival, the sage stayed his vengeance ; and Vishvamitra exclaimed with a groan : 'Shame on a Kshatriya's strength ; the strength of a Brahman's might alone is strength ; by the single Brahmanical mace all my weapons have been destroyed. ' No alternative now remains, to the humiliated monarch, but either to acquiesce in this helpless inferiority, or to work out his own elevation to the Brahmanical order. He embraces the latter alternative: "Having pondered well this defeat, I shall betake myself, with composed senses and mind, to strenuous austere fervour, which shall exalt me to the rank of a Brahman". Intensely vexed and mortified, groaning and full of hatred against his enemy, he travelled with his queen to the south, and carried his resolution into effect; and we are first of all told that three sons Havishyanda, Madhusyanda, and Dridhanetra were born to him.

At the end of a thousand years Brahma appeared, and announced that he had conquered the heaven of royal sages (Rajarshis) ; and, in consequence of his austere fervour, he was recognised as having attained that rank. Vishvamitra, however, was ashamed, grieved, and incensed at the offer of so very inadequate a reward, and exclaimed: "I have practised intense austerity, and the Gods and Rishis regard me only as a Rajarshi and not as a Brahman." There is conflict recorded between the same persons or different persons of the same name though on a somewhat different issue.

King Trisanku, one of Ikshvaku's descendants, had conceived the design of celebrating a sacrifice by virtue of which he should ascent bodily to heaven. As Vashistha, on being summoned, declared that the thing was impossible (asakyam), Trisanku travelled to the south, where

the sage's hundred sons were engaged in austerities, and applied to them to do what their father had declined. Though he addressed them with the greatest reverence and humility, and added that "the Ikshvaku regarded their family—priests as their highest resource in difficulties, and that, after their father, he himself looked to them as his tutelary deities" he received from the haughty priests the following rebuke for his presumption : "Asakyam" "Fool, thou hast been refused by thy truth speaking preceptor. How is it that, disregarding his authority, thou hast resorted to another school (sakha). The family priest is the highest oracle of all the Ikshvakus', and the command of that veracious personages cannot be transgressed. Vashishtha, the divine Rishi, has declared that 'the thing cannot be'; and how can we undertake thy sacrifice? Thou art foolish king; return to thy capital. The divine (Vashishtha) is competent to act as priest of the three worlds; how can we shew him disrespect?" Trisanku then gave them to understand that as his preceptor and "his preceptor's sons had declined compliance with his requests, he should think of some other expedient". In consequence of his venturing to express this presumptuous intention, they condemned him by their imprecation to become a Chandala.

As this curse soon took effect, and the unhappy king's form was changed into that of a degraded outcast, he resorted to Vishvamitra (who, as we have seen, was also dwelling at this period in the south), enlarging on his own virtues and piety, and bewailing his fate. Vishvamitra commiserated his condition, and promised to sacrifice on his behalf, and exalt him to heaven in the same Chandala form to which he had been condemned by his preceptor's curse. "Heaven is now as good as in thy possession, since thou hast resorted to the son of Kusika". He then directed that preparations should be made for the sacrifice, and that all the Rishis, including the family of Vashishtha should be invited to the ceremony. The disciples of Vishvamitra, who had conveyed his message, reported the result on their return in these words : "Having heard your message, all the Brahmans are assembling in all the countries, and have arrived, excepting Mahodaya (Vashishtha)? Hear what dreadful words those hundred Vashishthas, their voices quivering with rage, have uttered : "How can the Gods and Rishis consume the oblation at the sacrifice of that man, especially if he be a Chandala, for whom a Kshatriya is officiating priest? How can illustrious Brahmans ascend to heaven after eating the food of a Chandala, and being entertained by Vishvamitra?" These ruthless words all Vashishthas, together with Mahodaya, uttered, their eyes inflamed with anger.

Vishvamisra, who was greatly incensed on receiving this, message by a curse doomed the sons of Vashishtha to be reduced to ashes, and reborn as degraded outcasts (mritapah) for seven hundred births, and Mahodaya to become a Nishada. Knowing that this curse had taken effect, Vishvamisra then after eulogizing Trisanku, proposed to the assembled Rishis that the sacrifice should be celebrated. To this they assented, being actuated by fear of the terrible sage's wrath. Vishvamisra himself officiated at the sacrifices as vajakas ; and the other Rishis as priests (Ritvijah) (with other functions) performed all the ceremonies. Vishvamisra next invited the gods to partake of the oblations ; "When, however, the deities did not come to receive their portions, Vishvamisra became full of wrath, and raising aloft the sacrificial ladle, thus addressed Trisanku : 'Behold, O monarch, the power of austere fervour acquired by my own efforts. I myself, by my own energy, will conduct thy to heaven.

Ascend to that celestial region which is so arduous to attain in an earthly body. I have surely earned SOME reward of my austerity'." Trisanku ascended instantly to heaven in the sight of Munis. Indra, however, ordered him to be gone, as a person who, having incurred the curse of his spiritual preceptors, was unfit for the abode of the celestials :—and to fall down headlong to earth. He accordingly began to descend, invoking loudly, as he fell, the help of his spiritual patron. Vishvamisra, greatly incensed, called out to him to stop:"Then by the power of his divine knowledge and austere fervour created, like another Prajapati, other Seven Rishis (a constellation so called) in the southern part of the sky. Having proceeded to this quarter of the heavens, the renowned sage, in the midst of the Rishis, formed another garland of stars, being overcome with fury. Exclaiming, 'I will create another Indra, or the world shall have no Indra at all', he began, in his rage, to call Gods also into being".

The Rishis, Gods, (Suras), and Asuras now became seriously alarmed and said to Vishvamisra, in a conciliatory tone, that Trisanku,"as he had been cursed by his preceptors, should not be admitted bodily into heaven, until he had undergone some lustration". The sage replied that he had given a promise to Trisanku, and appealed to the Gods to permit his portage to remain bodily in heaven, and the newly created stars to retain their places in perpetuity. The Gods agreed that"these numerous stars should remain, but beyond the Sun's path, and that Trisanku, like an immortal, with his head downwards should shine among them, and be followed by them", adding"that his object would be thus attained,

and his renown secured, and he would be like a dweller in heaven". Thus was this great dispute adjusted by a compromise, which Vishvamitra

accepted. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/17.Philosophy of Hinduism.htm - _msocom_22

When all the Gods and rishis had departed at the conclusion of the sacrifice, Vishvamitra said to his attendant devotees ;"This has been a great interruption (to our austerities) which has occurred in the southern region : we must proceed in another direction to continue our penances". He accordingly went to a forest in the west, and began his austerities anew. Here the narrative is again interrupted by the introduction of another story, that of king Ambarisha, king of Ayodhya, who was, according to the Ramayana, the twenty eighth in descent from Ikshvaku, and the twenty second from Trisanku. Vishvamitra is nevertheless represented as flourishing contemporaneously with both of these princes. The story relates that Ambarisha was engaged in performing a sacrifice, when Indra carried away the victim. The priest said that this ill-omened event had occurred owing to the king's bad administration ; and would call for a great expiation, unless a human victim could be produced. After a long search the royal rishi (Ambarisha) came upon the Brahmin-rishi Richika, a descendant of Bhrigu, and asked him to sell one of his sons for a victim, at the price of a hundred thousand cows. Richika answered that he would not sell his eldest son ; and his wife added that she would not sell the youngest : "Eldest sons," she observed, "being generally the favourites of their fathers, and youngest sons of their mothers". The second son, Sunassepa then said that in that case he regarded himself as the one who was to be sold, and desired the king to remove him. The hundred thousand cows, with ten millions of gold pieces and heaps of jewels, were paid down, and Sunassepa was carried away. As they were passing through Puskara, Sunassepa beheld his maternal uncle Vishvamitra who was engaged in austerities there with other rishis, threw himself into his arms, and implored his assistance, urging his orphan, friendless, and helpless state, as claims on the sage's benevolence. Vishvamitra soothed him: and pressed his own sons to offer themselves as victims in the room of Sunassepa. This proposition met with no favour from Madhushanda and the other sons of the royal hermit, who answered with haughtiness and derision : "How is it that thou sacrificest thine own sons, and seekest to rescue those of others? We look upon this as wrong, and like the eating of one's own flesh".

The sage was exceedingly wrath at this disregard of his injunction, and doomed his sons to be born in the most degraded classes, like Vashishtha's sons, and to eat dog's flesh, for a thousand years. He then said to Sunassepa :”When thou art bound with hallowed cords, decked with a red garland, and anointed with unguents, and fastened to the sacrificial post of Vishnu, then address thyself to Agni, and sing these two divine verses (gathas), at the sacrifice of Ambarisha ; then shall thou attain the fulfilment of thy desire". Being furnished with the two gathas, Sunassepa proposed at once to King Ambarisha that they should set out for their destination. Then bound at the stake to be immolated, dressed in a red garment,”he celebrated the two Gods, Indra and his younger brother (Vishnu), with the excellent verses. The thousand-eyed (Indra) was pleased with the sacred hymn, and bestowed long life on Sunassepa". King Ambarisha also received great benefits from this sacrifice. Vishvamitra meanwhile proceeded with his austerities, which he prolonged for a thousand years.”At the end of this time the Gods came to allot his reward; and Brahma announced that he had attained the rank of a rishi, thus apparently advancing an additional step. Dissatisfied, as it would seem, with this, the sage commenced his task of penance anew. After a length of time he beheld the nymph (Apsara) Menka, who had come to bathe in the lake of Pushkara.

She flashed on his view, unequalled in her radiant beauty, like lightning in a cloud. He was smitten by her charms, invited her to be his companion in his hermitage, and for ten years remained a slave to her witchery, to the great prejudice of his austerities. At length he became ashamed of this ignoble subjection, and full of indignation at what he believed to be a device of the Gods to disturb his devotion ; and, dismissing the nymph with gentle accents, he departed for the northern mountains, where he practised severe austerities for a thousand years on the banks of the Kausiki river. The Gods became alarmed at the progress he was making, and decided that he should be dignified with the appellation of great rishi (Maharshi) ; and Brahma, giving effect to the general opinion of the deities, announced that he had conferred that rank upon him. Joining his hands and bowing his head, Vishvamitra replied that he should consider himself to have indeed completely subdued his senses, if the incomparable title of Brahmin-rishi were conferred upon him. Brahma informed him in answer, that he had not yet acquired the power of perfectly controlling his senses ; but should make further efforts with that view.

The sage then began to put himself through a yet more rigorous

course of austerities, standing with his arms erect, without support, feeding on air, in summer exposed to five fires (i.e. one on each of four sides, and the sun overhead), in the rainy season remaining unsheltered from the wet, and in winter lying on a watery couch night and day. This he continued for a thousand years. At last Indra and the other deities became greatly distressed at the idea of the merit he was storing up, and the power which he was thereby acquiring; and the chief of the celestials desired the nymph Rambha to go and bewitch him by her blandishments. She expressed great reluctance to expose herself to the wrath of the formidable muni, but obeyed the repeated injunction of Indra, who promised that he and Kandarpa (the God of love) should stand by her, and assumed her most attractive aspect with the view of overcoming the sage's impassability. He, however, suspected this design, and becoming greatly incensed, he doomed the nymph by a curse to be turned into stone and to continue in that state for a thousand years.

The curse took effect, and Kandarpa and Indra sunk away. In this way, though he resisted the allurements of sensual love, he lost the whole fruit of his austerities by yielding to anger; and had to begin his work over again. He resolved to check his irresistibility, to remain silent, not even to breathe for hundreds of years ; to dry up his body ; and to fast and stop his breath till he had obtained the coveted character of a Brahmin. He then left the Himalaya and travelled to the east, where he underwent a dreadful exercise, unequalled in the whole history of austerities, maintaining silence, according to a vow, for a thousand years. At the end of this time he had attained to perfection, and although thwarted by many obstacles, he remained unmoved by anger. On the expiration of this course of austerity, he prepared some food to eat; which Indra, coming in the form of a Brahmin, begged that he would give him. Vishvamitra did so, and though he had done left for himself, and was obliged to remain fasting, he said nothing to the Brahmin, on account of his vow of silence."As he continued to suspend his breath, smoke issued from his head, to the great consternation and distress of the three worlds."

The Gods, rishis, etc., then addressed Brahma."The great muni Vishvamitra has been allured and provoked in various ways, but still advances in his sanctity. If his wish is not conceded, he will destroy the three worlds by the force of his austerity. All the regions of the universe are confounded, no light anywhere shines; all the oceans are tossed, and the mountains crumble, the earth quakes, and the wind blows confusedly. We cannot, O Brahma, guarantee that mankind shall not

become atheistic..... Before the great and glorious sage of fiery form resolves to destroy (everything) let him be propitiated."The Gods, headed by Brahma, then addressed Vishvamitra : 'Hail, Brahman rishi, we are gratified by the austerity ; O Kausika, thou hast, through their intensity, attained to Brahmahood. O Brahman, associated with the Maruts, confers on thee long life. May every blessing attend thee ; depart where ever thou wilt.' The sage, delighted, made his obeisance to the Gods, and said: ' If I have obtained Brahmahood, and long life, then let the mystic monosyllable (ornkara) and the sacrificial formula (vashatkara) and the Vedas recognise me in that capacity. And let Vashishtha, the son of Brahmin, the most eminent of those who are skilled in the Kshatra-Veda, and the Brahma-Veda (the knowledge of the Kshatriya and the Brahmnical disciplines), address me similarly '..... Accordingly Vashishtha, being propitiated by the Gods, became reconciled to Vishvamitra, and recognised his claim to all the prerogatives of a Brahman rishi. Vishvamitra, too having attained the Brahmanical rank, paid all honour to Vashishtha".

The second event has a reference to the slaughter of the Brahmins by the Kshatriyas. It is related in the Adiparva of the Mahabharat from which the following account is taken :—

"There was a King named Kritvirya, by whose liberality the Bhrigus, learned in the Vedas, who officiated as his priests, had been greatly enriched with corn and money. After he had gone to heaven, his descendants were in want of money, and came to beg for a supply from the Bhrigus, of whose wealth they were aware. Some of the latter hid their money under ground, others bestowed it on Brahmins, being afraid of the Kshatriyas, while others again gave these last what they wanted. It happened, however, that a Kshatriya, while digging the ground, discovered some money buried in the house of Bhrigu. The Kshatriyas then assembled and saw this treasure, and, being incensed, slew in consequence all the Bhrigus, who they regarded with contempt, down to the children in the womb. The widows, however, fled to the Himalaya mountains. One of them concealed her unborn child in her thigh. The Kshatriya, hearing of its existence from a Brahmani informant, sought to kill it ; but it issued forth from its mother's thigh with lustre, and blinded the persecutors. After wandering about bewildered among the mountains for a time, they humbly supplicated the mother of the child for the restoration of their sight ; but she referred them to her wonderful infant Aurva into whom the whole Veda, with its six Vedangas, had entered as the person who (in retaliation of the slaughter

of his relatives) had robbed them of their eyesight, and who alone could restore it. They accordingly had recourse to him, and their eyesight was restored. Aurva, however, meditated the destruction of all living creatures, in revenge for the slaughter of the Bhrigus. and entered on a course of austerities which alarmed both Gods, Asuras, and men ; but his progenitors (Pitris) themselves appeared, and sought to turn him from his purpose by saying that they had no desire to be revenged on the Kshatriyas: "It was not from weakness that the devout Bhrigus overlooked the massacre perpetrated by the murderous Kshatriyas.

When we became distressed by old age, we ourselves desired to be slaughtered by them. The money which was buried by someone in a Bhrigu's house was placed there for the purpose of exciting hatred, by those who wished to provoke the Kshatriyas. For what had we, who were desiring heaven, to do with money?" They added that they hit upon this device because they did not wish to be guilty of suicide, and concluded by calling upon Aurva to restrain his wrath ; and abstain from the sin he was meditating, "Destroy not the Kshatriyas. Oh, son, nor the seven worlds. Suppress thy kindled anger which nullifies the power of austere fervour."

Aurva, however, replies that he cannot allow his threat to remain unexecuted. His anger, unless wreaked upon some other object, will, he says, consume himself. And he argues on grounds of justice, expediency, and duty, against the clemency which his progenitors recommend. He is, however, persuaded by the Pitris to throw the fire of his anger into the sea, where they say it will find exercise in assailing the watery element, and in this way his threat will be fulfilled."

The third event has reference to the slaughter of the Kshatriyas by the Brahmins. This story is told in several places in the Mahabharat. The magnificent and mighty Kartavirya, possessing a thousand arms, was lord of this whole world, living in Mahishmati. This Haihaya of unquestioned valour ruled over the whole sea-girt earth, with its oceans and continents. He obtained boons from the Muni Dattatreya, a thousand arms whenever he should go into battle, power to make the conquest of the whole earth, a disposition to rule it with justice and the promise of instruction from the virtuous in the event of his going astray." Then ascending his chariot glorious as the resplendent Sun, he exclaimed in the intoxication of his prowess, ' Who is like me in fortitude, courage, fame, heroism, energy, and vigour?'

At the end of this speech a bodiless voice in the sky addressed him: "Thou knowest not, O fool, that a Brahman is better than Kshatriya. It is

with the help of the Brahman that the Kshatriya rules his subjects. ' Arjuna answers : ' If I am pleased, I can create, or, if displeased, annihilate living beings; and no Brahman is superior to me in act, thought or word. The first proposition is that the Brahmins are superior: the second that the Kshatriyas are superior; both of these thou hast stated with their grounds, but there is a difference between them (in point of force). The Brahmins are dependent on the Kshatriyas and not the Kshatriyas on the Brahmins, who wait upon them, and only make the Vedas a pretence. Justice, the protection of the people, has its seat in the Kshatriyas. From them the Brahmins derive their livelihood; how then can the latter be superior? I always keep in subjection myself those Brahmins, the chief of all beings, who subsist on air and sand who have a high opinion of themselves. For truth was spoken by that female the Gayatri in the sky. I shall subdue all those unruly Brahmins clad in hides. No one in the three worlds, god or man can hurl me from my royal authority; therefore I am superior to any Brahman. Now shall I turn the world in which Brahmins have the upper hand into a place where Kshatriyas shall have the upper hand; for no one dares to encounter my force in battle. ' Hearing this speech of Arjun, the female roving in the night became alarmed.

Then Vayu hovering in the air, said to Arjuna: 'Abandon this sinful disposition, and do obeisance to the Brahmins. If thou shall do them wrong, thy kingdom shall be convulsed. They will subdue thee; those powerful men will humble thee, and expel thee from thy country. ' The King asks him, 'Who art thou?' Vayu replies, 'I am Vayu, the messenger of the Gods. and tell thee what is for thy benefit. ' Arjuna rejoins, ' Oh, thou displayest today a great warmth of devotion to the Brahmins. But say that a Brahman is like (any other) earth-horn creature.'"

This king came into conflict with Parsuram the son of a Brahman sage Jamadagni. The history of this conflict is as follows:—

There lived a king of Kanyakubja, called Gadhi, who had a daughter named Satyavati. The marriage of this princess to the rishi Richika, and the birth of Jamadagni, are then told in nearly the same way as above narrated. Jamadagni and Satyavati had five sons, the youngest of whom was the redoubtable Parasuram. By his father's command he kills his mother (who, by the indulgence of impure desire, had fallen from her previous sanctity), after the four elder sons had refused this matricidal offence, and had in consequence been deprived of reason by their father's curse. At Parasuram's desire, however, his mother is restored by his father to life, and his brothers to reason; and he himself is absolved

from all the guilt of murder ; and obtains the boon of invincibility and long life from his father.

His history now begins to be connected with that of king Arjuna (or Kartavirya). The latter had come to Jamadagni's hermitage, and had been respectfully received by his wife; but he had requited this honour by carrying away by force the calf of the sage's sacrificial cow, and breaking down his lofty trees. On being informed of this violence, Parasurama was filled with indignation, attacked Arjuna, cut off his thousand arms, and slew him. Arjuna's sons, in return slew the peaceful sage Jamadagni, in the absence of Parasuram.

Rama, after performing, on his return, his father's funeral obsequies, vowed to destroy the whole Kshatriya race ; and executed his threat by killing first Arjun's sons and their followers. Twenty one times did he sweep away all the Kshatriyas from the earth, and formed five lakes of blood in Samantpanchaka ; in which he satiated the manes of the Bhrigus, and beheld face to face (his grandfather), Richika, who addressed himself to Rama. The latter gratified Indra by offering to him a grand sacrifice, and gave the earth to the officiating priests. He bestowed also a golden altar, ten fathoms long and nine high, on the mighty Kasyapa.

This, by his permission, the Brahmins divided among themselves, deriving thence the name of Khandavavanas. Having given away the earth to Kasyapa, Parasuram himself dwells on the mountain Mahendra. Thus did enmity arise between him and Kshatriyas, and thus was the earth conquered by Parasuram of boundless might."The Kshatriyas who were slain by Parasuram are described in the Dronaparvan of the Mahabharata as of various provinces, viz., Kasmiras, Daradas, Kuntis, Kshudrakas, Malavas, Angas, Vangas, Kalingas, Videhas, Tamraliptakas, Marttikavatas, Sivis and other Rajanyas.

The means by which the Kshatriya race was restored is also told as part of this story of annihilation of the Kshatriyas by the Brahmins. It is said :—

"Having one and twenty times swept away all the Kshatriyas from the earth, the son of Jamdagni engaged in austerities on Mahendra the most excellent of mountains. After he had cleared the world of Kshatriyas, their widows came to the Brahmins, praying for offspring. The religious Brahmins, free from any impulse of lust cohabited at the proper seasons with these women, who in consequence became pregnant, and brought forth valiant Kshatriya boys and girls, to continue the Kshatriya stock. Thus was the Kshatriya race virtuously begotten by Brahmins on

Kshatriya women, and became multiplied and long lived. Thence there arose four castes inferior to the Brahmins."No country has such a dismal record of class war as Hindustan. It was the proud boast of the Brahmin Parsuram that he exterminated the Kshatriyas twenty one times from the face of Hindustan and recreated them by Brahmans cohabiting with the widows of the Kshatriyas.

It must not be supposed that this Class War in India is a matter of ancient History. It has been present all along. Its existence was very much noticeable in Maharashtra during the Maratha Rule. It destroyed the Maratha Empire. It must not be supposed that these class Wars were like ordinary wars which are a momentary phenomena which come and go and which leave no permanent chasms to divide the peoples of the different nations. In India the class war is a permanent phenomenon, which is silently but surely working its way. It is a grain in the life and it has become genius of the Hindus.

These facts it will not be denied are symptomatic in the sense they indicate health and character. Do they suggest that there is fraternity among Hindus? In the face of these facts I am sure it would be impossible to give an affirmative answer.

What is the explanation of this absence of fraternity among the Hindus? It is Hinduism and its philosophy that is responsible for it. The sentiment of fraternity as Mill said is natural but it is a plant, which grows only where the soil is propitious and the conditions for its growth exist. The fundamental condition for the growth of the sentiment of fraternity is not preaching that we are children of God or the realisation that one's life is dependent upon others. It is too rational to give rise to a sentiment. The condition for the growth of this sentiment of fraternity lies in sharing in the vital processes of life. It is sharing in the joys and sorrows of birth, death, marriage and food. Those who participate in these come to feel as brothers. Prof. Smith very rightly emphasises the importance of sharing food as a prime factor in the creation of community feeling when he says;

"The sacrificial meal was an appropriate expression of the antique ideal of religious life, not merely because it was a social act and in which the God and his worshippers were conceived as partaking together, but because, as has already been said, the very act of eating and drinking with a man was a symbol and a confirmation of fellowship and mutual social obligations. The one thing directly expressed in the sacrificial meal is that the God and his worshippers are common souls but every other point in their mutual relations is included in what this

involves. Those who sit at meal together are united for all social effects; those who do not eat together are aliens to one another, without fellowship in religion and without reciprocal social duties".mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_23

There is no sharing among Hindus of joys and sorrows involved in the vital facts of life. Everything is separate and exclusive. The Hindu is separate and exclusive all through his life. A foreigner coming to India will not find men crying Hindu Pani (water for Hindus) and Musalman Pani (water for Musalmans). He will find Brahmin Coffee

Houses, Brahmin Eating-Houses, where no non-Brahmin Hindus can go. He will find Brahmin Maternity Homes, Maratha Maternity Homes and Bhatia Maternity homes although Brahmins, Marathas and Bhatias are all Hindus. If there is a birth at the house of a Brahmin, no non-Brahmin will be invited nor will he feel the desire to join. If there is marriage in the family of a Brahmin, no non-Brahmin will be invited nor will he feel the desire to join if a Brahmin dies, no non-Brahmin will be invited to join the funeral nor will he think it necessary to join in the procession. If there is a festivity in the house of a Brahmin, no non-Brahmin will be called and no non-Brahmin will feel any wrong about it. Joys and sorrows of one caste are not the joys and sorrows of another. One caste has no concern with other castes. Even charity has become caste bound. Among Hindus there is no public charity in the sense of its benefit being open to all. You have Brahmin Charity for Brahmins. Within that you have Chitpavan Brahmin Charity for Chitpavan Brahmins only. Deshastha Brahmin Charity for Deshastha Brahmins only, Karhada Brahmin Charity for Karahda Brahmins only. You have Sarasvat Brahmin Charity. Within that you have Kudaldeshkar Brahmin Charity. One could go on with such instances *ad nauseum* to show the exclusive character of Hindu Charity—rather Charity among Hindus—for there is no such thing as Hindu Charity. Thus one Hindu will share nothing with another Hindu while they are alive. But they will be separate and exclusive even when they are dead. Some Hindus bury their dead. Some Hindus burn their dead. But those bury will not share the same cemetery. Each will appropriate a part of the cemetery to bury its dead. Those Who burn will not burn at the same burning place. If they do, each will have a separate funeral pan.

Is there any wonder that the sentiment of fraternity is foreign to the Hindus? With a complete refusal to share the joys and sorrows of life how can the sentiment of fraternity take roots?

But the question of all questions is why do the Hindus refuse to share the joys and sorrows of life? It needs no saying that he refuses to share because his religion tells him not to share them. This conclusion need cause no surprise. For what does Hinduism teach? It teaches not to inter-dine, not to intermarry, not to associate. These don'ts constitute the essence of its teaching. All the shameful facts I have referred to, to illustrate the separate and exclusive character of the Hindus is the direct outcome of this philosophy of Hinduism. The philosophy of Hinduism is a direct denial of fraternity.

This brief analysis of the Philosophy of Hinduism from the point of view of justice reveals in a glaring manner how Hinduism is inimical to equality, antagonistic to liberty and opposed to fraternity.

Fraternity and liberty are really derivative notions. The basic and fundamental conceptions are equality and respect for human personality. Fraternity and liberty take their roots in these two fundamental conceptions. Digging further down it may be said that equality is the original notion and respect for human personality is a reflection of it. So that where equality is denied, everything else may be taken to be denied. In other words it was enough for me to have shown that there was no equality in Hinduism. But as Hinduism has not been examined so far in the manner I have done, I did not think it sufficient to leave it to implication that Hinduism was a denial of Fraternity and Liberty as well.

There is one final observation with which I wish to conclude this discussion with the profound observation of Lord Acton. The great Lord says that inequality has grown as a result of historical circumstances. It has never been adopted as a creed. It is obvious that in making this observation Lord Acton must have omitted to take note of Hinduism. For in Hinduism inequality is a religious doctrine adopted and conscientiously preached as a sacred dogma. It is an official creed and nobody is ashamed to profess it openly. Inequality for the Hindus is a divinely prescribed way of life as a religious doctrine and as a prescribed way of life, it has become incarnate in Hindu Society and is shaped and moulded by it in its thoughts and in its doings. Indeed inequality is the Soul of Hinduism.

Let me now turn to the examination of the philosophy of Hinduism from the point of view of Utility.

This examination of Hinduism from this aspect need not be long and detailed. For as Mill pointed out there is no necessary antagonism between justice and utility. In other words what is unjust to the individual cannot be useful to society. Apart from this we have before

us the consequences of caste staring us in the face.

The ideal of caste was not mere ideal. The ideal was put into practice; was therefore something real. So that, in the matter of the Chaturvarna the Hindus have very faithfully followed the German Philosopher Nietzsche who said "Realise the-ideal and idealise the real".

The value of the ideal must be tested by its results. If experience therefore must be the criterion then the ideal of Chaturvarna stands thrice condemned. Purely as a form of social organisation it stands condemned. As a producer's organisation it stands discredited. As an ideal scheme of distribution it has miserably failed. If it is an ideal form of organisation how is it that the Hinduism has been unable to form a common front. If it is an ideal form of production, how is it that its technique never advanced beyond that of the primitive man. If it is an ideal form of distribution, how is it that it has produced appalling inequality of wealth, immense wealth side by side extreme poverty.

But I do not wish to dismiss the subject so summarily, for I know many Hindus who claim great social utility to the institution of caste and praise Manu for having been so wise and so thoughtful not only in devising it but in giving it a divine sanction.

This view of the caste is due to taking the separate aspects of caste separately. One must take them in conjunction. The resultant social utility or distillate of caste can be ascertained only by putting together the separate aspects of caste and judge them in their combination. Following this line of attacking the problem, the following conclusions follow: —

(1) Caste divides Labourers (2) Caste disassociates work from interest (3) Caste disconnects intelligence from manual labour (4) Caste devitalises by denying to him the right to cultivate vital interest and (5) Caste prevents mobilisation. Caste System is not merely division of labour. *IT IS ALSO A DIVISION OF LABOURERS*. Civilised society undoubtedly needs division of labour. But in no civilised society is division of labour accompanied by this unnatural division of labourers into watertight compartments. Caste System is not merely a division of labourers, which is quite different from division of labour it is an hierarchy in which the divisions of labourers are graded one above the other. In no other country is the division of labour accompanied by this gradation of labourers. There is also a third point of criticism against this view of the Caste System. This division of labour is not spontaneous, it is not based on natural aptitudes. Social and individual efficiency requires us to develop the capacity of an individual to the

point of competency to choose and to make his own career. This principle is violated in the Caste System in so far as it involves an attempt to appoint tasks to individuals in advance, selected not on the basis of trained original capacities, but on that of the social status of the parents. Looked at from another point of view this stratification of occupations which is the result of the Caste System is positively pernicious. Industry is never static. It undergoes rapid and abrupt changes. With such changes an individual must be free to change his occupations. Without such freedom to adjust himself to changing circumstances it would be impossible for him to gain his livelihood. Now the Caste System will not allow Hindus to take occupations where they are wanted if they do not belong to them by heredity. If a Hindu is seen to starve rather than take to new occupations not assigned to his Caste, the reason is to be found in the Caste System. By not permitting readjustment of occupations, caste becomes a direct cause of much of the unemployment we see in the country.

As a form of division of labour the Caste System suffers from another serious defect. The division of labour brought about by the Caste System is not a division based on choice. Individual sentiment, individual preference has no place in it. It is based on the dogma of predestination. Considerations of social efficiency would compel us to recognise that the greatest evil in the industrial system is not so much poverty and the suffering that it involves, as the fact that so many persons have callings which make no appeal to those who are engaged in them. Such callings constantly provoke one to aversion, ill will and the desire to evade. There are many occupations in India which on account of the fact that they are regarded as degraded by the Hindus provoke those who are engaged in it to aversion. There is a constant desire to evade and escape from such occupations which arises solely because of the blighting effect which they produce upon those who follow them owing to the slight and stigma cast upon them by the Hindu religion.

The second mischief it does is to dissociate intelligence from work and create contempt for labour. The theory of the Caste is that a Brahmin who is permitted to cultivate his intellect is not permitted to labour, indeed is taught to look down upon labour. While the Shudra who is required to labour is not permitted to cultivate his intelligence. The disastrous consequences of this have been well portrayed by Mr. R.C.Dutt. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_24.....](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy_of_Hinduism.htm_-_msocom_24.....) barren. Wealth without education and wealth is

brutal. Each is necessary to every one. They are necessary for the growth of a man.

That the Brahmin should cultivate knowledge, Kshatriya should bear arms, the Vaishya should trade and that the Shudra should serve is presented as a theory of mutual interdependence found in the family. It is asked why should the Shudra need trouble to acquire wealth when the three Varnas are there to support him; Why need the Shudra bother to take to education when the Brahmin to whom he can go when the occasion for reading or writing arises; Why need the Shudra worry to arm himself because there is the Kshatriya to protect him? The theory of Chaturvarnya understood in this sense may be said to look upon the Shudra as the ward and the three Varnas as his guardians. Thus interpreted it is a simple and alluring theory. Assuming this to be the correct view of the underlying conception of Chaturvarnya it seems to me that the system is neither fool-proof nor knave-proof. What is to happen if the Brahmins, Vaishyas and Kshatriyas fail to pursue knowledge, to engage in economic enterprises and to be efficient soldiers which are their respective functions? Contrary-wise, suppose that they discharge their functions but flout their duty to the Shudra or to one another? What is to happen to the Shudra if the three classes refuse to support him on fair terms or combine to keep him down? Who is to safeguard the interests of the Shudra or for the matter of that of the Vaishya and Kshatriya when the person who is trying to take advantage of his ignorance is the Brahmin? Who is to defend the liberty of the Shudra or that of the Brahmin and the Vaishya, when the person who is robbing him of it is the Kshatriya? Inter-dependence of one class on another class is inevitable. Even dependence of one class upon another may sometimes become allowable. But why make one person depend upon another in the matter of his vital needs? Education every one must have. Means of defence every one must have. These are the paramount requirements of every man for his self-preservation. How can the fact that his neighbour is educated and armed, help a man who is uneducated and unarmed. The whole theory is absurd. These are the questions which the defenders of Chaturvarnya do not seem to be troubled about. But they are very pertinent questions. Assuming their conception of Chaturvarnya that the relationship between the different classes is that of ward and guardian is the real conception underlying Chaturvarnya, it must be admitted that it makes no provision to safeguard the interests of the ward from the misdeeds of the guardian. Whether the relationship of guardian and ward was the real underlying

conception on which Chaturvarnya was based there is no doubt that in practice the relation was that of master and servant. The three classes, Brahmins, Kshatriyas and Vaishyas although not very happy in their mutual relationship managed to work by compromise. The Brahmin flattered the Kshatriya and both let the Vaishya live in order to be able to live upon him. But the three agreed to beat down the Shudra. He was not allowed to acquire wealth lest he should be independent of the three Varnas. He was prohibited from acquiring knowledge lest he should keep a steady vigil regarding his interests. He was prohibited from bearing arms lest he should have the means to rebel against their authority. That this is how the Shudras were treated by the Trayavarnikas is evidenced by the Laws of Manu. There is no code of laws more infamous regarding social rights than the Laws of Manu. Any instance from anywhere of social injustice must pale before it. Why have the mass of people tolerated the social evils to which they have been subjected? There have been social revolutions in other countries of the world. Why have there not been social revolutions in India is a question which has incessantly troubled me. There is only one answer which I can give and it is that the lower classes of Hindus have been completely disabled for direct action on account of this wretched system of Chaturvarnya. They could not bear arms and without arms they could not rebel. They were all ploughmen or rather condemned to be ploughmen and they were allowed to convert their ploughshares into swords. They had no bayonets and therefore everyone who chose ploughs did sit upon them. On account of the Chaturvarnya they could receive no education. They could not think out or know the way to their salvation. They were condemned to be lowly and not knowing the way of escape and not having the means of escape, they became reconciled to eternal servitude which they accepted as their inescapable fate. It is true that even in Europe the strong has not shrunk from the exploitation, nay the spoliation of the weak but in Europe, the strong have never contrived to make the weak helpless against exploitation so shamelessly as was the case in India among the Hindus. Social war has been raging between the strong and the weak far more violently in Europe than it has ever been in India. Yet the weak in Europe has had in him freedom of military service his physical weapon, in suffrage his political weapon and in education his moral weapon. Three weapons for emancipation were never withheld by the strong from the weak in Europe. All these weapons were however denied to the masses in India by Chaturvarnya. There cannot be a more degrading system of social

organisation than Chaturvarnya. It is the system, which deadens, paralyses and cripples the people from helpful activity. This is no exaggeration. History bears ample evidence. There is only one period in Indian history, which is a period of freedom, greatness and glory. That is the period of the Mourya Empire. At all other times the country suffered from defeat and darkness. But the Mourya period was a period when Chaturvarnya was completely annihilated, when the Shudras, who constituted the mass of the people came into their own and became the rulers of the country. The period of defeat and darkness is the period when Chaturvarnya flourished to the damnation of the greater part of the people of the country.

Caste prevents mobilisation. Occasions arise when society must mobilise all its resources to one end in order to save itself from a catastrophe. To take a catastrophe like war, Society must mobilise all its resources for militarization. Every one must do war. Every one must be a soldier. Is this possible under the theory of caste? Obviously not. Indeed the destiny of a defeat which has been the lot of India throughout history is due to caste. Caste prevented general mobilisation. Or the extent of mobilisation was of a very limited character. Only the Kshatriyas were expected to fight. The rest the Brahmins and the Vaishyas were not armed and the Shudras who formed the large majority of the country were disarmed. The result was that once the small class of Kshatriyas were defeated by a foreign foe. the whole country fell at his feet. It could offer no resistance. It was not capable of resistance. Indian wars have been mostly wars of single battles or single campaigns. This was due to the fact that once the Kshatriyas fell everything fell. Why? Simply because there was no general mobilisation and the theory deeply imbedded in the psychology of the people.

If these conclusions are sound, how can a philosophy which dissects society in fragments, which dissociates work from interest, which disconnects intelligence from labour, which expropriates the rights of man to interests vital to life and which prevented society from mobilising resources for common action in the hour of danger, be said to satisfy the test of Social Utility.

V

The Philosophy of Hinduism therefore neither satisfies the test of social utility nor does it satisfy the test of individual justice.

The result of my analysis is so odd that it will surprise many. Astonished some may even say that if the conclusions are so odd then

there must be something wrong in my analysis of the philosophy of Hinduism. I must meet this objection. To those who refuse to accept my analysis I say that they find my analysis odd because they do not have a correct notion what is central in the philosophy of Hinduism. If they do they will feel no surprise at my conclusions.

This matter is so important that I must stop to explain it. It may be recalled that the foregoing analysis of the religious revolution showed that religious ideals as forms of divine governance for human Society fall into two classes, one in which Society is the centre and the other in which the Individual is the centre. The same analysis showed that for the former the appropriate test of what is good and what is right i.e. the test of the moral order is utility while for the latter the test is justice. Now the reason why the philosophy of Hinduism does not answer the test either of utility or of justice is because the religious ideal of Hinduism for divine governance of human society is an ideal, which falls into a separate class by itself. It is an ideal in which the individual is not the centre. The centre of the ideal is neither individual nor society. It is a class - the class of Supermen called Brahmins. Those who will bear the dominant and devastating fact in mind will understand why the philosophy of Hinduism is not founded on individual justice or social utility. The philosophy of Hinduism is founded on a totally different principle. To the question what is right and what is good the answer, which the philosophy of Hinduism gives, is remarkable. It holds that to be right and good the act must serve the interest of this class of supermen, namely, the Brahmins. Oscar Wilde said that to be intelligible is to be found out. Manu is neither afraid nor ashamed of being found out. Indeed Manu does not leave it to be found out. He expresses his view in resonant and majestic notes as who are the Supermen and anything which serves the interest of the Supermen is alone entitled to be called right and good. Let me quote Manu.

X. 3."On account of his pre-eminence, on account of the superiority of his origin, on account of his observance of (particular) restrictive rules, and on account of his particular sanctification the Brahman is the Lord of (all) Varnas."

He proceeds to amplify his reasons and does so in the following characteristic manner :—

1. 93."As the Brahmana sprang from (Prajapati's i.e. Gods) mouth, as he was first-born, and as he possesses the Veda, he is by right the lord of this whole creation"

1. 94. For the self existent (Svayambhu i.e.God), having performed

austerities, produced him first from his own mouth, in order that offerings might be conveyed to the Gods and Manes and that this universe might be preserved."

1. 95."What created being can surpass him, through whose mouth the gods continually consume the sacrificial viands and the manes the offerings to the dead?"

1. 96."Of created beings the most excellent are said to be those which are animated ; of the animated, those who subsist by intelligence ; of the intelligent, mankind ; and of the men, the Brahmanas".

Besides the reason given by Manu the Brahmin is first in rank because he was produced by God from his mouth, in order that the offerings might be conveyed to the Gods and manes. Manu gives another reason for the supremacy of the Brahmins. He says :—

1. 98."The very birth of a Brahmana is an eternal incarnation of the sacred Law (Veda) ; for he is born to (fulfil) the sacred law, and becomes one with Brahman (God)."

1. 99."A Brahmana, coming into existence, is born as the highest on earth, the lord of all created beings, for the protection of the treasury of the Law."Manu concludes by saying that:—

1. 101."The Brahman eats but his own food, wears but his own apparel, bestows but his own in alms ; other mortals subsist through the benevolence of the Brahmana."Because according to Manu:—

II. 100."Whatever exists in the world is the property of the Brahmana ; on account of the excellence of his origin the Brahmana is, indeed, entitled to it all."Manu directs:—

VII. 36."Let the King, after rising early in the morning, worship Brahmins who are well versed in the three-fold sacred science and learned (in polity), and follow their advice".

VII. 38."Let him daily worship aged Brahmins who know the Veda and are pure. . . ."

VII. 37."Let the king, having risen at early dawn, respectfully attend to Brahman, learned in the three Vedas and in the science of ethics, and by their decision let him abide."

VII. 38."Constantly must he show respect to Brahmins, who have grown old, both in years and in piety, who know the scriptures, who in body and mind are pure ; for he, who honours the aged, will perpetually be honoured even by cruel demons."

IX. 313."Let him not, although in the greatest distress for money, provoke Brahmins to anger by taking their property ; for they, once enraged, could immediately by sacrifices and imprecations destroy him

with his troops, elephants, horses and cars."

Finally Manu says :—

XI. 35."The Brahman is (hereby) declared (to be) the creator (of the world), the punisher, the teacher, (and hence) a benefactor (of all created beings) ; to him let no man say anything unpropitious ; nor use any harsh words".

• To conclude and complete the theory of supermen and of what is right and good let me reproduce the following two texts from Manu :—

X. 122. But let a Shudra serve Brahmans, either for the sake of heaven or with a view to both this life and the next, for he who is called the servant of a Brahman thereby gains all his ends.

X. 123. The service of the Brahmana alone is declared to be an excellent occupation for a Shudra; for whatever else besides this he may perform will bear no fruit. And Manu adds :—

X. 129. No collection of wealth must be made by a Shudra, even though he be able to do it ; for a Shudra who has acquired wealth gives pain to Brahman.

The above texts from Manu disclose the core and the heart of the philosophy of Hinduism. Hinduism is the gospel of the superman and it teaches that what is right for the superman is the only thing which is called morally right and morally good.

Is there any parallel to this philosophy? I hate to suggest it. But it is so obvious. The parallel to this philosophy of Hinduism is to be found in Nietzsche. The Hindus will be angry at this suggestion. It is quite natural. For the philosophy of Nietzsche stands in great odium. It never took roots, In his own words he was "sometimes deified as the philosopher of the aristocracy and squirearchy, sometimes hooted at, sometimes pitied and sometimes boycotted as an inhuman being". Nietzsche's philosophy had become identified with will to power, violence, denial of spiritual values, superman and the sacrifice, servility and debasement of the common man. His philosophy with these high spots had created a certain loathsomeness and horror in the minds of the people of his own generation. He was utterly neglected if not shunned and Nietzsche himself took comfort by placing himself among the "posthumous men". He foresaw for himself a remote public, centuries after his own time to appreciate him. Here too Nietzsche was destined to be disappointed. Instead of there being any appreciation of his philosophy, the lapse of time has only augmented the horror and loathing which people of his generation felt for Nietzsche. This is

principally due to the revelation that the philosophy of Nietzsche is capable of producing Nazism. His friends have vehemently protested against such a construction. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_25](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy_of_Hinduism.htm_-_msocom_25) But it is not difficult to see that his philosophy can be as easily applied to evolve a super state as to superman. This is what the Nazis have done. At any rate the Nazis trace their ancestry from Nietzsche and regard him as their spiritual parent. Hitler has himself photographed beside a bust of Nietzsche ; he takes the manuscripts of the master under his own special guardianship ; extracts are chosen from Nietzsche's writings and loudly proclaimed at the ceremonies of Nazism, as the New German Faith. Nor is the claim by the Nazis of spiritual ancestry with Nietzsche denied by his near relations. Nietzsche's own cousin Richard Ochler approvingly says that Nietzsche's thought is Hitler in action and that Nietzsche was the foremost pioneer of the Nazi accession to power. Nietzsche's own sister, few months before her death, thanks the Feurhar for the honour he graciously bestows on her brother declaring that she sees in him that incarnation of the "Superman" foretold by Zarathustra.

To identify Nietzsche, whose name and whose philosophy excites so much horror and so much loathing; with Manu is sure to cause astonishment and resentment in the mind of the Hindus. But of the fact itself there can be no doubt. Nietzsche himself has openly declared that in his philosophy he is only following the scheme of Manu. In his *Anti Christ* this is what Nietzsche says :—

"After all, the question is, to what end are falsehoods perpetrated? The fact that, in Christianity, 'holy' ends are entirely absent, constitutes my objection to the means it employs. Its ends are only bad ends; the poisoning, the calumny and the denial of life, the contempt of the body, the degradation and self pollution of man by virtue of the concept of sin, - consequently its means are bad as well. My feelings are quite the reverse, When I read the law book of Manu, an incomparably intellectual and superior work, it would be a sin against the spirit even to mention in the same breath with the Bible. You will guess immediately why; it has a genuine philosophy behind it, in it, not merely an evil-smelling Jewish distillation of Rabbinism and superstition - it gives something to chew even to the most fastidious psychologist. And, not to forget the most important point of all, it is fundamentally different from every kind of Bible: by means of it the noble classes, the philosophers and the warriors guard and guide the masses; it is replete

with noble values, it is filled with a feeling of perfection, with saying yea to life, and triumphant sense of well-being in regard to itself and to life, - the Sun shines upon the whole book. All those things which Christianity smothers with its bottomless vulgarity; procreation, woman, marriage, are here treated with earnestness, with reverence, with love and confidence. How can one possibly place in the hands of children and women, a book that contains those vile words :”to avoid fornication, let every man have his own wife, and let every woman have her own husband. . . . it is better to marry than to burn”. And is it decent to be a Christian so long as the very origin of man is Christianised, - that is to say, befouled, by the idea of the immaculate conception?... I know of no book in which so many delicate and kindly things are said to woman, as in the Law Book of Manu ; these old grey-beards and saints have a manner of being gallant to woman which, perhaps, cannot be surpassed.”The mouth of a woman”, says Manu on one occasion,”the breast of a maiden, the prayer of a child, and the smoke of the sacrifice, are always pure”. Elsewhere he says:”there is nothing purer than the light of the Sun, the shadow cast by a cow, air water, fire and the breath of a Maiden”. And finally-perhaps this is also a holy lie:—”all the openings of the body above the navel are pure, all those below the navel are impure. Only in a maiden is the whole body pure.”

This leaves no doubt that Zarathustra is a new name for Manu and that *Thus Spake Zarathustra* is a new edition of *Manu Smriti*.

If there is any difference between Manu and Nietzsche it lies in this. Nietzsche was genuinely interested in creating a new race of men which will be a race of supermen as compared with the existing race of men. Manu on the other hand was interested in maintaining the privileges of a class who had come to arrogate to itself the claim of being supermen. Nietzsche's supermen were supermen by reason of their worth. Manu's supermen were supermen by reason of their birth. Nietzsche was a genuine disinterested philosopher. Manu on the contrary was an hireling engaged to propound a philosophy which served the interests of a class born in a group and whose title to being supermen was not to be lost even if they lost their virtue. Compare the following texts from Manu.

X. 81.”Yet a Brahman, unable to subsist by his duties just mentioned, may live by the duty of a soldier; for that is the next rank.”

X. 82.”If it be asked, how he must live, should he be unable to get a subsistence by either of those employment ; the answer is, he may subsist as a mercantile man, applying himself into tillage and attendance

on cattle."

Manu adds :

IX. 317."A Brahmana, be he ignorant or learned, is a great divinity, just as the fire, whether carried forth (for the performance of a burnt oblation) or not carried forth, is a great divinity".

IX.323."Thus, though the Brahmans employ themselves in all (sorts) of mean occupation, they must be honoured in every way; (for each of) them is a very great deity".

Thus Manu's is a degraded and degenerate philosophy of superman as compared with that of Nietzsche and therefore far more odious and loathsome than the philosophy of Nietzsche.

This explains why the philosophy of Hinduism does not satisfy the test of justice or of utility. Hinduism is not interested in the common man. Hinduism is not interested in Society as a whole. The centre of its interest lies in a class and its philosophy is concerned in sustaining and supporting the rights of that class. That is why in the Philosophy of Hinduism the interests of the common man as well as of society are denied, suppressed and sacrificed to the interest of this class of Supermen.

What is the value of such a religion to man? Mr. Balfour in speaking on the merits of positivism as Religion asked the positivists certain questions which are worth recalling. He very pertinently asked ;

"What has (Positivism) to say to the more obscure multitude who are absorbed, and well nigh overwhelmed, in the constant struggle with daily needs and narrow cares; who have but little leisure or inclination to consider the precise role they are called on to play in the great drama of 'humanity' and who might in any case be puzzled to discover its interest or its importance? Can it assure them that there is no human being so insignificant as not to be of infinite worth in the eyes of Him who created the Heavens, or so feeble but that his action may have consequence of infinite moment long after this material system shall have crumbled into nothingness? Does it offer consolation to those who are bereaved, strength to the weak, forgiveness to the sinful, rest to those who are weary and heavy laden?"

The same questions may be asked of Manu. The answer to each one of them must be in the affirmative. In short the philosophy of Hinduism is such that it cannot be called the Religion of humanity. That is why to use the language of Balfour, Hinduism, if it penetrates, does not vitrify the inmost life of ordinary humanity. Indeed if it does anything it

paralyses it. There is in Hinduism no nourishment for ordinary human souls, no comfort for ordinary human sorrow, no help for ordinary human weakness. It leaves men in darkness face to face with the unthinking energies of nature, which gives them birth to which after a few fruitless struggles they succumb. Not less cruel than the crudest irreligious, does it leave men divorced from all communions with God.

Such is the philosophy of Hinduism. It is Superman's heaven and the common man's damnation.

I am conscious that my position regarding the philosophy of Hinduism will be assailed from different sides. So contrary it is to the current views about it that it is bound to be assailed. The attack may come from various sides.

It will be said that I am wrong in taking the Manu Smriti as the book of Hindu religion and that the true gospel of Hinduism is contained in the Vedas and the Bhagwat Gita.

I am sure no orthodox Hindu will be bold enough to repudiate the authority of Manu Smriti as a book of Hindu Religion. Such a charge can be made only by some reformed sects of Hinduism such as the Arya Samajists. But there can be no doubt that this charge is not well founded. To refute this charge it is perhaps desirable to explain [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_26](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy_of_Hinduism.htm_-_msocom_26) how the Smritis obtained a place and position of authority among the Hindus.

The Smritis originally were a collection of rules relating to social traditions, customs and conventions approved of and recommended by those who were learned in the Vedas. For a long time these rules existed only in the memory of those learned in the Vedas, so they began to be called Smritis i.e. things which are remembered in contrast to Vedas or Shruti that is things which were heard. In the beginning the Smritis even when they were codified were treated as rules of inferior value as compared with the rules contained in the Vedas.

The difference in their authority and binding force was the result of the natural difference between the trustworthiness of what is heard as compared to what is only remembered. There was also another reason of this differentiation in the two sorts of Dharma Shastra literature. This was based upon the status of their authors. The authors of the Vedas were Rishis. The authors of the Smritis were only learned men. The Rishis were superior in status and sanctity than those who were merely learned. Consequently the Vedas were treated as more authoritative than the Smritis.

The consequence arising from this was well expressed in the Hindu theological formula according to which if there was a conflict in the rules of two Vedas on the same subject it meant option for a rule of Vedas cannot be deemed to be inoperative. On the other hand, in a conflict between a rule of Shruti and a rule of Smriti the rule of Shruti prevailed because for the reasons stated above Smriti was inferior in authority to the Shruti. But as pointed out by Prof. Altekar, the Smritis in course of time came to be invested with the same authority as belonged to the Vedas. Various means were adopted to accomplish this purpose. In the first place the authors of the Smritis were elevated to the status of Rishis. The early Dharma Shashtra writers like Gautama, and Baudhayana were never given the status of a Rishi. But Manu and Yajnavalkya are reckoned as Rishis. By this means the status of the Smritis was equated to that of the Shrutis. The second means adopted was to regard the Smriti as the record from memory of a Shruti which was lost. Thus Smriti instead of being regarded as something quite different from Shruti came to be regarded as akin to and indistinguishable from Shruti. The result of these steps was a complete change in the rules regarding the authority of the two. Originally if there was a conflict between a Smriti and a Shruti, the Shruti prevailed. The new rule was that in case of conflict there was an option which meant that the Smriti rule was as operative as the Rule of Shruti. This new rule has been expressly laid down by Kumarila in his commentary on the Purvamimansa Sutra whereby the Smritis were made as authoritative as Shrutis.

While originally Hindu Society was bound to the Vedas and could not follow any rule which was contrary to the Vedas, the new rule altered the situation and left it to the option of society either to follow the Shruti or the Smriti. But even this option was later on taken away. This was done by making the study of the Smritis as compulsory as that of the Shruti.

This was done gradually. In the first place it was suggested that the Shrutis and Smritis are the two eyes of the Brahamana, if he is devoid of one he becomes a one-eyed person. Then came the theory that Brahmanyam is possible only as the result of a joint study of both the Vedas and the Smritis. Finally came the rule according to which the study of the Smriti only was recognised and a contempt of the Smriti was made a sin and a person guilty of it was declared to be condemned to be born as a beast for 21 generations.

This is how the Smritis have been recognised as a source of Hindu

Religion and there is no doubt that, to quote Prof. Altekar, the Smritis ;
 "have played a great part in determining the features of many a social and socio-religious institutions and customs and in moulding the development of modern Hinduism."

It cannot therefore be maintained that I was wrong in taking Manu Smriti as containing the philosophy of Hinduism.

This work of elevating the Smritis to the status of the Vedas was undertaken by the Brahmins for a most selfish reason. The Smritis contain in all its wild and luxurious growth the doctrine of Caste, the doctrine of the superiority of the Brahmins, their rights and privileges, the doctrine of the subordination of the Kshatriyas and Vaishyas and the doctrine of the degradation of the Shudras. Such being the philosophy of the Smritis, the Brahmins were directly interested in investing the Smritis with the authority which was claimed for the Vedas and in which they ultimately succeeded to their advantage but to the ruination of the whole country. But conceding—which orthodox and pious Hindu would do that the Smritis do not contain the philosophy of Hinduism but that the same is to be found in the Vedas and the Bhagwat Geeta the question is what difference would this make in the result.

It seems to me that it matters very little whether one takes the Smritis, or the Vedas or the Bhagwat Geeta.

Do the Vedas teach something, which is fundamentally different from what the Smritis do? Does the Bhagwat Geeta run contrary to the injunctions of the Smritis. A few illustrations will make the matter clear.

It is indisputable that the Vedas lay down the theory of Chaturvarna in what is known as the Purushasukta. This Purushasukta recognises two basic principles. It recognises the division of society into four sections as an ideal. It also recognises that the ideal relationship between the four sections is inequality.

What the Bhagwat Geeta teaches is also beyond controversy. Its teaching may be summarised in the following four pronouncements made by Krishna in the Bhagwat Geeta.

(1)"I myself have created the arrangement known as Chaturvarna (i.e. the fourfold division of society into four castes Brahmins, Kshatriyas, Vaishyas and Shudras) assigning them different occupations in accordance with the native capacities. It is I who am the maker of this Chaturvarna"— Gita. IV. 13

(2)"Even if it may be easier to follow the occupation of another *Varna* yet to follow the occupation of one's own *Varna* is more meritorious,

although one may not be able to do it quite efficiently. There is bliss in following the occupation of one's own Varna, even if death were to result in performing it ; but to follow the occupation of another *Varna* is risky".—Geeta. III. 35.

(3)"The educated should not unsettle the faith of the uneducated who have become attached to their occupation. He himself should perform the occupation of his Varna and make others perform theirs accordingly. An educated man may not become attached to his occupation. But the uneducated and dull-minded people who have become attached to their occupation should not be spoiled by the educated by putting them on a wrong path by abandoning their own occupation"— Geeta III. 26, 29.

(4)"Oh, Arjun ! Whenever this religion of duties and occupations (i.e. this religion of Chaturvarna) declines, then I myself will come to birth to punish those who are responsible for its downfall and to restore it— Geeta IV, 7-8.

Such is the position of Geeta. What difference is there between it and the Manu Smriti? Geeta is Manu in a nutshell. Those who run away from Manu Smriti and want to take refuge in Geeta either do not know Gita or are prepared to omit from their consideration that soul of Geeta which makes it akin to Manu Smriti.

Compare the teachings of the Veda, of the Bhagwat Geeta with what is contained in the Manu Smriti which I have taken as the text for elucidating the philosophy of Hinduism. What difference does one find? The only difference one can find is that the Vedas and the Bhagwat Geeta deal with General Theory while the Smritis are concerned in working out the particulars and details of that theory. But so far as the essence is concerned all of them—the Smritis, the Vedas and the Bhagwat Geeta—are woven on the same pattern, the same thread runs through them and are really parts of the same fabric.

The reason for this is obvious. The Brahmins who were the authors of the whole body of Hindu Religious Literature—except the Upanishad Literature—took good care to inject the doctrines formulated by them in the Smritis, into the Vedas and the Bhagwat Geeta. Nothing is to be gained in picking and choosing between them. The Philosophy of Hinduism will be the same whether one takes the Manu Smriti as its Gospel or whether one takes the Vedas and the Bhagwat Geeta as the gospel of Hinduism.

Secondly it will be contended that Manu Smriti is a Book of Laws and not a code of ethics and that what I have presented as a philosophy of

Hinduism is only legal philosophy and is not the moral philosophy of Hinduism.

My answer to this contention is simple. I hold that in Hinduism there is no distinction between legal philosophy and moral philosophy. That is because in Hinduism there is no distinction between the Legal and the Moral, the Legal being also the Moral.

Not much evidence is necessary to support my contention. Take the meaning mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_27 of the word Dharma in the Rig Veda. The word Dharma occurs in the Rig Veda 58 times. It is used in six different senses. It is used to denote (1) Ancient custom, (2) Laws, (3) Any arrangement which maintains law and order in society, (4) The course of nature, (5) The quality of a substance and (6) Duty of good and evil. It will thus be seen that from the very beginning the word Dharma in Hinduism has a two fold connotation. It means both law and moral. That is one reason why in the philosophy of Hinduism there can be no distinction between legal philosophy and moral philosophy.

This is not to say that the Hindus have no code of morality. To be sure they have. But it is very pertinent to ask the nature and character of conduct, which the Hindu Code of Ethics declares to be moral.

To have an idea of the nature of conduct which the Hindu thinks moral, it is better to begin by recognising that there are three levels of conduct mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_28, which must be, distinguished. (1) Conduct arising from instincts and fundamental need (2) Conduct regulated by standards of I society and (3) Conduct regulated by individual conscience. Conduct on the first level, we do not call moral conduct. It is of course not immoral; it is merely unmoral. It is governed by forces not as moral in purpose but as valuable in result. The forces are biological or sociological or psychological. These have purpose, such as to satisfy hunger, or to forge a weapon against an enemy. But the end is one set up by our physical or instinctive nature. So long as this is merely accepted as an inevitable end and not compared with others, valued, and *chosen*, it is not properly moral. Conduct on the second level is no doubt social. Wherever groups of men are living there are certain ways of acting which are common to the group—"folkways". There are *approved* ways of acting, common to a group, and handed down from generation to generation. Such approved ways of acting are called the mores or the morals of the group. They imply the judgement of the group that they are to be followed. The welfare of the group is regarded as in some

sense imbedded in them. It becomes the duty of the individual to follow them and if any one acts contrary to them he is made to feel the group's disapproval. We cannot strictly speaking call the conduct moral. Because the end is accepted as a standard of 'good' prescribed by society. If it had spoken of a moral conduct it is only because it conforms to the mores or morals of the Society. It may be called customary morality. Conduct on the third level is conduct, which alone is truly and completely moral. That is because in it the Individual *recognises* the right or *chooses* the good, and freely devotes himself heartily to its fulfilment. He does not merely accept what is inevitable or follow what is approved by society. He values and chooses the end and becomes personally responsible. His is reflective morality.

On what level does Hindu morality stand? Obviously it is not on the third level. This means that a Hindu is social but not moral in the strict sense of the term. A Hindu takes no responsibility for the ends he serves. He is a willing tool in the hands of his society, content to follow. He is not a free agent afraid to differ. His notions of sin give remarkable proof of his unmoral character. Institutes of Vishnu gives a list of sins which are divided into nine classes:—

1. Deadly sins—*atipataka*. These are certain forms of incest, to be atoned for only by burning.

2. Great sins—*mahapataka*. These are killing a Brahman, drinking spirituous liquor, stealing the gold of a Brahman, connection with a Guru's wife ; also social intercourse with those guilty of such sins.

3. Minor sins of a similar character— *anupataka*. These include the killing of certain other classes of persons, giving false evidence and killing a friend, stealing lands or deposits of a Brahman, certain forms of incest and adultery.

4. Minor sins— *upapataka*. Sins of false statement, neglect of certain religious duties, adultery, unlawful occupation, offences connected with marrying before an elder brother &c., not paying one's debts to the Gods, and manes, atheism &c.

5. Sins effecting loss of caste *jatibramsakara*. Causing bodily pain to a Brahman, smelling things, which should not be smelt, dishonest dealing, and certain unnatural crimes.

6. Sins which degrade to a mixed caste *samkarikarana*. Killing domestic or wild animals.

7. Sins which render one unworthy to receive alms— *apatrikarana*. Receiving presents and alms from despicable persons, trade, money lending, lying, and serving a Shudra.

8. Sins cause defilement— *malavaha*. Killing birds, amphibious animals, and aquatic animals, worms and insects; eating nutmegs or other plants similar in their effects to intoxicating liquors. 9. Miscellaneous sins— *prakirnaka*. Those not already mentioned. This list of sins is not exhaustive but it, is long enough and illustrative enough to give us the idea which underlies the Hindu notion of Sin. In the first place it connotes the fall of man from a prescribed form of conduct. In the second place it means to be defiled, to become unclean. This is the root meaning of the term *Patak*. It means *Patana* (falling away) and it means *Asoncha* (being rendered unclean). In either case sin according to Hindu notion is a decrease of the soul. In the first sense it is merely breach of a rule of external conduct. In the other sense it is a defilement of the body to be cleaned and purified by both or by pilgrimage or by sacrificial offering. But it is never the spiritual defilement, which is associated with the harbouring of evil thoughts and purposes.

This shows the morality of the Hindu is purely social. This means that the level of his morality is purely traditional and customary. There are two evils of customary morality. In the first place there is no surety that it will always be charged with sincerity and purity of motive. For it is only when morality penetrates to the deepest springs of purpose and feeling in the individual that pretence will cease to find a place in human behaviour. In the second place customary morality is an anchor and a drag. It holds up the average man and holds back the man who forges ahead. Customary morality is only another name for moral stagnation. This is true of all cases where morality is only customary morality. But the customary morality of the Hindus has an evil feature, which is peculiar to it. Customary morality is a matter of meritorious conduct. Ordinarily this meritorious conduct is something, which is good from the general or public point of view. But among the Hinduism the meritorious conduct is not concerned with the worship of God or the general good of community. Meritorious conduct in Hinduism is concerned with the giving of presents, of good and of honour to the Brahmins. Hindu Ethics is worship of the superman.

What difference would it have made if I had taken Hindu Ethics as the basis for deducing the philosophy of Hinduism? Most students of Hinduism forget that just as in Hinduism there is no difference between law and Religion so there is no difference between law and ethics. Both are concerned with the same thing namely regulating the conduct of the low class Hindus to *subserve* the ends of high Caste Hindus.

Thirdly it will be objected that I presented an altogether false picture

of Hinduism in as much as I have omitted to take into account the Upanishads which are the true source of Hindu philosophy.

I admit that I have not taken the Upanishads into account. But I have a reason and I believe very good reason for doing so. I am concerned with the philosophy of Hinduism as a part of the philosophy of Religion. I am not concerned with Hindu philosophy. If I were, it would have been necessary to examine the Upanishads. But I am quite willing to deal with it so as to leave no doubt that what I have shown to be the philosophy of Hinduism is the philosophy of Upanishads.

The philosophy of the Upanishads can be stated in very few words. It has been well summarised by Huxleymk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_29 when he says that the Upanishad philosophy agreed:—

"In supposing the existence of a permanent reality, or 'substance', beneath the shifting series of phenomena, whether of matter or of mind. The substance of the cosmos was 'Brahma', that of the individual man 'Atman'; and the latter was separated from the former only, if I may so speak, by its phenomenal envelope, by the casing of sensations, thoughts and desires, pleasures and pains, which make up the illusive phantasmagoria of life. This the ignorant, take for reality; their 'Atman' therefore remains eternally imprisoned in delusions, bound by the fetters of desire and scourged by the whip of misery.

Of what use is this philosophy of the Upanishadas? The philosophy of the Upanishadas meant withdrawal from the struggle for existence by resort to asceticism and a destruction of desire by self-mortification. As a way of life it was condemned by Huxleymk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_30 in scathing terms :—

"No more thorough mortification of the flesh has ever been attempted than that achieved by the Indian ascetic anchorite; no later monarchism has so nearly succeeded in reducing the human mind to that condition of impassive quasi-somnambulism, which, but for its acknowledged holiness, might run the risk of being confounded with idiocy."

But the condemnation of the philosophy of the Upanishads is nothing as compared to the denunciation of the same by Lala Hardyalmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_31 :—

"The Upanishads claim to expound 'that, by knowing which everything is known'. This quest for 'the absolute' is the basis of all the

spurious metaphysics of India. The treatises are full of absurd conceits, quaint fancies, and chaotic speculations. And we have not learned that they are worthless. We keep moving in the old rut; we edit and re-edit the old books instead of translating the classics of European social thought. What could Europe be if Frederic Harrison, Brioux, Bebel, Anatole France, Herve, Haekel, Giddings, and Marshall should employ their time in composing treatises on Duns, Scotus and Thomas Aquinas, and discussing the merits of the laws of the Pentateuch and the poetry of Beowulf? Indian pundits and graduates seem to suffer from a kind of mania for what is effete and antiquated. Thus an institution, established by progressive men, aims at leading our youths through Sanskrit grammar to the Vadasvia the Six Darshanas! What a false move in the quest for wisdom ! It is as if a caravan should travel across the desert to the shores of the Dead Sea in search of fresh water! Young men of India, look not for wisdom in the musty parchments of your metaphysical treatises. There is nothing but an endless round of verbal jugglery there. Read Rousseau and Voltaire, Plato and Aristotle, Haeckel and Spencer, Marx and Tolstoi, Ruskin and Comte, and other European thinkers, if you wish to understand life and its problems." But denunciations apart, did the Upanishad philosophy have any influence on Hinduism as a social and political system? There is no doubt that it turned out to be most ineffective and inconsequential piece of speculation with no effect on the moral and social order of the Hindus.

It may not be out of place to inquire into the reasons for this unfortunate result. One reason is obvious. The philosophy of Upanishad remained incomplete and therefore did not yield the fruit, which it ought to have done. This will be quite clear if one asks what is the keynote of the Upanishads. In the words of Prof. Max Muller mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_32 the keynote of the Upanishads is `Know thy Self'. The `Know thy Self of the Upanishads, means, know thy true Self, that which underlies thin ego and find it and know it in the highest, the eternal self, the One without a Second, which underlies the whole world."

That Atman and Brahman were one was the truth, the great truth which the Upanishads said they had discovered and they asked man to know this truth. Now the reasons why the philosophy of Upanishads, became ineffective are many. I will discuss them elsewhere. At this place I will mention only one. The philosophers of Upanishads did not realise that to know truth was not enough. One must learn to love truth. The

difference between philosophy and religion may be put in two ways. Philosophy is concerned with knowing truth. Religion is concerned with the love of truth. Philosophy is static. Religion is dynamic. These differences are merely two aspects of one and the same thing. Philosophy is static because it is concerned only with knowing truth. Religion is dynamic because it is concerned with love of truth. As has been well said by Max Plowman mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_33 :—

". . . Unless religion is dynamic and begets in us the emotion of love for something, then it is better to be without any thing that we can call religion; for religion is perception of truth and if our perception of truth is not accompanied by our love for it then it were better not seen at all; The Devil himself is one who has seen the truth only to hate it. Tennyson said "We must love the highest when we see it". It does not follow. Seen in pure objectivity the highest repels by its difference and distance; what we fear it, and what we fear we come to hate. . . ."

This is the fate of all transcendental philosophies. They have no influence on the way of life. As Blake said "Religion is politics and politics is Brotherhood. Philosophy must become Religion that is it must become a Working Ethic. It must not remain mere metaphysics. As Mr. Plowman says—

"If religion were a Metaphysic and nothing else, one thing is certain, it would never be the concern of the simple and humble men.

"To keep it wholly in the realm of Metaphysic is to make non-sense of it. For belief in religion as in something not directly and vitally effective of politics is ultimately belief that is strictly speaking idiotic; because in the effective sense such a belief makes no difference, and in the world of time and space what 'makes no difference' does not exist."

It is for these very reasons that the philosophy of the Upanishads proved so ineffective.

It is therefore incontrovertible that notwithstanding the Hindu Code of Ethics, notwithstanding the philosophy of the Upanishads not a little not a jot did abate from the philosophy of Hinduism as propounded by Manu. They were ineffective and powerless to erase the infamy preached by Manu in the name of religion. Notwithstanding their existence one can still say "Hinduism! Thy name is inequality!"

VI

Inequality is the soul of Hinduism. The morality of Hinduism is only

social. It is unmoral and inhuman to say the least. What is unmoral and inhuman easily becomes immoral, inhuman and infamous. This is what Hinduism has become. Those who doubt this or deny this proposition should examine the social composition of the Hindu Society and ponder over the condition of some of the elements in it. Take the following cases.

First as to the Primitive Tribes. In what state of civilisation are they?

The history of human civilisation includes the entire period of human progress from Savagery to Barbarism and from Barbarism to Civilisation. The transition from one to other has been marked by some discovery or invention in some department of knowledge of Art resulting in advancing the onward march of man.

The development of articulate speech was the first thing which, from the point of view of human progress, divided man from the brute. It marks the first stage of savagery. The Middle period of the state of savagery began with the knowledge of the manufacture and use of fire. This wonderful discovery enabled man to extend his habit almost indefinitely. He could leave his forest home, go to different and colder climates, and increase his food supply by including flesh and fish. The next discovery was the Bow and Arrow. This was the greatest achievement of primitive man and marks the highest state of savage man. It was indeed a wonderful implement. The possessor of this device could bring down the fleetest animal and could defend himself against the most predatory.

The transition from Savagery to Barbarism was marked by the discovery of pottery. Hitherto man had no utensils that could withstand the action of fire. Without utensils man could not store nor could he cook. Undoubtedly pottery was a great civilising influence.

The Middle State of Barbarism began when man learned to domesticate wild animals. Man learned that captive animals could be of service to him. Man now became a herdsman, no longer dependent for food upon the precarious chase of wild animals. Milk procurable at all seasons made a highly important addition to his dietary. With the aid of horse and camel he traversed wide areas hitherto impassable. The captive animals became aids to commerce, which resulted in the dissemination of commodities as well as of ideas.

The next discovery was of the Art of smelting iron. This marks the highest stage of advancement of barbaric man. With this discovery man became a "tool-making animal" who with his tool could fashion wood and stone and build houses and bridges. This marks the close of the

advancement made by barbaric man. The dividing line which marks off Barbaric people from Civilised people, in the fullest sense of the word Civilisation, is the art of making ideas tangible by means of graphic signs— which is called the art of writing. With this man conquered time as he had with the earlier inventions conquered space. He could now record his deeds and his thoughts. Henceforth, his knowledge, his poetical dreams, his moral aspirations might be recorded in such form as to be read not merely by his contemporaries but by successive generations of remote posterity. For man his history became safe and secure. This was the steepest ascent and the climbing of it marks the beginnings of civilisation. Stopping here for the moment let us ask in what state of civilisation are the Primitive Tribes.

The name Primitive Tribes mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/17.Philosophy of Hinduism.htm - _msocom_34 is expressive of the present state of people who are called by that name. They live in small-scattered huts in forests. They live on wild fruits, nuts and roots. Fishing and hunting are also resorted to for the purpose of securing food. Agriculture plays a very small part in their social economy. Food supplies being extremely precarious, they lead a life of semi-starvation from which there is no escape. As to clothes they economise them to a vanishing point. They move almost in a state of complete nakedness. There is a tribe, which is known as "Bonda Porajas" which, means "Naked Porajas". Of these people it is said that the women wear a very narrow strip which serves as a petticoat almost identical with what is worn by the Momjak Nagas in Assam, the ends hardly meeting at the top on the left thigh. These petticoats are woven at home out of the fibre of a forest tree. Girls wear a fillet of beads and of palmyra leaf and an enormous quantity of beads and neck ornaments extremely like those worn by many Komjak women. Otherwise the women wear nothing. The women shave their heads entirely. Of these Chenchus, a tribe residing near Farhabad in the Nizam's Dominions it is said that "their houses are conical, rather slight in structure made of bamboo sloping to the central point and covered with a thin layer of thatch..... They have very little, indeed, in the way of material effects, the scanty clothes they wear, consisting of a *langoti* and a cloth in the case of men, and a short bodice and a petticoat in the case of women, being practically all, besides a few cooking pots and a basket or two which perhaps sometimes contains grain. They keep cattle and goats and in this particular village do a little cultivation, elsewhere subsisting on honey and forest produce which they sell". Regarding the

Morias, another Primitive tribe, it is stated the men generally wear a single cloth round the waist with a flap coming down in the front. They also have a necklace of beads and when they dance put on cock's plumes and peacock's feathers in their turbans. Many girls are profusely tattooed, especially on their faces, and some of them on their legs as well. The type of tattooing is said to be according to the taste of the individual and it is done with thorns and needles. In their hair many of them stick the feathers of jungle cocks and their heads are also adorned with combs of wood and tin and brass.

These Primitive Tribes have no hesitation about eating anything, even worms and insects, and, in fact, there is very little meat that they will not eat, whether the animal has died a natural death or has been killed four days or more before by a tiger.

The next groups of the people he will come across are the Criminal Tribes.

The Criminal Tribes live not in Forests as the Primitive Tribes do but in the plains in close proximity to, and often in the midst of civilised life. Hollis in his "Criminal Tribes of the United Provinces" gives an account of their activities. They live entirely by crime. A few may be ostensibly engaged in agriculture, but this is only to cover up their real activities. Their nefarious practices find largest scope in dacoity or robbery by violence, but being a community organised for crime, nothing comes amiss to them. On deciding to commit a dacoity in any particular locality spies are sent out to select a suitable victim, study the general habits of the villagers, and the distance from any effective aid, and enumerate the number of men and firearms. The raid usually takes place at midnight. Acting on the information given by the spies, men are posted at various points in the village and by firing off their guns attract attention from the main gang which attacks the particular house or houses previously appointed. The gang usually consists of 30 to 40 men.

It is essential to emphasise the great part played by crime in the general life of these peoples. A boy is initiated into crime as soon as he is able to walk and talk. No doubt the motive is practical, to a great extent, in so far as it is always better to risk a child in petty theft, who, if he is caught, would probably be cuffed, while an adult would immediately be arrested. An important part is also played by women, who, although they do not participate in the actual raids, have many heavy responsibilities. Besides being clever in disposing off stolen property the women of the Criminal Tribes are experts in shop lifting.

At one time the Criminal Tribes included such well-organised

Confederacies of Professional Criminals as the Pindharies and the Thugs.

The Pindharies were a predatory body of armed gangsters. Their organisation was an open military organisation of freebooters who could muster 20000 fine horse and even more. They were under the command of brigand chiefs. Chitu one of the most powerful commanders had under his single command 10000 horse, including 5000 good cavalry, besides infantry and guns. The Pindharies had no military projects for employing their loose bands of irregular soldiery, which developed into bodies of professional plunderers. The Pindharies aimed at no conquests. Their object was to secure booty and cash for themselves. General loot and rapine was their occupation. They recognised no rulers. They were subjects of none. They rendered loyalty to none. They respected none, and plundered all, high and low, rich and poor, without fear or compunction.

The Thugs [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy of Hinduism.htm - _msocom_35](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/17.Philosophy_of_Hinduism.htm_-_msocom_35) were a well organised body of professional assassins, who, in gangs of from 10 to 100 wandered in various guises throughout India, worked themselves into the confidence of wayfarers of the wealthier class, and, when a favourable opportunity occurred, strangled them by throwing a handkerchief or noose round their necks, and then plundered and buried them. All this was done according to certain ancient and rigidly prescribed forms and after the performance of special religious rites, in which was the consecration of the package, and the sacrifice of sugar. They were staunch worshippers of Kali, the Hindu Goddess of destruction. Assassination for gain was with them a religious duty, and was considered a holy and honourable profession. They had, in fact, no idea of doing wrong, and their moral feelings did not come into play. The will of the Goddess, by whose command and in whose honour they followed there calling, was revealed to them through a very complicated system of omens.

In obedience to these they often travelled even the distance of hundred miles in company with, or in the wake of, their intended victims before a safe opportunity had presented itself for executing their design; and when the deed was done, rites were performed in honour of that tutelary deity, and a goodly portion of the spoil was set apart for her. The Thugs had also a jargon of their own, as well as certain signs by which its members recognised each other in the remotest part of India. Even those who from age or infirmities could no longer take an active part in the operations used to aid the cause as watchmen, spies or

dressers of food. It was owing to their thorough organisation, the secrecy and security with which they went to work, but chiefly to the religious garb in which they shrouded their murders, that they could continue for centuries to practise their craft. The extraordinary fact was that Thugee was regarded as a regular profession by Indian Rulers of the day, both Hindu and Mahomedans. The Thugs paid taxes to the state and the state left them unmolested.

It was not until the British became rulers of the country that an attempt was made to suppress the Thugs. By 1835, 382 Thugs were hanged and 986 were transported or imprisoned for life. Even as late as 1879 the number of registered Thugs was 344 and the Thugee and the Dacoity department of the Government of India continued to exist until 1904 when its place was taken by the Central Criminal Intelligence Department. While it is not possible for the criminal tribes to live by organized bodies of criminals, crime continues to be their main occupation.

Besides these two classes there is a third class which comprises a body of people who are known as Untouchables.

Below the Untouchables there are others who are known as unapproachable. Untouchables are those who cause pollution only if they touch. The Unapproachable are those who cause pollution if they come within a certain distance. It is said of the Nayadis—a people, who fall into the category of the Unapproachable,"that they are the lowest caste among the Hindus—the dog-eaters.

They are the most persistent in their clamour for charity, and will follow at a respectful distance, for miles together any person walking, driving or boating. If any thing is given to them, it must be laid down, and after the person offering it has proceeded a sufficient distance, the recipient comes timidly forward, and removes it."Of the same people Mr. Thurston says,"The subject (i.e. the Nayadis) whom I examined and measured at Shoranus, though living only about three miles off, had, by reason of the pollution which they traditionally carry with them to avoid walking over the long bridge which spans the river, and follow a circuitous route of many miles". Below the Unapproachable are the Unseeables. In the Tinnevelly District of the Madras Presidency there is a class of unseeables called Purada Vannans. Of them it is said,"that they are not allowed to come out during day time because their sight is enough to cause pollution. These unfortunate people are 'compelled' to follow the nocturnal habits, leaving their dens after dark and scuttling home at the false dawn like the badger, the hyena, the avordvark."

Consider the total population of these classes. The Primitive Tribes form a total of 25 million souls. The Criminal Tribes number 41/2 millions and the Untouchables number 50 millions. This makes a grand total of 791/2 millions. Now ask how these people could have remained in the state of moral, material, social and spiritual degradation surrounded as they have been by Hinduism. Hindus say that their civilisation is older than any civilisation, that Hinduism as a religion is superior to any other religion. If this is so how is that Hinduism failed to elevate these people, bring them enlightenment and hope; how is it that it failed even to reclaim them ; how is it that it stood with folded hands when millions and millions were taking to life to shame and crime? What is the answer to this? The only answer is that Hinduism is overwhelmed with the fear of pollution. It has not got the power to purify. It has not the impulse to serve and that is because by its very nature it is inhuman and unmoral. It is a misnomer to call it religion. Its philosophy is opposed to very thing for which religion stands.

PLEA TO THE FOREIGNER

**Note
on
the Annexure to
'What Congress and Gandhi have done to the Untouchables?'**

Editorial Note:

The present volume of 'What Congress and Gandhi have done to the Untouchables', is the reprint of the first edition published in 1945. Dr. Ambedkar brought out a second edition in 1946. Certain changes by way of substantial additions and improvements are noticed. Chapter 9, which contains these changes is therefore annexed to the Volume. No changes are noticed in the remaining text.

The Editorial Committee is grateful to Shri G. P. Mandavkar of Nagpur for bringing to our notice the contents of the second edition.

CHAPTER IX A PLEA TO THE FOREIGNER *Let not Tyranny Have Freedom to Enslave*

I

'It is a matter of common experience that barring a few exceptions, almost all foreigners, who show interest in Indian political affairs, take the side of the Congress. This quite naturally puzzles and annoys the other political parties in the country, such as the Muslim League, claiming to represent the Musalmans, the Justice Party—now in a state of suspended animation but still—claiming to speak in the name of the non-Brahmins and the All-India Scheduled Castes Federation, claiming to represent the Untouchables, all of whom have been appealing to the foreigner for support but to whom the foreigner's not even prepared to give a sympathetic hearing. Why does the foreigner support the Congress and not the other political parties in India? Two reasons are usually assigned by the foreigner for his behaviour. One reason assigned by him for supporting the Congress is that it is the only representative political organisation of the Indians and can speak in the name of India and even for the Untouchables. Is such a belief founded on facts?

It must be admitted that there have been circumstances which are responsible for creating such a belief. The first and foremost

circumstance for the spread of this view is the propaganda by the Indian Press in favour of the Congress. The Press in India is an accomplice of the Congress, believes in the dogma that the Congress is never wrong and acts on the principle of not giving any publicity to any news, which is inconsistent with the Congress prestige or the Congress ideology. To the foreigner the Press is the principal medium of information about the Indian political affairs. The cry of the Indian Press being what it is, there is therefore no wonder if the people in England and America know one thing and only one thing, namely, that the Congress is the only representative body in India including even the Untouchables.

The effect of this propaganda is considerably heightened because of the absence of counter-propaganda on behalf of the Untouchables to advertise their case against the Congress clam. There are various explanations for this failure on the part of the Untouchables.

The Untouchables have no Press. The Congress Press is closed to them and is determined not to give them the slightest publicity. They cannot have their own Press and for obvious reasons. No paper can survive without advertisement revenue. Advertisement revenue can come only from business and *in* India all business, both high and small, is attached to the Congress and will not favour any Non-Congress organisation. The staff of the Associated Press in India, which is the main news distributing agency in India, is entirely drawn from the Madras Brahmins—indeed the whole of the Press in India is in their hands and they, for well-known reasons, are entirely pro-Congress and will not allow any news hostile to the Congress to get publicity. These are reasons beyond the control of the Untouchables.

To a large extent the failure of the Untouchables to do propaganda, it must be admitted, is also due to the absence of will to do propaganda. This absence of will arises from a patriotic motive not to do anything, which will damage the cause of the country in the eyes of the world outside. There are two different aspects to the politics of India, which may be distinguished as foreign politics and constitutional politics. India's foreign politics relate to India's freedom from British Imperialism, while the constitutional politics of India centre round the nature of a constitution for a free India. For a discriminating student the two issues are really separate. But the Untouchables fear that though the two aspects of India's politics are separable, the foreigner, who counts in this matter and whose misunderstanding has to be guarded against, is not only incapable of separating them but is very likely to mistake a quarrel over constitutional politics for a, disagreement over the ultimate

purposes of India's foreign politics. This is why the Untouchables have preferred to remain silent and allowed the Congress propaganda to go unchallenged.

The Congressmen will not admit the patriotic motives of the Untouchables in keeping silent over Congress propaganda which is directed against them. The fact, however, remains that the silence and the desire to avoid open challenge on the part of the Untouchables have been materially responsible for the general belief that the Congress represents all, even the Untouchables.

While, as explained above, there are circumstances which are responsible for creating the belief that Congress represents all including the Untouchables, such a belief is not warranted by the facts as disclosed by the elections that took place in 1937. How the claim of the Congress to represent all has been disproved by those elections, has already been described in an earlier part of this book, both generally and also with particular regard to the claim of the Congress to represent the Untouchables. If the foreigner will make a note of it he will see how wide the propaganda is from the facts.

At a time when the representative character of the Congress was not put to test in an election it was excusable for a foreigner to be carried away by propaganda. But the matter has now been put to test in the elections that took place in 1937. With the results of the elections available to check the position, it may be hoped that the foreigners will revise their view that the Congress represents all, including the Untouchables, and that they will realise that the other parties are equally representative of elements in the social life of India which are outside the Congress and have therefore the right to be heard.

II

There is another reason why the foreigner lends his support to the Congress. It lies in the difference between the demonstrative activities of the Congress and the other political parties in the country. While he compares the activities of the different political parties, he sees Congressmen engaged in a conflict with the British Government, launching campaigns of civil disobedience, breaking laws made by a foreign Government, organizing movements for non-payment of taxes, courting prison, preaching non-co-operation with Government, refusing offices and exhibiting themselves in other ways as men out to sacrifice themselves for the freedom of the country. On the other hand, he sees the other political parties uninterested, passive and taking no part in

such a struggle. From this, he concludes that the Congress is a body struggling for the freedom of India, while the other parties are indifferent, if not obstructive and as a lover of freedom feels bound to support the Congress as a body carrying on a ' Fight for Freedom ' in preference to other parties.

This is quite natural. But a question arises which calls for attention. Is this partiality to the Congress the result of an infatuation for the ' Fight for Freedom ' movement? Or, is it the result of a conviction that this ' Fight for Freedom ' is going to make the people of India free? If it is the former, all I can do is to regret that what I have said in Chapter VII in explanation as to why the Untouchables have not joined with the Congress in this ' Fight for Freedom ' has not produced the desired effect on the foreigner. But I cannot quarrel, with him on that account. For it is quite understandable that many a foreigner on reading that chapter may say that while the reasons adduced by me as to why the Untouchables refuse to join the ' Fight for Freedom ' are valid and good, I have shown no ground why he should not support a body which is carrying on a fight for freedom.

If the basis of his partiality to the Congress is of the latter sort then the matter stands on a different footing. It then becomes necessary to examine the rationale of his attitude and to save him from his error.

Ordinarily, no one trusts the word of a person who is not prepared to place all his cards on the table and commit himself to something clear and definite, so as to prove his *bona fides*, to inspire confidence and secure the co-operation of those who have doubts about his motives. The same rule must apply to the Congress. But as I have shown in Chapter VII the Congress has not produced its blue print of the sort of democracy it aims to establish in India, showing what place the servile classes and particularly the Untouchables will have in it. Indeed, it has refused to produce such a blue print, notwithstanding the insistent demand of the Untouchables and the other minority communities. In the absence of such a pronouncement it appears to be a strange sort of credulity on the part of the foreigner to give support to the Congress on the ground that it stood for democracy.

There is certainly no ground for thinking that the Congress is planning to establish democracy in India. The mere fact that the Congress is engaged in a ' Fight for Freedom ' does not warrant such a conclusion. Before any such conclusion is drawn it is the duty of the foreigner to pursue the matter further and ask another question, namely, ' For whose freedom is the Congress fighting? ' The question whether the Congress

is fighting for freedom has very little importance as compared to the question, ' for whose freedom is the Congress fighting? ' This is a pertinent and necessary inquiry and it would be wrong for any lover of freedom to support the Congress without further pursuing the matter and finding out what the truth is. But the foreigner who takes the side of the Congress does not care even to raise such a question. One should have thought that he would very naturally raise such a question and if he did raise it and pursue it, I am confident, he will find abundant proof that the Congress far from planning for democracy is planning to resuscitate the ancient form of Hindu polity of a hereditary governing class ruling a hereditary servile class.

The attitude of the foreigner to the cause of the servile classes and particularly to the cause of the Untouchables is a vital matter and no party can leave it out of consideration, *as* a case of idiosyncrasy. For any one representing the Untouchables it is necessary to take note of it and do his best to convince the foreigner that in supporting the Congress he is supporting a wrong party.

III

Apart from the question of likes and dislikes, the real explanation for this strange attitude of the foreigner towards the Congress seems to be in certain notions about freedom, self-government and democracy propounded by western writers on Political Science and which have become the stock-in-trade of the average foreigner.

As to freedom, the foreigner does not stop to make a distinction between the freedom of a country and the freedom of the people in the country. He takes it for granted that the freedom of a country is the same as the freedom of the people in the country and once the freedom of the country is secured the freedom of the people is also thereby assured.

As regards self-government he believes that all that is wanted in a people is a sense of constitutional morality, which Grote [mk:@MSITStore:C:\important\writing_of_babasaheb.chm::/43. A Plea to the Foreigner.htm - _msocom_1](http://msitstore.c:\important\writing_of_babasaheb.chm::/43. A Plea to the Foreigner.htm - _msocom_1) defined as habits of 'paramount reverence for the form of the constitution, enforcing obedience to the authorities acting under and within those forms, yet combined with the habit of open speech, of action subject only to definite legal control, and unrestrained censure of those very authorities as to all their public acts—combined, too, with a perfect confidence in the bosom of every citizen, admits the bitterness of party contest, that the forms of constitution will be not less sacred in

the eyes of his opponents than in his own.”If in a populace these habits are present, then according to the western writers on Politics, self-government can be a reality and nothing further need be considered. As to democracy he believes that what is necessary for achieving it is the establishment of universal adult suffrage. Other aids have been suggested such as recall, plebiscite and frequent elections and in some countries they have been brought into operation. But in a majority of countries nothing more than adult suffrage and frequent elections is deemed to be necessary for ensuring Government by the people, of the people and for the people.

I have no hesitation in saying that all these notions are fallacious and grossly misleading.

Not to make a distinction between the freedom of the country and the freedom of the people in the country is to allow oneself to be misled, if not deceived. For, words such as society, nation and country are just amorphous if not ambiguous terms. There is no gainsaying that 'nation' though one word means many classes. Philosophically, it may be possible to consider a nation as a unit but sociologically it cannot but be regarded as consisting of many classes and the freedom of the nation, if it is to be a reality, must vouchsafe the freedom of the different classes comprised in it, particularly of those who are treated as the servile classes.

Habits of constitutional morality may be essential for the maintenance of a constitutional form of Government. But the maintenance of a constitutional form of Government is not the same thing as a self-government by the people. Similarly, it may be granted that adult suffrage can produce government of the people in the logical sense of the phrase, i.e., in contrast to the government of a king. But it cannot by itself be said to bring about a democratic government, in the sense of the government by the people and for the people.

Anyone who knows the tragic fate of Parliamentary Democracy in Western Europe will not require more and better evidence to prove the fallacy underlying such notions of democracy mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/43. A Plea to the Foreigner.htm - _msocom_2 . If I may quote myself from what I have said in another place, the causes which have led to the failure of democracy in Western Europe may be summarised in the following words;

“The Government of human society has undergone some very significant changes. There was a time when the government of human society had taken the form of autocracy by Despotic Sovereigns. This

was replaced after a long and bloody struggle by a system of government known as Parliamentary Democracy. It was felt that this was the last word in the framework of government. It was believed to bring about the millennium in which every human being will have the right to liberty, property and pursuit of happiness. And there were good grounds for such high hopes. In parliamentary democracy there is the Legislature to express the voice of the people; there is the executive which is subordinate to the Legislature and bound to obey the Legislature. Over and above the Legislature and the Executive there is the Judiciary to control both and keep them both within prescribed bounds. Parliamentary democracy has all the marks of a popular Government, a government of the people, by the people and for the people. It is therefore a matter of some surprise that there has been a revolt against parliamentary democracy although not even a century has elapsed since its universal acceptance and inauguration. There is revolt against it in Italy, in Germany, in Russia and in Spain, and there are very few countries in which there has not been discontent against parliamentary democracy. Why should there be this discontent and dissatisfaction against parliamentary democracy? It is a question worth considering. There is no country in which the urgency of considering this question is greater than it is in India. India is negotiating to have parliamentary democracy. There is a great need of some one with sufficient courage to tell Indians: "Beware of parliamentary democracy, it is not the best product as it appears to be.

Why has parliamentary democracy failed? In the country of the dictators it has failed because it is a machine whose movements are very slow. It delays swift action. In a parliamentary democracy the Executive may be held up by the Legislature which may refuse to pass the laws which the Executive wants and if it is not held up by the Legislature it may be held up by the judiciary which may declare the laws as illegal. Parliamentary democracy gives no free hand to dictatorship and that is why it became a discredited institution in countries like Italy, Spain and Germany which readily welcomed dictatorships. If dictators alone were against parliamentary democracy it would not have mattered at all. Their testimony against parliamentary democracy would be welcomed for the reason that it can be an effective check upon dictatorship. But unfortunately there is a great deal of discontent against parliamentary democracy even in countries where people are opposed to dictatorship. That is the most regrettable fact about Parliamentary democracy. This is all the more regrettable because parliamentary democracy has not been

at a standstill. It has progressed in three directions. It began with equality of political rights in the form of equal suffrage. There are very few countries having parliamentary democracy which have not adult suffrage. It has progressed by expanding the notion of equality of political rights to equality of social and economic opportunity. It has recognised that the State cannot be held at bay by corporations which are anti-social in their purpose. With all this, there is immense discontent against parliamentary democracy even in countries pledged to democracy. The reasons for discontent in such countries must obviously be different from those assigned by the dictator countries. There is no time to go into details. But it can be said in general terms that the discontent against parliamentary democracy is due to the realisation that it has failed to assure to the masses the right to liberty, property or the pursuit of happiness. If this is true, it is important to know the causes which have brought about this failure. The causes for this failure may be found either in wrong ideology or wrong organisation or in both. I think the causes are to be found in both.

Of the erroneous ideologies which have been responsible for the failure of parliamentary democracy I have no doubt that the idea of freedom of contract is one of them. The idea became sanctified and was upheld in the name of liberty. Parliamentary democracy took no notice of economic inequalities and did not care to examine the result of freedom of contract on the parties to the contract, in spite of the fact that they were unequal in their bargaining power. It did not mind if the freedom of contract gave the strong the opportunity to defraud the weak. The result is that parliamentary democracy in standing out as protagonist of liberty has continuously added to the economic wrongs of the poor, the downtrodden and the disinherited class.

The second wrong ideology which has vitiated parliamentary democracy is the failure to realise that political democracy cannot succeed where there is no social and economic democracy. Some may question this proposition. To those who are disposed to question it, I will ask a counter-question. Why did parliamentary democracy collapse so easily in Italy, Germany and Russia? Why did it not collapse so easily in England and the U.S.A.? To my mind there is only one answer. It is that there was a greater degree of economic and social democracy in the latter countries than existed in the former. Social and economic democracy are the tissues and the fibre of a political democracy. The tougher the tissue and the fibre, the greater the strength of the body. Democracy is another name for equality. Parliamentary democracy

developed a passion for liberty. It never made even a nodding acquaintance with equality. It failed to realise the significance of equality and did not even endeavour to strike a balance between liberty and equality with the result that liberty swallowed equality and has made democracy a name and a farce.

I have referred to the wrong ideologies which in my judgement have been responsible for the failure of parliamentary democracy. But I am equally certain that more than bad ideology it is bad organisation which has been responsible for the failure of democracy. All political societies get divided into two classes—the Rulers and the Ruled. This is an evil. If the evil stopped here it would not matter much. But the unfortunate part of it is that the division becomes so stereotyped and stratified that Rulers are always drawn from the ruling class and the class that is ruled never becomes the ruling class. This happens because generally people do not care to see that they govern themselves. They are content to establish a government and leave it to govern them. This explains why parliamentary democracy has never been a government of the people or by the people and why it has been in reality a government of a hereditary subject class by a hereditary ruling class. It is this vicious organisation of political life which has made parliamentary democracy such a dismal failure. It is because of this that parliamentary democracy has not fulfilled the hope it held out to the common man of ensuring to him liberty, property and pursuit of happiness."

If this analysis of the causes which have led to the failure of democracy is correct, it must serve as a warning to the protagonists of democracy that there are certain fundamental considerations which go to the root of democracy and which they cannot ignore without peril to democracy. For the sake of clarity these considerations may be set down in serial order.

First is the recognition of the hard fact of history that in every country there exist two classes,—the governing class and the servile class between whom there is a continuous struggle for power. *Second* is that by reason of its power and prestige the governing class finds it easy to maintain its supremacy over the servile class. *Third* is that adult suffrage and frequent elections are no bar against governing class reaching places of power and authority. *Fourth* is that on account of their inferiority complex the members of the servile classes regard the members of the governing class as their natural leaders and the servile classes themselves volunteer to elect members of the governing classes as their rulers. *Fifth* is that the existence of a governing class is inconsistent with democracy

and self-government and that given the fact that where the governing class retains its power to govern, it is wrong to believe that democracy and self-government have become realities of life. *Sixth* is that self-government and democracy become real not when a constitution based on adult suffrage comes into existence but when the governing class loses its power to capture the power to govern. *Seventh* is that while in some countries the servile classes may succeed in ousting the governing class from the seat of authority with nothing more than adult suffrage, in other countries the governing class may be so deeply entrenched that the servile classes will need other safeguards besides adult suffrage to achieve the same end.

That there is great value in having these considerations drawn up and hung up, so to say on the wall, before every lover of democracy, so that he may see them and note them, goes without saying. For they will help, as nothing else can, to make him realise that in devising a constitution for democracy he must bear in mind: that the principal aim of such a constitution must be to dislodge the governing class from its position and to prevent it from remaining as a governing class for ever; that the machinery for setting up a democratic government cannot be a matter of dogma; that ousting the governing class from power being the main object the machinery for setting up a democratic government cannot be uniform and that variations in the machinery of Democracy must not merely be tolerated but accepted for the reason that the processes by which the governing classes obtain their mastery over the servile classes vary from country to country.

This is what democracy means and involves. But unfortunately Western writers on Politics from whom the foreigner draws his notions have failed to take such a realistic view of democracy. Instead, they have taken a very formal and a very superficial view of it by making constitutional morality, adult suffrage and frequent elections as the be-all and end-all of democracy.

Those who propound the view that democracy need involve no more than these three devices are probably unaware of the fact that they are doing nothing more than and nothing different from expressing the point of view of the governing classes. The governing classes know by experience that such mechanisms have not proved fatal to their power and their position. Indeed, they have helped to give to their power and prestige the virtue of legality and made themselves less vulnerable to attack by the servile classes.

Those who wish that democracy and self-government should come

into their own, and should not remain as mere forms, cannot do better than start with the recognition of the crucial fact that the existence of a permanently settled governing class is the greatest danger to democracy. It is the only safe and realistic approach for a democrat to adopt. It is a fatal blunder to omit to take account of its existence in coming to a conclusion as to whether in a free country freedom will be the privilege of the governing class only or it will be the possession of all. In my view, therefore, what the foreigner who chooses to side with the Congress should ask is not whether the Congress is fighting for freedom. He should ask: For whose freedom is the Congress fighting? Is it fighting for the freedom of the governing class in India or is it fighting for the freedom of the people of India? If he finds that the Congress is fighting for the freedom of the governing class, he should ask Congressmen: Is the governing class in India fit to govern? This is the least he can do before siding with the Congress.

What are the answers which Congressmen have to give to these questions? I do not know. But I will give what I think are the only true answers to these questions.

IV

I cannot say if the foreigner will be impressed by what has been said in the foregoing section of this chapter. If he is he will no doubt ask for proof in support of the statement that the Congress is fighting for the freedom of the country is really fighting not to establish democracy but is planning to resuscitate the ancient Hindu polity of a hereditary governing class ruling a hereditary servile class. I am not certain that the foreigner will be satisfied with the evidence. But I am prepared to place it before him for what it is worth.

Who constitute the governing class in India? For Indians such a question is unnecessary. But for the foreigner it is a necessary preliminary and it must therefore be dealt with. The governing class in India consists principally of the Brahmins. Strangely enough some present-day Brahmins repudiate the allegation that they belong to the governing class though at one time they described themselves as *Bhudevas* (Gods on earth). What can this *volte face* be due to? The intellectual class in every community is charged by its moral code with one sacred duty, namely, to safeguard the interest of the community and not to sacrifice it to the interest of their own class. No intellectual class has so grossly related this trust as have the Brahmins in India. When one finds the Brahmins repudiating their position as the governing class in India one begins to think whether it is due to a guilty conscience, born

out of the realisation that they have committed a criminal breach of this trust and therefore dare not stand before the bar of the world. Or is it due to their sense of modesty? It is not necessary to speculate as to what the truth is. For, it is hardly open to question that in India the Brahmins are a governing class. If necessary there are two tests which one could apply for the purpose of ascertaining the truth. First is the sentiment of the people and the second is the Brahmin's share in administration. Taking the attitude of the people towards the Brahmin, nobody can deny that the person of the Brahmin is regarded as sacred by every Hindu, high or low. He is the most "Worshipful Master" to whom everyone high and low must bow. In pre-British days he had immunities and privileges which were denied to the servile class. For instance he could not be hanged even if he committed murder. That was because he was a sacred person. There was a time when no person of the servile class could take his food without drinking the water in which the toes of the Brahmins were washed. Sir P. C. Ray once described how in his childhood, rows of children belonging to the servile classes used to stand for hours together in the morning on the roadside in Calcutta with cups of water in their hands waiting for a Brahmin to pass, ready to wash his feet and take the sacred liquid to their parents who would not take their food without having a sip of it first. He was entitled to first fruits. In Malabar, where the Sambandham form of marriage prevails, the servile classes, such as the Nairs, regard it an honour to have their females kept as mistresses by the Brahmins. Even kings invited Brahmins to deflower their queens on *prima noctis*. #

The Traveller Ludovico Di Varthema who came to India in the middle of the 16th century and visited Malabar says :

"It is proper and at the same time a pleasant thing to know who these Brahmins are. You must know that they are the chief persons of the faith, as priests are among us. And when the king takes a wife he selects the most worthy and the most honoured of these Brahmins and makes him sleep the first night with his wife, in order that he may deflower her. Do not imagine that the Brahmin goes willingly to perform this operation. The king is obliged to pay him four hundred to five hundred ducats. The king only and no other person in Calicut adopts this practice."—*Voyages of Varthema* (Hakluyt Society), Vol I, p. 141.

Other Travellers tell that the practice was widespread. Hamilton in his *Account of the East Indies* says:

"When the Samorin marries, he must not cohabit with his bride till the Nambourie (Nambudri) or chief priest, has enjoyed her, and if he pleases he may have three nights of her company, because the first fruits of her nuptials must be a holy oblation to the God she worships and some of the nobles are so complacent as to allow the clergy the same tribute; but the common people cannot have that compliment

paid to them, but are forced to supply the priests places themselves."—Vol, I, p. 308.

Buchanan in his Narrative refers to the practice in the following terms : "The ladies of the Tamuri family are generally impregnated by Nambudries ; although if they choose they may employ the higher ranks of Nairs; but the sacred character of the Nambádries always procures them a preference."—*Pinkerton's Voyages*, Vol. VIII, p. 734.

Mr. C. A. Innea, I.C.S., Editor of the *Gazette* of Malabar and Anjengo, issued under the authority of the Government of Madras, says :

"Another institution found amongst all the classes following the *marukak-kaitayam* system, as well as amongst many of those who observe *makattayam*, is that known as 'Tali-tying wedding' which has been described as "the most peculiar, distinctive and unique" among Malayali marriage customs. Its essence is the tying of a *tali* (a small piece of gold or other metal, like & locket, on a string) on a girl's neck before she attains the age of puberty. This is done by a man of the same or of a higher caste (the usages of different classes differ), and it is only after it has been done that the girl is at liberty to contract *sambandham*. It seems to be generally considered that the ceremony was intended to confer on the *tali tier* or *manavaiin* (bridegroom) a right to cohabit with the girl; and by some the origin of the ceremony is found in the claim of the *Bhu-devas* or "Earth-Gods." (that is the Brahmins), and on a lower plane of Kshatriyas or ruling classes, to the first-fruits of lower case womanhood, a right akin to the medixeval *droit de seigncies*"—Vol. I, p. 101.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/43. A Plea to the Foreigner.htm -_msocom_3

Under the British Government and by reason of its equalitarian jurisprudence these rights, immunities and privileges of the Brahmins have ceased to exist. Nonetheless the advantages they gave still remain and the Brahmin is still pre-eminent and sacred in the eyes of the servile classes and is still addressed by them as "Swami" which means ' Lord.'

The second test gives an equally positive result. To take only the Madras Presidency by way of illustration. Consider Table 18 (see page 218). It shows the distribution of gazetted posts between the Brahmins and the other communities in the year 1948. Similar data from the other provinces could also be adduced to support this conclusion. But it is unnecessary to labour the point. Whether the Brahmins accept or deny the status the facts that they control the State and that their supremacy is accepted by the servile classes, are enough to prove that they form the governing class.

It is of course impossible for the Brahmins to maintain their supremacy as a governing class without an ally to help them on account of their being numerically very small. Consequently, as history shows, the Brahmins have always had other classes as their allies to whom they

were ready to accord the status of a governing class provided they were prepared to work with them in subordinate co-operation. In ancient and mediaeval times they made such an alliance with the Kshatriyas or the warrior class and the two not merely ruled the masses, but ground them down to atoms, pulverised them so to say—the Brahmin with his pen and the Kshatriya with his sword. At present, Brahmins have made an alliance with the Vaishya class called Banias. The shifting of this alliance from the Kshatriya to the Bania is in the changed circumstances quite inevitable. In these days of commerce money is more important than sword. That is one reason for this change in party alignment. The second reason is the need for money to run the political machine. Money can come only from and is in fact coming from the Bania. If the Bania is financing the Congress it is because he has realised—and Mr. Gandhi has taught him—that money invested in politics gives large dividends. Those who have any doubt in the matter might do well to read what Mr. Gandhi told Mr. Louis Fischer on June 6, 1942. In his book *A Week with Mr. Gandhi*, Mr. Fischer records very revealing answers to some of his most interesting and pertinent questions.

Mr. Fischer writes mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/43. A Plea to

[the Foreigner.htm - _msocom_4](#) :

“I said I had several questions to ask him (Mr. Gandhi) about the Congress Party. Very highly placed Britishers, I recalled, had told me that Congress was in the hands of big business and that Mr. Gandhi was supported by the Bombay Mill owners who gave him as much money as he wanted. 'What truth is there in these assertions,' I asked, ' Unfortunately, they are true,' he declared simply. ' Congress hasn't enough money to conduct its work. We thought in the beginning to collect four annas (about eight cents) from each member per year and operate on that. But it hasn't worked.' ' What proportion of the Congress budget,' I asked, ' is covered by rich Indians? ' ' Practically all of it,' he stated ' In this ashram, for instance, we could live much more poorly than we do and spend less money. But we do not and the money comes from our rich friends.'”

Being dependent on his money, it is impossible for the Brahmin to exclude the Bania from the position of a governing class. In fact, the Brahmin has established not merely a working but a cordial alliance with the Bania. The result is that the governing class in India to-day is a Brahmin-Bania instead of a Brahmin-Kshatriya combine as it used to be.

Enough has been said to show who constitute the governing class in India. The next inquiry must be directed to find out how the governing class fared in the elections to the Provincial Legislatures that took place in 1937.

The elections that took place in 1937 were based on a franchise which though it was neither universal nor adult was wide enough to include classes other than the governing class, certainly wider than any existing prior to 1937. The elections based on such a franchise may well be taken as a test to find out how the governing class fared as against the servile classes in this electoral contest.

Unfortunately, no Indian publicist *has* as yet undertaken to compile an Indian counterpart of Dodd's Parliamentary Manual. Consequently, it is difficult to have precise particulars regarding the caste, occupation, education and social status of members of the legislature elected on the Congress ticket. The matter is so important that I thought of collecting the necessary information on these points relating to members of the Provincial Legislatures elected in 1937. I did not succeed in getting precise information about every member. There are many whom I have had to leave as unclassified. But the information I have been able to gather is I believe sufficient to warrant our drawing certain definite

conclusions.

As an answer to the question as to how the governing class fared in the electoral contest of 1937, attention may be drawn to Table 19 (see page 216) which shows the proportion of Brahmins and Banias (landlords and moneylenders) representing the governing class and non-Brahmins and the Scheduled Castes representing the servile classes, that were elected to the Provincial Legislative Assemblies on the Congress ticket.

Those, who do not know how small is the proportion of the Brahmins to the total population of Hindus, may not be able to realise the degree of over-representation which the Brahmins have secured in the election. But there is no doubt that on comparison with their numbers the Brahmins have secured overwhelming representation.

Those, who wish to know what degree of representation the propertied classes, such as Banias, businessmen and landlords obtained, may see the figures given in Table 20 (see page 217). It shows how many Banias, businessmen and landlords were elected on the Congress ticket. Here again the representation secured by the Banias, landlords and businessmen is quite out of proportion to their numbers.

Such is the position of the governing class in the legislatures constituted under the elections that took place in 1937. Some may say that on the whole the governing classes were in a minority in the legislature. As against this, it must be pointed out that the supremacy of the governing class can be measured not by its position in the legislature but by its ability to get possession of executive authority. An inquiry into the class composition of the Ministers is therefore very pertinent. Information on this point will be found in Tables 21 and 22 (see pages 218 and 219). A glance at the tables mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/43. A Plea to the Foreigner.htm - _msocom_5 is enough to show that the Brahmins—the premier governing class—succeeded in capturing an overwhelming majority of seats in the Cabinet.

Compiled from Indian Information Issue of July 15, 1939. Question mark indicate inability to classify whether Brahmin or non-Brahmin.

In all the Hindu Provinces, the Prime Ministers were Brahmins. In all Hindu provinces, if the non-Hindu ministers were excluded, the majority of ministers were Brahmins and even parliamentary secretaries were Brahmins.

What has been said so far makes two things as clear as daylight. First is that there is in India a well defined governing class, distinct and separate from the servile class. Second is that the governing class is so powerful that though small in number in the elections of 1987 it quite easily captured political power and established its supremacy over the servile classes. There remains only one more point for me to establish to be able to put my thesis across. It is to show how far Congress was responsible for the victory of the governing class in the elections of 1987. I know I must prove beyond reasonable doubt that the Congress is responsible for placing the governing class in the position of supremacy over the servile class. For it might be said that the Congress had nothing to do with this, that even if the Congress was responsible for it the result was an accident and that there was no intention on the part

of the Congress to help the governing classes to win this position of supremacy.

V

The first line of these suggested defences can be easily disposed of. It is probable that those who raise this defence do not know the political colour of the province to which the figures given in Tables 19,20,21 and 22 relate. If they knew it they would give up this line of defence. For they relate to what are called the Congress Provinces. In these provinces the majority party was the Congress Party and the Cabinets were Congress Cabinets. Obviously, if in these Congress provinces the governing classes succeeded in establishing their rule over the servile classes it is difficult to see how the Congress could be absolved from responsibility for such a result. The Congress is a well disciplined party. It had a plan for fighting the elections. In every province there was established a Parliamentary Board, the functions of which were (1) to choose candidates for elections, (2) to decide upon the formation of Cabinets, and (3) to control the actions of ministers. Over and above these Provincial Parliamentary Boards there was a Central Parliamentary Board to superintend and control the work of the Provincial Parliamentary Boards. It was an election which was planned and controlled by the Congress. It is therefore futile to argue that if the governing classes captured power in the elections of 1937 in the Congress Provinces the Congress is not responsible for the result.

The second line of defence is as fragile as the first. Those who wish to argue that the dominance of the governing class in the Congress provinces is accidental and not intentional should know that they are advancing an argument which will not stand. I would invite the attention of those who are inclined to treat it as an accident to consider the following circumstances.

First let them consider the mentality of the leading members of the Congress High Command who have guided the destiny of the Congress in the past and who are at present running the affairs of the Congress. It would be well to begin with Mr. Tilak. He is dead. But while he was alive he was the most leading man in the Congress and exercised the greatest sway over it. Mr. Tilak was a Brahmin and belonged to the governing class. Though he had acquired the reputation of being the father of the Swaraj

movement his antipathy to the servile classes was quite well known. For want of space I will cite only one instance of his mentality towards the servile classes. In 1918, when the non-Brahmins and the Backward classes had started an agitation for separate representation in the legislature, Mr. Tilak in a public meeting held in Sholapur said that he did not understand why the oil pressers, tobacco shopkeepers, washermen, etc.—that was his description of the Non-Brahmins and the Backward classes—should want to go into the legislature. In his opinion, their business was to obey the laws and not to aspire for power to make laws.

Next after Tilak I may take Mr. Vallabhbhai Patel. Here again, I will cite only one instance to indicate his mentality. In 1942, Lord Linlithgow invited 52 important Indians representing different sections of the people to discuss the steps that might be taken to make the Central Government more popular and thereby enlist the sympathy and co-operation of all Indians in war effort. Among *those* that were invited were members belonging to the Scheduled Castes. Mr. Vallabhbhai Patel could not bear the idea that the Viceroy should have invited such a crowd of mean men. Soon after the event, Mr. Vallabhbhai Patel made a speech in Ahmedabad and said [f.7] :—

“The Viceroy sent for the leaders of the Hindu Mahasabha, he sent for the leaders of the Muslim League and he sent for Ghanchis (oil pressers), Mochis (cobblers) and the rest.”

Although Mr. Vallabhbhai Patel in his malicious and stinging words referred only to Ghanchis and Mochis his speech indicates the general contempt in which he holds the servile classes of his country.

It may be well to know the reactions of Pandit Jawaharlal Nehru. Pandit Jawaharlal Nehru is a Brahmin but he has the reputation of being non-communal in his outlook and secular in his beliefs. Facts do not seem to justify the reputation he carries. A person cannot be called secular if he, when his father dies, performs the religious ceremonies prescribed by orthodox Hinduism at the hands of Brahmin priests on the banks of the river Ganges as Pandit Jawaharlal did when his father died in 1931. As to his being non-communal it is stated by no less a person than Dr. Pattabhi Sitaramayya that Pandit Nehru is very conscious of the fact that he is a Brahmin.[f.8] This must come as a most astonishing fact to

those who believe the Pandit to have the reputation of being the most nationally minded Hindu leader in India. But Dr. Sitaramayya must be knowing what he is talking about. More disturbing is the fact that in the United Provinces from which he hails and over which he exercises complete authority the ministers in the cabinet of the province were all Brahmins. Mrs. Vijaya Laxmi Pandit, the well-known sister of Pandit Jawaharlal Nehru, also seems to be conscious of herself being Brahmin by caste. It is said that at the All-India Women's Conference held in Delhi in December 1940, the question of not declaring one's caste in the Census Return was discussed. Mrs. Pandit disapproved [f.9] of the idea and said that she did not see any reason why she should not be proud of her Brahmin blood and declare herself as a Brahmin at the Census. Who are these men? What is their status? Mr. Tilak has the reputation of being the father of the Swaraj movement. Mr. Patel and Pandit Nehru come next in command *in* the Congress hierarchy after Mr. Gandhi.

Some might think that these are the individual and private opinions of the members of the Congress High Command. But that would be an error. Several cases could be pointed out in which such opinions have been acted upon in election campaigns run by the Congress.

'Ever since 1919 when Mr. Gandhi captured the Congress, Congressmen have looked upon the boycott of legislatures as one of the sanctions for making the British Government concede the demand for Swaraj. Under this policy, every time there was an election in which the Congress decided not to take part, the Congress would not only refuse to put candidates on the Congress ticket but would carry on propaganda against any Hindu proposing to stand for election *as* an independent candidate. One need not quarrel over the merits of such a policy. But what were the means adopted by the Congress to prevent Hindus-standing on an independent ticket? The means adopted were to make the legislatures objects of contempt. Accordingly, the Congress in various Provinces started processions carrying placards with these significant and telling words: "Who will go in the legislatures? Only barbers, cobblers, potters and sweepers." In the processions one man would utter the question as part of the slogan and the whole Congress crowd would shout as answer the second part of the slogan. When the Congressmen found that this was not enough to

deter persons from standing for the elections, they decided to adopt sterner measures. Believing that respectable people would not be prepared to stand for election if they felt certain that they would have to sit with barbers, potters and sweepers, etc., in the legislatures, the Congress actually went to the extent of putting up candidates from these despised communities on the Congress ticket and got them elected. A few illustrations of this outrageous conduct of the Congress may be mentioned. In the 1920 election, the Congress elected a cobbler mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/43. A Plea to the Foreigner.htm - _msocom_10 to the legislature of the Central Provinces. In the 1930 election they elected in the Central Provinces two cobblers, [f.11] one milkman [f.12] and one barber, [f.13] and in the Punjab one sweeper mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/43. A Plea to the Foreigner.htm - _msocom_14. In 1984, the Congress elected to the Central Legislature a potter mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/43. A Plea to the Foreigner.htm - _msocom_15. It might be said that this is old history. Let me correct such an impression by referring to what happened in 1948, in the Municipal elections in Andheri—a suburb of Bombay. The Congress put up a barber to bring the Municipality in contempt.

What a mentality for a Governing class I What a brazen facedness for a governing class to use the servile class for such an ignominious purpose and yet claim to be fighting for their freedom! What a tragedy for the servile class to take pride in its own disgrace and join in it voluntarily! The Sinn Fein Party in Ireland also boycotted the British Parliament. But did they make such hideous use of their own countrymen for effecting their purposes? The campaign of boycott of legislature which took place in 1980 is of particular interest. The elections to the Provincial legislatures in 1980 in which these instances occurred coincided with Mr. Gandhi's Salt Satyagraha campaign of 1930; I hope that the future (the official historian, Dr. Pattabhi Sitaramayya, has failed to do so) historian of Congress while recording how Mr. Gandhi decided to serve notice on the Viceroy, Lord Irwin, presenting him with a list of demands to be conceded before a certain date and on failure *by* the Viceroy in this behalf, how Mr. Gandhi selected Salt Act as a target for attack, how he selected Dandi as a scene of battle, how he decided to put himself

at the head of the campaign, how he marched out from his Ashram in Ahmedabad with all pomp and ceremony, how the women of Ahmedabad came out with *Arthi* and applied *tilak* (saffron mark) to his forehead wishing him victory, how Mr. Gandhi assured them that Gujarat alone would win Swaraj for India, how Mr. Gandhi proclaimed his determination by saying that he would not return to Ahmedabad until he had won Swaraj, will not fail to record that while on the one hand Congressmen were engaged in fighting for Swaraj, which they said they wanted to win in the name of and for the masses, on the other hand and in the very year they were committing the worst outrages upon the very masses by exhibiting them publicly as objects of contempt to be shunned and avoided.

VI

This mentality of the Congress High Command towards the servile classes is enough to negative the theory that the supremacy of the governing classes in the Congress Provinces was an accident. There are other facts which also go to negative the theory of accident and which are set out in Table 23 (see page 226). They relate to the educational qualifications of the several classes of candidates selected by the Congress for fighting the elections. What does the table show? It is crystal clear that in the case of the Brahmins the relative proportion of graduates to non-graduates is far higher than what it is in the case of non-Brahmins and the Scheduled Castes. Was this an accident or was this a matter of policy? This sort of selection is marked by such a state of uniformity that it could hardly be doubted that the Congress High Command in selecting a candidate had a definite policy, namely, in the case of Brahmins, to give preference to a candidate who had the highest educational qualifications and in the case of the non-Brahmins and the Scheduled Castes, to give preference to a candidate who had the lowest educational qualifications. The difference in terms of graduates and non-graduates does not really reveal the real difference between the status and position of the Brahmin candidates and non-Brahmin candidates. The Brahmin candidates were not merely graduates but they were seasoned politicians of high repute, while the non-Brahmin graduates were raw graduates with nothing but the career of second class politicians behind them.

Why did the Congress select the best educated Brahmins as its candidates for election? Why did the Congress select the least educated non-Brahmins and Scheduled Castes as its candidates for election? To this question I can see only one answer. It was to prevent the non-Brahmins—the representatives of the servile classes—from forming a ministry. It cannot be that better educated non-Brahmins were not available. What the Congress seems to have done is deliberately to prefer an uneducated non-Brahmin to an educated non-Brahmin.

Table 23

Classification of Brahmin and Non-Brahmin Congress Partymen by Literacy

<i>Provincial Assemblies</i>	<i>Castes</i>	<i>Total</i>	<i>Graduates</i>	<i>Non-Graduates</i>	<i>Matriculates</i>	<i>Illiterates</i>	<i>Not stated</i>
Assam	Brahmin	6	5	1			
	Non-Brahmin ...	21	15	2	—	1	9
	Brahmin	15	14	1			
Bengal	Non-Brahmin ...	27	21	4	—	1	7
	Scheduled Castes	6	3	—	1	2	—
	Brahmin	31	11	5	8	4	3
Bihar	Non-Brahmin ...	39	23	4	3	8	13
	Scheduled Castes	—	1	1	4	10	—
	Brahmin	39	15		2	9	2
Central Provinces...	Non-Brahmin ...	54	15	—	2	17	6
	Scheduled Castes						1

	Brahmin	3 8	16	2	3	4	13
Madr as	Non- Brahmin ...	9 0	31	3	1	7	61
	Scheduled Castes	2 6	1	1	1	14	—
	Backward Class	—	1	—	—		—
	Brahmin	1 1	6	1		3	1
Oriss a	Non- Brahmin ...	2 0	7	3	2	7	1
	Scheduled Castes	5	—	-	—	5	

And why? Because from the point of view of the governing class, the uneducated non-Brahmin has two definite advantages over an educated non-Brahmin. In the first place, he is likely to be more grateful to the Congress High Command for having got him elected than an educated non-Brahmin is likely to be. In the second place, the uneducated non-Brahmin is less likely to join hands with the educated non-Brahmins in the Congress Party and overturn the ministry of the governing classes and form a non-Brahmin ministry. In the third place, the greater the number of raw non-Brahmins in the Congress the lesser is the possibility of the non-Brahmins in the Congress forming a competent and alternative Ministry to the detriment of the governing class.

Given these circumstances, can there be any doubt that the Congress "Fight for Freedom" is for the freedom of nobody except that of the governing class? Is there any doubt that the Congress is the governing class and the governing class is the Congress? Is there any doubt that when Swaraj came in 1937 in the form of Provincial autonomy, the Congress deliberately and shamelessly put the governing class in places of power and authority?

VII

The facts set out above prove beyond cavil that the "Fight for Freedom" launched by the Congress has ended in perverting the

aim and object of Indian freedom and that the Congress itself is a party to such a perversion. The result is an enormity, the character of which it would not be possible for the foreigner to realise unless he has an adequate idea of the social outlook and social philosophy of the Governing Classes in India.

Starting with the Brahmins Who Form a strong and powerful element in the governing class in India it is no exaggeration to say that they have been the most inveterate enemies of the servile classes, the Shudras (the old name for the non-Brahmins) and the Untouchables who together constitute about 80 or 90 per cent. of the total Hindu population of India. If the common man belonging to the servile classes in India is to-day so fallen, so degraded, so devoid of self-respect, hope or ambition, and so lifeless, it is entirely due to the Brahmins and their philosophy. The cardinal principles of this philosophy of the Brahmins were six—to use a correct expression, techniques of suppression—(1) graded inequality between the different classes; (2) complete disarmament of the Shudras and the Untouchables; (3) complete ban on the education of the Shudras and the Untouchables; (4) total exclusion of the Shudras and the Untouchables from places of power and authority; (5) complete prohibition against the Shudras and the Untouchables acquiring property, and (6) complete subjugation and suppression of women. Inequality is the official doctrine of Brahmanism and the suppression of the lower classes aspiring to equality has been looked upon by them and carried out by them, without remorse *as* their bounded duty. There are countries where education did not spread beyond a few. But India is the only country where the intellectual class, namely, the Brahmins not only made education their monopoly but declared acquisition of education by the lower classes, a crime punishable by cutting off of the tongue or by the pouring of molten lead in the ear of the offender. The result is that for centuries the Brahmins have denied the servile classes the right to education. Even to-day the Brahmins exhibit the same hostility to their education. Mr. Baines, the Census Commissioner for 1891 in discussing the causes why education was not spreading among the masses said :—

“The second influence antagonistic to a more general spread of literacy is the long continued existence of a hereditary class

whose object it has been to maintain their own monopoly of all book-learning as the chief buttress of their social supremacy, Sacerdotalism knows that it can reign over none but an ignorant populace. The opposition of the Brahmin to the rise of the writer castes has been already mentioned, and the repugnance of both, in the present day, to the diffusion of learning amongst the masses can only be appreciated after long experience. It is true that the recognition by the British Government of the virtue and necessity of primary education has met with some response on the part of the literate castes, but it is chiefly in the direction of academic utterances, which cannot, *in* the circumstances, be well avoided. It is welcome too, in its capacity of affording the means of livelihood to many of these castes, as they have to be engaged as teachers, and are bound accordingly to work up to the State standard of efficient tuition. The real interest of the castes in question is centred on secondary education, of which they almost exclusively are in a position to reap the advantage."

The Congress politicians complain that the British are ruling India by a wholesale disarmament of the people of India. But they forget that disarmament of the Shudras and the Untouchables was the rule of law promulgated by the Brahmins. Indeed, so strongly did the Brahmins believe in the disarmament of the Shudras and the Untouchables that when they revised the law to enable the Brahmins to arm themselves for the protection of their own privileges, they maintained the ban on the Shudras and the Untouchables as it was without lessening its rigour. If the large majority of people of India appear today to be thoroughly emasculated, spiritless, with no manliness, it is the result of the Brahmanic policy of wholesale disarmament to which they have been subjected for the untold ages. There is no social evil and no social wrong to which the Brahmin has not given his support. Man's inhumanity to man, such as the feeling of caste, untouchability, unapproachability and unseeability is a religion to him. It would, however, be a mistake to suppose that only the wrongs of man are a religion to him. The Brahmin has given his support to some of the worst wrongs that women have suffered from in any part of the world. In India widows were burnt alive as suttees and the Brahmin gave his fullest support to the practice. Widows were not allowed to remarry. The Brahmins upheld the

doctrine. Girls were required to be married before 8 and the husbands were permitted to claim the right to consummate the marriage at any time thereafter whether she had reached puberty or not. The Brahmin defended the system. The record of the Brahmins as law givers for the Shudras, for the Untouchables and for women is the blackest as compared with the record of the intellectual classes in other parts of the world, For no intellectual class has prostituted its intelligence for the sole purpose of inventing a philosophy to keep his uneducated countrymen in a perpetual state of servility, ignorance and poverty as the Brahmins have done in India. Every Brahmin to-day believes in this philosophy of Brahmanism propounded by his forefathers. He is an alien element in the Hindu Society. The Brahmin *vis-a-vis* the Shudras and the Untouchables is as foreign as the German is to the French, as the Jew is to the Gentile or as the White is to the Negro. There is a real gulf between him and the lower classes of Shudras and Untouchables. He is not only alien to them but he is also hostile to them. In relationship with them, there is in him no room for conscience and no call for justice.

The Bania is the worst parasitic class known to history. In him the vice of money-making is unredeemed by culture or conscience. He is like an undertaker who prospers when there is an epidemic. The only difference between the undertaker and the Bania is that the undertaker does not create an epidemic while the Bania does. He does not use his money for productive purposes. He uses it to create poverty and more poverty by lending money for unproductive purposes. He lives on interest and as he is told by his religion that money-lending is the occupation prescribed to him by the divine Manu, he looks upon money-lending as both right and righteous. With the help and assistance of the Brahmin judge who is ready to decree his suits, the Bania is able to carry on his trade with the greatest ease. Interest, interest on interest, he adds on and on, and thereby draws millions of families perpetually into his net. Pay him as much as he may, the debtor is always in debt. With no conscience to check him there is no fraud, and there is no chicanery which he will not commit. His grip over the nation is complete. The whole of poor, starving, illiterate India is irredeemably mortgaged to the Bania.

In every country there is a governing class. No country is free from it. But is there anywhere in the world a governing class with

such selfish, diseased and dangerous and perverse mentality, with such a hideous and infamous philosophy of life which advocates the trampling down of the servile classes to sustain the power and glory of the governing class? I know of none. It is true that the governing classes in other countries do not readily admit into their society those who do not belong to their class. But they do not refuse admission to those who have risen to their level. Nor do they prevent any person from rising to their level. In India the governing class is a close corporation unwilling to admit anyone who does not belong to it by birth and ready to use every means to prevent the servile classes from rising to their level.

VIII

There was a governing class in France before the French Revolution. There was a governing class in Japan before the seventies of the nineteenth century when Japan decided to modernise its constitution. In both countries the governing classes realising that it was an hour of national crisis decided to shed their ancient rights and privileges in order to make the transition from oligarchy to democracy smooth and easy.

In France, when the Revolution broke out and demanded equality the governing class in France voluntarily came forward to give up its powers and its privileges and to merge itself in the mass of the nation, This is clear from what happened when the States-General was called. The Commons got 600 representatives, while the clergy and the Nobles got 300 each. The question arose how were the 1,200 members to sit, debate and vote. The Commons insisted upon the union of all the estates in one Chamber and 'vote by head.' It was impossible to expect the clergy and the Nobles to accept this position. For it meant the surrender of their most ancient and valuable privileges. Yet a good part of them agreed to the demand of the Commons and gave France a constitution based upon liberty, equality and fraternity.

The attitude of the governing classes in Japan during the period between 1855 to 1870, a period in which the Japanese people were transformed from a feudal society into a modern nation—was even more self-sacrificing than the attitude of the governing classes in France. As students of Japanese history know, there were four classes in Japanese Society: (1) The *Damijos*, (2) The *Samurai*, (3) The *Hemin* or the Common folk and (4) The *Eta* or

the outcasts, standing one above the other in an order of graded inequality. At the bottom were the *Eta* numbering a good many thousands. Above the *Eta* were the *Hem in* numbering about 25/30 millions. Over them were the *Samurai* who numbered about 2 millions and who had the power of life and death over the *Hemin*. At the apex were the *Damijos* or the Feudal Barons who exercised sway over the rest of the three classes and who numbered only 300. The *Damijos* and the *Samurai* realised that it was impossible to transform this feudal society with its class composition and class rights into a modern nation with equality of citizenship. Accordingly the *Damijos* charged with the spirit of nationalism and anxious not to stand in the way of national unity, came forward to surrender their privileges and to merge themselves in the common mass of people. In a memorial submitted to the Emperor on the 5th March 1869 they said [f.16] :—

“The Place where we live is the Emperor's land. The food that we eat is grown by the Emperor's men. How then can we claim any property as our own? We now reverently offer up our possessions and also our followers (Samurai as well as 'common folk ') with the prayer that the Emperor will take good measures for rewarding those to whom reward is due, and for fining such as do not deserve reward. Let imperial orders be issued for altering and remodelling the territories of the various clans. Let the civil and penal codes, the military laws down to the rules for uniform and for the construction of engines of war, all proceed from the Emperor. Let all affairs of the Empire, both great and small, be referred to him.”

How does the governing class in India compare in this behalf with the governing class in Japan? Just the opposite. Unfortunately, the history of the struggle of the servile classes in India against the governing class has not yet been written. But those who know anything about it will know that the governing class in India has no intention of making any sacrifice not even on the altar of Indian Freedom for which it is thirsting. Instead, the governing class is using every means to retain them. For this it is using two weapons. First is the weapon of nationalism. Whenever the servile classes ask for reservations in the legislatures, in the

Executive and in Public Services, the governing class raises the cry of 'nationalism in danger.' What are these reservations for? To put it briefly they are intended to provide floorings below which the governing class will not be able to push down the servile classes in their struggle for existence. There, is nothing sinister and nothing wrong in this demand for reservations. How does the governing class react to them? It loses no occasion to deprecate them and to ridicule them. People are led to believe that if they are to achieve national freedom, they must maintain unity, that all questions regarding reservations in the Legislatures, Executives and the Public Services are inimical to national unity and that, therefore, for anyone interested in national freedom it is a sin to support those who ask for such reservation?."That is the attitude of the governing class in India. It stands in glaring contrast with that of the governing class in Japan. It is a misuse of nationalism. But the governing class does not feel any compunction for such misuse.

The second means employed by the governing class is the writing of the lampoons and parodies calculated to pour ridicule on the demand for reservations. Such lampoons are by no means few and far between. Even the most respectable members of the governing class do not mind indulging in such compositions, Even Dr. R. P. Paranjape, now India's High Commissioner for Australia, who stands for an advanced type of liberalism, could not withstand the temptation of trying his hand in writing such a parody#. Among the parodies composed by members of the governing class his was the most colourful and had, when it appeared, excited the greatest resentment among the servile classes.

#The parody written by Dr. R. P. Paranjape appeared in a magazine called *Gujarathi Punch* 1st May 1926 under the heading "A Peep into the Future." As a specimen of this class of writing by members of the governing class it is worth perusal. It is a satire based on certain incidents which are imagined to have occurred under the principle of communal reservation a. As The magazine if not easily available, I reproduce it below with a view to rescue it from oblivion:—

' A PEEP INTO THE FUTURE '

The following extracts are taken from reports of Commissions, records of police courts cases, judicial trials. Council Proceedings, Administration Reports, etc., issued

between the year 1930-50 and are published for the exclusive benefit of the reader of the *Gujarati Punch*.

I

Report of the Royal Commission on the Government of India, 1930 :

We have given our closest consideration to the representations made on behalf of several communities in India. Taking the figures of the last census as our basis we can only give an approximate satisfaction to all the claims made before us, for it is not possible to give an absolutely accurate solution to the problem of constructing a machinery of Government unless every single person in the country is made a member thereof, as the numbers of the several communities do not possess a common measure. We lay down the number 2375 as the fundamental number in the constitution and this number is divided into parts attached to the several communities as shown in the schedule attached to our report. The claims of each community will henceforward be represented by its proper number, and all appointments, memberships of various bodies, and in fact everything in the country will be awarded according to the proportion given in the schedule wherever possible. The Viceroy's Executive Council will consist of 475 members selected as far as may be according to one-fifth the numbers belonging to each community and these members will hold office for one year so that each community will have attained its exact share of membership in five years. There will be 125 Judges in each High Court, each judge holding office for one year, though according to this arrangement, each section will have obtained its exact share only after the lapse of 19 years. The number of other kinds of appointments will be determined on the same *basis* for the accurate adjustment of all claims.

To allow for the proper functioning of all bodies with these numbers as many existing Government buildings as may be necessary may be pulled down and rebuilt so as to be of the proper size.

II

(Notification of the Government of India, 1932)

In accordance with the provisions of the Government of India Act, 1931. His Majesty the King Emperor has been pleased to appoint the following 475 gentlemen as members of the Executive Council of the Governor-General :

267. Matadin Ramdin (caste Barber) member in charge of the Surgical Branch of the Medical Department.

372. Allabux Peerbux (Mahomedan Camel driver) in charge of the camel transport division of the Army Department.

433. Ramaswamy (caste, Andhra Sweeper) in charge of the road cleaning branch of the P.W.D.

437. Jagannath Bhattacharya (Kulin Brahmin Priest) in charge of the domestic section of the Registration Department.

• • •

IV

(Letter to all Local Governments, 1934)

In response to a resolution passed by the Legislative Assembly, with which the Government of India are in full agreement, I am directed to say that henceforward every appointment under Government should go by rotation to each community irrespective of the merits of the applicants.

V

(Notification in the Bombay Government Gazette, 1934)

The Government of Bombay will proceed to make the following appointments in December. The applicants for the several appointments should belong to the castes mentioned against each according to the rotation fixed by Government Order No. , dated November 30th, 1934.

1. 1. Chief Engineer for Irrigation (Sind) : Kunbi from North Kanara.
2. 2. Professor of Sanskrit, Elphinstone College, Bombay: Balachi Pathan from Sind.
3. 3. Commandant of His Excellency's Bodyguard: Marwari from North Gujarat.
4. 4. Consulting Architect to Government: Wadari (wandering gypsy) from the Deccan.
5. 5. Director of Islamic Culture : Karhada Brabmin
6. 6. Professor of Anatomy : (Grant Modical College) Mahomedan Butcher.
7. 7. Superintendent of Yeravda. Jail : Ghantichor. 8. Two organisers of prohibition: Dharala (Kaira District Bhil) (Panch Mahals).

VI

(Report of a Case from the High Court, 1935)

A.B. (caate Teli) was charged with the cold-blooded murder of his father while he was asleep. The judge summing up against the accused, the jury brought in a verdict of guilty. Before passing sentence the judge asked the pleader for the accused if he had to say anything. The pleader, Mr. Bomanji, said he agreed with the verdict but that according to Law the accused could not be sentenced at all, much less sentenced to death, as during the current year seven Telis had already been convicted and sentenced two of them with death, that several other communities had not yet reached their quota of convictions as given in the Government of India Act, who the Telis had already reached theirs. His Lordship accepted the contention of the defence pleader and acquitted the accused.

VII

(Extract from the ' Indian Daily Mail,' 1936)

Annaji Ramchandra (Chitpavan Brahmin) was found wandering in the streets of Poona with a long knife attacking whomsoever he met. When brought up before the Magistrate he was shown by the police to have been recently let off from the Mental Hospital. The Superintendent of the Hospital in his evidence said that Annaji had been in the hospital as a dangerous insane for three years, but as there was the quota for the Chitpavans and as the inmates belonging to other communities had not finished their year-quotas he could not keep him any longer and show any special favouritism to the Chitpavans and he had therefore let him off according to Government Order No. ... in the Medical Department. The Magistrate ordered Annaji to be discharged.

VIII

(Extract from the Report of the Administration of Jails in the Bombay Presidency, 1937)

In spite of every precaution the numbers in the jails did not correspond to the quotas fixed for each community. The Superintendent had already asked for instructions from Government with a view to remedying the discrepancy.

Resolution of Government: Government view with serious displeasure this grave dereliction of duty on the part of the I. G. of

prisons. Immediate steps should be taken to arrest and put in jail as many members of the various communities as are required to bring their quotas up to the proper level. If enough persons required cannot be caught, a sufficient number of inmates should be let off to bring down all to the same level.

IX

(Proceeding of the Legislative Council, 1940)

Mr. Chennappa asked: Has the attention of Government been called to the fact that class list of the recent M.A. Examination in Pali do not show the proper quota for mang-garudis?

The Hon. Mr. Damn Shroff (Minister of Education) : The University Registrar reports that no candidate from among Mang-garudis offered himself for examination.

Mr. Chennappa: Will Government be pleased to atop this examination until such a candidate offers himself and if the University disobeys the order of Government to take away the University grant and amend the University Act?

The Hon. Member: Government will be pleased to consider the suggestion favourably. (Cheers).

X

(Extract from 'The Times of India,' 1942)

The Coroner Mr. . . . was suddenly called last evening to inquire into the death of Ramji Sonu at the J. J. Hospital as the result of a surgical operation. Dr. Tanu Pandav (caste Barber) deposed that he had conducted the operation. He wished to open an abscess in the abdomen but his knife pierced the heart and the patient expired. Asked whether he had ever carried out any operation of this nature before, he said that he was appointed as the principal surgeon to the hospital only one day before as it was then the turn of his community and that he had never held a surgical instrument in his hand before except a razor for shaving. The jury returned a verdict of death by misadventure.

The argument used by the governing classes to oppose the demand of the servile classes for reservations is based on the doctrine of efficiency. To give a patriotic look to the stand taken by the governing classes it is represented that what Indians must aim at is to maintain in India an efficient body politic and that this can be done only by insisting that every place of power and authority should be filled by none but the best man available. It is

this argument which seems to impress the foreigner and which makes him a critic if not an adversary of the demand for reservation. It is therefore necessary to examine the validity of the argument and the sincerity of those who use it.

Nobody will have any quarrel with the abstract principle that nothing should be done whereby the best shall be superseded by one who is only better and the better by one who is merely good and the good by one who is bad. But the argument completely fails to carry conviction when in practice one finds that having regard to the historical circumstances of India every time the 'best man' is chosen he turns out to be a man from the governing class. This may be alright from the point of view of the governing class. But can it be right from the point of view of the servile class? Could the 'best' German be the 'best' for the French? Could the 'best' Turk be 'best' for the Greeks? Could the 'best' Pole be regarded 'best' for the Jews? There can hardly be any doubt as to the correct answer to these questions.

In answering this question two things cannot be overlooked. One is that a great man is not necessarily a good man. The other is that man is not a mere machine without any feelings. This is even true of the 'best' man. He too is charged with the feelings of class sympathies and class antipathies. Having regard to these considerations the 'best' man from the governing class may well turn out to be the worst from the point of view of the servile classes.

Mere efficiency can never be accepted as a test. If it was accepted as the only test the result would be that the affairs of the French might well be run by the Germans, of Turks by the Russians and of Chinese by the Japanese. Those who hold out the theory of naked efficiency and nothing but efficiency as the test of good Government should ask the French, the Turks and the Chinese as to what they have to say about it and how they like the result which follows from its application.

Even a simpleton can imagine what answer they are likely to return. I am sure that a theory which produces such a result will be regarded as an absurd one on all hands without exceptions. How then can such a theory be applied to India where the difference between the governing class and the servile class is the same both in degree and in kind as the difference between French and Germans, Turks and Russians or Chinese and Japanese? The fact

is that the governing class in India blinded by self-interest is unmindful of the absurdity of the argument of naked efficiency and being conscious that it has the power to convert its opinion into law does not bother what the servile classes have to say on the point.

The governing class does not bother to inquire into the ways and means by which it has acquired its supremacy. It does not feel the necessity of doing so, partly because it believes that it acquired its supremacy by dint of merit and partly because it believes that no matter how it acquired its power it is enough that it is in a position to dictate its policy on the servile classes. Assuming that the governing class did not find it necessary to examine the ways and means by which it obtained its supremacy what would it find? Strange as it may seem the governing class has obtained its power by the same system of reservations which it is now opposing on the ground of communalism. Many may find it difficult to accept the truth of this statement. Those who have any doubt need do no more than read the Manu Smriti, the Bible of the Hindus. What will they find in it? They will find and will no doubt be shocked to know that the Brahmins, the chief and the leading element in the governing class, acquired their political power not by force of intellect—for intellect is nobody's monopoly—but by sheer communalism. According to the Laws of Manu Smriti the post of the Purohit, King's Chaplain and Lord Chancellor, the posts of the Chief Justice and Judges of the High Court and the post of Ministers to the Crown were all reserved for the Brahmins. Even for the post of the Commander-in-Chief the Brahmin was recommended as a fit and a proper person though it was not in terms reserved for him. All the strategic posts having *been* reserved for the Brahmins it goes without saying that all ministerial posts came to be reserved for the Brahmins. This is not all. The Brahmin was not content with reserving places of profit and power for his class. He knew that mere reservation will not do. He must prevent rivals shooting up from other non-Brahmin communities equally qualified to hold the posts and agitate and blow up the system of reservations. In addition to reserving all executive posts in the State for Brahmins a law was made whereby education was made the monopoly and privilege of Brahmins. As has already been pointed out the law made it a crime for the Shudra, i.e., the lower orders of Hindu Society to acquire learning,

the infringement of which was followed by not only heavy but cruel and inhuman punishment such as cutting the tongue of the criminal and filling his ear with hot molten lead. It is true that these reservations do not exist under the British rule. But it must be admitted that though the reservations made by Manu have gone, the advantages derived from their continuance over several centuries have remained. In asking for reservations the servile classes are not asking for anything new or anything extraordinary. The demand for reservation is a demand for protection against the aggressive communalism of the governing class, which wants to dominate the servile class in all fields of life and without imposing on the governing class any such ignominious conditions as was done by the Brahmins for their own aggrandisement and for the perpetuation of their own domination on the Shudra, namely, to make it a crime for the governing class to learn or to acquire property.

This argument of naked efficiency has also to be considered from the point of view of public welfare. It was said by Campbell Bannerman in the course of a debate in the House of Commons on Ireland, that self-government is better than good government. The statement had become so popular in India that it had become more than a mere slogan. It had become a maxim. As it stands the statement is quite absurd. Campbell Bannerman was not contrasting self-government with good government. He was contrasting self-government with efficient government or rather with "resolute government" to use the phrase of his opponent Lord Salisbury. There is no denying that self-government must be good government, otherwise it is not worth having. The question is, how is good government to be had. Some people seem to be under the impression that as self-government is a sovereign government it is bound to result in good government. This is one of the greatest delusions from which most people in dependent countries are suffering. Those who are living in such a delusion had better read what Prof. Dicey has to say on this point. Discussing the question what persons and bodies with full sovereign powers can do Dicey has the following observations to make:—

“The actual exercise of authority by any sovereign whatever and notably by Parliament, is bounded or controlled by two

limitations. Of these the one is an external, the other is an internal limitation.

“The external limit to the real power of a sovereign consists in the possibility or certainty that his subjects or a large number of them, will disobey or resist his laws.

“This limitation exists even under the most despotic monarchies. A Roman Emperor, or a French King during the middle of the eighteenth century, was (as is the Russian Czar at the present day) in strictness a 'sovereign' in the legal sense of that term. He had absolute legislative authority. Any law made by him was binding, and there was no power in the empire or kingdom which could annul such law . . . But it would be an error to suppose that the most absolute ruler who ever existed could in reality make or change every law at his pleasure . . .

“The authority, that is to say, even of a despot, depends upon the readiness of his subjects or of some portion of his subjects to obey his behests; and this readiness to obey must always be in reality limited. This is shown by the most notorious facts of history. None of the early Caesars could at their pleasure have subverted the worship of fundamental institutions of the Roman world . . . The Sultan could not abolish Mohammedanism. Louis the Fourteenth at the height of his power could revoke the Edict of Nantes, but he would have found it impossible to establish the supremacy of Protestantism, and for the same reason which prevented James the Second from establishing the supremacy of Roman Catholicism . . . What is true of the power of a despot or of the authority of a constituent assembly is specially true of the sovereignty of Parliament; it is limited on every side by the possibility of popular resistance. Parliament might legally tax the Colonies; Parliament might without any breach of law change the succession to the throne or abolish the monarchy ; but everyone knows that in the present state of the world the British Parliament will do none of these things. In each case widespread resistance would result from legislation which, though legally valid, is in fact beyond the stretch of Parliamentary power.

* * *

“There is an internal limit to the exercise of sovereign power itself. Even a despot exercises his powers in accordance with his character, which is itself moulded by the circumstances under

which he lives, including under that head the moral feelings of the time and the society to which he belongs. The Sultan could not if he would, change the religion of the Mohammedan world, but if he could do so it is in the very highest degree improbable that the head of Mahommedanism should wish to overthrow the religion of Mahomet ; the internal check on the exercise of the Sultan's power is at least as strong as the external limitation. People sometimes ask the idle question why the Pope does not introduce this or that reform? The true answer is that a revolutionist is not the kind of man who becomes a Pope and that the man who becomes a Pope has no wish to be a revolutionist . . .”

I have already pointed out that it is not enough for the servile classes to be content with the mere fact that their country has become an independent and a sovereign state. It is necessary for them to go further and to find out who are likely to be the instruments of the State, in other words who is going to be the governing class. Dicey's observations and the profound truth which underlies them no one can question—add a further point namely that for good government, ability and efficiency of the governing class are not enough. What is necessary is to have in the governing class the will to do good or to use Dicey's language, freedom from internal limitations arising out of selfish class interests. Efficiency combined with selfish class interests instead of producing good government is far more likely to become a mere engine of suppression of the servile classes.

In selecting the instrumentalities of the State considerations of class bias in the instrumentalities cannot be overlooked. It is in fact fundamental to good government. It is unfortunate that the importance of this fact is not generally recognised even by those who regard themselves as the champions of democracy. Karl Marx was the first to recognise it and take account of it in the administration of the Paris Commune. It is unnecessary to say that it is today the basis of Government in Soviet Russia. The demand for reservations put forth by the servile classes in India is essentially based upon the same considerations pointed out by Dicey, advocated by Marx and adopted by Russia. Only those who belong to the servile class can be trusted to protect the interest of that class. This consideration is so important that the principle of

efficiency cannot be allowed to altogether override it. If the governing class in India stands on the principle of efficiency and efficiency alone it is because it is actuated by the selfish motive of monopolising the instrumentalities of Government.

IX

The foregoing discussion has extended over such length that the foreigner is likely to miss the points which it is intended to bring out. It may therefore be well to assemble them together with a view to underline them.

The main problems, which those desirous of establishing democracy in India must face, are:—(1) the position of the governing class of India, (2) the aims and objects of the governing class towards the servile classes, (3) the *raison d'être* of the demands of the servile classes for constitutional safeguards and (4) the relation of the governing class to the Congress.

Regarding the first point the argument is that the position of the governing class in India is quite different from the position of the governing classes in other countries of the world. It is not easy to understand this difference, nor is it easy to state it in expressive terms. Perhaps the illustration of a bar and a hyphen may help to give a clear idea of what the difference is. Nobody can mistake the difference between a hyphen and a bar. A bar divides but does not link, A hyphen does both. It divides but it also links. In India the governing classes and the servile classes are divided by a bar. In other countries there exists between them only a hyphen. The resultant difference is a very crucial one. In other countries, there is a continuous replenishment of the governing class by the incorporation of others who do not belong to it but who have reached the same elevation as the governing class. In India, the governing class is a close corporation in which nobody, not born in it, is admitted. In other countries where the governing class is not a close preserve, where there is social endosmosis between it and the rest, there is a mental assimilation and accommodation which makes the governing class less antagonistic in its composition and less antagonistic to the servile classes in its social philosophy. In other words, the governing class in countries outside India is not anti-social. It is only non-social. In India where the governing class is a close corporation, tradition, social

philosophy and social outlook which are antagonistic to the servile classes remain unbroken in their depth and their tenor and the distinction between masters and slaves, between the privileged and the unprivileged continues for ever hard in substance and fast in colour. In other words the governing class in India is not merely non-social. It is positively anti-social.

As to the demand for reservations by the servile classes the reason behind it is to put a limit on the power of the governing classes to have control over the instrumentalities of government. The governing classes are bent on giving the reservations a bad name in order to be able to hang those who are insisting upon them. The real fact is that the reservations are only another name for what the Americans call checks and balances which every constitution must have, if democracy is not to be overwhelmed by the enemies of democracy. That the reservations demanded by the servile classes are different in form from the American sort of checks and balances does not alter their character. The forms of checks and balances must be determined by two considerations. The first is the necessity of establishing a correlation between the political constitution and social institutions of the country if democracy is to be real. As the social institutions of countries differ in their form the checks and balances in its political constitutions must also differ. For instance, where a country is ridden by the caste system the checks and balances will have to be of a different sort from what they need be in a country pervaded by a spirit of social democracy. The second is the necessity of providing a firm flooring to the servile classes against the possibility of their being pressed down by the governing classes by reason of their superior power. In *some* countries adult suffrage may be quite enough for the servile classes to hold their own against the governing classes. In India unlike other countries the governing class is so omnipotent and omnipresent that other remedies besides adult suffrage will be necessary to give adequate power to the servile classes to protect themselves against exploitation by the governing classes. Looked at in the light of these observations, the reservations demanded by the servile classes, though different in form from the checks and balances embodied in the American Constitution, are fundamentally checks and balances, and must be considered as such by the foreigner before he forms an adverse opinion against them.

The facts bearing on the last point namely the relation of the Congress to the governing classes have also been fully set out. From these facts the foreigner should be able to see how intimate is the connection between the two. The same facts will explain why the governing class in India has placed itself in the vanguard of the Congress movement and why it strives to bring everybody within the Congress fold. To put it briefly the governing class is aware that a political campaign based on class ideology and class conflicts will toll its death knell. It knows that the most effective way of side-tracking the servile classes and fooling them is to play upon the sentiment of nationalism and national unity. It clings to the Congress because it realises that the Congress platform is the only platform that can most effectively safeguard the interest of the governing class. For if there is any platform from which all talk of conflict between rich and poor, Brahmin and non-Brahmin, landlord and tenant, creditor and debtor, which does not suit the governing class, can be effectually banned, it is the Congress platform which is not only bound to preach nationalism and national unity,—this is what the governing class wants, as it is on this that its safety entirely depends—but which prohibits any other ideology inconsistent with nationalism being preached from its platform.

If the foreigner bears in mind these points he will realise why the servile classes of India are not attracted by the Congress brand of Swaraj. What good can the Congress brand of Swaraj bring to them? They know that under the Congress brand of Swaraj the prospect for them is really very bleak. The Congress brand of Swaraj will either be materialisation of what is called Gandhism or it will be what the governing class would want to make of it. If it is the former it will mean the spread of charkha, village industries, the observance of caste, Brahmacharya (continence), reverence for the cow and things of that sort. If it is left to governing classes to make what it likes of Swaraj the principal item in it will be the suppression of the servile classes by withdrawing the facilities given by the British Government in the matter of education and entry in public services.

Some people hope that under Swaraj there will be a reform of tenancy laws, factory legislation, compulsory primary education, prohibition and construction of roads and canals, improvement of currency, regulation of weights and measures, dispensaries and

introduction of other measures for the servile classes. I am not quite sure that these hopes are well-founded. Most people forget that what leads the Congress to-day to mouth such a programme is the desire to show that the Congress is better than the British bureaucracy. But once the bureaucracy is liquidated, will there be the same incentive to better the lot of the masses? That is the question. Firstly, I entertain very grave doubts as to how far this will materialise. Secondly, there is nothing very great in it. In the world of to-day, no governing class can omit to undertake reforms, which are necessary to maintain society in a civilised state. Apart from this, is social amelioration the be-all and end-all of Swaraj? Knowing the servile classes as I do that is certainly not the fault of the servile classes. They certainly do not intend to follow the teaching that 'the meek shall eat and be satisfied.' The want and poverty which has been their lot for centuries is nothing to them as compared to the insult and indignity which they have to bear as a result of the vicious social order. Not bread but honour, is what they want. That can happen only when the governing classes disappear and cease to have control over their destiny. The question for the servile classes is not whether this reform or that reform will be undertaken. The question is; Will the governing classes in India having captured the machinery of the State, undertake a programme for the reform of the social order whereby the governing class will be liquidated, as distinguished from a programme of social amelioration? The answer to this depends upon whether the future constitution of India will be with safeguards or without safeguards for the protection of the servile classes. If it will have safeguards it will be possible for the servile classes to liquidate the governing classes in course of time. If the constitution is without safeguards the governing class will continue to maintain its dominance over the servile classes. This being the issue, the foreigner should note that the much-advertised representative character of the Congress is absolutely irrelevant. The Congress may be a representative body and the Congress may be the body which is engaged in what is called the Fight for Freedom ; but these things have nothing to do with the decision of the issue. A true lover of democracy before he befriends the Congress will demand that it should produce its blue print of the constitution and be satisfied that its constitution does contain unequivocal and positive provisions for the safety, security

for the life, liberty and the pursuit of happiness for the servile classes.

X

The foreigners who take interest in Indian politics fall into two classes. The first class includes those who are travellers and tourists who come * to do ' India for a short while and who are not equipped with a knowledge of the intricacies of the Indian Political problems, the theoretical apparatus to pronounce a correct opinion on the attitude of the different parties to these problems. Those who fall into the second class are the leaders of democratic public opinion such as Louis Fischer in America, Kingsley Martin, Brailsford and Laski whose knowledge and equipment none can question. I would have had no regrets if the foregoing discussion had been called for by the needs of correcting the unthinking bias of the tourists and traveller class of foreigners in favour of the Congress. But unfortunately the same sort of bias is also to be found in those foreigners who fall into the second class.

That there should be foreigners of the tourist sort who cannot understand the intricacies of Indian politics and who therefore support the Congress on no other ground except that which Mr. Pickwick gave to Sam Weller—to shout with the biggest crowd—is quite understandable. But what annoys most is the attitude of the leaders of the British Labour Party, heads of radical and leftist groups in Europe and America, represented by men like Laski, Kingsley Martin, Brailsford and editors of journals like the *Nation* in America, and the *New Statesman* in England championing the cause of the oppressed and the suppressed people in other parts of the world. How can these men support the Congress it is difficult to understand. Do they not know that the Congress means the governing class and that the governing class in India is a Brahmin-Bania combine? That masses are drawn in the Congress only to be camp followers with no say in the making of Congress policy? Do they not realise that for the reasons for which the Sultan could not abolish Islam or the Pope could not repudiate Catholicism, the governing class in India will not decree the destruction of Brahmanism and that so long as the governing class remains what it is, Brahmanism, which preaches the supremacy of Brahmins and the allied castes and which recognises the suppression and

degradation of the Shudras and the Untouchables as the sacred duty of the State, will continue to be the philosophy of the State even if India became free? Do they not know that this governing class in India is not a part of the Indian people, is not only completely isolated from them, but believes in isolating itself, lest it should be contaminated by them, has implanted in its mind by reason of the Brahmanic philosophy, motives and interests which are hostile to those who are outside its fold and therefore does not sympathise with the living forces operating in the servile masses whom it has trodden down, is not charged with their wants, their pains, their cravings, their desires, is inimical to their aspirations, does not favour any advance in their education, promotion to high office and disfavours every movement calculated to raise their dignity and their self-respect? Do they not know that in the Swaraj of India is involved the fate of 60 millions of Untouchables?

It would be impossible to say that the leaders of the British Labour Party, that Kingsley Martin, Brailsford and Laski whose writings on liberty and democracy are a source of inspiration to all suppressed people, do not know these facts. Yet if they refer to India, it is always to support the Congress. It is very, very seldom that they are found to discuss the problem of the Untouchables which ought to make the strongest appeal to all radicals and democrats. Their exclusive attention to Congress activities and their utter neglect of other elements in the national life of India show how misguided they have been. One could well understand their support to the Congress if the Congress was fighting for political democracy. But is it? As every one knows, the Congress is only fighting for national liberty and is not interested in political democracy. The party in India who is fighting for political democracy is the party of the Untouchables who fear that this Congress fight for liberty, if it succeeds, will mean liberty to the strong and the powerful to suppress the weak and the down-trodden unless they are protected by constitutional safeguards. It is they who ought to receive the help of these radical leaders. But the Untouchables have been waiting in vain for all these years even for a gesture of goodwill and support from them. These radicals and leftists in Europe and America have not even cared to know the forces behind the Congress.

Ignorant or unmindful one does not know, but the fact remains that these leftists and radical leaders have been giving blind and

unquestioning support to the Congress which admittedly is run by capitalists, landlords, money-lenders and reactionaries, only because the Congress calls its activities by the grandiloquent name of "Fight for Freedom." All battles for freedom are not on equal moral plane for the simple reason that the motives and purposes behind these battles of freedom are not always the same. To take only a few illustrations from English History. The Barons' Rebellion against John which resulted in the *Magna Charta* could be called a battle for freedom. But could any democrat in modern times give it the same support which he would give—say to the Levellers' Rebellion or to the Peasants' Revolt in English History, merely because it could logically be described as a battle for freedom? To do so will be to respond to a false cry of freedom. Such crude conduct would have been forgivable, had it proceeded from groups not intelligent enough to make a distinction between freedom to live and freedom to oppress. But it is quite inexcusable in radical and leftist groups led by Messrs. Laski, Kingsley Martin, Brailsford, Louis Fischer and other well-known champions of democracy.

When pressed to explain why they don't support Indian Parties which stand for true democracy, they are reported to meet the charge by a counter question. Are there any such parties in India? Insist that there are such parties and they turn round and say: If such parties exist, how is it the Press does not report their activities? When told that the Press is a Congress Press, they retort: How is it that the foreign correspondents of the English Papers do not report them? I have shown why nothing better can be expected from these foreign correspondents. The Foreign Press Agency in India is not better than the Indian Press. Indeed it cannot be better. There are in India what are called foreign correspondents. In a large majority of cases they are Indians. Only a very few are foreigners. The selection of Indians as foreign correspondents is so made that they are almost always from the Congress camp. The foreign correspondents who are foreigners fall into two groups. If they are Americans they are just Anti-British and for that reason pro-Congress. Any political party in India which is not madly anti-British does not interest them. Those who are not in the Congress will testify how hard it was for them to persuade the American War Correspondents who trooped into this country in 1941-42, even to entertain the possibility of

the Congress not being the only party, much less to induce them to interest themselves? In other political parties. It took a long time before they recovered their sanity and when they did, they either abused the Congress as an organisation led by impossible men or just lost interest in Indian politics. They never got interested in other political parties in India and never cared to understand their point of view. The situation is no better in the case of foreign correspondents who are Britishers. They too are interested only in that kind of politics which is first and foremost anti-British. They are uninterested in those political parties in India whose foremost concern is to make a free India safe for democracy. The result is that the foreign press provides the same kind of news about Indian politics, as does the Indian Press.

These reasons cannot be beyond the ken of these radicals. Correspondents or no correspondents, is it not the duty of radicals to keep in touch with their kindred in other parts of the world to encourage them, to help them and to see that true democracy lives everywhere? It is a most unfortunate thing that the Radicals of England and America should have forgotten the class to whom they owe a duty to help and have become the publicity agents of Indian Tories who are just misusing the slogan of liberty to be fool and befog the world.

The sooner they get out of this fog created by the Congress and realise that democracy and self-government in India cannot be real unless freedom has become the assured possession of all, the better for them and the better for the people of India. But if they persist in giving their blind support to the Congress on the basis of an empty slogan without examining its relation to facts and intentions, I for one will have *no* hesitation in saying that far from being the friends of India they are a positive menace to the freedom of the Indian masses. It is a pity that they do not seem to distinguish the case of a tyrant who is held down and who pleads for liberty because he wants to regain his right to oppress and the case of an oppressed class seeking to be free from the oppression of the tyrant. In their hurry to bring freedom to India they have no time to realise that by siding with the Congress what they are doing is not to make India safe for democracy but to free the tyrant to practise his tyrannies, Is it necessary to tell them that to support Congress is to let tyranny have freedom to enslave? It is to save their own reputation as the champions of the oppressed

and suppressed classes that they should reconsider their attitude towards the Congress.

PRESERVATION OF SOCIAL ORDER

[These are four hand-written pages of the manuscripts by Dr. Ambedkar with extracts from scriptures typed intermittently. The first page is numbered 56, which shows that the earlier part is not available. So also later portion is missing Title of the Chapter is suggested—Ed.]

* * * *

XII. 100.”Command of armies, royal authority, power of inflicting punishment, and sovereign dominion over all nations, he only well deserves, who perfectly understands the Veda Sastra. (i. e. one who is a Brahmin) (Manu Smriti)

The second technique devised for the maintenance and preservation of the Established Order is quite different from the first. Really speaking it is this, which constitutes a special feature of the Hindu Social Order.

In the matter of the preservation of the Social Order from violent attack it is necessary to bear in mind three considerations. The outbreak of a Revolution is conditioned by three factors. (1) The existence of a sense of wrong,

(2) Capacity to know that one is suffering from a wrong and

(3) availability of arms. The second consideration is that there are two ways of dealing with a rebellion. One is to prevent a rebellion from occurring and the other is to suppress it after it has broken out. The third consideration is that whether the prevention of rebellion would be feasible or whether the suppression of rebellion would be the only method open, would depend upon the rules which govern the three prerequisites of rebellion.

Where the Social Order denies opportunity to rise, denies right to education, and denies right to use arms it is in a position to prevent rebellion against the Social Order. Where on the other hand a Social Order allows opportunity to rise, allows right to education, and permits the use of arms it cannot prevent rebellion by those who suffer wrongs. Its only remedy to preserve the Social Order by suppressing rebellion by the use of force and violence. The Hindu Social Order has adopted the first method. It has fixed the social status of the lower orders for all generations to come. Their economic status is also fixed. There being no

disparity between the two there is no possibility of a grievance growing up. It has denied education to the lower orders. The result is that no one is conscious that his low condition is a ground for grievance. If there is any consciousness it is that no one is responsible for the low condition. It is the result of fate. Assuming there is a grievance, assuming there is consciousness of grievance there cannot be a rebellion by the lower orders against the Hindu Social Order' because the Hindu Social order denies the masses the right to use arms. . . . Social Orders such as use of follow the opposite course. They allow equal opportunity to all. They allow freedom to acquire knowledge, they allow the right to bear arms and take upon themselves the odium of suppressing rebellious force & violence. To deny freedom of opportunity, to deny freedom to acquire knowledge, to deny the right to arms is a most cruel wrong. Its result to..... and man. The Hindu Social Order is not ashamed to this. It has however achieved two things. It has found the most effective even though it be the most shameless method of preserving the established Order. Secondly notwithstanding the use of most inhuman means of killing manliness, it has given to the Hindus the reputation of being a very humane people.

Another special feature of the Hindu Social Order relates to the technique devised for its preservation.

The technique is twofold.

The first technique is to place the responsibility of upholding and maintaining the social order upon the shoulders of the King. Manu does this in quite express terms.

VIII. 410."The king should order each man of the mercantile class to practice trade, or money-lending, or agriculture and attendance on cattle ; and each man of the servile class to act in the service of the twice-born."

VIII. 418."With vigilant care should the King exert himself in compelling merchants and mechanics to perform their respective duties ; for, when such men swerve from their duty, they throw this world into confusion."

Manu does not stop with the mere enunciation of the duty of the King in this behalf. He.to ensure that the King shall at all times perform his duty to maintain and preserve the Established Order. Manu therefore makes two further provisions. One provision is to make the failure of the King to maintain the Established Order an offence for which the King become liable for prosecution and punishment like a common man. This would be clear from the

following citations from Manu—

VIII. 335.”Neither a father, nor a preceptor, nor a friend, nor a mother, nor a wife, nor a son, nor a domestic priest must be left unpunished by the king, if they adhere not with firmness to their duty.”

VIII. 336.”Where another man of lower birth would be fined one pana, the king shall be fined a thousand, and he shall give the fine to the priests, or cast it into the river, this is a sacred rule.”

The other provision made by Manu against a King who is either negligent or opposed to the Established Order is to invest the three classes. Brahmins, Kshatriya and Vaishya with a right to rise in armed rebellion against the King.

VIII. 348.”The twice-born may take arms, when their duty is obstructed by force ; and when, in some evil time, a disaster has befallen the twice-born classes.”

(Left incomplete in the Ms—ed)

RANADE, GANDHI AND JINNAH

*Address delivered on the 101st Birthday Celebration
of
MAHADEO GOVIND RANADE
held on the 18th January 1943
in
the Gokhale Memorial Hall, Poona
First Published: 1943 Reprinted from the first edition of 1943*

PREFACE

The Deccan Sabha of Poona invited me to deliver an address on the 101st birthday of the late Justice Mahadev Govind Ranade which *it proposed* to celebrate and which fell on the 18th January 1940. I was not very willing to accept the invitation. For I knew that my views on social and political problems, a discussion of which could not be avoided in a discourse on Ranade, would not very pleasing to the audience and even perhaps to the members of the Deccan Sabha. In the end I accepted their invitation. At the time when I delivered the address I had no intention of publishing it. Addresses delivered on anniversaries of great men are generally occasional pieces. They do not have much permanent value. I did not think that my address was an exception to this. But I have some troublesome friends who have been keen on seeing the whole of it in print and have been insisting upon it. I am indifferent to the idea. I am quite content with the publicity it has received and I have no desire to seek more. At the same time if there are people who think that it is worthy of being rescued from falling into oblivion. I do not see any reason for disappointing them.

The address as printed differs from the address as delivered in two respects. Section X of the address was omitted from the address as delivered to prevent the performance going beyond reasonable time. Even without it, it took one hour and a half so deliver the address. This is one difference. The other difference lies in the omission of a large portion of Section VIII which was devoted to a comparison of Ranade with Phule. For the omission, there are two reasons. In the first place, the comparison was not sufficiently full and detailed to do justice to the two men; in the

second place, when the difficulties of finding enough paper compelled me to sacrifice some portion of the address this appeared to be best offering.

The publication of the address is taking place under peculiar circumstances. Ordinarily reviews follow publication. In this case the situation is reversed. What is worse is that the reviews have condemned the address in scathing terms. This is a matter primarily for the publishers to worry about. I am happy that the publisher knows the risk and he takes it. Nothing more need be said about it except that it supports the view taken by my friends that the address contains matter which is of more than ephemeral value. As for myself I am not in the least perturbed by the condemnation of this address by the Press. What is the ground for its condemnation? And who has come forward to condemn it?

I am condemned because I criticized Mr. Gandhi and Mr. Jinnah for the mess they have made of Indian politics, and that in doing so I am alleged to have shown towards them hatred and disrespect. In reply to this charge what I have to say is that I have been a critic and I must continue to be such. It may be I am making mistakes but I have always felt that it is better to make mistakes than to accept guidance and direction from others or to sit silent and allow things to deteriorate. Those who have accused me of having been actuated by feelings of hatred forget two things. In the first place this alleged hatred is not born of anything that can be called personal. If I am against them it is because I want a settlement. I want a settlement of some sort and I am not prepared to wait for an ideal settlement. Nor can I tolerate anyone on whose will and consent settlement depends to stand on dignity and play the Grand Moghul. In the second place, no one can hope to make any effective mark upon his time and bring the aid that is worth bringing to great principles and struggling causes if he is not strong in his love and his hatred. I hate injustice, tyranny, pompousness and humbug, and my hatred embraces all those who are guilty of them. I want to tell my critics that I regard my feelings of hatred as a real force. They are only the reflex of the love I bear for the causes I believe in and I am in no wise ashamed of it. For these reasons I tender no apology for my criticism of Mr. Gandhi and Mr. Jinnah, the two men who have brought India's political progress to a standstill.

The condemnation is by the Congress Press. I know the Congress Press well. I attach no value to its criticism. It has never refuted my arguments. It knows only to criticise, rebuke and revile me for everything I do and to misreport, misrepresent and pervert everything I say. Nothing, that I do, pleases the Congress Press. This animosity of the Congress Press towards me can to my mind not unfairly, be explained as a reflex of the hatred of

the Hindus for the Untouchables. That their animosity has become personal is clear from the fact that the Congress Press feels offended for my having criticised Mr. Jinnah who has been the butt and the target of the Congress for the last several years.

However strong and however filthy be the abuses which the Congress Press chooses to shower on me I must do my duty. I am no worshipper of idols. I believe in breaking them. I insist that if I hate Mr. Gandhi and Mr. Jinnah—I dislike them, I do not hate them—it is because I love India more. That is the true faith of a nationalist. I have hopes that my countrymen, will some day learn that the country is greater than the men, that the worship of Mr. Gandhi or Mr. Jinnah and service to India are two very different things and may even be contradictory of each other.

22 Prithviraj Road, New Delhi

15th March 1943

B. R. AMBEDKAR

RANADE, GANDHI AND JINNAH

I

I must tell you that I am not very happy over this invitation. My fear is that I may not be able to do justice to the occasion. When a year ago the Centenary of Ranade's Birthday was celebrated in Bombay the Rt. Hon'ble Srinivas Shastri was chosen to speak. For very many reasons he was well qualified for performing the duty. He can claim to be a contemporary of Ranade for a part of his life. He had seen him at close range and was an eye witness of the work to which Ranade devoted his life. He had opportunity to judge him and compare him with his co-workers. He could therefore, expound his views about Ranade with a sense of confidence and with intimacy born out of personal touch. He could cite an anecdote and illuminate the figure of Ranade before his audience. None of these qualifications are available to me. My connection with Ranade is of the thinnest. I had not even seen him. There are only two incidents about Ranade which I can recall. First relates to his death. I was a student in the first standard in the Satara High School. On the 16th January 1901 the High School was closed and we boys had a holiday. We asked why it was closed and we were told that because Ranade was dead. I was then about 9 years old. I knew nothing about Ranade, who he was, what he had done ; like other boys I was happy over the holiday and did not care to know who died. The second incident which reminds me of Ranade is dated much later than the first. Once I was examining some bundles of old papers belonging

to my father when I found in them a paper which purported to be a petition sent by the Commissioned and non-Commissioned officers of the Mahar Community to the Government of India against the orders issued in 1892 banning the recruitment of the Mahars in the Army. On inquiry I was told that this was a copy of a petition which was drafted by Ranade to help the aggrieved Mahars to obtain redress. Beyond these two incidents I have nothing to recall of Ranade. My knowledge about him is wholly impersonal. It is derived from what I have read about his work and what others have said about him. You must not expect me to say anything of a personal character which will either interest you or instruct you. I propose to say what I think of him as a public-man in his days and his place in Indian politics today.

II

As you are well aware, there are friends of Ranade who do not hesitate to describe him as a great man and there are others who with equal insistence deny him that place. Where does the truth lie? But this question must, I think, wait upon another, namely, is history the biography of great men? The question is both relevant as well as important. For, if great men were not the makers of history, there is no reason why we should take more notice of them than we do of cinema stars. Views differ. There are those who assert that however great a man may be, he is a creature of Time—Time called him forth, Time did everything, he did nothing. Those who hold this View, in my judgement, wrongly interpret history. There have been three different views on the causes of historical changes. We have had the Augustinian theory of history, according to which history is only an unfolding of a divine plan in which mankind is to continue through war and suffering until that divine plan is completed at the day of judgement. There is the view of Buckle who held that history was made by Geography and Physics. Karl Marx propounded a third view. According to him history was the result of economic forces. None of these three would admit that history is the biography of great men. Indeed they deny man any place in the making of history. No one except theologians accepts the Augustinian theory of history. As to Buckle and Marx, while there is truth in what they say, their views do not represent the whole truth. They are quite wrong in holding that impersonal forces are everything and that man is no factor in the making of history. That impersonal forces are a determining factor cannot be denied. But that the effect of impersonal forces depends on man must also be admitted. Flint may not exist everywhere. But where it does exist, it needs man to strike flint against flint to make fire. Seeds may not be found everywhere. But where they do exist, it needs man to ground

it to powder and make it a delectable and nutritious paste and thereby lay the foundation of agriculture. There are many areas devoid of metals. But where they do exist, it needs a man to make instruments and machines which are the basis of civilization and culture.

Take the case of social forces. Various tragic situations arise. One such situation is of the type described by Thayer in his biography of Theodore. Roosevelt when he says :

“There comes a time in every sect, party or institution when it stops growing, its arteries harden, its young men see no visions, its old men dream no dreams ; it lives on the past and desperately tries to perpetuate the past. In politics when this process of petrification is reached we call it Bourbonism and the sure sign of the Bourbon is that, being unconscious that he is the victim of sclerosis, he sees no reason for seeking a cure. Unable to adjust himself to changed and new conditions he falls back into the past as an old man drops into his worn-out arm-chair.”

The other kind of situation is not one of decay but of destruction. The possibilities of it are always present whenever there is a crisis. The old ways, old habits and old thoughts fail to lift society and lead it on. Unless new ones are found there is no possibility of survival. No society has a smooth sailing. There are periods of decay and possibilities of destruction through which every society has to pass. Some survive, some are destroyed, and some undergo stagnation and decay. Why does this happen? What is the reason that some survive? Carlyle has furnished an answer. He puts in his characteristic way:

“No time need have gone to ruin, could it have found a great enough, a man wise and good enough; Wisdom to discern truly what the Time wanted, valour to lead it on to the right road thither, these are the salvation of any Time.”

This seems to me to be quite a conclusive answer to those who deny man any place in the making of history. The crisis can be met by the discovery of a new way. Where there is no new way found, society goes under. Time may suggest possible new ways. But to step on the right one is not the work of Time. It is the work of man. Man therefore is a factor in the making of history and that environmental forces whether impersonal or social if they are the first are not the last things.

III

Who can be called a great man? If asked of military heroes such as Alexander, Attila, Caesar and Tamerlane, the question is not difficult to answer. The military men make epochs and effect vast transitions. They appal and dazzle their contemporaries by their resounding victories. They

become great without waiting to be called great. As the lion is among the deer, so they are among men. But it is equally true that their permanent effect on the history of mankind is very small. Their conquests shrink, and even so great a General as Napoleon after all his conquests left France smaller than he found it. When viewed from a distance they are seen to be only periodical, if necessary, incidents in the world's movement, leaving no permanent mark on the character of the society in which they live. The details of their career and their moral may be interesting, but they do not affect society and form no leaven to transform or temper the whole.

The answer becomes difficult when the question is asked about a person who is not a military general. For, it then becomes a question of tests, and different people have different tests.

Carlyle the apostle of Hero Worship had a test of his own. He laid *it* down in the following terms :

“But of great man especially, of him I will venture to assert that it is incredible he should have been other than true. It seems to me the primary foundation of him, this. . . No man adequate to do anything, but is first of all in right earnest about it; what I call a sincere man. I should say *sincerity*, a deep, great genuine sincerity, is the first characteristic of all men in any way heroic.”

Carlyle was of course particular in defining his test of sincere in precise terms, and in doing so he warned his readers by defining what his idea Of sincerity was—

“Not the sincerity that calls itself sincere : Ah no,” he said, “that is a very poor matter indeed; — a shadow, braggart, conscious sincerity; oftenest self-conceit mainly. The great man's sincerity is of the kind he cannot, speak of, is not conscious *of* : Nay, I suppose, he is conscious rather of *insincerity* ; for what man can walk accurately by the law of truth for one day? No, the great man. does not boast himself sincere, far from that; perhaps does not ask himself if he is so: I would say rather, his sincerity does not depend on himself ; he cannot help being sincere !”

Lord Rosebery proposed another test when dealing with Napoleon—who was as great an Administrator as a General. In answering the question, Was Napoleon Great? Rosebery used the following language:

“If by ' great ' be intended the combination of moral qualities with those of intellect, great he certainly was not. But that he- was great in the sense of being extraordinary and supreme we can have no doubt. If greatness stands for natural power, for predominance, for something human beyond humanity, then Napoleon was assuredly great. Besides that indefinable spark which we call genius, he represents a combination of

intellect and energy which has never perhaps been equalled, never certainly surpassed."

There is a third test, suggested by the philosophers or, to be more accurate, by those who believe in divine guidance of human affairs. They have a different conception of what is a great man. To summarise the summary of their view, as given by Rosebery, a great man is launched into the world, as a great natural or supernatural force, as a scourge and a scavenger boon to cleanse society and lead it on to the right path who is engaged in a vast operation, partly positive, mainly negative, but all relating to social regeneration.

Which of these is the true test? In my judgement all are partial and none is complete. Sincerity must be the test of a great man. Clemenceau once said that most statesmen are rogues. Statesmen are not necessarily great men, and obviously these *on* whose experience he founded his opinion must have been those wanting in sincerity, Nonetheless no one can accept that sincerity is the primary or the sole test. For sincerity is not enough. A great man must have sincerity. For it is the sum of all moral qualities without which *no* man can be called great. But there must be something more than mere sincerity in a man to make him great. A man may be sincere and yet he may be a fool, and a fool is the very antithesis of a great man. A man is great because he finds a way to save society in its hours of crisis. But what can help him to find the way? He can do so only with the help or intellect. Intellect is the light. Nothing else can be of any avail. It is quite obvious that without the combination of sincerity and intellect no man can be great. Is this enough to constitute a great man? At this stage we must, I think, make a distinction between an eminent individual and a great man. For I am certain that a great man is something very different from an eminent individual. Sincerity and intellect: are enough to mark out an individual as being eminent as compared to his fellows. But they are not enough to raise him to the dignity of a great man. A great man must have something more than what a merely eminent individual has. What must be that thing? Here comes the importance of the philosophers definition of a great man. A great man *must* be motivated by the dynamics of a social purpose and must act as the scourge and the scavenger of society. These are the elements which distinguish an eminent individual *from* a great man and constitute his title deeds to respect and reverence.

IV

Was Ranade a great man? He was of course great in his person. Vast in physique -he could have been called "Your Immense" as the Irish servant who could not pronounce. Your Eminence used respectively to call

Cardinal Wiseman-his master. He was a man of sanguine temperament. of genial disposition and versatile in his capacity. He had keenly which is the sum of all moral qualities and his sincerity was of the sort which was prescribed by Carlyle. It was not a conscious "braggart sincerity". It was the natural sincerity a constitutional trait and not an assumed air. He was not only big in his physique and in his sincerity. he was also big in intellect. Nobody can question that 'Ranade had intellect of a high calibre. He was not merely a lawyer and a judge of the High Court, he was a first class economist, a first class historian a first class educationist and a first class divine. He was not a politician. Perhaps it is good that he was not. For if he had been, he might not have been a great man. As Abraham Lincoln said, "Politicians are a set of men who have interests aside from the interests of the people and who to say the most of them are taken as a mass, at least one long step removed from honest men." Ranade though not a politician was a profound student of politics. Indeed it would be difficult to find in the history of India any man who could come up to Ranade in the width of his learning, the breadth of his wisdom and the length of his vision. There was no subject which he did not touch and in which he did not acquire profundity. His reading was on the scale of the colossal and every inch he was a scholar. He was great not merely by the standard of his Time, but he was great— measured by any standard. As I have said no claim for being a great man can rest on the foundation of sincerity and intellect either singly or in combination. Ranade could not be called great if he had these two qualities and no more. His title to being a great man must rest upon the social purposes he served and on the way he served them. On that there can be no doubt. Ranade is known more as a social reformer than as a historian, economist or educationist. His whole life is nothing but a relentless campaign for social reform. It is on his role as a social reformer that this title to being a great man rests. Ranade had both the vision and the courage which the reformer needs, and in the circumstances in which he was: born his vision was no small a virtue than his courage. That he developed a vision of the Prophet—I am using the word in the Jewish sense—cannot but be regarded as a matter of surprise if the time in which he was born is taken into account. Ranade was born in 1842 some 24 years after the battle of Kirkee which brought the Maratha Empire to an end. The downfall of the Maratha Empire evoked different feelings among different people. There were men like Nattu who served as accessories before the fact. There were some who played the part of accessories after the fact, inasmuch as they were happy that the cursed rule of the Brahmin Peshwa was brought to an end. But there can be no doubt that a large

majority of the people of Maharashtra were stunned by the event. When the whole of India was enveloped by the advancing foreign horde and its people being subjugated piece by piece, here in this little corner of Maharashtra lived a sturdy race who knew what liberty was, who had fought for it inch by inch and established it over miles and miles. By the British conquest they had lost what was to them a most precious possession. One can quite imagine how the best intellect of Maharashtra had its mind utterly confounded and its horizon fully and completely darkened. What could be the natural reaction to so great a catastrophe? Can it be other than resignation, defeatism and surrender to the inevitable? How did Ranade react? Very differently. He held out the hope that the fallen shall rise. Indeed he developed a new faith on which this hope was founded. Let me quote his own words. He said :

“I profess implicit faith in two articles of my creed. This country of ours is the true land of promise. This race of ours is the chosen race.”

He did not rest quiet by merely enunciating this new Mosaic Gospel of hope and confidence. He applied his mind to the question of the realization of this hope. The first requisite was of course a dispassionate analysis of the causes of this downfall. Ranade realized that the downfall was due to certain weaknesses in the Hindu social system and unless these weaknesses were removed the hope could not be realized. The new gospel was therefore followed by a call to duty. That duty was no other than the duty to reform Hindu society. Social reform became therefore the one dominant purpose of his life. He developed a passion for social reform and there was nothing he did not do to promote it. His methods included meetings, missions, lectures, sermons, articles, interviews, letters—all carried on with an unrelenting zeal. He established many societies. He founded many journals. But he was not content with this. He wanted something more permanent, something more systematic for promoting the cause of social reform. So he founded the Social Conference, an All-India Organization which ran as an adjunct to the Indian National Congress. Year after year the Conference met to discuss the social ills and to find the ways of remedying them, and year after year Ranade attended its annual sessions as though it was a pilgrimage and fostered the cause of social reform.

In fostering the cause of social reform Ranade showed great courage. Many people of this generation will perhaps laugh at such a claim. Courting prison has become an act of martyrdom in India. It is regarded both as a patriotic act and also as an act of courage. Most people who would otherwise be beneath notice and in whose case it could rightly be said that

they were scoundrels who had taken to politics as their last refuge, have by going to prison become martyrs and have acquired a name and fame which, to say the least, is quite astounding. There would be some substance in this view, if prison life involved the rigours to which men like Tilak and those of his generation had been subjected. Prison life today has lost all its terrors. It has become a mere matter of detention. Political prisoners are no longer treated as criminals. They are placed in a separate class. There are no hardships to suffer, there is no reputation to lose and there is no privation to undergo. It calls for no courage. But even when prison life had, as in the time of Mr. Tilak, its rigours the political prisoners could make no claim to greater courage than a social reformer. Most people do not realize that society can practise tyranny and oppression against an individual in a far greater degree than a Government can. The means and scope that are open to society for oppression are more extensive than those that are open to Government, also they are far more effective. What punishment in the penal code is comparable in its magnitude and its severity to excommunication? Who has greater courage—the social reformer who challenges society and invites upon himself excommunication or the political prisoner who challenges Government and incurs sentence of a few months or a few years imprisonment? There is also another difference which is often lost sight of in estimating the courage shown by the social reformer and the political patriot. When the social reformer challenges society there is nobody to hail him a martyr. There is nobody even to befriend him. He is loathed and shunned. But when the political patriot challenges Government he has whole society to support him. He is praised, admired and elevated as the saviour. Who shows more courage?—The social reformer who fights alone or the political patriot who fights under the cover of vast mass of supporters? It would be idle to deny that Ranade showed courage in taking up the cause of social reform. Indeed he showed a high degree of courage. For let it be remembered that he lived in times when social and religious customs however gross and unmoral were regarded as sacrosanct and when any doubt questioning their divine and moral basis was regarded not merely as heterodoxy but as intolerable blasphemy and sacrilege.

V

His path as a reformer was not smooth. It was blocked from many sides. The sentiments of the people whom he wanted to reform were deeply rooted in the ancient past. They held the belief that their ancestors were the wisest and the noblest of *men*, and the social system which they had devised was of the most ideal character. What appeared to Ranade to be the shames

and wrongs of the Hindu society were to them the most sacred injunctions of their religion. This was the attitude of the common man. The intelligentsia. was divided into *two* schools—a school which was orthodox in its belief but unpolitical in its outlook, and a school which was modern in its beliefs but primarily political in its aims and objects. The former was led by Mr. Chiplunkar and the latter by Mr. Tilak. Both combined against Ranade and created as many difficulties for him as they could. They not only did the greatest harm to the cause of social reform, but as experience shows they have *done* the greatest harm to the cause of political reform in India. The unpolitical *or* the orthodox school believed in the Hegelian view—it is a puzzle to me—namely to realize the ideal and idealize the real. In this it. was egregiously wrong. The Hindu religious and social system is such that you cannot go forward to give its ideal form a reality because the ideal is bad; nor can you attempt to elevate the real to the status of the ideal because the real. i.e., the existing state of affairs, is worse than worse could be. This is no exaggeration. Take the Hindu religious system or take the Hindu social system, and examine it from the point of social utility and social justice. It is *said* that religion is *good* when it is fresh from the mint. But Hindu religion has been a bad coin to start with. The Hindu ideal of society as prescribed by Hindu religion has acted as a most demoralizing and degrading influence on Hindu society. It is Nietzschean in its form and essence. Long before Nietzsche was born Manu had proclaimed the gospel which Nietzsche sought to preach. It is a religion which is not intended to establish liberty, equality and fraternity. It is a gospel which proclaims the worship of the superman—the Brahmin by the rest of the Hindu society. It propounds that the superman and his class alone are born to live and to rule. Others are born to serve them, and to nothing more. They have no life of their own to live, and no right to develop their own personality. This has been the gospel of the Hindu Religion. Hindu philosophy, whether it is Vedanta, Sankhya, Nyaya, Vaishashika, has moved in its own circle without in anyway affecting the Hindu religion It has never had the courage to challenge this gospel That Hindu philosophy that everything is Brahma remained only a matter of intellect. It never became a social philosophy. The Hindu philosophers had. both their philosophy and their Manu held apart in two hands, the right not knowing what the left had. The Hindu is never troubled by their inconsistency, As to their social system, can things be worst? The Caste system is in itself a degenerate form of the Chaturvarnya which is the ideal of the Hindu. How can anybody who is not a congenital idiot accept Chaturvarnya as the ideal form of society? Individually and socially it is a

folly and a crime. One class and one class alone to be entitled to education and learning! One class and one class alone to be entitled to arms! One class and one class alone to trade! One class and one class alone to serve! For the Individual the consequences are obvious. Where can you find a learned man who has no means of livelihood who will not degrade his education.? Where can you find a soldier with no education and culture who will use his arms to conserve and not to destroy? Where can you find a merchant with nothing but the acquisitive instinct to follow who will not descend to the level of the brute? Where can you find the servant who is not to acquire education, who is not to own arms and who is not to possess other means of livelihood to be a man as his maker intended him to be? If baneful to the individual it makes society vulnerable. It is not enough for a social structure to be good for a fair weather. It must *be* able to weather the storm. Can the Hindu caste system stand the gale and the wind of an aggression? It is obvious that it cannot. Either for defence or for offence a society must be able to mobilize its forces. With functions and duties exclusively distributed and immutably assigned, what way is there for mobilization? Ninety per cent of the Hindus— Brahmins, Vaishyas and Shudras—could not bear arms under the Hindu social system. How can a country be defended if its army cannot be increased in the hour of its peril. It is not Buddha who; as is often alleged, weakened Hindu society by his gospel of non-violence. It is the Brahmin theory of Chaturvarnya that has been responsible not only for the defeat but for the decay of Hindu society. Some of you will take offence at what I have said about the demoralizing effect of the Hindu socio-religious ideal on Hindu society. But what is the truth.? Can the charge be denied? Is there any society in the world which has unapproachables,, unshadowables and unseeables? is there any society which has got a population of Criminal Tribes? Is there a society in which there exists today primitive people, who live in jungles who do not know even to clothe themselves? How many do they count in numbers? Is it a matter of hundreds, is it a matter of thousands? I wish they numbered a paltry few. The tragedy is that they have to be counted in millions, millions of Untouchables, millions of Criminal Tribes, millions of Primitive Tribes !! One wonders whether the Hindu civilization, is civilization or infamy? This is about the ideal. Turn now to the state of things as it existed when Ranade came on the scene. It is impossible to realize now the state of degradation they had reached when the British came on the scene and with which the reformers like Ranade were faced. Let me begin with the condition of the intellectual class. The rearing and guiding of a civilization must depend upon its intellectual

class—upon the lead given by the Brahmins. Under the old Hindu Law the Brahmin enjoyed the benefit of the clergy and not be hanged even if he was guilty of murder, and the East India Company allowed him the privilege till 1817. That is no doubt because he was the salt of the Earth. Was there any salt left in him? His profession had lost all its nobility. He had become a pest. The Brahmin systematically preyed on society and profited in religion. The *Puranas* and *Shastras* which lie manufactured in tons are treasure trove of sharp practices which the Brahmins employed to befool, beguile and swindle the common mass of poor, illiterate and superstitious Hindus. It is impossible in this address to give references to them. I can only refer to the coercive measures which the Brahmins had sanctified as proper to be employed against the Hindus to the encashment of their rights and privileges. Let those who want to know read the preamble to Regulation XXI of 1795. According to it whenever a Brahmin wanted to get anything which could not be willingly got from his victim, he resorted to various coercive practices—lacerating his own body with knives and razors or threatening to swallow some poison were the usual tricks he practised to carry out his selfish purposes. There were other ways employed by the Brahmin to coerce the Hindus which were as extraordinary as they were shameless. A common practice was the erection in front of the house of his victim of the *keorb*—a circular enclosure in which a pile of wood was placed—within the enclosure an old woman was placed ready to be burnt in the *keorb* if his object was not granted. The second device of such a kind was the placing of his women and children in the sight of his victim and threaten to behead them. The third was the Dhuma—starving on the doorstep of the victim. This is nothing. Brahmins had started making claims for a right to deflower the women of non-Brahmins. The practice prevailed in the family of the Zamorin of Calicut and among the Vallabhachari sect of Vaishnavas. What depths of degradation the Brahmins had fallen to! If, as the Bible says, the salt has lost its flavour wherewith shall it be salted? No wonder the Hindu Society had its moral bonds loosened to a dangerous point. The East India Company had in 1819 to pass a Regulation (VII of 1819) to put a stop to this moral degeneracy. The preamble to the Regulation says that women were employed wholesale to entice and take away the wives or female children for purposes of prostitution, and it was common practice among husbands and fathers to desert their families and children. Public conscience there was none, and in the absence of conscience it was futile to expect moral indignation against the social wrongs. Indeed the Brahmins were engaged in defending every wrong for the simple reason that they lived on them.

They defended Untouchability which condemned millions to the lot of the helot. They defended caste, they defended female child marriage and they defended enforced widowhood—the two great props of the Caste system. They defended the burning of widows, and they defended the social system of graded inequality with its rule of hypergamy which led the Rajputs to kill in their thousands the daughters that were born to them. What shames ! What wrongs! Can such a society show its face before civilized nations? Can such a society hope to survive? Such were the questions which Ranade asked. He concluded that on only one condition it could be saved—namely, rigorous social reform.

VI

His greatest opponents however came from the political school of the intelligentsia. These politicals developed a new thesis. According to that thesis political reform was to have precedence over social reform. The thesis was argued from platform to platform and was defended by eminent people like Mr. Justice Telang, a Judge of the Bombay High Court, with the consummate skill of an acute lawyer. The thesis caught the imagination of the people. If there was one single cause to which the blocking of the Social Reform movement could be attributed, it was this cry of political reform. The thesis is unsupportable, and I have no doubt that the opponents of Ranade were wrong and in pursuing it did not serve the best interests of the country. The grounds on which Mr. Justice Telang defended the Politicians' thesis were of course logical. But he totally forgot that logic is not reason, and analogy is not argument. Neither did he have a correct understanding of the inter-relation between the "social" and the "political" which Ranade had. Let us examine the reasons for the thesis. Those that were advanced were not very impressive. But I am prepared to meet the most impressive arguments that could be advanced. Even then the thesis will not stand. The following strike me as being the most impressive. In the first place, it could be said that we want political power first because we want to protect the rights of the people. This answer proceeds from a very frugal theory of Government as was propounded by the American statesman Jefferson according to whom politics was only an affair of policing by the State so that that the rights of people were maintained without disturbance. Assume that the theory is a sound one. The question is, what is there for the State to police if there are no rights? Rights must exist before policing becomes a serious matter of substance. The thesis that political reform should precede social reform becomes on the face of it an absurd proposition, unless the idea is that the Government is to protect those who have vested rights and to penalize those who have

none. The second ground that could be urged in support of the thesis is that they wanted political power because they wanted to confer on each individual certain fundamental rights by law and that such conferring of the political rights could not take place unless there was political power first obtained. This of course sounds very plausible. But is there any substance in it? The idea of fundamental rights has become a familiar one since their enactment in the American Constitution and in the Constitution framed by Revolutionary France. The idea of making a gift of fundamental rights to every individual is no doubt very laudable. The question is how to make them effective? The prevalent view is that once rights are enacted in a law then they are safeguarded. This again is an unwarranted assumption. As experience proves, rights are protected not *by* law but by the social and moral conscience of society. If social conscience is such that it is prepared to recognize the rights which law chooses to enact rights will be safe and secure. But if the fundamental rights are opposed by the community, no Law no Parliament, no judiciary can guarantee them in the real sense of the word. What is the use of the fundamental rights to the Negroes in America, to the Jews in Germany and to the Untouchables in India? As Burke said, there is no method found for punishing the multitude. Law can punish a single solitary recalcitrant criminal. It can never operate against a whole body of people who are determined to defy it. Social conscience—to use the language of Coleridge—that calm incorruptible legislator of the soul without whom all other powers would meet in mere oppugnancy—is the only safeguard of all rights fundamental or non-fundamental"

The third argument of the politicals could be based on the right to self-Government. That self Government is better than good Government is a well-known cry. One cannot give it more value than one can give to a slogan, and all would like to be assured that self-Government would also be a good Government. There is no doubt that the politicals wanted good Government and their aim was to establish a democratic form of Government. But they never stopped to consider whether a democratic form of Government was possible. Their contention was founded on a series of fallacies, A democratic form of Government presupposes a democratic form of society. The formal framework of democracy is of no value and would indeed be a misfit if there was no social democracy. The politicals never realized that democracy was not a form of Government. It was essentially a form of society. It may not be necessary for a democratic society to be marked by unity, by community of purpose, by loyalty to public ends and by mutuality of sympathy. But it does unmistakably involve two things. The first is an attitude of mind, an attitude of respect

and equality towards their fellows. The second is a social organization free from rigid social barriers. Democracy is incompatible and inconsistent with isolation and exclusiveness, resulting in the distinction between the privileged and the unprivileged. Unfortunately, the opponents of Ranade were never able to realize the truth of this fact.

One may judge it by any test and it will be found that the stand that Ranade took in this controversy and his plan of work were correct and fundamental to if they were not the pre-requisites of political reform. Ranade argued that there were no rights in the Hindu society which the moral sense of man could recognize. There were privileges and disabilities, privileges for a few and disabilities for a vast majority. Ranade struggled to create rights. Ranade wanted to vitalize the conscience of the Hindu society which had become moribund as well morbid. Ranade aimed to create a real social democracy, without which there could be no sure and stable politics. The conflict was between two opposing points of view and it centred round the question which is more important for the survival of a nation, political freedom or strong moral fibre. Ranade took the view that moral stamina was more important than political freedom. This was also the view of Lecky the great historian who after a careful and comparative study of history came to the conclusion that :

"The foundation of a Nation's strength and prosperity *is* laid in pure domestic life, in commercial integrity, in a high standard of moral worth, and of public spirit, in a simple habits, in courage, uprightness, and a certain soundness *and* moderation of judgement which springs quite as much from character as from intellect. If you would form a wise judgement of the future of a nation, observe carefully whether these qualities are increasing or decaying. Observe carefully what qualities count for most in public life. Is character becoming of greater or less importance? Are the men who obtain the highest posts in the nation men of whom, in private life, irrespective of party competent judges speak with genuine respect? Are they of sincere convictions, consistent lives and indisputable integrity? It is by observing this current that you can best cast the horoscope of a nation."

Ranade was not only wise but he was also logical. He told his opponents against playing the part of Political Radicals and Social Tones. In clear and unmistakable terms he warned them saying :

"You cannot be liberal by halves. You cannot be liberal in politics and conservative in religion. The heart and the head must go together. You cannot cultivate your intellect, enrich your mind, enlarge the sphere of your political rights and privileges, and at the same time keep your hearts

closed and cramped. It is an idle dream to expect men to remain enchained and ensnaked in their own superstition and social evils, while they are struggling hard to win rights and privileges from their rulers. Before long these vain dreamers will find their dreams lost.

Experience has shown that these words of Ranade have been true, even prophetic. Let those who deny this consider : Where are we today in politics and why are we where we are ? It is now 50 years since the National Congress was born. Its stewardship has passed hands, I won't say from the sane to the insane, or from realists to idealists, but from moderates to radicals. Where does the country stand today at the end of 50 years of political marching? What is the cause of this deadlock? The answer is simple. The cause of deadlock is the absence of Communal settlement. Ask why is communal settlement necessary for political settlement and you realize the fundamental importance of the stand that Ranade took. For the answer to this question is to be found in the wrong social system, which is too undemocratic, too over-weighed in favour of the classes and against the masses, too class conscious and too communally minded. Political democracy would become a complete travesty if it were built upon its foundations. That is why nobody except the high caste Hindus will agree to make it the case of a political Democracy without serious adjustments. Well may some people argue to their satisfaction that the deadlock is the creation of the British Government. People like to entertain thoughts which sooth them and which throw responsibility on others- This is the psychology of escapism. But it cannot alter the fact that it is the defects of social system which has given rise to the communal problem and which has stood in the way of India getting political power.

Ranade's aim was to cleanse the old order if not to build a new one. He insisted on improving the moral tone of Hindu society. If he had been heard and followed, the system would have at least lost its rigours and its rigidity. If it could not have avoided Communal settlement it would have made it easy. For his attempts, limited as they were, would have opened the way to mutual trust. But the politicals had developed a passion for political power which had so completely blinded them that they refused to see virtue in anything else. Ranade has had his revenge. Is not the grant of political safeguard a penalty for denying the necessity of social reform?

How much did Ranade achieve in the field in which he played so dominant a part? In a certain sense the question is not very important. Achievement is never the true measure of greatness."Alas", as Carlyle said,"we know very well that ideals can never be completely embodied in practice. Ideals must ever lie a very great way off ; and we will right

thankfully content ourselves with any not intolerable approximation thereto!" Let no man, as Schillar says, too querulously "measure by a scale of perfection the meagre product of reality" In this poor world of ours. We will esteem him no wise man ; we will esteem him a sickly discontented foolish man. And yet Ranade's record of achievement was not altogether bare. The problems facing the then social reformers contained in the statement on social reform prepared by Rai Bahadur P. Anandcharly were five : (1) early marriage ; (2) remarriages of widows ; (3) liberty for our countrymen to travel-----or sojourn in foreign lands ; (4) women's rights of property and (5) education of women. Of this programme he achieved a great part. If he did not achieve all, there were the odds against him, which should never be forgotten. A clever, determined and an insincere intelligentsia came forward to defend orthodoxy and give battle, to Ranade. The scenes were exciting, as exciting as those of a dread grim of battle. And battle it was. One cannot recall the spirit of the time when this controversy over social reform was raging in this country. It is not possible for decency to enter into the abuses that were hurled, the calumnies that were uttered, the strategies that were employed by the orthodox section against the Social Reformers. It is impossible to read the writing of those who supported orthodoxy in their opposition to the Age of Consent Bill without realizing the depth of the degradation to which the so-called leaders of the peoples had fallen. The Bill aimed to punish a husband who would have sexual intercourse with his wife if she had not attained the age of 12. Could any sane man, could any man with a sense of shame oppose so simple a measure? But it was opposed, and Ranade had to bear the brunt of the mad orthodoxy. Assuming that Ranade's achievements were small ; who could take pride or exultation in his failure to achieve more? There was no cause for exultation. The decline of social reform was quite natural. The odium of social reform was too great. The appeal of political power too alluring. The result was that social reform found fewer and fewer adherents. In course of time the platform of the Social Reform Conference was deserted and men flocked to the Indian National Congress. The politicians triumphed over the social reformers. I am sure that nobody will now allow that their triumph was a matter for pride. It is certainly a matter of sorrow. Ranade may not have been altogether on the winning side, but he was not on the wrong side and certainly never on the side of the wrong as some of his opponents were.

VIII

How does Ranade compare with others? Comparisons are always odious and unpleasant. At the same time it is true that there is nothing more

illuminating than comparisons. Of course in making them one must bear in mind that to be interesting and instructive comparisons must be between those that are alike. Fortunately there is field for comparison. Ranade was a social reformer and as a social reformer he could be usefully compared with other social reformers. Particularly illuminating will be the comparison between Ranade and Jotiba Phule. Phule was born in 1827 and died in 1890. Ranade was born in 1842 and died in 1901. Thus Phule and Ranade were contemporaries and both were foremost social reformers. Some may perhaps demur to the wisdom of comparing Ranade with other politicians. This can only be on the ground that Ranade was not a politician. To say that Ranade was not a politician is to impose a very narrow and very restricted meaning upon the term politician. A politician does not merely trade in politics but he also represents particular faith covering both—the method as well as the metaphysics of politics. Ranade was the founder of a school of politics which was distinctive for its method as well as for metaphysics. Used in this sense Ranade was a politician and could be usefully compared with other politicians. Comparisons of Ranade with social reformers and with politicians cannot but be illuminating and there is enough material for such comparisons. The question really is one of time and taste. Time will not permit any extensive comparison of Ranade being made both with social reformers as well as with politicians. I must really choose between comparing Ranade with social reformers or with politicians. This is a matter of taste. Left to myself I would have preferred to use my available time to compare Ranade with Phule. For I regard social Reform more fundamental than political reform. Unfortunately my taste is different from the taste of the audience and I feel that in detaining the audience I must be guided more by its likes and dislikes than my own. The ardour for social reform has cooled down. The craze for politics has held the Indian public in its grip. Politics has become an appetiser—a mastic the more one tastes it the more one craves it. The task I am undertaking is a very unpleasant one and if I venture upon it, it is only because it is my duty to expound fully and the desire of the public to know truly the value of Ranade's political philosophy and his place among politicians of today.

Who are the present day politicians with whom Ranade is to be compared? Ranade was a great politician of his day. He must therefore be compared with the greatest of today. We have on the horizon of India two great men, so big that they could be identified without being named—Gandhi and Jinnah. What sort of a history they will make may be a matter for posterity to tell. For us it is enough that they do indisputably make headlines for the Press. They hold leading strings. One leads the Hindus,

the other leads the Muslims. They are the idols and heroes of the hour. I propose to compare them with Ranade. How do they compare with Ranade? It is necessary to make some observations upon their temperaments and methods with which they have now familiarized us. I can give only my impressions of them, for what they are worth. The first thing that strikes me is that it would be difficult to find two persons who would rival them for their colossal egotism, to whom personal ascendancy is everything and the cause of the country a mere counter on the table. They have made Indian politics a matter of personal feud. Consequences have no terror for them ; indeed they do not occur to them until they happen. When they do happen they either forget the cause, or if they remember it, they overlook it with a complacency which saves them from any remorse. They choose to stand on a pedestal of splendid isolation. They wall themselves off from their equals. They prefer to open themselves to their inferiors. They are very unhappy at and impatient of criticism, but are very happy to be fawned upon by flunkeys. Both have developed a wonderful stagecraft and arrange things in such a way that they are always in the limelight wherever they go. Each of course claims to be supreme. If supremacy was their only claim, it would be a small wonder. In addition to supremacy each claims infallibility for himself. Pius IX during whose sacred regime as Pope the issue of infallibility was raging said—”Before I was Pope I *believed* in Papal infallibility, now I *feel* it.” This is exactly the attitude of the two leaders whom Providence—may I say in his unguarded moments—has appointed to lead us. This feeling of supremacy and infallibility is strengthened by the Press. One cannot help saying that. The language used by Gardiner to describe the Northcliffe brand of journalism, in my opinion, quite appropriately describes the present state of journalism in India. Journalism in India was once a profession. It has now become a trade. It has no more moral function than the manufacture of soap. It does not regard itself as the responsible adviser of the Public. To give the news uncoloured by any motive, to present a certain view of public policy which it believes to be for the good of the community, to correct and chastise without fear all those, no matter how high, who have chosen a wrong or a barren path, is not regarded by journalism in India its first or foremost duty. To accept a hero and worship him has become its principal duty. Under it, news gives place to sensation, reasoned opinion to unreasoning passion, appeal to the minds of responsible people to appeal to the emotions of the irresponsible. Lord Salisbury spoke of the Northcliffe journalism as written by office-boys for office-boys. Indian journalism is all that plus something more. It is written by drum-boys to

glorify their heroes. Never has the interest of country been sacrificed so senselessly for the propagation of hero-worship. Never has hero-worship become so blind as we see it in India today. There are, I am glad to say, honourable exceptions. But they are too few and their voice is never heard. Entrenched behind the plaudits of the Press, the spirit of domination exhibited by these two great men has transgressed all limits. By their domination they have demoralised their followers and demoralized politics. By their domination they have made half their followers fools and the other half hypocrites. In establishing their supremacy they have taken the aid of "big business" and money magnates. For the first time in our country money is taking the field as an organised power. The questions which President Roosevelt propounded for American Public to consider will arise here, if they have not already arisen : Who shall rule—wealth or man? Which shall lead, money or intellect? Who shall fill public stations, educated and patriotic free men or the feudal serfs of corporate Capital? For the present, Indian politics, at any rate the Hindu part of it, instead of being spiritualised has become grossly commercialised, so much so that it has become a byword for corruption. Many men of culture are refusing to concern themselves in this cesspool. Politics has become a kind of sewage system intolerably unsavoury and unsanitary. To become a politician is like going to work in the drain.

Politics in the hands of these two great men have become a competition in extravaganza. If Mr. Gandhi is known as Mahatma, Mr. Jinnah must be known as Qaid-i-Azim. If Gandhi has the Congress, Mr. Jinnah must have the Muslim League. If the Congress has a Working Committee and the All-India Congress Committee, the Muslim League must have its Working Committee and its Council. The session of the Congress must be followed by a session of the League. If the Congress issues a statement the League must also follow suit. If the Congress passes a Resolution of 17,000 words, the Muslim League's Resolution must exceed it by at least a thousand words. If the Congress President has a Press Conference, the Muslim League President must have his. If the Congress must address an appeal to the United Nations, the Muslim League must not allow itself to be outbidden. When is all this to end? When is there to be a settlement? There are no near prospects. They will not meet, except on preposterous conditions. Jinnah insists that Gandhi should admit that he is a Hindu. Gandhi insists that Jinnah should admit that he is one of the leaders of the Muslims. Never has there been such a deplorable state of bankruptcy of statesmanship as one sees in these two leaders of India. They are making long and interminable speeches, like lawyers whose trade it is to contest

everything, concede nothing and talk by the hour. Suggest anything by way of solution for the deadlock to either of them, and it is met by an everlasting "Nay". Neither will consider a solution of the problems which is not eternal. Between them Indian politics has become "frozen" to use a well-known Banking phrase and no political action is possible.

How does Ranade strike as compared to these two? I have no personal impression to give. But reading what others have said I think I can say what he must have been like. He had not a tinge of egotism in him. His intellectual attainments could have justified any amount of pride, nay even insolence. But he was the most modest of men. Serious youths were captivated by his learning and geniality. Many, feeling completely under his sway, responded to his ennobling influence and moulded their whole lives with the passionate reverence for their adored master. He refused to be satisfied with the praises of fools, and was never afraid of moving in the company of equals and of the give and take it involves. He never claimed to be a mystic relying on the inner voice. He was a rationalist prepared to have his views tested in the light of reason and experience. His greatness was natural. He needed no aid of the stage nor the technique of an assumed eccentricity nor the means of a subsidized press. As I said, Ranade was principally a social reformer. He was not a politician in the sense of one who trades in politics. But he has played an important part in the political advancement of India. To some of the politicians he acted as the teacher who secured such signal successes and who dazzled their critics by their brilliance. To some he acted as the guide, but to all he acted as the philosopher.

What was the political philosophy of Ranade? It may be summed up in three propositions :

(1) We must not set up as our ideal something which is purely imaginary. An ideal must be such that it must carry the assurance that it is a practicable one.

(2) In politics, sentiment and temperament of the people are more important than intellect and theory. This is particularly so in the matter of framing a Constitution. A constitution is as much a matter of taste as clothes are. Both must fit, both must please.

(3) In political negotiations the rule must be what is possible. That does not mean that we should be content with what is offered. No. It means that you must not refuse what is offered when you know that your sanctions are inadequate to compel your opponent to concede more.

These are the three main doctrines of Ranade's political philosophy. It

would be quite easy to illustrate them by appropriate quotations from his writings and his speeches. There is no time for that nor is there any necessity, for they must be clear to every student of Ranade's speeches and writings. Who could quarrel with Ranade on these three propositions and if there be one, on which? On the first only a visionary will quarrel. We need not take any notice of him. The second proposition is so evident that we could only ignore it at our peril. The third proposition is something on which a difference of opinion is possible. Indeed it is this which divided the Liberals from the Congressmen. I am not a liberal, but I am sure the view Ranade held was the right one. There can be no compromise on principle, and there should not be. But once the principle is agreed upon, there can be no objection to realize it by instalments. Graduation in politics is inevitable, and when the principle is accepted it is not harmful and indeed it may in certain circumstances be quite advantageous. On this third proposition there was really no difference between him and Tilak, except this : Tilak would have the possible maximised by the application of sanctions ; Ranade would look askance at sanctions. This is all. On the rest they were agreed. The absence of sanctions in Ranade's political philosophy need not detract much from its worth. We all know what sanctions are available to us. We have tried all, old as well as new, with what effect I need not stop to describe.

IX

In celebrating the birthday of Ranade we must not overlook what the critics and opponents are likely to say. The critics will ask what is the point in celebrating the birthday of Ranade. That the days of hero-worship are gone long past will be the line of their argument. The opponents will say if I condemn idolatry when it pertains to Mr. Gandhi and to Mr. Jinnah how do I join in idolizing Mr. Ranade? These are very pertinent questions. True hero-worship is dying. Of that there is no doubt. It was dying even in the days of Carlyle who indignantly complained against his age saying—

“This is an age that as it were denies the existence of great men : denies the inevitableness of great men.”

“Show our critics a great man”, he said and”They begin to what they call 'account for him' ; not to worship him but take the dimensions of him.”

But hero-worship is certainly not dead in India. India is still *par excellence* the land of idolatry. There is idolatry in religion, there is idolatry in politics. Heroes and hero-worship is a hard if unfortunate, fact in India's political life. I agree that hero-worship is demoralizing for the devotee and dangerous to the country. I welcome the criticism in so far as it conveys a

caution that you must know that your man is really great before you start worshipping him. This unfortunately is not an easy task. For in these days, with the Press in hand, it is easy to manufacture great men. Carlyle used a happy phrase when he described the great men of history as so many Bank Notes. Like Bank Notes they represent gold. What we have to see is that they are not forged notes. I admit that we ought to be more cautious in our worship of great men. For in this country we have perhaps arrived at such a stage when alongside the notice boards saying "beware of pickpockets" we need to have notice boards saying "beware of great men". Even Carlyle who defended the worship of great men warned his readers how :

"Multitudes of men have figured in history as great men who were false and selfish." He regretted deeply that "The World's wages (of homage) are pocketed (by these so-called great men), the World's work is not done. Heroes have gone out; quacks have come in."

Ranade never received the honours of apotheosis as these great men of India today are destined to receive. How could he? He did not come with a message hot from Senai. He performed no miracles and promised no speedy deliverance and splendour. He was not a genius and he had no superhuman qualities. But there are compensations. If Ranade did not show splendour and dominance he brought us no catastrophe. If he had no superhuman qualities to use in the service of India, India was saved from ruin by its abuse. If he was not a genius, he did not display that perverse supersubtlety of intellect and a temper of mind which is fundamentally dishonest and which has sown the seeds of distrust and which has made settlement so difficult of achievement. There is nothing exuberant and extravagant in Ranade. He refused to reap cheap notoriety by playing the part of an extremist. He refused to mislead people by playing upon and exploiting the patriotic sentiments of the people. He refused to be a party to methods which are crude which have volume but no effect and which are neither fool-proof nor knave-proof and which break the back even of the most earnest and sincere servants of the country and disable them from further effort. In short Ranade was like the wise Captain who knows that his duty is not to play with his ship clever and masterful tricks, just for effect and show in the midst of the ocean but to take it safely to its appointed port. In short Ranade was not a forged bank note and in worshipping him we have no feeling of kneeling before anything that is false.

In the second place this celebration of Ranade's birthday is not all an act of hero-worship. Hero-worship in the sense of expressing our unbounded admiration is one thing. To obey the hero is a totally different kind of hero-

worship. There is nothing wrong in the former while the latter is no doubt a most pernicious thing. The former is only man's respect for everything which is noble and of which the great man is only an embodiment. The latter is the villain's fealty to his lord. The former is consistent with respect, but the latter is a sign of debasement. The former does not take away one's intelligence to think and independence to act. The latter makes one a perfect fool. The former involves no disaster to the State. The latter is the source of positive danger to it. In short in celebrating Ranade's birthday we are not worshipping a boss who is elected by no one, accountable to no one and removable by no one, but paying our tribute of admiration to a leader who led and did not drive people, who sought to give effect to their deliberate judgement and did not try to impose his own will upon them by trickery or by violence.

In the third place it is not for hero-worship for which this gathering has assembled. This is an occasion to remind ourselves of the political philosophy of Ranade. To my mind it has become necessary to remind ourselves of it from time to time. For his is a philosophy which is safe and sound, sure if slow. Even if it does not glitter it is none the less gold. Do any have doubt? If they have let them ponder over the following utterances of Bismark, Balfour and Morley. Bismark the great German Statesman said :

“Politics is the game of the possible.”

Balfour in his Introduction to Walter Bagehot's well-known book on the English Constitution says:

“If we would find the true basis of the long drawn process which has gradually converted medieval monarchy into a modern democracy the process by which so much has been changed and so little destroyed, we must study temperament and character rather than intellect and theory. This is a truth which those who recommend the wholesale adoption of British Institutions in strange lands might remember with advantage. Such an experiment can hardly be without its dangers. Constitutions are easily copied ; temperaments are not ; and if it should happen that the borrowed constitution and the native temperament fail to correspond, the misfit may have serious results. It matters little what other gifts a people may possess if they are wanting in these which, from this point of view, are of most importance. If, for example, they have no capacity for grading their loyalties as well as for being moved by them; If they have no natural inclination to liberty and no natural respect for law; If they lack good humour and tolerate foul play; If they know not how to compromise or when ; If they have not that distrust of extreme conclusions which is

sometimes misdescribed as want of logic ; If corruption does not repel them ; and if their divisions tend to be either too numerous or too profound, the successful working of British Institutions may be difficult or impossible. It may indeed be least possible where the arts of Parliamentary persuasion and the dexterities of party management are brought to their highest perfection."

Morley has observed:

"To hurry on after logical perfection is to show one's self-ignorant of the material of that social structure with which the politician has to deal. To disdain anything short of an organic change in thought or institution is infatuation. To be willing to make such changes too frequently, even when they are possible, is foolhardiness. That fatal French saying about small reforms being the worst enemies of great reforms is, in the sense in which it is commonly used, a formula of social ruin."

These are the principles on which success in Politics depends. Are they different from those which Ranade enunciated? It bespeaks greatness in Ranade that he should have propounded them years before Bismark, Balfour and Morley.

The generation which Ranade served was wise in taking him as its political guide, friend and philosopher. His greatness lies in the fact that he can be a guide, friend and philosopher to this present, nay even to future generations.

There is one charge against Ranade which is frequently made and which I think must be met. It is said of Ranade that he believed that the conquest of India by the British was Providential, that it was in the best interest of India, that she should remain within the British Empire and that therein lay her final destiny. In short Ranade is accused of being opposed to India's Independence.

The charge is founded on the following utterances of Ranade :

"It cannot be easily assumed that in God's Providence, such vast multitudes as those who inhabit India were placed centuries together under influences and restraints of alien domination, unless such influences and restraints were calculated to do lasting service in the building up of the strength and character of the people in directions in which the Indian races were most deficient. Of one thing we are certain, that after lasting over five hundred years, the Mohammedan Empire gave way, and made room for the re-establishment of the old native races in the Punjab, and throughout Central Hindusthan and Southern India, on foundations of a much more solid character than those which yielded so

easily before the assaults of the early Mohammedan conquerors."

"Both Hindus and Mohammedans lack many of those virtues represented by the love of order and regulated authority. Both are wanting in the love of municipal freedom, in the exercise of virtues necessary for civic life, and in aptitudes for mechanical skill, in the love of science and research in the love and daring of adventurous discovery, the resolution to master difficulties, and in chivalrous respect for womankind. Neither the old Hindus nor the old Mohammedan civilization was in a condition to train these virtues in a way to bring up the races of India on a level with those of Western Europe, and so the work of education had to be renewed, and it has been now going on for the past century and more under the *Pax Britannica* with results—which all of us are witnesses to in ourselves."

A mere glance at these statements is enough to show that the charge is based on a misunderstanding if not on a misreading of the statements. The statements are plain and simple and they cannot even by inference be said to lead to the conclusion that Ranade was opposed to India's independence. In that sense the charge is false and without foundation.

These statements of Ranade far from casting any reflection upon his self-respect testify to his wisdom and to his sagacity. What did Ranade want to convey by these statements? As I understand them, I think, Ranade wanted to convey two things. The first thing he wanted to convey was that the conquest of India by Britain has given India the time, the opportunity and the necessary shelter for rebuilding, renovating and repairing her economic and social structure, to refit herself for bearing the strain of any foreign aggression when she does become free. The second thing Ranade wanted to convey was that going out of the British Empire by India before she had satisfied and solidified herself into a single nation, unified in thought, in feeling, and charged with a sense of a common destiny, was to invite chaos and disruption in the name of independence.

How very important these truths are? People do not realize the part that shelter plays in the smooth working out of social, economic and political conflicts which are inevitable in every society which desires to advance. The late Prof. Maitland was once asked to explain why Parliamentary Institutions flourished in England but failed to take roots in Europe. His answer reveals the importance of shelter. He said the difference was due to the English channel. By this answer what he meant to convey was that by reason of the English channel England was immune from foreign aggression while she was repairing her own body politic and therefore it became safe for people to fight against their King for Liberty and also safe

for the King to allow it to his people. This importance of shelter was also emphasized by Abraham Lincoln. In a speech devoted to showing why American Political Institutions were destined to remain perpetual, Lincoln said :

“All the armies of Europe, Asia and Africa combined. . . with a Bonaparte for a Commander, could not by force take a drink from Ohio, or make a track on the Blue Ridge in a trial of a thousand years.”

In this Lincoln was also emphasizing the importance and the necessity for shelter for social reconstruction. India is not a sheltered country as England and America are. She lies across and on the roads, whether the roads are land routes, sea routes or air routes. As she has no shelter the fear is that she will be broken up if she is attacked from outside while she is engaged in refitting herself. India needs a dry dock as a shelter for the period of her refitting and the British Empire is a dry dock for her. Who can say that Ranade was not wise in asking his countrymen to bear in mind the importance of a shelter which the British Empire can give and which India needs so much?

A servient nation is always eager to cut the knot and declare its independence of the dominant nation. But it seldom stops to consider the effect of independence on itself. Such a consideration is however very important. It is not often realized that the knot which binds the servient nation to the dominant nation is more necessary to the servient nation than to the dominant nation. It depends upon the conditions inside the servient nation. The servient nation may be one whole. The servient nation may consist of parts. The parts may be such that they will never become one whole. Or the parts may be such that they are not yet one whole but if held together longer they will become one whole. The effect which the cutting of the knot will have on the servient nation will depend upon the internal condition of the servient nation. There may be every good in cutting the knot by a servient nation which is one whole. Nothing good or nothing worse can happen—depends upon how one looks at it—by the cutting of the knot by a nation in which the parts can never become one whole. But there is positive danger in the third case. The premature cutting of the knot is sure to lead to disintegration where integration is desirable and possible. It would be a wanton act. This is the second danger which Ranade wanted to caution his countrymen against.

Who can say that Ranade was not wise in giving this caution? Those who are inclined to question its necessity have only to look to China. It is 30 years since the Chinese Revolution took place. Have the Chinese settled down? No. People are still asking”when will the Chinese revolution stop

revolving?” and those who know the conditions in China cannot do better than say “Perhaps in another hundred years.” Has China found a stable Government having the allegiance of all Chinese? Far from it. Indeed if truth be told, China after the revolution has been a land of disunity and disruption far more than she was ever before. The Revolution has produced a chaos of such magnitude that her very independence has been put in peril. Few Indians are aware of the fact that if China has not lost her independence as a result of the chaos caused by the Revolution it is only because she had too many enemies who could not agree *as to* which of them should devour her. The Chinese Revolution was a great mistake. That was the opinion of Yuan Shih-kai who said:

“I doubt whether the people of China are at present ripe for a Republic or whether under present conditions a Republic is adapted to the Chinese people... The adoption of a limited monarchy would bring conditions back to the normal and would bring stability much more rapidly than that end could be attained through any experimental form of Government unsuited to the genius of the people or to the present conditions in China. My only reason for favouring the retention of the present Emperor is that I believe in a constitutional monarchy. If we are to have that form of Government, there is nobody else whom the people would agree upon for his place. My sole aim, in this crisis is to save China from dissolution and the many evils that would follow.”

Those who think that China should be rather a warning to Indians than an example will, far from accusing Ranade for opposing India's independence will be happy that he had the wisdom to foresee the evils, of a premature revolution and warn his countrymen against taking a similar step.

X

Posterity is always interested in the last words and last regrets of great men. The last words of great men are not always significant of their experience of this world or their vision of the next. For instance the last thoughts of Socrates were to call Crito and say, “We owe a cock to Aesculapius; discharge the debt, and by no means omit it.” But their last regrets are always significant and worth pondering over. Take the case of Napoleon. Napoleon before his death at St. Helena showed evidence of being uneasy over three capital points which constituted his last regrets. They were: that he could not have died at some supreme moment of his career ; that he left Egypt and gave up his Eastern ambitions ; and last but by no means the least his defeat at Waterloo. Had Ranade any supreme regrets? One thing is certain that Ranade if he had any, could not have the

same regrets such as those which disturbed the peace of mind of Napoleon. Ranade lived for service and not for glory. It mattered very little to him whether the moment of his death was glorious or inglorious or whether he died as a hero, as a conqueror or a master or whether he died as a common man sometimes does of common cold. As a matter of fact Ranade was not troubled by any regrets. So far as record goes Ranade does not seem to be conscious of any act or event about which he had any regrets. He died a happy and a peaceful death. But it is worth-while asking could Ranade have any regrets if he came to life today? I am sure there is one matter over which he will feel extremely grieved— namely the present condition of the Liberal Party in India.

What is the present position of the Liberal Party in India? The Liberal Party is a casualty. Indeed this is a very mild expression. The Liberals are "the contemptibles" of Indian politics. To use the language of Norton used in another connection they are disowned by the people, unowned by the Government, having the virtues of neither, but possessing the vices of both. There was a time when the Liberal Party was the rival of the Congress. Today the relation of the Liberal Party to the Congress is that of a dog to his master. Occasionally the dog barks at his master but for the most part of his life he is content to follow him. What is the Liberal Party if not the tail of the Congress? Many are asking, why do not the Liberals merge in the Congress—so useless has their existence become. How can Ranade help not regretting the collapse of the Liberal Party? How can any Indian help regretting it?

The collapse of the Liberal Party is a tragedy to the Liberals. But it is really a disaster to the country. The existence of a party is so essential to a popular Government that it is impossible to conceive the possibility of getting on without it. As an eminent American historian says :

"It is easier to imagine the demolition of any part of our constitutional organization, the submersion of a large part of what the constitution describes, than to imagine our getting on without political combinations : they are our vital institutions."

Indeed to attempt to govern a country by the mass of voters without the control and discipline of a Party is, to use the language of James Bryce :

"Like attempting to manage a rail-board by the votes of uniformed share holders, or to lay the course of a sailing ship by the votes of the passengers."

It is undeniable that a party is an essential adjunct to Popular Government. But it is equally undeniable that the rule of a single party is fatal to Popular Government. In fact it is a negation of Popular

Government. The case of Germany and Italy furnish the most cogent evidence on this point. Instead of taking a warning from the totalitarian States we are taking them as models to copy. The one party system is being hailed in this country in the name of national solidarity. Those who are doing so are failing to take note of the possibilities of tyranny as well as the possibilities of misdirection of public affairs which is inherent in the one party Government. To have Popular Government run by a single party is to let democracy become a mere form for despotism to play its part from behind it. How under one party Government the tyranny of the majority ceases to be an empty phrase and becomes a menacing fact has been our experience, in India, under the Congress Regime. Were we not told by Mr. Rajgopalachariar that the separation of the Executive and the Judiciary which was necessary under the British is no longer necessary? Does it not show the Despot's taste for blood? Despotism does not cease to be despotism because it is elective. Nor does despotism become agreeable because the Despots belong to our own kindred. To make it subject to election is no guarantee against despotism. The real guarantee against despotism is to confront it with the possibility of its dethronement, of its being laid low, of its being superseded by a rival party. Every Government is liable to error of judgement, great many liable to bad administration and not a few to corruption, injustice and acts of oppression and bad faith. No Government ought to be free from criticism. But who can criticize a Government? Left to individuals it can never be done. Sir Toby has left behind advice as to how one should deal with one's enemy. He said :”soon, so soon as ever thou seest him, draw, and as thou drawest, swear horrible”But this is not possible for an individual who wants to stand up against a Government. There are various things against individuals successfully playing that part. There is in the first place what Bryce calls the fatalism of the multitude, that tendency to acquiesce and submit due to the sense of insignificance of individual effort, the sense of helplessness arising from the belief that the affairs of men are swayed by large forces whose movements cannot be turned by individual effort. In the second place there is possibility of the tyranny of the majority which often manifests in suppressing and subjecting to penalties and other social disabilities persons who do not follow the majority, of which some of us have good experience during the Congress regime- In the third place there is the fear of the C.I.D. The Gestapo and all the other instrumentalities which are at the disposal of the Government to shadow its critics and to silence them.

The secret of freedom is courage, and courage is born in combination of individuals into a party. A party is necessary to run Government. But two

parties are necessary to keep Government from being a despotism. A democratic Government can remain democratic only if it is worked by two parties—a party in power and a party in opposition. As Jennings puts it :

“If there is no opposition there is no democracy. ' His Majesty's Opposition ' is no idle phrase. His Majesty needs an opposition as well as a Government.”

In the light of these considerations who could deny that the collapse of the Liberal Party in India is not a major disaster? Without the resuscitation of the Liberal Party or the formation of another party the fight for freedom will result in loss of freedom for despotism is antithetical of freedom whether the despotism is native or foreign. It is a pity Indians have lost sight of this fact. But I have no doubt those who are shouting that the Congress is the only party and that the Congress is the nation will live to rue their decision.

Why has the Liberal Party collapsed? Is there something wrong in the Philosophy of Ranade? Is there anything wrong with the men in the Liberal Party? Or is the working of the Liberal Party at fault? I for one hold that there is nothing fundamentally wrong with the philosophy of Ranade. Nor can it be said that of the two the Congress has the best cause and the Liberal Party the best men. The Liberal Party has both. To my mind what has brought about the collapse of the Liberal Party is the complete lack of organization.

It may not be without interest to expose the weaknesses in the organization of the Liberal Party.

As pointed out by Pendleton Herring in his volume on *Politics of Democracy* the organization of a party is spread over three concentric rings. The centre ring represents the oligarchy in control of the party organization—what is called the High Command. There are associated with it, its workers who are primarily concerned with securing their livelihood through the party organization whether as party officials or through public office. They are called professional politicians and constitute the party machine. Surrounding this inner group—the High Command and the machine—there is a large circle of persons bound to the party by ties of tradition and emotional loyalty. They think of the principles professed by the party. They are more concerned with its ideals and symbols than with the acts of the professional party workers and leaders. They vote for the party ideal rather than for the party record. Outside this second ring lies that vast body of people who are not attached to any party. It is a floating population. The reason for their being unattached is either because they are aimless, thoughtless or because they have particular interests which are not included

in the platform of any party. Those outside the second ring constitute the most vital field of action for a political party. They are the prize which a party must capture. To capture this prize it is not enough to enunciate principles and formulate policies. Men are not interested in principles and policies. But they are interested in accomplishing things. What is necessary for a party is to bring about concerted action. For in the words of President Woodrow Wilson, given Self-Government with a majority rule, things can be accomplished not by individual voice but by concerted action. Now for concerted action what is necessary is the crystallization of individual opinions into public opinion. This crystallization or building up of public opinion as a sanction behind a particular principle becomes the main functions of a party. Theoretically, political parties are agencies for the expression and execution of public opinion but in practice parties create, direct, influence and often control public opinion. Indeed this is the chief function of a party. For this, a party must do two things. In the first place it must establish contact with the masses. It must go out among the masses with its wares—its principles, policies, ideas and candidates. In the second place it must carry on propaganda among the masses in favour of its wares. It must animate them and enlighten them, to quote Bryce again "Give the voters some knowledge of the political issues they have to decide, to inform them of their leaders, and the crimes of their opponents". These are the basic factors from which concerted action can arise. A party which fails to forge concerted action has no right to call itself a party.

Which of these things the Liberal Party has done as an organization? The Liberal Party has only the High Command. It has no machine. Not having any machine the high command is only a shadow. Its following is confined to that second concentric ring consisting of persons who are bound by ties of tradition. The leaders have nothing to evoke emotional loyalty. They have no war cry to gather a crowd. The Liberal Party does not believe in mass contact. It would be difficult to imagine a party so completely isolated and insulated from the main mass of people. It does not believe in conversion. Not that it has no Gospel to preach ; but like the Hindu religion it is a nonproselytising creed. It believes in the formulation of principles and policies. But it does not work for giving effect to them. Propaganda and concerted action are anathema to the Liberal Party. Individual voices and annual meetings and clamour for invitation when a Cripps arrives or when the Viceroy decides to invite important individuals have become the limits of its political activity.

Is there any wonder if the Liberal Party has fallen into disrepute? The Liberal Party has forgotten the most elementary fact that organization is

essential for the accomplishment of any purpose and particularly in politics where the harnessing of so many divergent elements in a working unity is so great.

Who is responsible for this collapse of the Liberal Party in India? However much we may regret to have to say it, I think it will have to be admitted that the responsibility for this catastrophe does to some extent fall on Ranade. Ranade belonged to the Classes. He was born and bred among them. He never became a man of masses. The Liberal Party has no machine and the reason why it did not forge a machine is because it did not believe in mass contact. This aversion to mass contact is the legacy of Ranade. In avoiding mass contact the party is following the tradition left by Ranade. There is another legacy of Ranade to the Liberal Party and that relates to the false faith in the driving force of principles and policies. Mazzini once said: "You may kill men, you cannot kill a great idea." To me it appears to be a most mistaken view. Men are mortal. So are ideas. It is wrong to hold that an idea will take roots *pro prio-vigore*. An idea needs propagation as much as a plant needs watering. Both will otherwise wither and die. Ranade agreed with Mazzini and did not believe that the fructification of an idea needed the resources of strenuous husbandry. If the Liberal Party is content with mere formulation of principles and policies it is also because of this tradition of Ranade.

What is the duty of the Liberals. All Liberals I know will say our duty is to follow the master. What else could be the attitude of a devout band of disciples? But can anything be more mistaken or more uncritical? Such an attitude implies two things. It means that a great man works by imposing his maxims on his disciples. It means that the disciples should not be wiser than the master. Both these conclusions are wrong. They do injustice to the master. No great man really does his work by crippling his disciple by forcing on them his maxims or his conclusions. What a great man does is not to impose his maxims on his disciples. What he does is to evoke them, to awaken them to a vigorous and various exertion of their faculties. Again the pupil only takes his guidance from his master. He is not bound to accept his master's conclusions. There is no ingratitude in the disciple not accepting the maxims or the conclusions of his master. For even when he rejects them he is bound to acknowledge to his master in deep reverence "You awakened me to be myself: for that I thank you." The master is not entitled to less. The disciple is not bound to give more.

It is therefore wrong to the master as well as to himself for the disciple to bind himself to the maxims and conclusions of his Master. His duty is to know the principles and if he is convinced of their value and their worth, to

spread them. That is the wish of every Master. Jesus wished it, Buddha wished it. I am sure the same must be the wish of Ranade. It follows that if the Liberals have faith in, and love and respect for Ranade their supreme duty lies not merely in assembling together to sing his praises but in organising themselves for spreading the Gospel of Ranade.

What hope is there of the Liberals coming forward to fulfill this duty? Signs are very depressing. In the last election the Liberals did not even contest the seats. That of course is in itself a matter of some surprise. But this pales into nothing when one recalls the announcement made by the Rt. Hon'ble Srinivas Shastri—the Leading Light of the Liberal Party—that he wished the Congress to succeed !! There is no parallel to this except in the treacherous and treasonous conduct of Bhishma who lived on the bounty of the Kauravas but wished and worked for success to their enemies the Pandavas. This shows even the Liberals had lost faith in the gospel of Ranade. If this is the general condition of health of the Liberal Party it is better if the party died. It would clear the way for a new orientation and spare us the tedium of idle clatter of liberals and liberalism. For such an event even Ranade may express satisfaction from his grave.

REVIEW: CURRENCY AND EXCHANGES

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/34. Review Currency and Exchange by H.L.Chablani.htm - _msocom_1

INDIAN CURRENCY AND EXCHANGE, By H. L CHABLANI,
M.A. (Oxford University Press, Bombay) 1925.
8 y 2 x 5 y 2 pp. 184 Rs. 4-8-0

THIS brochure is a poor production. Within the small compass of 180 pages devoted by the author to a hurried treatment of a somewhat complicated subject, there is neither sufficiency of information nor sufficiency of illumination. Methodology is conspicuous by its absence. There are so many contradictions and compromises in his book that it is difficult to know what is the exact position of the author. In one place he says gold cannot be circulated in India because India is poor. In another place he says gold does not circulate in India because there are rupees. After devoting one whole chapter to the discussion of the quantity theory of money—in itself the simplest and the most obvious proposition in Political Economy—he says the rise of the Rupee after 1893 was not altogether due to the limitation of its issue! Similar contradiction appears in his chapter on Foreign Exchanges. There he contrasts the two theories—namely, the Theory of Purchasing Power Parity and the theory of the Balance of Trade—and gives his judgement in favour of the former as being the true theory. Yet throughout the book he argues on the basis of the wrong theory, namely, the Balance of Trade. Again, in his opening chapter he says that there is nothing absurd in reverting back to the silver standard! Management of currency is according to the findings of the author, one of the greatest defects in our currency. Yet he recommends a convertible Rupee as the remedy for this evil! The compromises which the author makes are witnessed by the fact that he agrees with almost every proposal made for the reconstruction of Indian Currency. He sees good in Dr. Fisher's plan, in reverting back to the silver standard, and also in an universalised Gold Exchange Standard. Nevertheless, the author has his own pet plan and that is to have a 'Convertible Rupee', convertible not in gold coins but in gold bullion only. The author does not disclose it, but it is the plan suggested by Ricardo in his "Proposals for an Economical and Secure Currency". Fortunately for England it was not adopted. The reasons were simple. To legislate that notes shall be converted into gold bars of

certain weight meant that only those who had notes of the value of the gold bars, could convert. The rest could not. In other words, it was felt that such a system would considerably weaken the effect of convertibility and would thereby give an opening to inflation. The proposal was not therefore deemed to be secure enough. The point whether the proposal was economical was not debated upon at the time, and may here be conveniently dealt with ; since there are so many writers in India—and our author is one of them—who, in order to show themselves civilised, indulge in vituperations against what they call the barbarity of using gold as currency. All these civilised writers on currency spend their energy in demonstrating the self-evident proposition which no one disputes that to use paper as a medium of exchange is more economical than to use gold. But these same writers never care to prove that such a plan besides being economical will also be secure in the sense of ensuring stability of prices. A merely economical plan which does not guarantee security is of no use. The plan to be acceptable must be both economical and secure. It will do, if it is not economical; but it will certainly not do, if it is not secure. Now I submit that the proposition that to economise gold as a currency is to impair its utility as a standard of value is as self-evident as the proposition of the civilised writers that to use paper as a medium is more economical than to use gold. For what does this discarding of gold from currency use mean? It simply means this; that by economising the use of gold you thereby increase its supply, and by increasing its supply you lower its value i.e. gold by reason of this economy in its use becomes a depreciating commodity and therefore unfit to that extent to function as a standard of value. It cannot be denied that issues of paper money, or any other substitute for that matter, affect the demand for metallic money. There are no doubt some who make the reservation that the demand for metallic money will or will not be affected by a paper issue according as the paper money is convertible or inconvertible. But this is an error. The test is whether the paper issues are covered or uncovered by a metallic reserve. If they are covered then they will not affect the demand for metallic money. But if they are uncovered, then they will affect the demand for metallic money whether they are convertible or inconvertible. The reason is : covered notes merely represent metallic money ; but uncovered notes add to the stock of value. Therefore you cannot both economise gold and also use it as a standard. If you want to economise gold, you must abandon gold as a standard of value. Besides, in the present day there is no necessity to

economise gold, because there is all over the world such a great plethora of money that the less we economise gold the better. From this point of view the Gold Exchange Standard, once a boon, is now a curse. It served a very useful purpose for some time. From 1873 the production of gold had fallen off and the economy effected by the Gold Exchange Standard was indeed very welcome; because it helped in a period of contraction to expand the money of the countries of the world and thereby maintain the stability of the international price system by preventing the rapid fall in prices, which would have been inevitable if all the countries which established the gold standard had also adopted gold as currency. But after 1910 conditions changed and the production of gold increased, with the result that the continuance of the Gold Exchange Standard thereafter not only did not help the countries to check the rise of prices but actually helped to raise them by causing as a result of the economy in its use a redundancy of the already over-produced gold. The author approvingly quotes Prof. Fisher and others who blame the Gold Standard for the rise of prices after 1911. But Prof. Fisher forgets to take note of the fact that gold became a bad standard of value because of continuance elsewhere of the Gold Exchange Standard. For if after 1911 the Gold Exchange Standard has been abandoned and countries had used gold instead of economising it, there would have been no redundancy of gold and the rise of prices consequent on it would have been arrested. The Gold Exchange Standard from this point of view has outlived its purpose and is now doing positive harm. In the light of these considerations it is not possible to have any sympathy with projects that economise the use of gold and yet maintain it as a standard of value.

These points must have entirely escaped the author when he conceived his project of a Rupee convertible into gold bullion. But convertibility into gold bars does not embody the whole plan of the author. Along with convertibility he says a limit must be placed on the issue of rupees and small notes, even when they are legally convertible into gold bullion. The currency in India should be allowed to expand annually by only a certain small percentage representing its normal rate of progress in business. Beyond that percentage Government should have no power to increase the currency..... In giving reasons for this fluctuating limit on the issue of rupees and small notes, the author says, "A 'convertible rupee 'being small in its denomination, is not adequate safeguard against inflation ; for, as the older economists clearly showed, the *de facto* suspended convertibility of the small notes makes it practically

inconvertible, and its over-issue, is just as likely as that of inconvertible paper." All this is fantastic if not strange. It is strange because the author in one place says "convertibility is the best safety-valve for redundancy of currency: it provides the easiest automatic danger signal to Government which is inflating the currency." Now, if this is so, why is a convertible Rupee not sufficient for the purpose the author has in view? The author is quite wrong when he says that the older economists believed that convertibility of small notes was not a sufficient safeguard against over-issue. What the older economists feared was not that convertibility was not enough to maintain gold in circulation if the Banks were allowed to issue notes of small denomination—a view which is quite different from the one ascribed by the author to the older economists. Again to realise their aim the older economists did not urge, as our author represents them to have done, the placing of a limit on their issue. What they urged was a total prohibition of the notes of small denomination. That is why we find the Bank of England prevented by the Charter Act from issuing notes of lesser denomination than £5. To be consistent, the author should have recommended that the Government of India should not issue Rupees or silver notes of lesser denomination than Rs. 5. Instead of this he recommends a haphazard and an unworkable plan. Supposing it were possible to fix this percentage—the author has not told us how to do it—is the percentage to be maintained at all times? Or will it be sufficient if it were found at the end of the financial year that the percentage has not been exceeded? If the latter is all that the plan demands, then there may be no limits to the increase and decrease in the volume of currency that may be issued in the course of the year, provided care is taken that at the end of the year the balance errs on the side of an increase equal to the given percentage over the normal. Again, is the normal to be a figure fixed for ever or is it to be revised? If it is revisable then how is it to be revised and what authority is to revise that normal? These are some of the questions that have to be answered before the plan can be accepted. But one wonders whether instead of indulging in such in genuities it would not have been better if the author had played the common role and recommended either a convertible Rupee or an inconvertible Rupee with a fixed limit of issue.

The book consists of lectures delivered by the author in his capacity as a Professor to his students at the Elphinstone College, Bombay, and at the Central Hindu College, Benares, and is divided into two parts. Part I which is mostly informative, the author says, is "intended for candidates

preparing for the pass degree in economics."Part II" is mainly critical"and" is meant primarily for the candidates for the Hons. degree."As an examiner in Economics I always wondered why the answers of most of the pass students in Political Economy read like children's recitation of nursery tales and those of the Hons. like garbled versions of borrowed comments. It is now evident that this is due, as the author naively suggests, to the fact that the two sets of students are fed on two different kinds of fare—neither of which is supplied to them in plentitude or certitude.

REVIEW REPORT OF THE TAXATION ENQUIRY COMMITTEE,

1926mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/35. Review Report of the taxation
Committee, 1926.htm - _msocom_1

Report of the Taxation Inquiry Committee 1926-1

COMMISSIONS to report and committees to enquire are a peculiar feature of the English system of government. It is a cardinal principle of English Parliamentary action that in the matter of social and economic legislation it never takes a leap in the dark. Committees and commissions are necessary preliminaries of an Act of Parliament. In this it follows the well-known maxim that knowledge is power. One is happy to find that this principle of English Parliamentary action has been followed in India and our politicians, who so often oppose the appointment of Commissions and Committees, cannot be said to be acting in the best interests of the country.

In the case of the Taxation Enquiry Committee, however, it was the Government which was trying to shut it out and when it did institute an enquiry, it was not the one demanded by the Assembly. What the Assembly wanted was an Enquiry into the taxable capacity of the people and this the Government did not want to face for fear that such an enquiry might reveal that the burden of taxation upon the people was disproportionate to their taxable capacity. But when public opinion insisted upon the institution of such an enquiry, it, by a species of circumvention, split the enquiry into two parts : (1) The taxation Enquiry Committee and (2) The Economic Enquiry Committee, with the result that the utility of either committee's report has been considerably diminished.

The terms of reference to the Taxation Enquiry Committee directed it (1) to examine the manner in which the burden of taxation is distributed at present between the different classes of the population ; (2) to consider whether the whole scheme of taxation is equitable and in accordance with economic principles, and, if not, in what respects it is defective ; and (3) to report on the suitability of alternative sources of taxation. In making its Report, the Committee has not been very judicious in the allotment of space to the consideration of these three questions. The first was evidently the most important of the three heads comprised in the whole charge. Yet the space devoted to the

consideration of it barely covers 13 pages in a volume of 447 pages. Besides the treatment of the subject is far from satisfactory. The Committee without giving any reason whatsoever divided the population of the country in 11 classes and has discussed the burden they bear in 10 pages and a half without at all touching upon the most important of all questions, viz., the incidence of the individual taxes imposed under the Indian fiscal system. Now one would have liked to know why did the Committee think that 11 was an exhaustive classification? If it is just a question of may be, then why not 13? Again, how can the Committee at all say what is the burden that a merchant bears? If they had examined the incidence of individual taxes, they would have perhaps found that he bore none ! Take again, another specific instance, that of the Cotton Excise Duty. The Committee has no difficulty in saying that its abolition will benefit the working classes. But is the Committee quite certain that it was shifted on to the consumer? I do not at all wish to be unfair to the Committee. But I am bound to say that in this respect the Report of the Committee is a most disappointing document. The Committee has devoted a great deal of space to the detailed history of the various sources of taxation in India. So far so good. But it would have been far better if the Committee had devoted half of that space in discussing the incidence of each tax separately. But this the Committee has entirely omitted to do. If that was done, the Committee would have been in a better position to deal with the question of the distribution of the burden of taxation and of the elimination of the iniquitous taxes. That it has not been able to do as well as was to be expected from a Committee which has cost the country nearly Rs. 4 1/2 lakhs exclusive of printing is due to the fact that it forgot to consider the question of incidence, which, after all, was the most important part of its enquiry.

This failure of the Committee to tackle the main problem is to be attributed primarily to the personnel of the Committee, which was largely of inexpert people, most of whom, if rumour be true, began to learn the A.B.C. of Punjab Finance after they found themselves nominated on the Committee. There is no wonder if the report emanating from such a body falls flat upon students of the subject. One thing, however, can be said in favour of the Report. It is a document full of common-sense, neatly arranged. If it can not satisfy the student, it will certainly serve as a base for his intellectual operations. Some of the proposals of the Committee I hope to examine in subsequent articles.

For the present I propose to stop with this statement of my view on the Report in general.

REVOLUTION AND COUNTER-REVOLUTION IN ANCIENT INDIA

Contents

PART I

- Chapter 1: Ancient India on Exhumation
- Chapter 2: The Ancient Regime
- Chapter 3: A Sunken Priesthood
- Chapter 4: Reformers and Their Fate

PART II

- Chapter 5: The Decline and Fall of Buddhism
- Chapter 6: The Literature of Brahminism
- Chapter 7: The Triumph of Brahminism

PART III

- Chapter 8: The Morals of the House
- Chapter 9: Krishna and His Gita
- Chapter 10: Analytical Notes of Virat Parva and Udyog Parva
- Chapter 11: Brahmins Versus Kshatriyas
- Chapter 12: Shudras and the Counter-Revolution
- Chapter 13: The Woman and the Counter-Revolution

Editorial Note in the manuscript published in the Dr. Babasaheb Ambedkar: Writings and Speeches, Vol. 3 by the Government of Maharashtra:

Dr. B. R. Ambedkar had proposed to write a treatise, i.e., 'Revolution and Counter-Revolution in Ancient India'. The table of contents has been printed in the chapter of schemes. He had originally planned to write seven books to be included under this broad title. The Committee was able to find some pages and few chapters in his collection. The chapters are also incomplete. After scrutiny, the Committee came to a decision that 'Revolution and Counter-Revolution in

Ancient India' is to be presented in this volume with the available material though incomplete. Dr. Ambedkar considered the rise of Buddhism as revolution. The Counter-Revolution pioneered by Brahmins' resulted into decline and fall of Buddhism.

As such the following chapters are included under this title.

1. *Ancient India on Exhumation*
2. *The Ancient Regime—The State of the Aryan Society*
3. *A Sunken Priesthood*
4. *Reformers and Their Fate*
5. *The Decline and Fall of Buddhism*
6. *The Literature of Brahminism*
7. *Triumph of Brahminism*
8. *The Morals of the House—Manusmruti or the Gospel of Counter-Revolution*
9. *Philosophic Defence of Counter-Revolution (Krishna and his Gita)*
10. *Analysis of Virat Parva and Uddyog Parva*
11. *Brahmins V/s Kshatriyas*
12. *The Shudras and the Counter-Revolution*
13. *The Women and the Counter-Revolution*

The readers may compare these chapters with the proposed plan given in the last chapters of Schemes.—Editors

CHAPTER 1

Ancient India on Exhumation

There are two typed copies of this Chapter. Both of them contain additions and corrections in the handwriting of Dr. Babasaheb Ambedkar. After consideration, we decided that the latter version should be included here. This essay, consisting of three pages only, seems to be an introduction to a larger subject Dr. Ambedkar probably had in his mind.—Editors.

Much of the ancient history of India is no history at all. Not that ancient India has no history. It has plenty of it. But it has lost its character. It has been made mythology to amuse women and children. This seems to have been done deliberately by the Brahminical writers. Take the word *Deva*. What does it mean? Is the word *Jana Vishesh* representing a member of the human family? It is

made to appear superhuman agency. By this the pith of history contained in it is squeezed out.

Along with the word Deva occur the names of Yaksha, Gana, Gandharva, Kinnars. Who were they? The impression one gets on reading the Mahabharat and Ramayan is that they are imaginary beings who filled the horizon but did not exist.

But the Yaksha, Gana, Gandharva, Kinnaras were also members of the human family. They were in the service of the Devas. The Yakshas were guarding the palaces. Ganas were guarding the Devas. Gandharvas were amusing the Devas by music and dancing. The Kinnaras were also in the service of the Gods. The descendants of the Kinnaras are even now living in Himachal Pradesh.

Take the name Asura. The description of Asura given in the Mahabharat and Ramayana make out as though they belonged to non-human world. An Asura is described to eat ten carts-load of food. They are monsters in size. They sleep for six months. They have ten mouths. Who is a Rakshas? He too is described as a non-human creature. In size, in his capacity for eating, in his habits of life he resembled the Asura.

There is a plenty of references to the Nagas. But who is a Naga? A Naga is represented as a serpent or a snake. Can this be true? Whether true or not, it is so and Hindus believe it. Ancient Indian history must be exhumed. Without its exhumation Ancient India will go without history. Fortunately with the help of the Buddhist literature, Ancient Indian History can be dug out of the debris which the Brahmin writers have heaped upon in a fit of madness.

The Buddhist literature helps a great deal to remove the debris and see the underlying substance quite clearly and distinctly.

The Buddhist literature shows that the Devas were a community of human beings. There are so many Devas who come to the Buddha to have their doubts and difficulties removed. How could this be unless the Devas were human beings

Again the Buddhist canonical literature throws a flood of light on the puzzling question of the Nagas. It makes a distinction between womb-born Nagas and egg-born Nagas and thereby making it clear that the word Naga has two-fold meaning. In its original sense it stood for the name of a human community.

The Asuras again are not monsters. They too are a Jan-Vishesh human beings. According to Satpatha Brahmana, the Asuras are the descendants of Prajapati the Lord of the creation. How they became

evil spirits is not known. But the fact is recorded that they fought against the Devas for the possession of the earth and that they were overcome by the Devas and that they finally succumbed. The point is clear that the Asuras were members of the human family and not monsters.

With this exhumation of debris, we can see Ancient Indian History in a new light.

CHAPTER 2

The Ancient Regime : The State of the Aryan Society

This essay consists of 11 typed foolscap pages tagged into a file. From the last sentence it appears that the Chapter is incomplete. —Editors

Buddhism was a revolution. It was as great a Revolution as the French Revolution. Though it began as a Religious revolution, it became more than Religious revolution. It became a Social and Political Revolution. To be able to realise how profound was the character of this Revolution, it is necessary to know the state of the society before the revolution began its course. To use the language of the French Revolution, it is necessary to have a picture of the ancient regime in India.

To understand the great reform, which he brought about by his teaching, it is necessary to have some idea of the degraded condition of the Aryan civilisation at the time when Buddha started on the mission of his life.

The Aryan Community of his time was steeped in the worst kind of debauchery; social, religious and spiritual.

To mention only a few of the social evils, attention may be drawn to gambling. Gambling had become as widespread among the Aryans as drinking.

Every king had a hall of gambling attached to his palace. Every king had an expert gambler in his employment as a companion to play with. King *Virat* had in his employment *Kank* as an expert gambler. Gambling was not merely a pastime with kings. They played with heavy stakes. They staked kingdoms, dependants, relatives, slaves, servants* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_1 King *Nala* staked everything in gambling with *Paskekar* and lost everything. The only thing he did not stake was himself and his wife *Damayanti*. *Nala* had to go and live in the forest as a beggar. There were kings who went beyond

Nala. The Mahabharat mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_2 tells how Dharma the eldest of the Pandavas gambled and staked everything, his brothers and also his and their wife Draupadi. Gambling was a matter of honour with the Aryans and any invitation to gamble was regarded as an injury to one's honour and dignity. Dharma gambled with such disastrous consequences although he was warned beforehand. His excuse was that he was invited to gamble and that as a man of honour, he could not decline such an invitation.

This vice of gambling was not confined to kings. It had infected even the common folk. Rig-Veda contains lamentations of a poor Aryan ruined by gambling. The habit of gambling had become so common in Kautilya's time that there were gambling houses licensed by the king from which the king derived considerable revenue.

Drinking was another evil which was rampant among the Aryans. Liquors were of two sorts *Soma* and *Sura*. *Soma* was a sacrificial wine. The drinking of the *Soma* was in the beginning permitted only to Brahmins, Kshatriyas and Vaishyas. Subsequently it was permitted only to Brahmins and Kshatriyas. The Vaishyas were excluded from it and the Shudras were never permitted to taste it. Its manufacture was a secret known only to the Brahmins. *Sura* was open to all and was drunk by all. The Brahmins also drank *Sura*. Shukracharya the priest to the *Asuras* drank so heavily that in his drunken state he gave the life giving *Mantra* known to him only and with which he used to revive the *Asuras* killed by the Devas—to *Katch* the son of Brahaspati who was the priest of the Devas. The Mahabharat mentions an occasion when both Krishna and Arjuna were dead drunk. That shows that the best among the Aryan Society were not only not free from the drink habit but that they drank heavily. The most shameful part of it was that even the Aryan women were addicted to drink. For instance

Sudeshna mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_3 the wife of King Virat tells her maid *Sairandhri* to go to *Kichaka's* palace and bring *Sura* as she was dying to have a drink. It is not to be supposed that only queens indulged in drinking. The habit of drinking was common among women of all classes and even Brahmin women were not free from it. That liquor and dancing was indulged in by the Aryan women is clear from the *Kausitaki Grihya Sutra* 1. 11-12, which says ;"Four or

eight women who are not widowed, after having been regaled with wine and food are to dance for four times on the night previous to the wedding ceremony."

That the drinking of intoxicating liquor was indulged in by Brahmin women, not to speak of women of the lower *Varnas*, as late as the seventh and eighth centuries A.D. in the Central region of Aryavarta, is clear from Kumarila Bhatta's *Tantra-Vartika* I (iii). 4, which states, "Among the people of modern days we find the Brahmin women of the countries of Ahicchatra and Mathura to be addicted to drinking". Kumarila condemned the practice in the case of Brahmins only, but not of Kshatriyas and Vaishyas men and women, if the liquor was distilled from fruits or flowers (Madhavi), and Molasses (Gaudi) and not from grains (Sura).

The sexual immorality of the Aryan Society must shock their present day descendants. The Aryans of pre-Buddhist days had no such rule of prohibited degrees as we have today to govern their sexual or matrimonial relationship.

According to the Aryan Mythology, Brahma is the creator. Brahma had three sons and a daughter. His one son Daksha married his sister. The daughters born of this marriage between brother and sister were married some to Kashyapa the son of Marichi the son of Brahma and some to Dharma the third son of Brahma.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_4

In the Rig-Veda there is an episode related of Yama and Yami brother and sister. According to this episode Yami the sister invites her brother Yama to cohabit with her and becomes angry when he refuses
to do so.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_5

A father could marry his daughter. *Vashishta* married his own daughter *Shatrupa* when she came of age.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_6
Manu married his daughter *Ila*.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_7
Janhu married his daughter *Janhavi*.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_8
Surya married his daughter *Usha*.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_9

There was polyandry not of the ordinary type. The polyandry prevalent among the Aryans was a polyandry when kinsmen cohabited with one woman. Dhahaprachetani and his son Soma cohabited with Marisha the daughter of Soma.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_10

Instances of grandfather marrying his granddaughter are not wanting. Daksha gave his daughter in marriage to his father Brahmamk:
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_11 and from that marriage was born the famous Narada. Dauhitra gave his 27 daughters to his father Soma for cohabitation and procreation.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_12The Aryans did not mind cohabiting with women in the open and within sight of people. The Rishis used to perform certain religious rites which were called *Vamdevya vrata*. These rites used to be performed on the *Yadnya bhumi*. If any woman came there and expressed a desire for sexual intercourse and asked the sage to satisfy her, the sage used to cohabit with her then and there in the open on the *Yadnya bhumi*. Instances of this may be mentioned. The case of the sage Parashara had sexual intercourse with Satyavati and also of Dirghatapa. That such a custom was common is shown by the existence of the word Ayoni. The word Ayoni is understood to mean of immaculate conception. That is not however the original meaning of the word. The original meaning of the word Yoni is house. Ayoni means conceived out of the house i.e. in the open. That there was nothing deemed to be wrong in this is clear from the fact that both Sita and Draupadi were Ayonija. That this was very common is clear from the fact that religious injunctions had to be issued against such a practice.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_13

There was prevalent among the Aryans the practice of renting out their women to others for a time. As an illustration may be mentioned the story of *Madhavi*.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_14 The king *Yayati* gave his daughter *Madhavi* as an offering to his Guru *Galav*. *Galav* rented out the girl *Madhavi* to three kings, each a period. Thereafter he gave her in marriage to *Vishwamitra*. She remained with him until a son was

born to her. Thereafter *Galav* took away the girl and gave her back to her father *Yayati*.

Besides the practice of letting out women to others temporarily at a rent there was prevalent among the Aryans another practice namely allowing procreation by the best amongst them. Raising a family was treated by them as though it was a breeding or stock raising. Among the Aryas there was a class of persons called *Devas* who were Aryans but of a superior status and prowess. The Aryans allowed their women to have sexual intercourse with any one of the class of *Devas* in the interest of good breeding. This practice prevailed so extensively that the *Devas* came to regard pre libation in respect of the Aryan Women as their prescriptive right. No Aryan woman could be married unless this right of pre-libation had been redeemed and the woman released from the control of the *Devas* by offering what was technically called *Avadan*. The *Laja Hoame* which is performed in every Hindu marriage and the details of which are given in the *Ashwalayan Grabya Sutra* is a relic of this act of the redemption of the Aryan woman from the right of pre-libation of the *Devas*. The *Avadan* in the *Laja Hoama* is nothing but the price for the extinguishing of the right of the *Devas* over the bride. The *Saptapadi* performed in all Hindu marriages and which is regarded as the most essential ceremony without which there is no lawful marriage has an integral connection with this right of pre-libation of the *Devas*. *Saptapadi* means walking by the bridegroom seven steps with the bride. Why is this essential? The answer is that the *Devas*, if they were dissatisfied with the compensation, could claim the woman before the seventh step was taken. After the seventh step was taken, the right of the *Devas* was extinguished and the bridegroom could take away the bride and live as husband and wife without being obstructed or molested by the *Devas*.``

There was no rule of chastity for maidens. A girl could have sexual intercourse with and also progeny from anybody without contracting marriage. This is evident from the root meaning of the word *Kanya* which means a girl. *Kanya* comes from the root *Kam* which means a girl free to offer herself to any man. That they did offer themselves to any man and had children without contracting regular marriage is illustrated by the case of *Kunti* and *Matsyagandha*. *Kunti* had children from different men before she was married to *Pandu* and *Matsyagandha* had sexual intercourse with the sage *Parashara* before she married to *Shantanu* the father of *Bhishma*.

Bestiality was also prevalent among the Aryans. The story of the sage Dam having sexual intercourse with a female deer, is well known. Another instance is that of Surya cohabiting with a mare. But the most hideous instance is that of the woman having sexual intercourse with the horse in the Ashvamedha *Yadna*.

(INCOMPLETE)

CHAPTER 3

A Sunken Priesthood

This essay is numbered as Chapter III in the file of the Ancient Regime and contains 16 foolscap-typed pages. This Chapter also seems to be left incomplete.—Editors.

The priestly profession in the ancient Aryan Society was monopolised by the Brahmins. None except a Brahmin could become a priest. As custodians of religion, the Brahmins were the guides of the people in moral and spiritual matters. They were to set the standard for people to follow. Did the Brahmins act up to the standard? Unfortunately, all the evidence we have, shows that the Brahmins had fallen to the utmost depth of moral degradation.

A Shrotriya Brahmin was supposed not to keep with him a store of provision lasting for more than a week. But they had systematically trampled upon this rule and were addicted to the use of the things stored up ; stores, to wit, of foods, drinks, clothing, equipages, bedding, perfumes, and curry-stuffs. The Brahmins were addicted to visiting shows such as :—

- (1) Nautch dances (nakkam).
- (2) Singings of songs (gitam).
- (3) Instrumental music (vaditam).
- (4) Shows at fairs (pekham).
- (5) Ballads recitations (akkhanam).
- (6) Hand music (panisaram).
- (7) The chanting of bards (vetals).
- (8) Tam-tam playing (kumbhathunam).
- (9) Fair scenes (sobhanagarkam).
- (10) Acrobatic feats by Kandalaras (Kandala-vamsa-dhohanam).
- (11) Combats of elephants, horses, buffaloes, bulls, goats, rams, cocks and quails.
- (12) Bouts at quarter staff, boxing, wrestling. (13-16) Sham-fights, roll-calls, manoeuvres, reviews.

They were addicted to games and recreations; that is to say,

- (1) Games on boards with eight, or with ten rows of squares.
 - (2) The same games played by imagining such boards in the air.
 - (3) Keeping going over diagrams drawn on the ground so that one-steps only where one ought to go.
 - (4) Either removing the pieces or men from a help with one's nail, or putting them into a heap, in each case without shaking it. He who shakes the heap, loses.
 - (5) Throwing dice.
 - (6) Hitting a short stick with a long one.
 - (7) Dipping the hand with the fingers stretched out in lac, or red dye, or flour water, and striking the wet hand on the ground or on a wall, calling out 'what shall it be?' and showing the form required—elephants, horses .
 - (8) Games with balls.
 - (9) Blowing through toy pipes made of leaves.
 - (10) Ploughing with toy ploughs.
 - (11) Turning summersaults.
 - (12) Playing with toy windmills made of palm leaves.
 - (13) Playing with toy measures made of palm leaves. (14, 15)
- Playing with toy carts or toy bows.
- (16) Guessing at letters traced in the air, or on a playfellow's back.
 - (17) Guessing the playfellow's thoughts.
 - (18) Mimicry of deformities.

They were addicted to the use of high and large couches ; that is to say:

- (1) Moveable settees, high, and six feet long (Asandi).
- (2) Divans with animal figures carved on the supports (Pallanko).
- (3) Goat's hair coverings with very long fleece (Gonako).
- (4) Patchwork counterpanes of many colours (Kittaka).
- (5) White blankets (Patika).
- (6) Woollen coverlets embroidered with flowers (Patalika).
- (7) Quilts stuffed with cotton wool (Tulika).
- (8) Coverlets embroidered with figures of lions, tigers, & c., (Vikatika).
- (9) Rugs with fur on both sides (Uddalom).
- (10) Rugs with fur on one side (Ekantalomi).
- (11) Coverlets embroidered with gems (Katthissam).
- (12) Silk coverlets (Koseyyam).

(13) Carpets large enough for sixteen dancers (Kittakam). (14-16) Elephant, horse and chariot rugs.

(17) Rugs of antelope skins sewn together (Aginepaveni).

(18) Rugs of skins of the plantain antelope.

(19) Carpets with awnings above them (Sauttarakkhadam).

(20) Sofas with red pillows for the head and feet". The Brahmins were addicted to the use of means for adorning and beautifying themselves; that is to say : Rubbing in scented powders on one's body, shampooing it, and bathing it, patting the limbs with clubs after the manner of wrestlers, the use of mirrors, eye-ointments, garlands, rouge, cosmetics, bracelets, necklaces, walking-sticks, reed cases for drugs, rapiers, sunshades, embroidered slippers, turbans, diadems, whisks of the yak tail and long-fringed white robes. The Brahmins were addicted to such low conversation as these :

Tales of kings, of robbers, of ministers of state ; tales of war, of terrors, of battles ; talk about foods and drinks, clothes, beds, garlands, perfumes ; talks about relationships, equipages, villages, towns, cities and countries ; tales about women, and about heroes ; gossip at street corners, or places whence water is fetched ; ghost stories ; desultory talk ; speculations about the creation of the land or sea, or about existence and non-existence. The Brahmins were addicted to the use of wrangling phrases: such as:

"You don't understand this doctrine and discipline, I do." "How should you know about this doctrine and discipline?" "You have fallen into wrong views. It is I who am in the right." "I am speaking to the point, you are not." "You are putting last what ought to come first, and first what ought to come last."

"What you've ex-cogitated so long, that is all quite upset." "You are proved to be wrong." "Set to work to clear your views." "Disentangle yourself if you can."

The Brahmins were addicted to taking messages, going on errands, and acting as go-betweens; to wit, on kings, ministers of state, Kshatriyas, Brahmans, or young men, saying: 'Go there, come hither, take this with you, bring that from there.'

'The Brahmins were tricksters, drone out (of holy words for pray), diviners, and exorcists, ever hungering to add gain to gain.'

The Brahmins earned their living by wrong means of livelihood, by low arts, such as these:

(1) Palmistry—prophesying long life, prosperity, & c., (or the reverse from marks on a child's hands, feet, & c.)

- (2) Divining by means of omens and signs.
- (3) Auguries drawn from thunderbolts and other celestial portents.
- (4) Prognostication by interpreting dreams.
- (5) Fortune-telling from marks on the body.
- (6) Auguries from the marks on cloth gnawed by mice.
- (7) Sacrificing to Agni.
- (8) Offering oblations from a spoon. (9-13) Making offerings to gods of husks, of the red powder between the grain and the husk, of husked grain ready for boiling, or ghee and of oil.
- (14) Sacrificing by spewing mustard seeds, & c., into the fire out of one's mouth.
- (15) Drawing blood from one's right knee as a sacrifice to the gods.
- (16) Looking at the knuckles, & c., and, after muttering a charm, divining whether a man is well born of luck or not.
- (17) Determining whether the site for a proposed house or pleasure, is luck or not.
- (18) Advising on customary law.
- (19) Laying demons in a cemetery.
- (20) Laying ghosts.
- (21) Knowledge of the charms to be used when lodging in an earth house.
- (22) Snake charming.
- (23) The poison craft.
- (24) The scorpion craft.
- (25) The mouse craft.
- (26) The bird craft.
- (27) The crow craft.
- (28) Foretelling the number of years that man has yet to live.
- (29) Giving charms to ward off arrows.
- (30) The animal wheel.

The Brahmins earned their living by wrong means of livelihood, by low arts, such as these:

Knowledge of the signs of good and bad qualities in the following things and of the marks in them denoting the health or luck of their owners : to wit, gems, staves, garments, swords, arrows, bows, other weapons, women, men, boys, girls, slaves, slave-girls, elephants, horses, buffaloes, bulls, oxen, goats, sheep, fowls, quails, iguanas, herrings, tortoises, and other animals.

The Brahmins, earned their living by wrong means of livelihood by low arts such as soothe saying, to the effect that,

The chiefs will march out.

The home chiefs will attack and the enemies retreat.

The enemies' chiefs will attack, and ours will retreat.

The home chiefs will gain the victory, and ours will suffer defeat.

The foreign chiefs will gain the victory on this side, and ours will suffer defeat.

Thus will there be victory on this side, defeat on that. The Brahmins, while living on food provided by the faithful, earn their living by wrong means of livelihood, by such low arts as fore-telling:

(1) There will be an eclipse of the Moon.

(2) There will be an eclipse of the Sun.

(3) There will be an eclipse of a star (Nakshatra).

(4) There will be aberration of the Sun or the Moon.

(5) The Sun or the Moon will return to its usual path.

(6) There will be aberrations of the stars.

(7) The stars will return to their usual course.

(8) There will be a jungle fire.

(9) There will be a fall of meteors.

(10) There will be an earthquake.

(11) The god will thunder.

(12-15) There will be rising and setting, clearness and dimness of the Sun or the Moon or the stars, or foretelling of each of these fifteen phenomena that they will betoken such and such a result."

The Brahmins earned their living by wrong means of the livelihood, by low arts, such as these:

Foretelling an abundant rainfall.

Foretelling a deficient rainfall.

Foretelling a good harvest.

Foretelling scarcity of food.

Foretelling tranquillity.

Foretelling disturbances.

Foretelling a pestilence.

Foretelling a healthy season.

Counting on the fingers.

Counting without using the fingers Summing up large totals.

Composing ballads, poetising.

Casuistry, sophistry.

The Brahmins, while living on food provided by the faithful, earn their living by wrong means of livelihood by low arts, such as:

(1) Arranging a lucky day for marriages in which the bride or bridegroom is brought home.

(2) Arranging a lucky day for marriages in which the bride or bridegroom is sent forth.

(3) Fixing a lucky time for the conclusion of treaties of peace (or using charms to procure harmony).

(4) Fixing a lucky time for the outbreak of hostilities (or using charms to make discord).

(5) Fixing a lucky time for the calling in of debts (or charms for success in throwing dice).

(6) Fixing a lucky time for the expenditure of money (or charms to bring ill luck to an opponent throwing dice).

(7) Using charms to make people lucky.

(8) Using charms to make people unlucky.

(9) Using charms to procure abortion.

(10) Incantations to keep a man's jaws fixed.

(11) Incantations to bring on dumbness.

(12) Incantations to make a man throw up his hands.

(13) Incantations to bring on deafness.

(14) Obtaining oracular answers by means of the magic mirror.

(15) Obtaining oracular answers through a girl possessed.

(16) Obtaining oracular answers from a god.

(17) The worship of the Sun.

(18) The worship of the Great One.

(19) Bringing forth flames from one's mouth.

(20) Invoking Siri, the goddess of Luck. The Brahmins earned their living by wrong means of livelihood, by low arts, such as these:

(1) Vowing gifts to a god if a certain benefit be granted.

(2) Paying such vows.

(3) Repeating charms while lodging in an earth house.

(4) Causing virility.

(5) Making a man impotent.

(6) Fixing on lucky sites for dwellings.

(7) Consecrating sites.

(8) Ceremonial rinsing of the mouth.

(9) Ceremonial bathing.

(10) Offering sacrifices.

(11-14) Administering emetics and purgatives.

- (15) Purging people to relieve the head (that is by giving drugs to make people sneeze).
 - (16) Oiling people's ears (either to make them grow or to heal sores on them).
 - (17) Satisfying people's eyes (soothing them by dropping medicinal oils into them).
 - (18) Administering drugs through the nose.
 - (19) Applying collyrium to the eyes.
 - (20) Giving medicinal ointment for the eyes.
 - (21) Practising as an oculist.
 - (22) Practising as a surgeon.
 - (23) Practising as a doctor for children.
 - (24) Administering roots and drugs.
 - (25) Administering medicines in rotation.
- (INCOMPLETE)

CHAPTER 4

Reformers and Their Fate

This is a typed bound copy consisting of 87 pages. The Ambatta Sutta starts at page 69 of the manuscript and after page 70, pages are numbered from A to Z. The beginning of page 71 starts with Lohikka Sutta.—Editors.

1. Aryan Society. II. Buddha and Reform. III. I

It was Sir T. Madhava Raw who speaking of Hindu Society of his time said :

"The longer one lives, observes, and thinks, the more deeply does he feel that there is no community on the face of the earth which suffers less from political evils and more from self-inflicted or self-accepted or self-created, and therefore avoidable evils, than the Hindu Community."

This view expresses quite accurately and without exaggeration the necessity of social reform in Hindu Society.

The first Social Reformer and the greatest of them all is Gautama Buddha. Any history of Social Reform must begin with him and no history of Social Reform in India will be complete which omits to take account of his great achievements.

Siddhartha, surname Gautama, was born in the Sakya clan at Kapilvastu in Northern India, on the borders of Nepal in 563 B.C. Tradition says he was a prince. He received education fit for a prince, was married and had a son. Oppressed by the evils and misery then prevalent in the Aryan Society he renounced the world

at the age of twenty-nine and left his home in search for truth and deliverance. He became a mendicant and studied with two distinguished teachers, but finding that their teachings did not satisfy him he left them and became an ascetic. He gave up that also as being futile. By hard thinking he got insight into things and as a result of this insight he formulated his own

Dhamma. This was at the age of thirty-five. The remainder of his eighty years he spent in spreading his Dhamma and founding and administering an order of monks. He died about the year 483 B.C. at Kusinara surrounded by his devoted followers.

To the carrying out of his mission, the Buddha devoted all his days after the achievement of enlightenment. His time was divided between feeding the lamp of his own spiritual life by solitary meditation—just as Jesus spent hours in lonely prayer—and active preaching to large audiences of his monks, instructing the more advanced in the subtle points of inner development, directing the affairs of the Order, rebuking breaches of discipline, confirming the faithful in their virtue, receiving deputation, carrying on discussions with learned opponents, comforting the sorrowful, visiting kings and peasants, Brahmins and outcasts, rich and poor. He was a friend of publicans and sinners, and many a public harlot, finding herself understood and pitied, gave up her evil ways to take refuge in the "Blessed One". Such a life demanded a variety of moral qualities and social gifts, and among others a combination of democratic sentiments with an aristocratic *Savoir Faire* which is seldom met with. In reading the dialogues one can never forget that Gotama had the birth and upbringing of an aristocrat. He converses not only with Brahmins and pundits but with princes and ministers and kings on easy and equal terms. He is a good diner-out, with a fund of anecdotes and apparently a real sense of humour, and is a welcome guest at every house. A distinguished Brahmin is pictured as describing him thus :

'The venerable Gotama is well born on both sides, of pure descent..... is handsome, pleasant to look upon, inspiring trust, gifted with great beauty of complexion, fair in colour, fine in presence, stately to behold, virtuous with the virtue of the Arhats, gifted with goodness and virtue and with a pleasant voice and polite address, with no passion of lust left in him nor any fickleness of mind. He bids all men welcome, is congenial, conciliatory, not supercilious, accessible to all, not backward in conversation. ' But what appealed

most to the India of his time, and has appealed most to India through the ages, is expressed by the Brahmin in these words :

"The monk Gotama has gone forth into the religious life, giving up the great clan of his relatives, giving up much money and gold, treasure both buried and above ground. Truly while he was still a young man, without a grey hair on his head, in the beauty of his early manhood he went forth from the household life into the homeless state."

"Such a life as his, demanded not only pleasant manners, sympathy and kindness, but firmness and courage. When the occasion required it, he could be calmly severe with those who worked evil for the Order. Physical pain, he bore not only with equanimity but with no diminution of his inner joy. Courage also was needed and was found ; as, for example, in the Buddha's calm attitude during Devadatta's various attempts to assassinate him, in facing threats of murder, and in the conversion of the famous bandit in the Kingdom of Kosala, whom all the countryside feared, and whom the Buddha visited, alone and unarmed, in his lair, changing him from a scourge of the kindorn to a peaceful member of the Order. Neither pain, danger, nor insults marred his spiritual peace. When he was reviled he reviled not again. Nor was he lacking in tender thoughtfulness for those who needed his comfort and support."

He was beloved of all. Repeatedly he is described or describes himself, as one born into the world for the good of the many, for the happiness of the many, for the advantage, the good, the happiness of gods and men, out of compassion for the world.

He left an indelible mark on the Aryan Society and although his name has gone out of India the impression of his teaching still remains.

His religion spread like wild fire. It soon became the religion of the whole of India. But it did not remain confined to India. It reached every corner of the then known world. All races accepted it. Even the Afghans were once Buddhists. It did not remain confined to Asia. There is evidence to show that Buddhism was the religion of Celtic Britain.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_15What was the cause of this rapid spread of Buddhism? On this point what Prof. Hopkins has said is worth quoting. This is what he says:

"The cause, then, of the rapid spread of Buddhism at the beginning of its career lies only in the conditions of its teaching and the

influential backing of its founder. It was the individual Buddha that captivated men ; it was the teaching that emanated from him that fired enthusiasm ; it was his position as an aristocrat that made him acceptable to the aristocracy, his magnetism that made him the idol of the people. From every page stands out the strong, attractive personality of this teacher and winner of hearts. No man ever lived so godless yet so godlike. Arrogating to himself no divinity, despairing of future bliss, but without fear as without hope, leader of thought but despising lovingly the folly of the world, exalted but adored, the universal brother, he wandered among men, simply, serenely, with gentle irony subduing them that opposed him, to congregation after congregation speaking with majestic sweetness, the master to each, the friend of all. His voice was singularly vibrant and eloquent; his very tones convinced the hearer, his looks inspired awe. From the tradition it appears that he must have been one of those whose personality alone suffices to make a man not only a leader but also a god to the hearts of his fellows. When such a one speaks he obtains hearers. It matters little what he says, for he influences the motions, and bends whoever listens to his will. But if added to this personality, if encompassing it. there be the feeling in the minds of others that what this man teaches is not only a variety, but the very hope of their salvation ; if for the first time they recognise in his words the truth that makes of slaves free men, of classes a brotherhood, then it is not difficult to see wherein lies the lightning like speed with which the electric current passes from heart to heart. Such a man was Buddha, such was the essential of his teaching: and such was the inevitable rapidity of Buddhistic expansion and the profound influence of the shock that was produced by the new faith upon the moral consciousness of Buddha's people."

To understand the great reform, which he brought about by his teaching, it is necessary to have some idea of the degraded condition of the Aryan civilisation at the time when Buddha started on the mission *of his life*.

The Aryan Community of his time was steeped in the worst kind of debauchery: social, religious and spiritual.

To mention only a few of the social evils, attention may be drawn to gambling. Gambling had become as widespread among the Aryans as drinking.

Every king had a hall of gambling attached to his palace. Every king had an expert gambler in his employment as a companion to play with. King *Virat* had in his employment *Kank* as an expert gambler. Gambling was not merely a pastime with kings. They played with heavy stakes. They staked kingdoms, dependents, relatives, slaves, servants. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_16 King Nala staked everything in gambling with *Paskekar* and lost everything. The only thing he did not stake was himself and his wife Damayanti. Nala had to go and live in the forest as a beggar. There were kings who went beyond Nala. The

Mahabharat mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_17 tells how Dharma the eldest of the Pandavas gambled and staked everything, his brothers and also his and their wife Draupadi. Gambling was a matter of honour with the Aryans and any invitation to gamble was regraded as an injury to one's honour and dignity. Dharma gambled with such disastrous consequences although he was warned beforehand. His excuse was that he was invited to gamble and that as a man of honour he could not decline such an invitation.

This vice of gambling was not confined to kings. It had infected even the common folk. Rig-Veda contains lamentations of poor Aryan ruined by gambling. The habit of gambling had become so common in Kautilya's time that there were gambling houses licensed by the king from which the king derived considerable revenue.

Drinking was another evil which was rampant among the Aryans. Liquors were of two sorts *Soma* and *Sura*. *Soma* was a sacrificial wine. The drinking of the Soma was in the beginning permitted only to Brahmins, Kshatriyas and Vaishyas. Subsequently it was permitted only to Brahmins and Kshatriyas. The Vaishyas were excluded from it and the Shudras were never permitted to taste it. Its manufacture was a secret known only to the Brahmins. *Sura* was open to all and was drunk by all. The Brahmins also drank *Sura*. Shukracharyam mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_18 the priest to the *Asuras* drank so heavily that in his drunken state he gave the life-giving *Mantras*—known to him only and with which he used to revive the *Asuras* killed by the *Devas*— to *Katch* the son of *Brabhaspati* who was the priest of the *Devas*. The Mahabharat mentions an occasion when both *Krishna* and *Arjuna* were dead drunk. That shows that the best

among the Aryan Society were not only not free from the drink habit but that they drank heavily. The most shameful part of it was that even the Aryan women were addicted to drink. For instance *Sudeshna* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_19 the wife of king *Virat* tells her maid *Sairandhri* to go to *Kichaka's* palace and bring *Sura* as she was dying to have a drink. It is not to be supposed that only queens indulged in drinking. The habit of drinking was common among women of all classes and even Brahmin women were not free from it. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_20 That liquor and dancing was indulged in by the Aryan women is clear from the *Kausitaki Grihya Sutra* 1. 1 1-12, which says, "Four or eight women who are not widowed after having been regaled with wine and food are to dance for four times on the night previous to the wedding ceremony."

Turning to the Aryan Society it was marked by class war and class degradation. The Aryan Society recognised four classes, the Brahmins, Kshatriyas, Vaishyas and Shudras. These divisions were not merely horizontal divisions, all on a par with each other in the matter of social relationship. These divisions, had become vertical, one above the other. Being placed above or below there was both jealousy and rivalry among the four classes. This jealousy and rivalry had given rise even to enmity. This enmity was particularly noticeable between the two highest classes, namely, the Brahmins and the Kshatriyas and there was a regular class *war* between the two, so intense that it would delight the heart of any Marxian to read the descriptions thereof. Unfortunately there is no detailed history of this class war between the Brahmins and the Kshatriyas. Only a few instances have been recorded. Vena, Pururavas, Nahusha, Sudas, Sumukh and Nimi were some of the Kshatriya kings who came into the conflict with the Brahmins. The issues in these conflicts were different.

The issue between Vena and the Brahmins was whether a King could command and require the Brahmins to worship him and offer sacrifice to him instead of the Gods. The issue between Pururavas and the Brahmins was whether a Kshatriya King could confiscate the property of the Brahmin. The issue between Nahusha and the Brahmins was whether a Kshatriya king could order a Brahmin to do a servile job. The issue between Nimi and the Brahmins was whether the king was bound to employ only his family priest at the sacrificial

ceremony. The issue between Sudas and the Brahmins was whether the king was bound to employ only a Brahmin as a priest.

This shows how big were the issues between the two classes. No wonder that the struggle between them was also the bitterest. The wars between them were not merely occasional riots. They were wars of extermination. It is stated that Parashuram a Brahmin fought against the Kshatriyas twenty-one times and killed every Kshatriya.

While the two classes were fighting among themselves for supremacy, they both combined to keep down the Vaishyas and the Shudras. The Vaishya was a milch cow. He lived only to pay taxes. The Shudra was a general beast *of* burden. These two classes existed for the sole purpose of making the life of the Brahmins and Kshatriyas glorious and happy. They had no right to live for themselves. They lived to make the life of their betters possible.

Below these two classes there were others. They were the Chandalas and Shwappakas. They were not untouchables but they were degraded. They were outside the pale of society and outside the pale of law. They had no rights and no opportunities. They were the rejects of the Aryan Society.

The sexual immorality *of* the Aryan Society must shock their present day descendants. The Aryans of pre-Buddhist days had no such rule of prohibited degrees, as we have today to govern their sexual or matrimonial relationship.

According to the Aryan Mythology, Brahma is the creator. Brahma had three sons and a daughter. His one son Daksha married his sister. The daughters born of this marriage between brother and sister were married some to Kashyapa the son of Marichi the son of Brahma and some to Dharma the third son of Brahma.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_21

In the Rig-Veda there is an episode related of Yama and Yami brother and sister. According to this episode Yami the sister invites her brother Yama to cohabit with her and becomes angry when he refuses
to do
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_22.

A father could marry his daughter. *Vashishta* married his own daughter *Shatrupa* when she came of age.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_23. *Manu* married his daughter

[Ila.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_24](#) *Janbu* married his daughter *Janhavi*
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_25.](#) *Surya* married his daughter *Usham*
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_26](#) There was polyandri not of the ordinary type. The polyandri prevalent among the Aryans was a polyandri when Kinsmen cohabited with one woman. *Dhabaprachetani* and his son *Soma* cohabited with *Marisha* the daughter of *Somam*
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_27](#)

Instances of grandfather marrying his grand-daughter are not wanting. Daksha gave his daughter in marriage to his father *Brahmam*
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_28](#) and from that marriage was born the famous Narada. Dauhitra. gave his 27 daughters to his father *Soma* for cohabitation and procreation
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_29.](#)

The Aryans did not mind cohabiting with women in the open and within sight of people. The Rishis used to perform certain religious rites which were called Vamdevya vrata. These rites used to be performed on the Yadnya Bhumi. If any woman came there and expressed a desire for sexual intercourse and asked the sage to satisfy her, the sage used to cohabit with her then and there in the open on the Yadnya Bhumi. Instances of this may be mentioned; the case of the sage Parashara who had sexual intercourse with Satyavati and also of Dirghatapa. That such a custom was common is shown by the existence of the word Ayoni. The word Ayoni is understood to mean of immaculate conception. That is not however the original meaning of the word. The original meaning of the word Yoni is house. Ayoni means conceived out of the house i.e. in the open. That there was nothing deemed to be wrong in this is clear from the fact that both Sita and Draupadi were Ayonija. That this was very common is clear from the fact that religious injunctions had to be issued against such a practice.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_30](#)

There was prevalent among the Aryans the practice of renting out their women to others for a time. As an illustration may be mentioned the story of Madhavi: [MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_31](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution_and_Counter_Rev.in_Ancient_India_PART_I.htm_-_msocom_31) The king Yayati gave his daughter Madhavi as an offering to his guru Galav. Galav rented out the girl Madhavi to three kings each a period. Thereafter he gave her in marriage to Vishwamitra. She remained with him until a son was born to her. Thereafter Galav took away the girl and gave her back to her father Yayati.

Besides the practice of letting out women to others temporarily at a rent, there was prevalent among the Aryans another practice namely, allowing procreation by the best amongst them. Raising a family was treated by them as though it was a breeding or stock raising. Among the Aryas there was a class of persons called *Devas* who were Aryans but of a superior status and prowess. The Aryans allowed their women to have sexual intercourse with any one of the class of *Devas* in the interest of good breeding. This practice prevailed so extensively that the *Devas* came to regard prelibation in respect of the Aryan women as their prescriptive right. No Aryan woman could be married unless this right of prelibation had been redeemed and the woman released from the control of the *Devas* by offering what was technically called *Avadan*. The *Laja Hoame* which is performed in every Hindu marriage and the details of which are given in the *Ashwalayan Grahya Sutra* is a relic of this act of the redemption of the Aryan woman from the right of prelibation of the *Devas*. The *Avadan* in the *Laja Hoame* is nothing but the price for the extinguishment of the right of the *Devas* over the bride. The *Saptapadi* performed in all Hindu marriages and which is regarded as the most essential ceremony without which there is no lawful marriage has an integral connection with this right of prelibation of the *Devas*. *Saptapadi* means walking by the bridegroom seven steps with the bride. Why is this essential? The answer is that the *Devas* if they were dissatisfied with the compensation could claim the woman before the seventh step was taken. After the seventh step was taken, the right of the *Devas* was extinguished and the bridegroom could take away the bride and live as husband and wife without being obstructed or molested by the *Devas*.

There was no rule of chastity for maidens. A girl could have sexual intercourse with and also progeny from anybody without contracting

marriage. This is evident from the root meaning of the word *Kanya* which means a girl. *Kanya* comes from the root *Kam* which means a girl free to offer herself to any man. That they did offer themselves to any man and had children without contracting regular marriage is illustrated by the case of *Kunti* and *Matsyagandha*. Kunti had children from different men before she was married to Pandu and Matsyagandha had sexual intercourse with the sage Parashara before she was married to *Shantanu* the father of Bhishma.

Bestiality was also prevalent among the Aryans. The story of the sage Dam having sexual intercourse with a female deer [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_32](#) is well known. Another instance is that of Surya cohabiting with a mare [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_33..](#) But the most hideous instance is that of the woman having sexual intercourse with the horse in the Ashvamedha Yagna.

The religion of the Aryan consisted of the *Yadna* or sacrifice. The sacrifice was a means to enter into the godhead of the gods, and even to control the gods. The traditional sacrifices were twenty-one in number divided into three classes of seven each. The first were sacrifices of butter, milk, corn, etc. The second class covered *Soma* sacrifices and third animal sacrifices. The sacrifice may be of short duration or long duration lasting for a year or more. The latter was called a *Sattra*. The argument in favour of the sacrifice is that eternal holiness is won by him that offers the sacrifice. Not only a man's self but also his Manes stood to benefit by means of sacrifice. He gives the Manes pleasure with his offering, but he also raises their estate, and sends them up to live in a higher world [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_34.](#)

The sacrifice was by no means meant as an aid to the acquirement of heavenly bliss alone. Many of the great sacrifices were for the gaining of good things on earth. That one should sacrifice without the ulterior motive of gain is unknown. Brahmanic India knew no thank offering. Ordinarily the gain is represented as a compensating gift from the divinity, whom they sacrifice. The sacrifice began with the recitation : "He offers the sacrifice to the god with this text : 'Do thou give to me (and) I (will) give to thee ; do thou bestow on me (and) I (will) bestow on thee'."

The ceremony of the sacrifice was awe-inspiring. Every word was pregnant with consequences and even the pronunciation of the word or accent was fateful. There are indications, however, that the priest themselves understood that, much in the ceremonial was pure hocus-pocus, and not of much importance as it was made out to be.

Every sacrifice meant fee to the priest. As to fee, the rules were precise and their propounds were unblushing. The priest performed the sacrifice for the fee alone, and it must consist of valuable garments, kine, horses or gold—when each was to be given was carefully stated. The priests had built up a great complex of forms, where at every turn fees were demanded. The whole expense, falling on one individual for whose benefit the sacrifice was performed, must have been enormous. How costly the whole thing became can be seen from the fact that in one place the fee for the sacrifice is mentioned as one thousand cows. For this greed, which went so far that he proclaimed that he who gives a thousand cows obtains all things of heaven. The priest had a good precedent to cite, for, the gods of heaven, in all tales told of them, ever demand a reward from each other when they help their neighbour gods. If the Gods seek rewards, the priest has a right to do the same.

The principal sacrifice was the animal sacrifice. It was both costly and barbaric. In the Aryan religion there are five sacrificial animals mentioned. In this list of sacrificial animals man came first. The sacrifice of a man was the costliest. The rules of sacrifice required that the individual to be slaughtered must be neither a priest nor a slave. He must be a Kshatriya or Vaishya. According to the ordinary valuation of those times the cost of buying a man to be sacrificed was one thousand cows. Besides being costly and barbaric, it must have been revolting because the sacrificers had not only to kill the man but to eat him. Next to man came the horse. That also was a costly sacrifice because the horse was a rare and a necessary animal for the Aryans in their conquest of India. The Aryans could hardly afford such a potent instrument of military domination to be offered as sacrifice. The sacrifice must have been revolting in as much as one of the rituals in the horse-sacrifice was the copulation of the horse before it was slaughtered with the wife of the sacrificer.

The animals most commonly offered for sacrifice were of course the cattle which were used by the people for their agricultural purposes. They were mostly cows and bullocks.

The Yagnas were costly and they would have died out of sheer considerations of expense involved. But they did not. The reason is that the stoppage of Yagna involved the question of the loss of the Brahmin's fees. There could be no fees if the Yagna ceased to be performed and the Brahmin would starve. The Brahmin therefore found a substitute for the costly sacrificial animals. For a human sacrifice the Brahmin allowed as a substitute for a live man, a man of straw or metal or earth. But they did not altogether give up human sacrifice for fear that this Yagna might be stopped and they should lose their fees. When human sacrifice became rare, animal sacrifice came in as a substitute. Animal sacrifice was also a question of expense to the laity. Here again rather than allow the sacrifice to go out of vogue, the Brahmins came forward with smaller animals for cattle just as cattle had been allowed to take the place of the man and the horse. All this was for the purpose of maintaining the *Yagna* so that the Brahmin did not lose his fees which was his maintenance. So set were the Brahmins on the continuance of the Yagna that they were satisfied with merely rice as an offering.

It must not however be supposed that the institution of substitutes of the Yagnas of the Aryans had become less horrid. The introduction of substitutes did not work as a complete replacement of the more expensive and more ghastly sacrifice by the less expensive and the more innocent. All that it meant was that the offering may be according to the capacity of the sacrificer. If he was poor his offering may be rice. If he was well to do it might be a goat. If he was rich it might be a man, horse, cow or a bull. The effect of the substitutes was that the Yagna was brought within the capacity of all so that the Brahmin reaped a larger harvest of feast on the total. It did not have the effect of stopping animal sacrifice. Indeed animals continued to be sacrificed by the thousands.

The Yagna often became a regular carnage of cattle at which the Brahmins did the work of butchers. One gets some idea of the extent of this carnage of innocent animals from references to the Yagnas which one comes across in Buddhist literature. In the Suttanipat a description is given of the Yagna that was arranged to be performed by Pasenadi, king of Kosala. It is stated that there were tied to the poles for slaughter at the Yagna five hundred oxen, five hundred bulls, five hundred cows, five hundred goats and five hundred lambs and that the servants of the king who were detailed to do the jobs according to the orders given to them by the

officiating Brahmin priests were doing their duties with tears in their eyes.

The Yadna besides involving a terrible carnage was really a kind of carnival. Besides roast meat there was drink. The Brahmins had Soma as well as Sura. The others had Sura in abundance. Almost every Yadna was followed by gambling and what is most extraordinary is that, side by side there went on also sexual intercourse in the open. Yadna had become debauchery and there was no religion left in it. The Aryan religion was just a series of observances. Behind these observances there was no yearning for a good and a virtuous life. There was no hunger or thirst for righteousness. Their religion was without any spiritual content. The hymns of the Rig Veda furnish very good evidence of the absence of any spiritual basis for the Aryan religion. The hymns are prayers addressed by the Aryans to their gods. What do they ask for in these prayers? Do they ask to be kept away from temptation? Do they ask for deliverance from evil? Do they ask for forgiveness of sins? Most of the hymns are in praise of Indra.

They praise him for having brought destruction to the enemies of the Aryans. They praise him because he killed all the pregnant wives of Krishna, an Asura. They praise him because he destroyed hundreds of villages of the Asuras. They praise him because he killed lakhs of Dasyus. The Aryans pray to Indra to carry on greater destruction among the Anaryas in the hope that they may secure to themselves the food supplies of the Anaryas and the wealth of the Anaryas. Far from being spiritual and elevating, the hymns of the Rig-Veda are saturated with wicked thoughts and wicked purposes. The Aryan religion never concerned itself with what is called a righteous life.

II

Such was the state of the Aryan Society when Buddha was born. There are two pertinent questions regarding Buddha as a reformer who laboured to reform the Aryan Society. What were the chief planks in his reform? To what extent did he succeed in his reform movement? To take up the first question.

Buddha felt that for the inculcation of a good and a pure life, example was better than precept. The most important thing he did was to lead a good and a pure life so that it might serve as a model to all. How unblemished a life he led can be gathered from the *Brahma-*

Jala Sutta. It is reproduced below because it not only gives an idea of the pure life that Buddha led but it also gives an idea of how impure a life the Brahmins, the best among the Aryans led.

Brahma Jala Sutta

1. Thus have I heard. The Blessed One was once going along the high road between Rajagaha and Nalanda with a great company of the brethren with about five hundred brethren. And Suppiya the mendicant too was going along the high road between Rajagaha and Nalanda with his disciple the young Brahmadata. Now just then Suppiya the mendicant was speaking in many ways in dispraise of the Buddha, in dispraise of the Doctrine, in dispraise of the Order. But young Brahmadata, his pupil, gave utterance, in many ways, to praise of the Buddha, to praise of the Doctrine, to praise of the Order. Thus they two, teacher and pupil, holding opinions in direct contradiction of one to the other, were following, step by step, after the Blessed one and the company of the brethren.

2. Now the Blessed one put up at the royal rest house in the Ambalattika pleasance to pass the night, and with him the company of the brethren. And so also did Suppiya the mendicant, and with him his young disciple Brahmadata. And there, at the rest houses, these two carried on the same discussion as before.

3. And in the early dawn a number of the brethren assembled as they rose up. in the pavilion ; and this was the trend of the talk that sprang up among them as they were seated there. 'How wonderful a thing is it, brethren, and how strange that the Blessed One, he who knows and sees, the Arahant the Buddha Supreme, should so clearly have perceived how various are the inclination of men! For see how while Suppiya the mendicant speaks in many ways in dispraise of the Buddha, the Doctrine, and the Order, his own disciple, young Brahmadata, speaks, in as many ways, in praise of them. So do these two, teacher and pupil, follow step by step after the Blessed One and the company of the brethren, giving utterance to views in direct contradiction of one to the other.

4. Now the Blessed One. on realising what was the drift of their talk, went to the pavilion, and took his seat on the mat spread out for him. And when he had sat down he said :”What is the talk *on* which you are engaged sitting here and what is the subject of the conversation between you?”And they told him all. And he said:

5. Brethren, if outsiders should speak against me, or against the Doctrine, or against the Order, you should not on that account

either bear malice, or suffer heart burning, or feel ill-will. If you, on that account, should be angry and hurt, that would stand in the way of your own self-conquest. If, when others speak against us, you feel angry at that, and displeased, would you then be able to judge how far that speech of theirs is well said or ill? 'That would not be so, Sir.'

'But when outsiders speak in dispraise of me, or of the Doctrine, or of the Order, you should unravel what is false and point it out as wrong, saying, "For this *or* that reason this is not the fact, that is not so, such a thing is not found among us, is not in us."

6. But also, brethren, if outsiders should speak in praise of me, in praise of the Doctrine, in praise of the Order, you should not, on that account, be filled with pleasure *or* gladness, or be lifted up in heart. Were you to be so that also would stand in the way of your self-conquest. When outsiders speak in praise of me, or of the Doctrine, or of the Order, you should acknowledge what is right to be the fact saying: "For this or that reason this is the fact, that is so, such a thing is found among us, is in us."

7. It is in respect only of trifling things, of matters of little value, of mere morality, that an unconverted man, when praising the Tathagata, would speak. And what are such trifling, minor details of mere morality that he would praise?

(4) (The Moralities. Part 1).

8. "Putting away the killings of living things, Gotama the recluse holds aloof from the destruction of life. He has laid the cudgel and the sword aside, and ashamed of roughness, and full of mercy, he dwells compassionate and kind to all creatures that have life." It is thus that the unconverted man, when speaking in praise of the Tathagata, might speak.

Or he might say: "Putting away the taking of what has not been given, Gotama the recluse lived aloof from grasping what is not his own. He takes only what is given, and expecting that gifts will come, he passes his life in honesty and purity of heart."

Or he might say: "Putting away in-chastity, Gotama the recluse is chaste. He holds himself aloof, far off, from the vulgar practice, from the sexual act."

9. Or he might say: "Putting away lying words, Gotama the recluse holds himself aloof from falsehood. He speaks truth from the truth he never swerves; faithful and trustworthy, he breaks not his word to the world".

Or he might say: "Putting away slander. Gotama the recluse holds himself aloof from calumny. What he hears here he repeats not elsewhere to raise a quarrel against the people here; what he hears elsewhere he repeats not here to raise a quarrel against the people there. Thus does he live as a binder together of those who are divided, an encourage of those who are friends, a peacemaker, a lover of peace, impassioned for peace, a speaker of words that make for peace."

Or he might say: "Putting away rudeness of speech, Gotama the recluse holds himself aloof from harsh language. Whatsoever word is blameless, pleasant to the ear, lovely, reaching to the heart, urbane, pleasing to the people, beloved of the people such are words he speaks."

Or he might say : "Putting away frivolous talk, Gotama the recluse holds himself aloof from vain conversation. In season he speaks, in accordance with the facts, words full of meaning, on religion, on the discipline of the Order. He speaks, and at the right time, words worthy to be laid up in one's heart, fitly illustrated, clearly divided, to the point."

10. Or he might say: "Gotama the recluse holds himself aloof from causing injury to seeds or plants.

He takes but one meal a day, not eating at night, refraining from food after hours (after midday).

He refrains from being a spectator at shows at fairs with nautch dances, singing, and music.

He abstains from wearing, adorning, or ornamenting himself with garlands, scents, and unguents.

He abstains from the use of the large and lofty beds.

He abstains from accepting silver or gold.

He abstains from accepting uncooked grain.

He abstains from accepting raw meat.

He abstains from accepting women or girls.

He abstains from accepting bondmen or bond-women.

He abstains from accepting sheep or goats.

He abstains from accepting fowls or swine.

He abstains from accepting elephants, cattle, horses and mare.

He abstains from accepting cultivated fields or waste.

He abstains from the acting as a go-between or messenger.

He abstains from buying and selling.

He abstains from cheating with scales or bronzes or measures.

He abstains from the crooked ways of bribery, cheating, and fraud.

He abstains from maiming, murder, putting in bonds, highway robbery, dacoity, and violence."

Such are the things, brethren, which an unconverted man, when speaking in praise of the Tathagata might say. '

Here ends the Kula Sila (the Short Paragraphs on Conduct).

II. Or he might say:"Whereas some recluses and Brahmans, while living on food provided by the faithful, continue addicted to the injury of seedlings and growing plants whether propagated from roots or cuttings or joints or buddings or seeds—Gotarna the recluse holds aloof from such injury to seedlings and growing plants."

12. Or he might say:"Whereas some recluses and Brahmans, while living on food provided by the faithful, continue addicted to the use of the things stored up; stores, to wit, of foods, drinks, clothing, equipages, bedding, perfumes, and curry-stuffs—Gotama the recluse holds aloof from such use of things stored up."

13. Or he might say:"Whereas some recluses and Brahmans, while living on food provided by the faithful, continue addicted to visiting shows ; that is to say,

- (1) Nautch dances (nakkarn),
- (2) Singings of songs (gitam)
- (3) Instrumental music (vaditam)
- (4) Shows at fairs (pekham)
- (5) Ballads recitations (akkhanam)
- (6) Hand music (paniseram)
- (7) The chanting of bards (vetala)
- (8) Tam-tam playing (kumbhathunam) (9) Fair scences (sobhanagarkarn)
- (10) Acrobatic feats by Kandalas (Kandala-vamsa-dhopanam)
- (11) Combats of elephants, horses, buffaloes, bulls, goats, rams. Cocks and quails.

(12) Bouts at quarterstaff, boxing, wrestling.

(13)-(16) Sham-fights, roll-calls, manoeuvres, reviews. Gotama the recluse holds aloof from visiting such shows."14. Or he might say:"Whereas some recluses and Brahmans, while living on food provided by the faithful, continue addicted to games and recreations, that is to say.

- (1) Games on hoards with eight, or with ten rows of squares.
- (2) The same games played by imagining such boards in the air.

(3) Keeping going over diagrams drawn on the ground so that one-steps only where one ought to go.

(4) Either removing the pieces or men from a heap with *one's* nail or putting them into a heap in each case without shaking it. He, who shakes the heap, loses.

(5) Throwing dice.

(6) Hitting a short stick with a long one.

(7) Dipping the hand with the fingers stretched out in lac or red dye, or flour water, and striking the wet hand on the ground or on a wall calling out 'What shall it be?' and showing the form requires—elephants, horses etc.,

(8) Games with balls.

(9) Blowing through toy pipes made of leaves.

(10) Ploughing with toy ploughs.

(11) Turning summersaults.

(12) Playing with toy windmills made of palm leaves.

(13) Playing with toy measures made of palm leaves.

(14, 15) Playing with toy carts or toy bows.

(16) Guessing at letters traced in the air, or on a playfellow's back.

(17) Guessing the playfellow's thoughts.

(18) Mimicry of deformities. Gotama the recluse holds aloof from such games and recreations."

15. Or he might say: "Whereas some recluses and Brahmans, while living on food provided by the faithful, continue addicted to the use of high and large couches: that is to say,

(1) Moveable settees, high, and six feet long (Asandi).

(2) Divans with animal figures carved on the supports (Pallanko).

(3) Goats' hair coverings with very long fleece (Ganako).

(4) Patchwork counterpanes of many colour (Kittaka).

(5) White blankets (Patika).

(6) Woollen coverlets embroidered with flowers (Patalika).

(7) Quilts stuffed with cottonwood (Tulika).

(8) Coverlets embroidered with figures of lions, tigers, &c., (Vikatika).

(9) Rugs with fur on both sides (Uddalomi).

(10) Rugs with fur on one side (Ekantalomi).

(11) Coverlets embroidered with gems (Katthissam).

(12) Silk coverlets (Koseyyam).

(13) Carpets large enough for sixteen dancers (Kuttakam).

(14-16) Elephant, horse, and chariot rugs.

- (17) Rugs of antelope skins sewn together (Aginapaveni).
 (18) Rugs of skins of the plantain antelope.
 (19) Carpets with awnings above them (Sauttarakkhadam).
 (20) Sofas with red pillows for the head and feet.”

16. Or he might say:”Whereas some recluses and Brahmans, while living on food provided by the faithful, continue addicted to the use of means for adorning and beautifying themselves: that is to say:

Rubbing in scented powders on one's body, shampooing it, and bathing it patting the limbs with clubs after the manner of wrestlers. The use of mirrors, eye-ointments, garlands, rouge, cosmetics, bracelets, necklaces, walking sticks, reed cases for drugs, rapiers, sunshades, embroidered slippers, turbans, diadems, whisks of the yak's tail, and long-fringed white robes. Gotama the recluse holds aloof from such means of adorning and beautifying the person.”

17. Or he might say: “Whereas some recluses and Brahmans while living on food provided by the faithful, continue addicted to such low conversation as these:

Tales of kings, of robbers, of ministers of state, tales of war, of terrors, of battles; talk about foods and drinks, clothes, beds, garlands, perfumes, talks about relationships, equipages, villages, towns, cities, and countries. Tales about women, and about heroes; gossip at street corners, or places whence water is fetched: ghost stories; desultory talk; speculations about the creation of the land or sea, or about existence and non-existence.

Gotama the recluse holds aloof from such low conversation.”

18. Or he might say:”Whereas some recluses and Brahmans, while living on food provided by the faithful, continue addicted to the use of wrangling phrases: such as:

"You don't understand this doctrine and discipline, I do."

“How should you know about this doctrine and discipline?”

"You have fallen into wrong views. It is I who am in the right."

“I am speaking to the point, you are not."

“You are putting last what ought to come first, and first what ought to come last."

"What you've excoriated so long, that's all quite upset.”

"Your challenge has been taken up.”

"You are proved to be wrong.”"Set to work to clear your views.”

"Disentangle yourself if you can."

Gotama the recluse holds aloof from such wrangling phrases.”

19. Or he might say, "Whereas some recluses and Brahmans, while living on food provided by the faithful, continue addicted to taking messages, going on errands, and acting as go-betweens; to wit, on kings, ministers of state, Kshatriyas, Brahmans, or young men, saying. Go there, come-hither, take this with you, bring that from thence.'

Gotama the recluse abstains from such servile duties."20. Or he might say:"Whereas some recluses and Brahmans, while living on food provided by the faithful, are tricksters, droners out (of holy words for pay), diviners, and exorcists, ever hungering to add gain to gain.

Gotam the recluse holds aloof from such deception and patter."Here ends the Majjhima Sila (the Longer Paragraphs on Conduct).

21. Or he might say:"Whereas some recluses and Brahmans, while living on food provided by the faithful, earn their living by wrong means of livelihood, by low arts, such as these:

(1) Palmistry—prophesying long life, prosperity, &c., (or the reverse), from marks on a child's hands, feet, &c.

(2) Divining by means of omens and signs.

(3) Auguries had drawn from thunderbolts and other celestial portents.

(4) Prognostication by interpreting dreams.

(5) Fortune telling from marks on the body.

(6) Auguries from the marks on cloth gnawed by mice.

(7) Sacrificing to Agni.

(8) Offering oblations from a spoon. (9-13) Making offerings to gods of husks, of the red powder between the grain and the husk, of husked grain ready for boiling, of ghee and of oil.

(14) Sacrificing by spewing mustard seeds, &c., into the fire out of one's mouth.

(15) Drawing blood from one's right knee as a sacrifice to the gods.

(16) Looking at the knuckles, &c., and, after muttering a charm, divining whether a man is well born of luck or not.

(17) Determining whether the site, for a proposed house or pleasure, is lucky or not.

(18) Advising on customary law.

(19) Laying demons in a cemetery.

(20) Laying ghosts.

(21) Knowledge of the charms to be used when lodging in an earth house.

(22) Snake charming.

(23) The poison craft.

(24) The scorpion craft.

(25) The mouse craft.

(26) The bird craft.

(27) The crow craft.

(28) Foretelling the number of years that a man has yet to live.

(29) Giving charms to ward off arrows.

(30) The animal wheel.

Gotama the recluse holds aloof from such low arts.”

22. Or he might say:”Whereas some recluses and Brahmans while living on food provided by the faithful, earn their living by wrong means of livelihood, by low arts, such as these:

Knowledge of the signs of good and bad qualities in the following things, and of the marks in them denoting the health or luck of their owners to wit, gems, staves, garments, swords, arrows, bows, other weapons, women, men, boys, girls, slaves, slave-girls, elephants, horses, buffaloes, bulls, oxen, goats, sheep, fowls, quails, iguanas, herrings, tortoises, and other animals.

Gotama the recluse holds aloof from such low arts.”

23. Or he might say:”Whereas some recluses and Brahmans, while living on food provided by the faithful, earn their living by wrong means of livelihood by low arts, such as sooth saying to the effect that:

The chiefs will march out.

The home chiefs will attack, and the enemies retreat.

The enemies' chiefs will attack, and ours will retreat.

The home chiefs will gain the victory, and ours will suffer defeat.

The foreign chiefs will gain the victory on this side, and ours will suffer defeat.

Thus will there be victory on this side, defeat on that.

Gotama the recluse holds aloof from such low arts.”

24. Or he might say:”Whereas some recluses and Brahmans, while living on food provided by the faithful, earn their living by wrong means of livelihood, by such low arts as foretelling:

(1) There will be an eclipse of the Moon.

(2) There will be an eclipse of the Sun.

(3) There will be an eclipse of a Star (Nakshatra).

- (4) There will be aberration or the Sun or the Moon.
- (5) The Sun or the Moon will return to its usual path.
- (6) There will be aberrations of the Stars.
- (7) The Stars will return to their usual course.
- (8) There will be a fall of meteors.
- (9) There will be a jungle fire.
- (10) There will be an earthquake.
- (11) The God will thunder.
- (12-15) There will be rising and setting, clearness and dimness of the Sun or the Moon or the stars, or foretelling of each of these fifteen phenomena that they will betoken such and such a result.”

Gotama the recluse holds aloof from such low arts.

25. Or he might say:”Whereas some recluses and Brahmans, while living on food provided by the faithful, earn their living by wrong means of the livelihood, by low arts, such as these:

Foretelling an abundant rainfall.

Foretelling a deficient rainfall.

Foretelling a good harvest.

Foretelling scarcity of food.

Foretelling tranquility.

Foretelling disturbances.

Foretelling a pestilence.

Foretelling a healthy season.

Counting on the fingers.

Counting without using the fingers.

Summing up large totals.

Composing ballads, poetising, Casuistry, sophistry.

Gotama the recluse holds aloof from such low arts.”26. Or he might say:”Whereas some recluses and Brahmans, while living on food provided by the faithful, earn their living by wrong means of livelihood, by low arts, such as:

(1) Arranging a lucky day for marriages in which the bride or bridegroom is brought home.

(2) Arranging a lucky day for marriages in which the bride or bridegroom is sent forth.

(3) Fixing a lucky time for the conclusion of treaties of peace (or using charms to procure harmony)

(4) Fixing a lucky time for the outbreak of hostilities (or using charms to make discord).

(5) Fixing a lucky time for the calling in of debts (or charms for success in throwing dice).

(6) Fixing a lucky time for the expenditure of money (or charms to bring ill luck to an opponent throwing dice).

(7) Using charms to make people lucky.

(8) Using charms to make people unlucky.

(9) Using charms to procure abortion.

(10) Incantations to keep a man's jaws fixed.

(11) Incantations to bring on dumbness.

(12) Incantations to make a man throw up his hands.

(13) Incantations to bring on deafness.

(14) Obtaining oracular answers by means of the magic mirror.

(15) Obtaining oracular answers through a girl possessed.

(16) Obtaining oracular answers from a god.

(17) The worship of the Sun.

(18) The worship of the Great One.

(19) Bringing forth flames from one's mouth.

(20) Invoking Siri, the goddess of Luck.

Gotama the recluse holds aloof from such low arts."

27. Or he might say:"Whereas some recluses and Brahmans, while living on food provided by the faithful, earn their living by wrong means of livelihood, by low arts, such as these:

(1) Vowing gifts to a god if a certain benefit be granted,

(2) Praying such vows.

(3) Repeating charms while lodging in an earth house.

(4) Causing virility.

(5) Making a man impotent.

(6) Fixing on lucky sites for dwellings.

(7) Consecrating sites.

(8) Ceremonial rinsing of the mouth.

(9) Ceremonial bathing.

(10) Offering sacrifices.

(11-14) Administering emetics and purgatives.

(15) Purging people to relieve the head (that is by giving drugs to make people sneeze).

(16) Oiling people's ears (either to make them grow or to heal sores on them).

(17) Satisfying people's eyes (soothing them by dropping medicinal oils into them).

(18) Administering drugs through the nose.

- (19) Applying collyrium to the eyes.
- (20) Giving medical ointment for the eyes.
- (21) Practising as an oculist.
- (22) Practising as a surgeon.
- (23) Practising as a doctor for children.
- (24) Administering roots and drugs.
- (25) Administering medicines in rotation.

Gotama the recluse holds aloof from such low arts.

"These brethren are the trifling matters, the minor details of morality, of which the unconverted man, when praising the Tathagata, might speak."

Here end the Long Paragraphs on Conduct.

III

This was indeed the highest standard for a moral life for an individual to follow. So high a standard of moral life was quite unknown to the Aryan Society of his day.

He did not stop merely with setting an example by leading a life of purity. He also wanted to mould the character of the ordinary men and women in society. For their guidance he devised a form of baptism which was quite unknown to the Aryan Society. The baptism consisted in the convert to Buddhism undertaking to observe certain moral precepts laid down by Buddha. These precepts are known as Panch Sila or the five precepts. They are;

- (1) Not to kill, (2) Not to steal, (3) Not to lie, (4) Not to be unchaste and (5) Not to drink intoxicants.

These five precepts were of the laity.

For the Monks there were five additional precepts:

- (6) Not to eat at forbidden times,
- (7) Not to dance, sing, or attend theatrical or other spectacles,
- (8) To abstain from the use of garlands, scents, and ornaments,
- (9) To abstain from the use of high or broad beds, and
- (10) Never to receive money.

These *Silas* or precepts formed the moral code which it was intended should regulate the thoughts and actions of men and women.

Of these the most important one was the precept not to kill. Buddha took care to make it clear that the precept did not merely mean abstention from taking life. He insisted that the precept must

be understood to mean positive sympathy, good will, and love for every thing that breathes.

He gave the same positives and extended content to other precepts. One of the Buddha's lay followers once reported to him the teaching of a non-Buddhist ascetic, to the effect that the highest ideal consisted in the absence of evil deeds, evil words, evil thoughts, and evil life. The Buddha's comment upon this is significant."If, said he,"this were true, then every suckling child would have attained the ideal of life. Life is knowledge of good and evil; and after that the exchange of evil deeds, words, thoughts, and life, for good ones. This is to be brought about only by a long and determined effort of the will".

Buddha's teachings were not merely negative. They are positive and constructive. Buddha was not satisfied with a man following his precepts. He insisted upon encouraging others to follow them. For example in the *Anguttara Nikaya* the Buddha is quoted as distinguishing between a good man and a very good man by saying that one who abstains from killing, stealing, in-chastity, lying and drunkenness may be called good ; but only he deserves to be called very good who abstains from these evil things himself and also instigates others to do the like.....

As has been well said the two cardinal virtues of Buddhism are love and wisdom.

How deeply he inculcated the practice of love as a virtue is clear from his own words."As a mother at the risk of her life watches over her own child, her only child, so also let every one cultivate: a boundless loving mind towards all beings. And let him cultivate good will towards, the entire world, a boundless (loving) mind above and below and across, unobstructed, without hatred, without enmity. This way of living is the best in the world."So taught Buddha.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_35.

"Universal pity, sympathy for all suffering beings, good will to every form of sentient life, these things characterised the Tathagath (Buddha) as they have few others of the sons of men ; and he succeeded in a most surprising degree in handing on his point of view to his followers."
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19A.Revolution and Counter Rev.in Ancient India PART I.htm - _msocom_36

Buddha held to the doctrine of wisdom as firmly as he did to the doctrine of love. He held that moral life began with knowledge and ended with wisdom. he "came to save the world, and his method for the accomplishment of this end was the destruction of ignorance and the dissemination of knowledge as to the true values of life and the wise way to live." Buddha did not arrogate to himself the power to save people. People had to do that for themselves. And the way to save lay through knowledge. So much insistence did he place upon knowledge that he did not think that morality without knowledge was virtue.

There are three things against which Buddha carried on a great campaign.

He repudiated the authority of the Vedas..... Secondly he denounced the *Yudna* as a form of religion. The attitude of Buddha towards Yadna is well stated in the Jatakamala in the form of a story. The story runs thus :

THE STORY OF THE SACRIFICE

Those hearts are pure do not act up to the enticement of the wicked. Knowing this, pure-heartedness is to be striven after. This will be taught by the following:

Long ago the Bodhisattva. it is said, was a king who had obtained his kingdom in the order of hereditary succession. He had reached this state as the effect of his merit, and ruled his realm in peace, not disturbed by any rival, his sovereignty being universally acknowledged. His country was free from any kind of annoyance, vexation or disaster, both his home relations and those with foreign countries being quite in every respect; and all his vessels obeyed his commands.

1. This monarch having subdued the passions, his enemies, felt no inclination for such profits as are to be blamed when enjoyed, but was with his whole heart intent on promoting the happiness of his subjects. Holding virtuous practice (dharma) the only purpose of his actions, he behaved like a Muni.

2. For he knew the nature of mankind, that people set a high value on imitating the behaviour of the highest. For this reason, being desirous of bringing about salvation for his subjects, he was particularly attached to the due performance of his religious duties.

3. He practised almsgiving kept strictly the precepts of moral conduct (sila), cultivated forbearance, strove for the benefit of the creatures. His mild countenance being in accordance with his

thoughts devoted to the happiness of his subjects, he appeared like the embodied Dharma.

Now it once happened that though protected by his arm, his realm, both in consequence of the faulty actions of its inhabitants and inadvertence on the part of the angels charged with the care of rain, was afflicted in several districts by drought and the troublesome effects of such a disaster. Upon this the king, fully convinced that his plague had been brought about by the violation of righteousness by himself or his subjects, and taking much to heart the distress of his people, whose welfare was the constant object of his thoughts and cares, took the advice of men of acknowledged competence, who were reputed for their knowledge in matters of religion. So keeping counsel with the elders among the Brahmans, headed by his family priest (purohita) and his ministers, he asked them for some means of putting an end to that calamity. Now they believing a solemn sacrifice as is enjoined by the Veda to be a cause of abundant rain, explained to him that he must perform such a sacrifice of a frightful character, inasmuch as it requires the massacre of many hundreds of living beings. But after being informed of everything concerning such a slaughter as is prescribed for the sacrifice, his innate compassion forbade him to approve of their advice in his heart; yet out of civility, unwilling to offend them by harsh words of refusal, he slipped over this point, turning the conversation upon other topics. They, on the other hand, no sooner caught the opportunity of conversing with the king on matters of religion, than they once more admonished him to accomplish the sacrifice, for they did not understand his deeply hidden mind.

4."You constantly take care not to neglect the proper time of performing your different royal duties, established for the sake of obtaining the possession of land and ruling it. The due order of these actions of yours is in agreement with the precepts of Righteousness (dharma).

5."How then is this that you who (in all other respects) are so clever in the observance of the triad (of dharma, artha, and kama), bearing your bow to defend the good of your people, are so careless and almost sluggish as to that bridge to the world of the Devas, the name of which is 'sacrifice'?

6."Like servants, the kings (your vassel) revere your commands, thinking them to be the surest gage of success. Now the time is

come, O destroyer of your foes, to gather by means of sacrifice superior blessings, which are to procure for you a shining glory.

7. 'Certainly, that holiness which is the requisite for a dikshita is already yours, by reason of your habitual practice of charity and your strictness in observing the restraint (of good conduct). Nevertheless, it would be fit for you to discharge your debt to the Devas by such sacrifices as are the subject matter of the Veda. The deities being satisfied by duly and faultlessly performed sacrifice, honour the creatures in return by (sending) rain. Thus considering, take to mind the welfare of your subjects and your own, and consent to the performance of a regular sacrifice which will enhance your glory.'

8. Thereupon he entered upon this thought: 'Very badly guarded is my poor person indeed, being given in trust to such leaders. While faithfully believing and loving the law, I should uproot my virtue of tender heartiness by reliance upon the words of others. For, truly.'

9. Those who are reputed among men to be the best refuge are the very persons who intend to do harm, borrowing their arguments from the Law. Alas! Such a man, who follows the wrong path shown by them, will soon find himself driven to straits, for he will be surrounded by evils.

10. What connections may there be, forsooth, between righteousness and injuring animals? How my residence in the world of the Devas or propitiation of the deities have anything to do with the murder of victims?

II. The animal slaughtered according to the rites with the prescribed prayers, as if those sacred formulas were so many darts to wound it, goes to heaven, they say, and with this object it is killed. In this way that action is interpreted to be done according to the Law. Yet it is a lie.

12. For how is it possible that in the next world one should reap the fruits of what has been done by others? And by what reason will the sacrificial animal mount to heaven, though he has not abstained from wicked actions, though he has not devoted himself to the practice of good ones, simply because he has been killed in sacrifice, and not on the ground of his own actions?

13. And should the victim killed in sacrifice really go to heaven, should we not expect the Brahmans to offer themselves to be immolated in sacrifice? A similar practice, however, is nowhere seen among them. Who, then, may take to heart the advice proffered by these counsellors?

14. As to the Celestials, should we believe that they who are wont to enjoy the fair ambrosia of incomparable scent, flavour, magnificence, and effective power, served to them by the beautiful Apsaras, would abandon it to delight in the slaughter of a pitiable victim, that they might feast on the omentum and such other parts of his body as are offered to them in sacrifice?

Therefore, it is the proper time to act so and so.' Having thus made up his mind, the king feigned to be eager to undertake the sacrifice; and in approval of their words he spoke to them in this manner; 'Verily, well protected am I, well gratified, having such counsellors as Your Lordships are, thus bent on securing my happiness! Therefore I will have a human sacrifice (purushamedha) of a thousand victims performed. Let my officials, each in his sphere of business, be ordered to bring together the requisites necessary for that purpose. Let also an inquiry be made of the most fitting ground whereon to raise the tents and other buildings for the sattrā. Further, the proper time for the sacrifice must be fixed (by the astrologers) examining the auspicious lunar days, karanas, muhurtas, and constellations.' The purohita answered; 'In order to succeed in your enterprise, Your Majesty ought to take the Avabhṛitha (final bath) at the end of one sacrifice; after which you may successively undertake the others. For if the thousand human victims were to be seized at once, your subjects, to be sure, would blame you and be stirred up to great agitation on their account.' These words of the purohita having been approved by the (other) Brahmans, the king replied: 'Do not apprehend the wrath of the people, Reverends. I shall take such measures as to prevent any agitation among my subjects.'

15. After this the king convoked an assembly of the townsmen and the lands men, and said: 'I intend to perform a human sacrifice of a thousand victims. But nobody behaving honestly is fit to be designated for immolation on my part. With this in mind, I give you this advice. Whomsoever of you I shall henceforward perceive transgressing the boundaries of moral conduct, despising my royal will him I order to be caught to be a victim at my sacrifice, thinking such a one the stain of his family and a danger to my country. With the object of carrying this resolution into effect, I shall cause you to be observed by faultless and sharp-sighted emissaries, who have shaken off sleepy carelessness and will report to me concerning your conduct.'

16. Then the foremost of the assembly, folding their hands and bringing them to their foreheads, spoke:

'Your Majesty, all your actions tend to the happiness of your subjects, what reason can there be to despise you on that account? Even (God) Brahma cannot but sanction your behaviour. Your Majesty, who is the authority of the virtuous, be our highest authority. For this reason anything which pleases Your Majesty must please us too. Indeed, you are pleased with nothing else but our enjoyment and our good.'

After then, notables both of the town and the country had accepted his command in this manner; the king dispersed about his towns and all over his country, officers notified as such by their outward appearance to the people with the charge of laying hold of the evil doers, and everywhere he ordered proclamations to be made by beat of drum day after day, of this kind.

17. The King, a granter of security as he is, warrants safety to every one who constantly cultivates honesty and good conduct, in short, to the virtuous, yet, intending to perform a human sacrifice for the benefit of his subjects, he wants human victims by thousands to be taken out of those who delight in misconduct.

18. 'Therefore, whosoever henceforward, licentiously indulging in misbehaviour, shall disregard the command of our monarch, which is even observed by the kings, his vassals, shall be brought to the state as a sacrificial victim by the very force of his own actions, and people shall witness his miserable suffering, when he shall pine with pain, his body being fastened to the sacrificial post.'

When the inhabitants of that realms became aware of their king's careful search after evil-doers with the aim of destining them to be victims at his sacrifice-for they heard the most frightful royal proclamation day after day and saw the king's servants, who were appointed to look out for wicked people and to seize them. Appearing every now and then everywhere they abandoned their attachment to bad conduct, and grew intend on strictly observing the moral precepts and self-control. They avoided every occasion of hatred and enmity. and settling their quarrels and differences, cherished mutual love and mutual esteem. Obedience to the words of parents and teachers, a general spirit of liberality and sharing with others, hospitality, good manners, modesty, prevailed among them. In short, they lived as it was in the Krita Yuga.

19. The fear of death had awakened in them thoughts of the next world; the risk of tarnishing the honour of their families had stirred their care of guarding their reputation; the great purity of their hearts had strengthened their sense of shame. These factors being at work, people were soon distinguished by their spotless behaviour.

20. Even though every one became more than ever intends on keeping a righteous conduct, still the king's servants did not diminish their watchfulness in the pursuit of the evildoers. This also contributed to prevent people from falling short of righteousness.

21. The king learning from his emissaries this state of things in his realm, felt extremely rejoiced. He bestowed rich presents on those messengers as a reward for the good news they told him, and enjoined his ministers, speaking something like this :

22. The protection of my subjects is my highest desire, you know. Now they have become worthy to be recipients of sacrificial gifts, and it is for the purpose of my sacrifice that I have provided this wealth. Well, I intend to accomplish my sacrifice in the manner, which I have considered to be the proper one. Let every one who wishes for money, that it may be fuel for his happiness, come and accept it from my hand to his heart's content. In this way the distress and poverty, which is vexing our country, may be soon driven out. Indeed, whenever I consider my own strong determination to protect my subjects and the great assistance I derive from you, my excellent companions in that task, it often seems to me as though those sufferings of my people, by exciting my anger, were burning in my mind like a blazing fire.'

24. The ministers accepted the royal command and anon went to execute it. They ordered alms-halls to be established in all villages, towns, and markets, likewise at all stations on the roads. This being done, they caused all who begged in order to satisfy their wants, to be provided day after day with a gift of those objects, just as had been ordered by the king.

25. So poverty disappeared, and the people, having received wealth from the part of the king, dressed and adorned with manifold and fine garments and ornaments, exhibited the splendour of festival days.

26. The glory of the king, magnified by the eulogies of the rejoiced recipients of his gifts, spread about in all directions in the same way, as the flower dust of the lotuses carried forth by the small waves of a lake, extends itself over a larger and larger surface.

27. And after the whole people, in consequence of the wise measures taken by their ruler, had become intent on virtuous behaviour, the plagues and calamities, overpowered by the growth of all such qualities as conduce to prosperity, faded away, having lost their hold.

28. The seasons succeeded each other in due course, rejoicing everybody by their regularity, and like kings newly established, complying with the lawful order of things. Consequently the earth produced the various kinds of corn in abundance, and there was fullness of pure and blue water and lotuses in all water basins.

29. No epidemics afflicted mankind; the medicinal herbs possessed their efficacious virtues more than ever; monsoons blew in due time and regularly; the planets moved along in auspicious paths.

30. Nowhere there existed any danger to be feared, either from abroad, or from within, or such as might be caused by dangerous derangement of the elements. Continuing in righteousness and self-control, cultivating good behaviour and modesty, the people of that country enjoyed as it were the prerogatives of the Krita Yuga. By the power, then, of the king performing his sacrifice in this manner in accordance with (the precepts of) the Law, the sufferings of the indigent were put to an end together with the plagues and calamities, and the country abounded in a prosperous and thriving population offering the pleasing aspect of felicity. Accordingly people never wearied of repeating benedictions on their king and extending his renown in all directions.

One day, one of the highest royal officials, whose heart had been inclined to the (True) Belief, spoke thus to the king: "This is a true saying, in truth.

31. "Monarchs, because they always deal with all kinds of business, the highest, the lowest, and the intermediate, by far surpass in their wisdom any wise men.

"For, Your Majesty, you have obtained the happiness of your subjects both in this world and in the next, as the effect of your sacrifice being performed in righteousness, free from the blameable sin of animal-slaughter. The hard times are all over and the sufferings of poverty have ceased, since men have been established in the precepts of good conduct. Why use many words? Your subjects are happy.

32. "The black antelope's skin which covers your limbs has the resemblance of the spot on the bright Moon's surface, nor can the

natural loveliness of your demeanour be hindered by the restraint imposed on you by your being a dikshita. Your head, adorned with such hair-dress as is in compliance with the rites of the diksha, possesses no less lustre than when it was embellished with the splendour of the royal umbrella. And, last not least, by your largesse's you have surpassed the renown and abated the pride of the famous performer of a hundred sacrifices.

33."As a rule, Oh, you wise ruler, the sacrifice of those who long for the attainment of some good, is a vile act, accompanied as it is by injury done to living beings. Your sacrifice, on the contrary, this monument of your glory, is in complete accord with your lovely behaviour and your aversion to vices.

34."Oh! Happy are the subjects who have their protector in you! It is certain that no father could be a better guardian to his children."Another said:

35." If the wealthy practise charity, they are commonly impelled to do so by the hopes they put in the cultivation of that virtue; good conduct too, may be accounted for by the wish to obtain high regard among men or the desire of reaching heaven after death. But such a practice of both, as is seen in your skill in securing the benefit of others, cannot be found but in those who are accomplished both in learning and in virtuous exertions."In such a way, then, those whose hearts are pure do not act up to the enticement of the wicked. Knowing this, pure-heartedness is to be striven after."(In the spiritual lessons for princes, also this is to be said: ' Who to his subjects wishing good, himself exerts, Thus brings about salvation, glory, happiness. No other should be of a king the businesses.

And it may be added as follows: '(The prince) who strives after material prosperity, ought to act in accordance with the precepts of religion, thinking, a religious conduct of his subjects to be the source of prosperity.'

Further this is here to be said: `Injuring animals never tends to bliss, but charity, self-restraint, continence and the like have this power; for this reason he who longs for bliss must devote himself to these virtues. `And also when discoursing on the Tathagata : `In this manner the Lord showed his inclination to care for the interests of the world, when he was still in his previous existences.')

IV

Another powerful attack against Yajna is contained in his discourses known as Kutadanta Sutta. It is as follows :

THE WRONG SACRIFICE AND THE RIGHT

1. Thus have I heard. The Blessed One once, when going on a tour through Magadha, with a great multitude of the brethren, with about five hundred brethren, came to a Brahman village in Magadha called Khanumata. And there at Khanumata he lodged in the Ambalatthika pleasure.

Now at that time the Brahman Kutadanta was dwelling at Khanumata, a place teeming with life, with much grassland and woodland and water and corn, on a royal domain presented him by Seniya Bimbisara the king of Magadha, as a royal gift, with power over it as if he were the king.

And just then a great sacrifice was being got ready on behalf of Kutadanta the Brahman. And a hundred bulls, and a hundred steers, and a hundred heifers, and a hundred goats, and a hundred rams had been brought to the post for the sacrifice.

2. Now the Brahmans and householders of Khanumata heard the news of the arrival of the Samana Gotama. And they began to leave Khanumata in companies and in bonds to go to the Ambalatthika pleasure.

3. And just then Kutadanta the Brahman had gone apart to the upper terrace of his house for his siesta; and seeing the people thus to go by, he asked his door-keeper the reason. And the doorkeeper told him.

4. Then Kutadanta thought: 'I have heard that the Samana Gotama understands about the successful performance of a sacrifice with its threefold method and its sixteen accessory instruments. Now I don't know all this, and yet I want to carry out a sacrifice. It would be well for me to go to the Samana Gotama, and ask him about it.'

So he sent his doorkeeper to the Brahmans and householders of Khanumata, to ask them to wait till he could go with them to call upon the Blessed One.

5. But there were at that time a number of Brahmans staying at Khanumata to take part in the great sacrifice. And when they heard this they went to Kutadanta, and persuaded him on the same grounds as the Brahmans had laid before Sonadanda, not to go. But he answered them in the same terms as Sonadanda had used to those Brahmans. Then they were satisfied, and went with him to call upon the Blessed One.

9. And when he was seated there Kutadanta the Brahman told the Blessed One what he had heard, and requested him to tell him about success in performing a sacrifice in its three modes and with its accessory articles of furniture of sixteen kinds.

'Well then, O Brahman, give ear and listen attentively and I will speak.'

'Very well, Sir, 'said Kutadanta in reply; and the Blessed One spoke as follows:

10. 'Long ago, O Brahman, there was a king by name Wide-realm (Maha Vigita), mighty, with great wealth and large property; with stores of silver and gold, of aids to enjoyment, of goods and corn; with his treasure-houses and his garner full. Now when King Wide-realm was once sitting alone in meditation, he became anxious at the thought: "I have in abundance all the good things a mortal can enjoy. The whole wide circle of the earth is mine by conquest to possess. 'Twere well if I were to offer a great sacrifice that should ensure me weal and welfare for many days."

And he had the Brahman, his chaplain, called; and telling him all that he had thought, he said: "Be I would fawn, O Brahman, offer a great sacrifice-let the venerable one instruct me how-for my weal and my welfare for many days."

11. Thereupon the Brahman who was chaplain said to the king: "The king's country, Sirs, is harassed and harried. There are decoits abroad who pillages the villages and townships, and who makes the roads unsafe. Were the king, so long as that is so, to levy a fresh tax, verily his majesty would be acting wrongly. But perchance his majesty might think. 'I'll soon put a stop to these scoundrels' game by degradation and banishment, and fines and bonds and death! ' But their license cannot be satisfactorily put a stop to. The remnant left unpunished would still go on harassing the realm. Now there is one method to adopt to put a thorough end to this disorder. Whosoever there be in the king's realm who devote themselves to keeping cattle and the farm, to them let his majesty the king give food and seed-corn. Whosoever there be in the king's realm who devote themselves to trade, to them let his majesty the king give capital. Whosoever there be in the king's realm who devote themselves to government service, to them let his majesty the king give wages and food. Then those men following each his own business, will no longer harass the realm; the king's revenue will go up ; the country will be quiet and at peace ; and the populace,

pleased one with another and happy; dancing their children in their arms, will dwell with open doors."

'Then King Wide-realm, O Brahman, accepted the word of his chaplain, and did as he had said. And those men, following each his business, harassed the realm no more. And the King's revenue went up. And the country became quiet and at peace. And the populace pleased one with another and happy, dancing their children in their arms, dwelt with open doors.'

12. 'So King Wide-realm had his chaplain called, and said:"The disorder is at an end. The country is at peace. I want to offer that great sacrifice—let the venerable one instruct me how—for my weal and my welfare for many days."

' Then let his majesty the king send invitations to whomsoever there may be in his realm who are Kshatriyas, vassals of his, either in the country or the towns ; or who are ministers and officials of his, either in the country or the towns ; or who are Brahmans of position, either in the country or the towns ; or who are householders of substance, either in the country or the towns, saying : "I intend to offer a great sacrifice. Let the venerable ones give their sanction to what will be to me for weal and welfare for many days."

'Then King Wide-realm, O Brahman, accepted the word of his chaplain, and did as he had said. And they each—Kshatriyas and ministers and Brahmans and householders—made alike reply:"Let his majesty the king celebrate the sacrifice. The time is suitable O King!"' Thus did these four, as colleagues by consent, become wherewithal to furnish forth that sacrifice,

13. 'King Wide-realm was gifted in the following eight ways:

'He was well born on both sides, on the mother's side and on the father's, of pure descent back through seven generations, and no slur was cast upon him, and no reproach, in respect of birth.'

' He was handsome, pleasant in appearance, inspiring trust, gifted with great beauty of complexion, fair in colour, fine in presence, stately to behold.'

' He was mighty, with great wealth, and large property, with stores of silver and gold, of aids to enjoyment, of goods and corn, with his treasure-houses and his garners full.'

' He was powerful, in command of an army, loyal and disciplined in four divisions (of elephants, cavalry, chariots, and bow men), burning up, methinks, his enemies by his very glory.'

' He was a believer, and generous, a noble giver, keeping open house, a well in spring whence Samanas and Brahmans, the poor and the wayfarers, beggars, and petitioners might draw, a doer of good deeds.'

' He was learned in all kinds of knowledge.' ' He knew the meaning of what had been said, and could explain,"This saying has such and such a meaning, and that such and such".

' He was intelligent, expert and wise and able to think out things present or past or future.

' And these eight gifts of his, too, became where withal to furnish forth that sacrifice.'

14. 'The Brahman, his chaplain was gifted in the following four ways :

' He was well born on both sides, on the mother's and on the father's, of pure descent back through seven generations, with no slur cast upon him, and no reproach in respect of birth.

' He was a student repeater who knew the mystic verses by heart, master of the three Vedas, with the indices, the ritual, the phonology, and the exegesis (as a fourth), and the legends as a fifth, learned in the idioms and the grammar, versed in Lokayata (Mature-lore) and in the thirty marks on the body of a great man.

' He was virtuous, established in virtue, gifted with virtue that had grown great.

' He was intelligent, expert, and wise; foremost, or at most the second, among those who hold out the ladle. ' ' Thus these four gifts of his, too became wherewithal to furnish forth that sacrifice.'

15. 'And further, O Brahman, the chaplain, before the sacrifice had begun, explained to King Wide-realm the three modes:

Should his majesty the King, before starting on the great sacrifice, feel any such regret as : "Great, alas, will be the portion of my wealth used up herein," let not the king harbour such regret. Should his majesty the King, whilst he is offering the great sacrifice, feel any such regret as : "Great, alas, will be the portion of my wealth used up herein" let not the king harbour such regret. Should his majesty the King, when the great sacrifice has been offered, feel any such regret as "Great, alas, will be the portion of my wealth used up herein," let not the king harbour such regret.'

' Thus did the chaplain, O Brahman, before the sacrifice, had begun, explained to King Wide-realm the three modes.'

16. `And further, O Brahman, the chaplain, before the sacrifice had begun, in order to prevent any compunction that might afterwards in ten ways, arise as regards those who had taken part therein, said :”Now there will come to your sacrifice, Sire, men who destroy the life of living things, and men who refrain therefrom, men who take what has not been given, and men who refrain therefrom, men who speak lies, and men who do not—men who slander and men who do not—men who speak rudely and men who do not—men who chatter vain things and men who refrain therefrom—men who covet and men who covet not—men who harbour illwill and men who harbour it not—men whose views are wrong and men whose views are right. Of each of these let them, who do evil, alone with their evil. For them who do well let your majesty offer, for them, Sire, arrange the rites, for them let the king gratify, in them shall our heart within find peace.”

17. `And further, O Brahman, the chaplain, whilst the king was carrying out the sacrifice, instructed and aroused and incited and gladdened his heart in sixteen ways :”Should there be people who should say of the king, as he is offering the sacrifice : 'King Wide-realm is celebrating sacrifice without having invited the four classes of his subjects, without himself having the eight personal gifts, without the assistance of a Brahman who has the four personal gifts.' Then would they speak not according to the fact. For the consent of the four classes has been obtained, the king had the eight, and his Brahman has the four, personal gifts. With regard to each and every one of these sixteen conditions the king may rest assured that it has been fulfilled. He can sacrifice, and be glad, and possess his heart in peace.”

18. `And further, O Brahman, at that sacrifice neither were any oxen slain, neither goats, nor fowls, nor fatted pigs, nor were any kinds of living creatures put to death. No trees were cut down to be used as posts, no Dabha grasses mown to strew around the sacrificial spot. And the slaves and messengers and workmen there employed were driven neither by rods nor fear, nor carried on their work weeping with tears upon their faces. Who so chose to help, he worked ; who so chose not to help, worked not. What each chose to do he did; what they chose not to do, that was left undone, With ghee and oil, and butter and milk, and honey and sugar only was that sacrifice accomplished.

19. `And further, O Brahman, the Kshatriya vassals, and the ministers and officials, and the Brahmans of position, and the householders of substance, whether of the country or of the towns, went to King, Wide-realm, taking with them much wealth, and said, "This abundant wealth, Sire, have we brought hither for the king's use. Let his majesty accept it at our hands!"

"Sufficient wealth have I, my friends, laid up, the produce of taxation that is just. Do you keep yours, and take away more with you!"

When they had thus been refused by the king, they went aside, and considered thus one with the other: "It would not be seem us now, were we to take this wealth away again to our own homes. King Wide-realm is offering a great sacrifice. Let us too make an after-sacrifice!"

20. ` So the Kshatriyas established a continual largesse to the east of the king's sacrificial pit, and the officials to the south thereof, and the Brahmans to the west thereof, and the householders to the north thereof. And the things given, and the manner of their gift, was in all respects like unto the great sacrifice of King Wide-realm himself.'

`Thus, O Brahman, there was a fourfold co-operation, and King Wide-realm was gifted with eight personal gifts, and his officiating Brahman with four. And there were three modes of the giving of that sacrifice. This, O Brahman, is what is called the due celebration of a sacrifice in its threefold mode and with its furniture of sixteen kinds.

21. `And when he had thus spoken, those Brahmans lifted up their voices in tumult, and said: "How glorious the sacrifice, how pure its accomplishment!" But Kutadanta the Brahman sat there in silence.

Then those Brahmans said to Kutadanta : ' Why do you not approve the good words of the Samana Gotarna as well-said?'

` I do not fail to approve ; for he who approves not as well-said that which has been well spoken by the Samana Gotama, verily his head would split in twain. But I was considering that the Samana Gotama does not say : "Thus have I heard," nor "Thus behoves it to be," but says only, "Thus it was then," or "It was like that then". So I thought ; "For a certainty the Samana Gotama himself must at that time have been King Wide-realm, or the Brahman who officiated for him at that sacrifice. Does the Venerable Gotama admit that he who celebrates such a sacrifice, or causes it to be celebrated, is reborn at

the dissolution of the body, after death, into some state of happiness in heaven?"

'Yes, O Brahman, that I admit. And at that time I was the Brahman who, as chaplain, had that sacrifice performed.'

22. 'Is there, O Gotama, any other sacrifice less difficult and less troublesome, with more fruit and more advantage still than this? ' 'Yes, O Brahman, there is.' 'And what, O Gotama, may that be?'

'The perpetual gifts kept up in a family where they are given specifically to virtuous recluses.'

23. 'But what is the reason, O Gotama, and what the cause, why such perpetual giving specifically to virtuous recluses, and kept up in a family, are less difficult and troublesome of greater fruit and greater advantage than that other sacrifice with its three modes and its accessories of sixteen kinds? '

'To the latter sort of sacrifice, O Brahman, neither will the Arhata go, nor such as have entered on the Arhat way. And why not? Because in it beating with sticks takes place, and seizing by the throat. But they will go to the former, where such things are not. And therefore are such perpetual gifts above the other sort of sacrifice.'

24. 'And is there, O Gotama, any other sacrifice less difficult, and less troublesome, of greater fruit and of greater advantage than either of these.' 'Yes, O Brahman, there is.' 'And what, O Gotama, may that be? '

'The putting up of a dwelling place (Vihara) on behalf of the Order in all the four directions.'

25. And is there, O Gotama, any other sacrifice less difficult and less troublesome, of greater fruit and of greater advantage than each and all of these three?' 'Yes, O Brahman, there is.' 'And what, O Gotama, may that be? '

'He who with trusting heart takes a Buddha as his guide, and the Truth, and the Order—that is a sacrifice better than open largesses, better than perpetual alms, better than the gift of a dwelling place.'

26. 'And is there, O Gotama, any other sacrifice less difficult and less troublesome, of greater fruit and of greater advantage than all these four?'

'When a man with trusting heart takes upon himself the precepts—abstinence from destroying life; abstinence from taking what has not been given ; abstinence from evil conduct in respect of lusts ; abstinence from lying words; abstinence from strong, intoxicating,

maddening drinks, the root of carelessness, that is a sacrifice better than open largesses, better than perpetual alms, better than the gift of dwelling places, better than accepting guidance.'

27. 'And is there, O Gotama, any other sacrifice less difficult and less troublesome, of greater fruit and of greater advantage than all these five?' 'Yes, O Brahman, there is.' 'And what, O Gotama, may that be?'

(The answer is the long passage from the Samana-phale Sutta 40, p. 62 (of the text,) down to 75 (p. 74) on the First Ghana, as follows :

1. The Introductory paragraphs on the appearance of a Buddha, his preaching, the conversion of a hearer, and his renunciation of the world.

2. The Silas (minor morality).

3. The paragraph on Confidence.

4. The paragraph on 'Guarded is the door of his senses.'

5. The paragraph on 'Mindful and self possessed.'

6. The paragraph on Content.

7. The paragraph on Solitude.

8. The paragraph on the Five Hindrances.

9. The description of the First Ghana.) 'This, O Brahman, is a sacrifice less difficult and less troublesome, of greater fruit and greater advantage than the previous sacrifices,

(The same is then said the Second, Third, and Fourth Ghanas, in succession (as in the Samanna-phalo Sutas 77-82) and of the Insight arising from knowledge (*ibid* 83, 84), and further (omitting direct mention either way of 85-96 inclusive) of the knowledge of the destruction of the Asavas. the deadly intoxications or floods (*ibid.* 97-98).

' And there is no sacrifice man can celebrate, O Brahman, higher and sweeter than this.'

28. And when he had thus spoken, Kutadanta the Brahman said to the Blessed One :

' Most excellent, O Gotama, are the words of thy mouth, most excellent ! Just as if a man were to set up what has been thrown down, or were to reveal that which has been hidden away, or were to point out the right road to him who has gone astray, or were to bring a light into the darkness so that those who had eyes could see external forms—just even so has the truth been made known to me in many a figure by the Venerable Gotama. I, even I, betake myself to the Venerable Gotama as my guide, to the Doctrine and the

Order. May the Venerable One accept me as a disciple, as one who, from this day forth, as long as life endures has taken him as his guide. And I myself, O Gotama, will have the seven hundred bulls, and the seven hundred steers, and the seven hundred heifers, and the seven hundred goats, and the seven hundred rams set free. To them I grant their life. Let them eat green grass and drink fresh water, and may cool breezes waft around them.'

29. Then the Blessed One discoursed to Kutadanta the Brahman in due order; that is to say, he spoke to him of generosity, of right conduct, of heaven, of the danger, the vanity, and the defilement of lusts, of the advantages of renunciation. And when the Blessed One became aware that Kutadanta the Brahman had become prepared, softened, unprejudiced, upraised, and believing in heart then did he proclaim the doctrine the Buddhas alone have won; that is to say, the doctrine of sorrow, of its origin, of its cessation and of the Path. And just as a clean cloth, with all stains in it washed away, will readily take the dye, just even so did Kutadanta the Brahman, even while seated there, obtain the pure and spotless Eye for the Truth. And he knew whatsoever has a beginning, in that is inherent also the necessity of dissolution.

30. And then the Brahman Kutadanta, as one who had seen the Truth, had mastered it, understood it, dived deep down into it. Who had passed beyond doubt, and put away perplexity and gained full confidence, who had become dependent on no other for his knowledge of the teaching of the Master, addressed the Blessed One and said :

' May the venerable Gotama grant me the favour of taking his tomorrow meal with me and also the members of the Order with him. '

And the Blessed One signified, by silence, his consent. Then the Brahman Kutadanta, seeing that the Blessed One had accepted, rose from his seat, and keeping his right towards him as he passed, he departed thence. And at daybreak he had sweet food, both hard and soft, made ready at the pit prepared for his sacrifice and had the time announced to the Blessed One: 'It is time, O Gotama and the meal is ready. ' And the Blessed One, who had dressed early in the morning, put on his outer robe, and taking his bowl with him, went with the brethren to Kutadanta's sacrificial pit, and sat down there on the seat prepared for him. And Kutadanta the Brahman satisfied the brethren with the Buddha at their head, with his own hand, with sweet food,

both hard and soft, till they refused any more. And when the Blessed One had finished his meal, and cleansed the bowl and his hands, Kutadanta the Brahman took a low seat and seated himself beside him. And when he was thus seated, the Blessed One instructed and aroused

and incited and gladdened Kutadanta the Brahman with religious discourse ; and then arose from his seat and departed thence.

V

Thirdly Buddha denounced the caste system. The Caste System in its present form was not then existing. The bar against inter-dining and inter-marriage had not then become operative. Things were flexible and not rigid as they are now. But the principle of inequality which is the basis of the caste system had become well established and it was against this principle that Buddha carried on a determined and a bitter fight. How strongly was he opposed to the pretensions of the Brahmins for superiority over the other classes and how convincing were the grounds of his opposition are to be found in many of his dialogues. The most important one of these is known as the Ambattha Sutta.

AMBATTHA SUTTA

(A young Brahman's rudeness and an old one's faith). 1. Thus have I heard. The Blessed One when once on a tour through the Kosala country with a great company of the brethren, with about five hundred brethren, arrived at a Brahman village in Kosala named Ikkhanankala ; and while there he stayed in the Ikkhanankala Wood.

Now at that time the Brahman Pokkharsadi was dwelling at Ukkattha, a spot teeming with life, with much grassland and woodland and corn, on a royal domain, granted him by King Pasenadi of Kosala as royal gift, with power over it as if he were the king.

2. Now the Brahman Pokkharasadi heard the news : `They say that the Samana Gotama, of the Sakya clan, who went out from a Sakya family to adopt the religious life, has now arrived, with a great company of the brethren of his Order, at Ikkhanankala, and is staying there in the Ikkhanankala Wood. Now regarding that venerable Gotama, such is the high reputation that has been noised abroad. The Blessed One is an Arahata, a fully awakened one, abounding in wisdom and goodness, happy, with knowledge of the worlds, unsurpassed as a guide to mortals willing to be led, a teacher

for gods and men, a Blessed One, a Buddha. He, by himself, thoroughly knows and sees, as it were, face to face this universe, including the worlds above of the gods, the Brahmans, and the Maras, and the world below with its recluses and Brahmans, its princes and peoples, and having known it, he makes his knowledge known to others. The truth, lovely in its origin, lovely in its progress, lovely in its consummation, doth he proclaim, both in the spirit and in the letter, the higher life doth he make known, in all its fullness and in all its purity. `And good is it to pay visits to Arahats like that.'

3. Now at the time a young Brahman, an Ambattha, was a pupil under Pokkharasadi the Brahman. And he was a repeater (of the sacred words) knowing the mystic verses by heart, one who had mastered the Three Vedas, with the indices, the ritual, the phonology, and the exegesis (as a fourth), and the legends as a fifth learned in the idioms and the grammar, versed in Lokayata sophistry and in the theory of the signs on the body of a great man—so recognised an authority in the system of the threefold Vedic knowledge as expounded by his master, that he could say of him: 'What I know that you know, and what you know that I know.'

4. And Pokkharasadi told Ambattha the news, and said : `Come now, dear Ambattha, go to the Samana Gotama, and find out whether the reputation so noised abroad regarding him is in accord with the facts or not, whether the Samana Gotama is such as they say or not'. 5. `But how. Sir, shall I know whether that is so or not?' 'There have been handed down, Ambattha, in our mystic verses thirty-two bodily signs of a great man,—signs which, if a man has, he will become one of two things, and no other. If he dwells at home he will become a sovereign of the world, a righteous king, bearing rule even to the shores of the four great oceans, a conqueror, the protector of his people, possessor of the seven royal treasures. And these are the seven treasures that he has the Wheel, the Elephant, the Horse, the Gem, the Woman, the Treasurer, and the Adviser as a seventh. And he has more than a thousand sons, heroes, mighty in frame, beating down the armies of the foe. And he dwells in complete ascendancy over the wide earth from sea to sea, ruling it in righteousness without the need of baton or of sword. But if he go forth from the household life into the house less state, then he will become a Buddha who removes the veil from the eyes of the world. Now I, Ambattha, am a giver of the mystic verses; you have received them from me.'

6. ' Very good Sir, said Ambattha in reply; and rising from his seat and paying reverence to Pokkharasadi, he mounted a chariot drawn by mares, and proceeded, with a retinue of young Brahmans, to the Ikkhanankala Wood. And when he had gone on in the chariot as far as the road was practicable for vehicles, he got down, and went on, into the park, on foot.

7. Now at that time a number of the brethren were walking up and down in the open air. And Ambattha went up to them and said: 'where may the Venerable Gotama be lodging now? We have come hither to call upon him.'

8. Then the brethren thought: 'This young Brahman Ambattha is of distinguished family, and a pupil of the distinguished Brahman Pokkharasadi. The Blessed One will not find it difficult to hold conversation with such.' And they said to Ambattha : 'There Gotama is lodging, where the door is shut, go quietly up and enter the porch gently, and give a cough, and knock on the crossbar. The Blessed One will open the door for you.'

9. Then Ambattha did so. And the Blessed One opened the door, and Ambattha entered in. And the other young Brahmans also went in; and they exchanged with the Blessed One the greetings and compliments of politeness and courtesy, and took their seats. But Ambattha, walking about, said something or other of a civil kind in an off-hand way, fidgetting about the while, or standing up, to the Blessed One sitting there.

10. And the Blessed One said to him ; 'Is that the way, Ambattha, that you would hold converse with aged teachers, and teachers of your teachers well stricken in years, as you now do, moving about the while or standing, with me thus seated? '

11. 'Certainly not, Gotama. It is proper to speak, with a Brahman as one goes along only when the Brahman himself is walking and standing to a Brahman who stands, and seated to a Brahman who has taken his seat, or reclining to a Brahman who reclines. But with shavelings, sham friars, menial black fellows, the off scouring of our kinsman's heels—with them I would talk as I now do to you.'

' But you must have been wanting something, Ambattha, when you come here. Turn your thoughts rather to the object you had in view when you came. This young Brahman Ambattha is ill bred, though he prides himself on his culture ; what can this come from except from want of training?'

12. Then Ambattha was displeased and angry with the Blessed One at being called rude; and at the thought that the Blessed One was vexed with him, he said, scoffing, jeering, and sneering at the Blessed One: 'Rough is this Sakya breed of yours, Gotama, and rude, touchy is this Sakya breed of yours and violent. Menials, mere menials, they neither venerate, nor value, nor esteem, nor give gifts to, nor pay honour to Brahmans. That, Gotama, is neither fitting, nor is it seemly.' Thus did the young Brahman Ambattha for the first time charge the Sakyas with being menials.

13. 'But in what then, Ambattha, have the Sakyas given you offence?'

Once, Gotama, I had to go to Kapilvastu on some business or other of Pokkharasadi's, and went into the Sakyas' Congress Hall. Now at that time there were a number of Sakyas, old and young, seated in the hall on grand seats, making merry and joking together, nudging one another with their fingers; and for a truth, methinks, it was I myself that was the subject of their jokes; and not one of them even offered me a seat. That, Gotama, is neither fitting, nor is it seemly, that the Sakyas, menials, as they are, mere menials, should neither venerate, nor value, nor esteem, nor give gifts to, nor pay honour to Brahmams."

Thus did the young Brahman Ambattha for the second time charge the Sakyas with being menials.

14. 'Why a quail Ambattha, little hen bird tough she be, can say what she likes in her own nest. And there the Sakyas are at their own home, in Kapilvastu. It is not fitting for you to take offence at so trifling a thing.'

15. 'There are these four grades, Gotama,—the nobles, the Brahmans, the trades folk, and the work-people. And of these four, three—the nobles, the trades folk, and workpeople—are, verily, but attendants on the Brahmans. So, Gotama, that is neither fitting nor is it seemly, that the Sakyas, menials as they are, mere menials should neither venerate, nor value, nor esteem, nor give gifts to, nor pay honour to the Brahmans.'

1* Thus did the young Brahman Ambattha for the third time charged the sakyas with being menials.

16. Then the Blessed One thought thus: 'This Ambattha is very set on humbling the Sakyas with his charge of servile origin. What if I were to ask him as to his own lineage.' And he said to him:

'And what family do you then, Ambattha, belong to?' 'Yes, but if one were to follow up your ancient name and lineage, Ambattha, on the father's and the mother's side, it would appear that the Sakyas were once your masters, and that you are the offspring of one of their slave girls. But the Sakyas trace their line back to Okkaka the kings.'

'Long ago, Ambattha, King Okkaka, wanting to divert the succession in favour of the son of his favourite queen, banished his elder children-Okkamukha, Karanda, Hatthinika, and Sinipura-from the land. And being thus banished they took up their dwelling on the slopes of the Himalaya, on the borders of a lake where a mighty oak tree grew. And through fear of injuring the purity of their line they intermarried with their sisters.

Now Okkaka the king asked the ministers at his court : "Where, Sirs, are the children now?"

"There is a spot, Sire, on the slopes of the Himalaya, on the borders of a lake, where there grows a mighty oak (sako). There do they dwell. And lest they should injure the purity of their line they have married their own (sakahi) sisters.'

'Then did Okkaka the king burst forth in admiration:"Hearts of oak (sakya) are those young fellows! Right well they hold their own (parama sakya)!"

'That is the reason, Ambattha, why they are known as Sakyas. Now Okkaka had slave girl called Disa. She gave birth to a black baby. And no sooner was it born than the little black thing said,"Wash me, mother. Bathe me, mother. Set me free, mother of this dirt. So shall I be of use to you."

Now, just as now, Ambattha, people call devils,"devils", so then they called devils."black fellows"(kanhe). And they said,"This fellow spoke as soon as he was born.' 'Tis a black thing (Kanha) that is born, a devil has been born!"And that is the origin, Ambattha, of the Kanhayanas. He was the ancestor of the Kanhayanas. And thus is it, Ambattha, that if one were to follow up your ancient name and lineae, on the father's and on the mother's side, it would appear that the Sakyas were once your masters, and that you are the offspring of one of their slave girls.'

17. When he had thus spoken the young Brahmans said to the Blessed One : ' Let not the Venerable Gotama, humble Ambattha too sternly with this reproach of being descended from a slave girl. He is well born, Gotama, and of good family; he is versed in the

sacred hymns, an able reciter, a learned man. And he is able to give answer to the Venerable Gotama in these matters.

18. Then the Blessed One said to them: Quite so. If you thought otherwise, then it would be for you to carry on our discussion further. But as you think so, let Ambattha himself speak.'

19. ' We do not think so ; and we will hold our peace. Ambattha is able to give answer to the venerable Gotama in these matters.'

20. Then the Blessed One said to Ambattha the Brahman: 'Then this further question arises, Ambattha, a very reasonable one which even though unwillingly, you should answer. If you do not give a clear reply, or go off upon another issue, or remain silent, or go away, then your head will split in pieces on the spot. What have you heard, when Brahmans old and well stricken in years, teachers of yours or their teachers, were talking together, as to whence the Kanhayanans draw their origin, and who the ancestor was to whom they trace themselves back?'

And when he had thus spoken Ambattha remained silent. And the Blessed One asked the same question again. And still Ambattha remained silent. Then the Blessed One said to him: ' You had better answer, now, Ambattha. This is no time for you to hold your peace. For whosoever, Ambattha, does not, even up to the third time of asking, answer a reasonable question put by a Tathagata (by one who has won the truth), his head splits into pieces on the spot.'

21. Now at that time the spirit who bears the thunderbolt stood over above Ambattha in the sky with a mighty mass of iron, all fiery, dazzling, and aglow, with the intention, if he did not answer, there and then to split his head in pieces. And the Blessed One perceived the spirit bearing the thunderbolt, and so did Ambattha the Brahman. And Ambattha on becoming aware of it, terrified, startled, and agitated, seeking safety and protection and help from the Blessed One, crouched down besides him in awe, and said : 'What was it the Blessed One said? Say it once again !'

'What do you think. Ambattha? What have you heard, when Brahmans old and well stricken in years, teachers of yours or their teachers, were talking together, as to whence the Kanhayanans draw their origin, and who the ancestor was to whom they trace themselves back?'

'Just so, Gotama, did I hear, even as the Venerable Gotama hath said. That is the origin of the Kanhayana, and that the ancestor to whom they trace themselves back.'

22. And when he had thus spoken the young Brahmans fell into tumult, and uproar, and turmoil: and said : `Low born they say, is Ambattha the Brahman: his family, they say is not of good standing: they say he is descended from a slave girl: and the Sakyas were his masters. We did not suppose that the Samana Gotama whose words are righteousness itself, was not a man to be trusted! '

23. And the Blessed One thought: "They go too far these Brahmans in their depreciation of Ambattha as the offspring of a slave girl. Let me set him free from their reproach. And he said to them : Be not too severe in disparaging Ambattha the Brahman on the ground of his descent. That Kanha became a mighty seer. He went into the Dekkan there he learnt mystic verses, and returning to Okkaka the king, he demanded his daughter Madda-rupi in marriage, To him the king in answer said:"Who forsooth is this fellow who son of my slave girl as he is asks for my daughter in marriage :”and angry and displeased, he fitted an arrow to his bow. But neither could he let the arrow fly nor could he take it off the string again.

Then the ministers and courtiers went to Kanha the seer, and said :”et the king go safe, Sir, let the king go safe."

"The king shall suffer no harm. But should he shoot the arrow downwards, then would the earth dry up as far as his realm extends.”“Let the king, Sir, go safe, and the country too.””The king shall suffer no harm, nor his land. But should he shoot the arrow upwards, the god would not rain for seven years as far as his realm extends."

“Let the king, Sir, go safe, and the country too.””The king shall suffer no harm nor his land. But should he shoot the arrow upwards, the god would not rain for seven years as far as his realm extends."

"Let the king, Sir, go safe, and the country too: and let the god rain."

"The king shall suffer no harm, nor the land either, and the god shall rain. But let the king aim the arrow at his eldest son. The prince shall suffer no harm, not a hair of him shall be touched."

"Then, O Brahmans, the ministers told this to Okkaka, and said:"Let the king aim at his eldest son. He will suffer neither harm nor terror.”And the king did so, and no harm was done. But the king, terrified at the lesson given him, gave the man his daughter Madda-rupi as wife. You should not, O Brahmans, be too severe to disparage Ambattha in the matter of his slave-girl ancestry. That Kanha was a mighty seer.'

24. Then the Blessed One said to Ambattha : 'What think you, Ambattha? Suppose a young Kshatriya should have connection with a Brahman maiden, and from their intercourse a son should be born. Now would the son thus come to the Brahman maiden through the Kshatriya youth receive a seat and water (as token of respect) from the Brahmans? ' Yes, he would. Gotama.'

' But would the Brahmans allow him to partake of the feast offered to the dead. or of the food boiled in milk. or of the offerings to the gods. or of food sent as a present? ' ' Yes. they would Gotama. '

' But would the Brahmans teach him their verses or not?' 'They would Gotama.' 'But would he be shut off or not from their women?' ' He would not be shut off.'

' But would the Kshatriyas allow him to receive the consecration ceremony of a Kshatriya?' 'Certainly not Gotama.'

Because he is not of pure descent on the mother's side.' 25. 'Then what think you Ambattha? Suppose a Brahman youth should have connection with a Kshatriya maiden, and from their intercourse a son should be born. Now would the son come to the Kshatriya maiden through the Brahman youth receive a seat and water (as token of respect) from the Brahmans? ' 'Yes, he would, Gotama.'

' But would the Brahmans allow him to partake of the feast offered to the dead, or of food boiled in milk, or of an offering to the gods, or of food sent as a present? ' ' Yes, they would, Gotama.'

' But would the Brahmans teach him their verses or not?' 'They would, Gotama.'

' But would the Kshatriyas allow him to receive the consecration ceremony of a Kshatriya. ' 'Certainly not, Gotama.' 'Why not that?'

' Because he is not of pure descent on the father's side.' 26. ' Then, Ambattha, whether one compares women with women, or men with men, the Kshatriyas are higher and the Brahmans inferior.

' And what think you, Ambattha? Suppose the Brahmans, for some offence or other, were to outlaw a Brahman by shaving him and pouring ashes over his head, were to banish him from the land from the township. Would he be offered a seat or water among the Brahmans? ' ' Certainly not, Gotama.'

' Or would the Brahmans allow him to partake of the food offered to the dead, or of the food boiled in milk, or of the offerings to the gods, or of food sent as a present? ' ' Certainly not, Gotama.'

' Or would the Brahmans teach him their verses or not? ' ' Certainly not, Gotama.'

‘And would he be shut off, or not, from their women?’ ‘He would be shut off.’

27. ‘But what think you, Ambattha? If the Kshatriyas had in the same way outlawed a Kshatriya and banished him from the land or the township, would he, among the Brahmans, be offered water and a seat?’ ‘Yes, he would, Gotama.’

‘And would he be allowed to partake of the food offered to the dead, or of the food boiled in milk, or of the offerings to the gods. or of food sent as a present?’

‘He would, Gotama.’

‘And would the Brahmans teach him their verses?’ ‘They would, Gotama?’

‘And would he be shut off, or not from their women?’ ‘He would not, Gotama.’

‘But thereby, Ambattha, the Kshatriya would have fallen into the deepest degradation, shaven as to his head, cut dead with the ash-basket, banished from land and townships. So that, even when a Kshatriya has fallen into the deepest degradation, still it holds good that the Kshatriyas are higher, and the Brahmans inferior.

28. ‘Moreover it was one of the Brahma gods, Sanam-kumara, who uttered this stanza.’

“The Kshatriya is the best of those among this folk who put their trust in lineage.

But he who is perfect in wisdom and righteousness, he is the best among gods and men.”

‘Now this stanza, Ambattha, was well sung and not ill sung by the Brahma Sanam-kumara well said and not ill said full of meaning and not void thereof. And I too approve it, ‘I also ‘Ambattha says:

“The Kshatriya is the best of those among this folk who put their trust in lineage,

But he who is perfect in wisdom and righteousness, he is the best among gods and men.”

HERE ENDS THE FIRST PORTION FOR RECITATION

1. ‘But what Gotama is the righteousness and what the wisdom spoken of in that verse?’

‘In the supreme perfection in wisdom and righteousness, Ambattha. there is no reference to the question either of birth, or of lineage, or of the pride which says:”You are held as worthy as I”,

or”You are not held as worthy as I”. It is where the talk is of marrying, or giving in marriage, that reference is made to such things as that. For whosoever, Ambattha, are in bondage to the notions of birth or of lineage, or to the pride of social position, or of connection by marriage. They are far from the best wisdom and righteousness. It is only by having got rid of all such bondage that one can realise for himself that supreme perfection in wisdom and in conduct.

2. `But what Gotama is that conduct, and what that wisdom?' [Here follow, under 'Morality' (Sila)]

The introductory paragraphs (40-42 of the 'Samanaphala' pp. 62-63 of the text) on the appearance of a Buddha, his preaching the conversion of a hearer, and his renunciation of the world: then come,

1. The Silas above pp. 4-12 (8-27) of the text. Only the refrain differs. It runs here, at the end of each clause, through the whole of this repeated passage: `This is reckoned in him as morality.' Then under 'Conduct' (Karuna).

2. The paragraph on `Confidence,' above, p. 69 of the text 63. The refrain from here onwards. This is reckoned to him as conduct.

3. The paragraph on `Guarded is the door of the senses' above. p. 70 of the text, 64.

4. The paragraph on `Mindful and self-possessed,' above, p. 70 of the text 65.

5. The paragraph on `Content,' above. p. 71 of the text, 66.

6. The paragraph on `Solitude,' above, p. 71 of the text, 67.

7. The paragraphs on the 'Five Hindrances,' above pp, 71-2 of the text, 68-74.

8. The paragraphs on the `Four Rapt Contemplations' above, 73-76, pp. 75-82. The refrain at the end of each of them ('higher and better than the last ') is here of course, to be read not as higher fruit of the life of a recluse, but as higher conduct.

UNDER WISDOM (VIGGA)

9. The Paragraphs on `Insight arising from Knowledge' (Nana-dassanam), above, p. 76 of the text, 83, 84. The refrain from here onwards is: `This is reckoned in him as wisdom, and it is higher and sweeter than the last.'

10. The paragraphs on the 'Mental Image,' above, p. 77 of the text 85, 86.

11. The paragraphs on 'Mystic Gifts' (Iddhi), above, p. 77 of the text, 87, 88.

12. The paragraphs on the 'Heavenly Ear' (Dibbasota), above p. 79 of the text, 89, 90.

13. The paragraphs on 'Knowledge of the hearts of others' (Kato-pariya-nanam) above p. 79 of the text 91, 92.

14. The paragraphs on 'Memory of one's own previous births' (Pubbe-nivasa-anussati-nama) above, p. 81 of the text, 93, 94.

15. The paragraph on the 'Divine Eye' (Dibbakakkhu), above, p. 82 of the text, 95, 96.

16. The paragraphs on the 'Destruction of the Deadly Floods' (Asavanam Khaya-nanam), above, p. 83 of the text. 97, 98.

'Such a man, Ambattha, is said to be perfect in wisdom, perfect in conduct, perfect in wisdom and conduct. And there is no other perfection in wisdom and conduct higher and sweeter than this.'

3. 'Now, Ambattha, to this supreme perfection in wisdom and goodness there are Four Leakages. And what are the four?'

'In case, Ambattha any recluse or Brahman, without having thoroughly attained unto this supreme perfection in wisdom and conduct, with his yoke on his shoulder (to carry fire-sticks, a water-pot, needles, and the rest of a mendicant friar's outfit), should plunge into the depths of the forest, vowing to himself: "I will henceforth be one of those who live only on fruits that have fallen of themselves"— then, verily, he turns that out worthy only to be a servant unto him that hath attained to wisdom and rightsouness.'

'And again, Ambattha in case any recluse or Brahman, without having thoroughly attained unto this supreme perfection in wisdom and conduct, and without having attained to living only on fruits fallen of themselves, taking a *hoe* and a basket with him, should plunge into the depths of the forest, vowing to himself: "I will henceforth be one of those who live only on bulbs and roots of fruits." Then, verily he turns out worthy only to be a servant unto him who hath attained to wisdom and righteousness.'

'And again Ambattha in case any recluse or Brahman without having thoroughly attained unto this supreme perfection in wisdom and conduct, and without having attained to living only on fruits fallen of themselves, and without having attained to living only on bulbs and roots and fruits, should build himself a fire shrine near the boundaries of some village or some town and there dwell serving the

fire-god, then verily he turns out worthy only to be a servant unto him that hath attained to wisdom and righteousness.'

'And again Ambattha in case any recluse or Brahman without having thoroughly attained unto this supreme perfection in wisdom and conduct, and without having attained to living only on fruits fallen of themselves, and without having attained to living only on bulbs and roots and fruits, and without having attained to serving the fire-god, should build himself a foundered almshouse at a crossing where four high roads meet, and dwell' there, saying to himself:"Whosoever, whether recluse or Brahman shall pass here, from either of these four directions, him will I entertain according to my ability and according to my power—then, verily, he turns out worthy only to be a servant unto him who hath attained to wisdom and righteousness.'

'These are the Four Leakage, Ambattha, to supreme perfection in righteousness and conduct.'

4. 'Now what think you, Ambattha? Have you, as one of a class of pupils under the same teacher, been instructed in this supreme perfection of wisdom and conduct?'

Not that, Gotama. How little is it that I can profess to have learnt! How supreme this perfection of wisdom and conduct! Far is it from me to have been trained therein?'

'Then what think you, Ambattha? Although you have not thoroughly attained unto this supreme perfection of wisdom and goodness, have you been trained to take the yoke upon your shoulders. and plunge into the depths of the forest as one who would fain observe the vow of living only on fruits fallen of themselves?' 'Not even that, Gotama'.

'Then what think you Ambattha? Although you have not attained unto this supreme perfection of wisdom and goodness, nor have attained to living on fruits fallen of themselves, have you been trained to take hoe and basket, and plunge into the depths of the forest as one who would fain observe the vow of living only on bulbs and roots and fruits?' 'Not even that, Gotama'

'Then what think you, Ambattha? Although you have not attained unto this supreme perfection of wisdom and goodness, and have not attained to living on fruits fallen of themselves, and have not attained to living on bulbs and roots and fruits, have you been taught to build yourself a fire-shrine on the borders of some village or some town.

and dwell there as one who would fain serve the fire-god?' 'Not even that, Gotama.'

' Then what think you, Ambattha? Although you have not attained unto this supreme perfection of wisdom and goodness, and have not attained to living on fruits fallen of themselves, and have not attained to living on bulbs and roots and fruits, and have not attained to serving the firegod, have you been taught to build yourself a four-doored almshouse at a spot where four high roads cross, and dwell there as one who would fain observe the vow to entertain whosoever might pass that way, from any of the four directions, according to your ability and according to your power?' ' Not even that, Gotama.'

5. ' So then you, Ambattha, as a pupil, have fallen short of due training, not only in the supreme wisdom and conduct, but even in any one of the Four Leakages by which the complete attainment thereof is debarred. And your teacher too, the Brahman Pokkharasadi, has told you this saying :”Who are these shavelings, sham friars, menial black fellows, the offscouring of our kinsman's heels, that they should claim converse with Brahmans versed in the threefold Vedic Lore!”he himself not having even fulfilled any one even of these lesser duties (which lead men to neglect the higher ones). See, Ambattha, how deeply your teacher the Brahman Pokkharasadi has herein done you wrong.'

6. 'And the Brhman Pokkharasadi Ambattha, is in the enjoyment of a grant from Pasenadi, the king of Kosala. But the king does not allow him to come into his presence. When he consults with him he speaks to him only from behind a curtain. How is it, Ambattha, that the very King, from whom he accepts this pure and lawful maintenance, King Pasendadi of Kosala, does not admit him to his presence? See, Ambattha, how deeply your teacher the Brahman Pokkharasadi, has herein done you wrong.'

7. ` Now what think you, Ambattha? Suppose a king, either seated on the neck of his elephant or on the back of his horse, or standing on the footrug of his chariot, should discuss some resolution of state with his chiefs or princes, and suppose as he left the spot and stepped on one side, a workman (Sudra) or the slave of a workman should come up and, standing there, should discuss the matter, saying:”Thus and thus said Pasendadi the King.”Although he should speak as the king might have spoken, or discuss as the king might have done, would he thereby be the king, or even as one of his officers? ' 'Certainly not, Gotama.'

8. `But just so, Ambattha, those ancient poets (Rishis) of the Brahmans, the authors of the verses, the utterers of the verses whose ancient form of words so chanted, uttered, or composed the Brahmans of to-day chant over again and rehearse, intoning or reciting exactly as has been intoned or recited—to wit, Atthaka, Vamaka, Vamadeva, Yamataggi, Angirasa, Bharadvaja, Vasettha, Vessamitta, Kassapa, and Bhagu—though you can say : ' I as a pupil know by heart their verses `that you should on that account by a Rishi, or have attained to the state of a Rishi—such a condition of things has no existence! '

9. `Now what think you, Ambattha? What have you heard when Brahmans. old and well stricken in years, teachers of yours of their teachers, were talking together—did those ancient Rishis whose verses you so chant over and repeat, parade about well groomed, perfumed, trimmed as to their hair and beard adorned with garlands and gems, clad in white garments, in the full possession and enjoyment of the five pleasures of sense, as you and your teacher too, do now?' 'Not that, Gotama.'

' Or did they live, as their food, on boiled rice of the best sorts, from which all the black specks had been sought out and removed, and flavoured with sauces and curries of various kind as you, and your teacher too, do now? ' `Not that, Gotama.'

Or were they waited upon by women with fringes and furbelows round their loins, as you, and your teacher too, do now?

` Or did they go about driving chariots, drawn by mares with plaited manes and tails, using long wands and goads the while, as you and your teacher too, do now?' 'Not that Gotama.'

`Or did they have themselves guarded in fortified towns, with moats dug out round them and crossbars let down before the gates, by men girt with long swords, as you, and your teacher too, do now?' 'Not that Gotama.'

10. `So then, Ambattha, neither are you a Rishi, nor your teacher, nor do you live under the conditions under which the Rishis lived. But whatsoever it may be, Ambattha, concerning which you are in doubt or perplexity about me, ask me as to that, I will make it clear by explanation.'

11.. Then the Blessed One went forth from his chamber, and began to walk up and down that Ambattha did the same. And as he thus walked up and down, following the Blessed One, he took stock of the thirty-two signs of a great man, whether they appeared on the

body of the Blessed One or not. And he perceived them all save only two. With respect to those two—the concealed member and the extent of tongue—he was in doubt and perplexity, not satisfied not sure.

12. And the Blessed One knew that he was so in doubt. And he so arranged matters by his Wondrous Gift that Ambattha the Brahman saw how that part of the Blessed One that ought to be hidden by clothes was enclosed in a sheath. And the Blessed One so bent round his tongue that he touched and stroked both his ears, touched and stroked both his nostrils, and the whole circumstance of his forehead he covered with his tongue.

And Ambattha, the young Brahman, thought: 'The Samana Gotama is endowed with the thirty-two signs of a great man, with them all, not only with some of them.' And he said to the Blessed One : ' And now, Gotama, we would fain depart. We are busy and have much to do.'

'Do Ambattha, what seemed to you fit.'

And Ambattha mounted his chariot drawn by mares, and departed thence.

13. Now at that time the Brahman Pokkharasadi had gone forth from Ukkattha with a great retinue of Brahmans, and was seated in his own pleasure waiting there for Ambattha. And Ambattha came on to the pleasure. And when he had come in his chariot as far as the path was practicable for chariots, he descended from it, and came on foot to where Pokkharasadi was, and saluted him, and look his seat respectfully on one side. And when he was so seated, Pokkharasadi said to him.

14. 'Well. Ambattha! Did you see the Blessed One?' ' Yes, Sir, we saw him.'

'Well! is the Venerable Gotama so as the reputation about him I told you of declares, and not otherwise. Is he such a one, or is he not?'

'He is so, Sir, as his reputation declares, and not otherwise. Such is he, not different. And he is endowed with the thirty-two signs of a great man, with all of them, not only with some.' ' And did you have any talk, Ambattha, with the Samana Gotama?' 'Yes, Sir, I had.' 'And how did the talk go?'

Then Ambattha told the Brahman Pokkharasadi all the talk that he had with the Blessed One.

15. When he had thus spoken, Pokkharasadi said to him : `Oh, you wiseacre! Oh! you dullard! Oh! you expert, forsooth, in our threefold Vedic Lore! A man, they say, who should carry out his business thus, must, on the dissolution of the body, after death, be reborn into some dismal state of misery and woe. What could the very points you pressed in your insolent words lead up to, if not to the very disclosures the venerable Gotama made? What a wiseacre, what a dullard : what an expert, forsooth, in our threefold Vedic lore!' And angry and displeased, he struck out with his foot, and rolled Ambattha over. And he wanted, there and then, himself to go and call on the Blessed One.

1. But the Brahmanas there spake thus to Pokkharasadi: `It is much too late. Sir, today to go to call on the Samana Gotama. The venerable Pokkharasadi can do so tomorrow.

So Pokkharasadi had sweet food, both hard and soft, made ready at his own house, and taken on wagons, by the light of blazing torches, out to Ukkattha. And he himself went on to the Ikkhanankala Wood, driving in his chariot as far as the road was practicable for vehicles and then going on foot, to where the Blessed One was. And when he had exchanged with the Blessed One the greetings and compliments of politeness and courtesy, he took his seat on one side, and said to the Blessed One :

17. ' Has our pupil Gotama the young Brahman Ambattha, been here?' `Yes. Brahman, he has.'

`And did you, Gotama, have any talk with him?' ' Yes. Brahman, I had.'

`And on what wise was the talk that you had with him?' 18. Then the Blessed One told the Brahman Pokkharasadi all the talk that had taken place. And when he had thus spoken Pokkharasadi said to the Blessed One :

`He is young and foolish, Gotama, that young Brahman Ambattha. Forgive him. Gotama''

`Let him be quite happy, Brahman, that young Brahman Ambattha' 19. And the Brahman Pokkharasadi took stock, on the body of the Blessed One, of the thirty two marks of a Great Being. And he saw them all plainly, save only two. As to two of them the sheath concealed member and the extensive tongue he was still in doubt and undecided. But the Blessed One showed them to Pokkharasadi, even as he had shown them to Ambattha. And Pokkharasadi perceived that the Blessed One was endowed with the thirty two

marks of a Great Being, with all of them, not only with some. And he said to the Blessed One: 'May the venerable Gotama grant me the favour of taking his tomorrow's meal with me and also the members of the Order with him.' And the Blessed One accepted, by silence, his request.

20. Then the Brahman Pokkharasadi seeing that the Blessed One had accepted, had (on the morrow) the time announced to him: 'It is time. Oh Gotama, the meal is ready.' And the Blessed One who had dressed in the early morning, put on his outer robe, and taking his bowl with him, went with the brethren to Pokkharasadi's house, and sat down on the seat prepared for him. And Pokkharasadi the Brahman, satisfied the Blessed One, with his own hand with sweet food, both hard and soft, until he refused any more, and the young Brahmans the members of the Order. And when the Blessed One had finished his meal, and cleansed the bowl and his hands, Pokkharasadi took a *low* seat, and sat down beside him.

21. Then to him thus seated the Blessed One discoursed in due order; that is to say he spoke to him of generosity, of right conduct, of heaven, of the danger, the vanity, and the defilement of lusts, of the advantages of renunciation. And when the Blessed One saw that Pokkharasadi the Brahman, had become prepared, softened, unprejudiced, upraised, and believing in heart, then he proclaimed the doctrine the Buddhas alone have won; that is to say, the doctrine of sorrow, of its origin, of its cessation, and of the Path. And just as a clean cloth from which all stain has been washed away will readily take the dye, just even so did Pokkharasadi the Brahman, obtain, even while sitting there, the pure and spotless Eye for the Truth, and he knew: 'Whatsoever has a beginning in that is inherent also the necessity of dissolution.'

22. And then the Brahman Pokkarasadi as one who had seen the Truth, had mastered it, understood it, dived deep down into it, who had passed beyond doubt and put away perplexity and gained full confidence, who had become dependent on no other man for his knowledge of the teaching of the Master, addressed the Blessed One and said:

'Most excellent Oh Gotama (are the words of thy mouth), most excellent! Just as if a man were to set up that which has been thrown down, or were to reveal that which has been hidden away, or were to point out the right road to him who has gone astray, or were to bring a light into the darkness so that those who had eyes could see

external forms,—just even so, Lord, has the truth been made known to me, in many a figure, by the venerable Gotama. And I, Oh Gotama, with my sons, and my wife, and my people, and my companions, betake myself to the venerable Gotama as my guide, to the truth, and to the Order. May the venerable Gotama accept me as a disciple, as one who from this day forth, as long as life endures, has taken him as his guide. And just as the venerable Gotama visits the families of others, his disciples at Ukkatha, so let him visit mine. Whosoever there may be there, of Brahmans or their wives, who shall pay reverence to the venerable Gotama or stand up in his presence, or offer him a seat or water, or take delight in him, to him that will be for long, a cause of weal and bliss.'

'It is well, Brahman, what you say.' Here ends the Ambattha Sutta.

VI

In the matter of his opposition to Caste, Buddha practised what he preached. He did what the Aryan Society refused to do. In the Aryan Society the Shudra or low caste man could never become a Brahman. But Buddha not only preached against caste but admitted the Shudra and the low caste to the rank of a Bhikku who held the same rank in Buddhism as the Brahman did in Brahmanism. As Rhys Davis points out: (Quotation not given)

In the first place, as regards his own Order, over which alone he had complete control, he ignores completely and absolutely all advantages or disadvantages arising from birth, occupation, and social status, and sweeping away all barriers and disabilities arising from the arbitrary rules of mere ceremonial or social impurity.

One of the most distinguished members of his Order, the very one of them who was referred to as the chief authority after Gotama himself, on the rules of the Order, was Upali, who had formerly been a barber. one of the despised occupations. So Sunita, one of the brethren whose verses are chosen for insertion in the Thera Gatha, was a Pukkusa. one of the low tribes. Sati, the profounder of a deadly heresy, was of the sons of the fisher folk, afterwards a low caste, and even then an occupation, on account of its cruelty, particularly abhorred. Nanda was a cowherd. The two Panthakas were born out of wedlock, to a girl of good family through intercourse with a slave (so that by the rule laid down in Manu 31. they were actually outcasts). Kapa was the daughter of a deer-stalker, Punna and Punnika had been slave girls. Sumangalamata was daughter and wife to workers in rushes, and Subha was the daughter

of a smith. More instances could doubtless be quoted and others will become known when more texts are published.

It does not show much historical insight to sneer at the numbers as small, and to suggest that the supposed enlightenment or liberality was mere pretence. The facts speak for themselves; and the percentage of low-born members of the Order was probably in fair proportion to the percentage of persons belonging to the despised jatis and sippas as compared with the rest of the population. Thus of the Theris mentioned in the Theri Gatha we know the social position of sixty, of whom five are mentioned above that is, 81/2 per cent of the whole number were base-born. It is most likely that this is just about the proportion which persons in similar social rank bore to the rest of the population.

Just as Buddha levelled up the position of the Shudras and the low caste men by admitting them to the highest rank namely that of Bhikkus, he also levelled up the position of women. In the Aryan Society women were placed on the same position as the Shudras and in all Aryan literature women and Shudras are spoken of together as persons belonging to the same status. Both of them were denied the right to take *Sanyas* as Sanyas was the only way open to salvation. Women and Shudras were beyond salvation. Buddha broke this Aryan rule in the case of women as he did in the case of the Shudras. Just as a Shudra could become a Bhikku so a woman could become a nun. This was taking her to the highest status then conceivable in the eyes of the Aryan Society.

Another issue on which Buddha fought against the leaders of the Aryan Society was the issue of the Ethics of teachers and teaching. The leaders of the Aryan Society held the view that learning and education was the privilege of the Brahmins, Kshatriyas and Vaishyas. The Shudras were not entitled to education. They insisted that it would be danger to social order if they taught women or any males not twice-born. Buddha repudiated this Aryan doctrine. As pointed out by Rhys Davis on this question is "That everyone should be allowed to learn; that everyone, having certain abilities, should be allowed to teach ; and that, if he does teach, he should teach all to all ; keeping nothing back, shutting no one out." In this connection reference may be made to the dialogue between Buddha and the Brahman Lohikka and which is known as the Lohikka Sutta.

LOHIKKA SUTTA

(Some points in the Ethics of Teaching)

1. Thus have I heard. The Exalted One, when once passing on a tour through the Kosala districts with a great multitude of the members of the Order, with about five hundred Bhikshus, arrived at Salavatika. (Village surrounded by a row of Sala trees). Now at that time Lohikka the Brahman was established at Salavatika, a spot teeming with life, with much grassland and woodland and corn, on a royal domain granted him by King Pasenadi of Kosala, as a royal gift, with power over it as if he were the king.

2. Now at that time Lohikka the Brahman was thinking of harbouring the following wicked view; 'Suppose that a Samana or a Brahmana have reached up to some good state (of mind), then he should tell no one else about it. For what can one man do for another? To tell others would be like the man who, having broken through an old bond, should entangle himself in a new one. Like that, I say, is this (desire to declare to others) ; it is a form of lust. For what can one man do for another?'

Now Lohikka the Brahman heard the news: 'They say that the Samana Gotama, of the sons of the Sakyas, who went out from the Sakya clan to adopt the religious life, has now arrived, with a great company of the brethren of his Order, on his tour through the Kosala districts, at Salavatika. Now regarding that venerable Gotama, such is the high reputation that has been noised abroad : that Exalted One is an Arhat, fully awakened, abounding in wisdom and goodness, happy, with knowledge of the worlds, unsurpassed as a guide to mortals willing to be led, a teacher for gods and men, an exalted one, a Buddha. He, by himself thoroughly knows, and sees as it were face to face. This universe-including the worlds above of the gods, the Brahmans and the Maras ; and the world below with its Samanas and Brahmans. Its princes and peoples and having known it, he makes his knowledge known to others. The truth, lovely in its origin, lovely in its progress, lovely in consummation, doth he proclaim both in the spirit

and in the letter. The higher life doth he make known in all its fullness, and in all its purity. And good is it to pay visits to Arhats like that.'

4. Then Lohikka the Brahman said to Bhesika the barber, 'Come now, good Bhesika, go where the Samana Gotama is staying, and on your arrival, ask in my name as to whether his sickness and indisposition as abated, as to his health and vigour and condition of ease; and speak thus :''May the venerable Gotama, and with him the

brethren of the order, accept the tomorrow's meal from Lohikka the Brahman."

5. 'Very well, Sir, 'said Bhesika the barber, acquiescing in the word of Lohikka the Brahman and did so even as he had been enjoined. And the Exalted One consented, by silence, to his request.

6. And when Bhesika the barber perceived that the Exalted One had consented, he rose from his seat and passing the Exalted One with his right hand towards him, went to Lohikka the Brahman, and on his arrival spake to him thus :

'We addressed that Exalted One. Sir. in your name, even as you commanded. And the Exalted One hath consented to come.'

7. Then Lohikka the Brahman, when the night had passed made ready at his own dwelling place sweet food, both hard and soft, and said to Bhesika the barber: 'Come now, good Bhesika, go where the Samana Gotama is staying, and on your arrival, announce the time to him, saying :''It is time, O Gotama, and the meal is ready.'"

' Very well, Sir ', said Bhesika the barber in assent to the words of Lohikka the Brahman: and did so even as he had been enjoined.

And the Exalted One, who had robed himself early in the morning, went robed, and carrying his bowl with him, with the brethren of the Order, towards Salavatika.

8. Now, as he went, Bhesika the barber walked step by step, behind the Exalted One. And he said to him :

'The following wicked opinion has occurred to Lohikka the Brahman ;''Suppose that a Samana or a Brahmana have reached up to some good state (of mind), then he should tell no one else about it. For what can one man do for another? To tell others would be like the man who, having broken through an old bond, should entangle himself in a new one. Like that, I say, is this (desire to declare to others) ; it is a form of lust", 'Twere well. Sir, if the Exalted One would disabuse his mind thereof. For what can one man do for another?'

'That may well be, Bhesika, that may well be.' 9. And the Exalted One went on to the dwelling-place of Lohikka the Brahman, and sat down on the seat prepared for him. And Lohikka the Brahman satisfied the Order, with the Buddha at its head, with his own hand, with sweet food both hard and soft, until they refused any more. And when the Exalted One had finished his meal, and had cleansed the bowl and his hands, Lohikka the Brahman brought a low seat

and sat down beside him. And to him, thus seated the Exalted One spake as follows:

‘ Is it true what they say, Lohikka, that the following wicked opinion has arisen in your mind ; (and he set forth the opinion as above set I forth)?’ “That is so Gotarna.’

10. ‘Now what think you, Lohikka? Are you not established at Salavatika?’ ‘Yes. that is so, Gotama.’

‘Then suppose, Lohikka. one were to speak thus:’ ‘Lohikka the Brahman has domain at Salavatika. Let him alone enjoy all the revenue and all the produce of Salavatika, allowing nothing to anybody else!’ ‘Would the utterer of that speech be danger-maker as touching the men who live in dependance upon you, or not?’ ‘He would be danger-maker, Gotama’

And making that danger, would he be a person who sympathised with their welfare, or not?’

‘ He would not be considering their welfare, Gotama.’ ‘ And not considering their welfare, would his heart stand fast in love towards them. or in enmity?’ ‘ In enmity. Gotama.’

‘ But when one's heart stands fast in enmity, is that unsound doctrine, or sound?’ ‘ It is unsound doctrine, Gotama.’

‘ Now if a man hold unsound doctrine, Lohikka, I declare that one of two future births will be his lot, either purgatory or rebirth as an animal.’

11. ‘Now what think you Lohikka? Is not King Pasenadi of Kosala in possession of Kasi and Kosala?’ ‘ Yes. that is so. Gotama.’

‘Then suppose, Lohikka. one were to speak thus : ‘ King Pasenadi of Kosala is in possession of Kasi and Kosala. Let him enjoy all the revenue and all the produce of Kasi and Kosala, allowing nothing to anybody else.’ ‘Would the utterer of that speech be a danger-maker as touching the men who live in dependance on King Pasenadi of Kosala both you yourself and others or not?’ ‘ He would be danger-maker Gotama.’

‘And making that danger, would he be a person who sympathised with their welfare, or not?’

‘ He would not be considering their welfare, Gotarna.’ ‘ And not considering their welfare, would his heart stand fast in love toward them, or in enmity?’ ‘ In enmity, Gotama.’

' But when one's heart stands fast in enmity, is that unsound doctrine, or sound? ' ' It is unsound doctrine, Gotama.' ' Now if a man hold unsound doctrine, Lohikka, I declare that one of two future births will be his lot, either purgatory or rebirth as an animal.

12 and 14. `So then, Lohikka, you admit that he who should say that you, being in occupation of Salavatika, should therefore, yourself enjoy all the revenue and produce thereof, bestowing nothing on any one else; and he who should say that King Pasenadi of Kosala, being in power over Kasi and Kosala, should therefore himself enjoy all the revenue and produce thereof, bestowing nothing on any one else— would be making danger for those living in dependence upon you ; or for those you and others living in dependence upon the King. And that those who thus make danger for others, must be wanting in sympathy for them. And that the man wanting in sympathy has his heart set fast in enmity. And that to have one's heart set fast in enmity is unsound doctrine.

13 and 15. `Then just so, Lohikka, he who should say :”Suppose a Samana or a Brahamana to have reached up to some good state (of mind), then should he tell no one else about it. For what can one man do for another? To tell others would be like the man who, having broken through an old bond, should entangle himself in a new one. Like that, I say, is this desire to declare to others, it is a form of lust ;”—just so he, who should say, thus, would be putting obstacles in the way of those clansmen who, having taken upon themselves the Doctrine and Discipline set forth by Him-who-has-won-the-Truth, have attained to great distinction therein—to the fruit of conversion, for instance, or to the fruit of once returning, or to the fruit of never returning, or even to Arhatship—he would be putting obstacles in the way of those who are bringing to fruition the course of conduct that will lead to rebirth in states of bliss in heaven. But putting obstacles in their way he would be out of sympathy for their welfare ; being out of sympathy for their welfare his heart would become established in enmity ; and when one's heart is established in enmity, that is unsound doctrine. Now if a man hold unsound doctrine, Lohikka, I declare that one of two future births will be his lot, either purgatory or rebirth as an animal.

16. `There are these three sorts of teachers in the world, Lohikka, who are worthy of blame ; And whosoever should blame such a one,

his rebuke would be justified, in accord with the facts and the truth, not improper. What are the three?

In the first place, Lohikka, there is a sort of teacher who has not himself attained to that aim of Samanaship for the sake of which he left his home and adopted the homeless life. Without having himself attained to it he teaches a doctrine (Dhamma) to his hearers, saying :”This is good for you, this will make you happy.”Then those hearers of his neither listen to him, nor give ear to his words, nor become steadfast in heart through their knowledge thereof; they go their own way, apart from the teaching of the master. Such a teacher may be rebuked, setting out these facts, and adding :”You are like one who should make advances to her who keeps repulsing him, or should embrace her who turns her face away from him. Like that, do I say, is this lust of yours (to go on posing as a teacher of men, no one heeding, since, they trust you not). For what, then, can one man do for another?”

This, Lohikka, is the first sort of teacher in the world worthy of blame. And whosoever should blame such a one, his rebuke would be justified, in accord with the facts and the truth, not improper.

17. In the second place, Lohikka, there is a sort of teacher who has not himself attained to that aim of Samanship for the sake of which he left his home and adopted the homeless life. Without having himself attained to it he teaches a doctrine to his hearers, saying :”This is good for you ;, that will make you happy.”And to him his disciples listen ; they give ears to his words ; they become steadfast in heart by their understanding what is said ; and they go not their own way, apart from the teaching of the master. Such a teacher may be rebuked, setting out these facts and adding :”You are like a man who, neglecting his own field, should take thought to weed out his neighbour's field. Like that, do I say, is this lust of yours (to go on teaching others when you have not taught yourself). For what, then, can one man do for another?”

This, Lohikka, is the second sort of teacher in the world worthy of blame. And whosoever should blame such a one, his rebuke would be justified, in accord with the facts and the truth not improper.

18. And again, Lohikka, in the third place, there is a sort of teacher who has himself attained to that aim of Samanaship for the sake of which he left his home and adopted the homeless life. Having himself attained it, he teaches the doctrine to his hearers, saying :”This is good for you, that will make you happy.”But those hearers

of his neither listen to him, nor give ear to his words, nor become steadfast in heart through understanding thereof; they go their own way, apart from the teaching of the master. Such a teacher may be rebuked, setting out these facts, and adding; "You are like a man who, having broken through an old bond, should entangle himself in a new one." Like that, do I say, is this lust of yours (to go on teaching when you have not trained yourself to teach). For what, then, can one man do for another?"

"This, Lohikka, is the third sort of teacher in the world worthy of blame. And whosoever should blame such a one, his rebuke would be justified, in accord with the facts and the truth, not improper. And these, Lohikka, are the three sorts of teachers of which I spoke."

19. 'And when he had thus spoken, Lohikka, the Brahman spake thus to the Exalted One :

' But is there, Gotama, any sort of teacher not worthy of blame in the world? '

' Yes, Lohikka, there is a teacher not worthy, in the world of blame.' ' And what sort of a teacher, Gotama, is so? ' (The answer is in the words of the exposition set out above in the Samanna-phala, as follows :

1. The appearance of a Tathagata (one who won the truth), his preaching, the conversion of a hearer, his adoption of the homeless state.

2. The minor details of mere morality that he practises.

3. The Confidence of heart he gains from this practice.

4. The paragraph on 'Guarded is the door of his Senses.'

5. The paragraph on 'Mindful and Self-possessed.'

6. The paragraph on Simplicity of Life, being content with little.

7. The paragraphs on Emancipation, ill-temper, laziness, worry and perplexity.

8. The paragraph on the Joy and Peace that, as a result of this emancipation, fills his whole being.

9. The paragraphs on the Four Raptures (Ghanas).

10. The paragraphs on the Insight arising from Knowledge (the knowledge of the First Path).

11. The paragraphs on the Realisation of the Four Noble Truths the destruction of the Intoxications—lust, delusions, becomings, and ignorance—and the attainment of Arhatship.) The refrain through and the closing paragraph is : 'And whosoever the teacher be, Lohikka, under whom the disciple attains to distinction so excellent

as that, that, Lohikka is a teacher not open to blame in the world. And whosoever should blame such a one, his rebuke would be unjustifiable, not in accord either with the facts or with the truth, without good ground.'

78. And when he had thus spoken, Lohikka the Brahman said to the Exalted One :

Just, Gotama, as if a man had caught hold of a man, falling over the precipitous edge of purgatory, by the hair of his head and lifted him up safe back on the firm land—just so have I, on the point of falling into purgatory, been lifted back on to the land by the Venerable Gotama. Most excellent, O Gotama, are the words of thy mouth, most excellent? Just as if a man were to set up what has been thrown down, or were to reveal what has been hidden away, or were to point out the right road to him who has gone astray, or were to bring a light into the darkness so that those who had eyes could see external forms—just even so has the truth been made known to me, in many a figure, by the Venerable Gotama. And I, even I, betake myself to the Venerable Gotama as my guide, to the Doctrine and to the Order. May the Venerable Gotama accept me as a disciple ; as one who, from this day forth as long as life endures, has taken him as his guide!'

PART II

Chapter 5: The Decline and Fall of Buddhism

Chapter 6: The Literature of Brahminism

Chapter 7: The Triumph of Brahminism

CHAPTER 5

The Decline and Fall of Buddhism.

Dr. B. R. Ambedkar had written "The Decline and Fall of Buddhism", as a part of the treatise, 'Revolution and Counter-Revolution'. We have found only 5 pages in our papers which were not even corrected. Copy of this essay has been received from Shri S. S. Rege, which shows some corrections in Dr. Ambedkar's handwriting. This essay is of 18 typed pages which is included here.—' Editors.

1

The disappearance of Buddhism from India has been a matter of great surprize to everybody who cares to think about the subject and is also a matter of regret. But it lives in China, Japan, Burma, Siam, Annam, Indo-China, Ceylon and parts of Malaya-Archipalego. In India alone, it has ceased to exist. Not only it has ceased to live in India but even the name of Buddha has gone out of memory of most Hindus. How could such a thing have happened? This is an important question for which there has been no satisfactory answer. Not only there is no satisfactory answer, nobody has made an attempt to arrive at a satisfactory answer. In dealing with this subject people fail to make a very important distinction. It is a distinction between the fall of Buddhism and the decline of Buddhism. It is necessary to make this distinction because the fall of Buddhism is one, the reasons for which are very different from those which brought about its downfall. For the fall is due to quite obvious causes while the reasons for its decline are not quite so obvious.

There can be no doubt that the fall of Buddhism in India was due to the invasions of the Musalmans. Islam came out as the enemy of the 'But'. The word 'But' as everybody knows is an Arabic word and means an idol. Not many people however know what the derivation of the word 'But' is 'But' is the Arabic corruption of Buddha. Thus the origin of the word indicates that in the Moslem mind idol worship had come to be identified with the Religion of the Buddha. To the Muslims, they were one and the same thing. The mission to break the idols thus became the mission to destroy Buddhism. Islam destroyed Buddhism not only in India but wherever it went.

Before Islam came into being Buddhism was the religion of Bactria, Parthia, Afghanistan, Gandhar and Chinese Turkestan, as it was of the whole of Asia.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_1 In all these countries Islam

destroyed Buddhism. As Vicent Smith
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_2 points out :

"The furious massacre perpetrated in many places by Musalman invaders were more efficacious than Orthodox Hindu persecutions, and had a great deal to do with the disappearance of Buddhism in several provinces (of India),"

Not all will be satisfied with this explanation. It does seem inadequate. Islam attacked both, Bramhanism and Buddhism. It will be asked why should one survive and the other perish. The argument is plausible but not destructive of the validity of the thesis. To admit that Bramhanism survived, it does not mean that the fall of Buddhism was not due to the sword of Islam. All that it means is that, there were circumstances which made it possible for Bramhanism and impossible for Buddhism to survive the onslaught of Islam. Fortunately for Bramhanism and unfortunately for Buddhism that was the fact.

Those who will pursue the matter will find that there were three special circumstances which made it possible for Bramhanism and impossible for Buddhism to survive the calamity of Muslim invasions. In the first place Bramhanism at the time of the Muslim invasions had the support of the State. Buddhism had no such support. What is however more important is the fact that this State support to Bramhanism lasted till Islam had become a quiet religion and the flames of its original fury as a mission against idolatry had died out. Secondly the Buddhist priesthood perished by the sword of Islam and could not be resuscitated. On the other hand it was not possible for Islam to annihilate the Bramhanic priesthood. In the third place the Buddhist laity was persecuted by the Bramhanic rulers of India and to escape this tyranny the mass of the Buddhist population of India embraced Islam and renounced Buddhism.

Of these circumstances there is not one which is not supported by history.

Among the Provinces of India which came under Muslim domination, Sind was the first. It was ruled by a Shudra king. But the throne was usurped by a Bramhin who established his own dynasty which naturally supported the Bramhanic religion a.t the time of the invasion of Sind by Ibne Kassim in 712 A.D. The ruler of Sind was Dahir. This Dahir belonged to the dynasty of Brahmin rulers.

Heuen Tsang had noticed that the Punjab was in his time ruled by a Kshatriya Buddhist dynasty. This dynasty ruled Punjab till about 880

A.D. In that year the throne was usurped by a Brahmin army commander by name Lalliya who founded the Brahmin Shahi dynasty. This dynasty ruled the Punjab from 880 A.D. to 1021 A.D. It will thus be seen that at the time when the invasions of the Punjab were commenced by Sabuktigin and Mohammad, the native rulers belonged to the Bramhanic religion and Jayapala (960-980 A.D.) Anandpal (980-1000 A.D.) and Trilochanpal (1000-21 A.D.) of whose struggles with Sabuktigin and Mahammad we read so much were rulers belonging to the Bramhanic faith.

Central India began to be infested by Muslim invasions which commenced from the time of Mohammad and continued under the leadership of Shahabuddin Ghorī. At that time Central India consisted of different kingdoms. Mewad (now known as Udepur) ruled by the Gulohits, Sambhar (now divided into Bundi, Kota and Sirohi) ruled by the Chauhans, Kanauj mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_3 ruled by the Pratihars, Dhar ruled by the Parmars, Bundelkhand ruled by Chandellas, Anhilwad ruled by the Chavdas, Chedi ruled by the Kalachuris. Now the rulers of all these kingdoms were Rajputs and the Rajputs for reasons which are mysterious and which I will discuss later on had become the staunchest supporters of the Bramhanic religion.

About the time of these invasions Bengal had fallen into two kingdoms, Eastern and Western. West Bengal was ruled by the Kings of the Pal dynasty and East Bengal was ruled by the Kings of the Sena dynasty.

The Palas were Kshatriyas. They were Buddhist but as Mr. Vadiya says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_4 probably only in the beginning or in name". As to the Sena kings there is a difference of opinion. Dr. Bhandarkar says they were Brahmins who had taken to the military profession of the Kshatriyas. Mr. Vaidya insists that the Sena Kings were Aryan Kshatriyas or Rajputs belonging to the Lunar race. In any case there is no doubt that the Senas like the Rajputs were supporters of the orthodox faith. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_5

"South of the river Nerbudda, then existed about the time of the Muslim invasions four kingdoms (1) The Deccan Kingdom of Western Chalukyas, (2) The Southern Kingdom of the Cholas (3) The Silahara

Kingdom in Konkan on the West Coast and (4) The Ganga Kingdom of Trikalanga on the East Coast. These Kingdoms flourished during 1000-1200 A.D. which is the period of the Muslim invasions. There were under them, certain feudatory Kingdoms which rose to power in the 12th Century A.D. and which became independent and powerful in the 13th Century. They are (1) Devagiri ruled by the Yadavas, (2) Warangal ruled by Kakatiyas (3) Halebid ruled by Hoyasalas (4) Madura ruled by the Pandyas and (5) Travancore ruled by the Cheras. All these ruling dynasties were followers of orthodox Brahmanism. The Muslim invasions of India commenced in the year 1001 A.D. The last wave of these invasions reached Southern India in 1296 A.D. when Allauddin Khilji subjugated the Kingdom of Devagiri. The Muslim conquest of India was really not completed by 1296. The wars of subjugation went on between the Muslim conquerors and the local rulers who though defeated were not reduced. But the point which requires to be borne in mind is that during this period of 300 years of Muslim Wars of conquests, India was governed all over by princes who professed the orthodox faith of Brahmanism. Brahmanism beaten and battered by the Muslim Invaders could look to the rulers for support and sustenance and did get it. Buddhism beaten and battered by the Muslim invaders had no such hope. It was an unweaned orphan and it withered in the cold blast of the native rulers and was consumed in the fire lit up by the conquerors.

The Musalman invaders sacked the Buddhist Universities of Nalanda, Vikramasila, Jagaddala, Odantapuri to name only a few. They raised to the ground Buddhist monasteries with which the country was studded. The Monks fled away in thousands to Nepal, Tibet and other places outside India. A very large number were killed outright by the Muslim commanders. How the Buddhist priesthood perished by the sword of the Muslim invaders has been recorded by the Muslim historians themselves. Summarizing the evidence relating to the slaughter of the Buddhist Monks perpetrated by the Musalman General in the course of his invasion of Bihar in 1197 A.D. Mr. Vincent Smith says [smk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_6](mailto:smk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm_-_msocom_6)

"The Musalman General, who *had* already made his name a terror by repeated plundering expeditions in Bihar, seized the capital by a daring stroke. The almost contemporary historian met one of the survivors of the attacking party in A.D. 1243, and learned from him that the Fort of Bihar was seized by a party of only two hundred horsemen, who boldly rushed the postern gate and gained possession of the place. Great

quantities of plunder were obtained, and the slaughter of the 'shaven headed Brahmans', that is to say the Buddhist monks, was so thoroughly completed, that when the victor sought for some one capable of explaining the contents of the books in the libraries of the monasteries, not a living man could be found who was able to read them. 'It was discovered', we are told, 'that the whole of that fortress and city was a college, and in the Hindi tongue they call a college Bihar.'

Such was the slaughter of the Buddhist priesthood perpetrated by the Islamic invaders. The axe was struck at the very root. For by killing the Buddhist priesthood Islam killed Buddhism. This was the greatest disaster that befell the religion of Buddha in India. Religion like any other ideology can be attained only by propaganda. If propaganda fails, religion must disappear. The priestly class, however detestable it may be, is necessary to the sustenance of religion. For it is by its propaganda that religion is kept up. Without the priestly class religion must disappear. The sword of Islam fell heavily upon the priestly class. It perished or it fled outside India. Nobody remained to keep the flame of Buddhism burning.

It may be said that the same thing must have happened to the Brahmanic priesthood. It is possible, though not to the same extent. But there is this difference between the constitution of the two religions and the difference is so great that it contains the whole reason why Brahmanism survived the attack of Islam and why Buddhism did not. This difference relates to the constitution of the clergy.

The Brahmanic priesthood has a most elaborate organization. A clear and succinct account of it has been given by the late Sir Ramkrishna Bhandarkar in the pages of the Indian Antiquary. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_7](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm_-_msocom_7)

'Every Brahmanic family,' he writes, 'is devoted to the study of a particular Veda, and a particular Sakha (recension) of a Veda; and the domestic rites of the family are performed according to the ritual described in the Sutra connected with that Veda. The study consists in getting by heart the books forming the particular Veda. In Northern India, where the predominant Veda is the White Yagush and the Sakha that of the Madhyandinas, this study has almost died out, except at Banaras, where Brahmanic families from all parts of India are settled. It prevails to some extent in Gujarat, but to a much greater extent in the Maratha country; and in Tailangana there is a large number of Brahmans who still devote their life to this study. Numbers of these go about to all

parts of the country in search of dakshina (fee, alms), and all well-to-do natives patronize them according to their means, by getting them to repeat portions of their Veda, which is mostly the Black Yagush, with Apastamba for their Sutra. Hardly a week passes here in Bombay in which no Tailangana Brahman comes to me to ask for dakshina. On each occasion I get the men to repeat what they have learned, and compare it with the printed texts in my possession.

'With reference to their occupation, Brahmans of each Veda are generally divided into two classes, Grihasthas and Bhikshukas. The former devote themselves to a worldly avocation, while the latter spend their time in the study of their sacred books and the practice of their religious rites.

'Both these classes have to repeat daily the Sandhya-vandana or twilight-prayers, the forms of which are somewhat different for the different Vedas. But the repetition of the Gayatri-mantra 'Tat Savitur Vareynam' etc., five, then twenty eight, or a hundred and eight times, which forms the principal portion of the ceremony, is common to all.

'Besides this, a great many perform daily what is called Brahmayagna, which on certain occasions is incumbent on all. This for the Rig-Veda consists of the first hymn of the first mandal, and the opening sentences of the Aitareya Brahmana, the five parts of the Aitereya Aranyaka, the Yagus-samhita, the Sama-samhita, the Atharva-samhita, Asvalayana Kalpa Sutra, Nirukta, Khandas, Nighantu, Jyotisha, Siksha, Panini, Yagnavalkya Smriti, Mahabharata, and the Sutras of Kanada, Jaimini, and Badarayan.' The point to be remembered is that in the matter of officiation there is no distinction between a Bhikshukamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_8 and a Grahastha. In Brahmanism both are priest and the Grahastha is no less entitled to officiate as a priest than a Bhikshu is. If a Grahastha does not choose to officiate as a priest, it is because he has not mastered the mantras and the ceremonies or because he follows some more lucrative vocation. Under Brahmanic dispensation every Brahmin who is not an outcast has the capacity to be a priest. The Bhikshuka is an actual priest, a Grahastha is a potential priest. All Brahmins can be recruited to form the army of Brahmanic priesthood. Further no particular training or initiation ceremony is necessary for a Brahmin to act as a priest. His will to officiate is enough to make him function as a priest. In Brahmanism the priesthood can never become extinct. Every Brahmin is a potential priest of Brahmanism and be drafted in service when the need be. There

is nothing to stop the rake's life and progress. This is not possible in Buddhism. A person must be ordained in accordance with established rites by priests already ordained, before he can act as a priest. After the massacre of the Buddhist priests, ordination became impossible so that the priesthood almost ceased to exist. Some attempt was made to fill the depleted ranks of the Buddhist priests. New recruits for the priesthood had to be drawn from all available sources. They certainly were not the best.

According to Haraprasad Shastri, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_9

"The paucity of Bhiksus brought about a great change in the composition of the Buddhist priesthood. It was the married clergy with families, who were called Aryas, that took the place of the Bhiksus proper, and began to cater to the religious needs of the Buddhists generally. They commenced attaining the normal status of Bhiksus through the performance of some sacraments. (Intro.pp.19.7, quoting Tatakara Guptas' Adikarmaracana : 149, pp. 1207-1208). They officiated at the religious ceremonies but at the same time, in addition to their profession of priesthood, earned their livelihood through such avocations as those of a mason, painter, sculptor, goldsmith, and carpenter. These artisan priests who were in later times larger in numbers than the Bhiksus proper became the religious guides of the people. Their avocations left them little time and desire for the acquisition of learning, for deep thinking, or for devotion to Dhyana and other spiritual exercises. They could not be expected to raise the declining Buddhism to a higher position through their endeavours nor could they check its course towards its ruin through the introduction of salutary reforms." It is obvious that this new Buddhist priesthood had neither dignity nor learning and were a poor match for the rival, the Brahmins whose cunning was not unequal to their learning. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_10

The reason why Brahmanism rose from the ashes and Buddhism did not, is to be accounted for, not by any inherent superiority of Brahmanism over Buddhism. It is to be found in the peculiar character of their priesthood. Buddhism died because its army of priests died and it was not possible to create. Though beaten it was never completely broken. Every Brahmin alive became priest and took the place of every Brahmin priest who died.

As to the conversion to the faith of Islam by the Buddhist population as a cause of the fall of Buddhism, there can hardly be much doubt.

In his Presidential address to the early Medieval and Rajput section of the Indian History Congress held at Allahabad in 1938, Prof. Surendra Nath Sen very rightly observed that there were two problems relating to the Medieval History of India for which no satisfactory answers were forthcoming as yet. He mentioned two : one connected with the origin of the Rajputs and the other to the distribution of the Muslim population in India. Referring to the second, he said :

"But I may be permitted to deal with one question that is not wholly of antiquarian interest today. The distribution of Muslim population in India demands some explanation. It is commonly believed that Islam followed the route of conquest and the subjugated people were forced to accept the faith of their rulers. The predominance of the Muslims in the Frontier Province and the Punjab lends some colour to this contention. But this theory cannot explain an overwhelming Muslim majority in Eastern Bengal. It is quite likely that the North-Western Frontier Province was peopled by Turkish folks during the Kushan days, and their easy conversion to Islam may be explained by racial affinity with the new conquerors; but the Muslims of Eastern Bengal are certainly not racially akin to the Turks and the Afghans, and the conversion of the Hindus of that region must have been due to other reasons."

What are these other reasons? Prof. Sen then proceeds to lay bare these reasons which are found in Muslim Chronicles. He takes the case of Sind for which there is direct testimony and says

"According to the Chachnama, the Buddhists of Sind suffered all sorts of indignities and humiliations under their Brahman rulers, and when the Arabs invaded their country, the Buddhists lent their whole hearted support to them. Later on, when Dahir was slain and a Muslim Government was firmly established in his country, the Buddhists found to their dismay that, so far as their rights and privileges were concerned, the Arabs were prepared to restore status quo ante bellum and even under the new order the Hindus received a preferential treatment. The only way out of this difficulty was to accept Islam because the converts were entitled to all the privileges reserved for the ruling classes. So the

Buddhists of Sind joined the Muslim fold in large numbers." Prof. Sen then adds this significant passage :

"It cannot be an accident that the Punjab, Kashmir, the district around Behar Sharif, North-East Bengal where Muslims now predominate, were all strong Buddhist Centres in the pre-Muslim days. It will not be fair to suggest that the Buddhists succumbed more easily to political temptations than the Hindus and the change of religion was due to the prospects of the improvement of their political status."

Unfortunately the causes that have forced the Buddhist population of India to abandon Buddhism in favour of Islam have not been investigated and it is therefore impossible to say how far the persecution of the Brahmanic Kings was responsible for the result. But there are not wanting indications which suggest that this was the principal cause. We have positive evidence of two Kings engaged in the campaign of persecuting the Buddhist population.

The first to be mentioned is Mihirkula. He belonged to the Huns who invaded India about 455 A.D. and established their kingdom in Northern India with Sakala, the modern Sialkot in the Punjab as the capital. Mihirkula ruled about 528 A.D. As Vincent Smith says : mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_13 "All Indian traditions agree in representing Mihirkula as a blood thirsty tyrant. 'The Attila of India', stained to a more than ordinary degree with 'implicable cruelty' noted by historians as characteristic of the Hun temperament."

Mihirkula, to use the language of Smith, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_14 : "exhibited ferocious hostility against the peaceful Buddhist cult, and remorselessly overthrew the *stupas* and monasteries, which he plundered of their treasures".

The other is Sasanka, the King of Eastern India. He ruled about the first decade of the seventh century and was defeated in a conflict with Harsha. In the words of Vincent Smith mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_15

"Sansanka, who has been mentioned as the treacherous murderer of Harsha's brother, and probably was a scion of the Gupta dynasty, was a worshipper of Shiva, hating Buddhism, which he did his best to extirpate. He dug up and burnt the holy Bodhi tree at Buddha Gaya, on which, according to legend, Asoka had lavished inordinate devotion; broke the stone marked with the footprints of Buddha at Pataliputra;

destroyed the convents, scattered the monks, carrying his persecutions to the foot of the Nepalese hills". The seventh century seems to be a century of religious persecution in India. As Smith points out : mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_16

"A terrible persecution of the cognate religion Jainism occurred in Southern India in the seventh century".

Coming nearer to the time of the Muslim invasions, we have the instance of Sindh where presecution was undoutedly the cause. That these persecutions continued upto the time of the Muslim invasions may be presumed by the fact that in Northern India the Kings were either Brahmins or Rajputs both of whom were anti Buddhists. That the Jains were persecuted even in the 12th century is amply supported by history. Smith refers to Ajayadeva, a Saiva King of Gujarat who came to the throne in A.D. 1174-6 and began his reign by a merciless persecution of the Jains, torturing their leader to death. Smith adds,"Several other well-established instances of severe persecution might be cited."

There is therefore nothing to vitiate the conclusion that the fall of Buddhism was due to the Buddhist becoming covert to Islam as a way of escaping the tyranny of Brahmanism. The evidence, if it does not support the conclusion, at least makes it probable. If it has been a disaster, it is a disaster for which Brahmanism must thank itself.

CHAPTER 6 Literature of Brahminism

We have come across scattered pages of this essay, numbering from 6 to 14 and 17 to 39. These pages seem to be a continuation of the subject dealt with under the title 'The Decline and Fall of Buddhism'. Some of the pages are the first copies while the rest are the carbon copies. There are 14 more pages dealing with the Vedanta Sutras and Bhagvat Gita. The size and quality of the paper on which 3 chapters i.e. (1) The Decline and Fall of Buddhism, (2) The Literature of Brahminism and (3) Vedanta Sutras and Bhagvat Gita are typed, appear to be similar but distinct from the size and quality of other Chapters in this part.—Editors.

1

The facts which supply the reasons must be gleaned from the literature of Brahmanism which grew up after its political triumph under Pushyamitra.

The literature falls under six categories (1) Manu Smriti (2) Gita. (3) Shankaracharya's Vedant (4) Mahabharat (5) Ramayana and (6) the Puranas. In analysing this literature, I propose to bring out only such facts as are capable of being suggested by inference, the reason or reasons for the decline of Buddhism.

There is nothing unusual or unfair in this. For literature is the mirror in which the life of a people can be said to be reflected.

There is one point which I feel I must clear up. It relates to the period when this literature came into existence. Not all will agree that the literature referred to came into being after the revolution of Pushyamitra. On the contrary most Hindus, whether orthodox or not, learned or not, have an inerradicable belief that their sacred literature is a very old one in point of time. Indeed it seems to be an article of faith with every Hindu which necessitates a belief in a very high antiquity of their sacred literature

As to the age of Manu I have given references to show that Manu Smriti was written by Sumati Bharagava after 185 B.C. i.e. after the Revolution of Pushyamitra. I need say nothing more on the subject.

The date of the Bhagavat Gita is a subject about which there has been a difference of opinion.

Mr. Telang was of opinion that the Geeta must be older than the third century B.C. though he was not able to say how much. Mr. Tilak.

In the opinion of Prof. Garbe, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_17 the Geeta as we have it, is different from what it originally was. He agrees that the conviction that the Bhagwat Geeta has not reached us in its original form but has undergone essential transformations, is now, however, shared by many Indologists outside India. According to Prof. Garbe, one hundred and forty-six verses in the Bhagwat Geeta are new and do not belong to the original Geeta. As to the date of its composition Prof. Garbe says that it "cannot possibly be placed before the second Century A.D."

Prof. Kausambi insists that the Geeta was composed in the reign of King Baladitya. Baladitya belonged to the Gupta Dynasty which supplanted the Andhra Dynasty in the year. Baladitya came to the throne in the year 467 A.D. His reasons for so late a date are two. Before Shankaracharya—who was born in 788 A.D. and who died in 820 A.D.—wrote his commentary on the Bhagwat Geeta, it was an unknown composition. It was certainly not mentioned in the *Tatvasangraha* by Shantarakshit who wrote his treatise only 50 years

before the advent of Shankaracharya. His second reason is this. Vasubandhu was the originator of a school of thought known as '*Vijnyan Vad*'. The *Bramha-Sutra-Bhashya* contains a criticism of the Vijnyan Vad of Vasubandhu. The Geeta contains a reference [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_18](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm_-_msocom_18) to the Bramha-Sutra-Bhashya. The Geeta must therefore be after Vasubandhu and after the Bramha-Sutra-Bhashya. Vasubandhu was the preceptor of the Gupta King Baladitya. That being so, the Geeta must have been composed during or after the reign of Baladitya.

Nothing more need be said about the date of Shankaracharya. The age in which he lived and wrote is now generally accepted. Something about his life needs to be said. But I will reserve that for another place.

The question of determining the date of the composition of the Mahabharata is next to impossible. Only an attempt to fix the period of its composition can be made. The Mahabharat has undergone three editions and with each editor the title and subject matter has changed. In its original form it was known as '*Jaya*', Triumph.

This original name occurs even in the third edition both in the beginning as well as in the end. The original edition of the book known as '*Jaya*' was composed by one Vyas. In its second edition it was known as Bharat. The Editor of this second edition was one Vaishampayana. Vaishampayan's edition was not the only second edition of the Bharata. Vyas had many pupils besides Vaishampayana ; Sumantu, Jaimini, Paila and Shuka were his other four pupils. They all had learned at the feet of Vyas. Each one of them produced his own. Thus there were four other editions of Bharata. Vaishampayana recast the whole and brought out his own version. The third editor is Sauti. He recast Vaishampayana's version of Bharata. Sauti's version ultimately came to have the name of *Mahabharata*. The book has grown both in size and in the subject matter as well. The '*Jaya*' of Vyas was a small work having not more than 8800 Shlokas. In the hands of Vaishampayana it grew into 24000 verses. Sauti expanded it to contain 96836 Shlokas. As to subject matter the original as composed by Vyas was only a story of the war between the Kauravas and the Pandavas. In the hands of Vaishampayana the subject became two-fold. To the original story there was added the sermon. From a purely historical work, it became a diadactic work aiming to teach a right code of social, moral and religious duties. Sauti the last Editor made it an all-embracing repository of legendary lore. All the smaller floating legends and historical stories which existed independently of the Bharata

were brought together by Sauti so that they might not be lost or that they may be found together. Sauti had another ambition, that was to make the Bharata a storehouse of learning and knowledge. This is the reason why he added sections on all branches of knowledge, such as politics, geography, archery etc. Taking into account Sauti's habit of repetition, it is no wonder that the Bharata in his hand became Mahabharata.

Now as to the date of its composition. There is no doubt that the war between the Kauravas and the Pandavas is a very ancient event. But that does not mean that the composition of Vyas is as old as the event or contemporaneous with the event. It is difficult to assign specific dates to the different editions. Taking it as a whole Prof. Hopkins says :mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_19

"The time of the whole Mahabharata generally speaking may then be from 200-400 A.D. This, however, takes into account neither subsequent additions, such as we know to have been made in later times, nor the various recasting in verbal form, which may safely be assumed to have occurred at the hands of successive copyists."

But there are other circumstances which definitely point to a later date.

The Mahabharat contains a reference to the Huns. It was Skandagupta who fought the Huns and defeated them in or about the year 455 A.D.. Notwithstanding this the invasions of the Huns continued till 528 A.D. It is obvious that the Mahabharat was being written about his time or thereafter.

There are other indications which suggest a much later date. The Mahabharat refers to the Mlenchas or the Muslims. In the 190th Adhyaya of the Vana Parva of the Mahabharat there is a verse 29 wherein the author says that "the whole world will be Islamic. All Yagnas, rites and ceremonies and religious celebrations will cease". This is a direct reference to the Muslims and although the verse speaks of what is to happen in the future, the Mahabharat being a Purana must as in the case of the Purana be taken to speak of the event that has happened. This verse so interpreted show that the Mahabharat was being written after the date of the Muslim invasions of India. There are other references which point to the same conclusion. In the same Adhyaya verse 59, it is said that "Oppressed by the Vrashalas, the Brahmins struck with fear and finding no one to protect them, will roam all over the world groaning and crying in agony".

The Vrashalas referred to in this verse cannot be the Buddhists. There is no particle of evidence that the Brahmins were ever oppressed. On the contrary the evidence is that the Brahmins, during the Buddhists regime, were treated with the same liberality as the Buddhist Bhikshus. The reference to the Vrashalas means the uncultured must be to the Islamic invaders.

There occur other verses in the same Adhyaya of the Vanaparva. They are 65, 66 and 67. In these verses it is said that, "Society will become disarranged. People will worship *Yedukas*. They will boycott Gods. The Shudras will not serve the twice-born. The whole world will be covered with Yedukas. The Yug will come to an end."

What is the meaning of the term '*Yedukas*'? By some it has been taken to mean a Buddhist *Chaitya*. But according to Mr. Kausambi [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_20](mailto:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm_-_msocom_20) this is wrong. Nowhere either in the Buddhist literature or in the Vedic literature is the word Yeduka used in the sense of 'Chaitya'. On the contrary according to the Amarkosh as commented upon by Maheshwar Bhatt the word Yeduka means a wall which contains a wooden structure to give it strength. So understood Kausambi contends that the word Yeduka must mean 'Idgaha' of the Musalmans before which they say their prayers. If this is a correct interpretation then it is obvious that parts of the Mahabharata were written after the invasion of Mohammad Ghori. The first Muslim invasion took place in 712 A.D. under Ibne Kassim. He captured some of the towns in Northern India but did not cause much destruction. He was followed by Mohammad of Gazni. He caused great destruction of Temples and Viharas and massacred priests of both religions. But he did not engage himself in building Mosques or Idgahas. That was done by Mohammad Ghori. From this it can be said that the writing of the Mahabharata was not complete till 1200 A.D.

It seems that like the Mahabharata, the Ramayana has also gone through three editions. There are two sort of references to the Ramayana in the Mahabharata. In one case the reference is to 'Ramayana' without any mention of the author. In other the reference is to the Ramayana of Valmiki. But the present Ramayana is not the Ramayana of Valmiki. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_21](mailto:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm_-_msocom_21) In the opinion of Mr. C. V. Vaidyam [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_22](mailto:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm_-_msocom_22)

"That the present Ramayana, even as it is approved and adopted by the searching and all-respected commentator Kataka, is not the Ramayana originally written by Valmiki, not even the most orthodox thinker will be disposed to doubt. Whoever even cursorily reads the poem cannot but be struck with the inconsistencies, the severances of connections, juxta-positions of new and old ideas which abound so greatly in the present Ramayana, whether we take the Bengal or the Bombay text of it. And one cannot but come to the conclusion that the Ramayana of Valmiki was substantially reconstructed at some subsequent date."

As in the case of the Mahabharata there has been an accretion to the subject matter of the Ramayana. Originally it was just a story of the war between Rama and Ravana over the abduction of Rama's wife Sita by Ravana. In the second edition it became a story with a sermon. From a purely historical work it also became a didactic work aiming to teach a right code of Social, Moral and religious duties. When it assumed the form of a third edition it was, again, like the Mahabharat, made a repository of legends, knowledge, learning, philosophy and other arts and sciences.

With regard to the date of the composition of the Ramayana one proposition is well established namely that the episode of Rama is older than the episode of the Pandus. But that the composition of the Ramayana has gone on paripassu along with the composition of the Mahabharata. Portions of Ramayana may be earlier than the Mahabharata. But there can be no doubt that a great part of the Ramayana was composed after a great part of the Mahabharata had already been

composed.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and
Counter Rev.in Ancient India PART II.htm - _msocom_23

(INCOMPLETE)

II

The literature from which I propose to draw upon consists of (1) The Bhagwat Geeta (2) The Vedant Sutras (3) The Mahabharat (4) The Ramayana and (5) The Puranas. In analysing this literature I propose to bring out only such facts as are capable of being suggested by inference a reason or reasons for the decline of Buddhism.

Before proceeding to examine the subject matter of this literature I must deal with the question of the period when this literature came into existence. Not all will agree that the literature referred to came into being after the revolution of Pushyamitra. On the contrary most Hindus whether orthodox or not, learned or not, have an in-eradicable belief

that their sacred literature is a very old one in point of time. Indeed it seems to be an article of faith with every Hindu which necessitates a belief in a very high antiquity of their sacred literature.

(1) BHAGWAT GITA

Beginning with the Bhagwat Gita, the date of its composition has been a matter of controversy. Mr. Telangmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_24 was of opinion that we should "take the second century B.C. as a terminus before which the Gita must have been composed". The late Mr. Tilakmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_25 was convinced that the date of the present Gita must be taken as not later than 500 years before the Saka era "which means that the present Gita was composed somewhere about . . . According to Prof. Garbe mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_26 the date of the composition of the Bhagwat Gita must be placed somewhere between 200 and 400 A.D. There is another view propounded by Mr. Kausambi and is based on quite indisputable data.

Prof. Kausambi insists that the Gita was composed in the reign of Gupta King Baladitya. Baladitya belonged to the Gupta dynasty which supplanted the Andhra Dynasty in the year.... Baladitya came to the throne in the year 467 A.D. His reasons for so late a date for the composition of the Gita are two. Before Sankaracharya—who was born in 788 A.D. and who died in 820 A.D.—wrote his commentary on the Bhagwat Gita, it was an unknown composition. It was certainly not mentioned in the *Tatvasangraha* by Shantarakshit who wrote his treatise only 50 years before the advent of Sankaracharya. His second reason is this. Vasubandhu was the originator of a school of thought known as '*Vijnan Vad*'. The Brahma-Sutra-Bhashya contains a criticism of the Vijnan Vad of Vasubandhu. The Gita contains a referencemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_27 to the Brahma-Sutra-Bhashya. The Gita must therefore be after Vasubandhu and after the Brahma-Sutra-Bhashya. Vasubandhu was the preceptor of the Gupta King Baladitya. That being so the Bhagwat Gita must have been composed or at any rate portions of Gita must have been added to the original edition during or after the reign of Baladitya i.e. about 467 A.D.

While there is a difference of opinion regarding the date of the composition of the Bhagwat Gita, there is no difference of opinion that the Bhagwat Gita has gone through many editions. All share the conviction that the Bhagwat Gita has not reached us in its original form but has undergone essential transformations at the hands of different editors who have added to it from time to time. It is equally clear that the editors through whose hands it has gone were not of equal calibre.

As Prof. Garbe points out mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_28

"The Gita is certainly 'no artistic work which the all comprehending vision of a genius has created.' The play of inspiration is indeed often times perceptible; not seldom, however, there are merely high-sounding, empty words with which an idea that has been already quite often explained, is repeated: and occasionally the literary expression is exceedingly faulty. Verses are bodily taken over from the Upanishad literature, and this is certainly what a poet filled with inspiration would never have done. The workings of Sattva, Rajas and Tamas are systematized with a truly Indian pedantry, and much indeed besides this could be brought forward to prove that the Gita is not the product of a genuinely poetic creative impulse..."

Hopkins speaks of the Bhagwat Gita as characteristic in its sublimity as in its puerilities, in its logic as in its want of it. . . .Despite its occasional power and mystic exaltation, the Divine Song in its present state as a poetical production is unsatisfactory. The same thing is said over and over again, and the contradictions in phraseology and meaning are as numerous as the repetitions, so that one is not surprised to find it described as "the wonderful song, which causes the hair to stand on end".

This is not to be rejected as the view of foreigners. It is fully supported by Prof. Rajwade mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_29 who goes to show that some of those who had a hand in the composition of the Bhagwat Gita were ignorant of the rules of grammar.

While all are agreed that there have been different editions of the Gita under different editors, they are not agreed as to what parts of the Gita are original and what parts of the Gita are additions subsequently made. In the opinion of the late Rajaram Shastri Bhagwat the original Gita consisted only of 60 Shlokas. Humboldt was inclined to the view that originally the Gita consisted of only the first eleven Adhyayas (chapters)

and that 12 to 18 Adhyayas were subsequent additions made to the original. Hopkins' view is that the first fourteen Adhyayas constitute the heart of the poem. Prof. Rajwade thinks that Adhyayas 10 and 11 are spurious. Prof. Garbe says that 146 verses in the Bhagwat Gita are new and do not belong to the original Gita which means that more than one-fifth of the Gita is new.

Regarding the author of the Gita there is none mentioned. The Gita is a conversation between Arjuna and Krishna which took place on the battle field, in which Krishna propounds his philosophy to Arjuna. The conversation is reported by Sanjaya to Dhritarashtra, the father of the Kauravas. The Gita should have been a part of the Mahabharata, for, the incident which formed the occasion for it, is natural to it, but it does not find a place there. It is a separate independent work. Yet there is no author to whom it is attributed. All that we know, is that Vyas asks Sanjaya to report to Dhritarashtra the conversation that took place between Arjuna and Krishna. One may therefore say that Vyas is the author of the Gita.

(2) VEDANT SUTRAS

As has already been said, the Vedic literature consists of the Vedas, the Brahmanas, the Aranyakas, and the Upanishadas. From the point of their subject matter, this literature falls into two classes (1) literature which deals with religious observances and rites and ceremonies technically called Karma Kanda and (2) literature which deals with the knowledge about God to use the Vedic equivalent; the Brahmanas, technically called 'Gnanakanda'. The Vedas and the Brahmanas fall under the first category of literature, while the Aranyakas and the Upanishadas fall under the second.

This Vedic literature had grown to enormous proportions and what is important is that, it had grown in a wild manner. Some system, some coordination was necessary to bring order out of this chaos. As a result of the necessity for this coordination, there grew up a branch of inquiry called "Mimansa" i.e. an inquiry into the connected meaning of sacred texts i.e. the Vedic literature. Those who thought it necessary to undertake such a task of systematization and coordination divided themselves into two schools, those who systematized the 'Karmakand' portion and these who systematized the "Gnanakand" portion of the Vedic literature. The result was that there grew up two branches of the Mimansa Shastra, one called *Purva Mimansa* and the other *Uttara Mimansa*. As the names suggest, the *Purva Mimansa* deals with the early portion of the Vedic literature namely the *Vedas* and the

Bramhanas. That is why it is called Purva (early) Mimansa. The Uttara Mimansa deals with the later portions of the Vedic literature namely the Aranyakas and Upanishads. That is why it is called Uttara (later) Mimansa.

The literature connected with the two branches of the Mimansa Shastra is immense. Of this, two collections of Sutras stand out as the principal and leading works in this field of Mimansa. The authorship of one is attributed to Jaimini and that of the other is ascribed to Badarayana. Jaimini's Sutras deal with 'Karmakanda' mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_30 and Badarayan's deal with 'Gnanakand'. There is no doubt that there were prior to Jaimini and Badarayana, other authors who had written treatises on these subjects. Nonetheless the sutras of Jaimini and Badarayana are taken as the standard works on the two Branches of the Mimansa Shastra.

Although the Sutras of both relate to that branch of inquiry called Mimansa, Jaimini's sutras are called *Mimansa Sutras* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_31 while those of Badarayana are called *Vedanta Sutras*. The term 'Vedanta' is taken to mean "the end of the Veda", or the doctrines set forth in the closing chapter of the Vedas which comprise the Upanishads and as the Upanishads constitute "the final aim of the Vedas." The Sutras of Badarayana which go to systematize and coordinate them have come to be called *Vedanta Sutras*, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_32 or the doctrines set forth in the closing chapter of the Vedas which asked Sanjaya to report to. This is the origin of the Vedanta Sutras.

Who is this Badarayana? Why did he compose these Sutras, and when did he compose them? Beyond the name nothing is known about Badarayana. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_33 It is not even certain that it is the real name of the author. There is a considerable uncertainty regarding the authorship of these Sutras even among his chief commentators.

Some say that the author is Badarayana. Others say that the author of the Sutra is Vyas. The rest say that Badarayana and Vyas are one and the same person. Such is the bewildering conflict of opinion regarding the author of the Sutras.

Why did he compose these Sutras? That the Brahmins should undertake to systematize the Karmakand portion of the Vedic literature one can quite understand. The Brahmins were deeply concerned with the Karmakand. Their very existence, their livelihood depended upon the systematization of the Karmakand portion of the Vedic literature.

The Brahmins on the other hand had no interest in the 'Gnankand' portion of the Vedic literature. Why should they have made an attempt to systematize it? The question has not even been raised. But it is an important question and the answer to that must also be very important. Why the question is important and what the answer is I shall discuss later on.

There are two other questions with regard to the Vedanta Sutras. First is this. Is this work theological in character or is it purely philosophical in its nature? Or is it an attempt to tie down pure philosophy to the apron strings of established theology and thereby to make it innocuous and harmless. The other question relates to the commentaries on the Vedanta Sutras.

There have been altogether five commentaries on the Vedanta Sutras by five eminent men all of whom are called Acharyas (doctors of learning) by reason of their intellectual eminence.

They are (1) Shankaracharya (788 A.D. to 820 A.D.), (2) Ramanujacharya (1017 A.D. to 1137 A.D.), (3) Nimbarkacharya (died about 1162 A.D.), (4) Madhavacharya (1197-1276 A.D.) and (5) Vallabhacharya (born 1417 A.D.).

The commentaries of these Acharyas on the Vedanta Sutras have become far more important than the Vedanta Sutras.

The point of some significance is that on the text of one and the same collection of the Vedanta Sutras, an attempt has been made by those five Acharyas to found five different systems of thought.

According to Shankara, the Vedanta Sutras teach absolute monism. According to Ramanuja, qualified monism. According to Nimbarka, monodualism. According to Madhava, dualism and according to Vallabha, pure monism. I will not discuss here what these terms mean. All I want to say is why should five different schools should have arisen as a result of five different interpretation of the same collection of Sutras. Is it a mere matter of grammar? Or is there any other purpose behind these several interpretations. There is also another question which arises out of the plurality of commentaries. While there are five different commentaries each propounding five different ways of looking at God and the individual soul really speaking there are only two, the

view taken by Shankaracharya and the view taken by the other four. For though the four differ among themselves, they are all united in their opposition to Shankaracharya on two points (1) The complete oneness between God and individual soul and (2) the world is an illusion. Here comes the third question. Why did Shankaracharya propound so unique a view of the Vedanta Sutras of Badarayana? Is it the result of a critical study of the Sutras? Or is it a wishful interpretation designed to support a preconceived purpose?

I am only raising this question. I don't propose to deal with them here. Here I am concerned with the age of this literature, is it Pre-Buddhist or Post-Buddhist.

As to the date of the composition of the Vedanta Sutras the initial difficulty is that like the Bhagwat Gita it has also gone through several recensions.

According to [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_34](mailto:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm_-_msocom_34) there have been three recensions of the Vedanta Sutras. That being so nothing definite can be said regarding the date of its composition. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_35](mailto:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm_-_msocom_35) The views expressed are only approximations. There can be no doubt that the Vedanta Sutras are composed after the rise of Buddhism for the Sutras do allude to Buddhism. They must not be after Manu for Manu refers to them in his Smriti. Prof. Keith holds that they must have been written about 200 A.D. and Prof. Jacobi believes that the Sutras must have been composed between 200 A.D. and 450 A.D.

(3) MAHABHARATA

The question of determining the date of the composition of the Mahabharata is next to impossible. Only an attempt to fix the period of its composition can be made. The Mahabharata has undergone three editions and with each editor the title and subject matter has changed. In its original form it was known as '*Jaya*' Triumph. This original name occurs even in the third edition, both in the beginning as well as in the end. The original edition of the book known as '*Jaya*' was composed by one Vyas. In its second edition it was known as Bharata. The editor of this second edition was one Vaishampayana. Vaishampayana's Edition was not the only second edition of the Bharata. Vyas had many pupils besides Vaishampayana; Sumantu, Jaimini, Paila and Shuka were his other four pupils. They all had learned at the feet of Vyas. Each one of

them produced his own edition. Thus there were four other editions of Bharata. Vaishampayana recast the whole and brought out his own version. The third Editor is Sauti. He recast Vaishampayana's version of Bharata. Sauti's version ultimately came to have the name of *Mahabharata*.

The book has grown both in size and in the subject matter as well. The 'Jaya' of Vyas was a small work having not more than 8,800 Shlokas. In the hands of Vaishampayana it grew into 24,000 verses. Sauti expanded it to contain 96,836 Shlokas. As to subject matter, the original as composed by Vyas was only a story of the war between the Kauravas and the Pandavas. In the hands of Vaishampayana the subject became two-fold. To the original story there was added the sermon. From a purely historical work it became a diadactic work aiming to teach a right code of social, moral and religious duties. Sauti the last Editor made it an all embracing repository of legendary lore. All the smaller floating legends and historical stories which existed independently of the Bharata were brought together by Sauti so that they might not be lost or that they may be found together. Sauti had another ambition, that was to make the Bharata a storehouse of learning and knowledge. This is the reason why he added sections on all branches of knowledge, such as politics, geography, archary etc. Taking into account Sauti's habit of repetition it is no wonder that the Bharata in his hand became Mahabharata.

Now as to the date of its composition. There is no doubt that the war between the Kauravas and the Pandavas is a very ancient event. But that does not mean that the composition of Vyas is as old as the event or contemporaneous with the event. It is difficult to assign specific dates to the different editions. Taking it as a whole Prof. Hopkins says : mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_36

"The time of the whole Mahabharata generally speaking may then be from 200-400 A.D. This, however, takes into account neither subsequent additions, such as we know, to have been made in later times, nor the various recasting in verbal form, which may safely be assumed to have occurred at the hands of successive copyists."

But there are other circumstances which definitely point to a later date.

The Mahabharata contains a reference to the Huns. It was Skandagupta who fought the Huns and defeated them in or about the year 455. Notwithstanding this, the invasions of the Huns continued till

528 A.D. It is obvious that the Mahabharata was being written about this time or thereafter.

There are other indications pointed out by Mr. Kausarnbi mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_37 which suggest a much later date. The Mahabharata refers to the Mlenchhas or the Muslims. In the 190th Adhyaya of the Vana Parva of the Mahabharata, there is a verse 29 wherein the author says that "the whole world will be Islamic. All Aryan rites and ceremonies and religious celebrations will cease". This is a direct reference to the Muslims and although the verse speaks of what is to happen in the future, the Mahabharata being a Purana must as in the case of the Purana be taken to speak of the event has happened. This verse so interpreted show that the Mahabharata was being written after the date of the Muslim invasions of India. There are other references which point to the same conclusion. In the same Adhyaya verse 59 it is said that "Oppressed by the Vrashalas, the Brahmins struck with fear, and finding no one to protect them will roam all over the world groaning and crying in agony".

The Vrashalas referred to in this verse cannot be the Buddhists. There is no particle of evidence that the Brahmins were ever oppressed. On the contrary the evidence is that the Brahmins during the Buddhist regimes were treated with the same liberality as the Buddhist Bhikshus. The reference to the Vrashalas which means the uncultured must be to the Islamic invaders. If that is so, then part of the Mahabharata was certainly composed after the Muslim invasions of India began.

There occur other verses in the same Adhyaya of the Vanaparva which points to the same conclusion. They are 65, 66 and 67. In these verses it is said that "Society will become disarranged. People will worship *Yedukas*. They will boycott Gods. The Shudras will not serve the twice born. The whole world will be covered with *Yedukas*. The Yug will come to an end".

Great significance attaches to the term '*Yedukas*'. By some it has been taken to mean a Buddhist *Chaitya*, on the ground that *Yeduka* means bone and particularly the bones of Buddha and subsequently *Chaitya* because a *Chaitya* contains the bones of the Buddha. But according to Mr. Kausambi² this is wrong. Nowhere either in the Buddhist literature or in the Vedic literature is the word *Yeduka* used in the sense of '*Chaitya*'. On the contrary, according to Amarkosh as commented upon by Maheshwar Bhatt, the word *Yeduka* means a wall which contains a wooden structure to give it strength. So understood Kausambi contends

that the word Yeduka must mean 'Idgaha' of the Musalmans before which they say their prayers. If this is a correct interpretation then it is obvious that part of the Mahabharata was written after the Muslim invasions, particularly after those of Mahamad Ghori. The first Muslim invasion took place in 721 A.D. under Ibne Kassim. He captured some of the towns in Northern India but did not cause much destruction of Temples and Viharas and massacred priests of both the religions. But he did not engage himself in building Mosques or Idgahas. That was done by Mahamad Ghori. So that, it can well be said, that the writing of the Mahabharata was going on till 1200 A.D.

RAMAYANA

It is a fact that like Mahabharata, the Ramayana has also gone through three editions. There are two sorts of references to the Ramayana in the Mahabharata. In one case the reference is to Ramayana without any mention of the author. The other reference is to the Ramayana of Valmiki. But the present Ramayana is not the Ramayana of Valmiki.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_38 In the opinion of Mr. C. V. Vaidyamk:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_39 :

“That the present Ramayana, even as it is approved and adopted by the searching and all-respected commentator Kataka, is not the Ramayana originally written by Valmiki, not even the most orthodox thinker will be disposed to doubt. Whoever even cursorily reads the poem, cannot but be struck with the inconsistencies, the severances of connections, juxtapositions of new and old ideas which abound so greatly in the present Ramayana, whether we take the Bengal or the Bombay text of it. And one cannot but come to the conclusion that the Ramayana of Valmiki was substantially reconstructed at some subsequent date.”

As in the case of the Mahabharata, there has been an accretion to the subject matter of the Ramayana. Originally it was just a story of the war between Rama and Ravana over the abduction of Rama's wife Sita by Ravana. In the second edition it became a story with a sermon. From a purely historical work, it also became a didactic work aiming to teach a right code of Social, Moral and religious duties. When it assumed the form of a third edition, it was again, like the Mahabharata, made a repository of legends, knowledge, learning, philosophy and other arts and sciences.

With regard to the date of the composition of the Ramayana, one proposition is well established namely that the episode of Rama is older than the episode of the Pandus. But that the composition of the Ramayana has gone on peripassu along with the composition of the Mahabharata. Portions of Ramayana may be earlier than the Mahabharata. But there can be no doubt that a great part of the Ramayana was composed after a great part of the Mahabharata had already been

composed.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_40

PURANAS

The Puranasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_41 today number 18. This is however not the original number. According to traditions, there is no reason to doubt, there was only one Purana to start with. Tradition alleges that this Purana was older than the Vedas. The Atharva Veda refers to this *Purana* and the Bramhanda Puran says that it is more ancient than the Vedas. It was a lore which the King was expected to know for the Satapada. Brarnhana says the Adhvaryu was required to recite the Purana to the King on the 10th day of the Yajna.

The origin of the 18 Puranas is attributed to Vyas who it is said recast the original single Purana and by additions and substractions made 18 out of one. The making of the 18 Puranas is thus the second stage in the evolution of the Puranas. The edition of each of these 18 Puranas as published or uttered by Vyas is called the *Adi*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_42 Purana i.e. the original edition as brought out by Vyas. After Vyas composed these 18 Puranas, he taught them to his disciple Romaharsana. Romaharsana prepared his own edition of the Puranas and taught it to his six disciples. Romaharsana's edition of the Puranas thus became the third edition of the Puranas. Of the six disciples of Romaharsana, three: Kasyapa, Savarni and Vaisampayana, made three separate editions which may be called the fourth edition of the Puranas which we call by their names. According to the Bhavishya Purana, the Puranas came to be revised sometime during the reign of King Vikramaditya.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_43

As to the subject matter of the Puranas. The *Purana* from the oldest time is a recognised department of knowledge. For instance it was distinguished from Itihas or history. By Itihas what was understood was past occurrences connected with a ruling king. By *Akhyana* was meant the recital of an event the occurrence of which one had witnessed. By *Upakhyana* was meant the recital of something one has heard. *Gat has* meant songs about dead ancestors and about nature and universe.

Kalpashudi mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_44 are ancient ways of acting regarding Shraddha and

Kalpa mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_45 The Purana was distinguished from all these branches of knowledge. The Purana was concerned with five subjects. (1) Sarga (2) Prati Sarga (3) Vamsha (4) Manvantar and (5) Vamshacharitra. Sarga means creation of the universe, Pratisarga means the dissolution of the Universe. Vamsha means Geneology, Manvantar means the Ages of the different Manus, particularly the fourteen successive Manus who were the progenitors or sovereigns of the Earth. Vamshacharitra means the account of royal dynasties.

There has been a considerable addition made in the scope and subject matter of the Puranas. For the Puranas which we have are no longer confined to these subjects. In addition to these subjects they contain other subjects which fall entirely outside their prescribed scope. Indeed there has been such a change in the fundamental notion regarding the scope of the Puranas so that some of them do not contain any treatment of the regular subjects but deal wholly with the new or extra subjects. The extra subjects include the following main topics :

- (I) Smriti Dharma which include discussion of:
 - (1) Varnashrama-dharma, (2) Achara, (3) Ahnika, (4) Bhashyabhasya, (5) Vivaha, (6) Asaucha, (7) Shradha (8) Dravya-Suddhi (9) Pataka, (10) Prayaschitta, (II) Naraka, (12) Karma Vipaka and (13) Yuga Dharma.
- (II) Vrata Dharma—Observance of holy vows and holy days
- (III) Kshetra Dharma—Pilgrimages to holy places and
- (IV) Dana Dharma—Gifts to holy persons. In addition to this, there are two other topics the new subject matter with which one finds the Puranas to be deeply concerned.

The first of these two topics relates to sectarian worship. The Puranas are votaries of a particular deity and advocate the cause of a particular deity and the sect devoted to his worship. Five mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter

Rev.in Ancient India PART II.htm - [_msocom_46](#) Puranas advocate worship of Vishnu, Eightmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - [_msocom_47](#) worship of Shiva, Onemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - [_msocom_48](#) worship of Brahma, Onemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - [_msocom_49](#) worship of Surya, Two worship of Devi and One worship of Genesh.

The second topic which the Puranas have made a part of their subject matter is the history of the Avatars of the God. The Puranas make a distinction between identification of two Gods and the incarnation of a God. In the case of identification, the theory is that the God is one although he has two names. In the case of an incarnation, God becomes another being of the man or brute and does something miraculous. In reading this history of incarnations the fruitful source is Vishnu. For it is only Vishnu who has taken Avatars from time to time and done miraculous deeds and we find in the Puranas this new topic discussed in all its elaborate details.

It is no wonder if by the addition of these new subjects, the Puranas have been transformed out of recognition.

There is one other matter regarding the authorship of the Puranas which is noteworthy. It relates to the change in the authorship of the Puranas. Among the ancient Hindus, there were two separate sections among the literary class. One section consisted of the *Brahmins* and another section called *Sutas* who were non-Brahmins. Each was in charge of a separate department of literature. The Sutas had the monopoly of the Puranas. The Brahmins had nothing to do with the composition or the reciting of the Puranas. It was exclusively reserved for the Sutas and the Brahmins had nothing to do with it. Though the Sutas had specialized themselves in the making and the reciting of the Puranas, although they had acquired a hereditary and a prescriptive right to compose and recite the Puranas, there came a time when the Sutas were ousted from this profession by Brahmins who took it into their own hands and made a monopoly of it in their own favour. Thus there was a change in the authorship of the Puranas. Instead of the Sutas, it is the Brahmins who became their authorsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - [_msocom_50](#)

It is probably when the Puranas fell into the hands of the Brahmins that the Puranas have been finally edited and recast to make room for

the new subjects. The editing and recasting has been of a very daring character. For in doing so they have added fresh chapters, substituted new chapters for old chapters and written new chapters with old names. So that by this process some Puranas retained their earlier materials, some lost their early materials, some gained new materials and some became totally new works.

The determination of the date of the composition of the Puranas is a problem which has hardly been tackled. All history written by the Brahmins is history without dates and the Puranas are no exception. The date of the Puranas has to be determined by circumstantial evidence correlated with events the dates of which are well settled. The dates of the composition of the different Puranas have not been examined as closely as those of the other parts of the Brahminic literature. Indeed scholars have paid no attention to the Puranas at all certainly nothing like what they have done in the matter of the Vedic literature. Mr. Hazara's is the only work I know of in which an attempt is made in the matter of determining the date of the composition of the Puranas. I give below the dates of the Puranas as found by him.

Puranas	Date of Composition
1. Markendeya	Between 200 and 600 A. D.
2. Vayu	Between 200 and 500 A. D.
3. Bramhanda	Between 200 and 500 A. D.
4. Vishnu	Between 100 and 350 A. D.
5. Matsya	Part about 325 A. D. Part about 1100 A. D.
6. Bhagwat	Between 500 and 600 A. D.
7. Kurma	Between 550 and 1000 A. D.
8. Vamana	Between 700 and 1000 A. D.
9. Linga	Between 600 and 1000 A. D.
10. Varaha	Between 800 and 1500 A. D.
11. Padma	Between 600 and 950 A. D.
12. Brahanaradiya	Between 875 and 1000 A. D.
13. Agni	Between 800 and 900 A. D.
14. Garuda	Between 850 and 1000 A. D.
15. Bramha	Between 900 and 1000 A. D.
16. Skanda	After 700 A. D.
17. Bramha Vaivrata	After 700 A. D.
18. Bhavishya	After 500 A. D.

No more. precise date can be fixed for the Puranas at any rate for the present. New research in the field may narrow the higher and lower limits of their composition. The difference will only be a difference of degree. It will not be one of subversion of Eras.

This short survey is enough to remove any doubt as to the age of this literature that it is post-Buddhistic. The survey establishes one more point of great significance. This literature arose during the period subsequent to the triumph of Brahmins under the leadership of Pushyamitra. The survey brings out one other point. Vyas writes Mahabharata. Vyas tells Bhagwat Gita, and Vyas also writes the Puranas. Mahabharata contains 18 Parvas, the Gita has 18 Adhyayas and the Puranas number 18. Is all this an Accident? Or is it the result of a design planned and worked out in concert? We must wait and see.

III THE VEDANTA SUTRAS

The vedanta Sutras of Badarayana as has been pointed out already constitute a department of study on the same line as the Karma Sutras of Jaimini. It is natural to ask how the founders of these two schools of thought comfort themselves towards each other. When one begins to inquire into the matter one comes across facts which are revealing. In the first place as Prof. Belvalkar mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_51 points out, 'the Vedanta Sutras are very closely modelled upon the Karma Sutras' In the matter of methodology and terminology, Badarayana almost slavishly follows Jaimini. He accepts Jaimini rules of interpreting the text of the Shruti. He uses Jaimini's technical terms in the sense in which they have been used by Jaimini. He uses the very illustrations which are employed by Jaimini.

This is a matter for small wonder. But what is not a matter for small wonder is the attitude of the two schools towards each other in the matter of doctrine. Let me give an illustration.

Badarayana gives the following Sutras mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_52 as illustrative of the position of Jaimini towards the Vedanta.

2. Because (the Self) is supplementary (to sacrificial acts), (the fruits of the knowledge of the Self) are mere praise of the agent, even as in other cases; thus says Jaimini.

"According to Jaimini the Vedas merely prescribe acts to attain certain purposes including Liberation, and nothing more. He argues that the knowledge of the Self does not yield any independent results, as Vedanta holds, but is connected with the acts through the agent. No one undertakes a sacrificial act unless he is conscious of the fact that he is different from the body and that after death he will go to heaven, where he will enjoy the results of his sacrifices. The Text dealing with Self-knowledge serve merely to enlighten the agent and so are subordinate to sacrificial acts. The fruits, however, which the Vedanta texts declare with regard to Self-knowledge, are merely praise, even as texts declare such results by way of praise, with respect to other matters. In short, Jaimini holds that by the knowledge that his Self will outlive the body, the agent becomes qualified for sacrificial actions, even as other things become fit in sacrifices through purificatory ceremonies. 3. Because we find (from the scriptures such) conduct (of men of realization).

"Janaka, emperor of Videha performed a sacrifice in which gifts were freely distributed"(Brih. 3.1.1.); "I am going to perform a sacrifice, Sirs"(Chh. 5.11.5.). Now both Janaka and Asvapati were knowers of the Self. If by this knowledge of the Self they had attained Liberation, there was no need for them to perform sacrifices. But the two texts quoted show that they did perform sacrifices. This proves that it is through sacrificial acts alone that one attains Liberation, and not through the knowledge of the Self, as the Vedantians hold. 4. That (viz, that knowledge of the Self stands in a subordinate relation to sacrificial acts) the scriptures directly declare, "That alone which is performed with knowledge, faith and meditation becomes more powerful"(Chh. 1.1.10); This text clearly shows that knowledge is a part of the sacrificial act. 5. Because the two (knowledge and work) go together (with the departing soul to produce the results).

"It is followed by knowledge, work, and past experience"(Brih. 4.4.2.). This text shows that knowledge and work go together with the soul and produce the effect which it is destined to enjoy. Knowledge independently is not able to produce any such effect."6. Because (the scriptures) enjoin (work) for such (as know the purport of the Vedas).

"The scriptures enjoin work only for those who have a knowledge of the Vedas, which includes the knowledge of the Self. Hence knowledge does not independently produce any result."7. And on account of prescribed rules.

"Performing works here let a man wish to live a hundred years"(Is. 2.);"Agnihotra is a sacrifice lasting up to old age and death; for through old age one is freed from it or through death"(Sat. Br. 12.4.1.1.). From such prescribed rules also we find that Knowledge stands in a subordinate relation to work.

What is the position of Badarayana towards Jaimini and Karma Kanda Shastras?

This is best illustrated by the reply which Badarayana gives to the attack by Jaimini on Vedanta as formulated by Badarayana in the Sutras quoted above. The reply is contained in the following Sutras :
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_53

8. But because (the scriptures) teach (the Supreme Self to be) other (than the agent), Badarayana's (view is) correct; for that is seen (from the scriptures).

"Sutras 2-7 give the view of the Mimamsakas, which is refuted by Sutras 8-17.

The Vedanta texts do not teach the limited self, which is the agent, but the Supreme Self, which is different from the agent. Thus the knowledge of the Self which the Vedanta texts declare is different from that knowledge of the self which an agent possesses. The knowledge of such a Self, which is free from all limiting adjuncts, not only does not help, but puts an end to all actions. That the Vedanta texts teach the Supreme Self is clear from such texts as the following;"He who perceives all and knows all"(Mu. 1.1.9.);"Under the mighty rule of this immutable, O Gargi"etc. (Brih. 3.8.9.).

9. But the declarations of the Shruti equally support both views.

"This Sutra refutes the view expressed in Sutra 3. There it was shown that Janaka and others even after attaining Knowledge were engaged in work. This Sutra says the scriptural authority equally supports the view that for one who attained Knowledge there is no work."Knowing this very Self the Brahmanas renounce the desire for sons, for wealth, and for the worlds, and lead a mendicant life"(Brih. 3.5.1.)."We also see from the scriptures that knowers of the Self like Yajnavalkya gave up work."This much indeed is (the means of) immortality, my dear'. Saying this Yajnavalkya left home"(Brih. 4.5.15). The work of Janaka and others was characterized by non-attachment, and as such it was practically no work; so the Mimamsa argument is weak.

10. (The declaration of the scripture referred to in Sutra 4) is not universally true.

The declaration of the Shruti that knowledge enhances the fruit of the sacrifice does not refer to all knowledge, as it is connected only with the Udgitha, which is the topic of the section. (There is) division of knowledge and work, as in the case of a hundred (divided between two persons).

"This Sutra refutes Sutra 5."It is followed by knowledge, work, and past experiences"(Brih. 4.4.2.). Here we have to take knowledge and work in a distributive sense, meaning that knowledge follows one and work another. Just as when we say a hundred be given to these two persons, we divide it into two halves and give each man fifty. There is no combination of the two. Even without this explanation Sutra 5 can be refuted. For the text quoted refers only to knowledge and work, which concern the transmigrating soul, and not an emancipated soul. For the passage,"Thus does the man who desires (transmigrate)"(Brih. 4.4.6.) shows that the previous text refers to the transmigrating self. And of the emancipated soul Shruti says,"But the man who never desires (never transmigrates)"etc. (Brih. 4.4.6.). 12. (The scriptures enjoin work) only on those who have read the Vedas.

"This Sutra refutes Sutra 6. Those who have read the Vedas and known about the sacrifices are entitled to perform work. No work is prescribed for those who have knowledge of the Self from the Upanishads. Such a knowledge is incompatible with work. 13. Because there is no special mention (of the Jaimini it does not (apply to him)).

"This Sutra refutes Sutra 7. The text quoted there from the Isa Upanishad is a general statement, and there is no special mention in it that it is applicable to a Jnani also. In the absence of such a specification it is not binding on him.

14. Or rather the permission (to do work) is for praising (Knowledge).

"The injunction to do work for the knowers of the Self is for the glorification of this Knowledge. The praise involved in it is this : A knower of the Self may work all his life, but on account of this Knowledge he will not be bound by its effects. 15. And some according to their choice (have refrained from all work).

"In Sutra 3 it was said that Janaka and others were engaged in work even after Knowledge. This Sutra says that some have of their own accord given up all work. The point is that after Knowledge some may choose to work to set an example to others, while others may give up all work. There is no binding on the knowers of the Self as regards work.

16. And (the scriptures say that the) destruction (of all qualifications for work results from Knowledge).

Knowledge destroys all ignorance and its products like agent, act, and result."But when to the knower of Brahman everything has become the Self, then what should one see and through what"etc., (Brih. 4.5.15). The knowledge of the Self is antagonistic to all work and so cannot possibly be subsidiary to work. 17. And (Knowledge belongs) to those who observe continence (i.e. to Sannyasis); because (this fourth Ashrarna is mentioned) in the scriptures.

"The scriptures declare that Knowledge is gained in that stage of life in which continence is prescribed, i.e. the fourth stage or Sannyasa Asrama. To a Sannayasin there is no work prescribed except discrimination. So how can Knowledge be subservient to work? That there is a stage of life called Sannyasa we find from the scriptures themselves in texts like : "There are three branches of duty; sacrifice, study and charity are the first; . . . All these attain to the worlds of the virtuous; but only one who is firmly established in Brahman attains immortality"(Chh. 2.33.1-2); "Desiring this world (the Self) alone monks renounce their homes"(Brih. 4.4.22). See also Mu. 1.2.11 and Chh. 5.10.1. Everyone can take to this life without being a householder etc. which shows the independence of Knowledge".

Many such Sutras can be found in Badarayana indicating the attitude of the two schools of thought towards each other. But one is enough as it is so very typical. If one stops to consider the matter the position becomes absolutely clear. Jaimini denounces Vedanta as a false Shastra a snare and a delusion, something superficial, unnecessary and insubstantial. What does Badarayana do in the face of this attack? He defends his own Vedanta Shastra. What one would expect from Badarayana is denunciation of the Karmakanda of Jaimini as a false religion. Badarayana shows no such courage. On the contrary he is very apologetic. He concedes that Jaimini's Karmakanda is based on the Scriptures and cannot be repudiated. All that he insists is that his Vedanta doctrine is also true because it has also the support of the Scriptures. Some explanation is necessary for this attitude of Badarayana.

BHAGWAT GITA

The Bhagwat Gita forms part of the Bhishmaparvan of the great epic known as the Mahabharat. The epic is mainly concerned with the struggle for sovereignty between cousins, the Kauravas the sons of Dhritarashtra and the Pandavas the sons of Pandu. Pandu was the younger brother of Dhritarashtra. But as Dhritarashtra was blind the throne went to Pandu. After Pandu's death there arises a dispute

between his sons and the sons of Dhritarashtra regarding the right of succession. The struggle for sovereignty culminated in the battle of Kurukshetra (near modern Panipat). In this battle Krishna sides with the Pandavas and acts as their guide, friend and philosopher,--nay acts as the charioteer of Arjuna, one of the Pandava brothers and who plays the part of the chief warrior in the battle on the side of the Pandavas.

The two armies of the Kauravas and the Pandavas were arrayed for battle on the field. Arjuna in his chariot with Krishna as a driver comes and takes his place in front of the Pandava army. Strong and valiant he gazes at the opposing army of the Kauravas and is struck by the horror of the dreadful fratricidal war in which he will have to kill his cousins and slay those whom he himself revere and to whom he is greatly attached and indebted, He becomes dejected, lays down his weapons and refuses to fight. Krishna begins to argue with him and provoke him to fight. This argument takes the form of a question and answer of a conversation between Arjuna and Krishna at the end of which Arjuna agrees to fight.

At the opening of the Bhagwat Gita we find old Dhritarashtra questioning Sanjaya about the battle. This is because Dhritarashtra the father of the Kauravas who though alive at the time when the battle was fought was a blind man and could not see and know things for himself. For the knowledge of the happenings he had to depend upon the reports of others. Anticipating the difficulty of getting someone to tell Dhritarashtra the authentic story, Vyas the author of the Mahabharata, it is said, bestowed on Sanjaya, the charioteer of Dhritrashtra, the power of knowing all that takes place on the battlefield— even the thoughts in men's minds- that he may make a faithful report to Dhritarashtra. That is why we find the episode of Bhagwat Gita related as a reply by Sanjaya to questions by Dhritarashtra. But the Gita is really a conversation between Arjuna and Krishna and is rightly called *Krishana Arjuna Samvad*.

In this Krishna-Arjuna-Samvad—which is the real name of the Bhagwat Gita—the main question over which there was disagreement was to fight or not to fight. There was no other question. This was the one and the only question which was the subject matter of discussion and argument between the two. Starting from this point of view it is obvious that the Gita could never have been intended by Krishna to be the occasion for moral instruction for the general public or the doctrinal exposition of any religious system or the catechism attached to any creed. Yet this is just what the Gita has come to be. Although the

occasion was to decide to fight or not to fight, the Gita is said to contain what his religious doctrine Krishna is said to have preached to Arjuna.

The first question that crops up is who is this Krishna. To this one gets quite surprizingly a variety of answers from the Gita itself. At the start Krishna appears as a mere man with a completely human personality. He is a warrior by profession. He is a great warrior though he had chosen mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_54 the humble duty of driving the chariot of Arjuna. From man he grows into superman directing and controlling the war and its frotunes. From superman he grows into a demigod and dictator. When all his arguments fail to move Arjuna to fight, he simply orders him to fight and the frightened Arjuna gets up and does his biddings. From demigod he rises to the position of God and is spoken of as Ishwara.

This shows the growth of the personality of Krishna. But what is important is that in the very same Gita, Krishna stands out a.s a representative of other forms of God. Four such representative characters in which Krishna appears are clear to any one who happens to read the Gita even casually.

Krishna is Vasudeo : *Bhagwat Gita* :

Ch.X.37. Of the Vrishnis I am Vasudeva; of the Pandavas, Dhananjaya; and also for the Munis, I am Vyasa; of the sages, Ushanas the sage. Krishna as Bhagwan :

Ch.X.12. The Supreme Brahman, the Supreme Abode, the Supreme Purifier, art Thou. Krishna is an Avtar of Vishnu :

Ch.X.21. Of the Adityas, I am Vishnu; of luminaries, the radiant Sun; of the winds, I am Marichi; of the asterisms, the Moon.

Ch.X1.24. On seeing Thee touching the sky, shining in many a colour, with mouths wide open, with large fiery eyes, I am terrified at heart, and find no courage nor peace, O Vishnu.

XI.30. Swallowing all the worlds on every side with Thy flaming mouths, Thou art licking Thy lips. Thy fierce rays, filling the whole world with radiance, are burning, O Vishnu. Krishna is also an Avtar of Shankara :

X.23. And of the Rudras I am Shankara; of the Yakshas and Rakshasas the Lord of wealth (Kuvera); of the Vasus I am Pavaka; and of mountains, Meru am I.

Krishna is Bramhan :—

XV. 15. I am centered in the hearts of all; memory and perception as well as their loss come from Me. I am verily that which has to be known by all the Vedas, I indeed am the Author of the Vedanta, and the Knower of the Veda am I.

XV. 16. There are two Purushas in the world,—The Perishable and the Imperishable. All beings are the Perishable, and the Kutastha is called Imperishable.

XV. 17. But (there is) another, the Supreme Purusha, called the Highest Self, the immutable Lord, who pervading the three worlds, sustains them.

XV. 18. As I transcend the Perishable and am above even the Imperishable, therefore am I in the world and in the Veda celebrated as the Purushottama, (the Highest Purusha).

XV. 19. He who free from delusion thus knows Me, the Highest Spirit, he knowing all, worships Me with all his heart, O descendant of Bharata.

Ask the next question, What is the doctrine that Krishna preaches to Arjuna? The doctrine preached by Krishna to Arjuna is said to be the doctrine of salvation for the human soul. While the question dealt with by Krishna is one relating to Salvation, Krishna teaches three different doctrines of Salvation.

Salvation is possible by *Dnyanmarg* as propounded by Samkhya Yog.

11.39. The wisdom of Self-realisation has been declared unto thee. Harken thou now to the wisdom of Yoga, endued with which, O son of Pritha, thou shalt break through the bonds of Karma. Thus is the concluding verse of the discourse on Samkhya Yoga discussed in Chapter II, verses 11-16 and 18-30.

(2) Salvation is possible by *Karma marg*,

V.2. Both renunciation and performance of action lead to freedom : of these performance of action is superior to the renunciation of action.

(3) Salvation is possible by *Bhakti Marg*.

IX. 13. But the great souled ones, O son of Pritha, possessed of the Divine Prakriti, knowing Me to be the origin of beings, and immutable, worship Me with a single mind.

IX. 14. Glorifying Me always and striving with firm resolve, bowing down to Me in devotion, always steadfast, they worship Me. IX. 15. Others, too, sacrificing by the Yajna of knowledge (i.e. seeing the Self in all), worship Me the All Formed, as one, as distinct, as manifold.

IX. 17. I am the Father of this world, the Mother, the Sustainer, the Grandfather; the Purifier, the (one) thing to be known, (the syllable) Om, and also the Rik Saman and Yajus.

IX.22. Persons who, meditating on Me as non-separate, worship Me in all beings, to them thus ever jealously engaged, I carry what they lack and preserve what they already have. There are two other features of the Bhagwat Gita which arrests one's attention.

(i) There is a sentiment of depreciation of the Vedas and Vedic rituals and sacrifices.

11.42-44. O Partha, no set determination is formed in the minds of those that are deeply attached to pleasure and power, and whose discrimination is stolen away by the flowery words of the unwise, who are full of desires and look upon heaven as their highest goal and who, taking pleasure in the panegyric words of the Vedas, declare that there is nothing else. Their (flowery) words are exuberant with various specific rites as the means to pleasure and power and are the causes of (new) births as the result of their works (performed with desire).

11.45 The Vedas deal with the three Gunas, Be thou free, O Arjun, from the triad of the Gunas, free from the apirs of opposites, ever balanced, free from (the thought of) getting and keeping, and established in the Self.

11.46. To the Brahmana who has known the Self, all the Vedas are of so much use, as a reservoir is, when there is a flood everywhere.

IX.21. Having enjoyed the vast Swarga-world, they enter the mortal world, on the exhaustion of their merit; Thus, abiding by the injunctions of the three (Vedas), desiring desires, they (constantly) come and go.

INCOMPLETE

CHAPTER 7

The Triumph of Brahmanism : Regicide or the birth of Counter-Revolution

We have found only 3 typed pages under this title. Fortunately, a copy of the essay has been spared by Shri S. S. Rege for being included in this book. While examining the pages we have noticed that the copy given by Mr. Rege also lacks page nos 3 to 7 and 9 to 17. The total typed pages of this essay have been numbered 92 inclusive of the missing pages. The title on the copy of Mr. Rege is the 'Triumph of Brahmanism'; whereas the first page of the script in our papers is also entitled as 'Regicide or the Birth of Counter-Revolution'. The classification of the subject into IX Chapters is noted in our copy whereas it is missing from the copy of Mr. Rege. Both the titles and the classification are recorded in the handwriting of Dr. Ambedkar. Hence, they are retained in this print. Incidentally, the page nos 91017

were found fagged in other file. All those papers have now been introduced at proper place. Thus except page Nos. 4 to 7, the script is complete.—Editors.

I The Brahmanic Revolt against Buddhism. II Manu the apostle of Brahmanism. III Brahmanism and the Brahmin's Right to rule and regicide. IV Brahmanism and the privileges of Brahmins. V Brahmanism and the Creation of Caste. VI Brahmanism and the degradation of the Non-Brahmins. VII Brahmanism and the Suppression of the Shudra. VIII Brahmanism and the Subjection of Women. IX Brahmanism and the legalization of the social system.

Speaking about India, Prof. Bloomfield opens his lectures on the Religion of the Veda by reminding his audience that "India is the land of religions in more than one sense. It has produced out of its own resources, a number of distinctive systems and sects....

In another sense India is a land of religions. Nowhere else is the texture of life so much impregnated with religious convictions and practices..." [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_55](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm_-_msocom_55)

These observations contain profound truth. He would have given utterance to truth far more profound and arresting if he had said that India is a land of warring religions. For indeed there is no country in which Religion has played so great a part in its history as it has in the history of India. The history of India is nothing but a history of a mortal conflict between— Buddhism and Brahmanism. So neglected is this truth that no one will be found to give it his ready acceptance. Indeed there may not be wanting persons who would repudiate any such suggestion.

Let me therefore briefly recount the salient facts of Indian history. For it is important that everyone who was able to understand the history of India must know that it is nothing but the history of the struggle for supremacy between Brahmanism and Buddhism.

The history of India is said to begin with the Aryans who invaded India, made it their home and established their culture. Whatever may be the virtues of the Aryans, their culture, their religion and their social system, we know very little about their political history. Indeed notwithstanding the superiority that is claimed for the Aryans as against the Non-Aryans, the Aryans have left very little their political achievements for history to speak of. The political history of India begins with the rise of a non-Aryan people called Nagas, who were a powerful people, whom the Aryans were unable to conquer, with whom the Aryans had to make peace, and whom the Aryans were compelled to

recognize as their equals. Whatever fame and glory India achieved in ancient times in the political field, the credit for it goes entirely to the Non-Aryan Nagas. It is they who made India great and glorious in the annals of the world.

The first land mark in India's political history is the emergence of the Kingdom of Magadha in Bihar in the year 642 B.C. The founder of this kingdom of Magadha is known by the name of Sisunag2mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_56 and belonged to the non-Aryan race of Nagas.

From the small beginning made by Sisunag, this Kingdom of Magadha grew in its extent under the capable rulers of this Sisunag dynasty. Under Bimbisara the fifth ruler of this dynasty the kingdom grew into an Empire and came to be known as the Empire of Magadha. The Sisunag dynasty continued to rule the kingdom till 413 B.C. In that year the reigning Emperor of the Sisunag Dyansty Mahananda was killed by an adventurer called Nanda. Nanda usurped the throne of Magadha and founded the Nanda Dynasty.

This Nanda Dynasty ruled over the Empire of Magadha upto 322 B.C. The last Nanda king was deposed by Chandragupta who founded the Maurya Dynasty. Chandragupta was relatedmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_57 to the family of the last ruling emperor of the Sisunag Dynasty so that it may be said that the revolution effected by Chandragupta was really a restoration of the Naga Empire of Magadha.

The Mauryas by their conquests enormously extended the boundaries of this Empire of Magadha which they inherited. So vast became the growth of this Empire under Ashoka, the Empire began to be known by another name. It was called the Maurya Empire or the Empire of Ashoka. *(From here onwards page Nos. 4 to 7 of the MS are missing.)*

It did not remain as one of the many diverse religions then in vogue. Ashoka made it the religion of the state. This of course was the greatest blow to Brahmanism. The Brahmins lost all state partonage and were neglected to a secondary and subsidiary position in the Empire of Ashoka.

Indeed it may be said to have been suppressed for the simple reason that Ashoka prohibited all animal sacrifices which constituted the very essence of Brahmanic Religion.

The Brahmins had not only lost state patronage but they lost their occupation which mainly consisted in performing sacrifices for a fee which often times was very substantial and which constituted their chief source of living. The Brahmins therefore lived as the suppressed and Depressed

Classes2

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_58 for nearly 140 years during which the Maurya Empire lasted.

A rebellion against the Buddhist state was the only way of escape left to the suffering Brahmins and there is special reason why Pushyamitra should raise the banner of revolt against the rule of the Mauryas. Pushyamitra was a Sung by Gotra.

The Sungas were Samvedi Brahmins,3mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_59 who believed in animal sacrifices and soma sacrifices. The Sungas were therefore quite naturally smarting under the prohibition on animal sacrifices throughout the Maurya Empire proclaimed in the very Rock Edict by Ashoka.

No wonder if Pushyamitra who as a Samvedi Brahmin was the first to conceive the passion to end the degradation of the Brahmin by destroying the Buddhist state which was the cause of it and to free them to practise their Brahmanic religion.

That the object of the Regicide by Pushyamitra was to destroy Buddhism as a state religion and to make the Brahmins the sovereign rulers of India so that with the political power of the state behind it Brahmanism may triumph over Buddhism is borne out by two other circumstances.

The first circumstance relates to the conduct of Pushyamitra himself. There is evidence that Pushyamitra after he ascended the throne performed the Ashvamedha Yajna or the horse sacrifice, the vedic rite which could only be performed by a paramount sovereign. As Vincent Smith observes :

"The exaggerated regard for the sanctity of animal life, which was one of the most cherished features of Buddhism, and the motive of Ashoka's most characteristic legislation, had necessarily involved the prohibition of bloody sacrifices, which are essential to certain forms of Brahmanical worship, and were believed by the orthodox to possess the highest saving efficacy. The memorable horse sacrifices of Pushyamitra marked an early stage in the Brahmanical reaction, which was fully

developed five centuries later in the time of Samudragupta and his successors."

Then there is evidence that Pushyamitra after his accession launched a violent and virulent campaign of persecution against Buddhists and Buddhism.

How pitiless was the persecution of Buddhism by Pushyamitra can be gauged from the Proclamation which he issued against the Buddhist monks. By this proclamation Pushyamitra set a price of 100 gold pieces on the head of every Buddhist monk.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_60

Dr. Haraprasad Shastri speaking about the persecution of Buddhists under Pushyamitra says
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_61 :

"The condition of the Buddhists under the imperial sway of the Sungas, orthodox and bigotted, can be more easily imagined than described. From Chinese authorities it is known that many Buddhists still do not pronounce the name of Pushyamitra without a curse."

II

If the Revolution of Pushyamitra was a purely political revolution there was no need for him to have launched a campaign of persecution against Buddhism which was not very different to the campaign of persecution launched by the Mahamad of Gazni against Hinduism. This is one piece of circumstantial evidence which proves that the aim of Pushyamitra was to overthrow Buddhism and establish Brahmanism in its place.

Another piece of evidence which shows that the origin and purpose of the revolution by Pushyamitra against the Mauryas was to destroy Buddhism and establish Brahmanism is evidenced by the promulgation of Manu Smriti as a code of laws.

The Manu Smriti is said to be divine in its origin. It is said to be revealed to man by Manu to whom it was revealed by the Swayambhu (i.e. the Creator). This claim, as will be seen from the reference already made to it, is set out in the Code itself. It is surprising that nobody has cared to examine the grounds of such a claim. The result is that there is a complete failure to realise the significance, place and position of the Manu Smriti in the history of India. This is true even of the historians of India although the Manu Smriti is a record of the greatest social revolution that Hindu society has undergone. There can however be no

doubt that the claim made in the Manu Smriti regarding its authorship is an utter fraud and the beliefs arising out of this false claim are quite untenable.

The name Manu had a great prestige in the ancient history of India and it is with the object to invest the code with this ancient prestige that its authorship was attributed to Manu. That this was a fraud to deceive people is beyond question. The code itself is signed mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_62 in the family name of Bhrigu as was the ancient custom."The Text Composed by Bhrigu (entitled)"The Dharma Code of Manu" is the real title of the work. The name Bhrigu is subscribed to the end of every chapter of the Code itself. We have therefore the family name of the author of the Code. His personal name is not disclosed in the Book. All the same it was known to many. The Author of Narada Smriti writing in about the 4th Century A.D. knew the name of the author of the Manu Smriti and gives out the secret. According to Narada it was one Sumati Bhargava who composed the Code of Manu. Sumati Bhargava is not a legendary name, and must have been historical person for even Medhatihemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_63 the great commentator on the Code of Manu held the view that this Manu was 'a certain individual'. Manu therefore is the assumed name of Sumati Bhargava who is the real author of Manu Smriti.

When did this Sumati Bhargava compose this Code? It is not possible to give any precise date for its composition. But quite a precise period during which it was composed can be given. According to scholars whose authority cannot be questioned Sumati Bhargava must have composed the Code which he deliberately called Manu Smriti between 170 B.C. and 150 B.C. Now if one bears in mind the fact that the Brahmanic Revolution by Pushyamitra took place in 185 B.C. there remains no doubt that the code known as Manu Smriti was promulgated by Pushyamitra as embodying the principles of Brahmanic Revolution against the Buddhist state of the Mauryas. That the Manu Smriti forms the Institutes of Brahmanism and are a proof that Pushyamitra Revolution was not a purely personal adventure will be clear to any one who cares to note the following peculiarities relating to the Manu Smriti.

First thing to be noted is that the Manu Smriti is a new Code of law promulgated for the first time during the reign of Pushyamitra. There was a view once prevalent that there existed a code known as the

Manava-Dharma-Sutra and that what is known as Manu Smriti is an adaptation of the old Manava Dharma Sutra. This view has been abandoned as there has been no trace of any such work. Two other works existed prior to the present Manu Smriti. One was known as Manava Artha Sastra, or Manava-Raja-Sastra or Manava-Raja-Dharma-Sastra. The other work was known as Manava-Grihya-Sutra. Scholars have compared the Manu Smriti. On important points the provisions of one are not only dissimilar but are in every way contrary to the provisions contained in the other. This is enough to show that Manu Smriti contains the new law of the new regime.

That the new regime of Pushyamitra was anti-Buddhist is betrayed by the open provisions enacted in the Manu Smriti against the Buddhists and Buddhism. Note the following provisions in Manu Smriti :—

IX. 225." . . . Men who abide in heresy . . . the king should banish from his realm."

IX. 226."These robbers in disguise, living in the king's realm constantly injure the worthy subject by the performance of their misdeeds."

V. 89."Libations of water shall not be offered to (the souls of) those who (neglect the prescribed rites and may be said to) have been born in vain, to those born in consequence of an illegal mixture of the castes, to those who are ascetics (of heretical sects) and to those who have committed suicide."

V.90. (Libations of water shall not be offered to the souls of) women who have joined a heretical sect.....

IV. 30. Let him (the householder) not honour, even by a greeting heretics.... logicians, (arguing against the Veda).

XII. 95."All those traditions and all those despicable systems of Philosophy, which are not based on the Veda produce no reward after death, for they are declared to be founded on Darkness.

XII. 96."All those (doctrines), differing from the (Veda), which spring up and (soon) perish, are worthless and false, because of modern date."

Who are the heretics to whom Manu refers and whom he wants the new king to banish from his realm and the Householder not to honour in life as well as after death? What is this worthless philosophy of modern date, differing from the Vedas, based on darkness and bound to perish? There can be no doubt that the heretic of Manu is the Buddhist and the worthless philosophy of modern date differing from the Vedas is Buddhism. Kalluck Bhutt another commentator on Manu Smriti expressly states that the references to heretics in these Shlokas in Manu are to the Buddhists and Buddhism.

The third circumstance is the position assigned to the Brahmins in the Manu Smriti. Note the following provisions in Manu :—

I. 93. As the Brahmana sprang from (Bramha's) mouth, as he was the first born, and as he possesses the Veda, he is by right the lord of this whole creation.

I. 96. Of created beings the most excellent are said to be those which are animated; of the animated, those which subsist by intelligence; of the intelligent, mankind; and of men, the Brahmins.

I. 100. Whatever exists in the world is the property of the Brahmins ; on account of the excellence of his origin the Brahmana is, indeed, entitled to it all.

I. 101. The Brahmana eats but his own food, wears but his own apparel, bestows but his own in alms; other mortals subsist through the benevolence of the Brahmana.

X. 3. On account of his pre-eminence, on account of the superiority of his origin, on account of his observance of (particular) restrictive rules, and on account of his particular sanctification, the Brahmana is the lord of (all) castes.

XI. 35. The Brahmana is declared to be the creator of the world, the punisher, the teacher, and hence a benefactor of all created beings; to him let no man say anything unpropitious, nor use any harsh words.

Manu warns the King against displeasing the Brahmins in the following terms:—

IX. 313. Let him (the King) not, though fallen unto the deepest distress, provoke Brahmins to anger; for they, when angered, could instantly destroy him together with his army and his vehicles. Manu further proclaims,

XI. 31. A Brahmana who knows the law need not bring any (offence) to the notice of the king; by his own power alone he can punish those men who injure him.

XI. 32. His own power is greater than the power of the king; The Brahmana, therefore, may punish his foes by his own power alone.

This deification of the Brahmins, placing them even above the King would have been impossible unless the King himself was a Brahmin and in sympathy with the view expressed by Manu. Pushyamitra and his successors could not have tolerated these exaggerated claims of the Brahmins unless they themselves were Brahmins interested in the establishment of Brahmanism. Indeed it is quite possible that the Manu Smriti was composed at the command of Pushyamitra himself and forms the book of the philosophy of Brahmanism.

Taking all these facts into considerations there can remain no doubt; the one and only object of Pushyamitra's revolution was to destroy Buddhism and re-establish Bramhanism.

The foregoing summary of the political history of India would have been quite unnecessary for the immediate purpose of this chapter if I was satisfied with the way in which the history of India is written. But frankly I am not satisfied. For too much emphasis is laid on the Muslim conquest of India. Reels and reels have been written to show how wave after wave of Muslim invasions came down like avalanche and enveloped the people and overthrew their rulers. The whole history of India is made to appear as though the only important thing in it is a catalogue of Muslim invasions. But even from this narrow point of view it is clear that the Muslim invasions are not the only invasions worth study. There have been other invasions equally if not of greater importance. If Hindu India was invaded by the Muslim invaders so was Buddhist India invaded by Bramhanic invaders. The Muslim invasions of Hindu India and the Bramhanic invasions of Buddhist India have many similarities. The Musalman invaders of Hindu India fought among themselves for their dynastic ambitions. The Arabs, Turks, Mongols and Afghans fought for supremacy among themselves. But they had one thing in common—namely the mission to destroy idolatry. Similarly the Bramhanic invaders of Buddhist India fought among themselves for their dynastic ambitions. The Sungas, Kanvas and the Andhras fought for supremacy among themselves. But they, like the Muslim invaders of Hindu India, had one object in common that was to destroy Buddhism and the Buddhist Empire of the Mauryas. Surely if Muslim invasions of Hindu India are worthy of study at the hands of the historians, the invasions of Buddhist India by Bramhanic invaders are equally deserving of study. The ways and methods employed by the Bramhanic invaders of Buddhist India to suppress Buddhism were not less violent and less virulent than the ways and means adopted by Muslim invaders to suppress Hinduism. From the point of view of the permanent effect on the social and spiritual life of the people, the Bramhanic invasions of Buddhist India have been so profound in their effect that compared to them, the effect of Muslim invasions on Hindu India have been really superficial and ephemeral. The Muslim invaders destroyed only the outward symbols of Hindu religion such as temples and Maths etc. They did not extirpate Hinduism nor did they cause any subversion of the principles or doctrines which governed the spiritual life of the people. The effects of the Bramhanic invasions were a thorough-going change

in the principles which Buddhism had preached for a century as true and eternal principles of spiritual life and which had been accepted and followed by the masses as the way of life. To alter the metaphor the Muslim invaders only stirred the waters in the bath and that too only for a while. Thereafter they got tired of stirring and left the waters with the sediments to settle. They never threw the baby—if one can speak of the principles of Hinduism as a baby—out of the bath. Bramhanism in its conflict with Buddhism made a clean sweep. It emptied the bath with the Buddhist Baby in it and filled the bath with its own waters and placed in it its own baby. Bramhanism did not care to stop how filthy and dirty was its water as compared with the clean and fragrant water which flowed from the noble source of Buddhism. Bramhanism did not care to stop how hideous and ugly was its own baby as compared with the Buddhist baby. Bramhanism acquired by its invasions political power to annihilate Buddhism and it did annihilate

Buddhism. Islam did not supplant Hinduism. Islam never made a thorough job of its mission. Bramhanism did. It drove out Buddhism as a religion and occupied its place.

These facts show that Brahmanic invasions of Buddhist India have a far greater significance to the Historian of India than the Muslim invasions of Hindu India can be said to have produced. Yet very little space is devoted by historians to the vicissitudes which befell Buddhist India built up by the Mauryas and even where that is done they have not cared to deal in a pointed manner with questions that quite naturally arise : questions such as, who were the Sungas, Kanavas and Andhras ; why did they destroy the Buddhist India which was built up by the Mauryas, nor has any attempt been made to study the changes that Brahmanism after its triumph over Buddhism brought about in the political and social structure.

Failure to appreciate this aspect of India's history is due to the prevalence of some very wrong notions. It has been commonly supposed that the culture of India has been one and the same all throughout history; that Brahmanism, Buddhism, Jainism are simply different phases and that there has never been any fundamental antagonism between them. Secondly it has been assumed that whatever conflicts have taken place in Indian politics were purely political and dynastic and that they had no social and spiritual significance. It is because of these wrong notions that Indian history has become a purely mechanical thing, a record of one dynasty succeeding another and one ruler succeeding another ruler. A corrective to such an attitude and to

such a method of writing history lies in recognition of two facts which are indisputable.

In the first place it must be recognized that there has never been such as a common Indian culture, that historically there have been three Indias, Brahmanic India, Buddhist India and Hindu India, each with its own culture. Secondly it must be recognized that the history of India before the Muslim invasions is the history of a mortal conflict between Brahmanism and Buddhism. Any one who does not recognize these two facts will never be able to write a true history of India, a history which will disclose the meaning and purpose running through it. It is a corrective to Indian history written as it is and to disclose the meaning and purposes running through it that I was obliged to re-cast the history of the Brahmanic invasions of Buddhist India and the political triumph of Brahmanism over Buddhism.

We must therefore begin with the recognition of the fact : Pushyamitra's revolution was a political revolution engineered by the Brahmins to overthrow Buddhism.

The curious will naturally ask what did this triumphant Brahmanism do? It is to this question that I will now turn. The deeds or misdeeds of this triumphant Brahmanism may be catalogued under seven heads (1) It established the right of the Brahmin to rule and commit regicide. (2) It made the Brahmins a class of privileged persons. (3) It converted the Varna into caste. (4) It brought about a conflict and anti-social feeling between the different castes. (5) It degraded the Shudras and the women (6) It forged the system of graded inequality and (7) It made legal and rigid the social system which was conventional and flexible.

To begin with the first.

The revolution brought about by Pushyamitra created an initial difficulty in the way of the Brahmins. People could not be easily reconciled to this revolution. The resentment of the public was well expressed by the poet Bana¹ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_64 when in referring to this revolution reviles Pushyamitra as being base born and calls his act of regicide as *Anarva*. The act of Pushyamitra was properly described by Bana as *Anarya* i.e. contrary to Aryan law. For on three points the Aryan law at the date of Pushyamitra's revolution was well settled. The then Aryan law declared (1) That Kingship is the right of the Kshatriya only. A Brahmin could never be a king. (2) That no Brahmin shall take to the profession of

Arms²mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_65 and (3) That rebellion against the King's authority was a sin. Pushyamitra in fostering the rebellion had committed a crime against each of these three laws. He was Brahmin, and although a Brahmin he rebelled against the King, took to the profession of Arms and became a King. People were not reconciled to this usurpation which constituted so flagrant a breach of the law that the Brahmins had to regularize the position created by Pushyamitra. This the Brahmins did by taking the bold step of changing the law. This change of law is quite manifest from the Manu Smriti. I will quote the appropriate shlokas from the Code :

XII. 100."The post of the Commander-in-Chief of the Kingdom, the very Headship of Government, the complete empire over every one are deserved by the Brahmin."Here we have one change in the law. This new law declares that the Brahmin has a right to become Senapati (Commander of forces), to

conquer a kingdom, and to be the ruler and the Emperor of it.

XI. 31. A Brahmin, who well knows the laws, need not complain to the king of any grievous injury; since, even by his own power, he may chastise those, who injure him.

XI. 32. His (Brahmin's) own power, which depends on himself alone is mightier than the royal power, which depends on other men ; by his own might, therefore may a Brahmin coerce his foes.

XI. 261-62. A Brahmin who has killed even the peoples of the three worlds, is completely freed from all sins on reciting three times the Rig, Yajur or Sama.-Veda with the Upanishadas."Here is the second change in the law. It authorized the Brahmin to kill not only the king but to engage in a general massacre of men if they seek to do injury to his power and position.

VIII. 348."The twice born man may take arms, when the rightful occupation assigned to each by Dharma is obstructed by force ; and when, in some evil time, a disaster has befallen the twice-born classes."

IX. 320. Of a Kshatriya (Military man or king), who raise his arm violently on all occasions against the Brahmins, Brahmin himself shall be the chastiser; since the soldier originally proceeded from the Brahmin."

This is the third legal change. It recognized the right to rebellion and the right to regicide. The new law is very delicately framed. It gives the right of rebellion to three higher classes. But it is also given to the Brahmins singly by way of providing for a situation when the Kshatriyas

and the Vaishyas may not be prepared to join the Brahmin in bringing about a rebellion. The right of rebellion is well circumscribed. It can be exercised only when the king is guilty of upsetting the occupations assigned by Manu to the different Varnas.

These legal changes were as necessary as they were revolutionary. Their object was to legalize and regularize the position created by Pushyamitra by killing the last Maurya King. By virtue of these legal changes, a Brahmin could lawfully become a king, could lawfully take arms, could lawfully depose or murder a king who was opposed to Chaturvarna and could lawfully kill any subject that opposed the authority of the Brahmin. Manu gave the Brahmins a right to commit Barthalomeu if it became necessary to safeguard their interests.

In this way Brahmanism established the right of Brahmana to rule and set at rest whatever doubt and dispute there was regarding the same. But that could hardly be enough for the Brahmins as a whole. It may be a matter of pride but not of any advantage. There can be no special virtue in Brahmin rule if the Brahmin was treated as common man along with the Non-Brahmins having the same rights and same duties. Brahmin rule if it is to justify itself, it must do so by conferring special privileges and immunities on the Brahmins as a class. Indeed Pushyamitra's Revolution would have been an ill wind blowing no good if it had not recognized the superior position of the Brahmins and conferred upon them special advantages. Manu was alive to this and accordingly proceeds to create monopolies for Brahmins and grant them certain immunities and privileges as may be seen from the Code.

First as to monopolies :

1. 88. To Brahmanas he assigned teaching and studying (the Veda) sacrificing for their own benefit and for others, giving and accepting (of alms).

X. 1. Let the three twice-born castes (Varna), discharging their (prescribed) duties, study (the Veda) ; but among them the Brahmana (alone) shall teach it, not the other two; that is an established rule.

X. 2. The Brahmana must know the means of subsistence (prescribed) by law for all, instruct others, and himself live according to (the law).

X. 3. On account of his pre-eminence, on account of the superiority of his origin, on account of his observance of (particular) restrictive rules, and on account of his particular sanctification, the Brahmana is the lord of (all) castes (varna).

X. 74. Brahmanas who are intent on the means (of gaining union with) Brahman and firm in (discharging) their duties, shall live by duly

performing the following six acts, (which are enumerated) in their (proper) order.

X. 75. Teaching, studying, sacrificing for himself, sacrificing for others, making gifts and receiving them are the six acts (prescribed) for a Brahmana.

X. 76. But among the six acts (ordained) for him three are his means of subsistence, (viz.) sacrificing for others, teaching, and accepting gifts from pure men.

X. 77. (Passing) from the Brahmana to the Kshatriya, three acts (incumbent) (on the former) are forbidden, (viz.) teaching, sacrificing for others, and, thirdly, the acceptance of gifts.

X. 78. The same are likewise forbidden to a Vaisya, that is a settled rule; for Manu, the lord of creatures (Prajapati), has not prescribed them for (men of) those two (castes).

X. 79. To carry arms for striking and for throwing (is prescribed) for Kshatriyas as a means of subsistence ; to trade, (to rear) cattle, and agriculture for Vaisyas; but their duties are liberality, the study of the Veda, and the performance of sacrifices. Here are three things which Manu made the monopoly of the Brahmin : teaching Vedas, performing Sacrifices and receiving gifts.

The following are the immunities that were granted to the Brahmins. They fall into two classes ; freedom from taxation and exemption from certain forms of punishment for crimes.

VII. 133. Though dying (with want), a king must not levy a tax on Srotriyas, and no Srotriya residing in his kingdom, must perish from hunger.

VIII. 122. They declare that the wise have prescribed these fines for perjury, in order to prevent a failure of justice, and in order to restrain injustice.

VIII. 123. But a just king shall fine and banish (men of) the three (lower) castes (varna) who have given false evidence, but a Brahmana he shall (only) banish.

VIII. 124. Manu, the son of the Self-existent (Svayambhu), has named ten places on which punishment may be (made to fall) in the cases of the three (lower) castes (varna); but a Brahmana shall depart unhurt (from the country).

VIII. 379. Tonsure (of the head) is ordained for a Brahmana (instead of) capital punishment; but (men of) other castes shall suffer capital punishment.

VIII. 380. Let him never slay a Brahmana, though he have committed all (possible) crimes; let him banish such an (offender), leaving all his property (to him) and (his body) unhurt. Thus Manu places the Brahmin above the ordinary penal law for felony. He is to be allowed to leave the country without a wound on him and with all property in proved offences of capital punishment. He is not to suffer forfeiture of fine nor capital punishment. He suffered only banishment which in the words of Hobbes was only a "Change of air" after having committed the most heinous crimes. Manu gave him also certain privileges. A Judge must be a Brahmin.

VIII. 9. But if the king does not personally investigate the suits, then let him appoint a learned Brahmana to try them.

VIII. 10. That (man) shall enter that most excellent court, accompanied by three assessors, and fully consider (all) causes (brought) before the (king), either sitting down or standing. The other privileges were financial

VIII. 37. When a learned Brahmana has found treasure, deposited in former (times), he may take even the whole (of it) ; for he is master of everything.

VIII. 38. When the king finds treasure of old concealed in the ground, let him give one half to Brahmanas and place the (other) half in his treasury.

IX. 323. But (a king who feels his end drawing nigh) shall bestow all his wealth, accumulated from fines, on Brahmanas, make over his kingdom to his son, and then seek death in battle.

IX. 187. Always to that (relative within three degrees) who is nearest to the (deceased) Sapinda the estate shall belong ; afterwards a Sakulya shall be (the heir, then) the spiritual teacher or the pupil.

IX. 188. But on failure of all (heirs) Brahmanas (shall) share the estate, (who are) versed in the three Vedas, pure and self-controlled ; thus the law is not violated.

IX. 189. The property of a Brahmana must never be taken by the King, that is a settled rule ; but (the property of men) of other castes the king may take on failure of all (heirs).

These are some of the advantages, immunities and privileges which Manu conferred upon the Brahmins. This was a token of a Brahmin having become a king.

Supporters of Brahmanism—so strong is the belief in the excellence of Brahmanism that there are no apologists for it as yet—never fail to point to the disabilities which Manu has imposed upon the Brahmins.

Their object in doing so is to show that the ideal placed by Manu before the Brahmin is poverty and service. That Manu has placed certain disabilities upon the Brahmins is a fact. But to conclude from it that Manu's ideal for a Brahmin is poverty and service is a gross and deliberate concoction for which there is no foundation in Manu.

To understand the real purpose which Manu had in imposing these disabilities, two things must be borne in mind. Firstly the place Manu has assigned to the Brahmins in the general scheme of society and secondly the nature of the disabilities. The place assigned by Manu to the Brahmins is enunciated by him in unequivocal terms. The matter being important I must quote again the Verses already quoted.

1. 93. As the Brahmana sprang from (Brahman's) mouth, as he was the first born, and as he possesses the Veda, he is by right the lord of this whole creation. Consider the nature of the disabilities.

IV. 2. A Brahmana must seek a means of subsistence which either causes no, or at least little pain (to others), and live (by that) except in times of distress.

IV. 3. For the purpose of gaining bare subsistence, let him accumulate property by (following those) irreproachable occupations (which are prescribed for) his (caste), without (unduly) fatiguing his body.

VIII. 337. In (a case of) theft the guilt of a Sudra shall be eightfold, that of a Vaishya sixteenfold, that of a Kshatriya two-and-thirty fold.

VIII. 338. That of a Brahmana sixty-four-fold, or quite a hundred-fold or (even) twice four-and-sixty-fold; (each of them) knowing the nature of the offence.

VIII. 383. A Brahmana shall be compelled to pay a fine of one thousand (panas) if he has intercourse with guarded (females of) those two (castes) ; for (offending with) a (guarded) Sudra female a fine of one thousand (panas) (shall be inflicted) on a Kshatriya or a Vaishya.

VIII. 384. For (intercourse with) an unguarded Kshatriya a fine of five hundred (panas shall fall) on a Vaisya ; but (for the same offence) a Kshatriya shall be shaved with the urine (of a donkey) or (pay) the same fine.

VIII. 385. A Brahmana who approaches unguarded females (of the) Kshatriya or Vaisya (castes), or a Sudra female, shall be fined five hundred (panas); but (for intercourse with) a female (of the) lowest (castes), one thousand.

Examining these disabilities against the background furnished by the place assigned to him by Manu, it is obvious that the object of these disabilities was not to make the Brahmin suffer. On the other hand it

becomes clear that the object of Manu was to save the Brahmin from falling from the high pinnacle on which he had placed him and incurring the disgrace of the non-Brahmins.

That the object of Manu was not to subject the Brahmins to poverty and destitute is clear from other provisions from Manu-Smriti. In this connection reference should be made to the rule contained in the Manu Smriti regarding the course of conduct a Brahmin should pursue when he is in distress.

X. 80. Among the several occupations the most commendable are, teaching the Veda for a Brahmana, protecting (the people) for a Kshatriya, and trade for a Vaisya.

X. 81. But a Brahmana, unable to subsist by his peculiar occupations just mentioned, may live according to the law applicable to Kshatriyas ; for the latter is next to him in rank.

X. 82. If it be asked, 'How shall it be, if he cannot maintain himself by either (of these occupations?' the answer is), he may adopt a Vaisya's mode of life, employing himself in agriculture and rearing cattle.

X. 83. But a Brahmana, or a Kshatriya, living by a Vaisya's mode of subsistence, shall carefully avoid (the pursuit of) agriculture, (which causes) injury to many beings and depends on others.

X. 84. (Some) declare that agriculture is something excellent, (but) that means of subsistence is blamed by the virtuous ; (for) the wooden (implement) with iron point injures the earth and (the beings) living in the earth.

X. 85. But he who, through a want of means of subsistence, gives up the strictness with respect to his duties, may sell, in order to increase his wealth, the commodities sold by Vaisyas, making (however) the (following) exceptions.

It will be seen that the disabilities imposed upon a Brahmin last as long as he is prospering by the occupations which belong to him as of right. As soon as he is in distress and his disabilities vanish and he is free to do anything that he likes to do in addition to the occupations reserved to him and without ceasing to be a Brahmin. Further whether he is in distress or not is a matter which is left to the Brahmin to be decided in his own discretion. There is therefore no bar to prevent even a prosperous Brahmin to supplement his earnings by following any of the professions open to him in distress by satisfying his conscience.

There are other provisions in Manu Smriti intended to materially benefit the Brahmanas. They are *Dakshina* and *Dana*. *Dakshina* is the fee which the Brahmin is entitled to charge when he is called to perform a

religious ceremony. Brahmanism is full of rites and ceremonies. It is not very difficult to imagine how great must this source of income be to every Brahmin: There was no chance of a priest being cheated of his fees. The religious sense attached to Dakshina was a sufficient sanction for regular payment. But Manu wanted to give the Brahmins the right to recover his fees.

XI. 38. A Brahamana who, though wealthy, does not give, as fee for the performance of an Agnyadheya, a horse sacred to Prajapati, becomes (equal to one) who has not kindled the sacred fires.

XI. 39. Let him who has faith and controls his senses, perform other meritorious acts, but let him on no account offer sacrifices at which he gives smaller fees (than those prescribed).

XI. 40. The organs (of sense and action), honour, (bliss in) heaven, longevity, fame, offspring, and cattle are destroyed by a sacrifice at which (too) small sacrificial fees are given ; hence a man of small means should not offer a (Srauta) sacrifice. He even goes to the length of excusing a Brahmin by declaring that anything done by him to recover his fees shall not be an offence under the law.

VIII. 349. In their own defence, in a strife for the fees of officiating priests and in order to protect women and Brahmanas ; he who (under such circumstances kills in the cause of right, commits no sin.

But it is the provision of Dana which makes a fruitful source of income to the Brahmins. Manu exhorts the King to make *Dana* to Brahmins.

VII. 79. A King shall offer various (Srauta) sacrifices at which liberal fees (are distributed), and in order to acquire merit, he shall give to Brahmanas enjoyments and wealth.

VII. 82. Let him honour those Brahmanas who have returned from their teacher's house (after studying the Veda) ; for that (money which is given) to Brahmanas is declared to be an imperishable treasure for kings.

VII. 83. Neither thieves nor foes can take it, nor can it be lost; hence an imperishable store must be deposited by kings with Brahmanas.

XI. 4. But a king shall bestow, as is proper, jewels of all sorts, and presents for the sake of sacrifices on Brahmanas learned in the Vedas.

This admonition by Manu to the King did not remain a mere hope for the Brahmin. For as history shows that this exhortation was fully exploited by the Brahmins as the number of *dana patras* discovered by Archialogists indicate. It is astounding how the kings were befooled by the Brahmins to transfer village after village to crafty, lazy and indolent Brahmins. Indeed a large part of the wealth of the present day Brahmins

lies in this swindle practised by wily Brahmins upon pious but foolish kings. Manu was not content to let the Brahmin prey upon the King for *dana*. He also allowed the Brahmin to prey upon the public in the matter of *dana*. This Manu does in three different ways. In the first place he exhorts people to make gifts as a part of the duty owed by the pious to himself at the same time pointing out that the highest *dana* to a Brahmin.:

VII. 85. A gift to one who is not a Brahmana (yields) the ordinary (reward); a gift to one who calls himself a Brahmana, a double (reward); a gift to a well-read Brahmana, a hundred thousandfold (reward); (a gift) to one who knows the Veda and the Angas (Vedaparanga), (a reward) without end.

VII. 86. For according to the particular qualities of the recipient and according to the faith (of the giver) a small or a great reward will be obtained for a gift in the next world. In the next place Manu declares that in certain circumstances *dana* to a Brahmin is compulsory.

XI. 1. Him who wishes (to marry for the sake of having) offspring, him who wishes to perform a sacrifice, a traveller, him who has given away all his property, him who begs for the sake of his teacher, his father, or his mother, a student of the Veda, and a sick man.

XI. 2 These nine Brahmanas one should consider as Snatakas, begging in order to fulfill the sacred law; to such poor men gifts must be given in proportion to their learning.

XI. 3. To these most excellent among the twice-born, food and presents (of money) must be given ; it is declared that food must be given to others outside the sacrificial enclosure.

XI. 6. One should give, according to one's ability, wealth to Brahmanas learned in the Veda and living alone ; (thus) one obtains after death heavenly bliss.

The third method adopted by Manu to make the rule of Dana become a source of secure and steady income is beyond question the most ingenuous one. Manu linked up *dana* with penance. In the Scheme of Manu, an improper act may be a sin although not an offence or it may be both a sin as well as an offence. As a sin its punishment is a matter for canonical law. As an offence its punishment is a matter of secular law. As sin, the improper act is called Pataka and the punishment for it is called Penance. In the Scheme of Manu every Pataka must be expunged by the performance of a penance.

XI. 44. A man who omits a prescribed act, or performs a blameable act, or cleaves to sensual enjoyments, must perform a penance.

XI. 45. (All) sages prescribe a penance for a sin unintentionally committed ; some declare, on the evidence of the revealed texts, (that it may be performed) even for an intentional (offences).

XI. 46. A sin unintentionally committed is expiated by the recitation of Vedic texts, but that which (men) in their folly commit intentionally, by various (special) penances.

XI. 53. Thus in consequence of a remnant of (the guilt of former) crimes, are born idiots, dumb, blind, deaf and deformed men, who are (all) despised by the virtuous.

XI. 54. Penances, therefore, must always be performed for the sake of purification, because those whose sins have not been expiated, are born (again) with disgraceful marks.

The penances prescribed by Manu are many and the curious may refer to the Manu Smriti itself for a knowledge of what they are. What is worthy of note is these penances are calculated to materially benefit the Brahmin. Some penances take the form of a simple *dana* to the Brahmin. Others prescribe the performance of some religious rites. But as religious rites cannot be performed by anybody except by a Brahmin and that the performance of religious rite requires the payment of fees the Brahmin alone can be the beneficiary of the *dana* system.

It is therefore absurd to suggest that Manu wanted to place before the Brahmins the ideal of humility, poverty and service. The Brahmins certainly did not understand Manu that way. Indeed they believed that they were made a privileged class. Not only they believed in it but they sought to extend their privileges in other directions a matter which will be discussed later on. They were perfectly justified, in their view. Manu called the Brahmins the 'lords of the earth' and he framed (the law) with such care that they shall remain so.

Having made full provision for Brahmin Rule and Brahmin dominance Manu next launches out to transform society to suit his purposes.

The transformation of Varna into Caste is the most stupendous and selfish task in which Brahmanism after its triumph became primarily engaged. We have no explicit record of the steps that Brahmanism took to bring about this change. On the contrary we have a lot of confused thinking on the relation between Varna and Caste. Some think that Varna and Caste are the same. Those who think that they are different seem to believe that Varna became caste when prohibition on intermarriage became part of the social order. All this, of course, is erroneous and the error is due to the fact that Manu in transforming the Varna into Caste has nowhere explained his ends and how his means are

related to those ends. Oscar Wilde has said that to be intelligible is to be found out. Manu did not wish to be found out. He is therefore silent about his ends and means, leaving people to imagine them. For Hindus the subject is important beyond measure. An attempt at clarification is absolutely essential so that the confusion due to different people imagining differently the design of Manu may be removed and light thrown on the way how Brahmanism proceeded to give a wrong and pernicious turn to the original idea of Varna as the basis of society.

As I said Manu's ways are silent and subterranean and we cannot give the detailed and chronological history of this conversion of Varna into Caste. But fortunately there are landmarks which are clear enough to indicate how the change was brought about.

Before proceeding to describe how this change was brought about let me clear the confusion between Varna and Caste. This can best be done by noting the similarities and differences between the two. Varna and Caste are identical in their *de jure* connotation. Both connote status and occupation. Status and occupation are the two concepts which are implied both in the notion Varna as well as in the notion of Caste. Varna and Caste however differ in one important particular. Varna is not hereditary either in status or occupation. On the other hand Caste implies a system in which status and occupation are hereditary and descend from father to son.

When I say that Brahmanism converted Varna into Caste what I mean is that it made status and occupation hereditary.

How was this transformation effected? As I said there are no foot prints left of the steps taken by Brahmanism to accomplish this change but there are landmarks which serve to give us a clear view of how the deed came to be done.

The change was accomplished by stages. In the transformation of Varna into Caste three stages are quite well marked. The first stage was the stage in which the duration of Varna i.e. of status and occupation of a person was for a prescribed period of time only. The second stage was a stage in which the status and occupation involved the Varna of a person ensured during lifetime only. The third stage was a stage in which the status and occupation of the Varna became hereditary. To use legal language the Estate conferred by Varna was at the beginning an Estate for a term only. Thereafter it became a life Estate and finally it became an Estate of inheritance which is tantamount to saying that Varna became Caste. That these are the stages by which Varna was converted into Caste seems to have ample support from tradition as

recorded in the religious literature.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_66 There is no reason why this tradition should not be accepted as embodying some thing that is quite genuine. According to this tradition, the task of determining Varna of a person was effected by a body of officers called Manu and Sapta Rishis. From the mass of people Manu selected those who were fit to be Kshatriyas and Vaishas and the Sapta Rishis selected those who were fit to be Brahmanas. After this selection was made by Manu and Sapta Rishis for being Brahmins, Kshatriyas, Vaishas, the rest that were not selected were called Shudras. The Varna arrangement so determined lasts for one *Yug* i.e. a period of four years. Every fourth year a new body of officers known by the same designation Manu and Sapta Rishi were appointed for making a new selection. It happened that last time some of those who were left to be fit only for being Shudras were selected for being Brahmins, Kshatriyas and Vaishyas while some of those who were, elected last time for being Brahmins, Kshatriyas and Vaishyas were left as being fit only of being Shudras. Thus the personnel of the Varna changed. It was a sort of a periodical shuffling and selection of men to take up according to their mental and physical aptitudes and occupations which were essential to the life of the community. The time when the reshuffling of the Varnas took place was called *Manwantar* which etymologically means change of Varna made by Manu. The word Manwantar also means the period for which the Varna of an individual was fixed. The word Manwantar is very rich in its contents and expresses the essential elements of the Varna system which were two. First it shows that Varna was determined by an independent body of people called Manu and Saptarshi. Secondly it shows that the Varna was for a period after which a change was made by Manu.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_67. According to ancient tradition as embodied in the Puranas the period for which the Varna of a person was fixed by Manu and Saptarshi was a period of four years and was called *Yug*. At the end of the period of four years there occurred the Manwantar whereby every fourth year the list was revised. Under the revision some changed their old Varna, some retained it, some lost it and some gained it.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_68

The original system seems to have in contemplation the determination of the Varna of adults. It was not based on prior training or close scrutiny of bias and aptitude. Manu and Saptarshi was a sort of a Board of Interview which determined the Varna of a person from how he struck them at the interview. The determination of the Varna was done in a rough and tumble manner. This system seems to have gone into abeyance. A new system grew up in its place. It was known as the Gurukul system. The Gurukul was a school maintained by a Guru (teacher) also called Acharya (learned man). All children went to this Gurukul for their education. The period of education extended for twelve years. The child while at Gurukul was known as Bramhachari. After the period of education was over there was the Upanayan ceremony performed at the Gurukul by the Acharya. The Upanayan ceremony was the most important ceremony. It was a ceremony at which the Acharya determined the Varna of the student and sent him out in the world to perform the duties of that Varna. Upanayan by the Acharyas was the new method of determining Varna which came into vogue in place of method of determination by Manu and Saptarshi. The new method was undoubtedly superior to the old method. It retained the true feature of the old method namely that the Varna should be determined by a disinterested and independent body. But it added a new feature namely training as a pre-requisite for assignment of Varna. On the ground that training alone develops individual in the make up of a person and the only safe way to determine the Varna of a person is to know his individuality, the addition of this new feature was undoubtedly a great improvement.

With the introduction of the Acharya Gurukul system, the duration of the Varna came to be altered. Varna instead of being Varna for a period became Varna for life. But it was not hereditary.

Evidently Brahmanism was dissatisfied with this system. The reason for dissatisfaction was quite obvious. Under the system as prevalent there was every chance of the Acharya declaring the child of a Brahmin as fit only to be a Shudra. Brahmanism was naturally most anxious to avoid this result. It wanted the Varna to be hereditary. Only by making the Varna hereditary could it save the children of the Brahmins from being declared Shudra. To achieve this Brahmanism proceeded in the most audacious manner one can think of.

III

Brahmanism made three most radical changes in the system of determining the Varna of the child. In the first place the system of

Gurukul as the place where training to the child was given and its Varna was determined by the Guru at the end of the period of training was abolished. Manu is quite aware of the Gurukul and refers to [Guruvasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_69](#) i.e. training and residence in the Gurukul under the Guru. But does not refer to it at all in connection with the Upanayan. He abolishes the Guru as an authority competent to perform Upanayan by omitting to make even the remotest reference to him in connection with Upanayan. In place of the Guru Manu allows the Upanayan of the child to be performed by its father at home. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_70](#) Secondly Upanayan was made into a Sanskara i.e. a sacrament. In olden times Upanayan was like a convocation

ceremony [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_71](#) held by the Guru to confer degrees obtained by students in his Gurukul in which certificates of proficiency in the duties of a particular Varna were granted. In Manu's law that Upanayan was a complete change in the meaning and purpose of this most important institution. Thirdly the relation of training to Upanayan was totally reversed. In the olden system training came before Upanayan.

Under the Brahmanism Upanayan came before training. Manu directs that a child be sent to the Guru for training but that is after Upanayan i.e. after [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_72](#) his Varna is determined by his father.

The principal change made by Brahmanism was the transfer of authority from the Guru to the father in the matter of performing Upanayan. The result was that the father having the right to perform the Upanayan of his child gave his own Varna to the child and thus made it hereditary. It is by divesting the Guru of his authority to determine the Varna and vesting it in the father that Brahmanism ultimately converted Varna into Caste.

Such is the story of the transformation of Varna into Caste. The story of the transition from one to the other is of course reconstructed. For the reasons already given it may not be quite as accurate as one would wish it to be in all its details. But I have no doubt that the stages and the ways by which Varna ceased to exist and caste came into being must be

some such as have been suggested in the foregoing discussion of the subject.

What object Brahmanism could have had in converting Varna into caste it is not difficult to imagine. The object was to make the high status enjoyed by the Brahmins from ancient times the privilege of every Brahmin and his progeny without reference to merits or to qualifications. To put it differently the object was to elevate and ennoble every Brahmin, however mean and worthless he may be, to the high status occupied by some of them on account of the virtue. It was an attempt to ennoble the whole of the Brahmin Community without exception.

That this was the object of Brahmanism is clear from Manu's ordinances. Manu knew that making Varna hereditary, the most ignorant Brahmin [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_73](http://msitstore.c:\important\writing_of_babasaheb.chm::19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_73) will be elevated to the status occupied by the most learned Brahmin. He feared that the former may not be respected as much as the most learned, which was the object of this attempt at the ennoblement of the whole class of Brahmins. Manu is very much concerned about the ignorant Brahmin—a new thing and warns people against being disrespectful to an ignorant and mean Brahmin.

IX. 317. A Brahmin, whether learned or ignorant, is a powerful divinity ; even as fire is powerful divinity, whether consecrated or popular.

IX. 319. Thus although Brahmins employ themselves in all sorts of mean occupations, they must invariably be honoured ; for they are something transcendently divine.

Such a warning was unnecessary if the object was to ennoble the whole Brahmin class. Here is a case where vice refuses to pay to virtue even the homage of hypocrisy. Can there be greater moral degeneracy than what is shown by Manu in insisting upon the worship of the Brahmin even if he is mean and ignorant?

So much for the object of change from Varna to caste. What have been the consequences of this change?

From the spiritual point of view the consequences have been too harmful to be contemplated with equanimity. The harm done may perhaps be better realized by comparing the position of the Brahmin as a priest resulting from the law of Manu with that of the clergy under the Church of England. There the clergy is subject to the criminal law as every citizen is. But in addition to that he is always subject to Church Discipline Act. Under the Criminal Law he would be punished

if he officiated as a clergy without being qualified for it. Under the Church Discipline Act he would be liable to be disqualified as a clergy for conduct which would be deemed to be morally wrong although it did not amount to a crime. This double check on the clergy is held justifiable because learning and morality are deemed to be quite essential for the profession of the clergy who are supposed to administer to the spiritual needs of the people. Under Brahmanism the Brahmin who alone can be the clergy need not possess learning or morality. Yet he is in sole charge of the spiritual affairs of the people!! On the value of a creed which permits this, comment is unnecessary.

From the secular point of view, the consequences of this transformation of Varna into Caste has to introduce a most pernicious mentality among the Hindus. It is to disregard merit and have regard only to birth. If one is descended from the high he has respect although he may be utterly devoid of merit or worth. One who is of high birth will be superior to the one who is of low birth although the latter may be superior to the former in point of worth. Under Brahmanism it is birth that always wins, whether it is against birth or against worth. Merit by itself can win no meads. This is entirely due to the dissociation of merits from status which is the work of Brahmanism. Nothing could be better calculated to produce an unprogressive society which sacrifices the rights of intelligence on the altar of aristocratic privilege.

Now the third deed in the catalogue of deeds done by Brahmanism after its triumph over Buddhism. It was to separate the Brahmins from the result of the Non-Brahmin population and to sever the different social strata of the Non-Brahmin population.

Pushyamitra's Brahmanic Revolution was undertaken for the purposes of restoring the ancient social system of Chaturvarna which under the Buddhist regime was put into the melting pot. But when Brahmanism triumphed over Buddhism it did not content itself with merely restoring Charutvarna as it was in its original form. The system of Chaturvarna of the Pre-Buddhist days was a flexible system and was an open to system. This was because the Varna system had no connection with the marriage system. While Chaturvarna recognized the existence of four different classes, it did not prohibit inter-marriage between them. A male of one Varna could lawfully marry a female of another Varna. There are numerous illustrations in support of this view. I give below some instances which refer to well known and respectable individuals which have acquired a name and fame in the sacred lore of the Hindus.

1. Shantanu	Kshatriya	Ganga	Shudra
-------------	-----------	-------	--------

Anamik			
2. Shantanu Fisher woman	Kshatriya	Matsyagandha	Shudra
3. Parashara Fisher woman	Brahmin	Matsyagandha	Shudra
4. Vishwamitra	Kshatriya	Menaka	Apsara
5. Yayati	Kshatriya	Devayani	Brahmin
6. Yayati Non-Aryan	Kshatriya	Sharmishta	Asuri-
7. Jaratkaru Non-Aryan	Brahmin	Jaratkari	Nag
Husband Varna	His Varna	Wife	Her

Should anybody retain doubt on the question that the division of the society into classes did not prohibit intermarriages between the four Varnas let him consider the geneology of the family of the great Brahmin sage Vyas.

GENEOLOGY OF VYAS

Varuna Mitra = Urvashi

Vashishtha = Akshamala

Shakti =

Parashara = Matsyagandha

= Vyas

Brahminism with the ferocity of an outraged brute proceeded to put a stop to these intermarriage between the different Varnas. A new law is proclaimed by Manu. It is in the following terms :—

III. 12. For the first marriage of twice born men (wives) of equal caste are recommended.

III. 13. It is declared that a Sudra woman alone can be the wife of a Shudra.

III. 14. A Shudra woman is not mentioned even in any (ancient) story as the (first) wife of a Brahmana or of a Kshatriya, though they lived in the (greatest) distress.

III. 15. Twice-born men who, in their folly, wed wives of the low (Sudra) caste, soon degrade their families and their children to the state of Sudras.

111.16. According to Atri and to (Gautama) the son of Utathya. he who weds a Sudra woman becomes an outcast, according to Saunaka on

the birth of a son, and according to Bhrigu he who has (male) offspring from a (Sudra female, alone).

III. 17. A Brahmana who takes a Sudra wife to his bed, will (after death) sink into hell ; if he begets a child by her, he will lose the rank of a Brahmana.

III. 18. The manes and the gods will not eat the (offerings) of that man who performs the rites in honour of the gods, of the manes, and of guests chiefly with a (Sudra wife's) assistance, and such (a man) will not go to heaven.

III. 19. For him who drinks the moisture of a Sudra's lips, who is tainted by her breath, and who begets a son on her. no expiation is prescribed.

Brahmanism was not satisfied with the prohibition of intermarriage. Brahmanism went further and prohibited interdining.

Manu lays down certain interdicts on food. Some are hygienic. Some are social. Of the social the following are worthy of attention :

IV. 218. Food given by a king, impairs his manly vigour; by one of the servile class, his divine light : by goldsmiths, his life ; by leathercutters, his good name.

IV. 219. Given by cooks and the like mean artizans, it destroys his offsprings : by a washerman, his muscular strength ;

IV. 221. That of all others, mentioned in order, whose food must never be tasted, is held equal by the wise to the skin, bones, and hair of the head.

IV. 222. Having unknowingly swallowed the food of any such persons, he must fast during three days; but having eaten it knowingly, he must perform the same harsh penance, as if he had tasted any seminal impurity, ordure, or urine. I said that Brahmanism acted with the ferocity of an outraged brute in undertaking the task of prohibiting intermarriage and interdining. Those who have doubts in this matter ponder over the language of Manu.

Mark the disgust Manu shows with regard to the Shudra woman. Mark what Manu says about the food of the Shudra. He says it is as impure as semen or urine.

These two laws have produced the caste system. Prohibition of intermarriage and prohibition against interdining, are two pillars on which it rests. The caste system and the rules relating to intermarriage and interdining are related to each other as ends to means. Indeed by no other means could the end be realized.

The forging of these means shows that the creation of the caste system was end and aim of Brahmanism. Brahmanism enacted the prohibitions against intermarriage and interdining. But Brahmanism introduced other changes in the social system and if the purposes underlying these changes are those which I suggest them to be, then it must be admitted that Brahmanism was so keen in sustaining the caste system that it did not mind whether ways and means employed were fair or unfair, moral or immoral. I refer to the laws contained in the Code of Manu regarding marriage of girls and the life of widows.

See the law that Manu promulgates regarding the marriage of females.

IX. 4. Reprehensible is the father who gives not (his daughter) in marriage at the proper time.

IX. 88. To a distinguished, handsome suitor of equal caste should a father give his daughter in accordance with the prescribed rule, though she have not attained (the proper age), i.e. although she may not have reached puberty.

By this rule Manu enjoins that a girl should be married even though she may not have reached the age of puberty i.e. even when she is a child. Now with regard to widows Manu promulgates the following rule.

V. 157. At her pleasure let her (i.e. widow) emaciate her body, by living voluntarily on pure flowers, roots and fruits ; but let her not, when her lord is deceased, even pronounce the name of another man.

V. 161. But a widow, who from a wish to bear children, slights her deceased husband by marrying again, brings disgrace on herself here below, and shall be excluded from the seat of her lord (in heaven).

V. 162. Offspring begotten on a woman by any other than her husband, is here declared to be no progeny of hers ; no more than a child, begotten on the wife of another man belongs to the begetter; nor is a second husband any where prescribed for a virtuous woman.

This is the rule of enforced widowhood for a woman. A reference may also be made to Sati or a widow who burns herself on the funeral pyre of her husband and thus puts an end to her life. Manu is silent about it.

Yajnavalkyamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_74 an authority nearly as great as Manu says, she must not live separately or alone.

86. When deprived of her husband, she must not remain away from her father, mother, son, brother, mother-in-law or from her maternal uncle; otherwise she might become liable to censure. Here again Yajnavalkya does not suggest that a widow become a Sati. But Vijnaneshwar, the author of Mitakshara a commentary on Yajnavalkya

Smriti makes the following observation in commenting on the above Sloka.

"This is in the case of the alternative of leading a celibate life vide the text of Vishnumk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_75 :”After the death of the husband, either celibacy or ascending the (cremation) pile after him."

Vijnaneshwar³ adds as his opinion that "There is great merit in ascending the funeral pyre after him.'

From this one can very easily and clearly see how the rule of Sati came to be forged. Manu's rule was that a widow was not to remarry. But it appears from the statement by Vijnaneshwar that from the time of the Vishnu Smriti a different interpretation began to put on the ordinance of Manu. According to this new interpretation Manu's rule was explained to be offering to the widow a choice between two alternatives: (1) Either burn yourself on your husband's funeral pyre or (2) If you don't, remain unmarried. This of course is totally false interpretation quite unwarranted by the clear words of Manu. Somehow it came to be accepted. The date of the Vishnu Smriti is somewhere about the 3rd or 4th Century. It can therefore be said that rule of Sati dates from this period.

One thing is certain, these were new rules. The rule of Manu that girl should be married before she has reached puberty is a new rule. In Pre-Buddhistic Brahmanism⁴ marriages were performed not only after puberty but they were performed when girls had reached an age when they could be called grown up. Of this there is ample evidence. Similarly the rule that a woman once she had lost her husband must not remarry is a new rule. In the Pre-Buddhist Brahmanism there was no prohibition on widow remarriage. The fact that the Sanskrit language contains words such as *Punarbhū* (woman who has undergone a second marriage ceremony) and *punarbhav* (second husband) show that such marriages were quite common under the Pre-Buddhist Brahmanism. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_76 With regard to Sati the position as to when it arose, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_77 there is evidence to suggest that it existed in ancient times. But there is evidence that it had died out and it was revived after Brahmanism under Pushyamitra obtained its victory over Buddhism although it was some time later than Manu.

Question is this, why these changes were made by the triumphant Brahmanism? What did Brahmanism want to achieve by having girls

married before they had become pubert, by denying the widow to the right to marry again and by telling her to put herself to death by immolating herself in the funeral pyre of her deceased husband? No explanations are forthcoming for these changes. Mr. C. V. Vaidya who offers an explanation for girl marriage says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_78 that girl marriage was introduced to prevent girls from joining the Buddhist order of nuns. This explanation does not satisfy me. Mr. Vaidya omits to take into consideration another rule laid down by Manu—namely the rule relating to suitable age for marriage. According to that rule.

IX. 94. A man. aged thirty, shall marry a maiden of twelve who pleases him, or a man of twenty-four a girl eight years of age. The question is not why girl marriage was introduced. The question is why Manu allowed so much discrepancy in the ages of the bride and the bridegroom.

Mr. Kanemk:[@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_79](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_79) has attempted an explanation of Sati. His explanation is that there is nothing new in it. It existed in India in ancient times as it did in other parts of the world. This again does not satisfy the world. If it existed outside India, it has not been practised on so enormous a scale as in India. Secondly if traces of it are found in Ancient India in the Kshatriyas, why was it revived, why was it not universalized? There is no satisfactory explanation. Mr. Kane's explanation that the prevalence of Sati by reference to laws of inheritance does not appear to me very convincing. It may be that because under the Hindu Law of inheritance as it prevailed in Bengal, women got a share in property. The relations of the husband of the widow pressed her to be a Sati in order to get rid of a share may explain why Sati was practised on so large a scale in Bengal. But it does not explain how it arose nor how it came to be practised in other parts of India.

Again with regard to the prohibition of widow remarriage, there is no explanation whatsoever. Why was the widow, contrary to established practice, prohibited from marrying? Why was she required to lead a life of misery? Why was she disfigured?

My explanation for girl marriage, enforced widowhood and Sati is quite different and I offer it for what it is worth.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_80

"Thus the superposition of endogamy over exogamy means the creation of Caste. But this is not an easy affair. Let us take an imaginary group that desire to make itself into a caste and analyse what means it will have to adopt to make itself endogamous. If a group desires to make itself endogamous, a formal injunction against intermarriage with outside groups will be of no avail, especially if prior to the introduction of endogamy, exogamy were to be the rule in all matrimonial relations. Again there is a tendency in all groups living in close contact with one another to assimilate and amalgamate, and thus consolidate into a homogeneous society. If this tendency be strongly counteracted in the interest of Caste formation, it is absolutely necessary to circumscribe a circle without which people should not contract marriages."

"Nevertheless this encircling to prevent marriages from without creates problems from within which are not very easy of solution. Roughly speaking in a normal group the two sexes are more or less evenly distributed, and generally speaking there is an equality between those of the same age. But this equality is never quite realised in actual societies. While to the group that is desirous of making itself into a caste the maintenance of this equality between the sexes becomes the ultimate goal, for without this endogamy can no longer subsist. In other words, if endogamy is to be preserved, conjugal rights from within have to be provided for, else members of the group will be driven out of the circle to take care of themselves in any way they please. But in order that the conjugal rights be provided for from within, it is absolutely necessary to maintain a numerical equality between the marriageable units of the two sexes within the group desirous of making itself into a Caste. It is only through the maintenance of this equality that the necessary endogamy of the group could be kept intact, and a very large disparity is sure to break it."

"The problem of Caste then ultimately resolves itself into one of repairing the disparity between the marriageable units of the two sexes within it. The much needed parity between the units could be realized only when a couple dies simultaneously. But this is a rare contingency. The husband may die before the wife and create a surplus woman who must be disposed of, else through intermarriage she will violate the endogamy of the group. In like manner the husband may survive his wife and be a surplus man whom the group, while it may sympathise with him for the sad bereavement, has to dispose of, else he will marry outside the Caste and will break the endogamy. Thus both the surplus man and the surplus woman constitute a menace to the Caste if not

taken care of, for, not finding suitable partners inside their prescribed circle (and they cannot find any, for there are just enough pairs to go round) very likely they will transgress the boundary, marry outside and import population that is foreign to the Caste. Let us see what our imaginary group is likely *to* do with this surplus man and surplus woman. We will first take up the case of the surplus woman. She can be disposed of in two different ways so as to preserve the endogamy of the Caste."

"First : burn her on the funeral pyre of her deceased husband and get rid of her. This, however, is rather an impracticable way of solving the problem of sex disparity. In some cases it may work, in others it may not. Consequently every surplus woman cannot thus be disposed of, because it is an easy solution but a hard realization. However, the surplus woman (widow) if not disposed of, remains in the group: but in her very existence lies a double danger. She may marry outside the Caste and violate to endogamy or she may marry within the Caste and through competition encroach upon the chances of marriage that must be reserved for the potential brides in the Caste. She therefore is a menace in any case and something must be done to her if she cannot be burned along with her deceased husband."

"The second remedy is to enforce widowhood on her for the rest of her life. So far as the objective results are concerned burning is a better solution than enforcing widowhood. Burning the widow eliminates all the three evils that a surplus woman is fraught with. Being dead and gone she creates no problem of remarriage either inside or outside the Caste. But compulsory widowhood is superior to burning because it is more practicable. Besides being comparatively humane it also guards against the evils of remarriage as does burning ; but it fails to guard the morals of the group. No doubt under compulsory widowhood the woman remains and, just because she is deprived of her natural right of being a legitimate wife in future, the incentive to bad moral conduct is increased. But this is by no means an insuperable difficulty. She can be degraded to a condition where she could no longer be a source of allurements."

"The problem of surplus man (—widower) is much more important and much more difficult than that of the surplus woman in a group that desires to make itself into a Caste. From time immemorial man as compared with woman has had the upper hand. He is a dominant figure in every group and of the two sexes has greater prestige. With this traditional superiority of man over woman his wishes have always been consulted. Woman on the other hand has been an easy prey to all kinds

of iniquitous injunctions, religious, social or economic. But man as a maker of injunctions is most often above them all. Such being the case you cannot accord the same kind of treatment to a surplus man as you can to a surplus woman in a Caste."

"The project of burning him with his deceased wife is hazardous in two ways : first of all it cannot be done, simply because he is a man. Secondly, if done, a sturdy soul is lost to the Caste. There remain then only two solutions which can conveniently dispose of him. I say conveniently because he is an asset to the group."

"Important as he is to the group, endogamy is still more important, and the solution must assure both these ends. Under these circumstances he may be forced, or I should say induced, after the manner of the widow to remain a widower for the rest of his life. This solution is not altogether difficult, for without there being any compulsion some are so disposed as to enjoy self-imposed celibacy or may even take a further step of their own accord to renounce the world and its joys. But, given human nature as it is, this solution can hardly be expected to be realized. On the other hand, as is very likely to be the case, if he remains in the group as an active participator in group activities, he is a danger to the morals of the group. Looked at from a different viewpoint, celibacy though easy in cases where it succeeds, is not so advantageous even then to the material prospects of the Caste. If he observes genuine celibacy and renounces the world, he would not be a menace to the preservation of Caste endogamy or Caste morals as undoubtedly would be, if he remained a secular person. But as an ascetic celibate he is as good as burned, so far as the material well being of his Caste is concerned. A Caste, in order that it may be large enough to afford a vigorous communal life, must be maintained at a certain numerical strength. But to hope for this and to proclaim celibacy is the same as trying to cure atrophy by bleeding.

"Imposing celibacy on the surplus man in the group therefore fails, both theoretically and practically. It is in the interest of the Caste to keep him as a Grahastha (one who raises a family) to use a Sanskrit technicality. But the problem is to provide him with a wife from within the Caste. At the outset this is not possible, for the ruling ratio in a caste has to be one man to one woman and none can have two chances of marriage, for in a Caste thoroughly self enclosed there are always just enough marriageable women to go round for the marriageable men. Under these circumstances the surplus man can only be provided with a wife by recruiting a bride from the ranks of those not yet marriageable

in order to tie him down to the group. This is certainly the best of the possible solutions in the case of the surplus man. By this, he is kept within the Caste. By this, this numerical depletion through constant outflow is guarded against, and by this endogamy and morals are preserved.

"It will now be seen that the four means by which numerical disparity between the two sexes is conveniently maintained are : (1) Burning the widow with her deceased husband ; (2) Compulsory widowhood—a milder form of burning ; (3) Imposing celibacy on the widower ; (4) Wedding him to a girl not yet marriageable. Though as I said above, burning the widow and imposing celibacy on the widower are of doubtful service to the group in its endeavour to preserve its endogamy, all of them operate as means. But means as forces, when liberated or set in motion create an end. What then is the end that these means create? They create and perpetuate endogamy, while caste and endogamy, according to our analysis of the various definitions of caste, are one and the same thing. Thus the existence of these means means caste and caste involves these means."

"This, in my opinion, is the general mechanism of a caste in a system of castes. Let us now turn to the castes in the Hindu Society and inquire into their mechanism. I need hardly promise that there are a great many pitfalls in the path of those who try to unfold the past, and caste in India to be sure is a very ancient institution. This is especially true where there exist no authentic or written history or records or where the people, like the Hindus are so constituted that to them Writing history is a folly, for the world is an illusion. But institutions do live, though for a long time they may remain unrecorded and as often as not customs and morals are like fossils that tell their own history. If this is true, our task will be amply rewarded if we scrutinize the solution the Hindus arrived at to meet the problems of the surplus man and surplus woman."

"Complex though it be in its general working the Hindu Society, even to a superficial observer, presents three singular uxorial customs, namely :—

- (i) Sati or the burning of the widow on the funeral pyre of her deceased husband.
- (ii) Enforced widowhood by which a widow is not allowed to remarry.
- (iii) Girl marriage.

In addition to these, one also notes a great hankering after Sannyasa (renunciation) on the part of the widower, but it may in some cases be due purely to a psychic disposition.

"So far as I know, no scientific explanation of the origin of these customs is forth coming even today. We have plenty of philosophy to tell us why these customs were honoured. (Cf. A. K. Coomaraswamy—"Sati : a Defence of the Eastern Woman" in the British Sociological Review Vol. VI 1913) Because it is a "proof of the perfect unity of body and soul" between husband and wife and of "devotion beyond the grave", because it embodied the ideal of wifeness which is well expressed by Uma when she said "Devotion to her Lord is woman's honour, it is her eternal heaven : and O Maheshwara", she adds with a most touching human cry, "I desire not paradise itself if thou art not satisfied with me!" Why compulsory widowhood is honoured I know not nor have I yet met with anyone who sang in praise of it, though there are a great many who adhere to it. The eulogy in honour of girl marriage is reported by Dr. Ketkar to be as follows : "A really faithful man or woman ought not to feel affection for a woman or a man other than the one with whom he or she is united. Such purity is compulsory not only after marriage, but even before marriage, for that is the only correct ideal of chastity. No maiden could be considered pure if she feels love for a man other than to whom she might get married. As she does not know whom she is going to get married to, she must not feel affection for any man at all before marriage. If she does so, it is a sin. So it is better for a girl to know whom she has to love, before any sexual consciousness has been awakened in her". Hence girl marriage.

"This high-flown and ingenious sophistry indicates why these institutions were honoured, but does not tell us why they were practised. My own interpretation is that they were honoured because they were practised. Any one slightly -quainted with rise of individualism in the 18th century will appreciate my remark. At all times, it is the movement that is most important ; and the philosophies grow around it long afterwards to justify it and give it a moral support. In like manner I urge that the very fact that these customs were so highly eulogized proves that they needed eulogy for their prevalence. Regarding the question as to why they arose, I submit that they were needed to create the structure of caste and the philosophies in honour of them were intended to popularize them or to gild the pill, as we might say, for they must have been so abominable and shocking to the sense of the unsophisticated that they needed a great deal of sweetening. These customs are essentially of the nature of means, though they are represented as ideals. But this should not blind us from understanding the results that flow

from them. One might safely say that idealization of means is necessary and in this particular case was perhaps motivated to endow them with greater efficacy. Calling means an end does not harm except that it disguises its real character, but it does not deprive it of its real nature, that of a means. You may pass a law that all cats are dogs, just as you can call a means an end. But you can no more change the nature of means thereby than you can turn cats into dogs ; consequently I am justified in holding that, regard them as ends or as means. Sati, enforced widowhood and girl marriage are customs that were primarily intended to solve the problem of the surplus man and surplus woman in a caste and to maintain its endogamy. Strict endogamy could not be preserved without these customs, while caste without endogamy is fake."According to my view girl marriage, enforced widowhood and Sati had no other purpose than that of supporting the Caste System which Brahmanism was seeking to establish by prohibiting intermarriage. It is difficult to stop intermarriage. Members of different castes are likely to go out of their Caste either for love or for necessity. It is to provide against necessity that Brahmanism made these rules. This is my explanation of these new rules, made by Brahmanism. That explanation may not be acceptable to all. But there can be no doubt that Brahmanism was taking all means possible to prevent intermarriages between the different classes taking place.

Another illustration of this desire on the part of Brahmanism is to be found in the rule regarding excommunication promulgated by Manu.

Manu says that a person who is excommunicated by his Caste is an outcast.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_81 According to Manu an outcast is to be treated as though he was actually dead. Manu ordains that his obsequies should be performed and lays down the mode and manner of performing these obsequies of the outcast.

XI. 183. The Sapindas and Samanodakas of an outcast must offer (a libation of) water (to him, as if he were dead), outside (the village), on an inauspicious day, in the evening and in the presence of the relatives, officiating priests, and teachers.

XI. 184. A female slave shall upset with her foot a pot filled with water, as if it were for a dead person ; (his Sapindas) as well as the Samanodakas shall be impure for a day and a night. Manu however allows the outcast to return to Caste on performing penance as will be seen from the following rules:

XI. 187. But when he has performed his penance, they shall bathe with him in a holy pool and throw down a new pot, filled with water.

XI. 188. But he shall throw that pot into water, enter his house and perform, as before, all the duties incumbent on a relative.

XI. 189. Let him follow the same rule in the case of female outcasts; but clothes, food, and drink shall be given to them, and they shall live close to the (family-) house.

But if the outcast was recalcitrant and impenitent Manu provides for his punishment.

Manu will not allow the outcast to live in the family house. Manu enjoins that

XI. 189.Clothes, food, and drink shall be given to them (i.e. the outcast members of the family), and they shall live close to the (family) house.

III. 92. Let him (i.e. the householder) gently place on the ground (some food) for dogs, outcasts, chandals, those afflicted with diseases that are punishments of former sins, crows and insects. Manu declares that having social intercourse with an outcast is a sin. He warns the Snataka

IV. 79.not (to) stay together with outcasts. IV. 213.Not (to eat food given) by outcasts. To the householder Manu says :—

III. 151. Let him (i.e. the householder) not entertain at a Shradha.

III. 157. (A person) who forsakes his mother, his father, or a teacher without (sufficient) reason, he who has contracted an alliance with outcasts either through the Veda or through a marriage.

Manu ordains a social boycott of the outcast by penalizing those who associate with him.

XI. 181. He who associates himself for one year with an outcast himself becomes an outcast ; not by sacrificing, reading the Veda, or contracting affinity with him, since by those acts he loses his class immediately, but even by using the same carriage or seat, or by taking his food at the same board.

XI. 182. He who associates with any one of those outcasts, must perform, in order to atone for (such) intercourse, the penance prescribed for that (sinner).

Then there are penalties against an outcast who defies his caste and chooses to remain an outcast. Manu tells him what will be his penalty in the next world.

XII. 60. He who has associated with outcasts (will) become Brahmarakshas (i.e. an evil spirit). Manu however was not prepared to

leave the outcast with this. He proceeds to enact penalty the severity of which cannot be doubted. The following are the penal sections of Manu Smriti against an outcast.

III. 150.Those Brahmins who areoutcastsAtheists are unworthy (to partake) of oblations to the gods and manes.

IX. 201.Outcast receive(s) no share (in inheritance). XI. 185. But thenceforward (i.e. after the obsequies of the outcast have been performed) it shall be forbidden to converse with him, to sit with him, to give him a share of the inheritance, and to hold with him such intercourse as is usual among men;

XI. 186. And (if the outcast be the eldest) his right of primogeniture shall be withheld and the additional share, due to the eldest son; and in his stead a younger brother, excelling in virtue (i.e. who observes the rule of caste) shall obtain the share of the eldest.

Such is the law of Manu against an outcast. The severity of the penalties prescribed against him is quite obvious. Its effect is to exclude him from all social intercourse, to suspend him from every civil function, to disqualify him for all offices and to disable him from inheriting any property. Under these pains and penalties the outcaste might as well be dead which indeed Manu considers him to be, directing libations to be offered to the manes as though he was naturally so. This system of privations and mortifications was enforced by prescribing a similar fate to anyone who endeavoured to associate with an outcast. The penalty was not confined to the: outcast. Nor was it restricted to males. Males and females were both subject to the law of the outcast. Even their progeny was subject to penalty. The law was extended to the son of the outcast. Born before son was entitled to inherit immediately, as though his father was dead. Born after excommunication he lost his right to inherit, i.e. he became an outcast along with his father.

The laws of Manu regarding the outcast are of course devoid of justice and humanity. Some might think that there is nothing very strange about them. That is because these laws are very similar to the laws against apostacy and heresy to be found in all religious codes. It is unfortunately a fact All religions—*Except Buddhism*— have used or misused the laws of inheritance for enforcing adhesion and conformity to their codes. The conversion of a Christian to Judaism or paganism or any other religion was punished by the Emperors Constantines and Jul Emperors Theodosius and Valentinianus added capital punishment, In case the apostle endeavoured to pervert others to the same inequity.

This was borrowed by all the European countries' who maintained a similar system of penalties to enforce the Christian faith.

Such a view of the law of the outcast would be quite superficial. First of all the outcast is a creation of Brahmanism. It is a necessary coefficient of caste. Indeed once Brahmanism was determined to create the caste system the law against the outcast was absolutely essential. For only by punishing the outcast can the caste system be maintained. Secondly there is a difference between the Christian or Mahomedan Law of Apostacy and the Brahmanic law of caste. The disqualification under the Christian or Mahomedan law of apostacy was restricted to want of religious belief or the profession of wrong religious belief. Under the Brahmanic law the disqualification had no connection with belief or want of belief. It was connected with the sanctity of a certain form of social organization namely Caste. It is the act of going out of one's caste that was made punishable. This is a very important difference.

The Brahmanic law of the outcast as compared with the law of apostacy in other religions shows that a belief in God is not essential to Brahmanism; that a belief in life after death is not essential to Brahmanism ; that a belief in salvation either by good deeds or by a belief in a prophet is not essential to Brahmanism; that a belief in the sacredness of the Vedas is essential to Brahmanism. This is only one thing that is essential to Brahmanism. For it is only breach of caste which is penalized. All else is left to violation.

Those who are not blind to these forces of integration will admit that this act of Brahmanism in prohibiting intermarriage and interdining is nothing short of a complete dismemberment of society. It is a deathknell to unity, an effective bar to united action. As will be shown hereafter Brahmanism was keen on preventing united action by Non-Brahmins to overthrow Brahmanism and that is why Brahmanism brought about this segmentation of Indian Society. But the fatal effects of a poison can never be confined to the limits of the original intention of the perpetrator. The same thing has happened in the case of Caste. Brahmanism intended to paralyse the Non-Brahmans for action against Brahmins, it did not design that they as a nation should be paralysed for action against a foreign nation. But the result of the poison of Caste has been they have become stricken for action against Brahmanism as well as against foreigners. In other words Brahmanism in instituting Caste system has put the greatest impediment against the growth of nationalism.

In spite of what others say the Hindu will not admit that there is anything evil in the Caste system., and from one point of view he is right. There is love, unity and mutual aid among members of a family. There is honour among thieves. A band of robbers have common interests as respects to its members. Gangs are marked by fraternal feelings and intense loyalty to their own ends however opposed they may be to the other gangs. Following this up one can say that a Caste has got all the praiseworthy characteristics which a society is supposed to have.

It has got the virtues of a family inasmuch as there is love unity and mutual aid. It has got the honour known to prevail among thieves. It has got the loyalty and fraternal feeling we meet with in gangs and it also possesses that sense of common interests which is found among robbers.

A Hindu may take satisfaction in these praiseworthy characteristics of the Caste and deny that there is anything evil in it. But he forgets that his thesis that Caste is an ideal form of social organization is supportable on the supposition that each caste is entitled to regard himself as an independent society, as an end in itself as nations do. But the theory breaks down when the consideration pertains to Hindu Society and to the Caste-System which goes with it.

Even in such a consideration of the subject the Hindu will not admit that the Caste system is an evil. Charge Hinduism with the responsibility for the evils of the Caste-system and the Hindu will at once retort."What about the Class System in Europe?"Upto a point the retort is good if it means that there exists nowhere that ideal society of the philosophers marked by organic unity, accompanied by praiseworthy community of purpose, mutuality of sympathy, loyalty to public ends and concern for general welfare. Nobody can have much quarrel if the Hindu by way of analogy were *to* say that in every Society there are families and classes marked by exclusiveness. suspicion, and jealousy as to those without: bands of robbers, gangs. narrow cliques, trade unions. Employees' Associations. Kartels. Chambers of Commerce and political parties. Some of these are held together by the interest and plunder and others while aspiring to serve the public do not hesitate to prey upon it.

It may be conceded that everywhere *de facto* society whether in the past or in the present is not a single whole but a collection of small groups devoted to diverse purposes as their immediate and particular objectives. But the Hindu cannot take shelter under this analogy between the Hindu caste system and the Non-Hindu Class system and rest there as though there is nothing more to be said about the subject. The fact is

there is a far bigger question which the Hindu has still to face. He must take note of the fact that although every society consists of groups there are societies in which the groups are only non-social while there are societies in which the groups are anti-social. The difference between a society with the class system and a society with the caste system lies just in this namely the class system is merely nonsocial but the caste system is positively anti-social.

It may be important to realize why in some societies the group system produces only non-social feeling and in some societies the group system produces anti-social feeling. No better explanation of this difference can be given than the one given by professor John Dewey. According to him every thing depends upon whether the groups are isolated or associated, whether there is reciprocity of interest between them or whether there is lack of reciprocity of interest. If the groups are associated, if there is a reciprocity of interest between them the feeling between them will be only non-social. If the groups are isolated, if there is no reciprocity between them the feeling between them will be anti-social.

To quote Professor Dewey mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_82

"The isolation and exclusiveness of a gang or clique brings its anti-social spirit into relief. But this same spirit is found wherever one group has interests 'of its own' which shut it out from full interaction with other groups, so that its prevailing purpose is the protection of what it has got, instead of reorganization and progress through wider relationships. It marks nations in their isolation from one another; families which seclude their domestic concerns as if they had no connection with a larger life; schools when separated from the interest of home and community; the divisions of rich and poor; learned and unlearned. The essential point is that isolation makes for rigidity and formal institutionalizing of life, for static and selfish ideals within the group."

The question to be asked is not whether there are groups in a Society or whether the Society is one single whole. The question to be asked is what degree of association, cooperative intercourse and interaction exists among the different groups : how numerous and varied are the interests which are consciously shared by them : how full and free is the interplay with other forms of Association? A society is not to be condemned as body because there are groups in it. It is to be condemned if the groups are isolated, each leading an exclusive life of its

own. Because it is this isolation which produces the anti-social spirit which makes co-operative effort so impossible of achievement.

In his isolation among the classes is the work of Brahmanism. The principal steps taken by it was to abrogate the system of intermarriage and interdining that was prevalent among the four Varnas in olden times. This has already been discussed in an earlier section of this chapter. There is however one part of the story that remains to be told. I have said the Varna system had nothing to do with marriage. That males and females belonging to the different Varnas could marry and did marry. Law did not come in the way of inter-varna marriage. Social morality was not opposed to such marriages. Savarna marriage was neither required by law nor demanded by Society. All marriages between different Varnas irrespective of the question whether the bride was of a higher Varna than the bride-groom or whether the bride-groom was of the higher Varna and the bride of the lower Varna were valid. Indeed as Prof. Kane says the distinction between Anuloma and Pratiloma marriage was quite unknown and even the terms Anuloma and Pratiloma were not in existence. They are the creation of Brahmanism. Brahmanism put a stop to Pratiloma marriages i.e. marriages between women of a higher Varna and men of lower Varna. That was a step in the direction of closing the connection between the Varnas and creating in them an exclusive and anti-social spirit regarding one another. But while the inter-connecting gate of the Pratiloma marriage was closed the inter-connecting gate of Anuloma marriage had remained open. That was not closed. As pointed out in the section on graded inequality Anuloma marriage i.e. marriage between a male of the higher Varna and the female of the lower Varna was allowed by Brahmanism to continue. The gate of Anuloma marriage was not very respectable and was a one way gate only. still it was an interconnecting gate by which it was possible to prevent a complete isolation of the Varnas. But even here Brahmanism played what cannot but be called a dirty trick. To show how dirty the trick was it is necessary first to state the rules which prevailed for determining the status of the child. Under the rule existing from very ancient times the status of the child was determined by the Varna of the father. The Varna of the mother was quite unimportant. The following illustrations will place the point beyond doubt:

Father's Child's Name	Varna of Varna of mother	Mother's Name name	Varna of father child
-----------------------------	--------------------------------	--------------------------	-----------------------------

1. Shantanu Bhishma	Kshatriya Kshatriya	Ganga	Shudra
(Anamik)			
2. Shantanu Vichitra Virya	Kshatriya Kshatriya	Matsyagandha	Shudra
(Fisher)			
3. Parashar Krishna-	Brahmin Brahmin	Matsyagandha	Shudra
(Fisher)			
Dwaipayana			
4. Vishwamitra Shakuntala	Kshatriya Kshatriya	Menaka	(Apsara)
5. Yayati Yadu	Kshatriya Kshatriya	Devayani	Brahmin
6. Yayati Druhya	Kshatriya Kshatriya	Sharmishta	Asuri
(Nonaryan)			
7. Jaratkaru Asita	Brahmin Brahmin	Jaratkari	Nag.
(Nonaryan)			

The rule was known as the rule *of* Pitra Savarnya. It would be interesting to consider the effect of this rule of Pitra Savarnya on the Anuloma and Pratiloma systems of marriage.

The effect on Pratiloma marriage would be that the children of mothers of the higher Varnas would be dragged down to the level of the lower Varnas represented by their fathers. Its effect on Anuloma marriage would be just the contrary. The children of mothers of the lower Varnas would be raised up and absorbed in the higher Varnas of their fathers.

Manu stopped Pratiloma marriages and thereby prevented the higher from being dragged to the status of the lower. However regrettable, not much damage was done by it so long as the Anuloma marriage and the rule of Pitra Savarnya continued in operation. The two together formed a very useful system. The Anuloma marriage maintained the inter-connection and the Pitra Savarnya rule made the higher classes quite composite in their make up. For they could not but help to be drawn from mothers of different Varnas. Brahmanism did not want to keep this gate of intercommunication between the Varnas open. It was bent on closing it. But it did it in a manner which is disreputable.

The straight and honourable way was to stop Anuloma marriage. But Brahmanism did not do that. It allowed the system of Anuloma marriage to continue. What it did was to alter the rule of determining the status of the child. It replaced the rule of Pitra Savarnya by the rule of Matra Savarnya by which the status of the child came to be determined by the status of the mother. By this change marriage ceased to be that means of intersocial communication which it principally is. It relieved men of the higher Varna from the responsibility to their children simply because they were born of a mother of lower Varna. It made Anuloma marriage mere matter of sex. a humiliation and insult to the lower Varnas and a privilege to the higher classes to lawfully commit prostitution with women of the lower classes. And from a larger social point of view it brought the complete isolation among the Varnas which has been the bane of Hindu Society. Notwithstanding all this the Orthodox Hindu still believes that the caste system is an ideal system.

But why talk about the orthodox Hindus. There are among enlightened politicians and historians. There are of course Indians both politicians and historians who vehemently deny that the Caste system comes in the way of nationalism. They presume that India is a nation and feel very much offended if anybody instead of speaking of the Indian Nation speaks of the people of India. This attitude is quite understandable. Most of the politicians and historians are Brahmins and cannot be expected to have the courage to expose the misdeeds of their ancestors or admit the evils perpetrated by them. Ask any one the question, is India a nation, and all in a chorus say, 'yes.' Ask for reasons, they will say that India is a nation firstly because India has a geographical unity of the country and secondly because of the fundamental unity of the culture. All this may be admitted for the sake of argument and yet it is true to say that to draw an inference from these facts that India is a nation is really to cherish a delusion. For what is a nation? A nation is not a country in the physical sense of the country whatever degree of geographical unity it may possess. A nation is not people synthesized by a common culture derived from common language, common religion or common race.

To recall what I have said in another place "Nationality is a subjective psychological feeling. It is a feeling of a corporate sentiment of oneness which makes those who are charged with it feel that they are kith and kin. This national feeling is a double edged feeling. It is at once a feeling of fellowship for one's own kith and an anti-fellowship feeling for those who are not one's own kith. It is a feeling of "consciousness of

kind" which binds together those who are within the limits of the kindred and severs them from those who are outside the limits of the kindred. It is a longing to belong to one's own group and a longing not to belong to any other group. This is the essence of what is called a nationality and national feeling. This longing to belong to one's own kindred as I said is a subjective psychological feeling and what is important to bear in mind is that the longing to belong to one's own kindred is quite independent of geography, culture or economic or social conflict.

There may be geographical unity and yet there may be no "longing to belong". There may be no geographical unity and yet the feeling of longing to belong may be very intense. There may be cultural unity and yet there may be no longing to belong. There may be economical conflicts and class divisions and yet there may be an intense feeling of longing to belong. The point is that nationality is not primarily a matter of geography culture or "....."

In the declining days of the Vedic Regime, the Shudras as well as women had come to occupy a very low position. The rising tide of Buddhism had brought about a great change in the status of both. To put it briefly a Shudra under the Buddhist regime could acquire property, learning and could even become a king. Nay he could even rise to the highest rung of the social ladder occupied by the Brahmin in the Vedic Regime. The Buddhist order of Bhikshus was counterpart of the Vedic order of Brahmins. The two orders, each within its own religious system were on a par in the matter of status and dignity. The Shudra could never aspire to be a Brahmin in the Vedic regime but he could become a Bhikshu and occupy the same status and dignity as did the Brahmin. For, while the Vedic order of Brahmins was closed to the Shudra, the Buddhist order of Bhikshus was open to him and many Shudras who could not become Brahmins under the Vedic Regime had become their peers by becoming Bhikshus under Buddhism. Similar change is noticeable in the case of women. Under the Buddhist regime she became a free person. Marriage did not make her a slave. For marriage under the Buddhist rule was a contract. Under the Buddhist Regime she could acquire property, she could acquire learning and what was unique, she could become a member of the Buddhist order of Nuns and reach the same status and dignity as a Brahmin. The elevation of the status of the Shudras and women was so much the

result of the gospel of Buddhism that Buddhism was called by its enemies as the Shudra religion (i.e. the religion of the low classes).

All this of course must have been very galling to the Brahmins. How very galling it must have been to them is shown by the vandalic fury with which Brahmanism after its triumph over Buddhism proceeded to bring about a complete demolition of the high status to which the Shudras and women had been elevated by the revolutionary changes effected by the vivifying gospel of Buddhism.

Starting with this background one shudders at the inhumanity and cruelty of the laws made by Manu against the Shudras. I quote a few of them assembling them under certain general heads.

Manu asks the householders of the Brahmana, Kshatriya and Vaishya Class:

IV. 61. Let him not dwell in a country where the rulers are Shudra.....

This cannot mean that Brahmana, Kshatriya and Vaishya should leave the country where Shudra is a ruler. It can only mean that if a Shudra becomes a king he should be killed. Not only a Shudra is not to be recognized as fit to be a king, he is not to be deemed as a respectable person. For Manu enacts that:-

XI. 24. A Brahmin shall never beg from a Shudra property for (performing) a sacrifice i.e. for religious purposes. All marriage ties with the Shudra were proscribed. A marriage with a woman belonging to any of the three higher classes was forbidden. A Shudra was not to have any connection with a woman of the higher classes and an act of adultery committed by a Shudra with her was declared by Manu to be an offence involving capital punishment.

VIII. 374. A Shudra who has an intercourse with a woman of the higher caste

guarded mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_84 or unguarded, shall be punished in the following manner if she was unguarded, he loses the offending part. If she was guarded then he should be put to death and his property confiscated.

Manu insists that a Shudra shall be servile, unfit for office, without education, without property and as a contemptible person, his person and property shall always be liable to be conscripted. As to office Manu prescribes.

VIII. 20. A Brahmana who is only a Brahmana by descent i.e. one has neither studied nor performed any other act required by the Vedas may.

at the king's pleasure, interpret the law to him i.e. act as the judge, but never a Shudra (however learned he may be).

VIII. 21. The Kingdom of that monarch who looks on while a Shudra settles the law will sink low like a cow in a morass.

VIII. 272. If a Shudra arrogantly presumes to preach religion to Bramhins the King shall have poured burning oil in his mouth and ears.

In olden times the study of the Vedas stood for education. Manu declare that the study of the Vedas was not a matter of right but that it was a matter of privilege. Manu deprived the Shudra of the right to study Veda. He made it a privilege of the three higher classes. Not only did he debar the Shudra from the study of the Vedas but he enacted penalties against those who might help the Shudra to acquire knowledge of the Veda. To a person who is previledged to study the Vedas. Manu ordains that :

IV. 99. He must never read the Vedas...in the presence of the Shudras. and prescribes that :-

III. 156. He who instructs Shudra pupils and he whose teacher is a Shudra shall become disqualified tor being invited to Shradha. Manu's successor went much beyond him in the cruelty of their punishment of the Shudra for studying the Veda. For instance Katyayana lays down that if a Shudra overheard the Veda or ventured to utter a word of the Veda. the King shall cut his tongue in twain and put hot molten lead in his cars.

As to property Manu is both ruthless and shameless. According to the Code of Manu :

X. 129. No superfluous collection of wealth must be made by a Shudra, even though he has power to make it, since a servile man. who has amassed riches, becomes proud, and, by his insolence or neglect, gives pain to Bramhans.

The reason for the rule is more revolting than the rule itself. Manu was of course not sure that the prohibitory injunction will be enough to prevent the Shudra from acquiring wealth. To leave no room for the Shudra to give offence to the Bramhins by his accumulation of wealth Manu added another section to his code whereby he declared that :

VIII. 417. A Bramhana may seize without hesitation if he be in distress for his subsistence, the goods of his Shudra. Not only is the property of a Shudra liable to conscription but the labour of the Shudra. Manu declares, is liable to conscription. Compare the following provision in Manu :

VIII. 413. A Bramhana may compel a Shudra, whether bought or unbought to do servile work; for he is created by the creator to be the slave of a Bramhana.

A Shudra was required by Manu to be servile in his speech. How very servile he must be can be seen from the following provisions in Manu :—

VIII. 270. A Shudra who insults a twiceborn man with gross invective, shall have his tongue cut out; for he is of low origin.

VIII. 271. If he mentions the names and castes of the (twiceborn) with contumely, an iron nail, ten fingers long, shall be thrust red hot into his mouth.

Manu's object *was* to make the Shudra not merely a servile person but an altogether contemptible person. Manu will not allow a Shudra the comfort of having a high sounding name. Had Manu not been there to furnish incontrovertible proof it would be difficult to believe that Bramanism could have been so relentless and pitiless in its persecution of the Shudra. Observe Manu's law as to the names that the different classes can give to their children.

II. 31. Let the first part of a Brahman's name denote something auspicious, a Kshatriya's be connected with power, and a Vaishya's with wealth, but a Shudra's express something contemptible.

II. 32. The second part of a Bramhan's name shall be a word implying happiness, of a Kshatriya's a word implying protection, of a Vaisya's a term expressive of thriving and of a Shudra's an expression denoting service.

The basis of all these inhuman laws is the theory enunciated by Manu regarding the Shudra. At the outset of his Code, Manu takes care to assert it emphatically and without blushing. He says :

I. 91. One occupation only, the Lord prescribed to the Shudra, to serve meekly these other three castes (namely Bramhin, Kshatriya and Vaishya).

Holding that the Shudra was born to be servile, Manu made his laws accordingly so as to compel him to remain servile. In the Buddhist regime a Shudra could aspire to be a judge, a priest and even a King, the highest status that he could ever aspire to. Compare with This the ideal that Manu places before the Shudra and one can get an idea of what fate was to be under Brahmanism :

X. 121. If a Shudra, (unable to subsist by serving Brahmanas), seeks a livelihood, he may serve Kshatriyas, or he may also seek to maintain himself by attending on a wealthy Vaishya.

X. 122. But let a (Shudra) serve Brahmanas, either for the sake of heaven, or with a view to both (this life and the next); for he who is called the servant of a Brahmana thereby gains all his ends.

X. 123. The service of Brahmanas alone is declared (to be) an excellent occupation for a Shudra: for whatever else besides this he may perform will bear him no fruit.

X. 124. They must allot to him out of their own family (property) a suitable maintenance, after considering his ability, his industry, and the number of those whom he is bound to support.

X. 125. The remnants of their food must be given to him, as well as their old household furniture.

Manu can hardly be said to be more tender to women than he was to the Shudra. He starts with a low opinion of women. Manu proclaims :

11.213. It is the nature of women to seduce men in this (world); for that reason the wise are never unguarded in (the company of) females.

II. 214. For women are able to lead astray in (this) world not only a fool, but even a learned man, and (to make) him a slave of desire and anger.

II. 215. One should not sit in a lonely place with one's mother sister or daughter; for the senses are powerful, and master even a learned man.

IX. 14. Women do not care for beauty, nor is their attention fixed on age; (thinking), '(It is enough that) he is a man', they give themselves to the handsome and to the ugly.

IX. 15. Through their passion for men, through their mutable temper, through their natural heartlessness, they become disloyal towards their husbands, however carefully they may be guarded in this (world).

IX. 16. Knowing their disposition, which the Lord of creatures laid in them at the creation, to be such, (every) man should most strenuously exert himself to guard them.

IX. 17. (When creating them) Manu allotted to women (a love of their) bed. (of their) seat and (of) ornament, impure desires, wrath, dishonesty, malice, and bad conduct.

The laws of Manu against women are of a piece with this view. Women are not to be free under any circumstances. In the opinion of Manu :—

IX. 2. Day and night women must be kept in dependence by the males (of) their (families), and, if they attach themselves to sensual enjoyments, they must be kept under one's control.

IX. 3. Her father protects (her) in childhood, her husband protects (her) in youth, and her sons protect (her) in old age: a woman is never fit for independence.

IX. 5. Women must particularly be guarded against evil inclinations, however trifling (they may appear); for, if they are not guarded, they will bring sorrow on two families,

IX. 6. Considering that the highest duty of all castes, even weak husbands (must) strive to guard their wives.

V. 147. By a girl, by a young woman, or even by an aged one, nothing must be done independently, even in her own house.

V. 148. In childhood a female must be subject to her father, in youth to her husband, when her lord is dead to her sons: a woman must never be independent.

V. 149. She must not seek to separate herself from her father, husband, or sons; by leaving them she would make both (her own and her husband's) families contemptible. Woman is not to have a right to divorce.

IX. 45. The husband is declared to be one with the wife, which means that there could be no separation once a woman is married. Many Hindus stop here as though this is the whole story regarding Manu's law of divorce and keep on idolizing it by comforting their conscience by holding out the view that Manu regarded marriage as sacrament and therefore did not allow divorce. This of course is far from the truth. His law against divorce had a very different motive. It was not to tie up a man to a woman but it was to tie up the woman to a man and to leave the man free. For Manu does not prevent a man for giving up his wife. Indeed he not only allows him to abandon his wife but he also permits him to sell her. But what he does is to prevent the wife from becoming free. See what Manu Says :

IX. 46. Neither by sale nor by repudiation is a wife released from her husband.

The meaning is that a wife, sold or repudiated by her husband, can never become the legitimate wife of another who may have bought or received her after she was repudiated. If this is not monstrous nothing can be. But Manu was not worried by considerations of justice or injustice of his laws. He wanted to deprive women of the freedom she had under the Buddhistic regime. He knew, by her misuse of her liberty, by her willingness to marry the Shudra that the system of the gradation of the Varna had been destroyed. Manu was outraged by her license and in putting a stop to it he deprived her of her liberty.

A wife was reduced by Manu to the level of a slave in the matter of property.

IX. 146. A wife, a son, and a slave, these three are declared to have no property, the wealth which they earn is (acquired) for him to whom they belong.

When she becomes a widow Manu allows her maintenance if her husband was joint and a widow's estate in the property of her husband if he was separate from his family. But Manu never allows her to have any dominion over property.

A woman under the laws of Manu is subject to corporal punishment and Manu allows the husband the right to beat his wife.

VIII. 299. A wife, a son, a slave, a pupil, and a younger brother of the full blood, who have committed faults, may be beaten with a rope or a split bamboo.

In other matters woman was reduced by Manu to the same position as the Shudra.

The study of the Veda was forbidden to her by Manu as it was to the Shudra.

II. 66. Even for a woman the performance of the *Sanskaras* are necessary and they should be performed. But they should be performed without uttering the Veda Mantras.

IX. 18. Women have no right to study the Vedas. That is why their Sanskars are performed without Veda Mantras. Women have no knowledge of religion because they have no right to know the Vedas. The uttering of the Veda Mantras is useful for removing sin. As women cannot utter the Veda Mantras they are as unclean as untruth is.

Offering sacrifices according to Bramhanism formed the very soul of religion. Yet Manu will not allow women to perform them. Manu ordains that:—

XI. 36. A woman shall not perform the daily sacrifices prescribed by the Vedas. XI. 37. If she does it she will go to hell.

To disable her from performing such sacrifices Manu prevents her from getting the aid and services of a Bramhin priest.

IV. 205. A Bramhan must never eat food given at a sacrifice performed by a woman.

IV. 206. Sacrifices performed by women are inauspicious and not acceptable to God. They should therefore be avoided. Woman was not to have any intellectual pursuits and nor free will nor freedom of thought. She was not to join any heretical sect such as Buddhism. If she

continues to adhere to it, till death she is not to be given the libation of water as is done in the case of all dead.

Finally a word regarding the ideal of life, Manu has sought to place before a woman. It had better be stated in his own words :

V. 151. Him to whom her father may give her, or her brother with the father's permission, she shall obey as long as he lives and when he is dead, she must not insult his memory.

V. 154. Though destitute of virtue, or seeking pleasure elsewhere, or devoid of good qualities, yet a husband must be constantly worshipped as a god by a faithful wife.

V. 155. No sacrifice, no vow, no fast must be performed by women, apart from their husbands; if a wife obeys her husband, she will for that reason alone be exalted in heaven. Then comes the choicest texts which forms the pith and the marrow of this ideal which Manu prescribes for the women :

V. 153. The husband who wedded her with sacred Mantras, is always a source of happiness to his wife, both in season and out of season, in this world and in the next.

V. 150. She must always be cheerful, clever in the management of her household affairs, careful in cleaning her utensils, and economical in expenditure.

This the Hindus regard as a very lofty ideal for a woman!!! The severity of these laws against Shudras and women show that the phenomenal rise of these classes during the Buddhist regime had not only offended the Brahmins but had become intolerable to them. It was a complete reversal of their sacred social order from top to bottom. The first had become last and the last had become first. The laws of Manu also explain, the determined way in which the Brahmins proceeded to use their political power to degrade the Shudras and the women to their old status. The triumphant Brahmanism began its onslaught on both the Shudras and the women in pursuit of the old ideal namely servility and Brahmanism did succeed in making the Shudras and women the servile classes, Shudras the serfs to the three higher classes and women the serfs to their husbands. Of the black deeds committed by Brahmanism after its triumph over Buddhism this one is the blackest. There is no parallel in history for so foul deeds of degradation committed by a class of usurpers in the interest of class domination. The colossal character of this deed of degradation perpetrated by Brahmanism is unfortunately not fully realized. It is concealed by those small monosyllabic words, Stri and Shudra. Let those who wish to get an idea of the enormity of

their deed think of the numbers that lie behind these two terms. What part of the population do they apply to? The woman represents one half of the population. Of the balance the Shudra represents not less than two third. The two together make up about 75% of the total population. It is this huge mass of people that has been doomed by Brahmanism to eternal servility and eternal degradation. It is because of the colossal scale of degradation whereby 75% of her people were deprived of their right to life, liberty and pursuit of happiness that India became a decaying if not a dead nation.

The principle of graded inequality runs through the whole of the Manu Smriti. There is no department of life in which he has not introduced his principle of graded inequality. For a complete and thorough exposition of it, it would be necessary to reproduce the whole of Manu Smriti. I will take only a few departments to illustrate how in the hands of Manu the principle of graded inequality became imbedded in the social life. Take the field of marriage. Observe the rule of Manu :—

III. 13. It is declared that a Shudra woman alone (can be) the wife of a Shudra, she and one of his own caste (the wives) of a Vaishya, those two and one of his own caste the wives of a Kshatriya, those three and one of his own caste (the wives of a Brahman). Take the rules of Manu regarding the treatment of guests:—

III. 110. But a Kshatriya (who comes) to the house of a Brahmana is not called a guest (atithi), nor a Vaisya, nor a Shudra, nor a personal friend, nor a relative, nor the teacher.

III. 111. But if Kshatriya comes to the house of a Brahmana in the manner of a guest, (the house-holder) may feed him according to his desire, after the above mentioned Brahmanas have eaten.

III. 112. Even a Vaisya and a Shudra who have approached his house in the manner of guests, he may allow to eat with his servants, showing (thereby) his compassionate disposition. In the house of a Brahmana, nobody except a Brahmin is to have the honour of being a guest. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_85 If the Kshatriya comes in the manner of a guest to the house of a Brahmin he is to be fed after all the Brahmins are fed and if the Vaishyas and Shudras come in the manner of guests they are to be fed after everybody is fed and only in the company of servants.

Take the rules of Manu regarding Sanskaras : X. 126. A Shudra has no right to receive the sacraments. X. 68. The law prescribes that neither of the two (that is those who belong to mixed castes) shall receive the

sacraments the first being excluded on account of lowness of his origin of his parents was against the order of the castes.

II. 66. The whole seriesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_86 of sacraments must be performed for females also in order to sanctify the body at the proper time and in the proper order, but without the recitation of sacred Vedic Mantras. Manu further lays down that :

VI. 1. A twice born Snataka, who has thus lived according to the law in the order of householders, may, taking a firm resolution and keeping his organs in subjection, dwell in the forest, duly (observing the rules given below).

VI. 33. But having thus passed the third part of (a man's natural term of) life in the forest, he may live as an ascetic during the fourth part of his existence, after abandoning all attachment to worldly objects.

Even in law Manu introduces the principle of graded inequality. To take only two illustrations, the law of defamation, abuse and the law of assault :

VIII. 267. A Kshatriya having defamed a Brahmana, shall be fined one hundred (panas); A Vaisya one hundred and fifty or two hundred ; a Shudra shall suffer corporal punishment.

VIII. 268. A Brahmana shall be fined fifty (panas) for defaming a Kshatriya ; in (the case of) a Vaisya the fine shall be twenty five (panas), in (the case of) a Shudra twelve.

VIII. 269. For offences of twice born men against those of equal caste (varna, the fine shall be) also twelve (panas) for speeches which ought not to be uttered, that (and every fine shall be) double.

VIII. 276. (For mutual abuse) by a Brahmana and a Kshatriya a fine must be imposed by a discerning (king), on the Brahmana the lowest amercement, but on the Kshatriya the middlemost.

VIII. 277. A Vaisya and a Shudra must be punished exactly in the same manner according to their respective castes, but the tongue (of the Shudra) shall not be cut out: that is the decision.

VIII. 279. With whatever limb a man of a low caste does hurt to (a man of the three) highest (castes), even that limb shall be cut off: that is the teaching of Manu.

VIII. 280. He who raises his hand or a stick, shall have his hand cut off; he who in anger kicks with his foot, shall have his foot cut off. Everywhere is the principle of graded inequality. So ingrained it had become in the social system that the successors of Manu were careful to

introduce it where he had failed to give effect to it. For instance Manu had had recognized the system of slavery. But had failed to prescribe whether the system of slavery was or was not subject to the principle of graded order of insubordination.

Lest it should be understood that the law of graded inequality did not apply to slavery and that a Brahmin may be a slave of the Shudra, Yajnavalkya at once proceeds to clear the doubt. He expressly laid down that :-

"Slavery is in the descending order of the Varnas and not in the ascending order"(XIV. 183).

Vijnaneshwar in his commentary on Yajnavalkya makes it concrete by his illustrations when he says :

"Of the Varnas such as the Brahmana and the rest, a state of slavery shall exist *Anulomyena*, in the descending order. Thus, of a Brahmana, a Kshatriya and the rest may become a slave; of a Kshatriya, the Vaishya and the Shudra; and of a Vaishya, Shudra, thus the state of slavery shall operate in the descending order." Stated in the language of equality and inequality, this means that the Brahmin is the highest because he can be the slave of nobody but is entitled to keep a person of any class as his slave. The Shudra is the lowest because everybody can keep him as his slave but he can keep no one as his slave except a Shudra. The place assigned to the Kshatriya and the Vaishya introduces the system of graded inequality. A Kshatriya while he is inferior to the Brahmin he can be the slave of the Brahmin. While he is yet superior to the Vaishyas and the Shudras because he can keep them as his slaves; the Vaishyas and the Shudras have no right to keep a Kshatriya as his slave. Similarly a Vaishya while he is inferior to the Brahmins and the Kshatriyas, because they can keep him as their slave and he cannot keep any one of them as his slave, he is proud that he is at least superior to the Shudra because he can keep the Shudra as his slave while Shudra cannot keep the Vaishya as his slave.

Such is the principle of graded inequality which Bramhanism injected into the bone and the marrow of the people. Nothing worse to paralyze society to overthrow inequity could have been done.

Although its effects have not been clearly noticed there can be no doubt that because of it the Hindus have been stricken with palsy. Students of social organization have been content with noting the difference between equality and inequality. None have realized that in addition to equality and inequality there is such a thing as graded inequality. Yet inequality is not half so dangerous as graded inequality.

Inequality carried within itself the seeds of its own destruction. Inequality does not last long. Under pure and simple inequality two things happen. It creates general discontent which forms the seed of revolution. Secondly it makes the sufferers combine against a common foe and on a common grievance. But the nature and circumstances of the system of graded inequality leave no room for either of these two things to happen. The system of graded inequality prevents the rise of general discontent against inequity. It cannot therefore become the storm centre of revolution. Secondly the sufferers under inequality becoming unequal both in terms of the benefit and the burden there is no possibility of a general combination of all classes to overthrow the inequity. To make the thing concrete the Brahmanic law of marriage is full of inequity. The right of Brahmana to take a woman from the classes below him but not to give a woman to them is in inequity. But the Kshatriya, Vaishya and Shudra will not combine to destroy it. The Kshatriya resents this right of the Brahmana. But he will not combine with Vaishya or the Shudra and that for two reasons. Firstly because he is satisfied that if the Brahman has the right to take the right of three communities, the Kshatriya has the right to appropriate the women of two communities. He does not suffer so much as the other two. Secondly if he joins in a general revolution against this marriage-inequity in one way he will rise to the level of the Bramhins but in another way all will be equal which to him means that the Vaishyas and the Shudras will rise to his level i.e. they will claim Kshatriya women-which means he will fall to their level. Take any other inequity and think of a revolt against it. The same social psychology will show that a general rebellion against it is impossible.

One of the reasons why there has been no revolution against Brahmanism and its inequities is due entirely to the principle of graded inequality. It is a system of permitting a share in the spoils with a view to enlist them to support the spoils system. It is a system full of low cunning which man could have invented to perpetuate inequity and to profit by it. For it is nothing else but inviting people to share in inequity in order that they may all be supporters of inequity.

There now remains to lift the curtain from the last act of this drama of Bramhanism.

Bramhanism inherited from the Vedic past that system of Chaturvarna. The system of Chaturvarna which the Hindus regard as the unique creation of their Aryan ancestors is in no sense unique. There is nothing original about it. The whole ancient world had stumbled into it. The

Egyptians had it and the ancient Persians had it. Plato was so convinced about its excellence that he presented it as ideal form of social organization. The ideal of the Chaturvarna is faulty. The lumping together of individuals into a few sharply marked off classes is a very superficial view of man and his powers. The Ancient Aryans as well as Plato had no conception of the uniqueness *of* every individual, of his incommensurability with others and of each individual forming a class of his own. They had no recognition of the infinite diversity of active tendencies and combination of tendencies of which an individual is capable. To them there were types of faculties or powers in the individual constitution and all that is necessary for social organization is to classify them. All this is demonstrably wrong. Modern science has shown that lumping together of individuals into a few sharply marked off classes each confined to one particular sphere does injustice both to the individual and to Society. The stratification of Society by classes and occupations is incompatible with the fullest utilization of the qualities which is so necessary for social advancement and is also incompatible with the safety and security of the individual as well as of Society in general.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_87

There is another mistake which the Ancient Hindus including Plato made. There is probably some truth in saying that there is among human beings a dimorphism or polyformism in human beings as, there is among insects, though in the former it is only psychological while in the latter it is both physical as well as psychological. But assuming that there is a thing psychological dimorphism or polyformism among human beings, it is wrong to separate them into those who are born to do one thing and others to do another, some born *to* command i.e. to be masters and some born to obey i.e. to be slaves. It is wrong to suppose that in a given person some qualities are present and others are absent. On the contrary the truth is that all qualities are present in every person and this truth is not diminished in any way by that, some tendency predominates to the extent of being the only one that is apparent. So well established is this truth that a tendency which may be dominant in a man at one time may be quite different from and even the direct opposite of the tendency that may be dominant at another time. As Prof. Bergson mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_88 in speaking of the Nietzsche's false antithesis of 'men' and 'slaves' observes :

"We have a clear vision of this (falsity) in times of revolution. Unassuming citizens, upto that moment humble and obedient, wake up one fine day with pretensions to be leaders of men". The cases of Mussolini and Hitler are a complete disproof of the theory of the Aryans and of Plato.

This Vedic system of Chaturvarna, far from being an ideal system was made positively worse by the changes which Bramhanism made and which have already been described. Every one of them was mischievous in character is beyond question. The Buddhist order of Bhikshus and the Vedic order of Brahmins were designed to serve the same purpose. They formed the elite of their society whose function was to lead and guide society along the right road. Although designed to discharge the same function the Buddhist Bhikshu was better placed to discharge it was the Bramhin. That is because Buddha recognized which nobody either before him or after him has done. Buddha realized that for a person to give a true lead to Society and be its trustworthy guide he must be intellectually free and further, which is more important, to be intellectually free he must not have private property. An elite charged with the care of his private property must fail to discharge his duty of leading and guiding Society along the right road. Buddha therefore took care to include in the Code of discipline for the Bhikshus a rule prohibiting a Bhikshu from holding private property. In the Vedic order of Bramhins there was no such prohibition. A Bramhin was free to hold property. This difference produced a profound difference on the character and outlook of the Buddhist Bhikshu and the Vedic Bramhin. The Bhikshus formed an intellectual class. The Bramhins formed on the other hand merely an educated class. There is a great difference between an intellectual class and an educated class. An intellectual class has no limitations arising out of any affiliations to any class or to any interest. An educated Class on the other hand is not an intellectual class although it has cultivated its intellect. The reason is that its range of vision and its sympathy to a new ideology is circumscribed by its being identified with the interest of the class with which it is affiliated.

The Bramhins from the very beginning therefore were inclined to be a purely educated class, enlightened but selfish. This evil in the Vedic order of Bramhins was extreme by the changes made in the old Vedic System. The right of the Brahmins to rule and the grant of special privileges and immunities made them more selfish, and induced in them the desire to use their education not for the advancement of learning but for the use of their community and against the advancement of society.

All their energy and their education has been spent in maintaining their own privileges against the good of the public. It has been the boast of many Hindu authors that the civilization of India is the most ancient civilization in the world. They will insist that there was no branch of knowledge in which their ancestors were not the pioneers. Open a book like "The Positive Background of Hindu Sociology" by Prof. Benoy Kumar Sarkar, or a book like "The Positive Sciences of the Ancient Hindus" by Dr. Brajendranath Seal one is overwhelmed with data touching upon the knowledge their ancestors had about various scientific subjects. From these books it would appear that the ancient Indians knew astronomy, astrology, biology, chemistry, mathematics, Medicine, mineralogy. Physics and in the view of the mass of people even aviation. All this may be very true. The important question is now how the ancient Indians discovered these positive sciences. The important question is why did the ancient Indians cease to make any progress in the sciences in which they were the pioneers? This sudden arrest in the progress of science in ancient India is as astounding as it is deplorable. In the scientific world India occupies a position which even if it be first among the primitive is certainly last among the civilized nation. How did it happen that a people who began the work of scientific progress stopped, halted on the way, left in its inchoate and incomplete condition? This is a question that needs to be considered and answered, not what the ancient Indians knew.

There is only one answer to the question and it is a very simple answer. In ancient India the Brahmins were the only educated class. They were also the Class which was claiming to be above all others. Buddha disputed their claim for supremacy and declared a war on the Brahmins. The Brahmins acted as an Educated Class—as distinguished from an intellectual class—would act under the circumstances. It abandoned all pursuits and engaged itself in defending the claim of supremacy and the social, economic and political interests of its class. Instead of writing books on Science, the Brahmins undertook to write Smritis. Here is an explanation why the progress of science in India became arrested. Brahmins found it more important and more imperative to write Smritis to repel the Buddhist doctrine of social equality.

How many Smritis did the Brahmins write? Mr. Kane a great authority on the Smriti literature has computed their number to be 128. And what for? The Smritis are called lawbooks which of course hide their nature. They are really treatises expounding the supremacy of the Brahmins and their rights to special privileges. The defence of Brahmanism was more

important than the progress of science. Bramhanism not only defended its privilege:s but set about extending them in a manner that would cover every descent man with shame. The Brahmins started particularly to expand the meaning of certain privileges granted to them by Manu.

Manu had given the Bramhins the right to *dana*, gift. The *dana* was always intended to be money or chattel. But in course of time the concept of *dana* was expanded so as to include the gift of a woman which a Brahmin could keep as his mistress or who could be released by the

Bramhin

on

commutationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_89 of money payment.

Manu designated the Bramhins as Bhu-devas, lords of the Earth. The Bramhins enlarged the scope of this statement and began to claim the right to sexual intercourse with women of other classes. Even queens were not exempt from this claim. Ludovico Di Varthema who came to India as a traveller in about 1502 A.D. records the following about the Brahmins of Calicut :

"It is a proper, and the same time pleasant thing to know who these Brahmins are. You must know that they are the chief persons of the faith, as priests are among us. And when the King takes a wife, he selects the most worthy and the most honoured of these Brahmins and makes him sleep the first night with his wife, in order that he may deflower her."

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_90 Similarly Hamiltonmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_91another writer says:

"When the Samorin marries, he must not cohabit with his bride till the Nambourie (Nambudari Brahmin), or chief priest, has enjoyed her, and if he pleases, he may have three nights of her company, because the first fruits of her nuptials must be an holy oblation to the god she worships."

In the Bombay Presidency the priests of the Vaishnava sect claimed the right to deflower the women of their sect. This gave rise to the famous Maharaja Libel case brought by the chief priest of the Sect against one Karosondas Mulji in the High Court of Bombay in the year 1869 which shows that the right to claim the benefit of the first night was certainly effective till then.

When such a right to sexual cohabitation for the first night could be extended against the generality of the lower classes the Brahmins did not hesitate to extend it. This they did particularly in Malabar. There, Manu designated the Brahmins as Bhu-devas, lords of the earth. The Brahmins

enlarged the scope of this statement and began to claim the right of promiscuous sexual intercourse with the women folk of the other Classes. This happened particularly in Malabar. [Theremk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_92](#)

“The Brahman castes follow the Makatyam System that is the system by which the child belongs to its father's family. They contract within their own caste regular marriages, with all the ordinary legal and religious sanctions and incidents. But the Brahmin men are also in the habit of entering into Sambandhan-Unions with women of the lower castes.” This is not all. Observe further what the writer has to say:

"Neither party to a Sambadhan Unions becomes thereby a member of the other family; and the offspring of the Union belong to their mothers *tharwad* (family) and have no sort of claim, so far as the law goes, to a share of their father's property or to maintenance therefrom."

Speaking of the origin of this practice the author of the Gazetteer observes that the origin of this institution :

"Is found in the claim of the Bhu-devas”or”Earth Gods”(that the Brahmanas) and on a lower plain of the Kshatriyas or the ruling classes, to the first fruits of lower Caste Womanhood, a right akin to the medieval *droit de Seigneurie*."

It is an understatement to say that it is only a right to first fruits as the 'right to the first night' was called in the middle ages in Europe. It is more than that. It is a general right of the Brahmin against the lower caste to claim any woman of that class for mere prostitution, for the mere satisfaction of sexual appetite, without burdening the Brahmin to any of the obligations of marriage.

Such were the rights which the Brahmins the spiritual precepts claimed against the laity!! The Borgese Popes have been run down in history as the most debauched race of spiritual preceptors who ascended the throne of Peter. One wonders whether they were really worse than the Brahmins of India.

A purely intellectual Class, free to consider general good and having no interest of a class to consider, such as the one contemplated by Buddha is not to be had anywhere. For the limitations resulting from property on the freedom of intellect of the elite have not been generally recognized until very recently. But this want of an intellectual class has been made good in other countries by the fact that in those countries each Strata of Society has its educated class. There is safety, if no definite guidance, in the multiplicity of views expressed by different

educated classes drawn from different strata of society. In such a multiplicity of views there is no danger of Society being misguided or misdirected by the views of one single educated class drawn from one single class of society and which is naturally bound to place the interest of its class before the interests of the country. By the change made by Brahmanism India ceased to have safe and sure guidance of an intellectual class. But what is worse is that the Hindus lost the safety and security which other peoples have and which arises from the multiplicity of views expressed by various educated classes drawn from different strata of Society.

By the denial of education to the Shudras, by diverting the Kshatriyas to military pursuits, and the Vaishyas to trade and by reserving education to themselves the Brahmins alone could become the educated class—free to misdirect and misguide the whole society. By converting Varna into Caste they declared that mere birth was a real and final measure of the worth of a man. Caste and Graded inequality made disunity and discord a matter of course.

All this disfigurement of the original Varna system would have been tolerable if it had remained a mere matter of social practice. But Brahmanism was not content to leave the matter there. It wanted to give the Chaturvarna in its changed and perverted form the force of law. This new Chaturvarna the making of Brahmanism occupies in the Manu Smriti as the Law of Persons and the Law of Family. Nobody can make a mistake about it. Manu made it an offence for a person of a lower Caste to arrogate to himself the status of a higher Caste or to pass off as a member of the higher Caste.

X. 96. A man of low caste who through covetousness lives by the occupations of a higher one, the king shall deprive of his property and banish.

XI. 56. Falsely attributing to oneself high birth, giving information to the king (regarding a crime), and falsely accusing one's teacher, (are offences) equal to slaying a Brahmana. Here there are two offences, General Impersonation (X. 96) and impersonation by the Shudra (XI. 56). Note also the punishments how severe they are. For the first the punishment is confiscation of property and banishment. For the second the punishment is the same as the punishment for causing the death of a Brahmin.

The offence of personation is not unknown in modern jurisprudence and the Indian Penal Code recognizes it in section 419. But what is the punishment the Indian Penal Code prescribes for cheating by

personation? Fine, and if imprisonment, then 3 years or both. Manu must be turning in his grave to find the British Government make so light of his law of Caste.

Manu next proceeds to direct the king that he should execute this law. In the first place he appeals to the King in the name of his pious duty :

VIII. 172. By preventing the confusion of Castesthe power of the King grows, and he prospers in this world and after death. Manu perhaps knows that the law relating to the confusion of Varna may not be quite agreeable to the conscience of the king and he avoids enforcement. Consequently Manu tells the King how in the matter of the execution of the laws the King should act :

VIII. 177. Therefore let the King not heeding his own likes and dislikes behave exactly like Yama. i.e. he should be as impartial as Yama the Judge of the Dead.

Manu however does not wish to leave the matter to the King as a mere matter of pious duty. Manu makes it a matter of obligation upon the King. Accordingly Manu lays down as a matter of obligation that :

VIII. 410. The King should order a Vaishya to trade to lend money, to cultivate the land, or to lend cattle, and the Shudra to serve the twice born Caste. Again Manu reverts to the subject and say:

VIII. 418. The King should carefully compel Vaishyas and Sudras to perform the work (prescribed) for them ; for if these two castes swerved from their duties they would throw this whole world into confusion.

What if the Kings do not act up to this obligation. This law of Chaturvarna is so supreme in the eyes of Manu that Manu will not allow himself to be thwarted by a King who will not keep his obligation to maintain this law. Boldly Manu forges a new law that such a king shall be disposed. One can imagine how dear Chaturvarna was to Manu and to Brahmanism.

As I have said the Chaturvarna of the Vedic system was better than caste system was not very favourable to the creation of a Society which could be regarded as one single whole possessing the Unity of the ideal society. By its very theory the Chaturvarna has given birth to four classes. These four classes were far from friendly. Often they were quarreling and their quarrels were so bitter that they cannot but be designated as Class wars. All the same this old Chaturvarna had two saving features which Brahminism most selfishly removed. Firstly there was no isolation among the Varnas. Intermarriage and interdining the two strongest bonds for unity had full play. There was no room for the different Varnas to develop that anti-social feeling which destroys the

very basis of Society. While the Kshatriyas fought against the Brahmins and the Brahmins fought against the Kshatriyas there were not wanting Kshatriyas who fought against the Kshatriyas [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_93](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm_-_msocom_93) for the sake of Brahmins and there were not wanting Brahmins [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_94](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm_-_msocom_94) who joined hands with Kshatriyas to put down the Brahmins.

Secondly this old Chaturvarna was conventional. It was the ideal of the Society but it was not the law of the State. Brahmanism isolated the Varnas and sowed the seed of antagonism. Brahmanism made legal what was only conventional. By giving it a legal basis it perpetrated the mischief. The Vedic Chaturvarna if it was an evil would have died out by force of time and circumstances. By giving it the force of Law Brahmanism has made it eternal. This is probably the greatest mischief that Brahmanism has done to Hindu Society.

In considering this question one cannot fail to notice that the obligation imposed upon the King for the maintenance of the law of Chaturvarna which is another name for the system of graded inequality does not require the King to enforce it against the Brahmins and the Kshatriyas. The obligation is limited to the enforcement of the law against the Vaishyas and the Shudras. Having regard to the fact that Brahmanism was so intent on giving the system the force of law the result has been very awkward to say the least about it. Notwithstanding this attempt at legalization the system remained half legal and half conventional, legal as to the Vaishyas and the Shudras and merely conventional as to Brahmins and Kshatriyas.

This difference needs to be accounted for. Was Brahmanism honest in its attempt to give the system the force of law? Did it wish that each of the four Varnas be bound by it? The fact that Brahmanism would not bind the Brahmins and the Kshatriyas by the law it made, shows that in this business Brahmanism was far from honest. If it believed in the system as ideal it could not have failed to make it an universal binding force.

But there is more than dishonesty in this foul game. One can quite understand why the Brahmins were left free and untrammelled by the shackles of the law. Manus called them Gods on earth and Gods must be above the law. But why were the Kshatriyas left free in the same way as the Brahmins. He knows that the Kshatriyas will not humble themselves

before the Brahmins. He then proceeds to warn them, how the Brahmins can punish them if the Kshatriyas show arrogance and plan rebellion.

IX. 320 When the Kshatriyas become in any way overbearing towards the Brahmanas, the Brahmanas themselves shall duly restrain them; for the Kshatriyas sprang from the Brahmanas.

IX. 321. Fire sprang from water, Kshatriya from Brahmanas, iron from stone ; the all-penetrating force of those (three) has no effect on that whence they were produced.

One might think that the reason why Manu does not impose an obligation upon the King to enforce the law against the Kshatriya was because the Brahmins felt themselves quite capable of dealing with Kshatriyas by their own prowess and without the aid of the King and that they meant to put their sanctions against the Kshatriyas when the time came and without fear of consequences. All this could not have been meant by Manu. For after uttering this vows of vengeance, and threats and imprecations Manu suddenly come down and begins to plead with the Kshatriyas for cooperation and common front with the Brahmins. In a verse next after the verse in which he utters the threats and imprecations against the Kshatriyas Manu pleads :

IX. 323. But (a king who feels his end drawing nigh) shall bestow all his wealth, accumulated from fines on Brahmanas, make over his kingdom to his son and then seek death in battle. From imprecations to supplication is a very queer cry. What is the explanation of this anti-climax in the attitude of this strange behaviour of Manu towards the Kshatriyas? What is the object of this cooperation between Brahmins and Kshatriyas? Against whom is this common front to be? Manu does not explain. A whole history of a thousand years must be told before this puzzle is solved and the questions satisfactorily answered.

The history which furnishes the clue to the solution of this puzzle is the history of the class wars between the Brahmins and the Kshatriyas.

Most of the orthodox Hindus are repelled by the doctrine of Class war which was propounded by Karl Marx and would be certainly shocked if they were told that the history of their own ancestors probably furnishes the most cogent evidence that Marx was searching for support of his theory. Indeed there have been numerous class wars between Brahmins and the Kshatriyas and only the most important of them have been recorded [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution_and_Counter_Rev.in_Ancient_India_PART_II.htm) - [_msocom_95](#) in the ancient Hindu literature. We have record of the conflict between the Brahmins and the Kings

who were all Kshatriyas. The first of these conflicts was a conflict with King Vena, the second with Pururavas, the third with Nahusha, fourth with Nimi and fifth with Sumukha. There is a record of a conflict between Vashishtha a Brahmin and Vishvamitra an ordinary Kshatriya and not a king. Then we have the record of the wholesale massacre of the Brahmins of Bhrigu clan by the Kshatriya descendants of Kratavirya and then we have the record of the whole class of Kshatriyas exterminated by Parashuram acting on behalf of the Brahmanas. The issues that brought them in conflict extended over a wide range and show how bitter and strained must have been the feelings between Brahmins and Kshatriyas. There were conflicts over the question whether the Kshatriya had a right to become a Brahmana. There were conflicts over the question, whether the Brahmins were subject to the authority or not. There were conflicts on the question who should salute first and who should give way to whom. The wars were warsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_96 of authority, status and dignity.

The results of these wars could not but be obvious to the Brahmins. Notwithstanding their boastful utterances they must have realized that it was not possible for them to crush the Kshatriyas and that notwithstanding the wars of extermination the Kshatriyas survived in sufficient numbers to plague the Brahmins. One need not pay any attention to the filthy story told by the Brahmins and alluded to by Manu that the Kshatriyas of the Manu's day were not the original Kshatriyas but a race of new Kshatriyas begotten by the Brahmins upon the widows of the old Kshatriyas who were massacred by Parashuram. Blackmailing is one of the means which Brahmanism is never ashamed of using to advance its own purposes. The fight of Brahmanism against the Kshatriyas was from the very beginning a fight between a fool and a bully. Brahmanas were fighting against the Kshatriyas for the maintenance of the Chaturvarna. Now it is this very Chaturvarna which allowed bayonets to the Kshatriyas and denied them to the Brahmins. How under this theory could the Brahmin fight with the Kshatriya with any hope of success? It could not have taken long for the Brahmins to realise the truth—which Tallyrand told Napoleon—that it is easy to give bayonets but it is very difficult to sit on them and that as Kshatriyas had bayonets and Brahmins none, war with the Kshatriya was the way to ruin. These were the direct consequences of these wars between the Brahmins and the Kshatriyas. But there were others which could not have escaped the attention of the Brahmins. While the Brahmins and

Kshatriyas were fighting among themselves nobody was left to check and keep the Vaishyas and the Shudras under control. They were on the road of social equality almost nearing to the status of the Brahmins and Kshatriyas. To Brahmanism the possibility of suppressing the Kshatriya was very remote and the danger of being overtaken by Vaishyas and Shudras were real and very real. Should the Brahmana continue to fight the Kshatriya and ignore the danger of the Vaishyas and the Shudras? Or Should the Brahmana give up the hopeless struggle against the Kshatriya and befriend him and make with him a common cause and suppress the growing menace of the Vaishyas and Shudras? Brahmanism after it was exhausted in the wars with the Kshatriyas chose the second alternative. It sought to befriend their worthwhile enemies the Kshatriyas to work for a new ideal namely to enslave and exploit the two classes below them namely the Vaishyas and the Shudras. This new ideal must have taken shape some time when the Satpatha Brahmana came to be composed. It is in the Satpatha Brahmana we find the new ideal expressed it was well established. The language in which it is expressed, and the subject to which it is applied are so telling that I feel it should be quoted in its original terms. Says the author of the Satpatha

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_97](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_97)

"They then make the beast return (to the Ahavaniya

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_98](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19B.Revolution and Counter Rev.in Ancient India PART II.htm - _msocom_98)) the he-goat goes first of them, then the ass, then the horse. Now in going away from this (Ahavaniya) the horse goes first, then the ass, then the he-goat—for the horse corresponds to the Kshatra (nobility), the ass to the Vaishya and Shudra, the he-goat to the Brahman and in-as-much as, in going from here, the horse goes first, therefore the Kshatriya, going first, is followed by the three others castes ; and in-as-much as, in returning from here, the he-goat goes first, therefore the Brahman, going first, is followed by the three other castes. And in-as-much as the ass does not go first, either in going back from here, or in coming back from there, therefore the Brahmana and Kshatriya never go behind the Vaishya and Sudra ; hence they walk thus in order to avoid a confusion between good and bad. And, moreover, he thus encloses those two castes (the Vaishyas and Sudra) on both sides by the priesthood and the nobility and makes them submissive."

Here is the explanation of the puzzling attitude of Manu towards the Kshatriyas, attitude of willing to wound but afraid to strike, of wishing to dictate but preferring to befriend.

It is these wars and the compromise that had taught Manu that it was no use trying to coerce the Kshatriyas to submit to the domination of the Brahmin. It may be an ideal to be kept up. But as practical politics it was an impossible ideal. Like Bismark.. Manu knew that politics was the game of the possible. What was possible was to make a common cause and to build up a common front between the Brhamins and the Kshatriyas against the Vaishyas and the Shudras and this is what Manu did. The pity of it is that it was done in the name of religion. This need not shock anybody who has studied the soul and spirit of Brahmanism. With Brahmanism religion is a cloak to cover and hide its acquisitive politics.

CHAPTER 8

The Morals of the House

This is 61 page typed manuscript. This is a second copy but it is having corrections and modifications by Dr. Ambedkar himself. It is reproduced here taking all the corrections into account. There is one separate file entitled 'Manu Smriti or the Gospel of Counter-Revolution'. In that copy notes on Manu Smriti under various categories have been drawn. However, all these notes have been found to be incorporated in this essay, 'Morals of the House.' It is felt that the printing of these notes would be a mere repetition of this essay. Hence, the said copy is not separately printed:

I

The morals of the Hindus and their religious creed are prescribed by the *Smritis* which form a part of the Sacred literature of the Hindus. It is to the Smritis that one must go to understand the Ethics and the Religion of the Hindus. The Smritis are by no means few in number. A conservative estimate gives the total number of Smritis to be 108. The large number of *Smritis* cannot however make our problem difficult. For though the Smritis are numerous they do not differ in essentials. Indeed they repeat one another so closely that reading the Smritis creates a most monotonous task. They are all derived from one common source. That source is the Smriti of Manu otherwise known as Manava Dharma Shastra. The other Smritis are faithful repetitions of the Manu Smriti. A study of the Manu Smriti is therefore quite sufficient to obtain an adequate conception of the moral standards and Religious notions of the Hindus.

It may be said that Manu Smriti—and the same is true of the other Smritis—is a Code of Laws. It is not a book of Ethics nor is it a book of Religion and to take a book of Laws and to treat it as though it is a book of Ethics and Religion is to confound Ethics, Religion and Law.

In the first place it is only in modern times that Law has been separated from Religion. In all ancient Society, Law and Religion were one.

As

Prof.

Max

Muller mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_1 points out that though :—

"Law seems naturally to be the foundation of society, and the bond that binds a nation together. Those who look below the surface have quickly perceived that law itself, at least ancient law, derives its authority, its force, its very life from religion. . . . The belief that the lawgiver enjoyed some closer intimacy with the Deity than ordinary mortals, pervades the ancient traditions of many nations. According to a well known passage in Diodorus Siculus, the Egyptians believed their laws to have been communicated to Menvis by Hermes; the Cretans held that Minos received his laws from Zeus, the Lacedaemonians that Lykurgus received his laws from Apollon. According to the Arians, their lawgiver Zarathustras had received his Laws from the Good Spirit; According to the Stoe, Zamolixis received his laws from the goddess Hestia; and according to the Jews, Moses received his laws from the God las."

No one has pointed out more forcibly than Sir Henry Mains mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_2 that in ancient times religion as a

divine influence was underlying and supporting every relation of life and every social institution when he says of Religion as :

"A supernatural presidency (which) is supposed to consecrate and keep together all the cardinal institutions of those times, the state, the Race, and the Family".

From this supernatural presidency of Religion, Law had not succeeded in finding an escape until at a later time when law finally breaks away from religion but not without leaving many traces to show the link it had with Religion at the very beginning of human history.

Again it is only in modern times that a difference is being made between Religion and Ethics. Religion and Ethics are inextricably and indissolubly bound together. Morality and Ethics are essentially practical. As Prof. Jacks

insists mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_3 that the problem of Ethics is not merely getting the Good understood but *realised*, not merely getting the Right placed on scientific basis but *done*. Morality is a mere matter of defining what is good and what is right. Prof. Jacks: rightly says :

"Whenever we embark on the study of morality without interest in its application I cannot but think that it is not morality we are studying. Morality does not arise till the point of application is reached. The effect of a moral theory launched upon the world is next to nothing unless the application of it can be reinforced by powerful motives. The good life, as Aristotle pointed out is a very difficult affair; difficult even when it goes no further than conformity to existing conventions. But when the good life demands that existing standards must be transcended how can this be effected without an immense liberation of power? Mere information as to why men should do right has no effect against their natural tendencies to do wrong-it is no match for the difficulties that beset good life."

Unless some motive force comes to its aid morality remains inert. There can be no doubt that what gives motive force to morality is Religion. It is a propelling force which creates, to use again the language of Principal Jacks :

"Motives which are strong enough to overcome the enormous difficulties involved in living the good life, even in its simpler forms, and adequate to maintain that continuous improvement of the moral ideal."

Religion as a motive force reinforces the moral will in various ways. Sometimes it takes the form of sanctions by laying down a scheme of rewards and punishments after death; some times it makes rules of

morality as the commandments of God; some times it invests these rules with sanctity which evokes willing obedience. But these are only different ways in which motive power generated by Religion helps to sustain moral life in action. Religion is the dynamics which moves the wheels of morality.

If Ethics and Morality are duties then there can be no doubt that Manu Smriti is a book of Ethics. Any one who takes the trouble to read the Smriti of Manu will have to admit that if there is any subject which figures prominently in the book it is that of duties. Manu was the first to systematise and codify the duties to which a Hindu was bound. He distinguishes between *Varnashramadharma*s and *Sadharandharma*s. The *Varnashramadharma*s are the specific duties relating to one's station in life i.e. one's station as determined by one's Varna or caste and one's Ashram or particular stage of life. The *Sadharandharma*s are duties irrespective of one's age, caste or creed i.e. duties obligatory on man as man and not as a member of a particular community or social class or as being at a particular stage or period of life. The whole book deals with duties and with nothing else.

Manu Smriti is thus a book of Law, Religion and Ethics rolled into one. It is Ethics because it deals with duties of men. It is religion because it deals with Caste which is the soul of Hinduism. It is Law because it prescribes penalties for breach of duties. In this view there is nothing wrong in going to Manu Smriti to ascertain the moral standards and religious notions of the Hindus.

That Manu Smriti is a book of Religion may not be quite obvious. That is because Hinduism is a very illusive term. Different writers have defined it in various ways. Sir D. Ibbetsonmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_4 defines Hinduism as :

"A hereditary sacerdotalism with Brahmins for its devices, the vitality of which is preserved by the social institution of caste and which include all shades and diversities of religion native to India, as distinct from foreign importations of Christianity and Islam, and from the later outgrowths of Buddhism, more doubtfully of Sikhism and still more doubtfully of Jainism". Sir J. A. Bainesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_5 defined Hinduism as :—

"The large residuum that is not Sikh, or Jain, or Buddhist or professedly Animistic, or included in one of the foreign religions such as Islam, Mazdaism, Christianity, or Hebraism." To Sir Edward

Gaitmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_6 Hinduism :—

"is a complex congenies of creeds and doctrines. It shelters within its portals monotheists, polytheists, and pantheists; Worshippers of the great God Siva and Vishnu, or of their female counterparts, as well as worshippers of the divine mothers, of the spirits of trees, rocks and streams and of the tutelary village deities; persons who propitiate their deity by all matter of bloody sacrifices, and persons who will not only kill no living creature, but who must not even use the word "cut"; those whose ritual consists mainly of prayers and hymns, and those who indulge in unspeakable orgies in the name of religion".

This discription of complexity is full but is still incomplete. To the list must be added those who revere the cow and those who eat it, those who worship natural forces, and those who worship a single God; those who are worshippers of idols, demons, ghosts, ancestors, saints and heroes.

Such are the answers given by the three Census Commissioners to the simple question what is Hinduism. Others have not found it less difficult to answer the question. Consider how Sir A. Lyall has fared in answering the question. In his "Rede Lecture" delivered at Cambridge in 1891 he saidmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_7:

"And if I were asked for a definition of Hinduism I could give no precise answer, I could not define it concisely by giving its central doctrines and its essential articles of faith; as I might do in describing of the great historical Religions. For the word Hindu is not exclusively a religious denomination; it denotes also a country, and to certain degree a race. When we speak of Christian, a Mahomedan, or a Buddhist, we mean a particular religious community, in the widest sense, without distinction of race or place. When we talk of a Russian or a Persian, we indicate country or parentage without distinction of creed. But when a person tells me that he is a Hindu, I know that he means all three things together— Religion. Parentage and Country."Speaking of Hinduism as a Religion Sir Alfred Lyall said that:

"Hindism was a tangled muggle of disorderly superstitions, the collection of rights, worships, beliefs, traditions and mythologies, that are sanctioned by the sacred books and ordinances of the Brahmins and are propogated by Brahmanic teachings."Lastly I will quote the defintion given by a Hindu Mr. G. P. Sen who not merely a Hindu but is

a student of Hinduism. In his book called 'Introduction to the study of Hinduism' Mr. Sen says :—

"Hinduism is what the Hindus, or a major portion of them in a Hindu Community do."

Is there then no principle in Hinduism which all Hindus no matter what their other differences are, feel bound to render willing obedience? It seems to me there is and that principle is the principle of Caste. There may be a difference of opinion as to which matters constitute matters of essence so far as Hinduism is concerned. But there can be no doubt that Caste is one and an essential and integral part of Hinduism. Every Hindu—if he is not merely a statutory Hindu—believes in Caste and every Hindu—even one who prides himself on being a statutory Hindu—has a Caste. A Hindu is as much born into caste as he is born in Hinduism. Indeed a person cannot be born in Hinduism unless he is born in a Caste. Caste and Hinduism are inseparable. As Prof. Max Muller mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_8 observes :

"Modern Hinduism rests on the system of Caste as on a rock which no arguments can shake."

It therefore follows that in so far as Manu lays down the creed of the Caste and in so far as Hinduism at its core is the creed of Caste the Manu Smriti must be accepted as the Book of Religion.

II

What are the Ethical and Religious norms prescribed by Manu for Hindus to observe and follow?

To begin with, Manu divides Hindus into four varnas or social orders. He not only divides Hindus into four orders he also grades them. The following is his scheme of gradation.

X. 3. On account of his pre-eminence, on account of the superiority of his origin, on account of his observance of (particular) restrictive rules, and on account of his particular sanctification the Brahman is the Lord of (all) Varnas.

He proceeds to amplify his reasons and does so in the following characteristic manner :—

1. 93. As the Brahmana sprang from (Prajapati's i.e. Gods) mouth, as he was first-born, and as he possesses the Veda, he is by right the lord of this whole creation.

1. 94. For the self existent (Svayambhu i.e. God), having performed austerities, produced him first from his own mouth, in order that the

offerings might be conveyed to the Gods and Manes and that this universe might be preserved.

1. 95. What created being can surpass him, through whose mouth the Gods continually consume the sacrificial viands and the manes the offerings to the dead.

1. 96. Of created beings the most excellent are said to be those which are animated; of the animated, those who subsist by intelligence: of the intelligent, mankind; and of the men, the Brahmans.

Besides the reason given by Manu the Brahmin is first in rank because he was produced by God from his mouth, in order that the offerings might be conveyed to the Gods and manes. Manu gives another reason for the supremacy of the Brahmans. He says :—

1. 98. The very birth of a Brahmana is an eternal incarnation of the sacred Law (Veda); for he is born to (fulfil) the sacred law, and become one with Brahman (God).

1. 99. A Brahamana, coming into existence, is born as the highest on earth, the lord of all created beings, for the protection of the treasury of the Law. Manu concludes by saying that :

1. 101. The Brahmana eats but his own food, wears but his own apparel, bestows but his own alms; other mortals subsist through the benevolence of the Brahmana.”Because according to Manu :

1. 100. Whatever exists in the world is the property of the Brahmana; on account of the excellence of his origin the Brahmana is, indeed, entitled to it all.

It is really an understatement to say that according to Manu the Brahman is a lord of all creation. For Manu gives a warning to the effect that :-

IX. 317. A Brahmana, be he ignorant or learned, is a great divinity, just as the fire, whether carried forth (for the performance of a burnt oblation) or not carried forth, is a great divinity.

IX. 319. Thus, though the Brahmans employ themselves in all (sorts) of mean occupations, they must be honoured in every way; (for each of) them is a very great deity.

Being a deity the Brahmin is above law and above the King. Manu directs :-

VII. 37. Let the King, after rising early in the morning, worship Brahmans who are well versed in the threefold sacred science and learned (in polity), and follow their advice VII. 38. Let him daily worship aged Brahmans who know the Veda and are pure..... Finally Manu says :

XI. 35. The Brahman is (hereby) declared (to be) the creator (of the world), the punisher, the teacher, (and hence) a benefactor (of all created beings); to him let no man say anything unpropitious, nor use any harsh words.

In the Code of Manu there are rules regarding the different occupations which the different orders are required to follow:

I. 88. To Brahmens he (Swayambhu Manu) assigned the duties of reading the Veda, of teaching it, of sacrificing, of assisting others to sacrifice, of giving alms, if they the rich, and if indigent, of receiving of gifts.

I. 89. To defend the people, to give alms, to sacrifice, to read the Veda, to shun the allurements of sensual gratification, are, in a few words, the duties of a Kshatriya.

I. 90. To keep herds of cattle, to bestow largeness, to sacrifice, to read the scriptures, to carry on trade, to lend at interest, and to cultivate land are prescribed or permitted to a Vaisya.

1. 91. One principal duty the supreme Ruler assigns to a Sudra; namely, to serve the before mentioned classes, without depreciating their worth.

X. 74. Let such Brahmans as are intent on the means of attaining the supreme Godhead, and firm in their own duties, completely perform, in order, the six following acts:

X. 75. Reading the Vedas, the teaching others to read them, sacrificing, and assisting others, to sacrifice, giving to the poor if themselves have enough, and accepting gifts from the virtuous if themselves are poor, are the six prescribed acts of the first born class;

X. 76. But, among those six acts of a Brahmin, three are his means of subsistence; assisting to sacrifice, teaching the Vedas, and receiving gifts from a pure handed giver.

X. 77. Three acts of duty cease with the Brahman, and belong not to the Kshatriya; teaching the Vedas, officiating at a sacrifice, and, thirdly, receiving presents.

X. 78. Those three are also (by the fixed rule of law) forbidden to the Vaisya; since Manu, the Lord of all men, prescribed not those acts to the two classes, military and commercial.

X. 79. The means of subsistence, peculiar to the Kshatriya, are bearing arms, either held for striking or missile, to the Vaisya, merchandize, attending on cattle, and agriculture but with a view to the next life, the duties of both are almsgiving, reading, sacrificing." Besides prescribing rank and occupation Manu grants privileges to certain orders and

imposes penalties on certain orders. As to privileges those relating to marriage may be referred to first. Manu says :

III. 12. For the first marriage of the twice born classes, a woman of the same class is recommended but for such as are impelled by inclination to marry again, women in the direct order of the classes are to be preferred :

III. 13. A Sudra woman only must be the wife of a Sudra; she and a Vaisya, of a Vaisya; they two and a Kshatriya, of a Kshatriya; those three and a Brahmani of a Brahman. Then there are privileges relating to occupations. These privileges stand out quite prominently when Manu deals with the question as to what a person is to do when he is in distress :

X. 81. Yet a Brahman, unable to subsist by his duties just mentioned, may live by the duty of a soldier; for that is the next in rank.

X. 82. If it be asked, how he must live, should he be unable to get a subsistence by either of those employments; the answer is, he may subsist as a mercantile man, applying himself in person to tillage and attendance on cattle.

X. 83. But a Brahman and a Kshatriya, obliged to subsist by the acts of a Vaisya, must avoid with care, if they can live by keeping herds, the business of tillage, which gives great pain to sentient creatures, and is dependent on the labour of others, as bulls and so forth.

X. 84. Some are of opinion, that agriculture is excellent, but it is a mode of subsistence which the benevolent greatly blame, for the iron mouthed pieces of wood not only wound the earth, but the creatures dwelling in it.

85. If through want of a virtuous livelihood, they cannot follow laudable occupations, they may then gain a competence of wealth by selling commodities usually sold by merchants, avoiding what ought to be avoided.

X. 86. They must avoid selling liquids of all sorts, dressed grain, seeds of tila, stones, salt, cattle, and human creatures.

X. 87. All woven cloth dyed red, cloth made of sana, of cshuma-bark, and of wool, even though not red; fruit, roots, and medicinal plants.

X. 88. Water, iron, poison, flesh-meat, the moon-plant, and perfumes of any sort; milk, honey, butter milk, clarified butter, oil of tila, wax sugar, and blades of cusa grass;

X. 89. All beasts of the forest, as deer and the like, ravenous beasts, birds, and fish; spirituous liquors, nili, or indigo, and lascha, or lac; and all beasts with uncloven hoofs.

X. 90. But the brahmen-husbandman may at pleasure sell pure tila-seeds for the purpose of holy rites, if he keep them not long with a hope of more gain, and shall have produced them by his own culture.;

X. 91. If he apply seeds of tila to any purpose but food, anointing, and sacred oblations, he shall be plunged, in the shape of a worm, together with his parents, into the ordure of dogs.

X. 92. By selling flesh-meat, lac or salt, a Brahmen immediately sinks low; by selling milk three days, he falls to a level with a Sudra.

X. 93. And by selling the other forbidden commodities with his own free will, he assumes in this world, after seven nights, the nature of a mere Vaisya.

X. 94. Fluid things may, however, be bartered for other fluids, but not salt for anything liquid; so may dressed grain for grain undressed, and tila-seeds for grain in the husk, equal weights or measures being given and taken.

X. 102. The Brahmen having fallen into distress, may receive gifts from any person whatever; for by no sacred rule can it be shown, that absolute purity can be sullied.

X. 103. From interpreting the Veda, from officiating at sacrifices, or from taking presents, though in modes generally disapproved, no sin is committed by priests in distress; for they are as pure as fire or water.

Compare with this what Manu has to say with regard, to what the other Varnas can do in an emergency, Manu says :

X. 96. A man of lowest class, who, through covetousness, lives by the acts of the highest, let the king strip of all his wealth and instantly banish.

X. 97. His own office, though defectively performed, is preferable to that of another, though performed completely; for he, who without necessity discharges the duties of another class, immediately forfeits his own.

X. 98. A mercantile man, unable to subsist by his own duties, may descend even to the servile acts of a Sudra, taking care never to do what ought never to be done; but, when he has gained a competence, let him depart from service.

X. 99. A man of fourth class, not finding employment by waiting on the twice born, while his wife and son are tormented with hunger, may subsist by handicrafts.

X. 121. If a Sudra want a subsistence and cannot attend priest, he may serve a Kshatriya; or, if he cannot wait on a soldier by birth, he may gain his livelihood by serving an opulent Vaisya.

X. 122. To him, who serves Brahmens, with a view to a heavenly reward, or even with view to both this life and the next, the union of the word Brahmen with his name of servant will assuredly bring success.

X. 123. Attendance on Brahmens is pronounced the best work of Sudra; whatever else he may perform will comparatively avail him nothing.

X. 124. They must allot him a fit maintenance according to their own circumstances, after considering his ability, his exertions, and the number of those, whom he must provide with nourishment.

X. 125. What remains of their dressed rice must be given to him, and apparel which they have worn, and the refuse of their grain, and their old household furniture.

X. 126. There is no guilt in a man of the servile class who eats leeks and other forbidden vegetables; he must not have the sacred investiture; he has no business with the duty of making oblations to fire and the like, but there is no prohibition against his offering dressed grain as a sacrifice, by way of discharging his own duty.

X. 127. Even Sudras, who were anxious to perform their entire duty, and, knowing what they should perform, imitate the practice of good men in the household sacraments, but without any holy text, except those containing praise and salutations, are so far from sinning, that they acquire just applause.

X. 128. As a Sudra, without injuring another man, performs the lawful acts of the twice-born, even thus, without being censured, he gains exaltation in this world and in the next.

X. 129. No superfluous collection of wealth must be made by a Sudra, even though he has power to make it, since a servile man, who has amassed riches, becomes proud, and, by his insolence or neglect, gives pain even to Brahmens. He concludes :—

X. 130. Such, as have been fully declared, are the several duties of the four classes in distress for subsistence, and, if they perform them exactly, they shall attain the highest beatitude. The privileges to some were not merely social they were also financial, Says Manu :—

VIII. 35. From the man, who shall say with truth, 'This property, which has been kept, belongs to me', the king may take a sixth or twelfth part, for having secured it.

VIII. 36. But he, who shall say so falsely, may be fined either an eighth part of his own property, or else in some small proportion to the value of the goods falsely claimed, a just calculation having been made.

VIII. 37. A learned Brahmen, having found a treasure formerly hidden, may take it without any deduction; since he is the lord of all.

VIII. 38. But of a treasure anciently deposited under ground, which any other subject or the king has discovered, the king may lay up half in his treasury having given half to the Brahmen.

IX. 323. Should the king be near his end through some incurable disease, he must bestow on the priests all his riches, accumulated his kingdom to his son, let him seek death in battle, or if there be no war, by abstaining from food.

VII. 127. Having ascertained the rates of purchase and sale, the length of the way, the expenses of food and of condiments the charges of securing the goods carried, and the net profits of trade, let the king oblige traders to pay taxes on their saleable commodities.

VII. 128. After full consideration, let a king so levy those taxes continually in his dominions, that both he and the merchant may receive a just compensation for their several acts.

VII. 129. As the leech, the suckling calf, and the bee, take their natural food by little and little, thus must a king draw from his dominions an annual revenue.

VII. 130. Of cattle, of gems, of gold and silver, added each year to the capital stock, a fiftieth part may be taken by the king; of grain, an eighth part, a sixth, or a twelfth, according to the difference of the soil, and the labour necessary to cultivate it. VII. 131. He may also take a sixth part of the clear annual increase of trees, fleshmeat, honey, clarified butter, perfumes, medical substances, liquids, flowers, roots, and fruit.

VII. 132. Of gathered leaves, pot-herbs, grass, utensils made with leather or cane, earthen pots, and all things made of stone.

VII. 132. A king, even though dying with want, must not receive any tax from a Brahman learned in the Vedas, nor suffer such a Brahmen, residing in his territories, to be afflicted with hunger.

VII. 134. Of that king, in whose dominion a learned Brahmen is afflicted with hunger, the whole kingdom will in a short time be afflicted with famine.

VII. 137. Let the king order a mere trifle to be paid, in the name of the annual tax, by the meaner inhabitants of his realm, who subsist by petty traffic.

VII. 138. By low handicraftsmen, artificers, and servile men, who support themselves by labour, the king may cause work to be done for a day in each month.

VIII. 394. Neither a blind man, nor an idiot, nor a cripple, nor a man full seventy years old, nor one who confers great benefits on priests of eminent learning, shall be compelled by any king to pay taxes.

X. 118. A military king, who takes even a fourth part of the crops of his realm at a time of urgent necessity, as of war or invasion, and protects his people to the utmost of his power, commits no sin :

X. 119. His peculiar duty is conquest, and he must not recede from battle; so that, while he defends by his arms the merchant and husbandman, he may levy the legal tax as the price of protection.

X. 120. The tax on the mercantile class, which in times of prosperity must be only a twelfth part of their crops, and a fiftieth of their personal profits, may be an eighth of their crops in a time of distress, or a sixth, which is the medium, or even a fourth in great public adversity ; but a twentieth of their gains on money, and other moveables, is the highest tax ; serving men, artisans, and mechanics. must assist by their labour, but at no time pay taxes.

X. 187. To the nearest sapinda, male or female, after him in the third degree, the inheritance next belongs ; then, on failure of sapindas and of their issue the samanodaca, or distant kinsman, shall be the heir ; or the spiritual preceptor, or the pupil, or the fellow student, of the deceased.

IX. 188. On failure of all those, the lawful heirs are such Brahmens, as have read the three Vedas, as are pure in body and mind, as have subdued their passions ; and they must consequently offer the cake; thus the rites of obsequies cannot fail.

IX. 189. The property of a Brahmen shall never be taken as an escheat by the king; this is a fixed law; but the wealth of the other classes, on failure of all heirs, the king may take. The terms on which the different social orders should carry on their associated life has been defined by Manu in a set of rules which form a very important part of the morals of the Hindu House. Manu ordains that :

X. 3. From priority of birth, from superiority of origin, from a more exact knowledge of scripture, and from a distinction in the sacrificial thread, the Brahmen is the lord of all classes.

IX. 317. A Brahmen, whether learned or ignorant, is a powerful divinity ; even as fire is powerful divinity, whether consecrated or popular.

IX. 319. Thus, although Brahmens employ themselves in all sorts of mean occupations, they must invariably be honoured ; for they are something transcendently divine.

VII. 35. A king was created as the protector of all those classes and orders, who, from the first to the last, discharge their several duties.

VII. 36. And all, that must be done by him, for the protection of his people, with the assistance of good ministers, I will declare to you, as the law directs, in due order.

VII. 37. Let the king, having risen at early dawn, respectfully attend to Brahmen, learned in the three Vedas, and in the science of ethics, and by their decision let him abide.

VII. 38. Constantly must he show respect to Brahmens, who have grown old, both in years and in piety, who know the scriptures, who in body and mind are pure ; for he, who honours the aged, will perpetually be honoured even by cruel demons :

IX. 313. Let him not, although in the greatest distress for money, provoke Brahmens to anger by taking their prosperity ; for they, once enraged, could immediately by sacrifices and imprecations destroy him with his troops, elephants, horses and cars.

Such was to be the relationship in the field of political life. For ordinary social intercourse between the different Varnas Manu lays down the following rules :—

III. 68. A house-keeper has five places of slaughter, or where small living creatures may be slain ; his kitchen-hearth, his grindstone, his broom, his pestle and mortar, his water-pot ; by using which, he becomes in bondage to sin :

III. 69. For the sake of expiating offences committed ignorantly in those places mentioned in order, the five great sacraments were appointed by eminent sages to be performed each day by such as keep house.

III. 70. Teaching and studying the scripture is the sacrament of the Veda ; offering cakes and water, the sacrament of the Manes, an oblation to fire, the sacrament of the Deities ; giving rice or other food to living creatures, the sacrament of spirits ; receiving guests with honour, the sacrament of men.

III. 71. Whoever omits not those five great ceremonies, if he have ability to perform them, is untainted by the sons of the five slaughtering places, even though he constantly reside at home ;

111.84. In his domestic fire for dressing the food of all the Gods, after the prescribed ceremony, let a Brahmen make an oblation each day to these following divinities. After it is offered to the deities Manu directs :—

III. 92. The share of dogs, of outcasts, of dog-feeders, of sinful men, punished with elephantiasis or consumption, of crows, and of reptiles, let him drop on the ground by little and little. With regard to the rules of hospitality Manu directs the householder:

III. 102. A Brahmen, staying but one night as a guest, is called an atithi, since continuing so short a time, he is not even a sojourner for a whole tithi, or day of the moon.

III. 98. But an offering in the fire of a sacerdotal mouth, which richly blazes with true knowledge and piety, will release the giver from distress and even from deadly sin.

III. 107. To the highest guests in the best form, to the lowest in the worst, to the equal equally, let him offer seats, resting places, couches; giving them proportionable attendance when they depart; and honour, as long as they stay.

III. 110. A military man is not denominated a guest in the house of a Brahman; nor a man of the commercial or servile class ; nor his familiar friend, nor his paternal kinsmen ; nor his preceptor.

III. 111. But if a warrior come to his house in the form of a guest, let food be prepared for him, according to his desire, after the beforementioned Brahmens have eaten.

III. 112. Even to a merchant or a labourer, approaching his house in the manner of guests, let him give food, showing marks of benevolence at the same time with his domestics. On social bearing of one class towards another Manu has laid down some very interesting ordinances. He has an equation for social status :

II. 135. The student must consider a Brahmen, though but ten years old, and a Kshatriya, though aged a hundred years, as father and son ; as between those two, the young Brahmen is to be respected as the father.

II. 136. Wealth, kindred, age, moral conduct, and, fifthly divine knowledge, entitle men to respect ; but that which is last mentioned in order, is the most respectable.

II. 137. Whatever man of the three highest classes possesses the most of those five, both in number and degree that man is entitled to most respect ; even a Sudra, if he have entered the tenth decade of his age.

II. 138. Way must be made for a man in a wheeled carriage, or above ninety years old, or afflicted with disease, or carrying a burthen ; for a woman ; for a priest just returned from the mansion of his preceptor; for a prince, and for a bridegroom.

II. 139. Among all those, if they be met at one time, the priest just returned home and the prince are most to be honoured ; and of those

two, the priest just returned, should be treated with more respect than the prince.

As illustrating the rules of social bearing a reference may be made to rules regarding salutation:

II. 121. A youth who habitually greets and constantly reverses the aged, obtains an increase of four things; life, knowledge, fame, strength.

II. 122. After the word of salutation, a Brahman must address an elder; saying, "I am such an one," pronouncing his own name.

II. 123. If any persons, through ignorance of the Sanskrit language, understand not the import of his name, to them should a learned man say, "It is I"; and in that manner he should address all classes of women.

II. 124. In the salutation he should pronounce, after his own name, the vocative particle 'bhoh'; for the particle 'bhoh' is held by the wise to have the same property with names fully expressed.

II. 125. A Brahmen should thus be saluted in return; "May'st thou live long, excellent man", and at the end of his name, the vowel and preceding consonant should be lengthened, with an acute accent, to three syllabic moments or short vowels.

II. 126. That Brahmen, who knows not the form of returning a salutation, must not be saluted by a man of learning; as a Shudra, even so is he.

II. 127. Let a learned man ask a priest, when he meets him, if his devotion prospers, a warrior, if he is unhurt; a merchant, if his wealth is secure; and one of the servile classes, if he enjoys good health; using respectively the words, cusalam, anamayam, ksheman and anarogyam.

The provisions laid down by Manu in relation to Religion and Religious Sacraments and Sacrifice are worthy of note.

The ordinances of Manu relating to Sacraments and sacrifices are as follows :

III. 68. A house-keeper has five places of slaughter, or where small living creatures may be slain; his kitchen-hearth, his grindstone, his broom, his pastle and mortar, his water-pot; by using which, he become in bondage to sin.

III. 69. For the sake of expiating offences committed ignorantly in those places mentioned in order, the five great sacraments were appointed by eminent sages to be performed each day by such as keep house.

III. 70. Teaching and studying the scriptures is the sacrament of the Veda; offering cakes and water, the sacrament of the Manes, an oblation to fire, the sacrament of the Deities; giving rice or other food to living

creatures, the sacraments of spirits; receiving guests with honour, the sacrament of men.

III. 71. Whoever omits not those five great ceremonies, if he have ability to perform them, is untainted by the sons of the five slaughtering places, even though he constantly reside at home. Manu then proceeds to lay down that all are not entitled to the benefit of the sacraments and all have not the same right to perform the sacrifices.

He defines the position of women and Shudras in the matter of Sacraments and sacrifices. As to women Manu says :—

II. 66. The same ceremonies, except that of the sacrificial thread, must be duly performed for women at the same age and in the same order, that the body may be made perfect; but without any text from the Veda.”As to Shudras, Manu says:—

X. 127. Even Shudras, who were anxious to perform their entire duty, and, knowing what they should perform imitate the practice of good men in the household sacraments, but without any holy text, except those containing praise and salutation, are so far from sinning, that they acquire just applause.

The investiture of a person with the sacred thread is a very important sacrament.

II. 36. In the eighth year from the conception of a Brahman., in the eleventh from that of a Kshatriya, and in the twelfth from that of a Vaisya, let the father invest the child with the mark of his class.

II. 37. Should a Brahman, or his father for him, be desirous of his advancement in sacred knowledge; a Kshatriya, of extending his power; or a Vaisya of engaging in mercantile business; the investiture may be made in the fifth, sixth, or eighth years respectively.

II. 38. The ceremony of investiture hallowed by the Gayatri must not be delayed, in the case of a priest, beyond the sixteenth year; nor in that of a soldier, beyond the twenty second; nor in that of a merchant, beyond the twenty fourth.

II. 39. After that, all youths of these three classes, who have not been invested at the proper time, become *vratyas*, or outcasts, degraded from the Gayatri, and condemned by the virtuous. As to the *Gayatri* it is a *mantra* and this is how Manu explains its importance :—

II. 76. Brahma milked out, as it were, from the three Vedas, the letter A, the letter U, and the letter M which form by their coalition the triliteral monosyllable, together with three mysterious words *bhur*, *bhuvah*, *svah* or earth, sky, heaven.

II. 77. From the three Vedas, also, the Lord of creatures, incomprehensibly exalted, successively milked out the three measures of that ineffable text, beginning with the word tad, and entitled Savitri or Gayatri.

II. 78. A priest who shall know the Veda, and shall pronounce to himself, both morning and evening, that syllable, and that holy text preceded by the three words, shall attain the sanctity which the Veda confers :

II. 79. And a twice born man, who shall a thousand times repeat those three (om, the vyahritis, and the gayatri), apart from the multitude, shall be released in a month even from a great offence, as a snake from his slough.

II. 80. The priest, the soldier, and the merchant, who shall neglect this mysterious text, and fail to perform in due season his peculiar acts of piety, shall meet with contempt among the virtuous.

II. 81. The great immutable words, preceded by the trilateral syllable, and followed by the gayatri which consists of three measures, must be considered as the mouth, or principal part of the Veda;

II. 82. Whoever shall repeat, day by day, for three years, without negligence, that sacred text, shall hereafter approach the divine essence, move as freely as air, and assume an ethereal form. II. 83. The trilateral monosyllable is an emblem of the Supreme, the suppressions of breath with a mind fixed on God are the highest devotion; but nothing is more exalted than the Gayatri; a declaration of truth is more excellent than silence.

II. 84. All rites ordained in the Veda, oblations to fire, and solemn sacrifices pass away ; but that which passes not away, is declared to be the syllable om, thence called acshara ; since it is a symbol of God, the Lord of created beings.

II. 85. The act of repeating his Holy Name is ten times better than the appointed sacrifice; an hundred times better when it is heard by no man ; and a thousand times better when it is purely mental.

II. 86. The four domestic sacraments which are accompanied with the appointed sacrifice, are not equal though all be united, to a sixteenth part of the sacrifice performed by a repetition of the gayatri. This investiture is equivalent to a new birth.

II. 147. Let a man consider that as a mere human birth, which his parents gave him for their mutual gratification, and which he receives after lying in the womb.

II. 148. But that birth which his principal acharya, who knows the whole Veda, procures for him by his divine mother the gayatri, is a true birth ; that birth is exempt from age and from death.

II. 169. The first birth is from a natural mother: the second, from the ligation of the zone ; the third from the due performance of the sacrifice ; such are the births of him who is usually called twice-born, according to a text of the Veda.

II. 170. Among them his divine birth is that, which is distinguished by the ligation of the zone, and sacrificial cord ; and in that birth the Gayatri is his mother, and the Acharya, his father. This sacrament is not permitted by Manu to Shudras and to women.

II. 103. But he who stands not repeating it in the morning and sits not repeating it in the evening, must be precluded, like a Sudra, from every sacred observance of the twice born class. Manu has not forgotten to mention rules relating to education and learning. Manu has nothing to say about mass education. He does not see the utility of it and he does not see the necessity of imposing any obligation upon the king or the state. He was merely concerned with the learning of the sacred and Religious literature namely the Vedas.

Veda must be learned from a preceptor and with his assent. No one can read and study the Vedas by himself. He will be guilty of theft if he did it.

II. 116. He who shall acquire knowledge of the Veda without the assent of his preceptor, incurs the guilt of stealing the scripture and shall sink to the region of torment. But others cannot study at all.

IX. 18. Women have no business with the texts of the Veda; thus is the law fully settled ; having, therefore, no evidence of law, and no knowledge of expiatory texts, sinful women must be as foul as falsehood itself; and this is a fixed rule.

IV. 99. He must never read the Veda without accents and letters well pronounced ; nor even in the presence of Sudras ; nor, having begun to read it in the last watch of the night, must he, though fatigued, sleep again.

This prohibition applies to *Vratyas* or outcasts from the three higher classes. For Manu says :

II. 40. With such impure men, let no Brahmen, even in distress for subsistence, ever form a connexion in law, either by the study of the Veda, or by affinity.

Teaching Veda or performing of sacrifices for disqualified persons was prohibited by Manu.

IV. 205. Never let a priest eat part of a sacrifice not begun with texts of the Veda, nor of one performed by a common sacrificer, by a woman, or by an eunuch :

IV. 206. When those persons offer the clarified butter, it brings misfortune to good men, and raises aversion in the deities, such oblations, therefore, he must carefully shun.

XI. 198. He, who has officiated at a sacrifice for outcasts, or burned the corpse of a stranger, or performed rites to destroy the innocent, or made the impure sacrifice, called Ahimsa, may expiate his guilt by three prajapatya penances. Take equality before Law.

When they come as witnesses—according to Manu they are to be sworn as follows :

VIII. 87. In the forenoon let the judge, being purified, severally call on the twice-born, being purified also, to declare the truth, in the presence of some image, a symbol of the divinity, and of Brahmens, while the witnesses turn their faces either to the north or to the east.

VIII. 88. To a Brahmen he must begin with saying, "Declare;" to a Kshatriya, with saying, "Declare the truth"; to a Vaisya, with comparing perjury to the crime of stealing kine, grain, or gold; to a Sudra, with comparing it in some or all of the following sentences, to every crime that men can commit.

VIII. 1 13. Let the judge cause a priest to swear by his veracity ; a soldier, by his horse, or elephant, and his weapons; a merchant, by his kine, grain, and gold; a mechanic or servile man, by imprecating on his own head, if he speak falsely, all possible crime; Manu also deals with cases of witnesses giving false evidence. According to Manu giving false evidence is a crime. Says Manu:

VIII. 122. Learned men have specified these punishments, which were ordained by sage legislators for perjured witnesses, with a view to prevent a failure of justice and to restrain iniquity.

VIII. 123. Let a just prince banish men of the three lower classes, if they give false evidence having first levied the fine ; but a Brahmen let him only banish."But Manu made one exception:

VIII. 1 12. To women, however, at a time of dalliance, or on a proposal of marriage, in the case of grass or fruit eaten by a cow, of wood taken for a sacrifice, or of a promise made for the preservation of a Brahmen, it is deadly sin to take a light oath. As parties to proceedings—Their position can be illustrated by quoting the ordinances of Manu relating to a few of the important criminal offences dealt with by Manu. Take the offence of Defamation. Manu says :

VIII. 267. A soldier, defaming a priest, shall be fined a hundred panas a merchant, thus offending, an hundred and fifty, or two hundred : but, for such an offence, a mechanic or servile man shall be whipped.

VIII. 268. A priest shall be fined fifty, if he slander a soldier; twenty five, if a merchant ; and twelve, if he slander a man of the servile class. Take the offence of Insult—Manu says:

VIII. 270. A once-born man, who insults the twice-born with gross invectives, ought to have his tongue slit ; for he sprang from the lowest part of Brahma.

VIII. 271. If he mention their names and classes with contumely as, if he say, "Oh Devadatta, thou refuse of Brahmen", an iron style, ten fingers long, shall be thrust red into his mouth.

VIII. 272. Should he, through pride, give instruction to priests concerning their duty, let the king order some hot oil to be dropped into his mouth and his ear. Take the offence of Abuse—Manu says:

VIII. 276. For mutual abuse by a priest and a soldier, this fine must be imposed by a learned king; the lowest amercement on the priest, and the middle-most on the soldier.

VIII. 277. Such exactly, as before mentioned, must be the punishment for a merchant and a mechanic, in respect of their several classes, except the slitting of the tongue; this is a fixed rule of punishment. Take the offence of Assault—Manu propounds:

VIII. 279. With whatever member of a low-born man shall assault or hurt a superior, even that member of his must be slit, or cut more or less in proportion to the injury; this an ordinance of Manu.

VIII. 280. He who raises his hand or a staff against another, shall have his hand cut ; and he, who kicks another in wrath, shall have an incision made in his foot. Take the offence of Arrogance—According to Manu :

VIII. 281. A man of the lowest class, who shall insolently place himself on the same seat with one of the highest, shall either be banished with a mark on his hinder parts, or the king shall cause a gash to be made on his buttock.

VIII. 282. Should he spit on him through pride, the king shall order both his lips to be gashed; should he urine on him, his penis; should he break wind against him, his anus.

VIII. 283. If he seize the Brahmen by the locks, or by the feet, or by the beard, or by the throat, or by the scrotum, let the king without hesitation cause incisions to be made in his hands. Take the offence of Adultery. Says Manu:

VIII. 359. A man of the servile class, who commits actual adultery with the wife of a priest, ought to suffer death ; the wives, indeed, of all the four classes must ever be most especially guarded.

VIII. 366. A low man, who makes love to a damsel of high birth, ought to be punished corporally; but he who addresses a maid of equal rank, shall give the nuptial present and marry her, if her father please.

VIII. 374. A mechanic or servile man, having an adulterious connection with a woman of a twice-born class, whether guarded at home or unguarded, shall thus be punished ; if she was unguarded, he shall lose the part offending, and his whole substance ; if guarded, and a priestless, every thing, even his life.

VIII. 375. For adultery with a guarded priestess, a merchant shall forfeit all his wealth after imprisonment for a year; a soldier shall be fined a thousand panas, and be shaved with the urine of an ass.

VIII. 376. But, if a merchant or soldier commit adultery with a woman of the sacerdotal class, whom her husband guards not at home, the king shall only fine the merchant five hundred, and the soldier a thousand ;

VIII. 377. Both of them, however, if they commit that offence with a priestess not only guarded but eminent for good qualities, shall be punished like men of the servile class, or be burned in a fire of dry grass or reeds.

VIII. 382. If a merchant converse criminally with a guarded woman of the military, or a soldier with one of the mercantile class, they both deserve the same punishment as in the case of a priestess unguarded.

VIII. 383. But a Brahmen, who shall commit dultery with a guarded woman of those two classes, must be fined a thousand panas ; and for the like offence with a guarded woman of the servile class, the fine of a soldier or a merchant shall be also one thousand.

VIII. 384. For adultery with a woman of the military class, if unguarded, the fine of a merchant is five hundred ; but a soldier, for the converse of that offence, must be shaved with urine, or pay the fine just mentioned.

VIII. 385. A priest shall pay five hundred panas if he connect himself criminally with an unguarded woman of the military, commercial, or servile class, and a thousand, for such a connexion with a woman of vile mixed breed.

Turning to the system of punishment for offences Manu's Scheme throws an interesting light on the subject. Consider the following ordinances :

VIII. 379. Ignominious tonsure is ordained, instead of capital punishment, for an adulterer of the priestly class, where the punishment of other classes may extend to loss of life.

VIII. 380. Never shall the king slay a Brahmen, though convicted of all possible crimes: let him banish the offender from his realm, but with all his property secure, and his body unhurt.

XI. 127. For killing intentionally a virtuous man of the military class, the penance must a fourth part of that ordained for killing a priest ; for killing a Vaisya, only an eighth ; for killing a Sudra, who had been constant in discharging his duties, a sixteenth part.

XI. 128. But, if a Brahmen kill a Kshatriya without malice, he must, after a full performance of his religious rites, give the priests one bull together with a thousand cows.

XI. 129. Or he may perform for three years the penance for slaying a Brahmen, mortifying his organs of sensation and action, letting his hair grow long, and living remote from the town, with the root of a tree for his mansion.

XI. 130. If he kill without malice a Vaisya, who had a good moral character, he may perform the same penance for one year, or give the priests a hundred cows and a bull.

XI. 131. For six months must he perform this whole penance, if without intention he kill a Sudra ; or he may give ten white cows and a bull to the priests.

VIII. 381. No greater crime is known on earth than slaying a Brahmen ; and the king, therefore, must not even form in his mind an idea of killing a priest.

VIII. 126. Let the king having considered and ascertained the frequency of a similar offence, the place and time, the ability of the criminal to pay or suffer and the crime itself, cause punishment to fall on those alone, who deserve it.

VIII. 124. Manu, son of the Self-existent, has named ten places of punishment, which are appropriate to the three lower classes, but a Brahmen must depart from the realm unhurt in any one of them.

VIII. 125. The part of generation, the belly, the tongue, the two hands, and, fifthly, the two feet, the eye, the nose, both ears, the property, and, in a capital case, the whole body. On the point of rights and duties relating to religious Sacraments and Sacrifices the views of Manu are noteworthy :

II. 28. By studying the Veda, by religious observances, by oblations to fire, by the ceremony of Traividya, by offering to the Gods and Manes,

by the procreation of children, by the five great sacraments, and by solemn sacrifices, this human body is rendered fit for a divine state.

III. 69. For the sake of expiating offences committed ignorantly in those places mentioned in order, the five great sacraments were appointed by eminent sages to be performed each day by such as keep house.

III. 70. Teaching and studying the scripture is the sacrament of the Veda; offering cakes and water, the sacrament of the Manes; an oblation to fire, the sacrament of the Deities ; giving rice or other food to living creatures, the sacrament of spirits ; receiving guests with honour, the sacrament of men.

III. 71. Whoever omits not those five great ceremonies, if he have ability to perform them, is untainted by the sins of the five slaughtering places, even though he constantly reside at home. Such are the ordinances of Manu. Laws are never complete enough to cover every point. There are always moot questions. Manu was conscious of this and provides for such contingencies.

XII. 108. If it be asked, how the law shall be ascertained, when particular cases are not comprised under any of the general rules, the answer is this : "That which well instructed Brahmens propound, shall be held incontestible law."

XII. 109. Well instructed Brahmens are they, who can adduce ocular proof from the scripture itself, having studied, as the law ordains, the Vedas and their extended branches, or Vedangas, Mimansa, Nyaya, Dharma, Shastra, Puranas.

XII. 113. Even the decision of one priest, if more cannot be assembled, who perfectly knows the principles of the Vedas, must be considered as law of the highest authority ; not the opinion of myriads, who have no sacred knowledge.

The Laws of Manu are eternal. Therefore there is no question of considering how changes could be effected in them. The only question Manu had to consider was the upholding and maintaining the system. Manu has laid down several provisions with this purpose in view.

As to the preservation of the Social Code, Manu has made it the duty of the King to uphold and maintain:

VIII. 410. The king should order each man of the mercantile class to practice trade, or money lending, or agriculture and attendance on cattle ; and each man of the servile class to act in the service of the twice-born.

VIII. 418. With vigilant care should the king exert himself in compelling merchants and mechanics to perform their respective duties

; for, when such men swerve from their duty, they throw this world into confusion.

Failure to maintain was made an offence in the King punishable at Law.

VIII. 335. Neither a father, nor a preceptor, nor a friend, nor a mother, nor a wife, nor a son, nor a domestic priest must be left unpunished by the king, if they adhere not with firmness to their duty.

VIII. 336. Where another man of lower birth would be fined one pana, the king shall be fined a thousand, and he shall give the fine to the priests, or cast it into the river, this is a sacred rule.

Failure to uphold and maintain the system on the part of the king involved a forfeiture of his right to rule. For Manu allows a right to rebel against such a King.

VIII. 348. The twice-born may take arms, when their duty is obstructed by force: and when, in some evil time. a disaster has befallen the twice-born classes.

The right of rebellion is given to the three higher classes and not to the Shudra. This is very natural. Because it is only the three upper classes who would benefit by the maintenance of this system. But supposing the Kshatriyas joined the King in destroying the system what is to be done? Manu gives the authority to the Brahmins to punish all and particularly the Kshatriyas.

XI. 31. A priest, who well knows the laws, need not complain to the king of any grievous injury; since, even by his own power, he may chastise those, who injure him.

XI. 32. His own power, which depends on himself alone, is mightier than the royal power, which depends on other men ; by his own might, therefore, may a Brahman coerce his foes.

XI. 33. He may use, without hesitation, the powerful charms revealed to Atharvan, and by him to Angiras ; for speech is the weapon of a Brahmen ; with that he may destroy his oppressors.

IX. 320. Of a military man, who raises his arm violently on all occasions against the priestly class, the priest himself shall be the chastiser; since the soldier originally proceeded from the Brahmen."How can the Brahmins punish the Kshatriyas unless they can take arms? Manu knows this and therefore allows the Brahmins to arm themselves to punish the Kshatriyas.

XII. 100. Command of armies, royal authority, power of inflicting punishment, and sovereign dominion over all nations, he only well deserves, who perfectly understands the Veda Shastra. So intent is Manu

on the maintenance of the system of Chaturvarna that he did not hesitate to make this fundamental change in it. For to ask a Brahman to take up arms is a fundamental change as compared with the rule that was prevalent before Manu. The prohibition against Brahmin handling arms was very strict. In the Apastamba Dharma Sutras which is prior to Manu the rule is laid down in the following terms :

1.10, 29,6. A Brahmin shall not take up a weapon in his hand though he be only desirous of examining it."Successor of Manu—Baudhayana—improved upon him, and laid down in his Code of Laws :

II. 24, 18. For the protection of the Cows, Brahmins, or in the case of the confusion of Varnas, Brahmins and Vaisyas (also) should take up arms, out of consideration for the Dharma. and maintain the system at any cost.

CHAPTER 9

Essays on the Bhagwat Gita : Philosophic Defence of Counter-Revolution: Krishna and His Gita

The first page of 'Essays on the Bhagwat Gita' is autographed by Dr. Ambedkar. Next 42 pages consist of analytical notes on Virat Parva and Uddyog Parva including the table of contents on this subject. The table of contents is printed in the schemes. This file contains two typed copies of an essay entitled 'Philosophic Defence of Counter-Revolution—Krishna and His Gita'. The last sentence of this essay is left incomplete. The total number of typed pages of this essay is 40 only. The notes on Virat Parva & Udyog Parva are printed in the next chapters.—Editors.

What is the place of the Bhagwat Gita in the literature of ancient India? Is it a gospel of the Hindu Religion in the same way as the Bible is of the Christian Religion? The Hindus have come to regard it as their gospel. If it is a gospel, what does it really teach? What is the doctrine it stands for? The variety of answers given to this question by students competent to speak on the subject is really bewildering. Bohtlingk mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_9says:

“The Gita contains by the side of many high and beautiful thoughts, not only a few weak points ; contradictions (which the commentators have tried to pass over as excusable), repetitions, exaggerations, absurdities and loathsome points.”

“Hopkins mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_10 speaks of the Bhagwat Gita as

a characteristic work of the Hindu Literature in its sublimity as in its puerilities, in its logic as in its want of it; an ill-assorted cabinet of primitive philosophical opinions." In his judgment:

"Despite its occasional power and music exaltation, the Divine song in its present state as a poetical production is unsatisfactory. The same thing is said over again, and the contradictions in phraseology and in meaning are as numerous as the repetitions, so that one is not surprised to find it described as "the wonderful song, which causes the hair to stand on end."

Holtzrnanmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_11says:

"We have before us (in the Bhagvat Gita) a Vishnuite revision of a pantheistic poem."

Garbemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_12 observes :

"The whole character of the poem in its design and execution is preponderatingly theistic. A personal God Krishna stands forth in the form of a human hero, expounds his doctrine, enjoins, above all things, on his listener, along with the performance of his duties, loving faith in Him and self-surrender:..... And by the side of this God—(who is) delineated as personally as possible, and who dominates the whole poem—stands out frequently the impersonal neutral Brahman, the Absolute, as the highest principle. At one time Krishna says that He is the sole Highest God who has created the world and all beings and rules over it all ; at another time, he expounds the Vedantic doctrine of Brahman and *maya-the* Cosmic Illusion, and expounds as the highest goal of human being that he be freed from the World-Illusion and become Brahman. These two doctrines—the theistic and the pantheistic—are mixed up with each other, and follow each other, sometimes quite unconnected and sometimes loosely connected. And it is not the case that the one is represented as a lower, exoteric. (Text p. 9) and, (p.) as the higher esoteric doctrine. It is nowhere taught that the Theism is a preliminary step to the knowledge of the reality or that it is its symbol, and that the pantheism of the Vedanta is the (ultimate) reality itself ; but the two beliefs are treated of almost throughout as though there was indeed no difference between them, either verbal or real." Mr. Telang says :mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_13

"There are several passages in the Gita which it is not very easy to reconcile with one another ; and no attempt is made to harmonise them.

Thus, for example, in stanza 16 of Chapter VI I, Krishna divides his devotees into four classes, one of which consists of 'men of knowledge', whom, Krishna says, he considers 'as his own self'. It would probably be difficult to imagine any expression which could indicate higher esteem. Yet in stanza 46 of chapter VI, we have it laid down, that the devotee is superior not only to the mere performer of penances, but even to the men of knowledge. The commentators betray their gnostic bias by interpreting 'men of knowledge' in this latter passage to mean those who have acquired erudition in the Shastras and their significations. This is not an interpretation to be necessarily rejected. But there is in it a certain twisting of words, which, under the circumstances here, I am not inclined to accept. And on the other hand, it must not be forgotten, that the implications fairly derivable from Chapter IV, stanza 39 (pp. 62, 63), would seem to be rather than knowledge is superior to devotion—is the higher stage to be reached by means of devotion as the stepping stone. In another passage again at Gita, Chapter XII, stanza 12, concentration is preferred to knowledge, which also seems to me to be irreconcilable with Chapter VII, stanza 16. Take still another instance. At Gita, Chapter B stanza 15, it is said, that 'Lord receives the sin or merit of none.' Yet at Chapter V, stanza 24 Krishna calls himself the Lord and enjoyer,"of all sacrifices and penances. How, it may be well asked, can the Supreme Being 'enjoy that which he does not even receive?' Once more at Chapter X, stanza 29, Krishna declares that 'none is hateful to me, none dear.' And yet the remarkable verse at the close of Chapter XII seem to stand in pointblank contradiction to that declaration. There through a most elaborate series of stanzas, the burden of Krishna's eloquent sermon is 'such a one is dear to me.' And again in those fine verses, where Krishna winds up his Divine Law, he similarly tells Arjuna, that he, Arjuna, is 'dear' to Krishna. And Krishna also speaks of that devotee as 'dear' to him, who may publish the mystery of the Gita among those who references Supreme Being.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_14 And yet again, how are we to reconcile the same passage about none being 'hateful or dear' to Krishna, with his own words at Chapter XVI, stanza 18 and following stanzas? The language used in describing the 'demoniac' people there mentioned is not remarkable for sweetness towards them, while Krishna says positively, ' I hurl down such people into demoniac wombs, whereby they go down into misery and the vilest condition.' These persons are scarcely characterized with accuracy 'as neither hateful nor

dear' to Krishna. It seems to me, that all these are real inconsistencies in the Gita, not such, perhaps, as might not be explained away, but such, I think, as indicate a mind making guesses at truth, as Professor Max Muller puts it, rather than a mind elaborating a complete and organized system of philosophy. There is not even a trace of consciousness on the part of the author that these inconsistencies exist. And the contexts of the various passages indicate, in my judgment, that a half-truth is struck out here and another half-truth there, with special reference to the special subject then under discussion; but no attempt is made to organize the various half-truths which are apparently incompatible, into a symmetrical whole, where the apparent inconsistencies might possibly vanish altogether in the higher synthesis."

These are the views of what might be called modern scholars. Turning to the view of the orthodox Pandits, we again find a variety of views. One view is that the Bhagvat is not a sectarian book. It pays equal respect to the three ways of salvation (1) Karma marga or the path of works (2) Bhakti marga or the path of devotion and (3) Jnana marga or the path of knowledge and preaches the efficacy of all three as means of salvation. In support of their contention that the Gita respects all the three ways of salvation and accepts the efficacy of each one of them, the Pandits point out that of the 18 Chapters of the Bhagvat Gita, Chapters I to 6 are devoted to the preaching of the Jnana marga, Chapters 7 to 12 to the preaching of Karma marga and Chapters 12 to 18 to the preaching of Bhakti marga and say that this equal distribution of its Chapters shows that the Gita upholds all the three modes of salvation.

Quite contrary to the view of the Pandits is the view of Shankaracharya and Mr. Tilak, both of whom must be classed amongst orthodox writers. Shankaracharya held the view that the Bhagvat Gita preached that the Jnana marga was the only true way of salvation. Mr. Tilakmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_15 does not agree with the views of any of the other scholars. He repudiates the view that the Gita is a bundle of inconsistencies. He does not agree with the Pandits who say that the Bhagvat Gita recognizes all the three ways of salvation. Like Shankaracharya he insists that the Bhagvat Gita has a definite doctrine to preach. But he differs from Shankaracharya and holds that the Gita teaches Karma Yoga and not Jnana Yoga.

It cannot but be a matter of great surprise to find such a variety of opinion as to the message which the Bhagvat Gita preaches. One is forced to ask why there should be such divergence of opinion among

scholars? My answer to this question is that scholars have gone on a false errand. They have gone on a search for the message of the Bhagvat Gita on the assumption that it is a gospel as the Koran, the Bible or the Dhammapada is. In my opinion this assumption is quite a false assumption. The Bhagvat Gita is not a gospel and it can therefore have no message and it is futile to search for one. The question will no doubt be asked : What is the Bhagvat Gita if it is not a gospel? My answer is that the Bhagvat Gita is neither a book of religion nor a treatise on philosophy. What the Bhagvat Gita does is to defend certain dogmas of religion on philosophic grounds. If on that account anybody wants to call it a book of religion or a book of philosophy he may please himself. But essentially it is neither. It uses philosophy to defend religion. My opponents will not be satisfied with a bare statement of view. They would insist on my proving my thesis by reference to specific instances. It is not at all difficult. Indeed it is the easiest task.

The first instance one comes across in reading the Bhagvat Gita is the justification of war. Arjuna had declared himself against the war, against killing people for the sake of property. Krishna offers a philosophic defence of war and killing in war. This philosophic defence of war will be found in Chapter II verses II to 28. The philosophic defence of war offered by the Bhagvat Gita proceeds along two lines of argument. One line of argument is that anyhow the world is perishable and man is mortal. Things are bound to come to an end. Man is bound to die. Why should it make any difference to the wise whether man dies a natural death or whether he is done to death as a result of violence? Life is unreal, why shed tears because it has ceased to be? Death is inevitable, why bother how it has resulted? The second line of argument in justification of war is that it is a mistake to think that the body and the soul are one. They are separate. Not only are the two quite distinct but they differ in-as-much as the body is perishable while the soul is eternal and imperishable. When death occurs it is the body that dies. The soul never dies. Not only does it never die but air cannot dry it, fire cannot burn it, and a weapon cannot cut it. It is therefore wrong to say that when a man is killed his soul is killed. What happens is that his body dies. His soul discards the dead body as a person discards his old clothes—wears a new ones and carries on. As the soul is never killed, killing a person can never be a matter of any movement. War and killing need therefore give no ground to remorse or to shame, so argues the Bhagvat Gita.

Another dogma to which the Bhagvat Gita comes forward to offer a philosophic defence is Chaturvarnya. The Bhagvat Gita, no doubt, mentions that the Chaturvarnya is created by God and therefore sacrosanct. But it does not make its validity dependent on it. It offers a philosophic basis to the theory of Chaturvarnya by linking it to the theory of innate, inborn qualities in men. The fixing of the Varna of man is not an arbitrary act says the Bhagvat Gita. But it is fixed according to his innate, inborn qualities.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_16

The third dogma for which the Bhagvat Gita offers a philosophic defence is the Karma marga. By Karma marga the Bhagvat Gita means the performance of the observances, such as Yajnas as a way to salvation. The Bhagvat Gita most stands out for the Karma marga throughout and is a great upholder of it. The line it takes to defend Karma yoga is by removing the excrescences which had grown upon it and which had made it appear quite ugly. The first excrescence was blind faith. The Gita tries to remove it by introducing the principle of *Buddhi yoga*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_17 as a necessary condition for Karma yoga. Become *Stihtaprajna* i.e., 'Befitted with *Buddhi*' there is nothing wrong in the performance of Karma kanda. The second excrescence on the Karma kanda was the selfishness which was the motive behind the performance of the Karmas. The Bhagvat Gita attempts to remove it by introducing the principle of *Anasakti* i.e., performance of karma without any attachment for the fruits of the *Karma* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_18 Founded in *Buddhi yoga* and dissociated from selfish attachment to the fruits of Karma what is wrong with the dogma of Karma kanda? this is how the Bhagvat Gita defends the Karma marga.⁴ It would be quite possible to continue in this strain, to pick up other dogmas and show how the Gita comes forward to offer a philosophic defence in their support where none existed before. But this could be done only if one were to write a treatise on the Bhagvat Gita. it is beyond the scope of a chapter the main purpose of which is to assign to the Bhagvat Gita its proper place in the ancient Indian literature. I have therefore selected the most important dogmas just to illustrate my thesis.

Two other questions are sure to be asked in relation to my thesis. Whose are the Dogmas for which the Bhagvat Gita offers this

philosophical defence? Why did it become necessary for the Bhagvat Gita to defend these Dogmas?

To begin with the first question, the dogmas which the Gita defends are the dogmas of counter-revolution as put forth in the Bible of counter-revolution namely Jaimini's Purvamimamsa. There ought to be no difficulty in accepting this proposition. If there is any it is largely due to wrong meaning attached to the word Karma yoga. Most writers on the Bhagvat Gita translate the word Karma yoga as 'action' and the word Janga yoga, as 'knowledge' and proceed to discuss the Bhagvat Gita as though it was engaged in comparing and contrasting knowledge versus action in a generalised form. This is quite wrong. The Bhagvat Gita is not concerned with any general, philosophical discussion of action versus knowledge. As a matter of fact, the Gita is concerned with the particular and not with the general. By Karma yoga or action Gita means the dogmas contained in Jaimini's Karma kanda and by Jnana yoga or knowledge it means the dogmas contained in Badarayana's Brahma Sutras. That the Gita in speaking of Karma is not speaking of activity or inactivity, quieticism or energism, in general terms but religious acts and observances cannot be denied by anyone who has read the Bhagvat Gita. It is to life the Gita from the position of a party pamphlet engaged in a controversy on small petty points and make it appear as though it was a general treatise on matters of high philosophy that this attempt is made to inflate the meaning of the words Karma and Jnana and make them words of general import. Mr. Tilak is largely to be blamed for this trick of patriotic Indians. The result has been that these false meanings have misled people into believing that the Bhagvat Gita is an independent self-contained book and has no relation to the literature that has preceded it. But if one were to keep to the meaning of the word Karma yoga as one finds it in the Bhagvat Gita itself one would be convinced that in speaking of Karma yoga the Bhagvat Gita is referring to nothing but the dogmas of Karma kanda as propounded by Jaimini which it tries to renovate and strengthen.

To take up the second question : Why did the Bhagvat Gita feel it necessary to defend the dogmas of counter-revolution? To my mind the answer is very clear. It was to save them from the attack of Buddhism that the Bhagvat Gita came into being. Buddha preached non-violence. He not only preached it but the people at large—except the Brahmins—had accepted it as the way of life. They had acquired a repugnance to violence. Buddha preached against Chaturvarnya. He used some of the most offensive similes in attacking the theory of

Chaturvarnya. The frame work of Chaturvarnya had been broken. The order of Chaturvarnya had been turned upside down. Shudras and women could become sannyasis, a status which counter-revolution had denied them. Buddha had condemned the Karma kanda and the Yajnas. he condemned them on the ground of *Himsa* or violence. He condemned them also on the ground that the motive behind them was a selfish desire to obtain bonus. What was the reply of the counterrevolutionaries to this attack? Only this. These things were ordained by the Vedas, the Vedas were infallible, therefore the dogmas were not to be questioned. In the Buddhist age, which was the most enlightened and the most rationalistic age India has known, dogmas resting on such silly, arbitrary, unrationalistic and fragile foundations could hardly stand. People who had come to believe in non-violence as a principle of life and had gone so far as to make it a rule of life—How could they be expected to accept the dogma that the Kshatriya may kill without sinning because the Vedas say that it is his duty to kill? People who had accepted the gospel of social equality and who were remaking society on the basis of each one according to his merits—how could they accept the chaturvarnya theory of gradation, and separation of man based on birth simply because the Vedas say so? People who had accepted the doctrine of Buddha that all misery in society is due to Tanha or what Tawny calls acquisitive instinct—how could they accept the religion which deliberately invited people to obtain boons by sacrifices merely because there is behind it the authority of the Vedas? There is no doubt that under the furious attack of Buddhism, Jaimini's counter-revolutionary dogmas were tottering and would have collapsed had they not received the support which the Bhagvat Gita gave them. The philosophic defence of the counter-revolutionary doctrines given by the Bhagvat Gita is by no means impregnable. The philosophic defence offered by the Bhagvat Gita of the Kshtriya's duty to kill is to say the least puerile. To say that killing is no killing because what is killed is the body and not the soul is an unheard of defence of murder. This is one of the doctrines which make some people say that the doctrines make one's hair stand on their end. If Krishna were to appear as a lawyer acting for a client who is being tried for murder and pleaded the defence set out by him in the Bhagvat Gita there is not the slightest doubt that he would be sent to the lunatic asylum. Similarly childish is the defence of the Bhagvat Gita of the dogma of chaturvarnya. Krishna defends it on the basis of the Guna theory of the Sankhya. But Krishna does not seem to have realized what a fool he has made of himself. In

the chaturvarnya there are four Varnas. But the gunas according to the Sankhyas are only three. How can a system of four varnas be defended on the basis of a philosophy which does not recognise more than three varnas? The whole attempt of the Bhagvat Gita to offer a philosophic defence of the dogmas of counterrevolution is childish—and does not deserve a moment's serious thought. None-the-less there is not the slightest doubt that without the help of the Bhagvat Gita the counter-revolution would have died out, out of sheer stupidity of its dogmas. Mischievous as it may seem, to the revolutionaries the part played by the Bhagvat Gita, there is no doubt that it resuscitated counter-revolution and if the counterrevolution lives even today, it is entirely due to the plausibility of the philosophic defence which it received from the Bhagvat Gita— anti-Veda and anti-Yajna. Nothing can be a greater mistake than this. As will appear from other portions of the Bhagvat Gita that it is not against the authority of the vedas and shastras (XVI, 23, 24: XVII, I I, 13, 24). Nor is it against the sanctity of the yajnas (III. 9-15). It upholds the virtue of both.

There is therefore no difference between Jaimini's Purva Mimansa and the Bhagvat Gita. If anything, the Bhagvat Gita is a more formidable supporter of counter-revolution than Jaimini's Purva Mirnansa could have ever been. It is formidable because it seeks to give to the doctrines of counter-revolution that philosophic and therefore permanent basis which they never had before and without which they would never have survived. Particularly formidable than Jaimini's Purva Mimansa is the philosophic support which the Bhagvat Gita gives to the central doctrine of counterrevolution—namely Chaturvarnya. The soul of the Bhagvat Gita seems to be the defence of Chaturvarnya and securing its observance in practice, Krishna does not merely rest content with saying that Chaturvarnya is based on Guna-karma but he goes further and issues two positive injunctions.

The first injunction is contained in Chapter III verse 26. In this Krishna says: that a wise man should not by counter propaganda create a doubt in the mind of an ignorant person who is follower of Karma kand which of course includes the observance of the rules of Chaturvarnya. In other words, you must not agitate or excite people to rise in rebellion against the theory of Karma kand and all that it includes. The second injunction is laid down in Chapter XVIII verses 41-48. In this Krishna tells that every one do the duty prescribed for his Varna and no other and warns those who worship him and are his devotees that they will not obtain salvation by mere devotion but by devotion

accompanied by observance of duty laid down for his Varna. In short, a Shudra however great he may be as a devotee will not get salvation if he has transgressed the duty of the Shudra—namely to live and die in the service of the higher classes. The second part of my thesis is that the essential function of the Bhagvat gita to give new support to Jaimini at least those portions of it which offer philosophic defence of Jaimini's doctrines—has become to be written after Jaimini's Purva Mimansa had been promulgated. The third part of my thesis is that this philosophic defence of the Bhagvat Gita, of the doctrines of counter-revolution became necessary because of the attack to which they were subjected by the revolutionary and rationalistic thought of Buddhism.

I must now turn to the objections that are likely to be raised against the validity of my thesis. I see one looming large before me. I shall be told that I am assuming that the Bhagvat Gita is posterior in time to Buddhism and to Jaimini's Purva Mimansa and that this assumption has no warrant behind it. I am aware of the fact that my thesis runs counter to the most cherished view of Indian scholars all of whom, seem to be more concerned in fixing a very ancient date to the composition of the Bhagvat Gita far anterior to Buddhism and to Jaimini than in finding out what is the message of the Bhagvat Gita and what value it has as a guide to man's life. This is particularly the case with Mr. Telang and Mr. Tilak.

But as Garbmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_19 observes "To Telang, as to every Hindu—how much so ever enlightened—it is an article of faith to believe in so high an antiquity of the Bhagvat Gita and where such necessities are powerful criticism indeed comes to an end." In the words of Prof. Garbe :-

"The task of assigning a date to the Gita has been recognized by every one who has earnestly tried to solve the problem, as being very difficult ; and the difficulties grow (all the more) if the problem is presented two fold, viz., to determine as well the age of the original Gita as also of its revision. I am afraid that generally speaking, we shall succeed in arriving, not at any certainties, but only at probabilities in this matter."

What are the probabilities? I have no doubt that the probabilities are in favour of my thesis. Indeed so far as I can see there is nothing against it. In examining this question, I propose first to advance direct evidence from the Gita itself showing that it has been composed after Jaimini's Purva Mimansa and after Buddhism.

Chapter III verses 9-13 of the Bhagvat Gita have a special significance. In this connection it is true that the Bhagvat Gita does not refer to Jaimini by name: nor does it mention Mimansa by name. But is there any doubt that in Chapter III verses 9-18 the Bhagvat Gita is dealing with the doctrines formulated by Jaimini in his Purva Mimansa? Even Mr. Tilak mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_20 who believes in the antiquity of the Bhagvat Gita has to admit that here the Gita is engaged in the examination of the Purva Mimansa doctrines. There is another way of presenting this argument. Jaimini preaches pure and simple Karma yoga. The Bhagvat Gita on the other hand preaches *anasakti* karma. Thus the Gita preaches a doctrine which is fundamentally modified. Not only the Bhagvat Gita modifies the Karma yoga but attacks the upholders of pure and simple Karma yoga in somewhat severe terms. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_21 If the Gita is prior to Jaimini one would expect Jaimini to take note of this attack of the Bhagvat Gita and reply to it. But we do not find any reference in Jaimini to this *anasakti* karma yoga of the Bhagvat Gita.

Why? The only answer is that this modification came after Jaimini and not before—which is simply another way of saying that the Bhagvat Gita was composed after Jaimini's Purva Mimansa.

If the Bhagvat Gita does not mention Purva Mimansa it does mention by name the Brahma Sutras mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_22 of Badarayana. This reference to Brahma Sutras is a matter of great significance for it furnishes direct evidence for the conclusion that the Gita is later than the Brahma Sutras.

Mr. Tilak mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_23 admits that the reference to the Brahma Sutras is a clear and definite reference to the treatise of that name which we now have. It may be pointed out that Mr. Telang mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_24 discusses the subject in a somewhat cavalier fashion by saying that the treatise "Brahma Sutras" referred to in the Bhagvat Gita is different from the present treatise which goes by that name. He gives no evidence for so extraordinary a proposition but relies on the conjectural statement of Mr. Weber mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter

Rev. in Ancient India PARTIII.htm - [_msocom_25](#)—given in a foot-note of his 'Treatise in Indian Literature, again without any evidence—that the mention of Brhma Sutras in the Bhagvat Gita" may be taken as an appellative rather than as a proper name." It would not be fair to attribute any particular motives to Mr. Telang for the view he has taken on this point. But there is nothing unfair in saying that Mr. Telang [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_26](#) shied at admitting the reference to Brahma Sutra because he saw that Weber had on the authority of Winternitz assigned 500 A.D. to the composition of the Brahma Sutras, which would have destroyed his cherished theory regarding the antiquity of the Bhagvat Gita. There is thus ample internal evidence to support the conclusion that the Gita was composed after Jaimini's Purva Mimansa and Badarayana's Brahma Sutras.

Is the Bhagvat Gita anterior to Buddhism? the question was raised by Mr. Telang:

"We come now to another point. What is the position of the Gita in regard to the great reform of Sakya Muni? The question is one of much interest, having regard particularly to the remarkable coincidences between Buddhistic doctrines and the doctrines of the Gita to which we have drawn attention in the footnotes to our translation. But the materials for deciding the question are unhappily not forth coming. Professor Wilson, indeed, thought that there was an allusion to Buddhism in the Gita. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_27](#) but his idea was based on a confusion between the Buddhists and the Charvakas or materialists. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_28](#) Failing that allusion, we have nothing very tangible but the unsatisfactory 'negative argument' based on mere non-mention of Buddhism in the Gita. That argument is not quite satisfactory to my own mind, although, as I have elsewhere pointed out, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_29](#) some of the ground occupied by the Gita is common to it with Buddhism, and although various previous thinkers are alluded to directly or indirectly in the Gita. There is, however, one view of the facts of this question, which appears to me to corroborate the conclusion deducible by means of the negative argument here referred to. The main points on which Buddha's protest against Brahmanism rests, seem to be the true authority of the Vedas

and the true view of the differences of caste. On most points of doctrinal speculation, Buddhism is still but one aspect of the older Brahmanismmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_30. The various coincidences to which we have drawn attention show that, if there is need to show it. Well now, on both these points, the Gita, while it does not go the whole length which Buddha goes, itself embodies a protest against the views current about the time of its composition. The Gita does not, like Buddhism, absolutely reject the Vedas, but it shelves them. The Gita does not totally root out caste. It places caste on a less untenable basis. One of two hypothesis therefore presents itself as a rational theory of these facts. Either the Gita and Buddhism were alike the outward manifestation of one and the same spiritual upheaval which shook to its centre the current religion, the Gita being the earlier and less thorough going form of it ; or Buddhism having already begun to tell on Brahmanism, the Gita was an attempt to bolster it up, so to say, at its least weak points, the weaker ones being altogether abandoned. I do not accept the latter alternative, because I cannot see any indication in the Gita of an attempt to compromise with a powerful attack on the old Hindu system while the fact that, though strictly orthodox, the author of the Gita still undermines the authority, as unwisely venerated, of the Vedic revelation; and the further fact, that in doing this, he is doing what others also had done before him or about his time ; go, in my opinion, a considerable way towards fortifying the results of the negative argument already set forth. To me Buddhism is perfectly intelligible as one outcome of that play of thought on high spiritual topics, which in its other, and as we may say, less thorough going, manifestation we see in the Upanishads and the Gitamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_31."

I have quoted this passage in full because it is typical of all Hindu scholars. Everyone of them is most reluctant to admit that the Bhagvat Gita is anyway influenced by Buddhism and is ever ready to deny that the Gita has borrowed anything from Buddhism. It is the attitude of Prof. Radhakrishnan and also of Tilak. Where there is any similarity in thought between the Bhagvat Gita and Buddhism too strong and too close to be denied, the argument is that it is borrowed from the Upanishads. It is typical of the mean mentality of the counterrevolutionaries not to allow any credit to Buddhism on any account.

The absurdity of these views must shock all those who have made a comparative study of the Bhagvat Gita and the Buddhist Suttas. For if it is true to say that Gita is saturated with Sankhya philosophy it is far more true to say that the Gita is full of Buddhist ideas.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_32 The similarity between the two is not merely in ideas but also in language. A few illustrations will show how true it is.

The Bhagvat Gita discusses Bramha-Nirvana.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_33 The steps by which one reaches Bramha. Nirvana are stated by the Bhagvat Gita to be (1) Shraddha (Faith in oneself); (2) Vyavasaya (Firm determination); (3) Smriti (Rememberance of the goal); (4) Samadhi (Earnest contemplation) and (5) Prajna (Insight or True Knowledge). From where has the Gita borrowed this Nirvana theory? Surely it is not borrowed from the Upanishads. For no Upanishad even mentions the word Nirvana. The whole idea is peculiarly Buddhist and is borrowed from Buddhism. Anyone who has any doubt on the point may compare this Bramha-Nirvana of the Bhagvat Gita with the Buddhist conception of Nirvana as set out in the Mahapari-nibbana Sutta, It will be found that they are the same which the Gita has laid down for Bramha-Nirvana. Is it not a fact that the Bhagvat Gita has borrowed the entire conception of Brmhma Nirvana instead of Nirvana for no other reason except to conceal the fact of its having stolen it from Buddhism?

Take another illustration. In Chapter VII verses 13-20 there is a discussion as to who is dear to Krishna; one who has knowledge, or one who performs karma or one who is a devotee. Krishna says that the Devotees is dear to him but adds that he must have the true marks of a Devotee. What is the character of a true Devotee? According to Krishna the true devotee is one who practices (1) Maitri; (loving Kindness); (2) Karuna (compassion); (3) Mudita (sympathizing joy) and (4) Upeksha (unconcernedness). From where has the Bhagvate Gita borrowed these qualifications of a perfect Devotee? Here again, the source is Buddhism. Those who want proof may compare the Mahapadana Sutta,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_34 and the Tevijja Suttammk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_35 where Buddha has preached what Bhavanas (mental attitude) are necessary for one to cherish for the

training of the heart. This comparison will show that the whole ideology is borrowed from Buddhism and that too word for word.

Take a third illustration. In chapter XIII the Bhagvat Gita descusses the subject of Kshetra-Kshetrajna. In verses 7-11 Krishna points out what is knowledge and what is ignorance in the following language:

"Pridelessness (Humility), Unpretentiousness, Non-injury or Harmlessness, Forgiveness, Straight-forwardness, (uprightness), Devotion to Preceptor, Purity, Steadiness, Self-restraint, Desirelessness towards objects of sense, absence of Egoism, Reflection on the suffering and evil of Birth, Death, decrepitude and disease, Non-attachment, Non-identification of oneself with regard to son, wife and home and the rest, Constant even-mindedness on approach of both (what is) agreeable and (what is) disagreeable unswerving devotion to Me with undivided meditation of Me, Resort to sequestered spots (contemplation, concentration, in solitude), Distaste for the society of worldly men, Incessant application to the knowledge relating to self, Perception or realisation of the true purport of the knowledge of the Tattvas (Samkhya Philosophy), all this is called 'knowledge'; what is Ajnana (Ignorance) which is the reverse thereof." Can anyone who knows anything of the Gospel of Buddha deny that the Bhagvat Gita has not in these stanzas reproduced word for word the main doctrines of Buddhism?

In chapter XIII verses 5, 6, 18, 19, the Bhagvat Gita gives a new metaphorical interpretation of karmas under various heads (1) Yajnas (sacrifices); (2) Dana (Gifts); (3) Tapas (penances); (4) Food and (5) Svadhyaya (Vedic study). What is the source of this new interpretation of old ideas? Compare with this what Buddha is reported to have said in the Majjhina Nikaya 1, 286 Sutta XVI. Can anyone doubt that what Krishna says in verses 5,6, 18, 19 of chapter XVII is a verbatim reproduction of the words of Buddha?

These are only a few illustrations I have selected those of major doctrinal importance. Those who are interested in pursuing the subject may take up the reference to similarities between Gita and Buddhism given by Telang in the footnotes to his edition of the Bhagvat Gita and satisfy their curiosity. But the illustrations I have given will be enough to show how greatly the Bhagvat Gita is permeated by Buddhistic ideology and how much the Gita has borrowed from Buddhism. To sum up the Bhagvat Gita seems to be deliberately modelled on Buddhists Suttas. The Buddhists Suttas are dialogues. So is the Bhagvat Gita. Buddha's religion offered salvation to women and Shudras. Krishna also comes

forward to offer salvation to women and Shudras. Buddhists say, "I surrender to Buddha, to Dhamma and to Sangha." So Krishna says, "Give up all religions and surrender unto Me." No parallel can be closer than what exists between Buddhism and Bhagvat Gita.

IV

I have shown that Gita is later than Purva Mimansa and also later than Buddhism. I could well stop here. But I feel I cannot. For there still remains one argument against my thesis which requires to be answered. It is the argument of Mr. Tilak. It is an ingenious argument. Mr. Tilak realizes that there are many similarities in ideas and in words between the Bhagvat Gita and Buddhism. Buddhism being earlier than the Bhagvat Gita, the obvious conclusion is that the Bhagvat Gita is the debtor and Buddhism is the creditor. This obvious conclusion is not palatable to Mr. Tilak or for the matter of that to all upholders of counter-revolution. With them it is a question of honour that counter-revolution should not be shown to be indebted to Revolution. To get over this difficulty Mr. Tilak has struck a new line. He points out the distinction between Hinayana Buddhism and Mahayana Buddhism and say, that Mahayana Buddhism was later than Bhagvat Gita and if there are any similarities between the Buddhism and Bhagvat Gita it is due to the borrowing by the Mahayanist from the Bhagvat Gita. This raises two questions. What is the date of the origin of the Mahayana Buddhism? What is the date of the composition of the Bhagvat Gita? The argument of Mr. Tilak is ingenious and clever. But it has no substance. In the first place, it is not original. It is based on certain casual remarks made by Winternitzmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_36 and by Kernmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_37 in foot-notes that there are certain similarities between the Bhagvat Gita and the Mahayan Buddhism and that these similarities are the result of Mahayana Buddhism borrowing its ideas from the Bhagvat Gita. Behind these remarks there is no evidence of special research either on the part of Winternitz, Kern or Mr. Tilak. All of them seem to be led away by the assumption that the Bhagvat Gita is earlier than Mahayana Buddhism.

This leads me to examine the question of the date of the Bhagvat Gita particularly with reference to the theory as put forth by Mr. Tilak. Mr. Tilakmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_38 is of opinion that the Gita is part of the Mahabharata and that both have been written by one and the same

author named Vyasa and consequently the date of the Mahabharata must be the date of the Bhagvat Gita. The Mahabharata, Mr. Tilak argues, must have been written at least 500 years before the Shaka Era on the ground that the stories contained in the Mahabharata were known to Megasthenes who was in India about 300 B.C. as a Greek ambassador to the court of Chandragupta Maurya. The Shaka Era began in 78 A.D. On this basis it follows that the Bhagvat Gita must have been composed before 422 B.C. This is his view about the date of the composition of the present Gita. According to him, the original Gita must have been some centuries older than Mahabharata. If reliance be placed on the tradition referred to in the Bhagvat Gita that the religion of the Bhagvat Gita was taught by Nara to Narayan in very ancient times. Mr. Tilak's theory as to the date of the composition of the Mahabharata is untenable. In the first place, it assumes that the whole of the Bhagvat Gita and the whole of Mahabharat have been written at one stretch, at one time and by one hand. There is no warrant for such an assumption, either in tradition, or in the internal evidence of these two treatises. Confining the discussion to the Mahabharata the assumption made by Mr. Tilak is quite opposed to well-known Indian traditions. This tradition divides the composition of the Mahabharata into three stages; (1) Jaya (2) Bharata and (3) Mahabharata and assigns to each part a different author. According to this tradition Vyasa was the author of the 1st edition so to say of the Mahabharata called 'Jaya'. Of the Second Edition called 'Bharata' tradition assigns the authorship to Vaishampayana and that of the Third Edition called Mahabharata to 'Sauti'. That this tradition is well-founded has been confirmed by the researches of Prof. Hopkins based on the examination of internal evidence furnished by the Mahabharata. According to Prof. Hopkins [msk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_39](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_39) there have been several stages in the composition of the Mahabharata. As has been pointed out by Prof. Hopkins [msk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_40](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_40) in the first stage it was just a Pandu Epic consisting of plays and legends about heroes who took part in the Mahabharata war without the masses of didactic material. Such a Mahabharata, says Prof. Hopkins, may have come into existence between 400-200 B.C. The second stage was the remaking of the epic by the inclusion of didactic matter and the addition of Puranic material. This was between 200 B.C. and 200 A.D. The third stage is marked when (1) the last books were added to the composition as it stood at the

end of the second stage with the introduction of the first book and (2) the swollen Anushasana Parva was separated from Shanti Parva and recognized as a separate book. This happened between 200 to 400 A.D. To these three stages Prof. Hopkins adds a fourth or a final stage of occasional amplification which started from 400 A.D. onwards. In coming to this conclusion Prof. Hopkins has anticipated and dealt with all the arguments advanced by Mr. Tilak such as the mention of Mahabharata in Panini mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_41 and in the Grihyasutras mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_42 The only new pieces of evidence produced by Mr. Tilak which has not been considered by Prof. Hopkins are two. One such piece of evidence consists of the statements which are reported to have been recorded by Megasthenes' mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_43 the Greek Ambassador to the court of Chandra Gupta Maurya, and the other is the astronomical evidence mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_44, in the Adi Parva which refers to the Uttarayana starting with the Shravana constellation. The facts adduced by Mr. Tilak as coming from Megasthenes may not be denied and may go to prove that at the time of Megasthenes i.e., about 300 B.C. a cult of Krishna worship had come into existence among the Sauraseni community. But how can this prove that the Mahabharata had then come into existence? It cannot. Nor can it prove that the legends and stories mentioned by Megasthenes were taken by him from the Mahabharata. For there is nothing to militate against the view that these legends and stories were a floating mass of Saga and that it served as a reservoir both to the writer of the Mahabharata as well as to Greek Ambassador.

Mr. Tilak's astronomical evidence may be quite sound. He is right in saying mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_45 that "it is stated in the Anugita that Visvamitra started the enumeration of the constellation with Shravana (Ma.Bha.Asva.44.2, and Adi.71.34). That has been interpreted by commentators as showing that the Uttarayana then started with the Shravana constellation, and no other interpretation is proper. At the date of the Vedanga-Jyotisa, the Uttarayana used to start with the Sun in the Dhanistha constellation. According to astronomical calculations, the

date when the Uttarayana should start with the Sun in the Dhanistha constellation to about 1,500 years before the Saka era; and according to astronomical calculations, it takes about a thousand years for the Uttarayana to start one constellation earlier. According to this calculation, the date when the Uttarayana ought to start with the Sun in the Shravana constellation comes to about 500 years before the Saka era. This conclusion would have been proper if it was true that the Mahabharata was one whole piece, written at one time by one author. It has, however, been shown that there is no warrant for such an assumption. In view of this Mr. Tilak's astronomical evidence cannot be used to determine the date of the Mahabharata. It can be used only to determine the date of that part of the Mahabharata which is affected by it—in this case the Adi Parva of the Mahabharata. For these reasons Mr. Tilak's theory as to the date of the composition of the Mahabharata must fall to the ground. Indeed any attempt to fix a single date for a work like the Mahabharata which is a serial story produced in parts at long intervals must be regarded as futile. All that one can say is that the Mahabharata was composed between 400B.C. to 400A.D. a conclusion too broad to be used for the purpose which Mr. Tilak has in view. Even this span seems to some scholars to be too narrow. It is contended [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_46](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution_and_Counter_Rev_in_Ancient_India_PARTIII.htm_-_msocom_46) that the reference to *Edukas* in the 190th Adhyaya of the Vanaparva has been wrongly interpreted to mean Buddhist Stupas when, as a matter of fact, it refers to the *Idgahas* created by the Muslim invaders for Muslim converts. If this interpretation is correct it would show that parts of the Mahabharata were written about or after the invasions of Mohammed Ghori.

Let me now turn to examine Mr. Tilak's theory as to the date of the composition of the Bhagvat Gita. There are really two propositions underlying his theory. First is that the Gita is part of the Mahabharata, both are written at one time and are the handiwork of one man. His second proposition is that the Bhagvat Gita has been the same what it is today from the very beginning when it first came to be written. To avoid confusion I propose to take them separately.

Mr. Tilak's object in linking the Gita with the Mahabharata in the matter of its composition is quite obvious. It is to have the date of the Mahabharata which he thinks is known to determine the date of the Bhagvat Gita which is unknown. The basis on which Mr. Tilak has tried to establish an integral connection between the Mahabharata and the Bhagvat Gita is unfortunately the weakest part of his theory. To accept

that the Gita is a part of the Mahabharata because the author of both is Vyasa- and this is the argument of Mr. Tilak—is to accept a fiction for a fact. It assumes that Vyasa is the name of some particular individual capable of being identified. This is evident from the fact that we have Vyasa as the author of the Mahabharata, Vyasa as the author of the Puranas, Vyasa as the author of Bhagvat Gita and Vyasa as the author of the Bramha Sutras. It cannot therefore be accepted as true that the same Vyasa is the author of all these works separated as they are by a long span of time extending to several centuries. It is well-known how orthodox writers wishing to hide their identity get better authority for their works by the use of a revered name were in the habit of using Vyasa as a nom-de-plume or pen name. If the author of the Gita is a Vyasa he must be a different Vyasa. There is another argument which seems to militate against Mr. Tilak's theory of synchronicity between the composition of the Bhagvat Gita and the Mahabharata. The Mahabharata consists of 18 Parvas. There are also 18 Puranas. It is curious to find that Bhagvat Gita has also 18 Adhyayas. The question is : Why should there be this parallelism? The answer is that the ancient Indian writers regarded certain names and certain numbers as invested with great sanctity. The name Vyasa and the number 18 are illustrations of this fact. But there is more in the fixation of 18 as the chapters of the Bhagvat Gita than is apparent on the face of it. Who set 18 as the sacred number, the Mahabharata or the Gita? If the Mahabharata, then Gita must have been written after the Mahabharata. If it is the Bhagvat Gita, then the Mahabharata must have been written after the Gita. In any case, the two could not have been written at one and the same time.

These considerations may not be accepted as decisive against Mr. Tilak's first proposition. But there is one which I think is decisive. I refer to the relative position of Krishna in the Mahabharata and in the Bhagvat Gita. In the Mahabharata, Krishna is nowhere represented as a God accepted by all. The Mahabharata itself shows the people were not prepared even to give him the first place. When at the time of the Rajasuya Yajna, Dharma offered to give Krishna priority in the matter of honouring the guest, Shishupala—the near relation of Krishna—protested and abused Krishna. He not only charged him with low origin, but also with loose morals, an intriguer who violated rules of war for the sake of victory. So abhorrent but so true was this record of Krishna's foul deeds that when Duryodhan flung them in the face of Krishna, the Mahabharata itself in the Gada Parva records that the Gods in heaven came out to listen to the charges made by Duryodhan against Krishna

and after listening showered flowers as a token of their view that the charges contained the whole truth and nothing but the truth. On the other hand, the Bhagvat Gita presented Krishna as God omnipotent, omniscient, omnipresent, pure, loving, essence of goodness. Two such works containing two quite contradictory estimates about one and the same personality could not have been written at one and the same time by one and the same author. It is a pity that Mr. Tilak in his anxiety to give a pre-Buddhist date to the composition of the Bhagvat Gita should have completely failed to take note of these important considerations.

The second proposition of Mr. Tilak is equally unsound. The attempt to fix a date for the composition of the Bhagvat Gita is nothing but the pursuit of a mirage. It is doomed to failure. The reason is that the Bhagvat Gita is not a single book written by a single author. It consists of different parts written at different times by different authors.

Prof. Garbe is the only scholar who has seen the necessity of following this line of inquiry. Prof. Garbe hold that there are two parts of the Bhagvat Gita one original and one added. I am not satisfied with this statement. My reading of the Bhagvat Gita leads me to the conclusion that there have been four separate parts of Bhagvat Gita. They are so distinct that taking even the present treatise as it stands they can be easily marked off.

(i) The original Gita was nothing more than a heroic tale told or a ballad recited by the bards of how Arjuna was not prepared to fight and how Krishna forced him to engage in battle, how Arjuna yielded and so on. It may have been a romantic story but there was nothing religious or philosophical in it.

This original Gita will be found embedded in Chapter I, Chapter II, verses... .. and Chapter XI verses 32-33 in which Krishna is reported to have ended the argument:

“Be my tool, carry out my will, don't worry about sin and evil resulting from fighting, do as I tell you, don't be impudent.”. This is the argument which Krishna used to compel Arjuna to fight. And this argument of coercion and compulsion made Arjuna yield. Krishna probably threatened Arjuna with brute force if he did not actually use it. The assumption of Vishva-rupa by Krishna is only different way of describing the use of brute force. On that theory it is possible that the chapter in the present Bhagvat Gita dealing with Vishva-rupa is also a part of the original Bhagvat Gita.

(ii) The first patch on the original Bhagvat Gita is the part in which Krishna is spoken of as Ishvara. the God of the Bhagvat religion. This

part of the Gita is embedded in those verses of the present Bhagvat Gita which are devoted to Bhakti Yoga.

(iii) The second patch on the original Bhagvat Gita is the part which introduces the Sankhya and the Vedanta philosophy as a defence to the doctrines of Purva Mimamsa which they did not have before. The Gita was originally only a historical Saga with the cult of Krishna came to be interwoven. The Philosophy portion of the Bhagvat Gita was a later intrusion can be proved quite easily from the nature of the original dialogue and the sequence of it.

In chapter I verses 20-47 Arjuna mentions those difficulties. In chapter II Krishna attempts to meet the difficulties mentioned by Arjuna. There are arguments and counter arguments. Krishna's first argument is contained in verse 2 and 3 in which Krishna tells Arjuna that his conduct is infamous, unbecoming an Arya and that he should not play the part of an effeminate which was unworthy of him. To this, Arjuna gives a reply which is embodied in verses 4 to 8. In verses 4 to 5 he says, "how can I kill Bhishma and Drona who are entitled to highest reverence: it would be better to live by begging than kill them. I do not wish to live to enjoy a kingdom won by killing old revered elders." In verses 6 to 8 Arjuna says: "I do not know which of the two is more meritorious, whether we should vanquish the Kauravas or whether we should be vanquished by them." Krishna's reply to this is contained in verses 11 to 39 in which he propounds (i) that grief is unjustified because things are imperishable, (ii) that it is a false view that a man is killed when the atman is eternal and (iii) that he must fight because it is the duty of the Kshatriya to fight. Any one who reads the dialogue will notice the following points:

(1) The questions put by Arjuna are *not* philosophical questions. They are natural questions put by a worldly man faced with worldly problems.

(2) Upto a point Krishna treats them as natural questions and returns to them quite natural replies.

(3) The dialogue takes a new turn. Arjuna after having informed Krishna positively and definitely that he will not fight, suddenly takes a new turn and expresses a doubt whether it is a good to kill the Kauravas or be killed by them. This is a deliberate departure designed to give Krishna a philosophical defence of war, uncalled for by anything said by Arjuna.

(4) Again there is a drop in the tone of Krishna from verses 31 to 38. He treats the question as natural and tells him to fight because it is the duty of the Kshatriya to fight.

Anyone can see from this that the introduction of the Vedanta philosophy is quite unnatural and therefore a later intrusion. With regard to the introduction of the Sankhya philosophy the case is quite obvious. Often it is expounded without any question by Arjuna and whenever it has been propounded in answer to a question that question has nothing to do with the war. This shows that the philosophic parts of the Bhagvat Gita are not parts of the original Gita but have been added later on and in order to find a place for them, new, appropriate and leading questions have been put in the mouth of Arjuna which have nothing to do with the mundane problems of war.

(iv) The third patch on the original Bhagvat Gita consists of verses in which Krishna is elevated from the position of Ishwara to that of Parmeshwara. This patch can be easily detected as being chapters X and XV where Krishna says: (Quotation not mentioned) As I said, to go in for a precise date for the composition of the Bhagvat Gita is to go on a fool's errand and that if an attempt in that direction is to be of any value, effort must be directed to determine the date of each patch separately. Proceeding in this way it is possible that what I have called the original unphilosophic Bhagvat Gita was part of the first edition of the Mahabharata called Jaya. The first patch on the original Bhagvat Gita in which Krishna is depicted as Ishwara must be placed in point of date sometimes later than Megasthenes when Krishna was only a tribal God.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_47 How much later it is not possible to say. But it must be considerably later. For it must be remembered that the Brahmins were not friendly to Krishnaism in the beginning. In fact they were opposed to it.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_48 It must have taken some time before the Brahmins could have become reconciled to Krishna worship.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_49

The second patch on the original Bhagvat Gita, having reference to Sankhya and Vedanta must for reason already given be placed later than the Sutras of Jaimini and Badarayana. The question of the date of these Sutras has carefully been examined by Prof. Jacobim.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_50 His conclusion is that these Sutras were composed sometime between 200 and 450 A.D.

The third patch on the original Bhagvat Gita in which Krishna is raised into Parmeshvara must be placed during the reign of the Gupta Kings. The reason is obvious. Gupta kings made Krishna-Vasudev their family deity as their opponents the Shaka kings had made Mahadeo their family deity. The Brahmins to whom religion has been a trade, who were never devoted to one God but came forward to worship the deity of the ruling race thought of pleasing their masters by making their family deity into a high and mighty Parmeshvar. If this is correct explanation then this patch on the original Bhagvat Gita must be placed between 400 and 464 A.D.

All this goes to confirm the view that the attempt to place the Bhagvat Gita prior in point of time to Buddhism cannot succeed. It is the result of wishful thinking on the part of those who have inherited a positive dislike to Buddha and his revolutionary gospel. History does not support it. History proves quite abnormally that at any rate those portions of the Bhagvat Gita which have any doctrinal value are considerably later in point of time to the Buddhist canon and the Sutras of Jaimini and Badarayana.

The discussion of the dates not only proves that the Bhagvat Gita is later than Hinayana Buddhism but is also later than Mahayana Buddhism. The impression prevails that Mahayana Buddhism is later in origin. It is supposed to have come into being after A.D. 100 when Kanishka held the third Buddhist Council to settle the dissension in the Buddhist Church. This is absolutely a mistake. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_51 It is not true that after the Council a new creed of Buddhism came into existence. What happened is that new names of abuse came into existence for parties which were very old. As Mr. Kimura has shown the Mahayanist is simply another name for the sect of Buddhists known as Mahasanghikas. The sect of Mahasanghikas had come into being very much earlier than is supposed to be the case. If tradition be believed the sect had come into being at the time of the First Buddhist Council held at Pataliputra 236 years after the death of Buddha i.e., 307 B.C. B.Cmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_52 for settling the Buddhist canon and is said to have led the opposition to the Theravad sect of Buddhism which later on came to be stigmatized as Hinayana (which means those holding to the low path). There could hardly be any trace of Bhagvat Gita when the Mahasanghikas later known as Mahayanists came into being.

Apart from this what have the Mahayanists borrowed from the Bhagvat Gita? Indeed what can they borrow from the Bhagvat Gita? As Mr. Kimura points out the doctrine of every school of Buddhism is mainly concerned at least with three doctrines: (1) Those which deal with cosmic existence; (2) Those which deal with Buddhology; and (3) Those which deal with conception of human life. Mahayana is no exception to this. Except probably on Buddhology the Mahayanists could hardly use the Bhagvat Gita to draw upon. So different is the approach of the two on the other doctrines and even this possibility is excluded by the factor of time.

The foregoing discussion completely destroys the only argument that could be urged against my thesis—namely that the Bhagvat Gita is very ancient, pre-Buddhistic in origin and therefore could not be related to Jaimini's Purva Mimansa and treated as an attempt to give a philosophic defence of his counter-revolutionary doctrines.

To sum up, my thesis is three-fold. In other words it has three parts. First is that the Bhagvat Gita is fundamentally a counter-revolutionary treatise of the same class as Jamini's Purva Mimansa—the official Bible of counter-revolution. Some writers relying on verses 40-46 of Chapter II hold the view that the Bhagvat Gita is

{In all the copies available with us, the essay has been left here incomplete, as is seen from the above sentence—Editors.}

CHAPTER 10

Analytical Notes of Virat Parva & Udyog Parva

VIRAT PARVA

1. The spies sent by Kauravas to search for the existence of the Pandavas return to Duryodhan and tell him that they are unable to discover them. They ask his permission as to what to do. Virat Parva, Adhya. 25.

2. Duryodhan asks for advice from his advisers. Kama said send other spies. Dushasan said they might have gone beyond the sea. But search for them.—*Ibid.*—Adhya. 26.

3. Drona said the Pandavas are not likely to be defeated or destroyed. They may be living as Tapasis. therefore send Siddhas and Brahamins as spies—*Ibid.* Adhya 27.

4. Bhishma supports Drona—*Ibid* Adhya. 28.

5. Kripacharya supported Bhishma and added—Pandavas are great enemies. But wise man does not neglect even small enemies. While they

are in *Agnyatavasa* you should go on collecting armies from now.— *Ibid* Adhya. 29.

6. Then Susharma King of Trigarth raised quite a different subject. He said that *Kichaka* who was the *Senapati* of King Virat I hear dead, King Virat is to give us great trouble. Kichaka having been dead Virat must have become very weak. Why not invade the Kingdom of Virat? This is the most opportune time. Kama also supported Susharma. Why worry about the Pandavas, these Pandavas are without wealth, without army and fallen. Why bother with them? They might have even been dead by now. Give up the search and let undertake the project of Susharma— *Ibid* Adhya. 30.

7. Susharma's invasion of Vairat. Susharma carries away the cows of Virat. The cow herds go and inform Virat of this and ask him to pursue Susharma and rescue the cows.— *Ibid* Adhya. 31.

8. Virat became ready for war. In the meanwhile *Shatanik* the younger brother of Virat suggested that instead of going alone he might take with him Kank (Sahadeo) Ballava (Yudhishtira) Santipal (Bhima) and Granthik (Nakula) to help him to fight Susharma. Virat agreed and they all went— *Ibid*. Adhya. 31.

9. War between Shusharma and Virat— *Ibid* Adhya. 32.

10. Yudhishtira rescues Virat.— *Ibid*. Adhya. 33.

11. Announcement in the Virat Nagari that their King is safe.— *Ibid* Adhya. 34.

ENTRY IN VIRAT NAGARI BY KAURVAS

12. While King Virat went after Susharman Duryodhan with *Bhishma*, *Drona*, *Kama*, *Krapa*, *Ashvashtama*, *Shakuni*, *Dushashana*, *Vivinshati*, *Vikarna*, *Chitrasen*, *Durmukha*, *Dushala* and other warriors entered the Virat Nagari and captured the cows of Virat and were going away. The cowherds came to the palace of King Virat and gave the news. They need not find the King but they found his son *Uttar*. so they gave him the news.— *Ibid* Adhya. 35.

13. *Uttar* began to boast saying he was superior to Arjuna and would do the job. But his complaint was that there was no one to act his *Sarathi*. *Draupadi* went and told him that *Brahannada* was at one time the *Sarathi* of Arjuna. Why not ask him? He said he had no courage and requested *Draupadi* to make the request. Why not ask your younger sister *Manorama*. So he told *Manorama* to bring *Brahannada*— *Ibid* Adhya. 36.

14. Manorama takes Brahannada to his brothers and Uttara persuades him to be his Sarathi. Brahannada agreed and took the Rath of Uttara in front of the Kauravas—*Ibid*. Adhya. 37.

15. On seeing the army of the Kauravas Uttara left the Rath and started running away. Arjuna stopped him. The Kauravas seeing this began to suspect that the man might be Arjuna. Arjuna told him not to be afraid—*Ibid* Adhya. 38.

16. Arjuna took his Ratha to the Shami tree. Seeing this Drona said he must be Arjuna. Hearing this the Kauravas were greatly upset. But Duryodhana said if Drona is right it is good for us. Because it is before the thirteenth year that the Pandavas will have been discovered and they will have to suffer Vanavas again for 12 years.—*Ibid* Adhya. 39.

17. Arjuna asks Uttara to climb the Shami tree and to take down the weapons.—*Ibid* Adhya. 40.

18. Uttara's doubts about the corpse on the Shami Tree—*Ibid* Adhya. 41.

19. Uttara's excitement after seeing the weapons—*Ibid* Adhya. 42.

20. Arjuna's description of the weapons.—*Ibid* Adhya. 43.

21. Uttara's Inquiry regarding the whereabouts about the Pandavas.—*Ibid* Adhya. 44.

22. Climbing down of Uttara from the tree—*Ibid* Adhya. 45.

23. The Rath with Vanar Symbol. Drona becomes sure that he is Arjuna. Bad omens seen by the army of the Kauravas.—*Ibid* Adhya. 46.

24. Duryodhan encourages the soldiers who were frightened by Drona's saying that it was Arjuna. Kama's slander of Drona and proposal to Duryodhan to remove Drona as a Commander-in-Chief.—*Ibid* Adhya. 47.

25. Boasting by Kama and Pratijna to defeat Arjuna— *Ibid* Adhya. 48.

26. Krapacharya's admonition to Kama not to brag and boast. War is regarded as bad by the Shastras—*Ibid* Adhya. 49.

27. Ashvathama abuses Kama and Duryodhan because of their slander of Drona—*Ibid* Adhya. 50.

28. Ashvathama abused Kama and Duryodhan for speaking ill of Drona. Kama replied, 'after all I am only a Suta,' But Arjuna has behaved as bad as Rama behaved towards Vali—*Ibid* Adhya. 50.

29. Ashvathama was quieted by Bhishma, Drona and Krapa, Duryodhan and Kama tendered apology to Drona— *Ibid* Adhya. 51. 30. Bhishma's decision that the Pandavas have completed 13 years.—*ibid* Adhya. 52.

31. Arjuna has defeated the army of the Kauravas.— *Ibid* Adhya. 53.

32. Arjuna defeats Kama's *Bhrata*. Arjuna defeats Kama and Kama runs away— *Ibid* Adhya. 54.
33. Arjuna destroys the army of the Kauravas and breaks the Rath of Kripacharya—*Ibid* Adhya. 55.
34. Gods came out in heaven to witness the fight between Arjuna and the army of the Kauravas—*Ibid* Adhya. 56.
35. Battle between Krapa and Arjuna and the running away of Krapa.—*Ibid* Adhya. 57.
36. Battle between Drona and Arjuna and running away of Drona.—*Ibid* Adhya. 58.
37. Battle between Ashavashtama and Arjuna—*Ibid* Adhya. 59.
38. Battle between Kama and Arjuna, defeat of Kama—Adhya. 60.
39. Attack on Bhishma by Arjuna—*Ibid* Adhya. 61.
40. Arjuna kills the Kauravas soldiers—*Ibid* Adhya. 62.
41. Defeat of Bhishma and his running away from the Battle-field—*Ibid* Adhya. 64.
42. Fainting of the soldiers of the Kauravas. Bhishmas telling them to return home.—*Ibid* Adhya. 66.
43. Kaurava soldiers surrendering to Arjuna from *Abhay*. Uttar and Arjuna return to Virat Nagari— *Ibid* Adhya. 67.
44. Virat enters his capital and his people honouring him.— *Ibid* Adhya. 68.
45. The Pandavas enter the King's Assembly.—*Ibid* Adhya. 69.
46. Arjuna introduces his other brothers in Virat.-- *Ibid* Adhya. 71.
47. Marriage between Arjuna's son and the daughter of Virat.— *Ibid* Adhya. 72.
48. Thereafter the Pandavas leave Virat Nagari and live in Upaplowya Nagari— *Ibid* Adhya. 72.
49. Arjuna thereafter brought his son Abhimanyu, Vasudev, and Yadav from Anrut Desh—*Ibid* Adhya. 72.
50. Friends of Yudhisthir such as Kings Kashiraj and Shalya came with two Akshauhini army. Similarly Yagyasen Drupadraj came with one Akshauhini. Draupadi's all sons Ajinkya, Shikhandi, Drustadumna also came.—*Ibid* 72.

UDYOGAPARVA

1. After the marriage of Abhimanyu the Yadavas and the Pandavas met in the Sabha of King Virat. Krishna addresses them as to what is to be done about the future. We must do what is good both Kauravas and Pandavas. Dharma will accept anything—even one villaga—by *Dharma*.

Even if he is given the whole kingdom by Duryodhana he will not accept it. Upto now the Pandavas have observed *Niti*. But if the Kauravas observe *Aniti* the Pandavas will not hesitate to kill the Kauravas. Let nobody be afraid on account of the fact that the Pandavas are a minority. They have many friends who will come to their rescue. We must try to know the wishes of the Kauravas. I suggest that we should send a messenger to Duryodhan and ask him to give part of the Kingdom to the Pandavas.—Udyog Parva, Adhya. 1.

2. Balaram supports the proposal of Krishna but added that it was the fault of Dharma knowing that he was losing at the hands of Shakuni. Therefore instead of fighting with the Kauravas get what you can by negotiation.—*Ibid*, Adhya. 2.

3. Satyaki got up and condemned Balaram for his attitude— *Ibid*, Adhya. 3.

4. Drupad supports Satyaki. Drupad agrees to send his Purohit as a messenger—*Ibid*, Adhya. 4.

5. Krishna supports Drupad and goes to Dwarka. Kings invited by Drupad and Virat arrive. Similarly Kings invited by Duryodhan arrive.—*Ibid*. Adhya. 5.

6. Drupada instructs his purohit how to speak in the assembly and deal with the issue.—*Ibid* Adhya. 6.

7. Arjuna and Duryodhana both go to Dwarka to ask for his aid in the war. He said I will help you both. I can give my army to one and I can join one singly. Choose what you want. Duryodhan chose the army. Arjuna choose Krishna.—*Ibid* Adhya. 7.

8. Coming of Shalya to the Pandavas with alarge army. Duryodhan thinks him lower. Meeting of Shalya and Pandavas. Pandavas request Shalya to discourage Kama in the war. Agreement of Shalya.— *Ibid*. Adhya. 8.

9. Adhya. 9—Irrelevant. 1

10. Adhya. 10—Irrelevant.

11. Adhya. II—Irrelevant.

12. Adhya. 12—Irrelevant.

13. Adhya. 13—Irrelevant.

14. Adhya. 14—Irrelevant.

15. Adhya. 15—Irrelevant.

16. Adhya. 16—Irrelevant.

17. Adhya. 17—Irrelevant.

18. Adhya. 18—Irrelevant.

19. Adhya.—Satyaki comes to Pandvas with his army and Bhagadatta went to Duryodhana.

20. Adhya. 20—The Purohit of Drupada enters the Kauravas Sabha. The Purohit said that the Pandvas are prepared to part evil deeds of the Kauravas and make a compromise with them. He told them that the Pandavas have a large army yet they wish to compromise.

21. Adhya. 21—Bhishma supports the Purohit. Kama objects. Dispute between Bhishma and Kama. Dhratrarashtra suggests that Sanjaya be sent for negotiation on their behalf.

22. Adhya. 22—Dhratrarashtra sends Sanjaya to go to the Pandvas and give his blessings and say what you think best for the occasion and which will not advance enmity between the two.

23. Adhya. 23—Sanjaya's going to the Pandvas.

24. Adhya. 24—Conversation between Sanjaya and Yudhistira.

25. Adhya. 25—Sanjaya condemns war.

26. Adhya. 26—Dharma says 'I am prepared to compromise if the Kauravas give us our Kingdom of Indraprastha.

27. Adhya. 27—It is *Adharma* to kill *Gurujan* and obtain a Kingdom. If the Kauravas refuse to give you any kingdom without war you had better live by begging in the Kingdom of Vrishni and Andhakas.

28. Adhya. 28—Says, Dharma Blame us Sanjaya if you think we have acted or acting against Dharma. Sanjaya says I want Swadharma or Sama.

29. Adhya. 29—Krishna's address to Sanjaya why war is legitimate and asks him to go and tell his views to Dhratarashtra.

30. Adhya. 30—Sanjaya returns to Kauravas and tells Duryodhana to war. Duryodhan either to return Indraprastha to the Pandavas or be ready for war.

31. Adhya. 30—Sanjaya tells Duryodhan to live and let live. If he cannot give Indraprastha let him give us five villages.

32. Adhya. 31—Sanjaya reaches Dratrarashtra at night and tells him I will give you the message of Dharma in the morning.

33. Adhya. 32—Dhratarashtra is uneasy and wants to know the message Sanjaya brought. So he sends for Sanjaya immediately. Sanjaya gives him the message and says settle the dispute by giving them their share of the Kingdom.

34. Adhya. 34—Dhratarashtra calls for Vidura and asks his advice. His advice is, give the Pandavas their portion of the Kingdom.

35. Adhya. 35—Irrelevant.

36. Adhya. 36—Irrelevant. Vidur says make the two sides friends.

37. Adhya. 37—Irrelevant.
38. Adhya 38—Irrelevant.
39. Adhya. 39—Dhratarashtra tells Vidura I cannot give up Duryodhan although he is bad.
40. Adhya. 40—Vidura describes Chaturvarna.
41. Adhya. 41—Dhratarashtra asks Vidur about Brahma. He says I can't because I am a Shudra. Then comes Sanat-Sujata.
42. Adhya. 42—Conversation between Dhratarashtra & Sanat Sujata on Brahma Vidya.
43. Adhya. 43—Dialogue between Sanat Sujat and Dhratarashtra on the same subject.
44. Adhya. 44—Sanat Sujata on Brahma Vidya.
45. Adhya. 45—Sanat Sujata preaches yoga.
46. Adhya. 46—Sanat Sujat on Atma.
47. Adhya. 47—Kauravas come to the Sabha to hear the message brought by Sanjaya.
48. Adhya. 48—Sanjaya delivers the message. (Particularly that part which was given by Arjuna?)
49. Adhya. 49—Praise of Arjuna & Krishna by Bhishma. Kama gets angry. Drona supports Bhisma and advices compromise.
50. Adhya. 50—Dhratarashtra asks Sanjaya who are the allies of the Pandvas & their strength. Sanjaya taunts, gets up answers.
51. Adhya. 51—Dhratarashtra thinks of the prowess of Bhismna and sighs.
52. Adhya. 52—Dhratarashtra thinks of the prowess of Arjuna and sighs.
53. Adhya. 53—Dhratarashtra thinks of the prowess of Dharma and his friends. He tells his sons to compromise with the Pandavas.
54. Adhya. 54—Sanjaya predicts the defeat of the Kauravas.
55. Adhya. 55—Duryodhan says Pandavas cannot defeat us because our forces are greater.
56. Adhya. 56—Sanjaya describes the disposition of the army made by the Pandavas.
57. Adhya. 57—Sanjaya describes how Pandavas have designed to kill the warriors of the Kauravas. Duryodhan says he is not affraid of the Pandvas defeating the Kauravas who have a larger army.
58. Adhya. 58—Dhratarashtra tells Duryodhan not to fight. Duryodhan takes oath not to swerve from battle. Dhratarashtra weeps.
59. Adhya. 59—Dhratarashtra tells Sanjaya to tell him what conversation took place between Krishna & Arjuna.

60. Adhya. 60—Dhratarashtra tells Duryodhan that the Devas will help the Pandavas and will ruin the Kauravas.

61. Adhya. 61—Duryodhan says he is not afraid of that.

62. Adhya. 62—Kama says he alone is capable of killing Arjuna.

63. Adhya. 63—Duryodhan says he is fighting relying on Kama & not on Bhishma, Drona etc.

64. Adhya. 64—Vidura tells Duryodhan give up enmity.

65. Adhya. 65—Dratarashtra admonishes Duryodhan.

66. Adhya. 66—Sanjaya tells Dratarashtra the message of Arjuna.

67. Adhya. 67—The kings who had assembled in the hall of the Kauravas return to their homes. Vyas and Gandhari come with Vidur. Vyas told Sanjaya to tell Dhratarashtra every thing he knows about the real Swarup of Krishna & Arjuna.

68. Adhya. 68—Sanjaya tells Dhratarashtra about Krishna.

69. Adhya. 69—Dhratarashtra tells Duryodhan to surrender to Krishna. Refusal of Duryodhan. Gandhari abuses Duryodhan.

70. Adhya 70—Different names of Krishna & their origin.

71. Adhya 71—Dhratarashtra surrenders to Krishna.

72. Adhya. 72—Conversation between Yudhistira and Krishna. Yudhistir says Sanjaya told him not to rely on Dhratarashtra. Yudhistir stresses the importance of property Speaks of (Kshatradharma) & the necessity of observing it Krishna proposes to go to the Kauravas. Yudhistir does not like the idea but says to what you think is the best.

73. Adhya. 73—Krishna tells Dharma the secret which has in mind. Don't use soft speech with the Pandvas tells Krishna to Dharma. There are plenty of reasons why you should not make any compromise with the Kauravas. Emphasizes how the Kauravas disgraced Draupadi. Therefore Oh ; Dharma do not hesitate to kill them.

74. Adhya. 74—Bhishma tells Krishna to use soft speech with the Kauravas.

75. Adhya. 75—Krishna redicules Bhima.

76. Adhya. 76—Bhima makes up his mind to fight.

77. Adhya. 77—Krishna tells Bhima the difference between *Daiva* and *Paurush*.

78. Adhya. 78—Arjuna tells Krishna to adopt Shama—failing war can be considered.

79. Adhya. 79—Krishna's talk to Arjun. I will try to bring about a settlement by peace. If that is not possible be ready for war. I will not communicate to Duryodhan Dharma's willingness to accept five villages.

80. Adhya. 80—Nakul tells Krishna to do the best.

81. Adhya. 81—Sahadev meets Krishna and tells him to bring about a war with the Kauravas. Satyaki said that all warriors assembled here agree with the view of Sahadeo.

82. Adhya. 82—Draupadi meets Krishna & tells him that she will not be satisfied unless Duryodhan is punished. Krishna gives her assurance.

83. Adhya. 83—Last meeting between Arjuna and Krishna. Arjuna makes the best effort for *Shama*. Yudhishtir tells Krishna to give assurances to Kunti. Krishna starts on his mission.

84. Adhya. 84—Good & Bad omens to Krishna on his way to Hastinapura.

85. Adhya. 85—Duryodhana creates Resting places for Krishna's journey to Hastinapur. Krishna arrives in Hastinapura.

86. Adhya. 86—Dhratarashtra tells Vidura what gifts are to be offered to Krishna.

87. Adhya. 87—Vidur tells Dhratarashtra that he cannot separate Krishna from the Pandavas.

88. Adhya. 88—Duryodhan says Krishna is worship. But this is not the time to worship him. Bhishma tells Duryodhan to make a compromise with Pandavas. Duryodhan desires to look up Krishna. Bhishma's strong opposition to Duryodhana.

89. Adhya. 89—Krishna's entry into Hastinapur. Meeting with Dhratarashtra. His stay with Vidura.

90. Adhya. 90—Meeting between Kunti and Krishna—Kunti's sorrow. Krishna consoles her. Kunti tells Krishna— (1) Tell my sons to fight for their kingdom. (2) I am sorry for Draupadi.

91. Adhya. 91—Kauravas invite Krishna to dinner. Krishna's refusal. Krishna goes for meal to Vidur.

92. Adhya. 92—Vidur tells Krishna that he does not like his going among the Kauravas.

93. Adhya. 93—Krishna tells Vidura not all the Kauravas can hurt him. I have come only because *Shama* is Punnyakarak.

94. Adhya. 94—Krishna enters the assembly Hall of the Kauravas.

95. Adhya. 95—Krishna's address to the Assembly. He told them pandavas are ready for both peace as well as war. Give them half their kingdom.

96. Adhya. 96—Jamadgni tells a story against arrogance.

97. Adhya. 97-105—Matali Akhyan.

98. Adhya. 106—Narada's advice to Duryodhana.

99. Adhya. 106-123— Galava Akhyan.

100. Adhya. 124—Dratarashtra tells Krishna to advise Duryodhana.

101. Adhya. 125—Bhishma's advice to Duryodhan. Drona's support. Vidura's condemnation of Duryodhana. Dhrtarashtra's advice.

102. Adhya. 126—Bhishma & Drona advice Duryodhana a second time.

103. Adhya. 127—Duryodhana announces not to give anything to the Pandavas.

104. Adhya. 128—Krishna condemns Duryodhana. Duryodhan leaves the Assembly. Dushyasana's speech. Krishna warns Bhishma.

104. Adhya. 129—Dhrtarashtra asks Vidur to bring Gandhari to the Assembly. Duryodhan comes back—Gandhari asks him to give half the Kingdom to Pandavas.

104. Adhya. 130—Duryodhana leaves the assembly. His intention to kill Krishna. Satyaki informs Dhrtarashtra of this secret plot. Srikrishna's speech. Dhrtarashtra calls back Duryodhana to the assembly, warns him. Vidur's condemnation.

105. Adhya. 131—*Bhagwana's Vishwarup Darshan* Dhrtarashtra gets *Divya Chakshu*? Krishna leaves the assembly and goes to. Kunti.

106. Adhya. 132—Krishna tells Kunti what happened in the assembly. Kunti tells Krishna war is natural to Kshatriyas. There is no better Dharma than that.

107. Adhya. 133—Kunti tells Krishna the story of Vidula to reinforce her point.

108. Adhya. 134—Vidula's story.

109. Adhya. 135—Vidula's story.

110. Adhya. 136—Vidula's story.

III. Adhya. 137—Kunti's advice to her sons. Krishna's advice to Kama and his departure to *Upapalavya Nagari*.

112. Adhya. 138—Advice to Duryodhana by Bhishma & Drona.

113. Adhya. 139—Bhishma's sorrow. Drona again advises Duryodhana.

114. Adhya. 140—Conversation between Dhrtarashtra and Sanjaya. Krishna advices Kama.

115. Adhya. 141—Kama's reply to Krishna.

116. Adhya. 142—Krishna's assurance to Kama that the Pandava's will win.

117. Adhya. 143—Kama sees bad omens. His determination to finish Pandavas. His going home.

118. Adhya. 144—Conversation between Vidura and Pratha. Knows Duryodhana is determined to fight. Kunti's sorrow. Her wish to tell Kama his origin. Kunti goes to the bank of the river.

119. Adhya. 145—Kunti meets Kama and tells him his origin and request him to join the Pandavas.

120. Adhya. 146—Surya supports the proposal of Kunti. Kama rejects it. Promises to save all the Pandavas except Arjuna.

121. Adhya. 147—Krishna goes to Pandavas. Yudhistir asks what happened in the Kaurava Sabha.

122. Adhya. 147, 148, 149, 150—Krishna relates the whole story.

123. Adhya. 151—Appointment of Senapati for the Pandavas Army. Entry of Pandava's Army in Kurushetra.

124. Adhya. 152—Description of Pandavas arrangement for supply to the Army.

125. Adhya. 153—Arrangement on Kaurava's side. Our army must enter Kurushetra tomorrow early morning.

126. Adhya. 154—Dharma's fear of fall from his moral rectitude by going to war. Krishna satisfied him. Arjuna said you must fight.

127. Adhya. 155—Description of Duryodhan's army.

128. Adhya. 156—Bhishma is made Senapati of the Kaurava's army. Kama is offended. His decision not to take command till Bhishma is dead. *Kaurava's Army enters Kurushetra.*

129. Adhya. 157—Krishna becomes commander of Pandava's Army.

130. Balrarn goes on Pilgrimage saying I do not like the Kauravas destroyed.

131. Adhya. 158—Rukmi neither wanted by Arjuna nor by Duryodhana goes home.

132. Adhya. 159—Conversation between Sanjaya and Dhratarashtra. He blames Dhratarashtra.

133. Adhya. 160—Pandava's Army on the bank of the *Hiranyavati* river. Duryodhan sends offensive messages to Pandavas and Krishna saying fight if you can.

134. Adhya. 161. Uluka goes with the messages.

135. Adhya. 162—Angry Pandavas send back angry messages. They give order that the war will start tomorrow.

CHAPTER 11 Brahmins Versus Kshatriyas

This manuscript consists of 43 foolscap typed pages. All the loose pages are tagged. The original title, 'Brahmins and Kshatriyas and the Counter-Revolution ' has been modified in Dr. Ambedkar's hand-writing as 'Brahmins Versus Kshatriyas ' on the title page. The essay seems to be complete.—Editors.

The sacred literature of the Hindus contains many cases of conflicts between the Brahmins and the Kshatriyas and even of sanguinary wars between the two.

The first case reported was that of the King Vena. Vena was a Kshatriya King. His conflict with the Brahmins has been referred to in various authorities. The following account is taken from the Harivansa.

"mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_53 There was formerly a Prajapati (lord of creatures), a protector of righteousness, called Anga, of the race of Atri, and resembling him in power. His son was the Prajapati Vena, who was but indifferently skilled in duty, and was born of Sunitha, the daughter of Mrityu. This son of the daughter of Kala (Death), owing to the taint derived from his maternal grand-father, threw his duties behind his back, and lived in covetousness under the influence of desire. This king established an irreligious system of conduct ; transgressing the ordinances of the Veda, he was devoted to lawlessness. In his reign men lived without study of the sacred books and without the Vashatkara, and the gods had no some-libations to drink at sacrifices."

No sacrifice or oblation shall be offered,—such was the ruthless determination of that Prajapati, as the time of his destruction approached. 'I', he declared, 'am the object, and the performer of sacrifice, and the sacrifice itself; it is to me that sacrifice should be presented, and oblations offered.' This transgressor of the rules of duty, who arrogated to himself what was not his due, was then addressed by all the great Rishis, headed by Marichi : "We are about to consecrate ourselves for a ceremony which shall last for many years; practise not unrighteousness, of Vena ; this is not the eternal rule of duty. Thou art in every deed a Prajapati of Atri's race and thou hast engaged to protect thy subject. 'The foolish Vena, ignorant of what was right, laughingly answered those great Rishis who had so addressed him: "Who but myself is the ordainer of duty? or whom ought I to obey? Who on earth equals me in sacred knowledge, in process, in austere fervour, in truth? Ye who are deluded and senseless know not that I am the source of all beings and duties. Hesitate not to believe that I, if I willed, could turn up the earth, or deluge it with water, or close up heaven and earth.' When owing to his delusion and arrogance Vena could not be governed, then the mighty Rishis becoming licensed, seized the vigorous and struggling king, and rubbed his left thigh. From this thigh, so rubbed, was produced a black man, very short in stature, who, being alarmed, stood with joined hands. Seeing that he was agitated, Atri said to him 'Sit

down' (Nishida). He became the founder of the race of the Nishadas, and also progenitor of the Dhivaras (Fishermen), who sprang from the corruption of Vena.'

The second case is that of Pururavas. Pururavas is another Kshatriya King, son of Ila and grandson of Manu Vaivasvata. He came in conflict with the Brahmans the following account of which appears in the Adi Parva of the Mahabharata :

“[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_54](#)Subsequently the wise Pururavas was born of Ila who, as we have heard was both his father and his mother. Ruling over thirteen islands of the ocean, and surrounded by beings who were all superhuman, himself a man of great renown, Pururavas, intoxicated by his prowess, engaged in a conflict with the Brahmans, and robbed them of their jewels, although they loudly remonstrated. Sanatkumara came from Brahma's heaven, and addressed to him an admonition, which however, he did not regard. Being then straightway cursed by the incenses Rishis, he perished, this covetous monarch, who, through piece of power, had lost his understanding.”The third and a somewhat serious conflict was that between King Nahusha and the Brahmins. Nahusha is the grandson of Pururavas. The story is told in two places in the Mahabharata once in the Vanaparvan and a second time in the Udyogaparvan. The following account is taken from the Udyogaparvan of the Mahabharata:

“[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_55](#)After his slaughter of the demon Vritta, Indra became alarmed at the idea of having taken the life of a Brahman (for Vritta was regarded as such) and hid himself in the waters. In consequence of the disappearance of the king of the gods, all affairs, celestial as well as terrestrial, fell into confusion. The Rishis and gods then applied to Nahusha to be their king. After the first excusing himself on the plea of want of power, Nahusha at length, in compliance with their solicitations, accepted the high function. Upto the period of his elevation he had led a virtuous life, but he now became addicted to amusement and sensual pleasure, and even aspired to the possession of Indrani, Indra's wife, whom he had happened to see. The queen resorted to the Angiras Vrihaspati, the preceptor of the gods, who engaged to protect her. Nahusha was greatly incensed on hearing of this interference ; but the gods endeavoured to pacify him, and pointed out the immorality of appropriating another person's wife. Nahusha,

however, would listen to no remonstrance, and insisted that in his adulterous designs he was no worse than Indra himself."

"The renowned Ahalya, a rishi's wife, was formerly corrupted by Indra in her husband's lifetime. Why was he not prevented by you? And many barbarous acts, and unrighteous deeds, and frauds were perpetrated of old by Indra; Why was he not prevented by you?" The gods, urged Nahusha, then went to bring Indrani; but Vrihaspati would not give her up. At his recommendation, however, she solicited Nahusha for some delay, till she should ascertain what had become of her husband. This request was granted." Indrani now went in search of her husband ; and by the help of Upasruti (the goddess of night and revealer of secrets) discovered him existing in a very subtle form in the stem of a lotus growing in a lake situated in a continent within an ocean north of the Himalayas. She made known to him the wicked intentions of Nahusha, and entreated him to exert his power, rescue her from danger, and resume his dominion. Indra declined any immediate interposition on the plea of Nahusha's superior strength ; but suggested to his wife a device by which the usurper might be hurled from his position. She was recommended to say to Nahusha that "if he would visit her on a celestial vehicle borne by Rishis, she would with pleasure submit herself to him."

"I desire for thee, king of the gods, a vehicle hitherto unknown, such as neither Vishnu, nor Rudra, nor the Asuras, nor the Rakshases employ. Let the eminent Rishis, all united, bear thee, lord, in a car: this idea pleases me." Nahusha receives favourably this appeal to his vanity, and in the course of his reply thus gives utterance to his self-congratulation : "He is a personage of no mean prowess who makes the Munis his bearers. I am a fervid devotee of great might, lord of the past, the future, and the present. If I were angry the world would no longer stand ; on me everything depends..... Wherefore, O goddess, I shall, without doubt, carry out what you propose. The seven Rishis, and all the Brahman-rishis, shall carry me. Behold, beautiful goddess, my majesty and my prosperity." The narrative goes on : "Accordingly this wicked being, irreligious, violent, intoxicated by the force of conceit, and arbitrary in his conduct, attached to his car the Rishis who submitted to his command, and compelled them to bear him." Indrani then again resorts to Vrihaspati, who assures her that vengeance will soon overtake Nahusha for his presumption, and promises that he will himself perform a sacrifice with a view to the destruction of the oppressor, and the discovery of Indra's lurking place. Agni is then sent to discover and bring Indra to Vrihaspati ; and the latter, on Indra's arrival, informs him

of all that had occurred during his absence. While Indra, with Kuvera, Yama, Soma and Varuna was devising means for the destruction of Nahusha, the sage Agastya came up, congratulated Indra on the fall of his rival, and proceeded to relate how it had occurred :

"Wearied with carrying the sinner Nahusha the eminent divine-rishis, and the spotless Brahman-rishis, asked that divine personage Nahusha (to solve) a difficulty;"Dost thou, O Vasava, most excellent of conquerors, regard as authoritative or not those Brahmana texts which are recited at the immolation of kine?"No', replied Nahusha, whose understanding was enveloped in darkness. The Rishis rejoined : 'Engaged in unrighteousness, thou attainest not unto righteousness : these texts, which were formerly uttered by great Rishis, are regarded by us as authoritative. Then (proceeds Agastya) disputing with the Munis, Nahusha, impelled by unrighteousness, touched me on the head with his foot. In consequence of this the king's glory was smitten and his prosperity departed. When he had instantly become agitated and oppressed with fear, I said to him, 'Since thou, O fool, contemnest that sacred text, always held in honour, which has been composed by former sages, and employed by Brahman-rishis, and has touched my head with thy foot, and employest the Brahma—like the irresistible Rishis as bearers to carry thee,—therefore, shorn of thy lusture, and all thy merit exhausted, sink down, sinner, degraded from heaven to earth. For ten thousand years thou shalt crawl in the form of a huge serpent. When that period is completed, thou shalt again ascend to heaven. So fell that wicked wretch from the sovereignty of the gods. Happily, O Indra, we shall now prosper, for the enemy of the Brahmans has been smitten. Take possession of the three worlds, and protect their inhabitants, O husband of Sachi (Indrani) subduing thy senses, overcoming thine enemies, and celebrated by the great Rishis."

The fourth case is of King Nimi. Nimi was one of the sons of Ikshvaku. The facts of his conflict with the Brahmans are related in the Vishnu Purana which says :

"mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_56Nimi had requested the Brahman Rishi Vashistha to officiate at a sacrifice, which was to last a thousand years. Vashistha in reply pleaded a pre-engagement to Indra for five hundred years, but promised to return at the end of that period. The king made no remark, and Vashistha went away, supposing that he had assented to his arrangement. On his return, however, the priest discovered that Nimi had retained Gautama (who was, equally with Vashistha, a

Brahmin-rishi) and others to perform the sacrifice ; and being incensed at the neglect to give him notice of what was intended, he cursed the king, who was then asleep, to lose his corporeal form. When Nimi awoke and learnt that he had been cursed without any previous warning, he retorted by uttering a similar curse on Vashistha, and then died. Nimi's body was emblamed. At the close of the sacrifice which he had begun, the gods, were willing, on the intercession of the priests, to restore him to life, but he declined the offer; and was placed by the deities, according to his desire, in the eyes of all living creatures. It is in consequence of this that they are always opening and shutting (nimisha means "The twinkling of the eye").

The fifth case relates to the conflict between Vashishtha and Vishvamitra. Vashishtha was a Brahmin priest. Vishvamitra was a Kshatriya. His great ambition was to become a Brahmin. The following episode reported from the Ramayana explains the reasons why he became anxious to become a Brahmin.

"mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_57 There was formerly, we are told, a king called Kusa, son of Prajapati, who had a son called Kusanabha, who was father of Gadhi, the father of Vishvamitra. The latter ruled the earth for many thousand years. On one occasion, when he was making a circuit of the earth, he came to Vashishtha's hermitage, the pleasant abode of many saints, sages, and holy devotees, where, after all first declining, he allowed himself to be hospitably entertained with his followers by the son of Brahma. Vishvamitra, however, coveting the wonderful cow, which had supplied all the dainties of the feast, first of all asked that she should be given to him in exchange for a hundred thousand common cows, adding that "she was a gem, that gems were the property of the King, and, therefore, the cow owes his by right." On this price being refused, the King advances immensely in his offers, but all without effect. He then proceeds very ungratefully, and tyrannically, it must be allowed—to have the *cow* removed by force, but she breaks away from his attendants, and rushes back to her master, complaining that he was deserting her. He replies that he was not deserting her, but that the king was much more powerful than he. She answers, 'Men do not ascribe strength to a Kshatriya : the Brahmans are stronger. The strength of Brahmans is divine, and superior to that of Kshatriyas. Thy strength is immeasurable. Vishvamitra, though of great vigour, is not more powerful than thou. Thy energy is invincible. Commission me, who have been acquired by thy Brahmanical power, and I will destroy the

pride, and force, and attempt of this wicked prince."She accordingly by her bellowing creates hundred of Pahalvas, who destroy the entire host of Vishvamitra, but are slain by him in their turn. Sakas and Yavanas, of great power and valour, and well armed, were then produced, who consumed the king's soldiers, but were routed by him. The cow then calls into existence by her bellowing, and from different parts of her body, other warriors of various tribes, who again destroyed Vishvamitra's entire army, foot soldiers, elephants, horses, chariots, and all. A hundred of the monarch's sons, armed with various weapons, then rushed in great fury on Vashishtha, but were all reduced to ashes in a moment by the blast of that sage's mouth. Vishvamitra, being thus utterly vanquished and humbled, appointed one of his sons to be regent, and travelled to the Himalaya, where he betook to austerities, and thereby obtained a vision of Mahadeva, who at his desire revealed to him the science of arms in all its branches, and gave him celestial weapons with which, elated and full of pride, he consumed the hermitage of Vashishtha, and put its inhabitants to flight.

Vashishtha then threatens Vishvamitra and uplifts his Brahmanical mace. Vishvamitra, too, raises his fiery weapon and calls out to his adversary to stand. Vashishtha bids him to show his strength and boasts that he will soon humble his pride. He asks:"What comparison is there between a Kshatriya's might and the might of a Brahman? Behold, thou contemptible Kshatriya, my divine Brahmanical power.' The dreadful fiery weapon uplifted by the son of Gadhi was then quenched by the rod of the Brahman, as fire is by water."Many and various other celestial missiles, as the nooses of Brahma, Kala (Time), and Varuna, the discuss of Vishnu, and the trident of Shiva, were hurled by Vishvamitra at his antagonist, but the son of Brahma swallowed them up in his all-devouring mace. Finally, to the intense consternation of all the gods, the warrior shot off the terrific weapon of Brahma ; but this was equally ineffectual against the Brahmanical sage. Vashishtha had now assumed a direful appearance."Jets of fire mingled with smoke darted from the pores of his body ; the Brahmanical mace blazed in his hand like a smokeless mundane conflagration, or a second sceptre of Yama."Being appeased, however, by the munis, who proclaimed his superiority to his rival, the sage stayed his vengeance ; and Vishvamitra exclaimed with a groan:"Shame on a Kshatriya's strength : the strength of a Brahman's might alone is strength ; by the single Brahmanical mace all my weapons have been destroyed."

No alternative now remains to the humiliated monarch, but either to acquiesce in this help less inferiority, or to work out his own elevation to the Brahmanical order. He embraces the latter alternative :”Having pondered well this defeat, I shall betake myself, with composed senses and mind, to strenuous austere fervour, which shall exalt me to the rank of a Brahman."Intensely vexed and mortified, groaning and full of hatred against his enemy, he travelled with his queen to the south, and carried his resolution into effect. At the end of a thousand years Brahma appeared, and announced that he had conquered the heaven of royal sages (rajarshis): and, in consequence of his austere fervour, he was recognised as having attained that rank."

The conflict seems to have begun in the reign of King Sudas who belonged to the line of Ikshavaku. Vashishtha was the hereditary priest of King Sudas. For some reason which is not very clearly stated Sudas appointed Vishvamitra as his family priest. This brought about a conflict between Vishvamitra and Vashishtha. This conflict once started raged on for a long time.

The conflict between the two took a peculiar turn. If Vishvamitra was involved in a dispute Vashishtha came into the fray and sided with his opponent. If Vishvamitra was involved in dispute Vashishtha entered into fray and sided with Vishvamitra as opponent. It was a case of one persecuting the other.

The first such episode is that of Satyavrata otherwise called Trishanku. The story as told in the Harivamsha is as follows :

“mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_58Meanwhile Vashishtha, from the relation subsisting between the King (Satyavrata's father) and himself, a disciple and spiritual preceptor, governed the city of Ayodhya, the country, and the interior apartments of the royal palace. But Satyavrata, whether through folly or the force of destiny, cherished constantly an increased indignation against Vashishtha, who for a (proper) reason had not interposed to prevent his exclusion from the royal power by his father. 'The formulas of the marriage ceremonial are only binding,' said Satyavrata, 'when the seventh step has been taken, and this had not been done when I seized the damsel : still Vashishtha, who knows the precepts of the law, does not come to my aid.' Thus Satyavrata was incensed in his mind against Vashishtha, who however, had acted from a sense of what was right. Nor did Satyavrata understand (he propriety of) that silent penance imposed upon him by his father..... When he had supported this arduous rite, (the supposed that) he had redeemed his

family position. The venerable muni Vashishtha did not, however, (as has been said) prevent his father from setting him aside, but resolved to install his son as King. When the powerful prince Satyavrata had endured the penance for twelve years, he beheld, when he was without flesh to eat, the milch cow of Vashishtha which yielded all objects of desire ; and under the influence of anger ; delusion, and exhaustion, distressed by hunger, and failing in the ten duties he slew..... and both partook of her flesh himself, and gave it to Vishvamitra's sons to eat. Vashishtha hearing of this, became incensed against him", and imposed on his the name of Trisanku as he had committed three sins. On his return home, Vishvamitra was gratified by the support which his wife had received, and offered Trisanku the choice of a boon. When this proposal was made, Trisanku chose the boon of ascending bodily to heaven. All apprehension from the twelve year's drought being now at an end, the muni (Vishvamitra) installed Trisanku in his father's kingdom, and offered sacrifice on his behalf. The mighty Kausika then, in spite of the resistance of the gods and of Vashishtha, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_59 exalted the king alive to heaven.”². As stated in the Harivamsa :

“mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_60 In consequence of the wickedness which had been committed, Indra did not rain for a period of twelve years. At that time Vishvamitra had left his wife and children and gone to practise austerities on the sea-shore. His wife, driven to extremity by want. was on the point of selling her second son for a hundred cows, in order to support the others ; but this arrangement was stopped by the interventions of Satyavrata, who liberated the son when bound, and maintained the family by providing them with the flesh of wild animals ; and according to his father's injunction, consecrated himself for the performance of a silent penance for twelve years.”The next episode in which they appear on opposite sides is that of Harishchandra the son of Trisanku. The story is told in the Vishnu Purana and in the Markendeya Purana. This is how the story runs:

"On one occasion, when hunting the king heard a sound of female lamentation which proceeded, it appears, from the sciences who were becoming mastered by the austerely fervid sage Vishvamitra, in a way they had never been before by anyone else ; and were consequently crying out in alarm at his superiority. In fulfilment of his duty as a Kshatriya to defend the weak, and inspired by the god Ganesha, who

had entered into him, Harishchandra exclaimed. "What sinner is this who is binding fire in the hem of his garment, while, I, his lord, am present, resplendent with force and fiery vigour?" He shall to-day enter on his long sleep, pierced in all his limbs by arrows, which, by their discharge from my bow, illuminate all the quarters of the firmament." Vishvamitra was provoked by this address. In consequence of his wrath the Sciences instantly perished, and Harishchandra, trembling like the leaf of an Asvattha tree, submissively represented that he had merely done his duty as a king, which he defined as consisting in the bestowal of gifts on eminent Brahmins and other persons of slender means, the protection of the timid, and war against enemies. Vishvamitra hereupon demands a gift as a Brahman intent upon receiving one. The king offers him whatsoever he may ask : Gold, his own son, wife, body, like kingdom, good fortune. The saint first requires the present for the Rajasuya sacrifice. On this being promised, and still more offered, he asks for the empire of the whole earth, including everything but Harishchandra himself, his wife and son, and his virtue which follows its possessor wherever he goes." Harishchandra joyfully agrees. Vishvamitra then requires him to strip off all his ornaments, to clothe himself in the bark of trees, and to quit the kingdom with his wife Saviya (Taramati) and his son. When he is departing the sage stops him and demands payment of his yet unpaid sacrificial fee. The king replies that he has only the persons of his wife his son, and himself left. Vishvamitra insists that he must nevertheless pay: and that "unfulfilled promises of gifts to Brahmans bring destruction." The unfortunate prince, after being threatened with a curse, engages to make the payment in a month ; and commences his journey with a wife unused to such fatigues, amid the universal lamentations of his subjects. While he lingers, listening to their affectionate remonstrances against his desertion of his kingdom, Vishvamitra, comes up and being incensed at the delay and the King's apparent hesitation, strikes the queen with his staff, as she is dragged on by her husband. Harishchandra then proceeded with his wife and little son to Benares, imagining that this divine city, as the special property of Siva, could not be possessed by any mortal. Here he found the relentless Vishvamitra waiting for him, and ready to press his demand for the payment of his sacrificial gift, even before the expiration of the full period of grace. In this extremity Saivya the queen suggests with a sobbing voice that her husband should sell her. On hearing this proposal Harishchandra swoons, then recovers, utters lamentations, and swoons again, and his

wife, seeing his said condition, swoon also. While they are in a state of unconsciousness, their famished child exclaims in distress, "O father, father, give me bread ; O mother, mother give me food : hunger overpowers me and my tongue is parched." At this moment Vishvamitra returns, and after recalling Harishchandra to consciousness by sprinkling water over him, again urges payment of the present. The king again swoons, and is again restored. The sage threatens to curse him if his engagement is not fulfilled by sunset. Being now pressed by his wife, the King agrees to sell her ading, however, "If my voice can utter such a wicked word, I do not what the most inhuman wretches cannot perpetrate." He then goes into the city and in self-focusing language offers his queen for sale as a slave. A rich old Brahman offers to buy her at a price corresponding to her value, to do his household work. Seeing his mother dragged away, the child ran after her, his eyes dimmed with tears, and crying 'mother'. The Brahman purchaser kicked him when he came *up*; but he would not let his mother go, and continued crying 'mother, mother.' The queen then said to the Brahman, ' Be so kind, my master, as to but also this child, as without him I shall prove to thee but a useless purchase. Be thus merciful to me in my wretchedness, unite me with my son, like a cow to her calf." The Brahman agrees: "Take this money and give me the boy." After the Brahman had gone out of sight with his purchases, Vishvamitra again appeared and renewed his demands ; and when the afflicted Harishchanda offered him the small sum he had obtained by the sale of his wife and son, he angrily replied, "If, miserable Kshatriya, thou thinkest this a sacrificial gift befitting my deserts, thou shall soon beheld the transcendent power of my ardent austere fervour, of my spotless Brahmanhood of my terrible majesty, and of my holy study. Harishchandra promises an additional gift, and Vishvamitra allows him the remaining quarter of the day for its liquidation. On the terrified and afflicted prince offering himself for sale, in order to gain the means of meeting this cruel demand, Dharma (Righteousness) appears in the form of a hideous and offensive Chandala, and agrees to buy him at his own price, large or small. Harishchandra declines such a degrading servitude, and declares that he would rather be consumed by the fire of his persecutor's curse than submit to such a fate. Vishvamitra however again comes on The scene, asks why he does not accept the large sum offered by the Chandala ; and, when he pleads in excuse his descent from the solar race, threatens to fulminate a curse against him if he does not accept that method of meeting his liability. Harishchandra implores that he may be spared this

extreme of degradation, and offers to become Vishvamitra's slave in payment of the residue of his debt; whereupon the sage rejoins, "If thou art my slave, then I sell thee as such to the Chandala for a hundred millions of money."

"The Chandala, delighted, pays down the money, and carries off Harishchandra, bound, beaten, confused and afflicted, to his own place of abode. Harishchandra is sent by the Chandala to steal grave clothes in a cemetery and is told that he will receive two-sixths goind to his masters, and one-sixth to the King. In this horrid spot, and in this degrading occupation, he spent in great misery, twelve months, which seemed to him like a hundred years. He then falls asleep and has a series of dreams suggested by the life he had been leading. After he awoke, his wife came to the cemetery to perform the obsequies of their son, who had died from the bite of a serpent. At first the husband and wife did not recognize each other, from the change in appearance which had been brought upon them by their miseries. Harishchandra however, soon discovered from the tenor of her lamentations that it is his wife, and falls into a swoon; as the queen does also when she recognizes her husband. When consciousness returns, they both break out into lamentations, the father bewailing in a touching strain the loss of his son, and the wife the degradation of the King. She then falls on his neck, embraces him, and asks "whether all this is a dream, or a reality, as she is utterly bewildered", and adds, that "if it be a reality, then righteousness is unavailing to those who practise it." After hesitating to devote himself to death on his son's funeral pyre without receiving his master's leave, Harishchandra. resolves to do so, braving all the consequences, and consoling himself with the hopeful anticipation: "If I have given gifts, and offered sacrifices and gratified my religious teachers, then may I be reunited with my son and with thee (my wife) in another world." The queen determines to die in the same manner. When Harishchandra., after placing his son's body on the funeral pile, is meditating on the Lord Shri Narayan Krishna, the supreme spirit, all the gods arrive, headed by Dharma (righteousness), and accompanied by Vishvamitra. Dharma entreats the king to desist from his rash intention; and Indra announces to him that he, his wife, and son have conquered heaven by their good works. Amrosia, the antidote of death, and flowers are rained by the god from the sky ; and the king's son is restored to life and the bloom of youth. The king, adorned with celestial clothing and garlands, and the queen, embrace their son. Harishchandra, however declares that he cannot go to heaven till he has received his master the

Chandala's permission, and has paid him a ransom. Dharma then reveals to the king that it was he himself who had miraculously assumed the form of a Chandala. The king next objects that he cannot depart unless his faithful subjects, who are shares in his merits, are allowed to accompany him to heaven, at least for one day. This request is granted by Indra; and after Vishvamitra has inaugurated Rohitasva the king's son to be his successor, Harishchandra, his friends and followers, all ascend in company to heaven. Even after this great consummation, however, Vashishtha, the family-priest of Harishchandra, hearing, at the end of a twelve years' abode in the waters of the Ganges, an account of all that has occurred, becomes vehemently incensed at the humiliation inflicted on the excellent monarch, whose virtues and devotion to the gods and Brahmans he celebrates, declares that his indignation had not been so great roused even when his own hundred sons had been slain by Vishvamitra, and in the following words dooms the latter to be transformed into crane. Wherefore that wicked man, enemy of the Brhmans, smitten by my curse, shall be expelled from the society of intelligent beings, and losing his understanding shall be transformed into a Vaka." Vishvamitra reciprocates the curse, and changes Vashishtha into a bird of the species called Ari. In their new shapes the two have a furious fight. the Ari being of the portentous height of two thousand yojanas = 18,000 miles, and the Vaka of 3090 yojanas. The first assail each other with their wings ; then the Vaka smites his antagonist in the same manner, while the Ari strikes with his talons. Falling mountains, overturned by the blasts of wind raised by the flapping of their wings, shake the whole earth, the waters of the ocean overflow, the earth itself, thrown off its perpendicular slopes downwards patala, the lower regions. Many creatures perish by these various convulsions. Attracted by the dire disorder, Brahma arrives, attended by all the gods, on the spot, and command the combatants to desist from their fray. They were too fiercely infuriated to regard this injunction; but Brahma put an end to the conflict by restoring them to their natural forms, and consoling them to be reconciled.

The next episode in which they came in as opponents is connected with *Ambarish* King of Ayodhya.

¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_61The story relates that Ambarisha was engaged in performing a sacrifice, when Indra carried away the victim. The priest said that this ill-omened event had occurred owing to the king's had administration, and would call for a great expiation, unless a

human victim could be produced. After a long search the royal rishi (Ambarisha) came upon the Brahman-rishi Richika, a descendent of Bhrigu, and asked him to sell one of his sons for a victim, at the price of a hundred thousand cows. Richika answered that he would not sell his eldest son; and his wife added that she would not sell the youngest: eldest sons”she observed,”being generally the favourites of their fathers, and youngest sons of their mothers.”The second son, Sunassena, then said that in that case he regarded himself as the one who was to be sold, and desired the king to remove him. The hundred thousand cows, with ten millions of gold pieces and heaps of jewels, were paid down, and Sunassepa carried away. As they were passing through Pushkara Sunassepa beheld his maternal uncle Vishvamitra who was engaged in austerities there with other rishis, threw himself into his arms, and implored his assistance, urging his orphan friendless, and helpless state, as claims on the sage's benevolence.

"Vishvamitra soothed him: and pressed his own sons to offer themselves as victim in the room of Sunassepa. This proposition met with no favour from Madhushyanda and the other sons of the royal hermit, who answered with haughtiness and derision:"How is that thou sacrificest thine own sons, and seekest to rescue those of others? We look upon this as wrong, and like the eating of one's own flesh."The sage was exceedingly wroth at this disregard of his injunction, and doomed his sons to be born in the most degraded classes, like Vashishtha's sons, and to eat dog's flesh, for a thousand years. He then said to Sunassepa : When thou art bound with hallowed cords, decked with a red garland, and annointed with unguents, and fastened to the sacrificial post of Vishnu, then address thyself to Agni, and sing these two divine verses (gathas), at the sacrifice of Ambarisha ; then shalt thou attain the fulfilment."Being furnished with the two gathas, Sunassepa proposed at once to king Ambarisha that they should set out for their destination. When bound at the stake to be immolated, dressed in a red garment,"he celebrated the two gods, Indra and his younger brother (Vishnu), with the excellent verses. The thousand-eyed (Indra) was pleased with the secret hymn, and bestowed long life on Sunassepa."The last episode recorded in which the two appear as opponents is connected with King *Kalmashapada*. The episode is recorded in the Adi Parva of the Mahabharata.

“mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - [_msocom_62](#)Kalmashapada was a King of the race Ikshvaku. Vishvamitra wished to be employed by him as his officiating

priest; but the king preferred Vashishtha."It happened, however, that the king went out to hunt, and after having killed a large quantity of game, he became very much fatigued, as well as hungry and thirsty. Meeting Saktri, the eldest of Vashishtha's hundred sons, on the road, he ordered him to get out of his way. The priest civilly replied : "The path is mine, O King; this is the immemorial law; in all observances the king must cede the way to the Brahman."Neither party would yield, and the dispute waxing warmer, the king struck the muni with his whip. The muni, resorting to the usual expedient of offended sages, by a curse doomed the king to become a man eater."It hapened that at that time enmity existed between Vishvamitra and Vashishtha on account of their respective claims to be priest to Kalmashapada."Vishvamitra had followed the king; and approached while he was disputing with Saktri. Perceiving, however, the son of his rival Vashishtha, Vishvamitra made himself invisible, and passed them, watching his opportunity. The king began to implore Saktri's clemency: but Vishvamitra wishing to prevent their reconciliation, commanded a Rakshasa (a man-devouring demon) to enter into the king. Owing to the conjoint influence of the Brahma-rishi's curse, and Vishvamitra's command, the demon obeyed the injunction. Perceiving that his object was gained, Vishvamitra left things to take their course, and absented himself from the country. The king having happened to meet a hungry Brahman, and sent him, by the hand of his cook (who could procure nothing else), some human flesh to eat, was cursed by him also to the same effect as by Saktri. The curse, being now augmented in force, took effect, and Saktri himself was the first victim, being eaten up by the King. The same fate befell all the other sons of Vashishtha at the instigation of Vishvamitra. Perceiving Saktri to be dead, Vishvamitra again and again incited the Rakshasa against the sons of Vashishtha; and accordingly the furious demon devoured those of his sons who were younger than Saktri as a lion eats up the small beasts of the forest. On hearing of the destruction of his sons by Vishvamitra, Vashishtha supported his affliction, as the great mountain sustains the earth. He meditated his own destruction, but never thought of exterminating the Kausikas. This divine sage hurled himself from the summit of Meru, but fell upon the rocks as if on a heap of cotton. Escaping alive from his fall, he entered a glowing fire in the forest; but the fire, though fiercely blazing, not only failed to burn him, but seemed perfectly cool. He next threw himself into the sea with a heavy stone attached to his neck; but was cast up by the waves on the dry land. He then went home to his hermitage; but seeing it empty and desolate, he.

was again overcome by grief and went out; and seeing the river Vipasa which was swollen by the recent rains and sweeping along many trees torn from its banks, he conceived the design of drowning himself into its water, he accordingly tied himself firmly with cords, and threw himself in, but the river severing his bonds, deposited him unbound (vipasa) on dry land; whence the name of the stream, as imposed by the sage. He afterwards saw and threw himself into the dreadful Satadru (Sutlej), which was full of alligators, etc., and derived its name rushing away in a hundred directions on seeing the Brahman brilliant as fire. In consequence of this he was once more stranded; and seeing he could not kill himself, he went back to his hermitage."There are only particular instances of their general enmity towards each other. This general enmity was of a mortal kind so much so that Vishvamitra wanted even to murder Vashishtha. This is related in the Shalyaparva of the Mahabharata. Says the author of the Mahabharata :

"mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_63 There existed a great enmity, arising from rivalry in their austerities, between Vishvamitra and the Brahman rishi Vashishtha. Vashishtha had an extensive hermitage in Sthanutirtha, to the east of which was Vishvamitra's..... These two great ascetics were every day exhibiting intense emulation in regard to their respective austerities. But Vishvamitra, beholding the might of Vashishtha, was the most chagrined; and fell into deep thought. The idea of this sage, constant in duty(!) was the following: 'This river Sarasvati will speedily bring to me on her current the austere Vashishtha, the most eminent of all mutterers of prayers. When that most excellent Brahman has come, I shall most assuredly kill him.' Having thus determined, the divine sage Vishvamitra, his eyes reddened by anger, called to mind the chief of rivers. She being thus the subject of his thoughts, became very anxious, as she knew him to be very powerful and very irascible. Then trembling palid, and with joined hands, the Sarasvati stood before the chief of munis. Like a woman whose husband has been slain, she was greatly distressed; and said to him, 'What shall I do?' The incensed muni replied, 'Bring Vashishtha hither speedily, that I may slay him.' The lotus-eyed goddess, joining her hands trembled in great fear, like a creeping plant agitated by the wind"..... Vishvamitra, however, although he saw her condition, repeated his command."The Sarasvati, who knew how sinful was his design, and that the might of Vashishtha was unequalled, went trembling, and in great dread of being cursed by both the sages, to Vashishtha, and told him what his rival had said. Vashishtha seeing her

emaciated, pale, and anxious, spoke thus: 'Deliver thyself, O chief of rivers; carry me unhesitatingly to Vishvamitra, lest he curse thee'. Hearing these words of the merciful sage, the Sarasvati considered how she could act most wisely. She reflected, 'Vashishtha has always shown me great kindness; I must seek his welfare.' Then observing the Kausika sage praying and sacrificing on her brink, she regarded that as a good opportunity, and swept away the bank by the force of her current. In this way the son of Mitra and Varuna (Vashishtha) was carried down; and while he was being borne along, he thus celebrated the river: 'Thou, O Sarasvati, issued from the lake of Brahma, and pervadest the whole world with thy excellent streams. Residing in the sky, thou dischargest water into the clouds. Thou alone art all waters. By these we study.' 'Thou art nourishment, radiance, fame, perfection, intellect, light. Thou art speech; thou art Svaha; this world is subject to thee. Thou, in fourfold form, dwellest in all creatures' !.....

Beholding Vashishtha brought near by the Sarasvati, Vishvamitra searched for a weapon with which to make an end of him. Perceiving his anger, and dreading lest Brahmanicide should ensue, the river promptly carried away Vashishtha in an easterly direction; thus fulfilling the commands of both sages, but eluding Vishvamitra. Seeing Vashishtha so carried away, Vishvamitra, impatient, and enraged by vexation, said to her : ' Since thou, O chief of rivers, hast eluded me, and hast receded, roll in waves of blood acceptable to the chief of demons,' '(which are fabled to gloat on blood).' 'The Sarasvati, being thus cursed, flowed for a year in a stream mingled with blood. . . . Rakshasas came to the place of pilgrimage, where Vashishtha had been swept away, and revealed in drinking to satiety the bloody stream in security, dancing and laughing, as if they had conquered heaven.' 'Some rishis who arrived at the spot some time after were horrified to see the blood-stained water, and the Rakshasas quaffing it, and' 'made the most strenuous efforts to rescue the Sarasvati.'

The foregoing cases relate to individual conflicts between a particular Brahmin and a particular Kshatriya. The cases which follow are cases of class or communal conflicts between Brahmins on the one hand and the Kshatriyas on the other. They are not mere conflicts. Nor is it correct to say that they were like communal riots. They were class wars undertaken by one community with the avowed intention of exterminating the other root and branch. Two such class wars of extermination have been recorded in the Mahabharat. The first is a war of the Haihaya Kshatriyas on the Bhargava Brahmins. It occurred in the reign of the Haihaya King

Kritavirya. The following is the description of this war in the Adiparvan of the Mahabharat.

"mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_64 There was a king named Kritavirya, by whose liberality the Bhrigu, learned in the Vedas, who officiated as his priest, had been greatly enriched with corn, and money. After he had gone to heaven, his descendants were in want of money, and came to beg for a supply from the Bhrigus, of whose wealth they were aware. Some of the latter hid their money under ground, others bestowed it on Brahmans, being afraid of the Kshatriyas, while others again gave these last what they wanted. It happened, however, that a Kshatriya, while digging the ground, discovered some money buried in the house of a Bhrigu. The Kshatriyas then assembled and saw this treasure, and, being incensed, slew in consequence all the Bhrigus, whom they regarded with contempt, down to the children in the womb. The widows, however, fled to the Himalaya mountains. One of them concealed her unborn child in her thigh. The Kshatriyas, hearing of its existence from a Brahmani informant, sought to kill it; but it issued forth from its mother's thigh with lustre, and blinded the persecutors. After wandering about bewildered among the mountains for a time, they humbly supplicated the mother of the child for the restoration of their sight; but she referred them to her wonderful infant Aurva into whom the whole Veda, with its six Vedangas, had entered, as the person who (in retaliation of the slaughter of his relatives) had robbed them of their eye-sight, and who alone could restore it. They accordingly had recourse to him, and their eye-sight was restored. Aurva, however, meditated the destruction of all living creatures, in revenge for the slaughter of the Bhrigus, and entered on a course of austerities which alarmed both gods, asuras, and men; but his progenitors (Pitris) themselves appeared, and sought to turn him from his purpose by saying that they had no desire to be revenged on the Kshatriyas : It was not from weakness that the devout Bhrigus overlooked the massacre perpetrated by the murderous Kshatriyas. When we became distressed by old age, we ourselves desired to be slaughtered by them. The money which was buried by someone in a Bhrigu's house was placed there for the purpose of exciting hatred, by those who wished to provoke the Kshatriyas. For what had we, who were desiring heaven, to do with money?" They add that they hit upon this device because they did not wish to be guilty of suicide, and concluded by calling upon Aurva to restrain his wrath; and abstain from the sin he was meditating," Destroy not the Kshatriyas, O

son, nor the seven worlds. Suppress thy kindled anger which nullifies the power of austere-fervour." Aurva, however, replies that he cannot allow his threat to remain unexecuted. His anger, unless wreaked upon some other object, will, he says, consume himself. And he argues on grounds of justice, expediency, and duty, against the clemency which his progenitors recommend. He is, however, persuaded by the Pitris to throw the fire of his anger into the sea, where they say it will find exercise in assailing the watery element, and in this way his threat will be fulfilled." The second class war and which was also a war of extermination was declared by the Bhargava Brahmins on the Haihaya Kshatriyas. In this the leader of Bhargava Brahmins was one Parashuram. The story of the birth of Parashuram is described in the Vishnu Purana in the following terms:

"mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_65Gadhi's daughter Satyavati had been given in marriage to an old Brahman called Richika, of the family of Bhrigu. In order that his wife might bear a son with the qualities of a Brahman, Richika had prepared for her a dish of Charu (rice, barley, and pulse, with butter and milk) for her to eat; and a similar mess for her mother, calculated to make her conceive a son with the character of a warrior. Satyavati's mother, however, persuaded her to exchange messes. She was blamed by her husband on her return home for what she had done. I quote the words of the original:

"Sinful woman, what improper deed is this that thou has done? I beheld thy body of a very terrible appearance. Thou hast certainly eaten the Charu prepared for thy mother. This was wrong. For into that Chari I had infused all the endowments of heriosm, vigour, and roce, whilst into thine I had introduced all these qualities of quietude, knowledge, and patnence which constitute the perfection of a Brahmin. Since thou hast acted in contravention of my design a son shall be born to thee who shall live the dreadful, martial, and murderous life of a Kshatriya and thy mother's offspring shall exhibit the peaceful disposition and conduct of a Brahman." As soon as she had heard this, Satyavati fell down and seized her husband's feet, and said, 'My lord, I have acted from ignorance; show kindness to me, let me not have a son of the sort thou hast described; if thou pleasest, let me have a grandson of that description. `Subsequently she bore Jamadagni, and her mother gave birth to Vishvamitra. Satyavati became the river called Kausiki. Jamadagni wedded Renuka, the daughter of Renu, of the family of Ikshvaku; and on her he begot a son called Parasurama.'" The following

additional details about Parshuram's family history is given in the Venaparvan of the Mahabharata :

“mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_66Jamadagni and Satyavati had five sons, the youngest of whom was the reputable Parasurama. By his father's command he kills his mother (who by the indulgence of impure desire, had fallen from her previous sanctity), after the four elder sons had refused this matricidal offer, and had in consequence been deprived of reason by their father's curse. At Parasurama's desire however, his mother is restored by his father to life, and his brothers to reason; and he himself is absolved from all the guilt of murder; and obtains the boon of invincibility and long life from his father.” This second class war took place in the reign of the Haihaya king Arjuna the son of King Kartavirya. To understand it correctly it is necessary to divide it into two parts for there are two stages in it. The trouble began with the Brahmans claiming certain prerogatives and powers exclusively for themselves and King—Arjuna scouting them in most contemptuous terms. As the Anushasanparvan of the Mahabharata puts it.

“mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_67Then ascending his chariot glorious as the resplendent sun, he exclaimed in the intoxication of his prowess, 'Who is like me in fortitude, courage, fame, heroism, energy, and vigour?' At the end of this speech a bodiless voice on the sky addressed him: 'Thou knowest not, O fool, that a Brahman is better than a Kshatriya. It is with the help of the Brahman that the Kshatriya rules his subjects. Arjuna answers 'If I am pleased, I can create, or, if displeased, annihilate, living beings; and no Brahman is superior to me in act, thought, or word. The first proposition is that the Brahmans are superior; the second that the Kshatriyas are superior: both of these thou hast stated with their ground, but there is a difference between them. The Brahmans are dependent on the Kshatriyas, and not the Kshatriyas on the Brahmans; and the Kshatriyas on the Brahmans; and the Kshatriyas are eaten up by the Brahmans, who wait upon them and only make the Vedas a pretence. Justice the protection of the people, has its seat in the Kshatriyas. From them the Brahmans derive their livelihood: how then can the latter be superior? I always keep in subjection to myself those Brahmans, the chief of all beings, who subsist on alms, and who have a high opinion of themselves. For truth was spoken by that female the Gayatri in the sky. I shall subdue all those unruly Brahmans clad in hides. No one in the three worlds, god or man can hurl me from my

royal authority; wherefore I am superior to any Brahman." On hearing this Vayu comes and says to Arjuna :

"mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_68 Abandon this sinful disposition, and to obeisance to the Brahmans. If thou shalt do them wrong, thy kingdom shall be convulsed. They will subdue thee; those powerful men will humble thee, and expel thee from thy country' The king asks him, 'who art thou? Vayu replies, 'I Vayu, the messenger of the gods, and tell thee what is for thy benefit'. Arjuna rejoins, '*Oh* thou displayest to-day a great warmth of devotion to the Brahmans. But say that a Brahman is like (any other) earth-born creature. Or say that this most excellent Brahman is something like the wind. But fire is like the waters, or the sun, or the sky.' Vayu then adduces various instances in which the superiority of the Brahmans has been manifested. Arjuna then drops his hostility against the Brahmans and becomes their friend. In the Anushasanaparva he is reported to have said :

"mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_69 I live altogether and always for the sake of the Brahmans. I am devoted to the Brahmans, and do obeisance to them continually. And it is through the favour of Dattatreya (A Brahman) that I have obtained all this power and high renown, and that I have practised righteousness."

It is in the second stage that Parashuram comes on the scene and exterminates the Kshatriyas. The story is told in the Shantiparvan in the following terms :

"mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_70 Being of a meek, pious, kind and charitable turn of mind, the valiant Arjuna thought nothing of the curse; but his sons, who were of an arrogant and barbarous disposition, became the cause of its resulting in his death. Without their father's knowledge they took away Jamadagni's calf; and in consequence Parasurama attacked Arjuna and cut off his arms." His son retaliated by killing Jamadagni. Parashurama incensed at the slaughter of his father, having vowed in consequence to sweep away all Kshatriyas from the earth, seized his weapons; and slaying all the sons and grandsons of Arjuna, with thousands of the Haihayas, he turned the earth into a mass of ensanguined mud. Having thus cleared the earth of Kshatriyas, he became penetrated by deep compassion and retired to the forest. After some thousands of years had elapsed, the hero, naturally irascible, was taunted by Paravsu, the son of Raibhya and grandson of Visvamitra, in a

public assembly in these words: 'Are not these virtuous men, Pratardana and the others, who are assembled at the sacrifice in the city of Yayati,—are they not Kshatriyas? Thou hast failed to execute thy threat, and vainly boastest in the assembly. Thou has withdrawn to the mountain from fear of those valiant Kshatriyas, while the earth has again become overrrun by hundred of their race. `Hearing these words, Rama seized his weapons. The hundreds of Kshatriyas who had before been spared had now grown powerful kings. These, however, Parasurama now slew with their children, and all the numerous infants then unborn as they came into the world. Some, however, were preserved by their mothers.'”Those who are curious to know the subsequent history of the Kshatriyas might be interested in the following extract from the Adiparvan.

“mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_71 Having one and twenty time swept away all the Kshatriyas from the earth, the son of Jamadagni engaged in austerities on Mahendra the most excellent of mountains. After he had cleared the world of Kshatriyas, their widows came to the Brahmans, praying for offspring. The religious Brahmans, free from any impulse of lust cohabited at the proper seasons with these women, who in consequence became pregnant, and brought forth valiant Kshatriya boys and girls, to continue the Kshatriya stock. Thus was the Kshatriya race virtuously begotten by Brahmans on Kshatriya women, and became multiplied and long-lived, thence arose four castes inferior to the Brahmans.”These instances of enmity were accompanied by challenges from one side to the other which shows how high were the tempers running on both sides. The conduct of king Nimi in yoking the Brahmans to his chariot and making them drag it like horses show how determined the Kshatriyas were to humiliate the Brahmans. The challenges uttered by Arjuna Kartavirya against the Brahmans indicates his determination to level them down. The Brahmans on their side were not slow to take up this challenge and send counter challenges to the kshatriyas not to provoke the Brahmans. This is very clear from the way Vayu the messenger or Ambassador of the Brahmans talks to Arjuna Kartavirya after he had issued his challenge to the Brahmans. Vayu tells Arjuna how the Brhmans Atri made sea water saltish by urinating in it, how Dandakas were overthrown by the Brahmans, how the Kshatriyas of the Talajaughas were destroyed by a single Brahmin Aurva; The striking power of the Brahmans is not only superior to that of the Kshatriya it is superior to that of the Devas and Vayu proceeds to tell

Arjuna some of the victories achieved by the Brahmins over the Devas. He tells him how Varuna ran away with Bhadra the daughter of Soma and the wife of the Brahman Utathya of the race of Angiras how Utathya by his curse caused the earth to be dried up and how Varuna as a consequence submitted to Utathya and returned his wife. He tells him how once the *Devas* were conquered by the Asuras and the Danavas, how deprived of all oblations, and stripped of their dignity they came to the earth went to the Brahmin Agastya and applied to him for protection and how Agastya scorched the Danavas from heaven and earth and made him fly to the South and reinstated the Devas in their dominion. He tells Arjuna how once the Adityas were performing a sacrifice and while engaged in it were attacked by Danvas called Khalims, who came in ten in thousands to slay them, how the Adityas went to Indra and how Indra himself attacked by the Daityas not being able to render help to the Adityas went to the Brahmin Vashishtha for help and how Vashishtha taking mercy on the Adityas saved them by burning the Danavas alive. He next tells Arjuna how the Danavas once fought with the Devas, how by enveloping them in dreadful darkness the Danavas slaughtered the Devas, how the Devas implored the Brahmin Atri to become the moon and dispell the glow around the sun which Atri did thereby saved the Devas from the Danvas. The last episode of Brahmin prowess which Vayu tells Arjuna is how the Brahmin Chyavana compelled Indra to admit the Ashwins to equal rank and drink Soma with them as a token of equality and how when Indra refused he took away both the earth and heaven from them and how he created a Demon Mada and put the Devas including Indra into his mouth and how he compelled Indra to admit the Ashwins to equal rank and drink Soma with them and how Indra ultimately surrendered to Chyavana.

Vayu did not merely recount these exploits of the Brahmins. He did something more. Every time he gave Arjuna an instance of the power of the Brahmins he ended by asking Arjuna pointed questions such as "Can you tell me of any Kshatriya who was superior to him (i.e. the Brahmins hero of the story)mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_72" Declare on your part, any Kshatriya who has been superior to him,"Tell me of any Kshatriya superior to Atri."

This class war between the Brahmins and the Kshatriyas must have gone on for ages. In the light of this the attitude of Manu towards this

Class War comes as very strange. Consider the following verses from the Manu Smriti :

IV. 135."Let him who desires prosperity, indeed, never despise a Kshatriya, a snake, and a learned Brahmana, be they ever so feeble."

IV. 136."Because these three, when treated with disrespect, may utterly destroy him; hence a wise man must never despise them."

X. 322."Kshatriyas prosper not without Brahmans, Brahmans prosper not without Kshatriyas; Brahmans and Kshatriyas, being closely united, prosper in this (world) and in the next."Here there is a clear attempt on the part of Manu to close the ranks. Against whom did Manu want the Brahmans and the Kshatriyas to close their ranks? Was this an attempt to forget and forgive or was the motive to combine them in a conspiracy to achieve some unholy purpose. What were the circumstances that forced Manu to advise the Brahmans to forget their age old enmity with Kshatriyas and seek the helping hand? The circumstances, must have been very hard and very pressing. For there was no room left for a reapproachment between the two. The Brahmans had hurled a terrible insult against the Kshatriyas and had wounded their pride by saying quite openly that the Kshatriyas were the illegitimate children of Brahmans begotten by them on Kshatriya widows. The next offensive thing that the Brahmans had done to wound the feelings of the Kshatriyas was to extract from the latter a confession that the Brahmans were superior to the Kshatriyas in military prowess and had made Bhishma say :

"The prowess of the Brahmans can destroy even the gods. Those wise beings behold all these worlds. To them it is indifferent whether they are perfumed with sandal wood or deformed with mire, whether they eat or fast, whether they are clad in silk, or in sack cloth or skins. They can turn what is not divine into what is divine, and the converse; and can in their anger create other worlds with their guardians. They are the gods of the gods; and the cause of the cause. The ignorant Brahman is a god, whilst a learned Brahman is yet more a god, like the full ocean."

All this makes this sudden climb down by the Brahmans, this stopping down to win over the Kshatriyas very mysterious. What can be the key to this mystery?

CHAPTER 12

Shudras and the Counter-Revolution

This is a 21-page foolscap typed manuscript. The cover page is having a title 'Shudras and the Counter-Revolution' and the text on next page starts with the same title. All these pages were loose and tagged together. Unfortunately, only 21 pages are available and the latter pages seem to be lost.— Editors.

The laws of Manu relating to the Status of the Shudra make a very interesting reading for the simple reason that they have moulded the psychology of the Hindus and determined their attitude towards the Shudras who forms at the present and at all times the most numerous part of Hindu society. They are set out below under separate heads so that it may be possible for the reader to have a complete idea of the status given by Manu to the Community of Shudras.

Manu asks the householders of the Brahmana, Kshatriya and Vaishya Class :

IV. 61. Let him not dwell in a country where the rulers are Shudra. A Shudra is not to be deemed as a respectable person. For Manu enacts that:

XI. 24. A Brahmin shall never beg from a Shudra property for (performing) a sacrifice i.e. for religious purpose. All marriage ties with the Shudra were proscribed. Marriage with a woman belonging to any of the three other classes was forbidden. A Shudra was not to have any connection with a woman of the higher classes and an act of adultery committed by a Shudra with her was declared by Manu to be an offence involving capital punishment.

VIII. 374. A Shudra who has an intercourse with a woman of the higher caste guarded [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_73](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution_and_Counter_Rev.in_Ancient_India_PARTIII.htm_-_msocom_73) or unguarded, shall be punished in the following manner :

If she was unguarded, he loses the offending part. If she was guarded then he should be put to death and his property confiscated.

As to office Manu prescribes.

VIII. 20. A Brahmana who is only a Brahmana by decent i.e. one who has neither studied nor performed any other act required by the Vedas may, at the king's pleasure, interpret the law to him i.e. act as the Judge, but never a Shudra (however learned he may be).

VIII. 21. The kingdom of that monarch who looks on while a Shudra settles the law will sink low like a cow in a morass.

VIII. 272. If a Shudra arrogantly presumes to preach religion to Brahmins the King shall have poured burning oil in his mouth and ears.

In the matter of acquiring learning the knowledge Manu ordains as follows :

III. 156. He who instructs Shudra pupils and he whose teacher is a Shudra shall become disqualified for being invited to a Shudra.

IV. 99. He must never read the Vedas. . . . in the presece of the Shudras.

Manu's successors went much beyond him in the cruelty of their punishment of the Shudra for studying the Veda. For instance Katyayana lays down that if a Shudra overheard the Veda or ventured to utter a word of the Veda the King shall cut his tongue in twain and pour hot molten lead in his ears. As to right to property by the Shudra Manu enjoins as follows :

X. 129. No superfluous collection of wealth must be made by a Shudra, even though he has power to make it, since a servile man, who has amassed riches, becomes proud, and, by his insolence or neglect, gives pain to Brahmans.

VIII. 417. A Brahmanas may seize without hesitation if he be in distress for his subsistence, the goods of his Shudra. The Shudra can have only one occupation. This is one of the inexorable Laws of Manu. Says Manu :

1. 91. One occupation only, the Lord prescribed to the Shudra, to serve meekly these other three castes (namely Brahmin, Kshatriya and Vaishyas).

X. 121. If a Shudra, (unable to subsist by serving Brahmans) seeks a livelihood, he may serve Kshatriyas, or he may also seek to maintain himself by attending on a wealthy Vaisya.

X. 122. But let (Shudra) serve Brahmans, either for the sake of heaven, or with a view to both (this life and the next); for he who is called the servant of a Brahmana thereby gains all his ends.

X. 123. The service of Brahmans alone is declared (to be) an excellent occupation for a Shudra for whatever else besides this he may perform will bear him no fruit. Service by Shudra is not left by Manu to be regulated as a free contract. If the Shudra refuses to serve there is a provision for conscription which runs as follows :

VIII. 413. A Brahmana may compel a Shudra, whether bought or unbought to do servile work; for he is created by the creator to be the slave of a Brahmana.

X. 124. They must allot to him out of their own family (property) a suitable maintenance, after considering his ability, his industry, and the number of those whom he is bound to suport.

X. 125. The remnants of their food must be given to him, as well as their old household furniture.

A Shudra is required by Manu to be servile in his speech and manner towards the other classes.

VIII. 270. A Shudra who insults a twice-born man with gross invective, shall have his tongue cut out; for he is of low origin.

VIII. 271. If he mentions the names and castes of the (twice-born) with contumely, an iron nail, ten fingers long, shall be thrust red hot into his mouth.

Manu is not satisfied with this. He wants this servile status of the Shudra to be expressed in the names and surnames of persons belonging to that community. Manu says :

II. 31. Let the first part of a Brahman's name denote something auspicious, a Kshatriya's be connected with power and a Vaishya's with wealth, but a Shudra's, express something contemptible.

II. 32. The second part of a Brahman's name shall be a word implying happiness; of a Kshatriya's word implying protection; of a Vaishya's a term expressive of thriving and of a Shudra's an expression denoting services.

What was the position of the Shudra before Manu? Manu treats the Shudra as though he was an alien Non-Aryan not entitled to the social and religious privileges of the Aryan. Unfortunately the view that the Shudra was a Non-Aryan is too readily accepted by the generality of the people. But there can be no doubt that this view has not the slightest foundation in the literature of the ancient Aryans.

Reading the Religious literature of the ancient Aryans one comes across the names of various communities and groups of people. There were first of all the Aryans with their fourfold divisions of Brahmins, Kshatriyas, Vaishyas and Shudras. Besides them and apart from them there were (i) Asuras (ii) Suras or Devas (iii) Yakshas (iv) Gandharvas (v) Kinnars (vi) Charanas (vii) Ashvins and (viii) Nishadas. The Nishadas were a jungle people primitive and uncivilized. The Gandharvas, Yakshas, Kinnars, Charanas and Ashvins were professional classes and not communities. The word Asura is generic name given to various tribes known by their tribal names of Daityas, Danavas, Dasyus, Kalananjas, Kaleyys, Kalins, Nagas, Nivata-Kavachas, Paulomas, Pishachas and Raxasas. We do not know if the Suras and Devas were composed of various tribes as the Asuras were. We only know the leaders of the Deva Community. The well known amongst them were Brahma, Vishnu Rudra, Surya, Indra, Varuna, Soma etc.

Due mostly to the ignorant interpretations of Sayanacharya some very curious beliefs prevail even among the best informed people about these communities namely the Aryans, the Asuras and the Devas and their inter-relation and their consanguinity. It is believed that the Asuras were not a human species at all. They are held to have been ghosts and goblins who plagued the Aryans with their nocturnal visitations. The Suras or Devas are understood to be poetic deifications of nature's forces. With regard to the Aryans the belief is that they were a fair race with sharp nose and had a great deal of colour prejudice. As to the Dasyus it is asserted that a Dasyu is only another name for a Shudra. The Shudras it is said formed the aboriginals of India. They were dark and flat nosed. The Aryans who invaded India conquered them and made them slaves and as a badge of slavery gave them the name Dasyu which it is said comes from the word [Dasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_74](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_74) which means a slave.

Every one of these beliefs is unfounded. The Asuras and Suras were communities of human beings as the Aryans were. The Asuras and Suras were descended from a common father Kashapa. The story is that Daksha Prajapati had 60 daughters, of them thirteen were given in marriage to Kashapa. Diti and Aditi were two among the 13 of Kashapa's wives. Those born to Diti were called Asuras and those born to Aditi were called Suras or Devas. The two fought a long and a bloody battle for the sovereignty of the world. This no doubt is mythology and mythology though it is history in hyperbole is still history.

The Aryans were not a race. The Aryans were a collection of people. The cement that held them together was their interest in the maintenance of a type of culture called Aryan culture. Any one who accepted the Aryan culture was an Aryan. Not being a race there was no fixed type of colour and physiognomy which could be called Aryan. There was no dark and flat nose people for the Aryans to distinguish themselves from mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_75. The whole of this edifice of colour prejudice as being factors for division and antagonism between Aryans and the Dasyus is based upon a wrong meaning given to the two words *Varna* and *Anas* which are used with reference to the Dasyus. The word *Varna* is taken to mean colour and the word *Anas* is taken to mean without nose. Both these meanings are erroneous. *Varna* means Caste or group and *Anas* if read as An-As means uncultivated speech. That statement that the Aryans had a colour prejudice which

determined their social order is arrant nonsense. If there were any people who were devoid of colour prejudice it is the Aryans and that is because there was no dominant colour to distinguish themselves.

It is wrong to say that the Dasyus were non-Aryans by race. The Dasyus were not a pre-Aryan race of aboriginals of India. The Dasyus were members of the Aryan community who were deprived of the title of Arya for opposing some belief or cult which was an essential part of the Aryan Culture. How this belief that the Dasyus were Non-Aryans by race could have arisen it is difficult to understand. In the Rig Veda (X. 49) Indra says :”I (Indra) have killed with my thunderbolt for the good of the man, known as Kavi. I have protected Kupa by adopting means of protection. I took up the thunderbolt for killing Susna. I *have deprived the Dasyus of the appellation of Arya.*”

Nothing can be more positive and definite than this statement of Indra that the Dasyus were Aryans. Further and better proof of this fact can be had in the impeachment of Indra for the various atrocities he had committed. In the list of atrocities for which Indra was impeached there was one charge namely the killing of Vratra. Vratra was the leader of the Dasyus. It is unthinkable that such a charge could be framed against Indra if the Dasyus were not Aryans.

It is erroneous to believe that the Shudras were conquered by the Aryan invaders. In the first place the story that the Aryans came from outside India and invaded the natives has no evidence to support it. There is a large body of evidence that India is the home of the Aryans. In the second place there is no evidence anywhere of any warfare having taken place between Aryans and Dasyus but the Dasyus have nothing to do with the Shudras. In the third place it is difficult to believe that the Aryans were a powerful people capable of much military prowess. Any one who reads the history of the Aryans in India in their relation to the Devas will be reminded of the relationship that subsisted between the Viellens and their lords during the feudal times. The Devas were the feudal lords and the Aryans were the Villens. The innumerable sacrifices which the Aryans performed have the look of fudal dues paid to the Deva. This servility of the Aryans to the Devas was due to the fact that without the help and the protection of the Devas they could not withstand the assaults of the Asuras. It is too much to presume that so effete a people could have conquered the Shudras. Lastly there was no necessity to conquer the Shudra. Thy were Aryans in the only sense in which the word Aryan is used, namely, the upholders of the Aryans Culture. Two things are clear about the Shudras. Nobody has ever

contended that they were dark and flat nosed. Nobody has contended that they were defeated or enslaved by the Aryans. It is wrong to treat the Dasyus and Shudras as one and the same. As a people they may be the same. But culturally they were quite different. The Dasyus were Non-Aryans in the sense they had fallen away and rebelled against the Aryan culture. The Shudras on the other hand were Aryans i.e. they were believers in the Aryan way of life. The Shudra was accepted as an Aryan and as late as Kautilya's Artha Shastra was addressed an Arya.

The Shudra was an integral, natural and valued member of the Aryan Society is proved by a prayer which is found in the Yajur Vedamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_76 and which is offered by the Sacrificer. It runs as follows :”..... 0 Gods

Give lustre to our holy priests, set lustre in our ruling chiefs, Lustre to Vaisyas, Sudras : Give, through lustre; Lustre unto me.”It is a remarkable prayer, remarkable because it shows that the Shudra was a member of the Aryan Community and was also a respected member of it.

That the Shudras were invited to be present at the coronation of the King along with Brahmins, Kshatriyas and Vaishyas is proved by the description given in the Mahabharata of the coronation of Yudhisthira the eldest brother of the Pandavas. Shudra took part in the consecration of the King. According to ancient writer called Nilkantha speaking of the coronation ceremony expressly says :”that the four chief Ministers, Brahmin, Kshatriya, Vaishya and Shudra consecrated the new king. Then the leaders of each Varna and by the Castes lower still consecrated him with the holy water. Then followed acclamation by the twice-born. In the post-vedic period preceding Manu there was group of the representatives of the people called the Ratnis. The Ratnis played a significant part in the investiture of the King. The Ratnis were so called because they held the Ratna (jewel) which was a symbol of sovereignty. The king received his sovereignty only when the Ratnis handed over to him the jewel of sovereignty and on receiving his sovereignty the King went to the house of each of the Ratnis and made an offering to him. It is a significant fact that the Shudra was one of the Ratnis.

Shudras were members of the two political Assemblies of ancient times namely the Janapada and Paura and as a member of this he was entitled to special respect even from a Brahmin. That the Shudra in the Ancient Aryan Society had reached a high political status is indisputable. They could become ministers of State. The Mahabharat bears testimony

to this. Enumerating the different classes of ministers within his memory the writer of the Mahabharata mentions a list mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_77 of 37 Ministers of whom four are Brahmins, eight Kshatriyas, twenty one Vaishyas, three Shudras and one Suta.

Shudras did not stop with being ministers of State. They even became Kings. The story of Shudras which is given in the Rig Veda stands in cruel contrast with the views expressed by Manu regarding the eligibility of the Shudra to be a King. The reign of Sudas if referred to at all is referred only in connection with the terrible contest between Vashishtha and Vishvamitra as to who should become the purohit or Royal priest of King Sudas. The issue involved in the contest was as to the right to officiate as the Purohit or the King. Vashishtha who was a Brahmin and who was already an officiating priest of Sudas claimed that a Brahmin alone could become the Purohit of a King while Vishvamitra who was a Kshatriya contended that a Kshatriya was competent for that office. Vishvamitra succeeded and in his turn became the Purohit of Sudas. The contest is indeed memorable because the issue involved in it is very crucial although the result has not been a permanent deprivation of the Brahmins. But there can be no doubt the story is probably the best piece of social history that is to be found in the ancient literature. Unfortunately nobody has taken serious notice of it. Nobody has even asked who this King was. Sudas was the son of Paijavana and Paijavana is the son of Devodas who was the King of Kasi i.e. Benares. What was the Varna of Sudas? Few would believe if they were told that King Sudas was a Shudra. But that is a fact and it can be proved by the testimony of the Mahabharata mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_78 where in the Santipurva a reference is made to this *Paijavana*. It is stated that Paijavana was a Shudra. In the light of this the story of Sudas sheds new light on the status of the Shudra in the Aryan Society. It shows that a Shudra could be a reigning monarch. It also shows that both the Brahmins and the Kshatriyas not only saw no humiliation in serving a Shudra King but they with each other to secure his patronage and were ready to perform vedic ceremonies at his house.

It cannot be said that there were no Shudra Kings in later times. On the contrary history shows that the two dynasties which preceded Manu were dynasties of Shudras Kings. The Nandas who ruled from B.C.413

to B.C. 322mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_79 were Shudras. The mauryas who succeeded the Nandas and who ruled from 322 B.C, to 183 B.C.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_80 were also Shudras. What more glaring piece of evidence can there be to show the high dignity enjoyed by the Shudra than to point to the case of Asoka who was not merely the Emperor of India but a Shudra and his Empire was the Empire built by the Shudras.

On the question of the right of the Shudra to study the Vedas a reference may be made to the Chhandogya Upanished (V. 1.2). It relates the story of one Janasruti to whom Veda Vidya was taught by the preceptor Raikva. This Janasruti was a Shudra. This story if it is a genuine story leaves no doubt that there was a time when there was no bar against the Shudra in the matter of studying the Vedas.

Not only was Shudra free to study the Vedas but there were Shudras who had reached the status of Rishis and has been composers of the Hymns of the Vedas. The story of the Rishi Kavasha Aliushamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_81 is very illuminating. He was a Rishi and the author of several hymns of the Tenth Book of the Rig-Veda.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_82

On the question of the spiritual eligibility of the Shudra to perform the Vedic ceremonies and sacrifices the following data may be presented. Jaiminmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_83 the author of the Purva Mimansa mentions an ancient teacher by name Badari—whose work is lost as an exponent of the view that even Shudra could perform Vedic sacrifices. The Bharadvaja Srauta Sutra (v. 28) admits that there exists another school of thought which holds that a Sudra can consecrate the three sacred fires necessary for the performance of a Vedic Sacrifice. Similarly the Commentator of the Katyayana Srauta Sutra (I & 5) admits that there are certain Vedic texts which lead o the inference that the Shudra was eligible to perform Vedic rites. In the Satpath Brahmana (1. 1.4.12) there is enunciated a rule of etiquette which the priest officiating at the performance of a sacrifice is required to observe. It relates to the mode in which the priest should address the Haviskut (the person celebrating the sacrifice) calling upon him to begin the ceremony. The rule says:

"Now there are four different forms of this call, viz. 'Come hither' (Ehi) in the case of a Brahmana; 'approach' (Agahi) and 'hasten hither' (Adarva) in the case of a Vaishya and a member of the Military caste and 'run hither' (Adhava) in that of a Shudra." In the Satpatha Brahmanamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_84 there is evidence to show that the Shudra was eligible to perform the Soma Yaga and to partake of the divine drink Soma. It says that in the Soma Yaga in place of a 'payovrata' (vow to drink milk only) Mastu (whey) is prescribed for the Shudra. In another place the same Satapatha Brahmanamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_85 says :

"There are four classes, the Brahmin, Rajanya, Vaishya and Sudra. There is no one of these who dislikes Soma. If any one of them however should do so, let there be an atonement." This means that the drinking of Soma was not only permissible but it was compulsory on all including the Shudra. But in the story of the Ashvins there is definite evidence that the Shudra had a right to the divine drink of Soma. The Ashvins as the storymk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_86 goes once happened to behold Sukanya when she had just bathed and when her person was bare. She was young girl married to a Rishi by name Chyavana who at the time of marriage was so old as to be dying almost any day. The Ashvins were captivated by the beauty of Sukanya and said "accept one of us for your husband, it behoveth thee not to spend thy youth fruitlessly."

She refused saying "I am devoted to my husband." They again spoke to her and this time proposed a bargain—"We two are the celestial physicians of note. We will make thy husband young and graceful. Do thou then select one of us as thy husband." She went to her husband and communicated to him the terms of the bargain. Chyavana said to Sukanya "Do thou so" and the bargain was carried out and Chyavana was made a young man by the Ashvins. Subsequently a question arose whether the Ashvins were entitled to Soma which was the drink of the Gods. Indra objected saying that the Ashvins were Shudras and therefore not entitled to Soma. Chyavana who had received perpetual youth from the Ashvins set aside the contention and compelled Indra to give them Soma.

All these provisions can have no meaning unless the Shudra was in fact performing the Vedic ceremonies to which they relate—there is

evidence to show that a Shudra woman took part in the Vedic sacrifice known as the Ashwamedha. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_87

With regard to the Upanayana ceremony and the right to wear the sacred thread there is nowhere an express prohibition against the Shudra. On the other hand in the Sansakara Ganapati there is an express provision declaring the Shudra to be eligible for Upanayan. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_88 The Shudra though belonging to a lower class was nonetheless a free citizen in days before Manu cannot be gainsaid. Consider the following provisions in Kautilya's Artha Shastra :

"The selling or mortgaging by kinsmen of the life of a Sudra who is not a born slave, and has not attained majority, but is an Arya in birth shall be punished with a fine of 2 panas."

"Deceiving a slave of his money or depriving him of the privileges he can exercise as an Arya (Aryabhava), shall be punished with half the fine (levied for enslaving the life of an Arya)."

"Failure to set a slave at liberty on the receipt of a required amount of ransom shall be punished with a fine of 12 panas; putting a slave under confinement for no reason (samrodhaschakaranat) shall likewise be punished.

"The offspring of a man who has sold himself off as a slave shall be an Arya. A slave shall be entitled without prejudice to his master's work but also the inheritance he has received from his father."

Why did Manu suppress the Shudra?

This riddle of the Shudra is not a simple riddle. It is a complex one. The Aryans were for ever attempting to Aryanize the Non-Aryans i.e. bringing them within the pale of the Aryan Culture. So keen were the Aryans on Aryanization that they had developed a religious ceremony for the mass conversion of the Non-Aryans. The ceremony was called Vratya-stoma. Speaking of the Vratya-Stoma Mahamahopadhyaya Haraprasad Shastri says :

"The ceremony by which these Vratyas were purified, and which is described in the Pancavimsa Brahmana differed at least in one particular from other great ceremonies of the Vedic times, namely, while other ceremonies had only one sacrificer and his wife in the hall of sacrifice, this ceremony had thousands of sacrificers. One of them, the wisest, the richest or the most powerful acted as Grahapati or Patriarch and the rest

simply followed him. The Grahapati had to pay a higher Daksina or fee than the rest."

"I consider this to be a device by which thousands and thousands of Vratyas were admitted to the society of the Rsis by one ceremony, and such ceremonies were of frequent occurrence, thus admitting hordes after hordes of nomadic Aryans into settled habits. The purified Vratyas were not allowed to bring their possessions in Vratya life with them in settled life. They had to leave them to those who remained Vratyas still or do the so-called Brahmins of the Magadha-desa, which, as I have elsewhere shown, was mostly inhabited by men whom the Rsis looked down upon."

"But when the Vratyas were admitted to settled life, they were admitted as fully equals. The Rsis used to eat food cooked by them, and they used to eat food cooked by the Rsi. They were taught all the three Vidyas, Sama, Rk, and Yajus, and they were allowed to study the Vedas, and teach them, and to sacrifice for themselves and for others, that is, they were considered as fully equal. Not only were they treated as fully equal but they attained the highest proficiency of a Rsi. Samans were revealed to them, and even Rks. One of the purified Vratyas, Kausitaki was allowed to collect Brahmins of the Rig-Veda, which collection still goes under his name."

The Aryans were not only converting to their way of life the willing non-Aryans they were also attempting to make converts from among the unwilling Asuras who were opposed to the Aryans, their cult of sacrifice, their theory of Chaturvarna and even to their Vedas which according to the mythology the Asuras stole away from the Aryas. The story of Vishnu rescuing Pralhad by killing his father the Asura called Hiranya Kashapu on the ground that Pralhad was willing to be converted to the Aryan Culture while Hiranya Kashapu was opposed to it is an illustration in point. Here are instances of Non-Aryans being naturalized and enfranchized. Why was an opposite attitude taken against the Shudra? Why was the Shudra fully naturalized and fully enfranchized, denaturalized and disfranchized?

The treatment given to the *Nishadas* gives a point to this riddle which should not be overlooked. The Ancient Sanskrit Literature is full of reference to the five tribes. They are described under various appellations [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm -_msocom_89](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/19C.Revolution_and_Counter_Rev_in_Ancient_India_PARTIII.htm_-_msocom_89) such as Panch-Krishtayah, Panch-Kshitayah, Panch-Kshityas Manushyah, Panch-Charshanayah, Panch-Janah, Panchi-janya viz., Pancha-Bhuma, Panchajata. There is a

difference of opinion as to what these terms denote. Sayanacharya the Commentator of Rig Veda says that these expressions refer to the four Varnas and the Nishads. The Vishnu Purana gives the following story about the Nishads :

"7. The Maiden named Sunitha, who was the first born of Mrityu (Death) was given as wife to Anga; and of her Vena was born."

8. This son of Mrityu's daughter, infected with the taint of his maternal grandfather, was born corrupt, as if by nature.

9. When Vena was inaugurated as king by the eminent rishis, he caused this proclamation to be made on the earth;"Men must not sacrifice, or give gifts, or present oblations. Who else but myself is the enjoyer of sacrifices? I am for ever the lord of offerings.'

10. Then all the rishis approaching the king with respectful salutations, said to him in a gentle and conciliatory tone :

11.' Hear, O King, what we have to say :

12. We shall worship Hari, the monarch of the Gods, and the lord of all sacrifices with a Dirghasattra (prolonged sacrifice), from which the highest benefits will accrue to your kingdom, your person and your subjects. May blessing rest upon you? You shall have a share in the ceremony.

13. Vishnu the Lord of sacrifices Male, being propitiated by us with this rite, will grant all the objects of your desire. Hari, the Lord of Sacrifices, bestows on those kings in whose country he is honoured with oblation everything that they wish."Vena replied : "What other being is superior to me? Who else but I should be adored? Who is this person called Hari, whom you regard as the Lord of sacrifice? Brahma Janardana, Rudra, Indra, Vayu, Yama, Ravi (the Sun) Agni, Varuna, Dhatri, Pushan, Earth, the Moon,— these and the other gods who curse and bless are all present in king's person: for he is composed of all the gods. Knowing this. ye must act in conformity with my commands. Brahmans ye must neither give gifts, nor present oblations nor sacrifices.

14. As obedience to their husbands is esteemed the highest duty of women, so is the observance of my orders incumbent upon you."The Rishis answered. ' Give permission great kings: let not religion perish: this whole world is but a modified form of oblations.

15. When religion perishes the whole world is destroyed with it, When Vena although thus admonished and repeatedly addressed by the eminent rishis, did not give his permission, then all the munis, filled with wrath and indignation, cried out to one another,"Slay, slay the sinner."

16. This man of degraded life, who blasphemes the sacrificed Male, the god, the Lord without beginning or end, is not fit to be lord of the earth.' So saying the munis smote with blades of kusa grass consecrated by texts this king who had been already smitten by his blasphemy of the divine being and his other offences. The munis afterwards beheld dust all round, and asked the people who were standing near what that was.

17. They were informed:"In this country which has no king, the people being distressed, have become robbers, and have begun to seize the property of others.

18. It is from these robbers rushing impetuously, and plundering other men's goods, that this great dust is seen?"Then all the munis, consulting together, rubbed with force the thigh of the king, who was childless, in order to produce a son. From his thigh when rubbed there was produced a man like a charred log, with flat face, and extremely short.

19."What shall I do,"cried the man, in distress, to the Brahmans. They said to him,"Sit down (nishida); and from this he became a Nishada.

20. From his sprang the Nishadas dwelling in the Vindhya mountains, distinguished by their wicked deeds.

21. By this means the sin of the king departed out of him; and so were the Nishads produced, the offspring of the wickedness of Vena."

This is a mythological origin of the Nishads. But it contains historical facts. It proves that the Nishads were a low, primitive jungle tribe living in the forests of the Vindhya mountains, that they were a wicked people i.e. opposed to the Aryan Culture. They invented a mythology for explaining their origin and connecting them with the Aryan Society. All this was done in order to support the inclusion of the Nishads into the Aryan fold though not in the Aryan Society. Now there is nowhere any sort of disabilities imposed upon Nishads a low, uncivilized and foreign tribe. Question is why were the disabilities imposed upon the Shudra, who was civilized and an Arya?

CHAPTER 13

The Woman and the Counter-Revolution

There is one copy with a title 'The Woman and the Counter-Revolution'. There is another copy of the same text with a title, 'The Riddle of the Woman'. The Editorial Board felt that this essay would be appropriate in this Volume rather than in the volume of Riddles in Hinduism'.—Editors.

Manu can hardly be said to be more tender to women than he was to the Shudra. He starts with a low opinion of women. Manu proclaims :

II. 213. It is the nature of women to seduce men in this (world): for that reason the wise are never unguarded in (the company of) females.

II. 214. For women are able to lead astray in (this) world not only a fool, but even a learned man, and (to make) him a slave of desire and anger.

II. 215. One should not sit in a lonely place with one's mother, sister or daughter; for the senses are powerful, and master even a learned man.

IX. 14. Women do not care for beauty, nor is their attention fixed on age; (thinking); '(It is enough that) he is a man', they give themselves to the handsome and to the ugly.

IX. 15. Through their passion for men, through their mutable temper, through their natural heartlessness, they become disloyal towards their husbands, however, carefully they may be guarded in this (world).

IX. 16. Knowing their disposition, which the Lord of creatures laid in them at the creation, to be such, (every) man should most strenuously exert himself to guard them.

IX. 17. (When creating them) Manu allotted to women (a love of their) bed, (of their) seat and (of) ornament, impure desires, wrath, dishonesty, malice, and bad conduct.

The laws of Manu against women are of a piece with this view. Women are not to be free under any circumstances. In the opinion of Manu:

IX. 2. Day and night women must be kept in dependence by the males (of their families), and, if they attach themselves to sexual enjoyments, they must be kept under one's control.

IX. 3. Her father protects (her) in childhood, her husband protects (her) in youth, and her sons protect (her) in old age; a woman is never fit for independence.

IX. 5. Women must particularly be guarded against evil inclinations, however trifling (they may appear); for, if they are not guarded, they will bring sorrow on two families.

IX. 6. Considering that the highest duty of all castes, even weak husbands (must) strive to guard their wives.

IV. 147. By a girl, by a young woman, or even by an aged one, nothing must be done independently, even in her own house.

V. 148. In childhood a female must be subject to her father, in youth to her husband, when her lord is dead to her sons; a woman must never be independent.

V. 149. She must not seek to separate herself from her father, husband, or sons; by leaving them she would make both (her own and

her husband's) families contemptible. Woman is not to have a right to divorce.

IX. 45. The husband is declared to be one with the wife, which means that there could be no separation once a woman is married. Many Hindus stop here as though this is the whole story regarding Manu's law of divorce and keep on idolizing it by comforting their conscience by holding out the view that Manu regarded marriage as sacrament and therefore, did not allow divorce. This of course is far from the truth. His law against divorce had a very different motive. It was not to tie up a man to a woman but it was to tie up the woman to a man and to leave the man free.

For Manu does not prevent a man from giving up his wife. Indeed he not only allows him to abandon his wife but he also permits him to sell her. But what he does is to prevent the wife from becoming free. See what Manu says:

IX. 46. Neither by sale nor by repudiation is a wife released from her husband.

The meaning is that a wife, sold or repudiated by her husband, can never become the legitimate wife of another who may have bought or received her after she was repudiated. If this is not monstrous nothing can be. But Manu was not worried by consideration of justice or injustice of his law. He wanted to deprive woman of the freedom she had under the Buddhistic regime. He knew that by her misuse of her liberty, by her willingness to marry the Shudra the system of the gradation of the Varna had been destroyed. Manu was outraged by her license and in putting a stop to it he deprived her of her liberty.

A wife was reduced by Manu to the level of a slave in the matter of property.

IX. 416. A wife, a son, and a slave, these three are declared to have no property; the wealth which they earn is (acquired) for him to whom they belong.

When she becomes a widow Manu allows her maintenance, if her husband was joint, and a widow's estate in the property of her husband, if he was separate from his family. But Manu never allows her to have any dominion over property.

A woman under the laws of Manu is subject to corporal punishment and Manu allows the husband the right to beat his wife.

VIII. 299. A wife, a son, a slave, a pupil and a younger brother of full blood, who have committed faults, may be beaten with a rope or a split

bamboo. In other matters woman was reduced by Manu to the same position as the Shudra.

The study of the Veda was forbidden to her by Manu as it was to the Shudra.

II. 66. Even for a woman the performance of the *Sanskaras* are necessary and they should be performed. But they should be performed without uttering the Veda Mantras.

IX. 18. Women have no right to study the Vedas. That is why their Sanskars are performed without Veda Mantras. Women have no knowledge of religion because they have no right to know the Vedas. The uttering of the Veda Mantras is useful for removing sin. As women cannot utter the Veda Mantras they are as unclean as untruth is.

Offering sacrifices according to Brahmanism formed the very soul of religion. Yet Manu will not allow women to perform them. Manu ordains that :

XI. 36. A woman shall not perform the daily sacrifices prescribed by the Vedas.

XI, 37, If she does it she will go to hell.

To disable her from performing such sacrifices Manu prevents her from getting the aid and services of a Brahmin priest.

IV. 205. A Brahman must never eat food given at a sacrifice performed by a woman.

IV. 206. Sacrifices performed by women are inauspicious and not acceptable to God. They should therefore be avoided. Woman was not to have any intellectual pursuits nor free will, nor freedom of thought. She was not to join any heretical sect such as Buddhism. If she continues to adhere to it till death she is not to be given the libation of water as is done in the case of all dead.

Finally a word regarding the ideal of life, Manu has sought to place before a woman. It had better be stated in his own words :

V. 151. Him to whom her father may give her, or her brother with the father's permission, she shall obey as long as he lives and when he is dead, she must not insult his memory.

V. 154. Though destitute or virtue, or seeking pleasure elsewhere, or devoid of good qualities, yet a husband must be constantly worshipped as a god by a faithful wife.

V. 155. No sacrifice, no vow, no fast must be performed by women, apart from their husbands; if a wife obeys her husband, she will for that reason alone be exalted in heaven. Then comes the choicest texts which

forms the pith and the marrow of this ideal which Manu prescribes for women:

V. 153. The husband who wedded her with sacred Mantras, is always a source of happiness to his wife, both in season and out of season, in this world and in the next.

V. 150. She must always be cheerful, clever in the management of her household affairs, careful in cleaning her utensils, and economical in expenditure.

This the Hindus regard as a very lofty ideal for a woman! Compare with this the position of the woman before the days of Manu.

That a woman was entitled to Upanayan is clear from the Atharva Veda where a girl is spoken of as being eligible for marriage having finished her Brahmacharya. From the Shrauta Sutras it is clear that women could repeat the Mantras of the Vedas and that women were taught to read the Vedas. Panini's Ashtadhyai bears testimony to the fact that women attended Gurukul and studied the various Shakhas of the Veda and became expert in Mimansa. Patanjali's Maha Bhashya shows that women were teachers and taught Vedas to girl students. The stories of women entering into public discussions with men on most abstruse subjects of religion, philosophy and metaphysics are by no means few. The story of public disputation between Janaka and Sulbha, between Yajnavalkya and Gargi, between Yajnavalkya and Maitrei and between Shankaracharya and Vidyadhari shows that Indian women in pre-Manu's time could rise to the highest pinnacle of learning and education.

That women in pre-Manu days were highly respected cannot be disputed. Among the Ratnis who played so prominent a part in the coronation of the King in Ancient India was the queen and the King made her an offering mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_90 as he did to the others. Not only the king elect did homage to the Queen, he worshipped his other wives of lower castes mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_91. In the same way the King offers salutation after the coronation ceremony to the ladies of the chiefs of the shremes mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/19C.Revolution and Counter Rev. in Ancient India PARTIII.htm - _msocom_92).

In the days of Kautilya women were deemed to have attained their age of majority at 12 and men at 16. The age of majority was in all probability the age of marriage. That the marriages were post puberty marriages is clear from Baudhayanas' Grihya Sutras where an expiatory ceremony is specially prescribed in the case of a bride passing her menses on the occasion of her marriage.

In Kautilya there is no law as to age of consent. That is because marriages were post puberty marriages and Kautilya is more concerned with cases in which a bride or a bridegroom is married without disclosing the fact of his or her having had sexual intercourse before marriage with another person or maiden in menses having had sexual intercourse. In the former case Kautilya says:

"Any person who has given a girl in marriage without announcing her guilt of having laid with another shall not only be punished with a fine but also be made to return the Sulka and Stridhana. Any person receiving a girl in marriage without announcing the blemishes of the bridegroom shall not only pay double the above fine, but also forfeit the Sulka and Stridhana (he paid for the bride). In regard to the latter case the rule in Kautilya is:

"It is no offence for a man of equal caste and rank to have connection with a maiden who has been unmarried three years after her first menses. Nor is it an offence for a man, even of different caste, to have connection with a maiden who has spent more than three years after her first menses and has no jewellery on her person."

Unlike Manu Kautilya's idea is monogamy. Man can marry more than one wife only under certain conditions. They are given by Kautilya in the following terms:

"If a woman either brings forth no (live) children, or has no male issue, or is barren, her husband shall wait for eight years (before marrying another). If she bears only a dead child, he has to wait for ten years. If she brings forth only females, he has to wait for twelve years. Then if he is desirous to have sons, he may marry another. In case of violating this

rule, he shall be made to pay her not only Sulka, her property (Stridhana) and an adequate monetary compensation (adhivedanika martham), but also a fine of 24 panas to the Government. Having given the necessary amount of Sulka and property (Stridhana) even to those women who have not received such things on the occasion of their marriage with him, and also having given his wives the proportionate compensation and an adequate subsistence (vrutti), he may marry any number of women; for women are created for the sake of sons."

Unlike Manu in Kautilya's time women could claim divorce on the ground of mutual enmity and hatred.

"A woman, hating her husband, cannot dissolve her marriage with him against his will. Nor can a man dissolve his marriage with his wife against her will. But from mutual enmity, divorce may be obtained (parasparam dveshanmokshah). If a man, apprehending danger from his wife, desires divorce (mokshamichchhet), he shall return to her whatever she was given (on the occasion of her marriage). If a woman, under the apprehension of danger from her husband, desires divorce, she shall forfeit her claim to her property." A wife can abandon her husband if he is a bad character.

"A woman who has a right to claim maintenance for an unlimited period of time shall be given as much food and clothing (grasacchadana) as necessary for her, or more than is necessary in proportion to the income of the maintainer (yathapurushapari-vapam va). If the period (for which such things are to be given to her with one-tenth of the amount in addition) is limited, then a certain amount of money, fixed in proportion to the income of the maintainer, shall be given to her; so also if she has not been given her Sulka, property, and compensation (due to her for allowing her husband to re-marry). If she places herself under the protection of any one belonging to her father-in-law's family (Svasurakula), or if she begins to live independently, then her husband shall not be sued (for her maintenance). Thus the determination of maintenance is dealt with."

In the days of Kautilya there was no ban on woman or a widow remarrying :

"On the death of her husband a woman, desirous to lead a pious life, shall at once receive not only her endowment and jewellery (sthapyabharanam), but also the balance of Sulka due to her. If after obtaining these two things she re-married another, she shall be caused to pay them back together with interest (on their value). If she is desirous of a second marriage (kutumbakama), she shall be given on the

occasion of her re-marriage (nivesakale) whatever either her father-in-law or her husband or both had given to her. The time at which women can re-marry shall be explained in connection with the subject of long sojourn of husbands.

"If a widow marries any man other than of her father-in-law's selection (svasurapratilomyenanivishta), she shall forfeit whatever had been given to her by her father-in-law and her deceased husband.

"The kinsmen (gnatis) of a woman shall return to her old father-in-law whatever property of her own she had taken with her while re-marrying a kinsman. Whoever justly takes a woman under his protection shall equally protect her property. No woman shall succeed in her attempt to establish her title to the property of her deceased husband, after she re-marries.

"if she lives a pious life, she may enjoy it (dharmakama bhunjita). No woman with a son or sons shall (after re-marriage) be at liberty to make free use of her own property (stridhana); for that property of hers, her sons shall receive." If a woman after re-marriage attempts to take possession of her own property under the plea of maintaining her sons by her former husband, she shall be made to endow it in their name. If a woman has many male children by many husbands, then she shall conserve her property in the same condition as she had received from her husbands. Even that property which has been given her with full powers of enjoyment and disposal, a remarried woman shall endow in the name of her sons.

"A barren widow who is faithful to the bed of her dead husband may, under the protection of her teacher, enjoy her property as long as she lives; for it is to ward off calamities that women are endowed with property. On her death, her property shall pass into the hands of her kinsman (Dayada). If the husband is alive and the wife is dead, then her sons and daughters shall divide her property among themselves. If there are no sons, her daughters shall have it. In their absence her husband shall take that amount of money (sulka) which he had given her, and her relatives shall re-take whatever in the shape of gift or dowry they had presented her. Thus the determination of the property of a woman is dealt with."

"Wives who belong to Sudra, Vaisya, Kshatriya or Brahman caste, and who have not given birth to children, should wait as long as a year, two, three and four years respectively for their husbands who have gone abroad for a short time; but if they are such as have given birth to children, they should wait for their absent husbands for more than a

year. If they are provided with maintenance, they should wait for twice the period of time just mentioned. If they are not so provided with, their well-to-do gnatīs should maintain them either for four or eight years. Then the gnatīs should leave them to marry, after taking what had been presented to them on the occasion of their marriages. If the husband is a Brahman, studying abroad, his wife who has no issue should wait for him for ten years; but if she has given birth to children, she should wait for twelve years. If the husband is a servant of the king, his wife should wait for him till her death; but even if she bears children to a savarna husband (i.e. a second husband belonging to the same gotra as that of the former husband), with a view to avoid the extinction of her race, she shall not be liable to contempt thereof (*savarnatascha prajata na ' pavadam labheta*). If the wife of an absent husband lacks maintenance and is deserted by well-to-do gnatīs, she may re-marry one whom she likes and who is in a position to maintain her and relieve her misery."

Unlike Manu every precaution was taken to guarantee economic independence to a married woman. This is clear from the following provisions in Kautilya's Arthashastra relating to wife's endowment and maintenance :

"Means of subsistence (*vruti*) or jewellery (*abadhya*) constitutes what is called the property of a woman. Means of subsistence valued at above two thousand shall be endowed (in her name). There is no limit to jewellery. It is no guilt for the wife to make use of this property in maintaining her son, her daughter-in-law, or herself, whenever her absent husband has made no provision for her maintenance. In calamities, disease and famine, in warding off dangers and in charitable acts, the husband, too, may make use of this property. Neither shall there be any complaint against the enjoyment of this property by mutual consent by a couple who have brought forth a twin. Nor shall there be any complaint if this property has been enjoyed for three years by those who are wedded in accordance with the customs of the first four kinds of marriage. But the enjoyment of this property in the cases of Gandharva and Asura marriages shall be liable to be restored together with interest on it. In the case of such marriages as are called Rakshasa and Paisacha, the use of this property shall be dealt with as theft. Thus the duty of marriage is dealt with."

"A woman who has a right to claim maintenance for an unlimited period of time shall be given as much food and clothing (*grasachhadan*) as is necessary for her, or more than is necessary in proportion to the income of the maintainer (*yatha-purushaparivapam va*). If the period

(for which such things are to be given to her with one-tenth of the amount in addition) is limited, then a certain amount of money, fixed in proportion to the income of the maintainer, shall be given to her; so also if she has not been given her sulka, property, and compensation (due to her for allowing her husband to re-marry). If she places herself under the protection of any one belonging to her father-in-law's family (svasurkula), or if she begins to live independently, then her husband shall not be sued (for her maintenance). Thus the determination of maintenance is dealt with."Surprising as it may appear in Kautilya's time a wife could bring an action in a court of law against her husband for assault and defamation.

In short in pre-Manu days a woman was free and equal partner of man. Why did Manu degrade her?

PART III - POLITICAL

RIDDLE No. 1

THE DIFFICULTY OF KNOWING WHY ONE IS A HINDU

India is a congeries of communities. There are in it Parsis, Christians, Mohammedans and Hindus. The basis of these communities is not racial. It is of course religious. This is a superficial view. What is interesting to know is why is a Parsi a Parsi and why is a Christian a Christian, why is a Muslim a Muslim and why is a Hindu a Hindu? With regard to the Parsi, the Christian and the Muslim it is smooth sailing. Ask a Parsi why he calls himself a Parsi he will have no difficulty in answering the question. He will say he is a Parsi because he is a follower of Zoraster. Ask the same question to a Christian. He too will have no difficulty in answering the question. He is a Christian because he believes in Jesus Christ. Put the same question to a Muslim. He too will have no hesitation in answering it. He will say he is a believer in Islam and that is why he is a Muslim.

Now ask the same question to a Hindu and there is no doubt that he will be completely bewildered and would not know what to say.

If he says that he is a Hindu because he worships the same God as the Hindu Community does his answer cannot be true. All Hindus do not worship one God. Some Hindus are monotheists, some are polytheists and some are pantheists. Even those Hindus who are monotheists are

not worshippers of the same Gods. Some worship the God Vishnu, some Shiva, some Rama, some Krishna. Some do not worship the male Gods. They worship a goddess. Even then they do not worship the same Goddesses. They worship different Goddesses. Some worship Kali, some worship Parvati, some worship Laxmi.

Coming to the Polytheists they worship all the Gods. They will worship Vishnu and Shiva, also Rama and Krishna. They will worship Kali, Parvati and Laxmi. A Hindu will fast on the Shivaratri day because it is sacred to Shiva. He will fast on Ekadashi day because it is sacred to Vishnu. He will plant a Bel tree because it is sacred to Shiva and he will plant a Tulsi because it is dear to Vishnu.

Polytheists among the Hindus do not confine their homage to the Hindu Gods. No Hindu hesitates to worship a Muslim Pir or a Christian Goddess. Thousands of Hindus go to a Muslim Pir and make offerings. Actually there are in some places Brahmans who own the office of a hereditary priesthood of a Muslim Pir and wear a Muslim Pir's dress. Thousands of Hindus go to make offerings to the Christian Goddess Mant Mauli near Bombay.

The worship of the Christian or Muslim Gods is only on occasions. But there are more permanent transfer of religious allegiance. There are many so-called Hindus whose religion has a strong Muhammadan content. Notable amongst these are the followers of the strange Panchpiriya cult, who worship five Muhammadan saints, of uncertain name and identity, and sacrifice cocks to them, employing for the purpose as their priest a Muhammadan Dafali fakir. Throughout India many Hindus make pilgrimages to Muhammadan shrines, such as that of Sakhi Sarwar in the Punjab.

Speaking of the Malkanas Mr. Blunt says that they are converted Hindus of various castes belonging to Agra and the adjoining districts, chiefly Muttra, Ettah and Mainpuri. They are of Rajput, Jat and Bania descent. They are reluctant to describe themselves as Musalmans, and generally give their original caste name and scarcely recognize the name Malkana. Their names are Hindu; they mostly worship in Hindu temples: they use the salutation Ram-Ram: they intermarry amongst themselves only. On the other hand, they sometimes frequent a mosque, practise circumcision and bury their dead: they will eat with Muhammadans if they are particular friends.

In Gujarat there are several similar communities such as the Matia Kunbis, who call in Brahmans for their chief ceremonies, but are followers of the Pirana saint Imam Shah and his successors, and bury

their dead as do the Muhammadans: the Sheikhas at their weddings employ both Hindu and a Muhammadan priest, and the Momans who practise circumcision, bury their dead and read the Gujarati Koran, but in other respects follow Hindu custom and ceremonial.

If he says that "I am a Hindu because I hold to the beliefs of the Hindus" his answer cannot be right for here one is confronted with the fact that Hinduism has no definite creed. The beliefs of persons who are by all admitted to be Hindus often differ more widely from each other than do those of Christians and Muhammadans. Limiting the issue to cardinal beliefs the Hindus differ among themselves as to the beliefs which are of cardinal importance. Some say that all the Hindu scriptures must be accepted, but some would exclude the Tantras, while others would regard only the Vedas as of primary importance; some again think that the sole essential is belief in the doctrine of karma and metempsychosis.

A complex congeries of creeds and doctrines is Hinduism. It shelters within its portals monotheists, polytheists and pantheists; worshippers of the great Gods Shiva and Vishnu or of their female counterparts, as well as worshippers of the divine mothers or the spirits of trees, rocks and streams and the tutelary village deities; persons who propitiate their deity by all manner of bloody sacrifices, and persons who will not only kill no living creature but who must not even use the word 'cut'; those whose ritual consists mainly of prayers and hymns, and those who indulge in unspeakable orgies in the name of religion; and a host of more or less heterodox sectaries, many of whom deny the supremacy of the Brahmans, or at least have non-Brahmanical religious leaders.

If he says that he is a Hindu because he observes the same customs as other Hindus do his answer cannot be true. For all Hindus do not observe the same customs.

In the north near relatives are forbidden to marry; but in the south cousin marriage is prescribed, and even closer alliances are sometimes permitted. As a rule female chastity is highly valued, but some communities set little store by it, at any rate prior to marriage, and others make it a rule to dedicate one daughter to a life of religious prostitution. In some parts the women move about freely; in others they are kept secluded. In some parts they wear skirts; in others trousers.

Again if he said that he is a Hindu because he believes in the caste system his answer cannot be accepted as satisfactory. It is quite true that no Hindu is interested in what his neighbour believes, but he is very much interested in knowing whether he can eat with him or take water

from his hands. In other words it means that the caste system is an essential feature of Hinduism and a man who does not belong to a recognized Hindu Caste cannot be a Hindu. While all this is *true* it must not be forgotten that observance of caste is not enough. Many Musalmans and many Christians observe caste if not in the matter of inter-dining certainly in the matter of inter-marriage. But they cannot be called Hindus on that account. Both elements must be present. He must be a Hindu and he must also observe caste. This brings us back to the old question who is a Hindu? It leaves us where we are.

Is it not a question for every Hindu to consider why in the matter of his own religion his position is so embarrassing and so puzzling? Why is he not able to answer so simple a question which every Parsi, every Christian, and every Muslim can answer? Is it not time that he should ask himself what are the causes that has brought about this Religious chaos?

RIDDLE No. 2
THE ORIGIN OF THE VEDAS—
THE BRAHMINIC EXPLANATION OR AN EXERCISE IN
THE ART OF CIRCUMLOCUTION

There is hardly any Hindu who does not regard the Vedas as the most sacred Book of his religion. And yet ask any Hindu what is the origin of the Vedas and it would be difficult to find one who can give a clear and a definite answer to the simple question. Of course, if the question was addressed to a Vedic Brahmin he would say that the Vedas are Sanatan. But this is no answer to the question. For first of all what does the word *Sanatan* means?

The best explanation of the word *Sanatan* is to be found in the Commentary by Kalluka Bhatt on Chapter I Shiokas 22-23 of the Manu Smriti. This is what Kulluka Bhatt defines the word Sanatan*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_1.

We have found 72 pages dealing with the subject "Origin of the Vedas". These pages were neither arranged properly nor paged either by the typist or by the author. We have attempted to organize and arrange all these loose papers systematically and divide them into the Riddle No, 2 to 6, in accordance with the arrangement given in the Table of contents. It is difficult to assume that all these pages are complete in the treatment of the subject of each Chapter.

(There is, however, one independent chapter containing 61 pages under the title 'Riddle of the Vedas' placed as Appendix I. That essay deals with all the subjects

mentioned in the Table of Contents at Sr. No. 2 to 6 in a consolidated manner. Several paras may be found repeated in that essay. The original MS of the chapters 2 to 6 included here bears corrections and modifications in the handwriting of the author, whereas the Chapter included as Appendix I is a typed second copy having no corrections at all. We have followed the chronology of the Table of contents and the pages of corrected MS are arranged accordingly.)

"The word Sanatana he says, means 'eternally pre-existing'. The doctrine of the superhuman origin of the Vedas is maintained by Manu. The same Vedas which (existed) in the previous mundane era (Kalpa) were preserved in the memory of the omniscient Brahma, who was one with the supreme spirit. It was those same Vedas that, in the beginning of the present Kalpa, he drew forth from Agni, Vayu and Surya; and this dogma, which is founded upon the Veda, is not to be questioned, for the Veda says, 'the Rig-Veda comes from Agni, the Yajur-Veda from Vayu, and the *Sama-Veda* from Surya.'" To understand the explanation by *Kulluka Bhatt* it is necessary to explain what Kalpa means.

A Kalpa is a reckoning of time adopted by the Vedic Brahmins. The Brahmanic reckoning of time divides time into (1) Varsha, (2) Yuga, (3) Mahayuga, (4) Manvantara and (5) Kalpa.

Varsha is easy enough to understand. It corresponds to the term year.

What exactly the period of time covered by the term Yuga covers there is no unanimity.

A Mahayuga is a period covered by a group of four Yugas: (1) Krita Yuga, (2) Treta Yuga, (3) Dwapar Yuga and (4) Kali Yuga. The four Yugas follow one another in a cycle, when the period of the first Yuga is spent it is followed by the second and so on in the order given. When the cycle is complete one Mahayuga is completed and a new Mahayuga opens. Every Mahayuga begins with the Krita Yuga and ends with Kali Yuga.

There is no uncertainty as to the time relation of a Mahayuga and a Kalpa. 71 Mahayugas make one Kalpa. There is however some uncertainty as to the time relation between Mahayuga and Manvantara. A Manvantara is equal to 71 Mahayugas "and something more". What exact period of time that 'something more' means, the Brahmins have not been able to state categorically. Consequently the time relation between Manvantara and Kalpa is uncertain.

But this does not matter very much for our present purposes. For the present it is enough to confine our attention to Kalpa.

The idea underlying 'Kalpa' is closely connected with the creation and dissolution of the Universe. The creation of the world is called

Srashti. The dissolution of the universe is called *Pralaya*. Time between *Srashti* and *Pralaya* is called *Kalpa*. The idea of the origin of the Vedas is thus more intimately connected with the idea of *Kalpa*.

According to this scheme of things, what is supposed to happen is that when a *Kalpa* begins creation begins. With the beginning of the creation there comes into being a new series of Vedas. What Kulluka Bhatt wants to convey is that though in a sense every new *Kalpa* has a new series of Vedas the same old Vedas are reproduced by Brahma from his memory. That is why he says the Vedas are Sanatan i.e., eternally pre-existing.

What Kalluka Bhatt says is that the Vedas are reproduced from memory. The real question is who made them and not who reproduced them. Even if one accepts the theory of reproduction at the beginning of each *Kalpa* the question still remains who made the Vedas when the First *Kalpa* began. The Vedas could not have come into being *ex-nihilo*. They must have a beginning though they may have no end. Why don't the Brahmins say openly? Why this circumlocution?

RIDDLE NO. 3 THE TESTIMONY OF OTHER SHASTRAS ON THE ORIGIN OF THE VEDAS I

The search for the origin of the Vedas may well begin with the Vedas themselves.

The Rig-Veda propounds a theory of the origin of the Vedas. It is set out in the famous Purusha Sukta. According to it, there was a mystic sacrifice of the Purusha a mythical being and it is out of this sacrifice that the three Vedas namely. Rig, Sama, Yajus came into being.

The Sama-Veda and Yajur-Veda have nothing to say about the origin of the Vedas.

The only other Veda that refers to this question is the Atharva-Veda. It has many explanations regarding the origin of the Vedas. One explanation* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_2 reads as follows:

“From Time the Rig verses sprang; the Yajus sprang from Time.” There are also two other views propounded in the Atharva-Veda on this subject. The first of these is not very intelligent and may be given in its own language which runs as follows mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_3:

“Declare who that Skamba (supporting principle) is in whom the primeval rishis, the rick, saman, and yajush, the earth and the one rishi, are sustained....

“Declare who is that Skamba from whom they cut off the rick verses, from whom they scrapped off the yajush, of whom the saman verses are the hairs and the verses of Atharvan and Angiras the mouth.”

Obviously this statement is a challenge to some one who had proclaimed that the Rig, Sama and Yajur Veda were born out of a Skamba.

The second explanation given in the Atharva-Veda is that the Vedas sprang from Indra.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_4

II

This is all that the Vedas have to say about their own origin. Next in order of the Vedas come the Brahmanas. We must therefore inquire into what they have to say on this subject. The only Brahmanas which attempt to explain the origin of the Vedas are the Satapatha Brahmana, the Taitteriya Brahmana, Aitereya Brahmana and Kaushitaki Brahmana.

The Satapatha Brahmana has a variety of explanations. One attributes the origin of the Vedas to Prajapati.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_5. According to it:

“Prajapati, was formerly this universe (i.e., the sole existence) one only. He desired, 'may I become, may I be propagated '. He toiled in devotion, he performed austerity.

“From him, when he had so toiled and performed austerity, three worlds were created—earth, air and sky. He infused warmth into these three worlds. From them, thus heated, three lights were produced,— Agni (fire), this which purifies i.e., Pavana, or Vayu, (the Wind), and Surya (the Sun). He infused heat into these three lights. From them so heated the three Vedas were produced,— the Rig-Veda from Agni (fire), the Yajur-Veda from Vayu (Wind) and the Sama-Veda from Surya (the Sun). He infused warmth into these three Vedas. From them so heated three luminous essences were produced, *bhubh*, from the Rig-Veda, *bhuvah* from the Yajur-Veda, and *sva* from the Sama-Veda. Hence, with the Rig-Veda, the office of the *adhvaryu*; with the Sama-Veda, the duty of the *udgatri*; while the function of the brahman arose through the luminous essence of the triple science (i.e., the three Vedas combined).”

The Satapatha Brahmana gives another

variantmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_6 of this explanation of the origin of the Veda from Prajapati. The explanation is that Prajapati created the Vedas from waters. Says the Satapatha Brahmana:

"This male, Prajapati, desired, 'May I multiply, may I be propagated'. He toiled in devotion; he practised austere-fervour. Having done so he first of all created sacred knowledge, the triple Vedic science. This became a basis for him. Wherefore men say, 'sacred knowledge is the basis of this universe'. Hence after studying the Veda a man has a standing ground; for sacred knowledge is his foundation. Resting on this basis he (Prajapati) practised austere-fervour. He created the waters from Vach (speech) as their world. Vach was his; she was created. As she pervaded (apnot) waters were called 'apah'. As she covered (avrinot) all, water was called 'Var'. He desired, 'May I be propagated from these waters'. Along with this triple Vedic science he entered the waters. Thence sprang an egg. He gave it an impulse; and said 'let there be, let there be, let there be again'. Thence was first created sacred knowledge, the triple Vedic science. Wherefore men say, 'Sacred knowledge is the first-born thing' in this universe. Moreover, it was sacred knowledge which was created from that Male in front, wherefore it was created as his mouth. Hence they say of a man learned in the Veda, 'he is like Agni; for the sacred knowledge is Agni's mouth'."

There is a third explanationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_7 given in the Satapatha Brahmana:

"I settle thee in the ocean as they seat."

"Mind is the ocean. From the mind-ocean with speech for a shovel the Gods dug out the triple Vedic science. Hence this verse has been uttered; 'May the brilliant deity today know where they placed that offering which the Gods dug out with sharp shovels. Mind is the ocean; speech is the sharp shovel; the triple Vedic Science is the offering. In reference to this the verse has been uttered. He settles it in Mind."

The Taittiriya - Brahmana has three explanations to offer. It speaks of the Vedas as being derived from Prajapati. It also says Prajapati created king Soma and after him the three. Vedas were createdmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_8. This Brahmana has another explanationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_9 quite unconnected with Prajapati. According to it:

"Vach (speech) is an imperishable thing, and the first-born of the ceremonial, the mother of the Vedas, and the centre-point of immortality. Delighting in us, she came to the sacrifice. May the protecting goddess be ready to listen to my invocation, she whom the wise rishis, the composers of hymns, the Gods sought by austere-fervour, and by laborious devotion." To crown all this the Taittiriya Brahmana offers a third explanation. It says that the Vedas came from the beard of Prajapati.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_10

III

The Upanishads have also attempted to explain the origin of the Vedas. The explanation offered by the Chhandogya Upanishad is the same
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_11 as that given by the Satapatha Brahmana—namely that the Rig-Veda originated from Agni, Yajus from Vayu and Sam from the Sun.

The Brahad Aranyaka Upanishad has two explanations to offer. In one place, it says
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_12:

"As from a fire made of moist wood, various modifications of smoke proceed, so is the breathing of this great Being the Rig-Veda, the Yajur-Veda, the Sama-Veda, the Atharvangirases, the Itihasas, Puranas, science, the Upanishads, verses (slokas), aphorisms, comments of different kinds—all these are his breathings." In another place, it says
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_13

"Prajapati (identified with Death or the Devourer) is said to have produced Vach (speech), and through her, together with soul, to have created all things, including the Vedas."

"By that speech and that soul he created all things whatsoever, rick, yajush, and saman texts, metres, sacrifices, creatures and animals."

"The three Vedas are (identifiable with) these three things (speech, mind and breath). Speech is the Rig-Veda, mind the Yajur-Veda and breath the Sama-Veda."

IV

Coming to the Smritis, there are two theories as to the origin of the Vedas to be found in the Manu Smriti. In one place
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_14, it is said that the Vedas were created by Brahma.

"He (Brahma) in the beginning fashioned from the words of the Veda the several names, functions, and separate conditions of all (creatures). That Lord also created the subtle host of active and living deities, and of Sadhyas, and eternal sacrifice. And in order to the performance of sacrifice, he drew forth from Agni, from Vayu and from Surya, the triple eternal Veda, distinguished as Rick, Yajush and Saman."

In another place mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_15 he seems to accept the story of Prajapati being the originator of the Vedas as would be evident from the following:

"Prajapati also milked out of the three Vedas the letters, 'a', 'u', and 'm' together with the words 'bhuh', 'bhuvah' and 'svah'. The same supreme Prajapati also milked from each of the three Vedas one of the three portions of the text called Savitri (or gayatri), beginning with the word *tat...*. The three great imperishable particles (bhuh, bhuvah, svar) preceded by om, and the gayatri of three lines, are to be regarded as the mouth of Brahma."

V

It is also interesting to note what the Puranas have to say about the origin of the Vedas. The Vishnu Puran mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_16 says:

"From his eastern mouth Brahma formed the gayatra, the rick verses, the trivrit, the soma-rathantara, and of sacrifices, the agnishtoma. From his southern mouth he created the yajush verses, the trishtubh metre, the panchadasa-stoma, the vrihat-saman and the ukthya. From his western mouth he formed the saman verses, the jagatimetre, the saptadasa-stoma, the vairupa, and the atiratra. From his northern mouth he framed the ekavinsa, the atharvan, the aptoryaman, with the anushtubh and biraj metres." The Bhagvat Puran mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_17 says:

"Once the Vedas sprang from the four-faced creator, as he was meditating 'how shall I create the aggregate worlds as before?'. . . He formed from his eastern and other mouths the Vedas called rick, yajush, saman, and atharvan, together with praise, sacrifice, hymns and expiation."**[There appears to be some quotations missing as there is no link*

between these two paragraphs.]

“Entering between her eyes. From her there was then produced a quadruple being in the form of a Male, lustrous as Brahma, undefined, eternal, undecaying, devoid of bodily senses or qualities, distinguished by the attribute of brilliancy, pure as the rays of the moon, radiant, and embodied in letters. The God fashioned the Rig-Veda, with the Yajush from his eyes, the Sama-Veda from the tip of his tongue, and the Atharvan from his head. These Vedas, as soon as they are born, find a body, (kshetra). Hence they obtain their character of Vedas, because they find (vindanti) that abode. These Vedas then create the pre-existent eternal Brahma (sacred science), a Male of celestial form, with their own mind-born qualities.”

It also accepts Prajapati as the origin. It says that when the Supreme being was intent on creating the Universe, Hiranyagarbha, or Prajapati, issued from his mouth the sound ' Om ', and was desired to divide himself—a process which he was in great doubt how he should effect—the

Harivamsa

proceedsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_18:

“While he was thus reflecting, the sound ' om ' issued from him, and resounded through the earth, air and sky. While the God of Gods was again and again repeating this, the essence of mind, the vashatkara proceeded from his heart. Next, the sacred and transcendent vyahritis, (bhuh, bhuvah, svar), formed of the great smriti, in the form of sound, were produced from earth, air, and sky. Then appeared the goddess, the most excellent of meters, with twenty-four syllables (the gayatri). Reflecting on the divine text (beginning with) 'tat', the Lord formed the Savitri. He then produced all the Vedas, the Rick, Saman, Atharvan, and Yajush, with their prayers and rites.”

VI

Here we have eleven different explanations regarding the origin of the Vedas—(1) as originating from the mystical sacrifice of Purusha, (2) as resting on Skambha, (3) as cut or scraped off from him, as being his hair and his mouth, (4) as springing from Indra, (5) as produced from Time, (6) as produced from Agni, Vayu and Surya, (7) as springing from Prajapati, and the Waters, (8) as being the breath of Brahma, (9) as being dug by the Gods out of mind-ocean, (10) as being the hair of Prajapati's beard and (II) as being the offspring of Vach.

This bewildering multiplicity of answers to a simple question is a riddle. The writers who have come forward to furnish these answers are

all Brahmins. They belong to the same Vaidik school of thought. They alone were the guardians of the ancient religious lore. Why should they have given such incoherent and chaotic answers to a very simple question?

RIDDLE No. 4

WHY SUDDENLY THE BRAHMINS DECLARE THE VEDAS TO BE INFALLIBLE AND NOT TO BE QUESTIONED?

To say that the Vedas occupy a very high position in the Religious literature of the Hindus is to make an understatement. To say that the Vedas form the sacred literature of the Hindus will also be an inadequate statement. For the Vedas besides being a sacred literature of the Hindus is a book whose authority cannot be questioned. The Vedas are infallible. Any argument based on the Vedas is final and conclusive. There is no appeal against it. This is the theory of the Vedic Brahmins and is accepted by the generality of the Hindus.

I

On what does this theory rest? The theory rests on the view that the Vedas are *Apaurusheya*. When the Vedic Brahmins say that the Vedas are *Apaurusheya* what they mean is that they were not made by man. Not being made by man, they are free from the failings, faults and frailties to which every man is subject and are therefore infallible.

II

It is difficult to understand how such a theory came to be propounded by the Vedic Brahmins. For there was a time when the Vedic Brahmins themselves thought quite differently on the question of the authority of the Vedas as being final and conclusive. These *Vaidik* Brahmins are no other than the authors of the various Dharma Sutras.

The following are the views expressed by the Dharma Sutras on question of the authority of the Vedas: To begin with the Gautama Dharma Sutra. It lays down the following rule on the question of the infallibility of the Vedas. "The Veda is the source of the sacred law" I-1.

"And the tradition and practice of those who know the Veda" I-2."

"If authorities of equal force are conflicting, (either may be followed at) pleasure" I-4.

The Vashishta Dharma Sutra propounds the following view:

"The sacred law has been settled by the revealed texts i.e., Vedas and by the tradition of the sages" I-4.

"On the failure of (rules given in) these (two sources) the practice of

Shishtas (has) authority”I-5.

The views of Baudhayana are given below:

Prasna I, Adhyaya I, Kandika I.

- (1) (1) The sacred law is taught in each Veda.
- (2) (2) We will explain (it) in accordance with that.
- (3) (The sacred law), taught in the tradition (Smriti) stands second.
- (4) The practice of the Shishtas (stands) third.
- (5) On failure of them an Assembly consisting at least of ten members (shall decide disputed points of law).

The view taken by the Apastamba Dharma Sutra is clear from the following extract from that Sutra:

“Now, therefore, we will declare the acts productive of merit which form part of the customs of daily life”1-1.

"The authority (for these duties) is the agreement (samaya) of those who know the law". 1-2.

"And (the authorities for the latter are) the Vedas alone”1-3. With regard to the *Shishtas* both the Vashishtha Dharma Sutra and also the Baudhayana Dharma Sutra have taken particular care to define who can be regarded as *Shishtas*.

The Vashishtha Dharma Sutra says:

“He whose heart is free from desire (is called) a Shishta". I-6. Baudhayana goes into much greater details about the qualification of the Shishtas. This is what he says:

"5. Shishtas, forsooth, (are those) who are free from envy, free from pride, contented with a store of grain sufficient for ten days, free from covetousness, and free from hypocrisy, arrogance, greed, perplexity and anger."

“6. Those are called Shishtas who, in accordance with the sacred law, have studied the Veda together with its appendages, know how to draw inferences from that (and) are able to adduce proofs perceptible by the senses from the revealed texts.”

Baudhayana has also something very interesting to say about the assembly whom he authorises to decide. The following are his views on the matter:

"8. Now they quote also (the following verses): 'Four men, who each know one of the four Vedas, a Mimansaka, one who knows the Angas, one who recites (the works on) the sacred law, and three Brahmanas belonging to (three different) orders, constitute an assembly consisting at least of ten members.’"

"9. There may be five, or there may be three, or there may be one

blameless man, who decides (questions regarding) the sacred law. But a thousand fools (can) not do it.”

"As an elephant made of wood, as an antelope made of leather, such an unlearned Brahmana; those three having nothing but the name (of their kind)".

This review of Dharma Sutras' mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_19 shows that the (1) Veda, (2) Tradition (Smriti), (3) Practice of Shishta and (4) Agreement in an assembly were the four different authorities which were required to be referred to in the decision of an issue which was in controversy. It also shows that there was a time when the Vedas were not the sole infallible authorities. That was the time represented by the Dharma Sutras of Vashishta and Baudhayana. Apastambha does not invest the Vedas with any authority at all. Knowledge of Vedas is made by him as an electoral qualification for membership of the Assembly whose agreed decision is the law and the only law. The Veda was not at all regarded as a book of authority and when the only recognized source of authority was an agreement arrived at in an Assembly of the learned. It is only in the time of Gautama that the Vedas came to be regarded as the only authority. There was a time when an agreed decision of the Assembly was admitted as one source of authority. That is the period represented by Baudhayana.

This conclusion is reinforced by the following quotation from the Satapatha Brahmana. It says:

[Left incomplete. Quotation and further discussion not given.]

RIDDLE No. 5

WHY DID THE BRAHMINS GO FURTHER AND DECLARE THAT THE VEDAS ARE NEITHER MADE BY MAN NOR BY GOD?

The Vedic Brahmins were not content with investing the Vedas with Infallibility. They went further and asserted that the Vedas were Apaurusheya. By this they meant the Vedas were not made by man. This doctrine no doubt leads to the doctrine of Infallibility. For not being made by man they are free from the failings, faults and frailties of man and are therefore infallible. All the same it is necessary to examine the theory separately for it is an independent theory.

Is there really no human author of the Vedas? Are they really Apaurusheya? The best evidence on the subject is the evidence of the *Anukramanis*— a special class of literature which forms part of the

ancient Sanskrit literature. What are called Anukramanis are nothing but systematic indices to various portions of the ancient Vedic literature. Every Veda has an Anukramani, sometimes have more than one Anukramani. Seven Anukramanis for the Rig-Veda are known to be in existence, five by Shaunaka, one by Katyayana and one by an unknown author. For the Yajur-Veda there exist three Anukramanis, one for each of the three Shakhas, Atreyi, Charayaniyas and Madhyandina. For the Sama-Veda there are two Anukramanis, one is called Arsheya-Brahmana and the other is known by the name Parishistas. As to the Atharva-Veda one Anukramani is known to exist. It is known as Brihat-Sarvanukramani.

The most perfect Anukramani according to Prof. Max Muller is Katyayana's Sarvanukramani to the Rig-Veda. Its importance lies in the fact that it gives (1) the first words of each hymn, (2) the number of verses. (3) the name and the family of the Rishi who composed it, (4) the names of the deities and (5) the metres of every verse. What emerges from a reference to the Sarvanukramani is that the Rishis are the authors of the hymns which make up the Rig-Veda. The Rig-Veda therefore on the evidence of the Anukramani cannot but be regarded as a man-made work. The same must be the conclusion regarding the other Vedas. That the Anukramanis are realistic is proved by many passages in the Rig-Veda in which the Rishis describe themselves as the composers of the hymns.

Below are given a few of such passages:

"The Kanvas make a prayer to you, hear well their invocation'. Thus, O, Indra, yoker of steeds, have the Gotamas made hymns for these efficaciously"

"This hymn has efficaciously been made to you, O opulent Asvins, by the Manas"

"These magnifying prayers, (this) hymn, O Asvins, the Gritsamadas have made for you"

"Aspiring to heaven, the sage Kusikas have made a hymn with praises to thee, O Indra."

"Nodhas, descendant of Gotama, fashioned this new hymn for (thee). Indra, who are of old, and who yokest thy steeds"

"Thus O, hero, have the Gritsamadas, desiring succour, fashioned for thee a hymn as men make works."

"The sages generated an efficacious production and a prayer for Indra."

"These hymns, Agni, generated for thee, celebrate thy bounty in cows

and horses.”

"Our father hath discovered (or invented) this great, sevenheaded hymn, born of sacred truth; Ayasya, friend of all men celebrating Indra, has generated the fourth song of praise."

"We, the Raghuanas, have uttered to Agni honied speech; we incessantly laud him with eulogies."

"Thus, all ye Adityas, Aditi, and ye ruling powers, has the wise son of Plati magnified you. The celestial race has been lauded by the immortal Gaya."

"He it is whom they call a rishi, a priest, a pious sacrificer, a chanter of prayers, a reciter of hymns, he it is who knows the three bodies of the brilliant (Agni), the man who is most prominent in bestowing gifts."

Apart from the evidence of the Anukramanis there is another sort of evidence which militates against the theory of the Vedas being Apaurusheya. The Rishis themselves have treated the Vedas as a human and as a historical product. The hymns of Rig-Veda distinguish between ancient and modern Rishis. Here are a few of them:

"Agni, who is worthy to be celebrated by former as well as modern rishis, will bring the gods hither."

"The former rishis who invoked thee for succour."

"Hear the hymn of me this modern sage, of this modern (sage)."

"Indra, as thou hast been like a joy to former worshippers who praised thee, like waters to the thirsty, I invoke thee again and again with this hymn."

"The ancient rishis, resplendent and sage, have placed in front of them (Brihaspati) with gladdening tongue."

"Neither the ancients nor later men, nor any modern man, has attained to (conceived) thy prowess, O, Madhavan."

"As (Indra's) former worshippers were, (may we be) blameless, irreproachable, and unharmed."

"For, now, O energetic god, men are thy worshippers as the ancients born of old and the men of the middle and later ages have been thy friends. And O, much-invoked think of the most recent of all.

"To Him (Indra) our ancient fathers, the seven Navagava sages desiring food, (resorted) with their hymns."

"Glorified by our newest hymn, do thou bring to us wealth and food with progeny."

A closer study of the Rig-Veda will show that the Rig-Veda itself makes a distinction between old hymns and new hymns. Some of them are given below:

“Glorified by our newest hymn, do thou bring to us wealth and food and progeny.”

“Agni thou hast announced (or do thou announcest) among the gods this our offering, our newest hymn.”

“Through our new hymns, do thou, vigorous in action, destroyer of cities, sustain us with invigorating blessings.”

“I bring to Agni, the son of strength, a new and energetic hymn, a production of, thought uttered by the voice (vachah).”

“I present to the mighty protector a mental production, a new utterance (now) springing up”

“May the new prayer impel thee, the heroic well-accounted, the loud-thundering to succour us.”

“I seek like the ancients, to stimulate thee, the ancient, with a new hymn.”

“May the new hymns made to praise you, may these prayers gratify you.”

“Sing O, Sobhari, with a new hymn to these youthful, vigorous, and brilliant (gods)

“Indra, slayer of Vritra, thunderer, invoked of many, we (thy) numerous (worshippers) bring to thee, as thy hire, hymns which never before existed.”

“I will address to this ancient (deity) my new praises which he desires: May he listen to us”

“Desiring horses, cattle, and wealth we invoke thee to approach us.”

Given this abundance of evidence to prove the human origin of the Vedas it is a riddle to find that the Brahmins should so strenuously propagate this extravagant view that the Vedas are not man made. What made the Brahmins propagate such a view?

Notwithstanding this there were eminent philosophers who were prepared to accept the authority of the Vedas although they were not prepared to admit that the Vedas were *Sanatan* or *Apaurush*.

The Gautama the founder of what is called the Nyaya system of Philosophy said:

“The authority of the Veda, like that of the formulas, and the Ayur-Veda (treatise on medicine) follows from the authority of the competent persons from whom they proceeded. Since the competent maker of the Veda possesses authority, inculcates truth, it results from the force of the terms that the Veda was uttered by a person of this character; and by this reasoning the authority of the Veda is to be inferred. He illustrates this by the case of the formulas and the Ayur-Veda. By formulas (*mantra*)

are meant the sentences which neutralize poison etc., and the section containing the Ayur-Veda forms part of the Veda. Now as the authority of these two classes of writings is admitted by general consent, the authority of everything which possess the characteristics of the Veda must be inferred from this example. Some, however, explain the aphorism thus; a Veda is that in which authority is found or recognized. From such Vedicity (or Possession of the character of a Veda) the authority of any work is to be inferred.”

The Vaishashika system admits that the Vedas are authoritative. But the grounds on which it rests its conclusion are:

- (1) That the Vedas are the product of an intelligent mind and
- (2) That they have been uttered by God. Therefore they are authoritative.

The Sankhya system founded by Kapila held the view that eternity cannot be predicated of the Vedas, since various texts in the Vedas themselves declare them to have been produced. It expressly denies that the Vedas originated from the conscious effort of any divine being. According to the Sankhya, the Vedas like the Sun shine by their own light, and evince an inherent power both of revealing their own perfection and of elucidating all other things, past and future, great and small, near and remote. The system of Philosophy known as the

Vedanta seems to support two distant views. It ascribes the origin of the Vedas to Brahma as its source or cause of source using the term Brahma as neuter denoting the supreme spirit and not as masculine designating the personal creator. It also speaks of the eternity of the Vedas and makes mention of a self-dependent author.

The Brahmins did not remain content with the argument that the Vedas were not made by man. They went much further and contended that the Vedas were not made even by God. This theory is propounded by Jaimini the author of the Purva Mimamsa. Jaimini's arguments in favour of the thesis are so strange that one has to know them in order to realize their strangeness.

It is in the *Purva Mimamsa*— a book of Brahmanic philosophy— that this doctrine of the Vedas being Apaurusheya is propounded. The following extracts from the book will reveal the nature of the argument.

Jaimini the author of the Purva Mimamsa first deals with the argument of the Naiyayikas who assert that the Vedas are made by Parameshwara and states the case made out by the Naiyayikas.

The argument of the Mimansakas is:

"The Veda could not have been uttered by the incorporeal

Paramesvara (God), who has no palate or other organs of speech, and therefore cannot be conceived to have pronounced the letters (of which it is composed.). This objection (answers the Naiyayika) is not happy, because, though Paramesvara is by nature incorporeal, he can yet, by way of sport assume a body, in order to show kindness to his devoted worshippers. Consequently, the arguments in favour of the doctrine that the Veda had no personal author are inconclusive."

He then proceeds to state his arguments in favour of the Doctrine of the Mimansakas—

"I shall now clear up all these difficulties. What is meant by this *paurushyatva* ('derivation from a personal author') which it is sought to prove? Is it (1) mere procession (*utpannatva*) from a person (*purusha*) like the procession of the Veda from persons such as ourselves, when we daily utter it? or (2) is it the arrangement— with a view to its manifestation—of knowledge acquired by other modes of proof, in the sense in which persons like ourselves compose a treatise? If the first meaning be intended, there will be no dispute.

If the second sense be meant, I ask whether the Veda is proved (to be authoritative) in virtue (a) of its being founded on inference, or (b) of its being founded on supernatural information (*agama-balat*)?. .

The former alternative (a) i.e., that the Veda derives its authority from being founded on inference cannot be correct, since this theory breaks down, if it be applied to the sentence of the Malati Madhava or any other secular poem (which may contain inferences destitute of authority). If, on the other hand, you say (b) that the contents of the Veda are distinguished from those of other books of having authority, this explanation also will fail to satisfy a philosopher. For the word of the Veda is (defined to be) a word which proves things that are not provable by any other evidence.

Now if it could be established that this Vedic word did nothing more than prove things that are provable by other evidence, we should be involved in the same sort of contradiction as if a man were to say that his mother was a barren woman.

And even if we conceded that Parameswara might in sport assume a body, it would not be conceivable that in that case he should perceive things beyond the reach of the senses, from the want of any means of apprehending objects removed from him in place, in time, and in nature. Nor is it to be thought that his eyes and other sense alone would have the power of producing such knowledge, since men can only attain to conceptions corresponding with what they have perceived.

This is what has been said by the Guru (Prabhakara) when he refutes this supposition of an omniscient author; 'Wherever any object is perceived (by the organ of sight) in its most perfect exercise, such perception can only have reference to the vision of something very distant or very minute, since no organ can go beyond its own proper objects, as e.g., the ear can never become cognizant of form '.

Hence the authority of the Veda does not arise in virtue of any supernatural information acquired by the Deity in a corporeal shape." These are arguments urged by Jaimini to destroy the case of the Naiyayikas. Jaimini then proceeds to give his positive arguments to show why the Vedas are not the word of God but something superior to that. This is what he says:

"In the preceding aphorism it was declared that the connection of words and their meanings is eternal. Desiring now to prove that this (eternity of connection) is dependent on the eternity of words (or sound), he begins by setting forth the first side of the question, viz., the doctrine of those who maintain that sound is not eternal."

"Some, i.e., the followers of the Nyaya philosophy, say that sound is a product, because we see that it is the result of effort, which it would not be if it were eternal."

"That it is not eternal, on account of its transitoriness, i.e., because after a moment it ceases to be perceived."

"Because, we employ in reference to it the expression 'making' i.e., we speak of 'making' a sound."

"Because it is perceived by different persons at once, and is consequently in immediate contact with the organs of sense of those, both far and near, which it could not be if it were one and eternal."

"Because sounds have both an original and a modified form; as e.g., in the case of *dadhi atra*, which is changed into *dadhy atra*, the original letter 'i' being altered into 'y' by the rules of permutation. Now, no substance which undergoes a change is eternal."

"Because sound is augmented by the number of those who make it. Consequently the opinion of the Mimansaka, who say that sound is merely manifested, and not created, by human effort, is wrong; since even a thousand manifesters do not increase the object which they manifest, as a jar is not made larger by a thousand lamps." These objections against the Mimansaka theory that sound is manifested, and not created, by those who utter it, are now answered by Jaimini. Says Jaimini:

"But, according to both schools, viz., that which holds sound to be

created, and that which regards it as merely manifested, the perception of it is alike momentary. But of these two views, the theory of manifestation is shown in the next aphorism to be the correct one."

"The non-perception at any particular time, of sound, which, in reality, perpetually exists, arises from the fact that the utterer of sound has not come into contact with his object i.e., sound. Sound is eternal, because we recognize the letter 'k', for instance, to be the same sound which we have always heard, and because it is the simplest method of accounting for the phenomenon to suppose that it is the same. The still atmosphere which interferes with the perception of sound is removed by the conjunctions and disjunctions of air issuing from a speaker's mouth, and thus sound (which always exists, though unperceived) becomes perceptible. This is the reply to the objection of its 'transitoriness'.

"The word, 'making' sounds, merely means employing or uttering them."

"One sound is simultaneously heard by different persons, just as one Sun is seen by them at one and the same time. Sound like the Sun, is a vast, and not a minute object, and thus may be perceptible by different persons, though remote from one another."

"The letter 'y', which is substituted for 'i' in the instance referred to under Sutra 10, is not a modification of 'i', but a distinct letter. Consequently, sound is not modified."

"It is an increase of 'noise', not of sound, that is occasioned by a multitude of speakers. The word 'noise' refers to the 'conjunctions' and 'disjunctions' of the air which enter simultaneously into the hearer's ear from different quarters; and it is of these that an increase takes place."

"Sound must be eternal, because its utterance is fitted to convey a meaning to other persons. If it were not eternal (or abiding), it would not continue till the hearer had learned its sense, and thus he would not learn the sense, because the cause had ceased to exist."

"Sound is eternal, because it is in every case correctly and uniformly recognised by many persons simultaneously; and it is inconceivable that they should all at once fall into a mistake."

"When the word 'go' (cow) has been repeated ten times, the hearers will say that the word 'go' has been ten times pronounced, not that ten words having the sound of 'go' have been uttered; and this fact also is adduced as a proof of the eternity of sound.

"Sound is eternal, because we have no ground for anticipating its destruction.

“But it may be urged that sound is a modification of air, since it arises from its conjunctions, and because the Siksha (or Vedanga treating of pronunciation) says that 'air arrives at the condition of sound' and as it is thus produced from air, it cannot be eternal.” A reply to this difficulty is given in Sutra 22. “Sound is not a modification of air, because if it were, the organ of hearing would have no appropriate object which it could perceive. No modification of air (help by the Naiyayikas to be tangible) could be perceived by the organ of hearing, which deals only with intangible sound.”

"And the eternity of sound is established by the argument discoverable in the Vedic text, ' with an eternal voice, O Virupa '. Now, though this sentence had another object in view, it, nevertheless, declares the eternity of language, and hence sound is eternal."

Such is the argument by Jaimini in favour of his thesis that the Vedas are eternal and not made by man, not even by God.

The bases on which his thesis rests are simple.

Firstly God has no body and no palate and therefore he could not utter the Vedas.

Secondly, Assuming God had a body, God could not perceive things which are beyond the reach of the senses while the Vedas contain things beyond the reach of human senses.

Thirdly, The connection between a word and its meaning is eternal.

Fourthly, Sound is eternal.

Fifthly, Because sound is eternal words which are made up of sounds are also eternal.

Sixthly Because words are eternal therefore the Vedas are eternal and because the Vedas are eternal they are not made by man nor by God.

What can one say of these premises? Can there be anything more absurd? Who can accept that the Vedas contain something not comprehensible by human senses? Who can accept that there is an eternal connection between a word and its meaning? Who can accept that sound is not created nor manifested but is eternal?

Having regard to these absurd premises one is led to ask why did the Brahmins make such a desperate attempt for establishing a desperate conclusion? What did they want to gain thereby? Was it because the Vedas had been made the exponent of the Chaturvarna with the Brahmins as the Lord of all?

RIDDLE NO. 6

THE CONTENTS OF THE VEDAS: HAVE THEY ANY

MORAL OR SPIRITUAL VALUE?

I

If the Vedas are to be accepted as binding and Infallible then what they teach must have ethical and spiritual value. Nobody can regard a rag to be binding and infallible because a Philosopher like Jaimini came forward to lend his authority to such a proposal. Have the Vedas any ethical or spiritual value? Every Hindu who regards the Vedas are infallible is bound to consider this question.

Modern writers have expressed views which deny any spiritual value to the Vedas. As an illustration one may refer to the views of Prof. Muir. According to Prof. Muir mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_20:

“The whole character of these compositions and the circumstances under which, from internal evidence, they appear to have arisen, are in harmony with the supposition that they were nothing more than the natural expression of the personal hopes and feelings of those ancient bards of whom they were first recited. In these songs the Aryan sages celebrated the praises of their ancestral gods (while at the same time they sought to conciliate their goodwill by a variety of oblations supposed to be acceptable to them), and besought of them all the blessings which men in general desired— health, wealth, long life, cattle, offspring, victory over their enemies, forgiveness of sin, and in some cases also celestial felicity.”

It would no doubt be objected that all foreign scholars are prejudiced and that their views cannot therefore be accepted. Fortunately we are not altogether dependent upon the views of foreigners. There are leaders of indigeneous schools of thought which have taken the same view. The most notorious example is that of the Charvakas.

The opposition of Charvaka can be seen from the following quotation which reproduces his line of argument against the Vaidikas mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_21:

If you object that, if there be no such thing as happiness in a future world, then how should men of experienced wisdom engage in the agnihotra and other sacrifices, which can only be performed with great expenditure of money and bodily fatigue. Your objection cannot be accepted as any proof to the contrary, since the agnihotra, etc., are only useful as means of livelihood: for the Veda is tainted by three faults of untruth, self-contradiction, and tautology; then again the impostors who

call themselves Vaidic pundits are mutually destructive, as the authority of the Jnan-Kanda is overthrown by those who maintain the authority of the Karma-Kanda and those who maintain the authority of the Jnan-Kanda reject that of the Karma-Kanda; and lastly, the three Vedas themselves are only the incoherent rhapsodies of knaves and to this effect runs the popular saying:

"The Agnihotra, the three Vedas, the ascetic, three staves, and smearing oneself with ashes," Brihaspati says, "these are but means of livelihood for those who have no manliness nor sense." "Brihaspati is another example of the same school of thought. Brihaspati was far more bold and militant in his opposition to the Vedas than the Charvakas. As reported by Madhava Acharya, Brihaspati argued mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/21A1.Riddles in Hinduism PART I.htm - _msocom_22—

"There is no heaven, no final liberation, nor any soul in another world: Nor do the actions of the four castes, orders etc., produce any real effect. The Agnihotra, the three Vedas, the ascetic's three stages and smearing one's self with ashes, . . . were made by Nature as the livelihood of those destitute of knowledge and manliness; If a beast slain in the Jyotishtoma rite will itself go to heaven; why then does not the sacrificer forthwith offer his own father?

If the Sraddha produces gratification to beings who are dead, then here, too, in the case of travellers when they start, it is needless to give provisions for the journey.

If beings in heaven are gratified by our offering the Sraddha here, then why not give the food down below to those who are standing on the housetop?

While life remains let a man live happily, let him feed on ghee even though he runs in debt;

When once the body becomes ashes, how can it ever return again?

If he who departs from the body goes to another world, how is that he comes not back again restless for love of his kindred?

Hence it is only a means of livelihood that Brahmans have established here.

All these ceremonies are for the dead, there is no other fruit anywhere. The three authors of the Vedas were buffoons, knaves and demons.

All the well-known formulas of the pundits Jarphari, Turphari, and all the obscene rites for the queen commanded in the Aswamedha:

These were invented by buffoons, and so all the various kinds of present² to the priests.

While the eating of flesh was similarly commended by night prowling demons."

If the opinions of the Charvaka and Brahaspati are not accepted there is plenty of other evidence. That evidence is recorded in the books of the various schools of philosophy such as the Nyaya, Vaishashikha, Purva and Uttar Mimamsa. It must be said to the credit of the authors of the text-books of these philosophies that before proceeding to defend the authority of the Vedas they have been very careful to set out the case of their opponents who were opposed to the authority of the Vedas. This fact enables us to prove two things: (1) That there was a school of thought which was opposed to recognize the Vedas as books of authority; (2) That they were a respectable group of people whose opinions the defenders of the authority of the Vedas were bound to consider. I reproduce below the case of the opponents as set out in the Nyaya and the Purva Mirnarnsa.

Gotama the author of the Nyaya system of Philosophy was an upholder of the doctrine of the authority of the Vedas. He has summarized the arguments of his opponents in Sutra 57 which reads as follows mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_23:

"The Veda has no authority, since it has the defects of falsehood, self-contradiction, and tautology. That verbal evidence, which is distinct from such as relates to visible objects, i.e., the Veda, has no authority. Why? Because it has the defects of falsehood etc."

"Of these defects, that of falsehood is established by the fact that we sometimes observe that no fruit results from performing the sacrifice for a son, or the like. ' Self-contradiction ' is a discrepancy between a former and a later declaration. Thus the Veda says 'he sacrifices when the Sun is risen; he sacrifices when the Sun is not yet risen. He sacrifices, (I cannot explain the next words says Muir,) A tawny (dog?) carries away the oblation of him who sacrifices before the Sun has risen: and both of these two carry off the oblation of him who sacrifices. Now here there is a contradiction between the words which enjoin sacrifices and the words which intimate by censure that those sacrifices will occasion disastrous results. Again, the Veda has no authority, owing to its 'tautology', as where it is said, he repeats the first thrice, he repeats the last thrice. For as the lastness ultimately coincides with the firstness and as there is a triple repetition of the words, this sentence is tautological. Now since these particular sentences have no authority, the entire Veda will be proved by these specimens to stand in the same predicament,

since all its other parts have the same author, or are of the same character, as these portions."

Coming to Jaimini. He summarises the views of the opponents of the Vedas in the first part of Sutras 28 and 32 of his Purva Mimamsa. Sutra 28 says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_24:

"It is also objected that the Vedas cannot be eternal, because we observe that persons, who are not eternal, but subject to birth and death, are mentioned in them. Thus it is said in the Veda ' Babara Pravahani desired ', ' Kusurvinda Auddalaki desired '. Now, as the sentences of the Veda in which they are mentioned, could not have existed before these persons were born, it is clear that these sentences had a beginning, and being thus non-eternal, they are proved to be of human composition."

Sutra 32 says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_25:

"It is asked how the Veda can constitute proof of duty when it contains such incoherent nonsense as the following: 'An old ox, in blanket and slippers, is standing at the door and singing benedictions. A Brahman female, desirous of offspring, asks, ' Pray O King, what is the meaning of intercourse on the day of the new moon?' or the following: 'the cows celebrated this sacrifice'."

This is also the view of Yaska the author of Nirukta who says:

(Of the four kinds of verses specified in the preceding section), (a) those which address a god as absent, (b) those which address him as present, and (c) those which address the worshippers as present and the god as absent, are the most numerous, while (d) those which refer to the speaker himself are rare. It happens also that a god is praised without any blessing being invoked, as in the hymn (R.V.i. 32). "I declare the heroic deeds of Indra," etc. Again, blessings are invoked without any praise being offered, as in the words, 'May, I see well with my eyes, be resplendent in my face, and hear well with my ears'. This frequently occurs in the Adhvaryava (Yajur), and in the sacrificial formula. Then again we find oaths and curses as in the words (R.V.vii. 104, 15), 'May I die today, if I am a Yatudhana,' etc. Further, we observe the desire to describe some particular state of things, as in the verse (R. V. x. 129, 2). ' Death was not then, nor immortality,' etc. Then there is lamentation, arising out of a certain state of thing, as in the verse (R. V. x. 95, 14), 'The beautiful god will disappear and never return,' etc. Again we have blame and praise, as in the words (R. V. x. 117, 6). 'The man who eats

alone, sins alone, etc. So, too, in the hymn to dice (R. V. x. 34, 13) there is a censure upon dice, and a commendation of agriculture. Thus the objects for which the hymns were seen by the rishis were very various."

To quote the words of Yaska again—

"Each particular hymn has for its deity the God to whom the Rishi, seeking to obtain any object of desire which he longs for, addresses his prayer." If this is not enough to prove that there is no ethical or spiritual Value in the Vedas further evidence could be added.

As to morality there is hardly any discussion about it in the Rig-Veda. Nor does the Rig-Veda contain elevating examples of moral life. Three illustrations of cases on the other side may well be given:

First is the conversation between *Yama* and *Yami* who were brother and sister.

"(Yami speaks). I invite my friend to friendship, having come over the vast and desert ocean may Vedhas, after reflecting, place in the earth the offspring (of thee) the father, endowed with excellent qualities."

"(Yama speaks). Thy friend desires not this friendship, for although of one origin, she is of a different form; the hero sons of the great Asura (are) the upholders of heaven, enjoying vast renown."

"(Yami speaks). The immortals take pleasure in (a union) like this which is forbidden to every mortal; let thy mind then concur with mine, and as the progenitor (of all) was the husband (of his daughter), do thou enjoy my person"

"(Yama speaks). We have not done what was done formerly; for how can we who speak truth, utter now that which is untrue? Gandharva (the sun) was in the watery (firmament), and the water was his bride. She is our common parent, hence our near affinity."

"(Yami speaks). The divine omniform generator *Twashtri*, the progenitor, made us two husband and wife, even in the womb; none frustrate his undertaking; earth and heaven are conscious of this our (union)."

"(Yama speaks). Who knows anything of this (his) first day (of existence)? Who has beheld it? Who has here revealed it? The dwelling of *Mitra* and of *Varuna* is vast. What sayest thou, who punishest men with hell?"

"(Yami speaks). The desire of *Yama* hath approached me *Yami*, to lie with him in the same bed; I will abandon my person as a wife to her husband; let us exert ourselves in union like the two wheels of a wagon."

"(Yama speaks). The spies of the Gods, which wander upon earth, never stop, never close their eyes. Associate quickly, deconstructress with

some other than with me, and exert yourselves in union, like the two wheels of a wagon."

"(Yami speaks). To him (Yama) let every whorshipper sacrifice both day and night, on him let the eye of the Sun repeatedly rise; (for him may) the kindred pair (day and night unite) with heaven and earth. Yami will adhere to the non-affinity of Yama."

"(Yama speaks). The subsequent ages will come, when sisters will choose one who is not a brother (as a husband); therefore, auspicious one, choose another husband than me, and make thine arm a pillow for thy mate."

"(Yami speaks). Is he a brother whose sister has no lord? Is she a sister (whose brother) misfortune approaches? Overcome by desire, I strongly urge this one request; unite thy person with mine."

"(Yama speaks). I will not unite my person with thine; they call him who approaches a sister, a sinner. Enjoy pleasure with some other than me; thy brother, auspicious one, has no such desire."

"(Yami speaks). Alas, Yama, thou art feeble; we understand not thy mind or thy heart. Some other female exbrances thee as a girth a horse, or as a creeper a tree."

"(Yama speaks). Do thou, Yami, embrace another; and let another embrace thee as a creeper a tree; seek his affection, let him seek thine; and make a happy union."

"May Agni, the destroyer of the Rakshasas consenting to our prayer, drive hence (the evil spirit) who (in the form of) sickness assails thine embryo, who, as the disease durnaman, assails thy womb."

"May Agni concurring in our prayer, destroy the cannibal who, as sickness, assails thine embryo, who, as the disease durnaman, assails thy womb."

"May we exterminate from hence (the evil spirit) who destroys the impregnating energy, the germ as it settles, the moving embryo, who seeks to destroy (the babe) when born."

"May we exterminate from hence (the evil spirit), who separates thy thighs, who lies between husband and wife, who entering thy womb, devours (the seeds). May we exterminate from hence (the evil spirit), who in the form of brother, husband, or paramour, approaches thee, and seeks to destroy thy offspring."

"May we exterminate from hence (the evil spirit) who, having beguiled thee by sleep or darkness, approaches thee, and seeks to destroy thy offspring."

Take some of the Hymns or prayers that are to be found in the Rig-

Veda. The following are a few of them—

1. 1. Oh ! God Vayu, how very beautiful you are. We have prepared the Somarasa (an intoxicating drink) with spices. Pray come and drink it and grant us our prayers—Rig. Ved. I. 1.2.1.

2. 2. Oh! God Indra. Bring ye wealth for our protection. Let the wealth that you bring make us happy be increasing and everlasting and help us to kill our enemies—1. 1.8.1.

3. 3. Oh! ye people whenever you are performing your yajna, fail not to praise the Gods Indra and Agni. Advance their position and sing their praises in the Gayatri Meter—I. 21.2.

4. 4. Oh ! ye Agni, please bring the wives of the Gods and Twashta who are eager to come and drink Soma—I. 22.9.

5. 5. We pray that the Gods' wives come to us with all available wings and with all happiness—I. 22.11.

6. 6. I am praying the wives of Indra, Varuna and Agni to come to my place to drink Soma.

7. 7. Oh! Varuna, we are supplicating before you to remove your anger. Oh! ye Asura, you are all wise, relieve us from our sins—I. 24.14.

8. 8. Our Somarasa has been prepared by women who have churned it backward and forward. Oh! ye Indra we pray you to come and drink this Soma—1. 28.3.

9. 9. Your enemies who do not make any offering to you may disappear and let your followers who do prosper. Oh ! Indra give us best cows and best horses and make us famous in the world.—1. 29.4.

10. 10. Oh! Agni save us from Rakshasas, from cunning enemies, from those who hate us and want to kill us.—1. 36.15.

11. 11. Oh! Indra, you are a hero. Come and drink the Soma we have prepared and be ready to give us wealth. Loot the wealth of those who do not make you any offering and give the same to us—1. 81-8-9.

12. 12. Oh! Indra, drink this Soma which is the best, giving immortality and most intoxicating.—I. 84-4.

13. 13. Oh ! Adityas, you come to give us your blessings. You give us victory in war. You are wealthy. You are charitable. Just as a chariot is pulled through a difficult path in the same way you pull us through our dangers.—1. 106-22.

14. 14. Oh ! ye Marutas. . . .your followers are singing your praises. Be pleased to come and sit on the grass-cushion prepared for you for the purpose of drinking Soma.—VII. 57-1-2.

15. 15. Oh! ye Mitra-Varuna we have offered you worship in the

yajna. Be pleased to accept it and save us from all dangers—VII. 60-12.

These are only a few verses out of a large bundle which form the Rig-Veda. But there can be no doubt that this sample small as it is is true to bulk.

I may state that I have deliberately omitted a good many obscene passages to be found in the Rig-Veda and Yajur-Veda. Those who have any curiosity in the matter might look up the conversation between Surya and Pushan in Rig-Veda Mandal X. 85.37 and between Indra and Indrani in Rig-Veda. Mandal X. 86.6. A further obscenity will also be found in the Ashvamedha Section of the Yajur-Veda.

Leaving these obscenities aside and confining oneself to the prayer portion of the Rig-Veda can any one say that these are morally or spiritually elevating prayers?

As to philosophy there is nothing of it in the Rig-Veda. As Prof. Wilson observes there is in the Rig-Veda, which is the stock Veda, scarcely any indication or doctrinal or philosophical speculation, no allusion to the later notions of the several schools, nor is there any hint of metempsychosis, or of the doctrine intimately allied to it, of the repeated renovation of the world. The Vedas may be useful as a source of information regarding the social life of the Aryans. As a picture of primitive life it is full of curiosity but there is nothing elevating. There are more vices and a few virtues.

II

We may now turn to the Atharva-Veda and examine its contents. The best I can do is to present the following extracts from the table of contents of the Atharva-Veda.

Book 1. Charms to cure diseases and possession by demons of disease (bhaishagyani).

v, 22. Charm against takman (fever) and related diseases.

vi, 20. Charm against takman (fever).

i, 25. Charm against takman (fever).

vii, 116. Charm against takman (fever).

v, 4. Prayer to the Kushtha-plant to destroy takman (fever).

xix, 39. Prayer to the Kushtha-plant to destroy takman (fever) and other ailments.

i, 12. Prayer to lightening, conceived as the cause of fever, headache, and cough.

i, 22. Charm against jaundice and related diseases.

vi, 14. Charm against the disease halasa.

- vi, 105. Charm against cough.
- i, 2. Charm against excessive discharges from the body.
- ii, 3. Charm against excessive discharges from the body, undertaken with spring-water.
- vi, 44. Charm against excessive discharges from the body.
- i, 3. Charm against constipation and retention of urine.
- vi, 90. Charm against internal pain (colic) due to the missiles of Rudra.
- i, 10. Charm against dropsy.
- vii, 83. Charm against dropsy.
- vi, 24. Dropsy, heart-disease, and kindred maladies cured by flowing water.
- vi, 80. An oblation to the sun, conceived as one of the two.
- ii, 8. Charm against kshetriya, hereditary disease.
- ii, 10. Charm against kshetriya, hereditary disease.
- iii, 7. Charm against kshetriya, hereditary disease.
- i, 23. Leprosy cured by a dark plant.
- i, 24. Leprosy cured by a dark plant.
- vi, 83. Charm for curing scrofulous sores called *apakit*.
- vii, 76. A. Charm for curing scrofulous sores called *apakit*.
B. Charm for curing tumours called *gayana*.
C. Stanza sung at the mid-day pressure of Soma.
- vii, 74. A. Charm for curing scrofulous sores called *apakit*.
B. Charm to appease jealousy.
C. Prayer to Agni, the lord of vows.
- vi, 25. Charm against scrofulous sores upon neck and shoulders.
- vi, 57. Urine (*galasha*) as a cure for scrofulous.
- iv, 12. Charm with the plant *arundhati* (*laksha*) for the cure of fractures.
- v, 5. Charm with the plant *silaki* (*laksha*) *arundhati* for the cure of wounds.
- vi, 109. The pepper-corn as a cure for wounds.
- i, 17. Charm to stop the flow of blood.
- ii, 31. Charm against worms.
- ii, 32. Charm against worms in cattle.
- v, 23. Charm against worms in children.
- iv, 6. Charm against poison.
- Iv, 7. Charm against poison.
- vi, 100. Ants as an antidote against poison.
- v, 13. Charm against snake-poison.
- vi, 12. Charm against snake-poison.

- vii, 56. Charm against the poison of serpents, scorpions and insects.
- vi, 16. Charm against ophthalmia.
- vi, 21. Charm to promote the growth of hair.
- vi, 136. Charm with the plant nitauni to promote the growth of hair.
- vi, 137. Charm to promote the growth of hair.
- iv, 4. Charm to promote virility.
- vi, 111. Charm against Mania.
- iv, 37. Charm with the plant agasringi to drive out Rakshasas, Apsaras and Gandharvas.
- ii, 9. Possession by demons of disease, cured by an amulet of ten kinds of wood.
- iv, 36. Charm against demons (pisaka) conceived as the cause of disease.
- ii, 25. Charm with the plant prisniparni against the demon of disease called kanva.
- vi, 32. Charm for driving away demons (Rakshas and Pisakas).
- ii, 4. Charm with an amulet derived from the gangidatree against diseases and demons.
- xix, 34. Charm with an amulet derived from the gangidatree against diseases and demons.
- xix, 35. Charm with an amulet derived from the gangidatree against diseases and demons.
- vi, 85. Exorcism of disease by means of an amulet from the varana-tree.
- vi, 127. The kipuddru-tree as a panacea.
- xix, 38. The healing properties of *bdellium*.
- vi, 91. Barley and water as universal remedies.
- viii, 7. Hymn to all magic and medicinal plants used as a universal remedy.
- vi, 96. Plants as a panacea.
- ii, 33. Charm to secure perfect health.
- ix, 8. Charm to procure immunity from all diseases.
- ii, 29. Charm for obtaining long life and prosperity by transmission of disease.

II. Prayers for long life and health (ayushyani).

- iii, 11. Prayer for health and long life.
- ii, 28. Prayer for long life pronounced over a body.
- iii, 31. Prayer for health and long life.

- vii, 53. Prayer for long life.
- viii, 1. Prayer for exemption from the dangers of death.
- viii, 2. Prayers for exemption from the dangers of death.
- v, 30. Prayer for exemption from disease and death.
- iv, 9. Salve (angana) as a protector of life and limb.
- iv, 10. The pearl and its shell as an amulet bestowing long life and prosperity.
- xix, 26. Gold as an amulet for long life.

III. Imprecations against demons, sorcerers, and enemies (abhikarikani and Krityapratiharanan).

- i, 7. Against sorcerers and demons.
- i, 8. Against sorcerers and demons.
- i, 16. Charm with lead, against demons and sorcerers.
- vi, 2. The soma-oblation directed against demons (rakshas).
- ii, 14. Charm against a variety of female demons, conceived as hostile to men, cattle and home.
- iii, 9. Against Vishkandha and Kabava (hostile demons).
- iv, 20. Charm with a certain plant (sadampushna) which exposes demons and enemies.
- iv, 17. Charm with the apamarga-plant, against sorcery, demons and enemies.
- iv, 18. Charm with the apamarga-plant against sorcery, demons and enemies.
- iv, 19. Mystic power of the apamarga-plant, against demons and sorcerers.
- vii, 65. Charm with the apamarga-plant against curses, and the consequence of sinful deeds.
- x, 1. Charm to repel sorceries or spells.
- v, 14. Charm to repel sorceries or spells.
- v, 31. Charm to repel sorceries or spells.
- viii, 5. Prayer for protection addressed to a talisman made from the wood of a sraktya-tree.
- x, 3. Praise of the virtue of an amulet derived from the varana-tree.
- x, 6. Praise of the virtues of an amulet of khadira-wood in the shape of a ploughshare.
- ix, 16. Prayer to Varuna for protection against treacherous designs.
- ii, 12. Imprecation against enemies thwarting holy work.
- vii, 70. Frustration of the sacrifice of an enemy.

ii, 7. Charm against curses and hostile plots undertaken with a certain plant.

iii, 6. The asvattha-tree as a destroyer of enemies.

vi, 75. Oblation for the suppression of enemies (naibadhyam havih).

vi, 37. Curse against one that practises hostile charms.

vii, 13. Charm to deprive enemies of their strength.

IV. Charms pertaining to women (strikarmani).

ii, 36. Charm to obtain a husband.

vi, 60. Charm to obtain a husband.

vi, 82. Charm for obtaining a wife.

vi, 78. Blessing for a married couple.

vii, 36. Love-charm spoken by a bridal couple.

vii, 37. Charm pronounced by the bride over the bridegroom.

vi, 81. A bracelet as an amulet to ensure conception.

iii, 23. Charm for obtaining a son (pumsavanam).

vi, 11. Charm for obtaining a son (pumsavanam).

vii, 35. An incantation to make a woman sterile.

vi, 17. Charm to prevent miscarriage.

i, 11. Charm for easy parturition.

i, 34. Charm with licorice, to secure the love of a woman.

ii, 30. Charm to secure the love of a woman.

vi, 8. Charm to secure the love of a woman.

vi, 9. Charm to secure the love of a woman.

vi, 102. Charm to secure the love of a woman.

iii, 25. Charm to secure the passionate love of a woman.

vii, 38. Charm to secure the love of a man.

vi, 130. Charm to arouse the passionate love of a man.

vi, 132. Charm to arouse the passionate love of a man.

iv, 5. Charm at an assignation.

vi, 77. Charm to cause the return of a truant woman.

vi, 18. Charm to allay jealousy.

i, 14. A woman's incantation against her rival.

iii, 18. Charm of a woman against a rival *or* co-wife.

vi, 138. Charm for depriving a man of his virility.

i, 18. Charm to remove evil bodily characteristics from a woman.

vi, 110. Expiatory charm for a child born under an unlucky star.

vi, 140. Expiation for the irregular appearance of the first pair of teeth.

V. Charms pertaining to royalty (ragakarmani).

- iv. 8. Prayer at the consecration of a king.
- iii, 3. Charm for the restoration of an exiled king.
- iii, 4. Prayer at the election of a king.
- iv, 22. Charm to secure the superiority of a king.
- iii, 5. Praise of an amulet derived from the parna-tree, designed to strengthen royal power.
- i, 9. Prayer for earthly and heavenly success.
- vi, 38. Prayer for lustre and power.
- vi, 39. Prayer for glory (yasas).
- viii 8. Battle-charm.
- i, 19. Battle-charm against arrow-wounds.
- iii, 1. Battle-charm for confusing the enemy.
- iii, 2. Battle-charm for confusing the enemy.
- vi, 97. Battle-charm of a king upon the eve of battle.
- vi, 99. Battle-charm of a king upon the eve of battle.
- xi, 9. Prayer to Arbudi and Nyarbudi for help in battle.
- xi, 10. Prayer to Trishmdhi for help in battle.
- v, 20. Hymn *to* the battle-drum.
- v, 21. Hymn to the battle-drum, the terror *of* the enemy.

VI. Charms to secure harmony, influence in the Assembly, and the like (sammanasyani).

- iii. 30. Charm to secure harmony.
- vi, 73. Charm to allay discord.
- vi, 74. Charm to allay discord.
- vii. 52. Charm against strife and blood shed.
- vi, 64. Charm to allay discord.
- vi, 42. Charm *to* appease anger.
- vi, 43. Charm to appease anger.
- vii. 12. Charm to procure influence in the assembly.
- ii, 27. Charm against opponents in debate undertaken with the pata-plant.
- vi, 94. Charm to bring about submission to one's will.

VII. Charms to secure prosperity in house, field cattle business, gambling and kindred matters.

- iii, 12. Prayer at the building of a house.
- vi, 142. Blessing during the sowing of grain.
- vi, 79. Charm for procuring increase of grain.
- vi, 50. Exorcism of vermin infesting grain in the field.
- vii. II. Charm to protect grain from lightning.
- ii, 26. Charm for the prosperity of cattle.
- iii, 14. Charm for the prosperity of the cattle.
- vi, 59. Prayer to the plant arundhati for protection to cattle.
- vi, 70. Charm to secure the attachment of a cow to her calf.
- iii, 28. Formula in expiation of the birth of twin-calves.
- vi, 92. Charm to endow a horse with swiftness.
- iii, 13. Charm for conducting a river into a new channel.
- vi, 106. Charm to ward off danger from fire.
- iv, 3. Shepherd's charm against wild beasts and robbers..
- iii, 15. A merchant's prayer.
- iv, 38. A. Prayer for success in gambling.

B. Prayer to secure the return of calves that have strayed to a distance.

- vii, 50. Prayer for success at dice.
- vi, 56. Exorcism of serpents from the premises.
- x, 4. Charm against serpents invoking the horse of Pedu that slays serpents.
- xi, 2. Prayer to Bhava and Sarva for protection from dangers.
- iv, 28. Prayer to Bhava and Sarva for protection from dangers.
- vii, 9. Charm for finding lost property.
- vi, 128. Propitiation of the weather-prophet.
- xi, 6. Prayer for deliverance from calamity, addressed to the entire pantheon.

VIII. Charms in expiation of sin and defilement.

- vi, 45. Prayer against mental delinquency.
- vi, 26. Charm to avert evil.
- vi, 114. Expiatory formula for imperfections in the sacrifice.
- vi, 115. Expiatory formulas for sins.
- vi, 112. Expiation for the precedence of a younger brother over an elder.
- vi, 113. Expiation for certain heinous crimes.
- vi, 120. Prayer for heaven after remission of sins.

- vi, 27. Charm against pigeons regarded as ominous birds.
 vi, 29. Charm against pigeons regarded as ominous birds.
 vi, 29. Charm against ominous pigeons and owls.
 vii, 64. Expiation when one is defiled by a black bird of omen.
 vi, 46. Exorcism of evil dreams
 vii, 115. Charm for the removal of evil characteristics, and the acquisition of auspicious.

III

It will thus be seen that the Atharva-Veda is nothing but a collection of sorcery, black-magic and medicine. Three-fourths of it is full of sorcery and black magic. It must not however be assumed that it is only the Atharva-Veda which contains black-magic and sorcery. The Rig-Veda is not altogether free from it. There are in it Mantras relating to black magic and sorcery. I give below three Suktas which deal with this matter:

SUKTA XVII (CXLV)

The deity or rather the aim of the hymn is the getting rid of a rival wife; the Rishi is Indrani, the metre of the last verse is Pankati, of the rest Anushtubh.

1. 1. I dig up this most potent medicinal creeper, by which (a wife) destroys a rival wife, by which she secures to herself her husband.
2. 2. 0 (plant) with up-turned leaves, auspicious, sent by the Gods, powerful, remove my rival and make my husband mine alone.
3. 3. Excellent (plant) may I too be excellent amongst the excellent, and may she who is my rival be vile amongst the vile.
4. 4. I will not even utter her name, no (woman) takes pleasure in that person: may we remove the other rival wife to a distance.
5. 5. I am triumphing, thou art triumphant: we two being powerful will triumph over my rival.
6. 6. I make thee the triumphant (herb) my pillow, I support thee with that more triumphant (pillow): let thy mind hasten to me as a cow to her calf, let it speed on its way like water.

SUKTA IV (CLV)

The deity of verses I and 4 is the averting of misfortune

(Alakshmi), of verses 2 and 3 Brahmanaspati, and of verse 5 the Viswadevas; the Rishi is Sirimbitha, the son of Bharadwaja, the metre is Anushtubh.

1. 1. Miserable, ill-favoured, deformed ever-railing (goddess), go to thy mountain; with these exploits of Sirimbitha we scare thee away.

2. 2. May she be scared away from this (world), scared away from the next (world), the destructress of all embryos; sharp-horned Brihaspati approach, driving away Distress.

3. 3. The wood which floats by the seashore far off, remote from man, seize that, (O, goddess) hard to destroy, and therewith go to a distant shore.

4. 4. Utterers of discordant sounds, when swiftly moving you departed, all the enemies of Indra were slain, disappearing like bubbles.

5. 5. These (Viswadevas) have brought back the (stolen) cattle, they have built up the fire: they have provided food for the Gods. Who will overcome them?

SUKTA XII (CLXIII)

The deity is the cure of phthisis: the Rishi is Vivrihan, the son of Kasyapa, the metre is Anushtubh.

1. 1. I banish disease from thine eyes, from thy head, from thy nose, from thy ears, from thy chin, from thy brain, from thy tongue.

2. 2. I banish disease from thy neck, from thy sinews, from thy bones, from thy joints, from thy upper arms, from thy shoulders, and from thy fore-arms.

3. 3. I banish disease from thine entrails, from thy anus, from thine abdomen, and from thy heart, from thy kidneys, from thy liver, from thy (other) viscera.

4. 4. I banish disease from thy thighs, from thy knees, from thy heels, from thy toes, from thy loins, from thy buttocks, from thy private parts.

5. 5. I banish disease from thy urethra, from thy bladder, from thy hair, from thy nails, from thy whole person.

6. 6. I banish disease from each limb, from each hair, from each joint where it is generated, from thy whole person.

Enough has been extracted from the Vedas to show that they contain nothing that can be said to be spiritually or morally elevating. Neither

the subject matter nor contents of the Vedas justify the infallibility with which they have been invested. Why then did the Brahmins struggle so hard to clothe them with sanctity and infallibility?

RIDDLE NO. 7
THE TURN OF THE TIDE OR HOW DID THE
BRAHMINS DECEARE THE VEDAS TO BE LOWER THAN
THE LOWEST OF THEIR SHASTRAS?

The religious literature of the Hindus includes (1) The Vedas, (2) The Brahmanas, (3) The Aranyakas, (4) Upanishads, (5) Sutras, (6) Itihas, (7) Smritis and (8) Puranas.

As has been pointed out there was a time when they occupied the same status. There was no distinction of superior or inferior, sacred or profane, fallible or infallible.

Eater on as we have shown the Vedic Brahmins felt that they must make a distinction between the Vedas and other classes of their religious literature. They made the Vedas not only superior to other classes of literature but they made them sacred and infallible. In evolving their dogma of the infallibility of the Vedas they made a distinction and divided their sacred writings in two classes (1) Shruti and (2) Non-Shruti. In the first division they placed only two of the eight classes of literature spoken of above namely-(1) Samhitas and (2) the Brahmanas. The rest they declared as Non-Shruti.

II

When this distinction was first made it is not possible to say. The more important question, however, is on what basis was this division made? Why were Itihas and Puranas excluded? Why were Aranyakas and Upanishads excluded? Why were the Sutras excluded? One can well understand why Itihas and Puranas were excluded from Shruti. At the time when the division took place they were too elementary and too undeveloped and in all probability included in the Brahmanas. Similarly one can well understand why the Aranyakas are not

This is a 21-page typed MS originally entitled ' The Supersession of the Vedas ', with several corrections and modifications by the author himself. This chapter seems complete as the last para of this chapter is concluded in the handwriting of the author.—Ed.

specifically mentioned as a part of the Shruti. They are a part of the Brahmanas and for that reason it was probably unnecessary to say expressly that they are part of the Shruti. The question of the

Upanishads and the Sutras remains a puzzle. Why were they excluded from the Shruti? The question regarding the Upanishads is the subject matter of another chapter. Here it is proposed to deal with the question of the Sutras. Because the reasons for the exclusion of the Sutras it is not possible to comprehend. If there were good reasons for including the Brahmanas in the category of Shruti the same reasons could not fail to justify the inclusion of the Sutras. As Prof. Max Muller observes:

"We can understand how a nation might be led to ascribe a superhuman origin to their ancient national poetry, particularly if that poetry consisted chiefly of prayers and hymns addressed to their gods. But it is different with the prose compositions of the Brahmanas. The reasons why the Brahmanas which are evidently so much more modern than the Mantras, were allowed to participate in the name of Sruti, could only have been because it was from these theological compositions, and not from the simple old poetry of the hymns, that a supposed divine authority could be derived for the greater number of the ambitious claims of the Brahmanas. But, although we need not ascribe any weight to the arguments by which the Brahmanas endeavoured to establish the contemporaneous origin of the Mantras and Brahmanas there seems to be no reason why we should reject as equally worthless the general opinion with regard to the more ancient date of both the Brahmanas and Mantras, if contrasted with the Sutras and the profane literature of India. It may easily happen, where there is a canon of sacred books, that later compositions become incorporated together with more ancient works, as was the case with the Brahmanas. But we can hardly imagine that old and genuine parts should ever have been excluded from a body of sacred writings, and a more modern date ascribed to them, unless it be in the interest of a party to deny the authority of certain doctrines contained in these rejected documents. There is nothing in the later literature of the Sutras to warrant a supposition of this kind. We can find no reason why the Sutras should not have been ranked as Sruti, except the lateness of their date, if compared with the Brahmanas, and still more with the Mantras. Whether the Brahmanas themselves were aware that ages must have elapsed between the period during which most of the poems of their Rishis were composed, and the times which gave rise to the Brahmanas, is a question which we need hardly hesitate to answer in the affirmative. But the recklessness with which Indian theologians claim for these Brahmanas the same title and the same age as for the Mantras, shows that the reason must have been peculiarly strong which deterred them from claiming the same divine authority for

the Sutras."

The exclusion of the Sutras from the category of Shruti is a riddle that calls for explanation.

There are other riddles which strike the student who cares to investigate into the subject. They relate to the changes in the content of the literature comprised in the term Shruti and their relative authority.

One such riddle relates to the class of literature called the Brahmanas. At one time the Brahmanas were included in the term Shruti. But later on they seem to have lost this position. For [Manu*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_26](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_26) seems to exclude the "Brahmanas" from the category of Shruti as may be seen from the following extract from his Smriti:

"By Shruti is meant the Veda, and by Smriti the institutes of law; the contents of these are not to be questioned by reason, since from them (a knowledge of) duty has shown forth. The Brahman who, relying on rationalistic treatises, shall condemn these two primary sources of knowledge must be excommunicated by the virtuous as a sceptic and reviler of the Vedas.... To those who are seeking a knowledge of duty, the Sruti is the supreme authority." Why were the Brahmanas excluded from Shruti?

III

We may now turn to the class of literature called the Smritis, the most important of which are the Manu Smriti and the Yajnavalkya Smriti. The number of Smritis was ever on the increase and the composing of Smritis went on up to the advent of the British. Mitramistra refers to 57 Smritis, Nilakanta to 97 and Kamalakar to 131. The Smriti literature is bigger than any other class of religious literature regarded as sacred by the Hindus.

There are several points regarding the relation of the Smritis to the Vedas.

The first is that the Smriti was not recognized mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_27 as part of the Dharma Shastra literature represented by the Dharma Sutras such as that of Baudhayana, Gautama or Apastambha. A Smriti originally dealt with social customs and conventions that were approved of and recommended by the learned leaders of society. As Prof. Altekar observes:

"In the beginning, Smritis were identical in nature and contents with *Sadacara* and were based upon it. When Smritis came into existence the scope of *Sadacara* became naturally reduced, as much of it was codified

by Smritis. It began to denote those old practices which happened not to be codified in Smritis, or those new ones, which had acquired social approval at a period subsequent to the codification of the early Dharmasastras or Smritis." The second point to note is that the Smritis were treated as quite different from the Vedas or the Srutis. So far as their sanction and their authority were concerned they stood on absolutely different footing. The sanction behind the Sruti was divine. The sanction behind the Smriti was social. In the matter of their authority the Purva Mimamsa lays down two rules. The first rule is that if there is a conflict between two texts of Sruti then both are authoritative and the presumption will be that the Vedas have given an option to follow one or the other. The second rule is that the text of a Smriti should be summarily rejected if it was opposed to the text of the Sruti. These rules were rigorously applied with the result that the Smritis could not acquire either the status or the authority of the Vedas.

Surprising as it may appear a time came when Brahmins took a summersault and gave the Smritis a status superior to that of the Vedas. As Prof. Altekar points out:

"The Smritis have actually overruled some of the specific dicta of Srutis that were not in consonance with the spirit of the age, or were coming into direct conflict with it. The Vedic practice was to perform *daiva karma* in the morning and the *pitr karma* in the afternoon. In later times the modern *pitr tarpana* came into vogue and it began to be offered in the morning, as the morning bath became the order of the day. Now this procedure is in direct conflict with the Vedic practice prescribed in the above-mentioned rule. Devamabhatta, the author of the *Smrticandrika*, however says that there is nothing wrong in this: the Sruti rule must be presumed to be referring to *pitr karman* other than *tarpana*. The Sruti literature shows that Visvamitra adopted Sunassepa, though he had a hundred sons living: this would thus permit a person to adopt a son even when he had a number of his own sons living. But Mitramisra says that such a deduction would be wrong: we shall have to assume that the Smriti practice is also based upon a Sruti text, which is not now available but the existence of which will have to be assumed." "The Vedic passage, *na seso 'gne' nyajatamasti* certainly disapproves of the practice of the adoption of a son, which is clearly recommended in later times by the Smriti literature. This is a clear example of a Sruti being thrown overboard by a Smriti. But Mitramisra says that there is nothing wrong about the procedure. The Sruti passage is a mere *arthavada*; it does not lay down any injunction. The Smritis on the other hand

prescribe adoption so that *homas* etc. should be properly performed. *Arthavada Sruti* is thus being fittingly overruled by a *Srnriti* text, which has a *vidhi* for its purport."

"The custom of the Sati of the later age is in direct conflict with the vedic injunction prohibiting suicide. Apararka, however, argues that the conflict with *Sruti* should not invalidate the custom. For the *Sruti* passage lays down a general principle disapproving suicide, while the *Smritis* lay down a special exception in the case of a widow."

Whether the customs of a Sati and adoption are good or not is a different question. Somehow or other society had come to approve of them. *Smritis* gave canonical, sanction to them and sought to defend them even against the authority of the *Vedas*.

The question is why did the Brahmins after having struggled so hard for establishing the supremacy of the *Vedas* degrade the *Vedas* and invest the *Smritis* with authority superior to that of the *Vedas*? They did so much to raise the authority of the *Vedas* above the divine. Why did they drag them below the *Smritis* which had nothing but social sanction?

The steps they adopted were so ingenious and artificial that one cannot help feeling that there must have been some definite motive which led the Brahmins to give the *Smritis* a status superior to that of the *Vedas*.

To give some idea as to how artificial, ingenious and desparate these arguments were it might be useful to give just a brief outline of them.

As an illustration of an artificial argument, one may refer to the view propounded by Brahaspati. According to him, *Sruti* and *Srnriti* are the two eyes of the Brahmana, if he is void of one of them he becomes a one-eyed person.

As an illustration of an ingenious argument one may refer to the argument of Kumarila Bhatt. His argument is founded on the theory of lost *Sruti*. It was argued on behalf of the *Smritis* that their views cannot be set aside even when they are in direct conflict with the *Srutis* for they may quite possibly have been based upon a lost text of *Sruti*, and so the conflict is not a conflict between a text of *Sruti* and that of a *Smriti*. It is really a conflict between an existing and lost text of *Sruti*. *Smriti* therefore came to be represented as lost *Sruti*.

There is a third means adopted by the Brahmins to make the *Smritis* equal if not superior to the *Vedas*. It is to be found in the *Atri Smriti*. *Atri* says that those who do not respect the *Smritis* will be subject to curse. *Atri's* argument is that *Brahmanyam* arises only as a result of a joint study of the *Sruti* and *Smriti* and if a person studies the *Vedas* only but holds the *Smriti* in contempt he would be immediately condemned to be

born as a beast for 21 generations.

Why did the Brahmins adopt such desparate means to place the Smritis on the same footing as the Sruti? What was their purpose? What was their motive?

Prof. Altekar's argument that the Smritis were given supremacy over the Vedas because they gave legal justification to customary law which was of later growth, cannot be accepted as adequate. If the case was that, there was law in the Vedic period and custom had grown later on; and if there was a conflict between the two, one could have understood the argument that the Smritis were given predominance because they set right the conflict by recognizing the progressive doctrines of the custom. This is not the case. There was no such thing as law in the Vedas. As Professor Kane points out:

"All law was customary and there was no necessity to give recognition to the customs because they were recognized by the people. Secondly the Smritis cannot be said to be more progressive than the Vedas. Barring the Chaturvarna doctrine which everybody knows the Vedas except in the matter of forms of worship left Society quite free to develop. What the Smritis have done is, take out the unprogressive element in the Vedas namely the Chaturvarna theory and to propogandize it and hammer it into the heads of the people."

Therefore there must be some other reason why the Brahmins gave supremacy to the Smritis over the Vedas.

The Brahmins were not content with their first acrobatics. They performed another.

The Smritis were followed in point of time by the Puranas. There are 18 Puranas and 18 Up-Puranas altogether 36. In one sense the subject matter of the Puranas is the same. They deal with the creation, preservation and destruction of the world. But in the rest of their contents they differ altogether. Some propagate the cult of Brahma, some the cult of Shiva, some the cult of Vishnu, some the cult of Vayu, some the cult of Agni, some the cult of Surya and some the cult of Goddesses and other deities. As has been noted there was a time when the Puranas were not included in the Shruti. In later times however a striking change seems to have taken place. The Puranas which were considered as too profane to be included in the Shruti were given a superiority over the Vedas. The Vayu Purana says ms@MSITStore.C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_28:

"First, of all the Shastras, the Purana was uttered by Brahma.

Subsequently the Vedas issued from his mouth.”The Matsya Purana not only claims priority of creation for the Puranas as against the Vedas, but also the qualities of eternity and identity with sound, which was once predicated of the Vedas alone. It says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_29:

“Pitamaha (Brahma), first of all the immortals, took shape; then the Vedas with their Angas and Upangas (appendages and minor appendages), and the various modes of their textual arrangements, were manifested. The Purana, eternal, formed of sound, pure, extending to the length of a hundred crores of verses, was the first of the Sastras which Brahma uttered ; and afterwards the Vedas, issued from his mouth; and also the Mimansa and the Nyaya with its eightfold system of proofs.

The Bhagawat Purana claims equality of authority with the Vedas. It says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_30:

"(Bramharatra) declared the Purana called the Bhagavata, which stands on an equality with the Veda."

The Brahma-Vaivartta Purana has the audacity to claim superiority over the Vedas. It says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_31:

"That about which venerable sage, you have inquired, and which you desire, is all known to me, the essence of the Puranas, the preeminent Brahma-Vaivartta, which refutes the errors of the Puranas and Upapuranas, and the Vedas."

This is the second acrobatic performed by the Brahmins in assigning priority, precedence, and authority to their sacred books.

This does not complete the story of the suppression of the Vedas. The worse is yet to come. The Puranas were followed by another class of literature called the *Tantras*.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_32 Their number is also quite formidable. Shankaracharya refers to 64 Tantras. There might be many more.

Traditionally the authorship of these works is attributed to Dattatreya, who was an incarnation of the Hindu trinity, Brahma, Vishnu and Shiva. They are therefore to be regarded as equally the revelation of the three supreme divinities. In form, however, they are dependent on Shiva alone, who in dialogue with his wife Durga, or Kali, reveals the mystical

doctrines and observances which are *to* be received and practised by his worshippers. This authoritative or 'higher tradition' is further said to have been delivered from his central or fifth mouth. As such it is pre-eminently sacred and secret and may not be revealed to the uninitiated. They are also called by the name Agamas, and as such are sometimes distinguished from Nigama, the text of the Vedas, Dharmashastras, and other sacred books.

The Tantras are regarded specially as the religious text-books of the Saktas and of their various sects. There are different Tantrik schools, with variant traditions, the distinctions between which are little understood outside of their immediate circle of adherents. The ritual of the Tantras of the Dakshinacharins, however, is said to be pure and in harmony with the Vedas, while that of the Vamacharins is intended only for Shudras.

The teaching of the Tantras, as of the Puranas is essentially based on the Bhakti-Marga which is regarded by them as superior to the Karma-Marga and Jnana-Marga of the Brahmanas and Upanishads. Adoration of a personal deity is inculcated, especially of the wife of Shiva, who is worshipped as the source of all regenerative power. In all these writings the female principle is personified and made prominent, to the almost total exclusion of the male.

What is the relation of the Tantras to the Vedas? Kalluka Bhatta the well known commentator of Manu Smriti has no hesitation in asserting that Shruti is two-fold- *Vaidik* and *Tantrik*—which means that the Vedas and the Tantras stand on equal footing. While the Vaidik Brahmins like Kalluka Bhatta admitted the equality of the Tantras to the Vedas, the authors of the Tantras went much beyond. They claimed that the Vedas, the Shastras, and the Puranas are alike a common woman, but the Tantras are like a highborn woman conveying thereby that the Tantras are superior to the Vedas.

From this survey one thing is clear. The Brahmins have not been very steadfast in their belief regarding the sacred character of what they called their books of religion. They fought to maintain the thesis that the Vedas were not only sacred but that they were infallible. Not only they maintained that the Vedas were infallible but they spent their ingenuity to invent strange arguments to support the doctrine of infallibility. Yet they had not the slightest compunction to overthrow the position of the Vedas and to subordinate them first to the Smritis, then to the Puranas and lastly to the Tantras. The question of all questions is what made the Brahmins degrade the Vedas and supersede them by Smritis,

Puranas and the Tantras if they regarded their Vedas as the most sacred?

RIDDLE NO. 8 HOW THE UPANISHADS DECLARED WAR ON THE VEDAS?

What is the position of the Upanishads in relation to the Vedas? Are the two complimentary to each other or are they antagonistic? Of course, no Hindu would admit that the Vedas and Upanishads are repugnant to each other. On the contrary, it is the common belief of all Hindus that there is no antagonism between them and that both form part and parcel of the same single system of thought. Is this belief well-founded?

The principal reason for the rise of such a belief is to be found in the fact that the Upanishads are also known by another name which is called Vedanta. The word Vedanta has got two meanings. In one sense, it means the last parts of the Vedas. In the second sense, it means the essence of the Vedas. The word Vedanta being another name for the Upanishads, the Upanishads themselves have come to acquire these meanings. It is these meanings which are responsible for the common belief that there is no antagonism between the Vedas and the Upanishads.

To what extent are these meanings of the word Upanishads justified by facts? In the first place, it is well to note the meaning of the word Vedanta. What was the original meaning of the word Vedanta? Does it mean the last book of the Vedas? As observed by Prof. Max Muller* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_33:

"Vedanta is a technical term and did not mean originally the last portions of the Veda, or chapters placed, as it were, at the end of a volume of Vedic literature, but the end i.e., the object, the highest purpose of the Veda. There are, of course, passages, like the one in the Taittiriya-aranyaka (ed-Rajendra Mitra p. 820), which have been misunderstood both by native and European scholars, and where Vedanta means simply the end of the Veda: *yo vedadu svarab*

*This 15-page typed MS with modifications in the handwriting of the author was originally entitled ' Vedas versus Upanishads '. Concluding two paragraphs are added by the author in his own handwriting.—Ed.

prokto vedante ka pratishthitah, 'the Om which is pronounced at the beginning of the Veda, and has its place also at the end of the Veda.' Here Vedanta stands simply in opposition to Vedadu, it is impossible to translate it, as Sayana does, by Vedanta or Upanishad. Vedanta, in the sense of philosophy, occurs in the Taittiriya-aranyaka p. 817, in a verse of the Narayana-upanishad repeated in the Mundak-upanishad III 2, 6 and elsewhere *vedantavignamuniskitarah*, 'those who have well understood the object of the knowledge arising from the Vedanta' not from the last books of the Veda and *Svetasvatara-up* VI-22, *vedante paramam gubhyam*, 'the highest mystery in the Vedanta'. Afterwards it is used in the plural also, e.g., Kshurikopanishad, 10 (bibl. Ind. p. 210) *pundariketi Vedanteshu nigadyate*, 'it is called pundarika in the Vedantas' i.e., in the Khandogya and other Upanishads, as the commentator says, but not in the last books of each Veda." More direct evidence on the point is that which is contained in the Gautama Dharma Sutras. In Chapter XIX verse 12 Gautama speaks of purification and says:

"The purificatory (texts are), the Upanishads, the Vedantas, the Samhita-text of all the Vedas" and so on. From this it is clear that at the date of Gautama the Upanishads were distinguished from Vedantas and were not acknowledged as a part of the Vedic literature. Hardatta in his commentaries says "those parts of the Aranyakas which are not (Upanishads) are called Vedantas". This is unimpeachable proof that the Upanishads did not come within the range of the Vedic literature and were outside the canons.

This view is also supported by the use of the Veda in the Bhagwat Gita. The word Veda is used in the Bhagwat Gita at several places. And according to Mr. Bhatmk:MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_34 the word is used in a sense which shows that the author did not include the Upanishads in the term.

The subject matter of the Upanishads is not the same as that of the Vedas. This is also another reason why the Upanishads are not a part of the Vedas. What is the origin of the word Upanishad? The point is somewhat obscure. Most European scholars are agreed in deriving Upanishad from the root *sad*, to sit down, preceded by the two prepositions *ni* down and *upa* near, so that it would express the idea of session or assembly of public sitting down near their teacher to listen to

his instructions. This is because in the *Trikandasesha*, the word Upanishad is explained by *Samipasadana* as sitting down near a person.

But as Prof. Max Muller points out there are two objections to the acceptance of this derivation. Firstly such a word, it would seem, would have been applicable to any other portion of the Veda as well as to the chapters called Upanishad, and it has never been explained how its meaning came thus to be restricted. Secondly, the word Upanishad, in the sense of session or assembly has never been met with. Whenever the word occurs, it has the meaning of doctrine, secret doctrine, or is simply used as the title of the philosophic treatises which contain the secret doctrine.

There is another explanation proposed by Sankara in his commentary on the *Taittiriya-Upanishad* II, 9, noted by Prof. Max Muller. According to it the highest bliss is contained in the Upanishad (*param sreyo 'syam nishannam*). That is why it is called Upanishad. Regarding this, Prof. Max Muller says:

"The Aranyakas abound in such etymologies which probably were never intended as real as plays on words, helping, to account somehow for their meaning."

Prof. Max Muller however favours a derivation of the word ' Upanishad ' from the root *sad* to destroy, and meant knowledge which destroys ignorance, the cause of Samsara, by revealing the knowledge of Brahmana as a means of salvation. Prof. Max Muller points out that this is the meaning which the native scholars have unanimously given to the word Upanishad.

If it be granted that the true derivation of the word ' Upanishad ' is what is suggested by Prof. Max Muller, then it would be one piece of evidence to show that the common belief of the Hindus is wrong and that the subject matter of the Vedas and the Upanishads are not complimentary but antagonistic. That the system of thought embodied in the Upanishads is repugnant to that of the Vedas is beyond doubt. A few citations from some of the Upanishads will suffice to show their opposition to the Vedas. The *Mundaka Upanishad* says:
