I have already said, that to Manu, this division between those who are within the pale of Chaturvama and those who are outside of it was a division which was real. It was so real that Manu calls those who were outside the pale of Chaturvama by the name *Bahayas* which means excluded i.e. excluded from or outside of the system of Chaturvama. It was a division to which he attached far reaching consequences. This division was intended to result in a difference of status and citizenship. It is true that all those who are within the pale of Chaturvarna are not all on the same level. Within the Chaturvarna there are the Brahmins, Kshatriyas, Vaishyas, Shudras and Slaves all unequal in status. Still they are within the Chaturvarna. Those within the Chaturvarna have a status in the eye of the

law of Manu and a respect in the eye of the public. Those outside it have no respect in the eye of that society. The difference is also one of citizenship. Those within the Chaturvarna have rights to enjoy and remedies to enforce them. Those outside the Chaturvarna have no rights and no remedies.

This difference between those who are within the Chaturvarna and those outside of it have a kind of resemblance to the difference between *civics* i.e. citizens and *preregenis* or *hostis* i.e. non-citizens in the early Roman Law. The early law of Rome was essentially personal—not territorial. A man enjoyed the benefit of its institutions and of its protection, not because he happened to be within Roman territory, but because he was a citizen—one of those by whom and for whom its law was established. The story of the early *jus getium* was that a man sojourning within the bounds of a foreign state was at the mercy of the latter and its citizens; that he himself might be dealt with as a slave, all that belonged to him appropriated by the first comer. For he was outside the pale of the law. Under *the jus civile* the private rights which were peculiar to a Roman citizen were summed up in three abstract terms, *Conubium*, *Commercium* and *Actio*. *Conubium* was the capacity to enter into a marriage which would be productive of the *palua potestas* and agnation which in their turn were the foundation of intestate succession, guardianship etc. *Commercium* was the capacity for acquiring or alienating property. *Actio* was the capacity to bring a suit in a Court of law for the vindication, protection, or enforcement of a right either included in or flowing from *connubium* or *commercium*, or directly conferred by *statute*. These three capacities were enjoyed only by the Roman Citizens. A noncitizen was entitled to none of these rights.

III

The division between classes who are within the Chaturvarna and those who are without it though real and fundamental is undoubtedly archaic in its terminology. The system of Chaturvarna is no longer operative as law. It is therefore somewhat academic to speak of classes being within Chaturvarna and without Chaturvarna. The question will be asked, what are the modern counterparts of these ancient classes? The question is perfectly legitimate especially as I have to explain how the ancient law of Manu is responsible for the present day lawlessness of the Hindus. Although I am using archaic language, two things will show that my thesis is true. The first is that the ancient social divisions of Manu are not without their counterpart in modern times.

The modern counterparts of those ancient divisions are Hindus and untouchables. Those whom Manu included within the Chaturvarna correspond to the modern composite class called Hindus. Those whom Manu called Bahayas (outside the Chaturvarna) correspond to the present day untouchables of India. The dividing line between the four classes—Brahman, Kshatriya, Vaishya and Shudra—included within Chaturvarna have in modern times become some what blurred and there has been some degree of amalgamation between them. But the line which Manu drew between those within the Chaturvarna from those outside the Chaturvarna is still clear and is not allowed to be effaced or crossed.

That line is the line which at present separates the Hindus from the untouchables. The first thing that is clear is that the ancient divisions have descended to modern times. The only change is the change of names.

The second question is, has the law as laid down by Manu for the Bahayas any counterpart in the present day social relationship between the Hindus and the Untouchables? To those who doubt I ask to take the following case into consideration. The incident has occurred in the Ramnad District of the Madras Presidency.

In December 1930 the Kallar in Ramanad propounded eight prohibitions, the disregard of which led to the use of violence by the Kallar against the untouchables whose huts were fired, whose granaries and property were destroyed, and whose livestock was looted. These eight prohibitions were as follows :—

- “(i) that the Adi-Dravidas shall not wear ornament of gold and silver;
- (ii) that the males should not be allowed to wear their clothes below their knees or above the hips;
- (iii) that their males should not wear coats or shirts or baniyans; (iv) No Adi-Dravida should be allowed to have his hair cropped. (v) that the Adi-Dravidas should not use other than earthenware vessels in their homes;
- (vi) their women shall not be allowed to cover the upper portion of their bodies by clothes or ravukais or thavanies;
- (vii) their women shall not be allowed to use flowers or saffron paste; and
- (viii) the men shall not use umbrellas for protection against sun and rain nor should they wear sandals”.

In June 1931, the eight prohibitions not having been satisfactorily observed by the exterior castes in question, the Kallar met together and framed eleven prohibitions, which went still further than the original eight, and an attempt to enforce these led to more violence.

These eleven prohibitions were :—

"1. The Adi-Dravidas and Devendrakula Vellalar² should not wear clothes below their knees.

2. The men and women of the above-said depressed classes should not wear gold jewels.

3. The women should carry water only in mud pots and not in copper or brass vessels. They should use straw only to carry the water pots and no clothes should be used for that purpose.

4. Their children should not read and get themselves literate or Educated.

5. The children should be asked only to tend the cattle of the Mirasdars.

6. Their men and women should work as slaves of the Mirasdars, in their respective Pannais.

7. They should not cultivate the land either on waram or lease from the Mirasdars.

8. They must sell away their own lands to Mirasdars of the village at very cheap rates, and if they don't do so, no water will be allowed to them to irrigate their lands. Even if something is grown by the help of rain water, the crops should be robbed away, when they are ripe for harvest.

9. They must work as coolies from 7 a.m. to 6 p.m. under the Mirasdars and their wages shall be for men RS. 0-4-0 per day and for women Rs. 0-2-0 per day.

10. The above said communities should not use Indian Music (melam etc.) in their marriages and other celebrations.

11. They must stop their habit of going on a horse in procession before tying the Thali thread in marriage and they must use their house doors as palanquins for the marriage processions, and no vehicle should be used by them for any purpose". Compare these prohibitions laid down by the Hindus of Ramnad with the prohibitions contained in the texts of Manu quoted earlier in this chapter against the untouchables.

Is there any difference between the law laid down by Manu for the *Bahayas* and the conditions imposed upon the untouchables by the Kallars in 1931? After this evidence, who can doubt that the Hindu in doing what appears to be an Adharma to a non-Hindu is merely asking the untouchables to follow the Dharma as prescribed by Manu.

Take another case. Those of the Balais of the Central India. The Balais are an untouchable community. About the year 1927, the Balais started a campaign of social improvement of their community and had made rules prescribing that the members of their community should not do certain kinds of work which is degrading and should dress in a certain manner. These rules did not in any way affect the interests of the Caste Hindus. But the Caste Hindus took offence at this effort of the Balais to raise

themselves above the status prescribed by custom and they decided to deal a deadly blow to what they regarded as the insolence of the Balais. The following is the report which appeared in the papers of how the Caste Hindus dealt with the rebellious Balais.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_42

Tyranny of Hindus Rules for Balais Mode of Life Laid Down

"Last May (1927) High Caste Hindus, viz, Kalotas, Rajputs and Brahmins, including the patels and putwaris of villages Kanaria, Bicholee Hafsi, Mardana and of about 15 other villages in the Indore District, informed the Balais of their respective village that if they wished to live among them, they must conform to the following rules:—

(1) Balais must not wear gold lace bordered pugrees; (2) they must not wear dhoties with coloured or fancy borders; (3) they must convey intimation of the death of any Hindu to relatives of the deceased—no matter how far away these relatives might be living; (4) in all Hindu marriages, the Balais must play music before the processions, and during the marriage; (5) the Balai women must not wear gold or silver ornaments; they must not wear fancy gowns, or jackets; (6) Balai women must attend all cases of confinement of Hindu women; (7) the Balais must render services without demanding remuneration, and must accept whatever a Hindu is pleased to give; (8) if the Balais do not agree to abide by these terms, they must clear out of the villages.

BALAIS REFUSE COMPLIANCE

"The Balais refused to comply; and the Hindu element proceeded against them. Balais were not allowed to get water from the village wells, they were not allowed to let their cattle graze. Balais were prohibited from passing through land owned by a Hindu; so that if the field of a Balai was surrounded by fields owned by Hindus, the Balai could have no access to his own field. The Hindus also led their cattle to graze down the fields of Balais. The Balais submitted petitions to the Darbar against these persecutions; but as they could get no timely relief, and the operation continued, hundreds of Balais, with their wives and children, were obliged to abandon their homes in which their ancestors lived for generations and

migrate to adjoining States, viz., to villages in Dhar, Dewas, Bhopal, Gwalior and other States.

COMPULSORY AGREEMENT

“Only a few days ago the Hindus of Reoti village, barely seven miles to north of Indore City, ordered the Balais to sign a stamped agreement in accordance with the rules framed against the Balais by the Hindus of other villages. The Balais refused to comply. It is alleged that some of them were beaten by the Hindus; and one Balai was fastened to a post, and was told that he would be let go on agreeing to sign the agreement. He signed the agreement and was released. Some Balais from this village ran up to the Prime Minister the next day, i.e. on the 20th December, and made a complaint about the ill treatment they received from the Hindu villagers of Reoti. They were sent to the Subha of the district. This officer, with the help of the police, made inquiries at the village, and recommended that action be taken against the Hindus under section 342 and 147 and against the Balais under section 147, Indian Penal Code.

Balais leave villages Caste Tyranny Ignorance of law a handicap

“There has been no improvement in the treatment of the Balais by the Hindu residents of certain villages. Balais, it has already been reported, have been ill treated by the higher caste Hindus. From the Dopalpur Pargana alone, Indore District, a large number of Balais have had to leave their homes and find shelter in adjoining States. The villages from which Balais have been forced to clear out are Badoli, Ahirkharal, Piploda, Morkhers, Pamalpur, Karoda, Chatwada, Newri, Pan, Sanauda, Ajnoti, Khatedi and Sanavada. Pamalpur village has been altogether deserted and not a Balai man, woman or child is to be found there. Nanda Balai a resident of one of the above villages, it is alleged, was severely beaten by the Hindus of the village. In one village, the report goes, the Hindus burnt down all the dwellings of the Balais but the offenders have not yet been traced.

“Balais are ignorant village folk, who are ignorant of legal procedure and think that if a petition is sent to the Sirkar all that is required will be done for them. They have not the knowledge; or the means and practices, to pursue a complaint to its end; and, as they, it is said in some cases, failed to attend or produce witnesses in support of their allegations, the magistrate had no alternative but to dismiss their complaint.”

Looked at from the point of view of Dharma and Adharma, can it be doubted that underneath the lawlessness and ruthlessness of the Hindus in

suppressing the revolt of the untouchables, they are actuated by what they think a noble purpose of preventing an outrage upon their Dharma?

IV

It may well be asked how much of this Dharma of Manu now remains? It must be admitted that as law in the sense of rules which a Court of Judicature is bound to observe in deciding disputes, the Dharma of Manu has ceased to have any operative force—except in matters such as marriage succession etc. matters which affect only the individual. As Law governing social conduct and civic rights it is inoperative. But if it has gone out as law, it remains as custom.

Custom is no small a thing as compared to Law. It is true that law is enforced by the state through its police power; custom, unless it is valid it is not. But in practice this difference is of no consequence. Custom is enforced by people far more effectively than law is by the state. This is because the compelling force of an organized people is far greater than the compelling force of the state.

Not only has there been no detriment to its enforceability on account of its having ceased to be law in the technical sense but there are circumstances which are sufficient to prevent any loss of efficacy to this Dharma of Manu.

Of these circumstances the first is the force of custom. There exists in every social group certain (habitsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. [Essay on Untouchables and Untouchability_Political.htm - _msocom_43](#)) not only to acting, but of feeling and believing, of valuing, of approving and disapproving which embody the mental habitudes of the group. Every new comer whether he comes in the group by birth or adoption is introduced into this social medium. In every group there goes on the process of persistently forcing these mental habitudes of the group upon the attention of each new member of the group. Thereby the group carries on the socialization of the individual of the shaping of the mental and practical habits of the new comer. Being dependent upon the group he can no more repudiate the mental habitudes of the group than he can the condition and regulation of his physical environment. Indeed, so dependent the individual is on the group that he readily falls in line and allows the current ways of esteeming and behaving prevailing in the community, to become a standing habit of his own mind. This socializing process of the individual by the group has been graphically described by Grote. He says—

“This aggregate of beliefs and predispositions to believe, ethical, Religious, Aesthetical, and Social respecting what is true, or false, probable

or improbable, just or unjust, holy or unholy, honourable or base, respectable or contemptible, pure or impure, beautiful or ugly, decent or indecent, obligatory to do, or obligatory to avoid, respecting the status and relations of each individual in the society, respecting even the admissible fashions of amusement and recreation—this is an established fact and condition of things, the real origin of which for the most part unknown, but which each new member of the group is born to and finds subsisting.... It becomes a part of each person's nature, a standing habit of mind, or fixed set of mental tendencies, according to which particular experience is interpreted and particular persons appreciated.... The community hate, despise or deride any individual member who proclaims his dissent from their social creed.... Their hatred manifests itself in different ways.... At the very best by exclusion from that amount of forbearance, good will and estimation without which the life of an individual becomes insupportable." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - [_msocom_44](#)

But what is it that helps to bring about this result? Grote has himself answered this question. His answer is that, this is due to—"Nomos (Law and Custom), King of all"(which Herodotus cites from Pindar) exercises plenary power, spiritual and temporal, over individual minds, moulding the emotions as well as the intellect, according to the local type.... and reigning under the appearance of habitual, self suggested tendencies.

What all this comes to is that, when in any community, the ways of acting, feeling, believing, or valuing or of approving and disapproving have become crystallised into customs and traditions, they do not need any sanction of law for their enforcement. The amplitude of plenary powers which the group can always generate by mass action is always ready to see that they are not broken.

The same thing applies to the Dharma laid down by Manu. This Dharma of Manu, by reason of the governing force which it has had for centuries, has become an integral and vital part of the customs and traditions of the Hindus. It has become ingrained and has given colour to their life blood. As law it controlled the actions of the Hindus. Though now a custom, it does not do less. It moulds the character and determines the outlook of generation after generation.

The second thing which prevents the Dharma of Manu from fading away is that the law does not prevent its propagation. This is a circumstance which does not seem to be present to the minds of many people. It is said that one of the blessings of the British Rule is that Manu Smriti has ceased

to be the law of the land. That the Courts are not required to enforce the provisions contained in Manu Smriti as rules of law is undoubtedly a great blessing—which might not be sufficiently appreciated except by those who were crushed beneath the weight of this “infamous” thing. It is as great a blessing to the untouchables as the Reformation was to the peoples of Europe. At the same time it must be remembered that the Reformation would not have been a permanent gain if it had been followed by what is called the Protestant Revolution.

The essential features of the Protestant Revolution as I understand them are:

- (1) (1) That the state is supreme and the Church is subordinate to the state.
- (2) The doctrine to be preached must be approved by the state.
- (3) The clergy shall be servants of the state and shall be liable to punishment not only for offences against the general law of the land but also liable for offences involving moral turpitude and for preaching doctrines not approved of by the state. I am personally a believer in the “Established Church”. It is a system which gives safety and security against wrong and pernicious doctrines preached by any body and every body as doctrines of religion. I know there are people who are opposed to the system of an “Established Church”. But whether the system of an “Established Church” is good or bad, the fact remains that there is no legal prohibition against the propagation of the Dharma laid down by Manu. The courts do not recognize it as law. But the law does not treat it as contrary to law. Indeed every village every day. When Pandits are preaching it to parents and parents preach it to their children, how can Manu Smriti fade away? Its lessons are reinforced every day and no body is allowed to forget that untouchability is a part of their Dharma.

This daily propagation of the Dharma of Manu has infected the minds of all men and women young and old. Nay, it has even infected the minds of the judges. There is a case reported mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_45 from Calcutta. A certain Dome (untouchable) by name Nobin Dome was prosecuted for theft of a goat. He was found to be not guilty. He filed a complaint for defamation against the complaint. The magistrate dismissed the complaint on the ground that as he was low caste man he had no reputation. The High Court had to intervene and direct the Magistrate that he was wrong in his view and that under the Penal Code all persons were equal. But the question remains,

how did the Magistrate get the idea that an untouchable had no reputation? Surely from the teaching of the Manu Smriti.

The Dharma of Manu had never been a mere past. It is as present as though it were enacted today. It bids fair to continue to have its sway in the future. The only question is whether its sway will be for a time or forever.

CHAPTER 5

UNDER THE PROVIDENCE OF MR. GANDHI

- (1) His work through the Congress
- I. A Strange Welcome.
 - II. The Great Repudiation.
 - III. A Charge Sheet.
 - IV. The Basis of the Charge Sheet.
 - V. The Tragedy of Gandhi.
 - VI. His Legacy to India and the Untouchables.

On the 28th December 1931, Mr. Gandhi returned to India from London where he had gone as a delegate to attend the second Session of the Indian Round Table Conference. At the Round Table Conference, Mr. Gandhi had been an utter, ignominious failure both as a personality and as a politician. I know that my opinion will not be accepted by the Hindus. But the unfortunate part is that my opinion in this respect coincides with the opinion of Mr. Gandhi's best friend. I will cite the opinions of two. This is what Mr. Ewer, who was closely associated with Mr. Gandhi during the Round Table Conference, wrote about the role Mr. Gandhi played at the Round Table Conference in London.

"Gandhi in the St. James Palace has not fulfilled the unwise expectation of those who saw him bestriding the Conference like a colossus He was out of his elements."

* * *

"His first speech, with its sentimental appeal, its over-stressing of humility, its reiteration of single-minded concern for the dumb suffering millions, was a failure. No one questioned its sincerity. But somehow it rang false. It was the right thing, perhaps, but it was in the wrong place. Nor were his later interventions on the whole more successful. A rather querulous complaint that the British Government had not produced a plan for the new Indian Constitution shocked some of Gandhi's colleagues, who had hardly expected to see the representative of the National Congress

appealing to British Ministers for guidance and initiative. The protest against the pegging of the rupee to the pound was astonishingly ineffective. The contributions to the discussions on franchise and kindred matters were of little importance. Behind the scenes he was active enough in the Hindu-Moslem negotiations, but here, too, results were intangible. Not for a moment did Gandhi take the lead or materially influence the course of committee work. He sat there, sometimes speaking, sometimes silent, while the work went on, much as it would have gone on without him.”* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability Political.htm - _msocom_46 This is what Bolton has to say about Mr. Gandhi's achievement at the Round Table Conference.

How did Mr. Gandhi fare as a statesman and a politician? At the close of the first session of the Round Table Conference there were three questions which had not been settled. The question of minorities, the question of the Federal structure and the question of the status of India in the Empire, were the three outstanding problems, which were the subject matter of controversy. Their solution demanded great statesmanship. Many said that these questions were not settled because the wisdom and authority of the Congress was not represented at the Round Table Conference. At the second session, Mr. Gandhi came and made good the deficiency. Did Mr. Gandhi settle any of these unsettled problems? I think it is not unfair to say that Mr. Gandhi created fresh disunity in the Conference. He began the childish game of ridiculing every Indian delegate. He questioned their honesty, he questioned their representative character. He taunted the liberals as arm-chair politicians and as leaders without any followers. To the Muslims he said that he represented the Muslim masses better than they did. He claimed that the Depressed Class delegates did not represent the Depressed Classes and that he did. This was the refrain which he repeated *ad nauseum* at the end of every speech. The non-Congress delegates deserve the thanks of all honest people for their having tolerated this nonsense and arrogance of Mr. Gandhi and collaborated with him to save him and to save the country from his mistake. Apart from this discourtesy to fellow-delegates, did Mr. Gandhi stand up for the cause he came to champion? He did not. His conduct of affairs was ignominious. Instead of standing up and fighting he began to yield on issues on which he ought never to have ceased fire. He yielded to the Princes and agreed that their representatives in the Federal legislature should be nominated by them and not elected, as demanded by their subjects. He yielded to the conservatives and consented to be content with provincial autonomy and not to insist upon central responsibility for which many lakhs of Indians went to gaol. The only

people to whom he would not yield were the minorities — the only party to whom he could have yielded with honour to himself and advantage to the country.

Nothing has helped so much to shatter the prestige of Mr. Gandhi as going to the Round Table Conference. The spectacle of Mr. Gandhi at the Round Table Conference must have been painful to many of his friends. He was not fitted to play the role he undertook to play. No country has ever sent a delegate to take part in the framing of the constitution who was so completely unequipped in training and in study. Gandhi went to the Round Table Conference with a song of the saint Narsi Mehta on his tongue. It would have been better for him and better for his country if he had taken in his arm pit a volume on comparative constitutional law. Devoid of any knowledge of the subject he was called upon to deal with, he was quite powerless to destroy the proposals put forth by the British or to meet them with his alternatives. No wonder Mr. Gandhi, taken out of the circle of his devotees and placed among politicians, was at sea. At every turn he bungled and finding that he could not even muddle through, he gave up the game and returned to India.

How was Mr. Gandhi received when he landed on the Indian soil? It may sound strange to outsiders and to those who are not the devotees of Mr. Gandhi but it is a fact that when the *S. S. Pilsner* of the Lloyd Triestino entered the harbour of Bombay at 8 a.m. in the morning of the 28th December 1931 there came to receive him an enthusiastic crowd of men, women and children who had assembled at the Pier in tens of thousands to greet him, to welcome him back and to have his *Durshan*. The following extracts from the *Times of India* and the *Evening News* of Bombay will serve to give a vivid idea of the grandeur of this reception.

"The Pilsner was escorted into the harbour by Desh Sevikas (women volunteers of the Congress) in saffron coloured sarees who went out in launches some distance from the pier.

"The Congress Committee had asked the Bombay Flying Club to fly an Aeroplane or two over the Pilsner and drop garlands as she came along side the pier, but the Flying Club, sanely preferring to keep out of politics, refused to grant the Congress demand.

"The spacious Central Hall at Ballard Pier was decorated with festoons and Congress flags and a large dais was put up at the centre with chairs placed on all sides for representatives of various organisations, local and upcountry, who were given passes for admission.

"Both the approaches to the reception hall from the wharf and from the city were lined by Desh Sevikas waving national flags and the duty of

guarding the dais and of regulating and directing the assembly inside the hall was also entrusted to the women volunteers.

"Mr. Gandhi reached the dais escorted by the Congress leaders and received an ovation. Hardly had he stepped on the dais when he began to be flooded with telegraph messages (presumably of welcome) which arrived one after another.

"Standing on the dais he was garlanded in turn by representatives of the public bodies who had assembled and whose names were called out from a long printed list of which copies were previously distributed.

"The proceedings inside the reception hall terminated with the garlanding.

"A procession was then formed in four, in place of the carriage which was intended to be the conveyance for Mr. Gandhi. He was seated in a gaily decorated motor car, with Mr. Vallabhbhai Patel to his left and Mr. Vitthalbhai Patel to his right and Mr. K. F. Nariman, President of the Bombay Provincial Congress Committee, on the front seat.

"Preceded by a pilot car and followed by others containing the Congress Working Committee members, the procession passed through the Ballard Pier Road, Hornby Road and Kalbadevi which had been decorated by the citizens at the instance of the Congress Committee and lined on either side by cheering crowds, five to ten deep till the party reached"*Mani Bhawan, Gamdevi*". At no stage of this welcome did Mr. Gandhi open his lips to acknowledge it. This man of vows was under his Sunday vow of silence which had not run out till then and nor did he think that etiquette, good manners or respect for those who had assembled required that he should terminate his vow earlier.

The official historian of the Congress describes mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_47 this reception given to Mr. Gandhi in the following terms:

"There were gathered in Bombay representatives of all parts and Provinces in India to accord a fitting welcome to the Tribune of the people. Gandhi greeted the friends that went on board the steamer to welcome him, patting many, thumping a few and pulling the venerable Abbas Tyabji by his beard. There was a formal welcome in one of the Halls of Customs House and then a procession in the streets of Bombay which kings might envy in their own country".

On reading this account one is reminded of the Irish Sein Fein Delegates who in 1921, just 10 years before, had gone to London at the invitation of Mr. Lloyd George for the settlement of the Irish Home Rule question. As is well known the Irish Delegates secured from the British Cabinet a treaty

which was signed on the 8th December 1921. The Treaty was subsequently submitted for approval to the Dail, the Parliament of the Sein Fein Party which met from 14th December 1921 to 7th January 1922. On the 7th January a division was taken. There were 64 votes for ratifying the treaty and 57 against. And what was the reception given to the Irish delegates who secured this treaty? Arthur Griffith — who was the head of the Irish Delegation and Michael Collins who was his most prominent colleague, were both of them shot by the anti-treaty Sein Feiners, the former on the 12th and the latter on the 22nd August 1922. The reason for sending them to such cruel death was that the treaty which they signed did not secure the inclusion of Ulster and a republic for Ireland. It is true the treaty did not grant this. But if it is remembered that negotiations were opened on the express understanding on the part of both sides that these two questions were outside the scope of negotiations it will be granted that if the treaty did not include these it was no fault of the Irish Delegates. The fury and ferocity of the anti treaty Sein Feiners against the Irish Delegates had no moral foundation and the fate that befell Arthur Griffith and Michael Collins can by no stretch of imagination be said to be one which they deserved.

Be that as it may, this welcome to Mr. Gandhi will be regarded as a very strange event. Both went to win Swaraj, Griffith and Collins for Ireland, Gandhi for India, Griffith and Collins succeeded, almost triumphed; Gandhi failed and returned with nothing but defeat and humiliation. Yet Collins and Griffith were shot and Gandhi was given a reception which kings could have envied!! What a glaring and a cruel contrast between the fate that awaited Collins and Griffith and the reception arranged for Gandhi? Are the Indian Patriots different from the Irish Patriots? Did the masses render this welcome out of blind devotion or were they kept in darkness of the failure of Mr. Gandhi by a mercenary Press? This is more than I can answer.

II

While this great welcome was being accorded to Mr. Gandhi the Untouchables of Bombay had come to the Pier to repudiate

Mr. Gandhi. Referring to this demonstration, the newspaper reports said:

"Just outside the gate of Ballard Pier, the scene was most exciting. On one side were drawn up Depressed Class volunteers in uniform, weaving black flags to the accompaniment of derisive shouts against Mr. Gandhi and laudatory cries in praise of their leader, while on the other side Congress followers kept up a din of counter shouts."

This Untouchable demonstration included men and women. The demonstrators numbered thousands, all waving Black Flags as a mark of repudiation of Mr. Gandhi. They were a determined crowd and, despite intimidation by the superior forces of the Congress assembled there to welcome Mr. Gandhi, were bent on showing that they repudiated Mr. Gandhi. This led to a clash and blood was split. There were forty casualties on each side.

For the first time Mr. Gandhi was made aware that there could be black flags even against him. This must have come to him as a shock. When he was asked about it later in the day, he said he was not angry, the Untouchables being the flesh of his flesh and bone of his bone. This is of course the Mahatmaic way of concealing the truth. One would not mind this convenient and conventional lie if there were behind it a realization that the crowd could not always be trusted to be loyal to its hero. Congressmen in India sadly lack the realism of a man like Cromwell. It is related that when Cromwell returned after a great battle, an enormous crowd came out to greet him. A friend sought to impress upon him the immensity of the crowd. But Cromwell dismissed the subject with the leconic remark, "Oh yes, I know many more will come to see me hanged."!! No Congress leader feels the realism of Cromwell. Either he believes that the day will never come when he will be hanged or he believes that the Indian crowd will never become a thinking crowd. That part of the Indian crowd does think was shown by the representatives of the Untouchables who assembled on the 28th to greet Mr. Gandhi with black flags.

Why did the Untouchables repudiate Mr. Gandhi? The answer to this question will be found in a statement issued by the organizers of these demonstrations which was printed and circulated on that day. The following are extracts from it. "Our Charge sheet against Gandhiji and Congress" "Enough of patronising attitude and lip sympathy. We ask for justice and fair play."

1. In spite of the fact that the removal of untouchability has been included in the constructive programme of the Congress, practically nothing has so far been done by that body to achieve that object, and in our fights against untouchability at Mahad and Nasik most of the local Congress leaders have been our bitter opponents.

2. The attitude of Gandhiji at the Round Table Conference in London with regard to the demands of the Depressed Classes as put forward by their accredited and trusted leader Dr. Ambedkar, was most unreasonable, obstinate and inexplicable.

3. Gandhiji was prepared to concede on behalf of the Congress the special claims of the Mohamedans and the Sikhs including their demand for separate representation on "historic grounds", but he was not willing even to concede reserved seats in general electorates to the Depressed Classes, although he knew, or should have known, what sort of treatment they would get, should they be thrown upon at the mercy on caste Hindus.

* * * * *

9. Gandhiji has said in opposing the claims of the Depressed Classes for separate representation that he does not want the Hindu Community to be subjected to vivisection or dissection. But the Congress is now dissecting the community of Untouchables by playing one section against another. Gandhiji and the Congress are not playing the fair game. Open enemies are far better than treacherous friends.

10. Attempts are being made to show that Gandhiji and the Congress alone represent the Depressed Classes by presenting addresses through a handful of hirelings and dupes. Is it not our duty to demonstrate the fact by coming out in thousands and proclaiming the truth? This is our charge sheet against Gandhiji and the Congress.

Let those who are not blind hero worshippers and blind partisans judge and give their verdict.

General Secretary, Depressed Classes Institute.

Is this charge sheet true? Mr. Gandhi is known to the world not merely as the Political leader of India, but also as the Champion of the Untouchables. It is perhaps true that the outside world takes more interest in Mr. Gandhi because he is the champion of the Untouchables than because he is a political leader. For instance the Manchester Guardian very recently devoted an editorial to the work of Mr. Gandhi for the Untouchables.

In the face of this, the charge appears to be quite unfounded. For, has not Mr. Gandhi made the Congress pledge itself to remove untouchability? The Congress before it came into the hands of Mr. Gandhi had refused to allow any social problem to be placed before it for consideration. A clear cut distinction was made between political and social question, and scrupulous attempt was made to confine the deliberations and activities of the Congress to purely political questions. The old Congress refused to take notice of the Untouchables. It was with great difficulty that the Congress in 1917

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_49 for the first time allowed the question of the Untouchables to be placed before it and condescended to pass the following resolution:

"The Congress urges upon the people of India the necessity, justice and righteousness of removing all disabilities imposed by custom upon the Depressed Classes, the disabilities being of a most vexatious and oppressive character, subjecting those classes to considerable hardship and inconvenience." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/24. Essay on Untouchables and Untouchability_Political.htm - [_msocom_50](#)

The Congress fell onto the hands of Mr. Gandhi in 1920 and the Congress at its ordinary session held at Nagpur passed the following resolution:

INTERCOMMUNAL UNITY

"Finally, in order that the Khilafat and the Punjab wrongs may be redressed and Swarajya established within one year, this Congress urges upon all public bodies, whether affiliated to the Congress or otherwise, to devote their exclusive attention to the promotion of non-violence and non-cooperation with the Government and, inasmuch as the movement of non-cooperation can only succeed by complete co-operation amongst the people themselves, this Congress calls upon public associations to advance Hindu-Muslim unity and the Hindu delegates of this Congress call upon the leading Hindus to settle all disputes between Brahmins and Non-Brahmins, wherever they may be existing, and to make a special effort to rid Hinduism of the reproach of untouchability, and respectfully urges the religious heads to help the growing desire to reform Hinduism in the matter of its treatment of the suppressed classes."

Again did not Mr. Gandhi make the removal of untouchability a condition precedent for achieving Swaraj?

In the *Young India* of December 29, 1920, Mr. Gandhi wrote:

"Non-cooperation against the Government means cooperation among the governed, and if Hindus do not remove the sin of untouchability, there will be no Swaraj in one year or one hundred years...."

Writing again on the conditions of Swaraj in the issue of *Young India* for February 23, 1921, he said:

"Swaraj is easy of attainment before October next if certain simple conditions can be fulfilled. I ventured to mention one year in September last because I knew that the conditions were incredibly simple and I felt that the atmosphere in the country was responsive. The past five months experience has confirmed me in the opinion. I am convinced that the country has never been so ready for establishing Swaraj as now."

"But what is necessary for us as accurately as possible to know the conditions. One supreme indispensable condition is the continuance of non-violence."

"The next condition is..... establishing a Congress Agency in every village."

"There are certain things that are applicable to all. The potent thing is Swadeshi. Every home must have the spinning wheel and every village can organize.... and become self supporting."

"Every man and woman can give some money—be it even a pice—to the Tilak Swaraja Fund. And we need have no anxiety about financing the movement....."

"We can do nothing without Hindu-Moslem unity and without killing the snake of untouchability....."

"Have we honest, earnest, industrious, patriotic workers for this very simple programme? If we have, Swaraj will be established in India before next October."

What more did the Untouchables want? Here is Mr. Gandhi who had held himself out as the friend of the Untouchables. He prides himself on being their servant. He claims and fought for being accepted as their representative. Why should the Untouchables show such a lack of confidence in Mr. Gandhi?

On the basis of words, the charge perhaps appears unfounded. But does it appear equally unfounded if we have regard to deeds? Let me examine Mr. Gandhi's deeds.

The work which is claimed by Mr. Gandhi and his friends to have been done by him and the Congress for the Untouchables falls into two periods, the period which precedes the Poona Pact and the period which follows the Poona Pact. The first period may be called the period of the Bardoli Programme. The second period may be called the period of the Harijan Sevak Sangh.

FIRST PERIOD

To begin with the Bardoli Programme period. The Bardoli Programme or what is called the Constructive Programme of the Congress was the direct outcome of the new line of action adopted by the Congress in securing the political demands of the country. At the session of the Congress held at Nagpur in 1920 the Congress declared :

"Whereas the people of India are now determined to establish Swaraj; and

"Whereas all methods adopted by the people of India prior to the last special session of the Indian National Congress have failed to secure due recognition of their rights and liberties;

"Now this Congress while reaffirming the resolution on nonviolent non-cooperation passed at the Special Session of the Congress at Calcutta declares that the entire or any part or parts of the scheme of non-violent

non-cooperation, with the renunciation of voluntary association with the present Government at one end and the refusal to pay taxes at the other, should be put in force at a time to be determined by either the Indian National Congress or the All India Congress Committee and in the meanwhile to prepare the Country for it”,....

At the session of the Congress held at Ahmedabad in 1921 it was declared that:

"This Congress is further of opinion that Civil Disobedience is the only civilized and effective substitute for an armed rebellion.... and therefore advises all Congress Workers and others.... to organize individual civil disobedience and mass civil disobedience"..... It is to give effect to this policy of non-cooperation and civil disobedience and to prepare the people to take part in them that the Working Committee of the Congress met at Bardoli in February 1922 and drew up the following programme of action.

"The Working Committee advises all Congress organisations to be engaged in the following activities:

- (1) To enlist at least one crore of members of the Congress.
- (2) To popularise the spinning wheel and to organise the manufacture of hand-spun and handwoven khaddar.
- (3) To organise national schools.
- (4) To organise the Depressed Classes for a better life, to improve their social, mental and moral condition to induce them to send their children to national schools and to provide for them the ordinary facilities which the other citizens enjoy.

Note: Whilst therefore where the prejudice against the Untouchables is still strong in places, separate schools and separate wells must be maintained out of Congress funds, every effort should be made to draw such children to national schools and to persuade the people to allow the Untouchables to use the common wells.

(5) To organise the temperance campaign amongst the people addicted to the drink habit by house-to-house visits and to rely more upon appeal to the drinker in his home than upon picketing.

(6) To organise village and town Panchayats for the private settlement of all disputes, reliance being placed solely upon the force of public opinion and the truthfulness of Panchayat decisions to ensure obedience to them.

(7) In order to promote and emphasize unity among all classes and races and mutual goodwill, the establishment of which is the aim of the movement of non-cooperation, to organise a social service department that will render help to all, irrespective of differences, in times of illness or accident.

(8) To continue the Tilak Memorial Swaraj Fund collections and call upon every Congressman or Congress sympathiser to pay at least a one-hundredth part of his annual income for 1921. Every province to send every month twenty-five per cent of its income from the Tilak Memorial Swaraj Fund to the All-India Congress Committee.

The above resolution shall be brought before the forthcoming session of the All-India Congress Committee for revision if necessary."

This programme was placed before the All-India Congress Committee at its meeting at Delhi on 20th February 1922 and was confirmed by the same. The programme is a very extensive programme and I am not concerned with what happened to the whole of it, how it was received and how it was worked out. I am concerned with only one item and that which relates to the Depressed Classes.

After it was confirmed by the All-India Congress Committee, the Working Committee met at Lucknow in June 1922 and passed the following resolution:

"This Committee hereby appoints a committee consisting of Swami Shradhanandji, Mrs. Sarojini Naidu and Messrs. 1. K. Yajnik and G. B. Deshpande to formulate a scheme embodying practical measures to be adopted for bettering the condition of the so-called Untouchables throughout the country and to place it for consideration before the next meeting of this Committee, the amount to be raised for the scheme to be Rs. 2 lacs for the present." This resolution was placed before the All-India Congress Committee at its meeting in Lucknow in June 1922. It accepted the resolution with the amendment that "the amount to be raised for the scheme should be 5 lacs for the present", instead of 2 lacs as put forth in the resolution of the Working Committee. How did this programme fare, what practical measures did the Committee suggest and how far were these measures given effect to? These questions one must ask in order to assess the work of Mr. Gandhi and the Congress for the Untouchables.

It seems that before the resolution appointing the Committee was adopted by the Working Committee, one of its Members Swami Shradhanandji tendered his resignation of the membership of the Committee. For one finds that at the very sitting at which the Working Committee passed this resolution, another resolution to the following effect was passed by the Working Committee:

"Read letter from Swami Shradhanandji, dated 8th June 1922 for an advance for drawing up a scheme for depressed classes work. Resolved that Mr. Gangadharrao B. Deshpande be appointed convener of the sub-committee appointed for the purpose and he be requested to convene a

meeting at an early date, and that Swami Shradhanand's letter be referred to the sub-committee." The Working Committee met again in July 1922 in Bombay and passed the following Resolution:

"That the General Secretary be asked to request Swami Shradhanand to reconsider his resignation and withdraw it and a sum of Rs. 500/- be remitted to the Convener, Shri G. B. Deshpande, for the contingent expenses of the Depressed Classes Sub-Committee." The year 1922 thus passed away without anything being done to further that item of the Bardoli Programme which related to the Depressed Classes. The year 1923 came on. The Working Committee met at Gaya in January 1923 and passed the following resolution:

"With reference to Swami Shradhanand's resignation, resolved that the remaining members of the Depressed Classes Subcommittee do form the Committee and Mr. Yajnik be the convener."

The All-India Congress Committee met in Feb. 1923 at Bombay and seeing that nothing was done as yet, recorded the following resolution :

"Resolved that the question of the condition of the Untouchables be referred to the Working Committee for necessary action."

What did the Working Committee do then? It met at Poona on the 17th April 1923 and resolved as follows:

"Resolved that while some improvement has been effected in the treatment of the so-called Untouchables in response to the policy of the Congress this Committee is conscious that much work remains yet to be done in this respect and inasmuch as this question of untouchability concerns the Hindu community particularly, it requests the All-India Hindu Mahasabha also to take up this matter and to make strenuous efforts to remove this evil from amidst the Hindu community."

Thus came to an end the Constructive Programme undertaken by Mr. Gandhi and the Congress for the Untouchables. The Bardoli programme for the Untouchables was in no sense a revolutionary programme. It did attempt to abolish untouchability. It does not attempt to break up caste. There is no mention of intermarriage or interdinning. It accepts the principle of separate wells and separate schools for Untouchables. It was purely an ameliorative programme. And yet such a harmless programme the Congress failed to carry through.

It must further be remembered that this was a time when the Congress was on the war path. It was determined to fight British Imperialism and was most anxious to draw every community towards itself and make all disaffected towards the British. This was the time when the Congress could have been expected to show to the Untouchables that the Congress stood

for them and was prepared to serve them in the same way that it was prepared to serve the Musalmans. There could be no more propitious circumstance which could make the Hindus overcome their antipathy towards the Untouchables and undertake to serve. But even such propitious circumstance did not prove sufficient to energize Congressmen to do this small bit for the Untouchables. How hard must be the anti-social feelings of the Hindus against the Untouchables that even the highest bliss and the greatest stimulant, namely the prospect of winning Swaraj, were not sufficient to dissolve that spirit. The tragedy and the shamelessness of this failure by the Congress to carry through their programme for the Untouchables is aggravated by the way in which the matter was disposed of.

The work of the amelioration of the Untouchables could not have been left in worse hands. If there is any body which is quite unfit for addressing itself to the problem of the Untouchables, it is the Hindu Mahasabha. It is a militant Hindu organization. Its aim and object is to conserve in every way everything that is Hindu, religious and culture. It is not a social reform association. It is a purely political organization whose main object and aim is to combat the influence of the Muslims in Indian politics. Just to preserve its political strength it wants to maintain its social solidarity and its way to maintain social solidarity is not to talk about caste or untouchability. How such a body could have been selected by the Congress for carrying on the work of the Untouchables passes my comprehension. This shows that the Congress wanted somehow to get rid of an inconvenient problem and wash its hands of it. The Hindu Mahasabha, of course, did not come forth to undertake the work and the Congress had merely passed a pious resolution recommending the work to them without making any promise for financial provision. So the project came to an inglorious and ignominious end. Yet there will not be wanting thousands of Congressmen who would not be ashamed to boast that the Congress has been fighting for the cause of the Untouchables and what is worse is that there will not be wanting hundreds of foreigners who are ready to believe it under the false propaganda carried on by men like Charles F. Andrews, who is the friend of Mr. Gandhi and who thinks that to popularize Gandhi in the Western World is his real mission in life. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_51

It is not enough to know that the effort failed and had to be wound up. It is necessary to inquire why Swami Shradhanand resigned and refused to serve on the proposed Committee. There must be some good reason for it.

For the Swami was the most enlightened Arya Samajist and very conscientiously believed in the removal of untouchability. On this point, the correspondence that passed between the Swami and the General Secretary to the All India Congress Committee throws a flood of light on the mentality of the Congressmen and I make no apology for reproducing below the whole of it.

SWAMIJI'S LETTER

The General Secretary, All-India Congress Committee, Camp Delhi.

I acknowledge, with thanks, receipt of your letters No. 331 and 332 embodying resolutions of the working committee and of the A.I.C.C. about untouchability. I observe with pain, that the resolution of the A.I.C.C. as at present worded, does not include the whole of what was passed by the committee.

The facts are these. I sent the following letter to Mr. Vithalbhai Patel, the then General Secretary on 23rd May 1922, which was also published by the principal dailies of the country.

“My dear Mr. Patel, there was a time (vide *Young India* of 25th May, 1921) when Mahatmaji put the question of untouchability in the forefront of the Congress Programme. I find now that the question of raising the Depressed Classes has been relegated to an obscure corner. While Khadi claims the attention of some of our best workers and liberal sum has been earmarked for it, for the year, while a strong sub-committee has been appointed to look after national education and a special appeal for funds is to be made for the same, the question of the removal of untouchability has been shelved by making small grants to Ahmedabad, Ahmednagar and Madras. I am of opinion that with a majority of 6 crores of our brethren set against us by the beauracracy even the Khadi Scheme cannot succeed completely. The Members of the Working Committee, perhaps, do not know that on this side our suppressed brethren are leaving off Khadi and taking to buying cheap foreign cloth. I want to move the following resolution in the meeting of the A.I.C.C. which comes off on the 7th of June next at Lucknow.

"That a Sub-committee, consisting of three members of the A.I.C.C., be appointed to give effect to the resolution about the so-called Depressed Classes, that a sum of five Lakhs of rupees be placed at their disposal for propaganda work and that in future all applications for grants be referred to the said Sub-committee for disposal."

My proposal was amended by the Working Committee and ran as follows:

"This Committee hereby appoints a committee consisting of Swami Shradhanand, Mrs. Sarojini Naidu and Messrs. G. B. Deshpande and 1. K. Yajnik to formulate a scheme embodying practical measures to be adopted for bettering the condition of the so-called Untouchables throughout the country and to place it for consideration before the next meeting of the Working Committee, the amount to be raised for the scheme to be Rs. 2 lakhs for the present."

Mr. Patel asked me to accept the Working Committee's proposed resolution in toto. I refused to accept the Working Committee's resolution and in the very first sitting of the All India Congress Committee substituted 5 lakhs for 2 lakhs with the condition that one lakh of the same be allotted by the A.I.C.C., out of the funds in its hands, in cash and an appeal be made for the balance.

Mr. Rajagopalachariar, on behalf of the Working Committee proposed that instead of fixing the amount to be allotted out of the

Congress funds now, it should be provided that when the Scheme was accepted by the Working Committee, that Committee should allot as much cash as it could then spare for this purpose. I do not recollect the exact words but the support of the amendment as given above is, to my knowledge, true.

On this an uproar arose and the query was pressed from all sides that the cash balance in the hands of the A.I.C.C. ought to be announced. The President called me aside and told me in confidence that the Congress possessed very little cash balance and if pressed to disclose the true state of affairs, it would harm the movement as outsiders and even C.I.D. people were also present. On this I accepted the amendment of Mr. Rajgopalchariar in spite of protests from my seconder and supporters. But my surprise was great when I found the resolution in the dailies, as reported by the associated press, shorn of Mr. Rajagopalchariar's amendment.

After the above resolution was passed, some members suggested that a convener of the Sub-committee ought to be appointed, several members proposed me as the convener. On this Mr. Vithalbhai Patel (the then General Secretary) got up and said, "As Swami Shradhanand's name occurs first, naturally he will be the convener and therefore there was no need of moving any fresh resolution at all."

Members from all parts of the country began to give information to me about untouchability in their provinces and pressed me to visit their parts. On this I made some promises. Then, I thought, that without some cash for preliminary expenses no enquiries, on the spot could be made and

hence no proper scheme formulated. I also learnt that Rs. 25,000/- had been voted by the Working Committee for "*the Independent*" of Allahabad and that an application for grant of Rs. 10,000/- to the Urdu daily "*Congress*" of Delhi had been placed by Hakim Ajmal Khan and Dr. Ansari before the Working Committee. So, considering, that after all, the Congress might not be so hard pressed for cash, I wrote a letter addressed to the President asking him to give the Untouchability Sub-Committee an advance of Rs. 10,000/- for preliminary expenses.

After all this, the following resolution of the Working Committee forwarded by your letter No. 331 is very interesting reading:

"Read letter from Swami Shradhanand dated 8th June 1922 for an advance for drawing up a scheme for Depressed Class work— Resolved that Mr. Gangadharrao B. Deshpande be appointed convener of the Sub-committee appointed for the purpose and he be requested to convene a meeting at an early date, and that Swami Shradhanand's letter be referred to the Sub-committee."

There is another matter which is inexplicable. After my first letter had been acknowledged I addressed the following letter from Hardwar on 3rd June 1922 :

"My dear Mr. Patel, I shall leave Hardwar the day after tomorrow and reach Lucknow on the morning of June 6th. You know, by now, that I feel the most for the so-called Depressed Classes. Even in the Punjab I find that no attention worth the name has been paid to this item of the constructive programme. In the U.P. of course it will be an uphill work. But there is another very serious difficulty.

The Bardoli programme, in its note under item 4, lays down that where prejudice is still strong, separate wells and separate schools must be maintained out of the Congress funds. This leaves a loophole for those Congress workers who are either prejudiced against the Depressed Classes or are weak, and no work can be done in inducing people to agree to allow the Untouchables to draw water from common wells. In the Bijnoor District, I learn, there was no restriction and the Untouchables drew water freely from common wells. But in some places fresh prejudice is being engendered under the aegis of the Bardoli resolution note. In my recent visits to Ambala Cantt., Ludhiana, Batala, Lahore, Arnritsar and Jandiala, I found that the question of the removal of disabilities of the Untouchables is being ignored. In and near Delhi it is the Dalitodhar Sabha, of which I am the President, rather than the Congress which is doing appreciable work. I think that unless item (4) of the Bardoli constructive programme is

amended in proper form, the work, which I consider to be the most important plank in the Congress programme, will suffer.

Kindly place the following proposal before the President and if he allows it to be placed before the next meeting of the A.I.C.C. I shall move it there—"Instead of the Note under item (4) of the Bardoli resolution, substitute the following Note :”The following demands of the Depressed Classes ought to be complied with at once namely that (a) they are allowed to sit on the same carpet with citizens of other classes, (b) they get the right to draw water from common wells and (c) their children get admission into National schools and Colleges and are allowed to mix freely with students drawn from the so-called higher castes. I want to impress upon the members of the A.I.C.C. the great importance of this item. I know of cases where the Depressed Classes are in open revolt against tyranny of the so-called upper castes and unless the above demands are conceded to them they will succumb to the machinations of the bureaucracy.”After my first proposals were passed in the A.I.C.C. Meeting on June 7th at Lucknow, I asked Mr. Patel to put my proposed amendment of Note to item (4) of Bardoli resolution before the meeting. He told me that the Working Committee would refer it to the Sub-committee and asked me not to press it there. I agreed. But I have not received copy of any resolution of the Working Committee referring my proposal to the Untouchability Sub-committee.

The untouchability question is very acute in and near Delhi and I have to grapple with it at once. But the Sub-committee cannot begin work off-hand because the Working Committee has to take several other political situations in the country into consideration before deciding upon any scheme of practical measures to be adopted for uprooting untouchability on behalf of the Congress. Under these circumstances I cannot be of any use to the Sub-committee and beg to resign from membership.

Yours sincerely, Delhi, Jan. 30.

Shradhanand Sanyasi.

SECRETARY'S REPLY

Dear Swamiji,

Your letter dated June 1922 received in my office on the 30th of that month has, by a resolution of the Working Committee passed in Bombay on the 18th instant, been referred to me with instructions to explain facts and request you to be good enough to reconsider your resignation from the Depressed Classes Sub-Committee.

As you are aware, I have no personal knowledge of the facts which happened prior to my release from the jail. But I was present at the meeting of the Working Committee which passed the resolution dated 10th June 1922 appointing Mr. Deshpande as the Convenor of the Sub-committee. It was not then mentioned that there was any understanding about any particular member acting as the Convenor of the Sub-committee and the whole resolution was passed merely to complete the necessary formalities in regard to the payment of money. It was felt that a formal resolution of the Sub-committee was necessary before any expenditure could be sanctioned. Mr. Deshpande was accordingly appointed as the convenor and a sum of Rs. 500/- was voted for the expenses of these preliminary steps. By an oversight the resolution as drafted omitted to mention the sanction of Rs. 500/- You will thus observe that it was not due to the unwillingness of Working Committee to sanction Rs. 10,000/- for untouchability, but the true reason for framing the resolution in the manner it was framed was what I have explained above. Nothing could be farther from the intention of the Working Committee than a desire to understand the importance of the work your Sub-committee was called upon to do or in any way to ignore the valuable advice tendered by you. On your letter being placed before the last meeting of the Working Committee the omission of the grant of Rs. 500/- was supplied, and I was instructed to communicate with you on the subject. It will be a great pity if the Sub-committee is deprived of the benefit of your experience and special knowledge of the whole question of untouchability and I will ask you therefore in the public interest to reconsider your decision and wire to my office at Allahabad withdrawing your resignation from the Sub-Committee. I need hardly add that any resolutions arrived at by your Sub-Committee will receive all the consideration they deserve at the hands of the Working Committee.

As to the alteration in the Working Committee's resolution in regard to separate wells and schools, the best course would be for your Subcommittee to recommend the change and for the Working Committee to adopt it.

I am afraid you are under a misapprehension as regards the grant to '*The Independent*', of Allahabad, and '*The Congress*' of Delhi. In reference to the former, all that has been done is to sanction the application of the U. P. Provincial Committee to advance as a loan to the '*nationalist journals*' Ltd., Rs. 25,000 from the funds already granted to that committee and in reference to the latter, the application for a grant of a loan was wholly rejected.

Yours sincerely,
Motilal Nehru. Bombay, July 23, 1922.

General Secretary.
SWAMIJI'S REJOINDER

Dear Pandit Motilaji,

I received your letter of 23rd July 1922 addressed from Bombay on my resignation from the Untouchability Sub-Committee. I am sorry I am unable to reconsider it because some of the facts brought out by me in my first letter have simply been ignored.

(1) Kindly enquire of Mr. Rajagopalchariar whether I did not first propose that at least one lakh should be given in cash out of the funds in the hands of the A.I.C.C., whether he did not move an amendment substituting words for the above which purported to promise that when the plan of work formulated by the Sub-Committee was accepted by the Working Committee, that Committee would allot as much money for the untouchability department as it could then spare and whether I did not accept his amendment when the President called me aside and explained the exact financial position at the time. If this is the fact then why did the amendment not appear with the resolution?

(2) Did you enquire of Mr. Vithalbai J. Patel whether the members of the A.I.C.C. did not propose me as the convenor of the Subcommittee and whether he did not then say —"As Swami Shradhanand's name occurs first, naturally he will be the convenor and therefore there was no need of moving any fresh resolution at all" I enquired about this from Dr. Ansari and he wrote back to me on June 17th, 1922 saying that I was appointed convenor. Dr. Ansari is with you and you can verify it from him. I hope Mr. Patel has not forgotten all about it.

(3) Then the immediate work among the Untouchables here is very urgent and I can not delay it for any reason whatever. Kindly have my resignation accepted in the next meeting of the Working Committee, so that I may be free to work out my own plan about the removal of untouchability. This was my position at the end of July last. My experience in the Amritsar and Mianwali jails and the information I gathered there, have confirmed me in the belief that unless sexual purity (Brahmacharya) is revived on the ancient Aryan lines and the curse of untouchability is blotted out of the Indian society, no efforts of the Congress nor of other patriotic organisations out of the Congress will avail in their efforts for the attainment of Swaraj. And as national self realization and virile existence is impossible without Swaraj, I, as a Sanyasi, should devote the rest of my life to this sacred cause—the cause of sexual purity and true national unity.

Delhi. July 23. 1922.
Shradhananda Sanyasi.

This shows what heart Congressmen had in the uplift work of the Untouchables.

So much for what Congressmen volunteered to do. How much did Congressmen or Mr. Gandhi help the Untouchables who were working independently for the uplift of their own people. This was the period when the Untouchables themselves were on the warpath. They too were engaged in offering civil disobedience against the Hindus for the purpose of acquiring their civic and social rights. This was the period during which the Untouchables of Bombay Presidency had launched their Satyagraha at Mahad for establishing their right to take water from the public tank and at Nasik for establishing their right to enter a Hindu temple. How did Mr. Gandhi look upon this Satyagraha movement started by the Untouchables against the caste Hindus? The attitude of Mr. Gandhi to say the least was extremely queer.

In the first place Mr. Gandhi condemned this Satyagraha by the Untouchables against the caste Hindus. He would not support it. In this controversy the Untouchables were perfectly logical. They argued that if Civil Disobedience was the weapon which, according to Mr. Gandhi, the Hindus could legitimately use against the British for securing their freedom, why were the Untouchables not justified in using the same weapon against the caste Hindus for securing their emancipation. However good this logic Mr. Gandhi would have none of it. He tried to meet their logic by his logic. He argued that Untouchability was the sin of the Hindus. It is the Hindus who must therefore do penance. It is they who must offer Satyagraha for the removal of untouchability. Satyagraha was not the business of the Untouchables because they were not sinners, far from being sinners they were sinned against. This was of course not Aristotelian logic. It is a Mahatmian logic which is another name for casuistry. But it was apparent that this Mahatmian logic was simply nonsense. The Untouchables replied that if that was the view of Mr. Gandhi — namely that Satyagraha is penance which is for the sinner to offer—then why should he call upon the Hindus to offer Satyagraha against the British. British Imperialism was the sin of the British and therefore according to his logic the Satyagraha must be offered by the British and not by the caste Hindus. The Untouchables had destroyed his logic. It was clear that there was either a fallacy or insincerity in this attitude of Mr. Gandhi to Satyagraha by the Untouchables against caste Hindus. But the Untouchables could not dislodge Mr. Gandhi from the position of hostility which he had adopted.

There is another inconsistency in the attitude which Mr. Gandhi showed towards the Satyagraha by the Untouchables against Caste Hindus at Mahad and Nasik and the attitude he showed against similar Satyagraha by the Untouchables at Vaikom. Mr. Gandhi was in favour of the Satyagraha at Vaikom. He blessed it and encouraged it. Why then was Mr. Gandhi opposed to the Satyagraha at Mahad and Nasik? Was there any difference between the two? Yes, there was. The Vaikom Satyagraha was carried on by the Untouchables under the auspices of the Congress. The other two were launched by the Untouchables independently of the Congress. Had the opposition of Mr. Gandhi something to do with this difference? As Mr. Gandhi has given no answer I must leave the reader to make the best guess.

Perhaps Mr. Gandhi was not prepared to protect the lambs who would not accept him as their shepherd. When Mr. Gandhi refused to give his blessings to the Satyagraha by the Untouchables it was a foregone conclusion that no Congressmen would or could come and help the Untouchables in their struggle against the orthodox Hindus. Indeed this attitude of Mr. Gandhi enabled Congress Hindus to join the orthodox Hindus—they are kith and kin and the line that divides the two is very thin—and batter the heads of the Untouchables with a clear conscience. This was not the only mischief Mr. Gandhi did by his most illogical if not perverse attitude. He came out openly against all non-Hindus and prohibited them from helping the Untouchables in their Satyagraha struggle against the caste Hindus: He was not only against Mahomedans, Christians, Parsis and Jews rendering any help, but he went to the length of objecting to the Sikhs—who are no more than militant and protestant Hindus—coming to help the Untouchables. Here again his argument was queer. Untouchability is the sin of the caste Hindus. It is they who must do penance. Help to the Untouchables being a penance and penance being the obligation of the sinner, only the sinner could offer Satyagraha and help it. The Mahomedans, Christians, Parsis, Jews and Sikhs were not sinners in the matter of untouchability and therefore they could not help the Satyagraha for the removal of untouchability. Mr. Gandhi of course would not see it from the point of view of the Untouchables. He would not see that what was sin for the caste Hindus was slavery for the Untouchables. If the sinner was bound to do penance, the slave was entitled to break his bonds and every person who believed in freedom, no matter what his caste or his creed, was bound to help and free to join in the struggle. This is exactly the point of view which Mr. Gandhi had adopted with regard to the Khilafat question. The Musalman wanted Khilafat and the territorial

integrity of Turkey. The demand for territorial integrity of Turkey was a most impossible demand because it involved the subjugation of the Arabs by the Turks. Still the Musalmans insisted upon it and Mr. Gandhi brought round the whole of the Congress and the Hindus to support this impossible and impious demand of the Musalmans. Mr. Gandhi then argued that if the Musalmans think it their religious duty to fight for the territorial integrity of Turkey, then it was the obligation of the Hindus to help the Muslims to fulfil their duty.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_52

The benefit of this logic Mr. Gandhi was not prepared to extend to the Untouchables. He was firm. Non-Hindus may help Hindus. Hindus may help non-Hindus. But none should help the Untouchables.¹ Friends of Mr. Gandhi were anxious to soften the rigour of his logic by pointing out that a distinction was necessary to be made on the basis of the nature of the disabilities of the Untouchables. They argued
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_53 that certain disabilities of the Untouchables were civic, certain were religious and that so far as the civic disabilities were concerned even non-Hindus should be allowed to help the Untouchables to carry on the Satyagraha. Even to this Mr. Gandhi was not prepared to listen. His interdict was applicable to all cases and there was no distinction possible. With this interdict on outside help Mr. Gandhi—the “friend of the Untouchables”—completely cut off the supplies of the Untouchables and left them without any sinews of war.

So far I have explained how the Congress without any qualm of conscience abandoned the idea of uplifting the Untouchables. It did not even undertake it. Secondly I have explained how Mr. Gandhi failed to support the Untouchables in their Satyagraha against the caste Hindus but by his queer logic found justification for not helping them and for preventing help reaching them. There now remains to record the third and the last event which belongs to this period. Though last in point of time it is undoubtedly the first in point of importance. That incident is the touchstone by which Mr. Gandhi's claim as a friend of the Untouchables must stand or fall.

The incident relates to the demand made by the Representatives of the Depressed Classes at the Indian Round Table Conference for political safeguards being embodied in the new Constitution and the attitude of Mr. Gandhi to these demands. The most important of these demands related to representation of the Depressed Classes in the Legislatures. The demand

submitted by the representatives of the Depressed Classes was in the following terms—

Adequate Representation in the Legislatures.

The Depressed Classes must be given sufficient political power to influence legislative and executive action for the purpose of securing their welfare. In view of this they demand that provisions shall be made in the electoral law to give them:

- (1) Right to adequate representation in the Legislatures of the Country, Provincial and Central.
- (2) Right to elect their own men as their representatives, (a) by adult suffrage and
(b) by separate electorates for the first ten years and thereafter by joint electorates and reserved seats, it being understood that joint electorates shall not be forced upon the Depressed Classes against their will unless such joint electorates are accompanied by adult suffrage."

It is this particular demand by the Depressed Classes which raised such a storm and which became so serious an issue that the solution of it almost shook the foundation of Indian politics and of Hindu Society.

This demand of the Depressed Classes was founded on the recommendation of the Simon Commission. After a careful survey of the problem of the Depressed Classes, the Simon Commission had reported to the following effect regarding their place under the new Constitution:

“It is clear that even with a considerable lowering of the franchise . . . there would be no hope of the Depressed Classes getting their own representatives elected in general constituencies without special provision being made to secure it Ultimately we should hope to see them maintaining their ground in joint electorates without special protection. . . . They will make no headway, however, in this direction as long as they are represented solely by nomination, for nomination provides no opportunities for training them in politics. There are, even with the present restricted franchise, a sufficient number of Depressed Class voters to make methods of election possible....

Our object, therefore, is to make a beginning which will bring the Depressed Classes within the circle of elected representation. How is this to be done? Most of the Depressed Class associations which appeared before us favoured separate electorates, with seats allocated on the basis of population. . . . separate electorates would no doubt be the safest method of securing the return of an adequate number of persons who enjoy the confidence of the Depressed Classes; but we are averse from stereotyping the difference between the Depressed Classes and the remainder of the

Hindus by such a step, which we consider would introduce a new and serious bar to their ultimate political amalgamation with others....

Our proposal, therefore, is that in all the eight Provinces there should be some reservation of seats for the Depressed Classes. . . . The result of our Scheme would be that spokesmen of the Depressed Classes would be returned as elected members in each of the Provinces. . . . As to the number of seats to be reserved, this should obviously bear some proportion to the total number of the Depressed Classes in the province. . . . We propose that. . . . the proportion of the number of such reserved seats to the total seats in all the Indian General constituencies should be three quarters of the proportion of the Depressed Classes population to the total population of the electoral area of the province.
mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_54"..... As a matter of fact there was nothing new in this demand of the Depressed Classes for separate political representation for themselves by themselves and through themselves and the Simon Commission in conceding it cannot be said to have made a new departure. This demand was put forth in 1919.

At the time when the reforms which subsequently became embodied in the Act of 1919 were being discussed, the authors of the Montague Cheirnsford Report clearly recognized the problem of the Untouchables and the authors pledged themselves to make the best arrangement for their representation in the Legislatures. But the Committee that was appointed under the Chairmanship of Lord Southborough to devise the franchise and the electoral system ignored them altogether. The Government of India did not approve of this attitude and made the following comments:

"They (Untouchables) are one-fifth of the total population and have not been represented at all in the Morley-Minto Councils. The Committee's report mentions the Untouchables twice, but only to explain that in the absence of satisfactory electorates they have been provided for by nomination. It does not discuss the position of these people, or their capacity for looking after themselves. Nor does it explain the amount of nomination which it suggests for them. . . . The measure of representation which they propose. suggested that one-fifth of the entire population of British India should be allotted seven seats out of practically eight hundred. It is true that in all the Councils there will be, roughly speaking, a one-sixth proportion of officials who may be expected to bear in mind their interests: but that arrangement is not, in our opinion, what the Report on reforms aims at. The authors stated that the Untouchables also should learn the lesson of self-protection. It is surely fanciful to hope that this result can be

expected from including a single member of the community in an assembly where there are sixty or seventy caste Hindus. To make good the principles of the Report we must treat the outcastes more generously.”

The Government recommended that the seats allotted to the Untouchables by the Committee should be doubled. Accordingly in place of seven, they were given fourteen seats.

Again in 1923, the Secretary of State appointed a Committee which is known as the Muddiman Committee. The principal object of the Committee was to find out how far the constitution established by the Act of 1919 could be expanded by alterations in the Rules and without altering the Act. The Committee made certain recommendations and pointed out the necessity of increasing the representation of the Depressed Classes in the Legislatures. This recommendation was accepted by the Secretary of State who increased the number of seats.

Thus the right of the Depressed Classes to special representation in the Legislature had become a principle which was not only accepted but adopted in the Constitution. So well was this principle recognized that it had been extended even to District Local Boards, School Boards and Municipalities.

A claim which had been given legal recognition in 1919 and which had thereby become a right and which had become perfected by user the representatives of the Depressed Classes felt could not be disputed by any body. There was no reason to fear that the Congress would come forward seriously to dispute this right of the Depressed Classes. Because although the Nehru Committee in 1929 in the Swaraj Constitution which it was asked to frame had denied this right to the Depressed Classes, the report of that Committee was not binding on the Congress. The Congress was bound by nothing except its own resolution which was passed in 1920, at its Nagpur Session to allay the fears of the Sikhs, and which had declared its policy to treat all minorities alike in the matter of representation in the Legislature

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_55

The representatives of the Depressed Classes were therefore justified in hoping that their demand would go through without any difficulty whatsoever from any quarters.

At the first Round Table Conference things went very smoothly. There was no trouble of any kind and although there was no agreement on the minorities question, the right of the Depressed Classes to special representation was accepted by all sections that were represented at the Round Table Conference. The conclusions reached by the Minorities Sub-

Committee were embodied in its report which was presented to the General Conference. The following are the extracts from that report:

“There was general agreement with the recommendation of Subcommittee No. II (Provincial Constitution) that the representation on the Provincial Executives of important minority communities was a matter of the greatest practical importance for the successful working of the new constitution, and it was also agreed that, on the same grounds, Mohammadans should be represented on the Federal Executive. On behalf of the smaller minorities a claim was put forward for their representation, either individually or collectively, on the Provincial and Federal Executives, or that, if this should be found impossible, in each Cabinet there should be a Minister specially charged with the duty of protecting minority interests.

(Dr. Ambedkar and Sardar Ujjal Singh would add the words “and other important minorities” after the word Mohammadans in line 6).

The difficulty of working jointly responsible Executives under such a scheme as this was pointed out.”

“The discussion in the Sub-Committee has enabled the Delegates to face the difficulties involved in the schemes put up, and though no general agreement has been reached, its necessity has become more apparent than ever.”

“It has also been made clear that the British Government cannot, with any chance of agreement, impose upon the communities an electoral principle which, in some feature or other, would be met by their opposition. It was therefore plain, that, failing an agreement, separate electorates, with all their drawbacks and difficulties, would have to be retained as the basis of the electoral arrangements under the new constitution. From this the question of proportions would arise. Under these circumstances, the claims of the Depressed Classes will have to be considered adequately.”

“The Sub-Committee, therefore, recommend that the Conference should register an opinion that it was desirable that an agreement upon the claims made to it should be reached, and that the negotiations should be continued between the representatives concerned, with a request that the result of their efforts should be reported to those engaged in the next stage of these negotiations.” Mr. Gandhi was not present at the first Round Table Conference because the Congress had boycotted it. He came for the Second Round Table Conference. What attitude did Mr. Gandhi take to this claim of the Depressed Classes?

Every body expected that Mr. Gandhi would be more interested in seeing that the constitution that was likely to emerge from these deliberations and

negotiations was a constitution which gave India *Purna Swaraj* i.e. complete independence and he would not interest himself in so unimportant a subject as the allocation of seats among the different minorities. But events completely falsified these hopes. Mr. Gandhi completely gave up his fight against British Imperialism altogether. He forgot that he had come with a mandate mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability Political.htm - _msocom_56 to secure a constitution which contained *Purna Swaraj*. He left that issue and started fighting the minorities and what is so strange he concentrated all his fire upon the representatives of the Untouchables for daring to put forth the claim for special representation. Mr. Gandhi opposed tooth and nail the representatives of the Depressed Classes. He was not even prepared to look at their claim. He was annoyed at their impudence and the whole Conference was astonished by his opposition. They could not understand how a man like Mr. Gandhi who posed himself as the friend of the Untouchables could in fact be so great an enemy of their interests. His friends were completely baffled. Mr. Gandhi was prepared to recognize a similar right claimed by the Musalmans and to the Sikhs and although he was not prepared to recognize a similar claim by Christians, Europeans and Anglo-Indians he was not going to oppose their claim. Mr. Gandhi's friends could not understand how he could deny a similar right to the Untouchables. The Mohamedans, Sikhs, Christians, Europeans and Anglo-indians were far better off than the Untouchables. The former were economically far better placed. The latter were poorest of the poor. The former were educationally advanced, the latter were educationally most backward. The former were socially well respected, the latter were socially despised. The former enjoyed a position of free citizens. The latter were suffering from certain disabilities. The former were not subjected to social tyranny and social boycott but social tyranny and social boycott were the every day lot of the latter. Having regard to this difference in status there could never be any doubt that if there was any section of the Indian people whose case called forth

special protection, they were the Untouchables. When his European friends tried thus to argue with Mr. Gandhi, Mr. Gandhi used to fly into temper and his relations with two of the best of them to my knowledge had become quite strained on this account.

Mr. Gandhi's anger was largely due to the fact he could give no rational answer which could convince his opponents that his opposition to the claim of the Depressed Classes was sincere and was founded upon the best interests of the Depressed Classes. He nowhere gave a consistent

explanation of his opposition to the Depressed Classes. Reading his speeches in London while he was there one can see that he was using three arguments in support of his position. Speaking as a member of the Federal Structure Committee of the Round Table Conference Mr. Gandhi said:

"The Congress has from its very commencement taken up the cause of the so-called 'untouchables'. There was a time when the Congress had at every annual session as its adjunct the Social Conference, to which the late Ranade had dedicated his energies, among his many activities. Headed by him, you will find in the programme of the Social Conference, reform in connection with the Untouchables taking a prominent place. But in 1920, the Congress took a large step, and brought the question of the removal of untouchability as a plank on the political platform, and made it an important item of the political programme. Just as the Congress considered Hindu-Muslim Unity, thereby meaning unity amongst all classes, to be indispensable for the attainment of Swaraj, so also did the Congress consider the removal of the curse of untouchability as an indispensable condition for the attainment of full freedom." At the minorities Sub-Committee of the Round Table Conference Mr. Gandhi used another argument. He said:

"I can understand the claims advanced by other minorities, but the claims advanced on behalf of the untouchables is to me the 'unkindest cut of all'. It means the perpetual barsinister. I would not sell the vital interests of the untouchables even for the sake of winning the freedom of India. I claim myself, in my own person, to represent the vast mass of the untouchables. Here I speak not merely on behalf of the Congress, but I speak on my own behalf, and I claim that I would get, if there was a referendum of the untouchables, their vote, and that I would top the poll. And I would work from one end of India to the other to tell the untouchables that separate electorates and separate reservation is not the way to remove this barsinister, which is the shame, not of them, but of orthodox Hinduism. Let this committee and let the whole world know that today there is a body of Hindu reformers who are pledged to remove this blot of untouchability. We do not want on our register and on our census, untouchables classified as a separate class. Sikhs may remain as such in perpetuity, so may Moslems, so may Europeans. Will untouchables remain untouchables in perpetuity? I would far rather than Hinduism died than that untouchability lived. Therefore, with all my regard for Dr. Ambedkar, and for his desire to see the untouchables uplifted, with all my regard for his ability I must say, in all humility, that here is a great wrong under which he has laboured and, perhaps, the bitter experiences he has undergone have for the moment

warped his judgement. It hurts me to have to say this but I would be untrue to the cause of untouchables, which is as dear to me as life itself, if I did not say it. I will not bargain away their rights for the kingdom of the whole world. I am speaking with a due sense of responsibility, when I say it is not a proper claim which is registered by Dr. Ambedkar when he seeks to speak for the whole of untouchables in India. It will create a division in Hinduism which I cannot possibly look forward to with any satisfaction whatsoever, I do not mind the untouchables being converted into Islam or Christianity. I should tolerate that but I cannot possibly tolerate what is in store for Hinduism if there are these two divisions set forth in the villages. Those who speak of political rights of untouchables do not know India and do not know how Indian society is today constructed. Therefore, I want to say with all the emphasis that I can command that if I was the only person to resist this thing I will resist it with my life."

At a meeting at the Friends House in London Mr. Gandhi relied upon quite a different argument. He is reported to have said mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_57:

"I have told you what is agitating my mind. You may take the Congress to be incapable of bartering away the minorities rights. The untouchables, I know, as one can claim to know. It would be equal to killing them if separate electorates were given them. They are at present in the hands of the superior classes. They can suppress them completely and wreck vengeance upon the untouchables who are at their mercy and it is because I want to prevent that thing happening that I would fight the demand for separate electorates for them. Whilst I am saying this, I know, I am opening out my shame to you. But in the existing state of things how could I invite destruction for them? I would not be guilty of that crime. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_58

Dr. Ambedkar, as able as he is, has unhappily lost his head over this question. I repudiate his claim to represent them."

None of his arguments carried any conviction. Indeed they could not. They were all spacious and they had the ring of special pleadings.

His first argument, that the Congress was pledged to look after the untouchables, to remove their untouchability—Was this argument founded in truth? Mr. Gandhi has been telling the world that the whole body of Congress has been pledged to remove untouchability and his friends have been giving him credit for getting the Congress to do what the Congress before him was not prepared to do. I am surprised how so false a view

could have been given such a wide currency. I have read and re-read the Resolution passed by the Congress in 1920 at Nagpur Which is the basis of such an assertion as is made by Mr. Gandhi and his friends, and I am sure every one who reads that resolution will agree that the text of the resolution gives no warrant for such an assertion. The resolution is a very clever piece of Gandhian tactics. Mr. Gandhi has been very anxious from the very beginning to keep the untouchables a close preserve of the Hindus. He did not want Musalmans or Christians to be interested in them. He wanted that the Untouchables who were attached to the British should be detached from them and attached to the Hindus. The second object could be achieved only if the resolution in favour of the removal of untouchability was passed from the Congress platform. To achieve this it was necessary to confine this duty only to the Hindus. This is what the resolution does. It is a clever move on the part of a cunning politician. The resolution does not put the Congress as a whole behind this resolution. Secondly, in what it does there is nothing that is obligatory in it. There is no pledge, there is no vow. There is only moral exhortation. It only recommends to the Hindus that removal of untouchability is their duty. Once Mr. Gandhi tried to alter the conditions for membership of the Congress. Instead of the payment of four annas per annum being the condition of membership Mr. Gandhi wanted to lay down two conditions: (1) removal of untouchability and (2) spinning yarns. Congressmen were prepared to accept spinning of yarn as a condition of membership. But they were not prepared to accept removal of untouchability as a condition. Congressmen told Mr. Gandhi that if he insisted upon it all Congress Committees will have to be closed down. So strong was the opposition that Mr. Gandhi had to withdraw his proposal. That being the case for Mr. Gandhi to have urged before the Round Table Conference that the Congress was pledged to remove untouchability and that the untouchables could safely be left to the mercy of the Hindus shows that even Mr. Gandhi is capable of economising truth to a vanishing point.

The next argument of Mr. Gandhi that the removal of untouchability was made by the Congress a condition precedent to Swaraj urged to prove the sincerity of the Congress could not be taken at its face value by the obvious insincerity of the Congress and Mr. Gandhi. Untouchability was as it had been, yet the Congress and Mr. Gandhi had come forth to demand independence. This was enough to show that Mr. Gandhi did not believe in what he said on this point. No one in India, at any rate no one from among the Untouchables believed in this declaration of Mr. Gandhi and his Congress that for them removal of untouchability was a condition

precedent to Swaraj. Long before the Round Table Conference Mr. Gandhi was questioned to test his sincerity on two occasions and the answers he gave on both left no doubt that even he did not believe this declaration. In 1920 a correspondent asked Mr. Gandhi the following question mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_59 :

“Should not we the Hindus wash our bloodstained hands before we ask the English to wash theirs?” To this Mr. Gandhi gave the following reply:

"A correspondent indignantly asks me in a pathetic letter reproduced elsewhere what I am doing for the (untouchables). I have given the letter with the correspondent's own heading. 'Should not we the Hindus wash our bloodstained hands before we ask the English to wash theirs?' This is a proper question reasonably put. And if a member of a slave nation could deliver the suppressed classes from their slavery without freeing myself from my own, I would so do today. But it is an impossible task....." Does this show that Mr. Gandhi and the Congress were sincere when they said that removal of untouchability was a condition precedent to Swaraj? That this is not the argument of a sincere man is shown by the fact that at a later time Mr. Gandhi himself has ridiculed a correspondent who urged upon Mr. Gandhi the desirability of keeping aside the question of the Untouchables until the Hindus had won Swaraj.

The second occasion on which Mr. Gandhi was questioned was when he went to Dandi in March in 1930 to make Salt Satyagraha contrary to law. Some Untouchables went to Dandi and questioned him. They asked him what happened to his declaration that removal of untouchability was condition precedent to Swaraj. Mr. Gandhi's reply as reported to me was this:

“The Untouchables are a part of a whole. I am working for the whole and I therefore believe that I am therefore working for the Untouchables who are a part of the whole.”

There is nothing to prove this except what was reported to me by those who had been to see Mr. Gandhi at Dandi. But I have no doubt that Mr. Gandhi must have said something to that effect. For what he is reported to have said tallies with what he has said in his reply in *Young India* referred to above in reply to the same correspondent. This is what Mr. Gandhi then said:

“... though the *Panchama* Problem is as dear to me as life itself, I rest satisfied with the exclusive attention to non-cooperation. I feel sure that the greater includes the less.”

Are these the answers of a sincere man? Can a sincere man believe that the untouchables are a part of a whole.

As to his argument that special representation to the untouchables would perpetuate the existing separation between the touchables and the untouchables was an argument which was absolutely hollow. The way to remove untouchability is to introduce intermarriage and interdining. The way to remove the disabilities of the untouchables is to admit them to the use of the common well and common school. It is difficult to understand that special representation can come in the way of intermarriage, interdinning and the use of a common well and a common school. On the other hand the introduction of these would be only way of disproving the necessity of special representation. Had Mr. Gandhi and the Congress done anything in this direction? The explanatory note added to the Bardoli resolution shows how far Gandhi and the Congress were prepared to go in this direction. The note says:

“Whilst therefore where the prejudice against the untouchables is still strong in places, separate schools and separate wells must be maintained out of Congress funds, every effort should be made to draw such children to national schools and to persuade the people to allow the untouchables to use the common wells.” Can it lie in the mouth of persons who want to maintain separate wells, separate schools to say that they object to separate representation because it will cause separation? It is only persons who are bent on breaking down barriers who can speak against separate representation and ask to be believed in the sincerity of their argument.

Mr. Gandhi's last argument was a fantastic argument. If the superior classes can suppress the untouchables and wreck vengeance upon them then there is all the greater reason why they should be given special representation so that they may protest themselves against the tyranny of the superior classes. Mr. Gandhi had become desperate and had lost his equanimity and balance to such an extent that he did not know where his arguments would lead him. In using this argument he evidently forgot that he was arguing for the perpetual enslavement of the Untouchables by the Hindus. Mr. Gandhi's argument in short was “don't ask for freedom, because it will enrage your master and he will illtreat you”. If such an argument had been advanced by any one else he would have been told that he was purile and insincere.

Having failed to demolish the justice of the claim of the Untouchables Mr. Gandhi decided to isolate the representatives of the Depressed Classes, to see that they got no support from any other quarter, Gandhi planned to break a possible compact between the Depressed Classes and the Muslims.

A part of the plan was to win over the Musalmans to his side and for that purpose he offered to enter into a pact with them. A copy of this pact which was circulated among the Muslim delegates came into my hands and I reproduce the same here.

Telegrams "Courtlike" London

Queen's house,
57, St. James' Court,
Buckingham Gate,
London, S. W. 1
6th October 1931.

The following proposals were discussed by Mr. Gandhi and the Muslim Delegation at 10 p.m. last night. They are divided into two parts—The proposals made by the Muslims for safeguarding their rights and the proposals made by Mr. Gandhi regarding the Congress policy. They are given herewith as approved by Mr. Gandhi, and placed for submission to the Muslim Delegation for their opinion.

MUSLIM PROPOSALS	GANDHI'S PROPOSAL
1. In the Punjab and Bengal bare majority of one percent of Musalmans but the question of whether it should be by means of joint electorates and reservation of 51 per cent of the whole house should be referred to the Musalman voters before the new constitution comes into force and their	1. That the Franchise should be on the basis of adult suffrage. 2. <i>No special reservations to any other community save Sikhs and Hindu Minorities. (Italics are not in the original)</i>

verdict should be accepted.	
2. In other provinces where the Musalmans are in a minority the present weightage enjoyed by them to continue, but whether the seats should be reserved to a joint electorate, or whether they should have separate electorates should be determined by the Musalman voters by a referendum under the new constitution, and their verdict should be accepted.	The Congress demands: A. A. Complete Independence B. B. Complete control over the defence immediately. C. C. Complete control over external affairs D. D. Complete control over finance. E. E. Investigation of public debts and other obligations by an independent tribunal. F. F. As in the case of a partnership, right of either party to terminate it.
3. That the Musalman representatives to the Central Legislature in both the houses should be 26percent of the total number of the British India representatives, and 7 percent at least by convention should be Musalmans, out of the quota that may be assigned to Indian States, that is to say, one-third of the whole house when taken together.	
4. That the residuary power should vest in the federating Provinces of British India.	
5. That the other points as follows being agreed to: 1. Sindh.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_62 2. N.W.F.P.mk:@MSITStore:C:\Important\

Safeguards against legislation affecting any community.</p>	
---	--

This is the agreement which Mr. Gandhi was prepared to enter with the Musalmans. By this agreement Mr. Gandhi was prepared to give to the Musalmans the fourteen points they had been demanding. In return Mr. Gandhi wanted the Musalmans among other things to agree to continue the benefit of the principle of special representation to Hindus, Muslims and Sikhs. Some one might ask what is wrong in such an agreement. Has not the Congress said that they will not agree to extend communal representation to others besides these three? Such a view cannot but be treated as a superficial view. Those who see nothing wrong in it must answer two questions. First is this. Where was the necessity for Mr. Gandhi to get the Musalmans to agree to the Congress policy of not extending the benefit of special representation to other minorities and the untouchables. Mr. Gandhi could have said as the Congress had been saying to the other minorities he was not prepared to agree to their claim. Why did he want the Musalmans to join him in resisting their claim? And if this was not his object why did he make it a term of the agreement which the Musalmans were to perform in return for what he agreed to do for them.

Secondly why did Mr. Gandhi come forward to give the Musalmans their fourteen demands at this particular juncture. These fourteen political demands of the Musalmans rightly or wrongly were rejected by all. They were rejected by the Hindu Maha-Sabha. They were rejected by the Simon

Commission. They were rejected by the Congress. There was no support for these 14 demands of the Musalmans from any quarter whatsoever. Why did Mr. Gandhi become ready to grant them except with the object of buying the Musalmans so that with their help he could more effectively resist the demand of the other minorities and the untouchables?

In my view Mr. Gandhi was not engaged in making any bona-fide agreement. He was inducing the Musalmans to join in a conspiracy with him to resist the claim of the smaller minorities and the untouchables. It was not an agreement with the Musalmans. It was a plot against the Untouchables. It was worse, it was a stab in the back.

This so-called agreement fell through because among other reasons it was impossible for the Mahomedans to agree to the exclusion of the Untouchables from the benefit of special representation. How could the Muslims agree to such a project? They were fighting for special representation for Muslims. They were not only fighting for special representation, they were fighting for weightage in representation. They knew that the case for Muslims rested only on the ground that India was once ruled by the Musalmans, that they had political importance to maintain and as Hindus are likely to discriminate against Muslims in elections to the Legislatures, there may not be sufficient Muslims returned to the Legislature, that the Muslims will sink politically and that to prevent such a calamity they must be given special representation. As against this one ground in favour of Muslims there were a hundred grounds in favour of the claim by the Untouchables. With what face could the Musalmans oppose this demand of the Untouchables?

The Musalmans had not lost their balance or their sense of shame. They refused to be party to such a deal—a deal which they could not publicly defend. Mr. Gandhi still kept on pestering the Musalmans. When he could not induce them to accept the price he offered—namely the grant of fourteen points—because they felt that the world would not call it price but would call it the wages of sin, Mr. Gandhi sought to appeal to the religious scruples of the Musalmans. The day before the 13th November

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_661931 when the *minorities pact*

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_67 was presented to the Minorities Sub-Committee of the Round Table Conference Mr. Gandhi took a copy of the Koran and went to the Ritz Hotel in Piccadilly where the Rt. Hon. H. H. Aga Khan was staying to meet the Muslim delegates who had assembled there. To Muslim delegates he asked—”Why are you dividing the Hindu

Community which you are doing by recognising the claim of the Untouchables for separate representation? Does the Koran sanction such a deed? Show me where it does? If you cannot, will you not stop perpetrating such a crime upon your sister Community?" I do not know how the Muslim delegates answered this question of Mr. Gandhi. It must have been a very difficult question for them to answer. Such a contingency could not have been present to the mind of the Holy Prophet and he could not have provided for it specifically. His followers knew that contingencies would arise for which he had given no directions and they had therefore asked him what they should do, and the Prophet had given them this general direction. He said to them, "in such a case see what the Kaffirs are doing and do just the opposite of it" mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_68 Whether the Muslim delegates relied upon this to answer Mr. Gandhi is more than I can say. What I have stated is what I have heard and my source is the most authentic source. Here again Mr. Gandhi failed because the next day in the open Committee when Mr. Gandhi let loose his fury against the Untouchables, the Mahomedans were silent.

What can one say of this conduct of Mr. Gandhi? Mr. Bernard Shaw has said that the British do everything on principle.

Similarly Mr. Gandhi says he does everything on the principle of morality and good faith. Can the acts of Mr. Gandhi be justified by tests of justice and good faith? I wonder. Let me state a few facts.

Before I left for London for the first Round Table Conference I had met Mr. Gandhi in Bombay. At that meeting I had informed Mr. Gandhi that at the Round Table Conference I would be asking for special representation for the Untouchables. Mr. Gandhi would not consent. But he also told me that he would not oppose. I felt that it was just a case of difference of opinion. At the second Round Table Conference I met Mr. Gandhi twice, once alone and second time along with the representatives of the smaller minorities. At the first meeting Mr. Gandhi was spinning and I was talking. I spoke for an hour during the whole of which he did not utter even a word. At the end he just said this much.

' I have now heard you. I will think over what you have said.' At the second interview he again heard me and the representatives of the smaller minorities and he told me that he was not prepared to agree to the claim I was making on behalf of the Untouchables. Thereafter the Minorities Sub-Committee was convened on 28th September 1931. At the meeting of the

Sub-Committee on 1st October 1931, the following motion was made by Mr. Gandhi:

*"Prime Minister, after consultation with His Highness the Aga Khan and other Muslim friends last night, we came to the conclusion that the purpose for which we meet here would be better served if a week's adjournment was asked for. I have not had the opportunity of consulting my other colleagues, but I have no doubt that they will also agree in the proposal I am making."

The proposal was seconded by the Aga Khan. I at once got up and objected to the motion and in support of my objection made the following statement*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_69:

*"Dr. Ambedkar: I do not wish to create any difficulty in our making every possible attempt to arrive at some solution of the problem with which this Committee has to deal, and if a solution can be arrived at by the means suggested by Mahatma Gandhi, I, for one, will have no objection to that proposal.

"But there is just this one difficulty with which I, as representing the Depressed Classes, am faced. I do not know what sort of committee Mahatma Gandhi proposes to appoint to consider this question during the period of adjournment, but I suppose that the Depressed Classes will be represented on this Committee. Mr. Gandhi : Without doubt.

Dr. Ambedkar : Thank you. But I do not know whether in the position in which I am today it would be of any use for me to work on the proposed Committee. And for this reason. Mahatma Gandhi told us on the first day that he spoke in the Federal Structure Committee that as a representative of the Indian National Congress he was not prepared to give political recognition to any community other than the Muhammadans and the Sikhs. He was not prepared to recognize the Anglo-indians, the Depressed Classes, and the Indian Christians. I do not think that I am doing any violence to etiquette by stating in this Committee that when I had the pleasure of meeting Mahatma Gandhi a week ago and discussing the question of the Depressed Classes with him, and when we, as members of the other minorities, had the chance of talking with him yesterday, in his office, he told us in quite plain terms that the attitude that he had taken in the Federal Structure Committee was a firm and well considered attitude. What I would like to say is that unless at the outset I know that the Depressed Classes are going to be recognised as a community entitled to political recognition in the future Constitution of India, I do not know whether it will serve any purpose for me to join the committee that is

proposed by Mahatma Gandhi to be constituted to go into this matter. Unless, therefore, I have an assurance that this Committee will start with the assumption that all those communities which the Minorities Subcommittee last year recommended as fit for recognition in the future constitution of India will be included, I do not know that I can wholeheartedly support the proposition for adjournment, or that I can wholeheartedly co-operate with the Committee that is going to be nominated. That is what I wish to be clear about.

* * *

"Dr. Ambedkar : I should like to make my position further clear. It seems that there has been a certain misunderstanding regarding what I said. It is not that I object to adjournment; it is not that I object to serving on any Committee that might be appointed to consider the question. What I would like to know before I enter upon this Committee, if they give me the privilege of serving on it, is: What is the thing that this Committee is going to consider? Is it only going to consider the question of the Muhammadans *vis-a-vis* the Hindus? Is it going to consider the question of the Muhammadans *vis-a-vis* the Sikhs in the Punjab? Or is it going to consider the question of the Christians, the Anglo-indians and the Depressed Classes?

“If we understand perfectly well before we start that this committee will not merely concern itself with the question of the Hindus and the Muhammadans, of the Hindus and the Sikhs, but will also take upon itself the responsibility of considering the case of the Depressed Classes, the Anglo-indians and the Christians, I am perfectly willing to allow this adjournment resolution to be passed without any objection. But I do want to say this, that if I am to be left out in the cold and if this interval is going to be utilised for the purposes of solving the Hindu-Muslim question, I would press that the Minorities Committee should itself grapple with the question and consider it, rather than allow the question to be dealt with by some other informal Committee for arriving at a solution of the communal question in respect of some minorities only.”The Prime Minister as Chairman of the Committee called upon Mr. Gandhi to explain his position and Mr. Gandhi made the following statement in reply

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_70

“Prime Minister and friends, I see that there is some kind of misunderstanding with reference to the scope of the work that some of us have set before ourselves. I fear that Dr. Ambedkar, Colonel Gidney and other friends are unnecessarily nervous about what is going to happen.

Who am I to deny political status to any single interest or class or even individual in India? As a representative of the Congress I should be unworthy of the trust that has been reposed in me by the Congress if I were guilty of sacrificing a single national interest. I have undoubtedly given expression to my own views on these points. I must confess that I hold to those views also. But there are ways and ways of guaranteeing protection to every single interest. It will be for those of us who will be putting our heads together to try to evolve a scheme. Nobody would be hampered in pressing his own views on the members of this very informal conference or meeting.

"I do not think, therefore, that anybody need be afraid as to being able to express his opinion or carrying his opinion also. Mine will be there equal to that of every one of us; it will carry no greater weight; I have no authority behind me to carry my opinion against the opinion of anybody. I have simply given expression to my views in the national interest, and I shall give expression to these views whenever they are opportune. It will be for you, it is for you to reject or accept these opinions. Therefore please disburse your minds, to everyone of us, of the idea that there is going to be any steam-rolling in the Conference and the informal meetings that I have adumbrated. But if you think that this is one way of coming closer together than by sitting stiffly at this table, you will not carry this adjournment motion but give your whole-hearted co-operation to the proposal that I have made in connection with these informal meetings."

* * *

I then withdrew my objection.

Now here is a definite word given by Mr. Gandhi in open Conference—namely that if all others agreed to recognize the claim of the Untouchables he would not object. And after having given this word Mr. Gandhi went about inducing the Musalmans not to recognize the claim of the Untouchables and to bribe them to resile and take back their plighted word!! Is this good faith or is this treachery? If this is not treachery I wonder what else could be called treachery.

I was pilloried because I signed what is called the Minorities Pact. I was depicted as a traitor. I have never been ashamed of my signature to the pact. I only pity the ignorance of my critics. They forget that the minorities could have taken the same attitude that Ulster took towards Irish Home Rule. Redmond was prepared to offer any safeguard to Ulstermen. The Ulstermen's reply was, "Damn your safeguards we don't wish to be ruled by you". The Hindus ought to thank the minorities that they did not take any such attitude. All the Pact contained were Safeguards and nothing more.

Instead of thanking them Mr. Gandhi poured his vials of wrath upon the pact and its authors. He said:

"Coming to this document', I accept the thanks that have been given to me by Sir Hubert Carr. Had it not been for the remarks that I made when I shouldered that burden, and had it not been for my utter failure to bring about a solution. Sir Hubert Carr rightly says he would not have found the very admirable solution that he has been able, in common with the other minorities, to present to this Committee for consideration and finally for the consideration and approval of His Majesty's Government."

"I will not deprive Sir Hubert Carr and his associates of the feeling of satisfaction that evidently actuates them, but, in my opinion, what they have done is to sit by the carcass, and they have performed the laudable feat of dissecting that carcass."¹ Reference is to the Minorities Pact.

Had Mr. Gandhi any right to be indignant? Had he any right to feel morally offended? Was he entitled to throw stones at the Minorities? Mr. Gandhi forgot that he was as much a sinner as the Minorities and worse he was a sinner without a sense of justice. For if the Minorities were dividing the carcass what was Mr. Gandhi himself doing? He too was busy in dividing the carcass. The only difference between Mr. Gandhi and the Minorities was this—Mr. Gandhi wanted that the carcass should be divided among three only, Hindus, Musalmans and Sikhs. The Minorities wanted that others also should be given a share, and which of these two can claim to have justice, on its side, Mr. Gandhi who wanted that the division of the carcass should be to strong sturdy well-nourished wolves or the minorities who pressed that the lean and hungry lambs should also be given a morsel? Surely in this controversy justice was not on the side of Mr. Gandhi.

Mr. Gandhi was the man who claimed to be the Champion of the Untouchables better than those who belonged to the Untouchables themselves. Claiming to be their champion he refused without any regard to morality, justice and necessity, their claim to representation which could be their only way to protection against social tyranny and social oppression while he was prepared to give to the Musalmans, the Hindus and the Sikhs a goodly share of political power. When others far better placed were claiming for power, Mr. Gandhi wanted the Untouchables to live under his providence and that of the Congress without any means of protection knowing full well that their lives were exposed to danger and humiliation every moment and when he came to know that the Untouchables were seeking outside aid in support of their claim Mr. Gandhi resorted to a terrible act of treachery. Were the Untouchables unjustified in presenting to

the world their charge sheet against Mr. Gandhi when he arrived in Bombay from the Round Table Conference?

CHAPTER 6

GANDHI AND HIS FAST

1. Poona Pact. II. Harijan Sevak Sangh. III. Temples and Untouchables. IV. The Gandhian Way.

I

The Communal question was the rock on which the Indian Round Table Conference suffered a shipwreck. The Conference broke up as there could be no agreement between the majority and minority communities. The minorities in India insisted that their position under Swaraj should be safeguarded by allowing them special representation in the Legislatures. Mr. Gandhi as representative of the Congress was not prepared to recognize such a claim except in the case of the Muslims and the Sikhs. Even in the case of the Muslims and Sikhs, no agreement was reached either on the question of the number of seats or the nature of the electorates.

There was a complete deadlock. As there was no possibility of an agreement, the hope lay in arbitration. On this everybody was agreed except myself and it was left to Mr. Ramsay Macdonald, the Prime Minister to decide upon the issue.

When at the first Round Table Conference, the Indian delegates did not agree upon a solution of the Communal question, followers of Mr. Gandhi said that nothing better could be expected from them. It was said that they were unrepresentative and responsible to nobody and were deliberately creating disunity by playing into the hands of the British whose tools and nominees they were. The world was told to await the arrival of Mr. Gandhi, whose statesmanship it was promised would be quite adequate to settle the dispute. It was therefore a matter of great humiliation for the friends of Mr. Gandhi that he should have acknowledged his bankruptcy and joined in the request to the Prime Minister to arbitrate.

But if the Conference failed the fault is entirely of Mr. Gandhi. A more ignorant and more tactless representative could not have been sent to a Conference which was convened to forge a constitution which was to reconcile the diverse interests of India. Mr. Gandhi was thoroughly ignorant of Constitutional Law or Finance. He does not believe in

intellectual equipment. Indeed he has a supreme contempt for it and his contributions to the solutions of the many difficulties is therefore nil. He was tactless because he annoyed almost all the delegates by constantly telling them that they were nonentities and he was the only man who counted and who could deliver the goods. At the first Round Table Conference the delegates did not agree upon a solution of the communal problem. But it is equally true that they were very near agreeing to it and when they departed they had not given up hope of agreeing. But at the end of the second Round Table Conference, so much bad blood was created by Mr. Gandhi that there was no chance of reconciliation left and there was no way except arbitration.

The Prime Minister's decision on the communal question was announced on 17th August 1932. The terms of the decision in so far as they related to the Untouchables were as follows mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_71:

COMMUNAL DECISION BY HIS MAJESTY'S GOVERNMENT 1932

In the statement made by the Prime Minister on 1st December last on behalf of His Majesty's Government at the close of the second session of the Round Table Conference, which was immediately afterwards endorsed by both Houses of Parliament, it was made plain that if the communities in India were unable to reach a settlement acceptable to all parties on the communal questions which the Conference had failed to solve. His Majesty's Government were determined that India's constitutional advance should not on that account be frustrated, and that they would remove this obstacle by devising and applying themselves a provisional scheme.

2. On the 19th March last His Majesty's Government, having been informed that the continued failure of the communities to reach agreement was blocking the progress of the plans for the framing of a new Constitution, stated that they were engaged upon a careful re-examination of the difficult and controversial question which arise. They are now satisfied that without a decision of at least some aspects of the problems connected with the position of minorities under the new Constitution, no further progress can be made with the framing of the Constitution.

3. His Majesty's Government have accordingly decided that they will include provisions to give effect to the scheme set out below in the proposals relating to the Indian Constitution to be laid in due course before Parliament. The scope of this scheme is purposely confined to the arrangements to be made for the representation of the British Indian

communities in the Provincial Legislatures, consideration of representation in the Legislature at the Centre being deferred for the reason given in paragraph 20 below. The decision to limit the scope of the scheme implies no failure to realize that the framing of the Constitution will necessitate the decision of a number of other problems of great importance to minorities, but has been taken in the hope that once a pronouncement has been made upon the basic questions of method and proportions of representation the communities themselves may find it possible to arrive at *modus vivendi* on other communal problems, which have not received the examination they require.

4. His Majesty's Government wish it to be most clearly understood that they themselves can be no parties to any negotiations which may be initiated with a view to the revision of their decision, and will not be prepared to give consideration to any representation aimed at securing the modification of it which is not supported by all the parties affected. But they are most desirous to close no door to an agreed settlement should such happily be forthcoming. If, therefore, before a new Government of India Act has passed into law, they are satisfied that the communities who are concerned are mutually agreed upon a practicable alternative scheme, either in respect of any one or more of the Governors' Provinces or in respect of the whole of the British India, they will be prepared to recommend to Parliament that that alternative should be substituted for the provisions now outlined.

5. *	*	*	*
6. *	*	*	*
7. *	*	*	*
8. *	*	*	*

9. Members of the "depressed classes" qualified to vote will vote in a general constituency. In view of the fact that for a considerable period these classes would be unlikely, by this means alone, to secure any adequate representation in the Legislature, a number of special seats will be assigned to them as shown in the table. These seats will be filled by election from special constituencies in which only members of the "depressed classes" electorally qualified will be entitled to vote. Any person voting in such a special constituency will, as stated above, be also entitled to vote in a general constituency. It is intended that these constituencies should be formed in selected areas where the depressed classes are most numerous, and that, except in Madras, they should not cover the whole area of the

Province.

In Bengal it seems possible that in some general constituencies a majority of the voters will belong to the Depressed Classes. Accordingly, pending further investigation no number has been fixed for the members to be returned from the special Depressed Class constituencies in that Province. It is intended to secure that the Depressed, Classes should obtain not less than 10 seats in the Bengal Legislature.

The precise definition in each Province of those who (if electorally qualified) will be entitled to vote in the special Depressed Class constituencies has not yet been finally determined. It will be based as a rule on the general principles advocated in the Franchise Committee's Report. Modification may, however, be found necessary in some Provinces in Northern India where the application of the general criteria of untouchability might result in a definition unsuitable in some respects to the special conditions of the Province.

His Majesty's Government do not consider that these special Depressed Classes constituencies will be required for more than limited time. They intend that the Constitution shall provide that they shall come to an end after 20 years if they have not previously been abolished under the general powers of electoral revision referred to in paragraph 6.

So far as the other minority communities were concerned the Communal Award was accepted and the sore of disunity and discord was closed. But so far as the Untouchables were concerned it remained open. Mr. Gandhi would not allow it to be healed. On his return to India from the Round Table Conference Mr. Gandhi was put behind the bars by the British Government. But though in the Yeravada gaol Mr. Gandhi had not forgotten that he had to prevent the Untouchables from getting their claim to special representation recognized by the British Government. He feared that the British Government might grant them this right notwithstanding the threat he had held out while at the Round Table Conference to resist it with his own life. Consequently he took the earliest opportunity to be in communication with the very British Government which had incarcerated him.

On the 11th March 1932 Mr. Gandhi addressed the following letter to Sir Samuel Hoare, the then Secretary of State for India: Dear Sir Samuel,

You will perhaps recollect that at the end of my speech at the Round Table Conference when the minorities' claim was presented, I had said that I should resist with my life the grant of separate electorates to the Depressed Classes. This was not said in the heat of the moment nor by way of rhetoric. It was meant to be a serious statement. In pursuance of that

statement I had hoped on my return to India to mobilize public opinion against separate electorate, at any rate for the Depressed Classes. But it was not to be.

From the newspapers I am permitted to read, I observe that any moment His Majesty's Government may declare their decision. At first I had thought, if the decision was found to create separate electorates for the Depressed Classes, I should take such steps as I might then consider necessary to give effect to my vow. But I feel it would be unfair to the British Government for me to act without giving previous notice. Naturally, they could not attach the significance I give to my statement.

Separate Electorates harmful

I need hardly reiterate all the objections I have to the creation of separate electorates for the Depressed Classes. I feel as if I was one of them. Their case stands on a wholly different footing from that of others. I am not against their representation in the legislatures. I should favour every one of their adults, male and female, being registered as voters irrespective of education or property qualification, even though the franchise test may be stricter for others. But I hold that separate electorates is harmful for them and for Hinduism, whatever it may be from the purely political standpoint. To appreciate the harm that separate electorates would do them one has to know how they are distributed amongst the so-called Caste Hindus and how dependent they are on the latter. So far as Hinduism is concerned, separate electorate would simply vivisect and disrupt it.

For me the question of these classes is predominantly moral and religious. The political aspect, important though it is, dwindles into significance compared to the moral and religious issue.

You will have to appreciate my feelings in this matter by remembering that I have been interested in the condition of these classes from my boyhood and have more than once staked my all for their sake. I say this not to pride myself in any way. For, I feel that no penance that the Hindus may do can in any way compensate for the calculated degradation to which they have consigned the Depressed Classes for centuries.

"Shall fast unto Death"

But I know that separate electorate is neither a penance nor any remedy for the crushing degradation they have groaned under. I, therefore, respectfully inform His Majesty's Government that in the event of their decision creating separate electorate for the Depressed Classes, I must fast unto death.

I am painfully conscious of the fact that such a step whilst I am a

prisoner, must cause grave embarrassment to His Majesty's Government, and that it will be regarded by many as highly improper on the part of one holding my position to introduce into the political field methods which they would describe as hysterical if not much worse. All I can urge in defence is that for me the contemplated step is not a method, it is part of my being. It is the call of conscience which I dare not disobey, even though it may cost whatever reputation for sanity I may possess. So far as I can see now, my discharge from imprisonment would not make the duty of fasting any the less imperative. I am hoping, however, all my fears are wholly unjustified and the British Government have no intention whatever of creating separate electorate for the Depressed Classes.

The following reply was sent to Mr. Gandhi by the Secretary of State:

India Office, Whitehall,
April 13, 1932.

Dear Mr. Gandhi,

I write this in answer to your letter of 11th March, and I say at once I realize fully the strength of your feeling upon the question of separate electorates for the Depressed Classes. I can only say that we intend to give any decision that may be necessary solely and only upon the merits of the case. As you are aware, Lord Lothian's Committee has not yet completed its tour and it must be some weeks before we can receive any conclusions at which it may have arrived. When we receive that report we shall have to give most careful consideration to its recommendations, and we shall not give a decision until we have taken into account, in addition to the view expressed by the Committee, the views that you and those who think with you have so forcibly expressed. I feel sure if you were in our position you would be taking exactly the same action we intend to take. You would await the Committee's report, you would then give it your fullest consideration, and before arriving at a final decision you would take into account the views that have been expressed on both sides of the controversy. More than this I cannot say. Indeed I do not imagine you would expect me to say more.

After giving this warning Mr. Gandhi slept over the matter thinking that a repetition of his threat to fast unto death was sufficient to paralyse the British Government and prevent them from accepting the claim of the untouchables for special representation. When on the 17th August 1932 the terms of the Communal Award were announced Mr. Gandhi found that his threat had failed to have any effect. He first tried to get the terms

of the Communal Award revised. Accordingly he addressed the following letter to the Prime Minister:

Yervada Central Prison,
August 18, 1932.

Dear friend,

There can be no doubt that Sir Samuel Hoare has showed you and the Cabinet my letter to him of 11th March on the question of the representation of the Depressed Classes. That letter should be treated as part of this letter and be read together with this.

Decision to fast

I have read the British Government's decision on the representation of Minorities and have slept over it. In pursuance of my letter to Sir Samuel Hoare and my declaration at the meeting of the Minorities Committee of the Round Table Conference on 13th November, 1931, at St. James' Palace, I have to resist your decision with my life. The only way I can do so is by declaring a perpetual fast unto death from food of any kind save water with or without salt and soda. This fast will cease if during its progress the British Government, of its own motion or under pressure of public opinion, revise their decision and withdraw their scheme of communal electorates for the Depressed Classes, whose representatives should be elected by the general electorate under the common franchise no matter how wide it is.

The proposed fast will come into operation in the ordinary course from the noon of 20th September next, unless the said decision is meanwhile revised in the manner suggested above.

I am asking the authorities here to cable the text of this letter to you so as to give you ample notice. But in any case, I am leaving sufficient time for this letter to reach you in time by the slowest route.

I also ask that this letter and my letter to Sir Samuel Hoare already referred to be published at the earliest possible moment. On my part, I have scrupulously observed the rule of the jail and have communicated my desire or the contents of the two letters to no one, save my two companions, Sardar Vallabhabhai Patel and Mr. Mahadev Desai. But I want, if you make it possible, public opinion to be affected by my letters. Hence my request for their early publication.

Not to compass Release

I regret the decision I have taken. But as a man of religion that I hold myself to be, I have no other course left open to me. As I have said in my letter to Sir Samuel Hoare, even if His Majesty's Government decided to release me in order to save themselves from embarrassment, my fast will have to continue. For, I cannot now hope to resist the decision by any other means; And I have no desire whatsoever to compass my release by any means other than honourable.

It may be that my judgement is warped and that I am wholly in error in regarding separate electorates for the Depressed Classes as harmful to them or to Hinduism. If so, I am not likely to be in the right with reference to other parts of my philosophy of life. In that case my death by fasting will be at once a penance for my error and a lifting of a weight from off these numberless men and women who have childlike faith in my wisdom. Whereas if my judgement is right, as I have little doubt it is, the contemplated step is but due to the fulfilment of the scheme of life which I have tried for more than a quarter of a century, apparently not without considerable success.

I remain,
Your faithful friend,
M. K. Gandhi.

The Prime Minister replied as under:

September 8th, 1932

10, Downing Street,
Dear Mr. Gandhi,

I have received your letter with much surprise and, let me add, with very sincere regret. Moreover, I cannot help thinking that you have written it under a misunderstanding as to what the decision of His Majesty's Government as regards the Depressed Classes really implies. We have always understood you were irrevocably opposed to the permanent segregation of the Depressed Classes from the Hindu community. You made your position very clear on the Minorities Committee of the Round Table Conference and you expressed it again in the letter you wrote to Sir Samuel Hoare on 11th March. We also knew your view was shared by the great body of Hindu opinion, and we, therefore, took it into most careful account when we were considering the question of representation of the Depressed Classes.

Government Decision Explained

Whilst, in view of the numerous appeals we have received from Depressed Class organisations and the generally admitted social disabilities under which they labour and which you have often recognized, we felt it our duty to safeguard what we believed to be the right of the Depressed Classes to a fair proportion of representation in the legislatures, we were equally careful to do nothing that would split off their community from the Hindu world. You yourself stated in your letter of March 11, that you were not against their representation in the legislatures.

Under the Government scheme the Depressed Classes will remain part of the Hindu community and will vote with the Hindu electorate on an equal footing, but for the first twenty years, while still remaining electorally part of the Hindu community, they will receive through a limited number of special constituencies, means of safeguarding their rights and interests that, we are convinced, is necessary under present conditions.

Where these constituencies are created, members of the Depressed Classes will not be deprived of their votes in the general Hindu constituencies, but will have two votes in order that their membership of the Hindu community should remain unimpaired.

We have deliberately decided against the creation of what you describe as a communal electorate for the Depressed Classes and included all Depressed Class voters in the general or Hindu constituencies so that the higher caste candidates should have to solicit their votes or Depressed Class candidates should have to solicit the votes of the higher castes at elections. Thus in every way was the unity of Hindu society preserved.

Safeguard Temporary

We felt, however, that during the early period of responsible government when power in the Provinces would pass to whoever possessed a majority in the legislatures, it was essential that the Depressed Classes, whom you have yourself described in your letter to Sir Samuel Hoare as having consigned by Caste Hindus to calculated degradation for centuries, should return a certain number of members of their own choosing to legislatures of seven of the nine provinces to voice their grievances and their ideals and prevent decisions going against them without the legislature and the Government listening to their case — in a word, to place them in a position to speak for themselves which every fair-minded person must agree to be necessary. We did not consider the method of electing special

representatives by reservation of seats in the existing conditions, under any system of franchise which is practicable, members who could genuinely represent them and be responsible for them, because in practically all cases, such members would be elected by a majority consisting of higher caste Hindus.

The special advantage initially given under our scheme to the Depressed Classes by means of a limited number of special constituencies in addition to their normal electoral rights in the general Hindu constituencies is wholly different in conception and effect from the method of representation adopted for a minority such as the Moslems by means of separate communal electorates. For example, a Moslem cannot vote or be a candidate in a general constituency, whereas any electorally qualified member of the Depressed Classes can vote in and stand for the general constituency.

Reservation Minimum

The number of territorial seats allotted to Moslems is naturally conditioned by the fact that it is impossible for them to gain any further territorial seats and in most provinces they enjoy weightage in excess of their population ratio; the number of special seats to be filled from special Depressed Classes constituencies will be seen to be small and has been fixed not to provide a quota numerically appropriate for the total representation of the whole of the Depressed Class population, but solely to secure a minimum number of spokesmen for the Depressed Classes in the legislature who are chosen exclusively by the Depressed Classes. The proportion of their special seats is everywhere much below the population percentage of the Depressed Classes. As I understand your attitude, you propose to adopt the extreme course of starving yourself to death not in order to secure that the Depressed Classes should have joint electorates with other Hindus, because that it already provided, nor to maintain the unity of Hindus, which is also provided, but solely to prevent the Depressed Classes, who admittedly suffer from terrible disabilities today, from being able to secure a limited number of representatives of their own choosing to speak on their behalf in the legislatures which will have a dominating influence over their future.

In the light of these very fair and cautious proposals, I am quite unable to understand the reason of the decision you have taken and can only think you have made it under a misapprehension of the actual facts.

Government Decision Stands

In response to a very general request from Indians after they had failed to produce a settlement themselves the Government much against its will, undertook to give a decision on the minorities question. They have now given it, and they cannot be expected to alter it except on the conditions they have stated. I am afraid, therefore, that my answer to you must be that the Government's decision stands and that only agreement of the communities themselves can substitute other electoral arrangements for those that Government have devised in a sincere endeavour to weigh the conflicting claims on their just merits.

You ask that this correspondence, including your letter to Sir Samuel Hoare of March 11th, should be published. As it would seem to me unfair if your present internment were to deprive you of the opportunity of explaining to the public the reason why you intend to fast, I readily accede to the request if on reconsideration you repeat it. Let me, however, once again urge you to consider the actual details of Government's decision and ask yourself seriously the question whether it really justifies you in taking the action you contemplate.

I am,
Yours very sincerely,
J. Ramsay MacDonald.

Finding that the Prime Minister would not yield he sent him the following letter informing him that he was determined to carry out his threat of fast unto death:

Yeravada Central Prison,
September 9th, 1932.

Dear friend,

I have to thank you for your frank and full letter telegraphed and received this day. I am sorry, however, that you put upon the contemplated step an interpretation that never crossed my mind. I have claimed to speak on behalf of the very class, to sacrifice whose interests you impute to me a desire to fast myself to death. I had hoped that the extreme step itself would effectively prevent any such selfish interpretation without arguing, I affirm that for me this matter is one of pure religion. The mere fact of the Depressed Classes having double votes does not protect them or Hindu

society in general from being disrupted. In the establishment of separate electorate at all for the Depressed Classes I sense the injection of poison that is calculated to destroy Hinduism and do no good whatever to the Depressed Classes. You will please permit me to say that no matter how sympathetic you may be, you cannot come to a correct decision on a matter of such vital and religious importance to the parties concerned.

I should not be against even over-representation of the Depressed Classes. What I am against is their statutory separation even in a limited form, from the Hindu fold, so long as they choose to belong to it. Do you realize that if your decision stands and the constitution comes into being, you arrest the marvellous growth of the work of Hindu reformers who have dedicated themselves to the uplift of their suppressed brethren in every walk of life?

Decision Unchanged

I have, therefore, been compelled reluctantly to adhere to the decision conveyed to you.

As your letter may give rise to a misunderstanding, I wish to state that the fact of my having isolated for special treatment the Depressed Classes question from other parts of your decision does not in any way mean that I approve of or am reconciled to other parts of the decision. In my opinion, many other parts are open to very grave objection. Only I do not consider them to be any warrant for calling from me such self immolation as my conscience has prompted me to, in the matter of the Depressed Classes.

I remain, Your faithful friend,
M. K. Gandhi.

Accordingly on the 20th September 1932 Mr. Gandhi commenced his "fast unto death" as a protest against the grant of separate electorates to the Untouchables.

The story of this fast has been told by Mr. Pyarelal in a volume which bears the picturesque and flamboyant title of "The Epic Fast". In the pages of this *lours Boswelliana* the curious will find all he wants to know about the happenings in India during these mad days and I need say nothing about it here. Suffice it to say that although Mr. Gandhi went on fast unto death he did not want to die. He very much wanted to live.

The fast therefore created a problem and that problem was how to save Mr. Gandhi's life. The only way to save his life was to alter the Communal Award so as not to hurt Mr. Gandhi's conscience. The Prime Minister had made it quite clear that the British Cabinet would not withdraw it or alter it of its own but that they were ready to substitute for it a formula that may be agreed upon by the Caste Hindus and the Untouchables. As I had the

privilege of representing the Untouchables at the Round Table Conference it was assumed that the assent of the Untouchables would not be valid unless I was a party to it. At the moment my position as the representative of the Untouchables of India was not only not questioned but was accepted as a fact. All eyes naturally turned to me as the man or rather as the villain of the piece. Mr. Gandhi's life as he himself said was in my hands.

It is no exaggeration to say that no man was placed in a greater and graver dilemma than I was then. It was a baffling situation. I had to make a choice between two different alternatives. There was before me the duty which I owed as a part of common humanity to save Gandhi from sure death. There was before me the problem of saving for the Untouchables the political rights which the Prime Minister had given them. I responded to the call of humanity and saved the life of Mr. Gandhi by agreeing to alter the Communal Award in a manner satisfactory to Mr. Gandhi. This agreement is known as the Poona Pact. The terms of the Poona Pact were as under:

1. There shall be seats reserved for the Depressed Classes out of general electorates. Seats in Provincial Legislatures shall be as follows:

Madras	30
Bombay with Sind	15
Punjab	8
Bihar and Orissa	18
Central Provinces	20
Assam	7
Bengal	30
United Provinces	20
Total	148

This number of 148 seats was raised to 151 in making adjustments on seats for Bihar and Orissa.

These figures are based on the total strength of the Provincial Councils announced in the Prime Minister's decision.

2. Election to these seats shall be by joint electorates subject, however, to the following procedure:

All members of the Depressed Classes registered in the general electoral roll of a constituency, will form an electoral college which will elect a panel of four candidates belonging to the Depressed Classes, for each of such reserved seats by the method of single vote and four persons getting the highest number of votes in such primary election, shall be the candidates for election by the general electorates.

3. Representation of the Depressed Classes in the Central Legislature shall likewise be on the principle of joint electorates and reserved seats by the method of primary election in the manner provided for in clause 2 above for their representation in Provincial Legislatures.

4. In the Central Legislature 18 per cent of the seats allotted to the general electorate for British India in the said legislature shall be reserved for the Depressed Classes.

5. The system of primary election to panel of candidates for election to the Central and Provincial Legislatures, as herein before mentioned, shall come to an end after the first ten years unless terminated sooner by mutual agreement under the provision of Clause 6 below.

6. The system of representation of the Depressed Classes by reserved seats in the Provincial and Central Legislatures as provided for in clauses I and 4 shall continue until determined by mutual agreement between the communities concerned in this settlement.

7. The franchise for the Central and Provincial Legislature for the Depressed Classes shall be as indicated in the Lothian Committee Report.

8. There shall be no disabilities attaching to anyone on the ground of his being a member of the Depressed Classes in regard to any elections to local bodies or appointment to public service.

Every endeavour shall be made to secure a fair representation of the Depressed Classes in these respects subject to such educational qualifications as may be laid down for appointment to public services.

9. In every province out of the educational grant an adequate sum shall be earmarked for providing educational facilities to members of the Depressed Classes.

The terms of the Pact were accepted by Mr. Gandhi and given effect to by Government by embodying them in the Government of India Act.

This fast unto death was a great gamble on the part of Mr. Gandhi. He perhaps felt that the mere threat to fast unto death would make me and other Depressed Classes who were with me just shiver and yield. But he soon found that he was mistaken and that the Untouchables were equally determined to fight to the last for their rights. No one except his own followers was convinced that Mr. Gandhi's fast had any moral basis and if Gandhi got a second lease of life, he owes it entirely to the generosity and goodwill shown towards him by the Untouchables.

Question however is what advantage the Untouchables have got by entering into the Poona Pact. To understand this one must examine the results of the elections to the Legislatures. The Government of India Act came into operation on 1st April 1937. In February 1937 the elections to

the new legislatures as defined in the Act took place. So far as the Untouchables are concerned the elections which took place in February 1937 were elections in accordance with the Poona Pact. The following is the analysis of the results of that election to the seats reserved for the Untouchables in the different Provincial Assemblies.

TABLE mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_72

		Total Seats	Total Seats
Province		Reserved for the Untouchables	Captured by the Congress
United Provinces		20	16
Madras		30	26
Bengal		30	6
Central Provinces		20	7
Bombay		15	4
Bihar		15	11
Punjab		8	Nil
Assam		7	4
Orissa		6	4
Total		151	78

This analysis reveals certain facts which make one ask whether the Untouchables have got anything of any value by entering into the Poona Pact and saving the life of Mr. Gandhi and whether the Poona Pact has not made the Untouchables the Bondsmen of the Caste Hindus.

This analysis shows that a large majority of them have been elected as Congressmen. It is my firm conviction that for the Untouchables to merge in the Congress or for the matter of that in any large political party cannot but be fatal for them.

The Untouchables need a movement if they are to remain conscious of their wrongs and if the spirit of revolt is kept alive amongst them. They need a movement because the Caste Hindus have to be told that what is tragedy of the Untouchables is their crime. The Congress may not be a red-blooded Hindu body so far as the Musalmans are concerned. But it is certainly a full-blooded and blue-blooded Hindu body inasmuch as it

consists of Caste Hindus. A movement of the Untouchables must mean an open war upon the Caste Hindus. A movement of the Untouchables within the Congress is quite impossible. It must mean an *inter necine* within the party. The Congress for its own safety cannot allow it.

The Congress has strictly forbidden the Untouchables who have joined the Congress to carry on any independent movement of the Untouchables not approved of by the High Command. The result is that in those Provinces where the Untouchables have joined the Congress the movement of the Untouchables as such is dead.

The Untouchables must retain their right to freedom of speech and freedom of action on the floor of the Legislature if they are to ventilate their grievances and obtain redress of their wrongs by political action. But this freedom of speech and action has been lost by the representatives of the Untouchables who have joined the Congress. They cannot vote as they like, they cannot speak what they think. They cannot ask a question, they cannot move a resolution and they cannot bring in a Bill. They are completely under the control of the Congress Party Executive. They have only such freedom as the Congress Executive may choose to allow them. The result is that though the tale of woes of the Untouchables is ever-increasing, the untouchable members of the Legislature are unable even to ask a question about them. So pitiable has their condition become that the Congress Party sometimes requires them to vote against a measure that may in the opinion of the Untouchable members of the Legislature be beneficial to the Untouchables. A recent instance of this occurred in Madras. Rao Bahadur Raja a member of the Madras Legislature brought in a Bill to secure the entry of the Untouchables into Hindu Temples in the Madras Presidency. The Congress Government had promised to support it at first. Subsequently the Congress Government in Madras changed its opinion and opposed the measure. It was a dilemma for the Untouchable members of the Madras Legislature. But they had no choice. The whip was applied and they in a body voted against the measure. The representatives of the Untouchables were supposed to be the watch-dogs of the Untouchables. But by reason of having joined the Congress they are muzzled dogs. Far from biting they are not even able to bark. This loss of freedom of speech and action by these Untouchable members is entirely due to their having joined the Congress and subjected themselves to the discipline of the Congress.

The third disadvantage arising from the Untouchables joining the Congress lies in their being unable to secure any real benefit to the Untouchables. This is due to two reasons. First of all the Congress is not a

radical party. The Congress has the reputation of being a revolutionary organization. Its idea of complete independence, the movement of civil disobedience and non-payment of land revenue which the Congress once launched have undoubtedly given that reputation. But many people forget that a revolutionary party is not necessarily a radical party. Whether a revolutionary party is also a radical party must depend upon the social and emotional realities which bring on or induce the revolutionary activity. The Barons of England who under Simon de Mandfort rose against King John in 1215 and compelled him to sign the *Magna Charta* must be classed as revolutionaries along with the Peasants of England who in 1381 rose in rebellion under Wat Tyler against their masters and who were all hanged for their rebellious acts. But who can say that the Barons because they were revolutionaries were also radical? The Barons rebelled because they wanted the rights of their class against the King and the peasants established. The Barons revolt was fed by the social emotion of those who were frustrated of power. The emotions behind the peasants revolt were those who were oppressed and who were hungering for food and freedom and that is why the peasants were both revolutionary as well as radical. The revolt of the Congress is more like the revolt of the Peasants. The Congress under Gandhi is as radical as the Barons were under Simon de Mandfort. Just as the Barons revolt was fed by the social emotions of those who were frustrated of power and not by the emotions of those who were toiling and hungering so was the Congress revolt against the British. It is true that the Congress gathered a large following from the masses but that was by appealing to their anti-British feeling which is natural to all Indians. It is also true that emotions of these were those who were frustrated of food and freedom. But their emotions were in conflict of those socially advanced and the propertied classes. And the latter had all along been the governing class in the Congress. The masses have been camp followers. It is their emotions which has all along determined the character of the Congress. Their emotions are of those who are frustrated of power. That is why the Congress has been only revolutionary body and has not been a radical party. The truth of this can be seen by any one who cares to examine the record of the Congress Governments. Their achievement since they have taken over are just a miscellaneous collection of trifling trinkets. They have shot down the workers more readily than the British and have released criminals sentenced by the High Courts on no other ground than that they have the authority to do it. It is a surprize to me—it is not me—that the Congress has so soon shown that it is just a counter-part of the Tories in England. The governing class in the Congress has lost

all its fervour for revolution, for driving the British out. Having now got a field to exploit the masses they want to stick on the power and authority to do the job thoroughly and do not wish to be disturbed by any thought of anti-imperialism at all.

Not being radical party the Congress cannot be trusted to undertake a radical programme of social and economic reconstruction without which the Untouchables can never succeed in improving their lot. For the Untouchables to join such a party is a futile and senseless thing. The Congress will not do anything for them but will only use them as they have done.

The Congress might do something for the Untouchables if it was compelled to do by force of circumstances. There is only one circumstance in which the Congress would feel such a compulsion— that is when the Congress finds itself dependent upon the representatives of the Untouchables for its majority in the Legislature. Then the Untouchables would be in a position to dictate their terms to the Congress and the Congress would be bound to accept them. In such a contingency it would be worth the while of the Untouchables to join the Congress in a coalition. It would be real bargain. But today the Congress has everywhere such large majorities that in the legislatures it is its own master. It is not dependent on any outside support. The Untouchables who are in it are at the end of the tail and the tail so lengthened that it cannot wag. This is the second reason why joining the Congress can be of no benefit to the Untouchables.

Such are the disadvantages that have arisen from the Untouchables having joined the Congress. They are not merely disadvantages. I call them dire consequences. All social movement has become dead. All political power has become migratory. It is understatement to say that under the new Constitution the Untouchables are marking time. The fact is that they have been put in chains.

But the question will undoubtedly be asked and it is this—If such are the consequences of joining the Congress why did these Untouchables join it? Why did they not fight their elections independently and in opposition to the Congress? Some of the Untouchables who stood on the Congress ticket were just careerists, men on the make who wanted to climb into the Legislature so as to be within call when the places of office or profit come for distribution. They did not care by whose ladder they climbed. The Congress being the biggest party and its pass the surest way of being admitted into the Legislature these careerists felt that to join the Congress was the easiest way of electoral success. They did not want to take any chance. This however explains their object. It does not explain the cause

which forced them to join the Congress. I am sure even these careerists would not have joined the Congress if it was possible for them to have got themselves elected independently of the Congress. They joined the Congress only because they found that that course was impossible. Why were they compelled to join the Congress? The answer is that it was due to the system of joint electorates which caused the mischief which was introduced by the Poona Pact.

A joint electorate for a small minority and a vast majority is bound to result in a disaster to the minority. A candidate put up by the minority cannot be successful even if the whole of the minority were solidly behind him. The fact that a seat is reserved for a minority merely gives a security that the minority candidate will be declared elected. But it cannot guarantee that the minority candidate declared elected will be a person of its choice if the election is to be by a joint electorate. Even if a seat is reserved for a minority, a majority can always pick up a person belonging to the minority and put him up as a candidate for the reserved seat as against a candidate put up by the minority and get him elected by helping its nominee with the superfluous voting strength which is at its command. The result is that the representative of the minority elected to the reserved seat instead of being a champion of the minority is really the slave of the majority.

In the system of electorates now formed for election to the Legislature, the Untouchable voters as against the caste Hindu voters are placed in a hopeless minority. A few instances will show how great is the discrepancy in the relative voting strength of the Untouchables and the caste Hindus in the different constituencies.

The power to do mischief in elections which a joint electorate gives to a majority is increased immensely if the electoral system is based on the principle of a single member constituency.

In a system of joint electorates with reserved seats for a minority a constituency must always be a plural member constituency i.e. there must be one seat for the minority and at least one seat for the majority. In other words it must be what is called a plural member constituency. This plural member constituency must be small one i.e. the majority community may have just two seats as against the one assigned to the minority. It may be a large one i.e. the majority may have a larger number of seats assigned to it. This is an important consideration because the smaller the number of seats the greater the power of mischief which the majority gets. This will be clear if it is borne in mind that when a majority has fewer seats it can release a large portion of its voting strength to get its own nominee from the minority elected to the reserved seats and defeat the nominee of the

minority. On the other hand if the majority is assigned a larger number of seats, there a competition among the candidates is greater, the voters of the majority community are for the most part (busy) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_73 in fighting out the election to the seats assigned to the majority and very few at all can be released to help the nominee of the majority for the minority seat. In a joint electorate the safety of the minority lies in the majority having a larger number of seats to contest. Otherwise it is sure to be overwhelmed by the majority.

In the electoral system now framed for the caste Hindus the principle that is adopted is that of the single member constituency. It is true that on the face of it the constituency taken as a whole appear to be a plural member constituency. But, in fact, the constituency so far as the caste Hindus are concerned are single member constituencies. The consequence of this single member constituency system for Caste Hindus is that the Hindus are able to release an enormous lot of their superfluous votes and flood the election for the seats reserved for the Untouchables and keep their nominee for the reserved seat afloat.

The Hindus were anxious to forge further means for nullifying the benefit of the Poona Pact. The Poona Pact having been concluded in a hurry, it left many things undefined. Of the things that were left undefined and about which there arose subsequently a keen controversy were the following: (1) Does the 'panel of four' to be elected at the primary election imply four as a maximum or a minimum? (2) What was to be the method of voting in the final joint electorate with the Hindus? The Hammond Committee which had to decide upon these issues found that there were two diametrically opposite views in regard to these two questions, one view held by the Caste Hindus and the other held by the Untouchables. It was contended on behalf of the Caste Hindus that the panel of four was intended to be a minimum. If four candidates are not forthcoming there could be no primary election and therefore there can be no election for the reserved seat, which they said must remain vacant and the Untouchables should go without representation. The Untouchables contended that four was the maximum. Four in the Poona Pact meant "not more than four". It did not mean "not less than four". On the question of voting the caste Hindus contended that the compulsory distributive vote was the most appropriate. The Untouchables on the other hand insisted that the cumulative system of voting was the proper system to be introduced.

The Hammond Committee accepted the view propounded by the Untouchables and rejected those of the Caste Hindus. All the same it is

interesting to know why the caste Hindus put forth their contentions.

The reason why the Hindus wanted four in the panel and not less was quite obvious. The object of the Hindus is to get elected in the final election such a representative of the Untouchables as would be most ready and willing to compromise with Hindus and Hinduism. To get him elected in the final election he must first come in the Panel. A most compromising Untouchable can come in the Panel only when the panel is a large panel.

If there is only one candidate in the Panel then he would be the staunchest representative of the Untouchable and worst from the standpoint of the Hindus. If there are two, the second will be less staunch than the first and therefore good from the standpoint of the Hindus. If there are three, the third will be less staunch than the second and therefore better from the standpoint of the Hindus. If there be four, the fourth will be less staunch than the third and therefore best from the point of view of the Hindus. The Panel of four gives the Hindus the best chance of getting into the Panel such representative of the Untouchables as is most compromising in his attitude towards Hindus and Hinduism and that is why they insisted that the Panel should be at least of four.

The object of insisting upon the system of compulsory distributive vote was just supplementary to the idea of having the Panel of not less than four. Under the cumulative vote the elector has as many votes as there are seats, but may plump them all for one candidate or distribute them over two or more candidates as he may desire. Under the distributive system of voting the elector has also as many votes as there are seats, but he can give only one vote to any one candidate.

Although the two look different yet in effect there may be no difference because even under the cumulative vote a voter is not prevented from distributing his votes. He is free to give one vote to one candidate. But the Hindus did not want to take any chance. Their main object was to flood the election to the seat reserved for the Untouchables in the joint electorate by using the surplus votes of the caste Hindus in favour of the Untouchable candidate who happens to be their nominee. The object was to outnumber the Untouchable voters and prevent them from electing their own nominee. This cannot be done unless the surplus votes of the caste Hindu voters were divested from the caste Hindu candidate towards the Untouchable candidates. There is a greater chance of the diversion of these surplus votes under the distributive system than there is under the cumulative system. Under the former the caste Hindu voter can give only one vote to the caste Hindu candidate. The other vote not being of use to the caste Hindu candidate is usable only for an Untouchable candidate.

With the distributive system there was more chance of flooding the election to the seat reserved for the Untouchables and this is why they preferred it to the system of cumulative vote. But they want to take a chance. Even the distributive system from their point of view was not foolproof. Under the distributive system there was no compulsion upon the voter to use all his votes. He may use one vote for the caste Hindu candidate and not use the rest of his votes. If this happens the purpose of getting in their untouchable nominee would be defeated. Not to leave things to chance the Hindus wanted that the distributive system of voting should be made compulsory so that a caste Hindu voter whether he wants it or not can have no option but to vote for the untouchable candidate who may be the nominee of the Hindus.

The two proposals were thus a part of a deep conspiracy on the part of the Hindus. They were rejected by the Hammond Committee. But there are enough elements of mischief in the Poona Pact itself that the rejection of these two proposals has in no way weakened the power of the Hindus to render nugatory the right of special representation granted to the Untouchables.

Notwithstanding the political disaster which has overtaken the Untouchables and which is the result of the Poona Pact, there are not wanting friends of Mr. Gandhi who hold out the Poona Pact as a great boon to the Untouchables.

Firstly it is alleged that the Poona Pact gave the Untouchables larger number of seats than was given to them by the Communal Award. It is true that the Poona Pact gave the Untouchables 151 seats while the Award had only given them 78. But to conclude from this that the Poona Pact gave them more than what was given by the Award is to ignore what the Award had in fact given to the Untouchables.

The Communal Award gave the Untouchables two benefits: (i) a fixed quota of seats to be elected by separate electorates for Untouchables and to be filled by persons belonging to the Untouchables, (ii) Double vote, one to be used through separate electorates and the other to be used in the general electorates.

Now if the Poona Pact increased the fixed quota of seats it also took away the right to the double vote. This increase in seats can never be deemed to be a compensation for the loss of the double vote. The second vote given by the Communal Award was a priceless privilege. Its value as a political weapon was beyond reckoning. The voting strength of the Untouchables in each constituency is one to ten. With this voting strength free to be used in the election of caste Hindu candidates, the Untouchables

would have been in a position to determine, if not to dictate, the issue of the General Election. No Caste Hindu candidate could have dared to neglect the Untouchables in his constituency or be hostile to their interest if he was made dependent upon the votes of the Untouchables. Today the Untouchables have a few more seats than were given to them by the Communal Award. But this is all that they have. Every other member is indifferent if not hostile. If the Communal Award with its system of double voting had remained, the Untouchables would have had a few seats less but every other member would have been a member for the Untouchables. The increase in the number of seats for the Untouchables is no increase at all.

Admitting for the sake of argument that the Poona Pact did give to the Untouchables a few more seats, the question still remains of what use are these additional seats. Ordinarily a right to vote is deemed to be sufficient as a means of political protection. But it was felt that in the case of the Untouchables mere right to vote would not be enough. It was feared that a member elected on the votes of the Untouchables, if he is himself not an Untouchable, might play false and might take no interest in them. It was held that the grievances of the Untouchables must be ventilated in the Legislature and that the surest way of ensuring it would be to provide that a certain number of seats shall be reserved for them so that the Untouchables shall be represented by Untouchables in the Legislature. It is now evident that this hope has not been fulfilled. The Communal Award no doubt gave fewer seats. But they would have been all of them freemen. The Poona Pact gave more but they are all filled by bondsmen. If to have a platoon of bondsmen is an advantage then the Poona Pact may be said to be advantage.

The second argument in favour of the Poona Pact is that in abolishing separate electorates it saved the Untouchables from being eternally branded as Untouchables. In one of his speeches delivered in London Mr. Gandhi said:

"Muslims and Sikhs are all well organized. The 'untouchables' are not. There is very little political consciousness among them and they are so horribly treated that I want to save them against themselves. If they had separate electorates their lives would be miserable in villages which are the strongholds of Hindu orthodoxy. It is the superior class of Hindus who have to do penance for having neglected the 'untouchables' for ages. That penance can be done by active social reform and by making the lot of the 'untouchables' more bearable by acts of service, but not by asking for separate electorates for them. By giving them separate electorates you will

throw the apple of discord between the 'untouchables' and the orthodox. You must understand I can tolerate the proposal for special representation of the Musalmans and the Sikhs only as a necessary evil. It would be a positive danger for the 'untouchables'. I am certain that the question of separate electorates for the 'untouchables' is modern manufacture of Government. The only thing needed is to put them on the voters' list, and provide for fundamental rights for them in the constitution. In case they are unjustly treated and their representative is deliberately excluded, they would have the right to special election tribunal which would give them complete protection. It should be open to these tribunals to order the unseating of an elected candidate and the election of the excluded man."

"Separate electorates to the 'untouchables' will ensure them bondage in perpetuity. The Musalmans will never cease to be Musalmans by having separate electorates. Do you want the 'untouchables' to remain 'untouchables' for ever? Well, the separate electorates would perpetuate the stigma. What is needed is destruction of untouchability, and when you have done it, the bar sinister which has been imposed by an insolent 'superior' class upon an 'inferior' class will be destroyed. When you have destroyed the bar sinister, to whom will you give the separate electorates? Look at the history of Europe. Have you got separate electorates for the working classes or women? With adult franchise, you give the 'untouchables' complete security. Even the orthodox would have to approach them for votes."

"How then, you ask, does Dr. Ambedkar, their representative, insist on separate electorates for them? I have the highest regard for Dr. Ambedkar. He has every right to be bitter. That he does not break our heads is an act of self-restraint on his part. He is today so much saturated with suspicion that he cannot see anything else. He sees in every Hindu a determined opponent of the 'untouchables', and it is quite natural. The same thing happened to me in my early days in South Africa, where I was hounded out by the Europeans wherever I went. It is quite natural for him to vent his wrath. But the separate electorates that he seeks will not give him social reform. He may himself mount to power and position but nothing good will accrue to the 'untouchables'. I can say all this with authority, having lived with the 'untouchables' and having shared their joys and sorrows all these years."

His argument it is true derives some support from the Simon Commission which also observed: (*The following extracts are not quoted in the MS. They are reproduced here from Dr. Ambedkar's 'What Congress and Gandhi have done to the Untouchables', Appendix VI, p. 327.— Ed.*)

(Extracts from the Report of the Simon Commission, Vol. II)

78. In no other province has it been possible to get an estimate of the number of the depressed classes who are qualified to vote. It is clear that even with a considerable lowering of the franchise—which would no doubt increase the proportion of the depressed class voters—there would be no hope of the depressed classes getting their own representatives elected in general constituencies without special provision being made to secure it. In the long run the progress of the depressed classes, so far as it can be secured by the exercise by them of political influence, will depend on their getting a position of sufficient importance for other elements to seek their support and to consider their needs.

* * *

80. It will be seen, therefore, that we do not recommend allocating seats to the depressed classes on the basis of their full population ratio. The scale of reserved representation suggested will secure a substantial increase in the number of the M.L.C.s drawn from the depressed classes. The poverty and want of education which so widely prevail amongst them make it extremely doubtful whether a large number of adequately equipped members could be at once provided, and it is far better that they should be represented by qualified spokesmen rather than by a larger number of ineffectives who are only too likely to be subservient to higher castes. The re-distribution of seats which is now being attempted among different kinds of representatives cannot be permanent, and provision must be made for its revision. But we think that our proposal is adequate for the present, especially as the representation of opinion by reservation of seats does not exclude the possibility of the capture of other seats *not* so reserved.

* * *

But that this argument is silly there can be no doubt about it. To put a man in a separate category from others is not necessarily an evil. Whether the affixing of a label is good or bad depends upon the underlying purpose. If the object is to deprive him of rights then such a labelling would no doubt be a grievous wrong. But if the purpose is to mark off as a recipient of a privilege then far from being a wrong it would be a most beneficial measure. To enrol an untouchable in a separate electoral roll would be objectionable if the object was to deprive him of the right of franchise. To enrol him in a separate electoral roll for giving him the benefit of special representation would certainly be an advantage to him. Looked at from the point of view of ultimate purpose it is difficult to see how any person who

claims to be the friend of the untouchables could object to separate electorates for them. Not only the argument of Gandhi against separate electorate was silly it was also insincere. Gandhi objected to separate electorates because it involved labelling of the Untouchables. But how is this labelling avoided in joint electorates it is difficult to understand. The reservation of a seat for the Untouchables in a joint electorate must and does involve such labelling for the candidate claiming the benefit of the reserved must in law declare that he is an untouchable. To that extent there is certainly a labelling involving in the Joint Electorate and Mr. Gandhi should have objected to joint electorates as violently as he did to separate electorates., Either Mr. Gandhi was insincere or that he did not know what he was talking about.

Friends of Mr. Gandhi do not stop to consider how far under the Poona Pact the Untouchables have been able to send independent men to represent them in the Legislature and whether these representatives have been putting up any fight and how well they are succeeding. If they stopped to do it they would be ashamed to sing the praises of the joint electorates and the Poona Pact. The Congress and the Hindus have shamefully abused their power and their resources as a majority community. Not only have they prevented the Untouchables from electing persons of their choice, not only have they got their own nominees elected by the use of their surplus votes, they have done something for which any decent party in any part of the world ashamed of itself. The selection of the candidates from the untouchables made by the Congress to fill the seats reserved for the Untouchables was a most cowardly and a blackguardly act.

It was open to the Congress—which is simply a political surname for Hindus—to allow the Untouchables the benefits of more seats than those fixed for them by the Poona Pact. They could have done that by adopting untouchable candidates to contest general seats. There was nothing in law to prevent them from doing so. The Congress did nothing of the kind. This shows that if no seat had been reserved to the Untouchables, the Hindus would never have cared to see that an untouchable was returned to the legislature. On the other hand when seats were reserved, the Hindus came forward to spoil the effect of the reservation by seeing to it that the seats went to such untouchables as agreed to be their slaves.

Thus there has been a tragic end to this fight of the untouchables for political rights. I have no hesitation in saying that Mr. Gandhi is solely responsible for this tragedy.

Mr. Gandhi's cry against the Communal Award on the ground that it prescribed separate electorates was absolutely false and if the Hindus had

not become maddened by his fast they would have seen that it was so. The Communal Award had also a provision for joint electorates in addition to separate electorates. The second vote given to the Untouchables was to be exercised in a general electorate in the election of a Caste Hindu candidate. This was undoubtedly a system of joint electorates. The difference between the Communal Award and the Poona Pact does lie in the nature of electorates. Both provide for joint electorates. The difference lies in this, joint electorate of the Communal Award was intended to enable the Untouchables to take part and influence the election of the Caste Hindu candidate while the joint electorate of the Poona Pact is intended to enable the caste.

Hindus to take part and influence the election of the Untouchable candidates. This is the real difference between the two.

What would a friend of the Untouchables wish? Would he support the joint electorates of the Communal Award or the joint electorates of the Poona Pact? There can be no doubt that the real salvation of the Untouchables lies in making the Hindus dependent upon the suffrages of the Untouchables. This is what the Communal Award did. To make the Untouchables depend upon the suffrages of the Hindus is to make them the slaves of the Hindus which they already are. This is what the Poona Pact does. The Communal Award was intended to free the Untouchables from the thraldom of the Hindus. The Poona Pact is designed to place them under the domination of the Hindus.

This 'Fast unto Death' of Mr. Gandhi was described in glorious terms by his friends and admirers both in India and outside. It was described as 'second crucifixion', as 'martyrdom' and as 'Triumphal struggle'. An American friend of Mr. Gandhi assured the Americans that in laying down his life Mr. Gandhi was neither a 'trickster' nor a stick demagogue. Another American in his ecstasy went to the length of describing him as the incarnation of '*one against the world*'. Of course I was held out as the villain of the piece. I had of course my own view of Gandhi's fast. I described it as a political stunt. His utterances had to me always the ring of falsity and even of insincerity.

I had always the feeling that what actuated Mr. Gandhi to fast against the Communal Award was not any desire to liberate the Untouchables as to save the Hindus from disruption. He was prepared to do that at any cost, even at the cost of political enslavement of the Untouchables. His disapproval of the Poona Pact was very much like the disapproval of the enfranchisement of the Negro by the Southerners after the civil war. The 'Statesman' and 'Nation' came to the same conclusion. It said: *Quotation*

not mentioned in the MS nor could it be traced elsewhere—Ed.)

At the time there was this one solitary instance of a view agreeing with mine. Even some of the prominent untouchables backed Mr. Gandhi. A curious case was that of Mr. Raja whose grievance was that although he was a member of the Central Assembly nominated to represent the Depressed Classes he was not selected as a delegate for the Round Table Conference. He was fighting for separate electorates. Suddenly he changed sides and took up the cudgels on behalf of Mr. Gandhi and fulminated both against me for demanding and against the British Government for granting separate electorates. He developed such a strong love for Mr. Gandhi and such a strong faith in the Hindus that no one could suspect that he was doing the work of a mere hireling. This is what Mr. Raja said in the course of a speech delivered by him on an adjournment motion moved in the Central Legislature on September 13th, 1932 relating to Gandhi's fast.

“Never in the annals of the history of India has the issue of the Depressed Classes assumed importance as it has today, and for this we of the Depressed Classes must for ever be grateful to Mahatma Gandhi. He has told the world, in words which cannot be mistaken, that our regeneration is the fundamental aim of his life. If world conscience cannot be roused even now to the realization of the position of the Depressed Classes, then we can only conclude that all instincts of humanity are dead in the world today.”

* * *

"The question before the House is the situation created by Mahatma Gandhi opposing the grant of communal electorates to the Depressed Classes. I am sure there is no honourable member in this House who will not regret that circumstances should have forced such a great personality to take a vow to play on his life, but sir, the correspondence shows that Government had enough warning. If they did not attach full importance to our considered views expressed in our conferences and in the Rajah-Moonje Pact I had signed with the President of Hindu Mahasabha, they should have taken at least the grave warning given by Mahatma Gandhi and desisted from the course of creating separate electorates."

* * *

"Indeed this is my chief attack on the Premier's letter to Mahatma Gandhi. He tells us that he has given separate electorates for twenty years to enable us to get the minimum number of seats to place our views before the Government and legislature of the day. I contend that this privilege we

have already enjoyed under the Montford reforms which have enabled us to get representation in numerous local bodies and in legislatures both provincial and central. We are sufficiently organized for that purpose and do not need either special pleading or special succour. In future what we do need as real remedy for our uplift is definite power to elect our representatives from the general constituencies and hold them responsible to us for their actions. I do not know why the Prime Minister calls the scheme of joint electorates with reservation of seats as impracticable. It is already in force in local bodies in Madras and some other provinces and has worked very satisfactorily. I contend, sir, that the scheme enunciated in the communal decision involves our segregation and makes us politically untouchables. I am surprised at the argument of the Prime Minister that there is no segregation because we can vote for Caste Hindus who will have to solicit our votes. But, sir, how can we bring about common ideal of citizenship when Depressed Class representatives are not to solicit votes of higher castes?"

* * *

"The sufferings which my community has undergone at the hands of Caste Hindus have been acknowledged by Caste Hindus themselves, and I am prepared to admit that there are a large number of reformers among them who are doing everything possible to improve our status and position. I am convinced that there is a change of heart and a change in the angle of vision of Caste Hindus. We, Depressed Classes, feel ourselves as true Hindus as any Caste Hindu can be, and we feel that the moral conscience of the Hindus has been roused to the extent that our salvation lies in bringing about a change from within the main body of Hindu society and not segregating ourselves from them. The course adopted by the Government would certainly arrest the progress of this most laudable movement. I must say, sir, that the Prime Minister's letter in its entire conception, and expression has disappointed me."

* * *

"The crisis that faces us today is very grave. There hangs in the balance the life of the greatest Indian of our time, and there hangs in the balance the future of millions of the down-trodden people of this country. Is Government going to take the responsibility for killing the one and reducing the other to perpetual servitude? Let it make its choice well and wisely."

* * *

Mr. Raja not only backed the Poona Pact and fought for distributive vote which as I pointed out was nothing but a part of the design of the Hindus

to make the political enslavement of the Untouchables fool-proof and knave-proof. Mr. Raja was so much enamoured of his new faith in Gandhi and Hindus that he was not satisfied by the disposal of the matter by the Hammond Committee. He reopened the matter after election by moving a resolution in the Madras Assembly in favour of the distributive vote¹.

But today after seeing the results of the Poona Pact Mr. Raja seems to have been disillusioned. How long he will remain faithful to the truth he has discovered is more than I can say. But he has declared himself openly as a bitter opponent of the Poona Pact. In a letter to Mr. Gandhi, dated 25th August 1938, Mr. Raja says:

“You remember how, when most of my people were in favour of separate electorates so that they may express themselves faithfully and effectively in the legislatures, you staked your life on bringing them into the Hindu fold not only politically but socially and religiously. And I was in no small measure responsible for my people going in for a joint electorate with Caste Hindus on the express understanding that there was to be no interference with our choosing men who would faithfully represent our grievances and wishes. It was with this object that the panel election was instituted.

“All this you know as well as I do. But my object in recalling the fact is to show that while on our part we faithfully adhered to the Poona Pact, giving up agitating for a separate electorate, the Congress Party men in Madras representing the Caste Hindus deviated from the Pact, so much so, that our community in the Legislative Assembly have to follow the Caste Hindus blindly in Madras Legislative Assembly Debates. Every measure the Ministry may bring and vote with them even in matters which deeply affect the interests of the community.

“You perhaps remember that at the beginning of the elections I protested against the Congress Committee setting up candidates for the panel election among the Depressed Classes. You were good enough to say that I might allow my community joining the Congress on certain conditions placed before us by Mr. S. Satyamurti. One of these conditions was that in matters affecting their community, the Depressed Class members of the Congress Party need not vote with the Congress members but vote according to their judgement.

"The recent debate on the Temple Entry Bill in the Madras Legislative Assembly has exposed the ugly fact that all Depressed Class Members driven by the discipline of the Congress Party in the Assembly voted solidly against my motion for referring the Bill to a Select Committee. Could anything be more unnatural and more humiliating, proving as it did

the subjugation of my community by the Caste Hindus represented by Mr. Rajagopalachariar?

"You know the provisions of the Bill. It was only a piece of permissive legislation making it possible for a majority of worshippers of a temple to allow Harijans to worship in the temple. There was no element of compulsion or coercion in it. This Bill had your blessing. It was drafted by Mr. Rajagopalachariar himself and approved by you.

"At a previous session of the Assembly I introduced the Bill with the consent of Mr. Rajagopalachariar, who promised his full support to the measure. When I suggested that the Bill might be introduced by him as a Government measure, he wanted me to introduce it. When I met him last, on the 12th July 1938 and informed him that I was giving notice of a motion for referring the Bill to a Select Committee he did not object.

"I do not know what happened in the meantime but two days before my motion for referring the Bill to the Select Committee came up before the house, Mr. Rajagopalachariar sent for me and quietly asked me to withdraw the Bill, which I refused to do. When in due course, I moved for the consideration of the Bill, Mr. Rajagopalachariar stood up and opposed the Bill and requested me to withdraw it, saying that he would introduce a Temple Entry Bill on the same lines, only for Malabar and not for other Districts.

"The effect of Mr. Rajagopalachariar's speech was to defeat my motion with my own community men registering their votes against the measure, introduced to secure their social and religious elevation. One effect of Mr. Rajagopalachariar's opposition will be to strengthen the opposition in the country to temple entry as a whole.

"All this makes me uneasy about the wisdom of our having been parties to the Poona Pact in the full belief that the Congress would really help in our attempt to secure social and religious freedom. I am forced to think that our entering the joint electorate with the caste Hindus under the leadership of the Congress, far from helping us, has enabled the Congress, led by Caste Hindu leaders to destroy our independence and to use us to cut our own throats.

"In the course of the debate, I asked Mr. Rajagopalachariar whether he had obtained your approval of the attitude which he so suddenly and unexpectedly assumed and the Speaker said that Mr. Rajagopalachariar will be given an opportunity to answer the question after I had done. Though he was given the privilege of speaking after me, he avoided the question and did not answer it at all.

"I trust that you will give your most serious consideration to this question

of the attitude of the Congress Ministry in Madras towards Harijan uplift, especially with regard to temple entry and let me have your view before I answer my community men who are very much exercised over this question and are contemplating a repudiation of the Poona Pact and an agitation for a separate electorate accompanied by direct action of some kind." Mr. Rajah also wired to Mahatma Gandhi, Wardha on 12th September 1938 as follows:

"Agitation against Ministry rejection my bill growing difficult withstand pressure upon me—Anxiously awaiting reply."

Mr. Gandhi replied to Mr. Rajah on 14th September 1938: "Dear friend, I must apologise for the delay in replying to your letter, I have been overwhelmed with work. Now I have your wire.

I wish you would trust C. Rajagopalachariar to do his best. He should be allowed to do the thing in his own way. If you cannot trust, naturally you will take the course which commends itself to you. All I know is that Harijans have no better friend than him. Go to him, reason with him and if you cannot persuade him, bear with him. That is my advice."

Mr. Rajah wrote a letter dated 21st September 1938 to Mr. Gandhi stating:

"I should request you on the other hand to give more serious consideration to the pledges given to my community during the Yeravada Fast and to the way in which they are carried out by your plenipotentiary in Madras. That fast was undertaken by you in order to change the Communal Award providing separate electorates for my people and to bring them into joint electorate with Caste Hindus by promising to spare no efforts to remove untouchability. And you have more than once said that temple entry is of the very essence of the removal of untouchability.

"So the question of our being in a joint electorate with Caste Hindus and the attitude of the Congress Ministry towards the raising of the social and religious status of the community are mutually and vitally connected.

"If we are not free to enter into Hindu Temples, we are no Hindus, and if we are not Hindus why should we be in a joint electorate with them? Is it for swelling their numbers as against Muslims and other communities?

"If you look at the situation in Madras from this point of view, you will realise that the rejection of the Temple Entry Bill is a gross betrayal of the Depressed Classes by the Congress Government in Madras.

"Any amount of money spent out of public funds or even from private resources for the amelioration of the economic condition of my community will be no substitute for the removal of untouchability through temple entry. As you yourself once said temple entry is the acid test of the

sincerity of the caste Hindus in espousing the cause of the Depressed Classes.

"Mr. Rajagopalachariar's Temple Entry Bill, besides involving the tactical choice of a difficult district makes our community subservient to the will of Caste Hindus, a policy which is given a further effect to, in the appointment of Advisory Boards to assist the Labour Commissioner in which Caste Hindus of the Harijan Sevak Sanghs in this Province are given Government facilities for guiding the destinies of my people. I do not expect you to agree with my views on the measures recently introduced by Mr. Rajagopalachariar after rejecting the Madras Temple Entry Bill; but I expect you to give more serious consideration to the situation in Madras as regards the Depressed Classes in the light of the pledges given to the Depressed Classes during your memorable fast.

"You are morally bound to make this a matter of conscience and not merely one of political strategy. I assure that if you should seek 'inner light' on this subject of untouchability and temple entry you will speak out more plainly and make the necessary sacrifice to educate your followers.

"I propose to send this correspondence to the press, but I shall wait for any further word from you till the end of this month."

Mr. Gandhi replied to the above on 5th October 1938:"Dear friend,

"I am working under great difficulty. Even this I am writing in the train taking me to Peshawar.

"Of course you will publish the correspondence between us whenever you think it necessary.

"Your last letter shows that you are in the wrong. I am not partial to Rajaji. But I know that he is as firm on untouchability as I am myself. I must, therefore, trust his judgement as to how to do the thing. From this distance, I can't judge his action. Do you not see that the whole of the movement is one of conversion of the Sanatani heart? You cannot force the pace except to the extent that reforms immolate themselves. This process is going on vigorously.

"This temple entry question is a mighty-religious reform. I would like you to apply your religious mind to it. If you will, you will give your whole hearted support to Rajaji and make his move a thorough success."

The Untouchables of U.P. have also expressed their hostility to the Poona Pact. In a Memorandum submitted to Col. Muirhead the Under Secretary of State in India they said: (*Memorandum not typed in the MS.*— Ed.)

All over India the Untouchables have realized that the Poona Pact has been a trap and the change of the British Government's Communal Award by Gandhi's Poona Pact is a change which in reality a change from freedom

to bondage.

The Poona Pact was signed on the 24th September 1932. On the 25th September 1932 a public meeting of the Hindus was held in Bombay to accord to it their support. At that meeting the following resolution was passed:

"This Conference confirms the Poona agreement arrived at between the leaders of the Caste Hindus and Depressed Classes on September 24, 1932, and trusts that the British Government will withdraw its decision creating separate electorates within the Hindu community and accept the agreement in full. The Conference urges that immediate action be taken by Government so as to enable Mahatma Gandhi to break his fast within the terms of his vow and before it becomes too late. The Conference appeals to the leaders of the communities concerned to realize the implications of the agreement and of this resolution and to make earnest endeavour to fulfil them.

This Conference resolves that henceforth, amongst Hindus, no one shall be regarded as an untouchable by reason of his birth, and that those who have been so regarded hitherto will have the same right as other Hindus in regard to the use of public wells, public schools, public roads, and all other public institutions. This right shall have statutory recognition at the first opportunity and shall be one of the earliest Acts of the Swaraj Parliament, if it shall not have received such recognition before that time.

It is further agreed that it shall be the duty of all Hindu leaders to secure, by every legitimate and peaceful means, an early removal of all social disabilities now imposed by custom upon the so-called untouchable classes, including the bar in respect of admission to temples."

Mr. Gandhi felt that an organization which will devote itself exclusively to the problem of the Untouchables was necessary. Accordingly there was established on 28th September 1932 the All-India Anti-Untouchability League. The name, Gandhi thought, did not smell well. Therefore in December 1932 it was given a new name—The Servants of the Untouchables Society. That name again was not as sweet as Mr. Gandhi wished it to be. He changed and called it the Harjan Sevak Sangh.

The first change which Mr. Gandhi has brought about is this change in the name. Instead of being called Untouchables they are now called *Harijans*. To call, the Untouchables say that Mr. Gandhi is selfish and has given the name Harijan to the Untouchables to blaster up Vaishnavism. They want the Untouchables to be called Harjans the followers of Shiva. Mr. Gandhi replies that the term is used to mean God and not Vishnu and that Harijan simply means 'children of God'.

The Untouchables simply detest the name Harijan. Various grounds of objection are urged against the name. In the first place it has not bettered their position. It has not elevated them in the eyes of the Hindus. The new name has become completely identified with the subject matter of the old. Every body knows that Harijans are simply no other than the old Untouchables. The new name provides no escape to the Untouchables from the curse of untouchability. With the new name they are damned as much as they were with the old. Secondly the Untouchables say that they prefer to be called Untouchables. They argue that it is better that the wrong should be called by its known name. It is better for the patient to know what he is suffering from. It is better for the wrong doer that the wrong is there still to be redressed. Any concealment will give a false sense of both as to existing facts. The new name in so far as it is a concealment is fraud upon the Untouchables and a false absolution to the Hindus. Thirdly there is also the feeling that the name Harijan is indicative of pity. If the name meant 'chosen people of God' as the Jews claimed themselves to be it would have been a different matter. But to call them 'children of God' is to invite pity from their tyrants by pointing out their helplessness and their dependent condition. The more manly among the Untouchables resent the degrading implications of this new name. How great is the resentment of the Untouchables against this new name can be seen from the fact that whole body of the representatives of the Untouchables in the Bombay Legislative Assembly walked out of the House in protest when the Congress Government introduced a measure giving to the name Harijan the sanction of law.

This new name Harijan will remain until the downfall of Mr. Gandhi and the overthrow of the Congress Governments which are his creatures. That it was forced upon the Untouchables and that it has done no good are however facts which cannot be disputed.

Having discussed the blessings of this new name I must now proceed to examine the work of the Harijan Sevak Sangh. The Sangh is spoken of as a memorial to Gandhi's labours in the cause of the Untouchables. What are the achievements of the Sangh.

The Sangh is an All-India Organization. It has a Central Board. Then there are Provincial Boards and under the Provincial Boards there are District and Local Committees. The number of Provincial Boards and Local Committees is given below:

	1932- 33	1933- 34	1934- 35
--	-------------	-------------	-------------

Provincial Boards	26	26	29
District & Local Committees	213	313	372

The financial resources of the Sangh are mainly drawn from the collections made on an All-India tour specially undertaken for the purpose by Mr. Gandhi between November 1933 to July 1934. The total amount collected on this tour came to about 8 lacs of Rupees and is known as the Gandhi Purse Fund and forms the principal reserve for the Sangh to draw upon. The rest of the resources are made up of annual donations.

The total expenditure of the Sangh under all heads from year to year is as follows:

1932-33	1933-34	1934-35	1935-36
Rs. 2,31,039.00	3,31,791.00	4,48,422.00	3,99,354.00

In his report for 1934-35 the General Secretary reported that almost the whole of the Gandhi Purse Fund, which stood at over 8 lacs in July 1934, will be spent away by the end of the current year, i.e. by the end of September 1936."In the fifth Annual Report the Secretary says,"As compared to the expenditure of the previous year, there has been a reduction of more than a lac in the total expenditure. This was partly owing to the gradual exhaustion of the Gandhi Purse Fund, dislocation in the realization of local collections owing to general elections and other contributory causes. The finances of the Central office were far from satisfactory. The total expenditure of the Central office (including grants made to branches) amounted to Rs. 86,610-14-8, as against an income of Rs. 42,485-4-9 thus leaving a deficit of Rs. 44,125-9-11 which was met from the general fund. Donations for general fund amounted to only Rs. 26,173-4."

It is obvious that the Harijan Sevak Sangh is a small affair and but for the running advertisement it gets from the Press it would not even be heard off. India is a vast continent with something like 6,96,831 mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_74villages. The Untouchables are spread out all throughout these 6,96,831 villages. There is no village without its untouchables. How many Untouchables can be reached by 372 Committees. It is a tiny peck in a vast ocean. Not only its capacity to cope with the problem is limited but its resources are too meagre to permit any relief being granted to the Untouchables on an adequate scale. The Sangh has now no permanent fund. What it had it has spent. It has to depend

upon annual subscriptions. That source is also drying up leaving the Sangh with heavy deficit. The Sangh is in an exhausted condition. Its affairs in fact would have been wound up on account of its bankruptcy. If the Sangh is still existing, it is not because its endeavours are sustained by Hindu charity directed to the uplift of the Untouchables. It exists because the Congress Governments which are now established in the different Provinces have come to the rescue of the Sangh. They have handed over to the Sangh certain social welfare work which former Governments carried out through Government Departments or Government Officials with the money grants. Thus the Sangh is now living on Government funds. As an institution maintained by the Hindus with the help of Hindu Charity for the Untouchables the Sangh simply does not exist.

The din and noise which was created by Mr. Gandhi's fast was simply deafening. The readiness to make sacrifices to save his life was great and the eagerness shown to befriend the Untouchables was surprising and overwhelming. All this has vanished leaving the Untouchables high and dry. If the desire to contribute towards the maintenance of the Sangh—which the Hindus founded as an earnest of their acceptance of their obligation towards the Untouchables—is any measure of the reality of the change of heart then it must be admitted that the change has died with the occasion which caused it. Gandhi broke his fast and the Hindu lost his new-born love for the Untouchables.

The premature decay of the Sangh should make it unnecessary for me to consider the work it did. But the Sangh is held out as a great monument to Mr. Gandhi. It is therefore proper that I should examine the work done by the Sangh and the policy underlying that work. The work of the Sangh follows certain well defined lines. In the field of education the Sangh has sought to encourage higher education among the Untouchables by instituting scholarships for the Arts, technical and professional courses. The Sangh also gives scholarships to High School students. The Sangh also maintained Hostels for Untouchable students attending colleges and High Schools. The great part of the educational activities of the Sangh is taken up in maintaining separate schools for primary stage children where there were no common schools in the vicinity or where common schools were closed to them.

Next comes the welfare activities of the Sangh. The medical aid which the Sangh undertakes to render to the Untouchables falls under this head. This is done by intendant workers of the Sangh who go in Harijan quarters to give medical aid to the sick and ailing among the Untouchables. The Sangh

also maintains a few dispensaries for the use of the untouchables. This is a very small activity of the Sangh.

The more important part of the welfare activity of the Sangh relates to water supply. The Sangh does this by (1) sinking new wells or installing tube wells and pumps for the use of the untouchables, (2) repairing old ones and (3) persuading local Governments and bodies to sink and repair wells for the Untouchables.

The third line of activity undertaken by the Sangh is economic. The Sangh seems to run a few industrial schools and it is claimed that the industrial schools run by the Sangh produced a number of trained artizans who have taken to independent living. But according to the report, more successful and substantial work was done by way of organising and supervising cooperative societies among the Untouchables.

Such is in brief the record of the work done by the Sangh. It is largely directed by the Caste Hindus. There are very few Untouchables who have any voice in directing the activities of the Sangh. I have had no connection with the Sangh. But I might mention that when the Sangh was started I was invited to join. I had great desire to cooperate with the Hindus for the removal of untouchability. I had my own views regarding the policy and programme which the Sangh should adopt for accomplishing this task. Immediately after the Sangh was established I had to go to London to attend the Round Table Conference and had no opportunity to talk the matter over with the other members of the Sangh. But I posted a letter to the General Secretary of the Sangh Mr. Thakkar on the 14th November 1932 on Board the Ship *M. V. "Victoria"*. Excepting a short introductory para which I omit, the following is the full text of the letter:

“In my opinion there can be two distinct methods of approaching the task of uplifting the Depressed Classes. There is a school which proceeds on the assumption that the fate of the individual belonging to the Depressed Classes is bound up with his personal conduct. If he is suffering from want and misery it is because he must be vicious and sinful. Starting from this hypothesis, this school of social workers concentrates all its efforts and its resources on fostering personal virtue by adopting a programme which includes items such as temperance, gymnasium, co-operation, libraries, schools etc., which are calculated to make the individual a better and virtuous individual. In my opinion there is also another method of approach to this problem. It starts with the hypothesis that the fate of the individual is governed by his environment and the circumstances he is obliged to live under and if an individual is suffering from want and misery it is because his environment is not propitious.

"I have no doubt that of the two views the latter is the more correct. The former may raise a few stray individuals above the level of the class to which they belong. It cannot lift the class as a whole. My view of the aim of the Anti-Untouchability League is that it has come into existence not for helping a few individuals at random or a few selected boys belonging to the Depressed Classes but for raising the whole class to a higher level. Consequently I would not like the League to dissipate its energies on one programme calculated to foster private virtue. I would like the Board to concentrate all its energies on a programme that will effect a change in the social environment of the Depressed Classes. Having stated in general terms my views I venture to place some concrete proposals for work to be undertaken by the League.

"I think the first thing that the League should undertake is a campaign all over India to secure to the Depressed Classes the enjoyment of their civic rights such as taking water from the village wells, entry in village schools, admission to village chawdi, use of public conveyance etc.

"Such a programme if carried into village will bring about the necessary social revolution in the Hindu society without which it will never be possible for the Depressed Classes to get equal social status. The Board must however know what difficulties it will have to face if this campaign of civic rights is to be carried through. Here I can speak from experience because I as President know what happened when the Depressed Classes Institute and the Social Equality League launched such a plan in the Kolaba and Nasik Districts of the Bombay Presidency.

"First of all there will be riots between the Depressed Classes and the Caste Hindus which will result in breaking heads and in criminal prosecutions of one side or the other. In this struggle the Depressed Classes will suffer badly. There has not been a single case in the course of the social struggle carried on in these two districts in which the Police and the Magistracy have come to the rescue of the Depressed Classes even when justice was on their side. Secondly the villages will proclaim a complete boycott of the Depressed Classes the moment they see that the latter are trying to reach a status of equality along with them.

"I have mentioned only two of the many obstacles which the League will have to overcome if this campaign of civic rights is to be successful and the League will have to have an army of workers in the rural parts who will encourage the Depressed Classes to fight for their rights and who will help them in any legal proceedings arising therefrom to a successful issue. It is true that this programme involves social disturbances and violent scuffle. But I do not think that it can be avoided. I know the alternative policy of

adopting the line of least resistance. I am convinced that it will be ineffective in the matter of uprooting untouchability.

“The silent infiltration of rational ideas among the ignorant mass of Caste Hindus cannot, I am sure, work for the salvation of the Depressed Classes. First of all the Caste Hindu like all human beings follows his customary conduct in observing untouchability towards the Depressed Classes. Ordinarily, people do not give up their customary mode of behaviour because somebody is preaching against it.

“The salvation of the Depressed Classes will come only when the Caste Hindu is made to think and is forced to feel that he must alter his ways. For that you must create a crisis by direct action against his customary code of conduct. The crisis will compel him to think and once he begins to think he will be more ready to change than he is otherwise likely to be.

"The great defect in the policy of least resistance and silent infiltration of rational ideas lies in this that they do not 'compel' for they do not produce crisis. The direct action in respect of the Chowdar tank in Mahad, the Kalaram temple in Nasik and the Guruvayur temple in Malabar have done in a few days what million days of preaching by reformers would never have done.

"The second thing I would like the Anti-Untouchability League to work for is to bring about equality of opportunity for the Depressed Classes. Much of the misery and poverty of the Depressed Classes is due to the absence of equality of opportunity which in its turn is due to Untouchability. I am sure you are aware that the Depressed Classes in villages and even in towns cannot sell vegetables, milk or butter — ways of earning a living which are open to all and sundry. A Caste Hindu, will buy these things from a Non-Hindu, but he will not buy them from the Depressed Classes. In the matter of employment his condition is the worst.

“Like the Negro in America he is the last to be employed in days of prosperity and the first to be fired in days of adversity. And even when he gets a foothold what are his prospects? In the Cotton Mills in Bombay and Ahmedabad he is confined to the lowest paid department where he can earn only Rs. 25 per month. More paying departments like the weaving department are permanently closed to them. The place of the boss is reserved for the caste Hindu while the Depressed Class worker must slave as his underdog no matter how senior or how efficient.

“Depressed Class women working in the winding or reeling departments have come to me in hundreds complaining that the Naikins, instead of distributing the raw material to all women employees equally or in fair proportion, give all of it to the caste Hindu women and leave them in the

cold."

"I think it would be fit and proper if the Anti-Untouchability League were to take up this question by creating public opinion in condemnation of it and establishing Bureaus to deal with urgent cases of inequality.

"Lastly I think the League should attempt to dissolve that nausea which the touchables feel towards the untouchables and which is the reason why the two sections have remained so much apart as to constitute separate and distinct entities. In my opinion the best way of achieving it is to establish closer contact between the two. Only a common cycle of participation can help people to overcome that strangeness of feeling which one has when brought into contact with the other. Nothing can do this more effectively in my opinion than the admission of the Depressed Classes to the houses of the caste Hindus as guests or servants.

"The live contact thus established will familiarize both to a common and associated life and will pave the way for that unity which we are all striving after. I am sorry that many caste Hindus who have shown themselves responsive are not prepared for this.

"During those ten days of the Mahatma's fast that shook the Indian world there were cases in Ville Parle and in Mahad where the caste Hindu servants had struck work because their masters had abrogated the rules of untouchability by fraternising with the Untouchables. I expected that they would end the strike and teach a lesson to the erring masses by filling the vacancies by employing Depressed Classes in their places. Instead of doing that they capitulated with the forces of orthodoxy and strengthened them. I do not know how far such fair-weather friends of the Depressed Classes would be of help to them.

"People in distress can have very little consolation from the fact that they have sympathisers if those sympathisers will do nothing more than sympathise and I may as well tell the League that the Depressed Classes will never be satisfied of the bona fides of these caste Hindu sympathisers until it is proved that they are prepared to go to the same length of fighting against their own kith and kin in actual warfare if it came to that for the sake of the Depressed Classes as the Whites of the North did against their own kith and kin namely the Whites of the South for the sake of the emancipation of the Negro.

"The League will have to employ a very large army of workers to carry out its programme. The appointment of social workers might perhaps be looked upon as a minor question. Speaking for myself, I attach very great importance to the selection of a proper agency to be employed in this behalf. There can always be found workers to do a particular piece of work

or any other for the matter of that if they are paid for it. I am sure such mercenary workers will not serve the purpose of the League. As Tolstoy said "Only those who love can serve". In my opinion that test is more likely to be fulfilled by workers drawn from the Depressed Classes. I should therefore like the League to bear this aspect of the question in mind in deciding upon whom to appoint and whom not to appoint. I do not suggest that there are hot scoundrels among the Depressed Classes who have not made social service their last refuge. But largely speaking you can be more sure that a worker drawn from the Depressed Classes will regard the work as love's labour a thing which is so essential to the success of the League.

"Secondly there are agencies which are already engaged in some sort of social service without any confines as to class or purpose and may be prepared to supplement their activity by taking up the work of the Anti-Untouchability League in consideration of a grant-in-aid. I am sure this hire-purchase system of work, if I may use that expression, can produce no lasting good. What is wanted in an agency is a single-minded devotion to one task only. We want bodies and organizations which have deliberately chosen to be narrow-minded in order to be enthusiastic about their cause. The work if it is to be assigned must be assigned to those who would undertake to devote themselves exclusively to the work of the Depressed Classes.

"Before closing this I wish to say just this. It was Balfour, I think, who said that what could hold the British Empire together was love and not law. I think that observation applies equally well to the Hindu society.

"The touchables and the untouchables cannot be held together by law, certainly not by any electoral law substituting joint electorates for separate electorates. The only thing that can hold them together is love.

"Outside the family, justice alone, in my opinion can open the possibility of love, and it should be the duty of the Anti-Untouchability League to see that the touchable does, or failing that, is made to do justice to the untouchable. Nothing else in my opinion can justify the project or the existence of the League." This letter was not even acknowledged by the Secretary. That not a single suggestion of mine was accepted goes without saying. Even my suggestion that the workers of the Sangh should be drawn largely from the Untouchables themselves was not accepted. Indeed when the attention of Mr. Gandhi was drawn to the fact that the Harijan Sevak Sangh had become the hive of mercenary Hindus, he defended it on the ground which are clever if not honest.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. [Essay on Untouchables and](#)

[Untouchability_Political.htm - _msocom_75](#) He said to the deputation of the Untouchables;

“The welfare work of the Untouchables is a penance which the Hindus have to do for the sin of Untouchability. The money that has been collected has been contributed by the Hindus. From both points of view the Hindus alone must run the Sangh. Neither ethics nor right would justify Untouchables in claiming a seat on the Board of the Sangh.”

Not only were all my proposals rejected by Mr. Gandhi and his advisers but in framing the constitution of the Sangh, aims and objects were adopted which are quite opposed to those which I had suggested.

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_76](#) At the meeting held in Cowasjee Jehangir Hall in Bombay on the 30th September 1932 the aims of the organization were stated to be:

“Carrying propaganda against Untouchability and taking immediate steps 'to secure as early as practicable that all public wells, dharmashalas, roads, schools, crematoriums, burning ghats and all public temples be declared open to the Depressed Classes, provided that no compulsion or force shall be used and that only peaceful persuasion shall be adopted towards this end'.”

But in the statement issued by Mr. G. D. Birla and Mr. A. V. Thakkar on the 3rd November, two months after its inauguration it was stated:

“The League believes that reasonable persons among the Sanatanists are not much against the removal of Untouchability as such, as they are against inter-caste dinners and marriages. Since it is not the ambition of the League to undertake reforms beyond its own scope, it is desirable to make it clear that while the League will work by persuasion among the caste Hindus to remove every vestige of Untouchability, the main line of work will be constructive, such as the uplift of Depressed Classes educationally, economically and socially, which itself will go a great way to remove untouchability. With such a work even a staunch Sanatanist can have nothing but sympathy. And it is for such work mainly that the League has been established. Social reforms like the abolition of the caste system and inter-dinning are kept outside the scope of the League.” These aims and objects are described in one of the Annual Reports of the Sangh. It says:

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_77](#)

“According to its constitution the aim and object of the Society is the abolition of untouchability by reason of birth and the acquisition of equal rights of access of public temples, wells, schools and other public

institutions for Harijans as enjoyed by other Hindus.

The achievement of this object has led the Society to undertake work of a two-fold kind. First, the Society has to bring about such a radical change in the sentiments and opinions of Caste Hindus that they may willingly, as a matter of course, allow the enjoyment of all civic rights to Harijans. Secondly, the society has to put forth its efforts and devote its funds for the educational, economic and social uplift of Harijans."

The work done and the aims formulated when put side by side raise two questions. Firstly is this record something of which the Sangh can be proud of? Secondly is its work consistent with the aims of the Sangh? The record is very poor. It is much cry and little wool. Certainly as compared with the record of work done by the Christian Missions with which the Sangh competes, it is not a record of which the Sangh can be proud of. But this is a mere matter for sorrow and nothing more. The second question is fundamental and therefore one for anxious consideration. It is well that the Sangh undertakes to labour in the interests of the Untouchables. But its labours must be so planned that out of it will come the destruction of untouchability.

Examined in the light of this consideration what is one to say of the work that is being done by the Sangh? The Sangh is openly and without abashment supporting *separate* schools, *separate* hostels, *separate* dispensaries, and *separate* wells for the Untouchables. I should have thought that that was the surest way of perpetuating untouchability. It is surprising that Mr. Gandhi who threatened to fast unto death against separate electorates on the ground that it involved segregation of the untouchables should himself sanction a line of activity which perpetuates this segregation. In undertaking to render this social service to the Untouchables, Mr. Gandhi and his Sangh should have forgotten what the Untouchables want. What the Untouchables want is not education, but the right to be admitted to common schools. The Untouchables do not want medical aid; what they want is the right to be admitted to the general dispensary on equal terms. The Untouchable does not want water. What he wants is the right to draw water from a common well. The Untouchables do not want their suffering to be relieved. They want their personality to be respected and their stigma removed. Once their stigma is removed their sufferings will go. This the Harijan Sevak Sangh does not seem to have realized. The Sangh is said to be the friend of the Untouchables and the orthodox Hindu the enemy of the Untouchables. One fails to understand what the friend has done which the enemy would not do. The orthodox Hindu insists that the Untouchables shall have *separate* schools, *separate* dispensaries and *separate*

wells, the Sangh says—*Thy will shall be done*. Except the fact the orthodox Hindu believes in untouchability and Harijan Sevak Sangh does not, what is the difference in practice between the friend and the foe? Under both, the untouchable is condemned to *separate* schools, *separate* hostels and *separate* wells. If this is so, it is difficult to understand why

Mr. Gandhi and the Harijan Sevak Sangh should pick up a quarrel with the orthodox Hindu if he and his Sangh are not prepared to force the issue. Whether the Hindu Shastras recognize untouchability or not is only an academic quarrel between Mr. Gandhi and the orthodox Hindu. It can do no practical good. On the contrary I am prepared to say that it had done positive harm to the Untouchables. In the first place it has created enmity between the Untouchables and the orthodox Hindus. Before Gandhi picked up this needless quarrel the relations between the Untouchables and the Hindus were non-social. The quarrel has made them anti-social. Secondly if there was no such quarrel, if instead of untouchability being made the issue—which Mr. Gandhi does not intend to fight it out—an appeal was made to the orthodox Hindu to remove the suffering of the Untouchables, many an orthodox Hindu I know would have come forward to help to remove the suffering. Mr. Gandhi has reaped the glory for having established the Sangh. But the Sangh has neither sought to remove untouchability nor has it helped to alleviate the sufferings of the Untouchables.

Why has the Sangh failed? My answer is quite definite. I say the Sangh has failed because of its wrong politics.

It has often been said that the Harijan Sevak Sangh is a political organization. Mr. Gandhi has always resented such an allegation and repudiated it as being false. The General Secretary of the Sangh has also protested against it. 'To use his own words"the Sangh, though a sequel of a Political Pact, has no politics"'.

I do not see any reason for the resentment of Mr. Gandhi nor for the protests of his Secretary. I wish very much that the Sangh was a political organization. The untouchables have obtained a share of political power. But power which is not conscious of itself is no power. Again power which is not organized is no power. The Harijan Sevak Sangh would have been of great use if it had helped the Untouchables to organize independent political parties to fight the elections and make their political power effective. Nor can I accept the statement of Mr. Gandhi and his Secretary that the Sangh has no politics. On the contrary I insist that not only the Sangh has a definite line of politics and that that line of politics is wrong because it is prejudicial to the cause of the Untouchables.

Since Mr. Gandhi does not admit that the Sangh has politics, one must go to circumstances for proof. Circumstantial proof is always better than oral testimony because as is well said man may lie but circumstances cannot. In this connection I want to rely upon a clause in the constitution of the Sangh as a piece of evidence in support of my contention. The clause relates to the means to be adopted by the Sangh for removing untouchability and for securing equal rights to the Untouchables along with the Caste Hindus. The clause reads as follows:

"That no compulsion is to be used for securing rights, but that peaceful persuasion is to be adopted as the *only* means." This is a basic principle of the Sangh. It has struck me as strange and I am sure it will strike all others as strange. I want to ask the question—Why has the Sangh limited itself to peaceful persuasion of the caste Hindus as the one and the only means of removing Untouchability?

Most social reformers, whether religious or rational, seem to imagine that men of power will immediately check their pretensions and their exactions as soon as they have been told that their actions and attitudes are anti-social. But as Prof. Neibhur points out mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_78 what these reformers overlook is an understanding of the brutal character of the behaviour of all human groups and the power of self interest and collective egoism which dominate all group relations. They also forget the fact that races, nations and classes are less moral than individuals which compose them and that justice between groups can therefore not be achieved purely by educational means. If conscience and reason can be insinuated into the resulting struggle they can only qualify, never abolish, the injustice. If injustice is to be abolished it must be resisted and when injustice proceeds from collective power, whether in the form of imperialism or class domination, it must be challenged by power. A class entrenched behind its established power can never be dislodged unless power is raised against it. That is the only way of stopping the exploitation of the weak by strong.

Why has Mr. Gandhi and the Harijan Sevak Sangh limited their means of resistance to the Caste Hindu domination to peaceful persuasion? Why do they not resist the injustice of the Caste Hindus by direct action? I can understand that in organising resistance to injustice, the problem is to find forms of resistance which will not destroy the meagre resources for rational and moral action which groups do possess. But there can be no difficulty on that account. Satyagraha or passive resistance has been found by Mr. Gandhi as a form of resistance which is morally beyond cavil. Why does

not Mr. Gandhi ask the Sangh to launch Satyagraha by the Untouchables against the Caste Hindus for the abolition of the injustice against the Untouchables. He asked the people of India to offer Satyagraha against British Imperialism. Why does he not want to use the same means against the caste Hindus in the interests of the Untouchables?

What is the answer of Mr. Gandhi to this question? The only answer I can see is that it comes in the way of *his* politics. Mr. Gandhi must remain at the head of the nation. I wonder if life would be worthwhile to him if for some reason he ceased to be at the head of the nation. He is, I think, the most ambitious politician. I know, he regards as his rivals those whom he calls as friends. To be at the head of the nation means that he must preserve the integrity of the Congress. The Congress is ninety nine per cent composed of Hindus. How can Gandhi succeed in maintaining the integrity of the Congress if he were to direct the Sangh to carry on Satyagraha against the Hindus for the sake of the Untouchables. The Hindus would leave the Congress and the Congress would disrupt. This is detrimental to the interests of Mr. Gandhi. This is the explanation why Mr. Gandhi and the Sangh have adopted peaceful persuasion as the only means of removing untouchability. It is a means which is least likely to hurt the Hindus and the Congress. Not only in big matters but even in small matters the Sangh is careful to see that the Hindus are not hurt or annoyed. I am told that in distributing scholarships for instance the Sangh makes inquiries into the political affiliations of the applicant and if it is found that the applicant belongs to a community which is against the Congress or the Hindus, he gets no aid from the funds of the Sangh.

I wonder if any one will have any doubts left that Mr. Gandhi and the Sangh in limiting themselves to peaceful persuasions were controlled by political considerations of not annoying the Hindus and disrupting the Congress. This is what I meant when I said that the Sangha's politics and that its failure is due to wrong politics. I am sure I am using mild language when I describe it as wrong politics. It is treachery if the surrender of the interests of his ward by his guardian can be described as treachery.

Mr. Gandhi is often compared with Jesus Christ both by his Indian and European friends. What may be the justification for so strange a comparison? In one thing I see a complete contrast between the two. Both Jesus and Gandhi claimed to serve the lowly. This befriending attitude of both was resented by the upper classes. How did the two react? When Jesus was taunted by the Pharisees he retorted by saying—"They that are whole have no need of the physician, but they that are sick". How sharp is the contrast between this attitude of Jesus and that of Mr. Gandhi. Jesus

did not worry about those who were 'whole'. Gandhi is devoted to those who are 'whole' and who are sinning at the cost of those who are sick and who are sinned against. Gandhi is no physician to the untouchables. At best a sympathiser and nothing more.

Even as a sympathizer of the Untouchables his sympathy for them is limited by two considerations. It is limited by his social aims. Secondly it is also limited by his politics. Lest this statement should be doubted, I wish to give two instances, one of each which have occurred recently. They have occurred not far from Shegaon in Central provinces where Mr. Gandhi resides.

As an instance of the first I refer to what is known in India as the Khare episode. In 1938 last there was a ministerial crisis in the Central Provinces where the ministry was a Congress Ministry. The Prime Minister Dr. Khare fell out with his colleagues. As Prime Minister he demanded the resignation of other ministers which they were not prepared to give without the consent of the Congress Parliamentary Board. But Dr. Khare forced them to give their resignations which they ultimately did. Thereupon Dr. Khare formed another Congress cabinet and filled the ministerial offices with men of his choice. In his new cabinet Dr. Khare included an untouchable as a minister. Dr. Khare's conduct in dissolving the old cabinet and forming a new one without consulting the Congress Parliamentary Board came up for investigation before the Congress Working Committee. Dr. Khare was found guilty of breach of party discipline and was deposed from his primiership. One of the accusations levelled against Dr. Khare by Mr. Gandhi was that he included an untouchable in his new Ministry. The following is the full text of what Mr. Gandhi said to Dr. Khare on this point and reduced to writing by Dr. Khare for my sake:

“Mahatmaji took me to task for including a Harijan in my second cabinet. I retorted by saying that it was a Congress programme of uplift of Harijans for which Mahatmaji fasted unto death and that I did what I could in furtherance of that programme when opportunity offered itself and I think I have done nothing wrong in doing so. Thereupon Mahatmaji charged me of doing this for my selfish ambition. I repudiated this charge saying that any selfish motive is disproved by my resignation. Then Mahatmaji said that by my action I have thrown an apple of discord among the members of that simple community and have rendered disservice to the Congress cause by throwing this temptation in their way.”

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_79

That this is true and that Gandhi objected to the untouchable being

included in the Cabinet is evidenced by the fact that when a new Congress Ministry was formed in Central Provinces this untouchable who functioned as a minister for a day was excluded. He should have been included as a matter of form, at least to keep up appearances. That he was not, shows that Gandhi was opposed to his inclusion on principle.

This is baffling because the Untouchable member of the Central Provinces Assembly who was chosen by Dr. Khare for ministership is a graduate, is a Congressman and is a strong party-man. Why should Mr. Gandhi have any objection to the inclusion of such a person in the Congress Cabinet. As a matter of fact if Mr. Gandhi was genuine in his professions regarding the untouchables he should have instructed all Congress Prime Ministers to include at least one untouchable in their Cabinets, if for nothing else, at least for its psychological effect upon the Untouchables and upon the Hindus. He should have done this irrespective of the party affiliations. Gandhi is not averse to congress making coalitions with other non-congress parties in provinces where it is not in a majority in order to secure offices. In such coalitions he has allowed Congress to include non-congressmen as ministers in their cabinets. If Gandhi can allow the congress to do this without losing its caste and its colour why Gandhi did not instruct the Congress Prime Ministers to include untouchables in the Congress Ministries if he wanted that when he talks about his love for the Untouchables he should be believed. But the case in the Central Provinces stand on a different footing. Here the Untouchable who was taken as a minister was a Congressman and a graduate. There could be no objection on the ground of his want of qualification or want of political faith. Why did Mr. Gandhi object to his inclusion? A crowd of Untouchables went to Shegaon to Mr. Gandhi for an explanation. Anticipating this Mr. Gandhi had started observing silence, so that no explanation could be had. Then the untouchables started Satyagraha against Mr. Gandhi for not including an Untouchable in the Central Provinces Congress Cabinet. To escape that embarrassment Mr. Gandhi left Shegaon and went on a tour to the North Western Frontier Provinces for teaching non-violence to the Pathans. I am sure Gandhi's silence on this occasion was not to commune with God. It was taken on as a convenient excuse for not being driven under the fire of cross examination to disclose his innermost thoughts about the Untouchables. In any case we have no answer to this question from Mr. Gandhi. To my mind there can be only one answer and that even if Gandhi had opened his mouth he could give no better. That answer is that Mr. Gandhi's ideal for the untouchable is a very low ideal and that all that he cares for is that the untouchable should be

touched and that if he is touched without anybody taking a bath nothing further need be done about them. If Gandhi had tried and failed he would have been excused. But how can he be excused for entertaining so low an aim? Not failure but low aim is a crime.

As an instance of the second I refer to what is known as the Bachuma incident. If the first instance is baffling this second is gruesome. How gruesome it is can be seen from the brief summary of fact which I am giving. Bachuma, a small girl, 12 years old and belonged to an untouchable family which was living in *Wardha* (*This name is inserted as it was not mentioned in the MS.—Ed.*). One evening she was decoyed into the house of a Mahomedan who was the Sub-Inspector of Police. She was kept in his house and during the night this small child was raped by three Mahomedans, one was the Superintendent of Police himself, second a Sub-Inspector of Education and third a Lawyer. The three Mahomedans were tried in a Court of Law and two of them were sentenced to two years rigorous imprisonment and the lawyer was acquitted as the girl was not able to identify him. The two who were convicted appealed to the High Court but the High Court rejected their appeals and confirmed their convictions and sentences. From gaol they sent to the Governor-in-Council petitions for mercy. But they were also rejected. This happened before the Congress came into office. After the Congress came into office they submitted fresh applications for mercy to the Minister-in-charge. The Minister-in-charge, who was also a Mahomedan thought that there was nothing wrong in a Mahomedan committing rape on an untouchable girl and decided to set the culprits free. He granted the application of one—that of the Inspector of Education who is now a free man and is employed on a big job in the Education Department of a Mahomedan State. He was to release the other culprit also but in the meantime the agitation against him was so great that he had to resign his office. Every body expressed his resentment against the shameless act of the Minister but Mr. Gandhi has kept mum. So far he has not uttered a word of condemnation against this Minister. On the contrary he is even now engaged in the confabulations that are going on over the question of the reinstatement of this dismissed minister in his office which is still kept vacant. One likes to ask if Gandhi would have remained so silent and so unmoved if the little girl Bachuma who was raped by the three Mahomedans instead of being the daughter of an Untouchable had been Mr. Gandhi's own daughter. Why is Gandhi not able to make Bachuma's case his daughter's case? There are two answers. One is that Mr. Gandhi is not an untouchable. One must be born to it. Secondly Mr. Gandhi feels that by condemning the Muslim Minister for

the sake of Bachuma he might destroy Hindu-Moslem Unity the maintenance of which is a fundamental creed of Congress politics. Does this now show that Mr. Gandhi's sympathies for the Untouchables are limited by his politics?

What good is a man who is not even free to sympathize according to his conscience. Ill

And now the temple entry. This is advertized as another of Mr. Gandhi's boons to the Untouchables.

This question of temple entry is the outcome of the resolution passed at the public meeting of the Hindus held on 25th September 1932 which also was the originating cause which gave birth to the Harijan Sevak Sangh. This resolution mentioned some of the liabilities of the Hindus towards the Untouchables. This list included the removal of the bar against the Untouchables in respect of admissions to Hindu temples.

Although the promise of temple entry was there in the Resolution the Untouchables did not insist upon its being fulfilled forthwith. The untouchables, at any rate a vast majority of them have not been keen for temple entry. When asked by Mr. Gandhi what I thought about temple entry I gave my opinion on it in the form of a statement which was issued to the Press on February 10
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_80, 1933, and which is reproduced below:

STATEMENT ON TEMPLE ENTRY

Although the controversy regarding the question of temple entry is confined to the Sanatanists and Mahatma Gandhi, the Depressed Classes have undoubtedly a very important part to play in it, in so far as their position is bound to weigh the scales one way or the other, when the issue comes for final settlement. It is, therefore necessary, that their view point should be defined and stated so as to leave no ambiguity about it.

To the Temple Entry Bill of Mr. Ranga Iyer as now drafted, the Depressed Classes cannot possibly give their support. The principle of the Bill is that if a majority of Municipal and Local Board voters in the vicinity of any particular temple on a Referendum decide by a majority that the Depressed Classes shall be allowed to enter the temple, the Trustees or the Manager of that temple shall give effect to that decision. The principle is an ordinary principle of majority rule and there is nothing radical or revolutionary about the Bill and if the Sanatanists were a wise lot, they would accept it without demur.

The reasons why the Depressed Classes cannot support a Bill based upon this principle are two. One reason is that the Bill cannot hasten the day of

Temple Entry for the Depressed Classes any nearer than would otherwise be the case. It is true that under the Bill the minority will not have the right to obtain an injunction against the Trustee or the Manager who throws open the temple to the Depressed Classes in accordance with the decision of the majority. But before one can draw any satisfaction from this clause and congratulate the author of the Bill, one must first of all feel assured that when the question is put to the vote there will be a majority in favour of the Temple Entry. If one is not suffering from illusions of any kind, one must accept that the hope of a majority voting in favour of Temple Entry will be rarely realised, if at all. Without doubt the majority is definitely opposed to day—a fact which is conceded by the Author of the Bill himself in his correspondence with the Shankaracharya. What is there in the situation as created after the passing of the Bill, which can lead one to hope that the majority will act differently? I find nothing. I shall, no doubt, be reminded of the results of the Referendum with regard to the Guruvayur Temple. But I refuse to accept a referendum so overweighed as it was by the Life of Mahatma Gandhi as the normal

result. In any such calculations, the life of the Mahatma must necessarily be deducted. Secondly, the Bill does not regard untouchability in temples as a sinful custom. It regards untouchability merely as a social evil not necessarily worse than social evils of other sorts. For, it does not declare untouchability as such to be illegal. Its binding force is taken away only if a majority decides to do so. Sin and immorality cannot become tolerable because a majority is addicted to them or because the majority chooses to practice them. If untouchability is a sinful and an immoral custom, then in the view of the Depressed Classes it must be destroyed without any hesitation, even if it was acceptable to the majority. This is the way in which all customs are dealt with by Courts of Law, if they find them to be immoral and against public policy. This is exactly what the Bill does not do. The author of the Bill takes no more serious view of the custom of untouchability than does the temperance reformer of the habit of drinking. Indeed, so much is he impressed by the assumed similarity between the two that the method he has adopted is a method which is advocated by temperance reformers to eradicate the evil habit of drinking, namely by local option. One cannot feel much grateful to a friend of the Depressed Classes who holds untouchability to be no worse than drinking. If Mr. Ranga lyer had not forgotten that only a few months ago Mahatma Gandhi had prepared himself to fast unto death if untouchability was not removed, he would have taken a more serious view of this curse and proposed a most thorough-going reform to ensure its removal lock, stock and barrel.

Whatever its shortcomings may be from the standpoint of efficacy, the least that the Depressed Classes could expect is for the Bill to recognise the principle that untouchability is a sin. I really cannot understand how the Bill satisfies Mahatma Gandhi who has been insisting that untouchability is a sin. It certainly does not satisfy the Depressed Classes. The question whether this particular Bill is good or bad, sufficient or insufficient, is a subsidiary question. The main question is; do the Depressed Classes desire Temple Entry or do they not? This main question is being viewed by the Depressed Classes by two points of view. One is the materialistic point of view. Starting from it, the Depressed Classes think that the surest way for their elevation lies in higher education, higher employment and better ways of earning a living. Once they become well placed in the scale of social life they would become respectable and once they become respectable the religious outlook of the orthodox towards them is sure to undergo change, and even if this did not happen it can do no injury to their material interest. Proceeding on these lines the Depressed Classes say that they will not spend their resources in such an empty thing as Temple Entry. There is also another reason why they do not care to fight for it. That argument is the argument of 'self respect'. Not very long ago there used to be boards in club doors and other social resorts maintained by Europeans in India, which said '*Dogs and Indians not allowed*'. The Temples of the Hindus carry similar boards today, the only difference is that the boards on the Hindu temples practically say "*All Hindus and all animals including dogs are admitted only Untouchables not admitted*". The situation in both cases is on a parity. But the Hindus never begged for admission in those places from which the Europeans in their arrogance had excluded them. Why should an untouchable beg for admission in a place from which he has been excluded by the arrogance of the Hindus? This is the reasoning of the Depressed Class man who is interested in his material welfare. He is prepared to say to the Hindus, "To open or not to open your temples is a question for you to consider, and not for me to agitate. If you think, it is bad manners not to respect the sacredness of human personality, open your temples and be a gentleman. If you rather be a Hindu than be gentleman, then shut the doors and damn yourself, for I don't care to come."

"I found it necessary to put the argument in this form, because I want to disabuse the minds of men like Pandit Madan Mohan Malaviya of their belief that the Depressed Classes are looking forward expectantly for their patronage. The second point of view is the spiritual one. As religiously minded people, do the Depressed Classes desire temple entry or do they not? That is the question. From the spiritual point of view, they are not

indifferent to temple entry as they would be, if the material point of view alone were to prevail. But their final answer must depend upon the reply which Mahatma Gandhi and the Hindus give to the following question:

What is the drive behind this offer of temple entry? Is temple entry to be the final goal of the advancement in the social status of the Depressed Classes in the Hindu fold? Or is it only the first step and if it is the first step, what is the ultimate goal? Temple entry as a final goal the Depressed Classes can never support. Indeed they will not only reject it, but they would then regard themselves as rejected by Hindu Society and free to find their own destiny elsewhere. On the other hand, if it is only to be a first step in the direction, they may be inclined to support it. The position would then be analogous to what is happening in the politics of India today. All Indians have claimed Dominion Status for India. The actual constitution will fall short of Dominion Status and many Indians will accept it. Why? The answer is that as the goal is defined, it does not matter much if it is to be reached by steps and not in one jump. But if the British had not accepted the goal of Dominion Status, no one would have accepted the partial reforms which many are now prepared to accept. In the same way if Mahatma Gandhi and the reformers were to proclaim what the goal which they set before themselves is for the advancement of the social status of the Depressed Classes in the Hindu fold, it would be easier for the Depressed Classes to define their attitude towards temple entry. The goal of the Depressed Classes might as well be stated here for the information and consideration of all concerned. What the Depressed Classes want is a religion, which will give them equality of social status. To prevent any misunderstanding, I would like to elaborate the point by drawing a distinction between social evils which are the results of secular causes and social evils which are founded upon the doctrines of religion. Social evils can have no justification whatsoever in a civilised society. But nothing can be more odious and vile than that admitted social evils should be sought to be justified on the ground of religion. The Depressed Classes may not be able to overthrow inequities to which they are being subjected. But they have made up their mind not to tolerate a religion that will lend its support to the continuance of these inequities. If the Hindu religion is to be their religion then it must become a religion of Social Equality. The mere amendment of Hindu religious code by the mere inclusion in it of a provision to permit temple entry for all, cannot make it a religion of Equality of social status. All that it can do is to recognise them as nationals and not aliens, if I may use these terms which have become so familiar in politics. But that cannot mean that they would thereby reach a position

where they would be free and equal without being above or below any one else, for the simple reason that the Hindu religion does not recognise the principle of equality of social status; on the other hand fosters inequality by insisting upon grading people as Brahmins, Kashatriyas, Vaishyas and Shudras which now stand towards one another in an ascending scale of hatred and descending scale of contempt. If the Hindu religion is to be a religion of social equality then an amendment of its code to provide temple entry is not enough. What is required is to purge it of the doctrine of Chaturvarna. That is the root cause of all inequality and also the parent of the caste system and untouchability which are merely forms of inequality. Unless it is done not only will the Depressed Classes reject temple entry, they will also reject the Hindu faith. Chaturvarna and the caste system are incompatible with the self respect of the Depressed Classes. So long it continues to be the cardinal doctrine, the Depressed Classes must continue to be looked upon as low. For the Depressed Classes to say that they are Hindus is to admit their inferiority of status by their own mouth. They can call themselves as Hindus only when the theory of Chaturvarna and caste system is abandoned and expunged from the Shastras. Do the Mahatma and the Hindu reformers accept this as their goal and will they show the courage to work for it? I shall look forward to their pronouncements on this issue as I have stated it with great concern. But whether Mahatma Gandhi and the Hindus are prepared for this or not, let it be known once for all that nothing short of this will satisfy the Depressed Classes and make them accept temple entry. To accept temple entry and be content with it, is to temporize with evil and barter away the sacredness of human personality that dwells in them.

There is however one argument which Mahatma Gandhi and the reforming Hindus may advance against the position I have taken. They may say, "acceptance by the Depressed Classes of Temple entry now, will not prevent them from agitating hereafter for the abolition of Chaturvarna and caste". If that is their goal, I like to meet this argument right at this stage with a view to clinch the issue and clear the road for future developments. My reply is that it is true that my right to agitate for the abolition of Chaturvarna and caste system will not be lost, if I accept Temple Entry now. But the question is on what side will Mahatma Gandhi be at the time when the question is put. If he will be in the camp of my opponents I must tell him that I cannot be in his camp now. If he will be in my camp, he ought to be in it now".

My friend Dewan Bahadur R. Srinivasan expressed himself almost in the same terms on the question of temple entry. He said:

“When a Depressed Classes member is permitted to enter into the Caste Hindu temples he would not be taken into any one of the four castes, but treated as man of fifth or the last or the lowest caste, a stigma worse than the one to be called an untouchable. At the same time he would be subjected to so many caste restrictions and humiliations. The Depressed Classes shun the one who enters like that and exclude him as Casteman. The crores of Depressed Classes would not submit to caste restrictions. They will be divided into sections if they do.

Temple entry cannot be forced by law. The village castemen openly or indirectly defy the law. To the village Depressed Classman it would be like a scrap of paper on which word “sugar” was written and placed in his hands for him to taste.

The above facts are placed before the public in time to save confusion and disturbance in the country.”

But Mr. Gandhi felt otherwise that securing temple entry to the untouchables was a liability of the Hindus which ought to be liquidated first. Accordingly immediately after the Poona Pact he started a campaign among the Hindus for opening the doors of their temples to the Untouchables.

How far has Mr. Gandhi succeeded in this matter is a question that may legitimately be asked. But it is difficult to know the truth. As a result of the fast, many temples were reported to have been thrown open by the Hindus to the Untouchables. How far this was true and how far it is a part of lying propaganda which the Congressman is so good at it is difficult to say. That many of the temples that were opened as a sequel to the fast were purified and closed to the Untouchables is beyond dispute. Again the opening of a temple may be quite a meaningless act. There are hundreds and thousands of temples in which there is no worship. They are occupied by only donkies. Instances of such temples can be seen at places of pilgrimage such as Nasik and Wai. If such a temple is declared to be open it is not only a meaningless act but it is an insult to the Untouchables. Again a temple may be opened to the Untouchable. But if it is abandoned by the Caste Hindus as a place of worship it cannot be said that it is open in the sense that they are welcomed to it by the Hindus. There is yet another possibility which must be taken into account in arriving at the truth.

A temple may be open to the untouchables in the same sense as the Ritz Hotel in London is open to all. We however know that the Ritz Hotel is not in fact open to all. It is open only to those who can afford. In the same way a temple may be open to the untouchables yet in fact it is open only to those untouchables who can afford to enter. If the cost of temple entry is

assault or social boycott then the cost will be prohibitive and the temple though nominally open is really closed. Assault and social boycott are a matter of course with the Hindus and it would not be too much to assume that in some case the Hindus would resort to such means to prohibit the Untouchables who dare to enter a temple which is declared to be open to them. If the case is one like this then it is a fraud.

Which of the two classes of cases are more numerous, it is difficult to say accurately. But a guess may be made on the basis of certain facts. There are two classes of Hindus now in India — the orthodox Hindus who care more for religion than for politics and the Congress Hindus who care more for politics and less for religion. The former who have no political ends to subserve can be honest i.e. true to their convictions however wrong they may be. The latter who have to serve political ends cannot always take an honest view but are prone to adopt dishonest ways. The first method of abandonment though honest brings discredit upon the Hindu community in the eyes of the world and is therefore politically unsuitable. The second method of opening the temple nominally and closing it really by *Hindus* (*This word is inserted by us against the blank space of MS.—Ed.*) is politically highly advantageous. It has the merit of a system which shows to the world that credit is opened and which clandestinely but without the world knowing prevents its being drawn upon by the person in whose favour it is declared to be opened. The Congress Hindus are more numerous than the orthodox Hindus. That being the case I should think that the second classes of cases must be more numerous than the first.

That genuine cases of opening of temples are very few and that most of the published reports of opening of temples is just false propaganda is clear from the fate of the Temple Entry Bill of Mr. Ranga Iyer brought by him in the Central Legislature in 1934. Of that Bill I will speak of at a later occasion.

With this I would have closed this discussion of the subject. But Mr. Gandhi insists that a spiritual awakening has taken place among the Hindus and relies upon the Temple Entry Proclamation of Travancore. I am therefore obliged to deal with this claim.

The success of temple entry cannot be determined by the number of temples opened. It can be determined only by reference to the motive with which it is done. Is the motive spiritual? That can be the only test.

Now I say that temple entry is not a spiritual act. It is a political manouever.

Is Mr. Gandhi acting from spiritual motive? In appealing to the Hindus Mr. Gandhi said:

"I have addressed this appeal to you, which proceeds out of my soul's agony. I ask you to share that agony and shame with me and cooperate with me, for I have no other end to serve than to see *Sanatana Dharma* revived and lived in its reality in the lives of millions who at present seem to me to deny it." This soul's agony was born after the Poona Pact. What did Mr. Gandhi think of the Problem of Temple Entry before the Poona Pact? Before the Poona Pact Mr. Gandhi was of different opinion. That opinion was expressed not very long before the Poona Pact and not long before this appeal was addressed to the Hindus from which I have..... It was expressed in Gandhi Shikshan, Vol. II, p. 132. Mr. Gandhi then held the opinion that separate temples should be built for the use of Untouchables.

Mr. Gandhi said: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_81

"How is it possible that the Antyajias (Untouchables) should have the right to enter all the existing temples? As long as the law of caste and ashram has the chief place in Hindu Religion, to say that every Hindu can enter every temple is a thing that is not possible today."

It is obvious that Temple Entry is not original with him and therefore not spiritual. The agony is caused by the grave and sudden provocation brought about by the demand of the untouchables for separate electorates. Mr. Gandhi was afraid of the principle underlying separate electorates. He felt that this principle may be extended and may ultimately lead to separation and cessation of the Untouchables from the Hindu fold. It was to counter this move that he changed his opinion and started the temple entry move. The motive of Mr. Gandhi is political and there is nothing spiritual about it.

I do not wish this conclusion to rest merely upon this evidence of change of front on the part of Mr. Gandhi. There is abundance of other evidence in support of it.

I will refer first to the Guruvayur Temple Satyagraha which was started by a caste Hindu by name Kellappan to secure entry into the Guruvayur Temple for the Untouchables. A few facts regarding this episode may be interesting.

The point to note is the attitude that Mr. Gandhi finally adopted in this matter when he was challenged by the leaders of the orthodox Hindus. Mr. Gandhi became ready for a compromise with the orthodox. The terms of the compromise were as follows. I give them in Mr. Gandhi's own words as reported in the papers.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and

[Untouchability_Political.htm - _msocom_82](#)

“During certain hours of the day the Guruvayur Temple should be thrown open to the Harijans and other Hindus, who have no objection to the presence of the Harijans and during certain other hours it should be reserved for those, who have scruples against the entry of the Harijans. There should be no difficulty whatsoever in the acceptance of this suggestion, seeing that in connection with the Krithikai Ekadashi festival in Guruvayur, the Harijans are allowed to enter side by side with the Hindus and then the temple or the idol undergoes purification.”

Asked if his suggestion was that the temple might undergo purification daily after the entry of the Harijans, Mr. Gandhi replied:

“Personally, I am opposed to purification at all. But if that would satisfy the conscience of the objectors I would personally in this case, raise no objection to purification. If purification has any value, then there are so many possibilities of daily defilement from a variety of causes referred to in various texts that there should be a daily purification, whether the Harijans are allowed to enter or not.” This attitude is not spiritual. It is purely commercial. This is almost admitted by Mr. Gandhi. Asked if the compromise suggested by him did not still maintain a distinction between the Untouchables and the Caste Hindus Mr. Gandhi is reported to have said:

"The Harijans' attitude should be this, 'if there is a person who objects to my presence, I would like to respect his objection so long as he (the objector) does not deprive me of the right that belongs to me and so long as I am permitted to have my legitimate share of the days of offering worship side by side with those, who have no objection to my presence, I would be satisfied.'" I do not know if any self respecting Untouchable would adopt this attitude of Mr. Gandhi. On these terms even dogs and cats are admitted in all temples when there are no human beings present in them. To divide the House of God in time or in space for worship for reconciling the rival claims of two opposing classes is in itself a quaint or grotesque idea. Mr. Gandhi evidently forgot that worshipping in the same temple is quite different from worshipping in common. Temple entry if it is to be spiritual must mean the latter. The former accepts that the presence of one class is repugnant to the other and proceeds to reconcile the interests of the two. The latter presupposes that there is no repugnance between the two classes and that they accept the common denominator of humanity as being present in both.

This shows that Mr. Gandhi is least motivated by spiritual considerations. He is in a hurry to bring the Untouchables within the Hindu stables so as

to prevent their running away.

Another piece of evidence which goes to disprove Mr. Gandhi's claim that he is acting from spiritual consideration is furnished by his conduct with reference to Mr. Ranga Iyer's *'Temple Entry Bill'*. It shows that the soul's agony is only a picturesque phrase and not a fact.

Some history of this Bill is necessary to understand the tragedy which ultimately befell Mr. Ranga Iyer the author of it.

Since the new constitution came into operation two Acts have been passed in two Provinces by the Congress Governments. One in Bombay and another in Madras. There is no substance in the Acts. They do not declare the Temples to be open. They permit the Trustees of the Temples under their management if they desire and as there is nothing to compel the Trustees to do so the Acts are just scraps of paper and nothing more. But the Madras Act has a history which is somewhat puzzling. The Madras Prime Minister who got the Act passed is Mr. Rajagopalachariar. He occupies a very high place in the Congress, so high indeed that he is called Deputy Mahatma. If one can solve the puzzle the solution will reveal the mind of the Author and therefore of Mr. Gandhi who is the living spirit behind all this.

Let me turn to the Travancore Temple Entry. The proclamation of 12th November 1936 issued by the Maharaja opening the Temple open to the Untouchables is a gorgeous document. It reads as follows:

“Profoundly convinced of the truth and validity of our religion, believing that it is based on divine guidance and on all-comprehending toleration, knowing that in its practice it has throughout the centuries adapted itself to the need of the changing times, solicitous that none of our Hindu subjects should, by reason of birth, caste or community, be denied the consolation and solace of the Hindu faith, we have decided and hereby declare, ordain and command that, subject to such rules and conditions as may be laid down and imposed by us for preserving their proper atmosphere and maintaining their rituals and observances, there should henceforth be no restriction placed on any Hindu by birth or religion on entering or worshipping at temples controlled by us and our Government.” What spirituality underlies this proclamation?

The proclamation was issued by the Maharaja of Travancore in his name. But the real active force behind the scene was the Prime Minister Sir C. P. Ramaswami Iyer. It is his motives that we must understand. In 1933 Sir C. P. R. Iyer was also the Prime Minister of Travancore. In 1933 Mr. Gandhi was fighting to get the Guruvayur Temple opened to all Untouchables. Among the many who took part in the controversy over the issue of

Temple entry was Sir C. P. Ramaswami Iyer. No body seems now to remember this fact. But it is important to recall it because it helps us to understand the motives which prompted him to press the Maharaja to issue this proclamation. What attitude did Sir C. P. Ramaswami Iyer have regarding this issue in 1933? It will be clear from the following statement which he issued to the press

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_83:

“Personally I do not observe caste rules. I realise there are strong, though not very articulate, feelings in this matter in the minds of men who believe that the present system of temple worship and its details are based on divine ordinances. The problem can be permanently solved only by a process of mutual adjustment and by the awakening of religious and social leaders of Hindu society to the realities of the present situation and to the need for preserving the solidarity of the Hindu community.

“Shock tactics will not answer the purpose and direct action will be even more fatal in this sphere than in the political. I have the misfortune to differ from Mr. Gandhi when he says that the problem of temple entry can be divorced from such topics as inter-dining and I agree with Dr. Ambedkar that the social and economic uplift of the Depressed Classes should be our immediate and urgent programme.”

This statement shows that in 1933 spiritual considerations did not move Sir C. P. Ramaswami Iyer. Spiritual considerations have become operative after 1933. Is there any particular reason why these spiritual considerations should have been thought of in 1936?

This question can be answered only if one bears in mind the fact that in 1936 there was held in Travancore a Conference of the Yezawa Community to consider the issue of conversion which was raised by me at Yeola in 1935. The Yezawas are an untouchable community spread over Malabar. It is an educated community and economically quite strong. It is also a vocal community and has been carrying on agitation in the state for social, religious and political rights. The Yezawas form a very large community. The cessation of so large a community would be a deathknell to the Hindus and the Conference had made the danger real as well as immediate. It was this which brought about a change in the attitude of Sir C. P. Ramaswami Iyer. The spiritual considerations are just an excuse. They did not form the motives.

How far did this Proclamation change facts and how far it has remained a show? It is not possible to get real facts as they exist in Travancore. In the course of the discussion on the *Malabar Temple Entry Bill* in the Madras

Legislative Assembly certain facts relating to Travancore were mentioned by Sir T. Pannirselvam, which if true would show that the whole thing is hollow. Sir T. Pannirselvam said:

“One of the arguments advanced by the Premier in support of the measure was that temples in Travancore had been thrown open to the”Untouchables”. A Maharaja vested with autocratic powers did so by an order. But how was it working there? From representations received, he was led to believe that after the first flush of enthusiasm, Harijans had left off going to temples, and people who used to worship previously before Harijans were allowed to enter the temples, had stopped worshipping in temples. He would ask the Government to tell them if the measure was really a success in Travancore.”

On the third reading of the Bill, Sir T. Pannirselvam made a statement which must have come as a surprize to many. He said:

“He wanted to know whether it was a fact that the private temples of the Senior Maharani were excluded from the proclamation. What was the reason for it? Again during the celebration of the marriage of the daughter of the Senior Maharani it was found necessary, so he was told, to perform purificatory ceremony of the temple. If such a purification of temples took place, what happened to the proclamation?”

These facts were not challenged by the Prime Minister. Evidently they cannot be challenged. If they are incontrovertible then the less said about the Malabar Temple Entry proclamation as a spiritual testament the better.

It would not be proper to close this discussion without adverting to the fear which some Untouchables entertain regarding this Temple entry movement. It is just a movement of social reform or is it a strategy?

The special privileges which the Untouchables have got in the matter of politics, in the matter of education, in the matter of services are founded upon the fact that they are Untouchables. If they cease to be Untouchables their claim to these special privileges could at once be challenged. If untouchability goes then they would be just poor and backward. But as poor and backward they would not be entitled to any special privileges which they have as untouchables. What is the plan of these protagonists of Temple Entry? Is it just to open temples or aim is ultimately to take away the privileges? This fear is lurking in the minds of many a thinking Untouchables. That the fear is a real fear is clear from what is happening in Travancore itself. A correspondent of mine who represents the All Travancore Pulayar Cheramar Aykia Maha Sangham writes to me as follows in a letter, dated 24th November 1938. I give below the full text of the letter sent by him to me.

To
Camp Mayyanad, 24-11-1938 Dr. Ambedkar,
Quilon. Bombay.
Respected Sir,

I have unaffected pleasure to draw your attention to the following facts for obtaining the valuable advice from you. Being the leader of a Harijan Community of the Travancore State, I think, it is my paramount duty to suggest you definitely all the grievances that the Harijans of this state are enduring.

1. The Temple Entry Proclamation issued by the H. H. The Maharaja is indeed a boon to Harijans; but the Harijans are enjoying all the other social disabilities except the temple entry. The proclamation is a check to the further concessions to us. The Government do not take any step for the amelioration of the Harijans.

2. Among 15 lakhs of Harijans, there are a few graduates, half a dozen undergraduates and 50 school finals and more than two hundred vernacular certificate holders. Though the Government have appointed a Public Service Commission, appointments of the Harijans are very few. All the appointments are given to Savarnas. If a Harijan is appointed it will be for one week or two weeks. According to the rules of the recruitment in Public Service the applicant is allowed to apply only after a year again, while a Savarna will be appointed for a year or more. When the list of the appointments is brought before the assembly, the number of appointments will be equal to the communal representation; but the duration of the post of all the Harijans will be equal to one Savarna. This kind of fraud is associating with the officials. Thus the public service is a common property of the Savarnas. No Harijan is benefitted by it.

3. There was a proclamation from H. H. the Maharaja, a few years ago that three acres of ground should be given to each Harijan to live in; but the Officials are Savarnas who are always unwilling to carry out the proclamation. Even though the Government is willing to grant large extent of ground for pasturing near Towns not a piece of the ground is given to the Harijans. The Harijans are still living in the compounds of the Savarnas and are undergoing manifold difficulties. Though large extents of ground lay in "Reserve", the applications of the Harijans for granting grounds are not at all regarded with importance or listen to. The most parts of the lands are benefitted by the Savarnas.

4. The Government nominates every year of the election of members of the Assembly one member from each Harijan Community. Though they

are elected to present the grievances of the Harijans before the Assembly, they are found to be the machinery of the Government viz., the toys of the Savarna officers, who are benefited by them. Thus the grievances of the Harijans cannot be redressed any way.

5. All the Harijans of Travancore are labourers in the fields and compounds. They are the servants of the Savarnas who behave them as beasts—no body to look after or protection—every Harijan gets only 2 chs (one anna) as the wage in the most parts of the State. The social disabilities are the same to them even after the temple entry. The workers in the factories in various parts of the State of Travancore and the Officers of the State are all Savarnas and they are at present agitating for responsible Government. Now the Harijans are demanding jobs in Government and in factories but the agitation in Travancore is a Savarna agitation by which the Savarnas are making arrangements to get rid of Harijans in Public Service and factories. They plead for higher salaries and more privileges. They pay the least care to the Harijan labourers while the people of Travancore are maddened with the agitation of the workers in the factories. The standard of salary of Harijan worker is very low while the standard of a factory worker is thrice the former.

6. Due to starvation and proper means of livelihood the heads of the children of Harijans are heated as a result of which they are likely to fail in school. Before proclamation the duration of concession in high schools was for 6 years, now, it has reduced to three years by which a good number of students stopped their education after their failure.

7. There is a department for the Depressed Classes and the head of which is Mr. C. O. Damodaran (the protector of the Backward Communities). Though every year a big amount is granted for the expenditure, at the end of the year, 2/3 of the sum is lapsed by its sagacity. He is used to submit reports to the Government that there is no way of spending the amount. 95 per cent of the sum allotted for the Depressed Class is spent as the salary of the officials who are always Savarna and 5 per cent is benefited. Now the Government is going to make some colonies in three parts of Travancore. The officers are Savarnas. This scheme is, in my opinion, not a success for the Government do not pay greater to it. I regret that Travancore Government spends one anna for the Harijan cause, while Cochin State spends a rupee for the same.

The majority of the subjects of Travancore are now agitating strongly for Responsible Government under an organization "The State Congress". The leaders of this popular organization belong to the four major communities of the State namely, the Nair, Mohamedan, Christian and Ezhava

community. The President of the State Congress Mr. Thanu Pillai issued a statement in which he stressed that special concessions would be given to the Depressed Class. All the leaders of the Depressed Class have been waiting for a time to see the attitude of the State Congress. Now we come to understand that there is no reality in the promises of these leaders.

Now I am sure that the leaders have neglected the cause of the Depressed Class. The State Congress was started on the principles of nationalism and now it has become an institution of communalism. Communal spirit is now working among the leaders. In every public speech, statement or article, the leaders mention only these four major communities, while they have no thought on us. I fear, if this is the case of the leaders of the political agitation of Travancore, the situation of the Depressed Class will be more deplorable when the Responsible Government is achieved, for the entire possession of the Government will be then within the clutches of the above mentioned communities and the Depressed Classes' rights and privileges will be devoured by the former. In the meetings of the working committee of the State Congress 2/3 of the time had devoted in discussion concerning the strike of the Alleppey Coir Factories; but nothing was mentioned in the meeting about the Harijan workers who are undergoing manifold difficulties. The workers in Factories are Savarnas and the agitation for obtaining Responsible Government is a kind of anti Harijan movement. The motive of every leader of the State Congress is to improve the situation (circumstance) of the Savarna. The leaders of the major communities have some mercenary attitude who are going to sacrifice the Depressed Class for their progress.

These are the conditions of the Depressed Class of the State. What are the ways by which we have to establish our rights in the State? I humbly request you to be good enough to render me your advice at this occasion. I am awaiting for the reply. Excuse me for the trouble,

Yours faithfully,
Srinarayanswami."

If the plan of Temple Entry is ultimately to deprive the Untouchables of their statutory rights then the movement is not only not spiritual but it is positively mischievous and it would be the duty of all honest people to warn the Untouchables,"*Beware of Gandhi*".

CHAPTER 7

A WARNING TO THE UNTOUCHABLES

Revolt and rebellion against the Established order is a natural part of the history of the poor in all countries of the world. A student of their history cannot but be struck by the thought entertained by them, of the way victory would come. In the theological age, the poor lived by the hope that spiritual forces would ultimately make the meek inherit the earth. In the secular age, otherwise called modern times, the poor live by the hope that the forces of historical materialism will automatically rob the strong of their strength and make the weak take their place.

In the light of this psychology, when one begins to think of the Untouchables in their role of rebels against the Hindu Social Order one feels like congratulating them on their realization that neither spiritual forces nor historical forces are going to bring the millennium. They know full well that if the Hindu Social Order is to fall to the ground, it can happen only under two conditions. Firstly, the social order must be subjected to constant fire. Secondly, they can't subject it to constant fire unless they are independent of the Hindus in thought and in action. That is why the Untouchables are insistent upon separate electorates and separate settlements.

The Hindus on the other hand are telling the Untouchables to depend upon the Hindus for their emancipation. The Untouchables are told that the general spread of education will make the Hindus act in a rational manner. The Untouchables are told that the constant preaching of reformers against Untouchability is bound to bring about a moral transformation of the Hindus and the quickening of his conscience. The Untouchables should therefore rely on the good will and sense of duty of the Hindus. No Untouchable believes in this facile proposition. If there are any who do, they are hypocrites who are prepared to agree to whatever the Hindus have to say in order that by their grace they may be put in places reserved for the Untouchables. They are a predatory band of Untouchables who are out to feather their nests by any means open to them.

The Untouchables are not deceived by such false propaganda and false hopes. It is therefore unnecessary to comment on it. At the same time, the propaganda is so alluring that it may mislead the unwary Untouchables into being ensnared by it. A warning to the Untouchables is therefore necessary.

Two agencies are generally relied upon by the social idealists for producing social justice. One is reason, the other is religion.

The rationalist who uphold the mission of reason believe that injustice could be eliminated by the increasing power of intelligence. In the mediaeval age social injustice and superstition were intimately related to

each other. It was natural for the rationalists to believe that the elimination of superstition must result in the abolition of injustice. This belief was encouraged by the results. Today it has become the creed of the educationists, philosophers, psychologists and social scientists who believe that universal education and the development of printing and press would result in an ideal society, in which every individual would be so enlightened that there would be no place for social injustice.

History, whether Indian or European, gives no unqualified support to this dogma. In Europe, the old traditions and superstitions which seemed to the eighteenth century to be the very root of injustice, have been eliminated. Yet social injustice has been rampant and has been growing ever and anon. In India itself, the whole Brahmin community is educated, man, woman and child. How many Brahmins are free from their belief in untouchability? How many have come forward to undertake a crusade against untouchability? How many are prepared to stand by the side of the Untouchables in their fight against injustice? In short, how many are prepared to make the cause of the Untouchables their own cause? The number will be appallingly small.

Why does reason fail to bring about social justice? The answer is that reason works so long as it does not come into conflict with one's vested interest. Where it comes into conflict with vested interests, it fails. Many Hindus have a vested interest in untouchability. That, vested interest may take the shape of feeling of social superiority or it may take the shape of economic exploitation such as forced labour or cheap labour, the fact remains that Hindus have a vested interest in untouchability. It is only natural that that vested interest should not yield to the dictates of reason. The Untouchables should therefore know that there are limits to what reason can do.

The religious moralists who believe in the efficacy of religion urge that the moral insight which religion plants in man whereby it makes him conscious of the sinfulness of his preoccupation with self and thereby of the duty to do justice to his fellows. Nobody can deny that this is the function of religion and to some extent religion may succeed in this mission. But here again there are limits to what religion can do. Religion can help to produce justice *within a community*. Religion cannot produce justice *between* communities. At any rate, religion has failed to produce justice between Negroes and Whites, in the United States. It has failed to produce justice between Germans and French and between them and the other nations. The call of nation and the call of community has proved more powerful than the call of religion for justice.

The Untouchables should bear in mind two things. Firstly, that it is futile to expect the Hindu religion to perform the mission of bringing about social justice. Such a task may be performed by Islam, Christianity, or Buddhism. The Hindu religion is itself the embodiment of inequity and injustice to the Untouchables. For it, to preach the gospel of justice is to go against its own being. To hope for this is to hope for a miracle. Secondly, assuming that this was a task which Hinduism was fitted to perform, it would be impossible for it to perform. The social barrier between them and the Hindus is much greater than the barrier between the Hindus and their men. Religion, however efficacious it may be within a community or a nation, is quite powerless to break these barriers and (make)*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/24. Essay on Untouchables and Untouchability_Political.htm - _msocom_84 them one whole.

Apart from these agencies of reason and religion the Untouchables are asked to trust the enlightened self-interests of the Hindu privileged classes and the fraternity of the Hindu proletariat.

As to the privileged classes it be wrong to depend upon for anything more than their agreeing to be benevolent despots. They have their own class interests and they cannot be expected to sacrifice them for general interests or universal values. On the other hand, their constant endeavour is to identify their class interests with general interests and to assume that their privileges are the just payments with which society rewards specially useful and meritorious functions. They are a poor company to the Untouchables as the Untouchables have found in their conflict with the Hindus.

For Untouchables to expect to gain help from the Hindu proletariat is also a vain hope. The appeal of the Indian Communists to the Untouchables for solidarity with the Hindu proletariat is no doubt based on the assumption that the proletariat does not desire advantages for himself which he is not willing to share with others. Is this true? Even in Europe the proletariat are not a uniform class. It is marked by class composition, the higher and the lower. This is reflected in their attitudes towards social change, the higher are reformist and the lower are revolutionary. The assumption therefore is riot true. So far as India is concerned it is positively false. There is very little for a common front. Socially, there is bound to be antagonism between them. Economically, there cannot be much room for alliance.

What must the Untouchables strive for? Two things they must strive for is education and spread of knowledge. The power of the privileged classes rests upon lies which are sedulously propagated among the masses. No resistance to power is possible while the sanctioning lies, which justify that

power are accepted as valid. While the lie which is the first and the chief line of defence remains unbroken there can be no revolt. Before any injustice, any abuse or oppression can be resisted, the lie upon which it is founded must be unmasked, must be clearly recognized for what it is. This can happen only with education.

The second thing they must strive for is power. It must not be forgotten that there is a real conflict of interests between the Hindus and the Untouchables and that while reason may mitigate the conflict it can never obviate the necessity of such a conflict. What makes one interest dominant over another is power. That being so, power is needed to destroy power. There may be the problem of how to make the use of power ethical, but there can be no question that without power on one side it is not possible to destroy power on the other side. Power is either economic or political. Military power is no power today. Because it is not free power. The economic power of the working class is the power inherent in the strike. The Untouchables as a part of the working class can have no other economic power. As it is, this power is not adequate for the defence of the interests of the working class. It is maimed by legislation and made subject to injunctions, arbitrations, martial law and use of troops. Much more inadequate is the Untouchables' power to strike.

The Untouchable is therefore under an absolute necessity of acquiring political power as much as possible. Having regard to his increasingly inadequate power in social and economic terms the Untouchable can never acquire too much political power. Whatever degree of political power he acquires, it will always be too little having regard to the vast amount of social, economic and political power of the Hindus.

The Untouchable must remember that his political power, no matter how large, will be of no use if he depends for representation in the Legislature on Hindus whose political life is rested in economic and social interests which are directly opposed to those of the Untouchables.

EVIDENCE

BEFORE THE ROYAL COMMISSION ON INDIAN CURRENCY AND FINANCE ON 15TH DECEMBER 1925

Dr. B. R. Ambedkar, Barrister-at-Law, called and examined.

6047. (*Chairman.*) Dr. Ambedkar, you are a Barrister-at-law, and you have been kind enough to furnish the Commission with a memorandum in which your recommendations as regards the Indian currency system are set forth in detail. I think you have also been nominated as one of the representatives of the Institute of Social and Political Science?—Yes.

6048. Whose opinions have been set forth in another memorandum?—Yes, that is so.

6049. I understand that you are a close student of these questions?—I was 2 years before, but since I have been practising of course I have not been able to give sufficient attention to the very recent developments in currency and so probably my facts and figures might sometimes be rather out of date, but I should be able to tackle any point from the theoretical side of the subject, I presume.

6050. You have been a student of political science?—I was a Professor at the Sydenham College of Science for two years and I have written a book on the Problem of the Rupee.

6051. I should like to ask you a few questions to elucidate a few individual contributions which you make to the subject in the course of your memorandum. In sub-paragraph (i) of paragraph 2 you commence with the statement :”A pure gold standard is stable because the value of gold in circulation is so large”and so on. What are you referring to as”a pure gold standard”in that connection?—A pure gold standard means a gold currency as the standard of value.

6052. A currency consisting of gold?—Largely.

6053. Supplemented by some form of token currency?—

By some form of token currency, yes.

6054. In so far as your opinion is based upon experience, can you refer to any instance in which a country has had a gold standard system with a large proportion of the circulation consisting of gold coins?—I may refer for instance to a country like Germany, and barring for instance the deposit of currency in England I should also cite the case of

England.

6055. In both those cases we must recognise that the actual proportion of the circulating medium which consisted of gold was comparatively small?—May I say just one thing? What I want to emphasise there is that the new additions to the supply are so small in comparison with the existing volume in circulation that the new supply does not make much difference to the price level. That is what I really want to say there in that paragraph: but when you have a currency which is merely regulated by the will of the issuer, the issuer may add a new supply to the existing stock of such an amount that he may disturb the price level once established.

6056. The new conditions there referred to are, I take it, the increment of currency rendered necessary by the regular expansion?—No; I simply say productions of the mines when I talk of new additions to the gold supply.

6057. Then you are dwelling there upon the feature that the annual additions to the quantity of gold in the world are so small?—That it does not cause any upheaval in the price level to any appreciable extent.

6058. In what respect does that serve to distinguish between any form of currency where the internal unit is related in stability to gold?—I do not quite follow.

6059. In what respect does the circumstance as to the small proportionate annual addition to the world's gold supply to which you refer serve to distinguish, as regards this matter of stability, between a currency based upon gold in circulation, and a currency based upon the gold exchange standard? That is the second part of your paragraph?—There I say that when you start with a certain given price level and if your issue of new currency is entirely dependent upon the will of the issuer, then he may add such a volume of currency to the existing stock that he may disturb the price level materially. There is nothing to prevent him from doing that. May I give, for instance, an illustration : suppose a government was bankrupt government and it wanted to finance certain of its departments, then it can very easily issue for instance, a token currency of any sort and add to the existing volume of currency as almost all the belligerent countries have done.

6060. Now let us assume a country with a currency of a certain amount of gold in circulation, supplemented by notes in circulation; that is one proposal, I understand, in regard to the point to which you are leading up?—Yes, in a certain way.

6061. And, on the other hand, a currency based upon a gold exchange

standard. Will you expand your recommendation by helping the Commission on this point: why this possibility of what is really inflation is more impossible when you have gold in circulation than when you have a pure exchange standard?— It is this : the fact that you have the liability of converting your paper currency into gold under a gold currency with paper in circulation is a means whereby the paper currency is kept within limits. You cannot add more paper currency to your circulation than what your reserves for convertibility would permit. But where under the gold exchange standard, as we have had in India, there is no liability upon you to convert your circulating media into gold you are free to issue as much as you like.

6062. Supposing (I start with a supposition) that you were to accept an obligation to convert your internal currency under an exchange standard into gold or the equivalent of gold in a foreign currency, would that, in your opinion, put the two systems in the same position as regards their capacity for resisting inflation?—It depends upon what kind of convertibility you adopt.

6063. I am supposing the acceptance by the currency authority, whatever it was, of a legal obligation to convert the internal currency on presentation into gold or the means of obtaining gold in a foreign currency in a gold standard country?—If your obligation is to accept to pay gold on tender without question then I think that would be sufficient. If I may say so, I mean that convertibility is like conscience and it might be of various degrees; and its efficacy to control the volume of currency would depend upon what kind of convertibility you have. If your convertibility is only for the purpose of foreign exchange then my submission is that that would not be a sufficient limitation on the issue of currency.

6064. If the obligation is such as that to which you have just referred, an obligation to convert the internal currency into a means of international payment, either gold or foreign currencies based on gold, why, in your opinion is that not an adequate means of preventing this danger of the inflation of currency with which we are dealing?—Because a foreign exchange is not necessarily an indication of internal inflation. For instance, in our own experience in India it has been found out, and it has been found out I think by Professor Keynes, that although the rupee remained at the ratio of 1s. 4d. for a long time, the level of prices in India and the level of prices in England were very different. Exchange cannot be said to be in complete harmony with the whole of the price level of a country. Exchange affects only such things as enter into

international trade, and everything would really depend upon what is the volume and what is the ratio of the goods that enter into international trade and goods that did not enter. If the country is so situated that its internal trade is much larger than its external trade, in fact, if its external trade is insignificant.....

6065. What do you mean by the internal trade being larger than its external trade?—I mean that all the goods or all the transactions of a country are not meant for the purpose of foreign trade. In fact a country may have very little foreign trade and consequently the valuation of goods that do enter into foreign trade may not affect the valuation of goods that do not enter; the relations between them may not be very close.

6066. Let me generalise the question somewhat and put it in this way : whether you have a gold standard with notes and gold in circulation, or whether you have an exchange standard by which the internal currency is converted into external, is not the volume of internal currency in both cases controlled by the preservation of a certain 'ratio between the reserves and the internal token currency outstanding, and is it any easier to ensure the maintenance of that due relation in the one case than in the other?—I have been thinking more of prices rather than of exchange ratios. I quite admit that the exchange ratio between two currencies might remain the same and yet the internal price levels in the two countries may differ.

6067. Which two countries?—Any two countries; take for instance England and India; the ratio between gold and the rupee or sterling and the rupee taking the sterling as equivalent to gold, may remain the same; in fact it did remain the same for a long time; but taking into consideration the price level in the two countries, they did differ; although I admit that after some time the internal price level will assert itself and bring the foreign exchange ratio in line with itself.

6068. I think you are going a little in advance of the actual point with which I was dealing in my question, although no doubt you are referring to matters which are very relevant. Now let me put it from another point of view. As a matter of fact, if we consider countries in which there has been a currency system more approximate to that which you recommended than India has ever seen, have those countries under the stress of necessity ever felt the slightest difficulty in inflating when they felt the need to do so? Let me instance what occurred in gold standard countries in the war? No; as I say, gold itself may be subject to inflation. It was as we found in America itself, subjected to inflation on account

of the enormous quantity of gold in circulation then. Might I put it in this way? That convertibility for the purposes of foreign exchange is insufficient; that is the point I am driving at. Convertibility, if it is to be an effective convertibility, must be convertibility without question; it must be convertibility for all purposes, although if I may just say so I am not in favour of a convertible currency, as you will see from my memorandum.

6069. Possibly a certain confusion may be introduced by the analysis of convertibility into internal and external convertibility. What is essential, is it not, in a sound system of currency, now that gold is to be once more apparently accepted as the world's international payment, is that the unit of internal currency should be stable related to a definite gold value?—I do not quite accept that; it may be stable for international purposes ; it might not be stable for internal purposes.

6070. I do not think I managed to make my question quite clear. I understand what is desired by you in your recommendations is that the unit of currency which is used internally should be stable related to a gold value?—I am really more for the use of gold. I am opposed to any kind of system which will economise gold under the present circumstances. Because. I think that economy of gold is incompatible with security of price. My standpoint is very different from the standpoint of other people. I may be a little barbarous in my view.

6071. Not at all. Let us examine what your real idea is. What is your ideal to be attained in the organisation of the currency of a country? It is not that the internal unit should be stable in relation to gold?—Oh yes, it should be stable—not in relation to gold but stable in terms of commodities.

6072. By what methods do you recommend that India's internal currency should be stabilised, that is, in relation to what, and, secondly, by what methods?—It should be stabilised more in relation to commodities rather than to gold, which is used only for purposes of internal trade. And I say it should be done by stopping the coinage of rupees altogether, and prescribing the use of gold.

6073. If we reject gold as a standard of reference for the internal currency, what other standard of reference are we to adopt?—That I have given here. That we should either go to the Compensating Standard of Professor Fisher or to the Tabular Standard of Professor Jevons. If you do not want to use gold and economise gold, then my submission is that you should go to one or other of those two.

6074. I am not sure that I am very intimately acquainted with

Professor Fisher's standard, but are these both the same sort of proposals?—They are very much the same except that Professor Fisher's Compensating Standard—they are really what I should say, I mean, the two sides of the same medal, so to say. Professor Fisher would, for instance, alter the metal in the gold unit according to a certain index number, and Professor Jevons would allow more units to be given or less units to be given according to a certain index number. But I think those two are too complicated. I personally believe that a gold standard for all practical purposes is sufficient.

6075. Returning to what is practically possible, you are of opinion that the value of India's currency unit should be determined in reference to a certain quantity of gold?—No, my submission is that India should have gold in currency. Gold should not only act as a unit of reference.

6076. Let me pass from that and ask you another question. Let me now deal with the view which you advance, which I understand is best expressed in paragraph 4 of your memorandum, sub-paragraph (2), where you say :”The whole world is suffering from a continuous rise of prices owing to the depreciation of gold. Anything, therefore, that will tend to appreciate gold will be to the good ; and if gold is to appreciate there must be a larger use of gold as currency.”If I understand the precise force of that opinion, it is that the gold exchange standard tends to economise the use of gold, and that what is prudent and advisable is not that the use of gold should be economised and therefore that the gold exchange standard is bad?—Yes.

6077. And that is based upon the view which you take as to the future relation between the demand and the supply of gold in the world?—Yes.

6078. You are of opinion that the future supply of gold is likely to grow in relation to the demand?—No, not grow ; it will remain large because other people are not using gold, they are using paper, they are not in a position to use gold, so gold, even if it is not used, will remain large in quantity.

6079. First of all, a preliminary question in regard to that. Are you considering here the interests of India, or are you considering the service which India might render to the rest of the world?—I have both in view. 6080. You think that, by doing that, India will be serving her own interests and the interests of the rest of the world at the same time. Do you agree with the not uncommonly held opinion that a gold currency is an expensive system?—Yes, it is.

6081. So that we have to consider, in the first place, the possible disadvantage to India of the expense involved. What are the advantages

to India to set against that expense?—It is that you get a more stable standard, which as Professor Cannan says is knave-proof and fool-proof.

6082. Now, as regards the prospect. The force of this contention would depend, would it not, upon the realisation of your anticipations as regards the supply of gold in the world at large?—Yes.

6083. Would you agree that, supposing on the other hand there was to be a relative decrease in the world's gold supply such as might tend to a general rise in world prices, that then it would be to the advantage of India, as of other countries, to economise in the use of gold?—Well, my reply is that we need not be afraid of an indefinite contraction. We have always got methods for increasing currency. We must guard against indefinite expansion which is always possible.

6084. If you have pegged the Indian currency definitely to gold through the gold standard and there is a relative diminution in the world's gold supplies, then any general fall in prices which must result would make itself felt in India also?—Yes, but that could be guarded against by increasing our paper currency or otherwise by manipulating the paper currency.

6085. Is not that sacrifice very characteristic of the gold currency system, for which you yourself have selected that system?—No, I am making gold the currency simply because I want to avoid the possibilities of indefinite expansion. As I say, you can always guard against an indefinite contraction. Falling prices can always be prevented.

6086. Now let me ask you a question as to the opinion you have formed that anything that would tend to appreciate gold would be to the good. Have you been able to arrive at any statistical estimates as to what the future of the relation between the supply and the demand of gold will be in the course of years to come?—Well, in my investigations I did some of them in 1923, when I was writing the book I had occasion to read some articles which appeared in the Harvard Business Barometer Series and I rather get the impression that there was no likelihood of any fall in the production of gold. And besides, my point is this, that the countries of the world are using so much paper that whatever gold supply we have is really very large. Those countries therefore that can avoid economising gold might as well do it to their own benefit and to the benefit of the rest of the world.

6087. I am not quite sure that I follow the latter part of your reply?—What I say is that although the production of gold may not be increased physically from the mines, yet the use of substitutes for gold in modern

days is on such a vast scale that the quantity of gold in the present circulation might appear to be large enough for a long period for the transactions of the world even without new additions from the mines.

6088. You have no more statistical calculations which you would care to put before the Commission as to your estimate of the future supply of gold?—No, I have made no estimates.

6089. This is a matter, of course, which is of great importance for the consideration of the Commission, so let me put to you one or two estimates that I have been supplied with from other sources. These are estimates as to the effect upon general gold prices of the movement of the relation between the demand for gold and the supply of gold for a period of years. They are forecasts made at various dates by authorities, and they are referred to the year 1930. What is done is to measure the effect of the gold supply upon prices by trying to forecast the general level of prices in 1930 by reference to 1913 as the 100 standard, and thus to see what the future of the world in this regard is. I have here an estimate of Sir James Wilson, made in 1921, who estimates that the result of these factors will be that the general price level in 1930 will be stable at 115. That is a substantial fall, you see from the present figure which is round about 158. Then there is that estimate to which you have already referred, the Harvard Business Barometer, in 1922, which estimates that in 1930 the general price level should stand about 150, and should be stable at that figure. Then there is Professor Gregory, who makes an estimate in the near past. May, 1925, who estimates that the general price level will stand about 162 in 1930 and should be rising at that figure. So he is the one who is most of your opinion. And, finally, there is Mr. Joseph Kitchen, an eminent authority, who in July, 1925, made a forecast that in 1930 the general price level should be expressed by a figure of 120 and should be falling at that figure. Of these four attempts to forecast the position, three anticipate that the prices will have fallen at that time ; two believe that they will be stable at that lower level ; one, Mr. Kitchen, believes that they will be falling at that lower level, and only one believes that they will be higher than they are now and rising. I will put it in this way. In view of these very careful attempts to estimate the situation does it not teach us the necessity of exercising great caution in making the assumption that it is unnecessary, in order to maintain prices stable, to economise the use of gold?—I am rather in favour of falling prices rather than rising prices, and I am glad if they do fall and fall rapidly too. I think it is good for the nation that there should be a fall in prices rather than a rise in prices. So these estimates do not

really deter me from making my proposal.

6090. Nevertheless, there is some different basis for your opinion?—I take those opinions for what they are worth. I am not in a position to contradict them because I have never made any estimates. But somehow this is my belief that already the existing amount of gold is so large and the capacity of the countries of the world to use that currency, any currency, is so small that the supply of gold is likely to remain larger for a long period, and there is, in my opinion, not much chance of prices falling.

6091. Then there is a further question. I should preface it by saying that you are dealing here with the abolition of the exchange standard?—Yes.

6092. In paragraph 5 you say, "The gold standard reserve is peculiar in one respect, namely, this: the assets, *i.e.*, the reserve and the liabilities, *i.e.*, the rupees are dangerously correlated by reason of the fact that the reserve cannot increase without an increase in the rupee currency." I am going to ask you to expand that a little, and in order to show you what I think needs expansion, I would put these possible questions by a critic. Might not a critic say : you say that the reserve cannot increase without an increase in the rupee currency, and this critic might say, why should it? He would say, if the rupee currency cannot increase without an increase in the reserve, would that not be a most desirable state of affairs? Have you followed my point?—I will explain in this way: for instance, there are the bank issues and the reserves of a bank. If you compare, for instance, the bank reserves with the bank issues and the currency and the gold standard reserves of the Government of India with the rupee issues, you will see this: that when the bank issues are limited, the reserves increase, and *vice versa*. But here you cannot, for instance, reduce the rupee currency without also reducing your reserve.

6093. My point is this. I say, all right, but look at it from the other point of view. However that may be, what appeals to me is that you cannot reduce your reserves without reducing your rupee currency, and that is what I desire to effect?—Quite true, I admit that. But my submission is this. What is the use of a reserve, really? Suppose you have an enormous reserve and you have also an enormous rupee circulation. Does the fact that you have a large reserve in store in some safe in any way affect the value of the rupee? It does not. The value of the rupee will be affected simply by its quantity and the volume of circulation. Its value has nothing to do with the reserve at all. Backing absolutely has no effect on the value of currency except, of course, in times in which it is

disorganised. It may lead to some confidence in that currency, but I submit that when currency has come to such a pass that people have to have some confidence, I say that currency has been absolutely inflated.

6094. Accepting no doubt, the proposition that the value of the currency will be ultimately decided by its total volume in relation to the business?—What I say is this, that this relation is so dangerously correlated, and I am sure you cannot indefinitely go on coining rupees simply because there is a gold reserve. If you go historically into this matter, my submission is that such has really been the case. In the history of India people who have had to deal with currency were so much infatuated by the idea that they must have some reserve that the coinage of rupees was really initiated for that purpose. The coinage of rupees in India in 1893 and 1898 when the Fowler Committee's Report was brought into operation and reforms were introduced is a point, Sir Edward Law was so much obsessed by the volume of rupees in circulation that he felt that there must be some reserve, and it was on this ground that he proposed to the Secretary of State that the Government should be allowed to coin rupees. If he knew properly that the value of rupees would maintain themselves if they were limited in volume, then he would certainly not have gone on increasing the currency. I am recommending simply what the Government of India recommended to the Secretary of State in 1893.

6095. To turn to the immediate point: the function of a reserve under these conditions is to maintain stability, is it not?— I think a reserve ought not to be there. A currency is something like any commodity which maintains its value simply because of the law of supply and demand.

6096. Do you reject the proposition that the function of a reserve is to maintain stability?—Yes, I do. I do not think a reserve has anything to do; in fact, a reserve maintains itself when the currency is limited ; it does not maintain the currency.

6097. Let us now consider your practical proposals for the reform of the currency. You say :—”The following, then, are the requirements of my plan for the reform of the Indian currency :— (1) Stop the coinage of rupees by absolutely closing the mints to the Government as they are to the public. (2) Open a gold mint for the coinage of a suitable gold coin. (3) Fix a ratio between the gold coin and the rupee. (4) Rupees not to be convertible in gold and *gold not to be convertible in rupees*, but both to circulate as unlimited legal tender at the ratio fixed by law.”A question which does suggest itself to a practical man there is, under those

circumstances, how are you to maintain the ratio between the gold coin and the rupee, and how are you to prevent one going to a discount or a premium in comparison with the fall in accordance with the balance of the country's trade?—Well, the rupee will maintain its value by reason of the fact that it will be limited in volume ; no more issues of rupees are to be issued.

6098. What is to prevent it going to a premium?—It cannot at once go to a premium because it has a substitute in gold. Rupees are not to be convertible in gold. The rupee cannot go to a discount because it is limited in volume. No more rupees are to be coined. The rupee cannot go to a premium because there is the alternative of a gold coin functioning as currency.

6099. Then you say :—”But there is just this chance : that the existing volume of the rupee currency is so large that when there is a trade depression it may become redundant and may by reason of its excess lose its value. As a safeguard against such a contingency, I propose that the Government should use part of the gold standard reserve for reducing the rupee currency by a substantial margin so that even in times of severe depression it may remain limited to the needs of the occasion.’ How would that operation take place?—You simply call in rupees and not issue them again—by the process of calling in rupees up to a certain limit.

6100. So that the rupees would not, to that extent, be convertible into gold?—It will never be convertible into gold, until the limit is reached, so that it will never be in excess even in times of depression—the rupee will not be convertible into gold and gold will not be convertible into rupees. Even as it is, I am not very much afraid that the rupee will go to a discount, but there is just this chance that it might and I therefore propose that safeguard.

6101. Coming then to the question of the ratio, you say:”In European countries the problem is one of deflating the currency, *i.e.*, appreciating it; in other words, of bringing about a fall in prices. In India the problem becomes one of inflating the currency, *i.e.*, depreciating it; in other words, of bringing about a rise in prices. For a change from 1s. 6d. gold to 1s 4d. gold means this and nothing else. Should the currency be inflated to reach back the pre-war parity?”Then you point out that the restoration of the pre-war parity is not a restoration of the pre-war price level because there is a change in gold prices?—Yes.

6102. Further, you point out that :”Two things must be borne in mind in this connection. Existing contracts include those made at every stage

of preceding depreciation's and appreciation's, and to deal fairly with all would demand that each one should be treated separately—a task impossible by reason of its complexity and enormity." I understand that the opinion which you emphasise there is that we have been passing through a period of violent fluctuations in the value of the rupee, that at every stage contracts have been entered into, and that it is impossible, as it were, to fix upon any, definite ratio which will do justice as between all these contracts made at the varying levels?—Yes.

6103. Then you say that the great bulk of the contracts have been of recent date?—Well, my information is really based upon a small note made by Professor Cannan in one of his articles in the "Statistical Journal."

6104. Are there any statistics available which would give us a correct estimate of the number of contracts?—I think it is a guess for what it is worth; a question of common-sense.

6105. Then you say, "It may be said that the centre of gravity of the total contractual obligations is always near the present." Those premises lead you to the following conclusion, that, given these two facts, the best solution would be to strike an average between 1s. 4d. and 1s. 6d. and say that it is nearer 1s. 6d. than 1s. 4d. I am not sure that I quite follow that. Your trend of reasoning would rather have led me to suppose that you would finally turn out to be a supporter of the 1s. 6d. rate?—I say it may be nearer 1s. 6d. and away from 1s. 4d.

6106. What ratio would you suggest?—It is difficult. Of course, I think 1s. 6d. would be just as good. It could not inflict any very great hardship.

6107. Then, finally, as regards the question of a rising and falling rupee ratio, your opinion is summarised in paragraph 9. You say: "Now if it is realised that a low exchange means high internal price, it will at once become clear that this gain is not a gain from one class at the cost of another class in the country." Which class gains and which class loses?—The business class gains; the labouring class does not. The price of all factors of production does not change. Wages do not change as rapidly as price and these are the classes who suffer.

6108. Have you any suggestion to make, either from the theoretical or practical point of view, as regards the important provisions as to the currency arrangements to provide elasticity to meet seasonal demands?—As I hinted, of course, very briefly, if we want to make our currency elastic for seasonal purposes, we must somehow see that the commercial paper which has given rise for trade transactions is

converted to currency. So that commercial paper should be made more a basis for the issue of the currency than Government bonds. I think it would be to the good of India if we adopt the proposals in the German Imperial Bank. They adopted, of course, more or less the English Banking Act of 1894 with variations so as to suit the seasonal demands.

6109. That is a provision for the extension?—For the extension for the time being of paper issues under certain regulations.

6110. That is a provision, is it not, for the extension of the fiduciary issue?—Exactly.

6111. . In return for the payment of a proportional tax?—Yes, I think it is a sufficient safeguard for both.

6112. (*Professor Coyajee.*) The chief merit of the gold standard is, according to you, that it places certain definite limitations against possible fluctuations?—Exactly.

6113. But, of course, there are certain things, for example, the provision from the mines is not based on how much currency is required by a country?—Yes ; I may say that I am in favour of a gold standard simply because compensating systems are not workable. If they are workable, I would at once reject the gold standard. I am not in love with it at all.

6114. Nor does the gold standard ameliorate the consequences of a trade cycle?—No.

6115. Then there is only one point. In paragraph 5 you observe "I am necessarily in favour of the abolition of the gold standard reserve as being of no practical use for maintaining the stability of the currency." By analogy why not abolish the paper currency reserve also because the value of the paper depends upon its limitations?—Quite.

6116. Would you abolish that?—No, for this reason. Because we are not placing a fixed limit on the issue of paper. Under the scheme where I say we should abolish gold standard I am placing a definite limit on the issue of the rupees. In the case of paper currency, we have allowed the Government the discretion.

6117. Do you think that possible? I will tell you why. Because with limited incomes and things like that, there is more scope as population increases for the use of rupee. Could you say for ever and for ever, we shall be coining gold and no rupees until possibility the quantity of gold in circulation will be ten times that of the rupee? Would that be convenient to the country?— I should think it would be. I would rather say that instead of using gold we use notes backed by gold. I do not mean that we should use gold from hand to hand.

6118. (*Sir Norcot Warren.*) Am I to understand from the latter part of paragraph 8 of your memorandum that you are inclined to the rate of 1s. 6d. rather than 1s. 4d.?—I confess predilection in favour of 1s. 6d.

6119. (*Sir Alexander Murray.*) There is one point, Dr. Ambedkar, which you referred to in answer to some questions put to you by the Chairman; you seem to suggest that the Government of India were somehow or other prepared to go on coining rupees simply in order that they may make profit between the bullion value and token value of the rupee. I want to know what you are referring to actually?—I am referring to this : It is a historical bit of thing. When the Government of India, for instance, introduced reforms suggested by the Fowler Committee, they felt that for a large circulation of the rupee they had not any reserve and the Fowler Committee in paragraph 60 of their Report suggested that if the Government coined rupees and keep profit to itself, that profit should be utilised as a reserve. Sir Edward Law who came on the scene in 1901, the period from which the coinage of rupees commenced, also felt that the volume of rupees was so large that some amount of reserve was necessary ; and I think he went on coining rupees sheerly because he felt that the reserve was wanted and the reserve could not be had in any other way except by coining rupees.

6120. You only *think* that?—No, my point is this: I have read the dispatch very closely and I feel that if Sir Edward Law had disclosed there that the rupee was coined to a premium because people did not want gold or any other thing to use in currency, then I could have understood that the rupee was coined in answer to the demand of the people. But there is not a single thing to that effect to be found in the dispatch. He simply says that when we introduced reforms we did not take into account paragraph 60 of the Fowler Committee's Report.

6121. But he also, I think, in that dispatch to which you refer laid down that there ought to be a gold reserve which estimated at 7 millions or something like that. Against this you say that he was issuing rupees?—Quite so. Gold standard reserve is kept in gold. I say no reserve was wanted.

6122. You make a general statement here, Dr. Ambedkar, "Unfortunately there is abundant proof of such perversion in the history of the currency system in India. Already we have had foolish administrators who had been obsessed with the idea that a reserve was a very essential thing and who had therefore gone on issuing currency without any other consideration but that of augmenting the reserve" and you are now repeating it to the Chairman?—I have used a much milder

expression than that used by Professor Cannan himself in his book.

6123. But is it not the case that in 1895 that was actually suggested by a well-known Bombay financier and turned down by the Finance Member at the time?—I find that in the dispatch.

6124. One moment. In your book you actually give the name of the Bombay financier who suggested it and you give the name of the Finance Minister of the Government of India who turned it down?—Yes.

6125. Then in your book you also give the name of a well-known politician who as recently as 1907-08 suggested the same thing and again it was turned down by the Government of India and as recently as 1919, you give a reference to another well-known economist. Then why do you repeat the statement to the Chairman that the administrators of the Government of India have not thrown overboard or turned down the suggestion when as a matter of fact you know that the administrators of the Government of India have turned it down repeatedly when it has been put forward by well-known Indian financiers?—My reply to that is this: that somehow if you read the speeches in the budget delivered by every Finance Minister, for instance, I forget the names now, gentlemen who preceded Sir Edward Law; I think I can cite instances.

6126. Sir James Westland and Sir Clinton Dawkins?—But they never agreed with that.

6127. No; it was suggested by an Indian to Westland who turned it down and again to Dawkins who turned it down?—With due respect to your interpretation, Sir Edward Law did say that there should be gold standard sufficient to back all the rupees and the notes. I do not deny that. But I simply say this ; that other financiers stated that no reserve was wanted and the rupee would maintain itself and Sir Edward Law stated that the reserve was wanted and he coined rupees because he wanted the reserve. In fact, I have paid sufficient compliments to the training and the notions of Westland and Dawkins for turning down the proposals. I say they were right and Sir Edward Law was certainly wrong.

6128. Sir Edward Law did not say that he coined rupees in order to provide the reserve. He said that he should hold it as a backing against the issue. It is you that put in the interpretation that he did coin rupees for the other purpose?—He says that in the dispatch. Before the Fowler Committee there were sufficient proposals of having a gold reserve and the Committee found that they were very costly, but slightly hinted that if a reserve was wanted, it might be had by coining rupees.

The two gentlemen who preceded Sir Edward Law did not think it was necessary. But Sir Edward Law said it was necessary and coined rupees. I am not making a general charge. I have given praise where it is due. I can give you also the reference.

6129. I can verify all your references. What do you want to find there?—That although the recommendation of the Fowler Committee was there that the Government of India could provide itself with gold reserve by coining rupees, Westland and Dawkins refused to pay any heed to that proposition, because they firmly believed that gold reserve was not necessary and that the rupee being limited in quantity it could maintain itself. But Sir Edward Law when he became Finance Minister felt that a reserve was necessary.

6130. Westland was the Finance Member before ever the Fowler Committee reported. I think he was away when the recommendations were brought into operation and Dawkins was the member in office when the Fowler Committee reported. But both of them turned down the suggestion which came from Indian politicians?—There is no difference of opinion on that point.

6131. The only difference is that you are imputing to Sir Edward Law that he coined rupees in order to create a reserve. I say that he did not; that in the actual dispatch he said that there was a gold reserve, I think, of 7 millions?—If so, there is a difference between us.

6132. (*Chairman.*) I cannot see what conceivable advantage it can be to anybody to increase a reserve for the fun of the thing?—Exactly, and people are under very big notions that a reserve is wanted and without a reserve a currency cannot work. I think it a very common superstition. It is there.

6133. (*Sir Alexander Murray.*) I will give you the reference, pages 276 to 278 of your book, "The Problem of the Rupee?"— Yes, Westland was there when the reforms were brought into being, page 276.

6135. What date was that?—It is the Budget speech of 1898-99 after the reforms were introduced.

6136. It was in 1894-95.—No ; Dawkins comes on the next page. My reference is to the Financial Statement for 1898-99 at page 276. Then the passage from Sir Edward Law occurs on page 278.

6137. Will you excuse me for correcting you. You said your reference was to the Budget speech of 1898-99. As a matter of fact the reference you have made is from the speech of 1894-95?— He was also Finance Minister in 1899.

6138. He turned it down in 1894-95?—I mean there was no material

difference between the Herschell Committee and the Fowler Committee and I am sorry if you think I have made any vile allegation against the gentleman.

6139. (*Sir Alexander Murray.*)—All I am doing is quoting what you say in paragraph 5 of your statement. All I say is there is danger of anybody falling into that trap.

6140. (*Chairman.*) And you maintain that in your book you have vindicated these eminent statesmen?—Yes.

6141. (*Sir Purshotamdas Thakurdas.*) In paragraph 8 you refer to various countries of the world as "hankering for a return to the pre-war parity" and you say it seems to be universal. Then you go on "There is but this difference between India and the other countries. The other countries have yet to reach the pre-war parity. India on the other hand has in fact over-reached the pre-war parity." Those other countries to which you refer have had their currency very severely depreciated during the war?—Absolutely.

6142. Not the solvent countries?—I think these countries also which are very near their old parity find it difficult to go back.

6143. For instance, which countries have you in your mind?—Well, I am talking of the proceedings of the Genoa Conference, which I do not carry in my mind, but I think for instance a country like Italy. France was at one time within measurable distance of pre-war parity.

6144. France now is perhaps worst off of all ; therefore you are there remarking a difference between India and other countries whose currency was severely dislocated during the war period and who have not yet been able to bring it round?—My point is, even if we were in a position to go back within a measurable distance it would not be always wise or advisable to go back supposing we could.

6145. I will come to that later on ; I am only trying to point out to you that it may be said the comparison you are stating here between India and the other countries is one which cannot stand as far as currency problems and conditions are concerned. So far as the "could" is concerned, I mean the difference between whether we should and whether we could even if they (those countries with depreciated currencies) wanted to they could not go back?—Very good; you have put it much better than I could have.

6146. Therefore if you compare India with the countries which got back to pre-war parity you find that those who could did go back to the pre-war parity?—Yes, for instance England ; but there was also a strong current of opinion even in England that they should not.

6147. I mean in spite of the strong current of opinion you refer to they have reconciled themselves to the pre-war parity and you do not hear much complaint now about having gone back?—I could not tell.

6148. You do not know, I see ; unless it can be said that those who went back made a mistake, there won't be anything particularly objectionable against those in India who want to return to the pre-war parity?—No, I don't say that. I am really raising the question whether it is desirable.

6149. Now regarding the desirability of it, lower down you say the view is wrong; you say both these views are fallacious. You say the restoration of pre-war parity is not a restoration of the pre-war price level. Now do you think that exchange should be used as a lever for attaining price levels?—No.

6150. Then, it does not appear to me very fallacious?—No, I say this, although you cannot always say exchange and price level move together, yet.....

6151. Excuse me, my question was, do you suggest that exchange should be used as a lever for adjusting price levels?—No, I do not say that.

6152. Therefore a change of ratio from that point of view was not desirable, as a lever for the adjustment of prices?—Yes, it was not.

6153. No country has done it unless you can show that it was particularly desirable in the case of India as an exception?—But it has happened in all countries.

6154. Which countries?—All countries.

6155. If I may make my question clearer.....?—I do not think your question was put very clearly.

6156. I sometimes do put my questions not very clearly, I admit. Which countries which could attain to pre-war parity did voluntarily go past it in order to adjust their internal price levels?— No, of course they did not do that.

6157. Therefore where is the fallacy?—Fallacy in this sense ; some people in doing this imagine they are going back to the old price level. That is a fallacy, because 1s. 4d. in 1914 is not the same as 1s. 4d. in 1925.

6158. But I mean those who do not base the demand for 1 s. 4d. on the question of prices at all, they would not be making that fallacy?—No.

6159. Then lower down you mention another point, I think.”If by restoring pre-war parity is meant the restoration of the pre-war level of

prices, then the ratio instead of being lowered from 1s. 6d. in the direction of 1s. 4d. must be raised in the direction of 2s. gold."Then you say"the restoration of pre-war parity even nominally would be unjust."What have you in your mind by the words"even nominally"?—Without looking to the price level.

6160. I thought you yourself agreed.....?—Supposing now, in 1925, 1s. 4d. is the ratio as compared to 1914, that would be only a nominal change because prices have certainly changed.

6161.. Where is the nominalness in regard to those who ask for 1s. 4d. as being the pre-war rate?—You are asking for a definite change from 1s. 6d. to 1s. 4d. I take my starting point, as I have stated at the end of the statement from what we find actually there. I say,"In short, in matters of currency the real is the normal."I therefore start from 1s. 6d. as the normal.

6162. Now supposing the exchange to-day, when we are discussing the thing, was 1 s. 8d., I take it you would urge the same ground for 1s. 8d. being confirmed as you have for 1s. 6d. being confirmed?—Yes.

6163. So whether exchange had gone up to 1s. 6d. or not the ground would prevail irrespective of what other countries have done ; and irrespective further of how that point was reached?— May I just explain it in my own way?

6164. If you please.—The way in which I look upon this problem is this. To-day we have 1 s. 6d. That to my mind means a certain price level. If you want us to go back to 1 s. 4d., it seems to me we have to raise our prices. Without increasing the volume of currency we certainly cannot reach 1 s. 4d., it seems to me we have to raise our prices. Without increasing the volume of currency we certainly cannot reach 1s. 4d. gold. Therefore the complete question to my mind. is, shall we raise our prices from what they are today, so that we can go back to 1 s. 4d.? Now I being a member of the labouring community, feel that falling prices are better. That is my view of the matter.

6165. Let me take it the other way. You say, as you put it, that, being a member of the labouring community, that means from the point of view of the labouring class it is undesirable?—Yes, and I may go further and say that from the national point of view too falling prices are better than rising prices.

6166. Now I suppose you heard the arguments that are being advanced that a high exchange, an exchange which is worked up to a higher point than where it has been 15 or 20 years at a stretch is undesirable in the interests of the producer. What would you say to that?—All that it

means is a depression of profits. I do want to make a distinction,—I do not know how far people will appreciate that,—between depression of industry and depression of profits. I think that distinction was made by Professor Marshal in his evidence before the Gold and Silver Commission. There might be a depression of profits, that is to say, the enterprising class may not get all that they would get if prices were to rise ; but it does not necessarily follow.

6167. Excuse me ; cannot I refer to the producer? We will come to the investor later if you don't mind. But what about the producer : in his case the higher the exchange the less the number of rupees available to him?—It does not matter to him at all, because he suspends it. His cost of production also falls ; therefore it makes no difference. If he got 15 rupees, and if the 15 rupees purchased a certain amount of goods, and if five years hence he got 10 rupees, and that 10 rupees purchased as much as 15 rupees before, the change is only a change of counters.

6168. When the adjustment is complete? But until then there is disturbance?—Yes.

6169. Now let us look at it as far as the present goes. You think that the average Indian cultivator rarely employs any labour and cultivates with his own hands?—Well, I suppose he does employ a certain amount of labour.

6170. In the ordinary course, for the adjustment to be complete, you would expect that the wages he pays to his labourers also go down?—Yes. I mean if he wants to get the same amount of profit, I would say yes.

6171. Very well, if the wages of the farmer's labourer have not gone down you would admit that to that extent the farmer has a smaller profit?—Smaller profit, yes, I admit that.

6172. And in cases where the farmer is just able to make both ends meet he loses?—No. He does not get profits, but he does not lose. Profit is something else ; it is surplus.

6173. Where a farmer or a class of farmers in a district make just enough to make both ends meet they would be losing, inasmuch as the labour charges have not gone down in proportion?—I do not know how you define profit. I define profit as surplus income.

6174. After paying all charges of production?—Yes.

6175. If in 1921 a farmer made both ends meet and in 1924 when exchange was stabilised at 1s. 6d. as far as his produce is concerned and his labour charges have not gone down, he would certainly make less?—He would lose part of his profits.

6176. He will save so much less?—I would stick to the word "profit."

6177. He will make less profit?—Yes; there would be a depression of profit.

6178. To that extent of course the producer will be a loser?— If you think that he had a legitimate right to that profit, then of course you would be right in saying that he loses ; but not if it was a merely differential gain.

6179. As 1s. 4d. it was merely a differential gain?—Yes.

6180. Lasting for a period of 25 or 23 years?—As I say it all depends upon how you define it.

6181. How would you define it yourself? So long as he is able to recover all that he has spent in production I do not think that he would be a loser.

6182. And you would apply that test to every person?—I would say that he has made both ends meet.

6183. Do you think that would be the maximum which the average citizen would like to apply in his own case?—I can give no opinion upon that, I am afraid.

6184. Now, you mention in paragraph 8 : "Two things must be borne in mind in this connection," and lower down you say: "Existing contracts are no doubt of various ages." What sort of contracts have you in mind there?—Leases for instance : and other contracts also, such as building contracts and so on.

6185. How would they come in with the question of exchange?—They are money contracts just the same ; they are all money contracts.

6186. Every contracts, then, you mean?—Yes.

6187. If a man was putting up a house in a mofussil rural place for 4,000 rupees, that also would come under this?—Of course ; it is investment of money.

6188. You have in mind everything that involves investment of money in the country?—Yes ; it has purchasing power.

6189. Then you say : "Given these two facts, the best solution would be to strike an average between 1s. 4d. and 1s. 6d." Why did you mention an average instead of 1 s. 6d.?—I say so because in 1925 there may be some contracts which were made when the ratio was 1s. 4d. Some contracts may be still subsisting made at that period when the purchasing power was at the rate of 1 s. 4d., and therefore to give justice to all I think that is the best way it could be done.

6190. What about contracts in the shape of debts incurred before 1914?—I do not suppose there are many existing now.

6191. You think that all these debts payable by agriculturists to sowers are paid within a certain period?—My personal opinion is that no commercial contract extends for more than five years, and the proportion of those is very -very small. There is no statistical information on this. Professor Fisher has made in his book certain calculations to that effect. He writes there that the rate of interest varies sympathetically with the prices ; so that the rate of interest bears a certain relation to the rise or fall of prices. He then comes to the conclusion that most contracts are very recent commercially.

6192. You mean about India?—I mean generally ; I do not know about India in particular; there may be something peculiar in India, but I do not know why it should be so.

6193. Do you think things in India may be different?—I should not think so unless there was some evidence forthcoming that that was so.

6194. You think that the problems in India are the same as in the West?—I do not see why they are not.

6195. It would surprise you if they happened to have been admitted to be otherwise?—It would surprise me.

6196. Regarding the adjustment of price levels, do you think that the adjustment is anything near complete now, owing to the disturbance in the exchange rate from 1s. 4d. to 1s. 6d.?—There would be some disturbance; that would be detrimental to the wage-earners if we went back from 1s. 6d. to 1s. 4d.

6197. The disturbance from the lower to the higher rate from 1s. 4d. to 1s. 6d.....?—Has been favourable to the labouring classes.

6198. Is that adjustment complete, or is there still any mal—adjustment of that?—I could not say ; that is a matter of statistical investigation which I have not entered into but I suppose exchange has been stable at 1s. 6d. for a long time.

6199. How long do you think it has been stable?—I cannot exactly say ; but certainly it shows signs of stability.

6200. How long have you any idea? Some witnesses have said six months, some eight months.....?—I think somewhere there.

6201. Do you think that six or eight months is a sufficient period for judging this stability?— say due weight should be given to it, and therefore you should strike an average.

6202. But I think you have said in the course of your oral examination that you would be prepared to agree to 1s. 6d.?— Yes, because it is nationally better; it would not inflate. That is what I say. If, even after 1 s. 6d., the process of adjustment was not complete so as to enable us to

say 1s. 6d. was really the level needed, I say we should establish it at that.

6203. Regarding the adjustment in the industries here, have you any idea at all? Can you give us any opinion?—None whatever.

6204. (*Mr. Preston*) : In case there should be any misunderstanding with regard to some of the answers which you gave to Sir Alexander Murray, in connection with that unfortunate reserve, the gold standard reserve, it may be well if we put on record some actual facts : the gold standard reserve came into being in the year 1901 and it resulted from profits earned from the previous April in 1900. The balance in the reserve to-day is 40 millions sterling, is it not?—Yes ; I think it is about that.

6204A. The Finance Minister when he made his report on currency last year made the following statement : "As will be seen from the statement, the bonds and stock purchased are due for repayment within the next few years. Of the amount now standing at the credit of the reserve, £ 27,449,950 represents profits on coinage and the remainder represents accumulated interest on securities held in the reserve." You say that this reserve cannot increase unless there is more rupee coinage. How has that increase of one-third in the last three years come about?—By interest on investments.

6205. Then if the interest on that reserve is kept being added to it, you are increasing that reserve for a useful purpose without having to adopt those methods which you so very strongly deprecate?—Yes, undoubtedly.

6206. Just one more point as to the usefulness of that reserve. It will be within your knowledge that in the period of the world's depression in 1908 that had it not been for that very reserve we could never have maintained our external parity; you admit that?—Yes.

6207. Thank you?—Although, of course, something has gone in to which I ought to take exception—by saying that I am in favour of increasing the gold standard reserve by investments. If a reserve is invested there is no reserve at all.

6208. (*Sir Reginald Mant.*) I understand your chief desideratum is stability of internal prices?—Quite.

6209. And you hold that that stability will then be linked to gold prices, will they not? They will vary with the gold prices?—Yes.

6210. Internal prices will then be linked to gold prices, will they not? They will vary with the gold prices?— Yes.

6211. Now a gold exchange standard without a gold currency has been recommended by several people with the same object in view ; but I understand you to hold that it will not achieve that object?—I think it

has not, so far as India is concerned.

6212. I was not speaking of what has been done in the past ; it has been represented to us that if a gold exchange standard were made automatic it could secure those objects?—I do not know ; there may be some people who hold that view, but I cannot see how it could be held.

6213. i want you to explain why a gold currency would achieve it and the gold exchange standard would not?—My first ground is this : that the exchange standard depreciates gold and makes it therefore useless as a standard of value. A gold exchange standard causes a redundancy of gold by its economy.

6214. Ought you not to put it the other way, and say that if we introduce a gold currency here we shall appreciate gold ; would not that be a more correct way of putting it?—You might put it that way, yes. Therefore under the present circumstances gold would behave as a better standard of value. My next submission is this, are we really effecting economy by the exchange standard?

6215. I was not raising the question of economy. I was trying to get at the reason for your holding that nothing but a gold currency would effect your object of keeping internal prices linked with gold?—Stable than they would be otherwise is what I said. If we adopted a gold standard our prices would be more stable than they would be under an exchange standard. I did not say that under a gold standard they would be perfectly stable because gold itself is not a perfectly stable standard of value ; but certainly it would be more stable than under an exchange standard.

6216. Because simply we should be using more gold?—Yes.

6217. That is your only reason for differentiation?—Yes.

6218. (*Sir Maneckji Dadabhoj.*) Let me proceed a step further with regard to the answers you gave to Sir Purshotamdas Thakur-das : in paragraph 8 you say "Existing contracts are no doubt of various ages ; but the great bulk of them are of very recent date and probably not more than one year old ; so that it may be said that the centre of gravity of the total contractual obligations is always near the present." When you are referring to this matter, I understand you are speaking without any definite statistics?—Yes ; I simply say there has been a calculation made by Professor Fisher.

6219. You state this as a sort of generalisation?—Yes. I said I had no definite information.

6220. When you speak of a centre of gravity of the total contractual obligations being near the present, it is not a very definite term. Would

not that centre of gravity come within the circumference of twelve months?—Yes, somewhere about that ; because I have said one year old.

6221. So that, if a certain ratio prevailed twelve months ago, we would be, according to your reasoning, as much justified in taking that as 1s. 6d.?—Quite ; yes.

6222. So you would be as much justified in taking that?—Yes.

6223. Then when discussing this matter and when you expressed your election in favour of the 1s. 6d. ratio. I understand you founded your opinion on the dictum of Professor Fisher?— Yes.

6224. Now we have got this dictum of Professor Fisher before us ;the words used are :—”The problem of a just standard of money looks forward rather than backward; it must take its starting point from the business now current, and not from imaginary parts before the war.”?— Exactly.

6225. Don't you think that Professor Fisher when he laid down that dictum had European conditions before him only?—Yes, but that would apply almost to any country. It is a general proposition.

6226. My question is did he not have European conditions in view only when he said that?—I cannot say.

6227. (*Chairman.*) The witness replied that he thought it would apply to any conditions?—Yes, it is a general proposition.

6228. (*Sir Maneckji Dadabhoj.*) Is that conclusion justified by these expressed words?—I should think it is.

6228A. You think it is?—He says further, he does not only refer to the war,—he says :”One might as well talk of restoring the original silver pound or returning the monetary standards of Greece and Rome.”

6229. Now, you know very well that this ratio of 1s. 6d. has continued in India for the last 16 months only. Now, if we take this period 16 months in Indian conditions, what would you say when you think of any imaginary parts before the war? Do you think in India a period of 16 months would make any substantial difference in coming to a conclusion? He is referring to the imaginary parts before the war ; he takes a longer period?—No, no. He is simply referring back to 1914, to the parity which existed in 1914. I say, if according to information 1s. 6d., has been in existence for 16 months, then I say it ought to be confirmed.

6230. Yes. But if previous to that, with a brief interval of some years, it has ranged equally for 20 years at 1 s. 4d. you would brush aside all those considerations?—Yes, because there are no contracts now existing

that were made 20 years ago. And therefore we need not be concerned about it.

6231. This is your argument? And you would also brush aside its economic effect both on agriculture and on the industries of the country?—I say they will be very good. By bringing the ratio to 1 s. 6d. I say there might be some depression of profits, but there won't be depression of industry.

6232. Yes. So you don't attach great value to those factors. You think on the whole it will be for the good of the country?—Yes.

6233. I will put you another question, a little bit imaginary. We will take 6 months to write out our report. Within the next 6 months if the ratio becomes 1s. 8d. I suppose you would be justified in taking that according to you as the basis of your calculation?— Then I would again say, you should strike an average.

6234. Between 1 s. 8d. and 1 s. 6d. or 1 s. 4d?—Between 1 s. 8d. and 1s. 6d.

6235.. And you think that would be a sound financial polity?—Well I don't know. You have to strike some sort of average. You can't do justice to each individual contract. For instance, if you take the example of the American War of Independence and the monetary fluctuations that took place then, all that the Americans could do was of course to do this kind of thing.—to strike an average and to dissolve all contracts on that basis. They could not do justice to each individual contract. It is impossible.

6236. (*Sir Henry Strakosch.*) Dr. Ambedkar, I want to refer back to some statements which you made in regard to the undesirability of introducing a gold exchange standard. At one period of your evidence you stated that the convertibility into exchange would not limit the issue of the currency and would therefore not produce stability of internal prices. That was one of the objections you raised and then at another point you said that the gold exchange standard is not a desirable standard because prices would be less stable under it than under a full-fledged gold standard?—Yes.

6237. Now, you are a student of economic affairs and you have no doubt followed the proceedings of the Genoa Conference?—Well, I did when I was in London. Recently of course I have not. But I know that the gold exchange standard was proposed.

6238. Well, you will remember that the Genoa Conference an International Conference adopted unanimously a proposal enjoining the countries to adopt the gold exchange standard with a view to stabilising

the purchasing power of gold and that they recommended for that purpose the co-operation of central banks?— I don't suppose they did it with a view to stabilising the purchasing power of gold ; they did it to stabilise their own currency.

6239. They stated definitely it was to stabilise the purchasing power of gold. Anyway, you can take it from me that it is so. Now, that is an international body and they have come to that conclusion and they apparently do not share your view that the gold exchange standard does not produce, as great a measure of stability internally as the gold standard?—Oh no. My submission is that we are comparing the gold exchange standard to a purely inconvertible standard. The belligerent countries had during the war an absolutely inconvertible currency and certainly an inconvertible currency is much worse than an exchange standard because it has some convertibility. As I have stated myself in sub-paragraph (2) to paragraph 2. They were not comparing the gold standard to the gold exchange standard; they were comparing the gold exchange standard with the paper currency they had.

6240. But I submit they did not compare at all. They made a recommendation?—But in reference to the circumstances that existed then—1 should limit it that way.

6241. Well, anyway, that is a fact. Now, quite apart from that, I am not quite sure what makes you think, apart from a change in the purchasing power of gold itself, why the gold exchange standard should not be as stable as the gold standard. I don't quite follow that, and, before you answer, I should like just to define what I understand by a gold exchange standard. A gold exchange standard is a standard where there is circulating within the country a currency which is not convertible internally, but which is freely convertible externally, and you could make that currency convertible into gold for export purchases. Now, taking that standard, I should be very glad if you would tell us why such a standard is less able to maintain stability than a gold standard?—1 follow your question, Sir. And my reply is this. Convertibility is a means of limiting the volume of currency to the needs of a country. A convertibility which is intended only for external purposes is not of sufficient efficacy to limit the volume of that currency. Consequently you cannot have stable internal prices to such a currency.

6242. Why do you say that it is less efficacious than convertibility for internal purposes?—Because convertibility to be effective must be absolute.

6243. But it is absolute?—It is not.

6244. But obviously it is. It is absolute. The difference is only that in the one case you convert into international money for international purposes, and in the other case you convert for either international money which is used internationally or international money which circulates within the country?—No, no. The point is this. When your obligations to convertibility are imperfect as in the case of the exchange standard you are likely to issue more currency without fear.

6245. But you just said that the obligation to convert limits the issue in both cases?—Yes, but converting depends upon the efficacy of the means of convertibility. If your convertibility is absolute, that is to say, if an issuer is bound to convert whenever he is presented with his currency, then that convertibility is absolute.

6246. But my proposition was that the gold exchange standard binds the issuing authority to convert the internal token currency into gold for external purposes?—And not for all purposes.

6247. Now, I want to know why the obligation to convert the token currency for internal purposes should increase the stability of the purchasing power of that money?—Because the principle is that any commodity, and currency included, maintains itself by the fact that it is limited in volume, in supply. That is the first elementary proposition of political economy ; that any commodity maintains itself by reason of the fact that the supply is limited. If the commodity supplied is not limited, it is bound to depreciate.

6248. Do you then contemplate that in your gold standard with gold currency, there should be nothing but gold coin circulating?—No, I say that the rupee shall circulate.

6249. And no bank notes?—Yes, there will be bank notes : why not?

6250. Then, I don't see how you are limiting more effectively the internal issue in the one case than in the other?—Because I am saying that the mint shall be closed.

6251. What about the issue of bank notes?—They are covered. A covered note issued is not an addition to currency. Supposing you deposit a certain amount of gold in the bank and you issue so much currency to cover it, that currency is not an addition to the currency.

6252. Oh, you want to have notes covered by 100 per cent. gold?—Well, I don't say 100 per cent gold.

6253. Then how will you limit it?—I mean convertibility is a method of limitation. I will have paper currency which is fully, absolutely convertible and not merely for the purposes of external trade. And I will have the rupee absolutely fixed in limit. So that it will maintain its value

by reason of the fact that it is limited. The paper currency will maintain its value by reason of the fact that it is convertible.

6254. And how will you manage the seasonal requirements of currency?—Well, I say you can expand the fiduciary portion of the currency so as to allow for currency being issued against paper during seasonal demand.

6255. Do you not put it here at the discretion and will of the issuer?—Yes, but there is this convertibility which regulates the discretion. Convertibility is a means by which the will of the issuer is regulated. There will be no danger. Although I admit that even under the gold standard, the gold may absolutely pass out and the country may only be inundated with paper notes.

6256. Would you say that the obligation to convert into an international currency at two given gold points is sufficient to ensure the stability of money, because, if you over-issue internally, your money will depreciate in relation to gold?—Yes, I admit it, but it will be long after. There will be a long interval before that thing may happen and in the case of some countries, it may not happen.

6257. How was the gold standard worked before the war in Europe and other countries?—It worked on the basis of convertibility, not only convertibility for external purposes.

6258. But was that standard not in the main worked, by the central banks not converting into gold but holding foreign exchange, and only in the last resort was gold flowing from one centre to another?—But their arrangements as to convertibility were perfect and absolute.

6259. You also know that a great many of the countries on the Continent of Europe who had perfectly stable currencies had practically no gold in circulation?—Yes that was so.

6260. (*Chairman.*) We are much obliged to you Doctor, for your very full assistance today.

(*The witness withdrew.*)

FEDERATION VERSUS FREEDOM

(Kale Memorial Lecture)

Address delivered on 29th January 1939 at the Annual Function
of
*the Gokhale Institute of Politics and Economics held in the Gokhale Hall,
Poona*

FEDERATION VERSUS FREEDOM

PREFACE

A word or two as regards the origin of this tract and the motive which has led me to publish it at this time will, I think, not be out of place.

Many in this country must be aware that there exists in Poona an

institution which is called the GOKHALE INSTITUTE OF POLITICS AND ECONOMICS, WORKING under the direction of Dr. D. R. **GADGIL**.

The Institute holds a function annually to celebrate what is called the Founder's Day and invites some one to deliver an address on some subject connected with politics or economics. This year, I was asked by Dr. Gadgil to deliver an address. I accepted the invitation and chose the Federal Scheme as the subject of my address. The address covered both (1) the structure of the Federation and (2) a critique of that structure. The address was delivered on 29th January 1939 at the Gokhale Hall in Poona. The address as prepared had become too lengthy for the time allotted to me and although I kept the audience for two hours when usually the time allotted for such address is one hour I had to omit from the address the whole of the part relating to the Federal structure and some portion from the part relating to the criticism of the structure. This tract, however, contains the whole of the original address prepared by me for the occasion.

So much for the origin of this tract. Now as to the reasons for publishing it. All addresses delivered at the Gokhale Institute are published. It is in the course of things that this also should be published. But there are other reasons besides this, which have prevailed with me to publish it. So far as the Federation is concerned, the generality of the Indian public seems to be living in a fog. Beyond the fact that there is to be a Federation and that the Federation is a bad thing the general public has no clear conception of what is the nature of this Federation and is, therefore, unable to form an intelligent opinion about it. It is necessary that the general public should have in its hand a leaflet containing an outline of the Federal structure and a criticism of that structure in small compass sufficient to convey a workable understanding of the Scheme. I feel this Tract will supply this need.

I also think that the publication of this tract will be regarded as timely. Federation is a very live issue and it is also a very urgent one. Soon the people of British India will be called upon to decide whether they should accept the Federal Scheme or they should not. The premier political organization in this Country, namely, the Congress seems to be willing to accept this Federation as it has

accepted Provincial Autonomy. The negotiations that are going on with the Muslim League and the manoeuvres that are being carried on with the Indian States give me at any rate the impression that the Congress is prepared to accept the Federation and that these negotiations and manoeuvres are designed to bring about a working arrangement with other parties so that with their help the Congress may be in the saddle at the Centre as it has been in the Provinces. Mr. Subhas Chandra Bose has even gone to the length of suggesting that the right wing of the Congress has committed itself to this Federation so far that it has already selected its cabinet. It matters not whether all this is true or not. I hope all this is untrue. Be that as it may, the matter is both grave and urgent, and I think all those who have anything to say on the subject should speak it out. Indeed I feel that silence at such a time will be criminal. That is why I have hastened to publish my address. I believe that I have views on the subset of Federation which even if they do not convince others will at least provoke them to think.

1-3-39

Rajgraha Dadar, Bombay 14

B. R. AMBEDKAR

INTRODUCTORY

Dr. Gadgil and students of the Gokhale Institute,

I feel greatly honoured by your invitation to address you this evening. You have met today to celebrate a day which is set out as your Founder's Day. I had the privilege of personally knowing the late Rao Bahadur R. R. Kale the founder of your Institute. He was my colleague in the old Bombay Legislative Council. I know how much care and study he used to bestow upon every subject which he handled. I am sure he deserves the gratitude of all those who care for knowledge and study for helping to establish this Institute, whose main function as I understand is to dig for knowledge and make it ready for those who care to use it. For, first knowledge is power as nothing else is, and secondly, not all those who wish and care for knowledge have the leisure and the patience to dig for it. As one who believes in the necessity of knowledge and appreciates the difficulties in its acquisition I am glad to be associated in this way with him and with the Institute he has founded.

The theme I have chosen for the subject matter of my address is

the Federal Scheme embodied in the Government of India Act, 1935. The title of the subject might give you the impression that I am going to explain the Federal Constitution. That would be an impossible task in itself. The Federal Scheme is a vast thing. Its provisions are contained, first in 321 sections of the Government of India Act, 1935, secondly in the 9 Schedules which are part of the Act, thirdly in 31 Orders-in-Council issued under a the Act and fourthly the hundreds of Instruments of Accession to be passed by the Indian States. Very few can claim mastery over so vast a subject and if any did he would take years to expound it in all its details.

I have set to myself a very limited task. It is to examine the scheme in the light of certain accepted tests and to place before you the results of this examination so that you may be in a position to form your own judgment regarding the merits of the scheme. It is true that I cannot altogether avoid setting out the outlines of the scheme. In fact, I am going to give an outline of the scheme. I realize that it is an essential preliminary without which my criticism might remain high up in the air. But the outline I am going to draw for my purpose will be the briefest and just enough to enable you to follow what I shall be saying regarding the merits of the scheme.

II

BIRTH AND GROWTH OF INDIAN FEDERATION

There are five countries which are known in modern times to have adopted the federal form of Government. They are : (1) U.S.A., (2) Switzerland, (3) Imperial Germany, (4) Canada and (5) Australia. To these five it is now proposed to add the sixth which is the All-India Federation.

What are the constituent units of this Federation? For an answer to this question refer to section 5. It says :

Proclamation of Federation of India

"5. (1) It shall be lawful for His Majesty, if an address in that behalf has been presented to him by each House of Parliament and if the condition hereinafter mentioned is satisfied, to declare by Proclamation that as from the day therein appointed there shall be united in a Federation under the Crown, by the name of the Federation of India,—

(a) 'The Provinces hereinafter called Governors' Provinces;
and

- (b) the Indian States which have acceded or may thereafter accede to the Federation; and in the Federation so established there shall be included the Provinces hereinafter called Chief Commissioners' Provinces.
- (2) The condition referred to is that, States—
- (a) the Rulers whereof will, in accordance with the provision contained in Part II of the First Schedule to this Act be entitled to choose not less than fifty-two members of the Council of State; and
- (b) the aggregate population whereof, as ascertained in accordance with the said provisions, amounts to at least one-half of the total population of States, as so ascertained, have acceded to the Federation."

Leaving aside the conditions prescribed by this Section for the inauguration of the Federation it is clear that the Units of the Federation are (1) The Governors' Provinces, (2) Chief Commissioners' Provinces and (3) The Indian States.

What is the size of this Indian Federation?

Many people when they speak of the Indian Federation do not seem to realize what an enormous entity it is going to be—

Population		Area	Units
U.S.A.	122,775,040	2,973,773	48 States plus 1 Federal Dist.
Germany	67,000,000	208,780	25
Switzerland	466,400	15,976	22
Canada	10,376,786	3,729,665	9
Australia	6,629,839	2,974,581	6
India	352,837,778	1,806,679	162

The Indian Federation in point of area is 3/5th of U.S.A. and of Australia and half of Canada. It is 9 times of Germany and 120 times of Switzerland. In point of population it is 3 times of U.S.A., 5 times of Germany, 35 times of Canada, 58 times of Australia and 88 times of Switzerland. Measured by the Units which compose it, it is 3 times larger than U.S.A., 6 1/2 times larger than Germany, 8 times larger than Switzerland, 18 times larger than Canada and 27 times

larger than Australia. Thus the Indian Federation is not merely a big federation. It is really a monster among federations.

What is the source from which the Federation derives its Governmental Powers and Authority?

Section 7 says that the executive authority of the Federation shall be exercised on behalf of His Majesty by the Governor-General. That means that the Authority of the Federation is derived from the Crown. In this respect the Indian Federation differs from the Federation in the U.S.A. In the U.S.A., the powers of the Federation are derived from the people. The people of the United States are the fountain from which the authority is derived. While it differs from the Federation in the U.S.A. the Indian Federation resembles the Federations in Australia and Canada. In Australia and Canada the source of the Authority for the Federal Government is also the Crown and Section 7 of the Government of India Act is analogous to section 61 of the Australian Act and section 9 of the Canadian Act. That the Indian Federation should differ in this respect from the American Federation and agree with the Canadian and Australian Federation is perfectly understandable. The United States is a republic while Canada and India are dominions of the Crown. In the former the source of all authority are the people. In the latter the source of all authority is the Crown.

From where does the Crown derive its authority?

Such a question is unnecessary in the case of Canada and Australia, because the Crown is the ultimate source of all authority and there is nothing beyond or behind, to which his authority is referable. Can this be said of the Indian Federation? Is the Crown the ultimate source of authority exercised by the Federation? Is there nothing beyond or behind the Crown to which this authority needs to be referred? The answer to this question is that only for a part of the authority of the Federation the Crown is the ultimate source and that for remaining part the Crown is not the ultimate source.

That this is the true state of affairs is clear from the terms of the Instrument of Accession. I quote the following from the draft instruments :—

"Whereas proposals for the establishment of a Federation of India comprising such Indian States as may accede thereto and the Provinces of British India constituted as Autonomous Provinces have been discussed between representatives of His Majesty's Government of the Parliament of the United Kingdom, of British

India and of the Rulers of the Indian States;
 And Whereas those proposals contemplated that the Federation of India should be constituted by an Act of the Parliament of the United Kingdom and by the accession of Indian States ;
 And Whereas provision for the constitution of a Federation of India has now been made in the Government of India Act, 1935;
 And Whereas that Act provided that the Federation shall not be established until such date as His Majesty may, by proclamation, declare, and such declaration cannot be made until the requisite number of Indian States have acceded to the Federation:
 And Whereas the said Act cannot apply to any of my territories save by virtue of my consent and concurrence signified by my accession to the Federation;

Now, therefore, I (insert full name and title). Ruler of (insert, name of State), in the exercise of my sovereignty in and over my said State for the purpose of co-operating in the furtherance of the interests and welfare of India by uniting in a Federation under the Crown by the name of the Federation of India with Provinces called Governors' Provinces and with the Provinces called Chief Commissioners' Provinces and with the Rulers of other Indian States do hereby execute this my Instrument of Accession, and hereby declare that subject to His Majesty's acceptance of this Instrument, accede to the Federation of India as established under the Government of India Act, 1935."

This is a very important feature of the Indian Federation. What has brought about this difference between the Indian Federation and the Canadian and Australian Federation? For what part is the Crown the ultimate source and for what part is it not? To understand these questions you must take note of two things. First, the Indian Federation comprises two distinct areas : British India and Indian States. This will be clear if you refer to section 5. Second, the relationship of these two 'areas with the Crown is not the same. The area known as British India is vested in the Crown while the area comprised in an Indian State is not vested in the Crown but is vested in the Ruler, This *is* clear if you refer to sections 2 and 311. The territory of British India being vested in the Crown the sovereignty over it belongs to the Crown and *the* territory of an Indian State being vested in the Ruler of the State the sovereignty over the State belongs to the Ruler of the State.

You will now understand why I said that in the Indian Federation

the Crown is the ultimate source for a part of its authority and for the remaining part the Crown is the ultimate source of authority of the Indian Federation in so far as British India is part of the Federation. The Indian Ruler is the ultimate source of authority in so far as his State is part of this Federation. When therefore section 7 says that the Executive Authority of the Federation shall be exercised by the Governor-General on behalf of the Crown it must *be* understood that Crown's authority which is delegated by him to the Governor-General in the working out of the Indian Federation is partly its own and partly derived from the Rulers of the Indian States.

What is the process by which the Crown acquires the authority which belongs to the Ruler of an Indian State? The process is known under the Indian Act as Accession. This Accession is effected by what is called an Instrument of Accession executed by the Ruler of a State. The provisions relating to the instrument of Accession are contained in section 6(1). That section reads as follows :-

“6. A State shall be deemed to have acceded to the Federation if His Majesty has signified his acceptance of an Instrument of Accession executed by the Ruler for himself, his heirs and successors—

- (a) declares that he accedes to the Federation as established under this Act, with the intent that His Majesty the King, the Governor-General of India, the Federal Legislature, the Federal Court and any other Federal Authority established for the purposes of the Federation shall by virtue of his Instrument of Accession, but subject always to the terms thereof, and for the purposes only of the Federation, exercise in relation to his State such functions as may be vested in him by or under this Act; and
- (b) assumes the obligation of ensuring that due effect is given within his State to the provisions of this Act so far as they are applicable therein by virtue of his Instrument of Accession.”

It is this Instrument of Accession which confers authority upon the Crown in the first instance so far as an Indian State is part of the Federation and it is because of this that the Crown's Authority in and over this Federation is derivative in part.

This is the law as to the birth of the Federation. What is the law as to the growth of this Federation? In other words what is the law as to change? The law as to change is contained in section 6(1)(a).

Schedule II and section 6(5).

Section 6(1)(a) makes it clear that the accession by a Prince, effected through his Instrument of Accession, is "to the Federation as established by this Act." Schedule II deals with future amendment of the Constitution. It declares what are the provisions in the Government of India Act an amendment of which will be deemed to affect the Instrument of Accession and what are the provisions an amendment of which will not affect the Instrument of Accession by the States.

Section 6(5) does two things. In the first place it provides that the Instrument of Accession shall be deemed to confer upon Parliament the right to amend these provisions which are declared by Schedule II as open to amendment without affecting the Instrument of Accession. In the second place it provides that although Parliament may amend a provision of the Act which is declared by Schedule II as open to amendment without affecting the Instrument of Accession such an amendment shall not bind the States unless it is accepted as binding by the State by a supplementary Instrument of Accession.

To sum up, the units of this Federation do not form one single whole with a common spring of action. The units are separate. They are just held together. For some purposes the position of the units cannot be altered at all. For some purposes alteration is permissible but such alteration cannot bind all the units alike. Some will be bound by it but some will not be unless they consent to be bound. In other words in this Federation there is no provision for growth. It is fixed. It cannot move. A change by evolution is not possible and where it is possible it is not binding unless it is accepted.

III

THE STRUCTURE OF THE FEDERATION

(a) The Federal Legislature

The Federal Legislature is a bicameral legislature. There is a Lower House which is spoken of as the Legislative Assembly and there is an Upper House which is called the Council of State. The composition of the two Chambers is a noteworthy feature. They are very small Chambers compared with other legislatures having regard to the population and the area as the total membership of the Federal Assembly is 375 and of the Council of State 260. These seats are divided in a certain proportion between British India and the

Indian States. Of the 375 seats in the Federal Assembly 250 are allotted to British India and 125 to the Indian States. In the Council of State, out of the 260 seats, 156 are allotted to British India and 104 to the Indian States. It may be noticed that distribution between British India and the Indian States is not based upon an equalitarian principle. It is possible to take the population as the basis of representation. It is also possible to take the revenue as the basis of representation. But neither of these has been taken as the basis of distribution of seats. Whether you take population as the basis or whether you take revenue as the basis, you will find that British India has been under-represented, while the Indian States have been over-represented in the two Chambers. The method of filling the *seats* is also noteworthy. The representatives of the British India in both the Chambers will be elected. The representatives of the Indian States, on the other hand, are to be appointed i.e., nominated, by the Rulers of the States. It is open to a Ruler to provide that the representatives of his State, though appointed by him, may be chosen by his subjects but this is a matter which is left to his discretion. He may appoint a person who is chosen by his people or he may, if he pleases, do both, choose and appoint. In the final result a State's representative is to be appointed by the Ruler as distinguished from being elected by the people. In the case of British India, the representatives are to be elected, but here again there is a peculiarity which may be noticed. In the case of all bi-cameral Legislatures the Lower House being a popular house is always elected directly by the people, while the Upper House being a revising Chamber is elected by indirect election. In the case of the Indian Federation this process is reversed. The Upper Chamber will be elected by direct election by the people and it is the Lower Chamber which is going to be elected indirectly by the Provincial Legislatures. The life of the Federal Assembly is fixed for a term of five years, although it may be dissolved sooner. The Council of State on the other hand is a permanent body not liable to dissolution. It is a body which lives by renewal of a third part of its membership every three years.

Now the authority of the two Chambers to pass laws and to sanction expenditure may be noted. With regard to the authority to pass laws some constitutions make a distinction between money bills and other bills and provide that with regard to money bills the Upper Chamber shall not have the power to initiate such a bill, and also that the Upper Chamber shall not have the authority to reject it. It is

given the power only to suspend the passing of the bill for a stated period. The Indian constitution makes no such distinction at all. The money bills and other bills are treated on the same footing and require the assent of both the Chambers before they can become law. The only distinction is that while according to section 30(7) a bill which is not a money bill may originate in either Chamber, a money bill, according to section 37, shall not originate in the Upper Chamber. But according to section 3(2) a money bill needs the assent of the Upper Chamber as much as any other bill.

With regard to the authority to sanction expenditure: here again there is a departure made in the accepted principles of distributing authority between the two Chambers when a Legislature is bicameral.

According to section 31(7) the Annual Financial Statement of estimated receipts and expenditure shall be laid before both Chambers of the Federal Legislature and shall, of course, be open to discussion in both the Chambers. Not only are they open to discussion in both the Chambers, they are also subject to the vote of both the Chambers. Section 34(2) requires that the expenditure shall be submitted in the form of demands for grants to the Federal Assembly and thereafter to the Council of State and either Chamber shall have the power to assent to or refuse any demand, or to assent to any demand subject to a reduction of the amount specified therein.

It will thus be seen that the two Chambers are co-equal in authority, both in the matter of their authority to pass laws and in the matter of sanctioning expenditure. A conflict between the two Chambers cannot end by one Chamber yielding to the other if that Chamber does not wish so to yield. The procedure adopted for the resolving of differences between the two Chambers is the method of joint sessions. Section 31 (1) deals with the procedure with regard to joint sessions where the conflict relates to a bill. Section 34(3) relates to the procedure where the conflict relates to the differences with regard to sanctioning of expenditure.

(b)

(b) The Federal Executive

The constitution of the Federal Executive is described in section 7(1). According to this section the executive Authority of the Federation is handed over to the Governor-General. It is he who is the Executive Authority for the Federation. The first thing to note about this Federal Executive is that it is a unitary executive and not a

corporate body. In India ever since the British took up the civil and military government of the country, the executive has never been unitary in composition. The executive was a composite executive. In the Provinces it was known as the Governor-in-Council. At the Centre it was known as the Governor-General-in-Council. The civil and military government of the Provinces as well as of India was not vested either in the Governor or in the Governor-General. The body in which it was vested was the Governor with his Councillors. The Councillors were appointed by the King and did not derive their authority from the Governor-General. They derived their authority from the Crown and possessed co-equal authority with the Governor and the Governor-General and, barring questions where the peace and tranquillity of the territory was concerned, the Governor and the Governor-General were bound by the decision of the majority. The constitution, therefore, makes a departure from the established system. I am not saying that this departure is unsound in principle or it is not justified by precedent or by the circumstances arising out of the necessities of a federal constitution. All I want you to note is that this is a very significant change.

The next thing to note about the Federal Executive is that although the Governor-General is the Executive Authority for the Federation, there are conditions laid down for the exercise of his powers as the Federal Executive. The constitution divides the matters falling within his executive authority into four classes and prescribes how he is to exercise his executive authority in respect of each of these four classes. In certain matters the Governor-General (1) is to act in his own discretion; (2) In certain matters he is to act on the advice of his Ministers; (3) in certain matters he is to act after consultation with his Ministers, and (4) in certain matters he is to act according to his individual judgment. A word may be said as to the *de jure* connotation that underlies these four cases of the exercise of the executive authority by the Governor-General. The best way to begin to explain this *de jure* connotation is to begin by explaining what is meant by "acting on the advice of his ministers." This means, in those matters the government is really carried on, on the authority of the Ministers and only in the name of the Governor-General. To put the same thing differently, the advice of the Ministers is binding on the Governor-General and he cannot differ from their advice. With regard to the matters where the Governor-General is allowed, "to act in his discretion" what is meant is that the Government is not only

carried on in the name of the Governor-General, but is also carried on the authority of the Governor-General. That means that there can be no intervention or interference by the Ministers at any stage. The Ministers have no right to tender any advice and the Governor-General is not bound to seek their advice; or to make it concrete, the files with regard to these matters need not go to the Ministers at all. "Acting in his individual judgment" means that while the matter is within the advisory jurisdiction of the Minister, the Minister has no final authority to decide. The final authority to decide is the Governor-General. The distinction between "in his discretion" and "in his individual judgment" is this that while in regard to matters falling "in his discretion" the Ministers have no right to tender advice to the Governor-General the Ministers have a right to tender advice when the matter is one which falls under "his individual judgment". To put it differently in regard to matters which are subject to his individual judgment the Governor-General is bound to receive advice from his ministers but is not bound to follow their advice. He may consider their advice, but may act otherwise and differently from the advice given by the Ministers. But in respect of matters which are subject to his discretion he is not bound even to receive the advice of his Ministers. The phrase "after consultation" is a mere matter of procedure. The authority in such matter vests in the Governor-General. All that is required is that he should take into account the wishes of the Ministers. Cases relating to "acting after consultation" may be distinguished from cases relating to "individual judgment" in this way. In cases relating to "individual judgment" the authority vests in the Ministers. The Governor-General has the power to superintend and, if necessary, overrule. In the cases falling under "after consultation", the authority belongs to the Governor-General and the Ministers have the liberty to say what they wish should be done.

(c) (c) The Federal Judiciary

The Government of India Act provides for the constitution of a Federal Court as part of the Federal Constitution. The Federal Court is to consist of a Chief Justice and such Puisne Judges as His Majesty thinks necessary, their number not to exceed six until an address is presented by the Legislature asking for an increase. The Federal Judiciary has original as well as appellate jurisdiction. Section 204, which speaks of the Original Jurisdiction of the Federal Court, prescribes that, that Court shall have exclusive Original Jurisdiction

in any dispute *between* the Federation, the Provinces and the federated States which involves any question of law or fact on which the existence or extent of a legal right depends. This section, however, provides that if a State is party then the dispute must concern the interpretation of the Act or an Order in Council thereunder, or the extent of the legislative or executive authority vested in the Federation by the Instrument of Accession or arise under an Agreement under Part VI of the Act for the administration of a federal law in the States, or otherwise concern some matter in which the Federal Legislature has power to legislate for the States or arise under an agreement made after federation with the approval of the Representative of the Crown between the States and the Federation or a Province, and includes provision for such jurisdiction. Even this limited jurisdiction of the Federal Court over the States is further limited by the proviso that no dispute is justifiable if it arises under an agreement expressly excluding such jurisdiction.

The appellate jurisdiction of the Federal Court is regulated by section 205 and section 207. Section 205 says that an appeal shall lie to the Federal Court from any judgment, decree or final order of a High Court in British India if the High Court certified that the case involves a substantial question of law as to the interpretation of this Act or an Order in Council made thereunder. Section 207 relates to appeal from decision of Courts of the Federated States. It says that an appeal shall be to the Federal Court from a Court in a federated State on the ground that a question of law has been wrongly decided, being a question which concerns the interpretation of this Act or of any Order in Council made thereunder or the extent of the legislative or executive authority vested in the Federation by virtue of the Instrument of Accession of that State or arises under an Agreement made under Part VI of this Act in relation to the administration in that State of a law of the Federal Legislature ; but sub-section (2) to section 207 provides that an appeal under this section shall be by way of a special case to be stated for the opinion of the Federal Court by a High Court, and the Federal Court may require a case to be so stated.

Two further points with regard to the Federal Judiciary may be noted. The first is the power of the Federal Court to execute its own orders. The Federal Court has no machinery of its own to enforce its orders. Section 210 provides that the orders of the Federal Court shall be enforceable by all courts and authorities in every part of

British India or of any Federated State as if they were orders duly made by the highest court exercising civil or criminal jurisdiction as the case may be in that part. The instrumentality, therefore, which the Federal Court can use for the enforcement of its own orders consists of the administrative machinery of the units of the Federation. The units of the Federation are bound to act in aid of the Federal Court. This is different to what prevails for instance, in the United States of America, where the Supreme Court has its own machinery for enforcing its own orders.

The second point to note with regard to the Federal Court is the question of the powers of the Executive to remove the judges and the power of the Legislature to discuss their conduct. In this respect also the Federal Court stands on a different footing from the Federal Courts in other Federations. The Constitution does not give the Governor-General the power to suspend a Judge of the Federal Court. It forbids any discussion of a judge's judicial conduct by the Legislature. This, no doubt, gives the judge of the Federal Court the greatest fixity of tenure and immunity from interference by the Executive or by the Legislature. To remove the Judiciary from the control of the Executive it has been found necessary that the tenure of a judge must not be subject to the pleasure of the Executive. All constitutions, therefore, provide that the tenure of a judge shall be during good behaviour and that a judge shall be removable only if address is presented by the Legislature pronouncing that he is not of good behaviour. Some such authority must be vested in somebody which should have the power to pronounce upon the good behaviour of a judge. This provision is absent in the Federal Constitution, so that a Judge of the Federal Court once appointed is irremovable from his place till retirement, no matter what his conduct during that period may be. Instead of this power is given to His Majesty under section 200(2)(b) to remove a Judge of the Federal Court on the ground of misbehaviour or infirmity of body or mind if the Judicial Committee of the Privy Council reports that he may be removed on any such ground.

IV

POWERS OF THE FEDERATION

Before I describe the powers of the Federal Government it might be desirable to explain what is the essence of a Federal Form of Government.

There is no simpler way of explaining it than by contrasting it with

the Unitary Form of Government.

Although the Federal Form of Government is distinct from the Unitary form, it is not easy to see distinction. On the other hand there is, outwardly at any rate, a great deal of similarity between the two. The Government of almost every country in these days is carried on by an inter-related group of Administrative Units operating in specific areas and discharging specific public functions. This is true of a country with a Federal Form of Government and also of a country with a Unitary form of Government. In a Federal Constitution there is a Central Government and there are inter-related to it several Local Governments. In the same way in a Unitary Constitution there is a Central Government and there are inter-related to it several Local Governments. On the surface, therefore, there appears to be no difference between the two.

There is, however, a real difference between them although it is not obvious. That difference lies in the nature of the inter-relationship between the Central and the Local Administrative Units. This difference may be summed up in this way. In the Unitary Form of Government, the powers of the local bodies are derived from an Act of the Central Government. That being so the powers of the Local Government can always be withdrawn by the Central Government. In the Federal form of Government the powers of the Central Government as well as of the Local Government are derived by the law of the Constitution which neither the Local Government nor the Central Government can alter by its own Act. Both derive their powers from the law of the Constitution and each is required by the Constitution to confine itself to the powers given to it. Not only does the Constitution fix the powers of each but the constitution establishes a judiciary to declare any Act whether of the Local or the Central Government as void if it transgresses the limits fixed for it by the Constitution. This is well stated by Clement in his volume on the Canadian Constitution in the following passage:

“Apart from detail, the term federal union in these modern times implies an agreement to commit people to the control of one common government in relation to such matters as are agreed upon as of common concern, leaving each local government still independent and autonomous in all other matters, as a necessary corollary the whole-arrangement constitutes a fundamental law to be recognised in and enforced through the agency of the Courts.

“The exact position of the line which is to divide matters of common concern to the whole federation from matters of local concern in each unit is not of the essence of federalism. Where it is to be drawn in any proposed scheme depends upon the view adopted by the federating communities as to what, in their actual circumstances, geographical, commercial, racial or otherwise, are really matters of common concern and as such proper to be assigned to a common government. But the maintenance of the line, as fixed by the federating agreement, is of the essence of modern federalism; at least, as exhibited in the three great Anglo Saxon federations today, the United States of America, the Commonwealth of Australia, and the Dominion of Canada. Hence the importance and gravity of the duty thrown upon the Courts as the only constitutional interpreter of the organic instrument which contains the fundamental law of the land.”

Thus to draw a line for the purpose of dividing the powers of Government between the Central and Local Governments by the law of the Constitution and to maintain that line through the judiciary are the two essential features of the Federal Form of Government. It is these two features which distinguish it from the Unitary Form of Government. In short every federation involves two things :

- (1) Division of Powers by metes and bounds between the Central Government and the Units which compose it by the law of the Constitution, which is beyond the power of either to change and to limit the action of each to the powers given and
- (2) a Tribunal beyond the control of either to decide when the issue arises as to whether any particular act of the Centre or of the Unit, Legislative, Executive, Administrative or Financial is beyond the powers given to it by the Constitution.

Having explained what is meant by Federal Government, I will now proceed to give you some idea of the Powers which are assigned by the constitution to the Federal Government.

(a) Legislative Powers of *the* Federation

For the purposes of distributing the Legislative Powers the possible subjects of Legislation are listed into three categories. The first category includes subjects, the exclusive right to legislate upon which is given to the Federal Legislature. This list is called the Federal List. The second category includes subjects, the exclusive right to legislate upon which is given to the Provincial Legislature. The list is called

the Provincial List. The third category includes subjects over which both the Federal as well as the Provincial Legislature have a right to legislate. This list is called the Concurrent list. The scope and contents of these lists are given in Schedule VII to the Government of India Act.

In accordance with the fundamental principles of Federation a law made by the Federal Legislature if it relates to a matter which is included in the Provincial List, would be *ultra vires* and a nullity. Similarly, if the Provincial Legislature were to make a law relating to a matter falling in the Federal List such a Provincial Law would be *ultra vires* and therefore a nullity. This is, however declared by statute and section 107 is now the law on the point. Cases of conflict of legislation touching the Federal List and the Provincial List are not likely to occur often. But cases of conflict between the two are sure to arise in the concurrent field of legislation. The law as to that you will find in section 107. Sub-section (7) lays down when a Federal Law shall prevail over a Provincial Law. Sub-section (2) lays down as to when a Provincial Law shall prevail over the Federal Law. Reading the sub-sections together the position in law is this. As a rule a Federal Law shall prevail over a Provincial Law if the two are in conflict. But in cases where the Provincial Law, having been reserved for the consideration of the Governor-General or for the signification of His Majesty's pleasure, has received the assent of the Governor-General or His Majesty, the Provincial Law shall prevail until the Federal Legislature enacts further legislation with respect to the same matter.

With regard to the question of this distribution of powers of legislation every Federation is faced with a problem. That problem arises because there can be no guarantee that enumeration of the subjects of legislation is exhaustive and includes every possible subject of legislation. However complete and exhaustive the listing may be there is always the possibility of some subject remaining unenumerated. Every Federation has to provide for such a contingency and lay down to whom the powers to legislate regarding these residuary subjects shall belong. Should they be given to the Central Government or should they be given to the Units? Hitherto there has been only one way of dealing with them. In some Federations. these residuary powers are given to the Central Government, as in Canada. In some Federations they are given to the Units, as in Australia. The Indian Federation has adopted a new

way of dealing with them. In the Indian Federation they are neither assigned to the Central Government nor to the Provinces. They are in a way vested in the Governor-General by virtue of section 104. When a Legislation is proposed on a subject which is not enumerated in any of the three lists it is the Governor-General, who is to decide whether the powers shall be exercised by the Federal Legislature or by the Provincial Legislature.

(b) Executive Powers of the Federation

The first question is, what is the extent of the executive powers of the Federation? Is it co-extensive with the legislative powers? In some of the Federations this was not made clear by statute. It was left to judicial decision. Such is the case in Canada. The Indian Constitution does not leave this matter to courts to decide. It is defined expressly in the Act itself. The relevant section is section 8(7). It says that the executive authority of the Federation extends—

(a) to matters with respect to which the Federal Legislature has powers

to make laws;

(b) to raising in British India on behalf of His Majesty of naval, military and air forces and to the governance of His Majesty's forces borne on the Indian establishment ;

(c) to the exercise of such rights, authority and jurisdiction as are exercisable by His Majesty by treaty, grant, usage, sufferance, or otherwise in and in relation to the tribal areas.

There is no difficulty in following the provisions of this sub-section. There might perhaps be some difficulty in understanding sub-clause (a). It says that the executive powers must be co-extensive with the legislative powers of the Federation. Now the legislative power of the Federation extends not only to the Federal List but also to the Concurrent List Does the executive power of the Federation extend to subjects included in the Concurrent List? Two points must be borne in mind before answering this question. First, the Concurrent List is also subject to the legislative authority of the Province. Second, according to section 49(2) that the executive authority of each Province extends to the matters with respect to which the Legislature of the Province has power to make laws. The answer to the question whether the executive authority of the Federation extends also to the Concurrent list is that the Executive Authority in respect of the Concurrent List belongs to the Federal

Government as well as to the Provincial Government. This is clear from the terms of section 126(2). It belongs to Provincial Government except in so far as the Federal Legislature has covered the field. It belongs to the Federal Government except in so far as the Provincial Legislature has covered the field.

The Concurrent List is not the only list which is subject to Legislation by the Federal Legislature. The Federal Legislature has the right to legislate even on Provincial subjects under Section 102 in causes of emergency and under Section 106 to give effect to international agreements. Does the Executive Authority of the Federation extend to such matters also? The answer is that when a field is covered by Federal Legislation that field also becomes the field of Executive Authority of the Federation.

(c) Administrative Powers of the Federation

The Administrative Powers of the Federation follow upon the Executive Powers of the Federation just as the Executive Powers of the Federation follow upon the Legislative Powers of the Federation.

To this there is one exception. That exception relates to the administration of subjects included in the Concurrent List. The Concurrent List is a list to which the Legislative Authority of the Federation extends by virtue of Section 100. As has already been pointed out the executive authority of the Federation extends in so far as Federal Legislation has covered the field. But the administrative powers for subjects falling in the Concurrent List do not belong to the Federation. They belong to the Provinces.

(d) Financial Powers of the Federation

The revenues of the Federal Government are derived from four different sources: (1) Revenue from Commercial Enterprise, (2) Revenue from Sovereign Functions; (3) Revenue from Tributes; and (4) Revenue from Taxes.

Under the first head fall all revenues from Posts and Telegraphs. Federal Railways, banking profits and other commercial operations. Under the second head come revenues from currency and coinage, from *bona vacantia* and territories administered directly by the Federal Government. Under the third head are included Contributions and Tributes from the Indian States.

The classification of Revenue from taxes follows upon the Powers of Taxation given to the Federal Government by the Constitution. The Powers of Taxation given to the Federal Government fall into three main categories. In the first category fall those powers of

taxation which is wholly appropriable by the Federal Government. In the second category, fall those powers of taxation which are exercisable for raising revenue which is divisible between the Federal Government and the Provincial Governments.

The heads of revenue which fall under the first category of Taxing Powers cover those which are specifically mentioned in the Federal List—

1. Duties of customs, including export duties.
2. Duties of excise on tobacco and other goods manufactured or **produced in** India except— (a) alcoholic liquors for human consumption ; (b) opium, Indian hemp and other narcotic drugs and narcotics, non-narcotic drugs; (c) medical and toilet preparations containing alcoholic, or any substance included in sub-paragraph (b) of this entry.
3. Corporation tax.
4. Salt
5. State lotteries.
6. Taxes on income other than agricultural income.
7. Taxes on the capital value of the assets, exclusive of agricultural land of individuals and companies ; taxes on the capital of companies.
8. Duties in respect of succession to property other than agricultural land.
9. The rates of stamp duty in respect of bills of exchange, cheques, promissory notes, bills of lading, letters of credit, policies of insurance proxies and receipts.
10. Terminal taxes on goods or passengers carried by railway or air; taxes on railway fares and freights.
11. Fees in respect of any of the mailers in this list but not including fees taken in any court.

In connection with this, attention might be drawn to the following items *in* the Concurrent List :

1. Marriage and divorce.
2. Wills, intestacy and succession.
3. Transfer of Property and other agricultural lands

Being in the Concurrent list, the Federal Legislature has power to legislate upon with respect to these. Can the Federal Legislature also while legislating upon them raise revenue from them? The Act does not seem to furnish any answer to this question. It may however be suggested that the rules contained in section 104 regarding the

exercise of Residuary Powers will also apply here.

The sources of revenue which are made divisible by the Constitution are :

(1) Income Tax other than Corporation Tax and (2) Jute Export duty. Those which are made divisible according to the Federal Law are : (1) Duty on Salt, (2) Excise duty on Tobacco and other goods and (3) Duties of Export.

In respect of the financial powers of the Federation there is one feature which by reason of its peculiarity is deserving of attention. The Act in giving the Federal Government the right to tax, makes a distinction between power to levy the tax and the right to collect it and even where it gives the power to levy the tax it does not give it the right to collect it. This is so in the case of surcharge on Income tax and the Corporation tax. The Income tax is only leviable in the Provinces and not in the States although it is a tax for Federal purposes. The State subjects are liable to pay only a Federal surcharge on Income Tax because such a surcharge is leviable both within the Provinces as well as the States. But under section 138 (3) the Federal Government has no right to collect it within the States. The collection is left to the Ruler of the State. The Ruler, instead of collecting the surcharge from his subjects, may agree to pay the Federation a lump sum and the Federation is bound to accept the same. Similar is the case with regard to the Corporation tax. The Federation can levy it on State subjects but cannot collect it directly by its own agency. Section 139 provides that the collection of the Corporation tax shall as of right be the function of the Ruler.

V

CHARACTER OF THE FEDERATION

(1) *The Nature of the Union*

How does the Indian Federation compare with other Federations? This is not only a natural inquiry but it is also a necessary inquiry. The method of comparison and contrast is the *best* way to understand the nature of a thing. This comparison can be instituted from points of view. There is no time for a comparison on so vast a scale. I must confine this comparison to some very moderate dimensions. Therefore I propose to raise only four questions: (1) Is this Federation a perpetual Union? (2) What is the relationship of the Units to the Federal Government? (3) What is the relationship of the

Units as between themselves? (4) What is the relationship of the people under the Units?

There is no doubt that the accession of the Indian States to the Federation is to be perpetual so long as the Federation created by the Act is in existence. While the Federation exists there is no right to secede. But that is not the real question. The real question is, will the federation continue even when the Act is changed? In other words the question is, is this a perpetual Union with no right to secede or, is this a mere alliance with a right to break away? In my opinion the Indian Federation is not a perpetual union and that the Indian States have a right to secede. In this respect the constitution of the United States and this Indian Federation stand in clear contrast. The constitution of the United States says nothing as to the right of secession. This omission was interpreted in two different ways. Some said that it was not granted because it was copy recognized. Others said it was not excluded because it was not negatived. It was this controversy over the question namely whether the right of secession was excluded because it was not recognized which led to the Civil War of 1861. The Civil War settled two important principles: (1) No State has a right to declare an Act of the Federal Government invalid; (2) No State has a right to secede from the Union. In the Indian Federation it would be unnecessary to go to war for establishing the right to secession because the Constitution recognizes the right of the Indian States to secede from the Indian Federation if certain eventualities occur. What is a perpetual Union and what is only a compact is made nowhere so clear as by Blackstone in his analysis of the nature of the Union between England and Scotland. To use his language the Indian Federation is not an incorporate Union because in a Union the two contracting States are totally annihilated without any power of revival. The Indian Federation is an alliance between two contracting parties, the Crown and the Indian States, in which neither is annihilated but each reserves a right to original Status if a breach of condition occurs. The Constitution of the United States originated in a compact but resulted in a union. The Indian Federation originates in a compact and continues as a compact. That the Indian Federation has none of the marks of a Union but on the other hand it has all the marks of a compact is beyond dispute. The distinguishing marks of a Union were well described by Daniel Webster, when in one of his speeches on the American Constitution he said—

"...The constitution speaks of that political system which is established as ' the Government of the United States '. Is it not doing a strange violence to languages to call a league or a compact between sovereign powers a *Government*? The Government of a State is that organisation in which political power resides".

"...The broad and clear difference between a government and a league or a compact is that a government is a body politic; it has a will of its own: and it possesses powers and faculties to execute its own purposes Every compact looks to some power to enforce its stipulations. Even in a compact between sovereign communities there always exists this ultimate reference to a power to ensure its execution; although in such a case, this power is but the force of one party against the force of another, that is to say, the power of war. But a Government executes its decisions by its own supreme authority. Its use of force in compelling obedience to its own enactments is not war. It contemplates no opposing party having a right of resistance. It rests on its power to enforce its own will; and when it ceases to possess this power it is no longer a Government".

In the light of this the following facts should be noted. The Act does not ordain and establish a Federal Government for British India and the Indian States. The Act ordains and establishes a Federal Government for British India only. The Federal Government will become a Government for the States only when each State adopts it by its Instrument of Accession. Again note that the subjection of the States to the Federal Government is not to be for all times. It is to continue only under certain circumstances. It is to continue so long as certain provisions of the Act are continued without a change. Thirdly, where change in the provisions is permissible such change shall not bind the State unless it agrees to be bound by it,

All these are unmistakable signs which show that the Indian Federation is a compact and not a perpetual Union. The essence of a compact is that it reserves the right to break away and to return to the original position.

In this respect therefore the Indian Federation differs from the Federations in U.S.A., Canada and Australia. It differs from the U.S.A., because the right to secede, is recognized by the Indian Constitution if the constitution is altered, while it is not recognized by the Constitution of the U.S.A., even if the constitution is altered against the wishes of a particular State. In regard to Australia and

Canada such a question cannot really arise and if it did, a civil war would be quite unnecessary to decide the issue. In these federations the sovereignty, whether it is exercised by the Federal Governments or the Units belongs to the Crown and the maintenance of the Federation or its break up remains with the King and Parliament. Neither the Federation nor the Units could decide the issue otherwise than with the consent of Parliament. If a break-up came, it would be a mere withdrawal of the sovereignty of the Crown and its re-distribution which the Crown is always free to do. The break up could be legal and even if it was perpetrated by non-legal means it could give sovereignty to the rebellious units because it belongs to the Crown. The same would have been the case, if the Indian Federation had been the Federation of British Indian Provinces only. No question of secession could have arisen. The Provinces would, have been required to remain in the position in which the Crown might think it best to place them. The Indian Federation has become different because of the entry of the Indian States. The entry of the Indian States is not for all times and under all circumstances. Their entry is upon terms and conditions. That being so the Indian Federation could not be a perpetual union, indeed, the Indian States would not enter into matrimony with the Indian Provinces unless the terms of divorce were settled before-hand. And so they are. That is why the Indian Federation is a compact and not a union.

(2) Relationship of the Units to the Federal Government

That each separate, unit should have approximately equal political rights is a general feature of federations. Equality of status among the different units is a necessity. To make them unequal in status is to give units the power to become dominant- partners. The existence of dominant partners in a federation, as observed by Dicey is fraught with two dangers. Firstly, the dominant partners may exercise an authority almost inconsistent with federal equality. Secondly, it may create combinations inside, the Federation of dominant units and subordinate units and *vice versa*. To prevent such *en* unhealthy slate of affairs, all federations proceed upon the principle of equality of status. How far does this principle obtain in the Indian Federation?

(a) In the matter of Legislation

As you know for purposes of Legislation the field is divided into three parts and there are three lists prepared which are called the Federal List the Concurrent List and the Provincial List.

The Federal List contains 59 items as subjects of legislation. The Con-current List contains. 36 items..

The first thing to note is that both these lists are binding upon the Provinces. They cannot pick and choose as to the matters in these two lists in respect of which they will subject themselves to the authority of the Federation. The Provinces have no liberty to contract out of these two lists. The position of a Federating State is quite different. A Federating State can wholly keep itself cut of the Concurrent List. Under section 6(2) there. is no objection to the Ruler of any Indian State to agree to federate in respect of matters included in the Concurrent List. But there is no obligation upon them to do so. Such an agreement is not a condition precedent to their admission into the Federation.

With regard to the Federal List, there is no doubt an obligation on the Ruler of a State to subject himself to the legislative authority of the Federation in respect of the Federal List, but his subjection to the Federation will be confined to matters specified by him in his Instrument of Accession. There are as I stated altogether 59 items in the Federal List. There is no obligation upon the Prince to accept all subjects in the Federal List as a condition precedent for his entry into Federation. He may accept some only or he may accept all. Again one Ruler may accept one item and another Ruler may accept another. There is no rule laid down in the constitution that some items must be accepted by every Ruler who chooses to enter the Federation. The Federation, therefore, while it affects British India and the Provinces uniformly and completely so far as the legislative authority of the Federation is concerned, it touches different States in different degrees. A Ruler may federate in respect of one subject yet he is as good a member of the Federation as a Ruler who accepts all the fifty-nine items in the Federal List.

The Provincial List is a list which is subject to the exclusive Legislative authority of the Provinces. There is no corresponding State List given in the Act for the Federated States. It cannot be given. But it can be said that it includes all these subjects which are not surrendered by the State to the Federation. Now with regard to the exclusive authority of the Provincial Legislature, still in. the event of emergency it is open to the Federal Legislature to make laws for a Province or any part thereof with respect to any of the matters enumerated in the Provincial List, if the Governor-General has in his discretion declared under section 102 by proclamation that a grave

emergency exists whereby the security of India is threatened whether by way of war or by internal disturbances. There is no such provision in respect of the Indian States. A grave emergency which threatens India may quite well arise within a State as it may within the territories of a Province. *It is* thus clear that while the Federal Legislature can intervene *and* make laws for a Province when there is emergency, it cannot intervene and make laws for the Federated States under similar circumstances.

(b) In the matter of the Executive

Again in the matter of the Executive the States and the Provinces do not stand on the same footing. Section 8 defines the scope *of* the executive authority of the Federation which according to section 7 is exercisable by the Governor-General on behalf of His Majesty. According to sub-section (1) to sub-clause (a) the authority of the Federal Executive extends to matters with respect to which the Federal Legislature has power to make laws, but this clause has also exclusive authority with respect to certain matters included in the concurrent List subject to certain limitations ; but with regard to the states the case is very different. With regard to the States the federation can have no executive authority in respect of subjects in the concurrent List, but also the federation is not entitled to have exclusive authority with respect to matters included in the Federal Legislative List. Sub-clause 2 of section 8 is very important. It says: "The executive authority of the Ruler of a Federated State shall notwithstanding anything in this section, continue to be exercisable in that state with respect to matters with respect to which the federal Legislature has power to make laws for that State except in so far as the executive authority of the Federation becomes exercisable in the State to the exclusion of the executive authority of the Ruler by virtue of a federal law."

In plain language what the sub-section means is this—With regard to a province the executive authority of the Federation extends to all matters over which the Federation has legislative authority. With regard to the State the position is different. The mere fact that the federal legislature has authority to legislate in respect of a subject does not give the Federation any executive authority over the State in respect of that subject. Such executive authority can be conferred only as a result of a law passed by the Federation. Whether it is

possible to pass such a law is problematic in view of the large representation which the States have in Federal Legislature. Whatever may be the eventuality, in theory the executive authority of the Federation does not extend to a Federated State. The position is that while with regard to the provinces the Federation can legislate as well as execute, in the case of the Federated States, the Federation can legislate, but cannot execute. The execution may be with the State.

(c) In the matter of administration

When you begin to examine the constitution from the point of view of administration you will find certain sections in the Act which lay down rules for the guidance of the Federal Government, of the Provincial Governments and of the State Governments. The purpose of the sections is to tell them how they should exercise the executive authority belonging to them respectively. These sections are 122, 126 and 128.

Section 122 is addressed to the Federal Government. It reads as follows :

“122. (1) The executive authority of every Province and Federated State shall be so exercised as to secure respect for the laws of the Federal Legislature which apply in that Province or State.

(2) The reference in sub-section (7) of this section to laws of the Federal Legislature shall, in relation to any Province, include a reference to any existing Indian Law applying in that Province.

(3) Without prejudice to any of the other provisions of this part of this Act, in the exercise of the executive authority of the Federation in any Province or Federated State regard shall be had to the interests of that Province or State.”

Section 126 is addressed to the Provincial Governments. It provides that—

“126 (1) The executive authority of every Province shall be so exercised as not to impede or prejudice the exercise of the executive authority of the Federation, and the executive authority of the Federation shall extend to the giving of such directions to a Province as may appear to the Federal Government to be necessary for that purpose.”

Section 128 is addressed to the States. It runs as follows :

“128. (7) The executive authority of every Federated State shall be so exercised as not to impede or prejudice the exercise of the

executive authority of the Federation so far as it is exercisable in the State by virtue of the law of the Federal Legislature while applies therein.

(2) If it appears to the Governor-General that the Ruler of any Federated State has in any way failed to fulfil his obligations under the preceding sub-section, the Governor-General, acting in his discretion, may after considering any representations made to him by the Ruler, issue such directions to the Ruler as he thinks fit:

Provided that if any question arises under this section as to whether the executive authority of the Federation is exercisable in a State with respect to which it is so exercisable, the question may, at the instance either of the Federation or the Ruler, be referred to the Federal Court for determination by that Court in the exercise of its original jurisdiction under this Act.'

All these sections would have been very useful if there was any possibility of conflict in the exercise of their executive authority by these agencies. But these will be quite unnecessary because there would be as a matter of fact no conflict of executive authority which can arise only when such executive authority is followed by administrative act. When administration is divorced from Executive Authority there is no possibility of conflict and the admonitions contained in such sections are quite unnecessary.

Now it is possible that in the Federal Constitution the Federal Government may be altogether denuded of its powers of administration and may be made just as a frame without any spring of action in it. The constitution provides that the Governor-General of the Federal Legislature may provide that the administration of a certain law passed by it instead of being carried on by the Federal Executive might be entrusted to Units i.e. to the Provincial Governments and the Indian States. This is clear from the terms of section 124:

“124. (1) Notwithstanding anything in this Act, the Governor-General may, with the consent of the Government of a Province or the Ruler of a Federated State, entrust either conditionally to the Government or Ruler or to their respective Officers, functions in relation to any matter to which the executive authority of the Federation extends.

(2) An Act of the Federal Legislature may, notwithstanding that it relates to a matter with respect to which a Provincial Legislature has no power to make laws, confer powers and impose duties upon a

Province or officers and authorities thereof.

(3) An Act of the Federal Legislature which extends to a Federated State may confer powers and impose duties upon the State or officers and authorities thereof to be designated for the purpose by the Ruler.

(4) Where by virtue of this section powers and duties have been *conferred* or imposed upon a Province or a Federated State or officers or authorities thereof, there shall be paid by the Federation to the Province or State such sum as may be agreed, or, in default of agreement, as may be determined by an arbitrator appointed by the Chief Justice of India, in respect of any extra cost of administration incurred by the Province or State in connection with the exercise of those powers and duties."

It is quite possible for States and Provinces to combine to rob the Federation of all administrative powers and make it only a law making body.

A more staggering situation however is created by section 125. It is in the following terms:

"125. (1) Notwithstanding anything in this Act, agreements may, and, if provision has been made in that behalf by the Instrument of Accession of the State, shall be made between the Governor-General and the Ruler of a Federated State for the exercise by the Ruler or his officers of functions in relation to the administration in his State of any law of the Federal Legislature which applies therein.

(2) An agreement made under this section shall contain provisions enabling the Governor-General in his discretion to satisfy himself, by inspection or otherwise that the administration of the law to which the agreement relates is earned out in accordance with the policy of the Federal Government and, if he is not so satisfied, the Governor-General acting in his discretion, may issue such directions to the Ruler as he thinks fit.

(3) All courts shall take judicial notice of any agreement made under this section.

This section means that a State by its instrument of Accession may stipulate that the administration of Federal laws in this State shall be carried out by the State agency and not by the agency of the Federation and if it does so stipulate then the Federation shall have no administrative power inside the State. The benefit of a law depends upon its administration. A law may turn out to be of no avail because the administration is either inefficient or corrupt to

deprive the Federal Government of its administrative power is really to cripple the federal Government. There is no Federation in which some units of the Federation are permitted to say that the Federal Government shall have no administrative power in their territory. The Indian Federation is an exception. Not only is there a difference between the Provinces and the States in this matter but they also differ in their liability to supervision and direction by the Federal Government in the matter of the exercise of their executive authority. That difference will be clear if you will compare section 126 with section 128.

Section 126 enacts that the executive authority of every province shall be exercised as not to impede or prejudice the exercise of the executive authority of the Federation and the executive authority of the Federation shall extend to the giving of such directions to a Province as may appear to the Federal Government to be necessary for that purpose. Section 128 is a section which enacts a similar rule with respect to a Federated State, but there is a significant difference between the two sections. Section 126 says that the executive authority of the Federation extends to the giving of such directions to a province as may appear to the Federal Government to be necessary for that purpose, while section 128 does not give such a power. That means that the Federation does not possess the inherent executive authority to give a direction to the Ruler of a Federated State to prevent him from so exercising the executive authority of the State as to impede or prejudice the exercise of the executive authority of the Federation. That is one very significant difference. Such authority, instead of being given to the Federation, is given to the Governor-General, who, of course, under the law is distinct from the Federal Government and it is the Governor-General who is empowered to issue such directions to the Ruler as he thinks fit. A further distinction is also noticeable. When directions are issued to the Governor OF A province under section 126 he is bound to carry them out. He has *no* right to question the necessity of the directions nor can he question the capacity of the Governor-General to issue such directions. With regard to the Ruler of a State, however, the position is entirely different. He can question such a direction, and have the matter adjudicated in the Federal Court because the proviso to sub-section 2 of section 128 says that if any question arises under this section as to whether the executive authority under this section of the Federation is exercisable in a State

with respect to any matter or as to the extent to which it is so exercisable, the question may at the instance either of the Federation or the Ruler be referred to the Federal Court for determination by that Court.

(3) In the matter of Finance

Coming to the question of Finance, the disparity between the Provinces and the States is a glaring disparity. Take the case of the taxing authority of the Federation over the Provinces and the States. It may be noted that the revenues of the Federation are derivable from sources which fall under two main heads—those derive, from taxation and those not derived from taxation. Those not derived from taxation fall under six heads—

- (1) Fees in respect of matters included in the Federal List.
- (2) Profits, if any, on the work of the Postal Services, including Postal Savings Banks.
- (3) Profits, if any, on the operation of Federal Railways.
- (4) Profits, if any, from Mint and Currency operations.
- (5) Profits, if any, from any other Federal enterprise, such as Reserve Bank, and
- (6) Direct, contribution to the Crown from Federated or non-Federated States.

As regards the revenues derived from taxation under the Government of India Act, they fall under two heads; Ordinary taxation and Extraordinary taxation. Ordinary taxation includes levy from following sources:

- (1) Customs duties;
- (2) Export duties;
- (3) Excise duties;
- (4) Salt;
- (5) Corporation tax;
- (6) Tax on income, other than agricultural; and
- (7) Property Taxes i.e., taxes on Capital value of the individual assets or a property.

The extraordinary revenue falls under following heads :

- (1) Surcharges on Income-tax.
- (2) Surcharges on succession duties.
- (3) Surcharges on terminal taxes on goods or passengers carried by rail or air and all taxes on railway freights.
- (4) Surcharges on Stamp duties, etc.

Now, while the provinces are liable to bear taxation under any of these heads whether the taxation is of an ordinary character or is of an extra-ordinary character, the same is not true of the States. For instance, the States are not liable in ordinary time to ordinary taxes falling under heads 6 and 7, while the Provinces are liable,

With regard to extraordinary taxation, the States are not liable to contribute even in times of financial stringency the taxes levied under items 2, 3 and 4 and even where they are liable to contribute under head 1 of the extraordinary sources of revenue, it must be certified that all other economies have been made.

There is another difference from the financial point of view between the States and the Provinces. The field of taxation for provincial Governments has been defined in the Act. A provincial Government cannot raise revenue from any source other than those mentioned in the Act. Such is not the case with the State. There is nothing in the Government of India Act, which defines the powers of a Federated State with regard to its system of taxation. It may select any source of taxation to raise revenue for the purpose of internal administration and may even levy customs duties upon articles entering its territory from a neighbouring province although that neighbouring province is a unit of the Federal Government *of* which the Federated State is also a unit. This is a most extraordinary feature of this Indian Federation and also one of its worst features. One of the results of a Federation, if not its primary object, has been the freedom of trade and commerce inside the territory of the Federation. There is no federation known to history which has permitted one unit of the Federation to levy customs duties or raise other barriers with a view to prevent inter-State commerce. The Indian Federation is an exception to that rule and this is a feature of the Indian Federation which makes it stand out in glaring contrast with other federations with which people are familiar today.

One of the characteristics of a Federal Constitution is that although the territory comprised in the Federation is distributed or held by different units, still they constitute one single territory. At any rate for customs purposes the territory is treated as a single unit. Every Federal Constitution contains powers and prohibitions to prevent trade and customs barriers being erected by one unit against another.

The American constitution by Section 9 of Article II prohibits a State from preventing the import or export of goods or from levying import or export duties upon goods passing in or out of the State

boundary. Section 8(3) of Article II gives the Federal Government the power of regulating trade or commerce between the States of the Union.

In Australia by virtue of Section 92 of its Constitution both the States and the Federal Government are bound so to exercise their power of regulation as not to transgress the fundamental guarantee of the Constitution embodied in Section 92 that "trade and commerce among the States whether by means of internal carriage or ocean navigation shall be absolutely free".

In Canada section 121 enacts that "all articles of the growth, produce, or manufacture of any one Province shall, from and after the Union, be admitted free into each of the other Provinces."

In the Indian Constitution the provision relating to freedom of trade and commerce within the Federation is contained in Section 297. It reads as follows: "297. (1) No Provincial Legislature or Government shall—

- (a) by virtue of the entry in the Provincial Legislative List relating to trade and commerce within the Province, or the entry in that list relating to the production, supply, and distribution of commodities, have power to pass any law or take any executive action prohibiting or restricting the entry into, or export from, the Province of goods of any class or description; or
 - (b) by virtue of anything in this Act have power to impose any tax, cess, toll, or due which, as between goods manufactured or produced in the Province and similar goods not so manufactured or produced, discriminates in favour of the former, or which, in the case of goods manufactured or produced outside the Province, discriminates between goods manufactured or produced in one locality and similar goods manufactured or produced in another locality.
- (2) Any law passed in contravention of this shall, to the extent of the contravention, be invalid."

Now it will be clear from the terms of this section that the freedom of trade and commerce is confined only to the provinces. That means the Indian States are free to prohibit the entry of goods from the Provinces absolutely or subject them to duty. This is quite contrary to the fundamental idea underlying a federal union. To allow one unit of the Federation to carry on commercial warfare against another unit is nothing but negation of federation.

(4) Relationship of the People under the Federation

Before I enter into this question it is necessary to clear the ground by pointing out certain distinctions. The words 'State' and 'Society' are often presented as though there was a contrast between the two. But there is no distinction of a fundamental character between a State and a society. It is true that the plenary powers of the State operate through the sanction of law while society depends upon religious and social sanctions for the enforcement of its plenary powers. The fact, however, remains that both have plenary powers to coerce. As such, there is no contrast between state and society. Secondly, the persons composing society are persons who are also members of the State. Here again, there is no difference between State and Society.

There is, however, one difference, but it is of another kind. Every person, who is a member of society and dwells in it, is not necessarily a member of the State. Only those who dwell within the boundary of the State do not necessarily belong to the State. This distinction between those, who belong to the State and those who do not, is very crucial and should not be forgotten because *it* has important consequences. Those who belong to State are members and *have* the benefit of membership which consists of the totality rights and duties which they possess over against the State. From the side of duty the relation is best indicated by the word subject, from the side of rights it is best designated by the word citizen. This difference involves the consequence that those who dwell in the State without belonging to it have no benefit of membership which means that they are foreigners and not citizens.

Theoretically, the task of differentiating the foreigners from the citizens of a State would seem to be an easy task, in fact, almost a mechanical task. This is particularly true of an Unitary State. Here there is a simple question: What is the relation of this State as against any and all foreign States? In a Federal State the matter is complicated by the fact that every individual stands in a dual relationship. On the one hand, he sustains certain relations to the Federal State as a whole; and on the other he sustains certain relations to the State in which he may reside. The moment an attempt is made to define the status of a person in a Federal State, therefore, not one question, but several must be answered: What is the relation of this person to the Federal State, as against any and all foreign States? What is the relation of this person to the State in which he resides? Further is it possible to be a citizen of one State

and not a citizen of Federal State?

Such questions did not arise in Canada and Australia when they became federations. The reason was that persons residing in their respective units were natural born British subjects—a status which remained with them when the Federation came. After the Federation the powers of naturalization was given to the Federation and consequently every one who is naturalized by the Federation is a citizen of the Federation and therefore of every unit in it.

Such questions however did arise in the U.S.A., Switzerland and Germany because before the Federation their units were all foreign. States and their subjects were foreign subjects. But, it is noteworthy that in all these cases a common citizenship was established as a part of the federation. A rule was established whereby it was accepted that a citizenship of one unit carried with it a citizenship of the Federation.

The case of the Indian Federation is similar to that of The U.S.A., Germany and Switzerland. The subject of an Indian State is a foreigner in British India as well as in another Indian State. The subject of a British Indian Province is a foreigner in every Indian State.

What does the Indian Federation do with regard to this matter? Does it forge a common Citizenship for all Units which become members of the Federation? The answer is no. A British Indian will continue to be a foreigner in every Indian State even though it is a Federal State after the Federation, as he was before the Federation. Similarly a subject of a Federated Indian State will be a foreigner in every British Indian Province after the Federation as he was before Federation. There is no common nationality. The whole principle of the Federation is that the ruler of a Federated State shall remain the ruler of the State and his subjects shall remain his subjects and the Crown as the ruler of the Federated Provinces shall remain the ruler of the Provinces and his subjects shall remain his subjects. This difference in citizenship manifests itself in two specific ways. Firstly, it manifests itself in the matter of right to serve. Federation being established under the Crown, only persons who are subjects of the Crown are entitled to serve under it. This is recognised by Section 262. This of course is an injustice to the subjects of the States. To prevent this injustice which of course is a logical consequence of difference of citizenship, power is given to the Secretary of State to declare the subjects of the Indian States of affairs and although the

injustice to Indian State subjects is mitigated, the injustice against British Indians in the matter of right to employment in Indian States continues. For, Indian States are not required to declare that British Indians shall be deemed to be eligible for service under them. That notwithstanding Federation such an anomaly should exist shows that this Federation is a freak.

Secondly, this difference in citizenship shows itself in the terms of the oath prescribed for members of the Legislature by Schedule IV.

In the case of a member who is a British subject the form of the oath is as under:

"I, A.B., having been elected (or nominated or appointed) a member of this Council (or Assembly), do solemnly swear (or affirm) that I will be faithful and bear true allegiance to His Majesty the King, Emperor of India, His heirs and successors, and that I will faithfully discharge the duty upon which I am about to enter."

In the case of a *person* who is a subject of a Ruler of an Indian State the form of the oath is as follows:

"I, A.B., having been elected (or nominated or appointed) a member of this Council (or Assembly), do solemnly swear (or affirm) that saving the faith and allegiance which I owe to C.D"his heirs and successors, I will be faithful and bear true allegiance in any capacity as Member of this Council (or Assembly) to His Majesty the King, Emperor of India, His heirs and successors, and that I will faithfully discharge the duty upon which I am about to enter."

The subject of an Indian State, it is obvious from the terms of the oath, owes a double allegiance. He owes allegiance to the ruler of his State and also to the King. Superficially the position seems not very different from what one finds in the United States. In the United States the individual is a citizen of the Union as well as of the State and owes allegiance to both powers. Each power has a right to command his obedience. But ask the question, to which, in case of conflict, is obedience due and you will see the difference between the two. On this question this is what Bryce has to say:

"The right of the State to obedience is wider in the area of matters which it covers. *Prima facie* every State-law, every order of a competent State authority binds the citizen, whereas the National government has but a limited power; it can legislate or command only for certain purposes or on certain subjects. But within the limits

of its power, its authority is higher than that of the State, must be obeyed even at the risk of disobeying the State.

“Any act of a State Legislature or a State Executive conflicting with the Constitution, or with an act of the National Government, done under the Constitution, is really an act not of the State Government, which cannot legally act against the Constitution, but of persons falsely assuming to act as such government, and is therefore ipso jure void. Those who disobey Federal authority on the ground of the commands of a State authority are therefore insurgents against the Union who must be coerced by its power. The coercion of such insurgents is directed not against the State but against them as individuals though combined wrongdoers. A State cannot secede and cannot rebel. Similarly, it cannot be coerced.” Can the Federal Government in India take the stand which the Union Government can when there is a conflict of allegiance? There can be no doubt that it cannot, for the simple reason that the allegiance to the King saves the allegiance to the Ruler. This is a very unhappy if not a dangerous situation. (5) Strength of the Federal Frame

The existence in the country of one Government which can speak and act in the name of and with the unified will of the whole nation is no doubt the strongest Government that can be had and only a strong Government can be depended upon to act in an emergency. The efficiency of a Governmental system must be very weak where there exists within a country a number of Governments which are distinct centres of force, which constitute separately organized political bodies into which different parts of the nation's strength flows and whose resistance to the will of the Central Government is likely to be more effective than could be the resistance of individuals, because such bodies are each of them endowed with a government, a revenue, a militia, a local patriotism to unite them. The former is the case where the unitary system of Government prevails. The latter is the case where the Federal form of Government prevails.

The Indian Federation by reason of the fact that it is a Federation has all the weaknesses of a Federal form of Government. But the Indian Federation has its own added weaknesses which are not to be found in other Federations and which are likely to devitalise it altogether. Compare the Indian Federation with the Federation of

the United States. As Bryce says.”the authority of the national Government over the citizens of every State is direct and immediate, not exerted through the State organization, and not requiring the co-operation of the State Government. For most purposes the National Government ignores the States, and it treats the citizens equally bound by its laws. The Federal Courts, Revenue Officers and Post Office draw no help from any State Officials, but depend directly on Washington There is no local self-Government in Federal Matters the Federal authority, be it executive or judicial, acts upon the citizens of a State directly by means of its own officers who are quite distinct from and independent of State Officials. Federal indirect taxes, for instance, are levied all along the coast and over the country by Federal customhouse collectors and excise men acting under the orders of the treasury department at Washington. The judgments of Federal Courts are carried out by U.S. Marshals, likewise dispersed over the country and supplied with a staff of assistants. This is a provision of the utmost importance, for it enables the central, national Government to keep its fingers upon the people everywhere, and make its laws and the commands of its duly constituted authorities respected whether the State within whose territory it acts be heartily loyal or not, and whether the law which is being enforced be popular or abnoxious. The machinery of the national Government ramifies over the whole union as the nerves do over the whole body, placing every point in direct connection with the Central executive.”

Not one of these things can be predicated of the Indian Federation. It is a dependent Government and its relation with the people is not direct.

In the United States, the States as States have no place in the Central Government and although the States elect representatives to the Federal Legislature, political action at the centre does not run in State channels. There is no combination of States into groups and it is not the fashion for States to combine in an official way through their State organizations. How different is the Indian Federation! States, as such, have been given *de jure* recognition, they have been given *de jure* exemptions, and immunities from law. There are great possibilities of combined action and counteraction by States and Provinces over these exemptions and immunities. This is another reason which leads to the feeling that the Indian Federation will have very

little vitality.

VI

BENEFITS OF THE FEDERAL SCHEME

The protagonists of the Federal Scheme have urged three grounds in favour of the acceptance of the Scheme. The first ground is that it helps to unite India. The second ground is that it enables British India to influence Indian India and to gradually transform the autocracy that is prevalent in Indian India into the democracy that exists in British India. The third ground is that the Federal Scheme is a scheme which embodies what is called Responsible Government.

These three arguments in favour of the Federal Scheme are urged in such seriousness and the authority of those who urge them is so high that it becomes necessary to examine the substance that underlies them.

1. Federation and the Unity of India

The advantages of common system of Government are indeed very real. To have a common system of law, a common system of administration and a feeling of oneness are some of the essentials of good life. But they are all the results which follow from a common life led under a common system of Government. Other things being equal, a federation as a common system of Government for the whole of India should be welcome. But does this Federation unite under one governmental system the whole territory called India in the Government of India Act, 1935? Is this an All India Federation?

That this federation includes British India is of course true; when Provinces are declared to be the units of the Federation it means that British India is included in the Federation. Because the Provinces which are declared to be the units of the Federation compromise what is called Indian India. Indian India is no small tract. The following figures of area and population will give a comparative idea of the extent of British India and this Indian India:

	Area in square	Population

British India excluding Burma Aden.	8,62,630	2,56,859,787
Indian States	7,12,508	81,310,845

It will be seen that Indian India comprises 39 p.c. of the population and 31 per cent of India as a whole.

How much of this Indian India is going to be brought under this Federation?

Many will be inclined to say that as this is spoken of as an All India Federation every inch of this area will be included in the Federation and will be subject to the authority of the Federal Government. Such an impression is no doubt created by the wording of Section 6(7) which relates to the accession of the states. This section speaks of a Ruler declaring his desire to join the Federation and thereby suggesting that every State is entitled to join the Federation. If this is true, then no doubt the Federation can in course of time be an All India Federation. But this impression is wrong. Such an impression, cannot arise if Section 6(1) is read with Schedule I of the Act. Schedule I is merely thought of as a schedule which contains a Table of Seats for the Rulers. This is a very incomplete reading of the Schedule. The Schedule does more than that. It not only gives a table of seats, but also enumerates the States which are entitled to join the Federation and thereby fixes the maximum number of States which can come within the Federation If they wish to do so. In other words it is not open to every State to join the Federation. Only those enumerated can join. This is the significance of the Table of Seats given in Schedule I.

What is the total number of the states which can join the Federation? Schedule I limits the number to 147. A number of questions crop up by reason of this limit fixed by the Schedule. According to official figures there are in all 627 States in India. That means 480 States will remain outside the Federation and can never become part of the Federation. Can this be called an All India Federation? If it is to be an All India Federation, why are these States excluded? What is the position of these excluded States? If they are not States with sovereignty why are they allowed to join the federation? If they are not States with sovereignty and if the

sovereignty is with the Crown, why has the Crown not transferred its sovereignty to the Federation in respect of these territories? What will be the ultimate destiny of such excluded States? Will these be merged in some Indian States or will these be merged in some Indian Provinces? I mention all this, firstly because I want to show that this Federation is not an All India Federation and secondly because I want to draw attention to the move of some Indian States to get these excluded States to merge into them.

A second question may be raised. Will this Federation help to unite the people of British India and the Indian States into one nation?

A Federation is necessarily a composite body. Within it are units which are smaller political communities. Above the units is a larger political community called the Federation. Whether these different political communities will remain merely political associations or whether they will develop a common social fabric leading ultimately to the formation of a nation will depend upon what form their association takes. As Bryce points out—

“When within a large political community smaller communities are found existing, the relation of the smaller to the larger usually appears in one or other of the two following forms. One form is that of the League, in which a number of political bodies, be they monarchies or republics are bound together so as to constitute for certain purposes, and especially for the purpose of common defence, a single body. The members of such a composite body or league are not individual men but communities. It exists only as an aggregate of communities, and will therefore vanish so soon as the communities which compose it separate themselves from one another. Moreover it deals with and acts upon these communities only. With the individual citizen it has nothing to do, no right of taxing him, or judging him, or making laws for him, for in all these matters it is to his own community that his allegiance is due.

"In the second form, the smaller communities are mere subdivisions of that greater one which we call a nation. They have been created, or at any rate they exist, for administrative purposes only. Such powers as they possess are powers delegated by the nation, and can be overridden by its will. The nation acts directly by its own officers, not merely on the communities, but upon every single citizen and the nation, because it is independent of these communities, would continue to exist were they all to disappear

The former is the case where the form of Government is a confederation. The latter is the case where there exists a unitary form of Government. A Federal Government is between the two. It must not however be assumed that nationalism is compatible only with a Unitary Government and incompatible with a Federal form of Government. It must be borne in mind that as a nation may be found in being, so also a nation, may be brought into being. In a Federal Government there may be at the start no nation, it may be a collection of heterogeneous communities. But it is possible to have in the end a nation even under a Federal Government. The most striking case is that of the United States of America. Mr. Bryce relates a story which is both interesting as well as instructive. This is the story and I give it in his own words."Some years ago the American Protestant Episcopal Church was occupied at its triennial Convention in revising its liturgy. It was thought desirable to introduce among the short sentence a prayer for the whole people; and an eminent New England Divine proposed the words, 'O Lord, bless our nation'. Accepted one afternoon on the spur of the moment, the sentence was brought up next day for reconsideration, when so many objections were raised by the laity to the word 'nation', as importing too definite a recognition of national unity, that it was dropped, and instead there were adopted the words, 'O Lord, bless these United States.' Notwithstanding this prayer to the Lord, notwithstanding the reluctance to encourage the idea of a nation over against the idea of the states and notwithstanding the federal form of Government the United States is a nation. That it is a nation in the social sense of the word is incontrovertible."

How has this happened in the United States? Can we hope to see this happen in India under the Federal Scheme? Bryce explains how this happened in America. He points out that in America "The Central or National Government is not a mere league, for it does not wholly depend on the component Communities which we call the States. It is itself a Commonwealth as well as a Union of Commonwealths, because it claims directly the obedience of every citizen, and acts immediately upon him through its Courts and executive officers". It can tax him, make law for him and judge him. In short it is the process of Government which is responsible largely if not wholly for moulding the Americans into a nation and that this was possible because in the Federal Form of Government of the United States there is a direct contact between the National

Government and the individual.

Is this possible under the Indian Federal Scheme? My answer is that such a thing is not possible. The people in the Indian States remain the subjects of the States. The Federal Government cannot deal with them directly. Everything has to be done through the State. There is no contact between the two, not even for purposes of taxation. How can a feeling that they belong to the national Government grow in the subject of the Indian States if they are excluded from any and every influence and are not even made to feel the existence of the National Government? I am afraid this United States of India will not be more than a mere body of United States. It has no potentiality of forging a nation out of these States and probably the framers of the Scheme have had no such intention at all.

2. Democratization of Autocracies

The other advantage of the Federal Scheme which is claimed by its protagonists is that it brings beneath the *dome* of a single political edifice the new democracies of British India and the ancient autocracies of the Indian States and that by bringing the two under one edifice it provides contact between democracy and autocracy and thus enables the democracy in British India to democratize the autocracies in the Indian States. To examine this argument and to see how much force there is behind it, it is well to note that the Indian States and the British Indian Provinces are geographically contiguous. There is regular intercourse between them. The people of British India and those of the Indian States racially, linguistically and culturally form parts of one whole. With all these contacts and with all the unity of race, religion, language and culture British India has not been able to influence at all the forms of government which are prevalent in the Indian States. On the contrary while British India has advanced from autocracy to democracy, the Indian States have remained what they were with their fixed form of government. Unless therefore there is something special in the Act itself which enables British India, to exercise its influence on the Indian States through the legislature and through the executive, this argument can have no substance at all. Is there anything in the *Act* which gives British India power to influence the States? In this *connection* reference may be made to section 34(1) which deals with the procedure in the legislature with respect to the discussion and voting of the Budget estimates.

From an examination of this Section it will be clear that the estimates relating to para (a) and para (f) of sub-section (3) of section 33 cannot even be discussed by the Federal legislature. Para (a) of sub-section (3) refers to the salary and allowances of the Governor-General and other expenditure reciting to his office for which estimate is required to be made by Orders in Council, and para (f) relates to the sums payables to His Majesty under this Act out of the revenue of the Federation in respect of the expenses incurred in discharging the functions of the Crown in its relations with the Indian States. Another section which has a bearing upon this point is Section 38. Section 38 is a section which deals with the making of the rules by the Federal legislature for regulating its procedure *in* the conduct of its business. While this section, permits the Federal legislature *to* make its own rules It allows the Governor-General to make rules —

(c) or prohibiting the discussion of, or the asking of questions *on*, any matter connected with any Indian State, other than a matter with respect to which the Federal legislature has power to make laws for the State, unless the Governor-General in his discretion is satisfied that the matter affects Federal interest or affects a British subject and has given his consent to the matter being discussed or the question being asked;

(d) For prohibiting:— -

- (i) the discussion of, or the asking of questions on, any matter connected with relations between His Majesty or the Governor-General and any foreign State or Prince; or
- (ii) the discussion, except in relation to estimates of expenditure of, or the asking of questions on, any matter connected with the tribal area or the administration of any excluded area; or
- (iii) the discussion of, or the asking of questions on, the personal conduct of the ruler of any Indian State, or *of* a member of the ruling family thereof :

and the section further provides that it and so far as any rule so made by the Governor-General is inconsistent with any rules made by the Chamber, the rules made by the Governor-General shall prevail.

Another section having a bearing on this point is section 40. It says: "No discussion shall take place in the Federal legislature with respect to the conduct of any judge of the Federal Court or a High

Court in the discharge of his duties and provides that in this subsection the reference to a High Court shall be construed as including a reference to any court in a Federated State which is a High Court for any of the purposes of Part 9 of this Act." Similar provisions are contained in that part of the Act which relates to the constitution of the provincial legislatures. Section 84 is a counterpart of section 38 and prevents any member of a Provincial legislature from asking any question with regard to the personal conduct of the ruler of any Indian State or the affairs of a State. Section. 86 is a counterpart of section 40.

Now it is obvious that the two most important ways open to a Legislature for influencing the conduct of the administration is by discussion of the Budget and by asking questions. The discussions on the budget had its origin in the theory which postulates that there can be no supply given to the executive unless the grievances of the people were redressed. *The* slogan of democracy has been : Redress of grievances before supplies of moneys. The discussion on the budget is the one opportunity of placing the grievances of a people before the executive, if it is therefore a very valid privilege, as will be seen from section 34, the legislature is prevented but from placing the grievances of the subjects of the States before the executive *on* the floor of the House. Similarly, the right to interrogate and ask questions is also valid privilege, but that also is denied. The right to criticise on a proper motion the conduct of the judiciary is always open to the legislature, but that also has been excluded. It is difficult to see exactly in what way the Federal legislature could influence the internal administration of the Indian States. Not only the representatives of British India are prevented from asking any question or moving any resolution with regard to the internal administration of the States, but the same disability is imposed upon the representatives of the States themselves who are the victims of this maladministration.

Compare with this the influence which the Federated States are in a position to exercise over British India.

In the first place there is no restriction on the representatives of the Federated States in the matter of asking any question or raising any matter in the Federal Legislature. The fact that the question or matter touches British India and relates to internal administration of British India is not a bar against the representatives of the Federated States from raising such an issue.

Secondly, there is no restraint upon the representative of the Federated States in the matter of discussing and voting upon the financial proposals of the Federal Government. The fact that any such proposal affects British India only and does not affect the States can cause no legal impediment in their way.

Thirdly, in the matter of Legislation the Representatives of the Federated States are free to vote upon any measure brought before the Federal Legislature. There are two lists over which the legislative authority of the Federation extends—The Federal list and the Concurrent list. The provinces are wholly bound by the Federal List. A Federated State is not wholly bound by it. The provinces are wholly bound by the concurrent list. A Federated State may not *be* bound at all. Yet the State representatives have a right to vote upon any measure falling under either of the two lists. In other words the Federal Scheme gives the States the right to legislate for British India, while British India gets no such right to legislate for the States except to the extent to which the States choose to subject themselves to these two legislative lists.

The scope of this Legislative influence by the States over British India is by no means small nor is it inconsequential. To Confine to the Concurrent list only, it includes 36 subjects. Among the 36 are such subjects as, Criminal Law, Criminal and Civil Procedure, Professions, Newspapers, Books and Printing Press etc. It is clear that these subjects are vital subjects. They affect the liberties of the people in the Provinces. Now as the States have a right to participate and vote upon all legislation within the Concurrent list the Indian States will have the right and the authority to pass legislation affecting the rights, privileges and liberties of British Indians in the Provinces.

Further in the Legislative sphere, so far as it relates to the Concurrent List the States have obtained authority without any obligation. They are free to legislate and need not consider their own case in doing so because they are not bound, by the laws they make. Their conduct can be as irresponsible as they may choose to make it.

It is however an understatement to say that the States have only a right to influence administration and Legislation in British India. The truth is that the States can dominate British India because they can maintain in office a ministry in the Federal Government although it is defeated by a majority of the representatives of British India on a matter purely affecting India This is because they have a right to vote

upon any motion including a non-confidence motion irrespective of the question whether the motion relates to a matter which affects them or not. If this does not vest control over British India in Indian States I wonder what will.

The injustice and anomaly of the States taking part in the discussions of the internal affairs of British India while the representatives of British India having no corresponding right to discuss the affairs of the States was sought to be remedied by limiting the rights of the States to discuss and vote upon such questions as did not relate to internal affairs of British India, but the Princes and their representatives have always been against such distinction being drawn and they insisted that on any matter on which the fate of the Ministry depended they must have the right to decide upon the future of that Government. The constitution has given effect to the point of view of the Princes and set aside the point of view of British India.

This comparison shows that the States are placed by law in a position to control the affairs of British India and by the same law British India is disabled from exercising any influence over the States. That this is the true state of facts must be admitted by all. In other words the Federal Scheme does not help, indeed binds British India from setting up in motion processes which would result in the democratisation of the Indian States. On the other hand it helps the Indian States to destroy democracy in British India.

3. Federation and Responsibility

Let us examine the plea of Responsibility. From the standpoint of British India it is of more decisive importance than the two other pleas and must be scrutinized more carefully.

It cannot be denied that the Federation has some degree of responsibility. The question is what is the degree of that responsibility and whether within its sphere it is a responsibility which can be called real.

Let us ask, how much responsibility is there in this Federation? To be able to answer this question, you should read sections 9 and 11 together. By reading them together you will get an idea of the extent of this responsibility. According to these two sections the field of Governmental Authority is divided into two categories. In one category are put four subjects (1) Defence, (2) Ecclesiastical affairs, (3) External affairs, and (4) the Administration of Tribal Areas. The rest of the subjects within the executive authority of the Federation

are put in another and a separate category. The executive authority for both these categories is vested in the Governor-General. But a distinction is made between them in the matter of Governmental Authority. The Governmental Authority in respect of the four subjects falling in the first category is under the Act the Governor-General in his discretion. The Governmental Authority in respect of the rest of the subjects put in the second category is under the Act, the Governor-General acting on the advice of the Minister. In the case of the first four subjects the Government is not responsible to the Legislature, because the Governor-General in whom the Governmental Authority in respect of these four subjects is vested is not removable by the legislature. In the case of the rest of the subjects the Government is responsible to the Legislature, because the ministers on whose advice the Governmental Authority is exercisable are removable by the Legislature. The responsibility in the Federal scheme is therefore a case of limited responsibility. The responsibility does not extend to Defence and Foreign Affairs which after all are the most important subjects from social, political and financial point of view. The scheme has a close resemblance to diarchy with the division of subjects into Reserved and Transferred such as was the basis of the Montague-Chelmsford Reforms, which was embodied in the Provincial Constitution under the Government of India Act of 1919. The scheme of responsibility in the Federal Constitution under the Act of 1935 is an exact replica of the scheme of responsibility in the Provincial Constitution under the Act of 1919.

Is this responsibility real? My answer is in the negative. I will give you my reasons. Firstly the field of responsibility besides being limited is not a free field of activity for ministers. To realize how fettered this limited field of responsibility is, we must note certain restraints which have been imposed upon the powers of the Ministers when acting in the field of responsibility.

The first set of restraints imposed upon the authority of the Ministers when acting in the field of responsibility arises from what are called the special responsibilities of the Governor-General.

There exist another set of restraints on the authority of the Ministers while exercising the Governmental Authority in respect of transferred subjects. To understand this you must understand one special feature of this Federal constitution. The constitution classifies

subjects from the standpoint of Governmental Authority and that this classification has resulted in that division of subjects which for brevity's sake may be designated as Transferred and Reserved. The Constitution does not stop here. It goes further and proceeds to divide the category of 'Transferred' subjects into two classes. (1) subjects over which the Ministers' Governmental Authority carries with it administrative control and (2) subjects over which the Governmental Authority of Ministers does not carry with it administrative control. As an illustration of this classification may be mentioned the case of Railways. Railways are a transferred subject. The Governmental Authority of the Ministers extends to Railways. But the Ministers have no right to exercise any administrative control over the Railways. The administrative control over Railways is vested in what is called the Railway Authority. The distinction between Governmental Authority with Administrative Control and Governmental Authority without administrative control is not a distinction without difference. On the other hand the difference between the two positions is very real. That difference is made clear in sub-clause (2) of section 181 in the matter of Railways. That distinction is the distinction between authority to lay down a policy and competency to act. It is for those who plead for this Federation to say whether there is reality of responsibility in a Scheme of Government where there is a divorce between competence to act and authority to lay down policy.

Two things are clear in regard to this Responsibility in the Federal Scheme. First is that this responsibility is limited in its ambit. Secondly it is not real because it is fettered by the restraints arising from the special responsibilities of the Governor-General and from the withdrawal from the Ministers Governmental Authority of their competence to act in certain subjects such as the Railways, although they are Transferred subjects.

I have stated that the system of responsibility in the Federal Scheme resembles the system of dyarchy introduced into the provinces under the Act of 1919. But if the Scheme of responsibility in the Federation was compared with the system of dyarchy introduced into the Provinces it will *be* found that the former is designed to yield less responsibility than the latter. There are two things introduced in the Federal Scheme which were not to be found in the dyarchy in the Provinces and there existed one thing in the dyarchy which is absent in the Federation. The presence of the two

and the absence of one makes this dyarchy in the Federation worse than the dyarchy in the Provinces.

Of the two things that are new in the Federal Scheme one is the principle of special responsibilities of the Governor-General in respect of the Transferred field and the other is the separation between Governmental Authority from administrative control in respect of matters falling within the Transferred field. These two are new things and did not exist in the dyarchical constitution in the provinces.

It may be said that the special responsibilities of the Governor-General is simply another name for the Veto power, that is the power to overrule the Ministers and that even in the English Constitution the King has such a Veto power. On the face of it, this view of special responsibilities of the Governor-General appears to be correct. But in reality it involves a misconception of the conditions and circumstances under which the King's Veto power can be exercised.

To my knowledge no one has explained the relationship of the King and his Ministers in a system of responsible Government better than Macaulay. To use his language—

“In England the King cannot exercise his Veto power *unless* there is some Minister to take responsibility for the King's act. If there is no Minister to take responsibility the King must yield, fight, or abdicate.” The Governor-General stands in a different position. He need not yield. He can act even if there is no Minister to take responsibility for his act. That is the difference between the King's Veto and the Veto of the Governor-General. What is however more important to note is that this Veto power exists in respect of the Transferred field. In the dyarchical constitution in the Provinces the Transferred field was not subject to such a Veto power of the Governor. In other words there were no special responsibilities of the Governor. If the Governor-General can overrule Ministers even in the Transferred field, question is what substance is there in Ministerial responsibility. I see very little.

The second thing which is new is the separation between Governmental Authority and administrative control. Such a provision did not exist in the dyarchical constitution in the Provinces. In the dyarchical constitution of the Provinces when a subject was transferred both Governmental Authority as well as Administrative control was transferred to the Minister. You will ask

yourself what substance is there in Ministerial responsibility if a Minister can only issue directions and cannot control the action taken thereunder? I see very little.

The provision which existed in the dyarchical constitution of the Provinces and which has been omitted from the Federal Constitution relates to the financing of the Reserved subjects. Section 72D of the old Act of 1919 and sections 33 and 34 of the present Act may be usefully compared in this connection. Section 72D, sub-section (2) reads as follows:

"The estimates of annual expenditure and revenue of the Province shall be laid in the form of a statement before the Council in each year, and the proposals of the local Government for the appropriation of provincial revenues and other moneys in any year shall be submitted to the vote of the Council in the form of demands for grants. The Council may assent, or refuse its assent, to a demand, or may reduce the amount therein referred to, either by a reduction of any of the items of expenditure of which the grant is composed." Compare with this section 34 of the present Act of 1935; sub-section (1) of section 34 reads as follows:

"So much of the estimates of expenditure as relates to expenditure charged upon the revenues of the Federation shall not be submitted to the vote of the Legislature, but nothing in this sub-section shall be construed as preventing the discussion in either chamber of the Legislature of any of these estimates other than estimates relating to expenditure referred to in paragraph (a) or paragraph (f) of sub-section (3) of section 33."

According to section 33 expenditure charged on the revenues of the Federation includes expenditure on the reserved subjects. On a comparison between the provisions of the two Acts, it is clear that under the old Act no distinctions were made by section 72D between Transferred and Reserved subjects, so far as the powers of the Legislature in regard to the granting of supply were concerned and the expenditure on Reserved subjects was not only open to discussion but was also subject to the vote of the Legislature. Under the provisions of section 34, of the new Act the Federal Legislature can only discuss the expenditure on the reserved subjects but cannot vote upon it. This is a very important distinction. Under the old constitution even the reserved subjects were amenable to the financial powers of the Legislature. Under the present constitution they are independent of the financial powers of the Federal

Legislature. It is true that in the provincial Constitution the vote of the Legislature with regard to expenditure on reserved subjects was not final. That under a proviso to section 72D the Governor was given the power "in relation to any such demand to act as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount (by the Legislature) if the demand relates to reserved subject, and the Governor certifies that the expenditure provided for by the demand is essential to the discharge of his responsibility for the subject" It is also true that in the Government of India Act, 1935 the amount of expenditure on reserved subjects is fixed to 42 crores. But the same difference exists, namely that under the old constitution the reserved subjects were amenable to the financial control of the Legislature while in the new constitution they are not. This difference is not a small difference. The power to grant supplies is the most effective mode of enforcing the responsibility of the executive. The power of certification might have deprived the Legislature of control of the reserved subjects. But it did not altogether destroy its influence. Under the present constitution the Legislature has not only no control over reserved subjects but also it cannot have any influence over them. There can therefore be no doubt that there was more responsibility in the dyarchy in the old Provincial Constitution than there is in this dyarchy in the Federation.

The fact that the Executive is not responsible to the Legislature is simply another way of stating that in the Federal Scheme the Executive *is* supreme. This supremacy of the Executive may be maintained in various ways. It may be maintained by curtailing the powers of the Legislature or it may be maintained by planning the composition of the Legislature in such a way that the Legislature will always be at the beck and call of the Executive.

The Federal Scheme adopts both these means. In the first place, it limits the powers of the Federal Legislature. I have already described how greatly the Federal Scheme curtails the financial powers of the Federal Legislature. The Federal Legislature has no right to refuse supplies to any expenditure which is declared to be a charge on the revenues.

The Federal Scheme also curtails the Legislative powers of the Federal Legislature. These restraints are specified in section 108 which reads as follows:

"108. (7) Unless the Governor-General in his discretion thinks fit

to give his previous sanction, there shall not be introduced into, or moved in, either Chamber of the Federal Legislature, any Bill or amendment which—

(a) repeals, amends or is repugnant to any provisions of any Act of Parliament extending to British India ; or

(b) repeals, amends or is repugnant to any Governor-General's or Governor's Act, or any ordinance promulgated in his discretion by the Governor-General or a Governor; or

(c) affects matters as respects which the Governor-General is, by or under this Act, required to act in his discretion; or (d) repeals, amends or affects any Act relating to any police force ; or (e) affects the procedure for criminal proceedings in which European British subjects are concerned; or

(f) subjects-persons not resident in British India to greater taxation than persons resident in British India or subjects companies not wholly controlled and managed in British India to greater taxation than companies wholly controlled and managed therein ; or

(g) affects the grant of relief from any Federal tax on income in respect of income taxed or taxable in the United Kingdom.

(2) Unless the Governor-General in his discretion thinks fit to give his previous sanction, there shall not be introduced into, or moved in a Chamber of a Provincial Legislature any Bill or amendment which—

(a) repeals, amends or is repugnant to any provisions of any Act of Parliament extending to British India; or

(b) repeals, amends or is repugnant to any Governor-General's Act, or any ordinance promulgated in his discretion by the Governor-General ; or

(c) affects matters as respects which the Governor-General is by or under this Act, required to act in his discretion ; or

(d) affects the procedure for criminal proceedings in which European British subjects are concerned;

and unless the Governor of Province in his discretion thinks fit to give his previous sanction, there shall not be introduced or moved any Bill or amendment which—

(i) repeals, amends or is repugnant to any Governor's Act, or any ordinance promulgated in his discretion by the Governor; or (ii) repeals, amends or affects any Act relating to any police force.

(3) Nothing in this section affects the operation of any other

provision in this Act which requires the previous sanction of the Governor-General or of a Governor to the introduction of any Bill or the moving of any amendment."

The Federal Scheme does not stop with merely curtailing the power of the Federal Legislature as a means of maintaining the supremacy of the Executive. Under it the composition of the Federal Legislature is so arranged that the Legislature will always be at the beck and call of the Executive. In this connection it is necessary to bear in mind what the actual composition of the Federal Legislature is. As has already been pointed out there are 375 members in the Legislative Assembly and of them 125 have been assigned to the Indian States and 250 to British India. In the Council of State the total is 260 and of them 104 are assigned to the States and 156 are allotted to British India. The seats assigned to the States are to be filled by the Princes by nomination. The seats assigned to British India are to be filled by election. The Federal Legislature is therefore an heterogeneous legislature partly elected and partly nominated.

The first question to be considered is how the Princes' nominees in the Federal Legislature will behave. Will they be independent of the Federal Executive or will they be subservient to it? It is difficult to prophesy. But certain influences which are likely to play a part in the making of these nominations may be noted. It is an indisputable fact that the British Government claims what are called rights of paramountcy over the States. "Paramountcy" is an omnibus term to denote the rights which the Crown can exercise through the Political Department of the Government of India over the States. Among these rights is the right claimed by the Political Department to advise the Indian Princes in the matter of making certain appointments. It is well known that what is called "advice" is a diplomatic term for dictation. There is no doubt that the Political Department will claim the right to advise the Princes in the matter of filling up these places. Should this happen, what would be the result? The result would be this that the Princes' representatives would be simply another name for an official block owing allegiance, not to the people and not even to the Princes, but to the Political Department of the Government of India. Two things must be further noted. First is that Paramountcy is outside the Federal Government.

That means that the Ministers, will have no right to give any advice in the matter of the nomination of the Princes' Representatives and the Legislature will have no right to criticise it. They will be under

the control of the Viceroy as distinct from the Governor-General. Secondly, this official block of the Princes is not a small block. In the Lower House a party which has 187 seats can command a majority. In the Upper Chamber a party which has 130 seats can command a majority. In the Lower House the Princes have 125 seats. All that they need is a group of 62 to make a majority. In the Upper Chamber they have 104; all that they need is 26. All this vast strength the Executive can command. How can such a Legislature be independent? The Reserved half can control the Transferred half with this strength in its possession.

How will the representatives of British India behave? I cannot make any positive statement. But I like it to be borne in mind that in some States there is no such thing as a regular budget and there is no such thing as independent audit and accounts. It would not be difficult for the Princes to purchase support from British India representatives. Politics is a dirty game and British India politicians cannot all be presumed to be beyond corruption and when purchases can be made without discovery the danger is very real.

Look at the Federal Scheme any way you like and analyse it as you may its provisions relating to responsibility, you will see that of real responsibility there is none.

VII

THE BANE OF THE FEDERAL SCHEME

There is no one who does not recognize that this Scheme for an All Indian Federation is full of defects. A difference of opinion arises only when the question is asked what shall we do about it. The answers given to this question by prominent Indians from time to time disclose that broadly speaking, there are two quite different attitudes to this Federation. There is the attitude of those who think that bad as it is, we should accept the Federation and work it so as to derive whatever good it can yield. On the other hand, there is the attitude of those who think that certain changes must be made in the Constitution of the Federation before it can be accepted and worked. It is agreeable to find that both the Congress as well as the Liberal Federation are one on this issue, Both have declared that certain changes must be made before they will accept to work the Federation.

That this Federation is not acceptable to a large majority of the Indian people is beyond question. The question is in what respects should we require the Constitution to be amended? What are the

changes which we should demand? We may take as our starting point the resolutions passed by the Congress and the Liberal Federation relating to this question.

The Congress at its session held at Haripura in 1938 passed the following resolution:

"The Congress has rejected the new Constitution and declared that a Constitution for India, which can be accepted by the people, must be based on independence and can only be framed by the people themselves by means of a Constituent Assembly, without interference by any foreign authority. Adhering to this policy of rejection, the Congress has, however, permitted the formation in provinces of Congress Ministries with a view to strengthen the nation in its struggle for independence. In regard to the proposed Federation, no such considerations apply even provisionally or for a period, and the imposition of this Federation will do grave injury to India and tighten the bonds which hold her in subjection to imperialist domination. This scheme of Federation excludes from the sphere of responsibility vital functions of Government.

The Congress is not opposed to the idea of Federation: but a real Federation must, even apart from the question of responsibility consist of free units enjoying more or less the same measure of freedom and civil liberty, and representation by the democratic process of election. The Indian States participating in the Federation should approximate to the provinces in the establishment of representative institutions and responsible Government, civil liberties and method of election to the Federal Houses. Otherwise the Federation as it is now contemplated, will, instead of building up Indian unity, encourage separatist tendencies and involve the States in internal and external conflicts.

The Congress therefore reiterates its condemnation of the proposed Federal Scheme and calls upon the Provincial and Local Congress Committees and the people generally, as well as the Provincial Governments and Ministries, to prevent its inauguration. In the event of an attempt being made to impose it, despite the declared will of the people, such an attempt must be combated in every way and the Provincial Governments and Ministries must refuse to co-operate with it. In case such a contingency arises, the All India Congress Committee is authorised and directed to determine the line of action to be pursued in this regard."

The resolution passed by the National Liberal Federation at its last

session held in Bombay was in the following terms:

“The National Liberal Federation reiterates its opinion that the Constitution, especially as regards the Centre as embodied in the Government of India Act, 1935, is utterly unsatisfactory and in several respects retrograde. While the National Liberal Federation accepts a federal form of Government for India as the only natural ideal for our country, the Federation considers that vital changes are required in the form of the Federation as laid down in the Act especially in the direction of (a) clearing up the position of the Princes and securing the subjects of States the right of election of States' representatives, (b) doing away with the safeguards regarding the monetary policy and commercial discrimination, (c) introducing direct elections for the members of the Federal Assembly by the Provinces and (d) making Constitution sufficiently elastic so as to enable India to attain Dominion Status within a reasonable period of time.

The National Liberal Federation considers that the present position when there is an irresponsible Government in the Centre coupled with responsible Governments in the Provinces is altogether untenable and earnestly urges on Parliament to make immediate changes in the Federal part of the Constitution so as to make it generally acceptable.

The Federation is further of opinion that these modifications are essential for the successful working of the Federal Constitution."

Should these changes demanded by the Congress or by the Liberal Federation suffice to alter the present attitude of rejection into one of acceptance of Federation? Speaking for myself I have no hesitation in saying that the changes asked for in these Resolutions even if they are made will not convert me. To my mind whether the British Parliament is prepared to alter this, that or the other detail of the Federal Scheme immediately is a very unimportant consideration. In the view I take of the matter the objections to the Federal Scheme will not be removed in the least even if the British Parliament will be ready to grant every one of the demands contained in these Resolutions. To me the fundamental question is whether this Federal Scheme is capable of so evolving that in the end India will reach her goal and it is from this point of view that I want you and every one interested to examine the Federal Scheme.

What is the goal of India's political evolution? There does not seem to any fixity *or* definiteness about it. The Congress which claims to

voice the political aspirations of the Indian people began with good Government as its goal. It moved from good Government to Self-Government or Responsible Government; from Responsible Government to Dominion Status and from Dominion Status it advanced to Independence. There the Congress stopped for some time in a mood of self-examination. Then there was period of vacillation. Now it seems to have come back to Dominion Status and we shall not be very wrong if we take that to be the goal of India according to the Congress. Now the question is, can the Federal Scheme blossom in due course into Dominion Status?

Many Indians seem to think that the question of Dominion Status is a matter of gift which lies in the hands of the British Parliament. If the British Parliament were to make up its mind to grant it, nothing can stand in the way. They *contend* that if India has no hope of Dominion Status, it is because the British Parliament refused to grant it. In support of their opinion they refer to the refusal of The British Parliament to add a Preamble to the Act of 1935 declaring Dominion Status as the goal for India.

It must be granted that the demand for such a preamble was a very proper one. In 1929 Lord Irwin with the consent of all the political parties in the British Parliament declared that the goal of India's political evolution was Dominion Status. What the Indians therefore wanted was not new. It had already been so stated authoritatively by the Governor-General and Viceroy, but the British Government refused to put such a preamble. The refusal was therefore arrange piece of conduct on the part of the British Government. But the grounds urged in support of the refusal were stranger still. The British Government sought to justify their conduct in not having a preamble in those terms on various grounds.

The first ground was that a preamble was a futility and that it had no operative force, but that argument was easily met. All Acts of Parliament have had Preambles expressing the purpose and the intention of Parliament. It is true that it has no legal effect, but all the same Courts have not held that a preamble is a futile thing. On the other hand, wherever there is any doubt with regard to the wording of a section, Courts have always resorted to the preamble as a key to understand the purpose of the enactment and made use of it for resolving any doubtful construction. Driven from this position, the British Government took another position and that was to repeal the Act of 1919 but to retain the Preamble to that Act. This again is

a very queer thing. In the first place if the Preamble is a futility, there is no necessity to save the Preamble enacted as part of the Act of 1919. Secondly 'if the Preamble to the Act of 1919 was a necessity, it should have been enacted afresh as a part of this Act of 1935, which the British Government would not do. Instead it preferred to present the strange spectacle of the head separated from the trunk. The head is now to be found in the repealed Act of 1919 and the trunk is to be found in the present enactment of 1935. In the third place, what the Indian people wanted was a preamble promising Dominion Status and that is what the declaration of Lord Irwin contained. The preamble to the Act of 1919 speaks only of Responsible Government. It does not speak of Dominion Status and the retention of the Preamble to the Act of 1919 was to say the least the silliest business possible.

Why did the British Parliament refuse to enact a Preamble defining Dominion Status as the goal? Why did the British Parliament run from pillar to post rather than grant the demand? The explanation offered is of course the usual one namely, the perfidy of the Albion! My own view is different. The British Parliament did not promise Dominion Status by enacting a preamble because it realized that it would be beyond its power to fulfil such a promise. What the British Parliament lacked was not honesty. Indeed it was its honesty which led it to refuse to enact such a preamble because it knew that it could not give effect to such a preamble. What it lacked was courage to tell the Indians that the Federal Scheme left no way for Dominion Status.

Why is Dominion Status impossible under the Federal Scheme? It is impossible because it is not possible to have Responsible Government. It must be borne in mind that to reach Dominion Status, India must first attain Responsible Government. To attain Responsible Government the subjects which are reserved must become transferred. That is the first stage in the process of evolution towards Dominion Status.

Some of you will want to know the reasons why I say that the reserved subjects cannot become transferred. They are sure to recall that there were Reserved subjects in the Provincial Scheme as they are in the Federal Scheme and will ask that if the reserved subjects have become transferred in the course of say 20 years what difficulty can there be in the similar things happening in the Federation. As the question is important, I proceed to give my reason. In the first

place, the analogy of the Provinces is false. It is important to note why the analogy is false. It is false because in the Provincial Scheme the distinction between the reserved and the transferred subjects was based upon the requirements of administrative efficiency. That the distinction between the reserved and the transferred subjects in the Federal Scheme is based upon legal necessity and not upon administrative efficiency needs no proof. One of the reasons why the Simon Commission did not recommend dyarchy at the Centre was that it felt that administratively it was not possible to divide subjects into two water-tight compartments, one reserved and the other transferred, without affecting the efficiency of all; and the Government of India's despatch on the Simon Commission entirely agreed with the view. The division, therefore, is not administrative in its basis, It is the result of a legal necessity. This is a fundamental distinction and ought never to be lost sight of.

How does this legal necessity arise? I say the legal necessity for treating certain subjects as reserved arises because of the Indian States. I go further and say that there would be necessity for treating certain subjects as reserved if the Federation was confined to the British India Provinces only. The reservation of certain subjects is a direct consequence of the entry of the Indian States into the Federation.

What is it, in the position of the Indian States which compels certain subjects to be treated as reserved? To be able to answer this question I must first draw your attention to section 180 of the Government of India Act. Section 180 says—

"Any contract made before the commencement of Part III of this Act by or on behalf of the Secretary of State in Council solely in connection with the exercise of the functions of the Crown in its relations with Indian States, shall, as from the commencement of Part III of this Act, have effect as if it had been made on behalf of His Majesty and references in any such contract to the Secretary of State in Council shall be construed accordingly."

This section gives statutory form to the contention put forward by the Princes before the Butler Committee and accepted by them, that the treaties of the Indian States were with the Crown of England as such and not with the Government of India.

The next step is to note what follows from this theory. Now what follows from this theory is very crucial, but has been unfortunately allowed to pass without due care and attention. The Princes have

contended that as treaty relations of the Indian States are with the Crown of England, the duty and responsibility of fulfilling the obligations arising under those treaties lay solely upon the Crown of England and the Crown of England must at all times maintain itself in a position to fulfil those obligations.

What is the obligation which the treaties with the Princes impose upon the Crown of England? The Principle of obligation imposed upon the Crown of England and which the Crown of England has undertaken by the treaties is to protect the Princes from internal commotion and external aggression.

How can the Crown fulfil this obligation? The only way, it is argued, that the Crown can fulfil this obligation is to reserve external affairs and the Army under its exclusive control.

You can now understand why I say that the necessity of reserved subjects is due to a legal necessity. That legal necessity flows from the treaty obligations of the Crown and so long as the basis of the treaty relations remains what Section 180 says it is, the reserved subjects cannot become transferred subjects. And as the reserved subjects cannot become transferred, there is no SCOPE even for Responsible Government much less for Dominion Status.

From the analysis I have made of the Constitution, from the standpoint of the ultimate goal, few, I believe, will have any hesitation to say that this Constitution is a fixed and rigid constitution. It cannot change and therefore it cannot progress. It is a constitution which is stricken at the very base and it is for the people of India to consider whether they will accept it.

I have examined the Constitution from the standpoint of our goal at so considerable a length that I feel I owe you an apology for tiring you. But the attitude of some people towards this question must be my excuse for entering into this subject at such great length. I realize that no Constitution is a perfect constitution. Imperfections there are bound to be. But I think a distinction must be drawn between imperfections and inherent and congenital deficiencies. Imperfections can be removed. But congenital deficiencies cannot be supplied. The demands made in the resolutions of the Congress or of the Liberal Federation, even if granted, will remove the imperfections. But will they remove the deficiencies? I would not mind the imperfections if I was assured that there are no deficiencies. The greatest deficiency in the Constitution is that it will not lead to Dominion Status. Neither the Congress nor the Liberal

Federation seems to be aware that this deficiency exists. Their demands have no relation to the goal of India's political evolution. They do not even mention it. It is surprising that Congressmen should have become so enamoured of the prospect of seizing political power that their demands against the British Government should not even contain a declaration from the British Government in this behalf. But if Congress forget, the people of India cannot and should not. To do so would be fatal. It would be fatal as much for an individual as for a people to forget that a stage on the way is not the home and to follow the way without knowing whether it leads homewards or not is to misdirect one-self and fall into a ditch.

You must not misunderstand me. I am not an impatient idealist. I am not condemning the gradualist, who is prepared to wait and take thing by instalments, although the gradualist, who has a valid claim for a rupee, demands an anna and proclaims a great victory when he gets a pie, must become an object of pity. All I want is that if circumstances force us to be gradualists we must not fail to be realists. Before accepting an instalment we should examine it carefully and satisfy ourselves that it contains an acknowledgement of the whole claim. Otherwise, as often happens what is good for the moment turns out to be the enemy of the better.

Some of you will ask, how can India secure Dominion Status. My answer is India will get Dominion Status only if the Princes who join the Federation, consent to its being granted. If the Princes object to the grant of Dominion Status to India, then India cannot get Dominion Status. The Federation places the strings of India's political evolution in the hands of the Princes. The destiny of India will be controlled by the Princes.

This view of the future will strike as very strange to a great many of you. We are all saturated with Dicey's dictum regarding the Sovereignty of Parliament. We all have learned from him that Parliament is supreme, that it is so supreme that it can do anything except make man a woman and woman a man. It would not be unnatural if some of you ask how can the Princes stand in the way when the British Parliament is supreme. It will take some effort on your part to accept the proposition that the British Parliament has no supremacy over the Indian Federation. Its authority to change the Federal Constitution now embodied in the Government of India Act is strictly limited.

Indian politicians have expressed their sense of sorrow and

resentment over the fact that the Indian Legislatures have not been given by the Act any constituent powers.

Under the Government of India Act neither the Federal Legislature, nor the Provincial Legislature have any powers of altering or amending the constitution. The only thing, which the Act by virtue of section 308 does, is to permit the Federal Legislature and Provincial Legislature to pass a resolution recommending any change in the constitution, and make it obligatory upon the Secretary of State to place it before both Houses of Parliament. This is contrary to the provisions contained in the Constitutions of the United States, Australia, the German Federation and Switzerland. There is no reason why constituent power should not have been given within certain defined limits to the Legislatures in India when they were fully representative of all sections and of all interests. Be that as it may, the fact remains that the Indian Legislatures cannot make any changes in constitution, not even in the franchise, much less in making the reserved subjects transferred. The only authority which can change the Constitution is of course the British Parliament. But very few seem to be aware of the fact that even Parliament has no powers to alter the Federal Constitution. This, however, is the truth and the sooner we all realize it the better.

From this point of view the importance of Schedule II cannot be overestimated. I am sorry, it has not received the attention which it deserves. Schedule II is not only a charter but is also a chart along which the Constitution can move. The whole Schedule is worth careful study. What does Schedule II say? Schedule II says that certain provisions of the Government of India Act may be amended by Parliament and that certain other provisions of the Act shall not be amended by Parliament. That is simply another way of saying that Parliament is not supreme and that its right to alter the Constitution is limited.

What would happen if Parliament did amend those provisions of the Act which Schedule II says shall not be amended by Parliament? The answer, which Schedule II gives, is that such an Act will have the effect of 'affecting' the accession of the States to the Federation, which means it will have the effect of destroying the binding character of the Instrument of Accession. In other words, if Parliament amended any of the provisions of the Act, which Schedule II says shall not be amended, the Princes would get the right to secede from the Federation. I am aware that some eminent

lawyers have taken a different view. They hold that the Princes, once they come into the Federation, cannot go out of it. I have mentioned my view for what it is worth and I will say that my view is not altogether baseless.

At any rate the Solicitor-General and Secretary of State gave the same interpretation, as I am giving, in the House of Commons, when the Government of India Bill was being discussed.

The Solicitor-General said:

"The States will not agree to federate in a structure which within limits, is definite and certain and obviously we could not completely alter the structure afterwards. The purpose of this clause is to lay down those matters which can be altered without being regarded as fundamental or as impinging on the Instrument of Accession."....."If the structure were to be altered in fundamental respects, of course the States would clearly have the right to say" This is not the Federation to which we have acceded."

The Secretary of State said :

"If you amend the parts of the Bill which affect the States, obviously you would be altering the conditions on which they have acceded and that would certainly create a situation in which the Princes could rightly claim that their Instrument of Accession had been altered. It certainly means that we cannot amend any part of the Bill which affects what is virtually the treaties under which the Princes come in. If we make a change in the Bill as to strike at the basis of their Instrument of Accession then obviously, the agreement has been broken between the Princes and Parliament and the Princes are free."

"It will be accepted by every one that under the general scheme of the Bill the States, when they are asked to federate are entitled to know with certainty certain aspects at any rate, of the Federation to which they are to accede. It would be an absurd position if having said to a State this month, "Will you accede to a Federation," it was possible next month for this House to alter in some fundamental respects the provisions of the Federation to which the State was held to have acceded. Therefore, some schedule of this kind is necessary. It is a sorting out of the various parts of the Bill which should be capable of amendment without in any sense altering from the point of view of the States the constitutional machinery to which they have acceded. The scheme of the Schedule is to set out the provisions of the Act,

the amendment whereof is not to affect the validity of the Instrument of Accession of a State."

"One sees set out those parts of the Bill the amendment of which is not to affect the validity of the Instrument of Accession of a State, and on the opposite side there are set out those subjects the amendment of which, would affect the validity of accession. In drawing up a schedule of this kind one has to proceed with great care in defining what are the legitimate matters on which the Rulers of a State are entitled to ask that there shall be no amendment without their consent. Of course there will be borderline cases. There could be minor amendments, which would not really make any great difference to the existing position, and it would be very unreasonable if the States took objection to such amendments and said, 'We are going to stand on our rights on this point as affecting the validity of our Instrument of Accession.' It is right that any matter which really affects what I may call the general balance of powers, the questions of the reservation of subjects of executive control and of matters which can be dealt with by the Governor-General in his discretion, matters which are vital to the architecture of the Federation to which the States are asked to accede, should not be amended without their assent.

"The whole area of the special powers vested in the Governor-General is one of the essential features of the Federation. That is one part where the States are entitled to say 'That is a change' or 'That is altered'. But this does not in any way check for all time the development of India. These are to be the subject-matter of negotiations with the States, because, in effect, they will produce a Federation of a different kind from that to which the State has acceded."

Therefore to the question what would happen if Parliament did make such changes which by virtue of Schedule II are treated as changes which will affect the Instrument of Accession the answer is that the Princes will get a right to walk out of the Federation. In other words, the consequence of any such change would be to break up the Federation.

What are the changes which cannot be made without affecting the Instrument of Accession? I will draw your attention to some of the provisions which Schedule II says cannot be amended *by* Parliament without affecting the Instrument of Accession. According to

Schedule II no changes in the Constitution can be made which relate to (1) the exercise by the Governor-General of the executive authority of the Federation; (2) the definition of the functions of the Governor-General; (3) the executive authority of the Federation; (4) the functions of the Council of Ministers and the choosing and summoning of ministers and their tenure of office; (5) the power of the Governor-General to decide whether he is entitled to act in his discretion or exercise his individual judgment; (6) the functions of the Governor-General with respect to external affairs and defence; (7) the special responsibilities of the Governor-General relating to the peace and tranquillity of India or any part thereof; (8) the financial stability and credit of the Federal Government; (9) the rights of the Indian States and the rights and dignity of their Rulers; (10) the discharge of his functions by or under the Act in his discretion or in the exercise of his individual judgment; (11) His Majesty's Instrument of Instructions to the Governor-General ; and (12) the superintendence of the Secretary of State in the making of the rules for the Governor-General in his discretion for the transaction of and the securing of transmission to him of Information with respect to, the business of the Federal Government.

Schedule II is a very extensive collection of constitutional don'ts. I have given just a few of them. They will however be sufficient to show how limited is the authority of Parliament to make changes in the Constitution.

Why is the authority of Parliament limited? To understand this it is necessary to note the exact limits of the authority of Parliament. According to law the authority of the Parliament to legislate extends only to countries which are the Dominions of the King. The States did not form part of the Dominions of the King and none of them not even the finest of them was subject to the legislative authority of Parliament. The Government of India Act makes no change in this status of the States. The States remain foreign territories in spite of the Federation, and as they were before Federation. This is the most extra-ordinary state about the Indian Federation, namely that the different units are as between themselves foreign states. As the Act does not make the States Dominions of the King, Parliament gets no right to legislate about them. Parliament derives its authority over the States from the Instrument of Accession. That being so, the authority of Parliament cannot but be limited to what is transferred

to it by the States 'through their instruments. To use the language of the Privy Council itself, as the stream can rise no higher than its source, similarly. Parliament cannot have powers over the States greater than those, given to them by the Instrument of Accession. This explains why the authority of Parliament to amend the Constitution is limited.

The analysis made so far shows that the authority of Parliament to change is limited by the Instrument of Accession and that for any excess of authority, there must be prior consent given by the Princes. As a legal effect of the provisions of the Act it may not be shocking. But consider the fact that the provisions in regard to which Parliament has no power to change include those that relate to the transposition of such subjects as Defence and External affairs from the category of Reserved to that of the Transferred and that it will not have that power unless the Princes consent expressly to confer that authority on Parliament and permit it to do so. You will be in a position to realize how grave are going to be the consequences of this Federation. The establishment of the Federation means that the mastery has gone from the hands of Parliament into the hands of Princes. This Federation makes the Princes the arbiters of destiny. Without their consent India cannot politically advance.

Other consequences of this Federation might also be noted. I will just refer to one. It is that this federation, if accepted will weaken the position of British Indians in their struggle for change. Hitherto, in the struggle between the Indian people and the British Parliament the latter was always the weaker party. It had nothing to oppose the right of the people to change except its will. After the Federation the position is bound to be reversed. The Indian people would be in a weaker position and Parliament would be in a stronger position. After the Federation, Parliament would be in a position to say that it is willing to grant the demand for change but that its authority to change is limited and that before making any demand for change. Indians should obtain the consent of the Princes. There is nothing to prevent Parliament from taking this stand.

What reply would Indians be able to give if they once accept the Federation and thereby admit the implications underlying it?

VIII

THE FATALITY OF FEDERATION

What shall we do with the Indian States? That is a question that is

often asked. Some people with Republican faith in them desire their total abolition. Those who do not care for forms of Government will reject this view. But even they must abide by the consideration that what works best is best. Can the Indian States be said to work best? I do not know that there is anybody, who will be prepared to give an affirmative answer. at any rate an affirmative answer which will apply to all States. The internal administration of the States is a bye-word for mismanagement and mal-administration. Very few States will escape this charge.

The people are always asking as to why there should be this mismanagement and mal-administration in the States. The usual answer is that it is the consequence of Personal Rule. Everywhere the demand made is that Personal Rule should be replaced by Popular Government. I have grave doubts about the efficacy of this demand. I do not think that in a large majority of cases the substitution of Popular Government will be any cure for the ills of the State subjects. For, I am sure that the evils arise as much from the misrule of the Ruler as they arise from want of resources. Few have any idea as to how scanty are the resources of the Indian States.

Let me give you a few facts. Out of the total of 627 States there are only ten with an annual revenue above 1 crore. Of these ten, five have just about a crore, three have between 2 and 2 1/4 crores. One has just about 3 1/4 crores and only one has a revenue just about 8 crores. There are nine with a revenue ranging between 1 crore and 50 lakhs. About twelve have a revenue ranging between 50 to 25 lakhs. Thirty have a revenue varying between 25 lakhs and 10 lakhs. The rest of the 566 have an annual revenue which is less than 10 lakhs. This does not, however, give an idea of how small are some of the States which fall below 10 lakhs. A few illustrations may therefore be given. Among these 566 States there is one with a revenue of Rs. 500 and a population of 206 souls. Another with a revenue of Rs. 165 and a population of 125 : another with a revenue of Rs. 136 and a population of 239, another with a revenue of 128 and a population of 147 and another with a revenue of Rs. 80 and a population of 27. Each one of these is an Autonomous State, even the one with a revenue of Rs. 80 and a population of 27!

The Autonomy of these State's means that each one must take upon itself the responsibility to supply to its subjects all the services which relate to matters falling under law and order such as revenue, executive and judicial and all the services which affect public welfare

such as education, sanitation, roads etc. We in Bombay with our 12 crores of revenue are finding it difficult to maintain a civilized standard of administration. Other Provinces with equally large revenue are finding the same difficulty. How then can these small tiny states with a revenue of few hundreds and a population of few thousands cater to any of the wants which a civilized man must have his Government satisfy in full measure? With the best of motives and given an ideal Prince the task is hopeless.

The only way out is to reorganize the whole area occupied by the Indian States. The proper solution would be to fix an area of a certain size and of certain revenue and to constitute it into a New Province and to pension off the rulers now holding any territory in that area. Only such States should be retained in whose case by measure of area and revenue it can be said that they by reason of their resources are in a position to provide a decent standard of administration. Those which cannot satisfy the test must go. There is no other way. This is not merely what might be done. I say, to do this is our duty and a sacred duty.

I know some, will think of the hereditary right of the Prince to rule over his territory. But I ask, what is more important, the right of the Prince or the welfare of the people? I am sure that even the best friends of the States will not say that the *rights* of the Prince are more important than the welfare of the people. Which should give way, if the two are in conflict? There again, I am sure that even the best friends of the States will not say that the welfare of the people should be sacrificed for the sake of maintaining the rights of the Prince.

The question of the reorganization of the Indian States is not a political question. As I look at it, is a purely administrative question. It is also an inevitable question. Because, not to tackle it is to condemn the people of the States—and there are millions of them—perpetually to a life of misery and security. The way I suggest is not a revolutionary way. To pension off a Prince and to annex his territory is a legal way and can fall under the principles with which we are familiar under the Land Acquisition Act which allows private rights and properties to be acquired for public purposes.

Unfortunately, the question of the Indian States has not been tackled from this point of view so far. The question that I want to place before you is, and it is a very important question, "Will it be open to you to tackle this question after the Federation is

established?" I say no. You will perhaps ask why. How does this conclusion follow?

I have already pointed out that with regard to the entry into the Federation, the Provinces and the States stand on a different footing. The Provinces have no choice. They must agree to be the units of the Federation. The States have a choice. They may join the Federation or they may refuse to join the Federation. That is so from the standpoint of the Provinces and from the standpoint of the States. What is the position from the standpoint of the Federation? Has the Federation any choice in the matter of the admission of the States? Can the Federation refuse to admit a State into the Federation? The answer is no. The Federation has no right to refuse. The State has a right to enter the Federation. But the Federation has no right to refuse admission at any rate for the first 20 years. That is the position. Now what does the admission of a State into the Federation mean? In my view the admission of a State into the Federation means recognition of the sovereign status of the State. Recognition of its sovereign status means the recognition of its indestructibility which means its right to the integrity of its territory and to guaranteeing of its powers of internal administration. This would apply even to the State with a population of 27 and revenue of Rs. 80. These being the implications of the admission of a State in the Federation, I am perfectly justified in suggesting that the territorial reorganisation of the Indian States will not be possible after the establishment of the Federation and the people of the Indian States will be forever doomed to misrule and mal-administration.

Can British India do anything in the matter now? I think British India is not in a position to do anything in the matter. If British India could have secured Responsible Government for itself, it might have been in a position to dictate which State should be admitted and on what terms. It would have been in a position to make the reorganization of the States territory into tolerably big units as a condition precedent for their entry into the Federation. Unfortunately British India has no Responsible Government. Indeed its right to Responsible Government at the Centre is denied and is made dependent upon the entry of the States." "No States, no responsibility" "has now become the fate of British India. That being the position of British India, British India is not in a position to make terms with the States as she would have been able to do if she

had Responsible Government. That is why I have said and that is why I have always maintained that British Indians should first ask for a Federation and Responsibility confined to British India. Once that is obtained, the path for an All India Federation on the basis of freedom and good government all round will become possible. That possibility will be gone if this Federation comes into being.

I have already drawn your attention to some of the deformities of the Federal Scheme. What I have now drawn attention to is more than a deformity. It is a fatality of the Federation. So far as the States' people are concerned, it is a decree of fate. It is something which they will never be able to escape once it is executed.

The State's problem is one which, I believe could be solved by the Paramount Power along the lines I have suggested or along any other line consistently with the welfare of the people, if it wishes to do so. Paramountcy is like the Trimurti of Hindu Theology. It is Brahma because it has created the States. It is Vishnu because it preserves them. It is Shiva because it can destroy them. Paramountcy has played all these parts in different times in relation to the States. At one time, it played the part of Shiva. It has now been playing the part of Vishnu. To play the part of Vishnu with regard to the States is from the point of view of the good of the people the cruellest act. Should British India be a party to it? It is for you to consider.

IX

FEDERATION WITHOUT TIE STATES

There is another point of view from which the case for Federation is argued. I must now proceed to examine that argument.

It is argued that the constitution creates Autonomous Provinces. The Autonomy of the Provinces means independence and therefore disruption of the Unity of British India. This must be counteracted. Some binding force must be provided so that the Provinces may be held together and unity and uniformity built up for the last hundred years as a result of British administration is preserved intact in fundamentals if not in details.

The argument is quite sound, if it only means that the creation of Autonomous Provinces makes the creation of a Central Government a necessity. This proposition I am sure will command universal assent. In all the Round Table Conferences the late Sir Mahomad Iqbal was the only delegate who was against the establishment of a Central Government. Every other delegate irrespective of caste or creed differed from him. They asserted that

with the creation of Autonomous Provinces the establishment of a Central Government was a categorical imperative and that without it autonomy would result in anarchy.

But the argument goes beyond its legitimate scope. It seeks to justify the establishment of a Central Government for All India. The argument which can justify the establishment of a Central Government for British India is used to justify a Central Government for the whole of India. And the question that you have to consider is whether the creation of Autonomous Provinces in British India can justify a Central Government for the whole of India including the Indian States. My contention is that the creation of Autonomous Provinces does not require the creation of a Central Government for the whole of India.

The establishment of Autonomous Provinces in British India will call for two things; (1) That there shall be a Central Government for British India and (2) that the form of that Central Government must be federal and not unitary. The essence of Federation lies in the division or allocation of Legislative and Executive Powers between the Central Government and the Units by law. The powers of the Units and the Centre are defined and demarcated and the one is not entitled to invade the domain of the other. Autonomy of the Provinces means that their powers are defined and vested in them. To make Provincial Autonomy real the Powers of the Central Government must also be limited, otherwise it would be in a position to invade the domain of the Provinces. To put it simply, autonomy means definition and delimitation of Powers by law and wherever there is definition and delimitation of powers between two Political Bodies there is and there must be Federation. You will now understand why I said that all that Provincial Autonomy demands is that the Central Government for British India shall be Federal in form- It does not justify all India Federation. Why is it necessary to bring in the States still remains to be answered and those who plead for this All-India Federation as distinct from British India Federation must answer this question.

As I said all that is necessary is that Central Government for British India shall be Federal in form and this fact has been recognized by the Constitution.

Many seemed to have failed to notice that the Government of India Act, 1935 establishes two distinct Federations. One is a federation which is a federation of the Provinces of British India

another which is a Federation of British Indian Provinces and the Indian States. It is surprising that so many should have missed so important a fact. That the Government of India Act establishes two federations is beyond dispute. To those who have any doubt they should read Parts III and XIII together and Part II and Part III together. Part II and Part III reveal that there is an All-India Federation and lay down the constitution of that Federation. Part III and Part XIII reveal that there is a Federation of British India Provinces apart from the States and lay down the Constitution of that Federation. That Part XIII relates to provisions which are called transitional does not make the British India Scheme any the less a Federation, because the law is law whether it is for a limited period or for all times.

That the Act establishes a Federation for British India Provinces and also an All-India Federation cannot be denied. What is the difference between these two Federations? Is there any difference in the Legislative Powers of the Federation? The answer is no. The Federal Legislative List remains the same whether the Federation that is in operation is British India Federation or the All-India Federation. The Concurrent list also remains the same whether the Federation in operation is one or the other.

Is there any difference in Financial Powers? The answer again is no.

The Powers of taxation remain the same whether it is an All-India Federation or British India Federation.

Is there any change in the Judicial organization of the Federation? There is none. Federal Court is as much necessary for the All-India Federation as for British India Federation.

How do these two Federations differ? The two differ in one respect only. To find out this difference you should compare section 313 with section 8. The comparison will show that if the Federation is a British India Federation the Executive Authority of the Federation will be the Governor-General in Council and if the federation is an All-India Federation the Executive Authority in transferred matters to be the Governor-General acting on the advice of Ministers responsible to the Legislature. In other words while there is British India Federation only there is no responsibility at the Centre so long as there is no All-India Federation.

This means that the entry of the States is a condition precedent for the grant of responsibility to British India. You will therefore ask, why is the entry of the States so essential?

All Federations have come into existence as a result of some danger from outside affecting the safety and integrity of the Units. The States of North America federated because of the fear of subjugation of the States by British Imperialism. The Provinces of Canada federated because of the danger of invasion or absorption by the United States. The Australian Colonies federated because of the danger of invasion by Japan. It is obvious that the Indian Federation is not the result of any such circumstance. There is no new invader on the border of India waiting to pounce upon both British India and the Indian States. Nor is this Federation necessary for bringing about peace between British India and the Indian States. It matters not that British India is under the sovereignty of the Crown and the Indian States are under the suzerainty of the Crown. So far as foreign relations are concerned, and they include peace and war, the two are subordinate to one and the same authority namely the crown. That is the reason why the two have been at peace. That is the reason why they will not be and cannot be at war. Prevention of external aggression or the maintenance of internal peace cannot be the motive for this All India Federation. What then can be the motive of this Federation? Why are the States invited to enter into this Federation? Why is their entry made a condition precedent for responsibility at the Centre? To put it bluntly, the motive is to use the Princes to support imperial interests and to curb the rising tide of democracy in British India. I should like to have another explanation, if there is any. I see none. That the Princes are wanted in the Federation to serve ends of the British Imperialism is beyond question. The Secretary of State for India speaking in Parliament during the course of the debate on the Government of India Bill admitted that "we should all welcome the entry into the Central Government of India of a great force of stability and imperial feeling represented by the Princes" While the suppression of democracy in British India may not be the motive I am sure that that will be the consequence of the entry of the Princes in the Federation.

What a price has been paid for the entry of the Federation! I do not wish to repeat what I have said. If you will re-call what I have said regarding the discrimination which has been made in favour of the Princes in the matter of representation, taxation, administration, legislation etc., you will know what benefits have been conferred, what rights have been surrendered and what immunities have been granted by British India to induce the Princes to come into the

Federation. And what has British India got in return?

If the Federal Constitution had provided full responsible Government, there would have been some compensation to British India for the price it has paid to the Princes for their joining the Federation. But British India has not got any responsibility worth the name. What British India has got is a system of responsibility halved in part and mutilated in substance by conditions and restraints. Not only British India has not been able to secure responsibility at the Centre commensurate with the sacrifices it has made for making the Federation easy for the Princes, but it has lost its claim for Dominion Status in its own right and independently of the Princes. Many people do not know what British India has lost and stands to lose in this business of an All India Federation. The new Constitution is the result of the struggle of the people of British India. It is the agitation and the sufferings of the people of British India which was the compelling force behind this constitution. What was the right which the people of British India were claiming for themselves? As I have said, their first claim was good government in British India. Next they claimed self-government, that is responsible government for British India. Lastly, they claimed Dominion Status for British India. Each one of these claims have been accepted by the British Parliament. In 1917 the British Parliament accepted the goal of Responsible Government. In 1929 the English Nation accepted the goal of Dominion Status, Now it must be emphasised that each time the claim was made, it was made in the name of the people of British India. Each time it was accepted in relation to the people of British India. What is going to be the position of British India as a result of the Federation?

The position of British India is that they can never get any responsibility at the Centre unless the Princes come into the Scheme. That means that British India has lost its right to claim Responsible Government for itself in its own name and independently of the Princes. This right was a vested right because it was the result of a claim made and accepted. That right has been lost because British India is made dependent for the realization of its destiny upon the wishes of the States. Of the two parts of this Federation. British India is the progressive part and the States form the unprogressive part. That the progressive part should be tied up to the chariot of the unprogressive and its path and destiny should be made dependent upon the unprogressive part constitutes the most tragic side of this

Federation.

For this tragedy you have to blame your own national leaders. Fortunately for me I am not one of your national leaders. The utmost rank to which I have risen is that of a leader of the Untouchables. I find even that rank has been denied to me. Thakkar Bapa, the left hand man of Mahatma Gandhi. I call him left hand man only because Vallabhbhai Patel is the right hand man—very recently said that I was only the leader of the Mahars. He would not even allow me the leadership of the Untouchables of the Bombay Presidency. Whether what Thakkar Bapa said was said by him out of malice or out of love of truth does not worry me. For politics is not my first love nor is national leadership the goal of my life. On the other hand, when I see what disasters your national leaders have brought upon this country I feel relieved to know that I am not included in that august crowd. Believe me when I say that some of your national leaders were thoroughly unprepared for the job of constitution making. They went to the Round Table Conference without any comparative study of constitutions and could propound no solutions to problems with which they were presented. Others who were undoubtedly competent to tackle the problem were like little children so charged with the ideal of Federation that they never cared to see whether what they were shaping was a real federation or a fraud in the name of Federation. This tragedy is entirely due to wrong leadership. I do not know if the steps taken can be retraced and whether the lost ground can be regained. But I think it is a right thing that the people of British India should know what they have lost. They have a federation of their own and they have right to demand responsibility for their federation.

There is another reason why it would be desirable to have a Federation of British India only. A Federation of British India and of the Indian States cannot work harmoniously. There are two elements which I am sure will produce a conflict between British India and the Indian States. The first element arises out of the difference in the position of the representatives of British India and those of the Indian States. The representatives of British India will be free men. The representatives of the Indian States will be bondmen of the Political Department. The sources of mandate of those two sets of representatives in the Federal Legislature will be different. The British India representatives will be engaged in extending the authority of the Ministers. The States representatives

are sure to act and will be made to act so as to lend support to the authority of the Governor-General as against the Ministers. This conflict is inevitable and it is sure to embitter the feelings of British India towards the Indian States. This was precisely what happened in the last regime in the Provinces. The feelings of the elected members towards the nominated members in the old Provincial Councils were certainly unfriendly. This experience I am sure will be repeated in the Federal Legislature. That it should be so is very natural when one section of the House feels that the other section has been brought in to thwart its wishes and is acting as the tool of some power outside the control of the Legislature. This is one element of disharmony. The other element of disharmony is the disparity in the position of British Indian States under the Federation. Equality before law is a precious thing. But not all people value it for the same reason. Most cherish it an ideal. Few realize why it is crucial. Equality before the law compels men to make common cause with all others similarly affected. Whereas if there is no equality, if some are favoured and others are burdened, those specially favoured not only refuse to join those who are burdened in the struggle for equality but actually take sides against them. A Dictator might, as the kings did in the olden times, pull out one by one the teeth of a few without necessarily exciting the resentment of the other people. On the contrary, the others will join in the raid. But suppose a law was made that all must contribute, as much money as the dictators ask for under penalty of their teeth being drawn out all would rise in opposition. There is no equality between British India and the Indian States under the Federation. Indian States enjoy many benefits and many exemptions which are denied to British India. This is particularly so in the matter of taxation. There is bound to be great acrimony between the representatives of British India and those of the Indian States as to who should bear the load of taxation first. Patriotism vanishes when you touch a man's pocket and I am sure that the States representatives will prefer their own financial interest to the necessities of a common front to make the executive responsible to the Legislature.

What is the use of housing British India and the Indian States under one edifice if the result is to make them quarrel with each other?

There is a complete dissimilarity between the forms of Government prevalent in British India and the Indian States and the

principles underlying the two. These dissimilarities need not produce any antagonism between the Indian States and British India if the two continue to evolve in their separate spheres. So long as the form of Government in the Indian States does not become a factor in the decision of affairs which affects British India, British India can tolerate those forms of Government however antiquated they may be. But the Federation makes them a factor and a powerful factor and British India cannot remain indifferent to them. Indeed the forging of the Federation will compel British India to launch a campaign in sheer self-interest for revolutionising the forms of Government prevalent in the Indian States.

This will be the inevitable result of this Federation. Is this a consummation which the States devoutly wish for? This is a question they will have to consider.

Does British India welcome this prospect? Speaking for myself I will not. It would be impossible to wage war on so vast a front. The States are too numerous to allow concentrated attack. The States being a part of the structure, you cannot attack them and justify your attack as a Constitutional Act. Secondly, why put yourself in this difficulty? Sometimes it turns out that a man thinks that he is buying property when as a matter of fact he is buying litigation. For British India to accept this Federation is like buying trouble. Thirdly, this Constitution is a settlement from which Dominion Status is most rigidly excluded not only for the present but also for the future as well.

Looked at from any point of view, the wisest course seems to me that leaving the States where they are, British India should proceed on its own evolution and Federation for itself.

X

FEDERATION FROM DIFFERENT POINTS OF VIEW

Different people are looking at this Federation from different points of view. There is the point of view of the Princes. There is the point of view *of* the Hindus and the Muslims and the Congress. There is also the point of view of the Merchant and the Trader. The point of view of each one of these is of course the result of their particular interests.

What is the interest of the Princes in this Federation? To understand the motives of the Princes you must go back to the

Butler Committee. The Princes had been complaining of the encroachment of the Political Department of the Government of India upon their treaty rights under the Doctrine of Paramountcy. The Princes were insisting that the Political Department had no greater right against the States except those that were given by the treaties subsisting between them and the British Government. The Political Department on the other hand claimed that in addition to the rights referable to the treaties, the Crown had also rights which were referable to political usages and customs. To adjudicate upon this dispute, the Secretary of State agreed to appoint the Butler Committee. The Princes had hoped that the Butler Committee would accept their contentions and limit the scope of Paramountcy to the rights referable to the treaties. Unfortunately for the Princes they were disappointed, because the Butler Committee reported that the Paramountcy was paramount and that there could be no definition or delimitation of it. This decision of the Butler Committee meant a complete subordination of the Princes to the Political Department of the Government of India and the Princes were in search of an escape from this unfortunate position in which they were placed and they found, and quite rightly, that the only 'solution which can enable them to escape the tyranny of the Political Department was the Federation; because to the extent to which the Federal authority prevailed, the authority of the Political Department would vanish and as the Federal authority could only be exercised by a Federal Legislature and a Federal Executive and as they would have sufficient voice in the Federal Legislature and the Federal Executive they thought of federation. The federal solution of their problem offered two advantages to the Princes. The first was that it would secure to the States internal autonomy which they were very anxious to have, for it is of the essence of federating units to remain in their own hands all powers save those which they themselves have willingly delegated to a common centre and over which they themselves possess a share in the control. The second advantage of the Federation was that Paramountcy would disappear to the extent of the Federal authority. The motive of the Princes, therefore, was selfish and their primary aim was to get rid as much as possible of the authority of the Political Department of the Government of India. This was one of the primary interests of the Princes. The Princes had another interests to safeguard. That was to preserve their powers of civil and military government as much as

possible. They wanted to make the Federation as thin as possible so that it might not impinge upon them very hard. The interest of the Princes is two-fold. They wanted to escape Paramountcy. Secondly, they did not want to subject themselves too much to the authority of the Federation. In looking at the Federation, the Princes keep two questions before them. How far will this Federation enable them to escape the tyranny of Paramountcy? Secondly, how far does this scheme of Federation take away their sovereignty and their powers of internal government? They want to draw more under the former and give less under the latter.

The Muslims had an interest which not only coloured their whole vision but made it so limited that they did not care to look at anything else. That interest was their interest as a minority. They knew only one means of protecting themselves against the Hindu majority. That was to ask for reservation of seats with separate electorates and weightage in representation. In 1930 they discovered that there was another and a more efficacious method of protecting the Muslim minorities. That was to carve out new Provinces in which Muslims would be in a majority and Hindus in a minority as a counterblast to Provinces with Hindus as a majority and Muslims as a minority. They hit upon this system because they felt such a system of balance of Provinces would permit the Muslims in the Muslim majority Provinces to hold the Hindu minorities in their Provinces as hostage for the good behaviour of the Hindu Majorities in the Provinces in which the Muslims were in minority. The creation of Muslim majority Provinces and to make them strong and powerful was their dominant interest. To accomplish this they demanded the separation of Sindh and the grant of responsible government to the North West Frontier Provinces so that the Muslims could have a command of four Provinces. To make the Provinces strong they insisted on making the Centre weak. As a means to this end the Muslims demanded that residuary powers should be given to the Provinces and the Hindu representation in the Centre should be reduced by giving the Muslims not only 1/3 of seats from the total fixed for British India but also 1/3 from the total assigned to the Princes.

The Hindus as represented by the Hindu Mahasabha were concerned with only one thing. How to meet what they called the menace of the Musalmans? The Hindu Mahasabha felt that the accession of the Princes was an accretion to the Hindu strength.

Everything else was to them of no consequence. Its point of view was Federation at any cost.

The next class whose point of view is worthy of consideration is the Indian Commercial Community. The commercial community is no doubt a small community in a vast country like India, but there can be no doubt about it that the point of view of this community is really more decisive than the point of view of any other community. This community has been behind the Congress. It is this community which has supplied the Congress the sinews of war and it knows that having paid the piper it can call for the tune. The commercial community is primarily interested in what is called commercial discrimination and the lowering of the exchange Ratio. It was a very narrow and limited point of view. The Indian Commercial Community is out to displace Europeans from Trade and Commerce and take their place. This it claims to do in the name of nationalism. It wants the right to lower the exchange rate and make profit in its foreign trade. This also it claims to do in the name of nationalism. Beyond getting profits to themselves the Merchants and Traders have no other consideration.

What shall I say about the Congress? What was its point of view? I am sure I am not exaggerating or misrepresenting facts when I say that the Congress point of view at the Round Table Conference was that the Congress was the only party in India and that no body else counted and that the British should settle with the Congress only. This was the burden of Mr. Gandhi's song at the Round Table Conference. He was so busy in establishing his own claim to recognition by the British as the dictator of India that he forgot altogether that the important question was not, with whom the settlement should be made but what were to be the terms of that settlement. As to the terms of the settlement, Mr. Gandhi was quite unequal to the task. When he went to London he had forgotten that he would have before him not those who go to him to obtain his advice and return with his blessings but persons who would treat him as a lawyer treats a witness in the box. Mr. Gandhi also forgot that he was going to a political conference. He went there as though he was going to a Vaishnava Shrine singing the Narsi Mehta's Songs. When I think of the whole affair I am wondering if any nation had ever sent a representative *to* negotiate the terms of a national settlement who was more unfit than Mr. Gandhi. How unfit Mr. Gandhi was to negotiate a settlement becomes evident when one

realizes that this Ambassador of India was ready to return to India with only Provincial Autonomy when as a matter of fact he was sent to negotiate on the basis of Independence. No man has brought greater disasters to the interests of India than did Mr. Gandhi at the Round Table Conference. Less one speaks of him the better.

How far each of these interests feel satisfied with the Federal Scheme such as it is, it is not for me to say. The question one may however ask is, are these the only points of view that must be taken into consideration in deciding as to what we shall do with this Federation? I protest that there are other points of view besides those mentioned above which must receive attention. There is the point of view of the Free man. There is also the point of view of the Poor man. What have they to say of Federation? The Federation does not seem to take any account of them. Yet they are the people who are most deeply concerned. Can the free man hope that the Federal Constitution will not be a menace to his freedom? Can the poor man feel that the constitution will enable him to have old values revalued, to have vested rights divested? I have no doubt that this Federation if it comes into being will be a standing menace to the free man and an obstacle in the way of the poor man. What freedom can there be when you are made subject to the autocracy of the Princes? What economic betterment can there be when you get Second Chambers with vested rights entrenched in full and when legislation affecting property is subject to sanction by the Government both before introducing and after it has passed?

XI

CONCLUSION

I have perhaps detained you longer than I should have done. You will allow that it is not altogether my fault. The vastness of the subject is one reason for the length of this address.

I must, however, confess that there is also another reason which has persuaded me not to cut too short. We are standing today at the point of time where the old age ends and the new begins. The old age was the age of Ranade, Agarkar, Tilak, Gokhale, Wachha, Sir Pherozeshah Mehta, Surendranath Bannerjee. The new age is the age of Mr. Gandhi and this generation is said to be Gandhi generation. As one who knows something of the old age and also something of the new I see some very definite marks of difference between the two. The type of leadership has undergone a profound change. In

the age of Ranade the leaders struggled to modernize India. In the age of Gandhi the leaders are making her a living specimen of antiquity. In the age of Ranade leaders depended upon experience as a corrective method of their thoughts and their deeds. The leaders of the present age depend upon their inner voice as their guide. Not only is there a difference in their mental make up there is a difference even in their viewpoint regarding external appearance. The leaders of the old age took care to be well clad while the leaders of the present age take pride in being half clad. The leaders of the Gandhi age are of course aware of these differences. But far from blushing for their views and their appearance they claim that the India of Gandhi is superior to India of Ranade. They say that the age of Mr. Gandhi is an agitated and an expectant age, which the age of Mr. Ranade was not.

Those who have lived both in the age of Ranade and the age of Gandhi will admit that there is this difference between the two. At the same time they will be able to insist that if the India of Ranade was less agitated it was more honest and that if it was less expectant it was more enlightened. The age of Ranade was an age in which men and women did engage themselves seriously in studying and examining the facts of their life, and what is more important is that in the face of the opposition of the orthodox mass they tried to mould their lives and their character in accordance with the light they found as a result *of* their research. In the age of Ranade there was not the same divorce between a politician and a student which one sees in the Gandhi age. In the age of Ranade a politician, who was not *a* student, was treated as an intolerable nuisance, if not a danger. In the age of Mr. Gandhi learning, if it is not despised, is certainly not deemed to be a necessary qualification of a politician.

To my mind there is no doubt that this Gandhi age is the dark age of India. It is an age in which people instead of looking for their ideals in the future are returning to antiquity. It is an age in which people have ceased to think for themselves and as they have ceased to think they have ceased to read and examine the facts of their lives. The fate of an ignorant democracy which refuses to follow the way shown by learning and experience and chooses to grope in the dark paths of the mystics and the megalomaniacs is a sad thing to contemplate. Such an age I thought needed something more than a mere descriptive sketch of the Federal Scheme. It needed a treatment which was complete though not exhaustive and pointed

without being dogmatic in order to make it alive to the dangers arising from the inauguration of the Federal Scheme. This is the task I had set before myself in preparing this address. Whether I have failed or succeeded. it is for you to say. If this address has length which is not compensated by depth, all I can say is that I have tried to do my duty according to my lights.

I am not opposed to a Federal Form of Government. I confess I have a partiality for a Unitary form of Government. I think India needs it. But I also realize that a Federal Form of Government is inevitable if there *is to be* Provincial Autonomy. But I am in dead horror the Federal Scheme contained in the Government of India Act. I think I have justified my antipathy by giving adequate reasons. I want all to examine them and come to their *own* conclusions. Let us however realize that the case of Provincial Autonomy is very different from that of the Federal Scheme. To those who think *that* the Federation should become acceptable, if the Governor-General gave an assurance along the same lines as was supposed to be done by the Governors that he will not exercise his powers under his special responsibilities. I want to say two things. First I am sure the Governor-General cannot give such an assurance because he is exercising these powers not merely in the interest of the Crown but also in the interest of the States. Secondly, even if he did, that cannot alter the nature of the Federal Scheme. To those who think that a change in the system of State representation from nomination to election will make the Federation less objectionable, I want to say that they are treating a matter of detail as though it was a matter of fundamental. Let us note what is fundamental and what is not. Let there be no mistake, let there be no fooling as to this. We have had enough of both. The real question is the extension and the growth of responsibility. Is that possible? That is the crux. Let us also realize that there is no use bugging to Provincial Autonomy and leaving responsibility in the Centre hanging in the air. I am convinced that without real responsibility at the Centre, Provincial Autonomy is an empty shell.

What we should do to force our point of view, this is no place to discuss. It is enough if I have succeeded in giving you an adequate idea of what are the dangers of this Federal Scheme.

FRUSTRATION

The Untouchables are the weariest, most loathed and the most miserable people that history can witness. They are spent and sacrificed people. To use the language of Shelley they are—

“pale for weariness of climbing heaven, and gazing on earth,
wandering companionless Among the stars that have a different
birth”

To put it in simple language the Untouchables have been completely overtaken by a sense of utter frustration. As Mathew Arnold says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/60. Frustration.htm - _msocom_1 “life consists in the effort to affirm one's own essence ; meaning by this, to develop one's own existence fully and freely, to have ample light and air, to be neither (.). mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/60. Frustration.htm - _msocom_2 nor overshadowed. Failure to affirm one's own essence is simply another name for frustration. Its non fulfilment of one's efforts to do the best, the withering of one's faculties, the stunting of one's personality.”

Many people suffer such frustrations in their history. But they soon recover from the blight and rise to glory again with new vibrations. The case of the Untouchables stands on a different footing. Their frustration is frustration for ever. It is unrelieved by space or time.

In this respect the story of the Untouchables stands in strange contrast with that of the Jews.

Their captivity in Egypt was the first calamity that visited the Jewish people. As the Bible says

[Quote Childern's Bible-39] (Quotation not recorded—ed.)

Ultimately Pharaoh yielded. The Jewish people escaped captivity and went to Canaan and settled there in the land flowing with milk and honey.

The second calamity which overtook the Jews was the Babylonian Captivity. (Some pages are missing—ed.)

We can now explain why the Untouchables have suffered frustration. They have no plus condition of body and mind. They have nothing in their dull drab deadening past for a hope of a rise in the future to feed upon. This is due to no fault of theirs. The frustration which is their fate is the result of the unpropitious social environment born out of the Hindu Social Order which is so deadly inimical to their progress.

Their fate is entirely unbearable. As Carlyle has said—

[Quote p. 201]

(Quotation not cited—ed.)

Some are thinking of revolutions, even bloody revolutions to overthrow the Hindu Social Order. All are saying what Cabli Williams once said—

[Quote p. 152]

(Quotation not cited—ed.)

Such is the degree of frustration they feel

III

The Covenant with God may be interpreted to mean in the language of Emerson a plus condition of mind and body. As Emerson has said "Success is constitutional—depends, on a plus condition of mind and body—on power of work—on courage. Success goes invariably with a certain plus or positive power: An ounce of Power must balance an ounce of weight."

If the Jews rose after their first captivity, it was primarily because of their plus condition of mind and body. This plus condition of mind and body can arise from two sources. It can arise from reliance on God. God, if nothing else is at least a source of power and in emergency man needs mental power, the plus condition of mind and body which is necessary for success. There is therefore nothing wrong in the suggestion that the Jews succeeded because of their Covenant of God if it is interpreted in the right way.

IV

This plus condition of body and mind is also the result of Social Environment, if the Environment is propitious. In a society where there is exemption from restraint, a secured release from obstruction, in a society where every man is entitled not only to the means of being, but also of well-being, where no man is forced to labour so that another may abound in luxuries, where no man is deprived of his right to cultivate his faculties and powers so that there may be no competition with the favoured, where there is emphasis of reward by mento, where there is goodwill towards all, (Further portion of this part is erased and not legible—ed.)

(The above portions are in the handwriting of Dr. Ambedkar. Each part is written on a separate sheet—ed.).

Editorial Note for the manuscript published in the Dr. Babasaheb Ambedkar: Writings and Speeches, Vol. 3 by the Government of Maharashtra:

We are reproducing here the text of Chapter One and Two of 'The Hindu Social Order'. This Chapter seems to be a part of the book entitled 'India and Communism'. From the contents on the first page of the typed script, we find that Dr. Ambedkar had divided the whole book "India and Communism" into three parts. The first part was captioned as 'The Prerequisites of Communism'. This part was to have three Chapters but we could not find any of these Chapters in Dr. Ambedkar's papers. So far as the part Two is concerned which is titled "India and the Pre-requisites of Communism", only Chapter Four entitled, "Hindu Social Order" has been found in a well bound register. This Chapter has two sub-titles as follows: —

I—Hindu Social Order: Its Essential Principles, and II— The Hindu Social Order: Its Unique Features. No other chapters on the subjects

mentioned in the table of contents of this book were found. In all, there are 63 foolscap-typed pages. —Editors.

CHAPTER The Hindu Social Order: It's Essential Principles I

What is the character of the Hindu Social Order? Is it a free social order? To answer this question, some idea of what constitutes a free social order is necessary. Fortunately, the matter is not one of controversy. Since the days of the French Revolution there is no difference as to the essentials of a free social order. There may be more but two are fundamental. Generally speaking, they are two. The first is that the individual is an end in him self and that the aim and object of society is the growth of the individual and the development of his personality. Society is not above the individual and if the individual has to subordinate himself to society, it is because such subordination is for his betterment and only to the extent necessary.

The second essential is that the terms of associated life between members of society must be regarded by consideration founded on liberty, equality and fraternity.

Why are these two essentials fundamental to a free social order? Why must the individual be the end and not the means of all social purposes? For an answer to this question, it is necessary to realise what we precisely mean when we speak of the human person. Why should we sacrifice our most precious possessions and our lives to defend the rights of the human person? No better answer to this question can be found than what is given by Prof. Jacques Maritain. As Prof. Maritain in his essay on 'The Conquest of Freedom' mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - _msocom_1 says:-

“What do we mean precisely when we speak of the human person? When we say that a man is a person, we do not mean merely that he is an individual, in the sense that an atom, a blade of grass, a fly, or an elephant is an individual. Man is an individual who holds himself in hand by his intelligence and his will; he exists not merely in a physical fashion. He has spiritual super-existence through knowledge and love, so that he is, in a way, a universe in himself, a microcosms, in which the great universe in its entirety can be encompassed through knowledge.

By love he can give himself completely to beings who are to him, as it were, other selves. For this relation no equivalent can be found in the physical world. The human person possesses these characteristics because in the last analysis man, this flesh and these perishable bones which are animated and activated by a divine fire, exists 'from the womb to the grave' by virtue of the existence itself of his soul, which dominates time and death. Spirit is the root of personality. The notion of personality thus involves that of totality and independence, no matter how poor and crushed a person may be, he is a whole, and as a person subsistent in an independent manner. To say that a man is a person is to say that in the depth of his being he is more a whole than a part and more independent than servile. It is to say that he is a minute fragment of matter that is at the same time a universe, a beggar who participates in the absolute being, mortal flesh whose value is external and a bit of straw into which heaven enters. It is this metaphysical mystery that religious thought designates when it says that the person is the image of God. The value of the person, his dignity and rights, belong to the order of things naturally sacred which bear the imprint of the Father of Being, and which have in him the end of their movement." Why is Equality essential? The best exposition of the subject is by Prof. Beard in his essay on 'Freedom in Political Thought' and I shall do no more than quote him. Says Prof. Beardmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - _msocom_2: —

"The term 'Equality' is unfortunate, but no other word can be found as a substitute. Equality means 'exactly the same or equivalent in measure, amount, number, degree, value, or quality'. It is a term exact enough in physics and mathematics, but obviously inexact when applied to human beings. What is meant by writers who have gone deepest into the subject is that human beings possess, in degree and kind, fundamental characteristics that are common to humanity. These writers hold that when humanity is stripped of extrinsic goods and conventions incidental to time and place, it reveals essential characteristics so widely distributed as to partake of universality. Whether these characteristics be called primordial qualities, biological necessities, residues or any other name matters little. No one can truthfully deny that they do exist. It is easy to point out inequalities in physical strength, in artistic skill, in material wealth, or in mental capacity, but this too is a matter of emphasis. At the end it remains a fact that fundamental Characteristics appear in all human beings. Their nature and manifestations are summed up in the phrase 'moral equality'.

Emphasis must be placed on the term 'moral'. From time immemorial it has been the fashion of critics to point out the obvious facts that in physical strength, talents, and wealth, human beings are not equal. The criticism is both gratuitous and irrelevant. No rational exponent of moral equality has even disputed the existence of obvious inequalities among human beings, even when he has pointed out inequalities, which may be ascribed to tyranny or institutional prescriptions. The Declaration of Independence does not assert that all men are equal; it proclaims that they are 'created' equal.

In essence the phrase 'moral equality' asserts in ethical value, a belief to be sustained, and recognition of rights to be respected. Its validity cannot be demonstrated as a problem in mathematics can be demonstrated. It is asserted against inequalities in physical strength, talents, industry, and wealth. It denied that superior physical strength has a moral right to kill, eat, or oppress human beings merely because it is superior. To talents and wealth, the ideal of moral equality makes a similar denial of right. And indeed few can imagine themselves to have superior physical strength, talents and wealth will withhold from inferiors all moral rights. In such circumstances government and wealth would go to superior physical strength; while virtue and talents would serve the brute man, as accomplished Greek slaves served the whims, passions and desires to Roman conquerors. When the last bitter word of criticism has been uttered against the ideal of moral equality, there remains something in it which all, except things, must accept and in practice do accept, despite their sheers and protests. A society without any respect for human personalities is a band of robbers."

Why is Fraternity essential?

Fraternity is the name for the disposition of an individual to treat men as the object of reverence and love and the desire to be in unity with his fellow beings. This statement is well expressed by Paul when he said 'Of one blood are all nations of men. There is neither Jew nor Greek, neither bond nor free, neither male nor female; for yet are ail one in Christ Jesus. ' Equally well was it expressed when the Pilgrim Fathers on their landing at Plymouth said:"We are knit together as a body in the most sacred covenant of the Lord. . . . by virtue of which we hold ourselves tied to all care of each others' good and of the whole."These sentiments are of the essence of fraternity. Fraternity strengthens socialites and gives to each individual a stronger personal interest in practically consulting the welfare of others. It leads him to identify his feelings more and more with their good, or at least with an even greater degree of practical consideration for

it. With a disposition to fraternity he comes as though instructively to be conscious of him as being one who of course pays a regard to others. The good of others becomes to him a thing naturally and necessarily to be attended to like any of the physical conditions of our existence. Where people do not feel that entire sympathy with all others, concordance in the general direction of their conduct is impossible. For a person in whom social feeling is not developed cannot but bring himself to think of the rest of his fellow-beings as rivals struggling with him for the means of happiness when he must endeavour to defeat in order that he may succeed in himself.

What is Liberty and why is it essential in a free social order?

Liberty falls under two classes. There is civil liberty and there is political liberty. Civil liberty refers to (1) liberty of movement which is another name for freedom from arrest without due process of law (2) liberty of speech (which of course includes liberty of thought, liberty of reading, writing and discussion) and (3) liberty of action.

The first kind of liberty is of course fundamental. Not only fundamental it is also most essential. About its value, there can be no manner of doubt. The second kind of liberty, which may be called freedom of opinion, is important for many reasons. It is a necessary condition of all progress intellectual, moral, political and social. Where it does not exist the status quo becomes stereotyped and all originality even the most necessary is discouraged. Liberty of action means doing what one likes to do. It is not enough that liberty of action should be formal. It must be real. So understood liberty of action means effective power to do specific things. There is no freedom where there are no means of taking advantage of it. Real liberty of action exists only where exploitation has been annihilated, where no suppression of one class by another exists, where there is no unemployment, no poverty and where a person is free from the fear of losing his job, his home and his food as a consequence of his action.

Political liberty consists in the right of the individual to share in the framing of laws and in the making and unmaking of governments. Governments are instituted for securing to men certain unalienable rights such as life, liberty and pursuit of happiness. Government must, therefore, derive its powers from those whose rights it is charged with the duty to protect. This is what is meant when it is said that the existence, power and authority of the Government must be derived from the consent of the governed. Political liberty is really a deduction from the principle of human personality and equality. For it implies that all political authority is derived from the people that the people are capable of

directing and controlling their public as well as private lives to ends determined by themselves and by none else.

These two tenets of a free social order are integrally connected. They are non-separable. Once the first tenet is admitted, the second tenet automatically follows. Once the sacredness of human personality is admitted the necessity of liberty, equality and fraternity must also be admitted as the proper climate for the development of personality.

II

How far does the Hindu social order recognise these tenets? The inquiry is necessary. For it is only in so far as it recognises these tenets that it will have the title to be called a free social order.

Does the Hindu social order recognise the individual? Does it recognise his distinctiveness his moral responsibility? Does it recognise him as an end in himself, as a subject not merely of disabilities but also of rights even against the State? As a starting point for the discussion of the subject one may begin by referring to the words of the exodus where Jehova says to Ezekiel:—

“Behold! All souls are mine; as the soul of the Father, so also the soul of the son is mine; the soul that sinister, it shall die. . . . the son shall not bear the iniquity of the Father, neither shall the father bear the iniquity of the son; the righteousness of the righteous shall be upon him, and the wickedness of the wicked upon him.” Here is emphasised the distinctiveness of the individual and his moral responsibility. The Hindu social order does not recognise the individual as a centre of social purpose. For the Hindu social order is based primarily on class or Varna and not on individuals. Originally and formally the Hindu social order recognised four classes: (1) Brahmins, (2) Kshatriyas (3) Vaishyas and (4) Shudras. Today it consists of five classes, the fifth being called the Panchamas or Untouchables. The unit of Hindu society is not the individual Brahmin or the individual Kshatriya or the individual Vaishya or the individual Shudra or the individual Panchama. Even the family is not regarded by the Hindu social order as the unit of society except for the purposes of marriage and inheritance. The unit of Hindu society is the class or Varna to use the Hindu technical name for class. In the Hindu social order, there is no room for individual merit and no consideration of individual justice. If the individual has a privilege it is not because it is due to him personally. The privilege goes with the class and if he is found to enjoy it, it is because he belongs to that class. Countrywide, if an individual is suffering from a wrong, it is not because he by his conduct

deserves it. The disability is the disability imposed upon the class and if he is found to be labouring under it, it is because he belongs to that class.

Does the Hindu social order recognise fraternity? The Hindus like the Christians and the Muslims do believe that men are created by God. But while the Christians and the Muslims accept this as the whole truth the Hindus believe that this is only part of the truth. According to them, the whole truth consists of two parts. The first part is that men are created by God. The second part is that God created different men from different parts of his divine body. The Hindus regard the second part as more important and more fundamental than the first.

The Hindu social order is based on the doctrine that men are created from the different parts of the divinity and therefore the view expressed by Paul or the Pilgrim Fathers has no place in it. The Brahmin is no brother to the Kshatriya because the former is born from the mouth of the divinity while the latter is from the arms. The Kshatriya is no brother to the Vaishya because the former is born from the arms and the latter from his thighs. As no one is a brother to the other, no one is the keeper of the other.

The doctrine that the different classes were created from different parts of the Divine body has generated the belief that it must be divine will that they should remain separate and distinct. It is this belief which has created in the Hindu an instinct to be different, to be separate and to be distinct from the rest of his fellow Hindus. Compare the following rules in the Manu Smriti regarding the Upanayan or the Investiture of a body with the sacred thread :—

II. 36."In the eighth year after conception, one should perform the initiation (Upanayan) of a Brahmani in the eleventh after conception (that) of a Kshatriya but in the twelfth that of a Vaishya."

II. 41."Let students according to the order (of their castes), wear (as upper dressed) the skins of black antelope, spotted deer, and he-goats and (lower garments) made of hemp, flex or wool."

II. 42."The girdle of a Brahmana shall consist of a triple cord of Munga grass, smooth and soft (that) of a Kshatriya, of a bowstring, made of Murva fibres (that) of a Vaishya of hempen threads.

II. 43."If Munga grass (and so forth) be not procurable, (the girdles) may be made of kusa, Asmantaka, and Belbaga (fibres) with a single threefold knot, or with three or five (knots according to the custom of the family."

II. 44."The sacrificial string of a Brahmana shall be made of cotton (shall be) twisted to the right, (and consist) of three threads, that of a Kshatriya of hempen threads, and that of a Vaishya of woolen threads.

II. 45."A Brahamana shall carry according to sacred law a staff of Bilva or Palasa, a Kshatriya of Vata or Khadira; and a Vaishya of Pillu or Udumbara."

II. 46."The staff of a Brahmana shall be made of such length as to reach the end of his hair; that of a Kshatriya to reach his forehead ; and that of a Vaishya to reach the tip of his nose."

II. 48."Having taken a staff according to his choice having worshipped the Sun and walked round the fire, turning his right hand towards it (the student) should beg alms according to the prescribed rule."

II. 49."An initiated Brahmana should beg, beginning his request with the word lady (bhavati); a Kshatriya placing the word lady in the middle, but a Vaishya placing it at the end of the formula."

On reading this one may well ask the reasons for such distinctions. The above rules refer to students or what are called Bramhacharia ready to enter upon the study of the Vedas. Why should there be these distinctions? Why should the ages of Upanayana of the Brahmin boy differ from that of the Kshatriya or Vaishya? Why should their garments be of different kind? Why should their materials of girdle cords be different? Why should the material of strings be different? Why should their staves be of different trees? Why should their staves differ in length? Why in uttering the formula for asking alms they should place the word ' Bhavathi ' in different places? These differences are not necessary nor advantageous. The only answer is that they are the result of the Hindu instinct to be different from his fellow which has resulted from the belief of people being innately different owing to their being created from different parts of the divine body.

It is also the Hindu instinct due to the same belief never to overlook a difference if it does exist but to emphasise it, recognise it and to blazon it forth. If there is caste its existence must be signalled by a distinguishing headdress and by a distinguishing name. If there is a sect it must have its head mark. There are 92 sects in India. Each has a separate mark of itself. To invent 92 marks each one different from the other is a colossal business. The very impossibility of it would have made the most ingenious person to give up the task. Yet, the Hindus have accomplished it as may be seen from the pictorial representation of these marks given by Moore in his Hindu Pantheon.

The most extensive and wild manifestation of this spirit of isolation and separation is of course the caste-system. It is understandable that caste in a single number cannot exist. Caste can exist only in plural number. There can be castes. But there cannot be such a thing as a caste. But granting

that theoretically castes must exist in plural number how many castes should there be? Originally, there were four only. Today, how many are there? It is estimated that the total is not less than 2000. It might be 3000. This is not the only staggering aspect of this fact. There are others. Castes are divided into sub-castes. Their number is legion. The total population of the Brahmin castes is about a crore and a half. But there are 1886 sub-castes of Brahmin caste!! In the Punjab alone, the Saraswat Brahmans are divided into 469 sub-castes. The Kayasthas of Punjab are divided into 890 sub-castes!! One could go on giving figures to show this infinite process of splitting social life into small fragments. The splitting process has made a social life quite impossible. It has made the castes split into such small fragments that it has marital relationship consistent with the rule of excluded degrees quite impossible. Some of the Baniya sub-castes count no more than 100 families. They are so inter-related they find it extremely difficult to marry within their castes without transgressing the rules of consanguinity.

It is noteworthy that small excuses suffice to bring about this splitting of castes into sub-castes. Castes become sub-divided into sub-castes by reason of change of location, change of occupation, change in social practices, change due to pollution, changes due to increased prosperity, changes due to quarrel and changes due to change of religion. Mr. Blunt has given many instances to illustrate this tendency among the Hindus. There is no space to reproduce all except one which shows how ordinary quarrels lead to the splitting one caste into sub-castes. As stated by Mr. Bluntmk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - _msocom_3:—

“In Lucknow there was a sub-caste of Khatika consisting of three ghols or groups, known as Manikpur, Jaiswala and Dalman. They inter-married, ate together, and met together in panchayat under the presidency of their Chaudharis or headmen. Twenty years ago each group had one Chaudhri, but now Jaiswala have three and Manikpur two. The quarrel was as follows. Firstly a woman (her ghol is not given) peddled fruit about the streets. The brethren ordered her to desist from the practice, which is derogatory to the caste's dignity; women should only sell in shops. Her husband and she proved contumacious; and finally their own ghol, acting singly, outcaste the man.

The Dalmu ghol, however, dissenting from this action admitted the husband to communion with themselves upon payment of a fine of Rs. 80 in lieu of excommunication. Secondly a man (the ghol, again is not given) was excommunicated by his own ghol, acting alone; and while his

case was under trial, the Jaiswala Chaudhri invited him to dinner by mistake. Thereupon, the three ghol, acting in concert, fined the Chaudhri Rs. 30. Lastly, fines had accumulated and it was decided to hold a Katha (sacred recitation). The Dalmu Chaudhri said he preferred to have his share of money; but the Manikpur Chaudhri (who seems to have kept the joint purse) refused, taking up the attitude that there was going to be a Katha to which the Dalmu people could come or not as they liked. The matter at this stage was brought into court; meanwhile the three ghol ceased to inter-marry, so that one endogamous sub-caste split into three quarrels, ghol was pitted against ghol.

If in any caste a group should adopt some new or unusual worship of which other members do not approve, one would expect that group to break off and become an endogamous sub-caste. That such sub-castes are uncommon is due to the tolerance about what and with whom he eats and whom he marries. We do, however, find that the Mahabhira and Panchipriya sub-castes amongst Telis, Koris and the Namakshalis amongst Barhais, Bhangis and Kadheras.”

How do these castes behave towards one another. Their guiding principle is 'be separate', 'do not intermarry', 'do not inter-dine' and 'do not touch'. Mr. Blunt¹ has well described the situation when he says:

“A Hindu sits down to a meal either alone or with his caste fellows. The women cannot eat with the men; they wait till their lords have finished. So long as the meal or a part of it consists of Kachcha food (as it usually does, since Chapatis appear at most meals), the man must dine with the precautions of a magic ceremony. He sits within a square marked off on the ground (chauka) inside which is the Chulha or cooking place. Should a stranger's shadow fall upon this square, all food cooked within it is polluted and must be thrown away. In camp Hindu servants may be seen, each well apart from the rest, each within his own chauka, cooking his food upon his own mud oven and eating alone. .

“Rules regarding the acceptance of water are on the whole the same as those regarding the acceptance of a pakka food, but with a tendency to greater laxity. The vessel in which the water is contained affects the question. A high caste man will allow a low caste man to fill his lota (drinking vessel) for him; but he will not drink from the lota of that low caste man. Or a high caste man will give anybody (save Untouchables) a drink, by pouring water from his own lota into that of the drinker; all the men employed at stations to supply railway travellers with water are Barhais, Bans, Bharbhunjas, Halwais, Kahars, and Nais; and of course from higher castes still.

Rules regarding smoking are stricter. It is very seldom that a man will smoke with anybody but a caste fellow; the reason, no doubt is that smoking with a man usually involves smoking his pipe, and this involves much closer contact even than eating food which he has prepared. So stringent is this rule, indeed, that the fact that Jats, Ahirs, and Gujars will smoke together has been regarded as a ground for supposing that they are closely akin. Some castes, the Kayastha for instance, differentiates between smoking in a fashion in which the hands are closed round the pipe and the smoke is drawn in without putting the stem actually in the mouth—and smoking in the usual way. Little need be said on the subject of vessels. There are rules laying down what sort of vessels should be made, but they are rather religious than social. Hindus must use brass or alloy (although the use of alloy is hedged about by numerous and minute injunctions, and if such vessels become impure, the only remedy is to get them remoulded). The risk of pollution makes it imperative for every man to have a few vessels of his own. The minimum consists of a lota (drinking vessel), batna (cooking pot), and thali (dish). Better class folk add a Katora (spoon) and Gagra (Water pot). For feasts, the brotherhood usually keep a set of larger vessels of all kinds, which they end to the host; these are bought with the proceeds of fines, and are common property.”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - _msocom_4

What fraternity can there be in a social order based upon such sentiments? Far from working in a spirit of fraternity the mutual relations of the castes are fratricidal. Class-consciousness, class struggle and class wars are supposed to be ideologies, which came into vogue from the writings of Karl Marx. This is a complete mistake. India is the land, which has experienced class-consciousness, class struggle. Indeed, India is the land where there has been fought a class war between Brahmans and Kshatriyasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - _msocom_5 which lasted for several generations and which was fought so hard and with such virulence that it turned but to be a war of extermination.

It must not be supposed that the fratricidal spirit has given place to a spirit of fraternity. The same spirit of separation marks the Hindu social order today as may be seen from what follows:

Each class claims a separate origin. Some claim origin from a Rishi or from a hero. But in each case it is a different Rishi or a different hero having nothing to do with the Rishis and heroes claimed by other castes as their progenitors. Each caste is engaged in nothing but establishing for

itself a status superior to that of another caste. This is best illustrated by rules of hyper commonality and rules of hyper gamy. As pointed out by Mr. Blunt mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - _msocom_6:

“It is essential to realise that in respect of the cooking taboo, the criterion is the caste of the person who cooks the food, not the caste of the person who offers it. It follows, therefore, that a high caste Hindu can eat the food of a man of any caste, however low, if his host possesses a cook of suitable caste. And that is why so many cooks are Brahmins. The Hindu draws a distinction between kachcha food, which is cooked in water and pucca food, which is cooked with ghee (clarified butter). This distinction depends on the principle that ghee, like all the products of the sacred cow, protects from impurity, and since such protection is the object of all food taboos, this convenient fiction enables the Hindu to be less particular in the case of pucca food than of kachcha food, and to relax his restrictions accordingly: Speaking of hyper gamy, Mr. Blunt mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - _msocom_7 says:—

"The custom of hyper gamy introduces an important modification into the marriage laws of many castes. Where it prevails, the exogamous groups are classified according to their social position; and whilst a group of highest rank will take brides from it, it will not give brides to a group of lower rank. The law is found most highly developed amongst Rajputs but it is observed by many other castes. . . . Indeed amongst all Hindus there is probably a tendency towards hyper-gamy."

What is it that has behind these rules regarding hyper-communality and hypergamy? Nothing else but the spirit of high and low. All castes are infested with that spirit and there is no caste, which is free from it. The Hindu social order is a ladder of castes placed one above the other together representing an ascending scale of hatred and a descending scale of contempt.

This spirit has exhibited itself in the proverbs coined by one caste with the object of lampooning another caste. It has given rise even to literature by authors of low castes suggesting filthy origin of the so-called high caste. The Sahyadrikhand is the best illustration of it. It is one of the Puranas, which form part of the Hindu sacred literature. It is a Purana of a style quite different from the traditional puranas. It deals with the origin of the different castes. In doing so, it assigns noble origin to other castes while it assigns to the Brahmin caste the filthiest origin.

Does the Hindu social order recognise equality? The answer must be in the negative. That men are born equal is a doctrine, which is repugnant to the Hindu social order. In the spiritual sense it treats the doctrine as false. According to the Hindu social order though it is true that men are the children of Prajapati the Creator of the Universe, they are not equal on that account. For, they were created from the different parts of the body of Prajapati. The Brahmins were created from the mouth, the Kshatriyas from the arms, the Vaishyas from his thighs and Shudras from his feet. The limbs from which they were created being of unequal value the men thus created are as unequal. In the biological sense, the Hindu social order does not bother to examine whether the doctrine is founded in a fact. If it was not a fact, i.e., men were not equal in their character and natural endowments of character and intelligence so much the better. On the other hand, if it was a fact, i.e., men were equal in character and natural endowments, so much the worse for the doctrine. The Hindu social order is indifferent to the doctrine as a fact. It is equally indifferent to it as an ethical principle. It refuses to recognise that men no matter how profoundly they differ as individuals in capacity and character, are equally entitled as human beings to consideration and respect and that the well-being of a society is likely to be increased if it so plans its organisation that, whether their powers are great or small, all its members may be equally enabled to make the best of such powers as they possess. It will not allow equality of circumstances, institutions and manner of life. It is against equality temper.

III

If the Hindu social order is not based on equality and fraternity, what are the principles on which it is based? There is only one answer to this question. Though few will be able to realise what they are, there is no doubt as to their nature and effect on Hindu society. The Hindu social order is reared on three principles. Among these the first and foremost is the principle of graded inequality.

That the principle of graded inequality is a fundamental principle is beyond controversy. The four classes are not on horizontal plane, different but equal. They are on vertical plane. Not only different but unequal in status, one standing above the other. In the scheme of Manu, the Brahmin is placed at the first in rank. Below him is the Kshatriya. Below the Kshatriya is the Vaishya. Below Vaishya is the Shudra and below Shudra is the Ati-shudra or the Untouchable. This order of precedence among the classes is not merely conventional. It is spiritual,

moral and legal. There is no sphere of life, which is not regulated by this principle of graded inequality.

One can substantiate this by numerous illustrations from the Manu Smriti. I will take four illustrations to prove the point. They will be the law of slavery, law of marriage, law of punishment and law of Samskaras and law of Sanyas. The Hindu law recognised slavery as a legal institution. Manu Smriti recognised seven kinds of slaves. Narada Smriti recognised fifteen kinds of slaves. These differences as to the number of slaves and the classes under which they fall is a matter of no importance. What is important is to know who could enslave whom. On this point, the following citations from the Narada Smriti and the Yajnavalkya Smriti are revealing:

Narada Smriti : V. 39.”In the inverse order of four castes slavery is not ordained except where a man violates the duties peculiar to his caste. Slavery (in that respect) is analogous to the condition of a wife.”

Yajnavalkya Smriti: XVI. 183 (2).”Slavery is in the descending order of the Varnas and not in the ascending order.”

Recognition of slavery was bad enough. But if the rule of slavery had been left free to take its own course it would have had at least one beneficial effect. It would have been a levelling force. The foundation of caste would have been destroyed. For under it, a Brahmin might have become the slave of the Untouchables and the Untouchables would have become the masters of the Brahmin. But it was seen that unfettered slavery was a principle and an attempt was made to nullify it. Manu and his successors therefore while recognising slavery ordain that it shall not be recognised in its inverse order to the Varna system. That means that a Brahmin may become the slave of another Brahmin. But he shall not be the slave of a person of another Varna, i.e., of the Kshatriya, Vaishya, Shudra, or Ati-Shudra. On the other hand, a Brahmin may hold as his slave anyone belonging to the four Varnas. A Kshatriya can have a Kshatriya, Vaishya, Shudra and Ati-Shudra as his slaves but not one who is a Brahmin. A Vaishya can have a Vaishya, Shudra and Ati-Shudra as his slaves but not one who is a Brahmin or a Kshatriya. A Shudra can hold a Shudra and an Ati-Shudra, as his slaves but not one who is a Brahmin, Kshatriya or a Vaishya. Ati-Shudra can hold an Ati-Shudra as his slave but not one who is a Brahmin, Kshatriya, Vaishya or Shudra.

Another illustration of this principle of graded inequality is to be found in the Laws of marriage. Manu says :—

III. 12."For the first marriage of the twice-born classes, a woman of the same class is recommended but for such as are impelled by inclination to marry again, women in the direct order of the classes are to be preferred."

III. 13."A Shudra woman only must be the wife of a Shudra; she and a Vaishya, of a Vaishya; they two and a Kshatriya of a Kshatriya; those three and a Brahmani of a Brahmin."Manu is of course opposed to inter-marriage. His injunction is for each class to marry within his class. But he does recognise marriage outside the defined class. Here again, he is particularly careful not to allow inter-marriage to do harm to his principle of inequality among classes. Like slavery he permits inter-marriage but not in the inverse order. A Brahmin when marrying outside his class may marry any woman from any of the classes below him. A Kshatriya is free to marry a woman from the two classes next below him, namely, the Vaishya and Shudra but must not marry a woman from the Brahmin class which is above him. A Vaishya is free to marry a woman from the Shudra class which is next below him. But he cannot marry a woman from the Brahmin and the Kshatriya class which are above him.

The third illustration is to be found in the Rule of Law as enunciated by Manu. First as to treatment to be given to witnesses. According to Manu, they are to be sworn as follows:

VIII. 87."In the forenoon let the judge, being purified, severally call on the twice-born, being purified also, to declare the truth, in the presence of some image, a symbol of the divinity and of Brahmins, while the witnesses turn their faces either to the north or to the east."

VIII. 88."To a Brahmin he must begin with saying ' ' Declare ' ; to a Kshatriya, with saying 'Declare the truth'; to a Vaishya admonishing him by mentioning his kine, grain or gold; to a Shudra, threatening him with the guilt of every crime that causes loss of caste."

Take the punishment of offences as laid down by Manu. To begin with, punishment for defamation:

VIII. 267."A soldier, defaming a priest, shall be fined a hundred panas; merchant thus offending, a hundred and fifty, or two hundred; but for such an offence a mechanic or servile man shall be whipped."

VIII. 268."A priest shall be fined fifty if he slanders a soldier; twenty-five if a merchant and twelve if he slanders a man of the servile class."

Take the offence of insults. The punishment prescribed by Manu is as follows:

VIII. 270."A Shudra who insults a Dvija with gross invectives, ought to have his tongue slit for he sprang from the lowest part of Brahma."

VIII. 271."If he mentions their names and classes with contumely, as if he says, ' Oh Devadatta, thou refuse of Brahmin '; an iron style, ten fingers long, shall be thrust red into his mouth."

VIII. 272."Should he, through pride, give instructions to Brahmins concerning their duty; let the king order some hot oil to be dropped into his mouth and his ear."Punishment for the offence of abuse. Manu says:

VIII. 276."For mutual abuse by a Brahmin and a Kshatriya, this fine must be imposed by a learned king; the lowest on the Brahmin and the middlemost on the soldier."

VIII. 277."A Vaishya and a Shudra must be punished exactly in the same manner according to their respective castes, except the slitting of the tongue of the Shudras. This is the fixed rule of punishment."Punishment for the offence of assault. Manu propounds:

VIII. 279."With whatever limb a Shudra shall assault or hurt a Dvija that limb of his shall be cut off, this is in accordance of Manu."Punishment for the offence of arrogance. According to Manu:

VIII. 281."A Shudra who shall insolently place himself on the same seat with a man of high caste, shall either be branded on his hip and be banished or the King shall cause a gash to be made on his buttock."

VIII. 282."Should he spit on him through pride, the king shall order both his lips to be gashed; should he urine on him, his penis; should he break wind against him, his anus."

VIII. 283."If he seizes the Brahmin by the locks or likewise if he takes him by the feet, let the king unhesitatingly cut off his hands, or by the beard, or by the throat or by the scrotum." Punishment for the offence of adultery says Manu.

VIII. 359."A man who is not a Brahmin who commits actual adultery ought to suffer death; for the wives, indeed of all the four classes must ever be most especially guarded."

VIII. 366."A Shudra who makes love to a damsel of high birth, ought to be punished corporally; but he who addresses a maid of equal rank, shall give the nuptial present and marry her, if her father desires it."

VIII. 374."A Shudra having an adulterous connection with a woman of a twice-born class, whether guarded at home or unguarded shall thus be punished in the following manner; if she was unguarded, he shall lose the part offending and all his property; if guarded everything even his life."

VIII. 375."For adultery with a guarded Brahmin a Vaishya shall forfeit all his wealth after imprisonment for a year; a Kshatriya shall be fined a thousand panas, and he be shaved with the urine of an ass."

VIII. 376."But if a Vaishya or Kshatriya commits adultery with an unguarded Brahmin, the king shall only fine the Vaishya five hundred panas and the Kshatriya a thousand."

VIII. 377."But even these two however, if they commit that offence with a Brahmani not only guarded but the wife of an eminent man, shall be punished like a Shudra or be burned in a fire of dry grass or reeds."

VIII. 382."If a Vaishya approaches a guarded female of the Kshatriya or a Kshatriya a guarded Vaishya woman, they both deserve the same punishment as in the case of an unguarded Brahmin female."

VIII. 383."But a Brahmin, who shall commit adultery with a guarded woman of those two classes, must be fined a thousand panas, and for the offending with a Shudra woman the fine of a thousand panas on a Kshatriya or Vaishya."

VIII. 384."For adultery by a Vaishya with a woman of the Kshatriya classes, if guarded, the fine is five hundred; but a Kshatriya for committing adultery on a Vaishya woman must be shaved with urine or pay the fine just mentioned."How strange is the contrast between Hindu and non-Hindu criminal jurisprudence! How inequality is writ large in Hinduism as seen in its criminal jurisprudence! In a Penal Code charged with the spirit of justice we find two things—a section dealing with defining the crime and a section prescribing a rational form of punishment for breach of it and a rule that all offenders are liable to the same penalty. In Manu, what do we find? First an irrational system of punishment. The punishment for a crime is inflicted on the organ concerned in the crime such as belly, tongue, nose, eyes, ears, organs of generation etc., as if the offending organ was sentient having a will for its own and had not been merely a survivor of human being. Second feature of Manu's Penal Code is the inhuman character of the punishment, which has no proportion to the gravity of the offence. But the most striking feature of Manu's Penal Code, which stands out in all its nakedness, is the inequality of punishment for the same offence. Inequality designed not merely to punish the offender but to protect also the dignity and to maintain the baseness of the parties coming to a Court of Law to seek justice; in other words to maintain the social inequality on which his whole scheme is founded.

The principle of graded inequality has been carried into the economic field."From each according to his ability; to each according to his need" is not the principle of Hindu social order. The principle of the Hindu social order is:"From each according to his need. To each according to his nobility." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and [pre-requisite](#)

of communism.htm - [_msocom_8](#)Supposing an officer was distributing dole to a famine stricken people. He would be bound to give greater dole to a person of high birth than he would to a person of low birth. Supposing an officer was levying taxation. He would be bound to assess a person of high birth at a lower rate than he would to a person of low birth. The Hindu social order does not recognise equal need, equal work or equal ability as the basis of reward for labour. Its motto is that in regard to the distribution of the good things of life those who are reckoned as the highest must get the most and the best and those who are classed as the lowest must accept the least the worst.

Nothing more seems to be necessary to prove that the Hindu social order is based on the principle of graded inequality. It pervades all departments of social life. Every side of social life is protected against the danger of equality.

The second principle on which the Hindu social order is founded is that of fixate of occupations for each class and continuance thereof by heredity. This is what Manu says about occupations of the four classes.

"1. 87. But in order to protect this universe, He, the most resplendent one, assigned separate (duties and) occupations, to those who sprang from his mouth, arms, thighs and feet.

1. 88. To Brahmanas he assigned teaching and studying (the Veda) sacrificing for their own benefit and for others, giving and accepting (of alms).

1. 89. The Kshatriya he commanded to protect the people, to bestow gifts to offer sacrifices to study (the Veda) and to abstain from attaching himself to sensual pleasures."

"I. 90. The Vaishya to tend cattle to bestow gifts to offer sacrifices to study (the Veda) and to abstain from attaching himself to sensual pleasures."

I. 91. One occupation only the Lord prescribed to the Shudra, to serve meekly even these (other) three castes."These rules regarding the occupations of the different classes are further amplified by Manu as will be seen from the following citations from his Smriti:

"I. 88. To Brahmans he (Swayambhu Manu) assigned the duties of reading the Veda, of teaching it, of sacrificing, of assisting others to sacrifice, of giving alms if they be rich, and if indigent of receiving of gifts.

I. 89. To defend the people, to give alms, to sacrifice, to read the Veda, to shun the allurements of sensual gratification, are in a few words, the duties of a Kshatriya.

I. 90. To keep herds of cattle, to bestow largeness, to sacrifice, to read the scriptures, to carry on trade, to lend at interest, and to cultivate land are prescribed or permitted to a Vaishya.

I. 91. One principal duty the supreme Ruler assigns to a Shudra; namely, to serve the before mentioned classes, without depreciating their worth.

X. 74. Let such Brahmans as are intent on the means of attaining the supreme godhead, and firm in their own duties, completely perform in order, the six following acts.

X. 75. Reading the Vedas, the teaching others to read them, sacrificing, and assisting others to sacrifice, giving to the poor if themselves have enough, and accepting gifts from the virtuous if themselves are poor, are the six prescribed acts of the firstborn class.”

“X. 76. But, among those six acts of a Brahman three are his means of subsistence; assisting to sacrifice, teaching the Vedas and receiving gifts from a pure handed giver.

X. 77. Three acts of duty cease with the Brahman and belong not to the Kshatriya, teaching the Vedas, officiating at a sacrifice and thirdly receiving presents.

X. 78. Those three are also (by the fixed rule of law) forbidden to the Vaishya since Manu, the Lord of all men, prescribed not those acts to the two classes, military and commercial.

X. 79. The means of subsistence peculiar to the Kshatriya are bearing arms, either held for striking or missile; to the Vaishya, merchandise, attending on cattle, and agriculture; but with a view to the next life, the duties of both are alms giving, reading and sacrificing.”

Every member must follow the trade assigned to the class to which he belongs. It leaves no scope for individual choice, individual inclination. An individual under the Hindu social order is bound to the profession of his ancestor. It is an inexorable law from which he cannot escape.

The principle does not stop with fixate of occupation. It grades the several occupations in terms of respectability. This is what Manu says:—

“X. 80. Among the several occupations for gaining a livelihood the most commendable respectively for the Brahmans, Kshatriyas and the Vaishyas are the teaching of the Vedas, defending the people and trade.

The third principle on which the Hindu social order is founded is the fixation of people within their respective classes. There is nothing strange or peculiar in the fact that the Hindu social order recognises classes. There are classes everywhere and no society is without them. Families, cliques, clubs, political parties, nay communities, gangs engaged in criminal conspiracies, business corporations which prey upon the public

are to be found in all societies in all parts of the world. Even a free social order will not be able to get rid of the classes. What a free social order aims to do is to prevent isolation and exclusiveness being regarded by the classes as an ideal to be followed. For so long as the classes do not practise isolation and exclusiveness they are only non-social in their relations towards one another. Isolation and exclusiveness make them anti-social and inimical towards one another. Isolation makes for rigidity of class consciousness, for institutionalising social life and for the dominance of selfish ideals within the classes. Isolation makes life static, continues the separation into a privileged and underprivileged, masters and servants.

Not so much the existence of classes as the spirit of isolation and exclusiveness which is inimical with a free social order. What a free social order endeavours to do is to maintain all channels of social endowment. This is possible only when the classes are free to share in an extensive number of common interests, undertakings and expenses, have a large number of values in common, when there is a free play back and forth, when they have an equable opportunity to receive and to take from others. Such social contacts must and does dissolve custom, makes for an alert and expanding mental life and not only occasion but also demand reconstruction of mental attitudes. What is striking about the Hindu social orders is its ban on free inter-change and inter-course between different classes of Hindu society. There is a bar against inter-dining and inter-marriage. But Manu goes to the length of interdicting ordinary social intercourse. Says Manu:

IV. 244."He, who seeks to preserve an exalted rank, must constantly form connections with the highest and best families, but avoid the worst and the meanest.

IV. 245. Since a priest, who connects himself with the best and the highest of men, avoiding the lowest and worst, attains eminence ; but sinks by an opposite conduct, to the class of the servile.

IV. 79. Not let him tarry even under the shade of the same tree with outcaste for the great crimes, nor with Chindalas, nor with Puccasas, nor with idiots, nor with man proud of wealth, nor with \ashcrmcn and other vile persons, nor with Artyevasins." "The Hindu social order is opposed to fraternity, it does not admit the principle of equality. Far from recognising equality it makes inequality its official doctrine. What about liberty? So far as choice of occupation goes, there is none. Everyone has his occupation determined for him. Only thing left to do is to carry it on. As to freedom of speech it exists. But it exists only for those who are in

favour of the social order. The freedom is not the freedom of liberalism which was expressed by Voltaire when i.e. said "I wholly disapprove of what you say and will defend to the death your right to say it." This is clear from what Manu has to say about Logic and dialectics.

"IV. 29-30. No guest must stay in his house without being honoured according to his ability, with a seat, food, a couch, water, or roots and fruits.

Let him not honour even by greeting heretics, men who follow forbidden occupations, men who live like cats, rogues, logicians (arguing against the Veda) and those who live like herons.

II. 10. But by Sruti (Revelation) is meant the Vedas and by Smriti (tradition) the Institutes of the sacred law ; those two must not be called into question in any matter, since from those two the sacred law shone forth.

II. II. Every twice-born man, who, relying on the Institutes of dialectics, treats with contempt those two sources (of the law), must be cast out by the virtuous as an atheist and a scorner of the Veda.

II. 12. The Veda, the sacred tradition, the customs of virtuous men, and one's own pleasure, they declare to be visibly the fourfold means of defining the sacred law." The reasons for this are made manifest by Manu who says:

II. 6."The whole Veda is the (first) source of the sacred law, next the tradition and the virtuous conduct of those who know the (Veda further) also the customs of holy men, and (finally) self- satisfaction:

II. 7. Whatever law has been ordained for any (person) by Manu; that has been fully declared in the Veda; for that (sage was) omniscient."

In this freedom there is not freedom for dialecticians, no freedom for logicians to criticise the social order which means there is no freedom at all.

What about liberty of action? In the sense of effective choice, there is no room for it in the Hindu social order. The Hindu social order leaves no choice to the individual. It fixes his occupation. It fixes his status. All that remains for the individual to do is to conform him self to these regulations.

The same must be said with regard to political liberty. The Hindu social order does not recognise the necessity of a representative government composed of the representatives chosen by the people. Representative Government rests on the belief that people must be governed by law and law can be made only by the representative of the people. The Hindu social order recognises the first part of this thesis, which says that people

must be governed by law. But it denies the second part of the thesis, which says that law can be made only by the representatives chosen by the people. The tenets of the Hindu social order is that the law by which people are to be governed is already made and is to be found in the Vedas. Nobody has a right to add to and subtract from it. That being so, a representative assembly of the people is unnecessary. Political liberty which is liberty to frame laws and to make and unmake Government is futility for which there is no place in the Hindu social order.

To sum up, the Hindu social order is an order based on classes and not on individual. It is an order in which classes are graded one above the other. It is an order in which the status and functions of the classes are determined and fixed. The Hindu social order is a rigid order. No matter what changes take place in the relative position of an individual his social status as a member of the class he is born in relation to another person belonging to another class shall in no way be affected. The first shall never become the last. The last shall never become the first.

The Hindu Social Order: Its Unique Features

So far the discussions were confined to describing the essentials of the Hindu social order. Besides its essentials, the Hindu social order has some unique features. These unique features are as important as the essentials. No study of the Hindu social order, which does not make any reference to them, can be regarded as complete or accurate.

What are these special features? The special features of the Hindu social order are three in number. Of these three, the most striking is the worship of the superman. In this respect the Hindu social order is nothing but Nietzsche's Gospel put in action. Nietzsche himself never claimed any originality for his theory of the superman. He admitted and avowed that he borrowed it from the Manu Smriti. In his treatise, called Anti-Christ this is what Nietzsche said :—

“After all, the question is, to what end are falsehoods perpetrated? The fact that, in Christianity, ' Holy ends are entirely absent, constitutes my objection to the means it employs. Its ends are only bad ends; the poisoning, the calumination and the denial of life, the contempt of the body, the degradation and self-pollution of man by virtue of the contempt of sin, consequently its means are bad as well. My feelings are quite the reverse when I read the law book of Manu, an incomparably intellectual and superior work, which it would be a sin against the spirit even to mention in the same breath with the Bible. You will guess

immediately why it has a genuine philosophy behind it. In it, not merely an evil smelling Jewish distillation of Rabbinism and superstition it gives something to chew even to the most fastidious psychologist. And, not to forget the most important point of all, it is fundamentally different from the very kind of Bible; by means of it the noble classes, the philosophers and the warriors guard and guide the masses; it is replete with noble values, it is filled with a feeling of perfection with saying yea to life, triumphant sense of well-being in regard to itself and to life, the Sun shines upon the whole book. All those things which Christianity smothers with its bottomless vulgarity; procreation, women, marriages are here treated with earnestness, with reverence, with love and confidence. How can one possibly place in the hands of children and women, a book that contains those vile words; 'to avoid fornication let every man have his wife, let every woman have her own husband. . . . It is better to marry than to burn. And is it decent to be a Christian so long as the very origin of man is Christianised that is to say, befouled, by the idea of the Immaculate Conception.'

Nietzsche never got any respectful or serious hearing in his own country. In his own words, he was 'sometimes defied as the philosopher of the aristocracy and squiarchy, sometimes hooted at, sometimes pitied and sometimes boycotted as an inhuman being. ' Nietzsche's philosophy had become identified with will to power, will to violence and denial of spiritual values, sacrifice, servility to and debasement of the common man in the interest of the superman. His philosophy with these high spots had created a feeling of loathsomeness and horror in the minds of the people of his own generation. He was utterly neglected if not shunned and Nietzsche himself took comfort by placing himself among the 'posthumous men '. He foresaw for himself a remote public, centuries after his own time to appreciate him. Here too Nietzsche was destined to be disappointed. Instead of there being any appreciation of his philosophy the lapse of time has only augmented the horror and loathing which people of his generation felt for Nietzsche. Having regarded to the vile nature of Nietzsche's philosophy some people may not be ready to believe that the Hindu social order is based on the worship of the Superman.

Let the Manu Smriti speak on this point. This is what Manu says with regard to the position of the Brahmin in the Hindu social order.

I. 93."As the Brahmana sprang from Prajapati's (i.e. God's) mouth, as he was first-born, and as he possesses the Veda, he is by right the Lord of this whole creation."

I. 94."For the self-existent (Swayambhu) i.e. God having performed austerities, produced him first from his own mouth, in order that the offerings might be conveyed to the Gods and Manes and that this universe might be preserved."

I. 95."What created being can surpass him, through whose mouth the Gods continually consume the sacrificial viands and the Manes the offerings to the dead."

I. 96."Of created beings the most excellent are said to be those which are animated, of the animated those who subsist by intelligence; of the intelligent mankind, and of the men the Brahmans."

Besides the reason given by Manu the Brahman is first in rank because he was produced by God from his mouth, in order that the offerings might be conveyed to the Gods and manes, Manu gives another reason for the supremacy of the Brahman. He says:

I. 98."The very birth of a Brahmana is an eternal incarnation of the sacred law (Veda) for he is born to (fulfil) the sacred law, and becomes one with Brahman (God.)"

I. 99."A Brahmana coming into existence, is born as the highest on earth, the Lord of all created beings, for the protection of the treasury of the law."Manu concludes by saying that :

I. 101."The Brahmana eats but his own food, wears but his own apparel, bestows but his own in alms ; other mortals subsist through the benevolence of the Brahmana."Because according to Manu :

I. 100."Whatever exists in the world is the property of the Brahmana ; on account of the excellence of his origin the Brahmana is, indeed, entitled to it all."

Being a deity the Brahman is above law and above the king. Manu directs :

VII. 37."Let the king, rising early in the morning, worship Brahmanas who are well-versed in the threefold sacred science and learned (in polity) and follow their advice."

VII. 38."Let him daily worship aged Brahmans who know the Veda and are pure....."Finally Manu says:

XI. 35."The Brahman is (hereby) declared to be the creator (of the world), the punisher, the teacher, (and hence) a benefactor (of all created beings) to him let no man say anything unpropitious, nor use any harsh words."Manu ordains that:

X. 3."From priority of birth, from superiority of origin, from a more exact knowledge of scripture, and from a distinction in the sacrificial thread, the Brahman is the lord of all classes."The Brahmin or the

Superman of the Hindu social order was entitled to certain privileges. In the first place, he could not be hanged even though he might be guilty of murder. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/18.India and pre-requisite of communism.htm - _msocom_9 Manu says:

VIII. 379."Ignominious tonsure is ordained, instead of capital punishment, for a Brahmin adulterer where the punishment of other classes may extend to loss of life."

VIII. 380."Never shall the king slay a Brahmin, though convicted of all possible crimes; let him banish the offender from his realm, but with all his property secure, and his body unhurt."

XI. 127."For a Brahmin killing intentionally a virtuous man of the Kshatriya class, the penance must be a fourth part of that ordained for killing a priest; for killing a Vaishya, only an eighth; for killing a Shudra, who had been constant in discharging his duties a sixteenth part."

XI. 128."But, if a Brahmin kills a Kshatriya without malice, he must, after a full performance of his religious rites give the priests one bull together with a thousand cows."

XI. 129."Or he may perform for three years the penance for slaying a Brahmin, mortifying his organs of sensation and action, letting his hair grow long, and living remote from the town, with the root of a tree for his mansion."

XI. 130."If he kills without malice a Vaishya, who had a good moral character, he may perform the same penance for one year, or give the priests a hundred cows and a bull."

XI. 131."For six months must he perform this whole penance, if without intention he kills a Shudra, or he may give ten white cows and a bull to the priests."

VIII. 381."No greater crime is known on earth than slaying a Brahmin; and the king, therefore must not even form in his mind an idea of killing a priest."

VIII. 126."Let the king having considered and ascertained the frequency of a similar offence, the place and time, the ability of the criminal to pay or suffer and the crime itself, cause punishment to fall on those alone, who deserve it."

VIII. 124."Manu, son of the self-existent, has named ten places of punishment, which are appropriated to the three lower classes. but a Brahmin must depart from the realm unhurt in any one of them."

The Brahmin has been given by the Manu Smriti other privileges. In the matter of marriage in addition to his marrying a woman of his own class he is entitled mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/18.India and pre-

requisite of communism.htm - [_msocom_10](#) to enter into wedlock with a woman of any of the classes lower to him without being bound to the woman by the tie of marriage or conferring upon the children the right to his status or to his property.

He had the power to punish his wrongdoer without resort to courtmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - [_msocom_11](#).

He could take the property of the common man (the Shudra) without compensation and without reference to court if the same was necessary for the performance of his religious dutiesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - [_msocom_12](#). If he discovers a hidden treasure he was free to appropriate the wholemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - [_msocom_13](#) of it without giving the usual share to the king ' since he was the lord of all ' and was entitled to claim halfmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - [_msocom_14](#)if it was discovered by another. He was entitled to whole amount accumulated from legal fines from a king whose death was due to some incurable diseasemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - [_msocom_15](#). He was exempt from taxationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - [_msocom_16](#). He was entitled to compel the king to provide for his daily food and to see that he did not starvemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - [_msocom_17](#). His property was free from the law of escheatmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and pre-requisite of communism.htm - [_msocom_18](#).

The superman of the Hindu Social order is not bound by the rules as to occupation if he is in distress. Manu says:—

X. 81."Yet a Brahman, unable to subsist by his duties just mentioned, may live by the duty of a soldier; for that is the next in rank."

X. 82."If it be asked, how he must live, should he be unable to get a subsistence by either of those employment; the answer is, he may subsist as a mercantile man, applying himself in person to tillage and attendance on cattle."

X. 83."But a Brahman and a Kshatriya, obliged to subsist by the acts of a Vaishya, must avoid with care, if they can live by keeping herds, the business of tillage, which gives great pain to sentient creatures, and is dependent on the labour of others, as bulls and so forth."

X. 84."Some are of opinion, that agriculture is excellent but it is a mode of subsistence which the benevolent greatly blame, for the iron mouthed pieces of wood not only wound the earth, but the creatures dwelling in it."

X. 85."If, through want of a virtuous livelihood, they cannot follow laudable occupations, they may then gain a competence of wealth by selling commodities usually sold by merchants, avoiding what ought to be avoided."

X. 102."The Brahman, having fallen into distress, may receive gifts from any person whatever; for by no sacred rule can it be shown, that absolute purity can be sullied."

X. 103."From interpreting the Veda, from officiating at sacrifices or from taking presents, though in modes generally disapproved, no sin is committed by priests in distress; for they are as pure as fire or water."

The privileges of the superman are not at all counterbalanced by an obligation towards the common man. Indeed the superman has no duty towards the common man.

He is not bound to do charity for the uplift of the Common man. On the other hand, to receive charity is the monopoly of the Superman. For any other person to receive charity is a sin. To the Common man (Shudra) who is born to serve the Superman man, the Superman is not at all required to be a good employer and is not bound to keep him well-fed, well clothed and well-housed. His obligations in this behalf as laid down by Manu are stated below:

X. 124."They must allot to him (Shudra) out of their own family property a suitable maintenance after considering his ability, his industry and the number of those whom he is bound to support."

X. 125."The remnants of their food must be given to him, as well as their old clothes, the refuse of their grain, and their old household furniture.

The rise of the Common man is antagonistic to the supremacy of the Superman. In order to keep the Superman satisfied, happy and secure the Hindu social order takes special care to keep the Common man in a state of perpetual degradation.

Manu insists on the Shudra doing nothing but service: X. 122."But let a Shudra serve Brahmans."X. 121."If a Shudra unable to subsist by serving Brahmanas seeks a livelihood, he may serve Kshatriyas, or he may also seek to maintain himself by attending on a wealthy Vaishya."

I. 91."One occupation only the lord prescribed to the Shudra, to serve meekly even these other three castes."And why? Manu does not hesitate to give the reason. He says:

X. 129."No superfluous collection of wealth must be made by a Shudra, even though he has power to make it, since a servile man, who has amassed riches, becomes proud, and, by his insolence or neglect, gives pain even to Brahmanas."

The common man is not permitted to acquire learning. The following are the injunctions of Manu:

I. 88."To the Brahmanas he (the creator) assigned teaching and studying the Veda."

I. 89."The Kshatriya he (the creator) commanded to study the Veda."

II. 116."He who shall acquire knowledge of the Veda without the assent of his preceptor incurs the guilt of stealing the scripture, and shall sink to the region of torment."

IV. 99."He (the twice-born) must never read the Veda. . . . in the presence of the Shudras."

IX. 18."Women have no business with the text of the Veda."IX. 199."A twice-born man who has... (improperly) divulged the Veda (ie., to Shudras and women) commits sin, atones for his offence, if he subsists a year on barley."In those texts there are embodied three distinct propositions. The Brahmins, Kshatriyas and Vaishyas can study the Vedas. Of these the Brahmins alone have the right to teach the Vedas But in the case of the Shudra he has not only to study the Vedas but he should not be allowed to hear it read.

The successors of Manu made the disability of the Shudra in the matter of the study of the Veda into an offence involving dire penalties. For instance, Gautama says:

III. 4."If the Shudra intentionally listens for committing to memory the Veda, then his ears should be filled with (molten) lead and lac; if he utters the Veda, then his tongue should be cut off; if he has mastered the Veda his body should be cut to pieces."To the same effect is Katyayana.

The common man (Shudra) is not allowed the benefit of the sacrament of initiation. It is the second birth that helps towards the moral and material advancement of the individual.

The common man is denied the right to have a name conveying dignity. Manu says:

II. 30."Let the father perform or cause to be performed the Namadheya (the rite of name of the child), on the tenth or twelfth (day after birth), or on a lucky lunar day in a lucky muhurth under an auspicious constellation.

II. 31."Let (the first part of) a Brahman's name (denote something) auspicious, a Kshatriya name be connected with power, and a Vaishya with wealth, but a Shudra's (express something) contemptible."

II. 32."(The second part of) a Brahman's name shall be a word implying happiness, of a Kshatriya (a word) implying protection, of a Vaishya (a term) expressive of thriving and of a Shudra's (an expression) denoting a service."

The Superman will not tolerate the Shudra to have the comfort of a high-sounding name. He must be contemptible both in fact and in name.

A Hindu's life is divided into periods. The first period is called Brahmacharya, the stage of a student. The second period is called Grahasthashram, the stage of married life. The third period is called Vanasprastha, the stage of detachment from worldly life. The fourth period is called Sanyasa which is complete severance from the affairs of the world which is tantamount to civil death. The common man is denied the right of becoming a Sanyasi. It is difficult to understand why. Obviously for the benefit of the Superman. A Shudra by becoming a Sanyasi ceases to render service to Superman. A Shudra by becoming a Sanyasi reaches God or Brahma which is an invasion of the privileges of the Superman.

The citations from Manu prove that the Hindu social order is openly and avowedly devised and intended for the good of the Superman. In it everything is ordained for the Superman. The Superman is the Brahmin and the common man is the Shudra. The Superman has rights and no duties. Everything is at the disposal of the Superman, everything must be ascribed in the interests of the Superman. The counterpart of the same feature is the degradation of the common man. As against the Superman the common man has no right to life, liberty, property or pursuit of happiness. He must be ready to sacrifice everything for the sustenance of the life and dignity of the Superman. The Hindu social order prescribes that such sacrifice should be made willingly by the common man. Indeed, it inculcates that the common man should respond to such call for sacrifice in the interest of the Superman as his supreme duty.

Can there be any doubt that Zarathustra is a new name for Manu and that 'Thus spoke Zarathustra' is a new edition of the Manu Smriti?

If there is any difference between Manu and Nietzsche, it lies in this. Nietzsche was genuinely interested in creating a new race of men which will be race of Superman as compared with the existing race of men. Manu, on the other hand, was interested in maintaining the privilege of a class who had come to arrogate to itself the claim of being Superman.

Nietzsche's Supermen were Supermen by reason of their worth. Nietzsche was a genuine disinterested philosopher. Manu, on the contrary, was a hireling engaged to propound a philosophy which served the interests of a class, born in a group and whose title to being Superman was not to be lost even if they lost their virtue. Compare the following texts from Manu.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/18.India and prerequisite of communism.htm - _msocom_19

X. 81."Yet, a Brahmin, unable to subsist by his duties just mentioned, may live by the duty of a soldier; for that is the next rank."

X. 82."If it be asked, how he must live, should he be unable to get a subsistence by either of those employment; the answer is, he may subsist as a mercantile man, applying himself to tillage and an attendance on cattle."Manu adds:

IX. 317."A Brahmin, be he ignorant or learned, is a great divinity, just as the fire, whether carried forth (for the performance of a burnt oblation) or not carried forth, is a great divinity."

IX. 319."Thus, though the Brahmins employ themselves in all (sorts) of mean occupation, they must be honoured in every way; (for each of) them is a very great deity."

Nietzsche's praise of the Manu Smriti is undeserved. For when he says that according to its scheme "the noble classes, the philosophers and the warriors guard and guide the masses", he is either making a positively untrue statement or that he has not read it correctly. Under the Manu Smriti the superman has rights against the common man but he has no duties towards the common man.

Manu's degraded and degenerate philosophy of Superman as compared with that of Nietzsche is therefore far more odious and loathsome than the philosophy of Nietzsche. Such is the social order which the Hindus regard as a pearl without price and which Mr. Gandhi is proud to offer as a gift from the Hindus to the world.

Another special feature of the Hindu social order relates to the technique devised for its preservation. The technique is twofold.

The first technique is to place the responsibility of upholding and maintaining the social order upon the shoulders of the King. Manu does this in quite express terms.

VIII. 410."The King should order each man of the mercantile class to practise trade or money-lending or agriculture and attendance on cattle; and each man of the servile class to act in the service of the twice-born."

VIII. 418."With vigilant care should the King exert himself in compelling merchants and mechanics to perform their respective duties;

for, when such men swerve from their duty they throw this world into confusion.”

Manu does not stop with the mere enunciation of the duty of the King in this behalf. He wants to ensure that the King shall at all times perform his duty to maintain and preserve the established order. Manu therefore makes two further provisions. One provision is to make the failure of the King to maintain the established order an offence for which the King became liable for prosecution and punishment like a common felon. This would be clear from the following citations from Manu: —

VIII. 335.”Neither a father, nor a preceptor, nor a friend, nor a mother, nor a wife, nor a son, nor a domestic priest must be left unpunished by the King if they adhere not with firmness to their duty.”

VIII. 336.”Where another man of lower birth would be fined one pana, the King shall be fined a thousand, and he shall give the fine to the priests, or cast it into the river, this is a sacred rule.”The other provision made by Manu against a King who is either negligent or opposed to the established order is to invest the three classes, Brahmins, Kshatriyas and Vaishyas with a right to rise in armed rebellion against the King.

VIII. 348.”The twice-born may take arms, when their duty is obstructed by force; and when, in some evil time, a disaster has befallen the twice-born classes.”

The Right of rebellion is given to the three higher classes and not to the Shudra. This is very natural. Because it is only the three upper classes who would benefit by the maintenance of this system. But supposing the Kshatriyas joined the king in destroying the system what is to be done? Manu gives the authority to the Brahmins to punish all and particularly the Kshatriyas.

XI. 31.”A priest, who well knows the laws, need not complain to the king of any grievous injury; since, even by his own power, he may chastise those, who injure him.”

XI. 32.”His own power, which depends on himself alone, is mightier than the royal power, which depends on other men; by his own might, therefore, may a Brahmin coerce his foes.”

XI. 33.”He may use without hesitation, the powerful charms revealed to Atharvan, and by him to Angiras; for speech is the weapon of a Brahmin; with that he may destroy his oppressors.”

IX. 320.”Of a military man, who raises his arm violently on all occasions against the priestly class, the priest himself shall be the chastiser; since the soldier originally proceeded from the Brahmin.”How can the Brahmins punish the Kshatriyas unless they can take arms? Manu knows this and

therefore allows the Brahmins to arm themselves to punish the Kshatriyas.

XII. 100."Command of armies, royal authority, power of inflicting punishment, and sovereign dominion over all nations, he only well deserves, who perfectly understands the Veda Sastra i.e., who is a Brahmin."

The second technique devised for the maintenance and preservation of the established order is quite different from the first. Really speaking, it is this, which constitutes a special feature of the Hindu social order.

In the wake of the preservation of the social order from violent attack it is necessary to bear in mind three considerations. The outbreak of a revolution is conditioned by three factors: (1) the existence of a sense of wrong; (2) capacity to know that one is suffering from a wrong and (3) availability of arms. The second consideration is that there are two ways of dealing with a rebellion. One is to prevent a rebellion from occurring and the other is to suppress it after it has broken out. The third consideration is that whether the prevention of rebellion would be feasible or whether the suppression of rebellion would be the only method opens, would depend upon the rules, which govern the three prerequisites of rebellion.

When the social order denies opportunity to rise, denies right to education and denies right to use arms, it is in a position to prevent rebellion against the social order. Where on the other hand, a social order allows right to education, and permits the use of arms, it cannot prevent rebellion by those who suffer wrongs. Its only remedy to preserve the social order is by suppression of rebellion by the use of force and violence. The Hindu social order has adopted the first method. It has fixed the social status of the lower orders for all generations to come. Their economic status is also fixed. There being no disparity between the two, there is no possibility of a grievance growing up. It has denied education to the lower orders. The result is that no one is conscious that his low condition is a ground for grievance. If there is any consciousness it is that no one is responsible for the low condition. It is the result of fate. Assuming there is a grievance, assuming there is consciousness of grievance, there cannot be a rebellion by the lower orders against the Hindu social order because the Hindu social order denies the masses the right to use arms. Other social orders such as those of the Muslims or the Nazis, follow the opposite course. They allow equal opportunity to all. They allow freedom to acquire knowledge. They allow the right to bear arms and take upon themselves the odium of suppressing rebellion by

force and violence. To deny freedom of opportunity, to deny freedom to acquire knowledge, to deny the right of arms is a most cruel wrong. Its results Manu mutilates and emasculates man. The Hindu social order is not ashamed to do this. It has, however, achieved two things. It has found the most effective, even though it be the most shameless method of preserving the established order. Secondly, notwithstanding the use of most inhuman means of killing manliness, it has given to the Hindus the reputation of being very humane people. The Nazis had indeed a great deal to learn from the Hindus. If they had adopted the technique of suppressing the masses devised by the Hindus they would have been able to crush the Jews without open cruelty and would have also exhibited themselves as humane masters.

The third special feature of the Hindu social order is that it is a Divine order designed by God himself. As such it is sacred, not open to abrogation, amendment, not even to criticism. For the purpose of removing any doubt that may be lurking in the minds of anybody about the Divine character of the Hindu social order, attention is invited to the following verses from the Bhagvat Gita and the Manu Smriti. Shri Krishna one of the Hindu Gods, whose word is the Bhagvat Gita says:—

IV. 13.”I myself have created the arrangement of the four castes (into Brahmins, Kshatriyas, Vaishyas and Shudras), consistently with the differences in their qualities and actions. It is, I who am the Maker of it.”

XVIII. 41-44.”0, Parantapa! the respective duties of Brahmins (priests), Kshatriyas (warriors), Vaishyas (tradesmen) and Shudras (menials) have been individually fixed with reference to the qualities arising from their inherent natures, that is, from Prakriti. The inherently natural duties of a Brahmin are peace, self-restrain, religious austerities, cleanliness, and quietness, straightforwardness (humanity). Knowledge (that is, spiritual knowledge). Vijnana (that is Imperial knowledge) and Astikya-budhi (that is belief in a future world). The inherently natural duty (karma) of the Kshatriya is bravery, brilliance, courage, intentness, not running away from the battle, generosity, and exercising authority (over subject people) ' goraksya ' (that is the business of keeping cattle), and vanijya (that is, trade) is the inherently natural duty of the Vaishya; and in the same way, service is the inherently natural duty of the Shudra.”

Krishna forbids propaganda against the Hindu social order. He says:—

III. 26.”As the ignorant act with attachment to action so a wise man wishing to keep the people to their duties, should not shake the convictions of the ignorant who are attached to action, but acting with devotion (himself) should make them apply themselves to all action. . . . A

man of perfect knowledge should not shake these men of imperfect knowledge in their convictions.”When the Hindu social order breaks down, Krishna does not want the people to undertake the work of reform. He asks them to leave the task to him. This is evident from the following admonition contained in the Bhagvat Gita. Says Krishna :—

IV. 7-8.”O! Bharata, whenever Righteous less declines and Unrighteousness becomes powerful, then I Myself come to birth. I take birth in different Yugas for protecting the Righteous and destroying the Unrighteous and for establishing Righteousness.”It is not only a special feature of the Hindu social order. It is an extraordinary feature. An examination of consecrations will show that there are instances where society has consecrated inanimate beings and inculcated on the minds of its members the religious belief that they are sacred. There are cases where stones, rivers, trees are made Gods and Goddesses. There are instances where society has consecrated living things and inculcated on the minds of its members the religious belief that they are sacred. But there are no instances where a particular social order has been consecrated by Religion and made sacred. The primitive world had its clan order and its tribal order. But the clan or the tribal order was only a social order and was never consecrated by religion and made sacred and inviolate. The ancient world countries like Egypt, Persia, Rome, Greece, etc., each had its social order in which some were free and some were slaves, some were citizens, some were aliens, some of the race, some of another. This class order again was only a social order and was never consecrated by religion and made sacred and inviolate. The modern world has its order, in some it is Democracy, in some Fascism, in some Nazism and in some Bolshevism. But here again the order is only social order. It is not consecrated by religion and made sacred and inviolate.

Nowhere has society consecrated its occupations—the ways of getting a living. Economic activity has always remained outside the sanctity of religion. Hunting society was not without a religion. But Hunting as an occupation was not consecrated by religion and made sacred. Pastoral society was not without religion. But pastorage was not consecrated by religion and made sacred. Farming as an occupation did not become consecrated by religion and made sacred. Feudalism with its gradations, with its Lords, villains and serfs was a purely social in character. There was nothing sacred about it.

The Hindus are the only people in the world whose social order—the relation of man to man is consecrated by religion and made sacred, eternal and inviolate. The Hindus are the only people in the world whose

economic order—the relation of workman to workman, is consecrated by religion and made sacred, eternal and inviolate.

It is not therefore enough to say that the Hindus are a people with a sacred code of religion. So are the Zoroastrians, Israelites, Christians and Muslims. All these have sacred codes. They consecrate beliefs and rites and make them sacred. But they do not prescribe, nor do they consecrate a particular form of social structure—the relationship between man and man in a concrete form—and make it sacred inviolate. The Hindus are singular in this respect. This is what has given the Hindu social order its abiding strength to defy the ravages of \ time and the onslaught of time.

The orthodox Hindu will accept this as an accurate description of the Hindu social order. It is only the reformer who is likely to demur. He would say that since the advent of the British, this is all a description of a dead past. One need not be perturbed by this view. For it contains a fallacy. It omits to take note of the fact that institutions, which have died as creeds sometimes continue, nevertheless survive as habits. No one can deny that the Hindu social order has become the habit of the Hindus and as such is in full force.

CHAPTER

Symbols of Hinduism

Editorial note in the source publication:

There are 37 pages under this title. The chapter seems incomplete. However this relates to the topic No. 7 of the original plan. All these pages are tagged along with the pages of 'India and Communism' into One register. We are reproducing the text of this typed copy along with the table of contents written by Dr. Ambedkar. A photo copy of the plan of a proposed book ' Can I be a Hindu? ' is also reproduced from the original (moth-eaten).—Editors

Is there anything peculiar in the social organisation of the Hindus? An unsophisticated Hindu who is unaware of investigations conducted by scholars will say that there is nothing peculiar, abnormal or unnatural in the organisation of the Hindu society. This is quite natural. People who live their lives in isolation are seldom conscious of the peculiarities of their ways and manners. People have gone on from generation to generation without stopping to give themselves a name. But how does the social organisation of the Hindus strike the outsiders, the non-Hindus? Did it appear to them as normal and natural as it appears to the Hindus?

Megasthenese who came to India as the ambassador of the Greek King Seleukos Nicator to the Court of Chandragupta Maurya some time about the year 305 B.C. did feel that the social organisation of the Hindus was of a very strange sort. Otherwise, he would not have taken such particular care to describe the peculiar features of the Hindu social organisation. He has recorded: "The population of India is divided into seven parts. The philosophers are first in rank, but form the smallest class in point of number. Their services are employed privately by persons who wish to offer sacrifices or perform other sacred rites, and also publicly by the kings at what is called the Great Synod, wherein at the beginning of the new year all the philosophers are gathered together before the king at the gates, when any philosopher who may have committed any useful suggestion to writing, or observed any means for improving the crops and the cattle, or for promoting the public interests, declares it publicly. If anyone is detected giving false information thrice, the law condemns him to be silent for the rest of his life, but he who gives sound advice is exempted from paying any taxes or contributions. The second caste consists of the husbandmen, who form the bulk of the population, and are in disposition most mild and gentle. They are exempted from military service, and cultivate their lands undisturbed by fear. They never go to town, either to take part in its tumults, or for any other purpose. It therefore not infrequently happens that at the same time, and in the same part of the country, men may be seen drawn up in array of battle, and fighting at risk of their lives, while other men close at hand are ploughing and digging in perfect security, having these soldiers to protect them. The whole of the land is the property of the king, and the husbandmen till it on condition of receiving one-fourth of the produce.

The third caste consists of herdsmen and hunters, who alone are allowed to hunt, and to keep cattle and to sell draught animals or let them out on hire. In return for clearing the land of wild beasts and fowls, which devour the seeds sown in the fields, they receive an allowance of grain from the king. They lead wandering life and live under tents.

The fourth class, after herdsmen and hunters, consists of those who work at trades, of those who vend wares, and of those who are employed in bodily labour. Some of these pay tribute, and render to the state certain prescribed services. But the armourmakers and shipbuilders receive wages and their victuals from the king, for whom alone they work. The general in command of the army supplies the soldiers with weapons, and the

admiral of the fleet lets out ships on hire for the transport both of passengers and merchandise.

The fifth class consists of fighting men, who when not engaged in active service, pass their time in idleness and drinking. They are maintained at the king's expense, and hence they are always ready, when occasion calls, to take the field, for they carry nothing of their own with them but their own bodies.

The sixth class consists of the overseers, to whom is assigned the duty of watching all that goes on, and making reports secretly to the king. Some are entrusted with the inspection of the city, and others with that of the army. The former employs as their coadjutors the courtezans of the city, and the latter the courtezans of the camp. The ablest and most trustworthy men are appointed to fill these offices.

The seventh class consists of the Councillors and assessors of the king. To them belong the highest posts of government, the tribunals of justice, and the general administration of public affairs.

No one is allowed to marry out of his own caste, or to exchange one profession or trade for another, or to follow more than one business. An exception is made in favour of the philosopher, who for his virtue is allowed this privilege.”

Alberuni who wrote an account of his travels in India some time about 1030 AD must have been struck by the peculiarity of the Hindu social organisation. For he too has not omitted to make a note of it in the record of impressions he made. He observed: --

"The Hindus call their castes varna i.e. colours, and from a genealogical point of view they call them jataka i.e., births. These castes are from the very beginning only four.

1. The highest caste is the Brahmins of whom the books of the Hindus tell that they were created from the head of Brahma. And a Brahma is only another name for the force called nature, and the head is the highest part of the animal body, the Brahmans are the choice part of the whole genus. Therefore the Hindus consider them as the very best of mankind.

II. The next caste is the Kshatriyas, who were created, as they say, from the shoulders and hands of Brahma. Their degree is not much below that of the Brahman.

III. After them follow the Vaishyas, who were created from the thigh of Brahma.

IV. The Sudras, who were created from his feet. Between the latter two classes there is no very great distance. Much, however, as these classes

differ from each other, they live together in the same towns and villages, mixed together in the same houses and lodgings.

After the Shudras follow the people called Antyaja, who render various kinds of services, who are not reckoned amongst any caste, but only as members of a certain craft or profession. There are eight classes of them who freely intermarry with each other, except the fuller, shoemaker and weaver, for no others would condescend to have anything to do with them. These eight guilds are the fuller, shoemaker, juggler, the basket and shield maker, the sailor, fisherman, the hunter of wild animals and of birds, and the weaver. The four castes do not live together with them in one and the same place. These guilds live near the villages and towns of the four castes, but outside them.

The people called Hadi, Doma (Domba), Candala, and Badhatau (sic) are not reckoned amongst any caste or guild. They are occupied with dirty work, like the cleansing of the villages and other services. They are considered as one sole class, and distinguished only by their occupations. In fact, they are considered like illegitimate children; for according to general opinion they descend from a Sudra father and a Brahmani mother as the children of fornication; therefore they are degraded outcastes.

The Hindus give to every single man of the four castes characteristic names, according to their occupations and modes of life, eg., the Brahman is in general called by this name as long as he does his work staying at home. When he is busy with the service of one fire, he is called ishtin; if he serves three fires, he is called Agnihotrin; if he besides offers an offering to the fire, he is called Dikshita. And as it is with the Brahmana, so is it also with the other castes. Of the classes beneath the castes, the Hadi are the best spoken of, because they keep themselves free from everything unclean. Next follow the Doma, who play on the lute and sing. The still lower classes practise as a trade killing and the inflicting of judicial punishments. The worst of all are the Badhantan, who not only devour the flesh of dead animals, but even of dogs and other beasts.

Each of the four castes, when eating together, must form a group of themselves, one group not being allowed to comprise two men of different castes. If, further, in the group of the Brahman there are two men who live at enmity with each other, and the seat of the one is by the side of the other, they make a barrier between the two seats by placing a board between them, or by spreading a piece of dress, or in some other way; and if there is only a line drawn between them, they are considered as separated. Since it is forbidden to eat the remains of a meal, every single man must have his own food for himself, for if anyone of the party

who are eating should take of the food from one and the same plate, that which remains in the plate becomes, after the first eater has taken part, to him who wants to take as the second, the remains of the meal as such is forbidden.”

Alberuni did not merely content himself with recording what struck him as peculiar in the Hindu social organization. He went on to say:—

“Among the Hindus institutions of this kind abound. We Muslims, of course, stand entirely on the other side of the question, considering all men as equal, except in piety; and this is the greatest obstacle which prevents any approach or understanding between Hindus and Muslims.”

Duarte Barbosa who was a Portuguese official in the service of the Portuguese Government in India from 1500 to 1571 has left a record of his impressions of Hindu society. This is what struck him in. Speaking of the kingdom of Gujerat:

“And before this kingdom Guzerate fell into the hands of the Moors. A certain caste of Heathen whom the Moors called Resbutos (Rajputs) dwelt therein, who in those days were the knights and wardens of the land, and made war wheresoever it was needful. These men kill and eat sheep and fish and all other kinds of food; in the mountains there are yet many of the them, where they have great villages and obey not the king of Guzarate, but rather wage daily war against him; who, do what he may, is yet not able to prevail against them, nor will do so, for they are very fine horsemen, and good archers, and have besides divers other weapons to defend themselves withal against the Moors, on whom they make war without ceasing; yet have they no king nor lord over them. And in this kingdom there is another sort of Heathen whom they call Baneanes, who are great merchants and traders. They dwell among the Moors with whom they carry on all their trade. This people eat neither flesh nor fish nor anything subject to death; they slay nothing, nor are they willing even to see the slaughter of any animal; and thus they maintain their idolatry and hold it so firmly that it is a terrible thing. For often it is so that the Moors take to them live insects or small birds, and make as though to kill them in their presence, and the Baneanes buy these and ransom them, paying much more than they are worth, so that they may save their lives and let them go. And if the King or a Governor of the land has any man condemned to death, for any crime which he has committed, they gather themselves together and buy him from justice, if they are willing to sell him, that he may not die. And divers Moorish mendicants as well, when they wish to obtain alms from this people, take great stones wherewith they beat upon their shoulders and bellies as though they would slay

themselves before them, to hinder which they give them great alms that they may depart in peace. Others carry knives with which they slash their arms and legs, and to these too they give large alms that they may not kill themselves. Others go to their doors seeking to kill rats and snakes for them, and to them also they give much money that they may not do so. Thus they are much esteemed by the Moors. When these Baneanes meet with a swarm of ants on the road they shrink back and seek for some way to pass without crushing them. And in their houses they sup by daylight, for neither by night nor by day will they light a lamp, by reason of certain little flies which perish in the flame thereof; and if there is any great need of a light by night they have a lantern of varnished paper or cloth, so that no living thing may find its way in, and die in the flame. And if these men breed many lice they kill them not, but when they trouble them too much they send for certain men, also Heathen, who living among them and whom they hold to be men of a holy life, they are like hermits living with great abstinence through devotion to their gods. These men house them, and as many lice as they catch they place on their own heads and breed them on their own flesh, by which they say they do great service to their Idol. Thus one and all they maintain with great self restraint their law of not killing. On the other hand they are great usurers, falsifiers of weights and measures and many other goods and of coins ; and great liars. These Heathen are tawny men, tall and well-looking gaily attired, delicate and moderate in their food. Their diet is of milk, butter, sugar and rice, and many conserves of divers sorts. They make much use of dishes of fruit and vegetables and pot herbs in their food. Wheresoever they dwell they have orchards and fruit gardens and many water tanks wherein they bathe twice a day, both men and women; and they say when they have finished bathing that they are clear of as many sins as they have committed up to that hour. These Baneanes grow very long hair, as women do with us, and wear it twisted up on the head and made into a knot, and over it a turban, that they may keep it always held together; and in their hair they put flowers and other sweet scented things.

They use to anoint themselves with white sandalwood mixed with saffron and other scents. They are very amorous people. They are clad in long cotton and silken shirts and are shod with pointed shoes of richly wrought cordwain; some of them wear short coats of silk and brocade. They carry no arms except certain very small knives ornamented with gold and silver, and this for two reasons; first because they are men who make but little use of weapons; and secondly, because the Moors defend them.”

And there is here another class of Heathen whom they call Brahmenes, who are priests among them, and persons who manage and rule their houses of prayer and idol-worship, which are of great size and have great revenues; and many of them also are maintained by alms. In these houses are great numbers of wooden Idols, and others of stone and copper and in these houses or monasteries they celebrate great ceremonies in honour of these idols, entertaining them with great store of candles and oil lamps, and with bells after our fashion. These Brahmans and Heathen have in their creed many resemblance to the Holy Trinity, and hold in great honour the relation of the Triune Three, and always make their prayers to God, whom they confess and adore as the true God, Creator and maker of all things, who is three persons and one God, and they say that there are many other Gods who are rulers under him, in whom also they believe. These Brahmans and Heathen wheresoever they find our churches enter them and make prayers and adoration to our Images, always asking for Santa Maria, like men who have some knowledge and understanding of these matters and they honour the Church as is our manner, saying that between them and us there is little difference. These men never eat anything subject to death, nor do they slay anything. Bathing they hold to be a great ceremony and they say that by it they are saved."Speaking of the Kingdom of Calicut, Barbosa says:—

"There is also in this same kingdom of Calicut a caste of people called Brahmenes who are priests among them (as are the clergy among us) of whom I have spoken in another place."

"These all speak the same tongue, nor can any be a Brahmene except he be the son of a Brahmene. When they are seven years of age they put over their shoulder a strip of two fingers in breadth of untanned skin with the hair on it of a certain wild beast, which they call Cryvamergam, which resembles a wild ass. Then for seven years he must not eat betel for which time he continues to wear this strap. When he is fourteen years old they make him a Brahmene, and taking off their leather strip they invest him with the cord of three strands which he wears for the rest of his life as a token that he is a Brahmene. And this they do with great ceremonial and rejoicing, as we do here for a cleric when he sings his first mass. Thereafter he may eat betel, but no flesh or fish. They have great honour among the Indians, and as I have already said, they suffer deaths for no cause whatsoever, their own headman gives them a mild chastisement. They marry once only in our manner, and only the eldest son marries, he is treated like the head of an entailed estate. The other brothers remain single all their lives. These Brahmenes keep their wives well guarded, and

greatly honoured, so that no other man may sleep with them; if any of them die, they do not marry again, but if a woman wrongs her husband she is slain by poison. The brothers who remain bachelors sleep with the Nayre women, they hold it to be a great honour, and as they are Brahmenes no woman refuses herself to them, yet they may not sleep with any woman older than themselves. They dwell in their own houses and cities, and serve as clergy in the houses of worship, whither they go to pray at certain hours of the day, performing their rituals and idolatries."

"Some of these Brahmenes serve the kings in every manner except in arms. No man may prepare any food for the King except a Brahmene or his own kin; they also serve as couriers to other countries with letters, money or merchandise, passing wherever they wish to go in safety and none does them any ill, even when the kings are at war. These Brahmenes are learned in their idolatry and possess many books thereof. The Kings hold them in high esteem."

"I have already spoken many times of the Naiyars and yet I have not hitherto told you what manner of men they are. you are to know that in this land of Malabar there is another caste of people called Nayars and among them are noble men who have no other duty than to serve in war, and they always carry their arms where ever they go, some swords and shields, others bows and arrows, and yet others spears. They all live with the King, and the other great Lords; nevertheless all receive stipends from the King or from the great Lords with whom they dwell. None may become a Nayar, save only he who is of Nayar lineage. They are very free from stain in their nobility. They will not touch anyone of low caste. Nor eat nor drink save in the house of a Nayar. These men are not married, their nephews (sister's sons) are their heirs. The Nayar women of good birth are very independent, and dispose of themselves as they please with Brahmenes and Nayars, but they do not sleep with men of caste lower than their own under pain of death. When they reach the age of twelve years their mothers hold a great ceremony.

When a mother perceives that her daughter has attained that age, she asks her kinsfolk and friends to make ready to honour her daughter, then she asks of the kindred and especially of one particular kinsman or great friend to marry her daughter; this he willingly promises and then he has a small jewel made, which would contain a half ducat of gold, long like a ribbon, with a hole through the middle which comes out on the other side, strung on a thread of white silk. The mother then on a fixed day is present with her daughter gaily decked with many rich jewels, making great rejoicing with music and singing, and a great assembly of people.

Then the kinsmen or friend comes bringing that jewel, and going through certain forms, throws it over the girl's neck. She wears it as a token all the rest of her life, and may then dispose of herself as she wills. The man departs without sleeping with her inasmuch as he is her kinsman; if he is not, he may sleep with her, but is not obliged to do so. Thenceforward the mother goes about searching and asking some young men to take her daughter's virginity; they must be Nayars and they regard it among themselves as a disgrace and a foul thing to take a woman's virginity. And when anyone has once slept with her, she is fit for association with men.

Then the mother again goes about enquiring among other young Nayars if they wish to support her daughter, and take her as a Mistress so that three or four Nayars agree with her to keep her, and sleep with her, each paying her so much a day; the more lovers she has the greater is her honour. Each of one of them passes a day with her from midday on one day till midday on the next day and so they continue living quietly without any disturbance or quarrels among them. If any of them wishes to leave her, he leaves her, and takes another and she also if she is weary of a man, she tells him to go, and he does go, or makes terms with her.

Any children they may have stay with the mother who has to bring them up, for they hold them not to be the children of any man, even if they bear his likeness, and they do not consider them their children, nor are they heirs to their estates, for as I have already stated their heirs are their nephews, sons of their sisters, (which rule whosoever will consider inwardly in his mind will find that it was established with a greater and deeper meaning than the common folk think) for they say that the Kings of the Nayars instituted it in order that the Nayars should not be held back from their service by the burden and labour of rearing children.”

“In this kingdom of Malabar there is also another caste of people whom they call Biabares, Indian Merchants, natives of the land. They deal in goods of every kind both in the seaports and inland, where ever their trade is of most profit. They gather to themselves all the pepper and ginger from the Nayars and husbandmen and off times they buy the new crops beforehand in exchange for cotton clothes and other goods, which they keep at the seaports. Afterwards they sell them again and gain much money thereby. Their privileges are such that the king of the country in which they dwell cannot execute them by legal process.”

“There is in this land yet another caste of folk known as Cuiavern. They do not differ from the Nayars, yet by reason of a fault, which they committed, they remain separate from them. Their business is to make

pottery and bricks for roofing the houses of the Kings and idols, which are roofed with bricks instead of tiles; only these, for as I have already said, other houses are thatched with branches. They have their own sort of idolatry, and their separate idols.”

“There is another Heathen caste which they call Mainatos, whose occupation is to wash clothes for the Kings, Brahmenes and Nayars. By this they live, and may not take up any other.”

“There is another lower caste than these which they call Caletis, who are weavers who have no other way of earning save by weaving of cotton and silk clothes, but they are low caste folk and have but little money, so that they clothe the lower races. They are apart by themselves and have their own idolatry.”

“Besides the castes mentioned above, there are eleven others lower than they with whom the others do not associate, nor do they touch them under pain of death; and there are great distinctions between one and another of them, preserving them from mixture with one another. The purest of all these low, simple folk they call Tuias. Their work is mainly that of tending the palm-groves and gathering the fruit thereof, and carrying it away for wages on their backs, for there are no beasts of burden in the land.”

“There is another caste still lower than these whom they call Manen (Mancu in the printed text) who neither associate with others nor touch them, nor do the other touch them. They are washermen for the common people, and makers of sleeping mats from which occupations all but they are barred; their sons must perforce follow the same trade; they have their own separate idolatry.”

“There is another caste in this land still lower whom they call Canaquas. Their trade is making buckles and umbrellas. They learn letters for purposes of astronomy, they are great astrologers, and foretell with great truth things that are to come; there are some lords who maintain them for this cause.”

“There is also another lower caste, also Heathens, called Ageres. They are masons, carpenters, smiths, metal workers and some are goldsmiths, all of whom are of a common descent, and a separate caste, and have their idols apart from other folk. They marry, and their sons inherit their property, and learn their fathers' trade.”“There is another caste still lower in this country called Mogeris, they are almost the same as the Tuias, but they do not touch one another. They work as carriers of all things belonging to the Royal State when it moves from one place to another, but there are very few of them in this land; they are a separate caste; they

have no marriage law; the most of them gain their living on the sea, they are sailors, and some of them fishers; they have no idols. They are as well slaves of the Nayars:

"There is another caste yet lower whom they call Monquer, fishers who have no other work than fishing, yet some sail in the Moors' ship and in those of other Heathens, and they are very expert seamen. This race is very rude, they are shameless thieves; they marry and their sons succeed them, their women are of loose character, they sleep with anyone whosoever and it is held no evil. They have their own idolatry."

"In this land of Malabar there is another caste of Heathen even lower than those, whom, they call Betunes. Their business is salt-making and rice growing, they have no other livelihood."

"They dwell in houses standing by themselves in the fields away from the roads, whither the gentlefolk do not walk. They have their own idolatry. They are slaves of the Kings and Nayars and pass their lives in poverty. The Nayars make them walk far away from them and speak to them from a far off. They hold no intercourse with any other caste."

"There is another caste of Heathen, even lower and ruder, whom they call Paneens, who are great sorcerers and live by no other means."

"There is another caste lower and ruder than they, named Revoleens a very poor folk, who live by carrying firewood and grass to the towns, they may touch none, nor may any touch them under pain of death. They go naked, covering only their private parts with scant and filthy rags, the more part of them indeed with leaves of certain trees. Their women wear many brass rings in their ears; and on their necks, arms and legs, necklaces and bracelets of heads."

"And there is yet another caste of Heathens lower than these whom they call Poleas, who among all the rest are held to be accursed and excommunicate; they dwell in the fields and open campaigns in secret lurking places, whither folk of good caste never go save by mischance, and live in huts very strut and mean. They are tillers of rice with buffaloes and oxen. They never speak to the Nayars save from a far off, shouting so that they may hear them, and when they go along the roads they utter loud cries that they may be let past, and whosoever hears them leaves the road, and stands in the wood till they have passed by; and if anyone whether man or woman, touches them, his kinsfolk slay them forthwith, and in vengeance therefore they slay Poleas until they are weary without suffering any punishment."

"Yet another caste there is even lower and baser called Parens, who dwell in the most desert places away from all other castes. They have no

intercourse with any person nor anyone with them; they are held to be worse than devils, and to be damned. Even to see them is to be unclean and outcaste. They eat yams and other roots of wild plants. They cover their middles with leaves, they also eat the flesh of wild beasts.”

"With these end the distinctions between the castes of the Heathen, which are eighteen in all, each one separate and unable to touch others or marry with them; and besides these eighteen castes of the Heathen who are natives of Malabar, which I have now related to you, there are others of outlandish folk merchants and traders in the land, where they possess houses and estates, living like the natives yet with customs of their own.”

These foreigners were not able to give a full and detailed picture of caste. This is understandable. For to every foreigner the private life of the Hindu is veiled and it is not possible for him to penetrate it. The social organism of India, the play of its motive forces, is moreover, regulated infinitely more by custom, carrying according to locality and baffling in its complexity, than by any legal formula which can be picked out of a legal text book. But there is no doubt that caste did appear to the foreigner as the most singular and therefore the most distinguishing feature of Hindu society. Otherwise they would not have noted its existence in the record they made of what they observed when they came to India.

Caste therefore is something special in the Hindu social organization and marks off the Hindus from other peoples. Caste has been a growing institution. It has never been the same at all times. The shape and form of Caste as it existed when Megasthenes wrote his account was very different from what the shape and form it had taken when Alberuni came and the appearance it gave to the Portuguese was different from what it was in the time of Alberuni. But to understand caste one must have more exact idea of its nature than these foreigners are able to give.

To follow the discussion of the subject of caste it is necessary to familiarise the reader with some basic conceptions which underlie the Hindu Social Organisation. The basic conception of social organisation which prevails among the Hindus starts with the rise of four classes or Varnas into which Hindu society is believed to have become divided. These four classes were named (1) Brahmins, the priestly and the educated class (2) Kshatriyas the military class (3) The Vaishyas the trading class and (4) The Shudras the servant class. For a time these were merely classes. After a time what were only classes (Varnas) became Castes (Jatis) and the four castes became four thousand. In this way the modern caste system was only the evolution of the ancient Varna system.

No doubt the caste system is an evolution of the Varna system. But one can get no idea of the caste system by a study of the Varna system. Caste must be studied apart from Varna.

II

An old agnostic is said to have summed up his philosophy in the following words:—

“The only thing I know is that I know nothing; and I am not quite sure that I know that”

Sir Denzil Ibbetson undertaking to write about caste in the Punjab said that the words of this agnostic about his philosophy expressed very exactly his own feelings regarding caste. It is no doubt true that owing to local circumstances there does appear a certain diversity about caste matters and that it is very difficult to make any statement regarding any one of the castes. Absolutely true as it may be, as regards one locality which will not be contradicted with equal truth as regards the same caste in some other area.

Although this may be true yet it cannot be difficult to separate the essential and fundamental features of caste from its non-essential and superficial features. An easy way to ascertain this is to ask what are the matters for which a person is liable to be excluded from caste. Mr. Bhattacharya has stated the following as causes for expulsion from caste. (1) Embracing Christianity or Islam (2) Going to Europe or America (3) Marrying a widow (4) Publicly throwing the sacred thread (5) Publicly eating beef, pork or fowl (6) Publicly eating kachcha food prepared by a Mahomedan, Christian or low caste Hindu (7) Officiating at the house of a very low caste Shudra (8) By a female going away from home for immoral purposes (9) By a widow becoming pregnant. This list is not exhaustive and omits the three most important causes which entail expulsion from caste. They are (10) Intermarrying outside caste (11) Inter dining with persons of another caste and (12) Change of occupation. The second defect in the statement of Mr. Bhattacharya is that it does not make any distinction between essentials and non-essentials. Of course, 'when a person is expelled from his caste the penalty is uniform. His friends, relatives and fellowmen refuse to partake of his hospitality. He is not invited to entertainment in their houses. He cannot obtain brides or bridegrooms for his children. Even his married daughters cannot visit him without running the risk of being excluded from caste. His priest, his barber and washermen refuse to serve him. His fellow caste men severe

their connection with him so completely that they refuse to assist him even at the funeral of a member of his household. In some cases the man excluded from caste is debarred access to public temples and to the cremation or burial ground.

These reasons for expulsion from caste indirectly show the rules and regulations of the caste. But all regulations are not fundamental. There are many which are unessential. Caste can exist even without them. The essential and unessential can be distinguished by asking another question. When can a Hindu who has lost caste regain his caste? The Hindus have a system of Prayaschitas which are Penances and which a man who has been expelled from caste must perform before he can be admitted to caste fellowship. With regard to these Prayaschitas or Penances certain points must be remembered. In this first place, there are caste offences for which there is no Prayaschita. In the second place, the Prayaschitas vary according to the offence. In some cases the Prayaschitas involve a very small penalty. In other cases the penalty involved is a very severe one.

The existence of a Prayaschita and the absence of it have a significance which must be clearly understood. The absence of Prayaschita does not mean that anyone may commit the offence with impunity. On the contrary it means that the offence is of an immeasurable magnitude and the offender once expelled is beyond reclamation. There is no re-entry for him in the caste from which he is expelled. The existence of a Prayaschita means that the offence is compoundable. The offender can take the prescribed prayaschita and obtain admission in the caste from which he is expelled.

There are two offences for which there is no penance. These are (1) change from Hindu Religion to another religion (2) Marriage with a person of another caste or another religion. It is obvious if a man loses caste for these offences he loses it permanently.

Of the other offences the prayaschitas prescribed are of the severest kind, are two—(1) interdining with a person of another caste or a non-Hindu and (2) Taking to occupation which is not the occupation of the caste. In the case of the other offences the penalty is a light one almost nominal.

The surest clue to find out what are the fundamental rules of caste and what caste consists it is furnished by the rules regarding prayaschitas. Those for the infringement of which there is no prayaschita constitute the very soul of caste and those for the infringement of which the prayaschita is of the severest kind make up the body of caste. It may therefore be said

without any hesitation that there are four fundamental rules of caste. A caste may be defined as a social group having (a) belief in Hindu Religion and bound by certain regulations as to (b) marriage (c) food and (d) occupation. To this one more characteristic may be added namely a social group having a common name by which it is recognised.

In the matter of marriage the regulation lays down that the caste must be endogamous. There can be no intermarriage between members of different castes. This is the first and the most fundamental idea on which the whole fabric of the caste is built up.

In the matter of food the rule is that a person cannot take food from and dine with any person who does not belong to his caste. This means that only those who can intermarry can also inter dine. Those who cannot intermarry cannot inter dine. In other words, caste is an endogamous unit and also a communal unit.

In the matter of occupation the regulation is that a person must follow the occupation which is the traditional occupation of his caste and if the caste has no occupation then he should follow the occupation of his father.

In the matter of status of a person it is fixed and is hereditary. It is fixed because a person's status is determined by the status of the caste to which he belongs. It is hereditary because a Hindu is stamped with the caste to which his parents belonged, a Hindu cannot change his status because he cannot change his caste. A Hindu is born in a caste and he dies a member of the caste in which he is born. A Hindu may lose his status if he loses caste. But he cannot acquire a new or a better or different status.

What is the significance of a common name for a caste? The significance of this will be clear if we ask two questions which are very relevant and a correct answer to each is necessary for a complete idea of this institution of caste. Social groups are either organised or unorganised. When the membership of the group and the process of joining and leaving the groups, are the subject of definite social regulations and involve certain duties and privileges in relation to other members of the group then the group is an organised group. A group is a voluntary group in which members enter with a full knowledge of what they are doing and the aims which the association is designed to fulfil. On the other hand, there are groups of which an individual person becomes a member without any act of volition, and becomes subject to social regulation and traditions over which he has no control of any kind.

Now it is hardly necessary to say that caste is a highly organised social grouping. It is not a loose or a floating body. Similarly, it is not necessary

to say that caste is an involuntary grouping. A Hindu is born in a caste and he dies as a member of that caste. There is no Hindu without caste, cannot escape caste and being bounded by caste from birth to death he becomes subject to social regulations and traditions of the caste over which he has no control.

The significance of a separate name for a caste lies in this—namely it makes caste an organised and an involuntary grouping. A separate and a distinctive name for a caste makes caste asking to a corporation with a perpetual existence and a seal of separate entity. The significance of separate names for separate castes has not been sufficiently realised by writers on caste. In doing that they have lost sight of a most distinctive feature of caste. Social groups there are and they are bound to be in every society. Many social groups in many countries can be equated to various castes in India and may be regarded as their equivalent. Potters, Washermen, Intellectuals, as social groups are everywhere.

But in other countries they have remained as unorganised and voluntary groups while in India they have become organised and involuntary i.e., they have become castes because in other countries the social groups were not given name while in India they did. It is the name, which the caste bears which gives it fixate and continuity and individuality. It is the name which defines who are its members and in most cases a person born in a caste carries the name of the caste as a part of his surname. Again it is the name which makes it easy for the caste to enforce its rules and regulations. It makes it easy in two ways. In the first place, the name of the caste forming a surname of the individual prevents the offender in passing off as a person belonging to another caste and thus escape the jurisdiction of the caste. Secondly, it helps to identify the offending individual and the caste to whose jurisdiction he is subject so that he is easily handed up and punished for any breach of the caste rules.

This is what caste means. Now as to the caste system. This involves the study of the mutual relations between different castes. Looked at as a collection of caste, the caste system presents several features, which at once strike the observer. In the first place there is no inter-connection between the various castes, which form a system. Each caste is separate and distinct. It is independent and sovereign in the disposal of its internal affairs and the enforcement of caste regulations. The castes touch but they do not interpenetrate. The second feature relates to the order in which one caste stands in relation to the other castes in the system. That order is vertical and not horizontal.

Such is the caste and such is the caste system. Question is, is this enough to know the Hindu social organisation? For a static conception of the Hindu social organisation an idea of the caste and the caste system is enough. One need not trouble to remember more than the facts that the Hindus are divided into castes and that the castes form a system in which all hang on a thread which runs through the system in such a way that while encircling and separating one caste from another it holds them all as though it was a string of tennis balls hanging one above the other. But this will not be enough to understand caste as a dynamic phenomenon. To follow the workings of caste in action it is necessary to note one other feature of caste besides the caste system, namely class-caste system.

The relationship between the ideas of caste and class has been a matter of lively controversy. Some say that caste is analogous to class and that there is no difference between the two. Others hold that the idea of castes is fundamentally opposed to that of class. This is an aspect of the subject of caste about which more will be said hereafter. For the present it is necessary to emphasise one feature of the caste system which has not been referred to herein before. It is this. Although caste is different from and opposed to the notion of class yet the caste-system—as distinguished from caste—recognises a class system which is somewhat different from the graded status referred to above. Just as the Hindus are divided into so many castes, castes are divided into different classes of castes. The Hindu is caste-conscious. He is also class conscious. Whether he is caste conscious or class conscious depends upon the caste with which he comes in conflict. If the caste with which he comes in conflict is a caste within the class to which he belongs he is caste conscious. If the caste is outside the class to which he belongs he is class conscious. Anyone who needs any evidence on this point may study the Non-Brahmin Movement in the Madras and the Bombay Presidency. Such a study will leave no doubt that to a Hindu caste periphery is as real as class periphery and caste consciousness is as real as class-consciousness.

Caste, it is said, is an evolution of the Varna system. I will show later on that this is nonsense. Caste is a perversion of Varna. At any rate it is an evolution in the opposite direction. But while caste has completely perverted the Varna system it has borrowed the class system from the Varna system. Indeed the Class-caste system follows closely the class cleavages of the Varna system.

Looking at the caste system from this point of view one comes across several lines of class cleavage which run through this pyramid of castes dividing the pyramid into blocks of castes. The first line of cleavage

follows the line of division noticeable in the ancient Chaturvarna system. The old system of Chaturvarna made a distinction between the first three Varnas, the Brahmins, Kshatriyas, Vaishyas and the fourth Varna namely the Shudra. The three former were classes as the Regenerate classes. The Shudra was held as the unregenerate class. This distinction was based upon the fact that the former was entitled to wear the sacred thread and study the Vedas. The Shudra was entitled to neither and that is why he was regarded as the unregenerate class. This line of cleavage is still in existence and forms the basis of the present day class division separating the castes which have grown out of the vast class of Shudras from those which have grown out of the three classes of Brahmins, the kshatriyas and Vaishyas. This line of class cleavage is the one which is expressed by the terms High Castes and Low Castes and which are short forms for the High Class Castes and Low Class Castes.

Next after this line of cleavage there runs through the pyramid a second line of class cleavage. It runs just below the Low Class Castes. It sets above all the castes born out of the four Varnas i.e., the High Castes as well as the low castes above the remaining castes, which I will merely describe as the 'rest'. This line of class cleavage is again a real one and follows the well-defined distinction which was a fundamental principle of the Chaturvarna system. The Chaturvarna system as is pointed out made a distinction between the four Varnas putting the three Varnas above the fourth. But it also made an equally clear distinction between those within the Chaturvarna and those outside the Chaturvarna. It had a terminology to express this distinction. Those within the Chaturvarna—high or low, Brahmin or Shudra were called Savarna i.e., those with the stamp of the Varna. Those outside the Chaturvarna were called Avarna i.e., those without the stamp of Varna. All the castes which have evolved out of the four varnas are called Savama Hindus—which is rendered English by the term Caste Hindus—The 'rest' are the Avarnas who in present parlance spoken of by- Europeans as Non-caste Hindus i.e., those who are outside the four original castes or varnas.

Much that is written about the caste system has reference mostly to the caste-system among the Savama Hindus. Very little is known about the Avarna Hindus. Who are these Avarna Hindus, what is their position in Hindu Society, how are they related to the Savarna Hindus are questions to which no attention has so far been paid. I am sure that without considering these questions no one can get a true picture of the social structure the Hindus have built. To leave out the Class cleavage between

the Savarna Hindus and the Avarna Hindus is to relate Grimm's Fairy Tale which leaves out the witches, the goblins and the orges.

INDIA ON THE EVE OF THE CROWN GOVERNMENT

More than anything else in the world. Imperialism stands in greater need of defence and Imperialists have not been wanting in their duty.

Unlike the Greeks who did not have even a word for imperialism nor knew the idea of the federation of city states, the Romans were the world's first and greatest imperial people and they coined a justification for imperialism that became the heritage of their successor.

They proclaimed that they were a people of superior race with a culture too high to be compared with any other, that they had better system of administration, that they were versed in the arts of life. They also proclaimed that the rest were people of inferior race with a very low culture and were absolutely devoid of the arts of life, and that their administration was very despotic. As a logical consequence of this the Romans argued that it was their divine mission to civilise their low lying brethren, nay to conquer them and superimpose their culture in the name of humanity.

The British have justified their imperial policy in India by similar argumentation. The British historians of India have a kind of Leues Boswelliana—disease of admiration. Their optical vision somehow or other has magnified the vices, not the virtues, of the predecessors of the British in India. Not only have they been loud in their denunciation of the Moghul and the Maratha rulers as despots or brigands, they cast slur on the morale of the entire population and their civilization. This is but natural for individuals as well as states can raise themselves only by lowering the merits of others.

Historians of British India have often committed the fallacy of comparing the Rule of the British with their immediate or remote predecessors. In deference to historical methodology. They ought to compare the rulers of India with the contemporaries in England. Much of historical error will vanish if we closely follow this plan. It would no longer be a matter of contemptuous pity to read perhaps the abject condition of the Hindoos under the conquest of the Mohommedans when we will remember the pitiful condition of the Anglo-Saxons under their Norman conquerors when "to be called an Englishman was considered as a reproach—when those who were appointed to administer justice were the fountains of all iniquity—when magistrates, whose duty it was to pronounce righteous judgements were the most cruel of all tyrants, and great plunderers than common thieves and

robbers. . . ; when the great men were inflamed with such a rage of money that they cared not by what means it was acquired; when the licentiousness was so great that a Princess of Scotland found it necessary to wear a religious habit in order to preserve her person from violation.”

The much spoken of Mohomedan cruelty could hardly exceed that committed by the first Crusaders on their conquest of Jerusalem. The garrison of 40,000 men”was put to the sword without distinction; arms protected not the brave, nor submission the timid; no age or sex received mercy i infants perished by the same sword that pierced their mothers. The streets of Jerusalem were covered with heaps of slain, and the shrieks of agony and despair resounded from every house.”

If we thus run down through the history of India and history of England and compare contemporary events we will find that for every Native Rowland we have an English Oliver. We must therefore repeat the warning of Sir Thomas Munro to English Historians of India, who said, ”When we compare other countries with England, we usually speak of England as she now is, we scarcely ever think of going back beyond the Reformation and we are apt to regard every foreign country as ignorant and uncivilised, whose state of improvement does not in some degree approximate to our own, even though it should be higher than our own as at no distant period.”

Let us, therefore, turn to the ”Despots and Brigands” who ruled India before the British and let us review their deeds and the condition of the people during their respective rulers.

This knowledge is absolutely necessary in order to form a correct estimate of the Economic condition of the people of India under the East India Company.

We need not wait to dilate upon the Economic prosperity of India in ancient times since we have already dwelt upon it.

We have a consensus of opinion both Hindoo and Mohomedan as regards the prosperity of India when the Mohomedan conquest took place. The magnificence of Canouj and the wealth of the Temple of Somnath bear witness to it. It is a mistake to suppose that the Mussalman sovereigns of India were barbarous and despots. On the other hand majority of them were men of extraordinary character. Mohommed of Guzni, ”showed so much munificence, to individuals of eminence that his capital exhibited a greater assemblage of literary genius than any other monarch in Asia has ever been able to produce. If rapacious in acquiring wealth, he was unrivalled in the judgement and grandeur with which he knew how to expend it.”

Of all his illustrious successors one of whom was a female (Sultana Rezia); Feroz Shah is very well known for his administration. His public works”consisted of 50 dams across rivers to promote irrigation, 40 mosques and 30 colleges, 100 Caravan series, 30 reservoirs, 100 hospitals, 100 public baths, 150 bridges, besides many other edifices for pleasure and ornament; and, above all, the canal from the point in the Jumna where it leaves the mountains of Carnal to Hausi and Hissar, a work which has been partially restored by the British Government. The historian of this monarch expatiates on the happy state of the ryots under his Government, on the goodness of their houses and furniture and the general use of gold and silver ornaments amongst their women . . . The general state of the country must have been flourishing, for Milo de Conti, an Italian traveller, who visited India about A.D. 1420, speaks highly of what he saw in Guzerat, and found the banks of the Ganges covered with towns amidst beautiful gardens and orchards. He passed four famous cities before he reached Maarazia, which he describes as a powerful city, filled with gold, silver, and precious stones. His accounts are corroborated by those of Barbora and Baitema, who travelled in the early part of the sixteenth century. The former in particular describes Cambay as a remarkably well-built city, situated in a beautiful country, filled with merchants of all nations, and with artisans and manufacturers like those of Flanders. Caesar Frederic gives a similar account of Guzerat, and Ibne-Batuta, who travelled during the anarchy and oppression of Mohammed Tagluk's reign, in the middle of the fifteenth century, when insurrections were reigning in most parts of the country, enumerates many large and populous towns and cities, and gives a high impression of the state in which the country must have been before it fell into disorder.”

Baber, the founder of the Moghul dynasty in India found the country in a prosperous condition and was surprised at the immense population and the innumerable artisans everywhere. He was a benevolent ruler and public works marked his statesmanship. Sher Shah who temporarily wrested the throne from the Moghul was, excepting Akabar, the greatest of Mohomedan rulers and like Baber executed many public works.

Akabar's benevolent administration is too well known to need any mention.

The rule of Shah Jehan who”reigned not so much as a king over his subjects, but rather as a father over his family”was marked by the greatest prosperity; his reign was the most tranquil.

Speaking of the condition of the people in the dominions of the

Marathas who were contemporaries of the later Moghuls a traveller says, "from Surat, I passed the Ghats, and when I entered the country of the Maharattas, I thought myself in the midst of the simplicity and happiness of the golden age where nature was yet unchanged, and war and misery were unknown. The people were cheerful, vigorous, and in high health, and unbounded hospitality was a universal virtue; every door was open, and friends, neighbours and strangers, were alike welcome to whatever they found."

With regard to the economic condition of the people in Southern India which was under the rule of Tipoo, a historian says, "When a person, travelling through a strange country, finds it well cultivated, populous with industrious inhabitants, cities newly founded, commerce extending, towns increasing, and everything flourishing, so as to indicate happiness, he will naturally conclude it to be under a form of Government congenial to the minds of the people. This is a picture of Tipoo's country, and this is our conclusion respecting its Government." "His country was found everywhere full of inhabitants and apparently cultivated to the utmost extent of which the soil was capable".... His Government though strict and arbitrary, was the despotism of a strict and able sovereign, who nourishes, not oppresses, the subjects who are to be the means of his future aggrandisement, and his cruelties were, in general, inflicted on those who he considered as his enemies.

Clive described Bengal as a country of "inexhaustible riches". Mecauly said, "In spite of the Mussalman despot and of the Maratha freebooter, Bengal was known through the East as the Garden of Eden—as the rich kingdom. Its population multiplied exceedingly; distant provinces were nourished from the overflowing of its granaries : and the noble ladies of London and Paris were clothed in the delicate produce of its looms."

But with the advent of the English things began to change. Prosperity bade fair to India and perched itself on the Union Jack.

The evil forces were set forth both on the side of the Parliament and the East India Company.

The Rule of the Company was anything but wise, it was rigorous, it gave security but destroyed property. The scheme of administration was far from perfect. Adam Smith characterizes the "Company of Merchants" as "incapable of considering themselves as sovereigns, even after they have become such" and says, "Trade or buying in order to sell again, they will consider as their principal business, and by a strange absurdity, regard the character of the sovereign as but an appendix to that of the merchants, . . ., as sovereigns, their interest is exactly the

same with that of the country which they govern. As merchants, their interest is directly opposite to that interest.” mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/48. India on the Eve of the Crown Government.htm - _msocom_1 Adam Smiths criticism of the Courts of Proprietors and Directors described in the last chapter is also very valuable. He posits that the interest of every proprietor of India stock, is by no means the same with that of the country in the Government of which his vote gives him some influence and says, ”This would be exactly true if those masters never had any other interest but that which belongs to them as proprietors of India stock. But they frequently have another of much greater importance. Frequently a man of great, sometimes even a man of moderate fortune, is willing to give thirteen or fourteen hundred pounds. . . merely for the influence which he expects to acquire by a vote in the Court of Proprietors. It gives him a share though not in the plunder, yet in the appointment of the plunderers of India. The Directors, though they make those appointments, being necessarily under the influence of the Court of Proprietors, which not only elects them, but sometimes overrules their appointments. A man of great or even of moderate fortune, provided he can enjoy this influence for a few years, and thereby get a certain number of his friends appointed to Employment in India, frequently cares little about the dividends which he can expect from so small a capital, or even about the improvement or loss of the capital itself upon which his vote is founded. About the prosperity or ruin of the great empire, in the Government of which that vote gives him a share, he seldom cares at all. No other sovereigns ever were, or from the nature of things ever could be, so perfectly indifferent, about the happiness or misery of their subjects, the improvements or waste of their dominions, the glory or disgrace of their administration, as, from irresistible moral causes, the greater part of *the* proprietors of such a mercantile company are, and necessarily must be.” mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/48. India on the Eve of the Crown Government.htm - _msocom_2

This is perhaps a sweeping indictment of the administration of the company as a whole. It, however, holds true of the early rule of the company though the corruption was later gradually eliminated.

In the local or Supreme Government of India, the native inhabitants had no voice. They were barred from all high paid offices and had no scope beyond the position of a petty clerk.

The internal administration was so devised that the Governors and the official staff in their capacity as advisers did or were compelled to do all

the thinking for the inhabitants of the country. They enacted, true to a word, the part of Sir John Bowley or the "Poor man's friend" so ably drawn by Charles Dickens: "Your only business, my good fellow, is with me. You need not trouble yourself to think about anything. I will think for you; I know what is good for you; I am your perpetual parent. Such is the dispensation of all all-wise Providence. . . what man can do, I do. I do my duty as the Poor man's Friend and Father, and I endeavour to educate his mind, by inculcating on all occasions the one great lesson which that class requires, that is entire dependence on myself. They have no business whatever with themselves."

These Bowleys no doubt did the thinking as a Divine mandate but unfortunately, none the less naturally, their thinking and enacting proved decidedly favourable to England and fatal to India.

How England prospered while India declined may be well impressed on our minds if we recall the economic condition of England immediately before and after 1600 and also the nature of India's tribute to England.

Sir Josiah Child gives very interesting comparative description of the rising prosperity of England after 1545.

According to him, in 1545 "the trade of England then was inconsiderable and the merchants very mean and few" . . . "but now", he says "there are more men to be found upon the exchange with ten thousand pounds estates, than were then of one thousand pounds. And if this be doubted let us ask the aged, whether five hundred pounds portion with a daughter sixty years ago, were not esteemed a larger portion than two thousand pounds is now ; and whether gentle women in those days would not esteem themselves well clothed in a serge gown, which a chambermaid now will be ashamed to be seen in. .. We have now almost one hundred coaches for one we had formerly. We with ease can pay a greater tax now in one year than our forefathers could in twenty. Our customs are very much improved, I believe above the proportion aforesaid, of six to one; which is not so much in advance of the rates of goods as by increase of the bulk of trade." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/48. India on the Eve of the Crown Government.htm - _msocom_3 By 1600 A. D. the mercantile class had become so powerful that "but for the hostility of the city, Charles I could never have been vanquished, and that without the help of the city, Charles II could scarcely have been restored". mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/48. India on the Eve of the Crown Government.htm - _msocom_4

India contributed or rather was made (to)* contribute to the prosperity of England in many ways.

Trade as the augmentation of wealth must be placed in the forefront. Stock quotation is a barometer of business conditions applying the same criterion we will see how much Indian trade was valued in England."Throughout the (18th) century the Company's stock was always at premium. In 1720 it was quoted as high as £450, but by 1755 it fell to £148. This figure represented much more nearly its real value. Even supposing the dividend of 10% to be average, this would only mean interest at the moderate rate of about $5\frac{1}{3}\%$ on the cost price. It continued to fall until 1766, when the prospect of profit from the revenues of Bengal caused an artificial boom, which inflated the price to £233. This was followed by a fall of 60% as a result of war in the Carnatic. From 1779 to 1788 the price was much more reasonable. It averaged about £150, although at the crisis of 1784 it fell as low as £118.10 *s. 0 d.* After Pitt's Act prices improved and by 1787 it was quoted at £185.10 *s. 0 d.* Subsequently the fluctuations largely decreased. The Company was now a sovereign ruler than a trading Corporation. It paid a fair interest to its shareholders and its stock was quoted at a price which represented the capitalised value of its profits. There was no further scope for speculation. Its balance-sheet began to resemble the Indian Budget of later years."mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/48. [India on the Eve of the Crown Government.htm - _msocom_5](#) Dividends paid to the share-holders will also indicate how much India contributed to the wealth of England."Before the union of 1709 the trade, though subject to great fluctuations, always showed a great profit. In 1682, the dividend reached the enormous figure of 160% but at the end of the century, things were very different. In 1709, after the union, it was only 8% rising, in 1710 to 9% and two years later to 10%, the average rate during the century would work out at about 9% and it only rose above from 1768 to 1771. In 1723 a slight fall was caused by the competition of the French Company, and a further fall of 1% followed an increase of capital and the foundation of the Swedish Company in 1732. In 1744, it rose again to 8% and continued at this rate for eleven years in spite of the continual war both in Europe and in the Carnatic. In 1755, the unsettled condition of the affairs at last had effect and a fall of 2% resulted. In 1760, the cession of Burdwan and other provinces increased the working costs of the Company, and kept the dividend at 6%, so that the sum distributed annually was £1,91,644. In 1767, in

consequence of the acceptance of the territorial sovereignty of Bengal, the dividend was raised to 10% and the amount distributed reached £3,19,408. This rise was quite unjustifiable and was largely due to the exaggerated estimate of the prosperity of India. The increased dividends declared in anticipation of large profits which were never fully realised, were paid by means of loans raised at exorbitant interest. For five years the Company hung on in the hope of better days but in 1772 the crash came and the dividends fell from 124% to 6%. Lord North then intervened and, for the future, the Company's dividend *was subject to ministerial control*. The Regulating Act was followed by revenue prosperity and the dividend continued to rise slowly. In 1792 the conclusion of the peace with Tipoo, whereby the Company received: a revenue of £2,40,000 and an indemnity of 1,600,000, was followed by a further rise of 2% and in 1802, the dividend reached 11%. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/48. India on the Eve of the Crown Government.htm - _msocom_6. Besides this, "the sums of money paid to the (English) public by the United Company of Merchants of England trading to the East Indies, for their privileges, etc.," "between the years 1798 to 1803 have been estimated by Mr. Macpherson at £25,343,215." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/48. India on the Eve of the Crown Government.htm - _msocom_7 Not only India has helped England in her war with America by taking the burden of £3,858,666 but has helped towards the furtherance of Education in America for Mr. Yale founded the Yale College after his name from the money earned exclusively in the Indian Trade.

Some of the direct and indirect advantages to England from: India may be noted in the words of St. George Tucker who says :—

(1) "The East India Company have, at different periods, drawn, a surplus revenue from their territorial possessions to the extent of a million and a half sterling per annum after paying the interest of the territorial debt and this surplus was evidently a direct tribute from India to England."

(2) "About four-fifths of the territorial debt being held by European British subjects, a large proportion of the annual interest, amounting to near two million sterling may be regarded as an *indirect* tribute paid by India to the mother country." "This indirect or private tribute" including the savings, the profits of commerce, etc.. Tucker estimates at "three million sterling per annum at the present period" (i.e., about 1821).

(3) "The Shipping of India (that is, the India built ships which are

employed in carrying on the trade from port to port in the (eastern Seas) forms no inconsiderable portion of the whole tonnage of Great Britain.

(4) "The possession of India furnishes a most convenient outlet for the present overflowing in one class at least of the community, for whom it is found difficult in all countries, and in none more than our own, to make a suitable provision..... The service of India alone opens a field in which they can be employed largely with the prospect of benefit to themselves and to their country."

These do not by any means exhaust the ways by which India contributed to the prosperity of England.

Besides these indirect ways, England adopted more direct and drastic measures to harm India. This was effected through the protective system. England was in no way able to compete with Indian goods and as a manufacturing country, India was England's superior. To destroy the competition of Indian goods which in spite of the cost of transportation ousted the English goods from their home markets, England adopted a strong protectionist policy.

The following figures will indicate how high the tariff against Indian goods was:—

Alocs duty p.c	280	Oil of Cannamon	400
Assafoefida	622	Mace	3000
Benjamin	373	Nutmegs	250
Borax	102	Olibanum	400
Cardemom s	266	Pepper (black)	400
Cassiabuds	140	Pepper (white)	266
Cloves	240	Rhubarb (common)	500
Coculus Indicus	1400	Rice (Java)	150
Coffee	373	Rum (Bengal)	1142
Cubebs	320	Sago pearl	100
Dragons blood	465	Sugar (Bengal white)	118
Gamboge	187	Ditoo	128

		(Hudding white)	
Gum Ammoniac	466	Ditoo (low and brown)	152
Myrph	187		
Nux Vomica	266		
Oil of Cassia	343		

But England did not stop with this high tariff. She went a step further and made an invidious discrimination against Indian goods which (bore)mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/48. India on the Eve of the Crown Government.htm - _msocom_8 import duty much higher than that on the same goods from other parts of the world. This will become manifest by the import duty figures given by M'Acloch's Commercial Dictionary respecting the goods from the East Indies and West Indies and other colonies.

Articles	East Indies	West Indies, etc.
	£. s. d.	£. s. d.
Sugar per Qnt.	1 12 0	1 4 0
Coffee per Ib.	0 0 9	0 0 6
Spirits, sweetened per gallon	1 10 0	1 0 0
Spirits not sweetened per gallon	0 15 0	0 8 6
Tamarinds per Ib.	0 0 6	0 0 2
Succades per Ib.	0 0 6	0 0 3
Tobacco per Ib.	0 3 0	0 2 9
Wood – teak under 8 inches square per load	1 10 0	0 10 0
Wood – not particularly enumerated, <i>ad valorem</i> .	20 per cent	5 per cent

The English tariff on Indian goods was not only discriminating but differed with the use to which they were put to in England, as will be seen from the following answers of

Mr. John Ranking to the questions of the committee of House of Commons in 1813 :—

Q.—"Can you state what is the *ad valorem* duty on piece-goods sold at the East India House?"

A.—"The duty on the class called Calicoes is £3 6s. 8d. per cent upon importation, and if they are used for home consumption there is a further duty of £68 6s. 8d. per cent".

"There is another class called Muslins, on which the duty on importation is 10 per cent, and if they are used *for home* consumption, of £27 6s. 8d. per cent.

"There is a third class, coloured goods, which are prohibited being used in this country (England), upon which there is a duty upon importation of £3 6s. 8d. per cent; they are only for exportation".

"This Session of Parliament, there has been a new duty of 20 per cent on the consolidated duties, which will make the duties on calicoes. used for home consumption, £78, 6s. 8d. per cent upon the Muslins for home consumption; £31, 6s. 8d."

This much for the Parliamentary Exactions, direct and indirect. The Exactions of the Governors and Governor-Generals were by no means small. It is necessary to recall here the words of Sir W. W. Hunter who, describing the morale of the European people, when they came in contact with India, says, "Europe just emerged from mediaevalism, was then making her first experiments in Asiatic rule. Mediaeval conceptions of conquest imposed themselves on her exploitation of the Eastern world : Mediaeval types of commerce were perpetuated in the Indian trade. Portugal, Spain, Holland established their power in Asia when these conceptions and types held sway. The English ascendancy in India came later and embodied the European ideals of the eighteenth century in the place of the European ideals of the sixteenth. It was the product of modern as against semi-mediaeval Christendom. Yet even for England it was difficult to shake off the traditions of the period. . . of monopoly in the Indian trade, and of Indian Government for the personal profit of the rulers." mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/48. India on the Eve of the Crown Government.htm - _msocom_9 "Self-interest certainly swayed the corrupt

and oligarchic legislature, and politics were always discussed on plane from which principles were banished... Men fought avowedly for the most-material objects only. Gold ruled the aspirations of the greatest, and India afforded many examples of its fatal power at the time.” mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/48. India on the Eve of the Crown Government.htm - _msocom_10•

The battle of Plassey in 1757 and the battle of Wandewashin 1761 gave the English supremacy in Bengal and Madras respectively and they turned both of these victories to their account. Clive, the victor of Plassy became really the king-maker. He sold his support to the Nawab who promised better terms. He not only got great bribes from the Nawabs and Jehagir (Estate) and controlled the salt monopoly in spite of the wishes of the Home authorities but gave perfect liberty to the civil servants—Burke' s—”birds of prey and passage”—to indulge in private trade to monopolise certain trades to the utter exclusion of the natives : as a result of this the people were greatly oppressed and reduced to poverty. The wealth of Clive and the poverty of the people are well described by Macaulay, who says”As to Clive, there was no limit to his acquisitions but his own moderation. The treasury of Bengal was thrown open to him. There were piled up, after the usage of the Indian princes, immense masses of coins, among which might not seldom be detected the florins and byzants with which before any European ship had turned the Cape of Good Hope, the Venetians purchased the stuffs and spices of the east. Clive walked between heaps of gold and silver. Crown rubies and diamonds, and was at liberty to help himself..... Enormous fortunes were thus rapidly accumulated at Calcutta, while thirty millions of human beings were reduced to the extremity of wretchedness. . . . This misgovernment of the English was carried to a point such as seems hardly compatible with the very existence of society. The Roman proconsul, who, in a year or two squeezed out of a province ,the means of rearing marble palaces and baths on the shores of Campomia, of drinking from Amber, of feasting on singing birds, of exhibiting armies of gladiators and flocks of camelopards; the Spanish viceroy, who, leaving behind him the curses of Mexico or Lima, entered Madrid with a long train of gilded coaches and of sumpter-horses trapped and shod with silver, were now outdone.”

Clive ruined the Bengal populace.Hastings the first Governor-General turned to the potentates. His ill-treatment of, and exactions from the Raja of Benares and the Begums of Oudh, his massacre of the Rohillas excited the Catholic sympathies of that great 18th century political

philosopher Edmond Burke who by impeachment of Warren Hastings re-enacted so to say, the memorable impeachment of Verres by Cicero for similar reasons. Burke espoused the cause of the oppressed and strained all his nerves to redress their wrongs and punish their offender. The impeachment, in spite of his vigour and the active participation of Sheridan failed but not without its salutary effect. It was one of these failures that was worth a hundred victories. Lord Morley in his Life of Burke says, "that Hastings was acquitted was immaterial. The lesson of his impeachment had been taught with sufficiently impressive force—the great lesson that Asiatics have rights, and that Europeans have obligations : that a superior race is bound to observe the highest current morality of the time in all its dealings with the subject race. Burke is entitled to our lasting reverence as the first apostle and great upholder of integrity, mercy and honour, in the relations between his countrymen and their humble dependents."

As a result, the direct mode of administrative exploitation was nipped in the bud: but certain other indirect modes of exploitations were either imposed or suffered to remain by the same administration. These indirect modes of exploitations were the Inland transit duties. The servants of the Company in their capacity of private traders enjoyed perfect immunity from these duties but they were levied with all strictness upon the natives whose economic betterment was thereby greatly hindered,

Mr. Holt Mackenzie speaking of these Duties says :

"Some articles have to run the gauntlet through ten custom-houses, passing at each several subordinate Chowkis (stations), before they reach the Presidency, and little or none of the great stable commodities of the country escape from being subjected to repeated detentions.

"Even supposing that there were no exactions and no delays, still the system would seriously hinder the commercial intercourse of the country, no interchange of goods can take place between districts separated by a line of Chowkis, unless the difference of price shall cover not only the export of transportation and the other charges of merchandise, but also the duty of 5 or 7 1/2 per cent levied by Government Thus also the natural inequalities of prices aggravated and contrary to every principle, justly applicable to a consumption tax, the burden falls on those places where the consumer would, independently of duty, have most to pay.

"But when to the Government demand are added those of the

custom' house officers, it appears to be certain that much trade that would be carried on by persons, of small capital must be absolutely prevented. The rich merchant can afford to pay the utmost demand likely to be made upon him, because a considerable *douceur* will not fall heavy on a large investment, and because his rank and wealth secures him from any outrageous extortion. But to the petty trader, a moderate fee would consume the probable profit of his adventure, and he has little or no security for moderation.

“Hitherto the attention of the authorities at home, and of the mercantile body generally in England, would appear to have been directed chiefly to the object of finding a market for the manufactures of the United Kingdom. They have consequently looked more to the import than to the export trade of India. The duties prescribed by Regulation IX of 1810 have accordingly taken off a great number of articles sent from England hither: while of the exports only indigo, cotton, wool and hemp have been made free, and this more with a view, I apprehend, to English than to Indian objects.”

It would be profitable to read what Lord Ellenborough has to say regarding these inland transit duties:

“While the cotton manufactures of England are imported into India on payment of a duty of 2 1/2 per cent, the cotton manufactures of India are subjected to a duty on yarn of 7 1/2 per cent to an additional duty upon the manufactured article of 2 1/2 per cent, and finally to another duty of 2 1/2 per cent, if the cloth should be dyed after the Rowana (pass) has been taken out for it as white cloth. Thus altogether the cotton goods of India (consumed in India) pay 17 1/2 per cent

“The raw hide pays 5 *per* cent. On being manufactured into leather it pays 5 per cent more; and when the leather is made into boots and shoes, a further duty is imposed of 5 per cent. Thus in all there is a duty of 15 per cent (on Indian leather goods used in India).

In what manner do we continue to treat our own sugar? On being imported into a town it pays 5 per cent in customs, and 5 per cent in town duty, and when manufactured, it pays, on exportation from the same town 5 per cent more, in all 15 per cent (on Indian Sugar used in India).

“No less than 235 separate articles are subjected to Inland Duties. The tariff includes almost everything of personal or domestic use, and its operation, combined with the system of search, is of the

most vexatious and offensive character, without materially benefiting the revenue. The power of search, if really exercised by every custom-house officer, would put a stop to internal trade by the delay it would necessarily occasion. It is not exercised except for the purpose of extortion.”

Added to this was the lack of uniform currency in India.

All these were a means to kill Indian industries.

Frederick List says, “Had they sanctioned the free importation into England of Indian Cotton and silk goods, the English cotton and silk manufacturers must, of necessity, soon come to a stand. India had not only the advantage of cheaper labour and raw material, but also the experience, the skill and the practice of centuries”.

The opinion of Mr. H. H. Wilson, the historian of India is still more emphatic. “It is also a melancholy instance” he admits,

“of the wrong done to India by the country on which she has become dependent. It was stated in evidence (in 1813) that the cotton and silk goods of India up to the period could be sold for a profit in the British market at a price from 50 and 60 per cent lower than those fabricated in England. It consequently became necessary to protect the latter by duties of 70 and 80 per cent on their value, or by positive prohibition. Had this not been the case, had not such prohibitory duties and decrees existed, the mills of Paisley and Manchester would have been stopped in their outset, and could scarcely have been again set in motion, even by the power of steam. They were created by the sacrifice of the Indian manufacture. Had India been independent, she would have retaliated, would have imposed prohibitive duties upon British goods, and would thus preserved her own productive industry from annihilation. This act of self-defence was not permitted her. She was at the mercy of the stranger. British goods were forced upon her without paying duty, and the foreign manufacturer employed the arm of political injustice to keep down and ultimately strangle a competitor with whom he could not contend on equal terms”: With the result, to quote the words of Mr. Chaplin, that “many manufacturers have been compelled to resort to agriculture for maintenance, a department already overstocked”.

Thus the land revenue policy destroyed agriculture and the prohibitory protectionist policy of England ruined the industries of the country whose wealth attracted these swarms of flies that drenched her to the last dregs.

The resulting misery and poverty of the people knew no bounds and is pathetically described by many a traveller and Governor. Bishop Heber, travelling in India about 1830 wrote, "Neither native nor European agriculturist, I think can thrive at the present rate of taxation. Half the gross produce of the soil is demanded by Government, and this, which is nearly the average rate wherever there is not a Permanent Settlement, is sadly too much to leave an adequate provision for the present, even with the usual frugal habits of the Indians, and the very inartificial and cheap manner in which they cultivate the land. Still more if it (is)* an effective bar to anything like improvement; it keeps the people, even in favourable years, in a state of abject penury; and when the crop fails in even a slight degree, it involves a necessity on the part of the Government of enormous outlays in the way of remission and distribution, which, after all, do not prevent men, women and children dying in the streets in droves, and the roads being strewn with carcasses. In Bengal, where, independent of its exuberant fertility, there is a Permanent Assessment, famine is unknown. In Hindustan, (Northern India) on the other hand, I found a general feeling among the King's officers and I myself was led from some circumstances to agree with them, that the peasantry in the Company's Provinces are, on the whole, worse off, poorer, and more dispirited, than the subjects of the Native Princes; and here in Madras, where the soil is, generally speaking, poor, the difference is said to be still more marked. The fact is, no Native Prince demands the rent which we do, and making every allowance for the superior regularity of our system, etc., I met with very few men who will not, in confidence, own their belief that the people are over-taxed, and that the country is in a gradual state of impoverishment. The Collectors do not like to make this avowal officially. Indeed, now and then, a very able Collector succeeds in lowering the rate to the people, while by diligence he increases it to the State. But, in general, all gloomy pictures are avoided by them as reflecting on themselves, and drawing on them censure from the Secretaries at Madras or Calcutta, while these, in their turn, plead the earnestness with which the Directors at home press for more money." Speaking of trade and industries he says, "the trade of Surat is now of very trifling consequence, consisting of little but raw cotton, which is shipped in boats for Bombay. All the manufactured goods of the country are undersold by the English . . . a dismal decay has consequently taken place in the circumstances of the native merchants." Regarding the decay of Dacca the same authority says, "Its

trade is reduced to the sixtieth part of what it was, and all its splendid buildings, . . . the factories and the Churches of the French, Dutch and Portuguese Nations are all into ruin, and overgrown with jungle.”

To ameliorate their misery, natives petitioned Parliament saying, ”that every encouragement is held out to the exportation from England to India of the growth and produce of foreign, as well as English industry, while many thousands of the natives of India, who, a short time ago, derived a livelihood from the growth of cotton and the manufacture of cotton goods, *are without bread*, in consequence of the facilities afforded to the produce of America, and the manufacturing industry of England.” But the appeal was made in vain and the interests of England always remained in the forefront in the eyes of those that were called upon to rule the destinies of India.

Though, as Bishop Heber rightly says that the officers of the Company avoid ”all gloomy pictures” of the misery of the people, there are others who, marked by independence of opinions, are quite as explicit as they are emphatic on this point.

The Court of Directors wrote on May 7th, 1766 :

“We have the sense of the deplorable state.....from the corruption and rapacity of our servants, and the universal depravity of manners throughout the settlement..... Think the vast fortunes acquired by a scene of the most tyrannic and oppressive conduct that ever was known in any age or country.”

Clive, though criminal himself, was conscious of the oppression for, he wrote to George Dudley on September 8th, 1766:

“But retrospection into actions which have been buried in oblivion for so many years; which if inquired into, may produce discoveries which cannot bear the light..... but may bring disgrace upon the nation, and at the same time blast the reputation of great and good families.”

Sir Thomas Munro was so indignant at the misrule of the Company that he said, ”It would be more desirable that we should be expelled from the country altogether, than that the result of our system of Government should be such an abasement of a whole people.

Mr. Martin in his ”Eastern India” 1838 says, ”The annual drain of 3,000,000 on British India has amounted in thirty years, at 12 per cent (the usual Indian rate) compound interest, to the enormous sum of £723,900,000 sterling . . . So constant and accumulating a drain, even in England, would soon impoverish her. How severe, then, must be its effects on India, where the wage of a labourer is from two pence to

three pence a day! Were the hundred millions of British subjects in India converted into a *consuming* population, what a market would be presented for British capital, skill and industry!" Mr. Frederick John Shore of the Bengal Civil Service very pathetically said:

"But the halcyon days of India are over', she has been drained of a large proportion of the wealth she once possessed, and her energies have been cramped by a sordid system of misrule to which the interest of millions have been sacrificed for the benefit of the few. The gradual impoverishment of the people and the country, under the mode of rule established by the English Government has.... the grinding extortions of the English Government have effected the impoverishment of the country and people to an extent almost unparalleled....."

"The fundamental principle of the English had been to make the whole Indian Nation subservient in every possible way to the interest and benefit of themselves..... Had the welfare of the people been our object, a very different course would have been adopted, and a very different result would have followed."

But such was not to be the case. Nay, it would have been unnatural had it been otherwise, for Mill says,"the Government of a people by itself has a meaning and a reality; but such a thing as Government of one people by another does not, and cannot exist. One people may keep another for its own use, a place to make money in, a human cattle-farm to be worked for the profits of its own inhabitants,"

The administration of the East India Company was a prototype of the Roman provincial administration, under the Roman Empire, however, local liberties were conserved. Monesen says,"The Roman provincial constitution, in substance, only concentrated military power in the hands of the Roman Governor, while administration and jurisdiction were, or at any rate were intended to be, retained by the communities, so that as much of the old political independence as was at all capable of life might be preserved in the form of communal freedom."

But the British suppressed everything, and just as Mr. Ferrero insists on our abandoning"one of the most wide spread misconceptions which teaches that Rome administered her provinces in broad-minded spirit, consulting the general interest, and adopting wide and benefit principles of Government for the good of the subjects,"so must we guard against any complacent view of the administration of the East India Company, so current among historians who labour hard to show that with the interval of 1700 years, human nature had greatly advanced in moral

standard.

Short may have been our discussion of the situation before the East India Company, it is quite sufficient to show that the supplanter of the Moghuls and the Marathas were persons with no better moral fiber and that the economic condition of India under the so-called native despots and brigands was better than what was under the rule of those who boasted as being of superior culture."

It is with industries ruined, agriculture "overstocked" and over-taxed with productivity too low to bear high taxes, with few avenues for display of native capacities, the people of India passed from the rule of the Company to the rule of the Crown.

LECTURES ON THE ENGLISH CONSTITUTION

In the Government Law College Magazine, following observations are made in the ' College Notes, 8th January 1936 issue:—

"We however note with satisfaction that Mr. Fyzee has handed over charge to no less a person than Dr. Ambedkar. A lawyer of repute, he is a close student of Economics, an authority on Constitutional Law and a personality known throughout India and elsewhere. To write more about him would be otiose. Expecting much from our Principal we shall not embarrass him *now*. We prefer to wait and see."

- I. I. Principles underlying the English Constitution.
- II. II. What is Parliament?
- III. III. The Crown.
- IV. The House of Lords.
- V. The Powers and Privileges of the Lords and the Commons.

PREFACE

These are lectures on the English Constitution which I delivered to the students of the Government Law College, Bombay, in 1934-35. In publishing these lectures I have not forgotten how presumptuous it may be deemed for an Indian to attempt to expound the principles of the English Constitution. Sir Austen Chamberlain in the course of his cross-examination of a certain Indian witness who appeared before the Joint Committee on Indian Constitutional Reform observed : I listen to the witness with great respect when he talks of Indian conditions, but when he expounds the British Constitution he must permit me to remain of my own opinion (Minutes of Evidence, Vol. 11c, Q. 9812). There is undoubtedly a great deal of truth in this remark and it should make every Indian who wishes to write on the English Constitution pause. An Indian, however, who wishes to enter into the field may well take courage from the fact that much of the English Constitution have been expounded by foreigners who

have not only been heard with respect by Englishmen but whose writings have compelled a change of opinion. Be that as it may the remark made by Sir Austen Chamberlain need not come in my way. I am not expounding anything of my own. I am not expounding it to Englishmen. I am merely trying to make Dicey's English Constitution easier for Indian students to follow and to understand. From the stand-point of Indian students Dicey's treatise suffers from two defects. It presupposes a knowledge of certain parts of the English Constitution. For instance it presupposes a knowledge of what is Parliament, how it is constituted and how it functions. This presupposition, howsoever justifiable it may be in the case of English students, would be without warrant in the case of Indian students who are called upon to take up the study of Dicey for the first time. Without a complete knowledge of this part of the English Constitution Indian student feels completely bewildered and fails to grasp the full import of such fundamental principles as supremacy of the rule of law or the role of conventions in the working of the Constitution. In order that the Indian student may follow in an intelligent way the exposition of Dicey regarding the operation of these principles the teacher is forced at every turn to present to the student the framework of the English Constitution which finds no place in Dicey 's treatise. Secondly, the English Constitution has grown enormously both as regards rules of law and also as regards conventions since the last edition of Dicey 's English Constitution was published. The result of this growth has been felt in two different ways. It has rendered some of the illustrations given by Dicey quite inappropriate. Secondly, it has altered the character of the English Constitution especially the relations of the Crown and the British Parliament to the Dominions to such an extent that an Indian student who depends upon Dicey alone will not be up-to-date but will be missing a great deal that is vital in it. Except for additions of matter and changes of form there is nothing new in these lectures. They constitute a revision of Dicey's treatise on the English Constitution with a view to remove its defects and to adapt it to the needs of Indian students.

PRINCIPLES UNDERLYING THE ENGLISH CONSTITUTION

According to Dicey there are three principles which distinguish the English Constitution from the Constitution of other countries. These principles are :—

- (1) The legislative supremacy of Parliament.
- (2) The prevalence of the rule of law.

(3) The dependence of the Constitution on the conventions.

Two comments may be legitimately made on the assertion that these principles form distinguishing characteristics of the English Constitution. In the sense that they are not to be found in other Constitutions. One is this. That some of these characteristics have ceased to be true at any rate, to the extent they were true when Dicey wrote. For instance the legislative supremacy of Parliament is to some extent modified and circumscribed by the Statute of Westminster passed in the year 1930. The second comment that must be made that these characteristics, especially the prevalence of the rule of law and the dependence of the Constitution on conventions are not special to the English Constitution. Conventions are a feature of all Constitutions and the rule of law, in one of its senses at any rate, obtains in the United States. All the same it is Constitution in principles form a feature of the English Constitution in a manner and to an extent unknown in other Constitutions. And understood in that sense they no doubt serve to distinguish the English Constitution from other Constitutions.

(1) LEGISLATIVE SUPREMACY OF PARLIAMENT

One of the first and foremost of foreign Commentators on the English Constitution Hontessquie came to the conclusion as a result of his study that the English Constitution exhibited a feature which was absent from the Constitution of France as it existed at the time when he wrote. He found that under the English Constitution the three organs of the State, namely, the legislative, the executive and the judiciary were distinct and were separated from one another in their composition as well as their functions. Each was limited to its own sphere of activity and was not permitted to invade the dominion of another. Whatever liberty the Englishman had in the days when he was writing and which his countrymen did not possess, was attributed by him to this feature of the English Constitution. So convinced was he of the virtue of this principle of the English Constitution that he propounded it as a vital principle of political Organisation and recommended it to his countrymen for adoption in their own Constitution. This doctrine of separation of powers of Hontessquie has been laid at the base of every new Constitution made thereafter. This is an interesting illustration of how countries have been misled by the wrong conclusions of a student of politics, for there is no doubt about it that Hontessquie misunderstood the English Constitution. The English Constitution certainly does not recognise the principle of the separation of powers. The King is a part of the legislature, the head of the judiciary and the supreme executive authority in the land. The Ministry

which carries on the executive Government of the country in the name of the King are members of Parliament. There is, therefore, no separation between the executive and the legislature. The Lord Chancellor is the working head of the Judicature. He is also a member of the Cabinet. There is, therefore, no separation between the executive and the judiciary. Not only is there no separation between the three organs of the State, but there is no foundation for the statement that their authority is limited by the Constitution for the simple fact that there is no Constitution in the American sense of the word which allocates the functions of the different organs of the State and delimits their authority. Under the English Constitution there is one supreme authority under the law, and that is Parliament. If the functions of the executive and the judiciary are limited, it does not follow that the functions of Parliament are limited. It only means that Parliament has for the time being allotted certain functions to be discharged by certain bodies, in a certain manner. The limitations of the judiciary and the executive do not result in putting consequential limitation. On the other hand as the limitations proceed from the authority of Parliament, Parliament retains the authority to widen them or to curtail them.

MEANING OF THE LEGISLATIVE SUPREMACY OF PARLIAMENT

A complete idea of the legislative supremacy of Parliament must involve a grasp of the two parts which it must include. The first is that Parliament has, under the English Constitution, the right to make or unmake any law whatsoever. Secondly, no person or a body of persons is recognised by the law of England as having a right to override or set aside the law made by Parliament. It is unnecessary to recall that the words Parliament and law must be understood in their strictly legal sense. Parliament means as has been already explained, the King, the Lords and the Commons, and that none of them individually exercised the authority, belonged to them jointly so as to make it an Act of Parliament. The term law again must be understood in the strictly legal sense. It means only such rules as are enforced by the Courts. Having stated what is involved in the notion of the legislative supremacy of Parliament, we may next ask what is the proof of this legislative supremacy of Parliament?

The doctrine of legislative supremacy is accepted by all the lawyers who have written about the English Constitution. Sir Edward Coke, speaking of the power and jurisdiction of Parliament, agreed that it was so transcendent and absolute that it cannot be confined either for causes or persons, within

any bounds.

(4 *Institute Page 36*)^{*} mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/50.Lectures on the English Constitution.htm - _msocom_1

Blackstone the author of the celebrated commentaries agrees that, "Parliament has sovereign and uncontrollable authority in the making, confirming, enlarging, restraining, abrogating, repealing, reviving and expounding of laws concerning matters of all possible denominations ecclesiastical or temporal, civil, military, maritime or criminal. This being the place where that absolute despotic power, which must in all Governments must reside somewhere, is entrusted by the Constitution of those Kingdoms. All mischiefs and grievances, operations and remedies that transcend the ordinary course of laws are within the reach of this extra-ordinary tribunal. It can regulate the succession to the crown, as was done in the reign of Henry VIII and William III. It can alter the established religion of the land, as was done in a variety of instances in the reigns of Henry VIII and his three children. True it is that "what the Parliament doth no authority upon earth can do."

Delome, a French lawyer agrees with Coke and with Blackstone. He observes, "that Parliament can do everything but make a woman a man and a man a woman". a woman a man and a man a woman".

This legislative supremacy of Parliament which is acknowledged by all lawyers can be proved by reference to a large number of instances drawn from the history of the British Parliament. But the following may suffice.

(1) *Parliamentary sovereignty and the Acts of Union*.—The Acts of Union with Scotland and Ireland are in the nature of treaties and contain certain clauses which were then regarded as fundamental and essential conditions of Union and which were understood as not being liable to abrogation by the Parliament of Great Britain. The Act of Union with Scotland stipulated that every professor of a Scotch University shall acknowledge and confess and subscribe the confession of faith as his profession of faith. This was regarded as a fundamental condition of the treaty of Union with Scotland. But this very provision has been repealed by the Universities Scotland Act, 1853, which relieves most professors in Scotch Universities from the necessity of subscribing the confession of faith. The Act of Union with Ireland stipulated "that the Churches of England and Ireland as now by law established, be united into one Protestant Episcopal Church, to be called the United Church of England and Ireland, and that the doctrine, worship, discipline and the Government of the said United Church shall be and shall remain in full force forever as the same are now by law established for the

Church of England and that the continuance and preservation of the said United Church, as the established Church of England and Ireland shall be deemed and be taken to be an essential and fundamental part of the Union". There is no doubt that from the language of the clause that it was intended to limit the legislative supremacy of Parliament and yet Parliament by the Irish Church Act of 1869 disestablished the Church in Ireland and its legislative competency to enact such a measure was not questioned.

II

The Septennial Act of 1707 is another illustration of the legislative supremacy of Parliament. Under the Act of 1694, the duration of Parliament was limited to 3 years. In the year 1716 a new election was due. But both the King and the Ministry were convinced that under the political circumstances of the day, a new election would be disastrous to the ministry and to the state and ministry of the day persuaded Parliament to pass an Act extending the duration of Parliament from 3 years to 7 years. The House of Commons was accused by the critics of a breach of trust, as representatives of the electors and even the peers joined in the protest on the ground that this Act deprived the people of their remedy against their M.P's, who had failed to do their duty. In the wake of political criticism against the Act, the legal connotation was missed altogether. Whether such an Act was proper or improper was one thing. Whether Parliament could alter the law governing its life was another question. It should be noted that while the Act was attacked from the first point of view it was never questioned from the second. Indeed it was taken for granted that the Septennial Act was within the legislative competence of Parliament.

There is another feature of the Septennial Act which should be noted because it helps to explain the extent of the legislative supremacy of Parliament. Parliament could have passed a law extending the life of Parliament and probably no question would have been raised if the Act was made applicable to future Parliaments. But the Septennial Act not only extended the life of all future Parliaments, but it also enlarged the terms of the very Parliament which passed the Act. It was undoubtedly an Act of usurpation of political power not contemplated and not given by law to the Parliament which passed the Act and yet such an Act of usurpation was a legal Act. It is unnecessary to go back so far in the past to cite an authority of the Legislative supremacy of Parliament, as the Septennial Act. A similar exercise of the legislative supremacy was resorted to by Parliament during the late war when the sitting Parliament in 1914 instead of dissolving itself passed an Act extending its own life.

Acts of Indemnity are examples which constantly occur and which serve as

sharp reminders of the legislative supremacy of Parliament An Act of Indemnity is a statute the object of which is to free individuals from penalties imposed upon them by law. This is the highest proof of the legislative supremacy of Parliament, for it imports the legalisation of an illegality. legalisation of an illegality.

INTERFERENCE WITH PRIVATE RIGHTS

Most legislative assemblies confine their legislative powers to the regulation of the rights of the public in general. Private rights and domestic rights are deemed either to be too particular and too sacred to be interfered with by Parliament. But the British Parliament has never accepted these limitations upon its legislative authority. In the case of the lives of the Duke of Clarence and Clocester, Parliament passed an Act declaring that their daughters and wives should inherit their property although they were alive. In the case of the Duke of Buckingham, he was an infant but Parliament passed an Act declaring that he should be treated as a major for all legal purposes. Sir Robert Playfinston was dead yet long after his death. Parliament passed an Act holding him guilty of treason. The case of the Marquis of Winchester is an illustration in which Parliament by law declared a legitimate child to be illegitimate. A contrary illustration in which illegitimate children born before marriage were declared legitimate, is supplied by the law passed by Parliament in respect of the issues born to Catherine Swinford by John of Gaunt, the Duke of Lancaster. Catherine had, before marriage from the Duke four illegitimate children, Henry, John, Thomas and a daughter, Joan. The King by an Act of Parliament in the form of charter legitimised these children. These illustrations that Parliament cannot only regulate by law the affairs of a single individual but it may also alter the course of general law.

II

CHAPTER I

WHAT IS PARLIAMENT?

1. With a large, mass of the people Parliament in these days means the House of Commons. It does not include in it the House of Lords, and certainly not the King. This popular notion is due largely to the fact that the House of Commons has become the most dominant element in the working of the English Constitution. But however justifiable such a notion may be, speaking in terms of law it is a wrong notion. Legally Parliament consists of three constituent elements, the King, the House of Lords and the House of Commons. All legislative power belongs to the King, the House of Lords and the House of Commons jointly. It is vested in the

King in Parliament, *i.e.*, in the King acting in consent with the two Houses of Parliament. Legally, every Act before it can become the law of the land, requires the King's assent. How important element the King is in the Constitution of Parliament will be evident, if it is borne in mind that the two Houses of Parliament can transact their business only if they are summoned by the King. They cannot meet on their own initiative and authority and transact business. How important place the King occupies will also be obvious if it is remembered that the power to summon, prorogue and to dissolve the Houses of Parliament vests in the King and is exercisable at any time according to his pleasure. On the other hand, it is usually true that without the consent of the two Houses of Parliament, the King has no inherent power of legislation whatever within the United Kingdom. Every act of the King to be law must have the assent of the House of Commons and the House of Lords, unless it is otherwise provided by Statute.

2. The proposition, that all legislative power is vested in the King in Parliament and that no law could be passed without the concurrence of the King, the House of Lords and the House of Commons's subject to two qualifications.

(1) *The King's veto* :—Although in law the King's assent is necessary to every measure before it can become law, his power to refuse assent, *i.e.*, his power to veto has become absolute by misuse. The right of veto has not been exercised since the days of Queen Anne, who refused her assent to the Scotch Militia Bill of 1707. The impairment of this power of veto by the King is not a legal impairment. In law his power of veto exists in all its amplitude without any qualifications. This is due to forbearance founded on a convention whereby it is settled that when the two Houses agree, the King should not refuse his assent. Its disuse does not mean that it is buried beyond revival. Suppose a ministry resigns after a bill is passed by the House of Commons. The House of Lords insists upon passing the bill in spite of the opposition of the new ministry. It would be rash to assert that in such a case the Royal assent would not be withheld even though both the Houses have concurred in the legislation.

(2) *The veto of the House of Lords*:—The House of Lord was once a co-ordinate and co-equal branch of the legislation, and every measure before it could become an Act of Parliament depended upon it's assent, as much as upon that of the House of Commons. Although this was the position in law, the House of Commons had claimed in practice exclusive authority for themselves in finance and an overriding authority in other legislation.

In 1671, the House of Commons passed the following resolution :”That

in all aids given to the King by the Commons, the rate of tax ought not to be altered by the Lords.”

In 1676, the Commons adapted another resolution as follows :”That all bills granting supplies ought to begin with the Commons, and it is the undoubted and the sole right of the Commons, to direct limit and appoint in such bills the ends, purposes, considerations, conditions, limitations and qualifications of such grants which ought not to be changed or altered by the House of Lords.”

In ordinary legislation of a non-fiscal character, the Commons claimed that although the House of Lords might differ from the House of Commons, yet when a conflict arose between the two Houses the Lords should at some stage yield to the views of the Houses, the Lords should, at some stage, yield to the views of the claim. Ever since the Lords had never expressly admitted them, although in practice the Lords conformed to them, the practice was a mere matter of political understanding, a convention and was not reduced to law. The House of Lords was possessed in law of the power of veto, *i.e.*, the right to refuse assent to any measure fiscal or non-fiscal. Here again the case was not one of legal impairment of power. It was a case of forbearance in the exercise of it. In 1910, the House of Lords, contrary to established practice, insisted in asserting their right to refuse assent to the financial proposals in the budget of Mr. Lloyd George. A conflict between the House of Commons and the House of Lords arose. It was settled by the Parliament Act of 1911. The Act is a most important piece of legislation relating to the English Constitution inasmuch as it has affected the veto power of the House of Lords in certain matters in a vital manner.

The Parliament Act of 1911 applies to Public Bills only. It does not apply to Private Bills. In regard to Private Bills, the veto power of the House of Lords remains in tact. Even though this applies to Public Bills it does not apply to all of them. It does not apply to a Public Bill which affects the duration or life of Parliament. Under the Parliament Act the House of Commons retains the power of veto in respect of such bills. In the case of these Public Bills to which it does apply, its effect on the veto power of the House of Lords is not the same. It varies. The Parliament Act divides Public Bills into two classes. (1) Public Bills which are money bills and (2) Public Bills which are not money bills. A money bill is defined as a Public Bill which in the opinion of the Speaker of the House of Commons contains only provisions dealing with all or any of the following subjects, namely; imposition, repeal, remission, alteration or regulation of taxation, the imposition for the payment of debt or other financial purposes of

charges on the Consolidated Fund or on money provided by Parliament or the variation or repeal of any such charges, supply, the appropriation, receipt, custody, issue or audit of accounts of public money, the raising or guarantee of any loan or repayment thereof or subordinate matters incidental to those subjects of any of them. The Act lays down that if a Money Bill having been passed by the House of Commons and sent up to the House of Lords at least one month before the end of the Session, is not passed by the House of Lords without amendment within one month after it is so sent up to that House, the bill shall, unless the House of Commons direct to the contrary, be presented to His Majesty and become an Act of Parliament on the Royal assent being signified, notwithstanding that the House of Lords have not consented to the Bill.

With regard to other Public Bills, the Parliament Act of 1911 provides that if it is passed by the House of Commons in three successive sessions (whether of the same Parliament or not) and having been sent up to the House of Lords at least one month before the end of the session, is rejected by the House of Lords in each of these sessions, that bill shall, on its rejection for the third time by the House of Lords, unless the House of Commons direct to the contrary, be presented to His Majesty and become an Act of Parliament on the Royal assent being signified thereto, notwithstanding that the House of Lords have not consented to the Bill, provided that this provision shall not take effect unless two years have elapsed between the date of the second reading in the first of these Sessions of the Bill in the House of Commons and the date on which it is passed by the House of Commons in the third of those Sessions. House of Commons in the third of those sessions.

These are the main provisions of the Parliament Act of 1911. It has altered the character of that veto with regard to a Public Bill other than a money bill by making it a merely suspensory veto which has the effect of merely holding up the legislation passed by the House of Commons during the prescribed period. The power to block legislation, which the House of Lords once possessed as a co-equal member of Parliament, has now been taken away by the Act.

Subject to these deductions, conventional and legal, regarding the authority of the King and the Lords, the proposition that Parliament consists of King, Lords and the Commons and that without their consent a bill cannot become law, remains as true today as it was before the Act of 1911.

III CHAPTER II

THE CROWN

(1) *The King's title to the Crown.*—Before the Resolution of 1688 when James II fled from the country, it was not certain by what right the King claimed the Crown, whether it was hereditary or elective. But there can be no doubt that thereafter the title to the Crown has become a Parliamentary title, in the sense that Parliament can alter the succession to the Crown. The title to the Crown is at present regulated by the provisions of the Act of Settlement passed in the year 1701. By that Act, the title to the Crown was conferred upon William and Mary and the heirs of their body. The title stipulates two conditions : One, the Successor must be an heir, male or female and two, the Successor must be a Protestant Christian by faith.

(2) *Rights and duties of the Crown.*—The rights of the King are either Statutory or Prerogative. Statutory rights are those which are conferred upon the King by an Act of Parliament. The prerogative rights are the Customary or Common Law Rights of the King which he has been exercising and which have not been taken away by law. It is unnecessary... with those rights and duties of the King which are statutory because they are capable of exact definition and ascertainment by reference to the Statute from which they are derived. The prerogative rights on the other hand are not capable of such ascertainment by reference to any statute because it is of the essence of a prerogative right that is not derived from Statute. Prerogative rights of the King are customary rights and are independent of Statute, and like all customary rights the nature and extent have to be investigated by a Court of Law whenever they are asserted. The King's prerogatives may be conveniently discussed under the following heads :

(A) Personal Prerogatives

(1) *The King can do no wrong.*—All acts are done in the name of the King, but by virtue of this Prerogative, the King is not responsible for any of his acts. The person responsible for his royal acts are his Ministers. The King, therefore, cannot be sued or otherwise held responsible for his executive acts. When a subject is aggrieved by a breach of contract, he cannot sue the King, nor can he sue the King in respect of a tort. A special provision is made to soften the rigour of the rule which is known as *the Petition of Right procedure*. Under it, a subject aggrieved may petition the Crown for redress and that petition will become justiciable only if the Attorney-General, who is the Law-Officer of the Crown, issues his fiat permitting justice to be done in which case alone, the Courts can proceed with the petition as though it was a plaint in a suit. Even then there are certain rules which though they are binding between private parties, would not be binding

upon the Crown, for instance it is a rule that the Crown cannot by contract hamper its future executive actions. As a result, the Crown can always dismiss a servant of the Crown at any time, no matter what the period of contract was, because such a contract would hamper the future executive action of the Crown. Consequently a servant of the Crown cannot sue the Crown for damages for wrongful dismissal even by a Petition of Rights.

(2) *The King never dies.*—The King has the attributing immortality. A particular person wearing the Crown may die. But the King survives. Immediately upon the decease of a reigning King, his Kingship, without any interregnum or interval, vests in his heirs. That is the law, and the popular cry—The King is dead ; Long live the King—is in conformity with the Law. The Coronation ceremony is not necessary to invest the King with Kingly power. A King can act as a King although he has not been coronated, provided he is the next heir of the last King. The Coronation ceremony has no other effect than to proclaim to the subjects and to the world at large, who the King is.

(3) *Lapse of time will not as a rule bar the right of the Crown to sue or to prosecute.*—To put it in a different way, the law of limitation does not apply to the Crown, as it does to a private individual. The private individual must sue or prosecute within a stated period fixed by the law of limitation. The Crown is free from the time-bar. The statement of this prerogative right must now be qualified so far as the right to sue is concerned. The law of limitation has made the time-bar applicable to the Crown although the period of limitation is sixty years. The Prerogative of the Crown's right to prosecute remains in tact.

(4) When the right of the King and the right of the subject come in conflict, a subject's right must give way to the King's.

(5) The King is not bound by statutes unless expressly named in it.

(II)

Political Prerogatives

Now these may be divided into two categories into which they naturally fall .those which relate to the internal Government of the country and those which relate to foreign affairs. As to the King's Political Prerogatives which relate to the internal Government of the country, they may be considered in relation to the three divisions of State activity, e.g., the executive, the judicial and the legislative. According to the English Constitutional law, the executive Government vests in the King. It is his Prerogative to be the supreme head of the executive. As such, he has the authority to appoint Ministers and other officers of the state, political as well as permanent. It is his prerogative to dismiss them. He is also the head

of the Army, the Navy, the Air-force and the Civil Service. Every one appointed to discharge the service of the State, no matter how he is appointed, is in law the servant of the Crown. Turning to his Judicial Prerogative, the King at one time actually sat in Court to dispense justice but this Prerogative the King has now lost. The King at one time could create any Court and invest it with jurisdiction to try any matter or any cause he chose to prescribe. The establishment of the Star Chamber and the Court of High Commission by Charles I is an illustration of how wide was the King's judicial Prerogative. But this Prerogative also, the King has now lost. The King can now only create by Prerogative, *i.e.*, without the Sanction of Parliament, Court to administer the Common law. Even this remnant of a Prerogative he cannot exercise, because of the necessity of financial legislation which such a course would involve, which would make it necessary for him to obtain the sanction of Parliament. Only four bits of his Judicial Prerogatives now remain. (1) He can grant leave to appeal to the Privy Council. (2) He can appoint judges. (3) He can pardon a criminal. (4) He can stifle the prosecution of a criminal, either by declining to offer evidence or by entering a formal *Grote Praseu*.

Coming to the legislative Prerogatives of the King, they extended at one time to vast proportions. The King at one time claimed the power to make laws independently of Parliament, to suspend laws in particular cases and to dispense with them generally. All this has now been altered. The right to suspend and dispense with laws made by Parliament is now completely lost. The right to legislate is also lost, except in so far as it relates to Crown Colonies. The only legislative Prerogatives that remains to the King are the Prerogatives right (1) to summon Parliament, (2) to prorogue Parliament, (3) to dissolve Parliament.

There are two other classes of Prerogatives which relate to the internal administration of the Country which must be referred to before considering the other classes of Prerogatives which relate to foreign affairs. They are Ecclesiastical Prerogatives and Revenue Prerogatives.

Ecclesiastical Prerogatives.—The King is the supreme head of the Church of England as established by law. As the head of the Church, he appoints on the recommendation of the Prime Minister, Archbishops, Bishops and certain other dignitaries of the Church. In his Prerogative right, the King convokes, prorogues and dissolves two Houses of the convocation and it is in his Prerogative right that the King can grant leave of appeal to the Privy Council from the decisions of the ecclesiastical Courts.

Revenue Prerogatives.—The revenues of the British Government fall into two classes, (1) the ordinary revenues and (2) the extraordinary revenues.

The ordinary revenues are called the Prerogative revenues and they are derived from the following sources, (1) The custody of a Bishop's temporalities, *i.e.*, the right of the King to take the profits which the episcopal see is vacant, though these are held in trust for his successor. (2) The rights to annates and tenths. Annates were the first year's profits of church's benefits formerly paid to the Pope and afterwards to the Crown. Tenths were the tenth part of the annual profits of a church's benefit formerly paid to the Pope. These are now paid to the Governor of the Queen Anne's Bounty. (3) Profits derived from the Crown lands. (4) The right to Royal fish wreck, treasure-trove, waifs and cotrays, royal mines and escheats.

The foregoing items constituting the ordinary revenues of the Crown were collected by Prerogative and paid to the King until 1715 when the first Civil Lists Act was passed whereby an arrangement was made between the King and Parliament whereby the King surrendered his Prerogative revenues to the state which are since then paid into the Consolidated Fund and Parliament in consideration of this assignment granted to the Royal family for its maintenance a fixed sum, which is made an annual charge upon the Consolidated Fund and is called the Civil List. The Civil List is not a permanent arrangement but is a temporary agreement made between the reigning King and the Parliament and lasts during the life-time of that King. When a new King succeeds, a new agreement is made with him which again is to last during his life-time. If no agreement is made, the Prerogative of the King in respect of the ordinary revenue will revive. The Civil List arrangement does not abrogate it in any way. It merely affects the appropriation of the revenue. It does not affect the right to raise that revenue.

II. The King's Prerogatives in relation to the foreign relations of the Country.

The King possesses the right and the power to receive Ambassadors of foreign Countries and to send his Ambassadors to them. This is his Prerogative right. The right is important because of the immunity from Civil and Criminal process which Ambassadors, who are recognised as such by the King, enjoy. What those immunities are will be discussed at a later stage. It is enough here to note that they depend upon the recognition by the King of a person as an Ambassador and that recognition is a Prerogative Right of the King.

The King has also the right to make war and peace whenever he thinks fit to do so. This also is his Prerogative right.

The King possesses the power to make a treaty with any foreign nation. The treaty may be a political treaty or a commercial treaty. It is his Prerogative. The only limitation upon the King's Prerogative to make a treaty is that he must not in any manner affect the rights of his subjects given to them by law.

There are some questions that arise in connection with the question of the King's Prerogatives and which it would not be desirable to pass over without some consideration being bestowed upon them. The first question is this. What is the exact relation of the King's Prerogative to the authority of Parliament? The second question is what happens if the King becomes incapable of exercising his Prerogative or other Statutory rights?

Taking the first inquiry for consideration it is necessary to get a clear idea of what is exactly meant when it is said that it is the King's Prerogative to do this, that or other act. What is meant by this expression, that when the King acts on the authority of his Prerogative, he does not need the sanction of Parliament. His authority is inherent in him and is independent of Parliament. But while it is true that the Prerogative power of the King is inherent and independent of Parliament, it must not be supposed that it is on that account beyond the control of Parliament. On the other hand the Prerogative power of the King can be regulated, amended or abrogated by Parliament, so that the correct position would be that the King possesses Prerogative power so long as Parliament has not by law trenched upon it. A matter which was once a matter of Prerogative if subsequently regulated by law made by Parliament, then the King cannot resort to his Prerogative power, but must act within the law which has superseded the Prerogative. Therefore, so far as the first inquiry is concerned, the conclusion is that the King's Prerogative is a source of independent power to him so long as Parliament has not interfered with its existence.

What happens if the King becomes incapable of exercising his Prerogative and other Statutory rights. Now this is no idle inquiry because there are certain important duties which are attached to the Kingly office and the King may become incapable of discharging them. Four contingencies of incapacity may be visualised. (1) The King may be absent from his Kingdom. (2) The King may be a minor. (3) The King may be insane. (4) The King may be morally incapable.

The absence of the King from the Kingdom cannot raise any very great difficulty. Modern means of communication have annihilated distance and have facilitated quick dispatch. The King, therefore, could discharge his Kingly duties from a distance with expedition at any rate without delay. There is also the other possibility of the King delegating his powers to

somebody who could exercise them on his behalf when he is away.

Minority of the King cannot create any difficulty so far as the law is concerned. The law holds that the King is never an infant and is capable of transacting business even though he is a minor. A minor King, therefore, can exercise all his powers and discharge all his duties lawfully. Ordinarily if the reigning King is expected to die leaving an infant as his heir, Parliament always takes the precaution of appointing by law a regent. But this is by way of prudence and not by way of any requirement by law.

Insanity makes a hard case. The King cannot delegate his powers if he is insane. Parliament cannot pass a law, appointing a regent because the King being insane cannot give his assent to the Bill. There are two cases of English Monarchs having gone insane, while on the throne, Henry VI (1454) and George III (1788). The procedure then adopted was a very crude one and certainly could be deemed to be strictly in conformity with the law of the Constitution, which requires the assent of all three elements which constitute Parliament.

The moral incapacity of the King is another hard case. Can the King resign supposing people do not want him? Can the King be deposed if he does not resign? There is no legal provision regulating the insanity or the moral incapacity of the King. Question of moral incapacity may not perhaps arise under the English Constitution owing to the development of responsible Government. But the question of insanity might.

Effect of the death of the King

1. On Parliament

The original rule was that Parliament was automatically dissolved by the death of the King. The Constitution and theory of which this was a consequence regarded members of Parliament as councillors of the King who summoned them. The tie of summons was regarded as a personal tie between the King who summoned and the members who assembled in return and that tie was broken by the death of the King. The members called by deceased King could not be on this account be called the councillors of the new King, and the King was entitled to call new councillors, which could happen only when the old Parliament was dissolved and the new King obtained an opportunity to call a new Parliament. This rule was first amended in mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/50. Lectures on the English Constitution.htm - _msocom_2* by 7-8 William III Chapter XV whereby it was provided that the existing Parliament was to work for six months after the death of the King if not sooner dissolved by his successor. Subsequently in the year 1867, (30, 31 Victoria, Chapter II 102), the rule was altogether

abrogated and the life of Parliament was made independent of the death of the king.

II. On the tenure of office

The original rule was that all executive officers were to vacate their offices on the death of the King, and for the same reasons whereby the death of the King resulted in the dissolution of Parliament. Here again the law has gradually altered the theory. The Succession to the Crown Act of 1707 extended the tenure of executive Officers to six months after the death of the King. By another Act passed in the year * the period was again extended and finally the Demise of the Crown Act of 1901 made the tenure of office independent of the death of the King.

IV

CHAPTER III

THE HOUSE OF LORDS

The House of Lords consists of three different classes of Peers. (1) Hereditary Peers of England and United Kingdom, (2) Representative Peers and (3) Peers by virtue of Office.

The first question that must be raised and answered in order to understand the Constitution of the House of Lords is this. What is the title of the Peers to sit in the House of Lords?

Peers of England and the United Kingdom

The title of the English Peers and the Peers of the United Kingdom is founded on the King's writ of summons addressed to each Peer individually to come and to attend Parliament. The English Peerage is created by the King by Letters Patent. No difficulty arises, therefore, with regard to persons holding Peerage by Letters Patent. The only question that arises is whether the King could create a Peerage for life. This was at one time a matter of controversy and the controversy was whether a life-Peer created by the King entitles the Peer to sit in the House of Lords. But the issue was decided finally in the Weynesdale Peerage case in 1856 in which two things were decided. (1) That the King had the right to create any class of life-peer or hereditary but (2) the life-Peer cannot sit as a member of the House of the Lords and the King could not send such a Peer a writ of summons. The reason assigned was that the hereditary character of the Peerage was by custom, if not by law, an integral feature of the Peerage and the King while entitled to exercise his right to create a Peerage was not entitled to abrogate the custom.

What about the right of the Peers whose Peerage was not created by

Letters Patent? Their right also was founded upon the King's writ of summons.

Two questions, however, were long agitated with regard to the writ of summons to such Peers. Could every Peer claim the writ of Summons? Was the King free to address or not to address the summons to any Peer? On behalf of the Peers it was contended that only Peers who held their Peerage by what is called tenure by Barony were entitled to summons and that no other Peer was entitled to summons, nor was the King free to address the summons to a Peer who fell outside that class. On the other hand it was contended on behalf of the King that the writ was not a special privilege confined to Peers by Barony nor was there any limitation upon the King's right to address the summons to the Peers. The controversy was in the long run settled and two rules can now be laid down as rules governing the right to writ by Peers whose Peerage is not evidenced by Letters Patent.

(1) Tenure by Barony is no ground for a claim to a writ from the King.

(2) The King was bound to summon by a writ to sit in the House of Lords a descendant of a person, who had received a writ and taken his seat in that House in accordance therewith. In other words the descendant of a person, however distant and whatever the break in the interval, who can be proved to have received a writ from the King can claim a similar writ by a hereditary right. The English Peerage, therefore, is a hereditary Peerage and all hereditary English Peers are, therefore, entitled by their hereditary right to a writ of summons from the king and be members of the House of Lords.

(3) Although the right is a hereditary right it is subject to two rules, (1) The rule of Primogeniture and (2) The rule of male descendant.

Representative Peers

The representative peers fall into two classes. Representative Peers of Scotland and representative Peers of Ireland. The title of the representative Peers of Scotland is founded on the treaty of Union between England and Scotland which took place in 1707 and which made them into a Common Kingdom under a Common King and was called the United Kingdom of Great Britain. Prior to its Union with England, Scotland had its own Peerage with its hereditary right to sit. The Union of Ireland with Great Britain took place in 1800. As in the case of Scotland, Ireland has also its own Peerage with hereditary right to sit in the old Irish Parliament. On the amalgamation of Ireland and Scotland by their respective treaties of Union with England, the question arose as to how much representation was to be allowed to the old Scottish and Irish Peers in the new Parliament of Great

Britain and Ireland. The English Peers claimed for every one of themselves the right to sit in the new Parliament. The Scottish and the Irish Peers claimed similar right for every member of their own class.

In the settlement that was arrived at, it was agreed (1) that the English Peers should be allowed each to sit in the new Parliament. (2) The Scottish Peers were allowed to elect sixteen (16) out of their number as their representatives in the new Parliament. (3) The Irish Peers were allowed to elect 28 out of their number. The Scottish Peers are elected for the duration of a single Parliament., When Parliament is dissolved, there takes place a new election of the 16 representative Scottish Peers by the Peers of Scotland. The Irish representative Peers on the other hand are elected for their lives, and there is no new election of Irish Peers when Parliament is dissolved. A new election takes place only when a vacancy takes place in the representative Irish Peers by death or by any other disqualifying cause.

In addition to these three ancient territorial Peerages existing from before the time of the Union, there has been created a fourth category of Peerage known as the Peers of the United Kingdom with a right to sit in the House of Lords. Such a Peerage could be conferred by the King even on a Scottish Peer or an Irish Peer in which case if the Peerage is hereditary, the holder would be entitled to sit in the House of Lords notwithstanding of the treaties of Union with Ireland and Scotland.

Peers by virtue of Office

The Peers who sit in the House of Lords by virtue of office fell into two divisions (1) The Lords spiritual and (2) the Lords of appeal in ordinary. By law twenty-six, officials of the Church are entitled to sit in the house of Lords. Of these, the Archbishops of Canterbury and York and the Bishops of London, Durham and Winchester have the right to sit in the House of Lords as Lords Spiritual. Of the remaining 21 spiritual Peers, 21 diocesan Bishops in order of seniority of appointment have a right to sit in the House of Lords. So when one of the 21 Bishops dies or resigns, his place in the House of Lords is taken not by his successor but by the next senior diocesan Bishop.

The Lords of Appeal in ordinary

The House of Lords, besides being a Legislative Assembly, is also a Court of Judicature. It is for most purposes, the final and the highest Court of Appeal from the King's Courts in England, Scotland and Ireland. This judicial function being the function of the House of Lords as such, there is nothing to prevent any Peer of Parliament from taking part in the decisions of any appeal that would be brought before the House in its judicial

capacity. The House of Lords in the main is a body of lay Peers not versed in the intricacies of law and not possessing any legal training. To allow such a body to permit to discharge the functions of the highest Judiciary involved a great danger to the cause of justice. It was, however, not possible to take away this jurisdiction from the House of Lords altogether. As a compromise, the Act of 1876 called the Appellate Jurisdiction Act was passed. It retained the Jurisdiction of the House of Lords as the final Court of Appeal but provided that no appeal should be heard and determined by the House of Lords unless there were present at such hearing and determination at least three Lords of Appeal. The Lords of Appeal consist of (1) The Lord Chancellor for the time being, (2) such sitting Lords in the House as have held high judicial office and (3) the Lords of Appeal in ordinary, appointed by the King.

The Appellate Jurisdiction Act of 1876 which gave the power to the Crown to appoint Lords of Appeal in ordinary to sit in the House of Lords, made the tenure of those Lords of Appeal as Peers dependent on the continuance of his discharge of his judicial functions as a Lord of Appeal. In 1887, however, this was altered and the tenure of a Lord of Appeal in ordinary is now a life tenure.

Having stated the composition of the House of Lords, we may next proceed to consider certain questions that arrive in connection therewith. The first is this. What is the title of the Peers to sit in the House of Lords? The title of the Peers to sit in the House of Lords is not founded upon election by a Constituency as is the case with the members of the House of Commons. Their title is founded by a writ of summons addressed to each Peer individually to come and attend Parliament. It is a kind of nomination by the King although the power to nominate is strictly regulated and does not leave any discretion in the King to revoke and alter the course of nominations from Parliament to Parliament.

While the right of the Peer is founded on the writ of summons issued by the King, there are certain restrictions on the King's right to summon Peers. An Alien Peer that is a Peer who is not a British subject cannot be summoned to sit in Parliament.

A second question that must also be considered relates to the admissibility and divesting by the Peer of his title. A Peerage is a non-transferrable dignity and the title to it cannot be transferred by sale or by gift to another. It can be claimed by another only by inheritance in accordance with the rules of heritage. Similarly a Peer cannot surrender his title and cease to be a Peer. The principle which governs the Peerage is, once a Peer always a Peer.

A third question must relate to the difference between Peerage and the House of Lords. Popularly the expression Peers of the Realm and the House of Lords are used synonymously. Legally speaking there is a difference between the two. A person may be a Peer of the Realm and yet not be a member of the House of Lords. The case of a life-Peer is an illustration in point. A life-Peer is a Peer of the Realm and yet he cannot be a member of the House of Lords, because of the rule that the Peer who is a Peer otherwise than by virtue of office must be a hereditary Peer in order that he may get a right to sit in the House of Lords. Contrariwise, a person may be a member of the House of Lords, although he is not a hereditary Peer. The case of the spiritual Lords and the Lords of Appeal in ordinary is an illustration in point. The Archbishops and Bishops as also the Lords of Appeal in ordinary are entitled to writ of summons from the King to the House of Lords, the former while they hold their offices and the latter during their life-time. Yet they are not Peers in the legal sense of the term inasmuch as Peerage connotes a hereditary right.

V

THE POWERS AND PRIVILEGES OF THE LORDS AND THE COMMONS

Both Houses of Parliament enjoy certain privileges in their collective capacity as constituent parts of Parliament and which are necessary for the support of their authority and for the proper exercise of their functions. Besides the privileges enjoyed collectively as members of the two Houses of Parliament, there are other privileges enjoyed by members in their individual capacity and which are intended to protect their person and secure their independence and dignity.

SECTION I

(1) PRIVILEGES OF PARLIAMENT

(1) Privileges of the House of Commons.—The right to exclude strangers and to debate within closed doors is one of the privileges claimed by the House of Commons. The origin of this privilege lies in the existence of two different circumstances. One circumstance related to the seating arrangements for members in the House of Commons, which was so defective that strangers and members of Parliament were often mixed together. The result was that the strangers were often counted along with the members in divisions. To prevent this, the House claimed the right to exclude strangers. The second circumstance related to the system of espionage practised by the King over members of the House of Commons. In those days, as reporting of the speeches by the members in the House had not become systematic the King was anxious to know who were his

friends and who were his enemies, employed spies, whose duty it was to report to the King the speeches made by members on the floor of the House. This was followed by intimidation of the members by the King or by other acts of displeasure, which had the effect of curtailing the independence of the members. And the only way by which the House could protect itself against the system of espionage practised by the King was to claim the right to exclude strangers.

Under this privilege it did not follow that strangers could not enter the House and listen to the debates. As a matter of fact, they did enter and listen to the debates. The effect of the privilege was that if a member took notice of their presence, the Speaker was obliged to order them to withdraw. This worked inconveniently because the objection of one member to the presence of strangers was enough to compel the Speaker to order them to withdraw. In 1875, therefore, the rule was altered by a resolution of the House, which prescribed that if any member took notice of the presence of the strangers or to use technical language rose to address the Speaker "Sir, I spy strangers", the Speaker shall forthwith put the question that strangers be ordered to withdraw without permitting debate or amendment and take the sense of the House and act accordingly. This resolution while retaining the privilege of excluding strangers, makes its exercise subject to the wishes of the majority of the House, and not to the caprice of an individual member. The rule, however, gives the Speaker the power to order the withdrawal of strangers at any time on his own initiative and without a motion from any member of the House.

The House of Commons claims the privilege of secrecy of debates and have the right to prohibit the publication of their debates and their proceedings. In 1771, an incident occurred which put the privilege beyond debate. A certain printer who resided in the city of London printed the debates of the Commons without their permit. The Commons, having taken offence at this breach of their privilege, sent a messenger under the authority of the Speaker to arrest the printer. The printer in his turn handed over the messenger of the House of Commons to the custody of a constable for assaulting him in his own house. In the criminal proceedings that took place, the Mayor and the two aldermen of the city of London who constituted the bench held that the warrant of arrest issued by the House of Commons was not operative within the city on account of its charter and committed the messenger of the Commons though they left him out on bail. The Commons sent for the Mayor and the aldermen who constituted the bench and their clerk who recorded the recognisance of the messenger in his book. They erased from the book the entry relating

to the messenger's recognisance by tearing the page and committed the Mayor and the aldermen to the Tower of London for challenging the authority of the Warrant. Since then no one has ventured to offend against the privilege of the Commons relating to the secrecy of debates. The reports of the debates which one sees today are made on sufferance and published on sufferance, and they could be prohibited any time by the order of the House in that behalf. This was done on some occasions during the last war when many subjects were discussed on the floor of the House in secrecy without any reports being published of the debates.

Another privilege which the House of Commons claims is the right to provide for the proper Constitution of the House. Under this privilege, falls the consideration of three distinct questions.

(1) **Filling of Vacancies.**—While the holding of a general election for the summoning of a new Parliament is a Prerogative of the King, the filling up of vacancies during the continuance of a Parliament is a privilege of the House of Commons. Consequently, when a vacancy occurs, the writ for the return of a member to supply the vacancy is issued on a warrant by the Speaker in pursuance of an order by the House and not in pursuance of an order from the King. If Parliament is not sitting when the vacancy occurs, the Speaker is authorised to issue the writ subject to certain conditions.

The second question that falls within this privilege is the determination of disputed elections. This question formed for a long time a bone of contention between the King on the one hand and the Commons on the other. Each party claimed the right for itself to the exclusion of the other. Originally the writ issued to a constituency for an election was returned to Parliament, thereby recognizing the right of the Commons to fill a vacancy in that particular constituency. Since the reign of Henry IV, it was returned to Chancery, thereby recognizing the right of the King to fill the vacancy. The matter thus alternated till 1604 when the Commons insisted that the right was theirs and a quarrel arose between them and James I. In that year, the King James I issued a proclamation directing that no bankrupt or outlaw be elected to Parliament. The County of Bucks elected one Mr. Goodwin. He was an outlaw and the King declared his election void and issued another writ. And Mr. Fortesque was returned. The Commons on their own motion resolved that notwithstanding the avoidance of his election by the King, Mr. Goodwin was duly elected a member of the House. The King on the other hand claimed the right to determine the issue. At a conference held between the King, the Lords and the Commons, the Lords advised the King to accept defeat and recognise the right of the Commons. The trial of disputed elections by the House

became a source of trouble to the House and anxiety to the candidates because all such trials became matters of party politics and in 1868 the House was pleased by law to leave the adjudication of disputed elections to the Court of Law.

The third right which falls within the purview of this privilege is the right of the House to expel a member who has behaved in a manner which would render him unfit to sit in the House. Expulsion is not a disqualification and the member expelled may be again elected. It must be borne in mind that the right to be elected does not carry with it the right to sit. To be elected is a favour derived from the electors. To be allowed to sit is a favour within the competence of the House and cases have occurred in which persons have been duly elected to the House of Commons but who have not been able to take their seats in the House. The case of Wilkes is an illustration in point. Wilkes was elected four times in succession by the County of Middlesex and on all the four times, he was refused by the House a seat. The next important privilege claimed by the House of Commons is the right to exclusive cognisance of matters arising within the House. Under this privilege, the House has the exclusive right to regulate its internal proceedings and concerns and the mode and manner of carrying on its business and that no Court could take cognisance of that, which passes within its walls. The nature and extent of this privilege are well-illustrated by the case of *Bradlaugh vs. Gosset*. The facts of this case are simple. On the 3rd of May 1880, Mr. Bradlaugh, who was elected a member from Northampton claimed to make the affirmation instead of the oath as he was an atheist. A Committee of the House of Commons reported that affirmation was confined to proceedings in a Court of Law and that the members of Parliament could not resort to it. Oath was the only thing that was open to them. After this report, Mr. Bradlaugh came to the Speaker's table to take the oath. The house, however, objected on the ground that it would not be binding upon his conscience, and that it would be a mere formality. Another Committee was appointed to report whether Mr. Bradlaugh should be permitted to take the Oath. The Committee reported that he should not be permitted to take the oath but recommended that he should be allowed to affirm subject to its legality being tested in a Court of Law. In accordance with this, a motion was made to allow Mr. Bradlaugh to affirm to which an amendment was made disallowing him either to affirm or to take oath. Bradlaugh, however, insisted upon his right to take the oath, but the Speaker asked him to withdraw. He refused and the sergeant was asked to remove Mr. Bradlaugh. A scuffle ensued between Mr. Cosset, the sergeant and Mr.

Bradlaugh in which Mr. Bradlaugh was very badly injured. A standing order was passed allowing affirmation. Mr. Bradlaugh affirmed but the Court declared that affirmation was not permissible to a member of Parliament. His seat was thereafter vacated. Re-elected again in 1881, the same scene was repeated. Whenever he came to the table to take the oath, the House resolved that he be not allowed to do so. On one occasion by the direction of the Speaker, Mr. Bradlaugh was conducted by Sergeant Gosset beyond the precise of the House and subsequently expelled. Bradlaugh brought an action against Gosset in the Queen's bench division for an injunction to restrain Gosset from using force to prevent his taking the oath.. The House made the usual order for the defence of the sergeant. The Queen's bench division refused relief to Mr. Bradlaugh on the ground that the order under which Gosset acted related to the procedure of the House and that the Court had no power to interfere in such a matter.

The House of Commons claims the privilege to protect its dignity and authority. It would be in vain to attempt any enumeration of the acts which might be construed by the House as an insult or an affront to its dignity. But certain principles may be laid down:

(1) Disobedience of any of the orders or rules which regulate the proceedings of the House is a breach of the privilege. Publication of debates contrary to the resolution of the House, wilful misrepresentation of the debates, publication of evidence taken before a select Committee until it has been reported to the House are examples of the breach of this rule.

(2) Disobedience to particular orders. Resolutions are agreed to at the beginning of each session which declare that the House will proceed with the utmost severity against persons who tamper with witnesses in respect of evidence to be given to the House or to any Committee thereof, who endeavour to deter or hinder persons from appearing or giving evidence and who give false evidence before the House on any Committee thereof, would be guilty of breach of privilege by reason of disobedience to particular orders.

(3) Indignities offered to the character or proceedings of Parliament or upon the honour of the House by libellous reflections would be a breach of the privilege. It is not to be supposed that only members of the public can be held guilty for a breach of privilege under this rule. Even members of Parliament could be made punishable if they commit the breach of this rule. In 1819, Mr. Hobhouse, who was an M. P., denounced the resistance offered by the House of Parliamentary Reforms, in a pamphlet which he published anonymously. After his

having acknowledged himself as the author of the pamphlet, the House held him guilty of the breach of privilege. In 1838, another instance occurred when Mr. Ocomed an M.P. at a public meeting laid a charge of foul perjury against members of the House in the discharge of their judicial duties in election committees.

(4) Interference with the members of the House in the discharge of their duties as members of the House.

It is an infringement of the privilege of the House to assault, insult or menace any member of the House in his coming or going from the House or on account of his behaviour in Parliament or to endeavour to compel members by force to declare themselves in favour of or against any proposition then pending or expected to be before the House or bribing members of parliament to vote in a particular manner.

SECTION II

PRIVILEGES OF INDIVIDUAL MEMBERS

(1) *Freedom from arrest.*—This privilege guarantees freedom from arrest for members during the continuance of the session and 40 days before the commencement and after its conclusion. Originally this privilege was not only enjoyed by members but also extended to their servants and their estates. It is now restricted to members only and that too to their persons.

(2) *Freedom of speech.*—The statute of William and Mary S2 C2 enacts that members shall enjoy complete freedom of speech in Parliamentary debates and proceedings and that nothing said by them shall be questioned or impeached in any Court or place out of Parliament.

SECTION III

METHODS OF PUNISHING BREACHES OF PRIVILEGE

There are five different ways in which the House can punish persons who are guilty of a breach of privilege. Incases of breach of privilege which are not grave, the House may release a person arrested for breach of privilege on mere admonition if he is prepared to tender apology. Or secondly, may release him on a reprimand. In cases of a grave character, the House can commit him to prison or inflict a fine or expel him. It is obvious that the last form of punishment namely, expulsion, can apply only to members of parliament who are guilty of a breach of privilege.

SECTION IV

PRIVILEGES OF THE HOUSE OF LORDS

The privileges of the House of Lords are more or less the same as those

of the Commons. It is, therefore, unnecessary to discuss them separately in detail. There is only one point of difference between the privileges of the Lords and the Commons which need to be mentioned and which relates to the source of their privileges. The privileges of the Commons are a gift from the King. They have to be claimed by the Speaker in the name of the Commons in the beginning of every newly elected Parliament. The privileges of the Lords belong to them in their own right. They are not derived from the King.

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/50. Lectures on the English](#)

Constitution.htm - _msocom_3**SECTION V**

OFFICERS OF THE HOUSE

The House of Lords and the House of Commons possess certain Officers for the general conduct of their business and for the enforcement of their privileges. For the sake of clarity it might be desirable to discuss the status and the functions of the Officers of the two Houses separately.

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/50. Lectures on the](#)

English Constitution.htm - _msocom_4**SECTION VI**

THE HOUSE OF COMMONS

(1) (1) **The Speaker.**—The Speaker is now elected by the House of Commons at its first meeting after the general election and continues to hold the place till the life-time of the Parliament unless removed from Office by a resolution. Originally the King claimed and exercised a virtual right of selection. In 1679, there arose a conflict between the Charles II and the newly elected House of Commons on the right to choose the Speaker. The Commons chose Sir Edward Sey Mour and the King declined to accept him. The King suggested his own nominee to the Commons and the Commons in their turn refused to have him. Eventually a compromise was arrived at, and another person who was an independent choice of the Commons was adopted by them as their Speaker. To him the King raised no objection. From this time onward, the right of the Commons to chose their own Speaker was not contested by the Crown.

SECTION VII

THE FUNCTIONS OF THE SPEAKER

The Speaker of the House of Commons functions in three distinct capacities. As the Spokesman and representative of the House he performs the following duties.—

(1) He demands its privileges and communicates its resolutions of thanks, ensures admonitions and reprimands.

(2) He issues warrants of commitments whenever a person is punished *for* breach of privilege. He issues warrants for attendance at the bar for being rebuked or sentenced by the House or for any other purpose as provided for in the order of the House.

(3) He issues writs for filling up vacancies.—The Parliament Act of 1911 has imposed upon the Speaker a new function which did not belong to him before. Under the Act, he the functions as a judicial officer and in that capacity he has to certify whether any particular bill is a money-bill or not.

The Speaker is also the Chairman of the House whenever the House meets to carry on its business. In his capacity as a Chairman he is required:

- (1) To maintain order in debates.
- (2) To decide questions upon points of order.
- (3) To put the question under discussion to the House.
- (4) To declare the determination of the House on the question.

SECTION VIII OFFICERS UNDER THE SPEAKER

There are two Officers under the Speaker of the House of Commons. One is called the clerk of the House of Commons and the other is called the Sergeant at arms. The duty of the clerk of the Commons is to maintain a record of the proceedings of the House. He maintains what is called the journal of the House of Commons in which are noted all matters brought before the House and discusses by it in their order from day-to-day.

The Sergeant at arms is a sort of a Police Officer whose duty is to enforce the orders of the House and the Speaker in relation to internal order and to breach of privilege.

THE HOUSE OF LORDS

The Speaker.—The Speaker of the House of Lords is not an elected person and the House of Lords has no right to elect its own Speaker. The Speaker of the House of Lords is by prescription the Lord Chancellor or the Lord Keeper of the Great Seal, who can act as Speaker in the absence of the Lord Chancellor. In their absence the place is taken by any one of the Deputy-Speakers of whom there are always several appointed by the King's Commission and if they should all be absent, the Lords elect a Speaker for the time being. The Speaker of the House of Lords need not necessarily be a Peer, and that office may be discharged by a commoner and has been so discharged when a commoner happened to be the Lord Keeper of the Great Seal or when the Great Seal was in commission. It is

singular that the President of this deliberative body is not necessarily a member of it, and the Woolsack on which the Speaker sits is treated as being outside the limits of the House of Lords, so as to permit the office being discharged by a person who is not a member of the House.

THE DUTIES OF THE SPEAKER IN THE LORDS

The position of the Speaker of the House of Lords is totally different from the position of the Speaker of the House of Commons. There is nothing common between them as far as their authority and function is concerned except that both are Chairmen of a deliberative assembly. But so far as their function and authority is concerned, their position is fundamentally different. This is clear from standing order No. 20 which defines the duties of the Lord Chancellor as a Speaker of the House of Lords. The standing order says :”The Lord Chancellor when he speaks to the House is always to speak uncovered and is not to adjourn the House or to do anything else as mouth of the House, without the consent of the Lords first had, except the ordinary thing about bills which are of course wherein the Lords may likewise overrule, as for preferring one bill before another and such like, and in case of difference among the Lords, it is to be put to the question, and if the Lord Chancellor speak to anything particularly, he is to go to his own place as a Peer”and be it noted that the place of the Lord Chancellor if he is a Peer is to the left of the Chamber. It is clear from the standing order how limited is the authority of the Speaker in the Lords.

(1) In the enforcement of rules for maintaining order the Speaker of the House of Lords has no more authority than any other Peer.

(2) He cannot decide points of order as is done by the Speaker of the House of Commons. If he is a Peer he may address the House on any point of order raised. But the decision on it is the decision of the Majority of the House.

(3) Owing to the limited authority of the Speaker in the Lords in directing the proceedings of the House, the right of a Peer to address the House depends not upon him as it does in the House of Commons but depends solely upon the will of the House. When two Peers rise at the same time, unless one immediately gives way to the other, the House calls upon one of them to speak and if each is supported by a party, there is no alternative but division. The issue is not decided by the Speaker, as is done in the House of Commons.

The result of his imperfect powers is that a Peer who is disorderly is called to order by another Peer perhaps of an opposite party and that an

irregular argument is liable to ensue in which case, each last Speaker imputes disorder to his predecessor and recrimination takes the place of an orderly debate with the Lord Chancellor sitting but powerless to intervene, as his power is limited to the putting of questions and carrying on other formal business.

OTHER OFFICERS

There are three other officers under the Lord Chancellor as Speaker of the House of Lords.

(1) **The clerk of the Parliament.**—His duties are similar to those of the clerk of the House of Commons, namely, to keep the record of the proceedings and judgements of the House, of Lords in a journal.

(2) **The Gentleman Usher of the Black rod,** whose duties are analogous to those of the Sergeant at arms in the House of Commons. He does the policing of the House.

(3) **The Sergeant at arms** is the attendant on the Lord Chancellor.

MAHARASHTRA AS A LINGUISTIC PROVINCE

Statement submitted to the Linguistic Provinces Commission

Note

Part I : The Problem of Linguistic Provinces

PART II : Will Maharashtra be a Viable Province?

PART III : Should the Maharashtra Province be Federal or Unitary?

PART IV : Maharashtra and the City of Bombay

NOTE

The figures quoted in this memorandum have been taken from various books and pamphlets written by various writers on the subject of reconstituting Maharashtra on a linguistic basis. I rely upon the writers for their accuracy. Similarly, the map of Maharashtra attached to this Memorandum need not be taken as accurate or complete. The idea is merely to give a picture of how the Province when reconstituted will look like.

B. R. Ambedkar.

14-10-48

PART I

THE PROBLEM OF LINGUISTIC PROVINCES

1. The question of Linguistic Provinces has not only led to a great deal of controversy born out of party prejudices and party interests but it has led to a difference of opinion as to the merits thereof. The points of controversy relate to claims and counter-claims as between contiguous Provinces to territories as well as to the terms of their inclusion. I shall deal with them at a later stage in so far as they relate to the creation of the Maharashtra Province. I shall first take up the question of the merits of the

proposal for Linguistic Provinces.

Purposes behind the demand for Linguistic Provinces

2. What is the purpose which lies behind the demand for Linguistic Provinces? The generality of those who advocate the creation of Linguistic Provinces do so because they believe that the Provinces have different languages and cultures. They should therefore have the fullest scope to develop their languages and their cultures. In other words, the Provinces have all the elements of a distinct nationality and they should be allowed the freedom to grow to their fullest in nationhood.

Difficulties arising out of Linguistic Provinces

3. In discussing the question of creating such Linguistic Provinces it would be very short-sighted to omit from one's consideration the fact that the structure of Government of India of the future is to be cast in a dual form: (a) a Central Government and (b) a number of Provincial Governments inextricably inter-linked and inter-woven in the discharge of their respective Legislative, Executive and Administrative functions. Before one could agree to the creation of Linguistic Provinces, one must, therefore, consider the effects which Linguistic Provinces would have on the working of the Central Government.

4. Among the many effects that may be envisaged, the following are obvious:

(1) Linguistic Provinces will result in creating as many nations as there are groups with pride in their race, language and literature. The Central Legislature will be a League of Nations and the Central Executive may become a meeting of separate and solidified nations filled with the consciousness of their being separate in culture and therefore in interests. They may develop the mentality of political insubordination, i.e., refusal to obey the majority or of staging walk-outs. The development of such a mentality is not to be altogether discounted. If such a mentality grows it may easily make the working of the Central Government impossible.

(2) The creation of Linguistic Provinces would be fatal to the maintenance of the necessary administrative relations between the Centre and the Provinces. If each Province adopts its own language as its official language the Central Government will have to correspond in as many official languages as there are Linguistic Provinces. This must be accepted as an impossible task. How great a deadlock Linguistic Provinces will create in the working of the Governmental machine can be better understood by studying the effects of Linguistic Provinces on the Judiciary. In the new set-up, each Province will have a High Court with a series of subordinate

courts below it. At the apex of these High Courts will be the Supreme Court with the right to hear appeals against the decisions of the High Courts. On the basis of Linguistic Provinces, Courts of each Province including its High Court will conduct their proceedings in the language of the Province. What is the Supreme Court to do when its jurisdiction is invoked for rectifying a wrong done by the High Court? The Supreme Court will have to close down. For, if it is to function — every judge of the Supreme Court — I am omitting for the moment (the lawyers practising therein — must know the language of every Province—which it is impossible to provide for.

No one can contemplate such a situation with equanimity. It may lead to a break-up of India. Instead of remaining united, India may end in becoming Europe — faced with the prospect of chaos and disorder.

Advantages from Linguistic Provinces

5. While it is true that the proposal of Linguistic Provinces creates a problem which goes to the very root of the matter — inasmuch as it affects the unity of India—there can be no doubt that the reconstruction of Provinces on linguistic basis has certain definite political advantages.

6. The main advantage of the scheme of Linguistic Provinces which appeals to me quite strongly is that Linguistic Provinces would make democracy work better than it would in mixed Provinces. A Linguistic Province produces what democracy needs, namely, social homogeneity. Now the homogeneity of a people depends upon their having a belief in a common origin, in the possession of a common language and literature, in their pride in a common historic tradition, community of social customs, etc. is a proposition which no student of sociology can dispute. The absence of a social homogeneity in a State creates a dangerous situation especially where such a State is raised on a democratic structure. History shows that democracy cannot work in a State where the population is not homogeneous. In a heterogeneous population divided into groups which are hostile and anti-social towards one another the working of democracy is bound to give rise to cases of discrimination, neglect, partiality, suppression of the interests of one group at the hands of another group which happens to capture political power. The reason why in an heterogeneous society, democracy cannot succeed is because power instead of being used *impartially* and *on merits* and for the benefit of all is used for the aggrandisement of one group and to the detriment of another. On the other hand, a state which is homogeneous in its population can work for the true ends of democracy, for there are no artificial barriers or social antipathies which lead to the misuse of political power.

7. It follows that if democracy is to function properly the subjects of the State must be so distributed as to form a single homogeneous group. The constitution for the Provinces of India which is on the anvil is designed for a democratic form of Government. It follows that each Province must be homogeneous in its population if democracy in the Province is to be successful. This is simply another way of saying that each Province must be a linguistic unit if it is to be fitted to work a democratic constitution. Herein lies the justification for Linguistic Provinces.

Can the creation of Linguistic Provinces be postponed?

8. Can the solution of this problem be postponed? In this connection, I would like to place before the Commission the following considerations :

(i) There is nothing new in the demand for Linguistic Provinces. Six Provinces (1) East Punjab, (2) United Provinces, (3) Bihar, (4) West Bengal, (5) Assam and (6) Orissa already exist as Linguistic Provinces. The Provinces which are clamouring for being reconstituted on linguistic basis are: (1) Bombay, (2) Madras and (3) Central Provinces. When the principle of Linguistic Provinces is accepted in the case of six Provinces, the other Provinces which are asking the same principle to be applied to them, cannot be asked to wait indefinitely:

(ii) The situation in the Non-Linguistic Provinces has become exasperating if not dangerous and is in no way different from the situation as it existed in the old Turkish Empire or in the old Austro-Hungarian Empire.

(iii) The demand for Linguistic Provinces is an explosive force of the same character which was responsible for blowing up the old Turkish Empire or Austro-Hungarian Empire. It is better not to allow it to get too hot when it may become difficult to prevent an explosion.

(iv) So long as the Provinces were not democratic in their constitutions and so long as they did not possess the widest sovereign powers which the new constitution gives them the urgency of Linguistic Provinces was not very great. But with the new constitution, the problem has become very urgent.

The solution of the difficulties

9. If the problem must be dealt with immediately what is to be the solution? As has already been pointed out, the solution must satisfy two conditions. While accepting the principle of Linguistic Provinces it must provide against the break-up of India's unity. My solution of the problem therefore is that, while accepting the demand for the re-constitution of Provinces on linguistic basis, the constitution should provide that the

official language of every Province shall be the same as the official language of the Central Government. It is only on that footing that I am prepared to accept the demand for Linguistic Provinces.

10. I am aware of the fact that my suggestion runs counter to the conception of Linguistic Provinces which is in vogue. It is that the language of the Province shall be its official language. I have no objection to Linguistic Provinces. But I have the strongest objection to the language of the Province being made its official language where it happens to be different from the official language of the Centre. My objection is based on the following considerations:

(1) The idea of having a Linguistic Province has nothing to do with the question of what should be its official language. By a Linguistic Province, I mean a Province which by the social composition of its population is homogeneous and therefore more suited for the realisation of those social ends which a democratic Government must fulfil. In my view, a Linguistic Province has nothing to do with the language of the Province. In the scheme of Linguistic Provinces, language has necessarily to play its part. But its part can be limited to the creation of the Province, i.e., for demarcation of the boundaries of the Province. There is no categorical imperative in the scheme of Linguistic Provinces which compels us to make the language of the Province its official language. Nor is it necessary, for sustaining the cultural unity of the Province, to make the language of the Province its official language. For, the cultural unity of the Province, which already exists, is capable of being sustained by factors other than language such as common historic tradition, community of social customs, etc. To sustain Provincial cultural unity which already exists it does not require the use of the Provincial language for official purposes. Fortunately for the Provincialists there is no fear of a Maharashtrian not remaining a Maharashtrian because he spoke any other language. So also there is no fear of a Tamilian or an Andhra or a Bengali ceasing to be a Tamilian, Andhra or Bengali if he spoke any other language than his own mother-tongue.

(2) The out-and-out advocates of Linguistic Provinces would no doubt protest that they have no intention of converting the Provinces into separate nations. Their *bona fides* need not be doubted. At the same time, it often happens that things do take a shape which their authors never intended. It is therefore absolutely necessary to take from the very beginning every step to prevent things taking an evil shape in course of time. There is therefore nothing wrong if the loosening of the ties in one direction is accompanied by their being tightened up in another direction.

(3) We must not allow the Provincial language to become its official language even if it was natural that the Provincial language should be the official language of the Province. There is no danger in creating Linguistic Provinces. Danger lies in creating Linguistic Provinces with the language of each Province as its official language. The latter would lead to the creation of Provincial nationalities. For the use of the Provincial languages as official languages would lead Provincial cultures to be isolated, crystallised, hardened and solidified. It would *be* fatal to allow this to happen. To allow this is to allow the Provinces to become independent nations, separate in everything and thus open the road to the ruination of United India. In Linguistic Provinces without the language of the Province being made its official language the Provincial culture would remain fluid with a channel open for give and take. Under no circumstances, we must allow the Linguistic Provinces to make their Provincial languages their official languages.

11. The imposition of an All-India official language on a Linguistic Province which may happen to be different from the language of the Province cannot come in the way of maintaining Provincial culture. Official language will be used only in the field occupied by Government. The nonofficial field or what may be the purely cultural field will still remain open to the Provincial language to play its part. There may be a healthy competition between the official and non-official language. One may try to oust the other. If the official language succeeds in ousting the non-official language from the cultural field, nothing like it. If it fails, there cannot be much harm. Such a position cannot be said to be intolerable. It is no more intolerable than the present position in which we have English as the official language and the Provincial language as its non-official language. The only difference is that the official language will not be English but some other.

The requirements of a satisfactory solution

12. I am aware of the fact that my solution is not an ideal solution. It makes working of the constitution in the Provinces on democratic lines possible. But it does not make possible the democratic working of the constitution at the Centre. That is because mere linguistic unity, i.e., the facility to speak a common language does not ensure homogeneity which is the result of many other factors. As stated before, the representatives selected by the Provinces to the Central Legislature will remain what they are, namely, Bengalis, Tamilians, Andhras, Maharashtrians, etc., even though they may be speaking the official language of the Centre and not their mother-tongue. But an ideal solution which can be put into effect

immediately, I cannot see. We must be content with the next best. The only thing we must be sure about is that the solution we adopt immediately must satisfy two conditions:

(i) It must be the very next best to the ideal; and (ii) It must be capable of developing itself into the ideal.

Judged in the light of these considerations, I venture to say that the solution which I have suggested satisfies these two conditions.

PART II

WILL MAHARASHTRA BE A VIABLE PROVINCE?

Tests of Viability

13. Coming to the specific question of Maharashtra Province it is necessary to be satisfied that it will be a viable Province. For being declared a viable Province, a Province must satisfy certain tests. It must be of a certain size, it must have a certain volume of population and a commensurate amount of revenue. A Province must not only be self-supporting—which any Province can be by choosing to live on a lower plane—but it must have sufficient revenue to provide for a minimum standard of administration required by efficiency and the needs of social welfare. **Is Maharashtra Viable?**

14. Does the Province of Maharashtra satisfy these tests? The following are the figures which show the size and population of the Maharashtra Province as constituted on a linguistic basis :

Territory	Area in square miles	Total Population of the territory	Total Marathi speaking population of the territory	Percentage of Marathi speaking population to total population
Twelve districts of the Bombay Presidency	47284	12913544	10045100	77.8
Eight Districts of C.P. and Berar	36865	7020694	5388300	76.7

Total	84151	19934 238	15433400	77.4
States within Bombay Presidency	11314	27202 07	2120700	77.9
Marathi speaking Districts of Hyderabad State	22766	42492 72	3299300	77.6
Goa	1534	58000 0	520000	89.6
State of Bastar	13701	63388 8	212300	33.5
Total	49315	81833 67	6142300	---
GRAND TOTAL	13346 6	28117 605	21585700	76.8

Area and population of Maharashtra

15. The above table gives figures for the Maharashtra Province *in* its two forms (1) abridged and (2) unabridged. In its unabridged form which means if all the area occupied by the Marathi-speaking people was constituted in one single Province the area and the population of Maharashtra will be 1,33,466 square miles with a population of 2,15,85,700. In its abridged form which means that if the area and population of the Marathi-speaking people comprised within the States was for the moment omitted, even then the proposed Maharashtra Province would comprise an area of 84,151 square miles with a population of 1,54,33,400.

Revenue of Maharashtra

16. Turning to the revenue side of the Province, it has been estimated that the total annual revenue at the existing rate of taxation which will accrue to the abridged Maharashtra Province will be approximately Rs. 25,61,51,000.

Comparison of Maharashtra with other Provinces

17. Some comparisons are necessary to get an idea if a Province of this

size, with this population and with so much revenue will be viable. For this, I give below figures of the first or the biggest and the forty-seventh or the smallest states within the U.S.A. in order of their size and population :

States	Area in Square Miles
1st Texas	2,67,339
47 th Delaware	2,057
States	Population
1 st New York	1,26,32,890
47 th Wyoming	2,57,108

18. It is obvious that Maharashtra whether one takes its abridged edition or the unabridged edition of it will be several times bigger than Delaware which is the smallest State in U.S.A. in point of area and also several times bigger than New York which is the biggest state in U.S.A. in point of population.

19. Comparison of Maharashtra with the existing and prospective Linguistic Provinces of India may also be useful. Their position in point of area, population and revenue is as follows :

Province	Area in square miles	Population	Annual Revenue
Existing Linguistic Province -			
United Provinces	106247	55020617	326508000
Bihar	69745	36340151	162678000
Orissa	32198	8228544	46062000
New Linguistic Province -			
Andhra	70000	19000000	---
Karnatak	25000	4500000	---
Kerala	6000	3500000	---

These figures when compared with the figures for Maharashtra leave no doubt that Maharashtra will not merely be a viable Province but a strong province in point of area, population and revenue.

PART III

SHOULD THE MAHARASHTRA PROVINCE BE FEDERAL

OR UNITARY?

20. I will now turn to what are known to be points on which there is controversy. There is no controversy regarding the unification of Maharashtra into one Province. The controversy relates to the way it should be brought about. *One* view is that the new Maharashtra Province should be a unitary Province, with a single legislature and a single executive. The other view is that Maharashtra should be a Federation of two sub-provinces, one sub-province to consist of the Marathi-speaking districts of the Bombay Presidency and the other of the Marathi-speaking districts of the present Province of the Central Provinces and Berar. The idea of creating sub-Provinces has originated from the spokesmen of the Marathi-speaking districts of Central Provinces and Berar. I am satisfied that it is only the wish of a few high-caste politicians who feel that in a unified Maharashtra their political careers will come to an end. It has no backing from the people of the fact that it gives me an opportunity to enunciate what I regard as a very vital principle. When it is decided to create a Linguistic Province, I am definitely of opinion that all areas which are contiguous and which speak the same language should be forced to come into it. There should be **no room** for choice nor for self-determination. Every attempt must be made to create larger provincial units. Smaller provincial units will be a perpetual burden in normal times and a source of weakness in an emergency. Such a situation must be avoided. That is why I insist that all parts of Maharashtra should be merged together in a single province.

PART IV MAHARASHTRA AND THE CITY OF BOMBAY

Controversy over Bombay

21. Should the City of Bombay be included in Maharashtra or not is another point over which there has been a controversy. A meeting was held in Bombay in the building of the Indian Merchants Chamber. The meeting was attended by no more than sixty. With the exception of one Indian-Christian it was attended by only Gujarati-speaking merchants and industrialists. Although it was small and sectional meeting, its proceedings were flashed on the front page of every important newspaper in India and the *Times of India* was so impressed by its importance that it wrote an editorial which while mildly castigating the vituperative tone which the speakers at the meeting adopted against the Maharashtrians, supported the resolutions passed at the meeting regarding the future of Bombay. This proves what truth there is in the reply given by Lord Birkenhead to the

Irish Leader, Mr. Redmond, in the course of the Irish controversy when he said that there are cases where a minority is a majority.

My memorandum would be woefully incomplete if I omitted to deal with the *pros* and *cons* of this controversy. This is because of two reasons: In the first place, the meeting has been recognized to be very important and secondly because the resolutions of the meeting have been supported by eminent University Professors.

Proposals regarding Bombay

22. The meeting passed the following resolutions:

- (1) That the question of the creation of Linguistic Provinces should be postponed; or
- (2) That if it is not postponed, Bombay City should be constituted into a separate Province.

There is a third suggestion, namely, that Konkan should be constituted into a separate Province with Bombay as its capital. There is hardly any support to this plan. There is therefore no necessity to discuss it.

Decision regarding Bombay must be made now

23. I have no complaint against that part of the Resolution which says the question of Linguistic Provinces be postponed provided the main question namely whether Bombay should or should not be included in Maharashtra is settled. If this question was settled it did not matter if it took five or ten years to give effect to the Settlement. But the resolution is only an escapism. It does not settle the issue. It only adjourns the controversy. The main question must therefore be tackled right now.

Ground for the exclusion of Bombay from Maharashtra

24. The arguments urged in favour of separating Bombay from Maharashtra are set out below :

(1) Bombay was never a part of Maharashtra*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_1.

(2) Bombay was never a part of the Maratha Empire.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_2

(3) The Marathi-speaking people do not form a majority of the population of the City of Bombay.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_3

(4) Gujarathis have been old residents of Bombay.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_4

[Province.htm - _msocom_4](#)

(5) Bombay is a trade centre for vast areas outside Maharashtra. Therefore, Bombay cannot be claimed by Maharashtra. It belongs to the whole of India.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_5](#)

(6) It is the Gujarathi speaking people of Bombay who have built up the trade and industry of Bombay. The Maharashtrians have been only clerks and coolies. It would be wrong to place the owners of trade and industry under the political dominance of the working classes who form the bulk of Maharashtrians.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_6](#)

(7) Maharashtra wants Bombay to be included in Maharashtra because it wants to live on the surplus of Bombay.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_7](#)

(8) A multi-lingual State is better. It is not so fatal to the liberty of smaller people.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_8](#)

(9) Regrouping of Provinces should be on rational lines and not on national lines.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_9](#)

Burden of Proof

25. On an examination of these points it is obvious that points (1) and (2) are preliminary in the sense that they help us to decide on whom rests the burden of proof. If it is proved that Bombay is part of Maharashtra, then the burden of proof for separating it from Maharashtra must fall upon those who urge that it should be separated and not upon those who claim that it should remain part of Maharashtra. I will therefore deal with these two points first.

POINTS (1) and (2)

Verdict of History

26. These points can be considered both in the light of history as well as of geography. I am, however, convinced that history cannot help us to decide the issue. In the first place, how far back must we go to find the data on which to base our conclusion. It is obvious that the history of the ancient past would be of no use to us in this connection. What could be of use to us is the past of the present. One may go further and question any reliance being placed upon such a past of the present for drawing any conclusion that can have a bearing on the issue before us. Most of the

contacts between people during historical times have been between conquerors and conquered. This is true of India as well as of Europe. But the results of such contacts have been quite different in Europe and in India. In Europe such contacts have produced assimilation of the conflicting social elements. Frequent inter-marriages have confounded the original stocks. One language, either the most useful or the most commonly spoken, has tended to supplant the other. If one civilisation is superior to the others in the same country it has automatically supplanted them. This natural tendency towards assimilation which we see in Europe is so strong that steps have to be taken to counteract it. What is the tendency in India? It is definitely against assimilation. The Musalmans conquered Hindus. But the Musalmans remained Musalmans and the Hindus remained Hindus. The Gujarathis were conquered by Maharashtrais and were ruled by them for some years. What effect has it produced upon the Gujarathis? Nothing. Gujarathis have remained Gujarathis and Maharashtrais have remained Maharashtrais. The Chalukyas conquered Maharashtrais and so did the Shilahars. But there was no assimilation between them. The Shilahars and Chalukyas remained what they were and so did the Maharashtrais. This being the case, what help can Indian History give in the decision of the issue? The history of internal upheavals as well as of external aggressions has been nothing more than a passing show. Conquest means nothing and proves nothing.

Verdict of Geography

27. Let us now turn to geography and ask for its verdict. It seems to be a better witness than history. For this purpose one must consider the location of Bombay in relation to the Province of Maharashtra. The Province of Maharashtra once it is created will be triangular in shape. One side of this triangle is formed by the Western Coast Line of India between Daman in the North and Karwar in the South. The City of Bombay lies in between Daman and Karwar. The Province of Gujarat starts from Daman and spreads northwards. The Kanada Province starts from Karwar and spreads southwards. It is about 85 miles South of Daman which is the starting point of Gujarat, and 250 miles North of Karwar, which is the starting point of Karnatak Province. If the unbroken territory between Daman and Karwar is geographically part of Maharashtra, how could Bombay be held not to be a part of Maharashtra? This is an incontrovertible fact of nature. Geography has made Bombay part of Maharashtra. Let those who want to challenge the fact of nature do so. To an unbiased mind it is conclusive proof that Bombay belongs to Maharashtra.

Bombay and the Maratha Empire

28. That the Marathas did not care to make it a part of their Empire does in no way affect the validity of the conclusion drawn from geography. That the Marathas did not care to conquer it does not prove that Bombay is not a part of Maharashtra. It only means that the Maratha power was a land power and did not therefore care to spend its energy in the conquest of a seaport.

29. With the decision on Points (1) and (2), the burden must now shift on those who contended that Bombay should not be included in Maharashtra. Have they discharged the burden? This leads to the consideration of other points.

POINT (3)

Marathi-speaking population—majority or minority

30. There is no unanimity on this question. Prof. Gadgil speaking for the inclusion of Bombay in Maharashtra asserts that the Marathi-speaking population of Bombay according to the census of 1941 is 51 per cent. Speaking against the inclusion of Bombay, Prof. Gheewala says that the Marathi-speaking population of Bombay is 41 percent Prof. Vakil has brought it down to 39 percent which he regards as a very liberal estimate. I have not had time to check up these figures and I understand that the Census of Bombay does not render much help in arriving at a precise figure. However, if one reads the reasons assigned by Prof. Vakil, one would find his conclusion to be speculative it not wishful thinking. But assuming that the figures given by Prof. Vakil are correct, what of it? What conclusion can be drawn from it? Does it defeat the claim of Maharashtra to include Bombay? Ever since the British became the masters of India, India has been one country with a right to free movement from place to place. If people from all parts of India were allowed to come to Bombay and settle there, why should the Maharashtrians suffer? it is not their fault. The present state of the population cannot therefore be a ground for excluding Bombay from Maharashtra.

POINT (4)

Are Gujarathis Natives Of Bombay?

31. Let us however fully consider the question. Are the Gujarathis natives of Bombay? If they are not, how did they come to Bombay? What is the source of their wealth? No Gujarathi would clam that the Gujarathis are the natives of Bombay. If they are not the natives of Bombay, how did they come to Bombay? Like the Portuguese, the French, the Dutch and the English on adventures to fight their way through and willing to take any risks? The answers which history gives to these questions are quite clear.

The Gujarathis did not come to Bombay voluntarily. They were brought to Bombay by the officers of the East India Company to serve as commercial *Adatias* or go-betweens. They were brought because the East India Company's officers who had their first factory in Surat had got used to Surti Baniyas as their go-betweens in carrying on their trade. This explains the entry of Gujarathis in Bombay. Secondly, the Gujarathis did not come to Bombay to trade on the basis of free and equal competition with other traders. They came as privileged persons with certain trading rights given to them exclusively by the East India Company. Their importation into Bombay was considered for the first time in the year 1671 by Governor Aungier. This fact is referred to in the *Gazetteer of Bombay Town and Island*. Vol. I in the following terms :
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_10

"Another scheme for the advantage of. Bombay in which Governor Aungier interested himself was the settlement of Surat Baniyas in Bombay. It appears that the Mahajan or committee of the Surat Bania community desired the assurance of certain privileges before risking the move to Bombay and that the company had given a general approval to the Mahajan's proposal. On the 10th January the Surat Council wrote to the Company. The Mahajan or Chief Council of the Baniyas have been much satisfied with the answer which you were pleased to give to their petition sent you by the ship *Samson* touching their privileges in Bombay. It seems they have determined once more to trouble Your Honours with a letter which they have ordered your broker Bhimji Parakh to write, representing their desires that the said privileges may be confirmed to them under your great seal, for which their request they give you their reason and ground in their own letter which they have sent us to be transmitted to you and now goes in your packet by ship *Falcon*. The argument they use to strengthen their request seems to have some weight. They say the Honourable Company are perpetual and their ordinances always of force, but their Presidents and Councils are mutable, and the succeeding Presidents and Councils, do alter often what their predecessors have granted on which score they hope your Honours will be pleased to grant their petition. As to our judgments hereon, we humbly offer that we cannot see any detriment can accrue to you thereby, rather a considerable advantage may follow; and as to the latitude and extent of what privileges you shall afford them, it must be totally referred to your own wisdoms howsoever you shall please to determine in this matter. We judge if your Honours would please to favour them with a line in answer to their letter, it would be a great

comfort to them and no disadvantage to your interest."

32. What were the privileges which the Gujjarathi Baniyas had asked for from the East India Company? The following petition by one Nima Parakh, an eminent Bania belonging to the City of Diu, gives some idea of what they were:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/03. Maharashtra as a Linguistic Province.htm - _msocom_11

"1. That the Honourable Company shall allot him so much ground in or near the present town free of rent as shall be judged necessary to build a house or warehouse thereon.

"2. That he with the Brahmans of Vers (Gors or priests) of his caste shall enjoy the free exercise of their religion within their own houses without the molestation of any person whatsoever; that no Englishman, Portuguese, or other Christian nor Muhammadan shall be permitted to live within their compound or offer to kill any living creature there, or do the least injury or indignity to them, and if any shall presume to offend them within the limits of their said compound, upon their complaint to the Governor (at Surat) or Deputy Governor (at Bombay), the offenders shall be exemplarily punished; that they shall have liberty to burn their dead according to their custom, also to use their ceremonies at their weddings ; and that none of their profession of what age, sex or condition whatever they be, shall be forced to turn Christians, nor to carry burthens against their wills.

"3. That he and his family shall be free from all duties of watch and ward, or any charge and duty depending thereon; that neither the Company nor the Governor, Deputy Governor or Council, or any other person, shall on any pretence whatsoever force them to lend money for public or private account or use any indirect.

"4. That in case there falls out any difference or suit in law between him or his vakil or attorneys or the Baniyas of his caste, and any other persons remaining on the island, the Governor or Deputy Governor shall not suffer him or them to be publicly arrested dishonoured or carried to prison, without first giving him due notice of the cause depending, that he or they may cause justice to be done in an honest and amicable way and in case any difference happen between him or his attorney and any Bania of their own caste, they may have liberty to decide it among themselves without being forced to go to law.

"5. That he shall have liberty of trade in his own ships and vessels to what port he pleases, and come in and go out when he thinks good; without paying anchorage, having first given the Governor or Deputy Governor or customer notice and taken their consent thereunto.

"6. That in case he brings any goods on shore more than he can sell on

the island within the space of 12 months, he shall have liberty to transport them to what port he pleases, without paying custom for exportation.

"7. That in case any person be indebted to him, and also to other Banias, and be not able to pay all his debts, his right may be preferred before other Banias.

"8. That in case of war. or any other danger which may succeed, he shall have a warehouse in the castle to secure his goods, treasure, and family therein.

"9. That he or any of his family shall have liberty of egress and regress to and from the fort or residence of the Governor or Deputy Governor; that they shall be received with civil respect and be permitted to sit down according to their qualities; that they shall freely use coaches, horses or palanquins and quitasols (that is barsums or umbrellas) for their convenience without any disturbances ; that their servants may wear swords and daggers, shall not be abused, beaten or imprisoned except they offend, and that in case of any of his kindred or friends shall come to visit him or them from any other ports, they shall be used with civility and respect.

"10. That he and his assigns shall have liberty to sell and buy coconuts, betelnuts, pan or betel-leaves, and any other commodity not rented out without any molestation on the island."

33. How this petition of Nima Parakh was disposed of can be seen from the reply of the Deputy Governor of Bombay dated 3rd April. 1677, which was in the following terms :

"According to order we have consider the articles of Nima Parakh Bania, which if we rightly understand we do not apprehend any prejudice connection the most of them being what the meanest enjoy.

"The first is very easy, the Company having vast ground enough, and we daily *do* the same to Banias and others who come to inhabit here. As to the second, the free exercise of religion is permitted to all with the use of their ceremonies at: weddings and feast, the Banias always burning their dead without molestation. Neither do we permit any person to kill anything near the Banias who ail live by themselves, much less can any person presume to enter into anybody's house or compound without the owner's license; and, for forcing people to turn Christian against their wills, the whole world will vindicate us; neither are any persons forced to carry burdens against their wills. No Bania, Brahman, Moor, or such man is obliged to watch or ward or other duty, but if any person buys an oart or warge (*vada*) he is bound on every alarm to send a musquiter. But if he possesses no land no duty is exacted, so the articles may be granted to Nima. and when

he goes about to buy any land he may be acquainted with that small encumbrance thereon.

“The 4th article is indeed a privilege but no more than Girdhar, the Moody and some others have, which does not in the least exempt them from the hands of the law or justice, but does only ask that justice be done respectfully, which he need not doubt of... and for matter of differences among themselves there is already his Honour's patent authorising them to decide such things.

“As to the 5th, the great anchorage of a rupee per ton is wholly taken off. There remains only a small one of a rupee for every 100 tons, which is so inconsiderable a matter that we do not believe we will stick at it. If he does, it will amount but to a small matter being only for his own vessels that the Company may easily allow it.

“The 6th if we rightly apprehend it, is no more than what all people enjoy, who are so far from paying custom at exportation of their own goods that they pay none for what goods they buy. But if he intends his goods must pay no custom at landing nor none at exportation of what he cannot sell, it will be so great a loss to the Company, they having farmed out the customs for two years, that the benefit of his settling here, will, we believe, not countervail it, till it comes into the Company's hands again,

“As to the 7th, our law is such that if a person be indebted to several men, whosoever gets a judgment first in Court will be paid his full debt, but no man can be aggrieved at that, nor can any creditor have any pretence to what is once paid, and when judgment is given it is already paid in law, so that. he *is* no longer proprietor of it But when a person is indebted to two men and the first sues him and upon that the second comes in and sues him too, with what justice can we pay all the debtor's estate to the second creditor. Only of this he may be assured that all justice shall be done him with speed according to our law and the party forced to pay the full debts if able, and be in prison for the rest till he pleases to release him, which we suppose may well content him.

"As to the 8th in case of war all person of quality have liberty to repair to the castle and secure their money and other things of value. Nor that I suppose *be* intends to fill up the castle with gari (coarse) goods ; but for money, jewels household stuff ,cloth goods of value that take up small room he may bring what he pleases and may have a warehouse apart allotted for himself and family.

"The 9th and 10th we may join together, they being only to fill up the number. They are plain optics to show the nature of those they live under. which, when they have experimented our Government, themselves will

laugh at us, enjoying more freedom than the very articles demand for the meanest person is never denied egress and regress upon respectful notice given and for horses and coaches and the like he may keep as many as he pleases and his servants be permitted to wear what arms they please, a thing common to all. Nothing is more promoted by us than the free liberty for buying and selling which is the load-stone of trade.

"That last thing he asked of having 10 *mans* of tobacco free of all duties is the most difficult thing of all, for the farmers will ask a vast deal to grant such a licence/it being a very great profit they make in the sale of 10 *mans*, so that we know not which way this article can be condescended to, but in this your Honours can judge better than us." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_12

34. In reply on the 26th April, the Surat Council wrote : mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/03. Maharashtra as a Linguistic Province.htm - _msocom_13 "We observe your answer touching the articles proposed by Nima Parakh Bania in order to his settlement on Bombay. When we come again to treat with him thereon, we hope so to moderate the affair that the island shall not receive any the least prejudice thereby and we do not question but wholly to put him by his request to 10 *mans* of tobacco which he would annually receive or bring on the island free of all duties."

POINT (5)

Bombay—an Emporium of India

35. That Bombay is an emporium for the whole of India may be admitted. But it is difficult to understand how it can be said that because of this, Maharashtra cannot claim Bombay. Every port serves a much larger area than the country to which it belongs. No one, on that account, can say the country in which the port is situated cannot claim it as a part of its territory. Switzerland has no port. It uses either German, Italian or French Ports. Can the Swiss therefore deny the right of Germany, Italy or France, the territorial rights of their ports. Why then should Maharashtrians be denied the right to claim Bombay merely because it serves as a port for Provinces other than Maharashtra? It would be different if the Province of Maharashtra were to get a right to close the Port to Non-Maharashtrians. Under the constitution, it will not have that right. Consequently, the inclusion of Bombay in Maharashtra will not affect the right of non-Maharashtrians to use the port as before.

POINT (6)

Gujarathis--owners of Trade and Industry of Bombay

36. It may be granted that the Gujarathis have a monopoly of trade. But, as has already been pointed out, this monopoly, they have been able to establish because of the profits they were able to make which were the result of the privileges given to them by the East India Company on their settlement in Bombay. Who built up the trade and industry of Bombay is a matter for which no very great research is necessary. There is no foundation in fact for the statement that the trade and industry of Bombay was built up by Gujarathis. It was built up by Europeans and not by Gujarathis. Those who assert that it is the Gujarathis who did it should consult the *Times of India Directory* before making such a claim. The Gujarathis have been just merchants which is quite a different thing from being industrialists.

37. Once it is established that Bombay belonged to Maharashtra the claim of Maharashtra to include Bombay cannot be defeated by the argument that the trade and industry of Bombay is owned by the Gujarathis. The claim of mortgagor to his land cannot be defeated by the mortgagee on the ground that the mortgagee has built up permanent structures on the land. The Gujarathis assuming they have built up the trade and industry of Bombay are in no better position than a mortgagee is.

38. But who have built up the trade and industry of Bombay seems to me quite irrelevant to the decision of the issue whether Bombay should or should not be included in Maharashtra. This argument based on monopoly of trade and industry is really a political argument. It means that the owners may rule the workers but the workers must not be allowed to rule the owners. Those who use this argument do not seem to know what they are up against. The one thing they are up against is whether this argument is to be confined only to the City of Bombay or whether it is to have a general application.

39. There is no reason why it should not have a general application. For just as in Bombay City society is divided into owners and workers or into capitalists and wage-earners, such also is the case of society in Gujarat or for the matter of that in every province of India. If the owners and capitalists of Bombay are to be protected by the exclusion of Bombay from Maharashtra because Maharashtrians belong to the working classes, what is the method they suggest for protecting the capitalists of Gujarat from the working classes of Gujarat. Those Gujarathi Professors like Vakils and Dantwalas who are searching their brains to supply arguments to the Gujarathi capitalists of Bombay have not thought of finding ways and means for protecting the Gujarathi capitalists of Gujarat against the working classes of Gujarat. The only remedy they can suggest is the

abandonment of adult suffrage. That is the only way by which they can protect the capitalists if they are out to protect capitalists in general and not the Gujarathi capitalists of Bombay in particular.

40. There is however one argument which the Professors could urge. It is that the Maharashtrians being in a majority would discriminate against the Gujarathi capitalists of Bombay if Bombay was included in Maharashtra.

One could appreciate such an argument. But those who like to use this argument must remember two things :

(i) That Maharashtra is not the only place in which such a situation can arise. It may arise in any province. I like to refer to Bihar. In Bihar the land in which coal is found belongs to the people of Bihar. But the coal-owners are Gujarathis, Kathiawaris or Europeans. Is there no possibility of Biharis making a discrimination against Gujarathi and Kathiawari coal-owners? Are the coalfields of Bihar to be excluded from the Province of Bihar and constituted into a separate Province in the interest of Kathiawari and Gujarathi coal-owners?

(ii) The constitution of India has noted the possibility of discrimination being made against a minority and has made more than ample provision for preventing it. There are the fundamental rights. There are the provisions against discrimination; there are the provisions of payment of compensation, and there are the High Courts with the inherent rights to issue high prerogative writs both against individuals and Governments to stop any harm, injustice or harassment being done to any citizen. What more protection do the Gujarathi traders and industrialists of Bombay want against the possibility of discrimination?

POINT (7)

Maharashtra's eye on Bombay's surplus

41. Before accusing Maharashtrians of having an eye on the surplus of Bombay it must be proved that Bombay has a surplus. What appears as surplus is due really to bad accounting. It is bad accounting where expenditure on overhead charges such as (1) the Governor and his establishment, (2) the Ministers and their establishments, (3) the Legislature and the expenditure thereon, (4) Judiciary, (5) Police and (6) Provincial establishments such as those of the Commissioners of Police and Directors of Public Instruction is not being taken into account. I doubt very much if on the existing basis of taxation, Bombay will have any surplus if expenditure on these items is charged to Bombay. It is a fallacy to charge all such expenditure to Maharashtra and exempt Bombay from it and then argue that Bombay has a surplus.

42. The statement that the Maharashtrians want Bombay because they want to live on the surplus revenue of Bombay, besides being wrong in fact raises a question of motive. I do not know if the Maharashtrians are actuated by any such motive. They are not a commercial community. Unlike other communities, the Maharashtrians have no nose for money, and I am one of these who believe that it is one of their greatest virtues. Money has never been their god. It is no part of their culture. That is why they have allowed all other communities coming from outside Maharashtra to monopolize the trade and industry of Maharashtra. But as I have shown there is no surplus and no question of Maharashtrians casting their eyes on it.

43. But supposing such a motive in the minds of the Maharashtrians, what is wrong in it? It is quite open to Maharashtrians to contend that they have a greater claim on Bombay's surplus because they have played and they will continue to play a greater part in supplying labour for the building up of the trade and industry of Bombay more than the people from other Provinces have done or likely to do. It would be difficult for any economist with any reputation to save who could deny that labour has as much claim on the wealth produced as capital if not more.

44. Secondly, the surplus from Bombay is not consumed by Maharashtra alone but is consumed by the whole of India. The proceeds of the Income-tax, Super-tax, etc. which Bombay pays to the Central Government are all spent by the Central Government for all-India purposes and is shared by all other Provinces. To Prof. Vakil it does not matter if the surplus of Bombay is eaten up by United Provinces, Bihar, Assam, Orissa, West Bengal, East Punjab and Madras. What he objects to is Maharashtra getting any part of it. This is not an argument. It is only an exhibition of his hatred for Maharashtrians.

45. Granting that, Bombay was made into a separate Province, what I don't understand is how Prof. Vakil is going to prevent Maharashtra from getting share of Bombay surplus revenue. Even if Bombay is made separate Province, Bombay will have to pay income-tax, super-tax, etc. and surely Maharashtra will get a part of the revenue paid by Bombay to the Centre either directly or indirectly. As I have said the argument has in it more malice than substance.

POINTS (8) AND (9)

General arguments against the inclusion of Bombay in Maharashtra

46. I will now turn to the Points (8) and (9) which have been urged by

Professors Dantwala and Gheewala. Their arguments strike at the very root of the principle of Linguistic Provinces. As such I should have dealt with them in Part I of this Memorandum. But as the aim of their argument is to exclude Bombay from being included in Maharashtra, I have thought it proper to deal with them in this Part of the Memorandum as they are really arguments against the inclusion of Bombay in Maharashtra.

47. The sum total of the arguments of the two Professors is that Linguistic Provinces are bad. This cry against Linguistic Provinces is too late. Since when two Professors having been holding these views is not known. Are they opposed to Gujarat being reconstituted on Linguistic Provinces also has not been made clear by them. Or, is it that they believed in the principle of Linguistic Provinces but hurried to disavow it when they realized that the admission of the principle involves the surrender of Bombay to Maharashtra. It is perhaps one of these cases where a person not finding argument limited to his purpose is forced to resort to an argument which proves more than he is anxious to allow. I am, however, prepared to examine the substance of their argument.

48. Prof. Dantwala relies upon Lord Acton and quotes the following passage from his Essay on Nationality printed in his well-known book *The History of Freedom and Other Essays* in support of his own view against Linguistic Provinces. The quotation reads as follows :

"The combination of various nations in one State is a necessary condition of civilized life as the combination of men in society."

49. I am sorry to say that this quotation completely misrepresents Lord Acton. The quotation is only a few opening lines of a big passage. The full passage reads as follows :

"The combination of different nations in one State is as necessary a condition of civilized life as the combination of men in society. Inferior races are raised by living in political union with races intellectually superior. Exhausting and decaying nations are revived by the contact of younger vitality. Nations in which the elements of organization and the capacity for Government have been lost, either through the demoralizing influence of despotism or the disintegrating action of democracy, are restored and educated anew under the discipline of a stronger and less corrupted race. This fertilizing and regenerating process can only be obtained by living under one Government. It is in the cauldron of the State that the fusion takes place by which the vigour, the knowledge and the capacity of one portion of mankind may be communicated to another.

50. Why Prof. Dantwala left out the rest of the passage, it is difficult to understand. I am not suggesting that it is a deliberate case of *suppresio veri*

and *suggestio falsi*. The fact is that it does misrepresent Lord Acton. Why has the Professor relied upon this passage, I do not understand. It is quite obvious that if the inferior races are placed in common with the superior races, the inferior races may improve. But the question is, who is inferior or who is superior. Are the Gujarathis inferior to Maharashtrians? Or are the Maharashtrians inferior to Gujarathis? Secondly, what is the channel of communion between Gujarathis and Maharashtrians which can assure the fusion of the two? Prof. Dantwala has not considered the question. He found a sentence in Lord Acton's Essay and jumped at it for he could find nothing else to support his case. The point is that there is nothing in the message which has any relevance to the principle involved in the question of Linguistic Province.

51. So much for Prof. Dantwala's arguments. I will now examine Prof. Gheewala's arguments. Prof. Gheewala also relies on Lord Acton. He quotes a portion of a passage from Lord Acton's Essay on Nationality. I reproduce below the passage in full :

"The greatest adversary of the rights of nationality is the modern theory of nationality. By making the State and the nation commensurate with each other in theory, it reduces practically to a subject condition all other nationalities that may be within the boundary. It cannot admit them to an equality with the ruling nation which constitutes the State, because the State would then cease to be national, which would be a contradiction of the principle of its existence. According, therefore, to the degree of humanity and civilization in that dominant body which claims all the rights of the community, the inferior races are exterminated, or reduced to servitude, or outlawed, or put in a condition of dependence."

52. I do not understand why the learned Professor has dragged in the name of Lord Acton. The passage does not really help him. There is one thing which seems to be uppermost in his mind. He thinks that if Bombay is included in Maharashtra the Province of Maharashtra will consist of two nationalities—one consisting of the Marathi-speaking people and the other of the Gujarathi-speaking people and the Marathi-speaking people who would be the dominant class will reduce the Gujarathi-speaking people to a subject condition. It is in support of this he thought of citing Lord Acton. Such a possibility is always there. There is no objection to the way in which he has presented the problem. But there are great objections to the conclusions he draws.

53. In the first place, in a country like India in which society is throughout communally organized it is obvious that in whatever way it is divided into areas for administrative purposes, in every area there will always be one

community which by its numbers happens to be a dominant community. As a dominant community it becomes a sole heir to all political power, which the area gets. If Marathi-speaking people in a unified Maharashtra with Bombay thrown into it will become dominant over the Gujarathi-speaking people, will this prospect be confined to Maharashtra only? Will such a phenomena not occur within the Marathi-speaking people? Will it not be found in Gujarat if Gujarat became a separate Province? I am quite certain that within the Marathi-speaking people who are sharply divided between the Marathas and the non-Marathas, the Marathas being a dominant class will reduce both Gujarathi-speaking and the non-Marathas to a subject condition. In the same way in Gujarat in some parts the Anavil Brahmins from a dominant class. In other parts it is the Patidars who form a dominant class. It is quite likely that the Anavils and the Patidars will reduce the condition of the other communities to subjection. The problem therefore is not a problem peculiar to Maharashtra. It is a general problem.

54. What is the remedy for this problem? Prof. Gheewala believes that the remedy lies in having a mixed State. So far as this remedy is concerned it is not his own. He has adopted it from Lord Acton. But I have no doubt that so far as Lord Acton advocates this remedy he is quite wrong. Lord Acton cites the case of Austria in support of his view. Unfortunately, Lord Acton did not live to see the fate of Austria. It was a mixed State. But far from providing for the safety of nationalities the clash of nationalities blew up Austria to bits. The real remedy is not a mixed State but an absolute State with no power to the people which is generally captured by a communal majority and exercised in the name of the people. Is Prof. Gheewala prepared for this remedy? One need have no doubt to what his answer would be.

55. In the second place. Prof. Gheewala has confounded nationality in the social sense of the term with Nationality in its legal and political sense. People often speak of nationality in speaking about Linguistic Provinces. Such use of the term can be only in the non-legal and non-political sense of the term. In my scheme there is no room even for the growth of separate provincial nationality. My proposal nips it in the bud. But even if the commonly suggested pattern of Linguistic Provinces with the language of the Province as the official language were adopted. Provinces cannot have that attribute of sovereignty which independent nations have.

56. It is very difficult to understand what exactly what Prof. Gheewala wants. Broadly he wants two things : He wants a mixed State and he also wants that a dominant section should not be in a position to reduce the smaller sections to subjection. I cannot see how Linguistic Provinces can

come in the way of achieving it. For even after Provinces have been reconstituted on linguistic basis,—

(1) Provinces will continue to be a conglomeration of communities which will give Prof. Gheewala the mixed State that he wants;

(2) If Prof. Gheewala wants a more pronounced form of a mixed State to protect smaller communities or nationalities, he will certainly have it at the Centre.

As I have said, I do not think a mixed State is either a good State or stable State. But if Prof. Gheewala prefers it, he will have it in one form or another, both in the Provinces as well as at the Centre, in the former in the form of different communities and in the latter in the form of the representatives of different Provinces.

57. With regard to his second objective, there will be double protection. In the first place, the citizen will have such protection as a mixed State he thinks can give. Secondly, citizenship will be common throughout India.

There is no provincial citizenship. A Gujarathi in Maharashtra will have the same rights of citizenship in Maharashtra as Maharashtrian will have.

Given these facts, I fail to understand what objection Prof. Gheewala can have to Linguistic Provinces?

58. Prof. Gheewala has made two other recommendations. He says, (1) if Provinces have to be reconstituted, constitute them on rational basis rather than on linguistic basis and (2) make nationality a personal thing.

59. To reconstitute Provinces on economic basis—which is what is meant by rational basis—appears more scientific than reconstituting them on linguistic basis. However, unscientific linguistic reorganization of Provinces I cannot see how they can come in the way of rational utilization of economic resources of *ndia*. Provincial boundaries are only administrative boundaries. They do not raise economic barriers for the proper utilization of economic resources. If the position was that the resources contained within a Linguistic Province must only be explained by the people of the Province and no other than it could no doubt be said that the scheme of Linguistic Provinces was mischievous. But such is not the case. So long as Linguistic Provinces are not allowed to put a ban on the exploitation of the resources of the people by any body capably of wishing to exploit them a Linguistic Province will yield all the advantages of a rationally planned Province.

60. The proposal of making nationality as a personal thing and put it on the same footing as religion may be dismissed as being too Utopian. It would raise many administrative problems. It will come when the world is one and all nationals are its citizens. Nationality will automatically vanish as

being quite useless.

61. So far I have dealt with the arguments advanced by those who are opposed to the inclusion of Bombay in Maharashtra. I have taken pains to do so not because I felt that they were very weighty. I did so because I felt it desirable to prevent the common man from being misled. The possibility of this happening was there and for two reasons. In the first place, those who have come forward with these arguments are not ordinary men. They are University Professors. Secondly, these Professors came out with their arguments after Prof. Gadgil had put forth the case for the inclusion of Bombay in Maharashtra. Unfortunately, no attempt has so far been made to refute the arguments of the adversaries of Prof. Gadgil. The result has been the creation of an impression that Prof. Gadgil's adversaries have carried the day. It was absolutely essential to remove this impression.

The other side

62. There are however arguments which the adversaries of Prof. Gadgil have not thought of but which may be advanced with justice as well as force in favour of the claim of Maharashtrians for the inclusion of Bombay in Maharashtra. It is quite possible that these arguments may suggest themselves to the Commission. But I don't like to leave it to chance. I therefore propose to set them out below even though the Commission might think that it was unnecessary.

Calcutta and Bombay

63. In deciding upon the issue of exclusion of Bombay from Maharashtra the Commission will have to take into account the position of Calcutta. Like Bombay it is the chief emporium of the whole of eastern part of India. Like the Maharashtrians in Bombay the Bengalis in Calcutta are in a minority. Like the Maharashtrians in Bombay, the Bengalis do not own the trade and industry of Calcutta. The position of the Bengalis *vis-à-vis* Calcutta is worse than the position of the Maharashtrians *vis-à-vis* Bombay. For, the Maharashtrians can at least claim that they have supplied labour if not capital for the trade and industry of Bombay. The Bengalis cannot even say this. If the Commission can accept the arguments urged for the separation of Bombay from Maharashtra, it must be equally prepared to recommend the separation of Calcutta from West Bengal. For it is a very pertinent question to ask that if for the reasons given Bombay can be separated from Maharashtra why when the same reasons exist Calcutta be not separated from West Bengal.

Is Bombay Viable?

64. Before Bombay can be separated it must be proved that financially Bombay is a viable Province. As I have already said if proper accounting of revenue and expenditure was made Bombay on the basis of present level of taxation may not be a self-sufficient Province. If that be so, the proposal for creating Bombay a separate Province must fall to the ground. It is no use comparing Bombay with Provinces like Orissa and Assam. The standard of administration, the standard of living and consequently the level of wages in Bombay are all so high that I doubt that even with a crushing rate of taxation Bombay will be able to raise the necessary amount of revenue to meet the expenditure.

The aim behind Greater Bombay

65. This doubt regarding viability of Bombay Province is heightened by the indecent haste shown by the Government of Bombay in creating Greater Bombay by including within the limits of Bombay the adjoining parts of Maharashtra. It seems that the object of including such area cannot but be to make Bombay viable. What else can it be? So long as Bombay remained part of Maharashtra it did not matter to Maharashtrians in which administrative area a portion of Maharashtra was included. But when Bombay is to be a separate Province it will take a long time to make Maharashtrians part with their territory to make Bombay greater and viable. What is more important is the scheme of greater Bombay casts responsibility upon the Linguistic Provinces Commission to decide whether they could, with justice force Maharashtrians not only to submit to the demand of the Gujarathis to give up Bombay but also to submit to their further demand to hand over a part of territory of Maharashtra to make Bombay a viable Province. The Commission cannot escape this responsibility.

66. Maharashtra and Bombay are not merely inter-dependent, they are really one and integral. Severance between the two would be fatal to both. The sources of water and electricity for Bombay lie in Maharashtra. The intelligentsia of Maharashtra lives in Bombay. To sever Bombay from Maharashtra would be to make the economic life of Bombay precarious and to dissociate the masses of Maharashtra from its intelligentsia without whose lead the masses of Maharashtra will be nowhere.

Arbitration as a Solution

67. I have seen a suggestion made in some quarters that problem of Bombay should be settled by arbitration. I have never heard of a more absurd suggestion than this. It is as absurd as the suggestion to refer matrimonial cause to arbitration, The matrimonial tie is too personal, to be

severed by a third party. Bombay and Maharashtra are tied together by God to use a Biblical phrase. No arbitrator can put them asunder. The only agency which is authorized to do so is the Commission. Let it decide.

MANU AND THE SHUDRAS

This is a 31 page hand written Ms. of Dr. Ambedkar. The chapter has no title. It is also left incomplete. The title is suggested—editor.]

I

The reader is now aware that in the Scheme of Manu there were two principal social divisions : those outside the Chaturvarna and those inside the Chaturvarna. The reader also knows that the present day Untouchables are the counterpart of those outside the Chaturvarna and that those inside the Chaturvarna were contrasted with those outside. They were a composite body made up of four different classes, the Brahmins, the Kshatriyas, the Vaishyas and the Shudras. The Hindu social system is not only a system in which the idea of classes is more dominant than the idea of community but it is a system which is based on inequality between classes and therefore between individuals. To put it concretely, the classes i. e. the Brahmins, Kshatriyas, Vaishyas, Shudras and Antyajas (Untouchables) are not horizontal, all on the same level. They are vertical i.e. one above the other. No Hindu will controvert this statement. Every Indian knows it. If there is any person who would have any doubt about it he can only be a foreigner. But any doubt which a foreigner might have will be dissolved if he is referred to the law of Manu who is the chief architect of the Hindu society and whose law has formed the foundations on which it is built. For his benefit I reproduce such texts from the Manu Smriti as go to prove that Hindu society is based on the principle of inequality.

II

It might be argued that the inequality prescribed by Manu in his Smriti is after all of historical importance. It is past history and cannot be supposed to have any bearing on the present conduct of the Hindu. I am sure nothing can be greater error than this. Manu is not a matter of the past. It is even more than a past of the present. It is a 'living past' and therefore as really present as any present can be.

That the inequality laid down by Manu was the law of the land under the pre-British days may not be known to many foreigners. Only a few

instances will show that such was the case.

Under the rule of the Marathas and the Peshwas the Untouchables were not allowed within the gates of Poona city, the capital of the Peshwas between 3 p. m. and 9 a. m. because, before nine and after three, their bodies cast too long a shadow; and whenever their shadow fell upon a Brahmin it polluted him, so that he dare not taste food or water until he had bathed and washed the impurity away. So also no Untouchable was allowed to live in a walled town ; cattle and dogs could freely enter but not the Untouchables

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/57. Manu and the Shudras.htm - _msocom_1

Under the rule of the Marathas and the Peshwas the Untouchables might not spit on the ground lest a Hindu should be polluted by touching it with his foot, but had to hang an earthen pot round his neck to hold his spittle. He was made to drag a thorny branch of a tree with him to brush out his footsteps and when a Brahman came by, had to lie at a distance on his face lest his shadow might fall on the Brahman

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/57. Manu and the Shudras.htm - _msocom_2

In Maharashtra an Untouchable was required to wear a black thread either in his neck or on his wrist for the purpose of ready identification.

In Gujarat the Untouchables were compelled to wear a horn as their distinguishing mark

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/57. Manu and the Shudras.htm - _msocom_3.

In the Punjab a sweeper was required while walking through streets in towns to carry a broom in his hand or under his armpit as a mark of his being a scavenger

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/57. Manu and the Shudras.htm - _msocom_4.

In Bombay the Untouchables were not permitted to wear clean or untorn clothes. In fact the shopkeepers took the precaution to see that before cloth was sold to the Untouchable it was torn & soiled.

In Malabar the Untouchables were not allowed to build houses above one storey in height

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/57. Manu and the Shudras.htm - _msocom_5 and not allowed to cremate their dead

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/57. Manu and the Shudras.htm - _msocom_6.

In Malabar the Untouchables were not permitted to carry umbrellas, to wear shoes or golden ornaments, to milk cows or even to use the ordinary language of the country

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/57. Manu and the Shudras.htm - _msocom_6.

[Shudras.htm - _msocom_7.](#)

In South India Untouchables were expressly forbidden to cover the upper part of their body above the waist and in the case of women of the Untouchables they were compelled to go with the upper part of their bodies quite bare

[Manu and the Shudras.htm - _msocom_8.](#)

In the Bombay Presidency so high a caste as that of Sonars (goldsmiths) was forbidden to wear their Dhoties with folds

[Manu and the Shudras.htm - _msocom_9](#) and prohibited to use *Namaskar* as the word of salutation#.

The following letter will be interesting to the reader as it throws a flood of light as to whether the Dhamia prescribed by Manu was or was not the law of the land-

“To

Damulsett Trimbacksett

Head of the Caste of Goldsmiths.

“The Hon 'ble the President in Council having thought proper to prohibit the Caste of Goldsmiths from making use of the form of salutation termed *Namaskar*, you are hereby pre-emptorily enjoined to make known this order and resolution to the whole caste and to take care that the same be strictly observed.

By order

Secretary to Government
sig. W. Page

Bombay

9th August 1779.

Resolution of Government Dated 28th July 1779.

“Frequent disputes having arisen for some time between the Brahmins and Goldsmiths respecting a mode of salutation termed ‘*Namaskar*’ made use of by the latter, and which the Brahmins allege they have no right to perform, and that the exercise of such ceremony by the Goldsmiths is a great breach and profanation of the rights of the Gentoo {Hindu} Religion, and repeated complaints having been made to us by the Brahmins, and the Peishwa also having several times written to the President, requesting the use of the *Namaskar*

might be prohibited to the Goldsmiths-Resolved as it i"necessary. This matter should be decided by us in order that the dispute between the two castes may be put an end to, and the Brahmins appear to have reason *for* their complaint, that the Goldsmiths be forbidden the use of the Namaskar, and this being a matter wherein the Company's interest is not concerned, our Resolution may be put on the footing of a compliment to the Peishwa whom the President is desired to make acquainted with our determination."

Under the Maratha rule any one other than a Brahmin uttering a Veda Mantra was liable to have his tongue cut off and as a matter of fact the tongues of several Sonars (goldsmiths) were actually cut off by the order of the Peshwa for their daring to utter the Vedas contrary to law.

All over India Brahmin was exempt from capital punishment. He could not be hanged even if he committed murder.

Under the Peshwas distinction was observed in the punishment of the criminals according to the caste. Hard labour and death were punishments mostly visited on the Untouchables mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/57. Manu and the Shudras.htm - _msocom_10.

Under the Peshwas Brahmin clerks had the privilege of their goods being exempted from certain duties and their imported corn being carried to them without any ferry charges; and Brahmin landlords had their lands assessed at distinctly lower rates than those levied from other classes. In Bengal the amount of rent for land varied with the caste of the occupant and if the tenant was an Untouchable he had to pay the highest rent.

These facts will show that Manu though born some time before B. C. or sometime after A. D. is not dead and while the Hindu Kings reigned, justice between Hindu and Hindu, touchable and untouchable was rendered according to the Law of Manu and that law was avowedly based on inequality.

III

This is the dharma laid down by Manu. It is called Manav Dharma i. e. Dharma which by its inherent goodness can be applied to all men in all times and in all places. Whether the fact that it has not had any force outside India is a blessing or a curse I do not stop to inquire. It is

important to note that this Manav Dharma is based upon the theory that the Brahman is to have all the privileges and the Shudra is not to have even the rights of a human being, that the Brahman is to be above everybody in all things merely by reason of his high birth and the Shudra is to be below everybody and is to have none of the things no matter how great may be his worth.

Nothing can show the shamelessness and absurdity of this Manava Dharma better than turning it upside down. I know of no better attempt in this behalf than that of Dr. R. P. Pranjape a great Educationist, Politician and Social reformer and I make no apology for reproducing it in full—

Peep Into the Futuremk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/57.Manu and the Shudras.htm - _msocom_11

This piece Was written against the Non-Brahmin Parties which were then in power in the Bombay and Madras Presidency and in the Central Provinces. The Non-Brahmin parties were founded with the express object of not allowing a single community to have a monopoly in State Service. The Brahmins have a more or less complete monopoly in the State services in all provinces in India and in all departments of State. The Non-Brahmin parties had therefore laid down the principle, known as the principle of communal ratio, that given minimum qualifications candidates belonging to non-Brahmin communities should be given preference over Brahmin candidates when making appointments in the public services. In my view there was nothing wrong in this principle. It was undoubtedly wrong that the administration of the country should be in the hands of a single community however clever such a community might be.

The Non-Brahmin Party held the view that good Government was better than efficient Government was not a principle to be confined only to the composition of the Legislature & the Executive. But that it must also be made applicable to the field of administration. It was through administration that the State came directly in contact with the masses. No administration could do any good unless it was sympathetic. No administration could be sympathetic if it was manned by the Brahmins alone. How can the Brahmin who holds himself superior to the masses, despises the rest as low caste and Shudras, is opposed to their aspiration, is instinctively led to be partial to his community and being uninterested in the masses is open to corruption be a good

administrator? He is as much an alien to the Indian masses as any foreigner can be. As against this the Brahmins have been taking their stand on efficiency pure & simple. They know that this is the only card they can play successfully by reason of their advanced position in education. But they forget that if efficiency was the only criterion then in all probability there would be very little chance for them to monopolise State service in the way and to the extent they have done. For if efficiency was made the only criterion there would be nothing wrong in employing Englishmen, Frenchmen, Germans & Turks instead of the Brahmins of India. Be that as it may, the Non-Brahmin Parties refused to make a fetish to efficiency and insisted that there must be introduced the principle of communal ratio in the public services in order to introduce into the administration an admixture of all castes & creeds and thereby make it a good administration. In carrying out this principle the Non-Brahmin Parties in their eagerness to cleanse the administration of Brahminism while they were in power, did often forget the principle that in redressing the balance between the Brahmins and non-Brahmins in the public services they were limited by the rule of minimum efficiency. But that does not mean that the principle they adopted for their guidance was not commendable in the interests of the masses.

This policy no doubt set the teeth of many Brahmins on edge. They were vehement in their anger. This piece by Dr. Paranjpe is the finest satire on the policy of the non-Brahmin Party. It caricatures the principle of the non-Brahmin party in a manner which is inimitable and at the time when it came out, I know many non-Brahmin leaders were not only furious but also speechless. My complaint against Dr. Paranjpe is that he did not see the humour of it. The non-Brahmin Party was doing nothing new. It was merely turning Manu Smriti upside down. It was turning the tables. It was putting the Brahmin in the position in which Manu had placed the Shudra. Did not Manu give privileges to Brahmin merely because he was a Brahmin? Did not Manu deny any right to the Shudra even though he deserved it? Can there be much complaint if now the Shudra is given some privileges because he is a Shudra? It may sound absurd but the rule is not without precedent and that precedent is the Manu Smriti itself. And who can throw stones at the non-Brahmin Party? The Brahmins may if they are without sin. But can the authors and worshippers, upholders of Manu Smriti claim that they are without sin? Dr. Paranjpe's piece is the finest condemnation of the iniquity that underlies this Manav Dharma. It shows as nothing else

does what a Brahmin feels when he is placed in the position of a Shudra.

IV

Inequality is not confined to Hindus. It prevailed elsewhere also and was responsible for dividing society into higher and lower free and servile classes. (Left incomplete in Ms—ed.)

PREFACE

In response to the invitation of the Chairman of the Indian section of the Institute of Pacific Relations, I wrote in August last year a Paper on the Problem of the Untouchables of India for the Session of the Conference which was due to be held on December 1942 at Mont' Trablant in Quebec in Canada. The Paper is printed in the proceedings of the Conference. Ever since it became known that I had written such a Paper, the leaders of the Untouchables and Americans interested in their problem have been pressing me to issue it separately in the form of a book and make it available to the general public. It was not possible to refuse the demand. At the same time I could not without breach of etiquette publish the paper until the proceedings of the Conference were made public. I am now told by the Secretary of the Pacific Relations Conference that the proceedings have been made public and there can be no objection to the publication of my Paper if I desired it. This will explain why the Paper is published nearly 10 months after it was written.

Except for a few verbal alterations the Paper is printed as it was

presented to the Conference. The Paper will speak for itself. There is only one thing I would like to add. It is generally agreed among the thoughtful part of humanity that there are three problems which the Peace Conference is expected to tackle. They are (1) Imperialism, (2) Racialism, (3) Anti-semitism and (4) Free Traffic in that merchandise of death popularly called munitions. There is no doubt these are the plague glands in which nation's cruelty to nation and man's inhumanity to man have their origin. There is no doubt that these problems must be tackled if a new and a better world is to emerge from the ashes of this terrible and devastating war. What my fear is that the problem of the Untouchables may be forgotten as it *has* been so far. That would indeed be a calamity. For the ills which the Untouchables are suffering if they are not as much advertised as those of the Jews, are not less real. Nor are the means and the methods of suppression used by the Hindus against the Untouchables less effective because they are less bloody than the ways which the Nazis have adopted against the Jews. The Anti-semitism of the Nazis against the Jews is in no way different in ideology and in effect from the Sanatanism of the Hindus against the Untouchables .

The world owes a duty to the Untouchables as it does to all suppressed people to break their shackles and to set them free. I accepted the invitation to write this Paper because I felt that it was the best opportunity to draw the attention of the world to this problem in comparison to which the problem of the Slaves, the Negroes and the Jews is nothing. I hope the publication of this Paper will serve as a notice to the Peace Conference that this problem will be on the Board of Causes which it will have to bear and decide and also to the Hindus that they will have to answer for it before the bar of the world.

22, Prithviraj Road,
New Delhi.
1st September 1943.

B.R.AMBEDKAR

CHAPTER I

TOTAL POPULATION OF THE UNTOUCHABLES

THE Decennial Census in India was at one time a very simple and

innocent operation which interested only the Malthusians. None else took interest in it. Today the Census is a matter of a first rate concern to everybody. Not only the professional politician but the general public in India regards it as a matter of very grave concern. This is so because Politics in India has become a matter of numbers. It is numbers which give political advantage, to one community over another which does not happen anywhere else in the world. The result is that the Census in India is deliberately cooked for securing political advantages which numbers give. In this cooking of the Census the Hindus, the Muslims and the Sikhs have played their part as the chief chefs of the kitchen. The Untouchables and the Christians, who are also interested in their numbers, have no hand in the cooking of the Census, for the simple reason that they have no place in the administrative services of the country which deal with the operations of the Census. On the other hand the Untouchables are the people who are quartered, cooked and served by the Hindus, Muslims and the Sikhs at every Decennial Census. This has happened particularly in the last Census of 1940. The Untouchables of certain parts of the Punjab were subjected to systematic tyranny and oppression by the Sikhs. The object was to compel them to declare in the Census returns that they are Sikhs even though they are not. This reduced the number of the Untouchables and swelled the number of the Sikhs. The Hindus on their part carried on a campaign that nobody should declare his or her caste in the Census return. A particular appeal was made to the Untouchables. It was suggested to them that it is the name of the Caste that proclaims to the world that they are Untouchables and if they did not declare their caste name but merely said that they were Hindus, they would be treated just like other Hindus and nobody would know that they were really Untouchables. The Untouchables fell a victim to this stratagem and decided not to declare themselves as Untouchables in the Census return but to call themselves merely as Hindus. The result was obvious. It reduced the number of Untouchables and swelled the ranks of the Hindus. To what extent the cooking of the Census has taken place it is difficult to say. But there can be no doubt that the degree to which cooking was resorted to was considerable. The Census has been cooked all over. But it is the Untouchables who have suffered most from the cooking of the Census. That being so, the Census figure regarding the total population of the Untouchables in British India cannot be accepted as giving a correct total. But one cannot be far wrong if it was said that the present number of the Untouchables to British India is round about

60 million people.

CHAPTER II

THE IMPORTANCE OF THE UNTOUCHABLES

MOST parts of the world have had their type of what Ward calls the lowly. The Romans had their slaves, the Spartans their helots, the British their villeins, the Americans their Negroes and the Germans their Jews. So the Hindus have their Untouchables. But none of these can be said to have been called upon to face a fate which is worse than the fate which pursues the Untouchables. Slavery, serfdom, villeinage have all vanished. But Untouchability still exists and bids fair to last as long as Hinduism will last. The Untouchable is worse off than a Jew. The sufferings of the Jew are of his own creation. Not so are the sufferings of the Untouchables. They are the result of a cold calculating Hinduism which is not less sure in its effect in producing misery than brute force is. The Jew is despised but is not denied opportunities to grow. The Untouchable is not merely despised but is denied all opportunities to rise. Yet nobody seems to take any notice of the Untouchables-some 60 millions of souls-much less espouse their cause.

If there is any cause of freedom in this Indian turmoil for independence it is the cause of the Untouchables. The cause of the Hindus and the cause of the Musalmans is not the cause of freedom. Theirs is a struggle for power as distinguished from freedom. Consequently it has always been a matter of surprise to me that no party and no organisation devoted to the cause of freedom has so far interested itself in the Untouchables. There is the American Weekly called "The Nation". There is the British Weekly called "Statesman". Both are powerful. Both are friends of India's freedom. I would mention the American Labour and British Labour among organised bodies among the supporters of India's freedom. So far as I know none of these have ever championed the cause of the Untouchables. Indeed what they have done is what no lover of freedom would do. They have just identified themselves with the Hindu body calling itself the Indian National Congress. Now everybody in India, outside the Hindus, knows that whatever may be its title it is beyond question that the Congress is a body of middle class Hindus supplied by the Hindu Capitalists whose object is not to make Indians free but to be independent of British control and to occupy places of power now occupied by the British. If the kind of Freedom which the Congress wants was achieved there is no doubt that the Hindus would do to the Untouchables exactly what they

have been doing in the past In the light of this apathy the Indian branch of the Institute of International Affairs may well be congratulated for having invited a paper for submission to the Institute of Pacific Relations, discussing the position of the Untouchables in India in the New Constitution. I must confess that this invitation for a statement on the position of the Untouchables under the new constitution came to me as an agreeable surprise and a great relief and it is because of this, that notwithstanding the many things with which I am preoccupied, I agreed to find time to prepare this paper.

CHAPTER III

THE POLITICAL DEMANDS OF THE UNTOUCHABLES

The problem of the Untouchables is an enormous problem. As a matter of fact I have been for sometime engaged on a work dealing with this problem which will run into several hundred pages. All that I can do within the limits of this paper is to set out in a brief compass what the nature of the problem is and the solution which the Untouchables have themselves propounded. It seems to me that I cannot do better than begin by drawing attention to the following Resolutions which were passed at the All-India Scheduled Castes Conference held in the city of Nagpur on the 18th and 19th July 1942 :-

Resolution No. II

CONSENT ESSENTIAL TO CONSTITUTION

"This Conference declares that no constitution will be acceptable to the Scheduled Castes unless,

- (i) (i) it has the consent of the Scheduled Castes,
- (ii) (ii) it recognises the fact that the Scheduled Castes are distinct and separate from the Hindus and constitute an important element in the national life of India, and
- (iii) (iii) contains within itself provisions which will give to the Scheduled Castes a real sense of security under the new constitution and which are set out in the following resolutions."

Resolution No. III
ESSENTIAL PROVISIONS IN THE
NEW CONSTITUTION

"For creating this sense of security in the Scheduled Castes: this Conference demands that the following provisions shall be made in the new Constitution:-

- (1) (1) That in the *budget* of every provincial Government an annual sum as may be determined upon by agreement be set apart for promoting the primary education among the children of the Scheduled Castes and another annual sum for promoting advanced education among them, and such sums shall be declared to be the first charge on the revenues of the Province.
- (2) (2) That provision shall be made by law for securing representation to the Scheduled Castes in all Executive Governments-Central and Provincial-the proportion of which shall be determined in accordance with their number, their needs and their importance.
- (3) (3) That provision shall be made by law for securing representation to the Scheduled Castes in the Public Services the proportion of which shall be fixed in accordance with their number, their needs and their importance. This Conference further insists that in the case of security services such as Judiciary, Police and Revenue, provision shall be made that the proportion fixed for the Scheduled Castes shall, subject to the rule of minimum qualification, be realised within a period of ten years.
- (4) (4) That provision shall be made by law for guaranteeing to the Scheduled Castes representation in all Legislatures and Local bodies in accordance with their number, needs and importance.
- (5) (5) That provision shall be made by law whereby the representation of the Scheduled Castes in all Legislatures and Local Bodies shall be by the method of Separate Electorates.
- (6) (6) That provision shall be made by law for the representation of the Scheduled Castes on all Public Service Commissions, Central and Provincial."

Resolution no. IV.
SEPARATE SETTLEMENTS

"It is the considered opinion of this conference,

- (a) (a) that so long as the Scheduled Castes continue to live on the outskirts of the Hindu village, with no source of livelihood and in small number as compared to Hindus, they will continue to remain Untouchables and subject to the tyranny and oppression of the

Hindus and will not be able to enjoy free and full life.

- (b)(b) That for the better protection of the Scheduled Castes from the tyranny and oppression of the Caste Hindus, which may take a worse form under Swaraj which cannot but be a Hindu Raj, and
- (c)(c) to enable the Scheduled Castes to develop to their fullest manhood, to give them economical and social security as also to pave the way for the removal of untouchability.

This Conference has after long and mature deliberation come to the conclusion that a radical change must be made in the village system now prevalent in India and which is the parent of all the ills from which the Scheduled Castes are suffering for so many centuries at the hands of the Hindus. Realising the necessity of these changes this conference holds that along with the Constitutional changes in the system of Government there must be a change in the village system now prevalent, made along the following lines:

- (1)(1) The constitution should provide for the transfer of the Scheduled Castes from their present habitation and form separate Scheduled Caste villages away from and independent of Hindu village.
- (2)(2) For the settlement of the Scheduled Castes in new villages a provision shall be made by the constitution for the establishment of a Settlement Commission.
- (3)(3) All Government land which is cultivable and which is not occupied shall be handed over to the Commission to be held in trust for the purpose of making new settlements of the Scheduled Castes.
- (4)(4) The Commission shall be empowered to purchase new land under the Land Acquisition Act from private owners to complete the scheme of settlement of Scheduled Castes,
- (5)(5) The constitution shall provide that the Central Government shall grant to the settlement commission a minimum sum of Rupees five crores per annum to enable the Commission to carry out their duty to this behalf.

CHAPTER IV HINDU OPPOSITION

The demands set forth in those resolutions fall into three categories (1) Political, (2) Educational and (3) Economic and Social.

Taking the political demands first it is obvious that they ask for three

safeguards-

- (1) (1) That the Legislature shall not be merely representative of the people but it shall be representative separately of both categories Hindus as well as Untouchables.
- (2) (2) That the Executive shall not be merely responsible to the Legislature, which means to the Hindus, but shall also be responsible both to the Hindus as well as to the Untouchables.
- (3) (3) That the administration shall not be merely efficient but shall also be worthy of trust by all sections of the people and also of the Untouchables and shall contain sufficient number of representatives of the Untouchables holding key positions so that the Untouchables may have confidence in it.

These Political demands of the Untouchables have been the subject matter of great controversy between the Untouchables and the Hindus. Mr. Gandhi, the friend of the Untouchables, preferred to fast unto death rather than consent to them and although he yielded he is not reconciled to the justice underlying these demands. It will be well if I set out at this stage what the Hindu or the Congress Scheme of representative Government is. It is as follows :-

- (1) (1) The Legislature to be elected by Constituencies which are to be purely territorial.
- (2) (2) The Executive to be drawn solely from the Majority party in the Legislature.
- (3) (3) The Administration to be run by a public service based entirely upon considerations of efficiency.

The Hindus of the Congress describe their own pet scheme as a National Scheme and call the scheme put forth by the Untouchables as the Communal Scheme. As I will show, there is no substance in this distinction. It is a case of damning what you do not like by the easy method of giving it a bad and a repelling name. Such tactics can't give strength to a case which is inherently weak. To expose its weakness let me examine the merits of the so called National Scheme. Before proceeding it might be desirable to note the points of agreement and the points of difference between the two. Both have the same object, inasmuch as both stand for a representative Legislature. The point of difference lies in the method of devising a scheme which will make the Legislature a truly representative Legislature. The so-called national, scheme insists upon the territorial constituency as being both proper and sufficient for producing a representative Legislature in India. What is called the Communal Scheme denies that a territorial

constitution can produce a truly representative legislature in India in view of the peculiar social structure of the Indian Society as it exists today. *The* issue can a purely territorial constituency produce a really representative legislature in India 7 It is round this issue that the controversy has centred.

The so-called National Scheme of the Hindus generally appeals to the Westerner and he prefers it to the so-called Communal Scheme. This is largely because the Westerner knows and is accustomed only to the system of territorial constituency. But there can be no doubt that this so called National Scheme is on merits quite unsound and on motives worse than communal.

That it is unsound will be quite obvious to any One who will stop to examine the assumptions which are involved in the alleged efficacy and sufficiency of the territorial constituency. What are these assumptions? To mention only those which are most important,

- (1)(1) It assumes that the majority of voters in a constituency represents the will of the constituency as a whole.
- (2)(2) that it is enough to take stock of the general will of the constituency as expressed by the majority and that the will of any particular section however much it may be in conflict with the will of the majority may be ignored without remorse and without being guilty of any inequity.
- (3)(3) *That* the representative who is elected by the voters will represent the wishes and interests of the voters and that there is not the danger of the representative allowing the interest of his class to dominate and override the interests and wishes of the voter who elects him.

Every one of these assumptions is a false assumption unjustified by any theory and, unsupported by experience. The history of Parliamentary Government furnishes abundant proof in support of this assertion and even the history of England tells the same tale. It is wrong to suppose that the majority in all circumstances can be trusted to represent the will of all sections of people in the constituency. As a matter of fact it can never do so to any satisfactory degree. If at all, it can only give a very pale reflection of the general will and even that capacity for pale reflection must depend upon how numerous and varied are the interests which are consciously -shared by the different sections of the constituency and how full and free is the interplay between than. It is obvious that where, as in India, there are no interest which are shared, where there is no full and free interplay and where

there are no common cycles of participation for the different sections, one section large or small cannot represent the will of the other. The will of the majority is the will of the minority and nothing more, and no amount of logical ingenuity can alter the fact and to give effect to it is to allow full play to the tyranny of the Majority.

Again it is wrong to suppose that the representative elected to the Legislature will represent the wishes of the voters who elect him and forget or subordinate the interests of the class to which he belongs. The case of the representative is a case of divided loyalties. He is confronted with two-rather with three- conflicting duties (1) a duty to himself, (2) a duty to the class to which he belongs, and (3) a duty to the voters who have elected him. Omitting (he first from our consideration it is common experience that the representative prefers the interests of his class to that of his voters. And why should any one expect him to *act* otherwise? It is in the nature of things that a man's self should be nearer to him than his constituency. There is a homely saying that man's skin sits closer to him than his shirt. To the members of the Legislature it is true more often than not that his class is his skin and the constituency is a shirt which it is unnecessary to say is one degree removed than the skin.

The Hindu therefore in relying upon the territorial constituency is seeking-to base the political structure of India upon foundations which all political architects have declared to be unsound. The territorial constituency has long since been regarded even in European countries as a discredited piece of political mechanism. In great many European countries the representative system based on territorial constituency has been wound up and replaced by other systems of Government largely because the territorial system of representation produced neither good Government nor efficient Government. In other countries where representative institutions have survived there is an acute discontent with the result produced by the system of territorial constituencies. The proposals for occupational and functional representation, the proposals for referendum and recall all furnish proof, if proof is really wanted, that there is a great body of enlightened and intelligent opinion which is definitely against the system of territorial constituency.

In these circumstances the question as to why the Hindu insists upon a political mechanism which is discredited everywhere excites a certain amount of curiosity. The reason he gives is that it is the only mechanism which is consistent with nationalism. I am not convinced that this is the real explanation. The real explanation to my mind is very different *The*

Hindu prefers the territorial constituency because he knows that it will enable him to collect and concentrate all political power in the hands of the Hindus, and who can deny that his calculation is incorrect? In a purely territorial constituency the contest, the Hindu knows, will be between a huge majority of Hindu voters and a small minority of Untouchable voters. Given this fact the Hindu majority -if it is a purely territorial constituency - is bound to win in all constituencies. But the Hindus besides relying upon their majority can also rely upon other factors which cannot but work to strengthen that majority. Those factors have their origin in the peculiar nature of the Hindu Society. The Hindu Social system which places communities one above the other is a factor which is bound to have its effect on the result of voting. By the Hindu Social system the Communities are placed in an ascending scale of reverence and a descending scale of contempt. It needs no prophet to predict what effect these social attitudes will have on voting. No Caste Hindu will cast a vote in favour of an Untouchable candidate, for to him he is too contemptible a person to go to the Legislature. On the other hand there will be found many voters among the Untouchables who would willingly cast their votes for a Hindu candidate in preference to an Untouchable candidate. That is because he is taught to revere the former more than himself or his Untouchable kinsmen. I am not mentioning the other means which are often resorted to for catching votes of the poor, illiterate, unconscious, unorganised body of voters which the Untouchables are. A combination of all these circumstances is bound to work in the direction of augmenting the representation of the Hindus-Under a system of purely territorial constituencies it is quite certain the Hindus will have assured to them a majority. They can draw for their majority upon themselves as well as upon the Untouchables. It is equally certain that the Untouchables will lose all seats. They must; firstly because they are a minority, and secondly because the Hindus can successfully exploit the weaknesses of the Untouchables which makes them offer their votes to the Hindus as one offers burnt meat to his gods.

Understood in the light of these forces which are sure to make the territorial constituency, profitable to the Hindus by enabling them to loot the political power which the Untouchable would become possessed of if the Communal Scheme came into operation, there can be no doubt that the National Scheme is from the result side, if not from the motive side, worse than the Communal Scheme.

CHAPTER V JOINT V/S SEPARATE ELECTORATES

The Hindus have after a long struggle accepted the view that a purely territorial constituency will not do in a country like India. In the previous discussion regarding the controversy between territorial constituency and communal constituency as two rival methods of bringing about a truly representative legislature was unnecessary. But I stated the case for and against because I felt that the foreigners who are not aware of Indian Political conditions ought to know the basic conceptions underlying that controversy. Unfortunately, however, the fact is that although the Hindus have accepted the basic argument in favour of communal scheme of representation they have not accepted all what the Untouchables are demanding. The Untouchables demand that their representation shall be by separate electorates. A separate electorate means an electorate composed exclusively of Untouchable voters who are to elect an Untouchable as their representative to the legislature. The Hindus agree that certain number of seats are to be reserved for Untouchables to be filled only by Untouchables. But they insist that the Untouchables who is to be the representative of the Untouchables in the Legislature should be elected by a mixed electorate consisting both of the Hindus as well as of the Untouchables and not by an electorate exclusively of the Untouchables. In other words there is still a controversy over the question of joint versus separate electorates. Here again I want to set out the pros and cons of this controversy. The objection to separate electorate raised by the Hindus is that separate electorate means the fragmentation of the nation. The reply is obvious. First of all, there is no nation of Indians in the real sense of the word. The nation does not exist, it is to be created, and I think it will be admitted that the suppression of a distinct and a separate community is not the method of creating a nation. Secondly, it is conceded - as the Hindus have done - that Untouchables should be represented in that Legislature by Untouchable then it cannot be denied that the Untouchable must be a true representative of the Untouchable voters. If this is a correct position then separate electorate is the only mechanism by which real representation can be guaranteed to the Untouchables. The Hindu argument against separate electorate is insubstantial and unsupportable. The premises on which the political demands of the Untouchables are based are admitted by the Hindus. Separate electorate is only a consequence which logically follows from those premises. How can you admit the premise and deny the conclusion? Special electorates

are devised as a means of protecting the minorities. Why not permit a minority like the Untouchables to determine what kind of electorate is necessary for its protection? If the Untouchables decide to have separate electorates why should their choice not prevail? These are questions to which the Hindus can give no answer. The reason is that the real objection to separate electorates by the Hindus is different from this ostensible objection raised in the name of a nation. The real objection is that separate electorate does not permit the Hindus to capture the seats reserved for the Untouchables. On the Other hand the joint electorate does. Let me illustrate the point by a few examples of how joint and separate electorate would work in the constituency. Take the following constituencies from the Madras Presidency.

Name of the Constituency	Total number of Seats for Hindus	Seat reserved for the Untouchables.	Total no of Hindu voters	Total no of Untouchable voters	Ratio of Hindu voters to Untouchable voters
1. Madras City South	2	1	40,626	2,577	16 to 1
2. Chicacole	2	1	83,456	5,125	16 to 1
3. Vijayanagram	2	1	47,594	996	49 to 1
4. Amalapuram	1	1	52,805	7,760	7 to 1
5. Ellore	1	1	51,795	5,155	9 to 1
6. Bandar	1	1	84,191	8,723	10 to 1
7. Tenali	2	1	1,32,107	5,732	24 to 1

The figures of the voting strength given in the above table for the seven constituencies taken at random in the Madras Presidency are illuminating. A scrutiny of the above figures is sufficient to show any disinterested person that if there is a separate electorate for the Untouchables in these seven constituencies they would be in a position to elect a man in whom they had complete confidence and who would be independent to fight the battle of the Untouchables on the floor of the Legislature against the representatives of the Hindus. If, on the other hand, there is a joint electorate in these constituencies the representative of the Untouchables would be only a nominal representative *and* not a real representative, for no Untouchable who did not agree to be a nominee of the Hindus and a tool in their hands could be elected in a joint electorate in which the Untouchable voter was outnumbered in ratio of 1 to 24 or in some cases 1 to 49. The joint electorate is from the point of the Hindus to use a familiar phrase a "rotten borough" in which the Hindus get the right to nominate an Untouchable to set nominally as a representative of the Untouchables but really as a tool of the Hindus. It will be noticed that the Hindu in opposing the so-called communal Scheme of the Untouchables with his so-called National Scheme is not fighting for a principle nor is he fighting for the nation. He is simply fighting for his own interests. He is fighting to have in his hands the undivided control over political power. His first line of defence is *not* to allow any shares to be drawn up so that like the Manager of the Hindu joint family he can use the whole for his benefit. That is why he fought for purely territorial constituencies. Failing that he takes his second line of defence. He wants that if he is made to concede power he must not lose control over it. This is secured by joint electorates and frustrated by separate electorates. That is why the Hindu objects to separate electorates *and* insists on joint electorates.

The end of the so-called National Scheme may not be communal but the result undoubtedly is.

CHAPTER VI THE EXECUTIVE

THE SECOND political demand of the Untouchables is that they must not only be represented to the Legislature but they *must* also be represented in the executive. This demand is also opposed by the Hindus. The argument of the Hindus takes two forms. One is that the executive must represent the majority of the Legislature and secondly the men in the Executive must be competent to hold places in the

executive. I propose to deal with the second argument first.

It is an argument which is fundamentally sound. But it is equally necessary to realise that in a representative Government this argument cannot be carried too far. For as Professor Dicey has argued, "It has never been a primary object of constitutional arrangement to get together the best possible parliament in intellectual capacity. Indeed, it would be inconsistent with the idea of representative Government to attempt to form a parliament far superior in intelligence to the mass of the nation."

The stress upon competency is needless. Nobody has said that ignorant people should be made Ministers simply because they are Untouchables. Given the right to representation in the cabinet the Untouchables, there is no doubt, will elect the most competent people amongst them- there are a number of them in every province- to fill those places. Again why apply this limiting condition to the Untouchables only? Like the Untouchables the Muslims are also claiming the right to be represented in the cabinet. Why have the Hindus not insisted upon such a limiting condition against the Muslims' claim? This shows that the objection of the Hindus is not based on reason. It is an excuse.

Coming to the second argument the Hindus are simply misusing the words majority and minority. They seem to forget that majority and minority are political categories. As political categories there is no fixed majority or a fixed minority. Political majorities and political minorities are fluid bodies and what is a majority today may become a minority tomorrow, and what is a minority today may become a majority tomorrow. The difference between the Hindus and the Untouchables cannot be said to be a difference of this sort. There is no endosmosis between the Untouchables and Hindus as there is between the Majority and Minority. There is another characteristic of a majority and minority relationship, which would make them inapplicable to the relationship which subsists between the Hindus and the Untouchables. The majority and minority are divided by a difference only- difference in the point of views. They are not separated by a fundamental and deadly antagonism as the Hindus are from the Untouchables. There is a third characteristic of Majority and Minority relationship which is not to be found in the relationship that subsists between the Hindus and the Untouchables. A minority grows into a majority and a majority in becoming a majority absorbs so much of the sentiment of the minority that the minority is satisfied with the result and does not feel the urge of fighting out the

issue with the majority. Now all these considerations are quite foreign to the relationship between the Hindu Majority and the Untouchable minority. They are fixed as permanent communities. They are not merely different but they are antagonistic. To speak of them as majority and minority would be as true and as useful as would be to speak of the Germans being a majority and the French being a minority.

CHAPTER VII PUBLIC SERVICES

The Untouchables demand that a certain proportion of posts in the public services of the country shall be reserved for them, subject to the rule of minimum qualification. The Hindus object to this demand as they do to the other demands of the Untouchables. The stand they take is that the interests of the State require that capacity, efficiency and character should be the only consideration and that caste and creed should have no place in making appointment to public offices. There is no dispute regarding character as a necessary qualification. Nor is there any dispute regarding capacity and efficiency. The only point of dispute, and it is a very important point, is whether caste and creed should form a consideration which must be taken into account in the recruitment for public services. Relying upon the educational qualification as the only test of efficiency, the Hindus insist that public offices should be filled on the basis of competitive examination open to persons of all Castes and Creeds. They argue that such a system serves both purposes. It serves the purpose of efficiency. Secondly it does not prohibit the entry of the Untouchables in the Public Services of the country.

The Hindus seek to give to their opposition to the demand of the Untouchable an appearance of fairness by relying upon efficiency and competitive examination. Here again the argument is quite beside the point. *The* question is not whether the competitive system of Examination is or is not the proper method of getting efficient persons in public services. The question is whether the competitive system simply because it is open to all castes and creeds will enable the Untouchables to get a footing in the Public Service. That depends upon the educational system of the State. Is it sufficiently democratic? Are the facilities for education sufficiently widespread and sufficiently used to permit persons from all classes to come forth to compete? Otherwise, even with the system of open competition large classes are sure to be left out in the cold. This basic condition is conspicuous by its absence in

India. Higher education in India is the monopoly of Hindus and particularly of high Caste Hindus. By reason of Untouchability the Untouchables are denied the opportunity for Education. By reason of their poverty higher education necessary for higher posts in the public service- and higher posts in the public service are the only things that matter because they have a strategic value- is not within their reach. The State will not take the financial responsibility of giving them higher education- they are demanding it by their resolution and the Hindus will not extend the benefit of their charities to the Untouchables- Hindu Charity being shamefully communal-so that to ask the Untouchables to rely upon the results of competitive examination for entry into the public services is to practise a fraud upon them. The position taken up by the Untouchables is in no sense unreasonable. They admit the necessity for maintaining efficiency. That is why in their resolution they themselves say that their demand shall be subject to the rule of minimum qualification. In other words what the Untouchables demand is that a minimum qualification should be prescribed for every post in the public service and if two persons apply for such a post and the Untouchables has the minimum qualification he should be preferred to a Hindu even though the Hindu may have a qualification higher than the minimum qualification. It, of course, does mean that the basis for appointment should be minimum qualification and not the higher qualification. This may sound queer to those who do not mind if their test of efficiency gives certain communities a monopoly of public service. But did not Campbell-Bannerman say that self-government was better than good government? What else are the Untouchables demanding? They are prepared to recognise the need of having an efficient Government. That is why they are ready to accept the requirement of minimum qualifications for entry in the public services of the country. What the untouchables are not prepared to do is to forego self-government for good government Good Government based on highest qualification will be a communal government, for the Hindus alone can claim qualifications higher than minimum qualifications. This is what they do not want. What they say is that minimum qualifications are enough for efficient government and since it makes self-government possible, minimum qualification should be the rule for entry in Public Service. It ensures self-government as well as efficient government.

CHAPTER VIII

SEPARATE SETTLEMENTS

Resolution No. IV Referred to in the foregoing part of this paper is to my mind quite self-explanatory and not much detailed comment is necessary to explain its purport. Nor is it possible in the compass of this short paper to deal with it in more than general terms. The demand for separate settlements is the result of what might be called "The New Life Movement" among the Untouchables. The object of the movement is to free the Untouchables from the thralldom of the Hindus. So long as the present arrangement continues it is impossible for the Untouchables either to free themselves from the yoke of the Hindus or to get rid of their Untouchability. It is the close-knit association of the Untouchables with the Hindus living in the same villages which marks them out as Untouchables and which enables the Hindus to identify them as being Untouchables. India is admittedly a land of villages and so long as the village system provides an easy method of marking out and identifying the Untouchable, the Untouchable has no escape from Untouchability. It is the village system which perpetuates untouchability and the Untouchables therefore demand that it should be broken and the Untouchables who are as a matter of fact socially separate should be made separate geographically and territorially also, and be grouped into separate villages exclusively of Untouchables in which the distinction of the high and the low and of Touchable and Untouchable will find no place.

The second reason for demanding separate settlements arises out of the economic position of the Untouchables in the village. That their condition is most pitiable no one will deny. They are a body of landless labourers who are entirely dependent upon such employment as the Hindus may choose to give them and on such wages as the Hindus may find it profitable to pay. In the villages in which they live they cannot engage in any trade or occupation, for owing to untouchability no Hindu will deal with them. It is therefore obvious that there is no way of earning a living which is open to the Untouchables so long as they live as a dependent part of the Hindu village. This economic dependence has also other consequences besides the condition of poverty and degradation which proceeds from it. The Hindu has a code of life, which is part of his religion. This code of life gives him many privileges and heaps upon the Untouchable many indignities which are incompatible with the sanctity of human life. By the New Life Movement which has taken hold of the Untouchables, the

Untouchables all over India are fighting against the indignities and injustices which the Hindus in the name of their religion have heaped upon them. A perpetual war is going on every day in every village between the Hindus and the Untouchables. It does not see the light of the day. The Hindu Press is not prepared to advertise it lest it should injure the cause of their freedom in the eyes of the world. The silent struggle is however a fact. Under the village system the Untouchable has found himself greatly handicapped in his struggle for free and honourable life. It is a contest between the economically and socially strong Hindus and an economically poor and socially small group of Untouchables. That the Hindus most often succeed in pulling down Untouchables is largely due to many causes. The Hindu has the Police and the Magistracy on his side. In a quarrel between the Untouchables and the Hindus the Untouchables will never get protection from the Police or justice from the Magistrate. The Police and the Magistracy are Hindus, and they love their class more than their duty. But the chief weapon in the armoury of the Hindus is economic power which they possess over the poor Untouchables living in the village. The economic processes by which the Hindus can hold down the Untouchables in their struggle for equality are well described in the Report made by a Committee appointed by the Government of Bombay in 1928 to investigate into the grievances of the Depressed Classes mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/42. Mr. Gandhi and The Emancipation of The Untouchables.htm - _msocom_2 and from which the following extracts are made. It illuminates the situation in a manner so simple that even foreigners who do not know the mysteries of the Hindu social system may understand what tyranny the Hindus can practise upon the Untouchables. The committee said -

"Although we have recommended various remedies to secure to the Depressed Classes their rights to all public utilities we fear that there will be difficulties in the way of their exercising them for a long time to come. The first difficulty is the fear of open violence against them by the orthodox classes, It must be noted that the Depressed Classes form a small minority in every village, opposed to which is a great majority of the orthodox who are bent on protecting their interests and dignity from any supposed invasion by the Depressed Classes at any cost. The danger of prosecution by the Police has put a limitation upon the use of violence by the orthodox classes and consequently such cases are rare.

"The second difficulty arises from the economic position in which

the Depressed Classes are found today. The Depressed Classes have no economic independence in most parts of the Presidency. Some cultivate the lands *of* the orthodox classes as their tenants at will Others live on their earnings as farm labourers employed by the orthodox classes and the rest subsist on the food or grain given to them by the orthodox classes in lieu of service rendered to them as village servants. We have heard of numerous instance where the orthodox classes have used their economic power as a weapon against those Depressed Classes in their villages, when the latter have dared to exercise their rights, and have evicted them from their *land*, and stopped their employment and discontinued their remuneration as village servants. This boycott is often planned on such an extensive scale as to include the prevention of the Depressed Classes from using the commonly used paths and the stoppage of sale of the necessaries of life by the village Bania. According to the evidence, sometimes small causes suffice for the proclamation of a social boycott against the Depressed Classes. Frequently it follows on the exercise by the Depressed Classes of their right to the use of the common well, but cases have been *by* no means rare where a stringent boycott has been proclaimed simply because a Depressed Class man has put on the sacred thread, has bought a piece of land, has put on good clothes or ornaments, or has carried a marriage procession with the bride-groom on the horse through the public street."

This demand for separate settlements is a new demand which has been put forth by the Untouchables for the first time. It is not possible to say as yet as to what attitude the Hindus will take to this demand. But there is no doubt that this is the most vital demand made by the Untouchables, and I am sure that whatever may happen with regard to the other demands they are not likely to yield on this. The Hindus are prone to think that they and the Untouchables are joined together by the will of God as the Bible says the husband is joined to his wife and they will say in the language of the Bible that those whom God is pleased to join let no man put asunder. The Untouchables are determined to repudiate any such view of their relations with the Hindus. They want the link to be broken and a complete divorce from the Hindus effected without delay.

The only questions that arise are those of the cost it will involve in and time it will take. As to cost, the Untouchables say it should be financed by Government It will no doubt fall for the most part on the Hindus. But there is no reason why the Hindus should not bear the same. The

Hindus own everything. They own the land in this country. They control trade, and they also own the State. Every source of revenue and profit is controlled by them. Other communities and particularly the Untouchables are just hewers of wood and drawers of water. The social system helps the Hindus to have a monopoly of everything. There is no reason why they should not be asked to pay the cost of this scheme when they practically own the country.

As to time, it matters very little even if the transplantation of the Untouchables to new settlements takes 20 years. Those who have been the bounded slaves of the Hindus for a thousand years may well be happy with the prospect of getting their freedom by the end of 20 years.

CHAPTER IX CASTE AND CONSTITUTION

It might well be asked why should such questions as are raised by these demands of the Untouchables find a place in the Constitution? Nowhere in the world have the makers of constitution been compelled to deal with such matters. This is an important question and I admit that an answer is required on the part of those who raise such questions and insist that they are of constitutional importance. The answer to this question is to my mind quite obvious. It is the character of the Indian Society which invests this question with constitutional importance. It is the Caste system and the Religious system of the Hindus which is solely responsible for this. This short statement may not suffice to give an adequate explanation to foreigners of the social and political repercussions of the Hindu Caste and Religious systems. But it is equally true that in the brief compass of this paper it is impossible to deal exhaustively with the repercussion of the caste system on the constitution. I would refer for a full and complete exposition of the subject to my book on the Annihilation of Castes which I wrote some time ago. For I believe it will shed sufficient light on the social and economical ramification of the Caste and Religious system of the Hindus. In this Paper I will content myself with making the following general observations. In framing a constitution the Social structure must always be kept in mind. The political structure must be related to the social structure. The operation of the social forces is not confined to the social field. They pervade the political field also. This is the view point of the Untouchables and I am sure this is incontrovertible. The Hindus are quite conscious of this argument and also of its strength. But what

they do is to deny that the structure of the Hindu Society is in any way different from the structure of European society. They attempt to meet the argument by saying that there is no difference between the Caste system of the Hindus and the Class system in Western Society. This is of course palpably false and discloses a gross ignorance both of the Caste system as well as of the Class system. The Caste system is a system which is infested with the spirit of isolation and in fact it makes isolation of one Caste from another a matter of virtue. There is isolation in the Class system but it does not make isolation a virtue nor does it prohibit social intercourse. The Class system it is true produces groups. But they are not akin to Caste groups. The groups in the Class System are only non-social while the Castes in the Caste system are in their mutual relations definitely and positively anti-social. If this analysis is true then there can be no denying the fact that the social structure of Hindu Society is different and consequently its political structure must be different. What the Untouchables are asking, to put it in general terms, is a proper correlation of means to ends. End may be the same. But because the end is the same it does not follow that the means must also be the same. Indeed ends may remain the same and yet means must vary according to time and circumstances. Those who are true to their ends must admit this fact and must agree to adopt different means if they wish that the end they have in view is not stultified.

In this connection there is another thing which I would like to mention. As I have said, it is the Caste basis of Hindu society which requires that its political structure should be different and suited to its social structure. There are people who admit this but argue that caste can be abolished from Hindu society. I deny that. Those who advocate such a view think that caste is an institution like a Club or a Municipality or a County Council. This is a gross error. Caste is Religion, and religion is anything but an institution. It may be institutionalised but it is not the same as the institution in which it is embedded. Religion is an influence or force suffused through the life of each individual moulding his character, determining his actions and reactions, his likes and dislikes. These likes and dislikes, actions and reactions are not institutions which can be lopped off. They are forces and influences which can be dealt with by controlling them or counteracting them. If the social forces are to be prevented from contaminating politics and perverting it to the aggrandisement of the few and the degradation of the many then it follows that the political structure must be so framed that it will contain mechanisms which will bottle the prejudices and nullify the injustice

which the social forces are likely to cause if they were let loose.

So far I have explained in a general way why the peculiar social structure of the Hindu Society calls for a peculiar political structure and why the maker of the Indian Constitution cannot escape problems which did not plague the makers of Constitution in other countries. Let me now take the specific question, namely why it is necessary that in the Indian Constitution the Communal Scheme must find its place and why in the Public Services for the Untouchables should be specified and should be assigned to them as their separate possession. The justification for these demands is easy and obvious. It arises from the undeniable fact that what divides the Untouchables from the Hindus is not mere matter of difference on non-essentials. It is a case of fundamental antagonism and antipathy. No evidence of this antipathy and antagonism is necessary. The system of Untouchability is enough evidence of the inherent antagonism between the Hindus and the Untouchables. Given this antagonism it is simply impossible to ask the Untouchables to depend upon and trust the Hindus to do them justice when the Hindu get their freedom and independence from the British. Who can say that the Untouchable is not right in saying that he will not trust the Hindu? The Hindu is as alien to him as a European is and what is worse the European alien is neutral but the Hindu is most shamefully partial to his own class and antagonistic to the Untouchables. There can be no doubt that the Hindus have all these ages despised, disregarded and disowned the Untouchables as belonging to a different and contemptible strata of Society if not to a different race. By their own code of conduct the Hindus behave as the most exclusive class steeped in their own prejudices and never sharing the aspirations of the Untouchables with whom they have nothing to do and whose interests are opposed to theirs. Why should the Untouchables entrust their fate to such people? How could the Untouchables be legitimately asked to leave their interest into the hands of a people who as a matter of fact are opposed to them in their motives and interests, who do not sympathise with the living forces operating among the Untouchables, who are themselves not charged with their wants, cravings and desires, who are inimical to their aspirations, who in all certainty will deny justice to them and to discriminate against them and who by reason of the sanction of their religion have not been and will not be ashamed to practise against the Untouchables any kind of inhumanity. The only safety against such people is to have the political rights which the Untouchables claim as safeguards against the tyranny of the Hindu Majority defined in the

Constitution. Are the Untouchables extravagant in demanding this safety?

CHAPTER X

SOME QUESTIONS TO THE HINDUS AND THEIR FRIENDS

IN the midst of this political controversy one notices that the Hindus are behaving differently towards different communities. The Untouchables are not the only people in India who are demanding political safeguards. Like the Untouchables the Muslims and the Sikhs have also presented their political demands to the Hindus. Both the Mussulmans and the Sikhs can in no sense be called helpless minorities. On the contrary they are the two most powerful communities in India. They are educationally quite advanced and economically well placed. By their social standing they are quite as high as the Hindus. Their organisation is a solid structure and no Hindu will dare to take any liberties with them much less cause any harm to them.

What are the political demands of the Muslims and the Sikhs? It is not possible to set them out here. But the general opinion is that they are very extravagant and the Hindus resent them very much. In contrast with this the condition and the demands of the Untouchables are just the opposite of the condition of the Muslims and the Sikhs. They are a weak, helpless and despised minority. They are at the mercy of all and there are not a few occasions when Hindus, Muslims and Sikhs combine to oppress them. Of all the Minorities they need the greatest protection and the strongest safeguards. Their demands are of the modest kind and there is nothing in them of that over-insurance which may be said to characterise the demands of the Muslims and the Sikhs. What is the reaction of the Hindus to the demands of the Muslims, the Sikhs and the Untouchables? Notwithstanding the extravagance of their demands the Hindus are ever ready to conciliate the Mussalmans and the Sikhs, particularly the former. They not only want to be correct in their relationship with the Mussalmans, they are prepared to be considerate and even generous. Mr. Rajagopalachari's political exploits are too fresh to be forgotten. Suddenly he enrolled himself as a soldier of the Muslim League and proclaimed a war on his own kin and former

friends and for what? Not for their not failure to grant the reasonable demands of the Muslim but for their conceding the most extravagant one, namely Pakistan !! What is Mr. Rajagopalachari's response to the

demands of the Untouchables? So far I am aware there is no response. He does not even seem to be aware that there are 60 million Untouchables in this country and that they too like the Muslims are demanding political safeguards. This attitude of studied silence and cold indifference of Mr. Rajagopalachari is typical of the whole body of Hindus. The Hindus have been opposing the political demands of the Untouchables with the tenacity of a bulldog and the perversity of a renegade. The Press is theirs and they make a systematic attempt to ignore the Untouchables. When they fail to ignore them they buy their leaders; and where they find a leader not open to purchase they systematically abuse him, misrepresent him, blackmail him, and do everything possible that lies in their power to suppress him and silence him: Any such leader who is determined to fight for the cause of the Untouchables he and his followers are condemned as anti-National. So exasperated the Hindus become by the political demands of the Untouchables that they in their rage refuse to recognise how generous the Untouchables are in consenting to be ruled by a Hindu Majority in return for nothing more than a few political safeguards. *The* Hindus are not aware of what Carson said to Redmond when the two were negotiating for a United Ireland. The incident is worth recalling. Redmond said to Carson "Ask any safeguards you like for the Protestant Minority of Ulster, I am prepared to give them; but let us have a United Ireland under one constitution." Carson's reply was curt and brutal. He said without asking for time to consider the offer "Damn your safeguards, I don't want to be ruled by you". The Hindus ought to be thankful that the Untouchables have not taken the attitude which Carson took. But far from being thankful they are angry because the Untouchables are daring to ask for political rights. In the opinion of the Hindus the Untouchables have no right to ask for any rights. What does this difference of attitude on the part of the Hindus to the political demands of the different communities indicate? It indicates three things (1) They want to *get* all power to themselves, (2) They are not prepared to base their political institutions on the principle of justice, (3) Where they have to surrender power they will surrender it to the forces of truculence and the mailed fist but never to the dictates of justice.

This attitude of the Hindus forms the tragic scene of Indian politics. Unfortunately this is not the only tragic scene with Indian Politics. There is another equally tragic in character. It concerns the friends of the Hindus in foreign countries, The Hindus have created many friends for themselves all over the world by their clever propaganda, particularly

in America,"the land of liberty". *The* tragedy is that these friends of the Hindus are supporting a side without examining whether it is the side which they in point of justice ought to support No American friends of the Hindus have, so far as I know, asked what do the Hindus stand for? Are they fighting for freedom or are they fighting for power? If the Hindus are fighting for power, are the American friends justified in helping the Hindus? If the Hindus are engaged in a war *for* freedom, must they not be asked to declare their war aims? This is the least bit these American friends could do. Since the American friends have thought it fit to respond to the Hindu call for help it is necessary to tell these American friends of the Hindus what wrong they will be doing to the cause of freedom by their indiscriminate and blind support to the Hindu side. What I want to say follows the line of argument which the Hindus themselves have taken. Since the war started the Hindus, both inside and outside the *Congress*, demanded that the British should declare their *war* aims. Day in and day out the British were told,"If you want our help, tell us what you are fighting for? If you are fighting for freedom, tell us if you will give us. freedom in the name of which you are waging this war" There was a stage when the Hindus were prepared to be satisfied with a promise from the British that India will have the benefit of freedom for which the British are waging. They have gone a stage further. They are no longer content with a promise. Or to put it in the language of a Congressman,"They refuse to accept a post-dated cheque on a crashing Bank". They wanted freedom to be given right now, before the Hindus would consent to give their voluntary support to the War effort. That is the significance of Mr. Gandhi's new slogan of "Quit India". Mr. Churchill on whom the responsibility of answering these questions fell replied, that his war aim was victory over the enemy. The Hindus were not satisfied. They questioned him further "What are you going to do after you get that victory? What social order you propose to establish after the war?" There was a storm when Mr. Churchill replied that he hoped to restore traditional Britain. These were legitimate questions I agree. But do not the friends of Hindus think that if it is legitimate to ask the very same questions to Mr. Churchill it is also legitimate to ask the very same questions to Mr. Gandhi and the Hindus? The British had declared war against Hitler. Mr. Gandhi has declared war against the British. The British have an Empire. So have the Hindus. For is not Hinduism a form of imperialism and are not the Untouchables a subject race, owing there allegiance and their servitude to their Hindu Master? If Churchill must be asked to declare

his war aims how could anybody avoid asking Mr. Gandhi and the Hindus to declare their war aims? Both say their war is a war for freedom. If that is so both have a duty to declare what their war aims are. What does Mr. Gandhi propose to do after he gets his victory over the British? Does he propose to use the freedom he hopes to get to make the Untouchables free or will he allow the freedom he gets to be used to endow the Hindus with more power than they now possess, to hold the Untouchables as their bondsmen? Will Mr. Gandhi and Hindus establish a New Order or will they be content with rehabilitation of the traditional Hindu India, with its castes and its untouchability, with its denial of Liberty, Equality and Fraternity? I should think that these questions should be asked by those American friends to Mr. Gandhi and the Hindus who are helping them in this so-called war for Freedom. These questions are legitimate and pertinent. It is only answers to such questions which will enable these American friends to know whether Mr. Gandhi's war is a war for freedom or a war for power. These questions are not merely pertinent and legitimate, they are also necessary. The reason is obvious to those who know the Hindus. The Hindus have an innate and inveterate conservatism and they have a religion which is incompatible with liberty, equality and fraternity i. e. with democracy. Inequality, no doubt, exists everywhere in the world. It is largely to conditions and circumstances. But it never has had the support of religion. With the Hindus it is different. There is not only inequality in Hindu Society but inequality is the official doctrine of the Hindu religion. The Hindu has no will to equality. His inclination and his attitude are opposed to the democratic doctrine of one man one value. Every Hindu is a social Tory and political Radical. Mr Gandhi is no exception to this rule. He presents himself to the world as a liberal but his liberalism is only a very thin veneer which sits very lightly on him as dust does on one's boots. You scratch him and you will find that underneath his liberalism he is a blue blooded Tory. He stands for the cursed caste. He is a fanatic Hindu upholding the Hindu religion. See how the Hindus read the famous American Declaration of Independence of 1776. The Hindu is mad with joy when he reads the Declaration to say-

That whenever any Form of Government become destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organising its powers in such form, as to them shall seem most likely to effect their Safety and Happiness.'

But he stops there. He never bothers about the earlier part of that Declaration which says :-

"We hold these truths to be self-evident, that all *men* are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness. That to secure these rights. Governments are instituted among Men, deriving their just powers from the consent of the governed."

The implementation of this Declaration has no doubt been a tragic episode in the history of the United States. There have been two views about this document. Some hold that it is a great spiritual document. Others have held that it immoralises many untruths. In any case this charter of human Liberty was not applied to the Negroes. What is however important to note is the faith underlying the Declaration. There is no doubt about it and certainly no doubt about the faith of Jefferson, the author of this Declaration. He never forgot that while enunciating along principle, his country decided to take a short step. He wrote, "I am sorry for my countrymen." It may be no recompense to the Negroes. But it is by no means small comfort to know that the conscience of the country is not altogether dead and the flame of righteous indignation may one day burst forth. The Negroes may laugh at this. But the fact is that even this much comfort the Untouchables cannot hope to have from the Hindus. People today are proud of the fact that the Hindus are a solid mass. But strange as it may appear, to the Untouchables of India, this is more a matter of dread than comfort-as the "Solid South" is to the Negroes in the United States. Where could anyone find in India among the Hindus any person with a sense of shame and a sense of remorse such as was felt by Jefferson? I should have thought the Hindus would be too ashamed of this stigma of Untouchability on them to appear before the world with a demand for their freedom. That they do clamour for freedom- the pity is that they get support- is evidence that their conscience is dead, that they feel no righteous indignation, and to them Untouchability is neither a moral sin nor a civil wrong. It is just a sport as cricket or hockey is. The friends of Mr. Gandhi will no doubt point to him and his work. But what has Mr. Gandhi done to reform Hindu Society that his work and life be cited by democrats as a witness of hope and assurance? His friends have been informed of the Harijan Sevak Sangh and they continue to ask, "Is not Mr. Gandhi working to

uplift the Harijans?" Is he? What is the object of this Harijan Sevak Sangh? Is it to prepare the Untouchables to win their freedom from their Hindu masters, to make them their social and political equals? Mr. Gandhi had never had any such object before him and he never wants to do this, and I say that he cannot do this. This is the task of a democrat and a revolutionary. Mr. Gandhi is neither. He is a Tory by birth as well as by faith. The work of the Harijan Sevak Sangh is not to raise the Untouchables. His main object, as every self-respecting Untouchable knows, is to make India safe for Hindus and Hinduism. He is certainly not fighting the battle of the Untouchables. On the contrary by distributing through the Harijan Sevak Sangh petty gifts to petty Untouchables he is buying, benumbing and drawing the laws of the opposition of the Untouchables which he knows is the only force which will disrupt the caste system and will establish real democracy in India. Mr. Gandhi wants Hinduism and the Hindu caste system to remain intact. Mr. Gandhi also wants the Untouchables to remain as Hindus. But as what? Not as partners but as poor relations of the Hindus. Mr. Gandhi is kind to the Untouchables. But for what? Only because he wants to kill, by kindness, them and their movement for separation and independence from Hindus. The Harijan Sevak Sangh is one of the many techniques which has enabled Mr. Gandhi to be a successful humbug.

Turn to Pandit Jawaharlal Nehru. He draws his inspiration from the Jeffersonian Declaration; but has he ever expressed any shame or any remorse about the condition of the 60 millions of Untouchables? Has he anywhere referred to them in the torrent of literature which comes out from his pen? Go to the youth of India, if you want. The youths who fill the Universities and who follow the Pandit's lead are ever ready to fight the political battle of India against the British. But what do these children of the leisured class Hindus have done to redress the wrongs their forefathers have done to the Untouchables? You can get thousands of Hindu youths to join political propaganda but you cannot get one single youth to take up the cause of breaking the caste system or of removing Untouchability. Democracy and democratic life, justice and conscience which are sustained by a belief in democratic principle are foreign to the Hindu mind. To leave democracy and freedom in such Tory hands would be the greatest mistake democrats could commit. It is therefore very necessary for the American friends of the Hindus to ask Mr. Gandhi and the Hindus to declare their War aims, so that they may be sure that the fight of the Hindus against British is really and truly a

fight for freedom. The Congress and the Hindus will no doubt refer their inquiring foreign friends to the Congress Resolutions regarding minority rights. But I would like to warn the American friends of the Hindus not to be content with the "glittering generalities" contained in congress declaration of Minority Rights. To declare the rights of the minority is one thing and to have them implemented is another. And why should the friends of the Hindus if they are really friends of freedom, not insist on implementation straight away? Are not the Hindus saying that they would not be satisfied with mere declaration of freedom from the British? Are they not asking for immediate implementation? If they want the British to implement their War aims, why should the Hindus be not prepared to implement their war aims? American friends of the Hindus, I am sure, will not be misled by the Hindu propaganda that this war of the Hindus against the British is a War for freedom. Before helping the Hindus they must get themselves satisfied that the Hindus who are urging that their war against the British is a war for freedom will not turn out to be the enemies of the freedom of millions of Indians like the Untouchables. That is the plea I am making on behalf of the 60 millions of the Untouchables of India. And above all let not the American friends think that checks and balances in a Constitution-the demand for checks and balances suited to Indian conditions-are not necessary because the struggle is carried on by a people and is carried on in the name of freedom. Friends of democracy and freedom cannot afford to forget the words of John Adams when he said-

"We may appeal to every page of history we have hitherto turned over, for proof irrefragable that the people when they have been unchecked, have been as unjust, tyrannical, brutal, barbarous , and cruel as any king or Senate possessed of uncontrollable power : the majority has eternally and without one exception usurped over the rights of the minority."

If all Majorities must be subjected to checks and balances how much more must it be so in the case of the Hindus?

NEED FOR CHECKS

AND BALANCES

Article on Linguistic States

From: The Times of India, dated 23rd April, 1953

The British who ruled India for more than 150 years never thought of creating linguistic States although the problem was always there. They were more interested in creating a stable administration and maintaining law and order throughout the country than in catering to the cultural craving of people in multi-lingual areas. It is quite true that towards the end of their career they did realise that the administrative set-up which they had built required some adjustment from the point of view of linguistic considerations, at any rate in cases where the conglomeration was very glaring. For instance, they did create Bengal, Bihar and Orissa as linguistic States before they left. It is difficult to say whether if they had continued to rule, they would have followed the path of forming linguistic States to its logical conclusion.

But long before the British thought of creating linguistic provinces the Congress under the aegis of Mr. Gandhi had already in the year 1920 framed a constitution for itself on the basis of linguistic provinces. Whether the ideology underlying the constitution of the Congress as framed in 1920 was a well thought out ideology or whether it was a sop to draw people inside the Congress fold, one need not now stop to speculate. There is, however, no doubt about it that the British did realise that linguistic considerations were important and they did give effect to them to a limited extent.

Opposition

Upto the year 1945, the Congress was, of course, not called upon to face the responsibility which it had created for itself by its constitution of 1920. It was only in the year 1945 when it assumed office that this responsibility dawned upon the Congress. Looking

into the recent history of the subject the necessary momentum to the issue was given by a member of Parliament by moving a resolution for the creation of linguistic provinces in India.

The duty of answering on behalf of the Government to the debate fell on me. Naturally I took the matter to the higher authorities in order to ascertain what exactly their point of view was. Strange as it may appear, it became clear to me that the High Command was totally opposed to the creation of linguistic provinces. In these circumstances, the solution that was found was that the responsibility to answer the debate had better be taken over by the Prime Minister. The Prime Minister in reply to the debate made statement promising the creation of an Andhra State immediately. On the basis of the statement made by the Prime Minister, the resolution was withdrawn. The matter rested there.

Second Time

As Chairman of the Drafting Committee, I had to deal with the matter a second time. When the draft Constitution was completed, I wrote a letter to the Prime Minister asking him whether I could include Andhra as a separate State in Part A States of the Constitution in view of what he had said in the course of the debate on the Resolution. I have nothing with me here to refresh my memory as to what exactly happened. But the President of the Constituent Assembly, Dr. Rajendra Prasad, appointed a Committee to investigate into the formation of linguistic States, under the Chairmanship of Mr. Dhar, a lawyer from U.P.

People will remember the Dhar Committee for one thing if not for any other. The Committee said that under no circumstances should Bombay City be included in Maharashtra if Maharashtra was made a linguistic State. That report was then considered by the Jaipur session of the Congress. The Jaipur Congress appointed a Three-Man Committee consisting of the Prime Minister, Mr. Vallabhbhai Patel and Dr. Pattabhi Sitaramayya. They produced a report, the gist of which was that an Andhra province should be created immediately but the city of Madras should remain with the Tamils. A committee was appointed to go into the details. It produced a more or less unanimous report. But the report was opposed by substantial elements among the Andhras including Mr. Prakasam who were not prepared to relinquish their claim to Madras, and the thing lay dormant there.

After that comes the incident of Shri Potti Sriramulu who had to

sacrifice his life for the sake of an Andhra province. It is a sad commentary on the ruling party that Mr. Sriramulu should have had to die for a cause the validity of which was accepted by all Congressmen. The creation of a new Andhra province now being thought of is only a pindadan to the departed soul of Mr. Sriramulu by the Prime Minister. Whether such action on the part of the Government would have been tolerated in any other country is a matter on which there is no use speculating.

There are, in my opinion, three conditions which must be satisfied before a linguistic State is brought into being. The first condition is that it must be a viable State. This rule was accepted as absolute when the question of the merger of the Indian States was under consideration during the making of the Constitution. Only those Indian States which were viable were allowed to remain as independent States. All others were merged into the neighbouring States.

A Sahara?

Is the proposed Andhra State a viable State? Mr. Justice Wanchoo had very candidly admitted that the annual revenue deficit of the proposed Andhra State will be of the magnitude of Rs. 5 crores. It is possible for the proposed Andhra State to reduce this gap either by increase of taxation or decrease in expenditure? The Andhras must face this question. Is the Centre going to take the responsibility of meeting this deficit? If so, will this responsibility be confined to the proposed Andhra State or will it be extended to all similar cases? These are questions which are to be considered.

The new Andhra State has no fixed capital. I might incidentally say that I have never heard of the creation of a State without a capital. Mr. Rajagopalachari (the staunchest Tamilian tribesman) will not show the Government of the proposed Andhra State the courtesy of allowing it to stay in Madras city even for one night—courtesy which is prescribed by the Hindu Dharma on all Hindus for an *atithi*. The new Government is left to choose its own habitat and construct thereon its own hutments to transact its business. What place can it choose? With what can it construct its hutments? Andhra is Sahara and there are no oases in it. If it chooses some place in this Sahara it is bound to shift its quarters to a more salubrious place, and the money spent on this temporary headquarters would be all a waste. Has the Government considered this aspect of the case? Why not right now give them a place which has the possibility of becoming

their permanent capital.

It seems to me that Warangal is best suited from this point of view. It is the ancient capital of the Andhras. It is a railway junction. It has got quite a large number of buildings. It is true that it lies within that part of Andhra which is part of Hyderabad State. As a matter of principle Hyderabad State which is a monstrosity should have been broken up and a complete Andhra State might have been created. But if the Prime Minister has some conscientious objection to the proposal, can he not create an enclave in the Andhra part of Hyderabad and join it to the new Andhra State and make a way to Warangal? An enclave is not a new thing in India. But the Prime Minister wants to work against the will of God in Hyderabad as well as in Kashmir. I am sure he will very soon learn the consequences of it.

First Condition

This is just incidental. My main point is that a linguistic State must be viable. This is the first consideration in the creation of a linguistic State. The second consideration is to note what is likely to happen within a linguistic State. Unfortunately no student has devoted himself to a demographic survey of the population of India. We only know from our census reports how many are Hindus, how many are Muslims, how many Jews, how many Christians and how many untouchables. Except for the knowledge we get as to how many religions there are this information is of no value. What we want to know is the distribution of castes in different linguistic areas. On this we have very little information. One has to depend on one's own knowledge and information. I don't think it would be contradicted if it is said that the caste set-up within the linguistic area is generally such that it contains one or two major castes large in number and a few minor castes living in subordinate dependence on the major castes.

Communal Set-up

Let me give a few illustrations. Take the Punjab of PEPSU. The Jats dominate the whole area. The untouchables live in subordinate dependence on them. Take Andhra—there are two or three major communities spread over the linguistic area. They are either the Reddis or the Kammas and the Kappus. They hold all the land, all the offices, all the business. The untouchables live in subordinate dependence on them. Take Maharashtra. The Marathas are a huge majority in every village in Maharashtra. The Brahmins, the Gujars,

the Kolis and the untouchables live in subordinate co-operation. There was a time when the Brahmins and the banias lived without fear. But times have changed. After the murder of Mr. Gandhi, the Brahmins and the banias got such a hiding from the Marathas that they have run away to the towns as safety centres. Only the wretched untouchables, the Kolis and the Malis have remained in the villages to bear the tyranny of the Maratha communal majority. Anyone who forgets this communal set-up will do so at his peril.

In a linguistic State what would remain for the smaller communities to look to? Can they hope to be elected to the Legislature? Can they hope to maintain a place in the State service? Can they expect any attention to their economic betterment? In these circumstances, the creation of a linguistic State means the handing over of Swaraj to a communal majority. What an end to Mr. Gandhi's Swaraj ! Those who cannot understand this aspect of the problem would understand it better if instead of speaking in terms of linguistic State we spoke of a Jat State, a Reddy State or a Maratha State.

Third Issue

The third problem which calls for consideration is whether the creation of linguistic States should take the form of consolidation of the people speaking one language into one State. Should all Maharashtrians be collected together into one Maharashtra State? Should all Andhra area be put into one Andhra State? This question of consolidation does not merely relate to new units. It relates also to the existing linguistic provinces such as U.P, Bihar and West Bengal. Why should all Hindi-speaking people be consolidated into one State as has happened in U.P.? Those who ask for consolidation must be asked whether they want to go to war against other States. If consolidation creates a separate consciousness we will have in course of time an India very much like what it was after the break-up of Maurya Empire. Is destiny moving us towards it?

This does not mean that there is no case for linguistic provinces. What it means is that there must be definite checks and balances to see that a communal majority does not abuse its power under the garb of a linguistic State.

BURDEN OF PROOF

CHAPTER 1

The Common Law

1. In the English system. Equity has acquired a technical connotation and we are accustomed to think of it as a whole jurisdiction distinct from Common Law principles.

2. For better or for worse, the stream of English Law divided into two channels, not without considerable disturbance of the soil and morbidity of the waters.

3. But the interdependence of Law and Equity has never wholly disappeared.

4. We ought not to think of Common Law and Equity as rival systems. Equity was not a self-contained system, at every point it presupposed the existence of Common Law.

The principle on which the Court of Equity granted relief

1. If we look for one general principle which more than any other influenced the Equity developed by the Chancery, we find it in a

philosophical and theological conception of *conscience*.

2. The English Equity begins to be systematised under the guidance of a governing moral principle of conscience.

3. Not that we can suppose that all the Chancellors were assiduous and consistent in the pursuit of that principle. Under the Tudors, some of them behaved with complete arbitrariness. These occasional aberrations may have inspired Seldon's oft quoted, but probably only half serious quip about the length of the Chancellor's foot. But they were not typical, the 'conscience' which the Chancellor set before him was normally something more constant and imperishable than the mere caprice of his own whim. A 'hardening' process sets in. By 1676 we find Lord Nottingham expressly repudiating the notion that the conscience of the Chancellor is merely *naturalis et interna*, and in 1818, Lord Seldon summarily repudiates any notion of mere individual discretion being open to an Equity Judge. Equity is a settled system of conscience.

The limits of the Chancellor's authority

1. This prerogative to grant relief had certain limits':—

(i) It could be exercised only where law gave no rights but where conscience required that certain rights should be given—This was known as the *Exclusive* jurisdiction of Equity.

(ii) It could be exercised only where law gave rights required by conscience but the remedies which it gave were insufficient to satisfy justice—This was known as the *concurrent* jurisdiction of Equity.

(iii) It could be exercised in matters in which the law gave rights required by conscience and remedies sufficient to satisfy the ends of justice but as to which its process was too defective to secure the remedies without the assistance of Equity—This was known as the *auxiliary* jurisdiction of Equity.

The nature of an equitable right

1. The nature of an equitable right will be better understood if it was studied in contrast with a moral right and a legal right. A mere definition would be very little use.

2. By way of introduction we may begin by seeking to have a precise conception of a right. What do we mean when we say that any given individual has a right :

(i) If a man by his own force or persuasion can carry out his wishes, either by his own accord or by influencing the acts of others, he has the 'might' so to carry out his wishes.

(ii) If, irrespectively of having or not having this right, public opinion

would view with approval or at least with acquiescence, his so carrying out his wishes, and with disapproval any resistance made to his so doing then he has a ' *moral right* ' so to carry out his wishes.

(iii) If, irrespectively of the approval or disapproval, acquiescence or non-acquiescence of public opinion, the State would support him in carrying out his wishes then he has a *legal right* so to carry out his wishes.

3. Whether it is a question of might, depends upon a man's own powers of force or persuasion. Whether it is a question of moral right depends on the readiness of public opinion to express itself on his side. Whether it is a question of legal right, depends upon the readiness of the State to exert its force on his behalf. A *legal right* exists where one course of action is enforced, and the other prohibited by that organised society which is called the State. A legal right is, therefore, an interest which is recognised and protected by the State. Right is any interest, respect for which is a duty and the disregard for which is a wrong.

The Characteristics of a legal right

1. A legal right is a right which unlike moral right is enforced by the State.
2. A legal right is founded in a title which must be shown to have been acquired in any one of the modes of acquiring title recognised by law—e.g. possession, prescription, agreement and inheritance, etc.
3. A vestitive fact which creates a title to a right in one person destroys the title of another to the same right.
4. A legal right creates an obligation which is either an obligation *in rem* or an obligation *in personam*.

In what respects does an equitable right resemble, in what respects does it differ, from a legal right

1. Equitable right is not like a moral right which is not enforced by the State. Equitable right is like a legal right in that it is enforced by the State.
2. A title to an Equitable right need not be created by any one of the recognised modes by which a title to a legal right is created. This is the most important distinction.

Illustration:

(i) A legal mortgage of land must be created by a deed. But an equitable mortgage may be created otherwise than by deed:—

(a) The statute of trade required that no action shall be brought upon any contract or sale of lands or any interest therein unless agreement was in writing and signed by the party or his agent.

But if the title-deeds of an estate are, without even verbal

communication, deposited by a debtor in the hands of the creditor, the mere fact of such deposit is enough to constitute the creditor a mortgage of the estate.

(b) An agreement that a creditor shall hold land at a fair rent to be retained in satisfaction of the debt, is a mortgage in equity but not in law.

(ii) **Assignment**—Legal and Equitable.

Legal: (1) Assignment must be in writing under the hand of the assignor—signature of the agent not sufficient. -

(2) The writing must contain a direction or order to the debtor by the creditor to pay the assignee.

(3) There must be express notice of assignment to the debtor.

Equitable : (1) The mode or form of assignment is immaterial provided the intention of the parties is clear. Assignment may be verbal.

(iii) **Charge**—Legal and Equitable.

(iv) **Lease**—Equitable and Legal.

(v) **Servitude**—Equitable and Legal.

Married Women's Property

This illustrates how an equitable right can arise without the legal formalities of conveyance required for the creation of a legal right.

(1) At Common Law, husband and wife were one person, and the status of the wife merged in that of the husband. The result of this merger was that the husband became the absolute owner of her personal property and acquired the sole right of controlling and managing her real estate.

On her death he became absolutely entitled to any of her personal property that had not already been sold and to a life estate by *courtesy* in her fee provided a child had been born.

(2) Secondly, a husband could not make a grant to his wife directly or enter into a covenant with her, for to allow either of these things would have been to suppose her separate existence.

(3) The effect of marriage at Common Law was to make a man complete master of his wife's property and to deprive her of contractual capacity.

(4) If property was given to a married woman by words which indicated either expressly or by implication that she was to enjoy it "*for her sole and separate use*". Equity removed that property from the control of the husband by regarding him as a trustee, and conferred upon the wife full powers of enjoyment and disposition.

But equity went even further than this. Perceiving the danger that a husband might persuade his wife to sell her separate property and hand the

proceeds to him, it permitted the insertion in marriage settlements of what is known as "*restraint upon anticipattion*". The effect of such restraint, which is still usual, was that a woman while possessing full enjoyment of the income was prevented during her coverture from alienating or charging the corpus of the property. She could devise but could not sell or mortgage it. This was in complete contravention of the Common Law. At Common Law, not only marriage became a vestitive fact giving the husband a title to the property of his wife but no agreement either with the wife or any other person could take away his right to hold and to alienate her property.

This is an illustration which shows that an Equitable right arises in a manner very different from that in which a legal right arises.

(3) Second distinction between a legal right and an equitable right may be formulated thus :

1. A legal right vested in one owner destroys either partially or completely the right vested in its previous owner. The destruction may be complete or may be partial. If it is a lease, it is a partial destruction. If it is a sale, it is a complete destruction. But whether complete or partial, it is destruction. This is what is meant when it is said that a *vestitive fact* is also *divestive fact*.

2. This is not true when there is a competition between a legal right and an equitable right. An equitable right does not destroy a legal right even when it prevails as against the owner of a legal right. In a conflict between a legal and an equitable right, the equitable right does not destroy the legal right, as one legal right does another legal right.

3. *Why is this so?* For this it is necessary to know how an equitable right came to be recognised at the very start by the Court of Chancery. The historical setting may be presented briefly as follows:—

(i) It was a common practice in England before the Norman conquest for one person to do something *ad opus*—on behalf of another. For instance the Sheriff seized lands and held them *ad opus domini Regis* or where a knight went about to go to the crusades, conveyed his property to a friend to hold it on behalf of his wife and children. The word *opus* became gradually transformed into *use* and the land transferred came to be spoken of as land put in use.

(ii) Now if in certain circumstances some persons could deal with land on behalf of or to the use of another, the question that inevitably occurred to men, why one person should not in a general way be allowed to hold land to the use of another. This as a matter of fact was exactly what was done in course of time. The tenant *A* would transfer his land by a Common Law conveyance to *B*, who undertook to hold it on behalf of, or adopting the correct expression, to the use of *A*.

In such cases B was called *the feoffee to use*, that is, the person to whom the feoffment had on certain conditions been made, while A went by the name of the *Astin que use*, which being interpreted, meant the person on whose behalf the land was held.

(iii) Reasons why this practice grew, are many. There were altogether six reasons why people liked to follow this practice of putting land in use. Of these two are of importance:—

(1) It enabled a party to escape the feudal burdens to which was liable at Common Law. At Common Law the following burdens were placed upon the tenant—

(i) (i) *Relief*—paid by a new tenant upon the death of an old tenant.

(ii) (ii) *Aids*—payable in three cases—

(a) (a) to ransom the Lord when imprisoned;

(b) (b) when the Lord desired to make his Lord a knight;

(c) (c) when the Lord was obliged to supply his eldest daughter with a dowry.

(iii) *Escheat*—The commission by a tenant of a crime serious enough to amount to felony caused the land to escheat.

(iv) *Wardship*.—If an existing tenant died leaving as his heir a male under 21 or a female under 14, the Lord was entitled to the wardship of the heir and as a consequence was free to make any use he liked of the lands during the minority without any liability to render accounts.

(v) *Marriage* :—To find a suitable match for an infant ward was the right of the Lord, and if the infant ward refused, the Lord was entitled to compensation.

The feoffor became free by putting his land in use. The burden fell on the person who acquired *Seisin*, namely, the feoffee to uses.

(2) The second advantage was avoidance of forfeiture and escheat.

Land held by tenure at Common Law was forfeited to the Crown if the tenant committed high treason, and upon his conviction or on slavery for felony, it escheated to the Lord. These unpleasant consequences were avoided, if a tenant, before embarking upon some doubtful enterprise, had the prescience to vest his lands in a few confidential friends. The delinquent might possibly suffer the extreme penalty, but at least his family would not be destitute.

4. Legal effect of putting lands in use :—

(i) The legal consequence of this practice of putting lands in use is an

important point to note. It was to cut off the *cestui que use* in the eyes of the Common Law from all connection with the land. By a conveyance operative at Common Law, he had conveyed his estate to the feoffee *to uses* and was, therefore, deprived of all Common Law rights over the land. He was nothing, the feoffee was every thing. Instead of keeping scisin, he chooses to rely upon the confidence which he reposed in the feoffee.

(ii) If the feoffee failed or refused to carry out the directions imposed upon him or if he deliberately alienated the land for his own purposes, there was no Common Law action by which he could be rendered liable.

(iii) If a *cestui que use* was let into possession of the land by the feoffee to uses, he was regarded as a mere tenant at will of the *feoffee to uses* and could be turned out any moment, and in the event of contumacy could be sued in trespass by the feoffee.

5. The nature of the remedy provided by the Court of Chancery to protect the feoffor must be clearly understood :—

(i) The Chancellor could not interfere with the jurisdiction of the Common Law Courts by proceeding directly against the land itself because the absolute title to the land was vested in the feoffee by the conveyance. The Chancellor could not disregard the fact that a feoffee was absolute owner at Common Law by virtue of the Common Law conveyance called feoffment whereby the land had been transferred to him.

(ii) The Chancellor distinctly recognised the fact that the feoffee was the owner of the land and had a legal right but what he said to the feoffee was this:—

"You have the legal right, I do not take it away from you but I will not permit you to exercise that legal right in such a way as to infringe the understanding on which the feoffor made the feoffment."

(iii) The Chancery in assuming jurisdiction over the *use* left untouched and inviolate the legal right of owner at Common Law. It exercised no direct control over the land. It only regulated the mode and manner of the legal right by imposing upon the owner of the legal right an obligation to observe the condition. The legal owner retained his legal right to own and to possess the land. The Chancellor gave the feoffor an equitable right to demand observance of the conditions of feoffment.

6. This is the explanation of that difference between a legal right and an equitable right according to which while one legal right destroys another

legal, either partially or wholly, an equitable right does not destroy a legal right.

7. This is also the explanation of the proposition enunciated by Strahan in *Article 11*, namely, that a legal right or interest issues *outflows out* of the property itself while equitable right or interest issues or flows out of the legal interest and not out of the property.

This is so because the Chancellor did not recognise the right of the equitable owner to obtain possession of property. That right he retained in the legal owner. What he gave to the equitable owner was the right to impose a duty upon the conduct of the legal owner and he did not give him the right to claim the property itself.

Illustration :- (1918). 2K.B. (Ir.)353—Graham vs. Mellwaine.

8. The consequences that follow from this fact may be noted:—

(1) Because an equitable right issues out of a legal right and not out of the property:

(i) It cannot be greater than the legal estate out of which it issues.

Illustration:

Land conveyed to *A* for the use of *B* and his heirs. *A* is the legal owner of the land. *B* is the equitable owner.

But land is conveyed to *A* and not to *A* and his heirs. Consequently the legal right of *A* vanishes at his death. As *A*'s legal right vanishes so does *B*'s equitable right

An equitable interest cannot survive the legal interest out of which it flows, (1914) *i Ch.* 300

(ii) Equitable right will be affected by all the infirmities attaching to the legal right

A died intestate leaving *B* and *C* as his sons, *B* being the eldest.

B being away *C* takes possession and transfers it to *D* for the use of his wife *E*.

B returns and claims the property. The legal title of *D* comes to an end by reason of the flaw in *C*'s title.

The equitable estate of *E*, the wife of *C*, also comes to an end.

III. The third difference between a Legal Right and an Equitable Right is that, a legal right may be a right in *rem* or may be a right in *personam*. But an equitable right is always a right in *personam*. Who is bound to respect the right of an Equitable owner? Not the world but the legal owner and no one else.

It is true, the legal owner, who is bound, is not the legal owner against whom the equitable right first arose but includes also every legal owner to whom the right is transferred.

All the same the proposition stands that an Equitable Right is a right in *personam* which binds only the legal owner.

Explain,

"Equitable rights have a resemblance to rights in rem."

- (i) It is true that Equitable Rights have a resemblance to rights *in rem*.
- (ii) How does this resemblance arise?
 - (i) An equitable right will be enforced not only against the owner of legal right but it will be enforced against:—
 - (a) his representatives and volunteers claiming through or under him,
 - (b) persons who acquire the legal right
 - (i) with the knowledge of the legal right,
 - (ii) against those who could have had knowledge.
 - (iii) The standard of knowledge set up by the Court of Chancery was so high that no one could escape and every purchaser was bound.

Equitable Priorities

1. An equitable right is a right *in personam*—operating against the owner of a legal right out of which it flows.

2. There may be two equitable rights flowing out of one legal right. Both would be rights in *personam* against the owner of the legal right out of which they flow.

3. An equitable right being a right in *personam* arising out of the legal and not out of the property which is the object of the legal right, could be defeated by transferring the legal right to a new owner. Or another equitable right may arise by this transfer which may defeat the prior equitable right.

4. The question to be considered is, in what cases can such a transfer defeat an equitable right?

5. The subject is discussed generally under the heading of *Equitable Priorities*. It is so designated because the test applied for the determination of the issue is the priority in time. But the real subject matter is the possible cases where an equitable right can be defeated by transfer of a legal right out of which it arises or by the creation of another equitable right out of the same legal right?

6. Cases to be considered fall under two classes :

- (i) Cases where there is a conflict between Legal Right and an

Equitable Right

(ii) Cases where there is a conflict between two equitable rights.

7. Under the first class of cases there are two contingencies which must be distinguished :

(a) Where the 'Equitable Right is prior in existence to the legal right

(b) Where an equitable right arises subsequently to the legal right.

Mrs. Thorndike was the beneficiary of a certain Trust Fund of which C was a trustee. In a suit by Mrs. Thomdike, the Court directed the Trustee to transfer of the fund into the Court for the purposes of the Thorndike Trust and was held by the Administrator. It appeared that the Trustees against whom the order was made had provided themselves improperly with the means of discharging themselves from their personal liability to bring the fund into Court and that there are third persons whom they had injured. The third party so injured filed a suit praying that the fund held in the name of Thorndyke should be transferred to them. *Contention* : Legal title not in Mrs. Thorndyke and therefore, her right could not prevail. *Contention* disallowed. Held, not necessary to acquire legal title personally. Also no notice.

8. Altogether we shall have three questions to consider which may be formulated thus :

(i) Whether a person who acquires a legal right will be subject to a prior equitable right?

(ii) Whether a person who has acquired a legal right will be postponed to an equitable right arising subsequently.

(iii) Where neither party has a legal right and both have only equitable rights, which of them will have priority?

(i) Whether a person who has acquired a legal right will be subject to a prior equitable right?

1. The answer to this question is this:

A purchaser obtaining a legal estate for valuable consideration and without notice of a prior equitable right will not be bound by the equitable right.

2. There are three important elements in this proposition :

(1) *Purchaser must have acquired a legal Estate.*—There is not much to be said about this. But the following points may be noted:

(a) (a) It is not necessary that he should acquire the legal estate personally. It is enough if somebody does it on his behalf.

Thorndike vs. Hunt, (1859) 3 De. G. 1. 563 =44 ER. 1386.

(b) The purchaser's title need not be a *perfect title*.

Illus. : If a trustee's title to property is defective, he may never the less convey to a *bonafide* purchaser an interest which will be effective against the beneficiary who is the owner of a prior equitable right.

Jones vs. Powles (1834) 3 My & K.581.

Facts

1. *John Jones* Owner—Mortgaged his house to Holbrook, redeemed it, obtained acknowledgement of payment— but did not obtain reconveyance. The legal estate remained outstanding in Holbrook.

2. On the death of Jones Meredith, his shop assistant forged a will of Jones and on its vests obtained possession of the house.

3. Meredith mortgaged it to Hall by a conveyance.

4. Meredith died leaving his wife to whom he left the equity of redemption by a will and thereafter to James Jones.

5. James Jones conveyed it to Watkins.

6. James Jones & Watkins became partners and mortgaged the property to *Powles* who acquired possession as mortgagee.

7. Powles died leaving his wife *Sarah*.

8. Sara Powles secured surrender of the estate and full ownership.

9. Sara Jones sued Sara Powles alleging that the will was a forgery and that Sara Powles had notice and that she could not defeat her right to redeem. (c) The purchaser should obtain a legal right. But this may be:

(i) (i) at the time of his purchase, or

(ii) he may get it subsequently.

(ii) The purchaser must have given valuable consideration for his right.

A volunteer is always subject to an equitable right. The reason is that he does not suffer by being made liable to the prior equitable right not having paid any consideration.

An existing debt is, however, sufficient consideration.

Illus. Thorndike vs. Hunt.

T had paid no consideration. His right was a sort of an existing debt against the trustee.

(iii) The purchaser must have acquired the right without notice of the existence of the prior equitable right.

This is the most (important)*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52A. Notes on Acts and Laws PART I.htm - _msocom_1 element in the proposition and the question

that arises for consideration is: (further portion not found—ed.)

What is Notice?

1. Notice may be *Direct* or *Imputed*, Direct notice is notice to the purchaser himself. Imputed notice is notice to the agent of the purchaser.

2. Direct Notice may be *actual* or *constructive* :

(1) Actual notice is where the matter is *within* the knowledge of the purchaser or his agent.

(2) Constructive notice (is)* where it would have come to his own knowledge or to the knowledge of his agent if proper inquiries had been made.

Actual Notice

1. If reliance is placed upon actual notice to defeat a legal right it must be proved that :

- | | | |
|-------|-------|---|
| (i) | (i) | It was given by a person interested in the property ; |
| (ii) | (ii) | it was given in the course of negotiations ; |
| (iii) | (iii) | it was clear and distinct. |

Constructive Notice

1. Constructive Notice arises where there is notice of a fact or facts from which notice of the existence of an equitable right could be presumed. It is not notice but evidence of notice.

2. There are three varieties of constructive notice :

(i) Where there is actual notice of a fact which would have led to the notice of the existence of the right, *Bisco vs. Earl of Banbury (1676) 6) 7 Ch. Ca. 287.*

The purchaser had actual notice of a specific mortgage but did not inspect the mortgage-deed which referred to other rights and encumbrances.

He was held to be bound by other encumbrances for he would have discovered their existence if he had inspected the deed as any prudent man would have done. *Davis vs. Ilutchings, 1907 I Ch. 356. .*

A trustee transferred a share of the beneficiary to the Solicitor relying upon the statement made by him that it was assigned. They did not call for the assignment. The assignment was subject to a charge in favour of another. *Held* they had constructive notice of the charge.

Occupation of tenant as Constructive Notice

Where land is in the occupation of some one other than the vendor, the fact of the occupation gives the purchaser constructive notice of any right of the occupying tenant.

It will not amount to notice of a third person's right—9. Moo. P. C. 18.

We now come to the parole evidence of notice. Upon this subject the rule is settled, that a purchaser is not bound to attend to vague rumours about purchaser—to statements by mere strangers, but that a notice in order to be binding must proceed from some person interested in the property—

R. 3 Ch. App. 488 *Lloyd vs. Banks* Carries j—1868

If he attempts to prove knowledge of the trustee *Aliunde*, the difficulty which this Court always feel in attending to what are called casual conversations or in attending to any kind of intimation which will put the trustee in a less favourable position as regards his mode of action than he would have been in if he had got a distinct and clear notice from the encumbrances. At the same time I am bound to say that I do not think it would be consistent with the principles upon which this Court has always proceeded, or with the authorities which have been referred to, if I were to hold that under no circumstances could a trustee without express notice from the encumbrancer be fixed with knowledge of the encumbrance. —*Illus. - 9 Moo. P. C. 18 Barnhart vs. Greenshields.*

Where it was held that vague reports from persons not interested in the property will not affect the purchaser's conscience.

Should notice be directly from the Encumbrancer?

A purchaser cannot safely disregard information, from whatever source it may come. It is of such a nature that a reasonable man of business would act upon that information even if it came from a news-paper report.

S.R. 3 Ch. App. 488 1868.

Registration

The registration of any instrument or matter required or authorised to be registered by law is to be deemed to constitute actual notice of such *instrument* or *matter* but not necessarily of its contents.

(ii) Where inquiry is purposely avoided to escape being bound by notice.

1. John Towsey contracted for the purchase of certain property in 1776.
2. He borrowed the amount of purchase money from one Dr. P, and placed the title-deeds in his hands as a security for repayment.
3. In 1790, T was very much indebted to one Ellames in a considerable

sum of money and executed a mortgage of the same property to Ellames.

4. Dr. P did not give any information of his claim to Ellames.

5. Ellames said that he made no inquiries after the title-deeds before he took the security, and admitted that upon executing the mortgage he inquired for them, and was informed of their being in the hands of Dr. P. but that he understood them to be so for safe custody only.

6. He received this information from one J. who was his brother-in-law, who had prepared the mortgage and appeared as his agent at the time of the execution of it.

7. Dr. P claimed priority over Ellames. It was granted as Ellames was held to have had notice.

(iii) Where there is gross negligence in not making usual and proper inquiries:

1899. 2 Ch. 264

1921. 1 Ch. 98.

Imputed Notice

1. 1. The underlying theory of agency is that a man can do a thing by an agent which he can do himself. Conversely, what is done by the agent is done by him. This being so, it is open to argument that what is known to the agent must be taken to be known to the Principal. This is the theory on which the doctrine of imputed notice is founded.

The Essentials of Imputed Notice

1. 1. *The knowledge must have come to him as an agent* and not in any other capacity. In other words, agency must be strictly proved.

Dyllie vs. Pollen—32 L. J. Ch. 782 (N. S.)

2. Agent must be distinguished from a person employed to do merely ministerial act—*e.g.* a person employed to procure a deed is an agent. Knowledge to such a person cannot be the basis of imputed notice.

3. In this connection, the position (of) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52A. Notes on Acts and Laws PART I.htm - _msocom_2 a person who is in the service of two Principals as their agent has to be considered. Suppose, there are two companies, A and B, and C is an officer employed in both A & B. Suppose that A company transferred their legal right to B company which was subject to an equitable right in favour of D of which C had knowledge.

Can D say that B company had notice of his equitable right because C, their agent, had notice of it in his capacity as the agent of A?

The answer is that, his knowledge which had acquired as agent of A company, will not be imputed to B company unless he owes a duty to the A company to communicate his knowledge and also a duty to the B company to receive the notice.

(1896) 2 Ch. 743—In *Re Hampshire Land Company*. *Facts*:

1. Hampshire Land Company was registered under the Companies Act, 1870.
2. The Company was closely interconnected with the Port Sea Island Building Society. Four Directors and a Secretary by name Wills were common to both.
3. On the 19th February 1881, a general meeting of the Company was held at which a resolution was passed authorising the Directors to borrow 30,000 £.
4. The Directors borrowed this amount from the Port Sea Society.
5. The Society went into liquidation in 1892. The Liquidator of the Society sought to claim the sum of £ 30,000 lent to the company.
6. It was contended that the resolution of the company authorising borrowing was *ultra vires* and that because William, the Secretary was a common officer notice to him was notice to Society and therefore Society could not recover.
7. *Held* that the Society could *recover* for reasons at p. 749.

II. The notice to the agent must have been obtained by him *in the same* transaction and not *in a previous* transaction.

There is a further qualification. Even if the notice was acquired by the agent in the *same* transaction, it will not be imputed to the purchaser, unless it is so material to the transaction as to make it the duty of the agent to communicate it to the principal.

(1886)—31 Ch. D. 671—In *Re Cousins*.

Facts :

1. In 1871, one William's cousins made a will of his property and left it in trust to his trustees.
2. One William Banks was a solicitor for the trustees.
3. Mathew, a cousin was to receive a share in the proceeds of real and personal property left by William's cousins under the will.
4. Mathew mortgaged his share to William Banks, the Solicitor as security for a loan of £ 35.
5. In 1873, Mathew mortgaged his share to William Richardson through

Banks and Banks was paid off.

6. In 1874' Richardson transferred his mortgage to William Drake. No Notice was given to the Trustees.

7. In 1875 Mathew mortgaged his share to Dennis Pepper to secure a payment of £ 500. Banks acted as the Solicitor. The mortgage to Dennis Pepper did not mention the previous mortgage to William Drake. Subsequently a notice of this transaction was given to the Trustee.

8. Drake took out a summons for payment of his mortgage debt due from Mathew out of the funds in the hands of the Trustee in *priority* to Pepper's claim. *1884. 26 Ch. D. 482*

9. Pepper's contention was that, he had no notice of Drake's claim—Mathew not having mentioned it in his deed of mortgage.

10. It was replied by Drake that Pepper had notice because Banks, the Solicitor who acted as his agent knew of Mathew's mortgage to Drake.

II. That Banks had notice, it was not denied. That Banks was the agent of Pepper was not denied. But the question was whether notice to Banks can be held to be notice to Pepper.

12. *Held:* No—p. 677.

Reasons. The knowledge of Banks did not arise in the course of the transaction with Pepper in 1875. Pepper could not be said to have any notice.

13. Pepper's claim was allowed.

III. Notice to agent will not be imputed to the purchaser when the agent is shown to have intended a fraud on the principal which would require the suppression of his knowledge and not communicate it to the Principal.

(1880) 15 Ch. D. 629 Cane vs. Cave.

(1428) ACI—Houghton & Co vs. Nollhard)

II. *Where an equitable right has come into being subsequently to the acquisition of a legal right.*

1. Leading case on the question is *Northern Counties of England Fire Insurance Co. vs. Whipp?*

1884 26 Ch. D. 482

Facts

C, the Manager of a company, executed a legal mortgage to his company, delivered title-deeds. They were kept in a safe of the company, the key to which was in C's possession. C— some time after took out the title-deeds and created another mortgage on the same property in favour of Mrs. Whipp. Mrs. Whipp has no notice of the first

mortgage to the Company. *Held:* Company entitled to priority.

2. The proposition laid down in the case is this—

Where the owner of a legal estate has assisted in or connived at the fraud which has laid to the creation of a subsequent equitable estate and the owner of equitable estate had no notice of the prior legal right, the Court will postpone the legal estate to the equitable estate although it is subsequent in its origin.

3. What is the evidence of assistance in or connivance at fraud:

(i) Omission to use ordinary care in inquiry after title-deeds.

(ii) Failing to take delivery in title-deeds are treated as evidence of assistance in or connivance at fraud where such conduct cannot otherwise be explained.

4. The same authority lays down another case in which also a legal estate will be postponed to a subsequent equitable estate.

Where the mortgagee, the owner of the legal estate has constituted the mortgagor, his agent with authority to raise money on the property mortgaged and the estate created has by the fraud or misconduct of the agent been represented as being the first estate.

5. For the operation of this rule, mere carelessness or want of prudence on the part of the legal owner will not be a sufficient ground. There must be fraud and connivance at or assistance therein. Nothing but fraud I will postpone.

(1913) 2 Ch. 18.

III. Where the competition is between two equitable rights.

1. In the two former cases the competition was between a legal right and an equitable right. In the third case the competition is between two equitable rights.

Cave vs. Cave. (1880) 15 Ch.D. 639.

Facts :

A Trustee & B a beneficiary.

A purchased land from trust-moneys in breach of trust and executed a legal mortgage thereof to C.

C had no notice of the trust.

Later by an equitable mortgage transferred the same land to There are three persons who have acquired rights. C, who has a legal right, is mortgagee, being a legal mortgage.

B has an equitable right flowing out of A's right which has been transferred.

D has an equitable right flowing out of A's right.

What is the position of the parties?

1. As between *C* and *B*, although *B*'s Equitable right is prior to *C*'s legal right as *C* had no notice, *C* takes priority.
2. As between *C* and *D*, *C* takes priority, because *C* is not party to a fraud in creating the rights of *D*.
3. As between *B* and *D*, their rights are equitable rights : whose right prevails? *B*'s right. The rule is that where there is a competition between two equitable rights, the right earlier in origin prevails over the subsequent right.
4. This rule applies only where the equitable rights have equal equities on their side. If the equities are unequal, the better of the two prevails.

Rice vs. Rice. 2. Drewry, 73 (76-78).

A sells land to *B* and without receiving purchase money (1) conveys land to *B*, (2) signs a receipt for money's and (3) delivers title-deeds to *B*. *B* subsequently mortgages the property to *C* who has no notice of *A*'s claim. Between *A* and *C* although *A*'s equitable right is earlier than that of *C*, yet the equities are unequal. *A* is guilty of negligence, therefore, *C*'s Equity is better and will prevail although later in time.

5. In some cases conflict as to priority between two equitable interests by the respective times at which the interest was transferred. In other cases, it is determined by the respective times at which written notice is given to the proper person or persons of the interest transferred (e.g. in the case of the assignment of chose in action).

Sum up. Three maxims of Equity.

1. Where equities are equal, the law prevails.
2. Where equities are equal, the first in time prevails.
3. Where equities are unequal, the better equity prevails.

Explanation

1. The first proposition has reference to cases where there is conflict between an equitable right and a legal right and applies to both classes of cases : (1) where the equitable right is prior to the legal right as well as to cases (2) where the equitable right is subsequent to the legal right.
2. Law prevails means that legal right prevails over an equitable right where no inequity can be attributed to the owner of a legal right. — Such as notice or fraud.
3. Propositions two & three have reference to cases where there is a conflict between two *equitable rights*.

Equitable Assignment /. General

1. Although the subject is called Equitable Assignment, it is an abbreviation. The subject is equitable assignment of a chose in action.
2. There are three matters of a preliminary character which must be dealt with at the outset:
 - (1) What is an assignment.
 - (2) What is a chose in action.
 - (3) Necessity for the study of the subject

(1) What is an assignment

1. Under the English Law of Property, property is classified as *Realty and Personality*.
2. In connection with the transfer of rights over Realty, the word used is *Conveyance*. In connection with the transfer of rights over Personality, the word used is either *Transfer* or *Assignment*.
3. Assignment, therefore, means the transfer by a person of his rights over personal property and particularly one form of it, namely, *chose in action*.

(2) What is a chose in act on

1. Under the English Nomenclature, Personality is divisible into two classes:
 - (i) Moveable goods of which one can take physical possession.
 - (ii) Personal rights of property which can only be claimed or enforced by action and not by taking physical possession.
2. The former are called :
 - (i) Choses in Possession—Things in Possession. (ii) Choses in Action—Things in Action.
3. The definition of a chose in action—*(1902) 2 K.B. 427 (430) Channell*. It is really speaking a debt.
4. The word assignment is used in respect of chose in action. It is something which you can only sign it away if you want to transfer it. You cannot deliver possession of it.

(3) Necessity of Studying Equitable Assignment

1. An assignment is a transfer of a right by its owner, subsisting against another, to a third person to whom the person against whom it was subsisting, becomes bound.
Illustration. *A* is creditor. *B* is debtor. *A* assigns his right to debt against *B* to *C* : *B* becomes bound to *C* and *C* gets a right to recover it from *B*.
2. Three persons are involved in an assignment :

- (i) The original owner. (ii) The person bound to the original owner. (iii) The person to whom the original owner has transferred the right.
3. The right, i.e., the chose in action may be legal or equitable such as a legacy or an interest in a trust fund.
4. Assignment of a chose in action was differently treated by Equity and by the Common Law.

Common Law and Chose in Action

1. There could be no assignment in Common Law of a Chose in action. Not only there could be no assignment of an equitable chose, there could be no assignment even of a legal chose.
2. The reason was the fear of multiplicity of suits.
3. Statute law and Special law made certain kinds of Choses of action assignable:
- (i) Negotiable Instruments became assignable by the law merchant
- (ii) Policies of Life Insurance and Marine Insurance were made assignable by Statute.
- (iii) Section 25(6) of the Judicature Act: all legal Choses in Action have been made assignable.

Equity and Chose in Action

1. In Equity, a chose in action was always assignable. Not only an equitable Chose was assignable in Equity but a legal Chose was also assignable in Equity.
2. If the Chose was equitable, the assignee could bring his proceedings to recover it in a Court of Chancery in his own name.
3. If it was a legal Chose, the proceedings had to be taken in the name of the assignor and the way the Court of Chancery interfered, was to restrain the assignor from objecting to this use of his name on the assignee giving him a proper indemnity against costs.
4. There were, however, some Choses in action to the assignment of which equity did not give effect on the ground of public policy:
- (i) assignment of pay and half pay of public officers paid out of the National Exchequer.
- (ii) Assignment of alimony to a wife.
- (iii) Assignment affected by maintenance of property.

Conclusion

1. There are thus two ways of making an assignment—
- (i) Legal, (ii) Equitable.
2. Although the Judicature Act has laid down the form and procedure for the legal Assignment of a legal Chose, it has not abrogated the rules

of Chancery relating to Equitable assignment of a legal Chose. So that if an assignment is ineffective in law by reason of some defect, it will be good if it conforms with the rules of equity. Secondly, the Judicature does not touch the assignment of an Equitable Chose in action.

Categories of cases to be considered

There are three categories of cases to be considered in connection with the assignment of a Chose in action :

- | | | |
|-------|-------|---|
| (i) | (i) | Legal assignment of a legal Chose in action. |
| (ii) | (ii) | Equitable assignment of a legal Chose in action. |
| (iii) | (iii) | Equitable assignment of an Equitable Chose in action. |

Requisites of a legal assignment of a Legal Chose

1. Assignment must be *absolute, i.e.*, it must amount to a *complete* divesting of his right by the assignor. The debt must be certain and must be of the whole amount.
2. The assignment must be in *writing* signed by the assignor. It need not be by deed. It need not be for value.
3. Express notice must be given to the debtors of the assignment.

The Section does not say :

- | | |
|-------|---|
| (i) | By whom is notice to be given—by <i>the</i> assignor or assignee. |
| (iii) | (iii) At what time notice is to be given so that it may be given by the assignee after the death of the assignor. |

Effect of Want of Notice

1. Absence of notice does not disentitle an assignee of suing on the assignment. It only imposes certain disabilities and results in certain disadvantages.

- | | |
|------|--|
| (i) | The assignee cannot sue the debtor in his own name without making the original creditor a party to the action. |
| (ii) | The assignee will be subject <i>to</i> equities arising between the debtor and his original creditor before the date of the assignment and will lose his right against the debtor altogether if the debtor pays the original creditor. On the other hand, if the debtor pays the original <i>creditor</i> after receiving notice of assignment, the <i>assignee</i> could still recover the debt from him. |
| (iv) | (iv) The assignee, who fails to give notice to the debtor of his assignment, will be postponed to a subsequent assignee for value who has no notice of the previous assignment, and gives notice of his assignment to the debtor. |

Requisites of an Equitable assignment of a Legal Chose in action

An Assignment which does not comply with the statutory requirements is not necessarily ineffectual, for it may operate as an Equitable Assignment.

Two things are necessary :

- (1) There must be value given by the assignor.
- (2) A charge created by agreement between the debtor and the creditor upon specific funds or by an order given to the creditor upon a person holding money belonging to the debtor, will amount to an assignment.

1839. *Burn vs. Carvallo* 4 *Hylve & Craigs Reports*. 690

Facts

F was in the habit of sending consignments of goods to *R*, who was trading in a different town and used to draw Bills of Exchange upon *R*. It was arranged by *F* with *B & Co.* that they should endorse and negotiate his Bills drawn upon *R* against consignment and they were to credit him with the amount and he was to draw upon it and *B & Co.* was reimburse itself by recovering the amount from *R*. *F* drew for certain amounts on *B & Co.* But *R* failed to meet the Bills on maturity. *F*, who was the debtor of the *B & Co.* by a letter to *B & Co.* promised that he would direct and by a subsequent letter did direct to deliver the goods to *V* as the agent of *B & Co.*

F wrote to *R* to transfer the goods in his possession to *V*, the agent of *B & Co.* in the town. *R* accordingly delivered the goods to *V* on the 30th of June 1829.

On the 23rd of June 1829, *F* was adjudged insolvent for an act done on the 23rd of May 1829. His trustee in bankruptcy sued for the recovery of the value of the goods from *B & Co.* *B & Co.* contended that there was an equitable assignment of the value of the goods by *F*. *Held* the order of the debtor was a good assignment in Equity.

Rodick vs. Gandell.

(1851-2) 1 *Dege*. 763. 42.E.R. 749

Gandell was an Engineer and was indebted to a certain Bank for a large amount and the Bank was pressing for payment.

Gandell was a creditor of a Railway Co. To induce the Bank not to press for payment and also to pay other drafts outstanding against him, it was arranged that *Gandell* should instruct his Solicitor to recover the amount due to *Gandell* from the Railway Co. and pay it to the Bank. *G*,

by a letter to the Solicitors of the Company, authorised them to receive the money due to him from the Railway Co. and requested them to pay it to the Bankers. The Solicitors by letter promised the Bankers to pay such money on receiving it.

Why—no agreement between debtor and creditor. The Solicitor recovered the amount from the Railway Co. but instead of paying it to the Bank, paid it to Gandell. Gandell became insolvent and his property was taken possession of by the official assignee. The Bank sued for a declaration that there was an equitable assignment by Gandell of his funds claimable from the Railway in favour of the Bank and collected by the Solicitor and the Bank was therefore entitled to recover the amount from the official assignee. *Held.* this was not an equitable assignment. It was not an order given by the debtor to his creditor upon a person owning money or holding funds belonging to the debtor directing the *person* to pay such funds to the Creditor.

There must be *privity* between the *assignor* and *assignee* in order to constitute an equitable assignment. If there is no privity then there is no assignment even in equity.

Consequently, if the Principal directs his agent to collect money owing to the principal and pay it to a third person, such third person is not an assignee in equity if the mandate is not communicated to him. It may be revoked by the principal.

Similarly a Power of attorney or authority to collect money and to pay it to the creditor of the party granting the power does not amount to an equitable assignment. A cheque is not an equitable assignment or appropriation of money in the drawer's Bank.

Hopkinson vs. Forster, (1874) L. R. 19 Eq. 74.

There can be no valid appropriation or assignment if no specific fund is specified out of which the payment is to be made.

Percival vs. Dunn. (1885) 29 Ch. D. 128

Whether notice is necessary in the case of an equitable assignment?

1. An equitable assignment is complete between the assignor and assignee although no notice is given to the debtor.
2. Notice of the assignment should, however, be given to the debtor for two reasons.
 - (i) If there is no notice, the debtor will be free to pay to the assignor, the

original creditor and will not be liable to the assignee. On the other hand, if he pays to the assignor in disregard of the notice, he will be liable to pay over again to the assignee.

Stocks vs. Dobson (1853) 4 De. G. M & G. II

(ii) If there is no notice, then the assignee will not be allowed to have priority over subsequent assignee of the same chose in action by the same assignor.

This is called the rule in **Dearl vs. Hall** (1823) 1 Rsess 1=S. F. C. p. 57.

Facts:

Peter Brown died and left a Will whereby he made a trust of his personal estate and of the monies to arise from the sale of his real estate and directed his executors to invest the same and pay interest to his son Zachariah Brown during his life. The income came to about £ 93 a year, On 19th December 1808, Brown, in consideration of £204 paid to him by William Dearle, assigned a part of his annuity of £ 37. On 26th September 1809, Brown, in consideration of £ 150, assigned another part of his annuity of £27 to Sherring, subject to the assignment in favour of Dearle.

Neither Dearle nor Sherring had given notice of assignment to the executor.

In 1812 Brown advertised the life interest of 93 pounds p. a. in trust funds for sale as an unencumbered fund.

Joseph Hall proposed to purchase it and through his Solicitor investigated Brown's title. He also made inquiries of the executors, who knew of no encumbrance affecting Brown's interest. Thereupon Hall purchased Brown's interest for £711-3-6 and had it assigned to him.

On the 25th April 1812, Hall gave the executors written notice of the assignment to him.

On the 27th October 1812, Dearle and Sherring gave notice of their assignment to the executors.

The executors refused to pay any one of the three until their rights were decided.

Dearle and Sherring brought a Bill in chancery against Hall praying that the income of £ 93 should be applied in satisfying their's before that of Joseph Hall.

Dearle contended that the doctrine *first in time is first in law* should be applied and as he was first he should be preferred to Hall.

Held No. Hall should be preferred.

Judgement of Plumer M. R. S. & C. p. 55

The rule was based on carelessness and negligence to perfect one's claim. But the rule is now absolute and independent of conduct. The assignee who gives proper notice first will be paid first, whether the other assignee has been guilty of carelessness nor not.

Re Dallas. (1904). 2Ch. 385.

The rule in *Dearle vs. Hall* has always applied to assignment of all equitable interests in personality.

To whom notice should be given under the rule in *Dearle vs. Hall*

1. It must be given to the debtor, trustee or other person whose duty it is to pay the money to the assignor. *Stephens vs. Green*, (1895) 2 Ch. 148
2. Notice to the Solicitor will be effectual only if Solicitor was expressly or impliedly authorised to receive it. (1880) 14 Ch. D. 406.
3. If there are several debtors or trustees, notice to one is notice to all.
4. Fresh notice to new trustees is not necessary, if notice is given to old trustees.

What should be the form of Notice

1. Formerly, notice need not be a formal notice and might have been by word of mouth.
2. But since 1925, it must be in writing.

What title is acquired by the assignee by an Equitable assignment.

1. It has always been the rule of equity that the assignee of a thing in action cannot acquire a better right than the assignor had.
2. In other words, the assignee takes it subject to all the equities affecting it in the hands of the assignor.

Roxburghe vs. Cox, (1881) 17 Ch. D. 520. So that—

- (1). If the Contract between the assignor and the debtor was violable, the debtor can set up the violable character of the contract against the assignee, even if the assignment was for valuable consideration.
- (2). If the debtor had a right of set-off against the assignor, the same would be available to him against the assignee.
- (3). The assignee is, however, free from equities arising after notice.

A debtor cannot diminish the rights of the assignee such as they are, on the date of notice, by any act done after date of notice.

Assignment of rights to be acquired in future

1. So far, we have dealt with assignments of rights which had accrued when the assignment had taken place.

2. We must consider the assignment of rights to be acquired in future.
3. Example of such rights :
 - (i) The expectancy of an heir-at-law to succeed to the Estate. (ii) The expectancy of a next of kin to succeed to personality. (iii) Freight not yet earned. (iv) Future Book-debts.
4. At Common Law, they were all void. A man could not assign what he had not got. In equity, they were assignable, if for valuable consideration.
5. Equity treated them not as assignments but as *contracts to assign* , and when the assignee became possessed of it, he was compelled to perform *his* contract.
6. When the right was acquired by the assignor, the beneficial interest passed immediately to the assignee. But the legal interest remained with the assignor. So that, if the assignor transferred it to a subsequent assignee who gave value and had no-notice of the previous assignment, the title of the subsequent assignee would prevail.

Conversion

1. NECESSITY FOR THE DOCTRINE OF CONVERSION.

1. The English Law had prescribed a different mode of devolution of the *Realty* and *Personality* of the owner, if he died *intestate*. His Realty went to his heir and *Personality* went to his *next-of-kin*.
2. That being so, whether the property will go to the heir or to the next of kin must depend upon the state of the property on the date on which the succession opens.
3. Ordinarily there is no difficulty. The actual state in which the property will be found on the material date will determine its devolution. But suppose, circumstances are such that on the date on which the succession opens, land *is to be sold* for money *but is not sold*, or money is *to be invested* in the purchase of land *but is not so invested*, how is the devolution of the property to be determined? If the land is to be treated as land, until it is actually sold, then it will go to the heir. On the other hand, if it is to be treated as money, because it was intended to be sold for money, then although it is land, it will go to the next-of-kin. In other words, the question was whether property was to devolve according to the actual state in which it is found to exist or according to the form in which it was intended to be converted. The answer given by equity was, that property was to devolve, not according to the actual state in which it exists, but according to the form in which it was

intended to be converted.

4. This is what is called the **doctrine of conversion**. There would have been no necessity for the doctrine. had there been no difference in the rules of inheritance for Real and Personal Property. This difference is now abolished by Sections 33,45 and therefore, conversion has lost all its importance.

5. In India there is no such distinction in the inheritance of property—Realty to heir and Personality to next-of-kin.

II. THERE ARE FOUR CASES WHICH GIVE RISE TO CONVERSION.

- (1) By operation of the law.
- (2) By operation of the order of the Court.
- (3) By operation of a Contract.
- (4) By operation of a direction in a deed or a will.

(1) Conversion by operation of the Law

1. There is only one case in which conversion takes place by operation of the Law. That case is the case of Partners. Under the Partnership Act of 1890, Section 39, every partner has a right to require, that the property belonging to the Partnership shall be sold and the proceeds, after the discharge of all debts and liabilities, shall be divided among the partners according to their shares in the capital. As a result, land which is partnership property is treated as Personality and not as Realty.

2. It is treated as Personality, not only as between Partners themselves and their representatives after death, for the purposes of distribution of the partnership assets, but it is also treated as personality for purposes of inheritance as between the persons entitled to the property of a deceased partner.

3. The conversion of Realty into Personality under the Partnership Act takes place not on the date of the dissolution of the Partnership or the death of a partner but at the moment when it became Partnership Property.

4. The doctrine of conversion applies to Partnership Realty unless the contrary intention appears. The reason why partnership agreements convert Realty into Personality is, because a partner ordinarily is not entitled on dissolution to any specific part of the partnership property. But there may be a proviso in the partnership agreement permitting a partner to have specific property, in which case conversion will not apply, there being intention to the contrary.

(2) Conversion by order of the Court

1. Where an order is made by the Court for the sale of Realty, the Realty is treated as being converted into Personality for purposes of succession to the estate of the person whose property was ordered to be sold.

Illus. A B C have equal shares in a Realty. The Court orders the sale of the Realty. This order has the effect of converting their shares in Realty into Personality, so that the persons entitled to succeed would be the next of kin and not the heir.

2. The following points must be noted:

- (i) The order for sale must be within the jurisdiction of the Court
- (ii) It is immaterial whether the purpose for which it is sold will or will not exhaust the sale proceeds. The sale may be merely to pay cost. All the same, if the order is for sale, within the jurisdiction, it will effect conversion
- (iii) It is immaterial whether it is actually sold or is merely ordered to be sold. Order for sale is enough to effect conversion.
- (iv) Conversion takes place from the date of the order and not from the date of the sale.

3. There are two cases in which the order of the Court will not effect conversion for the purpose of inheritance.

- (i) Where the Court itself makes an order that such change in the nature of the property shall not affect its devolution on death, in which case the sale proceeds will go to the heir and not to the next-of-kin.
- (ii) Where the provision of some statute prohibits a change in the nature of the property from affecting its devolution *e.g.* Section 123 of the Lunacy Act, 1890, which provides that if the property of a lunatic is sold, the proceeds will go to persons entitled to them as though it was not sold.

(3) Conversion by operation of a Contract

1. When there is a binding contract to sell Realty, the Realty is treated as part of vendors Personality. Conversely, the interest of the purchaser is treated as Realty, even if he dies before completion.

2. This is, however, subject to one condition. That is, the contract must be one of which specific performance would be ordered by the Court—*34 Ch. D. 166.*

Mere notice to treat does not suffice to bring into operation the doctrine of conversion. There will be no conversion if the contract is abortive or unenforceable.

(4) Conversion under a contract to lease with an option to purchase

A leases certain property to *B* for seven years, giving him by the lease an option to purchase the property at a certain price during the term. *B* exercises his option.

Three questions arise:

- (i) Does the exercise of the option effect a conversion?
- (ii) Does it effect a conversion even if the option is exercised after the death of the Lessor?
- (iii) From what date does such conversion begin to operate?

(i) Does the exercise of the option effect a conversion?

In law, the option given is an offer to sell. The exercise of the option is an acceptance of the offer and when there is an acceptance of the offer, there is a contract. The exercise of the option by respiting in a contract effects a conversion. The answer to the first question is therefore in the affirmative.

(ii) Exercise of the option before the death of the Lessee and after the death of the Lessor.

1. If the Lessee exercises his option *before* the death of the Lessor, i.e., while he is alive, then there is conversion, because the offer conveyed by the option can be legally accepted and a binding contract can arise.

2. If the lessee exercises the option *after* the death, then, on principle, there ought not to be conversion, because there cannot be a contract. An offer cannot be accepted after the person, who make the offer, is dead.

But in *Laves vs. Bennett* (1785) 1 Cax 167, it was held that the exercise of the option, even *after the* lessor's death, is good for the purposes of conversion.

3. The rule in *Laves vs. Bennett* being anomalous, is confined in its operation. It is applied as between persons claiming under the lessor. But it is not made applicable as between lessor and lessee.

Illus. *A* leased certain property to *B* with an option to purchase. The premises were insured. They are destroyed by fire *before* the option is exercised by *B*. *B*, on exercising the option, cannot claim the insurance money as part of his purchase. That is claim as between *A* and *B* (1878)7Ch.D.858, 10 Ch. D. App. 386.

(III) From what date does conversion by contract begin to operate.

1. Conversion becomes operative from the moment when the contract is made.
2. In the case of option to purchase, conversion takes place as from the execution of the lease.
3. For the purposes of profits etc., the property remains real estate until the option is exercised, so that the rents and profits are taken by the heir entitled to Realty.
4. For the purposes of devolution. it is personality.

Conversion by direction of the owner.—Whether contained in a deed or a will.

1. Two things are necessary for conversion by deed or will : (i) There must be a direction to sell or purchase Realty. (ii) There must be some person in existence who can be said to have the right to insist upon the direction being carried out. Conversion is always for the benefit of some person. If there is no person to claim the benefit, then there need be no conversion.

2. In order to effect a conversion, the direction must be imperative. If direction is only *optional*, there will be no conversion and property will be treated as real or personal, according as to the actual condition in which it is found.

NOTE.—For a difference between a direction which is *really* optional and a direction which is *apparently* optional but really *imperative* See *Earlom vs. Saunders*--(1754) *Ambler's Reports* 241.

Direction, if it is optional, must be *express*. Otherwise it will always be held to be imperative.

3. Distinction must be made between direction to sell or purchase Realty and discretion as to the time at which sale or purchase shall be made:

(a) If the direction is imperative, mere fact that it is accompanied by discretion, will not prevent conversion having its effect.

(b) If the direction is imperative, the fact that those to whom the direction was given have failed to carry it out, will not prevent conversion having its effect.

4. Distinction must be made between a simple direction to sell or purchase and a direction, the execution of which, is made dependent *on the request or consent* of some other person.

In such a case, whether there will be conversion or not, rests upon the construction of the document :

(a) If the intention of the clause is to enable the person named to *enforce the obligation to convert*, then there will be conversion.

(b) If the intention of the clause is *to control the operation of the direction* by making it subject to application, then there will be no conversion until such application is made.

5. Distinction must be made between the *power to convert* and *direction to convert* :

(1892) I Ch. 279.

(1910) I Ch. 750.

A mere **power to convert** is not imperative direction and therefore, there **will be** no conversion, where there is mere power.

Illus.:

A borrowed £ 300 from B on a mortgage of A's property and gave B power of sale by the terms of which the surplus proceeds of sale were to be paid to A, his executors and administrators.

A died intestate, and after A's death B sold the estate and there were surplus sale proceeds. *To whom would the surplus go?*

As this was not a direction to sell, the property would devolve according to its *actual* state at the death of A. At the death of A it was Realty, therefore, the heir was entitled to it. If the sale had taken place during the life-time of A, at the death of A it would be personality and would have, therefore, gone to the next-of-kin.

II. TIME FROM WHICH CONVERSION BY DIRECTION TAKES.

1. This varies according as the direction is contained in a will or in a deed.
2. If the direction is contained in a will, conversion will take place as from the death of the testator.
3. If the direction is contained in a deed, conversion will take place as from the date of the execution of the deed—not withstanding that the trust to sell or purchase is not to arise until after the, settlor's death.

III. EFFECT OF THE FAILURE OF OBJECTS FOR WHICH CONVERSION WAS DIRECTED IN A WILL OR DEED.

1. Two cases must be distinguished: (i) Cases of total failure.
- (ii) Cases of partial failure.

(i) Cases of total failure

1. Where there is a *total* failure of the objects *before* or *at the time* when the deed or will came into operation, or before the time at which the duty to convert is to arise, no conversion will take place at all and the property will remain as it was. The reason is that, there is no one who can insist upon the character of the property being altered.
2. The failure must *be prior* failure and not *subsequent* failure.
3. The rule regarding conversion is uniform in the case of total failure and there is no difference between the effects of a direction in a deed and a direction in a will.

(ii) Cases of partial failure

1. Where the purposes have only partially failed, then conversion is necessary to carry out such purposes as have not failed. Consequently the doctrine of conversion would operate and the representative entitled to take the property in the form in which it is directed to be converted.
2. It will be carried out to the extent necessary.

Illus.:

A devises Realty to trustees upon trust to sell and divide the sale proceeds between B and C. B predeceases A and C survives him. Here, sale is necessary in order that C may have what A intended to give him, i.e., money. C will take his share in money.

What would happen to the share of B?

It is money *in fact* and *ought* to go to the next-of-kin. But it will go to the heir because conversion to that extent was unnecessary. Heir takes it but as money.

Illus. :

A bequeaths personality to trustees to invest in the purchase of land for B and C. B predeceases A and C survives him. Here, purchase is necessary in order that C may have what A intended to give him, i.e., land. C will take his share in land.

What would happen to share of B? It will go to the next-of-kin, because, conversion to that extent was unnecessary. But the next -of-kin will take it as land.

Reconversion

1. Reconversion means annulment or cancellation of prior conversion. It is a reversion or restoration of the notional state of the property to its

actual state.

2. Reconversion can take place in two ways :

- | | | |
|------|------|----------------------|
| (i) | (i) | By act of parties. |
| (ii) | (ii) | By operation of law. |

(1) By act of parties

1. This occurs where a person has the right to choose between taking the property in its converted State or in its actual state.

2. Persons who have a right to make such an election and thereby reconvert property are:—

(1) An absolute owner.

(2) A owner of an undivided share— without the concurrence of the co-owner in the case of money to be converted into land but not in the case of land to be converted into money. This is because money is capable of apportionment while land is not.

Illus.—(1) Where money is to be invested into land in the interest of *A* and *B* as joint tenants. *A* can elect to reconvert without the concurrence of *B*.

(2) Ques :— Can a remainder man effect a reconversion by electing to take it in its actual state? This is not clearly settled.

(3) This rule of reconversion by act of parties applies where the owner who has a right to elect and thereby to effect reconversion is subject to the limitation that he must not be under any disability.

Infants and Lunatics are persons under disability and cannot, therefore, reconvert. But the Court may direct reconversion on their behalf if it is beneficial to them.

Married woman can reconvert if the property belongs to her for her separate use. If it is not her separate property, then she can do so only with the consent of her husband. (4) Evidence of election to reconvert—

- | | | |
|------|------|--|
| (i) | (i) | express declaration of intention in that behalf; |
| (ii) | (ii) | conduct amounting to election. |

(2) Reconversion by Law

Where a person, who is under an obligation to convert property, is in possession of and absolutely entitled to the property after the obligation has ceased/the property is at home and reconverted without any act on his part. Thus—

A converts within 3 years after his marriage with *B* to invest £ 1,000 in the purchase of lands and settle them upon his wife *B*. *B* dies within a year of the marriage. Since the obligation to invest money in land and the right to require its investment are both vested in *A*, the obligation is discharged by operation of law and the money which was converted into land by the covenant is reconverted and passes to the next-of-kin.

Election

I. DISTINCTION BETWEEN ELECTION IN LAW AND ELECTION IN EQUITY.

- (a) *Election in law* is connected with the choice of a party to repudiate a liability arising out of an unauthorised act or to ratify the act and accept the liability.
- (b) *Election in Equity* is connected with the choice of a person to accept a gift which is subject to a burden or to reject the gift.

II. NECESSITY FOR THE EQUITABLE DOCTRINE OF ELECTION.

(i) What is the problem which the doctrine deals with

Nature of the Problem.

A gives his property to *B* by an instrument—deed or a will—and by the same instrument gives to *C* a property belonging to *B*.

What can *B* take under such an instrument?

Here there are two gifts—

- (i) (i) by *A* to *B* of *A*'s property
 (ii) (ii) by *A* to *C* of *B*'s property

The gift to *B* of *A*'s property is a valid gift, because *A* is the owner of the property gifted away. The gift to *C* of *B*'s property by *A* is invalid, because it is not authorised by *B*.

Question is, can *B* take the gift from *A* of *A*'s property and repudiate the gift of his property by *A* to *C*? It is this problem with which the doctrine of Election deals.

(ii) **The doctrine of Election** says that the gift to *B* shall take effect only if *B* elects to permit the gift to *C* also to take effect.

III. THE PRINCIPLE OF THE RULE.

When a person makes a gift of this sort, equity presumes that in such a

gift there is an implied condition that he who accepts a benefit under an instrument must adopt the whole of it, conforming to all its provisions, and renouncing every right inconsistent with it.

(iii) Courses open to a person called upon to elect.

(A) Two courses are open to a person who is called upon to make an election.

(1) *B* may allow *C* to take his (*B*'s) property and himself take *A*'s property.

(2) *B* may take *A*'s property and not allow *C* to take his (*B*'s) property but give him compensation to the extent required to satisfy *C*.

Illus.:

A gives to *B* a family estate belonging to *C* worth £ 20,000 and by the same instrument gives to *C* a legacy of £ 30,000 of his (*A*'s) property. *C* can do either of the two things.

(i) (i) allow *B* to take the family estate *or*

(ii) (ii) keep the family estate and give *B* £20,000.

(B) The former course is called *taking under the instrument*. The latter is called *taking against the instrument*. The following points must be noted in connection with these two modes of Election:

(i) Election against the instrument is allowed in Equity only where the gift is made upon an *implied* condition that the donee shall part with his own property. Where the gift is made upon an *express* condition that the donee shall part with his own property. Equity will not allow Election against the instrument. The donee would take nothing if he refused to comply with the condition.

(ii) No question of compensation arises when a person elects under the instrument.

(iii) Election against the instrument where it is permitted—does not involve a forfeiture of the whole of the legacy but only of a part sufficient for compensation.

IV. CONDITIONS FOR THE APPLICATION OF THE DOCTRINE

(1) The donor must have given the property of the donee to a third person.

(2) The donor must have by the same instrument given his own property to the donee. To this the following must be added.

(3) The property *given to* the donee must be such that it can be used to compensate the third person.

(4) The property of the donee must be alienable.

NOTE.—The donor will be deemed to be disposing of such interest as he may have in the property and no more.

V. SOME CASES WHICH MUST BE DISTINGUISHED FROM CASES OF ELECTION

(1) Cases of *two* gifts to one person

In such cases the doctrine of election does not apply. They are cases of gifts of his own property.

Here the donee may accept the one that is beneficial and reject the one that *is onerous*—unless the intention of the donor was that the acceptance of the *onerous* was a condition for the grant of the beneficial.

2. Case of *two* properties in one gift.—One beneficial, the other onerous.

The beneficiary must take both or neither unless an intention appears to allow him to take the one without the other.

VI. CONCLUSION

(1) Conversion and election are doctrines which illustrate the maxim of Equity—Equity looks to intention.

(2) That being so there would be no election if there was no intention on the part of the donor to put the donee to election.

1. Performance

1. *The problem* :—A covenants with B to do a certain act. A does an act which can wholly or partly effects the same purpose *i. e.* available for the discharge of the obligation arising under the covenant but does not relate the act to the covenant. The question is *how is this act to be construed?* Is it to be construed that it is an independent *act* quite unconnected with the covenant or is it to be construed that the intention of A in doing this *act* was to perform the obligation. The answer of equity is that the *act* must be treated as being intended to perform the obligation under the covenant.

2. *Principle* •—The principle underlying the doctrine of Performance is that, equity presumes that every man has an *intention* to perform his obligation and when he does an *act* which is similar to the one he promised to do, then equity gives effect to that intention.

3. *The difficulties that would occur if this principle was not recognised.*

Illus :

A covenanted on his marriage to purchase lands of the value of £ 200 a year and to settle them for the jointure of his wife and to the first and other sons of the marriage in fail.

A purchased lands of that value but made no settlement, so that, on his death the lands descended to his eldest son.

The eldest son brought a bill in equity founded on his father's marriage-articles to have land purchased out of the personal estate of the father of the value of £ 200 a year and settled to the uses in the marriage-articles. But for the doctrine of *performance* the man would get both.

II. The cases in which the questions of Performance arise fall into classes:

(i) Where there is a covenant to purchase and settle lands, and a purchase is in fact made.

(ii) Where there is a covenant to leave personality to an individual and the covenantor dies intestate and the property thereby comes in fact to that individual.

III. Cases arising under the First Class

(i) *illus.* already given.

Points to be noted.

(i) Where the lands purchased are of less value than, the lands covenanted for, they will be considered as purchased in part performance of the contract.,

(ii) Where the covenant points to a future purchase of lands, lands of which the covenantor is already ceased at the time of the covenant, are not to be taken in part performance:

(iii) Property of a different nature from that covenanted to be purchased by the covenantor, is not subject to the doctrine of Performance.

IV. Cases that fall under the second class

(i) Covenant is to leave certain money.

A covenanted previously to his marriage to leave to his wife £620. He married and died intestate. His wife's share under the intestacy was less than £620.

The wife sued for the performance of the covenant. The question was, having received £ 620 on intestacy, was it not a performance of the covenant. It was *held* that it was, so that the widow could not claim her share on intestacy and £ 620 over and above as a debt under the

covenant.

(2) In this case, the covenant was wholly performed. But even if the amount received was less than the amount due under the covenant, the doctrine of performance would apply and the covenant would have been held to be performed *pro tanto*. , (3) Two points to be noted :

(i) Where the covenantor's death occurs at or before the time when the obligation accrues, there is performance.

(ii) Where the covenantor's death occurs after the obligation has *accrued due*, there is no performance.

Satisfaction

I. *Problem*.—A is under an obligation to B. A makes a gift to B. The Question is : Is the gift to B to be taken as a gift or is the gift to B to be taken as satisfaction of A's obligation to B?

II. There is a similarity between satisfaction and performance. There are fundamental distinctions between the two.

(1) In performance, the act done is available for the discharge of the obligation, but is not related in specific terms to the obligee. In satisfaction, it is related to the obligee but not in discharge of the obligation.

(2) In performance, whether the covenant has been performed depends, not upon the intention but, upon whether that has been done which was agreed to be done. The question, whether a gift satisfies an obligation, depends upon the intention of the donor.

(3) If an obligation has been performed according to its terms, the obligor is discharged. If an obligor makes a gift by will in satisfaction of his liability, it rests with the obligee either to accept the gift or decline it. If he accepts it, he loses the right to enforce his obligation, if he declines it, he retains his original rights.

II. Intention is that, the gift is in satisfaction of the prior obligation.

III. Cases in which the question of satisfaction arises fall into two classes:—

(i) Cases in which the prior obligation arises from an act of bounty.

(ii) Cases in which the prior obligation is of the nature of a debt.

IV. Class of cases in which the prior obligation arises from an act of bounty.

In this class fall two kinds of cases— (A) Satisfaction of legacies by portion. (B) Satisfaction of portions by legacies.

(A) *Satisfaction of legacies by portion*

Portion—That part of a person's estate which is given or left to a child.

IlluS.:

A has three sons B, C, D. He makes a will and in that will gives a legacy to each of his sons. Subsequently to the making of his will, A makes an advancement of a certain sum of money.

2. Here, there is a legacy and afterwards a portion. Are they cumulative or are they alternative. Is the child which has got a portion also entitled to get the portion? Or is the claim for legacy satisfied by the subsequent portion given by the father?

3. The answer of equity is that, a child cannot get both, legacy and a portion. The claim for legacy shall be held to be satisfied by the subsequent grant of the portion. This is called the rule against *double portions*.

II. *Satisfaction of Portion by Legacies*

1. This is the converse of the first. In the first class of cases, there is first legacy then a portion. In the second, there is a portion first and then there is a legacy.

2. In the former case, the question was whether a legacy by will was satisfied by a subsequent portion, In this, the question is whether the obligation to give a portion is satisfied by a subsequent legacy.

3. The answer here is the same as in the former case. The same rule against double portion applies. So that a portion will be satisfied by a legacy.

4. When the will precedes the settlement, it is only necessary to read the settlement as if the person making the provision had said, "I mean this to be in lien of what I have given by my will".

But if the settlement precedes the will, the testator must be understood as saying, "I give this in lien of what I am already bound to give, if those to whom I am so bound, will accept it".

5. The same rule applies in the case of a portion followed by a portion.

II. *Limitations on the rule of double portions*

1. The rule does not apply :

(1) In the case of legacy and a portion—where the legacy is *expressed* to be given for a particular purpose and the portion subsequently advanced is for the same purpose.

(2) In the case of portion and legacy, and in the case of portion and portion—where the property is actually transferred to the child and then a provision is made either by way of a legacy or portion—in short it applies only where the first portion is only a debt.

(3) Where the person, who makes the provision is the parent or a

person *in loco parentis*— If, therefore, a person gives a legacy to a stranger and then makes a settlement on the stranger or *vice versa*, the stranger can take both, the rule against double portion does not apply to him:

- (i) (i) An illegitimate child is a stranger;
- (ii) (ii) a grand child is also a stranger;
- (iii) a stranger cannot take advantage of the satisfaction of a child's share.

III. *Cases of two Legacies given by the same will or by a will and Codial.*

1. Question is whether the second Legacy is intended to be additional to the first or to be merely repetition.

2. The leading case is *Hooby vs. Hatton*, 1 Bro. C. C. 390 N. 3'. Two class of cases to be considered separately—

(1) Where the subject-matter of the legacy is a thing.

(2) Where the subject-matter of legacy is money.

4. *Where the subject-matter of the Legacy is a thing*, Rule :Where the same thing is given twice—not additional but repetition.

5. *Where the legacies are pecuniary legacies:*

(1) The rule varies according as the gifts are contained in the same instrument or in different instruments.

(2) Two pecuniary legacies in the *same* instrument.

Rule:

(i) (i) If equal— repetition.

(ii) (ii) If unequal—cumulative.

3. Two pecuniary legacies in *different* instrument. *Rule.*—They are cumulative.

Exception—If *same* motive is expressed for both gifts and the *same* sums are given—then repetition.

B. Cases in which the prior obligation is of the nature of a debt.

1. Cases may be divided into two classes—

(i) Satisfaction of debt by a Legacy.

(ii) Satisfaction of debt by a portion. (i) *Satisfaction of debt by a Legacy.*

(1) This case arises where a debtor, without taking notice of the debt bequeathes a sum by way of legacy to his creditor. Question is : Is the legacy to be taken as satisfying the debt or is the creditor entitled to the legacy and also the debt?

(2) *Rule*—That the legacy shall be taken as satisfying the debt.

(3) *Limitation on the Rule.*—The rule does not apply in the following cases—

(i) Where the legacy is of lesser amount than the debt—no satisfaction, even *protanto*.

(iii) (iii) Where the legacy is given upon a contingency.

(iv) (iv) (iii) Where the legacy is of an uncertain amount— *e.g.* residue. (iv) Where the time fixed for payment of the legacy is different from that at which the debt becomes due—so as to be equally advantageous to the creditor.

(v) Where the subject-matter of the legacy differs from the debt, *e.g.* land.

(ii) *Satisfaction of debt by Portion.*

(1) Such a case arises where the father becomes indebted to his child and then advances a portion to him in his life-time. The Question is : Can the child claim both—the debt as well as the portion? Or Is the debt satisfied by the portion?

(2) *Rule.*—Debt is satisfied by the portion.

(3) This rule is subject to the same limitations.

V. Difference between Performance and Satisfaction.

(Further notes are not available—ed.)

CHAPTER 2

THE DOMINION STATUS

1. The Statute of Westminster to some extent lays down and codifies the law which regulates the constitutional relationship of these parts of the British Empire which is known as the British Commonwealth of Nations.

2. The Statute of Westminster applies to the Dominions and establishes for them what is called Dominion Status. Our inquiry will be directed to understand the meaning of Dominion Status. Before approaching the subject we must ask.

1. What is a Dominion?

A Dominion is a colony which is declared to be a Dominion by the Statute of Westminster.

2. What is a Colony? A Colony is a British Possession other than U. K. and India.

3. What is a British Possession?

A British Possession is any part of the British Empire exclusive of the United Kingdom over which the King exercises sovereignty.

4. What is British Empire?

(British Empire)mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52A. Notes on Acts and Laws PART I.htm - _msocom_3 denotes the whole of the territories over which the King possesses sovereignty or exercise control akin to sovereignty. It includes therefore all the King's Dominions, over which he is sovereign, and the protectorates and Protected States whose foreign relations are controlled by the Crown. It also includes the mandated territories.

II. What is Dominion Status?

1. The subject could be better under (stood)mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52A. Notes on Acts and Laws PART I.htm - _msocom_4 if we compare the system of Government inaugurated by the Statute of Westminster with the system of Government which was in operation before it came into force.
2. The system which was in operation was known as Responsible Government. We must therefore grasp as a first step the characteristics of Responsible Government.
3. Why Responsible Government came in some colonies and why it did not come in others?
4. The Government of a colony differed according to the nature of the colony.
5. Colonies fall into two classes :
 - (1) Colony by settlement
 - (2) Colony by Conquest or Cession.

(1) Colony by settlement

1. Thus in a colony by settlement there came up the inevitable conflict between an irresponsible executive and representative legislature, a conflict of mandates.
2. Responsible Government had to be introduced in these colonies by settlement in order to solve this conflict.
3. THE NATURE OF THE RESPONSIBLE GOVERNMENT.

The position of the King in relation to settled colonies differs from his position in relation to conquered colonies.

The King stands to possession acquired by settlement in a position analogous to his status in the United Kingdom. *10 App. Calls 6921(744)*. He is possessed of the executive power and has authority to establish Courts of law, but not celesiastical Courts [*3 Moo. P. C. 115, 1865 : I Moo P.I.C.C 411, 1863*]. But he cannot legislate, and if laws are to be passed. this must be done—

- (1) by a legislative body of representative character on the analogy of the U.K.

(2) where this form of legislation would be difficult to carry out, parliamentary authority must be obtained authorising the establishment of a different form of Constitution.

(2) Colonies by Conquest

In these, the King possesses absolute power to establish such executive, legislative and judicial arrangements as he thinks fit, subject only to the condition that they do not contravene any Act of Parliament extending to all British Possession.

But this right is lost by the grant of a representative legislature unless it is expressly retained in whole or in part. If not so retained, power to legislature as to the Constitution or generally can only be recovered under the authority of an Act of Parliament.

1835 2 Knapp. 130 (152) Jehson v/s Pura ; 1932 A. C. 260.

1. The Statute of Westminster applies to :

- (1) The Dominion of Canada,
- (2) The Commonwealth of Australia,
- (3) The Dominion of New Zealand,
- (4) The Union of South Africa,
- (5) The Irish Free State,
- (6) Newfoundland.

2. This statute calls these colonies as Dominions and confers on them what is called Dominion Status.

3. These Colonies had Responsible Government before the Statute of Westminster.

What is the difference between Responsible Government and Dominion Status?

Mechanism of Responsible Government.—

(1) THE CLAIM BY THE COLONY TO COLONIAL AUTONOMY IN MATTERS WHICH AFFECTED THEM.

(2) THE CLAIM TO UNLIMITED SOVEREIGNTY BY THE IMPERIAL PARLIAMENT.

These two claims are contradictory. A self-governing colony is a contradiction in terms.

The solution of this question involved two questions :

(1) How was the division of authority to take place between the Colonial and Imperial Governments.

(2) How were the powers given to each were to be exercised by each.

The division proposed was not along the lines of imperial and colonial legislative competence.

All legislation was to be within colonial competence except what was

barred by the colonial laws, but some of it would be liable to veto by the Imperial Government not on the ground that it was beyond the competence of the colonial legislature, but it affected some Imperial interest.

The matters of Imperial concern were not reduced to writing by enumeration. The Imperial Government was free to decide whether any particular matter was or was not of Imperial concern.

The following provisions were a feature of the Constitution of these colonies:

- (1) The appointment of the G. and G. G. [G.mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/52A. Notes on Acts and Laws PART I.htm - _msocom_5](http://msitstore.c:\important\writing_of_babasaheb.chm::/52A. Notes on Acts and Laws PART I.htm - _msocom_5) by the Crown on the advice of the Imperial cabinet
- (2) The Right of the G. G. to act otherwise than the advice of his ministers.
- (3) The power of the Governor to Reserve Bill for the pleasure of the King on the advice of the Imperial Government.
- (4) The Power of Disallowance by the King on the advice of the Imperial Government.

The terms of the Statute of Westminster

I. It frees the Dominion Legislature from the overriding effect of the laws made by the British Parliament:

- (1) It abrogates the Colonial Laws Validity Act.
- (2) It gives the Dominion Legislature to repeal any U. K. Act in so far as the same is the part of the Dominion.

II. It puts limitations upon the legislative sovereignty of the British Parliament:

- (1) No Act of Parliament passed after December 11, 1931 shall extend, or be deemed to extend to a Dominion as part of the law of that dominion unless it is expressly declared in the Act that the Dominion has requested and consented to the enactment thereof.
- (2) Any alteration in the law touching the succession to the throne or the Royal Style and Titles requires the assent of the Parliaments of the Dominion as well as of the United Kingdom.

III. The Statute does not alter the other provisions :

- (1) The appointment of Governor General.
- (2) The Reservation of Bills.
- (3) The Disallowance of Bills.

But a great change has taken place in the exercise of these powers.

Right of advice to the Crown.

* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52A. Notes on Acts and Laws PART I.htm - _msocom_6 Dominion Status does not mean sovereignty,

* * * *

2. Constitution of the United Kingdom has been dealt with.

3. India will not be dealt with here. So also Protectorates and Mandated Territories.

4. Deal only with the Constitutional Organisation of the Colonies.

5. The Constitutional Organisation of the Colonies differs according to the mode of the acquisition of the Colony.

6. Two methods.—

(1) Settlement

(2) Conquest or Cession.

Dominions

1. The Dominion Office was established in 1925 to take over Dominions' business from the colonial office.

2. At first the Secretaryships for the Dominions and for the colonies

were held by the same minister, but in 1930 a separate S of Smk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52A. Notes on Acts and Laws PART 1.htm - _msocom_7 for the Dominions was appointed.

3. The Dominion Office deals with business connected with the Dominions, Southern Rhodesia, the South African High Commission [i. e. Basutoland, Bechunaland, Protectorate Swaziland], Overseas settlement, and business relating to

Imperial Conferences. See Sir G. V. Fiddes—*The Dominions and Colonial Offices*.

Old Halsbury, 1. p. 303. 662. The dominions of the Crown include—
(a) The U. K. and any Colony, plantation, island, territory or settlement within H M's dominions and not within the U. K.

(Naturalization Act, 1870, 33 Ne. c 14 s. 17)

(b) Places situated within the territory of a Prince, who is subject to the Crown of England in respect of such territory.

[*Crow and Ramsay (1670) Vaugh. 281*]

(c) British ships of war and other public vessels (*Parliament V/s. Belge. (1880) 5 P.D. 197.*)

(d) British Merchantmen on the high seas [1870 S. R. 6 Q. B. 31. *Marshall v/s Murgatroyd*] and probably even in the territorial waters of a foreign country [*Compare R v/s Carr and Wilson (1882) 1.0 Q.B.D. 76*].

Halsbury X. p. 503 para 856

1. "British Possession" means any part of H M's dominions exclusive of the U.K.; and where parts of such dominions are under both a central and a local legislature, all parts under the central legislature are deemed to be one British Possession. [Interpretation Act 1889 (52 & 53 Vict. c. 63) S. 18 (2)].

2. A Colony is any part of H M's dominions exclusive of the British Islands and British India; and where, parts of such dominions are under both a central and a local legislature, all parts under the central legislature are deemed one colony [*Ibid.* S.18(3)].

3. A British settlement means any British Possession which has not been acquired by cession or conquest and is not for the time being within the jurisdiction of the legislature of any British possession. [British Settlements Act, 1887 (50-51 Vic. C.54) S. 6].

4. The expression 'Dependencies' is used to signify places which have not been formally annexed to the British dominions, and are therefore, strictly speaking foreign territories, but which are practically governed by Great Britain, and by her represented in any relations that may arise

towards other foreign countries. Most of them are "Protectorates" that is territories placed under the protection of the British sovereign, generally by treaty with the native rulers or chiefs. Cyprus and Weihaiwei are foreign territories held by Great Britain under special agreements with their respective sovereigns, but administered under the Foreign Jurisdiction Act, 1890 [53-54 Vic. C. 37], on the same general lines as protectorates. India including both the Native States and the strictly British territory of that Empire, is frequently spoken of as our great dependency.

5. Crown colonies are those in which the Crown retains complete control of the public officers carrying on the Government, and the legislative power is either delegated to the officer administering the Government [S. S. Gibraltar, Ashanti, Virgin Islands, St. Helena and Basutoland] or is exercised by a Legislative Council which is nominated by the Crown either entirely or partly the other part being elected. In these colonies, with seven exception, the Crown has reserved to itself the power of legislating by Order in Council.

Protectorates although not parts of H M's Dominions are administered in much the same manner as Crown colonies.

Dominions are those colonies which possess elective legislatures to which the executive is responsible, as in the U. K. the only officer appointed and controlled by the Crown being the Governor or G. G.

Halsbury X, p. 521

885. There is no statutory or authoritative definition of the term "protectorate" although it appears in two recent Statutes. Protectorates are not British territory in the strict sense ; but it is understood that no other civilised power will interfere in their affairs. They are administered under the provisions of orders in Council issued by virtue of powers conferred upon H. M. by the Foreign Jurisdiction Act, 1890" or otherwise vested in His Majesty" which latter phrase may be taken to be intended to bring in aid any exercise of the Royal prerogative that may be necessary to supplement H. M 's statutory powers.

Halsbury XIV, p. 420

For a recent treatment of the meaning of "dominions" see *R v/s Crewe 1910 S.K.B .576,607',622.*

Halsbury IX, p. 16

The authority of the King extends over all his subjects wherever they may be, and also over all foreigners who are within the realm. The jurisdiction of English Courts of Law, however, is limited, first, by the stipulations contained in the enactments by which the kingdoms of Scotland and Ireland were incorporated in the United Kingdom ; Secondly by the Charter of Justice, letters patent and statutes affecting particular colonies ; and thirdly, by the consideration that no English Court will decide any question where it has not the power to enforce its decree.

The jurisdiction of each particular Court is that which the King has delegated to it, and this delegation has been complete, for the King has distributed his whole power of prosecution to diverse Courts of Justice.

Development of Dominion Status

1. There is first the claim to unlimited sovereignty by the Imperial Parliament and Government stated in its logical perfection by Lord John Russell.
2. There is second the claim to colonial autonomy an effective demand that, in matters which interested them, the colonies should manage their own affairs.
3. There is third, the contradiction between the two. A self-governing dependency is a contradiction in terms.

Solution

On the one hand, the Imperial Parliament granted to a colony a sphere of activity in which the colonial legislature, executive and judiciary had authority to exercise governmental power. In this sphere the colony was sovereign.

On the other hand, the Imperial Parliament had the authority and full legal power, as and when it saw fit, to withdraw or limit the rights of the Colony to exercise power within a prescribed sphere, either by repealing or amending the Constituent Act of the Colony or by passing an Imperial Act explicitly applying to some subject within the jurisdiction of the Colony.

Two Questions: (1) How was the division of authority to take place between the Colonial and Imperial authority? (2) The method of exercising the powers given to each.

(1) The division proposed was not along the lines of Imperial and Colonial legislative competence.

All legislation was to be within colonial competence, but some of it

would be liable to veto by the Imperial authority, not on the ground that it was beyond the competence of the colonial legislature, but because it affected some specified Imperial interest.

(2) It was advocated that the possible matters of Imperial concern should be reduced to writing by enumeration of those matters which were deemed of Imperial concern. The British Government refused to bind itself specifically in this way [and the provisions were not allowed to stand in the Australian Bills].

(3) How were the activities of the Colonial and Imperial authorities to be adjusted and co-ordinated so that confusion and overlapping and conflict might be avoided? The solution was found in the following :

(1) The Powers of Reservations.

(2) The Powers of Disallowance.

(3) The appointment of the Governor General.

(4) The nature of responsible Government in the colonies. (5) Right of the British Government to tender advice to the Crown. (6) Colonial Laws Validity Act of 1865.

(4) The nature of responsible Government in the Colonies.

The executive Government was vested in the Governor, who was empowered to appoint to his executive council those persons whom he thought fit, in addition to those, if any, who by law were members of it. While in one or two cases it was stipulated in the Constituent statute that ministers were to be members of the executive council or that members of the executive council were to be, or were within a given period, to become members of one or other house of the legislature. In no case is the executive council required by law to be composed of ministers and ministers alone.

The executive council includes but does not necessarily consist only of ministers. In certain cases there is no legal necessity for members of the executive council to be members of either house of legislature.

The Act prescribed a sphere of activity within which the colonial legislature had power to make laws for the peace, order and good Government of the colony. Thus far the statute.

The instructions to the Governor empowered him to govern with an executive council whose advice he might disregard if he thought fit.

Responsible Government was based, not upon a statutory basis, but on the faith of the Crown.

Character of InterImperial Relations

In the Commonwealth Merchant Shipping Agreement, the Dominions

appear in a position of complete equality, comparable with that of contracting states, and differences arising out of the agreement would seem suitable for reference to the inter-Imperial tribunal contemplated by the Imperial Conference 1930. [Cmd. 3994, Part VII].

But the relations are not governed by International Law. This was asserted clearly in 1924, when the Irish Free State registered with the Secretariat of the League of Nations, the Articles of agreement for a Treaty of December 6, 1921 on the score that it was a treaty within the meaning of Article 18 of the covenant of the League of Nations, and the British Government insisted that neither the covenant nor the conventions concluded under League auspices were intended to govern relations *inter se* of parts of the Commonwealth [Keeth. R. G. II. 884, 885.]

The Imperial Conference 1926, took this view, holding that it had been determined in this sense by the Legal Committee of the Arms Traffic Conference of 1925 [Cmd. 2768 p. 23.]

The Dominions save the Irish Free State as well as the United Kingdom, excluded inter-imperial disputes from those to be submitted to the Permanent Court of International Justice when accepting the optional clauses of the Statute of the Court in 1929 [Cmd. 3452 p. 415] and similarly when accepting the General Act of 1928 for the Pacific Settlement of International disputes [Cmd. 3930 pp. 14, 15].

The inter-imperial preferences are a domestic issue, on which most favoured nation clauses of treaties with foreign states do not operate.

Allegiance

The bond of a common allegiance involving a common status as British subjects, and this bond is one which cannot be severed by the unilateral action of any part as follows from the formal declaration in the Preamble to the Statute of Westminster that inasmuch as the Crown is the symbol of the free association of the members of the British Commonwealth of Nations and as they are united by a Common allegiance, any alteration in the law touching the succession to the throne or the Royal style and titles, requires the assent of the Parliaments of the Dominions as well as of the United Kingdom.

While the Preamble does not make law, it expresses a convention of the constitution which would render it very difficult for the Crown or its representative to assent to a bill passed by any single part which violated this principle of the unity of the British Commonwealth of Nations on a basis of equality of its status.

Note.— In approving the report of the Conference of 1929, the Union Parliament recorded that the proposed Preamble “shall not be taken as abrogating from the right of any member of the British Commonwealth of Nations to withdraw therefrom”.

Journal of Parliament of Empire XI. 797 800

But this view has never been formally adopted by the Imperial Conference.

The equality of status of the Dominions and the U. K. necessitates the consideration of a mode of deciding inter-imperial disputes [cmd.3479 p. 41].

For this purpose, the imperial conference 1930 decided that such disputes should be dealt with along the line of *ad hoc* arbitration, on a voluntary basis. The procedure is to be limited to differences between Government and only such as are justifiable.

The Tribunal is to be constituted *ad hoc* for each dispute ; there are to be five members, none drawn from outside the British Commonwealth of Nations.

Each party shall select one from the States members of the Commonwealth of Nations, not parties to the dispute, being persons who have held or hold high judicial office or are distinguished jurists and one with complete freedom of choice. The chairman shall be chosen by these four assessors may be employed if the parties desire—expenses to be borne equally. Each party shall bear those of presenting its case.

External Sovereignty of the Dominions

They have autonomy. But not status. (They Have) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52A. Notes on Acts and Laws PART I.htm - _msocom_8 ceremonial status, but not *legal*, *de facto* but *not de jure*

For many purposes the Dominions are endowed with a considerable amount of international personality independent of the United Kingdom. But the Common allegiance and the Common Crown interfere with the idea of each Dominion being a distinct sovereign state connected merely in a personal union.

The issue as to the possibility of neutrality in war has been discussed, but only claimed by the Nationalist Government in South Africa. [Kerth DGII 867 868 71, 72, *Sovereignty of Dominions of D. 300-304 463-471*].

It is open to serious doubt if the King could declare war without automatically involving the Dominions in the war.

The implications of Dominion Status

1. Does it imply sovereign status?

They have the functions of a sovereign state. But they have not the status of sovereign states.

2. 2. Does it imply the right to secede?

Law of citizenship in the United States

by

Prentiss Webster

Albany :1891

Webster

"The distinction between citizens proper, that is, the constituent members of the political sovereignty, and subjects of that sovereignty who are not, therefore, citizens is recognised in the best authorities of the public law". This distinction is true. The further question of who are and who are not citizens has its difficulties. Accept the definition of citizenship to be the enjoyment of equal rights and privileges at home and equal protection abroad, and consider the question from this standpoint, from which alone it should be treated, for we have no law in the U.S. A. which divides our citizens into classes or makes any difference whatever between them. We then discover the importance that the equal rights of citizens when at home should maintain when abroad, because questions as to citizenship are determined by municipal law in subordination to the law of Nations. Therefore, the value of citizenship should not be underestimated."

Webster

View of Roman Law

1. It was by man that the body politic was organised, and in entering the Organisation with his fellow men, man followed the exercise of his natural rights and became an ingredient of the society of which he, with

others, became members.

2. By the Organisation formed as of man and by man, man was so incorporated into the body politic that he could not depart.

3. Although in the early days of Rome, they alone could call themselves Roman citizens who were freeborn and born in Rome, yet very soon thereafter, foreigners were admitted to citizenship by authority of the legislative body. Later, as Rome advanced in her conquest of the neighbouring states, to these states the legislative authorities conferred charters by which the citizens of such states were admitted to Roman citizenship and their former citizenship was abolished.

4. Cicero lays down the rule, "that every man ought to be able to retain or renounce his rights of membership of a society," and further adds, "that this is the firmest foundation of liberty." Under this the Romans received all who came and forced none to remain with them.

5. This view of the Roman Law was based upon natural law.

Effect of Invasion

6. After the downfall of Rome this principle of natural law gave way to the principles of feudalism as introduced by the invaders.

7. The invaders having conquered both the people and their lands, organised their Government, as being in a prince who was all powerful over his subjects. The relation as between man and man and his relation to the Government was forced and involuntary. The natural rights of man as being in man were disavowed.

PART II

Chapter 3 : The Law of Specific Relief

Chapter 4 : The Law of Trust

Nature that the law permits its Specific Performance

(ii) Where the Plaintiff is a person in whose favour Specific Performance can be granted.

(iii) Where the Defendant is a person against whom Specific Performance might be granted.

The question is : Is the Court bound to grant Specific Relief in such cases?

The answer to this question is contained in Sec. 22.

(A) Section 22 lays down general rules—(1) It says that Specific Relief is discretionary. The Court may grant it or may refuse it. The Court is not bound to grant it merely because it is lawful.

(2) The discretion of the Court is not arbitrary, sound and reasonable, guided by judicial principles.

(B) Section 22 also specifies cases in which Court may exercise discretion not to grant Specific Performance and cases in which Court may exercise discretion to grant Specific Performance.

Cases in which Court may exercise discretion not to grant Specific Performance

(i) Where Specific Performance would give unfair advantage over the Defendant.

(ii) Where Specific Performance would involve some hardship on the Defendant which he did not foresee and non-performance would not involve such hardship on the Plaintiff.

Cases in which Court may exercise discretion to grant Specific Performance

Where the Plaintiff has done substantial acts or suffered losses in consequence of a contract capable of Specific Performance.

Damages and Specific Performance

Sections 19,20,29.

Two remedies for breach. Are the mutually exclusive or are they complimentary? Does one bar the other?

These are question which are considered in Sections 19, 20, 29. The rules contained in these three may be summarised as below:

19. (i) In the same suit, a Plaintiff can ask for both in addition or in substitution.

(iii) In a suit where Court decides not to grant Specific Performance Court can grant Compensation to Plaintiff if entitled.

(iv) If one suit Court may grant compensation in addition to Specific Performance if it comes to the conclusion to Specific Performance is not enough.

20. (v) The fact that liquidated damages have been agreed upon is no bar to

Specific Performance.

29. (vi) If suit for Specific Performance is decreed, it will be a bar to a suit for damages.

PART I

The Law of Specific Relief

INTRODUCTORY

1. The enactment which defines Specific Relief.

1. The law as to specific relief is contained in the Specific Relief Act I of 1877.
2. Before the passing of the Specific Relief Act the law as to Specific Relief was contained in Sections 15 and 192 of the Civil Procedure Code (Act VIII) of 1859.
3. The law was fragmentary. Section 15 dealt with declaratory decrees and Section 192 dealt with Specific performance of contracts.
4. The Act aims to *define* and *amend* the law relating to Specific Relief obtainable in Civil Court.

II. The nature of the Law of Specific Relief

1. Laws fall into *three* categories.—

- | | | |
|-----|-----|-------------------------------|
| (a) | (a) | Those which define Rights. |
| (b) | (b) | Those which define Remedies. |
| (c) | (c) | Those which define Procedure. |

2.2. *Illustrations.*

(Space left blank—ed.)

3. The Law of Specific Relief belongs to the second category. It is a law which deals with Remedies.

3.3. The term '*relief*' is only another word for remedy which a Court is allowed by law to grant to suitors.

III. What is meant by Specific Relief?

1. Specific Relief is one kind of remedy recognised by law. Its nature can be best understood by distinguishing the different remedies which the law allows to a person whose right has been invaded.
2. A right to be real must have a remedy. No right can give protection if there is no remedy provided for its vindication. Law therefore invariably provides a remedy for a breach of a right.
3. The general remedy provided by law for a breach of a right is *monetary reparation* called compensation or damages.
4. This remedy of money compensation is not an adequate remedy in *all* cases. The loss of some things can be compensated by payment of money. The loss of others cannot be compensated by money. Their loss can be

made good by the *return* of the very *same* article. Similarly, the refusal to perform an obligation may be compensated by money. In other cases, the only adequate remedy is to compel the performance of the very *same* obligation.

5. Thus there are two kinds of remedies provided by law :

(a) those under which the suitor is granted the *very same* things to which he is entitled, by virtue of the right he has acquired against his opponent; and
 (b) those under which the suitor is granted not the very same thing to which he was entitled, but money compensation or damages in lieu thereof.

6. Specific Relief is the name given to the first kind of remedy.

7. The relief is called specific because it is relief in *specie*, i. e. in terms of the very thing to which a suitor is entitled.

IV. What Specific Reliefs are provided for in the Specific Relief Act.

1. The forms of Specific Reliefs provided for in the Specific Relief Act form under four divisions :

(1) Taking possession of property and delivering it to the claimant who is out of possession.

(2) Requiring Performance of Contract.

(3) Compelling the Performance of a Statutory Duty.

(4) Preventing the doing of a wrong.

2. The subdivisions of the 4th category are :

(i)	(i)	Rectification of an instrument.
(ii)	(ii)	Rescission of an instrument.
(iii)	(iii)	Cancellation of an instrument.
(iv)	(iv)	Declaration of status.
(v)	(v)	Receivers—appointment of—
(vi)	(vi)	Injunctions.

V. Other Laws defining Specific Reliefs.

1. These are not the only specific remedies administered by courts in India. There are other specific remedies recognised by the Indian Law and which are enforced by courts in India.

2. These specific remedies outside the Specific Relief Act are:

(i) Taking an account of the property of a deceased person and administering the same.

(ii) Taking accounts of a trust and administering the trust property.

(iii) The foreclosure of the right to redeem or sale of the mortgaged property.

- (iv) Redemption and re-conveyance of mortgaged property.
 - (v) Dissolution of partnership, taking partnership accounts, realising assets ; discharging debts of partnership, etc.
3. We are not concerned with these.

PART II

Consideration of the Different Kinds of Specific Reliefs Recognised by the Act.

Division I

Recovery of possession of Property Sections 8, 9, 10 and 11

1. Recovery of Possession of immovable property
—Sections 8,9.
2. Recovery of Possession of movable property
—Sections 10, II.

Recovery of Possession of Immovable Property.

1. The Question is—

When can a person, who has lost possession of immovable property and sues to recovery possession thereof—be granted possession thereof instead of damages or compensation for the loss of possession.

2. The emphasis is on the nature of the relief—i.e. the recovery of the specific piece of property of which possession is lost. The relief by way of damages or compensation is always open under the general law. Question is when can an injured person insist upon specific relief for the recovery of property.

3. The cases in which a person has lost possession of immovable property fall under two classes.—

(i) The case of a person who is entitled to possession but who has lost possession.

(ii) The case of a person who had possession but who has lost possession.

4. The difference consists in *being entitled to possession* and *being in possession*.

5. These two cases are dealt with in Sections 8 and 9. Both provide that in either case the Plaintiff shall be entitled to Specific Relief by way of recovery of property.

6. Requirements of Section 8.

(i) Prove that you have a title to possession and you will succeed in recovering possession by way of specific relief.

7. Requirements of Section 9.

1. Prove that you were in possession with in six months prior to the date of suit.

2. Prove that you were dispossessed *without your consent or otherwise* than in

due course of law.

A *in possession is dispossessed by* B

I. a with title “ is “ without title

II. a without title “ is “ with title

III. a without title “ is “ without title

1. In *all* three cases A can recover possession if he brings suit under Section 9 i.e. within six months—irrespective of the question of title.

2. If he brings a suit after six months, he must rely on title so that A can recover possession in

(i) (i) —because he has a title.

(iii) —because he has a possessory title.

But cannot recover in (ii) because B has title and A has not.

Who can maintain a suit under Section 10

1. According to Section 10, only a person *entitled to* the possession of the suit property can sue.

2. Meaning of ‘entitled to possession’

3. Title to possession may arise

(i) as a result of ownership or

(ii) independently of ownership, as a temporary or special right to present possession

4. Title to possession as a result of ownership.

(i) Ownership may be bare legal ownership or it may be legal ownership coupled with beneficial interest.

(ii) It is not necessary that a legal owner must have also a beneficial interest in the property to have a right to maintain a suit under Section 10.

(iii) This is made explicit in Explanation I, where a trustee is permitted to sue for the possession of the trust property although he has no beneficial interest in it.

5. Title to possession independently of ownership

1. Title to possession independently of ownership may arise in two ways.—

(i) (i) By the act of owner.

(ii) (ii) (ii) Otherwise than by the act of the owner.

(i) TITLE TO POSSESSION BY THE ACT OF THE OWNER

(i) The owner may by his own act create in another person a right to the possession of the thing which belongs to him as *owner*.

(ii) Illustrations of such a right to possession are to be found in Bailment and lien.

(1) (1) Simple bailment cover the cases of.—

(i) loan

(ii) custody

(iii) carriage

(iv) agency.

(2) Other Bailments.

1. Pawn

2. Hire.

2. Difference between Simple Bailment and other Bailments of Pawn or Hire.-

(i) In Simple Bailment the owner (Bailer) has a right to possession and the Bailee has legal possession. The Bailee being entitled to possession can maintain a suit to recover possession. The Bailer having a right to possession can also maintain a suit to recover possession against any person other than a Bailee.

(ii) In other Bailments of Pawn or Hire—The Bailer has no right to possession. The right to possession is vested in the Pawnee or Hirer during the continuance of the Bailment and it is only the Bailee (Pawnee or Hirer) who can maintain a suit for the recovery of possession.

3. Lien is an illustration of a right to possession arising out of the act of the owner.—

(1) Lien is a right to possession of a thing which arises out of debt due by the owner.

(2) The right to possession of the owner is thus temporarily vested in another.

4. All that is necessary to maintain a suit is a right to present possession.—

(i) The right of present possession may arise out of ownership or may not.

(ii) Right to present possession may be special or temporary.

(ii) RIGHT TO POSSESSION OTHERWISE THAN BY THE ACT OF THE OWNER.—

(1) The founder of lost goods has a right to possession.

(2) It is not the result of the act of the owner.

(3) But it is good against all the world except the true owner.

II. Against whom can such a suit be maintained

1. A suit under Section 10 can be maintained against any one and can be maintained even against the true owner.

2. All that is necessary is that the Plaintiff must be entitled to possession.

Section 11. Movable Property

1. Q. 1.—Who can maintain a suit under Section 11.

A.—The person entitled to *immediate possession*.

2. Q. 2.—Against whom can such a suit be maintained?

A.—Against any person if he is not owner.

The Defendant must not be the owner. If he is, then Section 10 would apply.

3. Q. 3.—In what case will there be specific relief by way of recovery of possession?

A.—(i) Where the person who holds the thing is the agent or trustee of the claimant.

(ii) Where compensation for money would not be adequate compensation to the claimant for the loss.

(iii) Where it is extremely difficult to ascertain actual damage caused by its loss.

(iv) Where the possession of the person is the result of a wrongful transfer from the claimant.

Specific Relief regarding Possession of Property

They are dealt with in Sections 8—II.

Section 8. Recovery of specific immovable property by a person entitled to the possession thereof.

Section 9. Recovery of possession of specific immovable property by a person who is dispossessed.

Section 10. Recovery of possession of specific movable property by a person *entitled to its possession*. (1) By reason of ownership (2) By reason of temporary or special rights (Trustee) Bailment Pawn.

Section II. Recovery of possession of Specific immovable property by a person who is entitled to its *immediate possession*. This applies when the person having possession is not owner

What is meant by possession in Law?

Legal possession is a compound of two ingredients : *Corpus and animus domini*.

Note:—

(i) Legal Possession does not involve the element of title or right. Legal Possession is wholly independent of right or title. Legal Possession may be *lawful* or *unlawful*.

If a possessor acquired his *de facto* possession by a means of acquisition recognised by the Law (*Justis fitulus*) he has a lawful possession ; if he did not so acquire it (as in the case of a thief) he has legal possession, but it is an unlawful one.

(ii) *Legal Possession* confers more than a personal right to be protected against wrong-doers : it confers a qualified *right* to possess, a right in the nature of property, which is valid against every one, who cannot show a

prior and-better title.

There are two elements in legal possession. (i) Corpus, i.e. the physical relation. (ii) Animus, i. e. the mental relation.

Corpus or physical relation does not mean physical contact only. It also includes physical contact resumable at pleasure.

The essence of corpus is the power, to exclude others from the use of a thing, i. e. an effective occupation or control according to the nature of the thing possessed.

Animus is the intention of exercising such power of dealing with a thing at pleasure and excluding others—*animus domini*.

Three forms of animus

The mental attitude of the physical possessor in regard to the object of his possession may assume three degrees.—

First.—His intention may be merely to protect the thing. There is no assertion of right—Servant's possession of masters goods.

Second.—Intention to control for certain limited purposes —e. g. tenant—intention to exclude every one except the owner.

Thirdly.—Intention amounting to a denial of the right of every other person—This is the real *animus domini*.

Distinction between Possession and Trespass

1. What the plaintiff is to prove in such cases is possession of the disputed property and not mere isolated acts of trespass over that property. He must prove—

(i) That he exercised acts which amounted to dominion, the nature of these acts of dominion varies with the nature of the property.

(ii) That the act of dominion was exclusive.

2. If the occupation of the piff., as indicated by those acts, has been peaceable and uninterrupted and has extended over a sufficient length of time, the inference may properly be drawn that the plaintiff was in possession.

Objects of Section 8 and 9.

(i) Section 8 of the Act provides that the person entitled to the possession of specific immovable property may recover it in the manner prescribed by the C. P. C., i.e., by a suit for ejectment on the *basis of title*.

(ii) Section 9 gives a summary remedy to a person, who has, without his consent been dispossessed of immovable property otherwise than *in due course of Law* for recovery of possession without *establishing title*.

Section 9.

This Section deals with the subject of unlawful dispossession, and gives to the person dispossessed the alternative of two remedies.—

(i) He may simply prove the fact of his unlawful dispossession, in a suit instituted by him within six months thereof, recover possession of the property. The question of his *title* to the property is quite immaterial.

(ii) He may recover possession by relying on his title in a suit brought by him for that purpose. Here his success depends upon his proof of title.

The former remedy is called remedy by way of a possessory suit and is enacted in Section 9. The latter is the ordinary remedy of a suit based on title and is embodied in Section 8.

Nature and object of Section 9.

(i) To prevent people from taking the law into their own hands, however good their title may be.

(ii) To prevent the shifting of the *burden of proof owing* to dispossession— Possession being *prima facie* evidence of title.

Anterior possession *per se* constitutes a perfect title to property as between the *dispossessed* and the *dispossessor*, in a suit under Section 9, i. e. within six months of the dispossession.

Question.—What is the effect of anterior possession in a suit for possession by a person, who is dispossessed after 6 months have elapsed and a suit under Section 9 is barred?

The following propositions have been judicially established :—

(i) Possession for a period of sixty years and upwards is sufficient to create a title in the possessor which no one can question.—8 D.R. 386.

(ii) Adverse possession for 12 years under article 142 is itself title even against the rightful owner himself.

Consequently, where in a suit for possession, a plea of adverse possession during the prescribed period of limitation is set up by the Defdt. the question of limitation becomes a question of title, and the Plff. must furnish *prima fade* proof of subsisting title at the date of his suit, before the Defdt. is required to establish his adverse possession.

(iii) Prior possession, however short, is itself a title against a *mere wrong-doer* and a bare plea of anterior possession, and dispossession, is in fact a good ground for recovery of possession,

(1) Where the dispossessor can prove no title, or

(2) Where neither party can prove a title.

Statement of the Position			
A	Is	B	
in Possession	dispossessed	by	
(a) with title	(b) without title	(a) without title	(b) with title

title title

1. Suit brought within 6 months.-

(a) and (a) |

(b) and (b) | A can recover possession under Section 9 irrespective of

(b) and (a) | title.

II. In a suit brought after six months.-

(a) and (a) | A can recover because the title is in A.

(b) and (b) | A cannot recover because the title is in B.

(b) and (a) | A can recover because A's anterior possession.

Entitled to Possession

A right to possession exists either.—

(i) (i) as a part of ownership or

(ii) (ii) independently of ownership, as a temporary or special right.

These special rights arise either.—

(i) (i) by the act of the owner or,

(ii) (ii) otherwise than by the act of the owner.

I. I. By act of the owner

(1) Bailment and (2) Lien

Bailment is (1) simple and (2) special of *Pawn* and *Hire*

(i) *Simple Bailments* e. g. loan, custody, carriage and agency.

In simple Bailments, the Bailor has a *right to Possession* and the Bailee has legal possession.

A is Bailor and B is Bailee. Both can recover possession against C.

A can recover possession as against B.

(ii) *Special Bailment*.— *Pawn* and *Hire*

Bailor has no right to possession during the continuance of the bailment and he only can recover possession.

Lien. Arises out of debt—the Vendor having the right to possession of the thing sold, until the purchaser has paid the purchase money.

II. Right to possession otherwise than by act of owner

Finder of lost goods—entitled to possession as against all the world except the owner.

PART II

DIVISION II

Performance of Contract

Specific Performance of a Contract is "its actual execution according to its stipulations and terms; and is contrasted with damages or compensation for the non-execution of the contract.

It is a species of Specific Relief, afforded by ordering a party to *do* the very act which he is under an obligation *ex-contractor* to do.

Specific Performance of a Contract

Sections 12 and 21 deal with Specific Performance of a Contract.

Section 21.—Defines contracts which *cannot* be specifically enforced.

Section 12.—Defines contracts which *may* be specifically enforced.

Section 27.—There are eight sorts of contracts which *are not* specifically enforceable.—

(i) Contracts for the non-performance of which money compensation is an adequate relief.

(ii) Contracts (i) running into minute details.

(ii) dependent on personal qualifications or volition of parties.

(iii) is such that Court cannot enforce Specific Performance of its material terms.

(iii) Contracts the terms of which the Court cannot find with reasonable certainty—e. g. necessary appliances.

(iv) Contracts which in its nature is revocable e. g. Partnership without duration.

(v) Contracts by trustees in excess of their powers, or in breach of their trust.

(vi) Contracts by company in excess of its powers.

(vii) Contracts the performance of which involves the performance of a continuous duty extending over a longer period than 3 years from its date.

(viii) Contracts material part of the subject-matter supposed by both to exist has ceased to exist.

(ix) Contracts to refer a controversy to arbitration.

Note. Practically Specific Performance because no right of suit is given.

Specific Performance of Contracts

Section 12

1. There are four cases in which Specific Performance may be enforced.

(i) (i) Where act promised is in performance of a trust.

(ii) (ii) Where there is no standard to ascertain actual damage.

(iii) (iii) Damages, no adequate relief. (iv) Compensation for non-performance cannot be got.

Contract

The first question to be determined by the Court in a suit for Specific Performance of an agreement is, whether the agreement in question is a contract or not. Section 4 (a)—right to relief unless agreement is a contract.

The following agreements are not contracts because they are not enforceable and are therefore excluded:—

(i) Incomplete agreements—Parties not gone beyond the stage of negotiations; (ii) Agreements which are void.

(iii) Contingent agreement—until the contingency has applied . . . should be "arisen".

Voidable contracts are not excluded.

There must always be a contract before the Court which has been unperformed.

Mutuality—The remedy by way of specific performance is *mutual*, i. e., the vendor may bring his action in all cases where the purchaser can be sure for specific performance.

This principle of mutuality applies both in the case of immovables and movable.

Doctrine of mutuality— This means, that at the time of making of the contract, there must have been consideration on both sides or promises mutually enforceable by the parties. Hence specific of performance of a gratuitous promise under Seal will not be granted nor can an infant enforce a contract by this remedy. His promise is not enforceable against himself and it is a general principle of Courts of equity to interfere, only where the remedy is mutual.

Section 13

Specific performance of contract and impossibility of performance.
Section 56 of the Contract Act.

Section 56 clause 2 enacts a general rule. It lays down when a contract becomes void.

This rule covers every ground of impossibility and is based on the assumption, that there is, in all cases of contract, an implied condition that performance shall be possible.

Impossibility in relation to contract.

Impossibility

(1) at the time or (2) subsequently

Physically or legally impossible.	Or subject matter of contract not existent.
-----------------------------------	---

Subsequent Impossibility

Whether a party can be relieved upon discovery, subsequent impossibility depends upon—

(i) Whether the contract is conditional or unconditional.

(I) If unconditional— must perform

(II) If conditional— on three circumstances

(i) Continuing legality.

(ii) Conditional by express terms—

(iii) Conditional by implication— continued existence of the subject-matter of the thing in *Sec. 56 Contract Act.*— subsequent in possibility— the Contract is *void*.

might on two grounds.—

(i) (i) The thing agreed to is physically or legally impossible.

(ii) (ii) The subject matter of the contract is non-existent.

Such Impossibility might be either.— (i) *Initial or subsequent*.

If impossible, the contract is void and no question of Specific Performance arises whether the impossibility is initial or subsequent.

Section 13 of the Specific Relief Act establishes an exception to *Section 56* of the Contract Act in respect of one species of impossibility i. e. *impossibility by reason of non-existence of the subject-matter*.

Section 13 says that Specific Performance of a contract may be enforced even though the subject-matter is partly destroyed.

Sale of a house— Destruction by cyclone— purchaser may be compelled to perform.

Section 13 enacts an exception

It deals with the case where a *portion* of the subject matter ceases to exist.

The rule shortly expressed.—

Because A, owing to special inevitable circumstances, is unable to perform his promise, it is no reason why B should not perform his, especially as he might have protected himself by making the performance of his promise conditional upon performance by A. Having made an unqualified promise he must stand by it.

Specific Performance of a Part of a Contract

Can the Court decree the performance of a part of the contract? This question is dealt-with in Section 14-17.

Section 17 enacts a general rule. It lays that the Court will not, as a general rule, compel specific performance of a Contract, unless it can execute the whole contract. Specific performance must be of the whole or nothing.

Sections 14, 15, 16 form exceptions to the rule.

Exceptions : The promises undertaken— may be divisible or indivisible.

1. *Divisible promises* i. e. promises— one part stands on a separate and independent footing from another part. If the former can and might be specifically performed it will be so enforced, although the latter cannot or ought not to be specifically enforced— Section 16.

II. *Indivisible promises*.— The part which cannot be performed may—
(i) Admit of compensation by money or, (ii) It may not. (A) Admits of compensation— Two cases

It may bear—

(i) A small proportion to the whole undertaking, (ii) A large proportion to the whole undertaking.

If— (i) it bears *a small proportion*, then a party sue for specific performance of either part and for damages for non-performance of the balance— Section 14.

If—(ii) *it bears a large proportion*, then the promisee may sue for Specific Performance of the remaining part, if he relinquishes all claim to further performance and all right to damages.

(B) Part which cannot be performed, does not admit of compensation

Then the promisee may sue for Specific Performance of the remaining part, if he relinquishes all claim to further performance and all right to damages— Section 15.

Illustration

A contracts to sell to B an estate with a house and garden for 1 lakh. The garden is important for the enjoyment of the house. It turns out that A is unable to convey the garden.

Can B obtain specific performance to the contract?—Yes, if B is willing to pay the price agreed upon and to take the estate and house without garden, waiving all rights to compensation either for the deficiency or for loss sustained by him through A's neglect or default. There are *thus* four exceptions to the rule.

1. Where parts are divisible— Specific Performance can be decreed of one part though not of all parts— Section 16.

2. Where parts being in divisible part which *cannot* be performed admits of compensation and bears a small proportion to the whole, the party may sue for Specific Performance — Section 14.

3. Where parts being indivisible, part which *cannot* be performed admits of compensation and bears a large proportion to the whole undertaking, the promisee may sue for Specific Performance of the remaining i. e. of the part which can be performed provided he relinquishes all claim to further performance and all right to damages— Section 15.

4. Where parts being indivisible, the part which cannot be performed does not admit of compensation and bears a large Specific Performance of the part which can be performed may be decreed within the terms mentioned in Section 15.

Specific Performance of a Contract

Where the Vendor or Lessor has an Imperfect Title

1. The rule as to this is contained in Section 18. This Section deals with four clauses:—

(i) Where Vendor/Lessor has acquired good title *after* the contract.

(ii) Where procuring of the consent of other persons is necessary. (iii)

Where encumbered property is sold as though it was unencumbered.

(iv) Where *deposit* has been paid and the suit for Specific Performance has been dismissed.

Clause (a).—Is based on the undeniable proposition that when a person enters into a contract without the power of performing that contract, and subsequently acquires the power of performing that contract, he is bound to do so.

Illus. An heir apparent, who contracts to sell the property to which he is heir, will be compelled to specifically perform such contract if and when he succeeds to the property.

Whatever interest the seller acquires in the property subsequently to

the contract, he will be compelled to convey to the purchaser.

Clause (b).—Is based upon the proposition that where the validity of a contract is dependent upon the concurrence of a stranger to the contract, and the stranger to the contract is bound to convey at the request of the Vendor or lessor, the Vendee and the lessee can compel him to obtain such concurrence.

Clause (c).—Is based upon the proposition that where the property sold or leased is represented as being free from encumbrance but is *encumbered*, the Vendor shall be compelled to free it from encumbrance sale of property which is mortgaged— Provided the price is not above the mortgage money.

Clause (d).—Clauses (a), (b) and (c) cover cases where the purchaser or lessee is the plaintiff suing for perfection of title.

Clause (d) covers a case, where the suit is brought by the Vendor or lessor for Specific Performance and it fails because of his not being able to perfect the title.

In such a case the Court cannot only dismiss the suit with costs, but proceeds to award to the defendant purchaser a special relief *viz*—the return of his deposit with interest and his cost and a lien for all these on the property agreed to be sold or let.

General Rule regarding deposit.—Deposit is paid as a guarantee for the performance of the contract and where the contract fails by reason of the default of the purchaser, the vendor is entitled to retain the deposit.

Rights of Parties to a Contract to sue for Specific Performance

Four cases to be considered:—

- I. For whom contracts may be specifically enforced.
- II. For whom contracts cannot be specifically enforced.
- III. Against whom contracts may be specifically enforced.
- IV. Against whom contracts cannot be specifically enforced.

1. For whom contracts may be specifically enforced.

Section 23 deals with the question Who may obtain *Specific Performance*?

Clause (a) any party thereto. Clause (b) (i) an assignee from a promisee. (ii) Legal representative of a promisee after his death. (iii) an undisclosed principal of a promisee.

Each of these may obtain Specific Performance of a contract in which he is interested, but each is subject to the proviso that the contract must not be a personal one, nor must the contract prohibit the assignment of the interest of the Promisee.

(c) Persons entitled to the benefit of a marriage contractor

compromise of doubtful rights between members of the same family. (d) Remainder man on a contract made by a tenant for life. (e) Reversioner in possession. (f) Reversioner in remainder. (g) New company on amalgamation. (h) Company on a contract made by the promoters.

Cases where contract cannot be specifically enforced except by varying it—Sec. 76.

- (1) By mistake or fraud the contract is in terms different from that which the Deft. supposed it to be.
- (2) Deft. entered into contract under a reasonable misapprehension as to its effect between Deft. and Plff.
- (3) Enters into a contract relying upon some misrepresentation by the Plff.
- (4) Where the object is to produce a certain result which the contract fails to produce,
- (5) Where Parties have agreed to vary it. *Comment.*

Sections 91, 92. Evidence Act.—A plff. cannot give oral evidence to make out a variation. It does not debar a deft. from showing that by reason of fraud or misrepresentation, the writing does not contain the whole contract ; he can under provision I to S. 92 give oral evidence to prove that there is variation.

Plff. in that case cannot have a decree unless he submits to the variation; the Plff. is put on his election either (1) to have his action for Specific Performance dismissed or (2) have it subject to variation. If he elects not to accept the variation, he does not lose his remedy of damages.

II. Persons for whom contracts *cannot* be specifically enforced. This is dealt with in Sections 24 and 25.

Section 24

- (i) Who could not recover compensation for its breach.
- (ii) Who has become incapable of performing or violates any essential term of the contract.
- (iii) Who has already chosen his remedy and obtain satisfaction for the alleged breach.
- (iv) Who, previously to the contract had notice that a settlement had been made and was in force.

This Section is distinguishable from Section 23 in that the defence to Specific Performance is not founded on anything *in the contract itself*

but is based solely upon the *acts* or *conduct* of the Plff.

Section 24 is a general Section. While Section 25 is a Section which is a particular one and is limited in its application to two kinds of contracts only:—

(i) Contract to sale and (ii) Contract to let property whether movable and immovable,

Sec. 25 says that such a contract cannot be specifically enforced in favour a Vendor or Lessor, i. e. in the following cases:—

(i) Knowing not to have any title to the property, has contracted to sell or let the same.

(ii) Who cannot give a title free from reasonable doubt at the date fixed by parties or Court.

(iii) Who, previous to entering into the Contract has made a settlement of the subject-matter of the contract.

Settlement is defined in Section 3 and means any instrument—where by the destination or devolution . Successive interests in movable and immovable property is disposed of or is agreed to be disposed of.

III. Persons against whom contract may be enforced *Section 27.*

(i) Either party.

(ii) Any other person claiming under a party by a title arising subsequently to the Contract, [except a transferee for value without notice].

(iii) Any person claiming under a title which prior to the contract voidable and known to the plaintiff, and might have been displaced by the defendant.

(iv) New company after amalgamation.

(v) Company in respect of the contract made by promoters.

IV. Against whom contract cannot be enforced *Section 28.*

(i) Where consideration is grossly inadequate as to be evidence of fraud.

(ii) Where assent is obtained through misrepresentation; unfair practice or other promise not fulfilled.

(iii) Where assent is given under the influence of mistake of fact, misapprehension or surprise.

Specific Performance and Discretion of the Court

In granting Specific Relief, the important point is—When is the Court bound to grant Specific Performance Relief? Obviously the

Court cannot grant Specific Performance Relief in cases where the law provides that no Specific Performance Relief shall be granted. Such cases fall under three classes:

- (i) Where the nature of the contract is such that law does not allow it to be specifically enforced.
- (ii) Where the Plff. is a person in whose favour a contract cannot be specifically enforced.
- (iii) Where the Deft. is a person against whom a contract cannot be specifically enforced.

There remain the following three cases in which a contract can be specifically enforced:—

- (i) Where the contract is of such a *(further pages not found— ed.)*

Liabilities of the parties				
Of the seller		Of the buyer		
	Before Conveyance	After Conveyance	Before Conveyance	After Conveyance

Uberrima fides = (most abundant faith)

Contracts said to require *uberrima fides* are those between persons in a particular relationship, as

(i) Guardian and ward. (ii) Attorney and client. (iii) Physician and patient. (iv) Confessor and penitent.

Complete disclosure necessary.

Liabilities of the Parties

A. A. Liabilities of the Seller

1. BEFORE CONVEYANCE

1. SECTION 55 (1) (A)—TO DISCLOSE MATERIAL DEFECTS.

(1) A contract for the sale of land is not a contract *uberrima fidei*: The duty of disclosure is not absolute. *The duty to disclose is an obligation to disclose latent defects.*

(2) A latent defect is a defect which the buyer could not with ordinary care discover for himself. There is no duty to disclose defects of which the buyer has actual or constructive notice.

(3) As to patent defects of which the seller is unaware, the maxim *caevat emptor* applies. But a mutual mistake as to a matter of fact essential to the agreement will render the agreement void.

(4) *A latent defect whether of property or of title must be material.* A defect to be material must be of such a nature that it might be reasonably supposed that if the buyer had been aware of it, he might not have entered into the contract at all, for he would be getting something different from what he contracted to buy.

(5) Whether a defect is material or not must depend upon the circumstances of each case. When land was sold for building purposes, an underground drain was held to be a material defect, but not when a house or land were sold mainly for residence.

(6) Defects may be Defects in property or Defects in title. 2.
SECTION 55(1) (B)—PRODUCTION OF TITLE DEEDS

(1) The obligation is to produce title-deeds for inspection and not for delivery.

(2) The documents of title required to be produced for inspection are not only documents which are in the possession of the seller, but also includes documents which are in his power to produce.

(3) There is no obligation *to produce* title deeds unless the buyer makes a requisition.

(4) The Buyer however must not omit to take inspection, otherwise he will be held to have constructive notice of matters which he would have discovered if he had investigated the title.

3. SECTION 55(1)(C)—SELLERS DUTY TO ANSWER QUESTIONS

(1) When the documents of title are produced, the buyer examines them and if he is not satisfied makes requisitions. These requisitions are.—

(i) Requisitions relating to title. (ii) Requisitions relating to Conveyance. (iii) Other enquiries.

(2) Requisitions on title are objections that the documents do not show the agreed title or that the documents are not efficacious i. e. not duly attested.

(3) Requisitions on matters relating to conveyance refer to such matters as the joinder or concurrence of parties to the conveyance.

(4) Inquiries are for the protection of the buyer, and call attention to possible omissions of disclosure by the seller, and seek information on such points as easements, party walls and insurance.

(5) The Seller is bound to answer all requisitions which are relevant to the title and which are specific.

(6) The duty to answer requisitions is altogether distinct from the duty of disclosure under Section 55 (1) (a) of a defect, for, the omission of the buyer to make a requisition will not absolve the seller if he has not made a full disclosure.

(7) A buyer may waive requisitions. Waiver may be express or may be implied.

(8) Waiver is implied from conduct.

(i) (i) When a buyer does not press a requisition that has been made.

(ii) (ii) When a buyer asks for time to pay the price.

(iii) (iii) When a buyer enters into possession.

- (iv) (iv) When a buyer pays the whole or part of the price.

4. SECTION 55(1) (D)—EXECUTION OF CONVEYANCE

(1) The execution may be to the purchaser or to such person as the purchaser shall direct. Consequently, on a resale by the buyer before conveyance, the conveyance may be direct to the subpurchaser. The seller may require the original buyer to be a party to the Conveyance if there is a difference of price but not otherwise.

(2) It is the duty of the buyer to tender to the seller a proper draft—*31 Cal.L.J. 87.*

(3) This duty of the buyer is subject to a contract to the contrary.

(4) The execution of the conveyance and the payment of price are reciprocal duties to be performed simultaneously. They are concurrent promises. If either party sues for specific performance, he must show that he was ready and willing to perform his part.

(5) *Proper time for execution:—*

(i) (i) The section is silent as to what is proper time.

(ii) (ii) The time is usually settled by the contract of sale.

(iii) If time is fixed, and an unreasonable delay occurs, the proper course is to give notice making time the essence of the contract

(iv) If time is not settled, the proper time is the date when the seller makes out his title.

(6) *Proper place for execution:—*

(i) The Section is silent.

(ii) Since it is the buyer who has to tender the draft conveyance to the seller, the proper place for execution would be the Seller's residence or his Solicitor's office.

(7) *Cost of Conveyance:—*

(i) The Section is silent.

(ii) This is usually settled by the terms of the contract.

(iii) In the absence of any express term, the buyer has to pay the cost of the Stamp—Section 29 (c) Indian Stamp Act.

5. SECTION 55 (1) (E)—CARE OF PROPERTY

(1) The contract of sale does not give to the buyer any interest in property. But it imposes upon the seller a personal obligation to take care of the property.

(2) The seller must also take care of the title deeds. The loss of title deeds depreciates the value of the property and damage done to the estate.

(3) To take care means to do what a prudent owner ought to and keep the property in reasonable repair and protect it from injury by trespassers.

(4) The obligation to take care is one collateral to the contract and does not merge in the conveyance. The duty to take care continues even after completion of the sale and the buyer is not responsible for any loss caused by the seller. If the seller neglects his duty, the buyer is entitled to compensation to be deducted from the purchase money; after the completion the buyer may recover damages.

6. SECTION 55(1) (G)—MEET OUTGOINGS

(1) It is the duty of the seller to pay what are called under England Law outgoings. In India they include—

- | | | |
|-------|-------|----------------|
| (i) | (i) | Public Charges |
| (ii) | (ii) | Rent |
| (iii) | (iii) | Interest |
| (iv) | (iv) | Encumbrances. |

(i) *Public charges over*

- | | | |
|-------|-------|--|
| (i) | (i) | Government Revenue. |
| (ii) | (ii) | Municipal Taxes. |
| (iii) | (iii) | Payment charged upon land by Statute either expressly or implied by reason of their being recoverable by distress or other process against the land. |

(ii) *Rent*—The payment of rent is a question which arises when the property sold is leasehold property. The seller of the leasehold property is bound to pay rents accruing due up to the date of the sale.

(iii) *Interest.*

(i) Encumbrance means—a claim, lien, or liability attached to the property.

(ii) The seller's duty is to discharge all Encumbrances. It is immaterial that the buyer was aware of the Encumbrances when he contracted to buy.

(iii) The sale is not subject to Encumbrances, unless there is an express provision to that effect.

(iv) If the Encumbrance is a common charge on the property sold and other properties of the seller, the buyer may insist on its being discharged out of the other property.

(6) This liability imposed upon the seller is collateral to the contract and may be enforced even after conveyance.

Seller's Liabilities

AFTER CONVEYANCE

1. *Section 55(1)(b)—To give possession*

1. It is the duty of the seller to give possession after conveyance and not to leave the buyer to get possession for himself.

2. This liability may be enforced by a suit for Specific Performance.

3. 3. Time for giving possession—

(i) The Section does not say when the seller should give possession.

(ii) Reference to Section 55 (4) (a) shows that possession be given when ownership passes to the buyer. This would be at the time of the execution of the sale-deed—*6 Lab. 308*.

(iii) The seller cannot refuse possession because price has not been paid unless there was intention to the contrary.

(iv) The buyer's right to possession and the seller's right to unpaid price may be enforced in the same suit.

4. Nature of Possession—

(i) Possession does not mean actual occupation.

(ii) Physical possession in the case of tangible and symbolical possession in the case of intangible properly is enough.

(iii) Symbolical possession is enough in the case of property which is in the possession of tenants or mortgagees.

2. *Section 55 (2)—To assure that the interest subsists.*

1. There are two views as to whether this liability of the seller is one which arises before conveyance or after conveyance.

(i) *Calcutta view*. This clause contemplates a *completed contract* and corresponds to covenant for title in an English conveyance. *57 Cal. 1189*.

(ii) *Madras view*. This clause contemplates cases, where the transaction has not progressed beyond the stage of contract. *40 Mad. 338 (350)*;

38 Mad. 1171.

(iii) *Lahore view*. Follows Madras.

6 Lab. 308.

(iv) (iv) *Bombay view*. It pertains to liability *after conveyance*

18 Bom. S. R. 292; 52 Bom. 883; 31 Bom. LR. 658.

(a) The provisions of Section 55(1) enable the buyer before completion, to ascertain if the title offered is free from reasonable doubt. Once he has accepted the conveyance and the sale is completed, he has no remedy on the contract except for fraud.

(b) The covenant for title implied by Section 55 (2) gives the

buyer a further remedy in case of defects discovered after conveyance.

(v) Another view which probably is the correct view. (a) In the matter of Title, the liability of the seller is twofold. (i) He must pass to the buyer a title free from reasonable doubt. (ii) He must pass to the buyer a title which he professes to pass and nothing less. He must make good his representation.

Under (i) he must prove that he has acquired his title in any one of the recognised ways: such as prescription, possession, inheritance, purchase, etc.

Under (ii) if he professes to transfer a full proprietary interest, then interest transferred must be full proprietary interest and not merely occupancy interest: Sale of free from Encumbrances land which is subject to Encumbrance: Sale of non-transferable land as transferable.

(b) Section 55(1) relates to liability for a title free from reasonable doubt: Section 55 (2) relates to liability for passing title which he professed to pass.

2. Section 55 (2) relates to misrepresentation or misdescription as to title. A distinction must be made between misdescription of title and misdescription of property.

(i) Misdescription of title is a breach of the covenant for title under Section 55 (2) and gives right to damages.

(ii) Covenant for title does not extend to misdescription of property i. e. as to the extent of the land sold.

(iii) A covenant for title is not a covenant that the land purported to be conveyed is of the extent stated in the sale-deed. It is merely a contract with the purchaser of the validity of the sellers' title. Consequently if the purchaser finds a deficiency in area his, suit must be based not on the covenant for title, but for part failure of consideration.

3. Express covenant for title. Every conveyancer has an implied covenant for title. But parties may enter into an express covenant relating to title. The points to be noted in regard to an express covenant are:

(a) If overrides and does away with the effect of all implied covenants.

(b) Although an express covenant alone can govern the rights of the parties, yet an implied covenant cannot be got rid of except by *clear and unambiguous* expression.

4. *Who can claim the benefit of the covenant* : The benefit of a covenant for title can be enjoyed not only by the purchaser and his representatives, but also subsequent alienees, who claim under the purchaser, can enforce it as against the seller.

5. Under this clause the vendor is presumed to guarantee his title absolutely to the property. If he wishes to contact himself out of the covenant he must do so expressly or by necessary implication.

6. The implied covenant for title has nothing to do with the question, whether the buyer has or has not notice of the defect of title and the buyer's knowledge of the defect does not deprive him of the right to sue for damages and can claim a return of the purchase-money if he is dispossessed by reason of a defect in title.

7. *Covenant for title—what does it include.* The covenants for title implied in an English conveyance, include.—

- | | | |
|-------|-------|---------------------------------------|
| (i) | (i) | Right to convey, |
| (ii) | (ii) | Right to quiet enjoyment, |
| (iii) | (iii) | Right to hold free from Encumbrances, |
| (iv) | (iv) | Right to further assurance. |

Under the covenant for further assurance, the seller is bound to do such further acts for perfecting the buyer's title as the latter may reasonably require. Thus, if a seller has, after the sale perfected an imperfect title by the purchase of an outstanding interest, he can under this covenant, be compelled to convey it to the buyer.

(2) The English covenants are more extensive as they include the covenant for quiet enjoyment, for freedom from Encumbrances and for further assurance. Under Indian Law they are not included.

8. Covenant for title is a covenant for a title free from reasonable doubt. It has been held by the Privy Council that an absolute warranty of title cannot be insisted upon by the purchaser. *9 I.A. 700 (713)*.

9. The implied covenant for title does not apply in the case of a trustee:

(i) A trustee is only deemed to covenant that he has done no act whereby the property is encumbered, or that whereby he is hindered from transferring.

(ii) If a trustee conveys without disclosing his fiduciary character, he could no doubt be required to convey "as beneficial owner" so as to become subject to the usual covenants for title.

10. The implied covenant for title does not apply in the case of a guardian selling on behalf of the minor.

CHAPTER 4 THE LAW OF TRUSTS

OUTLINE

PART I. What is a Trust and to what the Act applies?

PART II. Express or Declared Trusts— (i) Creation. (ii) Extinction.

PART III. The Administration of a Trust.

PART IV. Constructive Trusts.

PART V. The Administration of a Constructive Trust.

PART I

What is a Trust and to what the Act applies?

II. To what KINDS OF TRUSTS The ACT Applies?

I. Section I says in what cases the Act shall not apply. They are:

(i) Wakfs created by a Mohammedan.

(ii) Mutual relations of the members of an undivided family as determined by any customary or personal law. (iii) Trusts to distribute prizes taken in war among the captors. (iv) Public or Private religious or Charitable Endowments.

1. *Explanations.*

1. Wakf.—Permanent dedication by a person professing the Mussalman faith of any property for any purpose recognised by the Mussalman Law as religious, pious or charitable.

Two classes of Wakfs—

(i) Where benefit is reserved to the settlor and his family— Act VI of 1913 applies.

(II) Where no benefit is reserved—Act 42 of 1923 applies.

II. II. MUTUAL RELATIONS OF MEMBERS OF AN UNDIVIDED FAMILY.

Illus—

1. The manager of a joint Hindu family and other members of the family.

2. A Hindu widow and a reversioner.

Their relations are not governed by the Trust Act. They are governed by customary law or personal law.

III. DISTRIBUTION OF PRIZES TAKEN IN WAR.

1. *Prize*,—A term applied to a ship or goods captured *jure belli* by the maritime force of a belligerent at sea or seized in port.

2. All prizes taken in war vest in the sovereign, and are commonly by the royal warrant granted to trustees upon trust to distribute in a

prescribed manner amongst the captors.

3. To such a trust created for the purpose of distributing prizes the Trust Act does not apply.

IV. PUBLIC TRUSTS AND PRIVATE, RELIGIOUS OR CHARITABLE ENDOWMENTS.

Trusts are either *Public* or *Private Trusts*.

1. *Public Trusts*.—A trust is a Public Trust when it is constituted for the benefit either of the public at large or some considerable portion of it answering a particular description. A Public Trust is for an unascertained body of people though capable of ascertainment.

II. *Private Trust*.—A Private Trust is a trust created only for the benefit of certain individuals who must be ascertained or ascertainable within a limited time.

III. *The Purposes of a Public Trust*.—They fall under three heads:— (i) Public purposes. (ii) Charitable purposes. (iii) Religious purposes.

(1) The phrase public purposes is used in two senses :

(a) In its ordinary sense—it includes purposes. Such as mending or repairing of roads, a parish supplying water for the inhabitants of a parish, making or repairing of bridges over any stream or culvert that may be required in a parish.

(2) The Phrase Charitable Purposes—includes almsgiving, building alms-houses, founding hospitals and the like.

(3) The Phrase Religious Purpose—includes relating to religious teaching or worship—purchase or distribution of religious books, upkeep of Churches, Temples, etc.

If a Trust is a Public Trust—The Trust Act does not apply. If a Trust is a Private Trust—Does the Trust Act apply?

The Act applies only if the Private Trust is a trust which is not a Charitable or Religious Trust.

What is the Law that applies to a Public Trust or a Private Trust which is Charitable and Religious? There are various enactments which apply.

1. Section 92, C. P. C.

2. The Religious Endowments Act, 1863.

3. The Religious Society's Act I of 1880.

4. The Official Trustee Act II of 1913.

5. The Charitable Endowments Act VI of 1890.

6. The Charitable and Religious Trusts Act XIV of 1920.

Different kinds of Trusts

1. Trusts fall into different classes. The class into which a trust falls

depends upon the point of view a trust is looked at—

2. A trust can be looked at from three points of view— (i) From the point of view of the mode in which a trust is created. (ii) From the point of view of the constitution of the trust. (iii) From the point of view of the nature of the duty imposed on the

trustee.

3. From the point of view of the mode in which a trust is created trusts fall into two divisions (i) Express and (ii) Constructive.

4. From the point of the constitution of a trust, trusts fall into two divisions (i) completely constituted trusts and (ii) incompletely constituted trust.

5. From the point of view of the nature of the duty imposed on the trustee trusts fall into two divisions (i) Simple Trusts and (ii) Special Trusts.

1. EXPRESS AND CONSTRUCTIVE TRUST

1. A trust can arise in two ways—

(i) It is the result of a voluntary declaration made by an individual. (ii) It may be the result of a rule of law.

2. When a trust is the result of a voluntary declaration it is called an Express Trust or Declared Trust. When a trust is the result of a rule of law it is called a Constructive Trust.

3. The term Constructive Trust is used in another sense. In this sense it is used to signify a trust which is the result of a construction put upon the deed. A trust is a matter of intention. Intention may be declared in specific terms or it may be found by the Court to have been indicated by the party on a proper construction of the deed. In the latter case the trust is sometime called a Constructive Trust.

4. Two things have to be remembered in connection with a constructive trust used in this sense.

(i) Such a Constructive Trust is some times contrasted with an Express Trust. This is quite wrong. Such a Constructive Trust is really an Express Trust and is not to be contrasted with it. A trust is none the less an Express Trust because the language used by the settlor is ambiguous or clumsy, if, on the true construction of that language the Court comes to the conclusion that a trust must have been *intended*.

(ii) A trust which is constructive in the sense that the intention is deduced by constructing the document must not be confused with a Constructive Trust which is the result of the operation of the law. In the former there is an intention to create a trust and in that sense it is

the result of the voluntary act of the party. In the latter there is no intention to create a trust. It is the creation of law and not of an act of the party.

Constructive Trusts fall into two sub-divisions :—

(i) Resulting Trusts. (ii) Non-Resulting Trusts.

The difference between the two will be considered later when dealing with Constructive Trusts. They have one thing in common— they are both the result of the operation of law and not the result of an act of party.

II. COMPLETELY CONSTITUTED TRUSTS AND INCOMPLETELY CONSTITUTED TRUSTS.

1. A trust is said to be completely constituted when the trust property is *vested* in the Trustees for the benefit of the beneficiaries. When there is a mere declaration of a trust but the property is not vested in the Trustee the trust is incompletely constituted.

2. The question whether a trust is completely constituted or not is of the *utmost* importance where no valuable consideration is given for its creation.

3. *If value is given* it is immaterial whether the trust is perfect or not, for as equity looks on that as done which has been agreed to be done an imperfect conveyance for value will be treated a contract to convey and the Court will see that it is perfected.

4. *If no value is given* there is no equity and the Court will not grant any assistance to a person seeking to enforce.

5. If there is a complete transfer of property although it is voluntary yet the legal conveyance being effectually made the trust will be enforced by the Court.

6. There are two ways in which a trust may be completely constituted:

(i) (i) The settlor may convey the property to the trustees.

(ii) (ii) The settlor may declare himself to be a trustee of it.

7. *Distinction between complete and incomplete trust—*

(i) A completely constituted trust is one in which the trust property has been finally and completely vested in the trustees.

(ii) A trust is incompletely constituted when the trust property has not been finally and completely vested in the trustees.

NOTE.—All trusts arising under wills are completely constituted, though may be either executed or executory—

(iii) A seller must take all due steps to do all that it is his duty to

vest the property in the trustee, and the instrument of conveyance must also contain a declaration of trust, if the settlor's intention is to escape defeat.

8. *Consequences arising from this difference—*

(i) An incomplete trust will be enforced if it is for valuable consideration. It will not be enforced if it is voluntary, i.e., without valuable consideration.

(ii) Valuable consideration in the law of trust, as in the law of contract, is some valuable thing assessable in terms of money, with the proviso that marriage, and also forbearance to sue is so considered.

(iii) A distinction exists between valuable consideration and good consideration. The phrase good consideration is applied to natural love and affection. Such a consideration though good is not valuable.

(iv) A good consideration does not make an incompletely constituted trust enforceable at the instance of a volunteer. It serves to rebut a resulting trust

(V) *How far marriage is a consideration :*

(i) If the settlement is made *before* and in consideration of marriage, it is made for valuable consideration. So it is also, if made after marriage, but in fulfilment of an ante-nuptial agreement to settle.

(ii) But if the settlement is made after marriage, and not in pursuance of an ante-nuptial agreement, it is voluntary.

(VI) *Who are within the marriage consideration:*

(i) The only persons within the marriage consideration are the actual parties, the husband and the wife, and the issue of that marriage.

(ii) All other persons are volunteers and cannot enforce the provisions of a settlement *as against the settlor* so far as the transfer of property is still incomplete, e.g., an agreement to settle after—acquired property.

9. *Does the Indian Trust Act recognise this distinction between complete trust and incomplete trust—*

Simple and Special Trusts

1. A Simple Trust is a trust in which a trustee is a mere passive custodian of the trust property, with no active duties to perform..

2. A Special Trust is a trust in which a trustee is appointed to carry out some scheme particularly pointed out by the settlor and is called

upon to exert himself actively in the execution of the settlor's intention.

3. A Simple Trust is spoken of as a passive trust and Special Trust is spoken of as an active trust.

4. Where a Simple Trust exists, the beneficiary, provided that he is *sue juris* and absolutely entitled, has a right to be put into actual possession of the property and he enjoys the further right of compelling the trustees to dispose of the legal estate in accordance with the beneficiary's instruction.

5. Special Trusts are divided into—(i) Ministerial and (ii) Discretionary.

6. In both, the trustees have positive duties to perform.

7. The point of distinction is that in a Ministerial Trust the duties are such that the trustee is not called upon to exercise *prudence* while in a discretionary trust a trustee is required to *exercise prudence*.

PART II

EXPRESS OR DECLARED TRUST

CHAPTER 1. Two kinds of Declared Trusts—

(i) (i) Executed.

(ii) (ii) Executory.

CHAPTER II. The Creation of an Express Trust.

CHAPTER III. The Revocation of an Express Trust. Declared

CHAPTER IV. The Extinction of an Express Trust.

CHAPTER I

Two kinds of Declared Trusts

Executed and Executory

An Express Trust is either an *Executed Trust* or is an *Executory Trust*.

1. EXECUTED AND EXECUTORY TRUSTS

1. The expressions Executed and Executory as used in relation to contract have not the same meaning which they have when used in relation to trust.

2. When used in relation to a contract they refer to the carrying out of the contract. When used in relation to a trust they refer to the creation of a trust as distinguished from its carrying out.

3. In the sense in which the term is used in contract every trust is executory until it is over. But that is not the meaning in which the word is used in relation to trust.

4. When the words *Executed* and *Executory* are used in connection

with a trust they have different meaning.

(1) A trust is an Executed Trust when the author of the trust has not only designated the persons who are to benefit by the trust but has also indicated the *interests* which they are to take in the trust property.

(2) A trust is said to be an Executory Trust when the author of the trust has only designated the persons who are to benefit by the trust but has not indicated the interests which they are to take in the trust property but has left it to be defined by another person by another instrument.

Illus.—On the marriage of *A* and *B* it is agreed between them that certain property shall be settled on trust for them and for their children.

NOTE.—Here the parties who are to benefit by the trust are defined—They are *A* and *B* and their children—

(1) But what benefits *A* and *B* their children are to take is not defined.

(2) Therefore, it is an Executory Trust.

(3) The line of cleavage between an Executed Trust and an Executory Trust is different from the line of cleavage between a completely constituted trust and an incompletely constituted trust.

(4) The line of cleavage between a completely constituted trust and an incompletely constituted trust is:- in the former the property is vested in the Trustees upon trust; in the latter the property is not so vested.

(5) The line of cleavage between an Executed Trust and an Executory Trust is that in the former the interests of the beneficiaries are defined when in the latter they are not so defined.

(6) That being so an Executory Trust may be a completely constituted Trust.

II. PARTIES TO A TRUST.

1. Apparently there are three parties to the transaction of a trust—

- | | | |
|-------|-------|--|
| (i) | (i) | The party who makes the trust. |
| (ii) | (ii) | The party who accepts the trust. |
| (iii) | (iii) | The party for whose benefit the trust is made. |

2. The party who makes the trust is called "the author of the trust". The party who accepts the trust is called the trustee. The party for whose benefit the *trust* is made by the author and accepted by the trustee is called the beneficiary.

3. Is it necessary that the three parties *should* be distinct and separate and that one of three cannot occupy the role of any two of them? The

answer to this question is *some* of them can play the role of two.

(i) The author of the trust and the beneficiary of the trust must be distinct and separate.

(ii) The trustee and the beneficiary must be distinct and separate.

(iii) The author of the trust need not be distinct and separate from the Trustee.

4. The reasons why some parties can occupy the role of two in one and some cannot are important.

(i) The making of a trust results in the creation of two different estates in the property which is the subject-matter of the trust—the legal and the equitable. A trust lasts as long as these two interests remain separate, (ii) If the legal and equitable estates happen to meet in the same person, the equitable is forever extinguished by being absorbed in the legal. In other words, where the legal and the equitable interests are co-extensive and vested in the same person the equitable merges in the legal interests which means that the trust comes to an end.

There are two principles to be borne in mind

(i) There is no trust if it does not create a separate equitable interest.

(ii) There is no trust if the separate legal and equitable interest become merged.

5. Applying these two principles we reach the following conclusion—

(i) There is no merger when the author of the Trust and the trustee are the same. Therefore, they need not be distinct.

(ii) There is no creation of a separate equitable estate when the author of the Trust and the beneficiary are the same. Therefore, they must be distinct.

(iii) There is merger when the trustee and the beneficiary are the same. Therefore, they must be distinct.

To sum up. The author of the trust and the trustee may be one and the same person. But the beneficiary must always be a distinct person separate from the author of the trust as well as from the trustee.

6. So far we have taken simple cases where the parties are single individuals. What happens when the parties are multiple parties, and where some of them play double role.

Illus.

(i) A and B are the beneficiaries of a trust Of them A is also a trustee. Is such a trust valid?

(ii) A and B are beneficiaries of a trust Of them A is the author of

the trust Is such trust valid?

7. The answer to the first question is in the affirmative. It is found in Section 6 which defines a trust. The definition does not give an answer to the Second question. Yet such a trust is invalid.

CHAPTER II

(i) The Creation of an Express Trust

1. CONDITIONS FOR THE CREATION OF A VALID TRUST.

For the validity of a declared Trust the following *four* conditions prescribed by law must be satisfied.

(i) Section 6.

(1) There must be necessary parties to the trust.

(2) (1) The language of the settlor must be such that the Court can find from it, as a fact,

a) a) An intention to create a trust;

b) b) of ascertainable property ;

c) c) in favour of ascertainable beneficiaries and

d) d) for an ascertainable purpose.

(ii) Sections 7-8.

The trust property must be of such a nature as to be capable of being transferred and settled in trust.

(iii) Section 4. The object of the trust must be lawful.

2. The English Law of Trust differs from the Indian Law in regard to the creation of a trust. According to Snell the creation of a trust requires three certainties,

(i) Certainty as to intention. (ii) Certainty as to trust property.

(iii) Certainty as to beneficiary. According to Underhill the creation of a trust requires *four* certainties, those mentioned by Snell and one more namely.

(iv) The purpose of the trust.

The English Law does not require the transfer of the trust property to the trustee. But the Indian Law does.

(i) Certainty as to intention

(i) The intendor to create a trust may be by words or acts.

ii) These are illustrations which show how a trust could be created by the acts of the author of the trust.

Illus.

(i) A father opening an account in his book in the name of his son in which money is credited in the name of his son.

9 Bom. 125 (ii) A buying shares in 5 Bom. 268 17 Col. 620 (628)

3. Examples of trust created by words are unnecessary. The question is

what kind of language is necessary to show there is a certainty to show that there was intention to create a trust—

(i) No technical expressions are needed for the creation of a trust. The matter is one of construction. The question, therefore, which has to be determined is whether upon construction of the will or deed as a whole, the testator intended that the person to whom property was given should take as a mere trustee or should take beneficially, subject to a mere superadded expression of a wish or desire, which the testator may have thought would be sufficient to influence the donee, but which was not intended to and does not impose upon him any obligation. Question is did the author of the trust merely express a wish that the trustee should do a particular thing or did he impose an obligation upon him to do a certain thing. If an obligation was in fact intended then obviously he had the intention to create a trust.

(iii) The language used may be *either precatory or imperative*.

(i) The words request, recommend, desire, hope, etc., are precatory words.

(ii) Such words cannot be said to indicate an intention to create a trust, because they do not show an intention to impose an obligation upon the trustee.

(iii) Under the English Law such precatory words were held to constitute a trust and the trusts were called precatory trust. But the modern tendency is against.

(iii) Certainty as to beneficiary

1. The beneficiary must be specified or described sufficiently as to be capable of identification.

2. *Illustrations of uncertainty*.

(i) Estate given to A with the direction that he would continue it in the family—family uncertain.

(ii) To the settlor's relations—relations uncertain.

3. *Illustrations of sufficient description*

(i) Descendants—held to be sufficient description and therefore not uncertain

3. Certainty of Purpose

1. How the property is to be applied must be specified.

2. Illustrations of uncertainty of purpose.

(i) To consider certain persons. (ii) To be kind to them. (iii) To make ample provision for them. (iv) To remember them. (v) To do justice to them. (vi) To take care of his nephew as might seem best in future.

(vii) To use property for herself and her children and to remember the Church of God and the poor.

3. The purpose of the trust means the way in which the beneficiaries are to be benefited the way in which the property is to be applied.

4. Certainty as to trust property

1. The property which is to be the subject-matter of the trust must be indicated with reasonable certainty. It must be specified or sufficiently described so as to be capable of identification.

Illus.

(i) A bequeathes certain property to B—directing him to divide the *bulk* of it among the children of C. There is no creation of a trust because the property is not indicated with reasonable certainty.

(ii) A gives property in trust for his wife and directs that such part of it as may not be required by her shall, after her death, be held in trust for his children.

(iii) A gives property in trust for his servants with a direction to reward them according to their deserts out of such parts of my estate as may not have been sold or disposed of by her.

Conclusion

1. Thus, it must be clear that the settlor intended to create a *definite* trust over *definite* property for *definite* persons. No trust can arise in the absence of an intent to create a definite equitable obligation giving definite equitable rights to definite beneficiaries.

2. It will, however, be noticed that the failure to nominate a definite person as a trustee does not invalidate the trust. Where a trust is clearly intended, then (subject to the rules as to voluntary trust), the mere omission to appoint a trustee will not invalidate the trust : for equity never allows a trust to fail for want of a trustee. So, if no trustee is appointed or if the trustee appointed fails, either by death, or disclaimed or incapacity or otherwise the trust does not fail, but fastens upon the conscience of any person (other than a purchaser for value without notice) into whose hands the property comes and such person holds it as a passive trustee, whose only duty is to convey it to new trustees when properly appointed.

3. The effect of uncertainty as to property or as to beneficiary or purpose of the trust is different :

(i) Where the trust is affected by uncertainty as to property the trust is void. As there is no property capable of identification there is nothing to litigate about.

(ii) Where the trust is affected by uncertainty as to the beneficiary or the purpose the trust is void. As there is no person named as a beneficiary no one can come forward to enforce it

(iii) Where the property is described with sufficient certainty, and the words actually used, or the surrounding circumstances make it clear that although the donor has not sufficiently specified. The objects of his bounty or the way in which the property was intended to be dealt with yet he never meant the trustee to take the entire beneficial interest, the Law implies a resulting trust in favour of the donor or his representative.

II. TRUST PROPERTY MUST BE CAPABLE OF TRANSFER.

1. *What property is capable of transfer?*

2. The answer to this question is to be found in section 6 of the Transfer of Property Act.

3. Property which can be transferred may be subject-matter of a trust.

4. But there can be no trust of a beneficial interest under a subsisting trust. A Beneficiary cannot create a trust of his interest in trust. His interest is transferable but he cannot create a trust of it.

5. This marks an important distinction between the English Law and Indian Law of Trust.

6. Under the English Law a beneficiary can create a trust of his equitable estate.

7. The reason is that the Indian Law does not recognise the distinction between legal and equitable estates in a trust.

Sec. II.—A Trust may be properly created and yet enforceable.

1. A trust may have been properly created but may not be enforceable. To be enforceable a trust must satisfy two other conditions:—

1. The object of the Trust must not be unlawful. II. The formalities prescribed for the creation of a trust must be satisfied.

Object of the trust Sec. 4.

1. The object of a trust must be lawful.

2. *What are lawful objects?*

(1) The purpose must not have been forbidden by Law.

(2) Purpose must not be such which if permitted would defeat the provisions of any law.

What are unlawful objects?

(1) Purpose which is fraudulent

(2) Purpose which involves or implies injury to the person or property of another.

(3) Purpose which is immoral or opposed to public policy.

Illus.

- (1) Trust for the care of female foundling to be trained as prostitutes.
 - (2) Trust to carry on smuggling business and to maintain it out of the profits.
 - (3) Trust by a person in insolvent circumstances—defeating creditors.
 - (4) Trusts for illegitimate children.
 - (5) Trust for the creation of a perpetuity.
 - (6) Trust to take effect upon future separation of husband and wife.
3. Whether the trust is lawful or unlawful is to be determined in the case of immovable property by the law where the property is situated.
 4. A trust which is unlawful is *void*.
 5. Where a trust has two purposes of which one is lawful and the other unlawful, the validity of the trust depends upon the severability of the two. If they can be severed, the one with a lawful purpose is valid and the one with an unlawful purpose will be void. If they cannot be separated the whole will be void.
 6. Consequences of settlor creating an unlawful trust—
 - (i) Court will not enforce it in favour of the person intended to be benefited thereby. (ii) Court will not help the settler to recover the estate.

Formalities for a valid trust

Sec. 5.

1. A trust may be a trust of immovable property or it may be a trust of movable property. The formalities prescribed by law for the validity of a trust differ according as the property is immovable property or movable property.
2. *Formalities in case the property is immovable.* Such a trust may be made in two ways—
 - (i) Either by a non-testamentary instrument signed by the author of the trust or by the trustee, or
 - (ii) By the will of the author of the Trust,
3. *Formalities in the case of a trust of movable property.* There are *three* ways by which it could be done.
 - (1) By a non-testamentary instrument signed by the author of the trust or the trustee.
 - (2) By a testamentary instrument signed by the author or the trustee.
 - (3) By transfer of the ownership of property to the trustee.

4. *Difference between declaration and creation of Trust.* (Not explained in ms.)

5. Transfer of Trust Property

1. No trust is created until the author of the trust has divested him of the trust property. That means he must have transferred the property to the Trustee.

2. This does not apply where the author of the trust is himself the trustee. All that is necessary to show is that he has changed the character in which he holds it.

3. This does not apply when the trust is created by a will. The will operates after his death and the trustees then take possession.

Section II.—A trust may be valid and yet impeachable.

1. A valid trust may be impeached on the following grounds by the following persons :—

(a) By the settlor or his successors in title on the ground: (i) of the incapacity of Parties.

(ii) of some mistake made by, or fraud practised on, the settlor at its creation.

(b) By the settlor's creditors, by reason of its having been made with a fraudulent intention to defeat or delay them or because it infringes the provisions of the Insolvency Act.

(c) By future purchasers of the property from the settlor without notice of the trust, where the trust property is land, and though was intended by the settlor to defeat the claims of future purchasers.

1. Incapacity of Parties to a Trust § *Capacity of the author of the Trust.*

1. The author of a trust must be a person who is *competent* to contract, i.e., (i) He must be major and (ii) He must be of sound mind.

2. Although this prevents a minor from making a trust yet the law provides for a minor making a trust, if the conditions prescribed are observed under the Law, a trust may be made by or on behalf of the minor, provided it is done with the permission of the Principal Court of original jurisdiction.

The Principal Civil Court of original jurisdiction is according to the Civil Procedure Code the District Court.

3. This competency of the Author of the Trust to make a trust is limited in two ways—

(i) The property which is to be the subject-matter of the trust must be transferable.

(ii) He can transfer it only to the extent permitted by Law for the

time being in force. A trust is not valid if the author had no power to dispose of property.

4. What property is transferable and what is not is defined in section 6 of the T. P. Act.

5. The authority to dispose of property and the extent of such power depends upon law.

Illus.

(i) A Hindu father cannot dispose of the ancestral property and therefore, he cannot create a trust thereof.

(ii) A Hindu widow cannot dispose of the estate inherited by her from her husband. She having only a life-estate in it— therefore, she cannot dispose of it by way of Trust.

(iii) A Mohammedan cannot dispose of more than 1/3 of his property after the payment of debts and funeral expenses— therefore, cannot dispose of more than 1/3 by way of a Trust.

§ Capacity to be a Trustee— Sec. 10.

1. Every person capable of holding property is competent to be a trustee.

2. *Who is capable of holding property?*

Every *living person* is capable of holding and taking property. Therefore, every living person whether a minor or a lunatic is capable of being a trustee.

3. There is a difference between capacity to contract and capacity to hold and take property. Every living person does not have the capacity to contract; but every living person has the capacity to hold and take property.

4. This distinction is necessary to make and important to bear in mind because a person may not have capacity to contract yet he may be competent to be a trustee provided he has capacity to hold and take property ;be not dead physically he must not be dead civilly: (1) A person who is sentenced to transportation is not civilly dead.

7. There is one further distinction which is to be noted. Ordinarily a person who is competent to be a trustee is also competent to execute a trust. But in the case where a trust involves the use of discretion the person who is competent to be a trustee is not necessarily competent to execute a trust.

8. Where the trust is such that it does not involve the use of discretion the requirement for competency to execute a trust is the same for being a trustee, namely, capacity to hold and take property.

9. Where the trust is such that its execution does involve the use of

discretion, then the trustee must have capacity to contract.

Capacity to be a Beneficiary— Sec. 9.

1. Every person capable of holding property may be a beneficiary.
- 2. The requirement for being a beneficiary is the same as for being a trustee.
3. That is every living person can be a beneficiary. That is a trust can be created in the interest of every living person. It is not necessary that a beneficiary should have contractual capacity. In this respect his position is regulated by the same provisions as that of the trustee.

CHAPTER III

The Revocation of an Express Trust Declared

Sec. 78.

1. Whether a trust can be revoked depends upon how the trust is created.

(i) If the trust is created by a will then it can be revoked by the testator *at his pleasure*. This is because will does not take effect till death. There is can be revoked before it takes effect

2. If the trust is created otherwise than be a will—i.e., by a non-testamentary instrument or by word of mouth then it can be revoked in the following circumstances only—

(i) If the power of revocation is expressly reserved to the author of the trust.

(ii) If the beneficiaries consent, provided all of them are competent to contract

CHAPTER IV

The Extinction of an Express Trust

Sec. 77.

1. A trust comes to end in the following cases— (i) When the purpose is completely carried out. (ii) When its purpose becomes unlawful. (iii) When the fulfilment becomes impossible. (iv) When the trust being revocable is expressly revoked. (v) If there is only one beneficiary or if there are several (whether entitled concurrently or successively) and they are or they are not under any disability (such as infant, lunatic) the trust may be extinguished by them without reference to the wishes of the setter or the trustees.

2. The terms for the extinction of a trust are the same as those for the extinction of a contract.

1. Two questions remain to be considered. (i) When does a trust

becomes administrable? (ii) What estate does the Trustee and Beneficiary have in the trust?

2. These questions are preliminary to the question of the administration of the trust.

1. When does a trust begin to function?

A trust becomes administrable when it has been accepted by the Trustee and the beneficiary—

I. I. DISCLAIMER AND ACCEPTANCE OF A TRUST

Acceptance Art. 34=Sect. 10.

1. Although the author of the trust may appoint a person as a trustee, the person so appointed is not bound to accept such appointment.

2. A person appointed to the office of a trustee may accept the office or he may disclaim it.

3. The acceptance of the office may be indicated expressly or by conduct. If it is by conduct it must indicate with reasonable certainty such acceptance.

Illus.—*A* by his will bequeaths certain properties to *B* and *C* as Trustees for *D*. *B* and *C* prove *A*'s will. On a question being raised whether *B* and *C* had accepted the office of Trustee, held that their conduct in proving the will was tantamount to acceptance of office.

4. Other illustrations of acceptance by conduct are :—

(i) Acceptance by acquiescence—Permitting an action regarding trust property being brought in his name.

(ii) Acceptance by exercising dominion over the trust property—such as advertising for sell—giving notice to tenants.

(iii) Acceptance by dealing with property—unless the dealing is plainly referable to some other ground.

(iv) Acceptance by long silence with notice of the trust and in the absence of any satisfactory explanation of the silence.

(v) Acceptance of a part of the trust is acceptance of the whole, notwithstanding any attempted disclaimer of part.

5. The law does not say how a disclaimer is to be made by a trustee who does not wish to accept the office. It only says that a trustee must do so within reasonable time.

6. Although the law is silent on the point, the following points with respect to disclaimer have been settled by judicial decisions—

(i) The disclaimer should be before acceptance. Once a trustee has accepted the office he can renounce it only under circumstances mentioned in section 46.

(ii) A person can disclaim a trust although he may have consented

to act as a trustee during the lifetime of the settlor.

(iii) A person cannot disclaim the office as to a part of the trust and accept as to the rest.

(iv) (iv) A disclaimer may be by words or by conduct.

7. **Effect of disclaimer.**

(i) If there is only one trustee a disclaimer prevents the trust property from vesting in him.

(ii) If there are two more trustees and if one of them disclaims, such a disclaimer vests the trust property in the other or others or makes him or them the sole trustee or trustees from the date of the creation of the trust.

8. What happens when there is only one trustee and he disclaims,

Two things can happen :—

(i) A new trustee may be appointed under section 73— (a) By one mentioned in the trust

(b) If there be none such, by the settlor if alive and competent to contract

(ii) If no trustee is appointed in place of the one who has disclaimed the property reverts to the settlor or his representatives if he is dead.

9. What happens to the property? Is it freed from the trust? Does it remain subject to the trust?

The answer is that the trust is not extinguished. The settlor or his representatives, if the settlor is dead, holds it on trust for the beneficiary. In other words the settlor or his representative becomes the trustee in place of the trustee who has disclaimed.

The rule is that a trust will never fail for want of a trustee. Wherever a trust exists, and there is no trustee to execute it, the person in whom the legal estate vests holds the property as trustee. This rule is intended to protect the beneficiary.

Mallott vs. Wilson (1903) 2 Ch. 494.

II. DISCLAIMER AND ACCEPTANCE BY BENEFICIARY—

Section 9

1. A beneficiary is not bound to accept the trust. He may accept it or he may disclaim it.

2. His disclaimer amounts to a renunciation of his interest under the trust.

3. If he wishes to disclaim he can do so in two ways : (i) By a disclaimer addressed to the trustee or (ii) By setting up a claim inconsistent with the trust with the knowledge of the trust.

4. A claim inconsistent with the trust would be a claim such as ownership of the trust property.

4. What happens to the trust when the beneficiary disclaims?

III. THE ESTATE OF A TRUSTEE UNDER A TRUST. (Page left blank)

IV. THE ESTATE OF A BENEFICIARY UNDER A TRUST. (Page left blank)

PART III THE ADMINISTRATION OF A TRUST

The Administration of a Trust

In connection with the Administration of a Trust, the Trustee has certain—

- (i) Duties—Sections 12—20.
- (ii) Liabilities—Sections 23—30.
- (iii) Rights—Sections 31—36.
- (iv) Powers—Sections 37—45.
- (v) Disabilities—Sections 46—54.

Similarly the beneficiary has certain—

- (i) (i) Rights—Sections 55—67.
- (ii) (ii) Liabilities—Section 68.

1. Duties of a Trustee Sections 12—20

V (2) Duty to obey directions contained in the Trust.

IV (3) Duty to act impartially between the beneficiaries.

IV (4) Duty to sell Wasting and Reversionary property.

IV (5) Duty in relation to payment of outgoing of Crops and income.

IV (6) Duty to exercise reasonable care.

IV (7) Duty in relation to the Investment of Trust Funds.

IV (8) Duty to pay Trust moneys to the Right Persons.

IV (9) Duty in relation to delegation of Duties and Powers.

IV (10) Duty to act jointly when there are more than one Trustees.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_1 IV (II) Duty not to set up *Jus Tertii*

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_2 IV (12) Duty to act gratuitously.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_3 IV (13) Duty not to traffic in Trust Property.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_4 IV (14) Duty to be ready with Accounts.

V. Powers of a Trustee Sections 37—45.

V. The powers of a Trustee * V (1) General Powers of a Trustee.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_5 V (2) Power of Trustees to sell or mortgage the Trust Property.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_6 V (3) Power in relation to conduct of sales.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_7 V (4) Power to give receipts. * V (5) Power to compound and settle disputes.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_8 V (6) Power to allow Maintenance to Infants.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_9 V (7) Power of Trustees to pay Cost of Beneficiary.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_10 V (8) Suspension of the Trustee's Powers by Administrative Action.

VI. Powers of the Beneficiaries

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_11 VI (1) Power of a sole beneficiary.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_12 VI (2) Power of one of several beneficiaries.

25. Is a trustee liable for breach of trust by his predecessor? He is not.

26. Is a trustee liable for the breach of trust committed by a Co-trustee?

He is not except in the following cases :—

(i) Where he has delivered trust-property to his Co-trustee without seeing to its proper application.

(ii) Where he allows his Co-trustee to receive trust property and fails to *make* due inquiry as to the Co-trustee's dealings therewith or allows him to retain it longer than the circumstances of the case reasonably require.

(iii) Where he becomes aware of a breach by a Co-trustee and conceals it or does not take proper steps to protect the property.

27. Breach of Trust jointly committed by Co-trustees.

What is the liability for each? Is it for the whole? Each is liable for the whole to the beneficiary. There will be a right of contribution from the rest.

28. Liability for Payment by a Trustee to a person who is not the person in whom the beneficiary's interest is not vested.

Trustee is not liable, provided:

- (i) He had no notice that the interest had vested in another person.
- (ii) That the person to whom payment is made was a person who was entitled to payment.

XIII. Protection to Trustees

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_13 (1) General Protection.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_14 XIII (2) Statute of Limitation.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_15 Each page contains only the heading and not the details—ed.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_16 XIII (3) Concurrence of or waiver or Release by the Beneficiary.

* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_17 XIII (4) Protection against acts of Co-Trustees.

* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_18 XIII (5) Right of contribution and indemnity as between Co-trustees.

* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_19 XIV. Liability of Third Parties and Beneficiaries.

* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_20 XIV (1) Liability of Third Parties and Beneficiaries who are parties to a Breach of Trust.

* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52B. Notes on Acts and Laws PART II.htm - _msocom_21 XIV (2) Following Trust Property into the hands of Third Parties.

PART IV Constructive Trusts

1. 1. There are *fourteen* cases of constructive trusts which are enumerated in the Trust Act.
2. 2. They fall *under five* heads :—
 - (1) CONSTRUCTIVE TRUSTS ARISING OUT OF TRANSFERS—
SECTIONS 81, 82, 84, 85.

(2) CONSTRUCTIVE TRUSTS ARISING OUT OF UNFAIR ADVANTAGE GAINED BY ONE PERSON AS AGAINST ANOTHER PERSON—SECS. 85, 88, 89, 90, 93. (3) CONSTRUCTIVE TRUSTS ARISING OUT OF CONTRACTS MADE—SECS. 86,

91,92.

(4) CONSTRUCTIVE TRUSTS ARISING OUT OF A MERGER OF TWO PERSONALITIES IN ONE INDIVIDUAL—SECTION 87. (5) CONSTRUCTIVE TRUSTS ARISING OUT OF A PAST TRUST—SECTION 83.

(1) TRANSFER OR BEQUEST OF PROPERTY

(i) Section 81.

1. In certain cases the transfer or bequest of property imposes an obligation upon the transferee or legatee in the nature of a trust in favour of the owner or his legal representative.

Ordinarily the transferee or legatee would take the property absolutely without any such obligation.

2. When can it be held that the transferee or legatee takes it subject to an obligation? He takes it subject to an obligation when there is no intention on the part of the owner to dispose of the beneficial interest in the property to the transferee or legatee.

3. How is intention to be determined?—In the light of the circumstances of the case. It is the circumstances which must be referred to in order to find out the intention of the owner. (ii) Section 82.

1. The second case where the transfer of property imposes an obligation upon the transferee in the nature of a trust is the case where the transferee is made to one and the consideration is paid by another—in such a case the transferee holds it on trust for the person who paid the consideration.

Ordinarily the transferee would be the owner in the eye of the law, the property being conveyed to him by the transferor.

2. This rule that a transferee who has not paid consideration holds it on trust for a person who has paid consideration applies generally except in one case—

3. *Exception:*

This rule does not apply where there is an intention on the part of the person who paid the consideration to benefit the transferee.

4. *Proof of intention.*

(iii) TRANSFER FOR AN ILLEGAL PURPOSE. Section 84.

1. Ordinarily when a transfer is for an unlawful purpose the Court will neither enforce the transaction in favour of the transferee nor will it assist the transferor to recover the estate if he has parted with it.

2. But the rule does not apply under *all* circumstances. The rule does apply under certain circumstances.

3. What are the circumstances in which the rule does not apply?

The circumstances in which the rule does not apply are—

- | | | |
|-------|-------|---|
| (i) | (i) | If the propose is not carried into execution. |
| (ii) | (ii) | If the transferor is not as guilty as the transferee. |
| (iii) | (iii) | If the effect of permitting the transferee to retain the property might be to defeat the provisions of any law. |

4. In these cases the Court will help the transferor and impose upon the transferee an obligation to hold the property for the benefit of the transferor.

(iv) BEQUEST UPON TRUST FOR AN ILLEGAL PURPOSE.
Section 85.

1. The position in law with regard to transfers for an illegal purpose is on a par with trust for an illegal purpose.

2. That is, a Court will neither enforce the trust in favour of the parties intended to be benefited nor will it assist the settlor to recover the estate if he has parted with it. 9 *Bom. S. R.* 542.

3. Section 85 recognises a trust although the purpose is unlawful. This is in contrast with the general principle enunciated in section 4 of the Trust Act and therefore requires some explanation.

4. The general principles governing the rights of the parties to an unlawful trust and the exceptions to those principles may formulate as follows :—

1. Where a trust is created for an unlawful and fraudulent purpose, the Court will neither enforce the trust in favour of the parties intended to be benefited nor will it assist the settlor to recover the estate (except in one case).

Q.—Why is a beneficiary not allowed to enforce it?

A.—Because it would be giving effect to an unlawful purpose.

Q.—Why is the author not allowed to recover the estate if he has parted with it?

A.—Because it would be helping him to take advantage of his own fraud.

II. The one case in which the settlor allowed to recover the property although the trust is for an illegal purpose is the case where the illegal

purpose has failed to take effect.

Q.—Why is this exception made?

A.—There are two reasons :—

(i) The purpose being unlawful no trust arose—it being void *ab initio*.

(ii) The trustee having paid no consideration has no right to retain the beneficial interest in the property which must, therefore, return to the settlor.

III. The disabilities attaching to the author of an unlawful trust do not apply to his legal representatives—

Q_why?

A.—Because they are not parties to the transactions.

5. The reason why section 85 recognises a trust in favour of legal representatives is because they are innocent parties having nothing to do with the creation of an unlawful trust.

(3) (2) Constructive Trusts arising out of unfair advantage—

1. Section 85.

1. The first case under this head arises where property is bequeathed under a will and the testator during his life-time wanted to revoke the bequest and he is prevented from revoking it by coercion.

2. Under such circumstances the legatee takes the property not as a beneficial owner thereof but holds it as a trustee for the legal representatives of the testator.

3. The reason is that the legatee has taken unfair advantage by using unfair means. He cannot, therefore, be allowed to retain such an advantage.

II. Section 88

1. The second case arises when any person who is bound to protect the interest of another person by reason of his fiduciary relationship with the latter.

2. Persons who fall in this category are—

- | | | |
|-------|-------|--------------------------|
| (i) | (i) | Agent and Principal. |
| (ii) | (ii) | Partners in a firm. |
| (iii) | (iii) | Guardian and ward. |
| (iv) | (iv) | Trustee and beneficiary. |
| (v) | (v) | Executor and Legatee. |

3. The section says—

(i) That any such person who gains any pecuniary advantage by availing himself of his fiduciary.

(ii) Enters into any dealings under circumstances in which his own

interests are adverse to those of the person whom he is bound to protect and thereby gains for himself a pecuniary advantage

Then

He must hold the advantage so gained for the benefit of the person whose interest he was bound to protect.

4. *Illus.*

(i) A partner buys land in his own name with funds belonging to his firm. He must hold it for the benefit of the partners.

(ii) A trustee, retires from his trust in consideration of a bribe paid to him by his Co-trustee. The trustee must hold the sum for the benefit of the trustee.

(iii) An agent is employed by A to secure a lease from B of a certain property. The agent obtained a lease for himself. The agent must hold it for the benefit of B.

(iv) A guardian buys up the Encumbrances on his ward's property at an undervalue. He can charge the ward only for the value he has actually paid for the Encumbrances.

III. Section 89

1. The third case arises where advantage is gained at the cost of another person by the exercise of undue influence.

2. This is dealt with in section 89. Section 89 says that such a person must hold the advantage for the benefit of the person who is the victim of such undue influence.

3. This is subject to two limitations—

(i) The advantage must have been gained without consideration or

(ii) The person must have had notice of the advantage having been gained by undue influence.

IV. Section 90

1. The fourth case arises where advantage is gained by a qualified owner availing himself of his position as such in derogation of the rights of other persons interested in the property.

2. This is dealt with in section 90. Section 90 says that such an advantage shall be held for the benefit of all and not merely for the benefit of the one who secured it.

3. Subject to two conditions—

(i) The others must repay their due share of expenses properly incurred for securing such advantage.

(ii) The others must bear proportionate part of their liabilities properly contracted for gaining such an advantage.

4. Cases covered are those of co-tenants, members of joint family,

mortgagee, etc.

V. Section 93

1. The fifth case arises where the advantage is gained by a creditor secretly.
2. Such a case generally arises when the creditors accept a composition from a debtor who is unable to pay his debts in full.
3. If it is found that one of the creditors who is a party to the composition has by arrangement with the debtor unknown to the other creditors gains better terms for himself he shall not be entitled to retain the advantage gained by him by reason of such better terms which have caused prejudice to other creditors.
4. The law will regard him as a trustee for the other creditors in so far as the advantage gained by him is concerned.

(4) (3) Constructive Trusts arising out of Contracts

I: Section 86

1. The first case dealt with by the Trust Act under this head relates to a contract for the transfer of property.
2. It falls under section 86. Section 86 refers to a contract in pursuance of which property is transferred and where the contract is of such a character that—
 - (i) It is liable to recession or
 - (ii) It is induced by fraud or mistake.
3. The transferee of the property under such a contract shall hold the property for the benefit of the transferor.
4. This obligation arises only under certain circumstances and is not absolute:
 - (i) The obligation arises only on receiving notice from the transferor that the contract is liable to recession or that it has been induced by fraud or mistake.
 - (ii) The obligation will be enforced only on repayment by the transferor of the consideration actually paid by the transferee.

II. Section 91

1. Acquiring property with notice that is subject to a contract with another person.
2. In such a case the person who acquires the property must hold it for the person who had contractual rights in it.
3. This obligation is limited in its extent. It is enforced only to the

extent necessary to give effect to the contract.

4. This obligation does not arise in the case of every acquisition of property which is subject to a contract. It applies only in the case of a contract which could be specifically enforced.

1. Property bought for being held on trust for certain persons.

2. A contracts to buy property from B and represents to B that the purpose of buying it is to hold the property on trust for C. B believing in the representation of A sells the property to A.

3. A must hold the property for the benefit of C.

4. This obligation is also limited in its extent—It is enforced only to the extent necessary to give effect to the contract.

5. The contract may be to hold part of the property in trust for C. In that case the obligation will be enforced only to the extent of the property.

(4) Constructive Trust arising out of merger of two personalities in one individual.

1. Section 87

1. This provides for the case of double personality—one man but two persons.

2. Every contract, debt, obligation or assignment requires two persons.

3. But these two persons may be the same human being.

4. In all such cases, were it not for the recognition of double personality, the obligation or Encumbrance would be destroyed by merger.

5. Because no man can in his own right be under any obligation to himself; or own any Encumbrance over his property.

6. But with the recognition of the double personality this is possible.

7. In fact this is necessary.

8. *Illustration*— Debtor becoming executor.

Executor is the owner in the eye of the law. Merger. Extinction of debt.

9. Section says no.

PART V

The Administration of a Constructive Trust

THE INDIAN TRUST ACT

1. The Law relating to Trust is contained in Act II of 1882.

2. It is an Act which defines and amends—that means that it does not introduce any new principle.

3. The Act does not consolidate the Law—That means that it is not an

Exhaustive Code.

4. The object of the Act was to group in one to enact the legal provisions relating to trusts. Before the Act of 1882 the statutory law relating to trust was contained in 29 *Car II. C. 31 sections 7— II.*

Act XXVII of 1866 Act XXVIII of 1866

There were also few isolated provisions scattered through the Penal Code, Specific Relief, C. P. Code Stamp Act, Limitation, Government Securities Act, Companies Act, Presidency Banks Act.

5. As originally passed, the Act did not apply to the whole of British India. For instance, it did not apply to Bombay. But provision was made to extend it by notification by local Government.

6. It is unnecessary to discuss here whether the Hindu Law and Mohammedan Law recognised trust as defined in the Trust Act. That may be dealt with by others.

The nature of a Trust

1. Trust is defined in section 3. A trust involves three things:

(1) A person who is the *owner* of some property.

(2) Ownership burden with an obligation.

(3) Obligation to use the property for the benefit of another or of another and himself.

2. It is ownership without beneficial enjoyment. It involves separation of ownership and beneficial enjoyment.

3. A trust arises out of a confidence reposed in and accepted by the owner.

4. The owner in the eye of the law is the trustee. After the trust is created the author of the trust ceases to be the owner of the property.

1. WHAT IS A TRUST.

1. The terms Trust and Trustee are defined in various enactments of the Indian Legislature.

(i) *Definition in Specific Relief Act I of 1877. Section 3—*

(1) *Obligation* includes every duty enforceable by law.

(2) *Trust* includes every species of express, implied or constructive fiduciary ownership.

(3) *Trustee* includes every person holding expressly, by implication, or constructively a fiduciary ownership.

(ii) *Definition in the Indian Trustees Act XXVII of 1866. Section 2—*

“Trust shall not mean the duties incident to an estate conveyed by way of mortgage; but with this exception, the words *trust* and *trustee* shall extend to and include implied and constructive trusts, and shall extend to and include cases where the trustee has some

beneficial estate or interest in the subject of the trust, and shall extend to and include the duties incident to the office of executor or administrator of a deceased person.

(iii) *Definition in Limitation Act IX of 1908. Section 2 (ii)*—

Trustee does not include a benamidar, a mortgagee remaining in possession after the mortgage has been satisfied or a wrong-doer in possession without title.

(iv) *Indian Trusts Act II of 1872.*

(1) Section 3—"A trust is an obligation annexed to the ownership of property . . .

(2) Ingredients of a Trust (i) A Trust in an *obligation*.

(i) The obligation must be annexed to the *ownership* of property.

(ii) The ownership must arise out of *confidence* reposed in and accepted by the owner.

(iv) The ownership must be for the benefit of another (i.e., a person other than the owner) or of another and the owner.

Explanation of Terms

I. THERE MUST BE OBLIGATION.

II. OBLIGATION MUST BE ANNEXED TO OWNERSHIP PROPERTY.

1. There may be an obligation to which a person is subject although there is no property to which it is annexed.

E.g. *Torts* assault—

2. There may be property without there being any obligation attached to it. E.g. *Full* and *complete* ownership—sale of property.

III. THE OWNERSHIP OF PROPERTY MAY BE FOUNDED IN CONFIDENCE OR IT MAY NOT.

Illus.

A person may transfer ownership to another with the intention of conferring upon him the right to enjoy the property.

A person may transfer ownership to another without the intention of conferring upon him the right to enjoy the property.

The difference between ownership founded in confidence and ownership not founded in confidence consists in this—

(i) In the latter there is *a jus in re* (a complete and full right to a thing) or *jus ad rem* (an inchoate and imperfect right).

(ii) In the former there is not. E.g. Bailment.

3. The nature of a trust can be better understood by contracting it with

other transactions resembling a trust.

Trust distinguished from agency

1. Where there is a trust, the ownership of the trust property is in the trustee. The trustee is personally liable on all contracts entered into by him in reference to the trust, although he may have a right of recourse against the trust funds or against the beneficiary.

2. An agent has no ownership in law in the goods entrusted to him. If an agent enters into a contract as agent, he is not personally liable. The contract is with the principal.

Trust distinguished from Condition

1. Cases of condition differ from cases of trust in two respects—

First. A trust of property cannot be created by any one except the owner. But A may dispose of his property to B upon condition express or implied that B shall dispose of his own property in a particular way indicated by A.

Second. The obligation of the person on whom the condition is imposed is not limited by the value of the property he receives, e.g., if A makes a bequest to B, on condition of B paying A's debts, and B accepts the gift, he will be compelled in equity to discharge the debts although they exceed the value of the property.

2. But the words "upon condition" may create a real trust. Thus a gift of an estate to A on condition of paying the rents and profits to B constitutes a trust because it is clear that no beneficial interest was intended to remain in A.

A may dispose of his property to B upon condition express or implied that B shall dispose of his property to C. There is a condition in favour of C.

Is this a trust? Trust distinguished from Bailment

1. Bailment is a deposit of chattel and may in a sense be described as a species of trust. But there is this great difference between a bailment and a trust, that the general property in the case of a trust, is in the trustee, whereas a bailee has only a special property, the general property remaining in the bailor.

2. The result of this difference is that an unauthorised sale by a trustee will confer a good title upon a *bonafide* purchaser who acquires the legal interest without notice of the trust, whereas such a sale by a bailee confers as a rule no title as against the bailor.

3. Bailee does not become the owner of the property as a result of the bailment. But a trustee does in law become the owner

of the property as a result of the trust notwithstanding he is under an

obligation to deal with the property in a certain specified manner.

Trust distinguished from Gift

Ordinary contract differs from a trust. Contract which confers a benefit on a third party closely resembles a trust.

1. There is a similarity between a Trust and a Gift inasmuch as in both the transfer results in ownership. The Trustee and the Donee both become owners of the property.

2. But there is a difference between the two. In a gift the donee is free to deal with the property in any way he likes. In a Trust the trustee is under an obligation to use the property in a particular manner and for a particular purpose.

Trust distinguished from Contract

1. That there is a distinction between trust and contract is evident from the existence of differing legal consequences attached to a trust and to a contract:

(i) A trust, if executed, may be enforced by a beneficiary who is not a party to it whilst only the actual parties to a contract can, as a rule, sue upon it

(ii) An executed voluntary trust is fully enforceable while a contract lacking consideration is not.

2. However, the determination of the question whether a given set of facts gives rise to a trust or a contract is not easy. What is the test?

Keetan—pp. 5-6 (1919) A. C. 801 | 38 Bom. S. R. 610.
(1926) A. C. 108 |

It is a question of intention.

Trust distinguished from Power

1. The term "power" in its widest sense includes every authority given to a person (called the donee of the power) to act on behalf of or exercise rights belonging to the person giving him the authority (called the donor of the power).

2. Powers are of many kinds e. g.

(i) The common law power of an agent to act for his principal, given sometimes by a formal "power of attorney".

(ii) Statutory power such as the power of sale given to a mortgagee.

(iii) The various express and implied equitable powers possessed by trustees and executors.

(iv) Powers to appoint trusts so as to create equitable interests.

3. The power of appointment is a transaction which resembles a trust and it is this which must be distinguished from a trust.

The word appointment means -pointing out, indicating-the act of declaring the destination of specific property, in exercise of an authority conferred for that purpose-the act of nominating to an office.

The last class *termed, powers of appointment* are made use of where it is desired to make provision for the *creation* of future interests, but to postpone their complete declaration.

Thus in a marriage settlement, property may be given to trustees upon trust for the husband and wife for their lives and, after the death of the survivor upon trust for (i) *Such of the children* of the marriage as the survivor shall appoint, or (ii) *All the children* of the marriage in such shares as the survivors shall appoint. In such a case, upon appointment being made, the child to whom it is made takes exactly as if a limitation to the same effect had been made in the original instrument.

A power of this kind, where there is a restriction as to its objects (i.e., persons in whose favour it may be exercised) is termed a *special power of appointment*. But there may be a *general power* of appointment when there is no such restriction, so that the donee may appoint to himself. In such a case the donee having the same powers of disposition as an owner, is for most purposes treated as the owner of the property :

- (i) (i) A power may give a mere discretion and therefore is distinct from a trust, which creates an obligation or
- (ii) (ii) A power may impose an obligation to exercise the discretion.

In the former case there is no trust. In the latter case there is. The former is called *mere power*. The latter is called power in the nature of a trust or *power coupled with trust*.

(iii) There is also a third category of cases which are cases of a *trust coupled with a power*.

These are cases where a trustee of a property though under an obligation to apply it for the benefit of certain individuals or purposes, may have a *discretion* as to whether he will or will not do certain specified acts, or as to the amount to be applied for any one individual or purpose or as to the time and manner of its application. In such cases, the Court will prevent the trustee from exercising the power unreasonably, it will not compel him to do such acts or attempt to control the proper exercise of his discretion.

1. Power resembles a trust and also differs from it.

- (i) It resembles a trust inasmuch as a power is an authority to

dispose of some interest in land, but confers no right to enjoyment of land.

(ii) It differs from a trust inasmuch as a power is discretionary, whereas a trust is imperative; the trustee if he accepts must necessarily do as the settlor directs.

XII. CONSEQUENCES OF A BREACH OF TRUST.

1. *Definition of Breach of Trusts.*—Breach of trust is defined in section 3, a breach of any duty imposed on a trustee, as such, by any law for the time being in force, is called a breach of trust.

2. *Under the English Law.*—Any act or neglect on the part of a trustee which is not authorised or excused by the terms of the trust instrument, or by law, is called a breach of trust.

3. *Breach of Duty.*—A trustee has Duties, Right, Powers and disabilities. Only breach of duty is breach of trust.

1. *The measure of liability* is the loss caused to the trust property.

2. Is he liable to pay interest? Only in the following cases—

(a) Where he has actually received interest.

(b) Where the breach consists in unreasonable delay in paying trust-money to the beneficiary.

(c) Where the trustee ought to have received interest, but has not done so.

(d) Where he may be fairly presumed to have received interest.

(e) Where the breach consists in failure to invest trust-money and to accumulate the interest or dividends.

(f) Where the breach consists in the employment of trust property or the proceeds thereof in trade or business.

3. Is he entitled to set off a gain from breach of trust against a loss from breach of trust.

He cannot.

Group X.—*Suits on Contracts.*

Division II—**Appeals** (Page left blank)

Division III—**Applications** (Page left blank)

VII—**Law of Prescription** (Page left blank)

I. I. INTRODUCTORY

1. What is the nature of the Law of Limitation?

1. There are various ways in which a time-limit enters into a course of litigation:

(1) Cases where the law says action shall be taken *within* a stated period:

Illus.—Order 6 Rule 18.—Amendment of a Plaint. Party obtaining leave to amend must amend within the time fixed by the Court for amendment and if no time is fixed then within 14 days. (2) Cases where the law says action *shall not* be taken before a certain period has elapsed.

Illus.—Section 80 of the C. P. C.—Suit against Secretary of State. No suit shall be instituted against the Secretary of State for India in Council or against any public officer in respect of any Act purporting to be done by such public officer in his official capacity, until the expiration of two months next after notice in writing has been given.

(3) Cases in which the law prescribes that action shall not be taken *after* a certain period has elapsed.

2. It is the *third* class of cases which strictly speaking constitute the subject-matter of the Law of Limitation.

2 Distinction between Limitation—Estoppel—Acquiescence and Laches

All these have the effect of denying to an aggrieved party a remedy for the wrong done to him. That being so it is necessary to distinguish them

from Limitation as such.

Limitation and Estoppel

1. By Limitation a person is prevented from getting relief because of his having brought the action after the time prescribed for bringing his suit.

2. By Estoppel a person fails to get relief because he is prevented by law from adducing evidence to prove his case.

Limitation and Acquiescence

1. Limitation defeats a suitor in the matter of obtaining relief for a wrong because he has *consented* to the doing of the wrong because his suit is beyond time.

2. Acquiescence defeats a suitor in the matter of obtaining relief for a wrong because he has *consented* to the doing of the wrong.

Limitation and Laches

1. Both have one common feature—relief is denied on the sole ground that action is not brought within time.

2. The distinction lies in this—In limitation time within which action shall not be brought is prescribed by Law. In laches there is no time prescribed and the Court, therefore, in granting relief works on the principle of unreasonable delay.

3. In India the doctrine of laches has not much scope because of the Law of Limitation which has prescribed a definite time limit for almost all actions. It does not, therefore, matter whether a man brings his suit on the first day or the last day of the period prescribed by law for his action.

5. 3. The doctrine of laches applies in India only in the following cases:

(1) Where the relief to be granted by the Court is *discretionary*.

This is so

(i) (i) In cases falling under specific relief.

(ii) (ii) In cases falling under interlocutory relief.

(2) Where the Law of Limitation does not apply e.g. Matrimonial suits.

Delay would mean that the offence was condoned.

3 The object of Limitation

1. Two things are necessary for a well-ordered community (i) Wrongs must be remedied. (ii) Peace must be maintained.

2. To secure peace of the community it is necessary that titles to property and matters of right in general should not be in a state of constant uncertainty, doubt and suspense.

3. Consequently, if persons are to be permitted to claim relief for what they think are wrongs done to them, then they must be compelled to seek relief within a certain time. There is nothing unjust in denying relief to a

person who has tolerated the wrong done to him beyond a certain period.

4. The Law of Limitation is based upon this principle.

5. That being the underlying principle, the Law of Limitation is absolute in its operation and is not subject to agreement or conduct of the parties.

That is to say it is not subject to

(1) Waiver.

(2) Custom.

(3) Estoppel.

(4) Variation in respect of enlargement or abridgement of time by agreement of parties sections 28 and 23 of the Contract Act.

6. In this respect the Law of Limitation differs from the Law of Negotiable Instruments.

7. *Limitation and the onus of Proof.*

1. The onus of proof is upon the Plaintiff. He must prove that his suit is within time.

37. *Bom. S. R. 471 - A.I.R.. 1935 September.*

A by a registered lease, dated 8th July 1922, gave certain lands to *B* on a rental for a period of 25 years. Subsequently, *A* dispossessed *B* alleging that the lease was taken by undue influence. *B* brought a suit against *A* for an injunction restraining *A* from interfering in any way with his possession and enjoyment and for possession of land.

It was contended on behalf of *B* that *A* was precluded from challenging the validity of the lease, on the ground that if he had sued to have the lease set aside the suit would have been barred by Limitation. In other words, it was contended that the plea of the Defendant was barred of the Limitation.

Question is : Is Defendant bound by the Law of Limitation?

The answer is No. —Section 3 refers to Plaintiff and not to Defendant.

8. *Plea of Limitation and the Stage of the Proceedings.*

1. The plea of limitation may be raised at any stage of the proceedings, i. e., it can be raised even in second appeal.

2. It can be raised for the first time in appeal

38 Mad. 374

36 Cal. 920

38 Cal. 512

38 Bom. 709 (714).

3. It can be raised in appeal even though it was abandoned in the trial Court.

3 All. 846 (848).

4. 4. It can be raised before the Privy Council although it had been

abandoned in the Courts below.

361 A. 210.

5. 5. This is subject to the proviso that when it is raised in the appeal stage Court will not allow it if the facts on record are not sufficient for its decision and if it involves a further inquiry into facts.

57 Cal. 114.

II. THE INDIAN LAW OF LIMITATION

Its Scheme of arrangement

Operation of Lapse of time under Indian Statute Law

1. Lapse of a definite period of time produces four results under Indian Statute Law.

(1) It multiplies the right of the holder to obtain a remedy for the wrong—Section 3 of the Limitation Act.

(2) It not only bars his remedy but extinguishes his right—Section 28 of the Limitation Act.

(3) It confers a right to light, air, way, watercourse, use of water or easements on a person who has enjoyed it for a prescribed period—Section 26 Limitation Act. (4) It extinguishes right to easements—Section 47 of Act V of 1882.

(2), (3), (4) are cases which fall under the Law of Prescription. (1) Only falls under the Law of Limitation. The Limitation Act deals with a mixed body of law and two must be studied separately.

II. THE INDIAN LAW OF LIMITATION

Its Applicability

I. In respect of Territory

1. The Act extends to the whole of British India—*Section 1(2)*.
2. The Act applies to *every* suit instituted, appeal preferred and application made in Courts functioning in British India.
3. It does not matter where the cause of action, whether in British India or outside British India, it does not matter where the transaction took place, whether in British India or outside British India, if the suit is instituted or appeal is preferred or application is made in a Court in British India, the Law of Limitation that will apply will be the Indian Law of Limitation and not Foreign Law of Limitation.
4. There is one exception to this rule which is enacted in section 11 (2) which says : A Foreign Rule of Limitation shall be a defence to suit in British India on a contract entered into in a foreign country if the rule has extinguished the contract and that the parties were domiciled in such

country during the period prescribed by such rule.

2. In respect of Proceedings

1. SPECIAL PROCEEDINGS

(1) *Arbitration Proceedings*

It was at one time doubted if the Limitation Act applied to proceedings before an Arbitrator on the ground that it applied only to suits, appeals and applications to the *Court* and that the Arbitrator was not a Court. This doubt has now been resolved by the Privy Council which has held that where persons have referred their disputes to arbitration, the arbitrator must decide the dispute according to the existing law and that he must recognise and give effect to every defence of limitation, unless that defence has been excluded by agreement between the parties. (1929) 561. A. 128.

Ques. This decision goes to the length of laying down that parties can vary the Law of Limitation by private agreement. This seems to overlook the provisions of sections 28 and 23 of the Contract Act.

(2) *Proceedings under the Companies Act.*

When a Company is being wound up and a liquidator is appointed to carry on the affairs of such Company, Section 186 of the Company's Act provides that the liquidator may make an *application* to the Court for an order upon a person "to pay any moneys due from him to the Company." Ordinarily there would have to be a suit. But to avoid multiplicity of suits this special proceedings is permitted by law.

Question is whether Limitation applies to such proceedings. It has been held that "money due" in section 186 means moneys due and recoverable in law, i.e., *moneys not time-barred*. This means that the Law of Limitation applies to such proceedings. 601.A.13(23)

(3) *Proceedings under the Income Tax Act.*

The Civil Courts in India have no jurisdiction in matters of public revenue.

They can have such jurisdiction only if a particular Revenue Act invests them with such jurisdiction. For example a provision will be found in section 66(3) of the Indian Income Tax Act of 1922. Under the section, a party aggrieved by an order of the Income Tax Officer in the matter of assessment may apply to him for stating a case to the High Court and if he refuses may apply to the High Court for an order compelling the Commissioner to state a case and refer it to the High Court.

There is a time-limit for such an application. But the Law of Limitation does not apply to it. The time-limit is the time-limit prescribed by the Income Tax Act and not by the Law of Limitation.

(4) Proceedings before the Commissioner of Workmen's Compensation

The Workmen's Compensation Act, 1923, provides for Compensation to be paid to workmen for injuries caused to them in the course of their employment. The cases are heard by a Commissioner. The Commissioner is a special tribunal and not a Court and therefore the Limitation Act does not apply to proceedings before him.

This does not mean that the claim for compensation for injury can be prosecuted before him at any time. That would be so if the Act had made no provision for a time-limit. As the Act has presented six months as the time-limit, suits have to be brought within that period. (5) *Proceedings under Registration Act.*

(1) Presentation of Documents—4 months.

(2) Appearance of Parties for admitting Documents-4 months.

3. Criminal Proceedings

1. Criminal Proceedings are generally instituted in the name of the Crown because they involve a breach of the King's peace.

2. It is a maxim of Constitutional Law that lapse of time does not affect the right of the King.

3. That being so the Law of Limitation does not apply to criminal prosecutions.

4. Two things may be noted :

(1) There are many Acts which prescribe limits of time for institution of prosecution under those Acts. E.g. Government of India Act, Section 128 : Opium Act, Customs Act, Salt and Excise Acts and Police Act.

(2) Limitation Act, although it does not provide for any time-limits for criminal prosecutions, it does provide for *appeals* under the Cr. P. C.

4. Civil Proceedings

(i) With regard to *suits* different kinds of suits have been specified in different Articles. There is also a general residuary Article No. 120 which is made to apply to any suit for which no period of limitation is provided elsewhere in the Schedule. The Act, therefore, applies to *all* suits.

(ii) With regard to *appeals* there are two Courts to which appeals can lie in India—(i) The Court of a District Judge and (ii) The High Court. The Limitation Act specifies appeals to both these Courts and therefore, it can be said that the Law of Limitation applies to all appeals.

(iii) With regard to *applications*, different kinds of applications are enumerated in the different articles in the Schedule. As in the case of articles relating to suits there is also an Article 181 for applications for

which no period of limitation is prescribed elsewhere in the schedule or by section 48 of the C. P. C. But almost all High Courts have held that the operation of this Act is to be restricted to applications under the C. P. C. only. That being so it is clear that the Limitation Act *does not apply* to all applications. For instance it does not apply to :

(i) Applications for the grant of probate letters of administrations succession certificates.

(ii) Applications under the Rules of the High Court

32 Bom. I
48 Cal. 817
46 Cal. 249.

(iii) Applications under a Local or Special Act (unless such Act provides for it).

These not being matters dealt with by the C. P. Code.

In respect of persons

1. The general rule is that the plea of limitation applies to every Plaintiff.

2. Originally, limitation did not apply to the Crown when it sued as a Plaintiff, on the ground that lapse of time did not affect the Crown. This maxim of Constitutional Law although it governs criminal prosecutions has been negatived so far as civil proceedings by the Crown are concerned by Article 149 of the Limitation Act which applies to every kind of *suit brought by Government*, and prescribes 60 years as the time-limit. Suits *against Government* must be brought within the ordinary time-limits.

15 Mad. 315.

Similarly, suits by private persons *claiming through Government* are also subject to the ordinary time-limit prescribed by the Act. This was always the rule. It was not always the rule for Government to bring a suit within any prescribed time. This has now been altered. It can, therefore, be said that as a rule the Law of Limitation applies to *all* persons whether they are private persons or corporate bodies of Governments, and that the plea of limitation is available to every Defendant as against every Plaintiff whether that Plaintiff is a private person or a Government.

3. The plea of limitation is available to every Defendant. To this rule there are certain exceptions.

37 Bom.—S. R. 471

Section 10.

1. The defence of limitation is not available to a person in whom property has become *vested in trust* for any specific purpose nor is it available to his legal representatives or assigns (not being assigns for valuable consideration), in a suit for recovery of the property or the proceeds

thereof or for an account of such property. This section is to be applied to an *express trust* as distinguished from an *implied* or *constructive trust*. A trustee of an implied or constructive trust can take the defence of limitation.

Distinction between an Express Trust and Implied or Constructive Trusts.

Persons, therefore, who are holding a fiduciary position are not trustees within the meaning of Section 10 ; E.g. Agent, Manager, Factor, Benamidar, Executor or Administrator, Banker, Surviving partner. Director of a Company Liquidator of a Company, *Karta* or Manager of a joint Hindu family.

Secondly Section 10 is applicable only in cases of persons "in whom property has become *vested*" in trust for a *specific purpose*"⁴⁴ *Mad. 277 (281-2)*.

What is Specific Purpose? A specific purpose is a purpose that is actually and specifically defined in the document by which the trust is created for a purpose which from the specified terms can be certainly affirmed.

49 1 .A. 37 (43)

58 I.A.I

That being so even a trustee *de son tort* would fall within this Section.

Meaning of *a trustee de son tort*.

Explanation.—Hindu, Mohammedan and Charitable endowments are declared to be express trusts and their managers express trustees.

Thirdly.—Section 10 not only applies to the defaulting trustee himself, but also applies to his legal representatives and assigns except assigns for valuable consideration. Purchasers for value from a defaulting trustee are protected and they can plead limitation.

Whether purchasers from a trustee must in addition to being purchasers for value should also be purchasers without notice of trust is a point on which the Act is silent. Judicial decisions on this point are, however, in conflict.

Section 29 (3) II. The Limitation Act does not apply to parties litigating under the Indian Divorce Act (IV of 1869).

(Page left blank—ed.)

As against a Special Law

1. Besides this General Law of Limitation there are other special or local laws which also prescribe time-limits for suits, appeals or applications. In case there is a difference between the time-limits fixed by the general and special law, question is which law is to prevail.

2. The answer to this question is given in Section 29. According to the Section the special law will prevail over the general law.

3. Section 29 also provides for the applicability and non-applicability of the other Sections of the Limitation Act in cases of conflict between the general and special law as to time-limit.

4. According to Section 29, in cases of conflict the provisions of Sections 4, 9 to 18 and 22 of the Limitation Act will apply

(unless expressly made inapplicable) and the remaining provisions of the Act shall not apply (unless expressly made applicable by the Special Law).

The Scheme of the Law of Limitation

1. The Indian Limitation Act consists of 29 Sections and one Schedule.

2. The Schedule is divided into three Divisions :

First Division—deals with Suits.

Second Division—deals with Appeals.

Third Division—deals with Applications.

3. The Schedule in respect of each of its Divisions is cut up into 3 Columns.

Column 1—Describes the nature of the claim for which suit is brought or of the appeal or if application is made. Provision is made for 154 different classes of suits.

Provision is made for 9 different classes of appeals. Provision is made for 26 different classes of applications.

Each of these provisions is numbered seriatim and is called article no. so and so. There are in all 189 articles in the Schedule though the last article is 183, that is, because some articles have the same number and are distinguished by the addition of A to the same number.

Column 2.—Specifies the period *within* which the suit must be filed, appeal or application must be made.

Column 3.—Specifies the starting-point of the period of limitation within which *suit* must be filed or appeal or application must be made.

4. The Sections of the Act in so far as they deal with the Law of Limitation as distinguished from the law of prescription deal with various questions arising out of the three columns of the Schedule. The Schedule, therefore, is the most important part of the Law of Limitation.

IV. LAW OF LIMITATION

Questions arising out of Column 3

Subject-matter of Column 3

1. Column 3 deals with the starting point of Limitation. Two Questions arise—

(1) When does time begin to run? What is the starting point of Limitation?

(2) Is there only one starting point of Limitation? *Or* Can there be a

fresh starting point of Limitation?

1. *When does time begin to run? What is the starting-point of Limitation.*

1. The answer to the question as to when time begins to run is this. Time in respect of the institution of a *suit, appeal or application* begins to run from the occurrence of the event mentioned in Column 3. In most cases the event is the incident. . But in some cases it is the knowledge of the incident to the Plaintiff—90-92. Whether it is the incident or the knowledge of the incident, in any case the occurrence of the event in Column 3 marks the starting point of limitation. Two questions with respect to right to sue and cause of action.

(1) Must a Plaintiff sue when there is a cause of action?

2. Confining to suits it may be said that time begins to run when the right to sue arises—Article 120. This is the first fundamental Rule.

When does the right to sue arise? It arises—

(i) When the event mentioned in column 3 occurs if the suit falls under any of the articles.

(ii) When the suit does not fall under any specific article but falls under the general article (120) then right to sue accrues when the cause of action arises or in certain cases knowledge that cause of action has arisen comes to the Plaintiff, so that time begins to run from the occurrence of the cause of action or from the date of the knowledge of the cause of action.

Cause of action arises when a wrong is done to a party. Every wrong does not necessarily give rise to a cause of action. The wrong must under the circumstances be real and necessitate taking of action.

(iii) The effect of death on the starting point of Limitation.

1. When does limitation commence in the case of a person who dies before the right to sue accrues to him?

2. When does limitation commence in the case of a person who dies before another person gets a right to sue him?

1. When a person dies *before* the right to sue accrues to him the period of limitation *will commence* when there is a legal representative of the deceased capable of instituting such a suit.

II. When a person against whom a right to sue would have accrued dies before such accrual, the period of limitation shall be computed from the time when there is a legal representative of the deceased against whom a suit could be brought.

Exception to the fundamental Rule—Limitation runs from the moment the right to sue accrues

1. Cases where Limitation commences *before* the right to sue accrues.

(i) Money payable on demand and money payable on a Bill or a Pronote made on demand.

In these cases unless there is a demand to pay and there is a consequent refusal to pay there is no right to sue. The right to sue arises on the date of the refusal to pay. But time begins to run not from the date of the refusal but from the date of the loan or the date of the Bill or note, i.e., *before* right to sue has accrued. 57—58—59—67—73

(ii) Redemption of a Pledge—suits on—

The pawnee's right to sue to recover the pledge accrues on the date on which the debt in respect of goods pledged is paid off by him. But time begins to run not from the date of payment but from the date of the pledge, i.e., *before* the right to sue has accrued—145.

§ Cases where Limitation does not commence even the right to sue has accrued—Sections 6, 7, 8

1. These are cases where a person to whom a right to sue has accrued is suffering from a disability the date on which the right to sue accrued.

2. According to this exception time will not run against a person who is suffering from a disability although the right to sue has accrued to him.

3. Only three kinds of disabilities are recognised— (i) minority, (2) lunacy, (3) idiocy.

4. In the case of a person suffering from a disability, time commences when the disability ceases.

5. Where these disabilities are concurrent or succession in their operation, limitation commences when all such disabilities have ceased.

6. Where the disability continues upto the death of the person then time will commence against his legal representative from the date of his death.

7. If the legal representative is under a disability at the death of the person then time will commence when the disability of the legal representative comes to an end.

8. What is the effect of a disability of persons who are jointly entitled to sue upon the starting point of limitation.

Two cases must be distinguished:

(i) Where only some of them are under a disability.

(ii) Where *all of them* are under a disability.

1. Where *only some* of them are under a disability :

(i) Where full discharge or release can be given to the Defendant by the **party** not *under, disability* without the concurrence of the person under a disability time will commence to run against all of them from the time the right to sue accrues.

(ii) Where no such discharge can be given, time will not run against

any of them until the disability ceases or until the person under disability loses his interest in the subject-matter.

II. Cases where *all* persons who are entitled to sue are under a disability:

(i) Where all are under a disability, rules laid down in Section 6 will apply.

(ii) Where one of them *ceases* to suffer from the disability, Section 7 will apply and the governing question will be whether the person who is free from his disability give a valid discharge without the concurrence of those who continue to suffer from their disability. If the answer is in the affirmative, time will commence to run against *all* from the moment the disability of such a person has ceased to operate. If the answer is in the negative then time will not run against any of them until *all* of them cease to suffer from their disabilities.

9. Within what time from the date of the Cessation of the disability, a suit must be brought by the person who was under a disability when the right to sue accrued to him?

1. There are three answers to this question.

(i) Within the prescribed period *to be counted from the date of the accrual of the right to sue*, if the period left over after the cessation of the disability is more than three years.

Illus. Prescribed period—12 years from 1920 to 1932.

Years of disability—4 years i.e. 1924 to 1936.

Period left over—9 years. Suit must be brought before 1932.

Suit must be brought within 9 years, i.e., within 12 years from the accrual of the right to sue i.e. within the prescribed period. He gets no benefit at all. Even his time is counted from the date of the accrual of right to sue.

(ii) Within the prescribed period *to be counted from the cessation of the disability*, if the period prescribed is less than three years.

He gets no benefit from his disability ; only his time begins to run from the date of the cessation of the disability.

Illus. Prescribed period 1 year from 1920 to 1921.

Years of disability—4 years. *S. P.* 1924 Bar 1925.

Suit must be brought in 1925.

(iii) Within *three* years from the date of the cessation of the disability, if the period left over after the cessation of the disability is *less* than three years and the period prescribed is *more* than three years.

Prescribed period—6 years from 1920 to 1926.

Years of disability—4 years from 1924—Bar 1930.

Period left over after cessation is—2 years.

Suit must be brought in 1928 within three years from cessation of disability.

10. Some points to be noted with regard to this question of disability.

(i) The Section applies only to *suits* and to applications for the execution of a decree, but not to any other applications, nor to appeals.

(ii) The Section applies only to a person who was already under a disability when the right to sue accrued. If the disability supervenes *subsequently* than the Section does not apply.

(iii) The Section applies only where the *Plaintiff* or the person entitled to sue is under a disability. The disability of the *Defendant*—person liable to be sued—does not matter at all.

Time will begin to run against the Plaintiff even if the Defendant is suffering from a disability.

First Fundamental Rule is that limitation starts in the case of person who is not suffering from a disability, from the date of the occurrence of the event mentioned in Column 3 and if no event is mentioned in Column 3 then from the date when the cause of action is said to arise.

Fundamental Rule II

1. When once time has begun to run, no subsequent disability or inability to sue stops it.

2. This means that Limitation, once it starts is never suspended. If a person becomes insane or dies *after* the right to sue has accrued, time will continue to run against them.

II. Is THERE ONLY ONE STARTING-POINT OF LIMITATION? OR CAN THERE BE A FRESH STARTING POINT OF LIMITATION.

1 Distinction must be made between the occurrence of a fresh cause of action and the occurrence of a fresh starting point of limitation in respect of the *same* cause of action. We are here considering cases where there occurs a fresh starting point of limitation in respect of the *same* cause of action.

2. The general rule of the Law of Limitation is that for a right to sue there is *only one* starting point of limitation and that starting point dates from the day when the right to sue accrues.

3. There are three cases where there is a fresh starting point of limitation in respect of the same cause of action :

(i) Case where there is an acknowledgement.

(ii) Cases where there is a part payment.

(iii) Cases where the cause of action arises out of a continuing breach of contract or out of a continuing Wrong independent of contract.

Section 19—§ Acknowledgement

I. GENERALLY

1. The acknowledgement must have been made *before* the period of limitation has actually run out. An acknowledgement made *after* the period has run out is of no avail and cannot be given a fresh starting point of limitation.

2. The acknowledgement must be in writing.

3. The acknowledgement must be signed by the party liable or by his agent duly authorised to sign an acknowledgement of liability.

4. The acknowledgement need not be *to the* creditor.

5. The acknowledgement must contain an admission of a *subsisting liability*. It need not contain a promise to pay. Indeed it may be coupled with a refusal to pay or with a claim to a set-off.

II. SECTION 21 (2)—ACKNOWLEDGEMENT BY PERSONS JOINTLY LIABLE

1. When a property or a right is claimed against persons who are jointly liable such as joint-contractors, partners, executors, mortgagees, etc., an acknowledgement signed by any one of them (or by the agent of any one) render the rest chargeable.

III. SECTION 21 (3)—ACKNOWLEDGEMENT BY A HINDU WIDOW

Acknowledgement by a Hindu widow or other limited owner shall be binding upon the reversioners.

IV. SECTION 21 (3)—ACKNOWLEDGEMENT BY A HINDU MANAGER

The acknowledgement signed by (or by the agent of) the Manager of a joint Hindu family shall be binding upon the whole family where the acknowledgement is in respect of a liability incurred by or on behalf of the whole family.

**§ Payment of interest on debt or on Legacy and Section 20—
Part-payment of the Principal**

1. The payment must be payment before time has run out.

2. The payment is made by the debtor or by his agent duly authorised to make such payment.

3. The payment must be *voluntary*.

**Section 23—§ Continuing breach of contract and continuing wrong
independent of contract**

1. In the case of a continuing breach of contract or a continuing wrong, a fresh period of limitation begins to run at every moment of the time during which the breach or the wrong continues.

Q.—What is meant by a continuing breach and a continuing wrong?

Continuing breach of contract

1. Covenant to repair in a lease which is broken every day the premises

are out of repair.

3. 1. Use of premises contrary to the covenants in the lease.

Continuing wrongs in respect of a tort

1. Infringement of a trade mark.

2. Refusal of a wife to return to her husband.

In these cases the right to sue arises *de die in diem* (from day to day).

3. The distinction between a continuing and a non-continuing wrong is very difficult to draw. A wrong continues either because the effect of a wrongful act once done continues or because the wrongful act is repeated.

The case of a continuing wrong is the case where the wrongful act is repeated and not where the effect of a wrongful act continues.

CHAPTER 6

THE LAW OF CRIMINAL PROCEDURE IN BRITISH INDIA

PRELIMINARY

Wrong and the Remedy for it

1. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52C1. Notes on Acts and Laws PART III.htm - _msocom_2](#) One of the clauses in the constitution of the U. S. A. runs thus:

“No citizen shall be deprived of his life, liberty and property without due process of law”.

Such a clause is not found in the constitution of other states. All the same every civilised State seeks to protect the life, liberty and property of its citizen from unwarranted attacks.

Such a guarantee is the foundation of the state. With this object in view every state has a code of laws which defines what are wrongs. In India we have the Penal Code and the law of Torts.

2. Wrongs are either civil *or* criminal.

Some wrongs are both civil as well as criminal; *Assault, Defamation* : they are both civil as well as criminal wrongs. The aggrieved party can proceed both in a criminal court and also in a civil court.

3. *Remedy*. It would be of no avail whatsoever merely to enact wrongs' if for every wrong an appropriate remedy is not provided. On the other hand, it may be said, that the law recognises a wrong only when it provides a remedy for its vindication. When there is no remedy provided for the commission of a wrong, the enactment of a wrong would be an idle work.

Liberty of a person and the writ of Habeus Corpus.

4. The Criminal Procedure Code is a remedial law. It provides a remedy to the aggrieved party against the offender for the vindication of the

criminal wrong done to him. It is a popular notion that the law allows ten guilty persons to escape rather than punish an innocent individual. This is absolutely incorrect. All that the law says is that no man shall be tried except in accordance with the procedure laid down by law.

5. The Criminal Procedure lays down :

- (1) The Constitution of the Criminal Courts.
- (2) The means and methods by which the accused may be brought before a Criminal Court for his trial.
- (3) The rules as to trial of an accused.
- (4) The rules as to punishment, and
- (5) The rules as to rectification of an error in the trial, conviction or punishment of an accused.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52C1. Notes on Acts and Laws

[PART III.htm - _msocom_3](#)

I. CONSTITUTION OF CRIMINAL COURTS

7. For a proper understanding of this subject a distinction must be drawn between the Presidency Towns system and the Provincial system.

Such distinction is often made in India in respect of other laws as well; *e.g.* Insolvency—

1. Presidency Towns Insolvency Act.

2. Provincial Insolvency Act.

Small Causes—1. Presidency Towns Small Causes Courts Act.

2. Provincial Small Causes Courts Act.

A. A. Provincial System

1. Sessions Courts

Section 7 (1)

8. 1. Every Province shall be a Sessions Division or shall be divided into more than one Sessions Division. Every Sessions Division shall be coterminous with a district or more than one district.

Section 9 (3)

3. For any Sessions Division there may be Additional Session Judges and Assistant Judges to exercise jurisdiction in one or more of Sessions Courts.

Section 9 (2)

4. The Court of Session shall hold its sitting at such place or places as may be notified by the L. G.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52C1. Notes on Acts and Laws PART III.htm - _msocom_4 in the Official Gazette.

Section 9 (4)

5. A Sessions Judge of one division may also be appointed as an Additional Sessions Judge of another division in which case he may sit in

either division to dispose of cases.

4. 2. Magistrates Courts

9. (1) District Magistrate.

Section 10

(1) In every district there *shall* be magistrate of the first class who shall be called the District Magistrate.

(2) Any magistrate of the first class may be appointed to act as an Additional District Magistrate.

(2) Sub-Divisional Magistrate. *Section 8 (1)*

10. A District may be sub-divided into a sub-division. *Section 13 (1) and (2)*
A Magistrate of the 1st or 2nd Class may be placed in charge of a sub-division and shall be called a Sub-Divisional Magistrate.

(3) Subordinate Magistrates. *Section 12 (1)*

11. In every District there may be appointed besides the District Magistrate, as many persons as may be necessary to be Magistrates of the first, second or third class.

They will exercise jurisdiction in such local areas as may be defined in the case of each.

Section 12 (2)

If no such area is fixed, their jurisdiction and power shall extend throughout such District.

3. District Magistrate and 1st Class Magistrate

The Code does not recognise any particular Court as that of the District Magistrate, but only Courts of 1st, 2nd and 3rd Class Magistrate.

Where a trial was commenced by an officiating District Magistrate and before its close he reverted to his original position as 1st Class Magistrate in which capacity he had jurisdiction over the offence, it was held : he had jurisdiction to continue the trial.

Emp. v/s Sayed Sajjad Husain 3 A.L.J. 825

11. As regards original jurisdiction, whatever the District Magistrate might do with regard to offences committed outside the division, the Sub-Divisional Magistrate is competent to try within his local jurisdiction. *4 A. 366.*

4. Special Magistrate

Section 14 (1)

12. (1) In any local area persons may be vested with the powers of the Magistrate of the 1st, 2nd or 3rd class in respect of particular cases or classes of cases or in regard to cases generally.

(2) To be called a Special Magistrate and to be prescribed for a term.

(3) Such a person may be an officer under its control.

(4) If he is a police officer, he shall not be below the grade of Assistant District Superintendent and he shall not have any power beyond what is necessary for :

- (i) (i) preserving the peace
- (ii) (ii) preventing crime
- (iii) (iii) detecting, apprehending and detaining offenders in order to their being brought before a Magistrate
- (iv) the performance by him of other duties imposed upon him by any law for the time being in force.

5. Bench Magistrates

Section 15 (1)

13. Any two or more Magistrates may sit together as a Bench and may hear such cases or such classes of cases only and within such local limits as may be prescribed in that behalf.

6. 6. Relation of the different Courts in the Provincial System

Section 17 (2)

14. Every Bench and every Magistrate in a sub-division shall be subordinate to the Sub-Divisional Magistrate. Within a sub-division, the jurisdiction of the District Magistrate and sub-divisional Magistrate are co-ordinating. 4 *All.* 366.

Magistrate who is subordinate to S. D. M. is also subordinate to D. M. All Benches and Magistrates including Sub-Divisional Magistrates are subordinate to the District Magistrate.

Section 10(3)

An Additional District Magistrate shall be sub-ordinate to the District Magistrate for the purpose only of:

- (i) (i) Section 192 (1)
- (ii) (ii) Section 407 (2)
- (iii) (iii) Section 528 (2) and (3).

Section 17 (3)

All Assistant Sessions Judges are subordinate to the Sessions Judge in whose court they exercise their jurisdiction.

15. Subordinate.—(1) inferior in rank.

9 Bom. 100

8 Mad. 18 (F. B.)

(2) Subordinate in respect of judicial as well as executive powers.

2 *All. 205 (F. B.)*

9 *Bom. 100.* There may be inferiority without subordination, but there cannot be subordination without inferiority, as subordinate means inferior in rank.

Section 17 (5)

Neither the District Magistrate nor the Magistrate and Benches shall be subordinate to the Sessions Judge except to be expressly provided by the Code.

Subordinate to the Sessions Judge only for the purposes of Section 123, 193, 195, 408, 431, 436, 437. If a Sessions Judge rule that touts should not be admitted to the Court it would not apply to the magistracy.

Subordinate means not merely subordinate so far as the regulation of work is concerned. Subordinate also means judicially inferior in rank, i. e. a Court over which another Court can proceed under Section 435. (call for records and pass orders) 9 *Bom. 100.*

B. Presidency Towns System

1. 1. Magistracy

Section 18(1)

16. In each of the Presidency Towns, a sufficient number of persons shall be appointed to act as Presidency Magistrates.

Of the number appointed for each town, one shall be appointed to act as a Chief Presidency Magistrate.

Any person may be appointed to act as an additional Chief Presidency Magistrate.

Section 19

17. Any two or more Presidency Magistrates may sit together as a Bench.

2. Relation of the Presidency Magistrates to the Chief Presidency Magistrate

Section 21

18. He is like a District Magistrate controlling Magistrates subordinate to him.

Local Government is to declare the extent of such subordination. *Control:*

1. Conduct and distinction of business and practice in Courts.
2. Constitution of Benches.
3. Settle times and places at which Benches shall sit.
4. Settle differences of opinion.

18. The Bombay Government has defined that Presidency Magistrate shall be subordinate to the Chief Presidency Magistrate.

I Bom. L. R. 437.

High Court

19. Along with these Criminal Courts, we have the High Courts of Judicature.

The High Courts owe their origin to the Charter Act passed by Parliament in 1861.

Section I empowered Her Majesty by *letters patent* to erect and establish High Courts for Bengal at Calcutta, for Bombay at Bombay, and for Madras at Madras.

Section 9

Each of the High Courts to be established under *Section 106* of this Act shall have and exercise all *such* Civil, Criminal, Admiralty, and Vice-Admiralty, Testamentary, Intestate and Matrimonial Jurisdiction, *original and appellate* and all such powers and authority for and in relation to the administration of justice in the Presidency for which it is established as His Majesty may grant and direct.

High Court's Power of Superintendence

3 Pat L. J. 581. 7.B. Sheonandan v/s Emperor.

1. High Court's powers of superintendence are limited by Section 15 of the Act of 1861 (Section 107 of the Government of India Act) to Courts subject to its appellate jurisdiction.

2. But where the High Court has appellate jurisdiction, even in a *modified* form from an inferior Court, it will exercise superintendence over that Court, even in cases which are not subject to appeal.

3. There are three classes of cases to be considered:

(a) Where a subordinate Court is subject to the *appellate jurisdiction* of the High Court, in certain cases, only the right of superintendence exists and its exercise is not confined to cases where a right of appeal lies to the High Court. This special power of superintendence is not as a rule exercised in cases where there is an adequate remedy by other proceedings such as appeal or revision.

(b) In cases in which the High Court has powers of revision over subordinate or where the power of reference to the High Court exists, a modified form of appeal may be said to exist.

(c) The power of superintendency may be conferred upon the High Court by the Act constituting the subordinate Court independently of Section 15 of the Charter Act

4. A Court may be established without being made subject to the superintendence of the High Court.

The Relation of the High Court to other Criminal Courts *Section 15, 107*

Each of the High Courts shall have powers of superintendence which

may be subject to its appellate jurisdiction and shall have powers to call for returns etc.

What are the Courts subject to its appellate jurisdiction? *Letters Patent*.

The High Court shall be a Court of appeal from the Criminal Courts in the Presidency.

3. *Pat. L.J. 5817. B* *Two questions*

Sheonandan v/s Emperor

1. Can the High Court have power of Superintendence where it has no power of appeal but has only power of revision or reference?

2. Can there be a Criminal Court in the Presidency which will not be subject to its power of superintendence.

The Local limits of the jurisdiction:

10. (1) of the District Magistrate is the District.

11. (2) of the Sub- Divisional Magistrate is the Sub-Division.

12. (3) of the subordinate Magistrate, such local area as the Local Government may prescribe.

14. (4) of the Special Magistrate, such local area as the Local Government may prescribe.

20. (5) of the Presidency Magistrate.

Every Presidency Magistrate shall exercise jurisdiction in all places within the Presidency-town for which he is appointed and within the limits of the port of such town and of any navigable river or channel leading thereto, as such limits are defined under the law.

(6) Sessions Judge—within the Sessions Division.

(7) High Court.

What are the powers granted by *letters-patent* in criminal matters.

22. The *letters patent* direct that High Court Jurisdiction shall be as follows:—

Paras 22 and 23

23 Para 24

23. **Ordinary original Criminal jurisdiction.**—High Court shall have original criminal jurisdiction within the local limits of its ordinary original civil jurisdiction.

24. **Extraordinary original Criminal Jurisdiction.**—High Court shall have Extraordinary Original Criminal Jurisdiction in places within the jurisdiction of any court subject to its superintendence.

25. *Appellate Criminal Jurisdiction.*—High Court shall be a Court of appeal from the Criminal Courts in the Presidency and from all other Courts subject to its superintendence, and shall exercise appellate jurisdiction in such cases as are subject to appeal to the said High Court by virtue of any law now in force.

Sentence on Escaped Convict Section 396.

(1) When a sentence is passed on escaped convict, such sentence, if of death, or fine or whipping shall subject to the provisions hereinafter contained, take effect immediately, and if on imprisonment, penal servitude or transportation, shall take effect according to the following rules, that is to say—

(2) If the new sentence is severer in its kind than the sentence which such convict was undergoing when he escaped, the new sentence shall take effect immediately.

(3) When the new sentence is not severer in its kind than the sentence the convict was undergoing when he escaped, the new sentence shall take effect after he has suffered imprisonment, penal servitude or transportation, as the case may be, for a further period equal to that which at the time of his escape remained unexpired of his former sentence.

Explanation : for the purposes of this Section :

(a) a sentence of transportation or penal servitude shall be deemed severer than a sentence of imprisonment.

(b) a sentence of imprisonment with solitary Confinement shall be deemed severer than a sentence same description of imprisonment with solitary confinement; and

(c) a sentence of rigorous imprisonment shall be deemed severer than a sentence of simple imprisonment with or without solitary confinement.

397. *Sentence on a person already undergoing sentence.*—

When a person already undergoing a sentence of imprisonment, penal servitude or transportation is sentenced to imprisonment, penal servitude or transportation, such imprisonment, penal servitude or

transportation shall commence at the expiration of the imprisonment, penal servitude or transportation to which he has been previously sentenced unless the Court directs that the subsequent sentence shall run concurrently with such previous sentence : Provided that, if he is undergoing a sentence of imprisonment, and the sentence on such subsequent conviction is one of transportation, the Court may, in its discretion, direct that the latter sentence shall commence immediately, or at the expiration of the imprisonment to which he has been previously sentenced : Provided, further, that where a person, who has been sentenced to imprisonment by an order under Section 123 in default of furnishing security, is whilst undergoing such sentence sentenced to imprisonment for an offence committed prior to the making of such order, the latter sentence shall commence immediately.

398. (1) Nothing in Section 396 or 397 shall be held to excuse any person from any part of the punishment to which he is liable upon his former or subsequent conviction.

(2)

399. Confinment of youthful offenders in Reformatories.

(Page left blank in MS —ed.)

Suspensions, Remissions and Commutations of Sentences

(Page left blank in MS—ed.)

Section 401

Governor-General in Council or Local Government may suspend or remit on conditions or without conditions any sentence.

(Page left blank in MS.—ed.)

Section 402 Power to commute sentences for any other mentioned

(Page left blank in MS —ed.)

IV. Conferment, Continuance and Cancellation of Powers

Section 39

(1) In conferring powers under this Code, the Local Government may, by order, empower persons specially by name or in virtue of their office or classes of officials *generally* by their official titles.

(2) Every such order shall take effect from the date on which it is communicated to the person so empowered.

Section 40

Whenever any person holding an office in the service of Government who has been invested with any powers under this Code throughout any local area is *appointed* to an equal or higher office of the same nature within a local area under the same Local Government, he shall, unless the Local Government otherwise directs, or has otherwise directed, exercise the

same powers in the local area in which he is so appointed.

Section 41

(1) The Local Government may withdraw all or any of the powers conferred under this code on any person by it, or by any officer subordinate to it.

(2) Any powers conferred by the District Magistrate may be withdrawn by the District Magistrate.

Statement made by a witness in deposition is not a complaint. (Page left blank in MS.—ed.)

PART II

Trial of an Offender

1. TAKING COGNISANCE OF AN OFFENCE

When an offence has been committed, there are three ways in which the Magistrate can take cognisance of an offence.

Section 190

(a) upon receiving a complaint of facts which constitute such offence.

(b) upon a report in writing of such facts made by any police-officer.

(c) upon information received from any person other than a police-officer, or upon his own knowledge or suspicion, that such offence has been committed.

A. Complaints to Magistrates.

1. Definition of a complaint.

= means the allegation made *orally* or in writing to a Magistrate, with a view to his taking action under the Cr. P. C. that some person, whether known or unknown, has committed an offence, but it does not include the report of a police-officer.

Complaint must allege that an offence has been committed.

An application for taking action under Section 107 is not a complaint.

Complaint must be with Magistrate ; it must be with a view to his taking action.

Mere statement to a Magistrate by way of information without any intention of asking him to take action, is not a complaint.

e. g. An Assistant Collector writing to the District Magistrate complaining against a party but merely 'solicited for orders', did not amount to a complaint.

40 All. 641

It must be with a view to taking action under this Code.

A statement made to a Magistrate with the object of inducing him to take action not under this Code, but under Section 6 of the Bombay Gambling

Act IV of 1887, is not a complaint within the meaning of this Section.

II. WHO MAY COMPLAIN

As a general rule the person aggrieved is the complainant.

But the complainant is not an essential party for initiation of criminal proceedings.

The Magistrate can act upon information received or upon his own knowledge.

Although, if he does so act, he shall be bound by the provisions of Section 491.

But there are exceptions to the general Rule.

These exceptions will be found in Sections 195 to 199-A. Section 195 deals with

(a) (a) Prosecution for contempts of lawful authority of public servants.

(b) (b) Prosecution of certain offences against public justice.

(c) (c) Prosecution of certain offences relating to documents given in evidence.

In cases coming under (a) No courts shall take cognisance except on the complaint in *writing* of the public servant concerned or of some other public servant to whom he is subordinate.

In cases coming under (b) No court (shall take cognisance) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52C1. Notes on Acts and Laws PART III.htm - _msocom_5 except on the complaint in writing of such Court or of some other Court to which such Court is subordinate.

In cases coming under (c) (No Court shall take cognisance) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52C1. Notes on Acts and Laws PART III.htm - _msocom_6 except on the complaint in writing of such Court or of some other Court to which such Court is subordinate.

Section 196. Prosecution for offences against the State.

Unless upon complaint made by order of, or under authority from, the Governor General in Council, the Local Government, or some officer empowered by the Governor General in Council in this behalf.

Section 196-A

Prosecution for certain classes of Criminal Conspiracy falling under Section 120-B of the 1. P. C.

If they fall under sub-Section (1) then :

Complaint must be under order of, or under the authority from, the Governor General in Council, the Local Government or some officer empowered by the Governor General in Council in this behalf.

If they fall under sub-section (2), the Chief Presidency Magistrate or D.

M. has by order in writing, consented to the initiation of the proceedings.

Section 197

Prosecution of Judges, Magistrates and public servants for an offence alleged to have been committed by him, while acting or purporting to act, in the discharge of his official duty,

No Court shall take cognisance of such offence except with the previous sanction of the Local Government.

(2) Such Local Government may determine the person by whom, the manner in which, the offence or offences for which, the prosecution of such Judges, etc . . . is to be conducted, and may specify the Court before which the trial is to be held.

Section 198

Prosecution for breach of contract or defamation, or offences against marriage. No cognisance except upon a complaint made by some person aggrieved by such offence. Proviso : in certain cases some other person may with the leave of the Court, make a complaint on his or her behalf.

Section 199

Prosecution for adultery or enticing a married woman : No cognisance except upon a complaint made by the husband of the woman, or in his absence, made with the leave of the Court, by some person who had care of such person on his behalf at the time when such offence was committed.

POLICE REPORT

I. How does it originate?

It originates in what is known as the first information. Information is usually given by the aggrieved party. But it may be given by any party. Even a police officer may give such information based on his knowledge. Not only that but in certain cases the law compels certain persons to give information.

Section 44.

Every person shall give information to the Magistrate or Police of certain offences.

Section 45

Information given to the police may refer to a cognisable offence or to a non-cognisable offence.

Cognisable offence is one in which the police can arrest without a warrant.

Non cognisable offence is one in which the police cannot arrest without a warrant. *Section 154*

Information relating to a cognisable offence, if given orally to an officer in charge of a police station, shall be reduced to writing by him or under his

direction, and be read over to the informant and every such information whether given in writing or reduced to writing as aforesaid shall be signed by the person giving it and the substance of it shall be entered in a book to be kept by such officer in such form as the Local Government may prescribe in this behalf.

Section 155 Information relating to non-cognisable offence :

He shall enter in a book to be kept the substance of such information and refer the informant to the Magistrate.

Section 155

No police-officer shall investigate a non-cognisable case, without the order of a Magistrate of the 1st or 2nd class having power to try such case or commit the same for trial, or of a Presidency Magistrate.

Section 156

Any officer in charge of a police-station may, without the order of a Magistrate, investigate any cognisable case which a Court having jurisdiction over the local area within the limits of such station, would have power to inquire into.

The police report which can be the basis of action by a Magistrate, is based upon information relating to a cognisable offence.

Section 157

If, from information received i.e. under Section 154, the officer has reason to suspect the commission of a cognisable offence then;

(1) He shall send a report of the same to a Magistrate empowered to take cognisance of it.

(2) Shall proceed to the spot to investigate the facts and circumstances of the case

and

(3) take measures, if necessary, for the discovery and arrest of the offender.

Provided

(a) that the informant gives the names of the offender and the case is not of a serious nature, the officer need not proceed in person to make an investigation on the spot.

(b) that if the officer thinks, there are no sufficient grounds for entering on an investigation, he shall not investigate the case.

He shall state in his said report his reasons for not complying fully with the requirements of the Section.

He should notify to the informant that he will not investigate the case or cause it to be investigated. But this withdrawal of the police cannot block the prosecution of the offender. They are two ways yet open.

1. The Magistrate, on receiving such report, may direct an investigation or may at once proceed and ask subordinate Magistrate to hold a preliminary inquiry into or otherwise dispose of the case in manner provided by the case.

This is a preliminary report before completion of the investigation. The Magistrate can act under Section 159. But if the report is submitted *after investigation*, the Magistrate is not empowered to act under this Section.

II. The aggrieved party may move.

If the police do not move, then they have the following powers ; *Section 160* (1) to require attendance of witnesses by an order in writing.

Witnesses are not required to tell the truth under this Section. If they give false testimony they cannot be prosecuted. They don't sign it. It is made before police.

Section 161

Police may examine witnesses acquainted with the facts of the case.

(2) Such witnesses shall be bound to answer all questions put to them, unless the question incriminates them.

Although Police can take statements from witnesses yet

Section 162

(a) they shall not be signed by them,

(b) they shall notice made use of at any inquiry or trial, in respect of any offence under investigation at the time when such statement was made.

Provided that, on the request of the accused, the Court shall refer to such writing and direct that the accused be given a copy thereof for contradicting such witness, provided that Court may exclude that part which is irrelevant or its disclosure is inexpedient with interests of the public or does not promote the ends of justice.

In short, they do not form evidence which can be said to be admissible.

If such statements are to be treated as evidence, then they must be recorded by Magistrates and not Police Officers. Consequently provision is made in the Criminal Procedure Code.

Section 164

Any Presidency Magistrate, Magistrate 1st class and Magistrate of the Second class especially empowered may, if he is not a police officer record any *statement or confession* made to him in the course of an investigation under this chapter.

Statement shall be recorded in a manner prescribed for recording evidence.

Confession is to be recorded in the manner provided for in Section 364.

Provided that the Magistrate, before recording such confession, shall explain to the accused that he is not bound to make it and if he does so it may be used as evidence against him.

No Magistrate shall record, unless he has reason to believe, that it is made voluntarily.

On recording confession. Magistrate shall make a memorandum at the foot showing that he has observed the conditions.

Search

Section 165

(1) In the course of his investigation, a police officer may find it necessary to make a search in any place. Such officer may, after recording in writing the grounds of his belief and specifying in such writing, so far as possible, the thing for which search is to be made, search or cause search to be made, for such thing in any place within the limits of that station in his charge.

(2) The police officer shall, as far as possible, conduct the search in person.

(3) He may authorise his subordinate after recording reasons in writing and specifying the place and thing to be searched.

(4) The provisions of the Code, as to search warrants and the general provisions as to searches contained in Section 102 and Section 103, shall apply.

(5) Copies of record made during search shall be sent to the nearest Magistrate and the owner or occupier of the place of search shall be given a copy of the record on payment of fees.

Section 166

Police officer can cause search to be made within the area of another police station.

Section 167

If the investigation cannot be completed within 24 hours fixed by Section 61, and *there are grounds for believing that the accusation or information is well founded*, the Police shall forthwith transmit to the nearest Magistrate, a copy of the entries in the diary hereinafter prescribed relating to the case and shall, at the time, forward the accused to such jurisdiction.

(2) The Magistrate shall, from time to time, authorise the detention of the accused in such custody as such Magistrate thinks fit for a term not exceeding 15 days.

(3) A Magistrate authorising detention in police custody shall record reasons for so doing.

Section 169

When police officer finds that there is not sufficient evidence or reasonable ground of suspicion to justify forwarding the accused to Magistrate *he shall release him* on his executing a bond with or without sureties *to appear if and when so required*, before a Magistrate empowered to take cognisance.

Section 170

(1) When police officer finds that there is sufficient evidence or reasonable ground, such officer shall forward the accused under custody to a Magistrate empowered to take cognisance.

(2) Along with this, he shall send article necessary to be produced before Magistrate and shall require complainant and witnesses, to execute a bond to appear before Magistrate.

Section 173

The police officer shall send a report giving names of parties, information each is responsible for.

Accused is entitled to a copy of the report. *Exemption of accused from attendance.* Section 205; 366; 424; 6 *All. 59: 21Cal.588*

Section 205.—Whenever a Magistrate issues a summons, he may, if he sees reason so to do, dispense with the personal attendance of the accused and permit him to appear by his pleader.

(21) But the Magistrate may call accused at any time. *Section 366.—Time of Judgement.*

Should be read in the presence of the accused unless it is dispensed with and the sentence is of fine only.

Section 424.—Judgement by appellate Court. Accused need not be called to hear judgement.

II. Of how many offences can the Court take cognisance of at one trial

Joinder of Charges

Sections 233, 234, 235 *Section 233.*

1. *Every offence shall be tried separately.*

A is accused of theft on one occasion and of causing grievous hurt on another occasion. A must be tried separately for the two offence. He cannot be tried for both at one trial. There are exceptions to this general proposition.

Section 234

Three offences *of the same kind* may be tried at one trial *if they are committed within the space of twelve months*, irrespective of the question whether they are committed against the same person or not.

Offences of the same kind = Offences punishable with the same amount of punishment under the same section of the 1. P. C. or of any special or local law.

2. *Must not exceed three.* Joinder of charges of three offences under section 411 and three offences under 414 is bad. Three offences of forgery and three offences of breach of trust bad.

<i>Same kind.</i> Adultery and bigamy		
Murder and hurt		not same
Forgery and giving false evidence		

The rule as to kind is subject to two provisos.

(1) Offences under Section 379 (Theft) and under Section 380 (Theft in a dwelling house) shall be deemed to be offences of the same kind even though they are not offences under the same section and the punishment for them is not identical.

(2) The offence and the attempt to commit that offence (Section 511 I. P. C.) shall be deemed to be offences of the same kind even though they are not offences under the same section and the punishment for them is not identical.

Section 235 (2)

When an act constitutes an offence under two or more separate definitions of any law defining or punishing offences the person accused of them may be tried at one trial for each of such offences.

Section 235 (3)

When an act, which by itself constitutes an offence, constitute when combined with another a different offence.

The person accused of them may be tried at one trial for the offences, constituted by such act when combined, and for any offences constituted by the act when taken by itself.

This is so when the act or acts done by the accused constitutes a single offence.

But it may be, that the acts done by the accused constitute more than one offence i.e. show that a plurality of offences have been committed.

Can the accused be tried for all such offences at one trial? Or must he be tried separately for each offence?

The rules as to this will be found in *Section 235 (1)*

If the acts amounting to different offences are committed by the accused in the course of the *same transaction*, then he may be tried at one trial for every such offence.

1. *Same transaction*

In deciding whether acts constituting an offence are so connected as to form one and the same transaction, the determining factor is not so much proximity in time as continuity and community of purpose and object.

A mere interval of time between the commission of one offence and another does not by itself import want of continuity, though length of interval may be an important element in determining the question of connection between the two.

2. There is no limit to the number of offences that can be tried together.

III, Of how many offenders can the Court try at one trial **Joinder of Accused**

Section 239

The following persons may be charged and tried together:

(a) persons accused of the same offence committed in the course of the same transaction;

(b) persons accused of an offence and persons accused of abatement, or of an attempt to commit such offence;

(c) persons accused of more than one offence of the same kind within the meaning of Section 234 *committed by them jointly* within the period of twelve months;

(d) persons accused of different offences committed in the course of the same transaction;

(e) persons accused of an offence which includes theft, extortion, or criminal misappropriation,

and

(f) persons accused of receiving or retaining, or assisting in the disposal or concealment of property, the possession of which is alleged to have been transferred by any such offence committed by the first-named persons,

or

persons accused of abutment of or attempting to commit any such last-named offence.

(f) persons accused of offences under sections 411 and 414 of the 1. P. C. or either of those sections in respect of stolen property, the possession of which has been transferred by one offence.

(g) persons accused of any offence under Chapter XII of the 1. P. C. relating to counterfeit coin, and persons accused of any other offence under the said Chapter relating to the same coin, or of abutment of or attempting to commit any such offence.

NOTE.—The foundation for the procedure of joint trial of different persons is their association from start to finish to attain the same end.

The fact that they carried out their scheme by successive acts done at intervals does not prevent the unity of the project from constituting the series of acts one transaction i.e. the carrying through of the same object which they had from the first act to the last.

20 cal. 358

5 Mad. 199

IV. Securing the presence of the accused and the witness

Although the Court has taken cognisance of an offence, the actual criminal proceedings can commence only when *the accused* and the witnesses are present in Court, the one to answer the charge and the other to give evidence.

How are they to be brought before the Court? Section 104

1. When cognisance is taken on police report based on investigation conducted under Section 173, the accused and witnesses are already before the Court.

II. When cognisance is taken otherwise than on police report under Section 173, the accused and the witnesses are not before the Court. They have to be brought before the Court.

What is the process for bringing them before the Court?

The Criminal Procedure Code contemplates two such processes.

Notes on Acts and Laws

Contents

PART III Continued...

Section 68 1. Summons to appear and II. Warrant to arrest

Section 68

1. Summons to appear

Every summons issued by a Court under this Code shall be in *writing* in *duplicate, signed and sealed by the presiding officer* of such Court or by such other officer as the High Court may, from time to time by rule direct.

(2) Summons shall be served by a police-officer, or, subject to such rules as the Local Government may prescribe in this behalf, by an officer of the Court issuing it or other public servant.

Section 69 Personal Service

(1) Summons shall if, practicable, *be served personally* on the persons summoned, by delivering or tendering to him one of the-duplicates of the

summons.

(2) Every person served with summons shall, if so required by the serving officer, *sign a receipt* therefor on the back of the other duplicate. (3) *Service on Corporations*

Service on incorporate company or other body corporate may be effected by serving it on the *Secretary, local manager or other principal officer of the corporation in British India*. In such case the service shall be deemed to have been effected when the letter would arrive in ordinary course of post.

Section 70

Service when person cannot be found may be served by leaving one of the duplicates for him with some adult male member of his family, or, in a Presidency-town, with his servant residing with him.

The *person with whom* it is left, shall sign on the back of the duplicate.

Substituted service is improper where sufficient steps are not taken to serve accused personally.

69 J. C. 627.

Section 71

If this is not possible, then the serving officer shall affix one of the duplicates of the summons to some conspicuous part of the house or homestead in which the person summoned ordinarily resides.

Section 72

Service on a Government Servant or of Railway Company.

Where person summoned is in the active service of the Government or of a Railway Company, the Court issuing the summons shall ordinarily *send it in duplicate to the head of the office in which such person is employed*, and such head shall thereupon cause the summons to be served in manner provided by Section 69 and shall return it to the Court under his signature with the endorsement required by that Section.

(2) Such signature shall be evidence of due service.

Section 73

Service of summons out of local limits.

When a Court desires that a summons issued by it shall be served at any place outside the local limits of its jurisdiction, *it shall ordinarily send such summons in duplicate to a Magistrate within the local limits of whose jurisdiction the person summoned resides or is, to be there served.*

Section 74

Proof of service in such cases when serving officer is not present.

(1) An affidavit, purporting to be made before a Magistrate, that such summons has been served, and a duplicate of the summons purporting to

be endorsed (in the manner provided by S. 69 or S. 70) by the person to whom it was delivered or tendered or with whom it was left, shall be admissible in evidence, and the statements made therein shall be deemed to be correct unless and until the contrary is proved.

(2) The affidavit mentioned in this section may be attached to the duplicate of the summons and returned to the Court.

Service on pleader is not sufficient.

6 C. W.N.927

Copy should be served and it is not enough merely to show it.

5 B. H. C. R. 20.

Tender amounts to service if summons is refused.

28 M. L. F. 505.

Refusing to *receive* summons is no offence.

II Warrantor Arrest

Section 75

(1) Shall *be in writing, signed* by the Presiding Officer, or in the case of a Bench of Magistrates, by any member of such Bench and shall bear the seal of the Court.

Warrant shall remain in force until it is cancelled by the Court which issued it, or until it is executed.

(2) Difference between Summons and Warrant. Summons is an order to the person to be summoned.

Warrant is *not* an order to the person to be arrested. Therefore a person can be punished for disobedience of a summons. But he cannot be punished for a disobedience of a warrant.

5W.R. ed. 71.

Section 76

Court may direct Security to be taken.

(1) The Issuing Court may in its discretion direct by endorsement on the warrant that, *if such person executes a bond with sufficient sureties for his attendance before the Court at a specified time and thereafter until otherwise directed by the Court, the officer to whom the warrant is directed shall take such security and shall release such person from custody.*

(2) The endorsement shall state.

(a) The number of sureties;

(b) The amount in which they and the person for whose arrest the warrant is issued, are to be respectively bound; and

(c) The time at which he is to attend before the Court.

(3) Whenever security is taken under this section, the officer, to whom the warrant is directed, shall forward the bond to the Court.

Section 77

(1) *Warrant to whom directed.*

Warrant shall ordinarily be directed to one or more police-officer, and when issued by a Presidency Magistrate, shall always be so directed; but any other Court issuing such a warrant may, if its immediate execution is necessary and no police-officer is immediately available, direct it to any other person or persons; and such person or persons shall execute the same.

(2) *Warrant addressed to more than one person.* May be executed by all or by any one or more of them.

Section 78

(1) *Warrant may be directed to Land holder, farmer, or manager of land, for the arrest of (1) any escaped convict, (2) proclaimed offender, or (3) person who has been accused of a non-bailable offence, and who has eluded pursuit.*

(2) Who shall sign it and execute it, if the person is on the land under his charge.

(3) On arrest the person shall be made over to the nearest police station.

Section 79

A police officer to whom a warrant has been addressed may endorse it on to another police officer to execute.

Section 80

Arresting party shall notify the substance of the warrant to the person arrested.

Section 81

Subject to the provisions of Section 76 as to Security, the arresting party shall without unnecessary delay, bring the person arrested before the Court before which he is required to produce him.

Section 82

Warrant of arrest may be executed at any place in British India.

Section 83

When warrant is to be executed *outside the local limits of the jurisdiction of the Court issuing the same, such Court may, instead of directing such warrant to a police officer, forward the same by post or otherwise to any Magistrate, or District Superintendent of Police, or the Commissioner of Police in a Presidency town, within the local limits of whose jurisdiction it is to be executed.*

(2) The Magistrate or D. S. P., or Commissioner whom such warrant is so forwarded, shall endorse his name thereon, and if practicable, cause it to be executed in manner herein before provided, within the local limits of his jurisdiction.

Section 84

When a warrant directed to a police-officer is to be executed outside the

jurisdiction, he shall ordinarily take it for endorsement either to a Magistrate or to a police officer not below the rank of an officer in charge of a station within the limits within which the warrant is to be executed.

(2) Such Magistrate or police officer shall endorse, his name thereon and such endorsement shall be sufficient authority to the police officer to whom the warrant is directed to execute the same.

(3) If the obtaining of endorsement is likely to cause delay, it may be executed without endorsement.

Section 85

When arrest is made outside, the person arrested shall be taken to the Magistrate, D. S. P., Commissioner of Police.

Section 86

They shall then direct his removal in custody to the Court issuing the warrant.

Effect of Non-execution of the warrant of arrest. Section 87

If the person is absconding, such Court may publish a written proclamation requiring him to appear at a specified place and at a specific time not less than 30 days from the date of publishing such proclamation.

(2) How to publish the Proclamation.

(a) It shall be read in the place in which he ordinarily resides.

(b) It shall be affixed to some conspicuous part of the house in which he resides.

(c) A copy of it affixed to the Court house. *Section 88*

The Court issuing a proclamation under Section 87 may at any time order the attachment of any property movable or immovable or both, belonging to the proclaimed person.

(2) Such order shall authorise the attachment of any property belonging to such person within the district in which it is made.

Section 89 Restoration of attached property

If the person *appears* within 2 years after the date of the order of attachment and satisfies (1) That he did not abscond or conceal himself *and* (2) that he had not such knowledge of the proclamation as to enable him to appear within time—

Section 90

Against whom can Warrant be issued?

Ordinarily, one would imagine, that it can be issued only against the accused. But that is not so. The law is that warrant can be issued against any person against whom a summons can be issued except a juror or assessor.

This means that a warrant may be issued even against a witness.

Provided:

(1) The Court sees reason to believe before the time for appearance that he has absconded or will not obey the summons ; or

(2) That at such time he fails to appear, and the summons is shown to have been duly served to enable him to appear in time but he does not appear.

**Safeguard for continued presence of the Parties called before
Court by due process**

Section 91

When any person for whose appearance or arrest the officer presiding in any Court is empowered to issue a summons or warrant is present in such Court, *such officer may require such person to execute a bond with or without sureties for his appearance in such Court.*

Section 92

When any person who is bound by any such bond does not appear, the officer presiding may issue a warrant directing that such person be arrested and produced before him. Besides, the necessity of having before the Court the *complainant, the accused and the witnesses*. There is also the necessity having before the Court the *Corpus delicti*, which are the subject matter of the accusation or things which are necessary to prove the accusation.

Forged document, person confined

We must therefore consider the rules relating to the production of these.

1. PRODUCTION OF A DOCUMENT OR A THING.

Section 94

Whenever any Court considers the production of any document or thing is necessary or desirable for the purpose of investigation, inquiry or trial or other proceedings before such Court, he may issue a summons to the person in whose *possession or power* such document or thing is believed to be, requiring him to attend and produce it, at the time or place stated in the summons.

(2) When the summons is merely to produce, he need not attend. Sufficient if he sends it.

(Earlier part is not found—ed.)

Officer or Judge or in his presence and hearing under his personal direction and superintendence and shall be signed by the Magistrate or Sessions Judge.

In cases in which the evidence is not taken down in writing by the Magistrate or Sessions Judge, he shall, as the examination of each witness

proceeds, make a memorandum of the substance of what such witness deposes; and such memorandum shall be written and signed by the Magistrate or Sessions Judge with his own hand, and shall form part of the record.

Section 363

Sessions Judge and Magistrate shall also record remarks regarding demeanour of the witnesses whilst under examination.

Section 360

As the taking down of the evidence of each witness is completed, it *shall* be read over to him in the presence of the accused, if in attendance, or of his pleader, if he appears by pleader, and shall, if necessary, be corrected.

If the witness denies the correctness of any part of the evidence when the same is read over to him, the Magistrate or Sessions Judge may, instead of correcting the evidence, make a memorandum thereon of the objections made to it by the witness and shall add such remarks as he thinks necessary.

Omission to read over is an illegality.

II. BEFORE PRESIDENCY MAGISTRATES

Section 362

Appealable cases and non-appealable cases.

In appealable cases

The Magistrate shall take down the evidence of the witnesses with his own hand, or cause it to be taken down in writing from his dictation in open Court.

All evidence so taken down shall be signed by the Magistrate and shall form part of the record.

The Magistrate shall make a memorandum of the substance of the examination of the accused. Such memorandum shall be signed by the Magistrate with his own hand, and shall form part of the record.

In non-appealable cases

It shall *not be necessary* for a Presidency Magistrate to record the evidence or frame a charge.

Section 359, 362 (2) Mode of recording Evidence

Evidence shall ordinarily be taken down in the form of a narrative, though the Court may in its discretion take down, or cause to be taken down, any particular question and answer.

Exception: Examination of the accused. Section 364

The whole of such examination, including every question put to him and every answer given by him, shall be recorded in full.

This does not apply to the record of the examination of the accused by the High Court.

II. RECORD IN SUMMARY TRIALS *Section 260*

1. The District Magistrate.

2. *Magistrate 1st class* especially empowered in this behalf by the Local Government.

3. Any Bench Magistrate invested with 1st class powers and especially empowered in this behalf by the Local Government may, if he thinks fit, try in a *summary* way all or any of the following offences:—

(a) Offences not punishable with death, transportation or imprisonment for a term exceeding six months and certain other offences mentioned in the Section.

Cases which can be tried summarily may be appealable or nonappealable.

Section 263

But they shall enter in such form as the Local Government may direct the following particulars.

(a) (a) The serial number.

(b) (b) The date of the Commission of the offence.

(c) (c) The date of the Report or Complaint.

(d) (d) The name of the complainant (if any).

(e) (e) The name, parentage and residence of the accused.

(f) (f) The offence complained off and the offence (if any proved) and the value of the property in respect of which the offence is committed.

(g) (g) The pica of the accused and his examination if any.

(h) (h) The finding and in conviction brief statement of the reasons for it.

(i) (i) Sentence or other final order; and

(j) (j) The dale on which the proceedings terminated.

In appealable cases Section 264

Before passing sentence the Court
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52C2. Notes on Acts and Laws PART III.htm
 - [_msocom_1](#) shall record a judgement embodying the substance of the evidence and also the particulars required in non-appealable cases.

Such judgement shall be the only record in appealable cases.

Judgement

Section 366

The judgement in every trial in any Criminal Court *shall be pronounced*, or the substance of such judgement shall be explained;

(1) In open Court, either immediately or in subsequent date to be notified.

Provided that the whole shall be read if requested by the parties.

(2) The accused shall, if in custody, be brought up and if not in custody be brought up to hear judgement delivered.

Except where his personal attendance has been dispensed with and the sentence is of fine only or he is acquitted.

N. B.— (3) Judgement shall not be read if delivered in absence.

Section 367

Every judgement unless otherwise provided *shall be written* by the presiding officer of the Court or from his dictation.

Shall contain

(1) Point or points for determination

(2) The decision thereon and

(3) The reasons for the decision

(4) Shall be dated and signed by the Presiding officer in open Court at the time of pronouncing it, and where it is not written by the Presiding officer with his own hand, every page of such judgement shall be signed by him

(5) It shall specify the offence (if any) of which, and the Section of the I. P. C. or other law under which the accused is convicted, and the punishment to which he is sentenced.

(6) When the conviction is under the I. P. C. and it is doubtful under which of the two parts of the same section of that Code the offence falls, the Court shall directly express the same and pass judgement in the alternative.

(7) If it be a judgement of acquittal it shall state the offence of which he is acquitted and direct that he be set at liberty.

(8) If the accused is convicted of offence punishable with death, and the Court sentences him to any punishment other than death, the Court shall give reasons.

Provided that in trials by jury, the Court need not write a judgement but the Court of Session shall record heads of charge.

Section 368

When sentence of death—sentence shall direct that he be hanged by the neck till he is dead.

Section 369 Alteration of judgement

Save as otherwise provided by the Code or other law or in the case of the High Court, no Court, when it has signed its judgement, shall alter or review the same except to correct a clerical error.

(Even the High Court has no power.)

Section 370 Judgement by a Presidency Magistrate

Instead of recording a judgement in the above, a Presidency Magistrate shall record the following particulars :

- (a) (a) Serial number.
- (b) (b) The date of the commission of offences.
- (c) (c) Name of the complainant (if any).
- (d) (d) Name of the accused and (except in the case of European British subject) his percentage and residence.
- (e) (e) The offence complained of or proved.
- (f) (f) Plea of the accused and his exam (if any).
- (g) (g) Final order.
- (h) (h) Date of such order.
- (i) (i) In all cases, where the sentence is imprisonment or fine exceeding 200 or both, a brief statement of reasons for the conviction.

Section 371

Copy of judgement to be given to accused without delay In cases other than summons cases it shall be given free of cost.

In trials by jury, a copy of heads of charge by the jury shall be given to him.

In sentence of death, shall inform the accused of the period of limit for appeal.

Section 373

Court of Session to send copy of finding and sentence to the District Magistrate.

Criminal proceedings other than trial of an offender

- I. Those dealing with keeping of peace and maintaining good order.
- II. Those dealing with the enforcement of certain obligations. Family obligation and public nuisance.
- III. Those dealing with the maintenance of public peace.
- 1. THOSE DEALING WITH THE PUBLIC ASSEMBLY—KEEPING OF PEACE AND MAINTAINING ORDER.

It is better to prevent crime than only to punish it when it is committed.

This theory is not accepted universally. Attempt to prevent crime may involve undue interference in the liberty of the individual.

English theory is inclined towards the view that the state should intervene only when the conduct of an individual amounts to a crime.

E. g.— English law of sedition, assembly.

On the other hand, the Indian Law takes a different view. E. g. Press Act, Public Meetings Act.

That being so, the Criminal Procedure Code enacts certain Sections to enable the Criminal Courts to prevent the commission of offences. (Page left blank—ed.)

Chapter VIII deals with offences against public tranquillity.

(Page left blank—ed.)

The Court contemplates the following usage fit for such preventative or anticipatory action.

1. There are quarrelsome people in every country in the world, and there are some quarrels which may lead to violence and even to serious crime.

2. In the same way certain forms of propaganda, if carried on without any restraint, may induce ignorant persons to do harmful things, they may be circulating falsehoods, or even more deadly half-truths, cause ignorant persons to believe, to act upon the belief, that malicious designs are being entertained which in fact are not entertained by any one.

3. Again there are those who prefer a life of idleness, varied by occasional crime when detection seems unlikely, to one of honest work. There are also persons who live mainly on the proceeds of crime committed by themselves, or on a share of the proceeds of crime committed by others, whom they help to escape detection, or assist by setting up an Organisation which affords its supporters both opportunity to dispose of the proceeds of their dishonesty and a fair prospect of immunity from punishment.

4. Habitual Offenders. *Section 183*

9. Where an offence is committed while the offender is on a journey or voyage, the offence may be inquired into or tried by a Court through or into the local limits of whose jurisdiction

the offender or		passed in the
the person against whom or		course of that
the thing in respect of which the offence was committed		journey or
voyage

Chapter 7 The Transfer of Property Act

CONTRIBUTION

1. Suppose two properties are mortgaged and they belong to different persons. Suppose for the realisation of the mortgage money only one property is sold and the proceeds are found to be sufficient to pay the amount. The result is that one mortgagor has lost his property while the other gets it back without having to pay any thing.

This is a gross injustice. To remedy this injustice Equity invented the doctrine of Contribution which is embodied in Section 82.

2. According to this Section, the different owners are liable to contribute rateably to the debt secured by the mortgage.

3. For determining the rate at which each should contribute the value therefore shall be taken as the value at the date of the mortgage deducting the amount of mortgage, if any, to which it was subject on that date.

1. The claim for contribution can arise only when the whole of the mortgage debt has been satisfied—*26 All. 407 (426, 27) T.B.*

2. The right to contribution is subject to the rule of marshalling. That is where marshalling comes into conflict with contribution, the rule of marshalling shall prevail—This is the meaning of the last para of Section 82.

WHO CAN CLAIM THE RIGHTS OF THE MORTGAGOR *Section 91.*

*****mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52

D. Notes on Acts and Laws PART IV.htm - _msocom_1

WHO CAN CLAIM THE RIGHTS OF THE MORTGAGEE *Section 92.*

Any person *other than the mortgagor* who pays the mortgagee becomes entitled to the rights of the mortgagee.

* The page of MS has been left blank.

Such persons are—

1. Subsequent mortgagee.
2. Surety.
3. Any person having an interest in the property.
4. A co-mortgagor.

5. Any other person with whose money the mortgage has been redeemed if the mortgagor has by a registered deed agreed to this.

This is called the rule of subrogation.

II. DOES THE LAW OF SALE PRESCRIBE ANY PARTICULAR MODE OF TRANSFER?

1. The Law of Sale of Immovable Property does prescribe a mode of transfer. The mode of transfer is either *Registration* or *Delivery of Possession*.

2. Whether the appropriate mode of transfer in any particular case is Registration or Delivery of Possession depends upon two considerations—

(i) Whether the immovable property is tangible or intangible. (ii)

Whether the Immovable Property is worth more than Rs. 100 or is less than Rs. 100.

3. If the property is *Intangible* then the transfer can take place only by registration, no matter what the value of the property is.

4. If the property is *Tangible* property then

(i) If it is worth more than Rs. 100 then the transfer must be by registration.

(ii) If it is worth less than Rs. 100 then the transfer may be either by Registration or by delivery of possession.

5. It is clear that in all cases except one. Registration is the only method of effecting a sale. The case where option is given either to register or deliver possession is the case where the property is tangible and is less than Rs. 100 in value.

6. *Registration and Delivery as alternative complimentary modes.*—In this connection the following points may be noted:—

(i) Where Registration is prescribed as the *only* mode of transfer, delivery of Possession is neither necessary nor enough to complete the transaction of sale.

(ii) Where delivery of possession is prescribed. Registration is not necessary to complete the sale. However, Registration without delivery will be enough to complete the sale.

7. *No other mode of Transfer.*—The provisions as to modes of transfer are exhaustive and a sale cannot be effected in any other way. Title cannot pass by admission or by recitals in a deed or petitions to officers or entry in the record of rights. Admission that land has been sold, will not operate as an estoppel so as to do, away with the sale for a registered conveyance or delivery. 43 Cal. 790.

8. It is necessary to observe the prescribed modes of transfer—

(i) Ownership does not pass except by a transfer in the prescribed form.

(ii) An unregistered deed *is not enough* (a) In cases where Registration is compulsory. (b) Also in cases where the value is less than Rs. 100 and the transfer is not made by delivery.

9. *Meaning of tangible and intangible* (i) Immovable Property is either *tangible* or *intangible*.

(ii) The distinction between tangible and intangible is analogous to the distinction made in English Law between a corporeal hereditament and incorporeal hereditament

(iii) A corporeal hereditament is an interest in land in possession i.e. a present right to enjoy the possession of land. An incorporeal hereditament is a right over land in the possession of another, which may be a future right to possession, or a right to use for a special purpose the land in the possession of another e. g. a right of way.

(iv) The contract between tangible and intangible is a contract between the estate of one who is possessed of the land, the tangible thing and that of a man who has the mere right, the intangible thing, without possession of anything tangible.

(v) A thing to be tangible must be capable of actual delivery.
Sulaiman C. J. 50 All. 986.

10. *Meaning of Delivery of Possession*

(i) Delivery takes place when the seller places the buyer, or such other person as he directs, in possession of the property.

(ii) Delivery is an act which has the effect of putting the buyer in the possession of property.

(iii) What amounts to Possession? The question remains unanswered. Is it actual possession? or Is it symbolical possession?

(iv) One view is that since delivery is prescribed for tangible property only what the Legislature intends is actual possession.

(v) The other view is that it is used in a wider and ordinary sense because in the great majority of cases, land is in the occupation of a tenant or the buyer and physical delivery is therefore impossible.

(vi) The latter view is the generally accepted view, so that there is physical delivery, when the owner of property places the buyer in such relation to the land and its actual occupants as he himself occupies.

11. *Ownership when transferred* (i) Ownership passes upon delivery or registration. (ii) With regard to registration, the following points should be noted:—

(a) Once registration is effected, the title relates back to the date of the execution.

(b) A Registered sale-deed will not be defeated by another deed

executed later but registered earlier.

(c) The transfer will not be subject to the *pendens* if the deed was executed before the suit but registered after the suit.

(d) Although it is true that property does not pass i. e. ownership is not transferred until Registration is effected, it is not true to say that property passes as soon as the instrument is registered, for the true test is the intention of the parties.

3. Section 55 (3)— *To deliver title-deeds* :—

1. Title-deeds are accessory to the estate. They pass with the conveyance without being named.

2. This includes *all* deeds relating to the property conveyed in possession as well as in power.

3. The liability to deliver title-deeds also includes the liability to bear the cost of obtaining them.

4. Counterparts leases and Kabulayets are deeds of title accessory to the estate.

5. The duty to deliver title-deeds is not dependent upon the completion of the conveyance. This duty does not arise until the price has been paid.

EXCEPTIONS :

(i) When the seller retains parts of the property comprised in the deeds, he may retain the deeds but is under an obligation for their safe custody and to produce them or give true copies when required.

(ii) When property is sold in different lots—the purchaser of the lot of the *greatest lot* is entitled to the documents—subject to the same obligations as above.

By an express covenant, it may be given to the purchaser of the *largest lot* i.e. in area.

6. The sub-section does not say what is to happen if the sales are at different times.

BUYER'S LIABILITIES

1. BEFORE CONVEYANCE

1. Section 55 (5) (a)—*To disclose facts relating to the interest of the seller in the property materially increasing value.*

1. Every purchaser is bound to observe good faith in all that he says or does in relation to the contract and must abstain from all deceit, whether by suppression of truth or by suggestion of falsehood.

2. The buyer, however, is under no duty to disclose latent advantages as the seller is to disclose latent defects.

3. To this rule, matters of title are an exception. Although the seller's title is ordinarily a matter exclusively within his knowledge, yet there may be

cases where the buyer has information which the seller lacks. In such cases he must not make an unfair use of it.

Illustration 1.—Summers vs. Griffiths.

An old woman sold property at an undervalue believing that she could not make out a good title to it while the buyer knew that she could. The sale was set aside.

Illustration 2.—Ellard vs. Llandaff (Lord)

The lessee obtained a renewal of a lease, in consideration of a surrender of the old lease, suppressing the fact (that)*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52D. Notes on Acts and Laws PART IV.htm - _msocom_2 the person on whose life the old lease depended was on his death-bed.

2. Section 55 (5) (6)—*To pay the Price.*

1. The buyer is not bound to pay the price except on a complete conveyance to himself of the whole interest that he has purchased.

2. If the property is sold free from Encumbrances and these are not discharged at the time of conveyance, the buyer is not bound to pay.

3. His remedies for getting rid of Encumbrances are—

(i) Under Section 18 (c) of the Specific Relief Act to compel the vendor to discharge them.

(ii) He may discharge it himself and set off the amount against purchase money.

(iii) Recover it by subsequent suit against the vendor.

4. This sub-section imposes a personal liability on the buyer apart from the liability imposed by Section 55 (4) (b) on the property—52 *All. 901.*

BUYER'S LIABILITIES

II. AFTER CONVEYANCE

1. Section 55 (5) (c)—*To bear loss, etc.*

1. Under sub-section 55 (1) (c) the seller is to bear the loss between Contract and Conveyance.

2. After conveyance the buyer is the owner and the property is at his risk. He must therefore bear the loss.

3. This is different from English Law under which the contract for sale transfers an equitable estate and with it liability for loss or destruction.

4. The seller is liable for waste and if the seller has insured the property, the buyer can compel him to apply it for restoration.

2. Section 55 (5) (d)—*To pay outgoing.*

1. Before conveyance this liability falls upon the seller—55 (1) (g) after

conveyance it falls on the buyer— Public charges, Rent, Interest and Encumbrances.

2. The liability is statutory and not merely contractual and therefore it is binding on a minor vendor on whose behalf the property is sold—*46 Mad. L. J. 464*.

3. If property is sold free from Encumbrances, the seller must discharge it. If sold, subject to Encumbrances, then the interest on Encumbrances *upto sale* must also be paid by the buyer—*26 Bom. S. R. 942*.

RIGHTS OF BUYER AND SELLER RIGHTS OF THE SELLER

1. BEFORE CONVEYANCE

1. Section 55 (4) (a)—*To take rents and profits*.

1. Until conveyance, the seller continues to be the owner. Therefore, he has a right to take rents and profits of the property.

II. AFTER CONVEYANCE

1. Section 55 (4) (b)—*To claim charge, on property for price not paid*.

1. If the sale is completed by conveyance and the price or any part of it is unpaid, the seller has under this sub-section a charge for the price or for the balance.

2. The charge is a non-possessory charge i. e. it does not give a right to retain possession. As the ownership has passed, the charge gives the seller no right to refuse possession—

30 Mad. 524 ; 43 Mad. 712 ; 23 Bom. 525 ; 34 Mad. 543.

3. The charge being on the property, it does not matter if there are several purchasers who had agreed among themselves to pay in a certain proportion.

4. The claim for a charge for unpaid price, not only subsists against the original buyer, but is also available against a transferee *without consideration* or a transferee with notice of non-payment.

5. The charge is not only for the purchase money but also for interest on the purchase money.

6. The right to a charge for interest commences only from the date on which possession has been delivered. The right to include interest for the purposes of a charge on the property *before* possession has been delivered depends upon the equities and circumstances of the case.

Illustration.—If the purchaser retains part of the purchase money as security for the seller discharging an Encumbrance, he is not liable to pay interest.

7. *English and Indian Law*.

(i) Under the English Law the seller has a lien from the date of the Contract.

(ii) Under the Indian Law the charge begins from the date of the conveyance.

(iii) The reasons for this difference :—

(a) Under the English Law, the seller parts with the estate as a result of the contract.

(b) Under the Indian Law, the seller parts with it as a result of conveyance.

(c) The result is the same, for both give the right to proceed against the property. The only difference is that the English lien being equitable, can be moulded by equity to suit circumstances. While the Indian charge being statutory, is rigid and must conform to the terms of the statute.

BUYER'S RIGHTS

1. BEFORE CONVEYANCE

1. Section 55 (6) (b)—*To claim a charge on the property for purchase money paid before conveyance.*

1. The clause as worded makes no sense. It is in two parts. If the clause "unless he has improperly declined to take delivery" which is negatively put was put positively to read "if he has properly declined" then there is no distinction between the two clauses.

2. But there is a distinction between the two parts which is a distinction arising from burden of proof. Under the first part, the purchaser is entitled to certain rights which he can enforce "unless he has improperly declined to take delivery" which means that he is to lose those rights if the seller proves that he, the purchaser, has improperly declined to accept delivery. Under the second part of the clause, the purchaser gets certain additional rights which he can claim, only if, he can show that "he has properly declined to take delivery" and the burden of showing it will be upon him.

3. Under this clause, a buyer has a right to a charge for three things:—

- (i) (i) for the amount of purchase money properly paid,
- (ii) (ii) for the earnest if any,
- (iii) for the costs awarded to him.

4. *Charge for Purchase money paid.*

1. This charge attaches from the moment the buyer pays any part of the purchase money.

2. Charge for purchase money is lost *only* when the seller proves that the buyer has improperly declined to take delivery. The burden of

proof is upon the seller.

5. *Charge for earnest and cost.*

(1) There is a possibility for a charge in respect of these two. But this possibility will be realised only if the buyer proves that he has properly declined to take delivery. The burden of proof is upon the buyer.

6. *Earnest and Part Payment of Purchase money.*

(1) What is stated above about charge in respect of earnest applies only if the money paid is paid as earnest.

(2) Money paid by a buyer before conveyance serves two purposes : (1) It goes in part payment of the purchase money for which it is deposited. (2) It is security for the performance of the contract. In the latter case it is earnest. In the former case it is instalment.

(3) This difference is important because whether there would be a charge or personal liability or there would not be, would depend upon whether the payment made is *Instalment or Earnest*.

(i) If it is earnest—There is no charge (except in the case of a buyer who proves that he has properly declined to take delivery). Earnest is wholly lost and there is not only no charge but there is even no personal liability.

(ii) If it is part payment—There is a charge unless seller shows that the buyer has improperly refused to take delivery. Part payment is never wholly lost. If it fails to create a charge, it remains as a personal liability of the seller.

(4) Whether it is part payment or earnest is matter of contract or intention.

7. The purchaser's charge can be enforced against the seller and all persons claiming under him.

8. 8. (1) The buyer loses his charge :—

(i) By his own subsequent default

(ii) By his improperly refusing to take delivery.

(2) Earnest money—There are two purposes underlining Earnest:—

(i) It goes in part payment of the purchase money.

(ii) It is a security for the performance of the contract. It becomes part of the purchase money if the contract goes through. It is forfeited, if the contract falls through by reason of the fault or failure of the purchaser.

II. AFTER CONVEYANCE

1. Section 55 (6) (a)—*To claim increment.* 1. This must be so, because, after conveyance he is the owner.

(Page left blank—ed.)

Sales free Encumbrances

1. As far as possible, a sale ought to be free from Encumbrances. To provide sales being made free from Encumbrances T. P. Act contains two sections which make it possible. They are Section 56 and Section 57.

SECTION I THE NATURE OF A MORTGAGE

1. DEFINITION.

1. Section 58 defines what is a mortgage. According to the section, there are three ingredients of a mortgage transaction :—

- (i) The transfer of interest. (ii) In specific immovable property.
- (iii) For the purpose of securing the payment of money advanced by way of a loan.

II. EXPLANATION OF THESE INGREDIENTS.

(i) Immovable property is not an essential ingredient of mortgage:

(1) Under the English Law, all kinds of property, personal or real, can be made the subject of a mortgage. The Real estate may be corporeal or incorporeal and the personal estate may be in possession or in action. The Estate may be absolute or determinable i. e. for life : it may be legal or equitable. Not only any kind of property may be the subject-matter of a mortgage but any interest in it may be mortgaged, whether such interest is vested, expectant or contingent.

(2) The Transfer of Property speaks only of immovable property in relation to mortgages. This gives the impression that the law does not recognise the mortgage of a movable property. This would be a mistake. The Transfer of Property Act merely *defines* and *amends* the law relating to property. It does not consolidate the law. It is, therefore, not a complete or exhaustive code of law relating to mortgage.

(3) (1) Mortgages of movables are recognised in India.

9 C. W. N. 14 : 8 Bom. S. R. 344.

(4) *Law by which mortgages of movables are governed.*

The Transfer of Property Act makes no provision: The Indian Contract Act makes no provision. Consequently the principles of English Law will be applicable to such mortgages.

34 Cal. 223 (228): 27 Bom. S. R. 1449.

(5) Mortgage of movable property may be effected without writing.

(6) Mortgage of an actionable claim—in writing—though movable by reason of Section 130 T. P.—*37 Bom. 198. (P. C.)* Deposit of insurance policy.

(ii) Transfer of an Interest :

1. It means the transfer of *some* right belonging to the mortgagor in respect of the property.
2. Ownership consists of a bundle of rights, such as, right to possess, right to enjoy, sell, etc.
3. It is enough if one of these rights is transferred. The right transferred may vary :— (i) It may be the right to sell. (ii) It may be the right to enjoy. (iii) It may be the right to own.
4. The nature of the right transferred is matter of no consequence so long as some right is transferred.

III. THE PURPOSE MUST BE SECURING THE PAYMENT OF MONEY

ADVANCED.

1. The transfer of interest is by way of *Security*. The idea of a Security involves two things. There must be a debt or pecuniary liability and secondly there must be some property pledged for the meeting of that liability.

2. 1. The purpose of the transfer must be securing of the debt. A transfer made for the purpose of securing a debt must be distinguished from a transfer, the purpose of which is to discharge a debt.

25 All. 115=30 I.A. 54.

II Bom. 462.

3. The right transferred must be to enable the man to recover the debt. The transfer must not extinguish the debt. If the effect of the transfer is to extinguish the debt then there is no mortgage.

Illustration.—

II Bom. 462 Abdulbhai vs. Kashi

In 1862, *A* in consideration of Rs. 150 passed to *B* a writing called *Karz Rokha* (or debt-note). It proved (*inter alia*) that *B* should hold and enjoy a certain piece of land belonging to *A* for twenty years, that at the end the land should be restored to *A* free from all claims in respect of principal or interest.

Held, not a mortgage.

25 All. 115.

MORTGAGE COMPARED WITH OTHER FORMS OF ALIENATIONS

MORTGAGE AND SALE

1. Sale is defined in Section 54—It is a transfer of ownership for a price.

The price is not a loan and the transfer is not a transfer of an interest but is an absolute transfer of ownership.

2. In a mortgage, the money paid is a loan and the transfer is a transfer of an interest only.

3. In a breach of a contract of sale, the rights are the rights of a vendor and purchaser while the contract is a contract of mortgage the rights are those of a mortgagor and mortgagee.

4. In sale, the property is transferred absolutely. In mortgage, the property serves only as a security for the repayment of a debt.

MORTGAGE AND OTHER KINDS OF SECURITIES

1. There are four kinds of securities (1) mortgage, (2) pledge, (3) lien and (4) hypothecation or charge.

It is important to note the distinction between mortgage and other kinds of securities.

1. MORTGAGE AND PLEDGE

1. The bailment of good as security for payment of debt or performance of a promise is called a 'pledge' —*Section 172 Indian Contract Act.*

2. In a mortgage, general ownership in the property passes to the mortgagee and the mortgagor has only a right to redeem. In a pledge, 'only a qualified or special property' passes to the pledgee, the general ownership remains in the pledger.

3. Delivery of possession of the property pledged to the pledgee is essential. But delivery of possession is not essential to a mortgage.

4. The property which is once pledged cannot be pledged a second time, because, no possession can be granted to the second pledgee, while property which is mortgaged once to one person can be mortgaged again to others subsequently.

5. Pledge can only be of *personal* property. Mortgage can be of both personal as well as real property.

Mortgage and Liens

1. A lien is a kind of security which is created by the operation of the law. Lien is a right created by law and not by contract to retain possession of the property belonging to another until certain demands are satisfied.

2. The law on the subject of lien is scattered in many statutes of the Indian Legislature. E. g. Contract Act Sections 170-General-171-Bankers Solicitors, etc., 221-Agent's lien. Sale of goods 47, unpaid Vendor's lien. T. P. 554 : 55 (6) seller's and buyer's lien.

3. Lien does not create general ownership as a mortgage does, not even qualified property as in a pledge—only right to retain possession.

4. Both mortgagee and pledgee can sell: but lien holder cannot.

Mortgage and a charge

1. A charge is defined in Section 100. There are two elements in a charge:
 - (1) There is a pecuniary liability.
 - (2) Immovable property is made security for the discharge of that pecuniary liability.
2. In a mortgage there are three elements :— (i) There is pecuniary liability.
 - (ii) Immovable property is made security for the discharge of that pecuniary liability.
 - (iii) There is a transfer of an interest in that property in favour of the creditor.
3. In a charge there is no transfer of interest. There is only burden.

*35 Cal. 837 (844) ;
13 Lab. 660 T. B.
35 Cal. 985.*
4. The difference between mortgage and charge is material.

1. A mortgagee can follow the mortgaged property in the hands of any transferee from the mortgagor. While a charge can be enforced only against transferee with notice—

33 Cal. 985.

§ DIFFERENT CLASSES OF MORTGAGE

1. The section enumerates six classes of mortgage :—
 - (i) (i) Simple mortgage.
 - (ii) (ii) Mortgage by conditional sale.
 - (iii) (iii) Unusufructuary mortgage.
 - (iv) (iv) English mortgage.
 - (v) (v) Equitable mortgage.
 - (vi) (vi) Anomalous mortgage.
2. Characteristics of the different classes of mortgage.
 - (i) Simple Mortgage
 1. 1. A Simple mortgage involves two things :
 - (i) A personal obligation, express or implied, to pay.
 - (ii) The transfer of a right to cause the property to be sold.

Personal obligation

1. When a person accepts a loan, there is involved a personal liability to pay, unless there is a covenant to pay out of a particular fund.

10 Cal. 740; 22 Cal. 434; 16 Cal. 540, 13 Mad. 192; 15 Mad. 304 ; 27

Mad. 526 : 86.

1. A loan may be a secured loan or unsecured loan.
2. 2. Every unsecured loan involves a personal obligation to pay.
441. A. 87.
3. The only case of a loan in which a personal obligation to pay is negatived, is where there is a covenant to pay out of a particular fund.
Cases. 10 Cal. 740 ; 22 Cal. 434 ; 16 Cal. 540 ; 13 Mad. 192 15 Mad, 304 ; 27 Mad. 526 : 86.

4. Whether a loan, for which there is security, involves a personal obligation to pay is a question of construction. Two propositions may be stated as those of law :—

(i) Personal liability is not displaced by the mere fact that security is given for the repayment of the loan with interest.

(ii) The nature and terms of security may negative any personal liability on the part of the borrower.

5. In a simple mortgage, there is always security given for the loan. The loan is a secured loan. But nature and terms of the security must not negative the personal liability of the mortgagor. A personal covenant to pay is implied in and is an essential part of every simple mortgage.

Cases. 22 All. 453 (461) ; 29 Mad. 491 ; 30 All. 388.

6. In the absence of such a covenant, the security would be a mere charge.

Cases. 42 All. 158 (164)=46 1. A. 228; 52 All. 901.

II. Right to cause the property to be sold.

1. This is a right in rem although it can only be enforced by the intervention of the Court, as the words, 'cause to be sold' indicate.

2. The transfer of this right may be express or it may be implied.

(ii) Mortgage by Conditional Sale

1. Characteristics.

- (1) The transfer is by way of sale. It is a transfer of ownership.
- (2) The difference between sale and mortgage by conditional sale is that, in sale the transfer is absolute while in mortgage by conditional sale, it is not absolute but is subject to a condition.
- (3) The condition may take three forms :—
 - (i) (i) That on default of payment of mortgage money *on a certain day*, the sale shall become absolute.
 - (ii) (ii) Then on such payment being made, the sale shall become void.
 - (iii) (iii) That on such payment being made, the buyer shall

transfer such
property to the seller.

2. A mortgage by conditional sale and a sale with a condition of repurchase have a very close resemblance. In both cases, there is a right of reconveyance :—

(1) But they are different in the nature of the terms on which the right to reconvey can be exercised vary.

(2) If it is a sale with a condition of repurchase then :— (i) The right is personal and cannot be transferred.

(ii) The right can be enforced on strict compliance with the terms laid down by the condition of repurchase.

Cases. 10 Cal. 30 ; 6 All. 37 ; 21 Bom. 528.

(3) If it is a mortgage by conditional sale, then—

(i) The right to reconveyance is not personal but is a right in term and can be exercised by the transferee.

(ii) Time will not be treated as of the essence.

3. *What is it that distinguishes sale with a condition of repurchase and mortgage by conditional sale?*

(1) In a mortgage by conditional sale, the transaction notwithstanding the form, remains a lending and borrowing transaction. The transfer of land, although it is in the form of a sale, in fact it is a transfer by way of security.

(2) In a sale with a condition of repurchase, the transaction is not a lending and borrowing arrangement. It is not a transfer of an interest. It is a transfer of all rights. It is not a transfer by way of security. It is an absolute transfer reserving only a personal right of repurchase.

What is the test for determining whether a transaction is a mortgage?

(1) No particular words or form of conveyance are necessary to constitute a mortgage. As a general rule, subject to very few exceptions, where a transfer of an estate is *originally* intended as a security for money, it is a mortgage and where it is not so originally intended, it is not a mortgage.

(2) (1) It is not the *name* given to a contract by the parties that determines the nature of the transaction. A document may be held to be a sale although it is called a mortgage by the parties.

2 Bom. 113.

(3) (2) It is the jural relation, constituted by it, that will determine whether the transaction is a mortgage or not.

2 Bom. 462.

4. *How to find what the intention of the parties was?*

By finding out how they have treated the money advanced? If they have

treated it as a debt, then it is mortgage. The criteria adopted by the Courts are—

- (i) The existence of a debt
- (ii) The period of repayment, a short period being indicative of a sale and a long period of a mortgage.
- (iii) The continuance of the mortgagor in possession indicates a mortgage.
- (iv) The price below a true value indicates a mortgage.

In applying these tests, the Courts put the onus on the party alleging that an ostensible sale-deed was a mortgage, and in a case of ambiguity, lean to the construction of a mortgage.

5. *Is oral evidence of intention admissible?*

1. Before the Indian Evidence Act was passed, oral evidence and other instruments were freely admitted to prove this intention. But this practice was condemned by the Privy Council.

2. After the passing of the Indian Evidence Act, the question was governed by Section 92.

3. Section 92 excludes oral evidence to contradict a written document. The Indian Courts, never the less, on the authority of *Lincoln vs. Wright (1859) 4 De G. & J. 16* admitted evidence of acts and conduct of parties to show, that a deed which purported to be an absolute conveyance was intended to operate as a mortgage.

4. In 1899, the Privy Council definitely ruled in *Balkishen v/s. Legge = 22 All. 149 = 27/. A. 58.* that the rule in *Lincoln vs. Wright* had no application in India.

5. The result is that, the Courts are definitely limited to the document itself in order to ascertain the intention of the parties.

The question is not what the parties meant, but what is the meaning of the words they used.

Importance of the Proviso.

1. 1. The condition must be embodied in the same document.

Points to be noted.

1. Only means that in determining the question if the condition is contained in another document Court cannot take into consideration in determining intention.

2. But, even if, it was contained in the same document, it is necessarily a mortgage by conditional sale and not a sale with the condition of repurchase.

3. The question of construction still remains.

(iii) Unusufructuary Mortgage

1. CHARACTERISTICS.

- (i) Delivery of possession or undertaking to deliver possession.
- (ii) Authority to retain such possession until payment of mortgage-money.
- (iii) Authority to receive the rents and profits and to appropriate the same in lieu of interest or in payment of the mortgage-money.

NOTE.—There is no personal obligation to pay.

(iv) English Mortgage

I. CHARACTERISTICS

- (i) There is a personal obligation to repay by the mortgagor on a certain day.
- (ii) The transfer of the mortgagee is *absolute*.
- (iii) The transfer is subject to the proviso that the mortgagee shall reconvey the property on payment.

II. This closely resembles the conditional mortgage. *Difference*.

(i) In the English Mortgage the sale is absolute while in the mortgage by conditional sale the sale is *ostensible*.

Query. How can it be a mortgage if the sale is absolute? This seems to conflict with the definition of mortgage which is transfer of an interest.

Difference in practice merely means this: that in English Mortgage, the mortgagee is entitled to immediate possession. While in the case of a mortgage by conditional sale, the right to possession depends upon the terms of the mortgage.

(2) In English Mortgage, there is a personal obligation to pay. In a conditional mortgage, there is no such right.

REQUISITES OF A MORTGAGE BY DEPOSIT OF TITLE DEEDS.

1. *Debt*.

1. A debt has been defined as a sum of money due now even though payable in the future, and recoverable by action—(7922) 2 K.B.599 (617).

NOTE.—AS to difference between a debt due by statute and debt due by contract—(1922) 2 K. B. 37. There is no necessity of a promise to pay in order to render the money recoverable when the debt is a statutory debt.

2. The debt may be an existing debt or a future debt. The deposit may be to cover a present as well as future advances—50

I. A. 283 ; 17 All. 252 ; 17 All. 252 ; 25 Cal. 611.

3. 3. The debt may be a general balance that might be due on an account.

2 Mad. 239 P. C.

III. I. DEPOSIT OF TITLE DEEDS.

(i) **Title deeds**

1. It has been held in England that it is sufficient if the deeds deposited *bona fide* relate to the property or are *material evidence of title*, and that, it is not necessary that all the deeds should be deposited. (1872) 8 Ch. App. 155.

2. These cases have been followed in India. 59 Cal. 7 81.

3. But Page *c.f.* in 11 Rang 239 F. B. held that the documents must not only relate to the property but must also be such as to show *a prima facie* or apparent title in the depositor.

4. If the documents show no kind of title, no mortgage is created—Tax receipt—Plan—not documents of title.

5. If the deeds are lost, copies may be deposited.

(ii) If the deeds are already deposited by way of mortgage, they can, by oral agreement, be made a security for further advance. It is not necessary that they should be handed back and redeposited.

17 All. 252.

25 Cal. 611.

III. INTENTION.

1. The intention that the title-deeds shall be the security for the debt is the essence of the transaction.

2. Mere possession is not enough without evidence as to the manner in which the possession originated so that a contract may be inferred.

23 1. A. 106; 38 Bom. 372.

I Rang. 545.

3. If it is in contemplation of the parties to have a legal mortgage prepared and if the title-deeds are deposited for that purpose *only*, the deposit does not create an equitable mortgage.

4. But although the deposit is for the purpose of the preparations of a legal mortgage, there may also be an intention to give an immediate security, in which case the deposit creates an equitable mortgage.

5. The question is whether mere possession *coupled with debt* does not raise an inference that it is a mortgage? There is a difference of opinion but the better opinion seems to be as between creditor and debtor possession coupled with debt raises a presumption in favour of a mortgage.

IV. TERRITORIAL RESTRICTIONS.

1. This kind of equitable mortgages can be created only in certain towns.

2. The question is, to what does the restriction refer? Does it to the place where the deeds are delivered? or does not refer to the place where the property mortgaged is situated? It is held that the restriction refers to the place where the deeds are delivered and not to the situation of the property mortgaged.

Cases. 14 All. 238. 231. A. 106.

It is not necessary for the property to be situated in the towns mentioned.

(vi) Anomalous Mortgages

1. Any mortgage, other than those specified, is called an anomalous mortgage. It is a mortgage which does not fall within any of the other five classes enumerated.

2. Anomalous mortgages take innumerable forms moulded either by custom or the caprice of the creditor—some are combinations of the simple forms—others are customary mortgages prevalent in particular districts, and to these special incidents are attached by local usage.

What is it that distinguishes different kinds of mortgage.

It is the nature of the right transferred which distinguishes the mortgage.

(1) In a simple mortgage, what is transferred is a power of sale which is one of the component rights that make up the aggregate of ownership.

(2) In a usufructuary mortgage, what is transferred is a right of possession and enjoyment of the usufruct.

(3) In a conditional mortgage and in an English mortgage, the right transferred is a right of ownership subject to a condition.

(4) In a simple mortgage and English mortgage, there is a personal obligation to pay.

(5) In an usufructuary mortgage and mortgage by conditional sale, there is no personal obligation to pay.

What is it that is common to all mortgages.

1. A mortgage is a transfer of an interest in specific immovable property as security for the repayment of a debt.

2. The existence of a debt is therefore a common characteristic.

3. It is said that this cannot be so because in a conditional mortgage or in an usufructuary mortgage there is no personal covenant to pay.

4. The reply to this is, a debt does not cease to be a debt. The remedy of an action for debt does not exist. The remedies for the recovery of debt may differ without the transaction ceasing to be a transaction for debt.

An ordinary mortgage of land may be viewed in two different aspects:

(1) Regarded as a promise by the debtor to repay the loan, it is a contract creating a personal obligation.

(2) It is also a conveyance, because it passes to the creditor a real right in the property pledged to him.

Out of this double aspect, many questions arise.

Q. I.—By what law the validity of a mortgage of land situated abroad should be governed?

It is now settled that it is governed by the law of *situs*, and no distinction is recognised between an actual transfer and a mere executory contract.

Q. II.—What is the *situs* of the secured debt—Is the debt to be regarded as situated in the country where the debtor resides, or where the land on which it is secured is situated?

The Privy Council says "It is idle to say that a debt covered by a security is in the same position with one depending solely on the personal obligation of the debtor".

III

REQUISITES OF A VALID MORTGAGE

This requires the consideration of the following topics :

- I. Formalities with which a mortgage must be executed.
- II. The proper subject-matters of a mortgage.
- III. The capacity to give and to accept a mortgage.
- IV. Contents of a mortgage-deed.

I FORMALITIES WITH WHICH IT MUST BE EXECUTED

Section 59.—

1. Except in the case of mortgage by a deposit of title-deeds, every mortgage created securing the repayment of Rs. 100 or more as principal money must, under the T. P. Act, be effected by a registered instrument, signed by the mortgagor and attested by at least two witnesses.

2. Where the principal money is less than Rs. 100, a mortgage may be created either by such an instrument or except in the case of simple mortgage by delivery of possession of the mortgaged property.

3. If the principal is Above Rs. 100, the transaction of mortgage must be in writing i.e. it must be by a deed and the deed must be:—

- (1) Signed by the mortgagor.
- (2) Attested by at least two witnesses.
- (3) Registered.

4. If it is less than Rs. 100 no writing is necessary. Parol agreement is enough in the case of:—

- (1) Simple mortgage.
- (2) Conditional mortgage.
- (3) English mortgage.
- (4) Usufructuary mortgage.

Parol agreement plus transfer of possession.

4. 4. We have only to consider mortgages where the principal is above Rs. 100.

(1)(1) § SIGNATURE

General Clauses Act 1897. Section 3 (52).

1. The signature may be made by means of types or by a facsimile. 25 *Cal. 911*. Such person having a name stamp used by servant.

2. It may be the mark of an illiterate person. 41 *Bom. 384* mark of a dagger.

3. But a literate person cannot sign by making a mark. Confession not signed the accused was literate. 32 *Cal. 550*.

Signature includes a mark in the case of a person unable to write his name.

(2) § ATTESTATION

1. *Attestation*.—To attest means to bear witness to, affirm the truth or genuineness of, to testify, certify. *Attestation* means the verification of the execution of a deed or will by the signature in the presence of witnesses. Attesting witness is a witness who signs in verification.

2. That being so question is, must the attesting witness be present at the execution of the instrument or a mere acknowledgement of execution by the mortgagor to a witness who afterwards subscribes his name is enough to satisfy the requirements of law in respect of attestation?

3. The Privy Council has laid down that the attesting witness ought to be present at the execution of the instrument and a mere acknowledgement will not suffice.

39 I.A. 218 ; 35 Mad. 607 which overrule the Allahabad and Bombay decisions to the contrary—27 *Bom. 91* and 26 *All. 69*.

§ ATTESTATION OF PARDANASHINS.

4. The same rule was applied. The signature of the Pardanashin lady must be in the presence of the witness otherwise he cannot be said to be an attesting witness.

Case Law. 451. A. 94.

A mortgage-deed for over Rs. 100 purported to be signed by a Pardanashin lady on behalf of her son, a minor and to be attested by two witnesses. It appeared from the evidence that the lady was behind the parda when the deed was taken to her for signature. The witnesses did not see her sign it, but her son came from behind the parda and told them that it had been signed by his mother; they thereupon added their signatures as witnesses :—

Held that the deed was not "attested" within the meaning of section 59 of the T. P. Act.

42 1. A. 163

A mortgage-deed purported to be executed by two pardanashin ladies. It appeared from the evidence of two of the attesting witnesses that they saw the hand of each executant when she signed the deed, and that although they could not see the faces of the executants, they heard them speak and recognised their voices :—

Held that the deed was duly attested in accordance with the T. P. Act.

5. The Law is now changed and attestation on acknowledgement of his signature by the executant is good—See Definition *Attested* in section 3, T. P. Act as amended in 1926.

(3) § REGISTERED

(Page left blank—ed.)

* * *

(Earlier portion not found—ed.) to operate immediately, it is not necessary that there should be a formal delivery or even that the document should go out of the possession of the party who executes it.

illus—Exton vs. Scott. (1833) 6 Simons 31.

A certain person having received moneys belonging to another without any communication with him executed in his favour a mortgage for the amount. The mortgagor retained the deed in his custody for several years and then died an insolvent. After his death the document was discovered in a chest containing his title-deed. It was contended that there was no binding mortgage, because there had been no delivery of the deed. But the contention is overruled, on the ground that there was no evidence to show that the deed was not intended to operate from the moment of its execution.

6. There seems to be an idea that if the deed is delivered to the other party, it must have immediate operation and *cannot* in point of law be delayed in its operation. But it is now established that evidence is admissible to show the character in which the deed is delivered to a person though he is himself a party taking under it and not a stranger. (1897) 2 Ch. 608.

7. Where an instrument is to come into operation, not immediately, but only upon the performance of some condition, it is known as an escrow which simply means a scrawl, or writing, that is not to take effect till a condition precedent is performed.

8. Mere execution is not enough. There must be intention to give it immediate effect. Delivery means an intention to give immediate effect.

That intention is independent of the process of delivery or non-delivery.

9. Where a document intended to be executed by one or some only and others refuse to complete it the question whether it is binding on those who have executed it, is one of the intention of the parties to be gathered from the facts of each.

§ MATERIAL ALTERATION IN A DEED—EFFECT OF

1. A material alteration in a deed made *without* the consent of the mortgagor and with the privity and knowledge of the person who relies upon it, would altogether destroy the efficacy of the deed.

2. If blanks are left to be filled up with merely formal matters the mortgagee may fill them up without imperilling his rights.

(1905) 2 Ch. 455.

3. 2. The question what constitutes a material alteration within the meaning of the rule has given rise to some difference of opinion.

10 C. W. N. 788 (of Mukerji J.)

Any change in an instrument which causes it to speak a different language in legal effect from that which it originally spoke, which changes the legal identity or character of the instrument either in its terms or the relation of the parties to it, is a material change, or technically, *an alteration*, and such a change will invalidate the instrument against all parties not consenting to the change.

An addition of a party to a contract constitutes a material alteration.

§ IMPORTANCE OF THE THREE FORMALITIES

1. The absence of any of three formalities is fatal to the validity of the transaction. The word is *only*.

2. Not only the formalities must exist but they must be valid, i. e., in accordance with law.

3. Not only must there be signature but the signature must be valid.

4. Not only must there be attestation but the attestation must be valid. If attestation is invalid, the deed cannot operate as a mortgage—e. g. attestation without the presence or acknowledgement by the executor.

5. Not only must there be registration but the registration must be valid. Thus

(i) If the property is so incorrectly described that it cannot be identified—18 Cal. 556/4.B.

(ii) When the deed is registered in a circle in which the property is not situate.

29 Cal. 654.

(iii) Where the deed is not presented for registration by the proper person the mortgage is invalid.

581. A. 58

Two other questions have to be considered in connection with the subject-matter of Formalities.

I IS EXECUTION OF THE DEED ENOUGH TO GIVE EFFECT TO THE MORTGAGE?

1. It is hardly necessary to state that the mere execution of a deed is not enough if it is not intended to operate as a binding agreement.

2. This is expressed in English Law by the formula that a deed must be delivered.

3. This may not be clear unless one understands what meant by 'delivered'. There is nothing mysterious about the delivery of a deed which does not represent any technical process, but only indicates that the instrument is to come into immediate operation.

4. Shephard in his *Touchstone* speaks of *delivery* as one of the requisites of a good deed and adds that it is a question of fact for the jury.

CASE LAW

I. I. SUIT AGAINST SECRETARY OF STATE

(1906) *I K.B.* 613; *5 Luc.* 157; *37Mad.* 55.

II. POSITION OF THE CROWN

1920 A.C. 508 ; *1932 A.C.* 28 ; *1929 A.C.* 285 ; *8 App.cases* 767 ; *8 M. I. A.* 500 ; *1903 App. cases* 501.

III. PARAMOUNTCY

(1792) *2 Ves.* 60 ; *13 M. P. C. C.* 22 ; (1906) *I K. B.* 613.

British India = Section 3(17) General Clauses Act, 1897. Whole of British India = includes the Scheduled Districts. *52 Mad.* 1.

Any newly acquired territory becomes an annexation part of British India—*Onsley vs. Plowden* (1856—59) *I Bom.* 145.

But it retains its laws until altered by the Crown or Legislature. *19 Bom.* 680 (686) following *I M.I. A.* 175/271.

Acts such as Stamp Act passed by the Indian Legislature have been extended to many places which though outside British India are under British Administration (e. g. Bangalore, Hyderabad assigned districts: Baroda cantonment: Mount Abu, etc.) by notifications under Sections 4 and 5 of the Foreign Jurisdiction and Extradition Act, 1879, and the Indian (Foreign Jurisdiction) Order in Council, 1902.

§ CAPACITY TO GIVE OR TAKE A MORTGAGE

1. A mortgage is a *transfer of property* and also a contract. It must therefore satisfy the requirements as to capacity laid down for a valid transfer of property and for a valid contract.

§ REQUIREMENTS AS TO CAPACITY FOR A VALID

TRANSFER OF PROPERTY

1. Transfer of property means an act by which a living person conveys property to one or more other living persons or to himself or to himself and one or more other living persons —Section 5.

2. A mortgage being an act of transfer of property, the parties to an act must be living persons.

3. When it is said that both persons must be living it is obvious that the intention is to make two distinctions :—

(i) Between a transfer *inter vivos* and a will. (ii) Between a transfer and the creation of an interest (Sections 13, 14, 16 and 20).

4. A will operates from the *death* of the testator. A mortgage therefore cannot be created by a will. It must be created *inter vivos*. A will does not operate as a transaction between two living persons.

5. A mortgage is a transfer of an interest. Sections 13, 14, 16—20 permit that an interest may be created in favour of a person not in existence at the date of transfer. But a mortgage is not the creation of an interest, but it is the *transfer* of an interest.

§ Living.

1. What is the meaning of the word *Living*? Does it mean one who has not suffered natural death or does it mean that a person has not suffered civil death? There may be no natural death although there may be civil death.

Illus. Sannyasi—Buddhist.

Where a person enters into a religious order renouncing all worldly affairs, his action is tantamount to civil death.

Illus.

Sannyasi—*Mulla.p.113*. Buddhist Monk—7. *Rang. 677. 1. B.*

2. A person who is civilly dead is not dead for the purpose of the T. P. Act.

3. *Living* as defined in explanation 3 to Section 299, I. P. C. would indicate that some part of its body must have been brought forth. But under the Hindu Law a son conceived is equal to son born—*Mulla p. 319*. A person may be living for the purpose of the Hindu Law and may not be for the purpose of T. P. Act.

16 *Mad.* 76 ; 37 *All.* 162 ; 58 *Mad.* 886.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52D. Notes on Acts and Laws PART IV.htm - _msocom_3

4. Another case of a person in a like position is that of a convict. A convict under the English Law, since he cannot enter into a contract or dispose of property, has no power to lend or borrow money on mortgage ;

but the administrator of a convict may mortgage any part of the convict's property.

A convict is defined in Section 6 of the Forfeiture Act *33 and 34 Vict. Ch. 23, 1870* : to mean any person against whom judgement of death, or of penal servitude, shall have been pronounced or recorded by any Court of competent jurisdiction in England, Wales or Ireland upon any charge of treason or felony.

4. 3. What about the position of a convict in India.

* (Page left blank in the Ms—ed.)

§ PERSON

1. The word "person" according to the General Clauses Act includes any company or association or body of individuals whether incorporated or not.

2. That the word person includes a "juristic person" such as a corporation was a long established view. But it is now made clear by a special proviso which was added to Section 5 of the T. P. Act in 1929.

3. A corporation, which has power to acquire and hold land has also impliedly power to mortgage it for purposes of carrying out the object for which it was created. The powers of statutory corporations are generally speaking regulated by the act of incorporation, but where borrowing is necessary for the purposes of the corporation, it is not forbidden by the T. P. Act because it is a "person".

4. By Hindu Law an *Idol* is recognised as a juristic person capable of holding property. 311. A. 203.

But the possession and management of the property of the *idol* are vested in the *Sebait*. But as the ownership belonged to the idol and as the idol is a juristic person and therefore a living person, it can be a party to the mortgage.

§ REQUIREMENTS AS TO CAPACITY FOR CONTRACT

1. This is dealt with in Section 7. Two things are necessary under section?

(i) Person must be competent to contract

(ii) Person must be entitled to transferable property or authorised to dispose of transferable property.

(i) § COMPETENT TO CONTRACT

1. Section 4 says that the Chapters and Sections of the T. P. Act which relate to contracts shall be taken as part of the Indian Contract Act.

2. Competency to contract must therefore mean competency in

accordance with the Contract Act.

Section 11. Every person is competent to contract who is of the age of majority according to the law to which he is subject, and who is of sound mind and is not disqualified from contracting by any law to which he is subject.

3. Disqualification of an Insolvent.

A word may be said as to the capacity of an Insolvent to deal with any property subsequently acquired by him. Now it is settled Law that an insolvent, who has not received his final discharge, cannot create a mortgage on immovable property acquired by him. *17 Mad. 21 (But See 8 Cal. 556).*

§ ENTITLED

1. The question is whether *entitled* means entitled as a full owner or as a limited owner.

2. That a full owner has the capacity to mortgage is obvious. The question is whether a limited owner has the capacity to mortgage?

3. Person holding property on trust for sale without express power to mortgage.

It may be laid down generally that a trust for sale containing a direction for absolute conversion does not authorise a mortgage.

4. *Partner*—can mortgage partnership property to secure partnership debt.

5. An executor or administrator under the Indian Succession Act is competent to transfer.

6. Hindu widow, a Member of a joint family and the Karta of a joint family, the Trustees of Hindu Religious Endowments.

7. The last two having their *power* and *necessity*.

§ TRANSFERABLE PROPERTY

1. The person whether he is a full owner or limited owner, the subject-matter must be transferable property.

2. What is transferable property?

(i) Section 6 says—Property of any kind may be transferred, except as otherwise provided by this Act or by any other law. Every kind of property is transferable unless its transfer is prohibited by Law.

(ii) The exceptions fall under two heads: (a) Merely personal rights cannot be transferred.

(b) An interest in property restricted in its enjoyment to the owner personally cannot be transferred.

3. This shows that there may be a mortgage of movable property. The T. P. Act does not deal with it because the contract deals with it as a pledge. It does not prohibit.

§ THE CONTENTS OF A MORTGAGE-DEED

It is desirable that the mortgage-deed should specify certain particulars.

1. The debt or engagement, which is the subject-matter of the security, should be specified in the deed, otherwise the mortgagor may substitute one debt for another.

2. The time for the payment or performance must be specified in the deed. A stipulation that whole will be payable on payment of instalment

3. The deed should also contain a covenant to pay because there are various kinds of mortgages in which no debt is implied.

4. The property which is given in mortgage should be sufficiently described. It is true, extrinsic evidence is always admissible for the purpose of identifying any property, where the description is either indefinite or even actually misleading.

Q.—Whether a mortgage can be created on a person's property, if such property is not specifically described? Whether a general mortgage is valid?

Q.—Whether a general pledge of all the property that the debtor then has, without any further distinction, can create a mortgage under our Law.

1. Distinction must be made between an instrument which contains sufficiently apt words to create a security and the one in which the debtor merely agrees that, if the money is not repaid, the obligee would be at liberty to recover the debt from the whole of the debtor's property.

In the latter case, if they *stand alone*, merely give the obligee the ordinary right of a creditor to levy execution on the property of his debtor and do not create any pledge.

Supposing the case to fall under the first head, is such hypothecation good to create a mortgage.

In India, the validity of such securities has been questioned on the ground that a general hypothecation is too indefinite to be acted upon.

(1) It is said that such hypothecations sin against the canon that a contract form must be definite and reliance is placed upon Section 29 of the Contract Act and Section 93 of the Evidence Act.

(2) Vagueness is a misleading term. It may mean (1) either that the language is so indistinct that it cannot be understood or (2) that the property to which it relates is not specified in the contract.

(3) Indefiniteness is, however, frequently confounded with what has been called wideness.

The subject-matter of a contract may be *wide and yet definite*. On the other hand it may be narrow and yet indefinite.

If a man says "I mortgage all my landed property", it is wide but definite.

If a man, who has several houses, says ' I mortgage one of my houses ', the description is not wide but is still indefinite.

(4) The word ' specific ' in the T. P. Act is used to distinguish it from general and unless the property is specified in the deed, there can be no mortgage in Law.

(5) The property must be specified although the Law does not say that it must be specified in any particular way.

THE RIGHTS AND LIABILITIES OF THE MORTGAGE INTRODUCTION

1. The property which is the subject-matter of the mortgage is subject to the rights of the mortgagor and the mortgagee.

2. There are two questions to be considered— (i) What are the rights of the mortgagor and mortgagee? (ii) What is the *nature* of those rights?

§ What is the nature of the rights

1. The English Law divides :—the interests of the mortgagor is spoken of as an equitable estate, while the interests of the mortgagee is spoken of as a legal estate. The Indian Law does not recognise this distinction between legal and equitable estate.

(1872) 1. A. Supp. 47 (71). 30 1. A. 238.

2. Even under the Trust Act this distinction is not recognised. 581. A. 279.

3. Both have legal rights—there is nothing equitable as opposed to legal.

II. Under the English Law mortgagee is owner while the mortgagor has a bare right of reconveyance.

1. Under the Indian Law it is just the reverse. The mortgagor is the owner and the mortgagee has only a right in re *abena*.

Rights of the Mortgagor

1. The Rights of the mortgagor fall into three divisions—

I. The Right to redeem.

II. The Right to manage the property.

III. The Right to obtain re-transfer.

§ Right to redeem Section 60

1. The right to redeem entitles the mortgagor to require the mortgagee to do three things— (i) To deliver to the mortgagor the mortgage-deed. (ii) To deliver possession if the mortgagee is in possession. (iii) To have executed and registered an acknowledgement in writing that the right (is

redeemed)*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52D. Notes on Acts and Laws PART IV.htm - _msocom_4

2. This right to redeem he can exercise on the following conditions:—

(i) On payment or tender of the mortgage money. (ii) At any time *after* the principal money has become *due*. (iii) If the right to redeem is not extinguished by act of parties or by decree of a Court. (iv) If the mortgagor is prepared to redeem the whole.

1. RIGHT TO REDEEM

1. The section is not prefaced by any such words as in the absence of a contract to the contrary.

2. The right of redemption is therefore a statutory right which cannot be fettered by any condition which impedes or prevents redemption.

491. A. 60. 3. Any such condition is void as a clog on redemption.

II. CLOG ON REDEMPTION—Any provision inserted in the mortgage transaction to prevent redemption by a mortgagor is void:

(1) The principle underlying the rule against clog is that, mortgage is a conveyance as a security for the payment of a debt. Nothing ought to prevent a man from getting back his *security*.

(2) There is a difference between *sale and security*. If sale, there is no right to get back property. If security, there is a right to get back property.

(3) This right cannot be taken away by a contract. If it does, it will be treated as a clog and will not be enforced.

III. INSTANCES OF CLOG ON REDEMPTION

I. The following clauses are clogs on Redemption :—

(1) Redeem during the life of the mortgagor.

(2) Redeem with his own money—not from any other person.

(3) Redeem by payment on due debt or the mortgage will become sale.

(4) Redeem on condition that mortgagor shall grant permanent lease to the mortgagee.

II. The following clauses are not deemed to be clogs on Redemption:—

(1) Not to redeem unless prior mortgages are redeemed.

(2) Not to redeem an usufructuary mortgage until after the expiry of 15 years.

(3) Postponement of the right to take possession after redemption for a reasonable and necessary period.

III. No hard and fast rule as to what is a clog and what is not :—

(1) The mere fact that the terms of a mortgage are hard, does not

make the clause a clog.

(2) The test is whether it hampers the mortgagor in the exercise of his right to redeem in such a way as to place the right to redeem beyond his reach.

(3) If the clause is a clog, then it will not be enforced, even though it may be contained in a consent decree. The right to redeem cannot be said to have been waived by consent

IV. The doctrine of clog on redemption relates only to the dealings which take place between the parties to the mortgage at *the time* when the contract of mortgage has been entered into. It does not apply to a contract made subsequently with each other.

1. That means that parties are not free at the time when the contract of mortgage is made to take away the right of the mortgagor to redeem.

2. But they are at liberty subsequently to alter the terms of the contract of mortgage and any clause which fetters the right to redeem will not be treated as a clog.

V. *Due*.

1. Must be distinguished from payable. Money may be payable but not due.

2. Due = demand able.

3. If it is not paid on due date, the right to redemption is not lost. Mortgage remains a mortgage—only it can be exercised.

VI. Payment.

(i) Payment must be to *all* if there are more than one mortgagee. (ii)

Mode of payment—legal tender or any other medium acceptable to the creditor. (iii) Place of payment—(Page left blank in Ms—ed.)

Redemption and Improvements Section 63 A.

1. The mortgagor on redemption is entitled to improvements in the absence of a contract to the contrary.

2. The mortgagor shall be liable to pay the cost of improvements if the improvement was— (i) necessary to preserve the property from destination. (ii) necessary to prevent security from being insufficient. (iii) made in compliance with lawful order of a public authority.

3. This also is subject to a contract to the contrary.

4. Section 63 A lays down the general rule that ordinarily a mortgagee is not at liberty to effect improvements and charge the mortgagor therewith. The object of the law is to prevent a mortgagee from laying out large sums of money and thereby increasing his debt to such an extent as to cripple the power of redemption. The mortgagee cannot be allowed to make

redemption impossible by making improvements—This is called improving a mortgagor out of his estate.

5. The mere *consent* of the mortgagor to improvements is not enough to make him liable, unless it amounts to a promise to reimburse.

Right of Redemption and the benefit of the renewal of a lease

Section 64

The renewal of a lease is a kind of an accession to the original interest of the mortgagor.

1. If the mortgagee obtains a renewal of the lease, the mortgagor is entitled to the benefit of the renewed lease on redemption.

2. This is subject to a contract to the contrary.

Right of the Mortgagor to manage *Section 66*

1. As long as the mortgagor remains in possession, he is at liberty to exercise the ordinary rights of property and to receive the rents and profits without accounting for them.

2. Question is whether the mortgagor is liable for waste?

3. This is a Section which deals with the doctrine of waste. Waste is either voluntary or permissive. *Voluntary waste* implies the doing of some act which tends to the destruction of the premises, as by pulling down houses, or removing fixtures ; or to the changing of their nature as the conversion of pasture land into arable or pulling down buildings.

Permissive Waste implies an omission whereby damage result to the premises, where for instance houses are suffered to fall into decay.

To constitute voluntary waste by destruction of the premises, the destruction must be wilful or negligent; it is not waste if the premises are destroyed in the course of reasonable user and any user is reasonable if it is for the purposes for which it is intended to be used, and if the mode and extent of the user is apparently proper, having regard to the nature of the property and what the tenant knows of it.

4. According to Section 66 the mortgagor is not liable for permissive waste. He is liable for voluntary waste which renders the security insufficient.

5. A security is insufficient if the value is less than 1/3 of the money due and less than 1/2 if the security is buildings.

For Section 65 A.—Please see page No. 523

Liabilities of the mortgagor

Section 65.

1. The liabilities consists of certain statutory covenants.

2. They are warranties for the breach of which the mortgagor is liable.

I. GENERALLY— (a) *Covenant for title.*

(i) There is a title in the mortgagor in the interest transferred. (ii) That he had the right to transfer. *Substituted Security*

Where the owner of an undivided share in a joint and undivided estate mortgages his undivided share, the person who takes the security i.e. the mortgagee takes it subject to the right of these co-sharers to enforce a partition and thereby convert what is an undivided share of the whole into a defined portion held in severally—II. A. 106. After partition the security will be the separate share allotted in place of the undivided share. Proceed against the share allotted and not against share originally mortgaged.

* * *

(a) *Covenant to deferred title.*

(b) *Covenant to pay public dues—if the mortgagee is not in possession.*

(c) *Covenant to pay prior Encumbrance (debt) on its being due.*

II. WHEN THE MORTGAGED PROPERTY IS LEASEHOLD.

(i) Covenant that all conditions have been performed down to the commencement of the mortgage.

(ii) Covenant to pay rent reserved by the lease if the mortgagee is not in possession.

(iii) Covenant to perform all the conditions if the lease is renewed.

These covenants are not personal covenants. They run with the mortgaged property and can be availed of by a transferee from the mortgagee.

* * *

Rights of the Mortgagee

1. They fall into two divisions—

(1) Right to realise the mortgage money.

(2) Right to have the security maintained in tact during the continuance of the mortgage.

1. RIGHT TO REALISE THE MORTGAGE MONEY.

1. Under this fall the following rights—

(1) Right to foreclose 67.

(2) Right to sell 67/69.

(3) Right to sue for mortgage money 68.

(4) Right to claim money on sale and acquisition 73.

2. A suit to obtain a decree that a mortgagor shall be absolutely debarred of his right to redeem the mortgaged property is a suit for foreclosure.

NOTE.—

1. Mortgage money does not mean the whole of the mortgage money.

If a mortgage is payable by instalments, it is open to the mortgagee to bring a suit for foreclosure for an instalment of the principal and interest. *13 M. L. 1. 2.*

2. In the absence of an express stipulation, a mortgagee is not bound to receive payment by instalments—*24 All. 461.*

3. A suit for interest is maintainable even before the principal money became due unless there is a covenant prohibiting him from doing so.

4. The three rights are not available to every mortgagee.

1. THE RIGHT TO SUE FOR MONEY.

Section 68.

This is available only where the mortgagor binds himself to repay the same.

Question.—When can it be said that a mortgagor *personally* binds himself to pay?

There are two views on the matter.

(a) A personal covenant is presumed in all mortgages of whatever form. According to this view, the only difference that can arise is that the Court might in the absence of an express covenant, demand more clearly implied covenants than it might require in other case—*13 Lab. 259.*

(b) The other view is that a covenant can arise only where there is an express covenant the words are *binds* himself. This clause would be unnecessary if personal covenant was implied in all cases.

By definition

Section 58.

1. The mortgagor in a simple mortgage *binds* himself to repay the money.

2. In a mortgage by conditional sale, he says that "if he pays he will recover his property".

3. In a usufructuary mortgage he does not even make this qualified covenant. It is therefore clear that a mortgagor can sue for a money decree in the case of a simple mortgage but not in the case of other kinds of mortgages unless there is an express covenant to that effect.

Exceptions.

The mortgagor can sue for a money decree from the mortgagor. But he cannot sue for a money decree from a transferee from the mortgagor or from his legal representative.—

Other cases in which he can sue for a money decree.

Generally a mortgagee can sue for a money decree when there is a personal covenant by the mortgagor to pay.

2. There are cases where a mortgagee can sue although there is no personal covenant to pay—

Section 68.

(i) Where by accidental causes, not due to the act of either party such as fire, flood or *vis major* the property is destroyed, wholly or partly, or is rendered insufficient and the mortgagor on being given an opportunity fails to give further security.

(ii) Where the mortgagee is deprived of the whole or part of his security by the wrongful conduct of the mortgagor.

(iii) Where the mortgagee being entitled to possession, the mortgagor fails to deliver possession or fails to secure the mortgagee in his possession.

Right to sell 1.

This right belongs only to—

- | | | |
|-------|-------|----------------------------|
| (i) | (i) | Simple mortgagee. |
| (ii) | (ii) | English mortgagee. |
| (iii) | (iii) | (iii) Equitable mortgagee. |

2. They cannot sue to obtain possession. They can only sue for sale. If the Court erroneously gives him possession, that possession does not amount to foreclosure and the mortgagor can subsequently redeem the mortgage.

19 Mad. 249 (252-53) P. C.

CONDITIONS FOR THE EXERCISE OF THE RIGHT OF SALE AND FORECLOSURE.

1. After the mortgage-money has become due and before decree for redemption is made.

2. Suit must be for the whole of the mortgage-money. There cannot be a suit for the realisation of a part of the mortgage-money by sale or foreclosure of a part of the mortgage property.

Exception.—If there is a severance of the interests of the mortgagee with the consent of the mortgagor, a suit for a part may be brought by the mortgagee.

Section 67 A.

3. A mortgagee who holds *many* mortgages against the same mortgagor must bring *one* suit on those mortgages in respect of which—

(i) A right to sue has accrued to him and

(ii) In respect of which he has a right to obtain the same kind of decree.

Section 65 A.

4. If the mortgagor could not only manage the property but, if he is

lawfully in possession of the mortgaged property, he shall have the power to make leases thereof which would be binding upon the mortgagee.

5. After the mortgage this power of the mortgagor to deal with the property is limited. He has not anything like general authority.

6. The power to lease is circumscribed by certain condition.

(i) He may lease it in accordance with local law, custom or usage.

(ii) Every lease shall reserve lest rent can reasonably be obtained—rent shall not be paid in advance.

(iii) The lease must not contain a covenant for renewal.

(iv) Lease shall take effect from a date not later than 6 months from the date on which it was made.

(v) In the case of a lease of a building, the duration of the lease shall not exceed three years.

7. The general power of the lease is subject to a contract to the contrary. The other provisions are subject to variations.

Right to foreclose. This right belongs to—

(1) Mortgagee by conditional sale.

(2) Mortgagee by anomalous mortgage by the terms of which he is entitled to foreclose.

Mortgagees who can neither sue for sale nor for foreclosure.

(1) Usufructuary mortgagee.

(2) Mortgagee of a Railway and canal or other work in the maintenance of which the public are interested. *Case of a mortgagor who may become a trustee or executor of the mortgagee or the mortgagee may become a trustee or executor of the mortgagor.*

Can such a mortgagor or mortgagee foreclose sale?

Sub-clause (b) of Section 67 provides for the case of a mortgagor who has become a trustee for the mortgagee. According to this clause a mortgagor trustee, who may sue for sale, is not allowed to foreclose.

In the other case the foreclosure is equally prohibited according to English practice on the principle that it is the duty of the trustee to consult the interests of the mortgagor and that it is for the mortgagor's interests that a sale and not foreclosure, should take place.

EXERCISE OF THE POWER OF SALE WITHOUT THE INTERVENTION OF THE COURT

1. As a rule, a mortgagee can bring the property to sale only through the Court.

2. Section 69 provides exceptions to this rule.

(i) Where the mortgage is an English mortgage and neither the mortgagor or the mortgagee is a Hindu, Mohammedan or Buddhist or a

member of a community notified in Gazette.

(ii) Where a power of sale is expressly given by the deed and the mortgagee is the S. of S.

(iii) Where a power of sale is expressly given by the deed and the property or any part of it was on the day of the execution of the deed situated in the towns of Bombay, etc

Section 69 A.

3. The mortgagee who has the *power* (as distinguished from the right) to sell without the intervention of the Court is also entitled to appoint a receiver by writing signed by him or on his behalf.

4. The exercise of this power of sale or power of appointing a receiver is to notice to the mortgagor.

5. The notice must be in writing requiring payment of the principal money and default for three months.

Section 73. I Mortgagee's Right to proceeds of sale

1. When property is sold for failure to pay arrears of revenue or other public charges and such failure is not due to default by the mortgagee, the mortgagee is entitled to claim the balance of the sale proceeds.

2. Similarly if the mortgage property is compulsorily acquired, the mortgagee shall be entitled to claim payment of the mortgage money out of the amount due to the mortgagor as compensation.

3. His claim shall prevail against all except those of the prior encumbrances.

4. The claim may be enforced although mortgage money has not become due.

//. *Rights of the mortgagee to the maintenance of the Security in tact during the continuance of the mortgage.*

I. Right to accession—Section 70.

II. Right to renewed lease—Section 71.

III. Right to preserve property—Section 72.

Section 70

1. § Right to accession.

1. The mortgagee is entitled to the accession for the purpose of his security *if* the accession is made after the date of the mortgage. *29 Cal. 803.* Where two mortgages were executed on a land on which there was a house and thereafter two new houses were built by the mortgagor on the land held that they were accessions on which a mortgagor could rely for security.

If the house was built *before* mortgage, he could not.

He could not if it was built after decree although the section does not say

so.

This is subject to a contract to the contrary. *Section 71.*

2. § Right to the benefit of a renewed lease.

He will be entitled to the benefit of the new lease for the purposes of his security.

This is subject to a contract to the contrary. *Section 72.*

3. § Right to preserve the property.

1. A mortgagee may spend such money as is necessary—

- (i) (i) for the preservation of the mortgage property from destruction, forfeiture or sale.
- (ii) (ii) for supporting the mortgagor's title to the property.
- (iii) (iii) for making his own title thereto good against the mortgagor.
- (iv) (iv) when the mortgaged property is a renewable leasehold, for the renewal of the lease.
- (v) (v) he may insure if the property is insurable and add the cost to the principal money.

Right of mortgage to Priority

I. PRIORITY BY TIME.

1. The general rule regarding priority in the matter of transfers of interests in immovable property is laid down in Section 48 of the T. P. Act.

2. The same rule applies to questions in regard to mortgages so that priority of mortgages in India depends upon the respective dates of their creation, the earlier in date having precedence over the latter—*56Cal.868.*

3. Section 78 is an exception to this rule. It lays down that the Court would postpone the prior mortgagee to the subsequent mortgagee where the prior mortgagee has, through fraud, misrepresentation or gross neglect, induced the subsequent mortgagee to advance money on the security of the mortgaged property.

Misrepresentation:

1. Is defined in Section 18 of the Indian Contract Act.
2. It does not necessarily mean fraudulent misrepresentation.

Fraud

Gross Negligence.

There is a difference between English and Indian Law. According to English Law gross negligence means negligence *amounting to fraud.*

According to Indian Law gross negligence is different from fraud.

II. PRIORITY BY PAYMENT.

Q.—Can a mortgagee acquire priority over an intermediate mortgagee by buying the rights of an earlier mortgagee?

Section 93

1. A mortgagee cannot acquire priority over an intermediate mortgagee by paying off a prior mortgagee whether he pays with or without knowledge of the intermediate mortgagee.

2. A mortgagee making a subsequent advance to the mortgagor, shall not acquire priority in respect of such subsequent advance over an intermediate mortgagee, whether he makes the advance with or without the knowledge of the intermediate mortgagee.

Section 79

This Section forms an exception to the second rule laid down in Section 93.

Under Section 79. A subsequent mortgagee having notice of the prior mortgage is postponed in respect of any subsequent advance if the prior mortgage is made to secure future advances and the subsequent advance does not exceed the maximum.

Right of Mortgagee to Marshalling*Section 81.**Section 82.***Question of Marshalling**

1. This arises when two or more properties are mortgaged to two *different* mortgagees in such a way that both properties are subject to the mortgage rights of one mortgagee while only one is subject to the mortgage rights of the other.

Illus.

A is the owner of two estates—Whiteacre and Blackacre. *A* mortgages Whiteacre and Blackacre to *B* and thereafter mortgages Blackacre to *C*.

The position that arises is this. *B* has a mortgage over Whiteacre as well as Blackacre. *C* has a mortgage over Blackacre only. From the standpoint of realizing the mortgage money *B* has a right to sell both Whiteacre as well as Blackacre. While *C* has a right to sell only Blackacre.

If B were allowed to exercise his rights as a mortgagee it would result in prejudice to the rights of *C*.

In order to protect *C* equity invented the doctrine of marshalling—under this equity compelled *B* to proceed first against that property which is not the subject-matter of security for the debt of another mortgagee. This is embodied in Section 81.

Note.—1. It is unnecessary for the mortgagee to have had no notice of the former mortgage in order that he may be able to claim the benefit of marshalling.

CHAPTER 8 LAW OF EVIDENCE

LAW OF EVIDENCE

1. § Meaning of the word Evidence

Like most of the words used in the statutes the word has a popular as well as technical meaning.

Popular meaning

Evidence in its ordinary sense signifies that which makes apparent the truth of the matter in question.

4 Mad. 393.

Technical meaning

The word however is used in the Evidence Act in a technical sense.

Section 3 defines the sense in which the word evidence is used in the Evidence Act. According to that Section

Evidence means and includes :

- (1) All Statements which the Court permits or requires to be made before it by witnesses in relation to matters of fact under enquiry;
- (2) All documents produced for the inspection of the Court. This definition of the term 'Evidence' is incomplete.

The depositions of witnesses and documents which only are included in the term evidence as defined by the section are the two principal means by which the materials upon which the judge has to adjudicate are brought before him. The examination of witnesses is generally indispensable and by means of it, all facts except the contents of documents may be proved (Sec. 59). For the proof a document as a statement made by the person by whom it purports or is alleged to have been made, oral Evidence is required. (Sec. 67-73).

As compared with the definition of the word "Proved" this definition of the word "Evidence" is narrow. According to the definition of the word "Proved",

"A fact is said to be proved when, after considering **the matters before it**, the Court believes it to exist....."

The Expression **matters before it** is much wider than what the word **Evidence** is said to include.

Evidence does not include :

- (1) Statement made by the parties and accused persons.
- (2) demeanour of witnesses.
- (3) Results of local inspection.
- (4) Facts judicially noted.

(5) Any real and personal property, the inspection of which may be material in determining the question at issue such as weapons, tools or stolen property.

(6) Questions put to the accused by the Magistrate and the answers.

But all these are included in the expression "matters before it".

The point is that the definition of evidence is strictly applicable to matters dealt with in the Evidence Act. It does not apply to evidence as dealt with by other Acts.

2. § Genesis of the Indian Evidence Act.

1. The Law of Evidence in India is contained in Act I of 1872.

§ Diversity of the Law of Evidence

2. There were two sets of Courts in British India ever since 1773 when the Regulating Act was passed by Parliament with a view to control the administration by the East India Company of its Indian possessions. There were the Supreme Courts established by Royal Charter in the Presidency Towns of Bombay, Madras and Calcutta. In the Muffassils, there were Courts established by the East India Company, Civil and Criminal. The rules of Evidence followed by the Supreme Courts were different from the rules of evidence followed by the muffassil Courts.

3. The Supreme Courts followed such of the rules of evidence as were contained in the Common and Statute Law which prevailed in England before 1726 and which were introduced by the Charter of that year in India. Some others were rules to be found in subsequent statutes of Parliament expressly extended to India; while others again, had no greater authority than that of use and custom.

4. For the Courts outside the Presidency Towns and not established by the Royal Charter no complete rules of Evidence were ever laid down or introduced by authority. Regulations made between 1793 and 1834 contained a few rules. Other were derived from a vague **customary law of evidence** partly drawn from the Hedyā and **Mohomedan Law Officers**. Others were drawn from English text books.

§ Efforts towards Uniformity:

5. The first Act of the Governor General in Council which dealt with evidence, strictly called, was **Act X of 1835** which applied to all the Courts in British India and dealt with the proof of the Acts of the Governor General in Council.

This was followed by **eleven enactments passed at intervals** during the next twenty years, which effected various small amendments of the law of evidence and applied to the Courts in India several of the reforms in the law of Evidence made in England.

In 1855, Act II of 1855 was passed for the further improvement of the law of evidence which contained many provisions applicable to all the Courts in British India.

6. Notwithstanding this attempt at uniformity there continued to be a great deal of disparity between the rules of Evidence applicable in the Presidency Towns and those applicable in the Muffassil. This disparity continued to be the subject of frequent judicial comment.

To remedy this state of affairs. Act of 1872 was passed.

§ Construction of the Act :

1. An Act may be (1) to *consolidate* or (2) to *amend* or (3) to *consolidate and to amend* or it may be to *define* i. e. to codify. The construction of an Act would differ according as it is a consolidating Act or a Codifying Act.

2. **Construction of a Codifying Act :** The rule of construction in regard to a Codifying Act is laid down in (1891) A. C. 107 (120).

Bank of England vs. Vagliano .

Lord Halsbury observed:

P. 120.

“I am wholly unable to adopt the view that where a statute is expressly said to Codify the law, you are at liberty to go outside the Code, so created, because before the existence of that code another law prevailed.”

Lord Harschell observed:

P. 144

“The proper course is in the first instance to examine the language of the Statute and to ask what is its natural meaning, **uninfluenced by the considerations derived from the previous state of the law** and not to start with enquiring how the law previously stood and then assuming that it was probably intended to leave it unaltered, to see if the words will bear an interpretation in conformity with this view.”

3. The object of codification of a particular branch of the law is that, on any point specifically dealt with by it, such law should be sought, for in the codified enactment, and is ascertained by interpreting the language used.

4. Construction of a Consolidating Act: The rule of Construction in regard to a Consolidating Act is laid down in (1894) 2 Ch. 557.

Shitty J. (P. 561) observed after referring to the rule of construction laid down in *Bank of England vs. Vagliano* in regard to a codifying Act. in Lord Halsbury

"..... But I have here to deal, not with an Act of Parliament codifying the law, but with an Act to amend and to consolidate the law and therefore it is I say these observations (of lord Halsbury) do not apply and I think it

is legitimate in the interpretation of the section in this amending and consolidating Act to refer to the previous state of the law for the purpose of ascertaining the intention of the legislature.”

5. The object of consolidation with or without amendment is merely to assemble together the scattered parts of the Existing law. It is merely a re-enactment of the old law. It is not a new enactment of the law. Prima facie the same effect ought to be given to its provisions as was given to those of the Acts for which it was substituted.

6. The Indian Evidence Act is as stated in the Preamble an Act to *Consolidate, define and amend* the law of evidence.

It is not a statute which merely consolidates and amends the evidence i. e. it codifies the law of evidence. Its constructions will be governed by the rule laid down in *Bank of England vs. Vagliano* and not by the rule laid down in it.

§ Scope and Extent of the Act

1. The scope of the Act is defined in *Section 2*. Under section 2 the law of evidence is contained :

(i) In the Evidence Act and

(ii) In other Acts or statutes which make specific provision on matters of evidence and which are not expressly repealed.

This Section in effect prohibits the employment of any kind of evidence not contained in the Act or any other statute or Regulation not expressly repealed.

Section 2:—The following laws shall be repealed.

(1) All rules of Evidence not contained in any Statute Act or Regulation in force.

(2) All such rules contained in Regulation as have acquired the force of law under Section 25 of the Indian Councils Act, 1861.

(3) Enactments mentioned in the Schedule.

2. The Evidence Act and other Acts relating to Evidence—

(1) The Evidence Act is a separate statute dealing with an important branch of law and its provisions are independent of the rules of procedure contained in the Criminal Procedure Code and must have full scope unless it is clearly proved that they have been repealed or altered by another statute.

7 Lah. 84.

§ Application of the Act

Section I prescribes the application of the Act

(1) Territorial Application

It extends to the whole of British India and therefore applies to the

Scheduled Districts.

It extends to places where it has been declared to be in force.

(2) *Application to Tribunals* It applies to all judicial proceedings **in or before any Court.**

(i) WHAT IS MEANT BY A JUDICIAL PROCEEDINGS? There is no definition.

An inquiry is judicial if the object of it is to determine a jural relation between one person and another or a group of persons or between him and the Community generally ; but even a Judge acting without such an object in view is not acting judicially.

12 Bom. 10 M. 1. A. 340.

An inquiry under section 32 of the Bombay Land Revenue Code is not a Judicial proceeding.

22 Bom. 936.

2. The Act applies to all judicial proceedings i. e. to **civil** as well as **criminal.**

3. The Act speaks of proceedings not merely suits and trials. Proceedings is a wider term. Inquiry under *Section 107 or 144* of the Criminal Procedure Code is not a trial but is a proceeding. Similarly execution of a decree is not a suit but is a proceeding. Consequently the Act applies to proceeds other than trials and suits.

(ii) **What is a Court**

1. Section 3 which is an interpretation clause speaks of the sense in which the word Court is used in the Act. According to this Section—

“Court includes all Judges and Magistrates, and all persons, except Arbitrators, legally authorised to take evidence. ’ ’

2. **This Section does not define what is a Court.** It merely says what is to be included in the meaning of the word Court i. e. what functionaries are to be treated as a Court.

3. Where in an interpretation clause it is stated a term includes this and that, the meaning is that the term retains its ordinary meaning and the clause enlarges the meaning of the term and makes it include matters which the ordinary meaning would not include.

23 A. L. J. 845.

4. **The Court means all persons except Arbitrators who are legally authorised to take evidence.** That being so the word Court is not to be confined to persons presiding over a Civil tribunal or a Criminal tribunal.

A Registrar holding an enquiry and taking evidence under the Registration Act is a Court.

15 Mad. 138.

A Commissioner appointed under order XXVI R. 1-10 of the Civil Procedure Code and under Section 503-508 of the Criminal Procedure Code is a person legally entitled to take evidence and as such he is a court.

5. Judges.

No definition of the word "Judges" is given in this Act. Section 2 (8) of the Civil Procedure Code defines the word ' Judge ' to mean the presiding officer of a Civil Court.

Section 19 of the Indian Penal Code, also gives definition of the word Judge. According to this definition a Judge is a person designated as a Judge also a person who is empowered by law to give, in any legal proceeding, civil or criminal a definitive judgement.

6. Magistrates.

No definition of this term is given in the Act. The General Clauses Act (X of 1897) lays down the following definition of the term:—

Magistrate shall include every person exercising all or any of the powers of a Magistrate under the Code of Criminal Procedure for the time being in force.

7. The peculiarities of these definitions is that they are neither uniform nor are they co-extensive.

(i) The basis of the definition of Judge in the Civil Procedure Code is the presidency of the officer.

The basis of the definition of the same word under the Indian Penal Code is his authority to give the Judgement. The basis of the definition under the evidence is the power to take evidence.

(ii) The definition of a Judge under the Criminal Procedure Code would not include a Magistrate. But the definition in the Indian Penal Code would include a Magistrate.

(iii) The Evidence Act would not include Arbitrator either Judges or Magistrates. But the definition of ' Judge ' in the Indian Penal Code would include Judges, Magistrates as well as Arbitrators.

The conclusion is that the definition of the word Court in the Evidence Act is framed only for the purpose of the Act. itself and should not be extended beyond its legitimate scope.

§ Proceedings to which the Evidence Act does not apply

1. The Act does not apply to :—

(i) Judicial proceedings in or before a Court Martial convened under the Army Act or Air Force Act. (ii) Affidavits presented to any Court or officer. (iii) Proceedings before an Arbitrator.

Proceedings before a Courts Martial

1. The Act does apply to the proceedings of a Courts Martial under the

Indian Army Act i. e., it applies to Native **Courts Martial**. *Act VIII of 1911*.

2. The Act also applies to all proceedings before the Indian Marine Courts.

Act XIV of 1887 s. 68.

Act V of 1898.

Act XVII of 1898.

Act I of 1899.

3. The Act does not apply to the proceedings of a Court Martial convened under the British Army or Air Force Act.

Questions relating to evidence are determined by *Ax loci contractus*, but by the law of the Country where the question arises where the remedy is sought to be enforced and where the court sits to enforce it.

The law of evidence which governs the proceedings before a court is the

Ax fori.

This provision of the Evidence Act is an exception to this general principle.

II. Affidavits.

1. Ordinarily the evidence of witnesses shall be taken orally in open Court in the presence and under the personal direction and superintendence of the Judge (Order 18 R. 1. C1.P. C.).

2. An Affidavit is a evidence contained in a statement or a declaration in writing on oath or affirmation before a person having authority to administer oath or affirmation.

3. Matters relating to affidavit are regulated by the Civil Procedure Code.

4. **Affidavit is evidence not taken before the Court and not subjected to cross examination.**

5. The safeguards for truth in affidavits are two :

(i) Provisions for the production of the witness for cross Examination.

(ii) Provisions of the Penal Law relating to giving of false evidence.

III. Proceedings of the Arbitrator.

He gives rough and ready justice and cannot be bound by the technicalities of the Law of Evidence.

§ Proper approach to the study of the Evidence Act.

1. The Indian Evidence Act divides the subject matter of evidence into three parts :

Part I deals with Relevancy of facts—what facts can be proved.

Part II deals with Proof.

Part III deals with Production and Effect of Evidence— Burden of Proof.

2. This may be a logical order. It may be a scientific order. But this certainly does not appear to be a natural order, natural from the point of view of the litigant.

3. The rules of Procedure regulate the general conduct of litigation; the rules of pleading help to ascertain for the guidance of parties and the Court, the material facts in issue in each particular case. Then arises the question of proof i. e. the Establishment of the facts in issue by proper legal means to the satisfaction of the Court.

4. The first question which faces the litigant is **who must prove the issue?** The questions how and by what sort of evidence he can prove them are secondary questions to him. We must therefore begin with **Burden of Proof.**

BURDEN OF PROOF

Notes on Acts and Laws

Notes on Acts and Laws

BURDEN OF PROOF

1. What Is Meant By Burden Of Proof
2. The Burden Of Proving The Issue In Criminal Trials
3. The General Rule Regarding Burden Of Proving Good Faith
4. Judgements As Conclusive Proof
5. English And Indian Law Of Estoppel

BURDEN OF PROOF

1. What is meant by Burden of Proof.

Description, letter, then definition:

The judge or jury can decide a case only by considering the truth and value of the several facts alleged and proved by the parties and as the facts are unknown to both judge and jury. They must be established by evidence. The question at once arises, which party must adduce evidence? The responsibility for adducing such evidence as will establish any allegation is called the "Burden of Proof".

2. The subject-matter of the Burden of Proof as applied to judicial proceedings falls into two parts:

1. Burden of Proving an issue.
2. Burden of Proving a particular fact.

THE NECESSITY FOR MAKING THIS DIVISION.

1. The Proof of an issue may involve the proof of many facts as they may involve the proof of only one fact.

Illustration:

1. Issue is, Did A commit murder of B?
2. Issue is, Is the signature on the document that of A?

Issue No. 2 involves the proof of one fact only. Issue No. 1 may involve the proof of many facts.

e. g. Was A present? .
Could C see him?

Is the bloodstained shirt his? and so on.

§ Burden of Proving an issue.

3. The framing of an issue presupposes an assertion of the existence of a certain set of facts and circumstances by one party and the denial of them by the opposite party. There are two ways by which the issue may be adjudicated upon (1) By proving that the circumstances alleged do not exist or (2) By proving that the circumstances alleged do exist. Question is which of the two modes of proving the issue to be adopted—the mode of proving the affirmative or the mode of proving the negative.

4. Where there are no reasons for holding :

- (a) that what is asserted is more probable than what is denied
and

(b) where the means of proof are equally accessible to both the parties then the rule is that the party which alleges the existence of the facts must prove that they exist. The burden is on him who states the affirmative of the proposition. He who denies need not prove that they do not exist.

This rule is laid down in Section 101.

5. Reasons why the law requires the affirmative to be proved instead of the negative.

(1) The man who brings another before a judicial tribunal must rely on the strength of his own right and the clearness of his own proof, and not on the want of right or the weakness of proof in his adversary.

Illus. *Midland Rail Co. vs. Bromby*—17 C B 372.

Doe vs. Longfield—16 M & W 497.

17 C. B. 372

P. 380

(2) A simple negative by reason of its indefiniteness is difficult if not impossible of proof. A person asserts that a *certain event took place*, not saying when, where, or under what circumstances. How can a person disprove that, and convince others that at no time, at no place and under no circumstances has such a thing occurred. The utmost that could possibly be done in most instances would be to show the impossibility of the supposed event and even this would require an enormous mass of presumptive evidence.

A negative averment must be distinguished from a contradiction of a positive averment, technically known as a "traverse".

Illustrations: Malicious Prosecution.

In an action for Malicious Prosecutions the Plaintiff makes two main allegations.—

(1) That the Defendant prosecuted him,

(2) That the Defendant had no reasonable cause for the prosecution.

The first being affirmative the second a negative averment. The burden of proof of both of them is on the Plaintiff.

Negligence.

The Defendant did not take reasonable and proper care. This is not a negative but a negative Averment.

6. Two things must be noted with regard to the rule of evidence that the affirmative of a proposition must be proved.

12 Mad. 526-15 Jur. 544-545.

What is a traverse.

1. It is a matter which relates to the law of pleadings. Before Judge is asked to decide any question which is in controversy between litigants, it is in all cases desirable and in most cases necessary, that the matter to be submitted to them for decision should be clearly ascertained. The defendant is entitled to know what is it that the plaintiff alleges against him; the plaintiff in his turn is entitled to know what defence will be raised in answer to his claim. The defendant may dispute every statement made by the plaintiff or he may admit or admit and allege other facts which put a different complexion on the case.

To put it technically a Defendant may either:

(1) Admit

(2) Deny

(3) Deny and allege other facts.

2. When a defendant denies the allegation of the Plaintiff in the Plaintiff, he

is said to traverse it. A traverse is the express contradiction of an allegation of fact in an opponent's pleading. It is generally a contradiction in the very terms of the allegation. It is as a rule framed in the negative ; because the fact which it denies is as a rule alleged in the affirmative. These traverses of affirmative allegations must be distinguished from a negative allegation which is in truth a positive allegation.

If a party asserts affirmatively, and it thereby becomes necessary to his case to prove that a certain state of facts does not exist, or that a particular thing is insufficient for a particular purpose, and such like—these although they resemble negatives,— are not negatives in reality : they are in truth possible averments, and the party who makes them is bound to prove them.

Plaintiff may have to prove negative in order to prove his positive assertion.

A negative averment if in truth it is a positive averment must be proved by the plaintiff.

Sale and Mortgage-Adequacy of price. Price is not inadequate?

II. To remember that the affirmative and the negative of the issue mean the affirmative and negative of the issue In substance and not merely its affirmative and negative inform.

Illustrations: (1) *Moody and Robinson* 464. *Amos vs. Hughes*.

Fact alleged in the Pleint

That the defendant did not emboss the Calico in a workmanlike manner.

Fact alleged in the Written Statement.

The Defendant did emboss the Calico in a workmanlike manner. On whom is the burden? If **form** alone was considered the burden would be on the Defendant. If substance was taken into account the burden must be on the Plaintiff. Although put in the negative he affirms that the workman embossed the Calico in an unworkmanlike manner.

(2) *7 Carrington and Payne* 612. *Loward vs. Leggatt*. Fact alleged by the Plaintiff.

That the Defendant did not repair the premises as bound by the covenant.

Fact alleged by the Defendant. That the Defendant did repair. In form the burden is on the Defendant. In substance it is on the Plaintiff.

The Burden of proving the issue in Criminal Trials

1. Section 101 is a general section and applies to both civil as well as criminal proceedings.

Section 105 is another section which relates to the burden of proving an

issue as distinguished from the burden of proving a fact but applies to criminal proceedings only.

2. To understand this section it is necessary to know the scheme of the Indian Penal Code. The Indian Penal Code defines various offences such as theft, murder, cheating etc. Some 400 in all. The task of framing definitions which would be exact, neither too wide, nor too narrow has been very difficult and with the best of efforts the authors of the Code have failed to frame exact definitions. They have however erred in making them too broad. Consequently they found it necessary to limit these definitions by enacting exceptions. Some of these exceptions are common to all the offences as defined by the Code. Other exceptions are specifically applicable to a particular offence.

Illustration (1):

(1) Whoever causes hurt..... .323

(2) Whoever steals379

Whoever = Any person who does etc.,

Any person = Any person of whatever age so that the definition as given in the section would make even a child 1 year old guilty. But the Penal Code recognises that a child below 7 has no *mens rea* = criminal mind which is the essence of the offence. To exempt children from the liability of an offence it would be necessary to say whoever above 7 years etc., in every section of the Indian Penal Code.

(1) Whoever takes any property belonging to another from his possession without his consent—378.

(2) Whoever wrongfully confines—342.

(3) Whoever enters into or upon property in the possession of another—441.

(4) Whoever assaults or uses criminal force—352.

It is obvious that under these definitions a Bailiff who acted under the order of his superiors in levying the attachment would be guilty of theft /378 and criminal trespass /441. Similarly a police officer who arrested a person in the discharge of his duty would be guilty of assault /353 and wrongful confinement /342.

That was not the intention of the framers of the Penal Code. It recognises the necessity of exempting Public Servants from the penal consequences of their acts done in discharge of their duty. To exempt public servants from the scope of the definitions of offences it would be necessary to say in each one of these sections "Whoever not being a public servant in the discharge of his duty".

Instead of repeating these limiting words in so many different sections to

which they are common the Penal Code has grouped them together in Chapter IV which is called General Exceptions and which cover sections 76 to 106.

There are also limiting clauses which apply to some specific offence as defined in the Penal Code.

Illus— Section 499. Defamation.

Definition is so wide that there are ten Exceptions. The necessity of 9th Exception—protection of interest. Such Exceptions are special Exceptions as distinguished from General Exceptions.

Proviso— *Illus—Sec. 92 1. P. C.*

Question is who should prove that the case of the Accused falls within the Exception, General or Special. Exception or the Proviso as the case may be? The prosecution who alleges that it does not or the Accused who alleges that it does? The Answer is given in Section 105. The burden is on the Accused to prove.

This is a departure from the previous law. Under it the burden was on the prosecution to prove that the case did not fall within the Exception.

§ Burden of Proving an Exception to a Civil Law—

1. There is no specific section in the Evidence Act which regulates the Burden of Proof in respect of an exception to a Civil Law. The rule is however the same as in Criminal Law. Namely that the Defendant must prove that his case falls under the Exception.

Illus— 15 Cal. 555

“The suit is governed by Section 37 of Bengal Act XI of 1859 (Revenue Sale Act)—and that section dealing separately with encumbrance and under tenures, lays down that the Auction purchaser shall be entitled to avoid all under tenures and to eject the holders of them with certain exceptions, and then goes on to set out the Exceptions. It appears to us that the presumption is in favour of the general proposition of law laying down that all under tenures are voidable, and that pleading a certain exception is bound to bring himself within it. That being so, it will be for the Defendant in this case to bring himself within the exception which he pleads.”

§ Burden of Proving an Exception a proviso/or a condition precedent in an Agreement.

1. Distinction between a Proviso and an Exception.

A Proviso is properly speaking the statement of some thing extrinsic of the subject-matter of a covenant which by the terms of the covenant is to go in discharge of that covenant by way of defeasance.

An Exception is a taking out of the covenant some part of the subject-

matter of the covenant.

Whether particular words form a proviso or an exception will not in any way depend on the precise form in which they are introduced, or the part of a deed in which they are found.

2. The rule of pleading is that a Plaintiff need never state a proviso in his plaint, but he must always state an exception.

Aga Syud Saduck vs. Raji Jackariah Mahomed. 2 Ind. Jur. N. S. 308 (310)

310. Markby J.

In the Note to *Thursby vs. Plant'* 1 Wms. Saund. p. 2336 it is laid down that a proviso is properly the subject of some thing extrinsic of a subject - matter of a covenant by way of defeasance. An exception is a taking out of the Covenant some part of the subject -matter of it. Of these be right definitions a Plaintiff need not never state a proviso, but always state an exception.

3. Although this is laid down as a rule of pleading it also holds good as a rule of burden of proof. So if a clause in an instrument such as a policy of assurance, be an exception, the Plaintiff must only state it, but show that it is not applicable. If it be a proviso the Defendant must state it, and show that it applies.

2 Ind. Jur. N.S. 308, 310

2. Ind. Jur. N. S. 308. 1867

A sued B. & Co. on a policy of insurance on the ship "Alaya" from noon of the 24th November 1865 to noon of the 24th February 1866 "and to all ports and places". The words "and to all ports and places" were written, the rest being printed. B & Co. in their Written Statement admitted the policy, but set up the following exception: "All risks or losses arising from the detention etc.; also from storms and gales of wind, or other perils of the sea; while touching or trading on the Coast of Coromandel from Point Palmyras to Ceylon and within surroundings between the 15th October and 15th December inclusive are here by excepted, which risks or losses are to be borne by the assured and not by the Assurers, notwithstanding anything to the contrary herein before expressed."

3. Akiks

4. Condition Precedent = Proviso.

In this connection the law of evidence has appointed three principles.

I. The burden of proof of a fact is on a person who wants to benefit himself by the special facilities provided by the law of evidence for the proof of that fact.

Section 104 is an illustration of this principle.

2. § Burden of proving a particular fact.

1. The rule is the same as in the case of burden of proving an issue. That is the burden of proving a particular fact is on the party who affirms the existence of the fact and not upon the party who denies it. The rule is contained in Section 103 and the reasons of the rule are the same in both cases.

2. There are however certain facts the burden of proving which is placed by law upon a particular person irrespective of the question whether he asserts its existence or denies its existence. Sections 104 to I II specify the cases in which the law of evidence places the burden on particular persons.

3. The principles underlying these sections and which justify this departure from the general rule relating to Burden of Proof seem to be four.

I. The burden of proving a fact should be on a party who wants to take the benefit of the **special** facilities provided by the law of evidence for the proof of that fact.

II. Where parties are unequal in their relative position the burden of proving a particular fact should rest on the one who is comparatively in a better or stronger position.

III. Where things have continued to exist the burden of proving their discontinuance is on the party who alleges discontinuance.

IV. Where one fact is a mere legal incident of another fact the burden of proving that the incident should not be attached to the fact is on the party who alleges that it should not be.

§ Sections illustrative of the First principle.

1. Section 104 is an illustration of the First Principle. This deals with the burden of proof of a fact, the proof which is a necessary prerequisite for the proof of another fact.

2. The law of evidence lays down certain conditions which must be fulfilled before evidence of a particular fact is given. Similarly the law of evidence lays down certain conditions which must be fulfilled before a particular method of proving a fact can be resorted to.

Illus-I.

Nothing is evidence unless it is given before and in the presence of the Court. Ordinarily therefore the statement made by a person who is dead is not evidence. The law of evidence however permits evidence being given of anything said by a deceased person if it is relevant to the issue on the condition that the fact of his death is proved.

Illus-II.

The law of Evidence requires that the contents of a document must be

proved by the production of the original. The law however permits secondary evidence being given on the condition that the loss of the original is proved.

3. The question is who must prove the fact of death or the fact of the loss of the original document? In general who must prove these prerequisites? Section 104 lays the burden on the party who wishes to profit by these special facilities.

§ Sections illustrative of the Second Principle.

1. 1. Section 106 and 111 illustrate the Second Principle.

Section 106.

1. This section deals with the burden of proof of a fact which is especially within the knowledge of one of the Parties.

(i) If A alleges a certain fact and if B denies it then by virtue of the rule contained in Section 103, A must prove it because A affirms it.

(ii) But if the fact is especially within the knowledge of B then by virtue of this section the burden of proof in respect of it rests on B.

2. 2. **Illustrations**

22 *Cal.* 164.

Haradhan had 2 daughters—twins about a year old—sold one of them to Karuna a prostitute for Rs. 9 and within 10 days sold to Karuna who she had brought up from her infancy and who was then living with her and leading the life of a prostitute.

Question. On a prosecution under Sec. 372/373 for buying and selling minors for prostitution the question was who should prove that the intention was that the girls were to be used for prostitution. By the accused-being a matter within their knowledge.

23 *All.* 124.

Several persons were found at 11 O'clock at night on a road just outside the city of Agra all carrying arms (guns and swords) concealed under their clothes. None of them had a license to carry arms, and none could give reasonable explanation of his presence at the spot.

On a charge under Section 402 held burden of intention on the Accused.

Section III.

1. This section deals with the burden of proof in respect of the *good faith* of a transaction.

2. Definition of good faith.

(1) Good faith is not defined in the Evidence Act.

(2) It is defined in Section 52 of the Indian Penal Code. Nothing is said to be done or believed in 'Good faith' which is done or believed without due care and attention.

(3) It is also defined in Section 3 (20) of the General Clauses Act X of 1897.

“A thing shall be deemed to be done in ' good faith ' where it is in fact done honestly whether it is done negligently or not”.

(4) The difference between the two definitions is that the *question of honesty* is immaterial to good faith as defined by the Penal Code. But it is the very core of the definition as given in the General Clauses Act.

(5) The term good faith as used in the Evidence Act is used in the sense in which it is used in the General Clauses Act.

3. The General rule regarding Burden of proving good faith.

(i) It is a general principle of law to hold that all persons in their dealings act fairly. Nothing dishonourable or odious is to be attributed to any person. Law will not impute vice and immorality. That being so the person who wishes to impeach the conduct of any person as being dishonest or unfair has the burden of proving dishonesty and unfairness. In other words the burden of proof in respect of good faith is upon the person who allege the absence of good faith. The motive must be proved.

(ii) Section 111 enacts an exception to this general rule and prescribes the circumstances in which a person must prove affirmatively the presence of good faith.

If the good faith of a transaction between two parties is questioned by one of them and the two are so related that one stands to the other in a position of *Active confidence* the burden of proving good faith affirmatively is on the person who stands in the position of active confidence.

This Exception applies only where the two parties to the transaction are so related that one stands to the other in a position of active confidence.

(IV) Meaning of the”Position of Active Confidence”:

(i) Position means legal relationship.

(ii) Active confidence means habituated to consult and act on advice.

Position of Active confidence therefore means such legal relationship between the parties as gives rise to the habit in one party to consult the other for the protection of his interest and imposes upon the other the duty to see that his advise is such as will safeguard his interest.

The section contemplates *legal relationship* between the parties such that it becomes the duty of the person taken in confidence to protect the others interests.

The mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52E. Notes on Acts and Laws

[Burden of Proof.htm - _msocom_1](#)rule applies because parties were husband and wife. The rule was not applied because parties were not husband and wife but mistress and paramour.

A transaction between *Trustee and beneficiary, solicitor and client, father and son or husband and wife* would be subject to this rule if the issue of good faith were raised.

(V) The rule although confined by the Section to cases where one person stands to the other in a position of active confidence it is extended by the Court to all cases where a person has domination over another and is in a position to exercise undue influence.

Sections 107-108.

1. They must be read together because 108 is only a proviso to the rule contained in Section 107.

2. The sections do not deal with the question, how long was a person alive.

3. The sections do not deal with the question at what *time* he died.

4. The sections do not deal with the question whether he was alive or dead at some antecedent date.

5. The sections deal with the question whether a person is alive or dead at the time when the question is raised, that is at the date of the suit.

Sections illustrative of the third Principle.

Sections 107, 108 and 109.

Sections 107 deals with the burden of proof where the *question is whether a man is alive or dead.*

According to this section where it is proved that the person in question was alive within the last 30 years then the burden is upon the party who asserts that he is dead. Where it is not proved that the person in question was alive within the last 30 years then the burden is on the person who alleges that he is alive.

Section 108 deals with the burden of proof where the question is whether the man who has not been heard of is alive or dead.

According to the section :

(1) if the man is not heard of for *seven* years
and

(2) by those who would *naturally* have heard of him the burden is upon the party who *affirms that he is alive.*

Comment—

The death of any party once shown to have been alive is a matter to be determined by the Court. As the presumption is in favour of the continuance of life the *onus* of proving the death lies on the party who

asserts it. But the presumption of continuance of life ceases at the expiration of 7 years from the period when the person in question was last heard of. And the burden of proving that the person was alive within the seven years is upon the person asserting it.

But a Court may find the fact of death from the lapse of a shorter period than seven years, if other circumstance concur.

Re.: Walker (1909) P. 115.

Application of Sections 107-108.

The question for which provision is made in these two sections is whether a person is alive or dead at the time the question is raised. These sections do not apply where the question is whether the man died at a particular time. If any one seeks to establish the precise time of death the burden of proof is upon him.

Section 109. This section deals with the burden of proof as to continuance or discontinuance of three relationships'

(1) **Partners.**

(2) **Landlord and tenant.**

(3) **Principal and agent.**

This section provides that once it is shown that two persons have stood in the relationship of partners. Landlord and Tenant or Principal and Agent the burden of proving that they have ceased to stand in that relationship is on the party who alleges that they have ceased.

§ Section illustrative of the 4th Principle—

Section 110. This section deals with the burden of proof regarding title to property when the competition is between a person in possession and the owner who is out of possession.

1. The rule laid down in Section 110 is that the burden of proof that the person in possession is not the owner is on the person who alleges that he is not the Owner.

Reason for the Rule—

Ownership chiefly imports the right to exclusive possession and enjoyment of a thing. The owner in possession has the right to exclude all others from possession and enjoyment of it ; and if he is wrongfully deprived of what he owns, he has the right to recover possession of it.

Ownership also imports the power to dispose of property, to sell, mortgage or donate.

Right to possession and Right to dispose of are therefore incidents of Ownership. Where there is ownership there goes with it the right to possession and the right to dispose.

The law therefore holds that a person would not be in possession of

property unless he was the owner and places the burden on his opponent.

The principle of the section does not apply in the following cases—

- (i) Where the possession is merely judicial as distinguished from actual present possession.
- (ii) Where possession is obtained by fraud or force.

BURDEN OF PROOF

1. The Law requires the person to discharge the Burden of Proof which is placed upon him.

2. In discharging the Burden of Proof attention must be paid to two considerations.

(i) There are Matters of which Proof is not required. (ii) There are Matters the Proof of it is not allowed.

3. We must therefore proceed to consider these matters and the rules regulating them.

I. BURDEN OF PROOF

(i)(i) Matters of which Proof is not required.

§ Facts of which Proof is not required.

1. Matters of which Proof is not required fall under three heads:

- (1) Facts Judicially noticed.
- (2) Facts admitted by the Parties.
- (3) Facts the existence of which is presumed by law.

§ (i) Facts judicially noticed.

1. Sections 56 and 57 deals with facts judicially noticed.

2. Section 56 says no fact of which the Court will take judicial notice need be proved.

3. Sec. 57 lays down 13 matters of which the Court *must* take judicial notice.

4. Principle of the Section. Certain matters are so notorious and are so clearly established that it would be useless to insist that they should be proved by evidence.

Illus—

- (1) Commencement and Continuance of hostilities.
- (2) Geographical Divisions.

5. The last two paras are important and read with section 56. They furnish a clue to the proper understanding of them. The effect is that when a matter enumerated in Section 57 comes into question, the parties who assert the existence to the contrary need not produce any evidence in support of their assertions. The judge must come to a conclusion without requiring any formal evidence.

(1) The Judge 'sown knowledge may be sufficient. If it is not he must look the matter up.

(2) The Judge can also call upon the parties to assist him, if he thinks it necessary.

(3) The Judge in making this investigation is emancipated entirely from all the rules of evidence laid down for the investigation of facts which the law requires a person to prove.

(ii) Facts admitted by parties. Section 58

1. There are two sorts of admissions which must be distinguished.

(1) Formal admissions made touching matters related to a proceeding in a Court and made intentionally by parties so as to dispense with their Proof.

(2) Informal admissions alleged to have been made by a party to the proceedings but not made in the course of the proceedings.

2. Section 58 applies only to formal Admissions. Formal admissions may be made by parties in 6 different ways : (i) On the pleadings. (ii) In answer to interrogatories. (iii) In answer to a notice to admit specified facts. (iv) In answer to produce and admit documents. (v) By the Solicitor of a party during the litigation. (vi) In open Court by the litigant himself or by his Advocate.

3. Proof of such facts would be futile. The Court has to try the questions on which the parties are at issue and not on which they are agreed.

4. 4. Applicability of Sec. 58 to criminal trials is a matter on which there is a difference of opinion.

(i) (i) **Norton** says that it does not apply to criminal trials.

(ii) (ii) **Cunningham** says that it does.

30 Bom. L. R. 646.

Section 58 makes no exception in regard to criminal proceedings.

Rat. Un. Cr. C. 769.

Section 58 makes no exception in regard to Criminal Proceedings.

39 Mad. 449.

On general principals of Jurisprudence Sec. 58 ought not to be applied to criminal trials.

“The question remains whether the Provisions of the Act are exhaustive and whether we can invoke the aid of the principles of Jurisprudence or of English Law as supplementing and explaining the rules of Evidence given in the Act.”¹² All. I. English rules of Evidence apply.

The rule is not an absolute rule. The section provides that a fact which is admitted may be required by the Judge to be proved by evidence by the

party on whom the Burden of Proof lies.

This is a safeguard intended to protect simple and ignorant persons against mistakes.

It is probably under this proviso that admissions in Criminal trials are not permitted.

§ Facts the Existence of which is presumed by Law.

1. Definition of presumption.

A presumption is a conclusion or inference drawn from a certain fact.

2. Principle underlying the rule of Presumption :

(1) The universe is no doubt composed of diverse elements and the motives that operate upon people are different.

Notwithstanding this there is a certain amount of regularity and uniformity.

(2) With respect to **things** the order and changes of the seasons, the rising, setting and the course of heavenly bodies, and the known properties of matter-magnetism-specific-gravity show a certain regularity and uniformity of movement and occurrence.

(3) With respect to persons the natural qualities, powers and faculties which are incident to the human race in general are more or less uniform.

(4) With respect to Conduct of men more or less the uniformity. They are actuated by the same uniformity.

3. Given this uniformity it is possible to say that given one thing another can be said to follow.

4. It is on this principle Section 114 is based.

1. 1. It empowers the Court to presume the existence of a fact if that fact is a likely result of a particular fact.

2. The test is—

(i) common Course of natural events. (ii) human conduct. (iii) Public and private business.

3. It gives 9 illustrations of what would be likely results of certain facts.

4. Explain.—Illustrations (not given in MS—ed)

5. An event likely in one circumstance may very unlikely in another circumstance. Therefore in drawing a presumption the Court must have regard to the facts of the particular case.

Explanations to illustrations (not given in MS—ed)

6. There can be no general codification of presumptions because the likely result must vary under circumstances.

7. The effect of presumption is to relieve a person from the Burden

of Proof.

8. Presumption of Law and Presumptions of fact.

9. Rebuttable and Irrebuttable Presumptions.

Norton P. 381.

II. Analogous presumptions are maxims of law. They are also called presumptions in the loose sense of the word.

1. There are certain maxims of Law which are also called Presumptions.

2. Illustrations of Maxims of Law :

(1) The law will presume that every body knows the law.

(2) The law will presume that every person intends the natural consequences of his acts.

(3) The law will presume that an accused person is innocent.

(4) The law will presume that every human being is endowed with the power of understanding.

(5) The law will presume that no man will throw away his property for instance, by paying money not due.

(6) The law will presume that money advanced by a Parent to his child is intended as a gift, and not as a loan.

(7) The law will presume that a parent prefers his own children to those of others.

These maxims are related to burden of Proof. They help to fix the burden.

§ Presumptions as to Documents 79-90

1	Presumption as to the genuineness of certified copies	79
2	Presumption as to the genuineness of documents produced as record of evidence.	80
3	Presumption as to the genuineness of gazettes, Newspapers.	81
4	Presumption as to documents—In England without proof of seal or signature.	82
5	Presumption as to maps or plans made by authority of Government.	83
6	Presumption as to books of law and report of decisions.	84
7	Presumptions as to powers of attorney.	85
8	Presumptions as to certified copies of foreign Judicial records	86
9	.Presumptions as to books, maps and charts	87
10	Presumptions as to telegraphic messages.	88
11	Presumption as to attestation and execution of documents not produced.	89

12	Presumption as to documents 30 years old	90
----	--	----

BURDEN OF PROOF

(ii) Matters of which Proof is not allowed

1. § Matters which parties are debarred from asserting. (conclusive evidence).
2. § Matters which parties are estopped from proving. (Estoppel).
3. § Matters stated without prejudice.
4. § Matters which are irrelevant.

1. § Matters which parties are debarred from asserting—

Matters which parties are debarred from asserting are spoken of in the Evidence Act as Matters of Conclusive proof or commonly spoken of as irrebuttable presumptions or presumptions of Law.

They are dealt with in Sections 41, 112 and 113.

II. Section 112

1. This section deals with the Question : How to prove that A is the legitimate child of B and his wife C?

2. There are two ways of proving this fact according to two different contingencies.

(i) (i) If the contingency is that the child is born during wedlock.

(a) (a) Prove lawful marriage between B and C.

(b) (b) Prove the Existence of Marital relations between B and C at the date of the birth of A.

On proof of these two facts the Law will conclude that A is the legitimate son of B and C.

(ii) If the Contingency is that the child is born after dissolution of the marriage between B & C—Either by death of the father or divorce.

(a) Prove that A was born within 280 days after the dissolution of the marriage by death or divorce.

(b) Prove that the mother had remained unmarried during that period of 280 days.

On Proof of these two facts the law will conclude that A is the legitimate son of B and C.

Points to be noted

1. The deciding factor in the question of legitimacy is not the time of the conception of the child but the time of the birth of the child. Whoever was the **husband** of the woman at the time of the birth of the child is the father.

Illus.

1. *Pal Singh vs. Jagir*. 7 *Lahore* 368. Harnam Kaur married Hari Singh. Had Singh died on the 10th January 1919. Harnam Kaur married Sohan Singh on

25th February 1919. Jagir was born to Harnam Kaur on the 17th October 1919 i.e. 279 days after the death of Hari Singh and 198 days after her marriage to Sohan Singh.

On a question being raised whether Jagir was the son of Hari Singh, Held that he was the son of Sohan Singh and not of Hari Singh.

2. *Palani vs. Sethu*. 49 *Mad.* 553.

Pechi Ammal married Subramanya in October 1903. That marriage was dissolved in June 1904.

Pechi married Thirumani in July 1904.

Palani was born during the second week in September 1904 i.e. 4 months after the dissolution of Pechi's marriage with Subramanya and 3 months after her marriage with Thirumani.

Whose son is Palani? of Subramanya or Thirumani. Held he was the son Thirumani.

2. This is treated as case of conclusive proof. This is treated so not because the truth is beyond dispute. A woman although married lawfully to one man may be in the keeping of another and her children may well in fact be the children of her paramour. This is so treated because for reasons of public policy or in the interests of Society an artificial probative value is given by the law to certain facts and no evidence is allowed to be produced with a view of combating that effect. Under Section 112 artificial probative value is to the following facts.

(1) The fact of marriage.

(2) The fact of access.

So that where these two facts exist the law concludes that issue born must be legitimate i. e. it must be issue born of the husband.

(2) This conclusion can be demolished only by giving evidence of non-access.

It must be proved that the parties to the marriage had no access to each other at any time when the child could have been begotten.

Meaning of non-access.

1934. 38 *Bom. L. R.* 394.

Karapaya vs. Mayandi.

Access does not imply actual cohabitation. It means no more than opportunity of intercourse.

Kerapaya, a Madras Hindu acquired considerable property in Burma. He died a lunatic in 1923.

Karapaya first married Karapayi and then married Nachiama. Kerapaya lived with Nachiama at Tamagyo while Karayappi was living at Houlmein with her mother and brother.

In December 1911 an agreement made between (Left incomplete—ed.)

(3) The conclusion cannot be demolished by giving evidence of inability to cohabit.

29. *I.A.17 Narendra vs. Ram Govind.*

1901

Upendra was married to Tilottama. Upendra died on July 15 from the effects of a Carbuncle in his back, from which he had been suffering for sometime.

After the death of Upendra, Tilottama gave birth to a son Narendra on April 18, 1887 i.e. 9 months 10 days or 280 days after the death of Upendra.

There were three questions to be considered :

1. Was Narendra the child of Tilottama—Upendra?
2. Was he born within 280 days from the death of Upendra?
3. Is it proved that he and she had no access to each other at any time when the appellant could have been begotten?

On the last issue the evidence was as follows :

Tilottama was married when she was quite a child and lived with her parents. But shortly before his death in July 1886 she went to live with her husband. How long before it is not clear. Some witnesses said five or six days others said ten or twelve days.

The important circumstances in the case were two :

(1) That Upendra died from the effects of a Carbuncle from which he had been suffering for a fortnight.

(2) That Upendra had made will on the 14th July 1886 appointing Tilottama as his Executrix and directing her to adopt a son.

The contention was that if he was ill he could not have cohabited. The contention was negative.

(3) Inability to cohabit must be distinguished from genital inability.

1935. (All India Reporter) P. 0. 199 (for Physical inability).

Query- If he was impotent.

The Section abrogates the rules of Hindu and Mahomedan Law regarding Legitimacy. 10. *All. 289.*

1. According to Mahomedan Law a child born six months after marriage or within two years after divorce or death of the husband is presumed to be her legitimate offspring.

2. According to Hindu Law it is ten months after divorce or death of the

husband.

The section does not prohibit a person born after 280 days from proving he is the legitimate son. Only the burden of proof is upon him.

24 All. 445. 357 days after the death of the father.

There is a difference between the English and Indian Law of Evidence regarding the competency of the Husband and wife on the issue of access when the question of the Legitimacy of the child arises.

1. Under the English Law they are incompetent.
2. Under the Indian Law they are competent.

38 Mad. 466.

28 Bom. L. R. 207.

Section 113

1. The section deals with the Burden of Proof regarding the cession of a territory.

How is it to be proved that a certain territory which was once a part of British India has ceased to be part of British India.

"The question is not merely academic. It is of great practical importance. It goes to the root of the question of the jurisdiction of the Court. If a territory is not a part of British India then it is not subject to the Jurisdiction of any Court.

2. Provision was made in Section 113. It said that a notification in the Gazette of India that a British Territory has been ceded to any native State Prince or Ruler should be taken as a conclusive proof that a valid cession of such territory took place at the date mentioned.

3. This Section has been declared to be *ultra vires* of the Indian Legislature and therefore void and of no legal effect by the Privy Council.

7. Bombay 367 Damodar Gordhan vs. Deoram Kanji.

P. 0.1876

The Governor General in Council being precluded by the 24-25 Vic. 0. 67 Sec. 22 from legislating directly as to sovereignty or dominion of the crown on any part of its territory in India or as to the allegiance of British subjects cannot by legislative Act (E. G. Evidence Act. S. 113) purporting to make a notification in the Government Gazette conclusive proof of a cession of territory, exclude judicial enquiry as to the nature and lawfulness of that cession.

Judgements as conclusive Proof.

1. Just as certain facts are deemed to be conclusive proof of certain other facts, similarly the Evidence Act treats certain Judgements as conclusive on certain issues. Sec. 41.

2. The judgements which are declared to be conclusive are :—

(1) Final Judgement, order or decree of a Competent Court in the exercise of

- (1) Probate
- (2) Matrimonial
- (3) Admiralty
- (4) Insolvency Jurisdiction

which confers a legal character or takes away a legal character or declares a person to be entitled to a legal character or to a thing not against any specified person but absolutely.

Are conclusive Proof:

- (1) That the legal character as given or taken away.
- (2) That it is given or taken away on the date of the Judgement.

Section 41.

This section deals with use of Judgements of Courts of Law for the proof or disproof of certain questions.

Question is:

- (1) The right of a person to a certain status
- (2) When did such right accrue to him.

Question is:

Did (1) A particular person cease to have a status (2) If so, when.

Question is whether any particular person was entitled to a certain property.

The Section declares that certain Judgements will be conclusive evidence of these facts.

What are these Judgements :

- (1) It must be a Judgement of a Competent Court.
- (2) It must be a Judgement in the exercise of
 - (i) Probate (ii) Matrimonial (iii) Admiralty (iv) Insolvency

1. Which declares conferring or taking away of a legal character on or from any person.

2. Which declares a person entitled to any specific thing not against any specified person but absolutely.

1. 1. If it is a final Judgement, order or decree.

Probate Jurisdiction.

The Courts exercise testamentary and intestate jurisdiction under:

- (1) Indian Succession Act.
- (2) The Hindu Wills Act.
- (3) The Probate and Administration Act.

Matrimonial Jurisdiction.

Exercised under the Indian Divorce Act and other Acts relating to

marriage and divorce.

Admiralty Jurisdiction.

Letters Patent of the High Court and the Colonial Courts Admiralty Act. 1890.

Insolvency Jurisdiction.

Charters and the Insolvency Acts.

§ Matters which parties are estopped from Proving.

1. The law of Estoppel is contained in Sections 115, 116, 117. Section 115 states the general rule of estoppel. Sections 116 and 117 enact particular kinds of estoppels.

2. 2. Section 115.

(i) Comparison of Section 115 with Section 31.

Estoppel is like an Admission inasmuch as it is a statement of a fact. Most admissions can be withdrawn by the party who makes them. The fact that they were made remains, but the party who made them can be heard to explain that he made them rashly and carelessly or under an honest misapprehension. Even he could be heard to say that he knew what he said to be false. But a statement may be made by one person to another in such an unequivocal manner and under such circumstances that it has a decisive effect on the conduct of the other. The law will not permit a person making such a statement to contradict it. The margin between an estoppel and an admission is very narrow and the answer to the question whether a statement is a mere admission or is a estoppel depends upon the nature of the statement and the circumstances appertain to it.

(ii) What are the legal requirements of the Rule of Estoppel?

The rule of Estoppel comes into operation when the three following conditions are satisfied. *37 Bom. L. R. 544 P. C.*

(i) A statement amounting to a representation of the existence of a fact has been made by the defendant or an authorised agent of his to the Plaintiff or some one on his behalf.

(ii) (ii) With the intention that the Plaintiff should act upon the faith of the statement, and

(iii) The Plaintiff does act upon the faith of the statement.

§ Statement must amount to representation.

(1) (1) Representation may be by word or by conduct.

A. If it is by word it may be active misrepresentation made deliberately with a knowledge of their falsehood.

Illus.-

Mc Cance vs. London and Nother Western Railway Co., (1861) 7 H. & N.

477.

M entered into a contract with the Railway Co., to carry his horse in trucks which should be reasonably fit and proper for the carriage of horses from Edge Hill near Liverpool, to Wolverhampton. The Railway agreed to provide trucks which should be reasonably fit and proper.

M filled in a declaration form in which he stated that, the value of a horse did not exceed £10 per horse. Under the system followed by the Railway there were modes of transporting horses. One was to send them in trucks allowing the owner to place as many horses as he liked in each truck. The other was to send them in horse boxes, each horse being placed in a separate stall. The rate of carriage by the latter mode being three times as much as when carried by the former mode. There was a further rule that the Railway would take horses above the value of £10 in trucks.

In transit some horses were injured owing to the defective state of the trucks provided by the Railway. The damage sustained by M on the basis that the value of each horse was £10 came to £25 which amount the Railway Company was agreeable to pay as they admitted that the trucks were defective. The Plaintiff claimed that the real value of a horse was £40 and the damages came to £55.

This is a case of active misrepresentation.

Illus. (2) Munnoo Lal vs. Lalla Choonee Lal. 1. I.A.144

Reep Singh was in debt but possessed considerable Estate. M had been his Banker. On 9th October 1863 M obtained a mortgage from R of a property to secure a debt of Rs. 20,000 owed by R. On 9th August 1863 R sold the same property to C. When negotiations for the purchase took place between R and C, M was present and took part in same and in answer to inquiries by C gave him to believe that he had no lien upon the Estate.

In 1868 M filed a suit against C to enforce the payment of his mortgage bond. He was estopped.

This is also a case of active misrepresentation.

B. Representation may be innocent misrepresentation

Illus. Gould vs. The Bacup Local Board. (1881) 50 L.J.(M. C.) 44.

Certain premises belonging to Gould were kept in a very insanitary condition. The Board asked him to do certain improvements which he refused to do. The Board then served a notice upon him stating that if he did not carry out the improvements within a given time the Board would execute them.

There were two modes of recovering the expenses which were prescribed by the Act, one was by Section 213 and another by Section 240. Section

213 allowed the Board to recover them by additions to the local rate levied by the Board and Section 240 allowed them to recover them independently in lump sum. In the notice served upon Gould it was stated that the recovery would be under Section 213. But in the suit the Board sought to recover the amount as provided by section 240. The Board was estopped. This is a case of innocent misrepresentation.

(2) Representation may be by words or may be by silence. Silence under certain circumstances may be eloquent and may amount to a representation as good and as real as is made by the spoken word.

But every case of silence cannot be taken as equivalent to speech. Because the law does not require a person to speak out what is in his mind on each and every occasion. The law requires

a person to speak only when there is a duty upon him to speak and to disclose his mind. Otherwise silence is golden.

Silence therefore to raise an estoppel must imply an obligation to speak. In considering the effect of silence it has to be seen whether there was any occasion for words and any reasonable occasion for silence. This ought to be done before relying on silence as a legitimate ground for inference.

(1896) A. C. 231(238)

2 Br. C. C. 400 (419)

6 Bom. L. R.

Illus. (1) **Silence no ground for Estoppel.**

10 Bom. L. R. 297.

A decree was obtained against the father by a judgement creditor. In execution the property was managed by the Collector and the proceeds were sent to the creditor. While this was going on, the father died and the son inherited the property. The Joint Creditor sought to execute the decree against the son who contended that he was not liable as the debts were improper. It was contended that the son was estopped because his silence was representation that he accepted the decree ; Held that it was not because there was no duty.

Illus. (2) **Silence ground for Estoppel**

151. A. 171.

Sale by Court in Execution proceedings by a proclamation which described the rights of the Judgement-debtor very imperfectly. The result is that the property worth of Rs. 40,000 sold for Rs. 20,000. Suit was brought by the Joint Debtor to set aside the sale. Contention was that *silence was Estoppel*. Held it was, as there was a duty to come forward and get the proclamation corrected.

Representation may be by conduct 1. Conduct may amount to

representation or it may not— (i) Where it does amount to representation 19 1. A. 203. (ii) Where it does not. 19 1. A. 221.

II. Conduct is either Active or Passive. Passive conduct is either

(1) Indifference.

(2) Acquiescence.

Passive conduct to raise an estoppel must amount to acquiescence. It must not merely be conduct of indifference.

Conduct of Acquiescence may be described as follows—

“If a person having a right and seeing another person about to commit or in the course of committing an act infringing upon that right, stands by in such a manner as really to induce a person committing the act, and who might otherwise have abstained from it, to believe that he asserts to its being committed, is a conduct which amounts to conduct of acquiescence”.

2 Bh.117 (123) 41 E. R.886.

Imp. 45 Bom. 1. L. R. 80.

14 All. 362 (364).

Acquiescence may occur while the act acquiesced in is in progress or it may occur only after it has been completed.

For the purposes of Estoppel it must occur while the infringement is in progress. *Ch. D. 286 (314).*

Points to be noted.

1. Misrepresentation must be as to existing facts and not of mere intention. *5 R. L. Cases 185.*

Illus—

1. A person has a legal right but between the time of its creation and that of his attempt to enforce it, he has made representation of his intention to abandon it.

2. There can be no estoppel where the truth of the matter is really known to *both parties.*

30 Cal. 539 P. C.

Mohori Bibee vs. Dharemdas Ghose.

On the 20th of July 1895 Damodar Das executed a mortgage in favour of one Brahma Dutt, a money lender. Brahma Dutt was absent throughout the transaction and the transaction was carried through by his attorney Kedar Nath, the money being found by Dedraj the local manager of Brahma Dutt. While the transaction was going on, the mother of Damodar Das wrote a letter to Kedar Nath the attorney that Damodar Das was a minor and any one advancing him any monies would do so at his own risk.

On the date of the mortgage Kedar Nath took a long declaration from

Damodar Das that he was major.

On the 10th September 1895 the mother filed a suit for cancellation of the Deed of Mortgage on the ground that D was a Minor.

Contention of B was that D was estopped. Held he was not because facts was known to B.

Actually knowing the fact is different from having the means of knowing it.

L. R. 20 Ch. D. 1. Redgrave vs. Hard.

The Plaintiff represented that his business brought in about £ 300 a year and produced 3 Summaries showing about 2/3rd of that together with some papers which Defendant did not examine. Upon the faith of this Defendant signed an agreement to purchase the Plaintiffs business and paid a deposit. Finding the business worthless he refused to complete and Plaintiff sued him for specific performance. Contention of Plaintiff was that Defendant was estopped from alleging that the representation of Plaintiff was false because he had the means of knowing the truth.

Jessel M. R. P. 21.

“Where one person induces another to enter into a contract by a material representation which is untrue, it is no defence to an action to rescind the contract that the person to whom the representation was made, had the means of discovering or might with reasonable diligence have discovered that it was untrue. It must be shown either that he had knowledge of the facts contrary to the representation, or that he stated in terms or showed clearly by his conduct, that he did not rely on the representation.”

II. Second Element in the rule of Estoppel the *intention* that the Plaintiff should act upon the faith of the statement.

It is *not* necessary that the party making the representation must have been under no mistake himself.

It is not necessary that the party making the representation must have acted with the intention to mislead or to deceive.

191. A. 203.

But it is necessary that the party making the representation must have the intention that the Plaintiff should act upon the faith of the representation.

How to prove intention?

Intention is used in two different senses :

(1) It is used to indicate as a presumption of law. A man is presumed to intend the natural or necessary consequences of his act.

(2) Intention is used to indicate a specific existing state of mind in a person.

This specific state of mind must be proved as a fact like any other fact and cannot be presumed.

Illus—

(1) Section 225, 1. P.C. whoever intentionally offers.

(2) Section 124, 1. P. C. whoever with the intention.

Intention here is used as a presumption of law and is not used in the second sense.

It is not therefore necessary to prove intention that the party should act as a specific fact.

If a reasonable man would take the representation to be true, and believe it was meant that he should act on it, the requirement as to intention would be satisfied.

19 1. A. 203 (219).

III. The third element in the rule of Estoppel is that the party to whom the representation was made must have acted upon the faith of it.

1. This element is really the foundation of the law of Estoppel and explains the principle underlying it. The principle underlying the rule of Estoppel is that it must be inequitable unjust; that if one person by a representation made or by conduct amounting to representation has induced another to act as he would not otherwise have done, the person who made the representation should be allowed to deny or repudiate the effect of his former statement to the loss and injury of the person who acted on it.

2. The reason of the rule is that the man has acted upon it and altered his position. To amount to estoppel the statement must have been acted upon by the party to whom it was made.

14 Bom. 312.

13 Moo I .A. 585 (599).

Limitation on the rule of Estoppel. 1. It cannot override the law of the land.

(i) Minor—represents himself as Major—not estopped from proving minority.

(ii) Corporation—does Acts which are *ultra vires*—not estopped from proving that they were beyond its power.

Other distinctions between Admissions and Estoppel.

1. An admission does not prevent the party from proving that the admission is untrue. An Estoppel prevents the party from doing so.

2. An admission can be taken advantage of by any person other than the one to whom it was made. An Estoppel can be taken advantage of only by the party to whom it was made. As against a stranger he can deny its truth.

5 W.R.209.

5. A. R. 209.

Plaintiff alleged that he had purchased the property in the suit for Rs. 10,000. Pressed for money he subsequently mortgaged it to his mother. That he redeemed the Mortgage a year after and took possession of the property.

The Defendant had obtained a decree against mother of the Plaintiff and in execution and satisfaction of the Decree had the property sold by Court Sale and purchased it Benamee and Plaintiff was ousted. The Plaintiff filed a suit for the recovery of the property.

The Defendant contended that Plaintiff was estopped from proving that he was the Owner because in a former suit Plaintiff had admitted that his mother was the Owner to that suit Defendant was not a party. Held there was no Estoppel.

Difference between Estoppel and Conclusive Proof.

1. Estoppel can be waived by the party in whose favour it operates. But conclusive proof cannot be waived.

Difference between Res Judication and Estoppel.

Res Judication prevents a man avering the same thing twice over in successive litigations.

Estoppel prevents a man from saying one thing at one time and the opposite at another. *36 Bom, 214.*

English and Indian Law of Estoppel.

1. Under the English Law Estoppels are usually classed under three heads.

- | | | |
|-------|-------|---------------------|
| (i) | (i) | Estoppel by Record. |
| (ii) | (ii) | Estoppel by Deed. |
| (iii) | (iii) | Estoppel by Conduct |

2. **Estoppel by Record** means estoppel by the Judgement of a competent Court.

(i) Estoppel by Record is recognised by the law of India. It is dealt with:

(a) (a) By the Code of Civil Procedure. *Sections 11-4.*

(b) (b) By the Evidence Act. *Sections 40-44.*

3. Estoppel by Deed.

1. Under the English Law a party to a deed cannot, in any action between him and the other party, set up the contrary of his assertion in that deed. This rule affords an illustration of the exaggerated importance of a ' seal ' in English law. Neither sealing wax nor Walter is necessary to constitute a seal. Apparently, a smudge of ink on document purporting to be a deed is a seal if so intended, and it makes a greater importance in law than a

deliberate and identifiable signature. **There is no estoppel in the case of ordinary signed documents.**

2. The strict technical doctrine of Estoppel by Deed cannot be said to exist in India.

3. But while the technical doctrine has no application in this country, statements in documents are, as admissions, always evidence against the parties. In some cases such a statement amounts to a mere admission of more or less evidential value according to circumstances, but not conclusive. In other cases namely those in which the other party has been induced to alter his position upon the faith of the statement contained in the document, such a statement will operate as an estoppel. In this view of the matter, an estoppel arising from a deed or other instrument is only a particular application of that estoppel by conduct or misrepresentation under Section 115.

4. An estoppel does not arise under the Evidence Act merely because a statement is contained in a deed. It can work an estoppel only when it can fall with section 115.

I All. 403.

II Bom. 708.

5. A Recital in a deed may be merely an admission or it may be estoppel according to circumstances.

§ Particular Estoppels.

1. Section 115 deals with Estoppels in general, sections 116 and 117 deal with particular Estoppels.

2. The distinction between Estoppels under Section 115 and Estoppels under 116-117 may be noted.

(i) Estoppels under section 115 can arise between any two parties. It is not necessary that they should be related by a particular legal tie. Estoppels under 116-117 arise **only** between parties who are related by a particular relationship.

(ii) Estoppel under 115 arises by reason of misrepresentation of facts by one party to another. Estoppel under 116, 117 arise by reason of agreement between the parties which has forged a particular relationship between them.

Section 116. deals with Estoppels between

- | | | |
|------|------|--|
| (i) | (i) | Landlord and Tenant and |
| (ii) | (ii) | Licensee and Licensor of immovable property. |

I. I. Landlord and Tenant.

This Estoppel applies to the tenant of immovable property.

2. This estoppel applies also to a person claiming through the tenant. In other words, if a tenant sublets his property without the knowledge or permission of the landlord, the sub-tenant will also be estopped from denying that the landlord had the title in the beginning.

3. This Estoppel does not ensure to the benefit of a person claiming through the landlord.

There are two possible cases in which premises may be let :

(i) Where the Plaintiff has let the Defendant into possession of the land.

(ii) When Plaintiff is not himself the person who lets the Defendant into possession, but claims under a title derived from the person who did.

This section applies to the first case and estops the tenant from denying the Landlord's title. It does not apply in the second case where the title of the landlord is derivative i. e. by sale, lease or inheritance so that when the Plaintiff claims by a derivative title, the defendant is not estopped from showing that the title is not in the Plaintiff but in some other person. The tenant can show that he has no derivative title. This is the effect of the absence of the words "claiming through the landlord".

This estoppel applies to a denial of title at the beginning of the tenancy, so that a tenant can show that his landlord's title has expired or is determined. In such a case he does not dispute the title, but confesses and avoids it by a matter *ex-post facto*. Justice requires that the tenant should be permitted to raise this plea, for, a tenant is liable to the person who has the real title and may be faced to make payment to him, and it would be unjust if, being so liable, he could not show the expiry or determination of his landlord's title as a defence.

4. The Scope of the Estoppel. A tenant or his representative will not be permitted to deny that on the day on which his tenancy commenced, the landlord who granted the tenancy had title to the property.

5. This Estoppel binds the tenant only so long as the tenancy continues. Once the tenancy has ceased he is free to deny that his landlord had any title even on the day on which tenancy commenced.

II. Licensee and Licensor of immovable property.

1. The rule is the same as a licensee, namely, that the licensor had title to such possession at the time when such license was given.

2. Difference between a tenant and a licensee.

License means permission given by one man to another to do some act, which without such permission it would be unlawful for him to do. It is a personal right, and is not transferable, but dies with the man to whom it is

given. It can as a rule be revoked by the Licensor unless the licensee has paid money for it.

Tenancy is an interest in land and is transferable and heritable.

Section 117 deals with (1) Estoppel of acceptor of a Bill of Exchange.

(2) Estoppel of a Bailee.

(3) Estoppel of a Licensee.

(1) The Estoppel with regard the Acceptor is to the effect that he should not be permitted to deny that the drawer had an authority to draw the Bill or to endorse it.

Reason for this rule is to be found in the Agreement between the Acceptor and the holder of the Bill.

What does the agreement of acceptance impost:

(1) That he will pay the payee or the holder.

(2) That if he fails to pay the drawer will pay.

What does it mean when he says that the Drawer will pay? It means that the drawer had the authority and capacity to bind himself.

The payee took it on the basis of this agreement. The acceptor, therefore, is not permitted to deny this agreement.

Under Explanation I, he is permitted to deny that the signature of the drawer is a forgery.

This is contrary to English Law.

(2) & (3) Estoppel in respect of a Bailee and Licensee.

They cannot deny the authority of the bailor to make the bailment or of the licensor to grant such a license at the time when such bailment or license commenced.

§ Matters stated without prejudice.

1. Under this head fall certain classes of admissions made by a party.
2. If the admission is made under certain circumstances mentioned in section 23, it cannot be proved against the party who made it.

3. What are those circumstances?

(1) If it is made on condition that evidence of it is not to be given

(a) Condition may be express or (b) Condition may be implied from the Conduct of the parties.

(2) Agreement may be verbal or in writing.

4. The application of Section 23.

(1) It applies to Civil cases only. The rule does not extend to criminal cases.

(2) By Judicial interpretation the application of the Section has been confined to admissions made in the course of the negotiations in the

same.

The mere fact that a document is stated to have been written "Without Prejudice" will not exclude it. The rule which excludes documents marked "Without Prejudice" has no application unless some person is in dispute or negotiations with another and terms are offered for the settlement of the dispute or negotiation. *23 Bom. 177 (180)*.

Explanation—

This section does not apply where a person is compellable to answer.

§ Matters which are irrelevant.

1. The law of Evidence does not state what matters are irrelevant.
2. It proceeds to state what matters are relevant and thus excludes those that are not relevant.
3. It is objected that the rules of relevancy are of no use.
4. There are two problems a Judge is faced with
 - (i) Whether and how far he ought to believe what the witness says?
 - (ii) What inference a Judge ought to draw from the facts which he believes to have been proved?

In every judicial proceedings there are two essential questions— Is this true? and if it is true, what then?

5. Rules of relevancy throw no light on either of them and persons who are absolutely ignorant of these rules may give a better answer.
6. Answer to the objections.
 - (i) Men reason and reason well even without the study of Logic. But it does not follow that we should study Logic.
 - (ii) The rules of relevancy out the flood of irrelevant gossip and collateral questions which are sufficient to comprise the strongest head and distract the most attentive mind.

I. Cardinal rule of relevancy is that you can prove a fact and not opinion.

Facts fall into two classes :

Those can and those which cannot be perceived by the senses. Those which cannot be perceived by the senses are :

- (1) Intention, (2) Fraud (3) Good faith and (4) Knowledge.

§ Matter of which Proof is allowed by Law.

1. Facts in Issue. 3,5,12.
2. Facts relevant to Facts in Issue. 3,6,7,8,9, 13-16,52-58
45-51.
3. Facts which are consistent with facts in Issue or with Relevant Facts or which show the probability of a Fact in Issue and Relevant Fact. 34-39-46.
Note—31-32 will go under direct evidence as exceptions.
4. Facts which are inconsistent with 11(1). Facts in Issue or with

Relevant Facts. 17-31. or which show the improbability of a Fact in Issue or Relevant Fact. 41-44,46.

§ Facts in Issue.

Section 3. There are two Requisites of a fact in issue :

(1) **It is a necessary fact.**

A Fact in Issue is a fact which is the foundation of right claimed or of the liability which is sought to be imposed by one party against or upon another party.

A fact in issue is a fact the proof of which is necessary for the claim being granted or the liability being imposed.

Illus—

(1) Supposing the inquiry to be whether A is entitled to succeed to B's property as his son.

The following facts would be necessary facts :

(a) Whether A is the son of B.

(b) Whether B is dead.

(c) Whether the property belongs to B.

They are necessary facts because unless they are proved A's claim to succeed cannot be granted. They are the foundation of his claim.

Illus— (2) Supposing the inquiry is

Whether A caused the death of B.

The following facts would be necessary facts : (i) Whether A caused the death of B. (ii) Whether A had the intention to cause death.

2. Every necessary fact is not a fact in issue. A necessary fact whether it is asserted and denied becomes a fact in issue.

In *Illus. 1* and *2* if any necessary fact is not denied it would base to be a fact in issue.

3. A fact in issue is, therefore, a necessary fact which is in dispute between the two parties.

2. § Facts which are relevant to Facts in Issue.

Section 3. 1. Relevant fact means fact connected to the fact in issue.

1. The connection must be visible and open i. e. must be obvious.

2. The connection must be immediate and not remote.

3. The connection need not be necessary connection that would exclude all presumptive evidence, but such as is reasonable, and not latent or conjectural.

4. Whether there is a connection is a matter of legal instinct or legal sense to be acquired by practice. A few instances may serve for illustrations.

(a) On a Criminal trial of A, the statement of B, who is not a witness that he was the real criminal and that A is innocent would be rejected

for remoteness and want of connection apart from the danger of collusion and fabrication.

R vs. Gray Ir. Cir. Rep. 76.

(b) On a suit by A against B for the recovery of £ 5 lent to him, an entry made by A in his diary that B owed him £ 5 would be rejected for want of connection.

Storr vs. Scott. 6 c &P 241.

(c) A as Agent of B, a Merchant residing abroad bought goods of C. At the time of purchase A did not inform C who was his principal ; but the invoices described the goods as "bought on account of B per A". C afterwards drew upon A for the amount. B after receiving advice for the purchase and of the acceptance of bills by A had made large remittances to A. But A had become insolvent in the meantime.

C sued B the principal.

C desired to give evidence of his account books for the purpose of showing that B had been throughout debited by him as principal.

Held that evidence was inadmissible.

Smyth vs. Anderson. 7 C-b. 21.

II. It is not every connected fact which is relevant. It is only facts connected **in a particular** respect which are relevant. The Evidence Act lays down in what way a particular fact must be connected with the fact in issue in order that it may be treated as a relevant fact.

6. 1. § Proof is allowed of Facts forming part of the same transaction comprised in the facts in issue.

Take *Illus* (a), (c) (d).

What is meant by transaction?

A transaction is a group of facts so connected that they go by a single name such as a **crime, contract, sale** etc.,

Anything connected with the crime or contract if the connection is open and visible i. e. **obvious** and **immediate** is part of the same transaction and is relevant.

What does transaction include?

A transaction not only includes acts done but also statement made in the course of the transaction.

Illus—

The cries of a woman when raped. The statement to be part of the same transaction must accompany the act.

What is meant by same transaction?

1. Same does not mean similar. Evidence of series of similar transactions irrelevant.

2. Same transaction does not mean transaction which has taken place at the same time and same place. It has nothing to do with simultaneity of occurrence as to time and place.

Illus—

Robbery may take place in January in one place, stolen goods may be entrusted with a receiver in another place in February and may be sold in March in a third place. All this would be parts of the same transaction.

3. Same transaction means one connected transaction— parts of the same piece.

Case Law. Cockles pp. 66-68. *53 Cal. 372.*

Principle. Such evidence is allowed because it makes things intelligible. It provides context.

2. § Proof is allowed of a Fact which shows occasion, cause, effect or opportunity for a fact in issue or for a relevant fact.

1. A man is accused of theft. If no money is found in his possession, probability is that he did not commit theft. Every cause has effect. If there was no effect no cause.

2. A man is accused of assault. —That there was a quarrel may be proved to show that there was occasion or cause.

3. A man is accused of poisoning his wife. —To show there was no opportunity for him to do so, it can be proved that the nurse was always present.

4. A is accused for murdering B. —To show there was cause for murder can be proved that B knew that A had married to C and that wanted hushmoney from A.

8. 3 § Proof is allowed of facts which show Motive, Preparation for any fact in issue or relevant fact.

Motive. *Illus.* (a) (b). No rational man acts without motive.

Preparation. *Illus.* (c) (d). No act can be done without preparation.

Case Law.

1. *61 Cal .54—*Motive-intention-Preparation-attempt-Act.

2. *R vs. Palmer—*Cockle P Killed Cook. Pecuniary embarrassment, his buying poison, attempting to avoid inquest.

3. *R vs. Lillyman* Cockle P. (1896) 2QB 167.

4. § Proof is allowed of a fact which shows the conduct of a party to any suit which has reference to such suit or which has reference to any fact in

issue or to any relevant fact. Similarly proof is allowed of a fact which shows the conduct of an accused if such conduct influences and is influenced by any fact in issue or by any relevant fact.

1. Conduct of persons generally.

Illus.— (d) The making of a will. Not long before the making of the will, the deceased made inquiries and drafts relevant.

Conduct of the Accused :

Illus.— (e) suborning witnesses. *Illus.*—(h) absconding. *Illus.*—(h) concealing things.

Explanation—

1. Conduct does not include statement unless the statement accompanies the conduct and explains the conduct.

2. If conduct is relevant then

a statement which affects the conduct is relevant if it was made to the person or in his presence and hearing.

Illus—

(g) Question is whether A owed B Rs. 10, 000. The A asked C to lend his money and D said in A's presence and hearing "I advise you not to trust A, for he owes Rs. 10,000" and A went away without making any answer is relevant.

Case Law.

Imp. 34 om. & R. 1087.

Imp. 7 All. 385 F. E.

Cockles-P. 75. Bright vs. foeBTatham.

5. § Proof is allowed of facts which are necessary to explain or introduce a fact in issue or a relevant fact.

Illustration—

(d) On an indictment for crime it was alleged that the Accused was absconding.

Evidence may be given to show that he had urgent business.

(f) A is tried for a riot to assault or overawe the Police Officer and is proved to have marched at the head of a mob. Evidence may be given of the cries of the mob to explain the nature of the transaction.

(b) On suit for libel—imputing disgraceful conduct. Evidence may be given of the position and relation of Parties at the time the libel was published as introductory to facts in issue.

Under this evidence may be given of:

(1) The identity of a person or thing whose identity is in question.

(2) Exact time and place at which a fact in issue or a relevant fact happened.

(3) of the relation of the parties to the fact in issue or relevant fact.

4. § Proof is allowed of facts showing the existence of any state of mind.

1. Under this, facts may be proved which shows intention, knowledge, good faith, negligence? ill-will or goodwill.

knowledge, Illus. (a) : good faith Illus. (f) : Intention, Illus. (e) (j) : Ill-will. Illus. (k).

2. Under this, evidence of previous conviction may be given. Illus. (b).

3. Limitations upon the use of the Section.

(1) The state of mind of which evidence is given is not general state of mind- general disposition -but a state of mind which has reference to the particular matter in question.

(2) The evidence of the previous commission of the offence must be to show his state of mind with regard to the particular matter in question and for no other purpose.

15. § Proof is allowed of facts to show that the act done was a part of a series of similar acts in order to show that the act in question was done intentionally and not accidentally.

Illustration— (a) (b)

1. Ordinarily the evidence of similar acts is not relevant because if a person has done one act, it does not follow that he must have done the particular act in question.

16. § Proof is allowed of facts showing the existence of a course of business according to which it naturally would have been one, if the question is a particular act was done or not.

Illus—(a) (b). This shows probability.

Question is whether a particular letter reached A or not? The letter was posted and was not returned through the Dead Letter Office may be proved.

13. § EVIDENCE OF TRANSACTION AND INSTANCES IN PROOF OF RIGHTS AND CUSTOMS.

1. Scope of the word Right. (A) There are three kinds of rights.

Private—e. g. a private right of way.

General - A Right common to any considerable class of persons. E. G. the right of villagers of a particular village to use the water of a particular well. Sec. 48 Illus.

Public—This is not defined in the Act. Every public right in the sense of the previous definition of general right is a general one though (according to the distinction drawn by the English Law) every general right is not a public right.

The section applies to all rights whether they are Private, General, or

Public by reason of the word any.

(B) Does the section apply to all kinds of rights? This question arises because of the absence of the word every. There was once a conflict of decisions on this question. One view was that included all rights. The other view was that it included only incorporeal rights.

The view now held seems to be that the term includes all rights.

2. Scope of the word custom.

A custom is not limited to ancient custom but includes customs and usages. Usage would include what people are now or recently in habit of doing in a particular place. It may be that the particular habit is of a very recent origin or it may be existed for a very long time. If it is one which is ordinarily practised there is usage.

B. Custom may be

- | | | |
|------|------|---|
| (i) | (i) | Private custom—Family custom. |
| (ii) | (ii) | General Custom—Custom common to a considerable class of people and may be |
| (a) | (a) | local |
| (b) | (b) | caste or class |
| (c) | (c) | Trade customs or usages. |

(III) Public—Not defined.

C. The Section applies to all customs and to all usages.

3. The evidence to be given is to be evidence of a transaction or of instances in which the right or custom arose.

A. Meaning of transaction and instance

(1) Transaction—some business or dealing carried on between two or more persons.

(2) Instance—Case occurring—individual acting in a particular way.

B, Proof is not restricted to previous transactions in cases between the parties to the proceedings. The use of the word any shows that it need not be between the parties to the litigation. It may be between strangers or it may be between a party to the litigation and a stranger.

C. The word transaction and instance has given a deal of trouble and the question has been raised whether it includes a judgement decree and the litigation in which they were pronounced not being between the same parties (and not being of a public nature), as evidence of a transaction or instance.

The question was considered in the leading case *Gajju Lall vs. Fatteh Lal* 6Cal.171.

III. Facts which are consistent with facts in issue or with relevant facts or which makes a fact in issue or of a relevant fact highly probable.

1. The Section is no doubt expressed in terms so wide and so extensive that any fact which can by a chain of ratiocination be brought into connection with another so as to have a bearing upon a fact in issue or a relevant issue may possibly be held to be admissible.

2. That such an extensive meaning was not intended by the legislature is clear from the word 'highly'. The words 'highly probable' point out that the connection between the facts in issue and the fact sought to be proved must be so mediate as to render the co-existence of the highly probable.—
6 Cal. 665 (662).

3. To render a collateral fact admissible under this section, it must (a) be established by reasonably conclusive evidence and (b) when established afford a reasonable presumption or inference as to the matter in dispute.—
6 Bom.L.R. 983.

4. The terms of this section though very wide must be read subject to other sections of the Act.

Illus—

1. *Ramanujan vs. King Emperor. 58 Mad. 523 F. B.*

Ramanujan was charged for having murdered Seethammal. Facts given at p. 526.

There was no eye-witness to the murder. The prosecution tendered evidence of the following facts :

1. That Seethammal when she left her husband joined the prisoner taking with her some jewels and some silver vessels.

2. That Seethammal and the accused lived together at various addresses.

3. They were last seen in 24 Peddunaicken Street on the 11th January.

4. On the morning of the 12th, when the milkwoman went, the room was locked.

5. That on or about the 13th he pledged certain ornaments belonged to Seethammal.

6. That he purchased a mattress like the one in which the dead body was wrapped.

2. Long continued absence of demand to prove the payment of an alleged debt.

3. The resemblance of a child to the Defendant to prove paternity in a maintenance case.

II (2) § Facts which are inconsistent with facts in issue or relevant facts or which make them highly improbable.

Illustrations.

1. In an action for money lent, the poverty of the alleged lender is relevant as being inconsistent with the making of the loan.

2. That a witness or the accused was at another place is relevant as inconsistent with his alleged presence at the scene of the offence.

3. In a case involving the determination of the question whether the thumb impression is that of A or not. Evidence may be given of his thumb impression on another document if their dissimilarity makes the story of his thumb impression improbable.

52-55. § Proof of facts relating to character.

1. The rules regarding evidence of character fall into two classes.

I Those which relate to the character of witnesses.

II Those which relate to the character of parties.

Character of witnesses.

1. The character of a witness is always material as affecting his credit. The credibility of a witness is always in issue. For as witnesses are the media through which the Court is to come to its conclusion on the matters submitted to it, it is always most material and important to ascertain whether such media are trustworthy and as a test of this, questions, among others, touching character are allowed to be put to witnesses in the case—Sections 145-153.

§ Character of a Party.

1. In respect of the character of a party, distinctions must be drawn between Cases where the character of the party is in issue and Cases where it is not in issue.

Where the character of the party is in issue, there, proof of facts relating to character is allowed irrespective of the question whether the proceedings are civil or criminal. *Sec. 52.*

Illus—

(i) In a Civil Suit the issue is "whether the governess was competent, ladylike and good tempered while in her employer's service" witnesses can be allowed to assert or to deny her general competency, good manners and temper.

(ii) In a Criminal prosecution for conspiracy to carry on the business of common cheats witnesses can be allowed to assert or to deny the general character of the accused.

When such general character of a party is not in issue, proof of character is not permitted by Law. *Sec. 52.*

There are two exceptions to this rule under which evidence of character is allowed even the character is not in issue.

(i) In Civil proceedings, proof of facts relating to character is allowed if they affect amount of damages. *Sec. 55.*

(ii) In Criminal Cases.

(i) Proof of facts showing accused is of good character is always allowed. Sec. 53.

(ii) Proof of facts showing accused is of bad character is not allowed except in the following case :

Where accused has given evidence that he has a good character.

Reasons why this difference is made between civil and criminal proceedings is obvious.

(1) Bad character only creates prejudice against the accused. It does not prove the case against the accused. It is irrelevant unless the accused makes it a matter of issue by giving evidence of his good character, then of course evidence of bad character may be given.

(2) Good character strengthens the innocence of the accused and ought on humanitarian grounds to be permitted.

Two things are to be noted.

1. 1. What is included in the term character?

Sec. 55.

The word Character includes both reputation and disposition. This is a departure from English law under which character is confined to reputation only.

There is a distinction between reputation and disposition. Reputation means what is thought of a person by others, and is constituted by public opinion. It is the general credit which a man has obtained in that opinion.

Disposition comprehends the springs and motives of action, is permanent and settled and has regard to the whole frame and texture of the mind.

2. How to prove Character?

There are two ways of proving the character of a man. One way is to give evidence of general reputation and general disposition. The other way is to give evidence of particular acts which may then become the basis of inference for reputation and disposition.

55 Expl.

The Evidence Act permits evidence to be given only of general reputation and general disposition.

55 Expl.

There is only one exception to this under which evidence of previous conviction may be given as evidence of bad character.

Sec. 45-51.

§ Proof of opinions.

1. The use of witnesses is to inform the Court of the facts of the case. It is the duty of the Court to form its own opinion.

2. To show what the witness thought or believed would be objectionable on two grounds (1) It can show nothing at all and (2) it would be entrenching upon the province of the Judge.

3. The rule is that witness must state facts and not-opinions. A strict application would create two difficulties.

(1) What a third person (i. e. some one who is neither a plaintiff, a defendant nor a prisoner) thinks or believes about any matter in question is not material. If such a third person be called as a witness, he must, as a rule, only state facts; his personal opinion is not evidence. But what a party thinks or believes at the time he does a material act is often a matter in issue both in Criminal and Civil proceedings.

Illus.— Carter -vs. Boehm. Cockle p.

Question was whether a policy of insurance was vitiated by the concealment of facts which had not been communicated to the underwriters. A broker gave evidence of the materiality of the facts. He was asked whether he would have entered into the contract if these facts were disclosed. His answer that he would not have was held to be inadmissible as it was matter of opinion. But if the question had been asked to the party then his opinion would have been admissible.

(2) A strict application of the rule is bound to create difficulties. In cases where the Court is required to form an opinion, the Court may not be competent to form an opinion cases occur in which special experience or special training is necessary before a true opinion can be formed. In such cases therefore the opinion of those who have had special experience or special training must be laid before the tribunal to enable it to arrive at a correct decision.

(3) There are certain cases where it is naturally impossible for any witness to speak positively, cases where he must speak if at all, as to his opinion or belief, the matters to which he deposes being so essentially matters of opinion or else so complex or indefinite that the Court is compelled to accept his opinion for what it is worth. The former are cases involving questions of science, art, or skill which necessarily require the opinion of the expert. The latter class of cases are cases involving question of impressions which may be those of non-experts.

(5) The Evidence Act therefore makes the following exceptions to the general rule that the opinion of a witness is not admissible.

Sec. 45.

(1) The opinions of skilled or scientific witnesses (Experts) are admissible evidence to elucidate matters which are strictly of a professional or scientific character.

For instance. (i) Question of foreign law.

(ii) Question of Science or Art (working of a gun machine).

(iii) Question of as to identity of handwriting or finger impression.

Sec. 47.

(2) On questions of identification of a person by whom any document was written or signed, the opinion of the person acquainted with the handwriting of the person is relevant.

Sec. 48.

(3) Where the Court has to form an opinion as to the existence of any general custom or right, the opinion of persons likely to know of its existence is relevant.

Sec. 49. (4) When the Court has to form an opinion as to :

1. The usages and tenets of anybody of men or family.

2. The constitution and government of any religions or charitable foundation.

3. The meaning of words or terms used in particular districts or particular classes of people.

The opinions of persons having special means of knowledge thereon are relevant facts.

Sec. 50.

(5) When the Court has to form an opinion as to the relationship between two persons, the opinion of persons based on the conduct of parties and having special means of knowledge on the subject.

Illus— (a) (b)

Proviso. Such opinion shall not be sufficient to prove marriage under Indian Divorce Act or the prosecutions under sections 494, 495, 497, 498 of the I.P.C

Nature of Evidence Required for Proof Summary of the Law

I. THE RULE OF BEST EVIDENCE.

REQUIREMENTS OF THE RULE OF BEST EVIDENCE.

- (i) The rule of Best Evidence requires. (a) That if the Evidence is oral then it must be direct. (b) Exceptions.
- (ii) The rule of Best Evidence requires that if the Evidence is documentary then.
 - (i) It must be original.
 - (a) Exceptions.
 - (ii) it be exclusive.
 - (a) Exceptions.

§ The Rule of Best Evidence:

1. It is an incontrovertible proposition of law that the party who is to prove any fact must do it by the **best** evidence of which the nature of the case is capable.
2. This rule, really speaking, underlies the whole law of Evidence.
 - (i) It is because of this rule that the law requires as a condition precedent to the admissibility of Evidence that there should be an open and visible connection between the principal and evidentiary facts.
 - (ii) It is because of this rule that the law requires that Evidence in order to be receivable should come through proper instruments.
 - (iii) It is because of this rule that the law requires that the evidence to be admissible should be original and not derivative.
3. At one time the rule of Best Evidence was very strictly applied. But its application is now greatly relaxed and what were once objections to admissibility now went merely to sufficiency on weight.
4. But the rule still survives and is illustrated by the requirements of the law of evidence in respect of oral Evidence and documentary evidence.

§ Oral Evidence:

1. The rule of best Evidence requires that if the evidence is oral then it must be direct.
2. This rule is embodied in section 60 of the Evidence Act.
3. What is meant by Direct Evidence?
4. The answer that is commonly given is that oral evidence must not be hearsay evidence. This leads to the consideration of hearsay evidence. The rule excluding Hearsay is subject to three main classes of Exceptions:
 - (i) Admissions and Confessions : Statements made in the presence of the party.
 - (ii) Statements made by persons since deceased. (iii) Statements made in

public Documents.

§ What is hearsay evidence:

1. Hearsay evidence has been defined in many different ways :

(i) All Evidence which does not derive its value solely from the credit given to the witness himself, but which rests also in part on the veracity and competence of some other person.

(ii) The statement as to the existence or non-existence of a fact which is being enquired into, made otherwise than by a witness whilst under examination in Court can be used as evidence.

2. Hearsay evidence is evidence reported by witnesses of statements made by non-witnesses.

§ Why hearsay evidence is excluded?

1. When A sworn in Court, details something which he did not see with his own eyes immediately but which he heard from B immediately he is not giving expression to the evidence of his own bodily senses, but is the medium merely of communicating that which some third unsworn person has said he saw. He is bringing evidence to birth, *obstetricante manu*, with the hand of a midwife; and is a mere channel or conduct pipe for communicating the information of a party not before the Court. A may most correctly and truthfully

report what has been related to him, but it is never the less apparent that the real truth of the original statement cannot under such circumstances be tested. The originator of the report is not subjected to an oath or to Cross Examination *Non Constat* but he may have spoken idly or jocularly ; and he would be unwilling to repeat on oath what he had not hesitated to narrate in ordinary conversation. *Non constat* that he might not have wilfully fabricated a story or been the dupe of some one still farther hid behind the scenes or that though perfectly veracious as to intention, he might have been the victim of his faulty impressions or unretentive memory ; and so have utterly broken down, if only exposed to the test of Cross Examination. Therefore the law determines that such evidence shall not be receivable ; that if it is important to the party calling A, to establish the facts which A has heard from B, B himself shall be produced, make his own statement in Court, be subjected to the two tests of oath and Cross Examination and the scarcely less terrible detector of inaccurate or fallacious evidence, the observation to which a Judge, experienced in forensic practice, and skilled in the knowledge of human nature, subjects the demeanour, the deportment, the manner, of every witness who comes before him.

§ Does the rule of Exclusion apply to all Hearsay Evidence?

1. Hearsay is the statement of a person who is not a witness in the Court and which is sought to be tendered as evidence through another person who comes as a witness.

2. The question is, does the rule of exclusion apply to all statements of a person who is not a witness in Court.

3. To understand, this question it is necessary to realise that a statement when tendered in evidence wears two different aspects. A statement is a fact and it is also the statement of a fact.

Illus--

When A gives Evidence that B said this or that

(i) taken as a fact the question is did say so or did he Not

(ii) taken as a statement of a fact the question is is what said false or true.

4. The Evidence of a statement by a person who is not a witness may be given for two purposes :

(i) To prove that such a statement was made. (ii) To prove that a statement made is a true statement.

In its former aspect it is merely a fact in issue. In its latter aspect it is an assertion to prove the truth of the matter stated.

5. Whether a statement by a non-witness sought to be tendered in evidence and the admissibility is in question is tendered merely as a fact in issue or relevant fact and is tendered as an assertion to prove the truth of the matter, depends upon the purpose for which it is tendered. The test is the purpose.

6. The Rule of Exclusion of hearsay is stated in a narrow sense as well as in a wider sense. In its narrower sense, it is confined to unsworn statements used to prove the truth of the facts stated. In its wider sense, it is used to include all statements by unsworn witnesses for whatever purposes tendered i. e. including statements used merely as facts.

The Rule adopted in the Evidence Act.

1. The Indian Evidence Act does not recognise the rule that "no statement as to the existence or non-existence of a fact which is being enquired into, made otherwise than by a witness whilst under examination in Court can be used as evidence"—Markby.

2. Under the Indian Evidence Act statements by nonwitnesses are admissible where the making of the statements not its accuracy is the material point.

3. Therefore

(i) Statements which are parts of the resgestee, whether as actually constituting a fact in issue or accompanying it (ss 5,8),

(ii) Statements amounting to acts of ownership, as leases, licenses and grants (Sec. 13),

(iii) Statements which corroborate or contradict the testimony of witness (ss. 155,157,158)

are admissible even though they are statements by non-witness.

4. The rule of the exclusion of hearsay applies only to statements made by non-witnesses which are used to prove the truth of the facts stated.

4. What are the exceptions to the rule?

1. Under the rule of evidence contained in the Evidence Act a statement made by a non-witness to prove the truth of the facts stated therein is inadmissible.

2. There are exceptions to this rule.

§ Exceptions contained in Section 32.

1. 1. When a person is dead or cannot be found or has become incapable of giving evidence or whose attendance cannot be procured without delay or expense, statements written or verbal made by such persons may be proved if the statements fall under any one of the 8 categories mentioned in Section 32.

(i) When it relates to the cause of his death (a)

(ii) When it is made in the course of business. *Illus* (b) (j)

(iii) When it is against the pecuniary or proprietary interest of the maker or which if true would have exposed him to criminal prosecution or suit for damages. *Illus* (e) (f)

(iv) When the statement gives his opinion as to public right or custom or matters of general interest provided such opinion was given before controversy had arisen. (*Illus*) (i)

(v) When it relates to the existence of relationship by blood, marriage or adoption and the person had special knowledge and was made before controversy.

(vi) When it relates to the existence of relationship between persons deceased and is made in any will or deed relating to family affairs, in a family pedigree, upon any tombstone, family portrait etc., and is made before controversy.

(vii) When it is contained in any deed, will or other document which relates to any transactions as is mentioned in Sec. 13, clause (a).

(viii) When it is made by a number of persons expressing feelings or impressions. *Illus*. V.

§ Exceptions contained in Section 33.

1. When a person is dead, or cannot be found, or is incapable of giving evidence or is kept out of the way by the adverse party or if his presence

cannot be obtained without unreasonable delay on expense then the Evidence given by such a person as a witness in a former judicial proceeding or before any person authorised by law to take it, can be tendered in a subsequent judicial proceedings or in a later stage of the same judicial proceedings to prove the truth of the facts which it states.

PROVIDED

(i) That the proceeding was between the same parties or their representative in interest

(ii) That the adverse party in the first proceeding had the right and opportunity to cross examine

(iii) That the questions in issue were substantially the same in the first as in the second proceeding, (Further portion not forthcoming—ed.)

35 § Entries in any book, register or record

1. Conditions of admissibility.

(i) Two classes of entries are contemplated by the section, (a) By public servants and (b) by persons other than public servants. If it is by a public servant then it must be in the discharge of his official duty. If it is by persons who are not public servants then the duty to make the entry must have been specially enjoined by the law. The former is as a matter of course. The latter is as a matter of special direction.

(ii) The book, register or record must be either public or an official one.

Official does not mean maintained for the use of the office. It means maintained by the State as distinguished from anything maintained by a private individual.

Public means for the use of the public. Public does not mean open to every one. It means open to every one having a concern to it. *18 Cal. 584.*

(iii) The Book, Register or Record may be in the book, register or record kept in any country not necessarily in India, provided it satisfied the conditions. An entry in a book, register or record of any foreign country can be proved.

Points to be noted.

(1) The entry is evidence ; though the person who made it is alive and is not called as a witness—For the proof of public and official documents see Sections 76-78.

(2) The Sections does not make the book, register or record evidence to show that a particular entry has not been made— *10 Cal. 1024; 25 All. 90.*

(3) The Section is not confined to the class of cases where the public officer has to enter in a register or other book some actual fact which

is known to him— *20 Cal. 940*.

(4) Although the entry must have been made by a public servant in the discharge of his official duty or in the performance of a duty specially enjoined by law, but it must not be such an entry which a public servant is not expected or permitted to make, or which from ignorance of his duties or caprice or otherwise, he may choose to make at the dictation of a person who had a personal knowledge of the truth of the facts stated in the entry. *25 All. 90. F.B.101*.

2. It is not necessary that the entries must have been made up from day or (as in banks) from hour to hour as the transactions take place. Time when the entries are made is not essential. All that is necessary is that they must have been made regularly in the course of business. Delay in entry may affect its value but cannot affect its admissibility—*27 Cal. 118 (P.C.); 13 C. L. J. 139*.

3. Although the actual entries in books of account regularly kept in the course of business are relevant, the book itself is not relevant to disprove an alleged transaction by the absence of any entry concerning it. *10 Cal. 1024*.

NOTE : It may be admissible under Sec. 9 and 11—*19 C. N. 1024*.

For inference to be drawn from absence of entry. *30 Cal. 231 (247) P.C.*

4. The entry must be in some book, register or record. Entry does not include correspondence *7 M.L.I. 117*.

Illus—

1. Entries in Birth and Death Registers.
2. Entries in Birth and Revenue Registers.
- 3.. Entries in Birth and Marriage Registers.

36 § Statements of fact in issue or relevant facts made in Maps, Plans and Charts.

I Conditions of admissibility.

The section refers to two classes of Maps and Plans.

- (a) Those generally offered for public sale and
- (b) Maps or Plans made under the authority of Government.

Reasons for the admissibility of (a)

The publication being accessible to the whole community and open to the criticism of all the probabilities are in favour of any inaccuracies being challenged or exposed.

Reasons for the admissibility of (b)

Being made and published under the authority of Government, they must be taken to have been made by and to be the result of the study or inquiries of competent persons.

37 § Statement made in a recital in any Act or in a notification of the Government appearing in the Gazette.

Reasons.

1. The Gazettes and Acts are admissible because they are made by the authorised agents of the public in the course of an official duty and published under the authority of the State and facts stated in them are of a public nature and notoriety.

2. As the facts stated in them are of a public nature, it would often be difficult to prove them by means of sworn witnesses.

1. Relevant only if the Court has to form an opinion as the existence of any fact of a public nature.

2. Public nature, (not explained—ed.)

3. The section draws no distinction between a public and private Act of Parliament. It merely requires that the fact recited in either case should be a public nature.

4. The recitals are not conclusive so far as the Evidence Act is concerned. However they may be expressly declared to be conclusive.

5. A recital is to be proved for showing the existence of a fact. It is no evidence that the particular person knows its existence. Knowledge of a fact although it be of a public nature is not to be conclusively inferred from a notification in the Gazette; it is a question of fact for the determination of the Court. It must be shown that the party affected by notice has probably read it.

38 S.

1. Statement of the law of any country in

(a) book purporting to be printed or published under the authority of the Government of such country and to contain any such law.

2. Report of a ruling of the Court of such country contained in a book supporting to be a report of such rulings.

This applies where the Court has to form an opinion as to a law of any country.

Particular instances of facts which are inconsistent with facts in issue or relevant facts or which make them highly improbable.

They are (1) Admissions (2) Confessions and (3) Judgements.

§ Admissions

Sec. 27.

1. Admission may be proved against the person who makes them or against his representative in interest.

2. Question is what is an admission? Before that certain points regarding the relevancy of admissions must be noted.

(1) Admission can be proved against a person. Admission in favour of a person cannot be proved by him. A plaintiff can prove an admission made by the Defendant if it is necessary for this case. A defendant can prove an admission made by the plaintiff if it is necessary for his case. But a plaintiff cannot prove an admission made by him however helpful it may be for his own case. Similarly a Defendant cannot give evidence of an admission made by him however hopeful it may be for his own case.

The reason is that a party cannot be allowed to create evidence in his own favour.

There are three exceptions to this rule under which a party is permitted to give evidence of an admission in his own favour.

(a) If the Admission is relevant under Sec. 32. (b) If the Admission relates to a state of mind or body made about the time and is accompanied by conduct. (c) If the admission is relevant otherwise than as an admission.

Illus: (d) and (e)

Sec. 23.

(2) Barring these three cases, an admission, if it is to be proved can be proved only against a party. But there is a case in which proof of an admission cannot be given. This is a case where admission was made on the express condition that proof of the admission shall not be given.

Sec. 31.

(3) Admissions are not conclusive proof of the matter admitted. An admission may become an estoppel if the elements necessary for estoppel exist in which case a party against whom it is sought to be proved cannot give evidence to disprove it or explain it away. But if it is not an estoppel, evidence can be given by the party against whom it is proved to disprove it or to explain it.

3. Admissions can only be proved against the party who made them but they can also be proved against his representative- interest.

Who is a representative-in-interest?

(i) (i) There is no definition of the term given in the Act.

(ii) (ii) It is held to be wider than the term Legal representative which according to the penal code means a person who represents in law the estate of a deceased person.

(iii) (iii) It not only includes a ' legal representative ' but also includes the **privies of a person.**

(iv) (iv) The privies of a person are :—

(i) (i) *Privies in blood*, such as ancestors and heirs.

(ii) (ii) *Privies in law*, such as executor of a testator

or administrator to an intestate.

(iii) *Privies in estate* or interest, such as Vendor and Purchaser, grantor and grantee, donor and donee, lessor or lessee.

So that an admission :

- (1) made by the father can be proved against the son ;
- (2) (1) made by the deceased against the executor or administrator ;
- (3) (2) made by the Vendor against the Purchaser.

17-20 § What is an Admission.

1. 1. Admissions are (1) Formal or (2) Informal. (1)

Formal admissions are :

- (i) (i) Admissions contained in the pleadings.
- (ii) (ii) Admissions in answers to interrogatories.
- (iii) (iii) Admissions on notice to admit facts.
- (iv) (iv) Admissions on notice to admit documents.
- (v) (v) Admissions by Solicitors.
- (vi) (vi) Admissions by Counsels.

(2) Informal Admissions are :

- (i) (i) By Statements.
- (ii) (ii) By Conduct—
 - (1) Act or Omission.
 - (2) Silence.
 - (3) Acquiescence.

4. Admissions the proof which is allowed by section 21 do not Formal Admissions. Section 21 deals with informal admissions only. But it does not deal with all the classes of informal admissions. It does not deal with informal admissions by conduct. It only deals with informal admissions contained in statements. It deals with assertions and not acts.

5. The definition of an admission as used in Section 21 is spread over sections 17-20.

An admission is a statement, oral or documentary, which suggests an Inference as to any fact in issue or relevant fact made by a person specified in Sections 18, 19, 20.

Two things are necessary.

The statement may not be directly touching the fact in issue or a relevant fact. It is enough if it suggests an inference of acknowledging the fact in issue or relevant fact.

Illus —

A sues X for damage done by K's cattle to A's crop and for the purpose of showing an admission on the part of X that his cattle had caused the

damage. X offers the testimony of B to the effect that X told that X had offered a certain sum to cover the damage.

This is a statement which can sustain the inference that X's admission that his cattle did do the damage.

IIIUS—

A sued *X* for the loss of his sheep alleging that *X*'s dog had killed them. As proof he adduced evidence that *X* had killed his dog at the time remarking that it will not kill any more sheep.

Is this an Admission?

II. It must have been made by persons specified in Sections 18-20.

1. Deference to sections 18-20 shows that the reasons specified fall into categories.

- (1) Persons who are parties to the proceedings and
- (2) Persons who are not parties to the proceedings—strangers.

Persons who are parties to the proceedings include :

- (1) Parties.
- (2) Agents of the parties.
- (3) Persons jointly interested in the subject-matter of proceedings . e. g. partners, joint contractors.
- (4) Persons from whom parties have derived their interest.

I. Strangers.

Where can a statement of a person who is a stranger and is not in any way related to a party to the proceedings mentioned in Section 18, be treated as an admission by a party.

Two cases. (1) Statement is that of a referee—Section 20.

II. When the liability or position of that stranger is subject-matter of the proceedings.

and

- (2) When the statement of the stranger, be such as to amount to admission by him of his liability i. e. it must come within Section 17-18.

Illus. To the section —of liability. *Illus. 5 Mad. 239*—of position.

A and *B* are jointly liable for a sum of money to *C* who brings an action against *A* alone.

A objects that he cannot singly or severally be made liable and that *B* should be joined as a co-defendant being jointly liable.

An admission by *B* to *D* as to his joint liability is relevant between *A* and *C* and may be proved.

D may prove it although *B* is not called.

§ Confession

1. Evidence may be given of a confession provided it be not expressly

excluded whether made to a private person or to a Magistrate.

2. That a confession was made is a fact which must be proved like any other fact.

9 *Mad.* 224 (240).

5 *Lab.* 140.

4 *All.* 46 (94).

8 *W. R. Cr.* 28.

3. Two Questions arise :

I. What is a Confession.

II. What are the cases in which the Evidence of a Confession is excluded.

1. What is a Confession :

1. The Act contains no definition of the term Confession.

2. The definition of the term is therefore a matter of judicial interpretation.

3. A confession is a statement. An Admission is also a statement although the one is a statement by an accused while admission may be statement by a party. Two questions arise :

(1) What is the precise difference between Confession and Admission.

(2) When is a statement by the accused a Confession and when it is an admission.

1. Statements made by an Accused person belongs to a class which the Evidence Act calls "admissions" (sections 17,18) and. . . . they are evidence against the maker but not in his favour.

2. Confessions are a sub-species of "statements" and a species of admissions.

3. The following table illustrates the relationship.

4. The common feature of confessions and admissions is that they are both of them are **statements** made by the party to the proceedings.

5. Two questions arise.

1. A statement is an admission even though it is not made by the party himself. If it is made by a person defined in Sections 18-20 it will be an admission. Can a statement rank as a confession if it is made not by the Accused himself but by persons specified in Sections 18-20.

1. To be a Confession, it must be by the Accused himself. If it is not by the accused it is not a Confession :

1. An exculpatory statement by the Accused is not a Confession.

2. An inculpatory statement by the Accused which involves him but does not incriminate him is not Confession.

3. An inculpatory statement which not only involves but also incriminates is a Confession.

Points to be noted.

1. The incrimination may be direct or may be by inference. A statement which can by itself be the foundation of conviction is a confession.

2. The statement may be intended by the accused to be self-exculpatory but it may nevertheless be an admission of an incriminating circumstance in which case it will amount to a Confession. *6 Bom. 34.*

§ Two sorts of Confessions.

1. Confessions are either Judicial or Extra Judicial.

(i) Judicial Confessions are those which are made before a Magistrate or in Court in the due course of legal Proceedings. (ii) Extra Judicial Confessions are those which are made by the party elsewhere than before a Magistrate or in Court.

§ What are the cases in which Evidence of Confession excluded

1. The Evidence Act has considered three possible cases : (i) Confession is made to a Police Officer. (ii) Confession is made while in the custody of the Police. (iii) Confession which is made to a person who is not a Police Officer and which is not made while in the custody of the Police.

With regard to (i)

It is excluded by Section 25. With regard to (ii)

It is excluded by Section 25, 26. Exception.

Effect of Sec. 27.

6 All. 509(F.B.)

Question. Is Section 27 an exception only to Section 26 and not to section 25?

or

Is it an exception to both?

57 Cal. 1062.

With regard to (iii)

The matter is governed by Section 24. **Explanation.**

1. Person in authority.**2. Appears.**

Points to note:

1. Sec. 28 Confession after..... is removed.
2. Sec. 29

Queries.

1. Does Sec. 24 apply to statements made by the Accused under Sec. 287 Cr. P. C. before the Committing Magistrate.

Q. Not settled. 17 *Bom. L.R.*
1059.

II. Does Sec. 24 apply to statement of an Approver under pardon under Sec. 339 (2) Cr. P. C. (22 *Bom. L. R.* 1247).

§ Use of Confessions.

1. Statement made by an Accused person binds him only so because of two reasons.

(i) The general rule of law is that an Admission made by one person could prejudicially affect another person.

(ii) The statement made by an accused person is not on oath.

(iii) The statement is not subject to cross-Examination.

2. But if the statement is a Confession which affects both himself and another person, then Section 30 says the Court may take into consideration the confession made by the Accused against other persons mentioned in the Confession.

3. Section 30 is therefore an exception to the general rule. The reason for this exception is the fact of self-implication which is said to take the place as it were of the sanction of an oath or is rather supposed to serve as same guarantee for the truth of the accusation against the other.

4. With regard to the use of the confession of one Accused against another accused, the important words are "**Court may take into consideration**". This means,

(1) That the use is not obligatory. It is permissive and discretionary. Court is permitted to use it. Court is not bound to use it.

(2) Court may Consider it. The word consider is significant.

(1) A statement made by a witness is "evidence", according to the definition of that term. A confession by an accused person affecting himself and his co-accused is not "evidence" in that special sense. It is in the sense that it is a matter before the Court which it may consider. The question is while allowing it to be so considered, does it do away with the

necessity of other evidence? There is no direct answer given in the Evidence Act. But all the Courts have held that it does not do away with the necessity of other evidence. The reasons are:

(1) Confession is never a complete guarantee of its truth against the other persons whom it involves. A confession may be true so far as it implicates the maker but may be false and concocted through malice and revenge so far as it affects others.

(2) Confession cannot be placed above the testimony of an accomplice because the latter is subject to Cross Examination while the former is not and if testimony of an accomplice requires corroboration a confession must.

Conclusion. If there is (a) absolutely no other evidence in the case, or (b) the other evidence is inadmissible such a Confession alone will not sustain a Conviction. There must be corroboration.

When persons are accused of an offence of the same definition, arising out of a single transaction, the Confession of one may be used against the other, though it inculcates himself through acts separable from those ascribed, to his accomplice, and capable, therefore of constituting a separate offence from that of the accomplice.

8 Bom. 223.; 7 Mad. 579 Abatement—Same offence

1. Importance of the words made and proved. Does the section include statement made by one accused at the trial which incriminates himself and implicates a co-accused?

The answer is that it does not.

The Section is not to be read as though the words "at the trial" were inserted after "made" and the word "recorded" substituted for "proved". (1890) *14 Mo. Jur. N. S. 516*.

The Section does not refer to the statements made at the trial. It refers to statements **made before** and proved at the trial. The use of the term proving a Confession is inapplicable to the procedure where the Judge asks questions and the accused gives explanation. *45 All. 323*.

2. Importance of "Jointly tried".

In this connection two important questions arise—When one Accused confesses and in his confession implicates a co-accused and pleads guilty.

(i) In such a case can he be treated as being jointly tried with the rest, as to let in his confession under this section against co-accused?

(2) In such a case can an Accused who pleads guilty be called as a witness against those who do not plead guilty?

Q. 1. His Evidence cannot be taken into consideration because he ceases to be jointly tried. *5 Bom. 63; 7 Mad. 102; 19 Bom. 195*.

Although it is open to the court to continue the trial without convicting the Accused who pleaded guilty, yet it is unfair to defer convicting them merely in order that their confessions may be considered against the other accused. *23 All. 53.*

Q. II. This depends upon the definition of the word accused : When does an accused person cease to be an accused person?

Until an Accused person who has pleaded guilty is convicted or acquitted, he is still an accused person and is therefore not a competent witness against the co-accused. *13 C. W. N. 552.* Until an Accused person who has pleaded guilty is convicted and **sentenced**, he is still an Accused person and is therefore not a competent witness against the coaccused. *3 Bom. L. R.*

Summary.

1. When a person pleads guilty—he ceases to be jointly tried but he does not cease to be accused person. So that on plea of guilty his confession cannot be taken into consideration against other accused because they are not co-accused jointly tried : nor can he be called as a witness because he continues to be an accused until sentenced.

2. When a person pleads guilty and he is jointly tried and ceases to be an accused person, his Confession cannot be used but he becomes a competent witness.

Relevancy of Judgements. Sec. 40

Where the question is whether a Court ought to take cognisance of a suit or to hold such trial.

The existence of a judgement order or decree which **prevents** any Court from taking cognisance of a suit or holding a trial is relevant fact.

Comment.

1. The law by which a prior judgement order or decree prevents a civil court from taking cognisance of a suit is contained in the Civil Procedure Code and the law by which a prior judgement prevents a criminal Court from holding a trial, is contained in the Cr. P. C.

2. The relevant Sections of the C. P. C. are 11-14. Provisions summarised in Field p. 260.

3. The relevant Section of Cr. P. C. is section 434.

4. Under Section 40 a Judgement is relevant if its effect is to conclude the court.

5. Such a judgement must be just between the **same** parties and on the same issues.

6. A Judgement *inter panes* does not bind a stranger. The principle underlying the rule is that no man ought to be bound by proceedings to

which he was a stranger and over which he had no control.

Exception to the Rule

(I) Sec. 41. enacts an exception to the rule, under it. A final Judgement of a competent court in the exercise of

- (i) Probate |
- (ii) Matrimonial | Jurisdiction
- (iii) Admiralty |
- (iv) Insolvency.

which confers or takes away a legal character or which declares any person to be entitled to any specific thing is admissible.

Comment:

1. This means that a judgement infer parties is admissible in a proceedings between persons who were not parties to that proceedings.

2. This section deals with what are called judgements *in rem* without using that expression. All judgements are *inter panes*. But some *inter partes* judgements are judgements *inper-sonam* and some are judgements *in rem*. Both are *inter partes*. Instead of defining judgements *in rem*—the section enumerates them.

3. The result is that every judgement which gives or takes away a character is not admissible. It is only judgements given in the exercise of particular kind of jurisdiction which is admissible.

Illus. Adoption is not admissible as between strangers.

It is a Judgement which confers a statics. But it is not admissible because it is not under any of the jurisdiction mentioned.

(II) Exception. Sec .42.

Judgement in *personam* is relevant as between strangers if the judgement relates to a subjects of a public nature.

Subjects of a public nature.

- (1) Customs.
- (2) Prescriptions.
- (3) Tolls.
- (4) Boundaries.
- (5) Rights of Ferry.
- (6) Sea Walls etc.

(III) **Exception Sec. 43.** Under this section Judgements *in personam* are admissible as between strangers under two circumstances

(i) Where the existence of such judgement is a fact in issue. (ii) Where the Judgement is relevant under some other provision of the Evidence Act.

Comment:

1. 1. The first circumstance is easy to conceive.

Illus.

(1) A sued B for slander in saying that he had been convicted of forgery. B justified it upon the ground that it was true.

The conviction of A forgery would be a fact in issue and a judgement supporting his conviction would be admissible also. B was not a party to that judgement.

(2) A Judgement against a surety obtained by the creditor will be admissible in a suit by the surety against the principal debtor although the principal debtor was not a party to it.

(3) Upon a trial for intentionally giving false Evidence in a Judicial proceedings the record will be evidence that there was a Judicial proceedings.

2. It is the second circumstance which has created difficulty. What are the sections under which a judgement is likely to be relevant?

Under sec. 7—Show cause, occasion. Under sec. 8—Motive conduct.

Under sec. 9—Facts necessary to explain relevant facts. Under sec.

11—Facts inconsistent. Under sec. 13—Transaction.

3. Two Questions.

I. Is a Judgement a fact.

II. Is a Judgement a transaction. 6.

Cal. 171 F. B.

4. Comment on 6 Cal. 171. that it is a fact. p. 181.

Fact: (1) Anything state of things, or relation of things capable of being perceived by the senses.

(2) Any mental condition of which any person is conscious.

II Documentary Evidence.

1. The subject to be dealt with is the proof of the statements made in a document i. e. proof of the contents of a document. Oral Evidence deals with the proof of the statements made verbally by a party.

2. What are the requirements of the Rule of Best Evidence with regard to the proof of the contents of a Document? There are two requirements'—

(i) In certain cases the Evidence must be documentary and not oral.

(ii) In those cases where the Evidence must be documentary that evidence must be primary.

§ Cases where Evidence must be documentary

1. Many matters are reduced to writing. But because they are reduced to writing, the Law does not require that every such case they shall *be proved only* by the production of the document. Some may be proved by oral Evidence and others must be proved by documentary Evidence.

2. For this purpose it is necessary to note that the Indian Evidence Act makes two distinctions—

(1) between documents which are **dispositive** in character and documents which are non-dispositive in character and

(2) between transactions which are required by law to be in writing and those which are not.

3. Dispositive and non-dispositive. Dispositive means transactions in which parties dispose of their rights, such as a Contract, grant etc., Non-dispositive means transactions in which no disposition of rights is involved.

4. The rule embodied in the Evidence Act is twofold :

(i) When a document is a dispositive document and when the matter is such that the law requires it to be reduced to writing no evidence shall be given in proof of the matter except the document. In other words oral Evidence in such cases cannot be substituted for documentary Evidence. But if the document is of a non-dispositive character or if it is one which is not required by law to be reduced to writing then although the transaction may have been reduced to writing yet oral evidence may be given in proof of the transaction.

(ii) If the transaction is a dispositive transaction or is one which is required by law to be in writing then not only oral Evidence cannot be substituted for the documentary Evidence but oral evidence cannot be admitted to contradict, modify or vary the terms of the document.

5. This rule is contained in Sections 91-92.

§ Exceptions to the Rule contained in Secs. 91-92.

1. There are exceptions to this rule. They fall into classes. They must be kept separate. One class deals with cases where the question is whether oral evidence may be substituted for documentary Evidence. The second deals with cases where the question is whether oral evidence may be admitted not to substitute but to modify documentary evidence where the rule requires that the Evidence shall be documentary.

§ Exceptions which permit substitution of oral Evidence for documentary Evidence.

1. They are contained in Section 91 and cover the following cases:

(i) Appointment of a Public Officer. (ii) Will may be proved by the probate.

§ Exceptions which permit oral Evidence to be given to modify the terms of the document.

1. They are contained in Sec. 92 and cover the following cases.

2. The first thing to note is that such evidence can always be given by persons who were not parties to the document or who are not representatives in interest of the parties to the document.

3. The cases in which parties to the document or their representatives in interest can give oral Evidence are as follows :— (i) Fact which would invalidate a document e. g. fraud, want of capacity.

(ii) Fact on which document is silent and which is not inconsistent with its terms. (iii) Condition precedent. (iv) Subsequent oral agreement. (v) Usage or custom by which incidents are attached to contracts. (Bakers dozen). Provided it is not inconsistent. (vi) Fact showing how the language is related to existing facts.

§ Cases where oral Evidence may be admitted to Explain documentary Evidence.

There are two propositions of law which arise out of the first rule of Best Evidence relating to Documentary Evidence.

1: Where the transaction embodied in a document is of a nondispositive character or is one not required by law to be in writing the fact of the transaction may be proved by oral Evidence.

2. Where it is dispositive or required by Law to be in writing then oral evidence not only given to prove the transaction but it cannot be given to contradict, modify or amend the terms of the transaction as embodied in the document.

3. One question however remains. Can oral Evidence be given to explain documentary Evidence? This is a distinct question and must be separated from the question whether evidence can be given to modify contract etc. the terms of the documentary evidence.

4. This question is dealt with in Sections 93-100.

5. In dealing with documentary Evidence disputes may arise on three counts:

(i) Disputes regarding applicability or non-applicability of the language of the document to existing facts.

(ii) Disputes regarding the meaning of the documents where the language used is ambiguous or defective.

(iii) Disputes regarding the meaning of the words used in the document.

1. Under I there are three possible cases of disputes.

(1) Where language applies accurately to facts and the contention is that it was not meant to apply— Evidence may not be given in support of the contention to show that it was not meant to apply to the existing facts to

which they do apply—Sec. 94.

(2) Where language applies to one of the existing facts but not to all of them— and the contention is that it applies to one specified fact— Evidence may be given in support of the contention to show to which particular fact it was intended to apply.—Sec. 95.

(3) Where language applies partly to one set of facts and partly to another set of facts and whole does not apply correctly to either and the contention is that it applies to one set and not to the other—Evidence may be given in support of the contention to show to which of the two it was meant to apply—Sec. 97.

1. Under the second Head of Disputes there are two possible cases:

(i) Where language is ambiguous or defective and the contention is that the parties meant a particular thing— Evidence may not be given in support of the contention to show its meaning or to supply its defects— Sec. 93.

(ii) Where the language is plain in itself but is unmeaning in reference to existing facts and the contention is that it was meant to indicate a particular thing—Evidence may be given in support of the contention to show what was meant —Sec. 95.

. Under the third head of disputes there arises the following case— (i) ... (Space left blank in M.S.—ed.)

Difference between latent ambiguity and patent Ambiguity. II How to prove the contents of a Document?

1. What are the requirements of the Rule of Best Evidence with regard to the proof of the Contents of a Document?

2. There are two requirements in this respect as laid down in the Evidence Act.

(i) The contents of a document must be proved by Primary Evidence.

(iii) (iii) The document must be proved to be genuine.

§ What is meant by Primary Evidence?

Sec. 62.

(1) Primary Evidence means the document itself produced for the inspection of the Court.

Explanation (Space left blank in M. S.—ed.)

§ How to prove that the document is genuine?

1. For the purpose of proving their genuineness the Evidence divides documents into two classes (1) Public Documents and (2) Private Documents.

2. Public Document is defined in Sec. 74.

3. Section 75 declares that any document which is not a public document

is a private document.

4. The rules for proving the genuineness of a document differs according as the document is a public document or a private document.

5. The mode of proving the genuineness of a public document is stated in Sections 76-78.

6. The mode of proving the genuineness of a private document is stated in Sections 67-75.

7. Private documents must generally be proved by the production of the original coupled with the evidence of the **handwriting, signature or execution** as the case may be. **Exception**— will may be proved by probate.

8. The genuineness of public documents may be proved either by the production of certified copies under Section 77 or if they be documents of the kind mentioned in Section 78 the various modes prescribed in that section.

9. With regard to the burden of the genuineness of a document whether it is public or private, the Evidence Act enacts certain presumptions which are contained in Sections 79-90 although they are not conclusive presumptions.

10. These presumptions fall into classes :

(1) Those in which the Court shall presume. 79-85 and 89.

(2) Those in which the Court may presume. 86-88 and 90.

§ **When is Primary Evidence dispensed with?**

(Space left blank in M. S.—ed.)

§ **How are the Contents of a document proved where Primary Evidence is dispensed with?**

1. By Secondary Evidence.

(Space left blank in M.S.—ed.)

§ **What is Secondary Evidence?**

(Space left blank in M. S.—ed.)

BURDEN OF PROOF

1. The law requires the person on whom the burden of evidence is placed to discharge the burden.

2. In discharging this Burden of Proof the following considerations must be borne in mind :—

(i) There are matters of which Proof is not required. (ii) There are matters of which Proof is not allowed.

3. Under (i) his burden is lightened while under (ii) his burden is increased.

BURDEN OF PROOF

(i) Matters of which Proof is not required by Law

1. Matters of which Proof is *not* required by Law fall under three heads:
 - (a) Matters which are judicially noticed. (b) Matters which are admitted by parties. (c) Matters the existence of which is presumed by Law.

§ Matters which are judicially noticed

1. Sections 56 and 57 deal with facts which are judicially noticed. Section 57 enumerates 13 matters of which judicial notice must be taken.

Section 56 says that no fact of which the Court will take judicial notice need be proved by evidence. Parties are relieved from the burden of adducing evidence to prove a fact which falls under any one of the matters falling under Section 57 of which judicial notice must be taken.

2. *The principle underlying the Sections.*— Certain matters are so notorious and are so clearly established that it would be useless to insist that they should be proved by evidence.

Illus.

1. The commencement and continuance of hostilities.
2. The Geographical Divisions of the Country.

These facts are so notorious that proof of them by evidence is superfluous.

2. 2. *Matters enumerated in Section 57.*

(i) RULES HAVING THE FORCE OF LAW.

Many Acts contain a Section empowering the Local Government to make rules for carrying into effect the provisions of the Act and declaring that such rules shall have the force of Law e. g. Rules made under the Government of India Act. Such rules fall within the purview of this section.

2. Distinction must be drawn between rule having the force of law and custom which is the source of Law. A large part of Hindu Law is based on custom. But the Court will not take judicial notice of a custom. The party who relies on a custom must prove the existence of the custom. When the party has proved the existence of the custom the Court will give effect to it only if it comes to the conclusion that it is a valid custom.

3. It is true that there are some customs for the proof of which the Court does not require Evidence. But that is not because the Court is bound to take judicial notice. The Court does not require formal proof because by the rule of precedent, the Court is bound to uphold a custom, the existence and validity of which has been recognised in an earlier decision by a Court to which it is Subordinate.

(ii) STATUTES. The statutes passed by Parliament are either general or special.

A General Statute is universal in its application and extends to all persons and to all territories.

A Special Statute is either local or personal and operates upon particular persons and private concerns.

2. All Acts of Parliament are to be presumed to be public unless the contrary be declared therein - Section 13 of 14 Vict. c. 21.

3. Judicial notice *must* be taken of all public Acts. Court is not bound to take judicial notice of a Private Act unless the particular Private Act contains a direction to the Court to take judicial notice. If it does not contain such a direction, the party must prove that a Private Act relied upon is an Act of Parliament.

(iii) INDIAN ARTICLES OF WAR.

These are rules of discipline for Native Officers, soldiers and other persons in His Majesty ' s Indian Army. They are contained in the Indian Army Act of 1911.

(iv) COURSE OF PROCEEDINGS OF PARLIAMENT AND COUNCIL.

1. Course of Proceedings must be distinguished from proceedings themselves.

2. The Court will take judicial notice of the course of proceedings and not of the proceedings.

Foreign State

Court will take judicial notice whether a foreign State is recognised or not by His Majesty or by the Governor-General in Council.

State of War

The existence of a State of War between foreign States will not be taken judicial notice of.

Rules of the Road on Land or Sea

Effect of the last para.

1. Court can refuse to take judicial notice under certain circumstances of matters of which they are bound to take judicial notice.

2. Party is bound to produce the necessary material to enable the Court to take judicial notice.

Illus.

Gazette must be produced if the party wishes the Court to take judicial notice of a Proclamation.

Mode of Proof

1. The general rule regarding mode of proof may be stated thus:

The law requires evidence to be given by a person— (i) Who is present in the Court. (ii) Who is legally competent as a witness. (iii) Upon oath or affirmation. (iv) In regular course of Examination. (v) Subject to contradiction as to facts. (vi) Subject to discredit as to veracity.

1. PRESENCE IN COURT.

1. It is a duty of the citizens to appear and testify to such facts within their knowledge as may be necessary to the due administration of justice. It is a duty which has been recognised and enforced by the Common Law from an early period.

2. The right to compel the attendance of witnesses was incidental to the jurisdiction of the Common Law Court, and the statutes have conferred this power upon other officers such as Arbitrators. Every Court having power definitely to hear and determine any suit, has by the Common Law, inherent power to call for all adequate proof of the facts in controversy and to that end, to summon and compel the attendance of witnesses before it.

3. The wilful neglect to attend and to testify after proper and reasonable service of the *subpoena* and in civil cases, after payment or tender of the witnesses fee of waiver of payment is a contempt of Court.

4. The process to compel attendance of witnesses to give testimony or to produce documents is not provided for in the Evidence Act. It is provided for in the Civil and Criminal Procedure Codes.

3. 1. The following matters are in the Country provided for by the Civil and Criminal Procedure Codes.

(i) Summoning of witnesses :

Civil Pro. C. 0. XII

Cr. Proc. C. 68-74 (Summons)

90-93 (Other rules regarding Process)

328 328 (Summons on Juror or Assessor)

244 244 (Issue of Process in Summons Cases)

254 („ „ Warrant cases)

256 ()

257 ()

540 (Power to summons material witness on

Examine person present)

(iii) (iii) Production of documents and other things:

Civil P. C. 0. XI, XVI.

Cr. P. C. 94,95 (Summons to produce documents or other thing)

96-99 (Search warrants)

485 (Consequences of refusal to produce)

(iii) Expenses of the witnesses :

Civil P. C. 0. XVI. R. 2-4

Cr. P. C. 244, 257.

(iv) The freedom of complainants and witnesses in criminal cases from police restraints.

Cr. P. C. 171.

(v) Recognisance for the attendance of complainants and witnesses in Criminal proceedings.

Cr. P. C. 217, 170.

NOTE.— Not provided for in Civil cases.

(vi) Exemption of witnesses from arrest under Civil process. Civil Pro. Code S. 135.

NOTE.— There is no protection given against Criminal process.

6. Not only is there provision for summoning a witness, there are provisions for compelling his attendance.

(1) Non-attendance in obedience to a Summons is made an offence by Section 174, 175, 1. P. C.

(2) Non-attendance in obedience to a summons may be followed by *Warrant of arrests* under Sections 75-86 and by Proclamation and Attachment under Sections 87-89 of the Cr. P. C.

(3) Non-attendance may further render a witness liable to a Civil action for damages under Section 26 of Act XIX of 1853 (in force in Bengal) and under Section 10 of Act X of 1855 (in force in Bombay and Madras).

24W.R.72.

7. Although the law requires persons summoned as witnesses *to attend in person*, the law also excuses non-attendance in certain cases.

(i) By reason of non-residence within certain limits.

Civil P. C. 0. XVI R. 19. (ii) By reason of the witness being a *pardanashin* lady.

Civil P. C. Section 132.

(iii) By reason of the witness being a person of Rank. Civil P. C. Section 133.

§ The witness must be competent to give evidence

1. The question of competency of a person may be considered from two points of view.

(1) From the point of view of his intellectual capacity.

(2) From the standpoint of his veracity.

1. COMPETENCY FROM THE STANDPOINT OF

INTELLECTUAL CAPACITY.

1. Section 118 deals with the question of competency from the standpoint of intellectual capacity.

2. The rule enacted in Section 118 is a rule which recognises the power of understanding as the *only* test of competency.

3. As every normal person has the intellectual capacity to understand things and to grasp their importance. Section 118 declares *that all persons* are competent to testify unless they suffer from want of understanding.

4. The law of competency is therefore practically the law of incompetency. A person is a competent witness who is not incompetent.

5. Incompetency therefore means want of understanding. This want of understanding may arise from

- | | | |
|-------|-------|-----------------------------------|
| (i) | (i) | Tender years. |
| (ii) | (ii) | Extreme old age. |
| (iii) | (iii) | Disease whether of body or mind. |
| (iv) | (iv) | Any other cause of the same kind. |

6. *Comment.* (i) *Tender year* or (ii) *Extreme old age*— is not defined.

A boy of 7 may not be incompetent but 12 may be, if the former has an understanding which the latter has not. A man of 60 may be incompetent and a man of 80 may not be.

The test is not the age. The test is the Existence or non-Existence of understanding.

(iii) *Disease of the body*

A witness may be in such extreme pain as to be unable to understand or if able to understand to answer questions. He may be unconscious, as if in a fainting fit, catalepsy or the like. Here again it is a question of fact whether in any particular case the disease of the body is such as to deprive a person of his power of understanding.

(iii) *Disease of the mind*

1. This contemplates the case of an idiot and a lunatic, both suffer from the disease of the mind.

2. An idiot is one who is born irrational, without the reasoning faculty. A lunatic is one who is born rational, has subsequently become irrational and lost his reasoning faculty.

3. A lunatic is either a *monomaniac* or is a maniac for the time being. That being so, a lunatic is not incompetent merely because he is a lunatic. Lunacy does not mean complete annihilation of understanding. If it is general lunacy, he may be lucid at intervals. If he is a monomaniac, his understanding about other matters may be clear.

Illus. of partial lunacy.

- (1) Murder discussion in Lunatic Asylum.
- (2) Interview by a person with his lunatic friend in the asylum and his remark about time.

Illus. of Monomaniac,

(1) R. V. Hill—Hill was tried for murder. Donnelly witness—lunatic—suffered from the delusion that he had 20000 spirits about him which were continually talking to him.

That being so a lunatic can be a competent witness. This is recognised in the Explanation. (iv) *Any other cause.*

This means any other cause depriving a person of his power of understanding, e. g. *drunkenness.*

Some of these disabilities are coextensive with the cause, therefore, when the cause is removed the witness becomes competent.

e.g. When pain ceases
 drunkenness ceases
 Lunacy ceases

Whether there is understanding or not in the witness, is a matter which is determined by the Court by questioning the witness.

§ Accused as a witness

1. While all persons who have understanding are competent as witnesses, there is one exception to the rule. That is, an accused person cannot be examined as a witness in a criminal case in which he is being tried.

There is a case of the disease of the body which does not affect the mind of the understanding. Dumbness is such a disease.

Section 119 deals with the case of such a witness. The Section does not declare him to be incompetent. On the other hand, it treats him as a competent, and permits him to give evidence in any manner by *writing* or by *signs* made in open Court.

§ Competency from the standpoint of the veracity of the witness

1. The motives, which prevent a person from telling the truth, are more numerous in judicial proceedings than in ordinary affairs of life because of the fact that, result of a judicial proceeding cannot be flouted and are binding in a more absolute manner than other informal proceedings of a Panch are. Consequently the law at one time rendered many people intellectually competent incompetent to give evidence in a cause.

2. Formerly, therefore, not only mental incapacity was a good ground for incompetency but *interest* was also a ground for incompetency. Reason was that, an interested person would not tell the truth. Consequently, at one

time, the following persons were deemed incompetent.

1. Parties to the suit.
2. Husband and wife against each other.
3. Accused against himself.
4. An Accomplice.

3. This view of the law is now changed and the principle has undergone a change. Question of competency or incompetency has been converted into a question of credibility or incredibility. So that every son is rendered competent to give evidence but it is left to the Court to believe him or disbelieve him.

4. This new principle is embodied in Sections 120 and 133.

§ Section 120

I. CIVIL PROCEEDINGS (i) The parties to the suit are competent witnesses.

(ii) The husband and wife of any party to the suit are competent witnesses.

II. CRIMINAL PROCEEDINGS

1. The husband or wife of the accused is a competent witness either for or against.

§ Section 133

1. This section deals with the competency of an accomplice. The evidence of an Accomplice is held untrustworthy for three reasons:

(i) because an accomplice is likely to swear falsely in order to shift the guilt from himself.

(ii) because an accomplice as participator in crime, and an immoral person, is likely to disregard the sanction of the oath.

(iii) because he gives his evidence under a promise or hope of not being prosecuted, if he discloses all he knows against his participators in the crime.

2. But his evidence has to be admitted from necessity, it being often impossible without having recourse to such evidence to bring the principal offenders to justice.

§ Difference between the value of Evidence of Accomplices and other persons

1. Persons other than accomplices are not only competent but are also credible. An Accomplice on the other hand is only competent but is not credible.

2. Witnesses may be incredible in the eye of the Judge. But they are not incredible in the eye of the law. An Accomplice has a statutory incredibility attached to him by the law.

3. This statutory incredibility arises from illustration (b) to Section 114 of the Evidence Act. The presumption is sanctioned by the Act and although it is rebuttable, it would be an error of law not to disregard.

4. For attaching this statutory incredibility, it would be necessary to determine whether the witness is an Accomplice. The term is not defined.

(i) An Accomplice is a person who is concerned with another or others in the commission of a crime. He is a participant. But it is not every participation in a crime which makes an accomplice. Much depends on the nature of the offence and the extent of the complicity of the witness in it. 5 *W. R. Cr. 59*.

(iii) (iii) An Accomplice is a person who is a guilty associate in crime or who sustains such a relation to the criminal act, that he can be justly indicted with the Accused who is being tried. 27 *Mad. 271*.

§ Effect of Sections 120 and 133

1. The sections enumerate certain persons as being competent to give evidence. Question is, Are other persons not competent? The sections are not to be understood to mean that these are the only persons who are competent and others are not. The effect of the sections is that all persons are competent including those mentioned in Sections 120 and 133.

2. The reason why it was necessary to specifically deal with these classes is, because under the earlier law they were incompetent. The ban against them had to be lifted and therefore the specific provisions relating to them. Other classes of persons were already deemed to be competent and it was unnecessary therefore to say anything about them.

3. The Effect of Sections 120 and 133 is this, that not only

- (1) Parties to suits.
- (2) Husbands and wives.
- (3) Accomplices.

are competent witnesses, but

- (1) Jurors and Assessors—Section 294 Cr. P. C.
- (2) The Executor of a Will

(3) An Advocate for a party may be competent witnesses in the case to which they are a party, although it is a cause in which they are interested.

Evidence must be given on Oath

1. Oath is not a requirement of the Indian Evidence Act. Left to the Indian Evidence Act, evidence by a witness would be legal evidence although the witness had given evidence without taking oath.

2. Oath is a requirement of the Indian Oaths Act X of 1873. Section 5 of

the Oaths Act lays down.

1. That oaths or affirmation *shall* be made by the following persons.

(a) all witnesses. (b) interpreters. (c) Jurors.

3. Section 6—permits a person who objects to the oath to affirm.

4. Section 14.—Every person giving evidence before any Court or person authorised to administer oaths or affirmation shall be bound to state the truth on such subject.

5. There are three questions that arise for consideration.

(1) Can a Court decline to administer oath or affirmation to a witness?

(2) Can a party decline to take oath or make affirmation?

(3) Effect of the refusal of a witness to take oath or affirm and of the failure of the Court to administer oath.

Answer to Question 1. It is a statutory duty of the Court to administer oath.

There is one qualification, namely, Court is bound to administer it to a person who is competent and not bound to administer it to one who is incompetent, e. g. a child.

6 Pat. L. J. 147.

Answer to Question 2. The answer is given in Section 12. Party shall not be compelled to make it. But the Court is to make a record of his refusal and the reasons, if any, given by him.

Answer to Question 3.

Part I— Effect of the refusal of the party to take oath or make an affirmation

1.

2. Such refusal only affects the value of the evidence.

Part II—Effect of the failure Judge to give oath.

1. The evidence remains of the admissible.

2. Obligation to tell the truth remains.

6. The Provisions of the Oaths Act in India are not so strict as they are in England.

(1) Oath is not a necessary condition precedent for the obligation of telling the truth. It is necessary merely to remind a witness of its sanction.

(2) The Indian Act condones the failure to remind or failure to take oath. The English law makes the evidence inadmissible.

IV. COURSE OF EXAMINATION

1. There are two possible ways in which a witness can depose (i) By narrating the facts. (ii) By answering questions put to him.

2. The Evidence Act provides that the testimony of a witness shall be taken in the form of Examination, not in the form of a narration. The reasons why the law prefers examination as the mode of giving evidence are to be traced to the rules of relevancy. A person is permitted to give evidence of matters which are relevant. He is not permitted to give evidence of all matters relating to the issue. Matters which are related to the issue are not necessarily relevant to the issue and under the Evidence Act it is the duty of the Judge to decide whether any particular fact is relevant or irrelevant and to rule out the irrelevant then and there.

If a witness is permitted to give his testimony in the form of a narration two things will happen :—

- (i) The witness will in all probability tell *all* facts relevant as well as related and this introduce irrelevant matter and
- (ii) The action that a Judge may be able to take to rule out irrelevant matters will be *ex-post facto*.

On the other hand if the witness was required to give his testimony in the form of answers to questions, two objects will be achieved:—

- (i) his testimony could be made to confine to relevant matters only not being permitted to wander and
- (ii) the Court can immediately check and rule out the introduction of irrelevant testimony.

4. With regard to the examination of witnesses, there are two questions which are distinct and which are regulated by different law. The *order* in which parties are to produce their witnesses for examination, and the *course* of Examination to which each witness is to be subjected when he is produced before the Court, are two separate questions.

Sections 135,138

The order in which witnesses are to be produced by the parties is a matter which is regulated by the Civil and Criminal Procedure Codes. While the course of examination to which a witness is to be subjected, when produced, is laid down by the Evidence Act.

§ Order of Production of Witnesses

1. *In Civil cases*

Order XVIII Rule 1.
C.

In Criminal cases

Summons cases 224 Cr. P.

Warrant cases 252

254

257

Summary cases 262.

Rule seems to be this.

1. The first question to be determined is who has the right to begin.
2. The right to begin depends upon on whom is the burden of proof.

§ Course of Examination

1. The Course of examination of a witness prescribed by the Evidence Act is to consist of 3 parts.

Section 138

(i) Examination in chief. (ii) Cross Examination. (iii) Re-Examination.

2. Examination in chief is the Examination of the witness by the party who calls him.

Section 137

Cross Examination is the examination of the witness by the adverse party.

Re-Examination is the examination of the witness by the party who called him subsequent to his cross examination by the adverse party.

Questions to be considered

3. Examination in chief is a matter of choice. No one can compel a party to call witnesses. But if witnesses are called and examined in chief, then the question that arises is this:— Is Cross-Examination and Re-Examination a matter of *right* or a matter of *privilege*, which may be granted or withheld according to the discretion of the Court?

The answer to this question is that Cross-Examination and Re-examination are matters of right and not of privilege. The Court cannot stop a party from Cross-examining or Re-examining a witness who has been examined in chief by the party. What about a witness who is *called by the Court* and not by any party to the proceedings? Is there any right to cross examine such a witness? If so which party? The Evidence Act makes no provision for such a case. It has however been held that a witness summoned and examined by the Court *cannot* as of right be Cross-Examined by either party without the permission of the Judge.

(1894) 2 Q.B. 316,

3 B. L. R. 145

11 W. R. I 10

24 Cal. 288

5 Cal. 614

16 W. R. 257.

4. When can the right to Cross examine be exercised?

As to this, there is a difference between civil cases and criminal cases.

(i) In *Civil Cases*, the right must be exercised immediately. It cannot be

postponed to a future date.

(ii) In Criminal Cases, in a summons case before the Magistrate and in the Sessions case the right must be exercised immediately. But in a warrant case, the accused has a right to postpone the Cross-examination of the prosecution witness to the next date of hearing.

The case of a person who is called as a witness by both the parties : In a litigation between A and B, C is cited as a witness by both A and B. First he is called as a witness by A on his behalf. After his cross-examination by B and Re-Examination by A, he is called as a witness by B on his behalf.

Can B Cross-examine C?

There is no specific provision answering this question in the law of evidence. It is a question of judicial opinion. On this question there is a divergence of view.

(1) One view is that, when a person once gets a right to Cross-examine a witness, that right continues to him at all subsequent stages of the case against that witness, no matter in what role the witness reappears, so that, even if he comes as his own witness he can Cross-examine him. This view is based on the theory that every witness is favourably disposed towards the party calling him.

(2) The other view is that, each party should alternatively have the right of X Examining such a witness as to his adversary's case, while both should be precluded in the course of the respective Examinations-in-Chief from leading questions with regard to their own case. So that a Plaintiff may Cross-Examine any of his own witnesses, on hearing afterwards called on behalf of the Defendant.

The better opinion is that the right to X Examine does not survive and he cannot be asked leading questions on his Second Examination. If the adversary again called the same witness who has been examined by the other side and Cross-examined by him, he could clearly examine him in-chief.

This rule appears to have been adopted by the Evidence Act.

5. Does this prescribed course of Examination apply to every witness?

1. There are three sorts of witnesses who are called before the Court:

- | | | |
|-------|-------|---|
| (i) | (i) | Those who are called to depose to relevant facts. |
| (ii) | (ii) | Those who are called to speak to character. |
| (iii) | (iii) | Those who are called to produce documents. |

2. With regard to witnesses who are called to depose to relevant facts or to speak to character, they are subject to the full prescribed course of examination. Cross-examination and Re-examination. But the witness, who is called to produce documents, stands on a different footing. He is not a witness and therefore cannot be cross-examined.

6. Can one Co-accused Cross-examine a witness called by another co-accused? Can one Co-defendant Cross-examine another co-defendant or the witness called by a co-defendant?

(1) The Section does not make special provision for the case of Cross-examination by co-accused and co-defendants.

(2) The Evidence Act gives a right to Cross-examine witnesses called *by the adverse party* and to no other. Consequently, it follows that one co-accused can cross-examine a witness called by another Co-accused only when the case of the second is adverse to that of the first. *21 Cat. 401.*

(3) The rule of English law in this respect is different. Under the English law the right of a defendant (and *a fortiori* an Accused) to Cross-examine a co-defendant or co-accused is, according to the English-cases, unconditional and not dependent upon the fact that the cases of the accused and co-accused are adverse or that there is an issue between the defendant and his co-defendant. And one co-defendant may Cross examine a co-defendant's witness and the co-defendant if he gives evidence.

The reasons for this English rule are :

(i) It is settled that the evidence of one party cannot be received as evidence against another party unless the latter has had an opportunity of testing it by Cross-examination. *Allen vs. Allen. L.R.P.D. (1894) 248/254.*

(ii) It is also Settled that all evidence taken, whether in examination-in-chief or Cross-examination, is common open to all the parties. *Lord vs. Coloin. 3 Drewery 222.*

(iii) It follows that if all evidence is common and that which is given by one party may be used for or against another party, the latter must have the right to Cross-examine.

7. What is the effect of a default in the course of the examination of a Witness prescribed by law?

(1) This question can arise only when there is a default in Cross examination or Re-examination. Until there is Examination-in-Chief, there is no evidence at all in the legal sense of that term.

It is only when evidence has been given by the witness in his Examination-in-Chief that this question can arise. The question to be

considered reduces itself to the effect of default of Cross-examination or Re-examination on the testimony of a witness.

(2) Such default takes place when the witness dies or falls ill, becomes insane or paralytic or disappears after his Examination-in-Chief or before X Examination.

(3) The Evidence Act does not in clear terms state in express terms what the effect will be. Whether, for want of Cross-examination or Re-examination of a witness, his testimony given in Examination-in-Chief will cease to be evidence in the legal sense of the word and will have to be cancelled and excluded from the consideration of the Court or whether it will merely affect its evidentiary value, is not stated in the Evidence Act. The question is determined by Judicial interpretation.

According to judicial interpretation, two propositions are well established.

(1) Such default does not make the evidence inadmissible. It only affects its credibility.

(2) Whether it would be credible or incredible, must depend upon the reasons for the default in Cross-examination.

There are two ways in which default in X Examination may take place:

(i) Where a party could have X Examined but did not do so. (ii) Where a party would have X Examined but could not do so.

The question of credibility could arise only in the second case. It could not arise in the first. The Law can give an opportunity and nothing more. If opportunity is not taken, the law holds there is no injury.

§ Regular Course of Examination

1. The Course of examination of a witness must be *regular*.

2. A Course of Examination to be *regular* must be in accordance with the rules laid down in the Evidence Act?

3. The rules for a Regular Course of Examination relate to :

- | | | |
|-------|-------|------------------------|
| (i) | (i) | Scope of Examination. |
| (ii) | (ii) | Manner of Examination. |
| (iii) | (iii) | Limits of Examination. |

§ Scope of Examination of a witness

Under this head, we must deal with matters on which it is permissible to a party to ask questions to a witness.

1. The objects underlying the examination of a witness are chiefly two: (i) to elicit from him what he knows. (ii) to test the truth of what he states.

2. The object of testing the truth of what the witness has stated can be achieved, only if, the Examination of the witness is extended to such questions as relate : (i) to the corroboration and contradiction of the witness.

(ii) to the confirmation or impeachment of the credit or character of the witness.

3. Under *Scope of examination*, we shall therefore be concerned with Rules relating to the following subjects :

(i) Rules relating to matters which can or cannot be elicited in the course of the Examination of the witness.

(ii) Rules for testing the credibility or incredibility of a witness.

(iii) Rules regarding the corroboration or contradiction of matters deposed to by the witness.

1§ Matters which can or cannot be elicited in the course of an Examination

1. This question is dealt with by Sections 138 and 146. The effect of these sections is that there are two kinds of matters which can be elicited from a witness in the course of his examination.

(i) Matters which are relevant to the issue and (ii) Matters which relate to the credibility of the witness.

These are the only two matters on which a witness can be examined.

2. But every party is not entitled to examine a witness on both these matters

(1) With regard to matters which are relevant, both parties are entitled to examine the witness, the party who called him and the adverse party. Indeed the rule is not that the party is entitled to examine the witness on all relevant matters ; the rule is that the examination of a witness must be confined to relevant facts.

This rule applies not only to Examination-in-Chief but also to Cross-examination. The only difference is that Cross-examination need not be confined to matters raised in Examination-in-Chief. It may be extended to other matters not raised in Examination-in-Chief. But these other matters must also be *relevant* matters. Nothing that is irrelevant is permissible either in Examination-in-Chief or Cross-examination.

There is therefore no difference in the scope of the Examination-in-Chief or Cross-examination so far as relevant matters are concerned.

(Here concludes Page 203 of the M.S. Page 204 is missing. Following text starts from Page 205—ed.)

There is agreement on the absence of the particular virtue of truth telling has the necessary effect of shaking the man's credit and therefore such questions as relate to this aspect of the witness character are always permissible and can be asked in Cross examination.

But there is no general agreement as to the absence of general good character on the veracity of a witness.

There are two views on the subject. One is that, bad general character necessarily involves an impairment of the truth telling capacity and therefore to show general moral degeneration is to show an inevitable degeneration in veracity. The other view is, a bad general disposition does not necessarily or commonly involve a lack of veracity and that, therefore, a bad general disposition is of no probative value for the purpose of shaking a witness's credit.

Under the English law, for the purposes of shaking credit by injury to character, general character is excluded and character for veracity only is taken into account.

§ Impeachment of Character otherwise than by Cross-examination

Section 155

1. Impeachment of character of a witness is permitted by the production of independent evidence under the provisions of Section 155.

2. *This again is a right of the adverse party.* So that a party who calls a witness cannot impeach the character of that witness by evidence of other persons.

3. *The impeachment may be undertaken in the following ways .*

(1) by evidence of persons who testify from personal knowledge that the witness is unworthy of credit.

(2) by proof that has been bribed or accepted the offer of a bribe or has received other corrupt inducement to give his evidence.

(3) by proof of former statements *inconsistent* with any part of his evidence which is liable to be contracted.

(4) by proof in rape that the prosecutrix was of generally immoral character.

3 § Rules regarding corroboration and contradiction of a witness

1. *Definition of a Corroborative Evidence*—Corroborative evidence simply means evidence which has the effect of confirming the truthfulness of the testimony of a witness. It is evidence which makes the assurance of a witness doubly sure.

2. *Kinds of Corroborative Evidence.*—The Evidence Act recognises two kinds of Corroborative Evidence. (i) Evidence of facts other than relevant facts. (ii) Additional evidence of.

Section 156. § Corroborative Evidence of facts other than relevant facts

There are two requirements which must be fulfilled.

(i) The Corroborative circumstance of which evidence is being given must have been observed by the witness *at or near to the time* at which the relevant fact occurred.

(ii) The Court must be of opinion that such circumstances, if proved, would corroborate the testimony of the witness as to the relevant fact
Illus.

A and B jointly committed robbery at a certain place. B is charged and A, the accomplice gives evidence against him. In his evidence A describes various incidents unconnected with the robbery which occurred on the way.

Prosecution call independent witnesses to prove the truth of the testimony of the accomplice relating to the *incidents on the way*.

The relevant question is whether B committed robbery. The Evidence tendered by the prosecution does not relate to the relevant question. Still it will be allowed as a corroborative evidence if the Court is of opinion that it will help to corroborate the testimony of the accomplice as to robbery.

§ **Corroborative Evidence byway**
(of) * mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/52F. Notes on Acts and Laws Burden of Proof.htm - _msocom_1 **Additional Evidence of relevant facts**

Section 157.

1. *This can be done by giving evidence of any former statement made by the witness relating to the same fact.* This is based upon the principle that he, who is consistent, deserves to be believed. The mere fact of a man, having on a previous occasion made the same assertion, may add little or nothing to the truthfulness. One may persistently adhere to falsehood once uttered, if there is a motive for it so that if consistency was conclusive nothing would be easier for designing and unscrupulous persons to procure the conviction of any innocent man, who might be obnoxious to them, by first committing offences and afterwards making statements to different people and at different times or places implicating the innocent man. *R. vs. Malappa, 11 Bom. H. C.R. 196 (198).*

2. The previous statement may be a statement made on oath or otherwise and either in ordinary conversation or before some persons who had authority to investigate and question the person who made it. It may be verbal or in writing. *There is one distinction between a previous statement made before a person who has authority to investigate and a previous statement made before a person not so authorised.* If not made before any person legally complain to investigate the fact, then to be admissible, must have been made at or about the time when the fact took place. This condition does not apply to a previous statement made before a person having authority to inquire.

25 Mad. 210. Illus.

(i) A statement by a girl, alleging that she was raped made immediately

after the rape, is admissible.

(ii) The dying declaration of a man, who chances to live, is admissible as a corroborative piece of evidence.

(iii) The first information given to the police is admissible as corroborative evidence of the testimony of the informant.

(iv) The Panchnama is admissible as a corroborative. *Two points must be urged by way of caution.*

(1) The use of statements made to the police in the course of investigation under Section 162, Criminal Procedure Code. These are also *previous statements* made before a person who is authorised to investigate.

Can they be used for the purposes of corroboration?

At one time it was held that they could be so used.

36 Cal. 281.

35 Mad. 397.

39 Bom. 58.

The Amendment to Section 162 of the Criminal Procedure Code excludes both the written record and *viva voce* statement made to the Police. Though previous statements, they cannot be used as a corroboration.

(2) The distinction between corroborative evidence and substantive evidence is important, because, on this depends the use of corroborative evidence. Corroborative evidence is not substantive evidence.

Illus.

In a trial of a prisoner, the depositions of witnesses given in a previous trial of other persons charged with having been engaged in the same offence, were used against him. The witnesses instead of being examined in the ordinary way, were re-sworn and said "I gave evidence before in this Court and that evidence is true".

Held that this evidence was inadmissible. It was only corroborative evidence and could be used only when substantive Evidence is given. If substantive Evidence is not given, then corroborative evidence cannot be given.

12 W.R. Cr. 3.

Similarly—If a panch does not identify the accused, the Panchanama of identification as corroborative evidence could be inadmissible.

In this connection there arises the question of giving corroborative evidence of a person who cannot be called to give substantive evidence by reason of the fact that the witness is dead or who cannot be found or who has become incapable of giving evidence or whose attendance cannot be procured without an amount of delay or expense, which under the

circumstances the Court thinks unreasonable.

Section 158 permits corroborative evidence being given although no substantive evidence is tendered. This is an exception to the general rule. That exception applies only *if the witness cannot be procured*.

This is an exception created by Statute. Another exception created by Statute is contained in Section 288 of the Criminal Procedure Code. By that Section, evidence before the committing Magistrate is treated as evidence before the Sessions Court for *all* purposes i. e. substantive Evidence of all facts deposed therein.

§ 3/2 § Rules regarding the contradiction of a witness

1. This is a matter which must necessarily be governed by two considerations:

- (i) The object of inquiry by the Court is to get at the truth and therefore contradiction must be permitted.
- (ii) If contradiction is permitted, the inquiry will be endless and therefore there must be some limit on the process of contradiction.

2. *In what cases can a witness be contradicted?*

The Section which deals with the contradiction of a witness is Section 153. For the purposes of contradiction, the Section divides the answers of the witness into two classes (1) Answers to questions relating to relevant facts and (2) Answers to questions relating to the credit of a witness.

3. *Are the answers of a witness to questions relating credit liable to contradiction?*

The answer given in Section 153 is positive to the effect that such answers shall not be contradicted.

There are only two exceptions to the rule :

(i) If previous conviction is denied, you can contradict it by evidence. (ii) If the witness denies partiality he may be contradicted.

In this connection, it must be borne in mind that under the provisions of Section 155, the answers of a witness giving reasons in X-Examination for his belief in the untrustworthiness of another witness are not liable to be contradicted.

In all these cases, where the answers of a witness to questions relating to credit are not liable to contradiction, the law provides that if their answers are false they may afterwards be charged with giving false evidence.

4. *Are answers of a witness to questions on relevant facts liable to contradiction?*

(1) Section 153 is negative in character and merely states cases in which contradiction is not allowed. It does not state in what cases contradiction will be allowed.

(2) It does not include answers to relevant questions in its prohibition. By implication it seems to permit contradiction of such answers.

(3) There is illustration (c) to Section 153 which shows that the legislature intended to permit contradiction of such answers.

5. Section 153, therefore, lays down the rule that you can contradict answers to relevant questions. But you cannot contradict answers to questions on credit.

§ Contradiction on relevant facts

1. The next question is ; *Is such contradiction permitted to the party who called the witness or Is it permitted to the adverse party only?*

2. That, a party may contradict the answers given by the witness called on behalf of the adverse party, is beyond question and is always permissible. The defence witnesses are thereto contradict. But it does not seem to be quite so obvious in the other case. A witness is called on behalf of a party. In answer to a question on a relevant fact, he gives a particular answer which the party who called him feels is untrue. Can the party, who called him, call another witness to contradict him?

3. *The answer is that he can.* The law seems to make difference between discrediting his own witness by attacking his general character and showing that in a particular respect his testimony is incorrect.

§ Manner of Examination of a Witness

1. *Manner of Examination means the manner of interrogating the witness, i. e. the manner of putting questions.*

2. This matter is left not to the discretion of the party interrogating the witness, but is regulated by law.

3. From the standpoint of the manner of putting questions, questions are either leading questions or not leading questions.

4. A leading question is generally said to be a question which can be answered by a mere yes or no. Although, all such questions undoubtedly come within the rule, the character of leading question is not limited to them.

The Evidence Act defines a leading question as one, which suggests a particular answer, which the questioner expects to have from the witness.

Illus.

On a charge for murder by stabbing, to ask a witness ' Did you see the accused covered with blood and with a knife in his hand coming away from the corpse? ' is a leading question.

5. A distinction must be made between two sorts of leading questions,

- (i) A leading question which suggests the answer.
- (ii) A leading question which directs the attention of the witness to the *subject* respecting which he is questioned.

As an illustration of the second sort of leading question, take the

following:

A was sued for defamation by *B* for having said in a conversation to *C* that *B* was in bankrupt circumstances and that his name would appear in the London Gazette among bankrupts. Question was asked to the witness.

“*Was anything said about the Gazette?*”

This is not a leading question in the sense of a question which suggests an answer. It is a leading question which directs the attention of the witness to the *subject* about which he is being questioned.

The manner of interrogation in Examination-in-Chief varies from the manner of investigation in Cross-examination.

In Cross-examination, a witness may be interrogated in the form of leading questions. But leading questions must not be asked in Examination-in-Chief, if objected to by the opposite party.

In Examination-in-Chief, the witness must be asked merely such question as “What did you see?” “What did you hear?” “What happened next?”

Reasons for the Rule

(1) A witness has a bias in favour of the party calling him and hostile to the opponent. He is, therefore, likely to agree to the answers suggested to him by the pleader of the party.

(2) That the party calling a witness has an advantage over his adversary, in knowing before hand what the witness will prove, or at least expected to prove ; and that, consequently, if he were allowed to lead, he might interrogate him in such a manner as to extract only so much of the knowledge of the witness as I would be favourable to his side, or even put a false gloss upon the whole.

Exceptions to the Rule.

Leading questions are permissible in Examination-in-Chief in the following cases :—

- | | | |
|-------|-------|---|
| (i) | (i) | Where the matters are merely introductory, such as a name, occupation of a witness. |
| (ii) | (ii) | Identification of persons or thing. |
| (iii) | (iii) | About matters which are not in dispute. |
| (iv) | (iv) | When a question from its very nature cannot be put except in a leading form. |
| (v) | | To contradict evidence already given by a witness on the other side. |

E. G.—If the Plaintiff has sworn that the defendant said, “The goods need not all be equal to sample”, the Defendant can and should be asked, “Did you ever say to the Plaintiff that the Goods need not all be equal to sample or any other words to that effect?”

(vi) Where the witness is hostile. Difference between a hostile and a witness who is unfavourable.

A Witness should always state what happened according to his own personal recollection, and not according to what he has since been told.

Suppose the witness cannot recall the facts and his memory fails, what is to be done?

There are two ways open :

(1) To assist the memory of a witness by leading questions.

(2) To permit him to refresh his memory by permitting him to refer to any writing which is a record of the fact.

Examples of writings used to refresh memory are—

(i) Entries in diaries. Entries in call books. Entries in account-books. Entries in Railway time-tables.

A witness may refresh his memory by referring to any writing or document *made by himself*. But he may also refresh his memory from documents made by other persons under his immediate observation.

The only condition is that the document must have been made at the time when the transaction was fresh in his mind or was *read by him*, if made by another person, at the time when the transaction was fresh in his memory and knew it to be correct.

A copy may be used if the original cannot be produced for reasons which satisfy the Court for its non-production.

Refreshing memory by inspecting a writing or document does not make it documentary evidence. So that a document which could be inadmissible in evidence for want of stamp would be admissible for refreshing memory.

There is a difference between referring to a writing for refreshing memory and using a document for corroboration.

A document which could not be used for corroboration can be used for refreshing.

Example : USE OF POLICE DIARIES

In connection with a document used for refreshing memory, it must be ascertained whether a memorandum does assist the memory or not.

The law, therefore, requires that such writing shall be produced and shown to the adverse party, if he requires it and he may cross examine the witness thereupon, if he so desires.

8 Cal. 739 (745).

The grounds upon which the opposite party is permitted to inspect are threefold : (i) to secure the full benefit of the witness 's recollection as to facts ; (ii) to check the use of improper documents and (iii) to compare his oral testimony with his written word.

Can the adverse party compel the witness to refresh his memory by referring to the writing.

It may be very advantageous to an accused person that Police Officer should state a certain fact. The Police Officer does not recall fact and would not refresh his memory by reference to his diary.

(8 Cal. 154), (8 Cal. 739) Says he cannot be compelled. *A. I. R. (1924) Pat. 829*, Says he can be compelled.

§ On the Limitations on the Examination of a witness

1. The subject-matter to be considered under this head relates to the questions a witness is bound or is not bound to answer.

2. The general rule is that a witness must answer *all* questions put to him. *Section 132*, Section 132 puts the matter negatively.

3. This rule is subject to *two* qualifications : (i) Certain questions a witness cannot be *compelled* to answer. (ii) Certain questions a witness is not to be empowered to answer.

4. Sections which deal with questions which cannot be *compelled* to answer are : 121,122, 124,125,129.

5. Sections which deal with questions which a witness is not empowered to answer are : 123, 126, 127, 128.

DISCHARGE OF THE BURDEN OF PROOF

1. Effect of Evidence may be : (i) To prove a fact. (ii) To disprove a fact. (iii) To fail to prove and therefore disprove.

2. Burden of Proof is discharged when : (i) The fact required to be proved is prove. (ii) The fact required to be disproved is disproved.

3. Burden of proof is *not* discharged when the Party on whom the Burden lies fails to prove or disprove as the case may be.

4. When can a fact be said to be proved or disproved? And when can it be said to be not proved.

The answer to this question is given in section 3.

NOTE.—TWO things must be noted.

(i) Proof does not mean rigid mathematical demonstration. (ii) Moral conviction is not proof.

Proof means Evidence.

But such evidence as would induce a reasonable man to come to some conclusion. (1911) 1. K. B. 988 (995). 31 Bom. L. R. 516.

The question of proof is one of probability and not of certainty.

Discharge of Burden of Proof and Quantum of Evidence

(1) Under the English Law corroboration is necessary in certain cases:

(1) High Treason—Two witnesses.

(2) Perjury—

(3) Breach of Promise—

(4) Bastard—Mother's testimony must be corroborated.

(II) Under the Indian Law the rule is absolute. The Court may act on the testimony of a single witness even though uncorroborated.

Exception. ***

NOTES ON HISTORY OF INDIA

[Reproduced from the handwritten manuscripts—Ed.]

More important for the history of India were the conquests of the Sakas and Yueh-chih, nomad tribes of Central Asia similar to the modern Turkomans*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/56. Notes on History of India.htm - _msocom_1 The former are first heard of in the basin of the river Hi, and being dislodged by the advance of the Yueh-chih moved southwards reaching north-western India about 150 B. C. Here they founded many small principalities, the rulers of which appear to have admitted the suzerainty of the Parthians for sometime and to have borne the title of Satraps. It is clear that western India was parcelled out among foreign princes called Sakas, Yavanas, or Pallavas whose frontiers and mutual relations were constantly changing. The most important of these principalities was known as the Great Satrapy which included Surashtra (Kathiawar) with adjacent parts of the mainland lasted until about 395 A.D.

The Yueh-chih started westwards from the frontiers of China about 100 B. C. and, driving the Sakas before them, settled in Bactria. Here Kadphises, the chief of one of their tribes, called the Kushans, succeeded in imposing his authority on the others who coalesced into one nation henceforth known by the tribal name. The chronology of the Kushan Empire is one of the vexed questions of Indian history and the dates given below are stated positively only because there is no space for adequate discussion and are given with some scepticism, that is desire for more knowledge founded on facts. Kadphises I (c. 15-45 A. D.) after consolidating his Empire led his armies southwards, conquering Kabul and perhaps Kashmir. His successor Kadphises II (c. 45-78 A. D.) annexed the whole of north-western India, including northern Sind, the Punjab and perhaps Benares. There was a considerable trade between India and the Roman Empire at this period and an embassy was sent to Trojan, apparently by Kanishka (c. 78-123), the successor of Kadphises. This monarch played a part in the later history of Buddhism comparable with that of Asoka in earlier agesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/56. Notes on History of India.htm - _msocom_2 He waged war with the Parthians and Chinese, and his Empire which had its capital at Peshawar included Afghanistan, Bactria,

Kashgar, Yarkhand, Khotan mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/56. Notes on History of India.htm - _msocom_3 and Kashmir. These dominions, which perhaps extended as far as Gya, in the east, were retained by his successors Huvishka (123-140 A. D.) and Vasudeva (140-178 A. D.) but after this period the Andhra and Kushan dynasties both collapsed as Indian powers, although Kushan kings continued to rule in Kabul. The reasons of their fall are unknown but may be connected with the rise of the Sassanids in Persia. For more than a century, the political history of India is a blank and little can be said except that the kingdom of Sirastra continued to exist under a Saka dynasty.

Light returns with the rise of the Gupta dynasty, which roughly marks the beginning of modern Hinduism and of a reaction against Buddhism. Though nothing is known of the fortunes of Patali-putra, the ancient imperial city of the Mauryas, during the first three centuries of our era, it continued to exist. In 320 a local Raja known as Candragupta I increased his dominions and celebrated his coronation by the institution of the Gupta era. His son Samudra Gupta continued his conquests and in the course of an extraordinary campaign, concluded about 340 A. D. appears to have received the submission of almost the whole peninsula. He made no attempt to retain all this territory but his effective authority was exercised in a wide district extending from the Hugli to the rivers Jumna and Chambal in the west and from the Himalayas to the Narbuda. His son Candragupta II or Vikramaditya added to these possessions Malwa, Glijarat and Kathiawar and formorethan half a century the Guptas ruled undisturbed over nearly all northern India except Rajputana and Sind. Their capital was at first Pataliputra, but afterwards Kausambi and Ayodhya became royal residences.

The fall of the Guptas was brought about by another invasion of barbarians known as Huns, Ephthalites mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/56. Notes on History of India.htm - _msocom_4 or White Huns and apparently a branch of the Huns who invaded Europe. This branch remained behind in Asia and occupied northern Persia. They invaded India first in 455, and were repulsed, but returned about 490 in greater force and overthrew the Guptas. Their kings Tormana and Mihiragula were masters of northern India till 540 and had their local capital at Sialkot in the Panjab, though their headquarters were rather in Barnyin and Baikh. The cruelties of Mihiragula provoked a coalition of Hindu princes. The Huns were

driven to the north and about 565 A. D. their destruction was completed by the allied forces of the Persians and Turks. Though they founded no permanent states their invasion was important, for many of them together with kindred tribes such as the Glijars (Gujars) remained behind when their political power broke up and, like the Sakas and Kushans before them, contributed to form the population of north-western India, especially the Rajput clans.

The defeat of the Huns was followed by another period of obscurity, but at the beginning of the seventh century Harsha (606-647 A. D.), a prince of Thanesar, founded after thirty five years of warfare, a state which though it did not outlast his own life, emulated for a time the dimensions and prosperity of the Gupta Empire. We gather from the account of the Chinese pilgrim Hsuan Chaung, who visited his court at Kanauj, that the kings of Bengal, Assam and Ujjain were his vassals but that the Panjab, Sind and Kashmir were independent. Kalinga, to the south of Bengal was depopulated but Harsha was not able to subdue Pulakesin II, the Calukya king of the Deccan.

Let us now turn for a moment to the history of the south. It is even more obscure both in events and chronology than that of the north, but we must not think of the Dravidian countries as uninhabited or barbarous. Even the classical writers of Europe had some knowledge of them. King Pandion (Pandya) sent a mission to Augustus in 20 B.C. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/56. Notes on History of India.htm - _msocom_5](#) Pliny [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/56. Notes on History of India.htm - _msocom_6](#) speaks of Modura (Madura) and Ptolemy also mentions this town with about forty others. It is said that there was a temple dedicated to Augustus at Maziris, identified with Craganore. From an early period the extreme south of the peninsula was divided into three states known as the Pandya, Cera and Cola kingdoms [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/56. Notes on History of India.htm - _msocom_7](#) The first corresponded to the districts of Madura and Tinnevely. Cera and Kerala lay on the west coast in the modern Travancore. The Cola country included Tanjore, Trichinopoly, Madras, with the greater part of Mysore. From the sixth to the eighth century A. D. a fourth power was important, namely the Pallavas, who apparently came from the north of the Madras presidency. They had their capital at Canjeevaram and were generally at war with the three kingdoms. Their king, Narasimha-Varman (625-645 A. D.) ruled over part of the Deccan and most of the Cola country but after about 750 they declined, whereas the Colas grew stronger and Rajaraja (985-1018) whose dominions

included the Madras Presidency and Mysore made them the paramount power in southern India, which position they retained until the thirteenth century.

As already mentioned, the Deccan was ruled by the Andhras from 220 B. C. to 236 A. D., but for the next three centuries nothing is known of its history until the rise of the Calukya dynasty at Vatapi (Badami) in Bijapur. Pulakesin II of this dynasty (608-642), a contemporary of Harsha, was for some time successful in creating a rival Empire which extended from Gujarat to Madras, and his power was so considerable that he exchanged embassies with Khusru II, King of Persia, as is depicted in the frescoes of Ajanta. But in 642 he was defeated and slain by the Palavas.

With the death of Pulakesin and Harsha begins what has been called the Rajput period, extending from about 650 to 1000 A. D. and characterized by the existence of numerous kingdoms ruled by dynasties nominally Hindu, but often descended from northern invaders or non-Hindu aboriginal tribes. Among them may be mentioned the following :—

1. Kanauj or Panchala. This kingdom passed through troublous times after the death of Harsha but from about 840 to 910 A. D. under Bhoja (or Mihira) and his son, it became the principal power in northern India, extending from Bihar to Sind. In the twelfth century it again became important under the Gaharwar dynasty.

2. Kanauj was often at war with the Palas of Bengal, a line of Buddhist kings which began about 730 A. D. Dharmapala (c. 800 A. D.) was sufficiently powerful to depose the king of Kanauj. Subsequently the eastern portion of the Pala Kingdom separated itself under a rival dynasty known as the Senas.

3. The districts to the south of the Jumna known as Jejak-abhukti (Bundelkhand) and Cedi (nearly equivalent to our Central Provinces) were governed by two dynasties known as Candels and Kalacuris. The former are thought to have been originally Gonds. They were great builders and constructed among other monuments the temples of Khajurao. Kirdvarman Chandel (1049-1100) greatly extended their territories. He was a patron of learning and the allegorical drama Prabodhacandrodaya was produced at his Court.

4. The Paramara (Pawar) dynasty of Malwa were likewise celebrated as patrons of literature and kings Munja (974-995) and Bhoja (1018-1060) were authors as well as successful warriors.

II Saka Period

According to Vincent Smith, after first adopting A. D. 78 which appeared the most probable, finally chose 120 A. D. and we may agree that this date marks the beginning of the Saka period inaugurated by Kanishka.

The order in which the chief Kushan kings followed doubtful. It is generally agreed that Kanishka came after Phises I (Kujula Kara Kadphises) and II (Vima Kadphises) former of these two, a Bactrianised Scythian, must, in Dr. Smith's view, have assumed power about 40 A. D. He seized Gandhara and the country of Taxila from Gondophares, the Parthian prince who, according to the apocryphal acts of the apostles, received St. Thomas. His son Vima (78-110) carved out a great empire for himself, embracing the Punjab and the whole western half of the Ganges basin.

There seems to have been an interval of about 10 years between Kadphises and Kanishka, the latter was the son of one Vajheshka and no relation of his predecessor, he seems to have been from Khotan, not Bactria, and indeed he spent the summer at Kapisi in Paropan. . . mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/56. Notes on History of India.htm - _msocom_8 and the winter at Purushapura (Peshawar) the axis of his empire was no longer in the (midst) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/56. Notes on History of India.htm - _msocom_9 of the Graeco-Iranian country.

The empire of Kanishka did not last long. Of his two sons, Vasishka and Havishka only the second survived him.

The power of the Kushans in the third century was reduced to Bactria with Kabul and Gandhara, and they fell beneath the yoke of the Sassanids.

Kshatrappas or Satraps.

This title, which is Iranian, is borne by two dynasties founded by the Sakas who had been driven from their country by the Yuch-chi invasion.

I. The first was established in Surashtra (Kathewar). One prince of this line Chasthana, seems to have held Malwa before the great days of the Kushans and to have become a vassal of Kanishka; he ruled over Ujjayini, which was the centre of the Indian civilisation.

II. The second line to which the name of Kshaharata is more particularly attached, was the hereditary foe of the Andhras ; it ruled over Maharashtra, the country between modern Surat and Bombay. It

was this latter Saka state that was annihilated by the Satakarni and it was the former which arranged it, when Rodraman, the Satrap of Ujjayni conquered the Andhra King. The antagonism between the eastern & western states seems to have been accompanied by a difference of ideals. The Sakas, like all the Scythians of India or Serindia, such as the Thorkhans, retained from their foreign origin a sympathy for Buddhism, whereas the Andhras were keen supporters of Brahmanism.

The Guptas

The events of the third century are unknown to history and we have very little information about the Kushan empire.

Day light returns in 318-19, when there arises in the old country of Magadha a new dynasty-Gupta.

The Guptas-Chandragupta II conquered the country of Malvas, Gujrath and Surashtra (Kathiwar) overthrowing the 1st great Satrap of the Saka dynasty of Ujjain. As an extension of his territory westward he made Ayodhya and Kausambi his capitals instead of Pataliputra. About 155 (B.C.) he conquered the whole of the lower Indus and Kathewar, waged war in Rajputana, and Oudh but took Mathura (Muttra) on the Jumna, and even reached Pataliputra.

He was severely defeated by Pushyamitra (?). Bactriana was at least in the north, a barrier between Parthia and India. India was therefore less exposed to attack from Parthia. Nevertheless, there was at least one Parthian ruler, Mithradates 1(171-136) who annexed the country of Taxila for a few years, about 138.

End of the independence of Parthia and Bactria

The event that put an end to the independence of Parthia and Bactria was a new invasion, resulting from a movement of tribes, which had taken place far away from India in the Mongolian steppes.

About 170 (B.C.) a horde of nomadic Scythians, the Yuch-chi or Tokharians, being driven from Gobi, the present Kansu, by the Hiangu or Huns, started on a wild migration which upset the whole balance of Asia.

They fell on the Sakas, who were Iranianised Scythians dwelling north of the Persian empire and settled in their grazing grounds north of the Jazartes. The expelled Sakas fell on Parthia and Bactriana, obliterating the last vestiges of Greek rule, between 140 and 120 (B. C.) Then the Tokharians, being defeated in their turns by the Wu-Sun tribe, established themselves on the Oxus, and after that took all the country of the Sakas in eastern Iran at the entrance to India. That entrance was

found in the first century after Christ.

The conquest of India was the work of the Kushans (Kushana), a dynasty which united the Yue-Chi tribes and established their dominion both over their own kinsfolk the Sakas of Parthia and over peoples of the Punjab.

The accession of the principal King of this line, Kanishka, was placed at uncertain dates between 57 B. C. and A. D. 200.

Pushyamitra—a mayor of the Palace as Sybrani Livi called him.

The Selected Empire ruled by Antiochos III (261-246 B.C.) and lost two provinces Parthia and Bactriana which emancipated themselves simultaneously. The Parthians whom the Indians called Pahalvas, were related to the nomads of the Turkoman steppes and occupied the country south-east of the Caspian. The Bactrians bordered on the Parthians on the north-east and were settled between the Hindu Kush and the Oxus ; the number and wealth of their towns were legendary. These two peoples seem to have taken advantage of the difficulties of Antiochos and his successors, Seleucos II (246-226 B.C.) and III (226-223 B.C.) in the west to break away.

The Parthian revolt was a natural movement, led by Arsaces, the founder of a dynasty which was to rule Persia for nearly 500 years.

The Bactrian rising was brought about by the ambition of a Greek satrap. Diodotos, represents an outbreak of Hellenism in the heart of Asia.

There is no doubt that the formation of these enterprising nations on the Indo-Iranian border helped to shake the empire of Ashoka in the time of his successors.

The Punjab, once a Persian satrapy and then a province of Alexander, was to find itself still more exposed to attack, now that smaller but turbulent states had arisen at its doors. After Diodotos I & II, the King of Bactria was Euthidemes, who went to war with Antioches the Great of Syria. Peace was concluded with the recognition of Bactrian independence about 208. But during hostilities Syrian troops had crossed the Hindu Kush and entering the Kabul valley had severely dispoiled the ruler Subhagasena. Demetrius, the son of Enthidemos, increased his dominion not only in the present Afghanistan but in India proper, and bore the title of King of the Indians (200-190). Between 190 and 180 there were Greek adventurers reigning at Taxila, named Paleon & Agathocles. From 160 to 140 roughly, Kabul and the Punjab were held by a pure Greek, Milinda or Minander, who left a name in the history of Buddhism.

III Huns

In the last years of Kumargupta new Iranian peoples assailed the empire, but they were kept back from the frontiers. Under Skandagupta, the first wave of formidable migration came down upon the same frontiers. This consisted of nomad Mongoloids to whom India afterwards gave the genuine name of **Huna**, under which we recognised the Huns who invaded Europe.

Those who reached India after the middle of the fifth century were white Huns or Ephthalites, who in type were closer to the Turks than to the hideous followers of Attila. After a halt in the valley of the Oxus they took possession of Persia and Kabul. Skandagupta had driven them off for a few years (455 A. D.) but after they had slain Firoz the Sassanid in 484, no Indian state could stop them. One of them, named Toramana, established himself among the Malavas in 500 and his son Mihirgula set up his capital at Sakol (Sialkot) in the Punjab.

A native prince Yeshodharman shook off the yoke of Mihirgula. The expulsion of the Huns was not quite complete everywhere. A great many resided in the basin of the Indus.

At the beginning of the 7th century a power arose from the chaos in the small principality of Sthanvisvara (Thaneshwar, near Delhi). Here a courageous Raja Prabhakar Vardhan organised a kingdom, which showed its mettle against the Gurjars, the Malwas and other neighbouring princes. Shortly after his death in 604 or 605 his eldest son was murdered by the orders of the king of Gauda in Bengal. The power fell to his younger brother Harsha.

NOTES ON PARLIAMENTARY PROCEDURE

Forms of Procedure are determined by functions of a body. The important functions of a Parliamentary Body are :

(1) Power to express an opinion on and criticise any executive action.

(2) Power to have Laws.

(3) Power to provide money for carrying on the administration.

I. Power to express an opinion on or criticise any action taken by the Executive. Rules of Business permit :

1. to ask Questions.

2. to move Resolutions.

3. to move an adjournment of the House.

4. to move a motion of want of confidence in the Government.

(1)(1) **Power to ask Questions.**

Rule 7

This is subject to the following restrictions.

Arrangement of Business

I. Order of precedence.

1. Questions 1 hour : 1/2 hour during voting of demands.

2. Bills.

3. Motions to amend Standing Orders.'

4. Resolutions.

President may give priority to any item.

II. Priority with regard to Bills, Motions and Resolutions.

(i) (i) **Bills and Motions**

The most advanced have priority over the less advanced.

(ii) (ii) **Resolutions**

Priority is determined by Ballot.

Quorum

25 members in Bombay:

President shall adjourn to next day if there is-no Quorum.

Rule 27. The Budget is dealt with in two stages.

- (i) (i) a general discussion ; and
 (ii) the voting of demands for grants.

Governor may allot as many days as he likes for general discussion.

No motion is to be made Nor the Budget to be submitted to the vote of the Council when the General discussion is going on.

Rule29. Voting of Grants.

Not more than twelve days shall be allotted by the Governor for the voting of the demands. Not more than 2 days for any demand. On the last appointed day the President shall forthwith put every Question necessary to dispose of all outstanding matters in connection with the demands for grants.

Rule 30.

No motion for appropriation can be made except on the recommendation of the Governor communicated to the Council. Motions may be moved to reduce any grant or to omit or reduce any item in a grant, but not to increase or alter the destination of the grant

Rule 31. Excess Grants

(Left blank by the author—ed.)

Rule 32. Supplementary or additional grant.

When the amount falls short

When need arises of provision of new source.

Public Accounts Committee

Rule 33. Constitution of Public accounts Committee.

(Left blank by the author—ed.)

Rule 34. Duties of the Public Accounts Committee :

(1) To satisfy itself that money is spent within the scope of the demand and to bring to the notice.

Conduct of Business

This is regulated by the Standing Orders.

I.Council Session

1. The Council can meet only at a time or place appointed by the Governor by notification.
2. Session is prorogued by the order of the Governor.
3. The Council shall sit on such days and at such times as the President shall direct.

Effect of Prorogation

On prorogation all pending notices shall lapse and fresh notices must be given for the next Session except in the following cases :

- | | | | |
|---|---|-----------------------------|----------------------------|
| (1) Question |] |] These are carried over to | |
| (2) Statutory motions | | |] the list of Business for |
| (3) Bills introduced | | |] the next Session. |
| (4) Motion to amend Standing Orders which have been referred to a Select Committee. | | |]] |

Procedure

With regard to

I. Question

Shall be put and answers given in such manner as the President may, in his discretion, determine.

II. Motion for Adjournment

30 members to rise

4 O'clock for the purpose of discussing the motion. Debate shall terminate at 6 p.m. and thereafter no question respecting the motion shall be put.

III. Bills

(1) Four Stages

1. Introduction. Asking the leave of the House.
2. First Reading
3. Second Reading
4. Third Reading

- (1) Constitution of Australia. Sec. 49.
- (2) Constitution of Canada. Sec. 18.
- (3) Constitution of South Africa. Sec. 57.

There is no Section in the Government of India Act which gives any

privilege to the Legislature.

The Government of India Act confers only two privileges upon members of the Legislature.

I. I. Freedom of Speech.

Sec. 67(7).

There shall be freedom of speech in both chambers of the Indian Legislature. No person shall be liable to any proceedings in any Court by reason of his speech or vote in either chamber or by anything contained in any **official** report of the proceedings of either chamber.

Sec. 72 D (7).

There shall be freedom of speech in the Governor's Legislative Council. No person shall be liable to any proceedings in any Court by reason of his speech or vote in any such Council, or by reason of anything contained in any **official** report of the proceedings of any such Council.

This privilege of Freedom of Speech is subject to two restrictions.

- (1) Standing orders.
- (2) Official report.

II. Freedom from Arrest.

This privilege is not granted by the Government of India Act. It is granted by an Act of the Indian Legislature. It is called

Legislative Members Exemption Act, 1925. [No. 23 of 1925]

UNDER THIS ACT

1. Members of the legislative bodies constituted under the Government of India Act are exempt from liability to serve as jurors or assessors.

2. No person is liable to arrest or detention in prison under civil process—

(a) If he is a member of a legislative body constituted under the Government of India Act, during the continuance of any meeting of such body.

(b) If he is a member of any Committee of such body, during the continuance of any meeting of such body.

(c) If he is a member of either chamber of Indian Legislature, during the continuance of a joint sitting of the chambers, or of a

meeting of a conference or joint Committee of the chambers of which he is a member, and during 14 days before and after such meeting or sitting.

Points to note.

- (1) Freedom is only from Civil Arrest.
- (2) Liable to re-arrest after the period.

Procedure of the Legislatures

1. The Procedure of the Indian Legislature is regulated by
 - (1) Rules of Business and
 - (2) Standing Orders.

Section 67 (1)] permit Rules and Standing Orders to be made
 Section 67 (6)] for the Central Legislature.

Section 72 D (6)] permit Rules and Standing Orders to be made
 Section 72 D (7)] for the Local Legislature.

II. Legislatures have no authority to make rules and standing orders.—

The Dominions have it.

In India the matter is governed by Section 129A. Governor General in Council to make rules and Standing Orders.

Difference between Standing Orders and Rules

1. Rules are not subject to alteration or repeal by the Indian Legislature, Local or Central.
2. Subject to certain conditions Standing Orders may be amended.

Different purposes of Rules and Standing Orders Two

Questions:

1. What matters a Legislature can discuss and what is within its competence and what is not?

2. Assuming any particular matter is within its competence, How is that matter to be discussed? How is it to be brought to an issue? In what order are members to speak? Has anybody priority in speaking? How are votes recorded? How are they counted? How are they valued.

The first Question is settled by the Rules of Business. The second is settled by the standing orders. To use the language of the Act:

Rules of Business Regulate the **Course of business.**

Standing Orders regulate the **Conduct of business.**

Rules of Business and Freedom of action

Do the Rules of Business give the Legislators the necessary freedom to discharge their functions?

Rule 8.—A Question may be asked for the purpose of obtaining information on a matter of public concern within the special cognisance of the member to whom it is addressed.

Period of Notice.

(a) The President may disallow a question if it does relate to a matter which is not primarily the concern of the Local Government.

(b) A Question which is allowed by the President may be disallowed by the Governor if it relates to

(i) any matter affecting the relations of H. M's Government or of the Government of India, or of the Governor or the Governor in Council, with any foreign State.

(ii) any matter affecting the relations of any of the foregoing authorities with any Prince or Chief under the suzerainty of His Majesty, or relating to the affairs of any such Prince or Chief or to the administration of the territory of any such Prince or Chief.

(iii) any matter which is under adjudication by a Court of Law having jurisdiction in any part of His Majesty's Dominions.

N.B.—If any doubt arises the Governor shall decide the point and his decision shall be final.

(c) In a controversy between the Governor General in Council or the Secretary of State and Local Government no question shall be asked except as to matters of fact, and the answer shall be confined to a statement of fact.

(ii) (ii) Right to move Resolutions.

Rules 22-23.

Rule 23. (1) Every resolution shall be in the form of a specific recommendation addressed to the Government.

Statutory Restrictions

Resolution cannot be moved regarding a matter relating to which a question cannot be asked.

Rule 22. Apart from the Statutory restrictions on the right to move resolutions, the Governor has the power within the period of notice to disallow any resolution, on the ground that it cannot be moved without detriment to the public interest or on the ground that it relates to a

matter which is not primarily the concern of the Local Government.

Prohibitions against Resolutions

Rule 24A. No discussion of a matter of general public interest shall take place otherwise than on a resolution moved in accordance with rules governing the moving of resolutions except with the consent of the President & the member of the Government to whose department the motion relates.

2. It shall not be permissible to the President or to the member of the Government concerned to give his consent to the moving of any in regard to any of the subjects in regard to which a resolution cannot be moved.

(iii) (iii) Motion for adjournment

Rules 11 and 12

Rule 11. A motion for an adjournment of the business of the Council for the purpose of discussing a definite matter of urgent public importance may be made.

Rule 12. This is subject to the following restrictions.

i) Only one such motion shall be made at the same sitting.

(ii) Not more than one matter can be discussed. It must be restricted to **specific matter of recent** occurrence.

(iii) Motion must not raise a matter already disposed of : must not revive.

(iv) Motion must not anticipate a matter already on the agenda or of which notice is given.

1. A motion must not deal with a matter on which a resolution could not be moved.

2. 2. The President must give his consent.

(iv) Motion of Want of Confidence

Rule 12A. A motion expressing want of confidence in a minister or a motion disapproving the policy of the minister in a particular.

PAKISTAN OR THE PARTITION OF INDIA

PREFACE TO THE SECOND EDITION

Contents

PREFACE TO THE SECOND EDITION

PROLOGUE

INTRODUCTION

PART 1 : MUSLIM CASE FOR PAKISTAN

Chapter I : What does the league demand?

Chapter II : A nation calling for a home

Chapter III : Escape from degradation

PART II - HINDU CASE AGAINST PAKISTAN

Chapter IV : Break-up of Unity

Chapter V : Weakening of the Defences

Chapter VI : Pakistan and communal peace

Part III - WHAT IF NOT PAKISTAN?

Chapter VII : Hindu alternative to Pakistan

Chapter VIII : Muslim alternative to Pakistan

Chapter IX : Lessons from abroad

PART IV : PAKISTAN AND THE MALAISE

Chapter X : Social stagnation

Chapter XI : Communal aggression

Chapter XII : National frustration

PART V :

Chapter XIII : Must there be Pakistan

Chapter XIV : The problems of Pakistan

Chapter XV : Who can decide?

APPENDICES

PREFACE TO THE SECOND EDITION

The problem of Pakistan has given a headache to everyone, more so to me than to anybody else. I cannot help recalling with regret how much of my time it has consumed when so much of my other literary work of greater importance to me than this is held up for want of it. I therefore hope that this second edition will also be the last I trust that before it is exhausted either the question will be settled or withdrawn.

There are four respects in which this second edition differs from the first.

*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40A.Pakistan or the Partition of India Preface.htm - [_msocom_1](#)The first edition contained many misprints which formed the subject of complaints from many readers as well as reviewers. In preparing this edition, I have taken as much care as is possible to leave no room for complaint on this score. The first edition consisted only of three parts. Part V is an addition. It contains my own views on the various issues involved in the problem of Pakistan. It has been added because of the criticism levelled against the first edition that while I wrote about Pakistan I did not state what views I held on the subject. The present edition differs from the first in another respect. The maps contained in the first edition are retained but the number of appendices have been enlarged. In the first edition there were only eleven appendices. The present edition has twenty-five. To this edition I have also added an index which did not find a place in the first edition.

The book appears to have supplied a real want. I have seen how the thoughts, ideas and arguments contained in it have been pillaged by authors, politicians and editors of newspapers to support their sides. I am sorry they did not observe the decency of acknowledging the source even when they lifted not merely the argument but also the language of the book. But that is a matter I do not mind. I am glad that the book has been of service to

Indians who are faced with this knotty problem of Pakistan. The fact that Mr. Gandhi and Mr. Jinnah in their recent talks cited the book as an

authority on the subject which might be consulted with advantage bespeaks the worth of the book.

The book by its name might appear to deal only with the X. Y. Z. of Pakistan. It does more than that. It is an analytical presentation of Indian history and Indian politics in their communal aspects. As such, it is intended to explain the A. B.C. of Pakistan also. The book is more than a mere treatise on Pakistan. The material relating to Indian history and Indian politics contained in this book is so large and so varied that it might well be called Indian Political What is What.

The book has displeased both Hindus as well as Muslims though the reasons for the dislike of the Hindus are different from the reasons for the dislike of the Muslims. I am not sorry' for this reception given to my book. That it is disowned by the Hindus and unowned by the Muslims is to me the best evidence that it has the vices of neither and that from the point of view of independence of thought and fearless presentation affects the book is not a party production.

Some people are sore because what I have said has hurt them. I have not, I confess, allowed myself to be influenced by fears of wounding either individuals or classes, or shocking opinions however respectable they may be. I have often felt regret in pursuing this course, but remorse never. Those whom I may have offended must forgive me, in consideration of the honesty and disinterestedness of my aim. I do not claim to have written dispassionately though I trust I have written without prejudice. It would be hardly possible—I was going to say decent—for an Indian to be calm when he talks of his country and thinks of the times. In dealing with the question of Pakistan my object has been to draw a perfectly accurate, and at the same time, a suggestive picture of the situation as I see it. Whatever points of strength and weakness I have discovered on either side I have brought them boldly forward. I have taken pains to throw light on the mischievous effects that are likely to proceed from an obstinate and impracticable course of action.

The witness of history regarding the conflict between the forces of the authority of the State and of anti-State nationalism within, has been uncertain, if not equivocal. As Prof. Friedmann*
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40A.Pakistan or the Partition of India Preface.htm - _msocom_2 observes:—

“There is not a single modern State which has not, at one time or another, forced a recalcitrant national group to live under its authority. Scots, Bretons, Catalans, Germans, Poles, Czechs, Finns, all have, at some time or another, been compelled to accept the authority of a more powerful State whether they liked it or not. Often, as in Great Britain or France, force eventually led to co-operation and a co-ordination of State authority and national cohesion. But in many cases, such as those of Germany, Poland, Italy and a host of Central European and Balkan countries, the forces of Nationalism did not rest until they had thrown off the shackles of State Power and formed a State of their own”

In the last edition, I depicted the experience of countries in which the State engaged itself in senseless suppression of nationalism and weathered away in the attempt. In this edition I have added by way of contrast the experience of other countries to show that given the will to live together it is not impossible for diverse communities and even for diverse nations to live in the bosom of one State. It might be said that in tendering advice to both sides I have used terms more passionate than they need have been. If I have done so it is because I felt that the manner of the physician who tries to surprise the vital principle in each paralyzed organ in order to goad it to action was best suited to stir up the average Indian who is complacent if not somnolent, who is unsuspecting if not ill-informed, to realize what is happening. I hope my effort will have the desired effect.

I cannot close this preface without thanking Prof. Manohar B. Chitnis of the Khalsa College, Bombay, and Mr. K. V. Chitre for their untiring labours to remove all printer's and clerical errors that had crept into the first edition and to see that this edition is free from all such blemishes. I am also very grateful to Prof. Chitnis for the preparation of the Index which has undoubtedly enhanced the utility of the book.

PROLOGUE

It can rightly be said that the long introduction with which this treatise

opens leaves no excuse for a prologue. But there is an epilogue which is affixed to the treatise. Having done that, I thought of prefixing a prologue, firstly, because an epilogue needs to be balanced by a prologue, and secondly, because the prologue gives me room to state in a few words the origin of this treatise to those who may be curious to know it and to impress upon the readers the importance of the issues raised in it. For the satisfaction of the curious it may be stated that there exists, at any rate in the Bombay Presidency, a political organization called the Independent Labour Party (abbreviated into I.L.P.) for the last three years. It is not an ancient, hoary organization which can claim to have grown grey in politics. The I.L.P. is not in its dotage and is not overtaken by senility, for which second childhood is given as a more agreeable name. Compared with other political organizations, the I.L.P. is a young and fairly active body, not subservient to any clique or interest. Immediately after the passing of the Lahore Resolution on Pakistan by the Muslim League, the Executive Council of the I.L.P. met to consider what attitude it should adopt towards this project of Pakistan. The Executive Council could see that there was underlying Pakistan an idea to which no objection could be taken. Indeed, the Council was attracted to the scheme of Pakistan inasmuch as it meant the creation of ethnic states as a solution of the communal problem. The Council, however, did not feel competent to pronounce at that stage a decided opinion on the issue of Pakistan. The Council, therefore, resolved to appoint a committee to study the question and make a report on it. The committee consisted of my self as the Chairman, and Principal M. V. Donde, B.A.; Mr. S. C. Joshi, M.A.,LL.B., Advocate (O.S.), M.L.C.;Mr.R.R.Bhole,B.Sc., LL.B.,. m.l.a.i Mr. D. G. Jadhav, B.A., LL.B., M.L.A., and Mr. A. V. Chitre, B.A., M.L.A., all belonging to the I.L.P., as members of the committee. Mr. D. V. Pradhan, Member, Bombay Municipal Corporation, acted as Secretary to the committee. The committee asked me to prepare a report on Pakistan which I did. The same was submitted to the Executive Council of the I.L.P., which resolved that the report should be published. The treatise now published is that report.

The book is intended to assist the student of Pakistan to come to his own conclusion. With that object in view, I have not only assembled in this volume all the necessary and relevant data but have also added 14

appendices and 3 maps, which in my judgement, form an important accompaniment to the book.

It is not enough for the reader to go over the material collected in the following pages. He must also reflect over it. Let him take to heart the warning which Carlyle gave to Englishmen of his generation. He said:

"The Genius of England no longer soars Sunward, world-defiant, like an Eagle through the storms, 'mewing her mighty youth,'..... the Genius of England—much like a greedy Ostrich intent on provender and a whole skin; with its Ostrich-head stuck into whatever sheltering Fallacy there may be, and so awaits the issue. The issue has been slow; but it now seems to have been inevitable. No Ostrich, intent on gross terrene provender and sticking its head into Fallacies, but will be awakened one day—in a terrible a posteriori manner if not otherwise! Awake before it comes to that. Gods and men did us awake! The Voices of our Fathers, with thousand fold stern monition to one and all, bid us awake".

This warning, I am convinced, applies to Indians in their present circumstances as it once did to Englishmen, and Indians, if they pay no heed to it, will do so at their peril.

Now, a word for those who have helped me in the preparation of this report. Mr. M. G. Tipnis, D.C.E., (Kalabhuwan, Baroda), and Mr. Chhaganlal S. Mody have rendered me great assistance, the former in preparing the maps and the latter in typing the manuscript. I wish to express my gratitude to both for their work which they have done purely as a labour of love. Thanks are also due in a special measure to my friends Mr. B. R. Kadrekar and Mr. K. V. Chitre for their labours in undertaking the most uninteresting and dull task of correcting the proof and supervising the printing.

B.R. AMBEDKAR. Dadar,

INTRODUCTION

The Muslim Leagued Resolution on Pakistan has called forth different

reactions. There are some who look upon it as a case of political measles to which a people in the infancy of their conscious unity and power are very liable. Others have taken it as a permanent frame of the Muslim mind and not merely a passing phase and have in consequence been greatly perturbed.

The question is undoubtedly controversial. The issue is vital and there is no argument which has not been used in the controversy by one side to silence the other. Some argue that this demand for partitioning India into two political entities under separate national states staggers their imagination ; others are so choked with a sense of righteous indignation at this wanton attempt to break the unity of a country, which, it is claimed, has stood as one for centuries, that their rage prevents them from giving expression to their thoughts. Others think that it need not be taken seriously. They treat it as a trifle and try to destroy it by shooting into it similes and metaphors."You don't cut your head to cure your headache,""you don't cut a baby into two because two women are engaged in fighting out a claim as to who its mother is,"are some of the analogies which are used to prove the absurdity of Pakistan. In a controversy carried on the plane of pure sentiment, there is nothing surprising if a dispassionate student finds more stupefaction and less understanding, more heat and less light, more ridicule and less seriousness.

My position in this behalf is definite, if not singular. I do not think the demand for Pakistan is the result of mere political distemper, which will pass away with the efflux of time. As I read the situation, it seems to me that it is a characteristic in the biological sense of the term, which the Muslim body politic has developed in the same manner as an organism develops a characteristic. Whether it will survive or not, in the process of natural selection, must depend upon the forces that may become operative in the struggle for existence between Hindus and Musalmans. I am not staggered by Pakistan; I am not indignant about it ; nor do I believe that it can be smashed by shooting into it similes and metaphors. Those who believe in shooting it by similes should remember that nonsense does not cease to be nonsense because it is put in. rhyme, and that a metaphor is no argument though it be sometimes the gunpowder to drive one home and imbed it in memory. I believe that it would be neither wise nor possible to reject summarily a scheme if it has behind it the sentiment, if not the

passionate support, of 90 p.c. Muslims of India. I have no doubt that the only proper attitude to Pakistan is to study it in all its aspects, to understand its implications and to form an intelligent judgement about it.

With all this, a reader is sure to ask : Is this book on Pakistan seasonable in the sense that one must read it, as one must eat the fruits of the season to keep oneself in health? If it is seasonable, is it readable? These are natural queries and an author, whose object is to attract readers, may well make use of the introduction to meet them.

As to the seasonableness of the book there can be no doubt. The way of looking at India by Indians themselves must be admitted to have undergone a complete change during the last 20 years. Referring to India Prof. Arnold Toynbee wrote in 1915—

“British statesmanship in the nineteenth century regarded India as a 'Sleeping Beauty,' whom Britain had a prescriptive right to woo when she awoke; so it hedged with thorns the garden where she lay, to safeguard her from marauders prowling in the desert without. Now the princess is awake, and is claiming the right to dispose of her own hand, while the marauders have transformed themselves into respectable gentlemen diligently occupied in turning the desert into a garden too, but grievously impeded by the British thorn-hedge. When they politely request us to remove it, we shall do well to consent, for they will not make the demand till they feel themselves strong enough to enforce it, and in the tussle that will follow if we refuse, the sympathies of the Indian princess will not be on our side. Now that she is awake, she wishes to walk abroad among her neighbours; she feels herself capable of rebuffing without our countenance any blandishments or threats they may offer her, and she is becoming as weary as they of the thorn-hedge that confines her to her garden.

"If we treat her with tact, India will never wish to secede from the spiritual brotherhood of the British Empire, but it is inevitable that she should lead a more and more independent life of her own, and follow the example of Anglo-Saxon Commonwealths by establishing direct relations with her neighbours....."

Although the writer is an Englishman, the view expressed by him in 1915 was the view commonly held by all Indians irrespective of caste or creed.

Now that India the "Sleeping Beauty" of Prof. Toynbee is awake, what is the view of the Indians about her? On this question, there can be no manner of doubt that those who have observed this Sleeping Beauty behave in recent years, feel she is a strange being quite different from the angelic princess that she was supposed to be. She is a mad maiden having a dual personality, half human, half animal, always in convulsions because of her two natures in perpetual conflict. If there is any doubt about her dual personality, it has now been dispelled by the Resolution of the Muslim League demanding the cutting up of India into two, Pakistan and Hindustan, so that these conflicts and convulsions due to a dual personality having been bound in one may cease forever, and so freed from each other, may dwell in separate homes congenial to their respective cultures, Hindu and Muslim.

It is beyond question that Pakistan is a scheme which will have to be taken into account. The Muslims will insist upon the scheme being considered. The British will insist upon some kind of settlement being reached between the Hindus and the Muslims before they consent to any devolution of political power. There is no use blaming the British for insisting upon such a settlement as a condition precedent to the transfer of power. The British cannot consent to settle power upon an aggressive Hindu majority and make it its heir, leaving it to deal with the minorities at its sweet pleasure. That would not be ending imperialism. It would be creating another imperialism. The Hindus, therefore, cannot avoid coming to grips with Pakistan, much as they would like to do.

If the scheme of Pakistan has to be considered, and there is no escape from it, then there are certain points which must be borne in mind.

The first point to note is that the Hindus and Muslims must decide the question themselves. They cannot invoke the aid of anyone else. Certainly, they cannot expect the British to decide it for them. From the point of view of the Empire, it matters very little to the British whether India remains one undivided whole, or is partitioned into two parts, Pakistan and Hindustan, or into twenty linguistic fragments as planned by the Congress, so long as all of them are content to live within the Empire. The British need not interfere for the simple reason that they are not affected by such territorial divisions.

Further, if the Hindus are hoping that the British will use force to put down Pakistan, that is impossible. In the first place, coercion is no remedy.

The futility of force and resistance was pointed out by Burke long ago in his speeches relating to the coercion of the American colonies. His memorable words may be quoted not only for the benefit of the Hindu Maha Sabha but also for the benefit of all. This is what he said:

“The use of force alone is temporary. It may endure a moment but it does not remove the necessity of subduing again : a nation is not governed which is perpetually to be conquered. The next objection to force is its uncertainty. Terror is not always the effect of force, and an armament is not a victory. If you do not succeed you are without resource; for conciliation failing, force remains; but force failing, no further hope of reconciliation is left. Power and Authority are sometimes bought by kindness, but they can never be begged as alms by an impoverished and defeated violence. A further objection to force is that you impair the object by your very endeavours to preserve it. The thing you fought for (to wit the loyalty of the people) is not the thing you recover, but depreciated, sunk, wasted and consumed in the contest.”

Coercion, as an alternative to Pakistan, is therefore unthinkable.

Again, the Muslims cannot be deprived of the benefit of the principle of self-determination. The Hindu Nationalists who rely on self-determination and ask how Britain can refuse India what the conscience of the world has conceded to the smallest of the European nations, cannot in the same breath ask the British to deny it to other minorities. The Hindu Nationalist who hopes that Britain will coerce the Muslims into abandoning Pakistan, forgets that the right of nationalism to freedom from an aggressive foreign imperialism and the right of a minority to freedom from an aggressive majority's nationalism are not two different things; nor does the former stand on a more sacred footing than the latter. They are merely two aspects of the struggle for freedom and as such equal in their moral import. Nationalists, fighting for freedom from aggressive imperialism, cannot well ask the help of the British imperialists to thwart the right of a minority to freedom from the nationalism of an aggressive majority. The matter must, therefore, be decided upon by the Muslims and the Hindus alone. The British cannot decide the issue for them. This is the first important point to note.

The essence of Pakistan is the opposition to the establishment of one Central Government having supremacy over the whole of India. Pakistan

contemplates two Central Governments, one for Pakistan and the other for Hindustan. This gives rise to the second important point which Indians must take note of. That point is that the issue of Pakistan shall have to be decided upon before the plans for a new constitution are drawn and its foundations are laid. If there is to be one Central Government for India, the design of the constitutional structure would be different from what it would be if there is to be one Central Government for Hindustan and another for Pakistan. That being so, it will be most unwise to postpone the decision. Either the scheme should be abandoned and another substituted by mutual agreement or it should be decided upon. It will be the greatest folly to suppose that if Pakistan is buried for the moment, it will never raise its head again. I am sure, burying Pakistan is not the same thing as burying the ghost of Pakistan. So long as the hostility to one Central Government for India, which is the ideology underlying Pakistan, persists, the ghost of Pakistan will be there, casting its ominous shadow upon the political future of India. Neither will it be prudent to make some kind of a make-shift arrangement for the time being, leaving the permanent solution to some future day. To do so would be something like curing the symptoms without removing the disease. But, as often happens in such cases, the disease is driven in, thereby making certain its recurrence, perhaps in a more virulent form.

I feel certain that whether India should have one Central Government is not a matter which can be taken as settled; it is a matter in issue and although it may not be a live issue now, some day it will be.

The Muslims have openly declared that they do not want to have any Central Government in India and they have given their reasons in the most unambiguous terms. They have succeeded in bringing into being five provinces which are predominantly Muslim in population. In these provinces, they see the possibility of the Muslims forming a government and they are anxious to see that the independence of the Muslim Governments in these provinces is preserved. Actuated by these considerations, the Central Government is an eyesore to the Muslims of India. As they visualize the scene, they see their Muslim Provinces made subject to a Central Government predominantly Hindu and endowed with powers of supervision over, and even of interference in, the administration

of these Muslim Provinces. The Muslims feel that to accept one Central Government for the whole of India is to consent to place the Muslim Provincial Governments under a Hindu Central Government and to see the gain secured by the creation of Muslim Provinces lost by subjecting them to a Hindu Government at the Centre. The Muslim way of escape from this tyranny of a Hindu Centre is to have no Central Government in India at all.*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40A.Pakistan or the Partition of India Preface.htm - _msocom_3

Are the Musalmans alone opposed to the existence of a Central Government? What about the Hindus? There seems to be a silent premise underlying all political discussions that are going on among the Hindus that there will always be in India a Central Government as a permanent part of her political constitution. How far such a premise can be taken for granted is more than I can say. I may, however, point out that there are two factors which are dormant for the present but which some day may become dominant and turn the Hindus away from the idea of a Central Government.

The first is the cultural antipathy between the Hindu Provinces. The Hindu Provinces are by no means a happy family. It cannot be pretended that the Sikhs have any tenderness for the Bengalees or the Rajputs or the Madrasis. The Bengalee loves only himself. The Madrasi is bound by his own world. As to the Mahratta, who does not recall that the Mahrattas, who set out to destroy the Muslim Empire in India, became a menace to the rest of the Hindus whom they harassed and kept under their yoke for nearly a century. The Hindu Provinces have no common traditions and no interests to bind them. On the other hand, the differences of language, race, and the conflicts of the past have been the most powerful forces tending to divide them. It is true that the Hindus are getting together and the spirit moving them to become one united nation is working on them. But it must not be forgotten that they have not yet become a nation. They are in the process of becoming a nation and before the process is completed, there may be a setback which may destroy the work of a whole century.

In the second place, there is the financial factor. It is not sufficiently known what it costs the people of India to maintain the Central Government and the proportionate burden each Province has to bear.

The total revenue of British India comes to Rs. 194,64,17,926 per annum. Of this sum, the amount raised by the Provincial Governments from provincial sources, comes annually to Rs. 73,57,50,125 and that raised by the Central Government from central sources of revenue comes to Rs. 121,06,67,801. This will show what the Central Government costs the people of India. When one considers that the Central Government is concerned only with maintaining peace and does not discharge any functions which have relation to the progress of the people, it should cause no surprise if people begin to ask whether it is necessary that they should pay annually such an enormous price to purchase peace. In this connection, it must be borne in mind that the people in the provinces are literally starving and there is no source left to the provinces to increase their revenue.

This burden of maintaining the Central Government, which the people of India have to bear, is most unevenly distributed over the different provinces. The sources of central revenues are (1) Customs, (2) Excise, (3) Salt, (4) Currency, (5) Posts and Telegraphs, (6) Income Tax and (7) Railways. It is not possible from the accounts published by the Government of India to work out the distribution of the three sources of central revenue, namely Currency, Posts and Telegraphs and Railways. Only the revenue raised from other sources can be worked out province by province. The result is shown in the following table :—

	Revenue raised by	Revenue raised by
Provinces	Provincial	Central
	Government from	Government from
	provincial sources	central sources
	Rs.	Rs.
1 Madras	16,13,44,520	9,53,26,745
2 Bombay	12,44,59,553	22,53,44,247
3 Bengal	12,76,60,892	23,79,01,583
4 U.P.	12,79,99,851	4,05,53,030
5 Bihar	5,23,83,030	1,54,37,742

6 C. P. & Berar	4,27,41,280	31,42,682
7 Assam	2,58,48,474	1,87,55,967
8 Orissa	1,81,99,823	5,67,346
9 Punjab	11,35,86,355	1,18,01,385
10 N.W.F.P.	1,80,83,548	9,28,294
11 Sind	3,70,29,354	5,66,46,915

It will be seen from this table that the burden of maintaining the Central Government is not only heavy but falls unequally upon the different provinces. The Bombay Provincial Government raises Rs. 12,44,59,553; as against this, the Central Government raises Rs. 22,53,44,247 from Bombay. The Bengal Government raises Rs. 12,76,60,892; as against this, the Central Government raises Rs. 23,79,01,583 from Bengal. The Sind Government raises Rs. 3,70,29,354; as against this, the Central Government raises Rs. 5,66,46,915 from Sind. The Assam Government raises nearly Rs. 2 1/2 crores; but the Central Government raises nearly Rs. 2 crores from Assam. While such is the burden of the Central Government on these provinces, the rest of the provinces contribute next to nothing to the Central Government. The Punjab raises Rs. 11 crores for itself but contributes only Rs. 1 crore to the Central Government. In the N.W.F.P. the provincial revenue is Rs. 1,80,83,548; its total contribution to the Central Government however is only Rs. 9,28,294. U.P. raises Rs. 13 crores but contributes only Rs. 4 crores to the Centre. Bihar collects Rs. 5 crores for itself; she gives only 1 1/2 crores to the Centre. C.J.P. and Berar levy a total of 4 crores and pay to the Centre 31 lakhs.

This financial factor has so far passed without notice. But time may come when even to the Hindus, who are the strongest supporters of a Central Government in India, the financial considerations may make a greater appeal than what purely patriotic considerations do now. So, it is possible that some day the Muslims, for communal considerations, and the Hindus, for financial considerations, may join hands to abolish the Central Government.

If this were to happen, it is better if it happens before the foundation of a new constitution is laid down. If it happens after the foundation of the new constitution envisaging one Central Government were laid down, it would be the greatest disaster. Out of the general wreck, not only India as an

entity will vanish, but it will not be possible to save even the Hindu unity. As I have pointed out, there is not much cement even among the Hindu Provinces, and once that little cement which exists is lost, there will be nothing with which to build up even the unity of the Hindu Provinces. It is because of this that Indians must decide, before preparing the plans and laying the foundations, for whom the constitutional structure is to be raised and whether it is temporary or permanent. After the structure is built as one whole, on one single foundation, with girders running through from one end to the other; if, thereafter, a part is to be severed from the rest, the knocking out of the rivets will shake the whole building and produce cracks in other parts of the structure which are intended to remain as one whole. The danger of cracks is greater, if the cement which binds them is, as in the case of India, of a poor quality. If the new constitution is designed for India as one whole and a structure is raised on that basis, and thereafter the question of separation of Pakistan from Hindustan is raised and the Hindus have to yield, the alterations that may become necessary to give effect to this severance may bring about the collapse of the whole structure. The desire of the Muslim Provinces may easily infect the Hindu Provinces and the spirit of disruption generated by the Muslim Provinces may cause all round disintegration.

History is not wanting in instances of constitutions threatened with disruption. There is the instance of the Southern States of the American Union. Natal has always been anxious to get out from the Union of South Africa and Western Australia recently applied, though unsuccessfully, to secede from the Australian Commonwealth.

In these cases actual disruption has not taken place and where it did, it was soon healed. Indians, however, cannot hope to be so fortunate. Theirs may be the fate of Czechoslovakia. In the first place, it would be futile to entertain the hope that if a disruption of the Indian constitution took place by the Muslim Provinces separating from the Hindu Provinces, it would be possible to win back the seceding provinces as was done in the U.S.A. after the Civil War. Secondly, if the new Indian constitution is a Dominion Constitution, even the British may find themselves powerless to save the constitution from such a disruption, if it takes place after its foundations are laid. It seems to be, therefore, imperative that the issue of Pakistan

should be decided upon before the new constitution is devised.

If there can be no doubt that Pakistan is a scheme which Indians will have to resolve upon at the next revision of the constitution and if there is no escape from deciding upon it, then it would be a fatal mistake for the people to approach it without a proper understanding of the question. The ignorance of some of the Indian delegates to the Round Table Conference of constitutional law, I remember, led Mr. Garvin of the *Observer* to remark that it would have been much better if the Simon Commission, instead of writing a report on India, had made a report on constitutional problems of India and how they were met by the constitutions of the different countries of the world. Such a report I know was prepared for the use of the delegates who framed the constitution of South Africa. This is an attempt to make good that deficiency and as such I believe it will be welcomed as a seasonable piece.

So much for the question whether the book is seasonable. As to the second question, whether the book is readable no writer can forget the words of Augustine Birrell when he said:

“Cooks, warriors, and authors must be judged by the effects they produce; toothsome dishes, glorious victories, pleasant books, these are our demands. We have nothing to do with ingredients, tactics, or methods. We have no desire to be admitted into the kitchen, the council, or the study. The cook may use her saucepans how she pleases, the warrior place his men as he likes, the author handle his material or weave his plot as best he can; when the dish is served we only ask. Is it good?; when the battle has been fought. Who won? ; when the book comes out. Does it read?”

“Authors ought not to be above being reminded that it is their first duty to write agreeably. Some very disagreeable men have succeeded in doing so, and there is, therefore, no need for anyone to despair. Every author, be he grave or gay, should try to make his book as ingratiating as possible. Reading is not a duty, and has consequently no business to be made disagreeable. Nobody is under any obligation to read any other man's book.”

I am fully aware of this. But I am not worried about it. That may well apply to other books but not to a book on Pakistan. Every Indian must read a book on Pakistan, if not this, then some other, if he wants to help

his country to steer a clear path.

If any book does not read well, i.e., its taste be not good, the reader will find two things in it which, I am sure, are good.

The first thing he will find is that the ingredients are good. There is in the book material which will be helpful and to gain access to which he will have to labour a great deal. Indeed, the reader will find that the book contains an epitome of India's political and social history during the last twenty years, which it is necessary for every Indian to know.

The second thing he will find is that there is no partisanship. The aim is to expound the scheme of Pakistan in all its aspects and not to advocate it. The aim is to explain and not to convert. It would, however, be a pretence to say that I have no views on Pakistan. Views I have. Some of them are expressed, others may have to be gathered. Two things, however, may well be said about my views. In the first place, wherever they are expressed, they have been reasoned out. Secondly, whatever the views, they have certainly not the fixity of a popular prejudice. They are really thoughts and not views. In other words, I have an open mind, though not an empty mind. A person with an open mind is always the subject of congratulations. While this may be so, it must, at the same time, be realized that an open mind may also be an empty mind and that such an open mind, if it is a happy condition, is also a very dangerous condition for a man to be in. A disaster may easily overtake a man with an empty mind. Such a person is like a ship without ballast and without a rudder. It can have no direction. It may float but may also suffer a shipwreck against a rock for want of direction. While aiming to help the reader by placing before him all the material, relevant and important, the reader will find that I have not sought to impose my views on him. I have placed before him both sides of the question and have left him to form his own opinion.

The reader may complain that I have been provocative in stating the relevant facts. I am conscious that such a charge may be levelled against me. I apologize freely and gladly for the same. My excuse is that I have no intention to hurt. I had only one purpose, that is, to force the attention of the indifferent and casual reader to the issue that is dealt with in the book. I ask the reader to put aside any irritation that he may feel with me and concentrate his thoughts on this tremendous issue : Which is to be, Pakistan or no Pakistan?

PART I**PAKISTAN OR THE PARTITION OF INDIA**

Contents**PART 1 : MUSLIM CASE FOR PAKISTAN****Chapter I : What does the league demand?****Chapter II : A nation calling for a home****Chapter III : Escape from degradation****PART 1 : MUSLIM CASE FOR
PAKISTAN**

The Muslim Case for Pakistan is sought to be justified on the following grounds:—

- (i) (i) What the Muslims are asking for is the creation of administrative areas which are ethnically more homogeneous.
- (ii) (ii) The Muslims want these homogeneous administrative areas which are predominantly Muslim to be constituted into separate States,
 - (a) (a) because the Muslims by themselves constitute a separate nation and desire to have a national home, and
 - (b) (b) because experience shows that the Hindus want to use their majority to treat the Muslims as though they were second-class citizens in an alien State.

This part is devoted to the exposition of these grounds.

CHAPTER I

WHAT DOES THE LEAGUE DEMAND?

I

On the 26th of March 1940, Hindu India was startled to attention as it had never been before. On that day, the Muslim League at its Lahore Session passed the following Resolution :—

“1. While approving and endorsing the action taken by the Council and the Working Committee of the All-India Muslim League as indicated in their resolutions dated the 27th of August, 17th and 18th of September and 22nd of October 1939 and 3rd of February 1940 on the constitutional issue, this Session of the All-India Muslim League emphatically reiterates that the Scheme of Federation embodied in the Government of India Act, 1935, is totally unsuited to, and unworkable in the peculiar conditions of this country and is altogether unacceptable to Muslim India;

“2. It further records its emphatic view that while the declaration dated the 18th of October 1939 made by the Viceroy on behalf of His Majesty's Government is reassuring in as far as it declares that the policy and plan on which the Government of India Act, 1935, is based will be reconsidered in consultation with the various parties, interests and communities in India, Muslim India will not be satisfied unless the whole constitutional plan is reconsidered de novo and that no revised plan would be acceptable to the Muslims, unless it is framed with their approval and consent;

“3. Resolved that it is the considered view of this Session of the All-India Muslim League that no constitutional plan would be workable in this country or acceptable to the Muslims unless it is designated on the following basic principle, viz. that geographically contiguous units are demarcated into regions which should be so constituted with such territorial readjustments as may be necessary, that the areas in which the Muslims are numerically in a majority as in the North-Western and Eastern Zones of India should be grouped to constitute”Independent

States”in which the Constituent Units shall be autonomous and sovereign;

“4. That adequate, effective and mandatory safeguards should be specifically provided in the constitution for minorities in these units and in the regions for the protection of their religious, cultural, economic, political, administrative and other rights, and interests in consultation with them ; and in other parts of India where the Musalmans are in a minority, adequate, effective and mandatory safeguards shall be specifically provided in the constitution for them and other minorities for the protection of their religious, cultural, economic, political, administrative and other rights, and interests in consultation with them ;

“5. This Session further authorizes the Working Committee to frame a Scheme of Constitution in accordance with these basic principles, providing for the assumption Finally by the respective regions of all powers such as defence, external affairs, communication, customs, and such other matters as may be necessary.”

What does this Resolution contemplate? A reference to para 3 of the Resolution will show that the Resolution contemplates that the areas in which Muslims predominate shall be incorporated into independent States. In concrete terms, it means that the Punjab, the North-Western Frontier Province, Baluchistan and Sind in the North-West and Bengal in the East instead of remaining as the provinces of British India shall be incorporated as independent States outside of British India. This is the sum and substance of the Resolution of the Muslim League.

Does the Resolution contemplate that these Muslim provinces, after being incorporated into States, will remain each an independent sovereign State or will they be joined together into one constitution as members of a single State, federal or unitary? On this point, the Resolution is rather ambiguous, if not self-contradictory. It speaks of grouping the zones into”Independent States in which the Constituent Units shall be autonomous and sovereign.”The use of the term”Constituent Units”indicates that what is contemplated is a

Federation. If that is so, then, the use of the word "sovereign" as an attribute of the Units is out of place. Federation of Units and sovereignty-of Units are contradictions. It may be that what is contemplated is a confederation. It is, however, not very material for the moment whether these Independent States are to form into a federation or a confederation. What is important is the basic demand, namely, that these areas are to be separated from India and formed into Independent States.

The Resolution is so worded as to give the idea that the scheme adumbrated in it is a new one. But, there can be no doubt that the Resolution merely resuscitates a scheme which was put forth by Sir Mahomed Iqbal in his Presidential address to the Muslim League at its Annual Session held at Lucknow in December 1930. The scheme was not then adopted by the League. It was, however, taken up by one Mr. Rehmat Ali who gave it the name, Pakistan, by which it is known. Mr. Rehmat Ali, M. A., LL.B., founded the Pakistan Movement in 1933. He divided India into two, namely, Pakistan and Hindustan. His Pakistan included the Punjab, N. W. F. Province, Kashmir, Sind and Baluchistan. The rest to him was Hindustan. His idea was to have an "independent and separate Pakistan" composed of five Muslim provinces in the North as an independent State. The proposal was circulated to the members of the Round Table Conference but never officially put forth. It seems an attempt was made privately to obtain the assent of the British Government, who, however, declined to consider it because they thought that this was a "revival of the old Muslim Empire."¹ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/40B.Pakistan or the Partition of India PART I.htm - _msocom_1

The League has only enlarged the original scheme of Pakistan. It has sought to create one more Muslim State in the East to include the Muslims in Bengal and Assam. Barring this, it expresses in its essence and general outline the scheme put forth by Sir Mahomed Iqbal and propagated by Mr. Rehmat Ali. There is no name given to this new Muslim State in the East. This has made no difference in the theory and the issues involved in the ideology of Mr. Rehmat Ali. The only difficulty one feels is that the League, while enlarging the facets, has not christened the two Muslim States with short and sweet names as it

might have been expected to do. That it did not do and we are left to carry on the discussion with two long jaw-breaking names of Muslim State in the West and Muslim State in the East. I propose to solve this difficulty by reserving the name Pakistan to express the ideology underlying the two-nation theory and its consequent effect, namely, partition, and by designating the two Muslim States in the North-West and North-East as Western Pakistan and Eastern Pakistan.

The scheme not only called Hindu India to attention but it shocked Hindu India. Now it is natural to ask, what is there that is new or shocking in this scheme?

II

Is the idea of linking up of the provinces in the North-West a shocking idea? If so, let it be remembered that the linking of these provinces is an age-old project put forth by successive Viceroys, Administrators and Generals. Of the Pakistan provinces in the North-West, the Punjab and N. W. F. P. constituted a single province ever since the Punjab was conquered by the British in 1849. The two continued to be a single province till 1901. It was in 1901 that Lord Curzon broke up their unity and created the present two provinces. As to the linking up of the Punjab with Sind, there can be no doubt that had the conquest of Sind followed and not preceded the conquest of the Punjab, Sind would have been incorporated into the Punjab, for the two are not only contiguous but are connected by a single river which is the most natural tie between them. Although Sind was joined to Bombay, which in the absence of the Punjab was the only base from which it could be governed, the idea of disconnecting Sind from Bombay and joining it to the Punjab was not given up and projects in that behalf were put forth from time to time. It was first put forth during the Governor-Generalship of Lord Dalhousie; but for financial reasons, was not sanctioned by the Court of Directors. After the mutiny, the question was reconsidered but owing to the backward state of communications along the Indus, Lord Canning refused to give his consent. In 1876, Lord Northbrook was of the opinion that Sind should be joined to the Punjab. In 1877, Lord Lytton, who succeeded Northbrook, sought to create a trans-indus province, consisting of the six frontier districts of the Punjab and of the

transindus districts of Sind. This would have included the six Frontier districts of the Punjab, namely, Hazara, Peshawar, Kohat, Bannu (except the Cis-indus tracts), Dera Ismail Khan (with the same exception), Dera Ghazi Khan, and trans-Indus Sind (with the exception of Karachi). Lytton also proposed that Bombay should receive the whole or part of the Central Provinces, in order to compensate it for the loss of trans-indus Sind. These proposals were not acceptable to the Secretary of State. During the Vice-royalty of Lord Lansdowne (1888—94), the same project was revived in its original form, namely, the transfer of Sind to the Punjab, but owing to the formation of the Baluchistan Agency, Sind had ceased to be a Frontier district and the idea which was military in its motive, lost its force and Sind remained without being incorporated in the Punjab. Had the British not acquired Baluchistan and had Lord Curzon not thought of carving out the N. W. F. P. out of the Punjab, we would have witnessed long ago the creation of Pakistan as an administrative unit.

With regard to the claim for the creation of a National Muslim State in Bengal, again, there is nothing new in it. It will be recalled by many that in 1905, the province of Bengal and Assam was divided by the then Viceroy, Lord Curzon into two provinces :

- (1) Eastern Bengal and Assam with Dacca as its capital and
- (2) Western Bengal with Calcutta as its capital. The newly-created province of Eastern Bengal and Assam included Assam and the following districts of the old province of Bengal and Assam: (1) Dacca, (2) Mymensingh, (3) Faridpur, (4) Backer gunge, (5) Tippera, (6) Noakhali, (7) Chittagong, (8) Chittag-ong Hill Tracts, (9) Rajashahl, (10) Dinajpur, (II) Jalpaiguri, (12) Rangpur, (13) Bogra, (14) Pabna and (15) Malda. Western Bengal included the remaining districts of the old Province of Bengal and Assam with the addition of the district of Sambalpur which was transferred from C. P. to Western Bengal.

This division of one province into two, which is known in Indian history as the Partition of Bengal, was an attempt to create a Muslim State in Eastern Bengal, inasmuch as the new province of Eastern

Bengal and Assam was, barring parts of Assam, a predominantly Muslim area. But, the partition was abrogated in 1911 by the British who yielded to the Hindus, who were opposed to it and did not care for the wishes of the Muslims, as they were too weak to make themselves felt. If the partition of Bengal had not been annulled, the Muslim State in Eastern Bengal, instead of being a new project, would now have been 39 years old. ²mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40B.Pakistan or the Partition of India PART I.htm - _msocom_2

III

Is the idea of separation of Pakistan from Hindustan shocking? If so, let me recall a few facts which are relevant to the issue and which form the basic principles of the Congress policy. It will be remembered that as soon as Mr. Gandhi captured the Congress, he did two things to popularize it. The first thing he did was to introduce Civil Disobedience.

Before Mr. Gandhi 's entry into the politics of India, the parties contending for power were the Congress, the Liberals and the Terrorists of Bengal. The Congress and the Liberals were really one party and there was no distinction between them such as divides them today. We can, therefore, safely say that there were only two parties in India, the Liberals and the Terrorists. In both, the conditions for admission were extremely difficult. In the Liberal Party, the condition for admission was not merely education but a high degree of learning. Without first establishing a reputation for study, one could never hope to obtain admission to the Liberal Party. It effectively excluded the uneducated from rising to political power. The Terrorists had prescribed the hardest test conceivable. Only those who were prepared to give their lives for the cause, not in the sense of dedicating them but in the sense of dying for it, could become members of their organization. No knave could, therefore, get an entry into the Terrorists' organization. Civil disobedience does not require learning. It does not call for the shedding of life. It is an easy middle way for that large majority who have no learning and who do not wish to undergo the extreme penalty and at the same time obtain the notoriety of being patriots. It is this middle path which made the Congress more popular than the Liberal Party or the

Terrorist Party.

The second thing Mr. Gandhi did was to introduce the principle of Linguistic Provinces. In the constitution that was framed by the Congress under the inspiration and guidance of Mr. Gandhi, India was to be divided into the following Provinces with the language and headquarters as given below :—

Province	Language	Headquarters
Ajmere-Merwara	Hindustani	Ajmere.
Andhra	Telegu	Madras.
Assam	Assamese	Gauhati
Bihar	Hindustani	Patna.
Bengal	Bengali	Calcutta.
Bombay (City)	Marathi-Gujarati	Bombay.
Delhi	Hindustani	Delhi.
Gujarat	Gujarati	Ahmedabad.
Kamatak	Kannada	Dharwar
Kerala	Malayalam	Calicut
Mahakosal	Hindustani	Jubbulpore

Maharashtra	Marathi	Poona.
Nagpur	Marathi	Nagpur.
N. W. F. P.	Pushtu	Peshawar.
Punjab	Punjabi	Lahore.
Sind	Sindhi	Karachi.
Tamil Nadu	Tamil	Madras.
United Provinces	Hindustani	Lucknow
Utkal	Oriya	Cuttack.
Vidarbha(Berar)	Marathi	Akola.

In this distribution no attention was paid to considerations of area, population or revenue. The thought that every administrative unit must be capable of supporting and supplying a minimum standard of civilized life, for which it must have sufficient area, sufficient population and sufficient revenue, had no place in this scheme of distribution of areas for provincial purposes. The determining factor was language. No thought was given to the possibility that it might introduce a disruptive force in the already loose structure of the Indian social life. The scheme was, no doubt, put forth with the sole object of winning the people to the Congress by appealing to their local patriotism. The idea of linguistic provinces has come to stay and the demand for giving effect to it has become so insistent and irresistible that the Congress, when it came into power, was forced to put it into effect. Orissa has already been separated from Bihar. ³mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40B.Pakistan or the Partition of India PART I.htm - _msocom_3 Andhra is demanding separation from Madras. Kamatak is asking for separation from

Maharashtra.⁴mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40B.Pakistan or the Partition of India PART I.htm - _msocom_4 The only linguistic province that is not demanding separation from Maharashtra is Gujarat Or rather, Gujarat has given up for the moment the idea of separation. That is probably because Gujarat has realized that union with Maharashtra is, politically as well as commercially, a better investment.

Be. that as it may, the fact remains that separation on linguistic basis is now an accepted principle with the Congress. It is no use saying that the separation of Karnatak and Andhra is based on a linguistic difference and that the claim to separation of Pakistan is based on a cultural difference. This is a distinction without difference. Linguistic difference is simply another name for cultural difference.

If there is nothing shocking in the separation of Karanatak and Andhra, what is there to shock in the demand for the separation of Pakistan? If it is disruptive in its effect, it is no more disruptive than the separation of Hindu provinces such as Karnatak from Maharashtra or Andhra from Madras. Pakistan is merely another manifestation of a cultural unit demanding freedom for the growth of its own distinctive culture.

CHAPTER II

A NATION CALLING FOR A HOME

That there are factors, administrative, linguistic or cultural, which are the predisposing causes behind these demands for separation, is a fact which is admitted and understood by all. Nobody minds these demands and many are prepared to concede them. But, the Hindus say that the Muslims are going beyond the idea of separation and questions, such as what has led them to take this course, why are they asking for partition, for the annulment of the common tie by a legal divorce between Pakistan and Hindustan, are being raised.

The answer is to be found in the declaration made by the Muslim League in its Resolution that the Muslims of India are a separate nation.

It is this declaration by the Muslim League, which is both resented and ridiculed by the Hindus.

The Hindu resentment is quite natural. Whether India is a nation or not, has been the subject-matter of controversy between the Anglo-Indians and the Hindu politicians ever since the Indian National Congress was founded. The Anglo-Indians were never tired of proclaiming that India was not a nation, that 'Indians' was only another name for the people of India. In the words of one Anglo-Indian "to know India was to forget that there is such a thing as India." The Hindu politicians and patriots have been, on the other hand, equally persistent in their assertion that India is a nation. That the Anglo-Indians were right in their repudiation cannot be gainsaid. Even Dr. Tagore, the national poet of Bengal, agrees with them. But, the Hindus have never yielded on the point even to Dr. Tagore.

This was because of two reasons. Firstly, the Hindu felt ashamed to admit that India was not a nation. In a world where nationality and nationalism were deemed to be special virtues in a people, it was quite natural for the Hindus to feel, to use the language of Mr. H. G. Wells, that it would be as improper for India to be without a nationality as it would be for a man to be without his clothes in a crowded assembly. Secondly, he had realized that nationality had a most intimate connection with the claim for self-government. He knew that by the end of the 19th century, it had become an accepted principle that the people, who constituted a nation, were entitled on that account to self-government and that any patriot, who asked for self-government for his people, had to prove that they were a nation. The Hindu for these reasons never stopped to examine whether India was or was not a nation in fact. He never cared to reason whether nationality was merely a question of calling a people a nation or was a question of the people being a nation. He knew one thing, namely, that if he was to succeed in his demand for self-government for India, he must maintain, even if he could not prove it, that India was a nation.

In this assertion, he was never contradicted by any Indian. The thesis was so agreeable that even serious Indian students of history came

forward to write propagandist literature in support of it, no doubt out of patriotic motives. The Hindu social reformers, who knew that this was a dangerous delusion, could not openly contradict this thesis. For, anyone who questioned it was at once called a tool of the British bureaucracy and enemy of the country. The Hindu politician was able to propagate his view for a long time. His opponent, the Anglo-Indian, had ceased to reply to him. His propaganda had almost succeeded. When it was about to succeed comes this declaration of the Muslim League— this rift in the lute. Just because it does not come from the Anglo-Indian, it is a deadlier blow. It destroys the work which the Hindu politician has done for years. If the Muslims in India are a separate nation, then, of course, India is not a nation. This assertion cuts the whole ground from under the feet of the Hindu politicians. It is natural that they should feel annoyed at it and call it a stab in the back.

But, stab or no stab, the point is, can the Musalmans be said to constitute a nation? Everything else is beside the point. This raises the question : What is a nation? Tomes have been written on the subject. Those who are curious may go through them and study the different basic conceptions as well as the different aspects of it. It is, however, enough to know the core of the subject and that can be set down in a few words. Nationality is a social feeling. It is a feeling of a corporate sentiment of oneness which makes those who are charged with it feel that they are kith and kin. This national feeling is a double edged feeling. It is at once a feeling of fellowship for one's own kith and kin and an anti-fellowship feeling for those who are not one's own kith and kin. It is a feeling of "consciousness of kind" which on the one hand binds together those who have it, so strongly that it over-rides all differences arising out of economic conflicts or social gradations and, on the other, severs them from those who are not of their kind. It is a longing not to belong to any other group. This is the essence of what is called a nationality and national feeling.

Now apply this test to the Muslim claim. Is it or is it not a fact that the Muslims of India are an exclusive group? Is it or is it not a fact that they have a consciousness of kind? Is it or is it not a fact that every Muslim is

possessed by a longing to belong to his own group and not to any non-Muslim group?

If the answer to these questions is in the affirmative, then the controversy must end and the Muslim claim that they are a nation must be accepted without cavil.

What the Hindus must show is that notwithstanding some differences, there are enough affinities between Hindus and Musalmans to constitute them into one nation, or, to use plain language, which make Muslims and Hindus long to belong together.

Hindus, who disagree with the Muslim view that the Muslims are a separate nation by themselves, rely upon certain features of Indian social life which seem to form the bonds of integration between Muslim society and Hindu society.

In the first place, it is said that there is no difference of race between the Hindus and the Muslims. That the Punjabi Musalman and the Punjabi Hindu, the U. P. Musalman and the U. P. Hindu, the Bihar Musalman and the Bihar Hindu, the Bengal Musalman and the Bengal Hindu, the Madras Musalman and the Madras Hindu, and the Bombay Musalman and the Bombay Hindu are racially of one stock. Indeed there is more racial affinity between the Madras Musalman and the Madras Brahmin than there is between the Madras Brahmin and the Punjab Brahmin. In the second place, reliance is placed upon linguistic unity between Hindus and Muslims. It is said that the Musalmans have no common language of their own which can mark them off as a linguistic group separate from the Hindus. On the contrary, there is a complete linguistic unity between the two. In the Punjab, both Hindus and Muslims speak Punjabi. In Sind, both speak Sindhi. In Bengal, both speak Bengali. In Gujarat, both speak Gujarati. In Maharashtra, both speak Marathi. So in every province. It is only in towns that the Musalmans speak Urdu and the Hindus the language of the province. But outside, in the mofussil, there is complete linguistic unity between Hindus and Musalmans. Thirdly, it is pointed out that India is the land which the Hindus and Musalmans have now inhabited together for

centuries. It is not exclusively the land of the Hindus, nor is it exclusively the land of the Mahomedans.

Reliance is placed not only upon racial unity but also upon certain common features in the social and cultural life of the two communities. It is pointed out that the social life of many Muslim groups is honeycombed with Hindu customs. For instance, the Avans of the Punjab, though they are nearly all Muslims, retain Hindu names and keep their genealogies in the Brahmanic fashion. Hindu surnames are found among Muslims. For instance, the surname Chaudhari is a Hindu surname but is common among the Musalmans of U.P. and Northern India. In the matter of marriage, certain groups of Muslims are Muslims in name only. They either follow the Hindu form of the ceremony alone, or perform the ceremony first by the Hindu rites and then call the Kazi and have it performed in the Muslim form. In some sections of Muslims, the law applied is the Hindu Law in the matter of marriage, guardianship and inheritance. Before the Shariat Act was passed, this was true even in the Punjab and the N. W. F. P. In the social sphere the caste system is alleged to be as much a part of Muslim society as it is of Hindu society. In the religious sphere, it is pointed out that many Muslim pirs had Hindu disciples ; and similarly some Hindu yogis have had Muslim chelas. Reliance is placed on instances of friendship between saints of the rival creeds. At Girot, in the Punjab, the tombs of two ascetics, Jamali Sultan and Diyal Bhawan, who lived in close amity during the early part of the nineteenth century, stand close to one another, and are revered by Hindus and Musalmans alike. Bawa Fathu, a Muslim saint, who lived about 1700 A.D. and whose tomb is at Ranital in the Kangra District, received the title of prophet by the blessing of a Hindu saint, Sodhi Guru Gulab Singh. On the other hand, Baba Shahana, a Hindu saint whose cult is observed in the Jang District, is said to have been the chela of a Muslim pir who changed the original name (Mihra), of his Hindu follower, into Mir Shah.

All this, no doubt, is true. That a large majority of the Muslims belong to the same race as the Hindus is beyond question. That all Mahomedans do not speak a common tongue, that many speak the

same language as the Hindus cannot be denied. That there are certain social customs which are common to both cannot be gainsaid. That certain religious rites and practices are common to both is also a matter of fact. But the question is : can all this support the conclusion that the Hindus and the Mahomedans on account of them constitute one nation or these things have fostered in them a feeling that they long to belong to each other?

There are many flaws in the Hindu argument. In the first place, what are pointed out as common features are not the result of a conscious attempt to adopt and adapt to each other's ways and manners to bring about social fusion. On the other hand, this uniformity is the result of certain purely mechanical causes. They are partly due to incomplete conversions. In a land like India, where the majority of the Muslim population has been recruited from caste and out-caste Hindus, the Muslimization of the convert was neither complete nor effectual, either from fear of revolt or because of the method of persuasion or insufficiency of preaching due to insufficiency of priests. There is, therefore, little wonder if great sections of the Muslim community here and there reveal their Hindu origin in their religious and social life. Partly it is to be explained as the effect of common environment to which both Hindus and Muslims have been subjected for centuries. A common environment is bound to produce common reactions, and reacting constantly in the same way to the same environment is bound to produce a common type. Partly are these common features to be explained as the remnants of a period of religious amalgamation between the Hindus and the Muslims inaugurated by the Emperor Akbar, the result of a dead past which has no present and no future.

As to the argument based on unity of race, unity of language and inhabiting a common country, the matter stands on a different footing. If these considerations were decisive in making or unmaking a nation, the Hindus would be right in saying that by reason of race, community of language and habitat the Hindus and Musalmans form one nation. As a matter of historical experience, neither race, nor language, nor country has sufficed to mould a people into a nation. The argument is so well

put by Renan that it is impossible to improve upon his language. Long ago in his famous essay on Nationality, Renan observed :—

“that race must not be confounded with nation. The truth is that . there is no pure race; and that making politics depend upon ethnographical analysis, is allowing it to be borne upon a chimera . . . Racial facts, important as they are in the beginning, have a constant tendency to lose their importance. Human history is essentially different from zoology. Race is not everything, as it is in the sense of rodents and felines.”

Speaking about language, Renan points out that :—

“Language invites re-union ; it does not force it. The United States and England, Spanish America and Spain speak the same languages and do not form single nations. On the contrary, Switzerland which owes her stability to the fact that she was founded by the assent of her several parts counts three or four languages. In man there is something superior to language, —will. The will of Switzerland to be united, in spite of the variety of her languages,' is a much more important fact than a similarity of language, often obtained by persecution.”

As to common country, Renan argued that :—

“It is no more the land than the race that makes a nation. The land provides a substratum, the field of battle and work; man provides the soul ; man is everything in the formation of that sacred thing which is called a people. Nothing of material nature suffices for it”

Having shown, that race, language, and country do not suffice to create a nation, Renan raises in a pointed manner the question, what more, then, is necessary to constitute a nation? His answer may be given in his own words :—

“A nation is a living soul, a spiritual principle. Two things, which in truth are but one, constitute this soul, this spiritual principle. One is in the past, the other in the present. One is the common possession of a rich heritage of memories ; the other is the actual consent, the desire to live together, the will to preserve worthily the undivided inheritance

which has been handed down. Man does not improvise. The nation, like the individual, is the outcome of a long past of efforts, and sacrifices, and devotion. Ancestor-worship is therefore, all the more legitimate ; for our ancestors have made us what we are. A heroic past, great men, glory,—I mean glory of the genuine kind,—these form the social capital, upon which a national idea may be founded. To have common glories in the past, a common will in the present; to have done great things together, to will to do the like again,—such are the essential conditions for the making of a people. We love in proportion to the sacrifices we have consented to make, to the sufferings we have endured. We love the house that we have built, and will hand down to our descendant. The Spartan hymn, ' We are what you were ; we shall be what you are,' is in its simplicity the national anthem of every land.

“In the past an inheritance of glory and regrets to be shared, in the future a like ideal to be realised ; to have suffered, and rejoiced, and hoped together; all these things are worth more than custom houses in common, and frontiers in accordance with strategical ideas; all these can be understood in spite of diversities of race and language. I said just now, ' to have suffered together ' for indeed, suffering in common is a greater bond of union than joy. As regards national memories, mournings are worth more than triumphs; for they impose duties, they demand common effort.”

Are there any common historical antecedents which the Hindus and Muslims can be said to share together as matters of pride or as matters of sorrow? That is the crux of the question. That is the question which the Hindus must answer, if they wish to maintain that Hindus and Musalmans together form a nation. So far as this aspect of their relationship is concerned, they have been just two armed battalions warring against each other. There was no common cycle of participation for a common achievement. Their past is a past of mutual destruction—a past of mutual animosities, both in the political as well as in the religious fields. As Bhai Parmanand points out in his pamphlet called “The Hindu National Movement”:—“In history the Hindus revere

the memory of Prithvi Raj, Partap, Shivaji and, Beragi Bir, who fought for the honour and freedom of this land (against the Muslims), while the Mahomedans look upon the invaders of India, like Muhammad Bin Qasim and rulers like Aurangzeb as their national heroes.”In the religious field, the Hindus draw their inspiration from the Ramayan, the Mahabharat, and the Geeta. The Musalmans, on the other hand, derive their inspiration from the Quran and the Hadis. Thus, the things that divide are far more vital than the things which unite. In depending upon certain common features of Hindu and Mahomedan social life, in relying upon common language, common race and common country, the Hindu is mistaking what is accidental and superficial for what is essential and fundamental. The political and religious antagonisms divide the Hindus and the Musalmans far more deeply than the so-called common things are able to bind them together. The prospects might perhaps be different if the past of the two communities can be forgotten by both, Renan points out the importance of forgetfulness as a factor in building up a nation :—

“Forgetfulness, and I shall even say historical error, form an essential factor in the creation of a nation; and thus it is that the progress of historical studies may often be dangerous to the nationality. Historical research, in fact, brings back to light the deeds of violence that have taken place at the commencement of all political formations, even of those the consequences of which have been most beneficial. Unity is ever achieved by brutality. The union of Northern and Southern France was the result of an extermination, and of a reign of terror lhal lasted for nearly a hundred years. The king of France who was, if I may say so, the ideal type of a secular crystalliser, the king of France who made the most perfect national unity in existence, lost his prestige when seen at too close a distance. The nation that he had formed cursed him ; and today the knowledge of what he was worth, and what he did, belongs only to the cultured.

“It is by contrast that these great laws of the history of Western Europe become apparent. In the undertaking which the king of France, in part by his justice, achieved so admirably, many countries

came to disaster. Under the crown of St. Stephen, Magyars and Slavs have remained as distinct as they were eight hundred years ago. Far from combining the different elements in its dominions, the house of Hapsburg has held them apart and often opposed to one another. In Bohemia, the Czech element and the German element are superimposed like oil and water in a glass. The Turkish policy of separation of nationalities according to religion has had much graver results. It has brought about the ruin of the East. Take a town like Smyrna or Salonica; you will find there five or six communities each with its own memories, and possessing among them scarcely anything in common. But the essence of the nation is, that all its individual members should have things in common; and also, that all of them should hold many things in oblivion. No French citizen knows whether he is a Burgundian, an Alan, or a Visigoth; every French citizen ought to have forgotten St. Bartholomew, and the massacres of the South in the thirteenth century. There are not ten families in France able to furnish proof of a French origin; and yet, even if such a proof were given it would be essentially defective, in consequence of a thousand unknown crosses, capable of deranging all genealogical systems."

The pity of it is that the two communities can never forget or obliterate their past. Their past is imbedded in their religion, and for each to give up its past is to give up its religion. To hope for this is to hope in vain.

In the absence of common historical antecedents, the Hindu view that Hindus and Musalmans form one nation falls to the ground. To maintain it is to keep up a hallucination. There is no such longing between the Hindus and Musalmans to belong together as there is among the Musalmans of India.

It is no use saying that this claim of the Musalmans being a nation is an after-thought of their leaders. As an accusation, it is true. The Muslims were hitherto quite content to call themselves a community. It is only recently that they have begun to style themselves a nation. But an accusation, attacking the motives of a person, does not amount to a

refutation of his thesis. To say that because the Muslims once called themselves a community, they are, therefore, now debarred from calling themselves a nation is to misunderstand the mysterious working of the psychology of national feeling. Such an argument presupposes that wherever there exist a people, who possess the elements that go to the making up of a nation, there must be manifested that sentiment of nationality which is their natural consequence and that if they fail to manifest it for sometime, then that failure is to be used as evidence showing the unreality of the claim of being a nation, if made afterwards. There is no historical support for such a contention. As Prof. Toynbee points out :—

"It is impossible to argue a priory from the presence of one or even several of these factors to the existence of a nationality; they may have been there for ages and kindled no response and if is impossible to argue from one case to another; precisely the same group of factors may produce nationality here, and there have no effect."

This is probably due to the fact, as pointed out by Prof. Barker, that it is possible for nations to exist and even for centuries, in unreflective silence, although there exists that spiritual essence of a national life of which many of its members are not aware. Some such thing has no doubt happened in the case of the Musalmans. They were not aware of the fact that there existed for them the spiritual essence of a national life. This explains why their claim to separate nationality was made by them so late. But, it does not mean that the spiritual essence of a national life had no existence at all.

It is no use contending that there are cases where a sense of nationality exists but there is no desire for a separate national existence. Cases of the French in Canada and of the English in South Africa, may be cited as cases in point. It must be admitted that there do exist cases, where people are aware of their nationality, but this awareness does not produce in them that passion which is called nationalism. In other words, there may be nations conscious of themselves without being charged with nationalism. On the basis of this reasoning, it may be argued that the Musalmans may hold that they are a nation but they

need not on that account demand a separate national existence ; why can they not be content with the position which the French occupy in Canada and the English occupy in South Africa? Such a position is quite a sound position. It must, however, be remembered that such a position can only be taken by way of pleading with the Muslims not to insist on partition. It is no argument against their claim for partition, if they insist upon it.

Lest pleading should be mistaken for refutation, it is necessary to draw attention to two things. First, there is a difference between nationality and nationalism. They are two different psychological states of the human mind. Nationality means

“consciousness of kind, awareness of the existence of that tie of kinship.” Nationalism means “the desire for a separate national existence for those who are bound by this tie of kinship.” Secondly, it is true that there cannot be nationalism without the feeling of nationality being in existence. But, it is important to bear in mind that the converse is not always true. The feeling of nationality may be present and yet the feeling of nationalism may be quite absent. That is to say, nationality does not in all cases produce nationalism. For nationality to flame into nationalism two conditions must exist. First, there must arise the “will to live as a nation. Nationalism is the dynamic expression of that desire. Secondly, there must be a territory which nationalism could occupy and make it a state, as well as a cultural home of the nation. Without such a territory, nationalism, to use Lord Acton's phrase, would be a “soul as it were wandering in search of a body in which to begin life over again and dies out finding none.” The Muslims have developed a “will to live as a nation.” For them nature has found a territory which they can occupy and make it a state as well as a cultural home for the new-born Muslim nation. Given these favourable conditions, there should be no wonder, if the Muslims say that they are not content to occupy the position which the French choose to occupy in Canada or the English choose to occupy in South Africa, and that

they shall have a national home which they can call their own.

CHAPTER III

ESCAPE FROM DEGRADATION

"What justification have the Musalmans of India for demanding the partition of India and the establishment of separate Muslim States? Why this insurrection? What grievances have they?"—ask the Hindus in a spirit of righteous indignation.

Anyone, who knows history, will not fail to realize that it has now been a well established principle that nationalism is a sufficient justification for the creation of a national state. As the great historian Lord Acton points out :—

“In the old European system, the rights of nationalities were neither recognised by Governments nor asserted by the people. The interest of the reigning families, not those of the nations, regulated the frontiers, and the administration was conducted generally without any reference to popular desires. Where all liberties were suppressed, the claims of national independence were necessarily ignored, and a princess, in the words of Fenelon, carried a monarchy in her wedding portion.”

Nationalities were at first listless. When they became conscious—

“They first rose against their conquerors in defence of their legitimate rulers. They refused to be governed by usurpers. Next came a time when they revolted because of the wrongs inflicted upon them by their rulers. The insurrections were provoked by particular grievances justified by definite complaints. Then came the French Revolution which effected a complete change. It taught the people to regard their wishes and wants as the supreme criterion of their right to do what they liked to do with themselves. It proclaimed the idea of the sovereignty of the people uncontrolled by the past and uncontrolled by the existing state. This text taught by the French Revolution became

an accepted dogma of all liberal thinkers. Mill gave it his support. ' One hardly knows, ' says Mill, ' what any division of the human race should be free to do, if not to determine with which of the various collective bodies of human beings they choose to associate themselves.'"

He even went so far as to hold that—

“It is in general a necessary condition of free institutions that the boundaries of governments should coincide in the main with those of nationalities.”

Thus history shows that the theory of nationality is imbedded in the democratic theory of the sovereignty of the will of a people. This means that the demand by a nationality for a national state does not require to be supported by any list of grievances. The will of the people is enough to justify it.

But, if grievances must be cited in support of their claim, the Muslims say that they have them in plenty. They may be summed up in one sentence, that constitutional safeguards have failed to save them from the tyranny of the Hindu majority.

At the Round Table Conference, the Muslims presented their list of safeguards, which were formulated in the well-known fourteen points. The Hindu representatives at the Round Table Conference would not consent to them. There was an impasse. The British Government intervened and gave what is known as "the Communal decision". By that decision, the Muslims got all their fourteen points. There was much bitterness amongst the Hindus against the Communal Award. But, the Congress did not take part in the hostility that was displayed by the Hindus generally towards it, although it did retain the right to describe it as anti national and to get it changed with the consent of the Muslims. So careful was the Congress not to wound the feelings of the Muslims that when the Resolution was moved in the Central Assembly condemning the Communal Award, the Congress, though it did not bless it, remained neutral, neither opposing nor supporting it. The Mahomedans were well justified in looking upon this Congress attitude

as a friendly gesture.

The victory of the Congress at the polls in the provinces, where the Hindus are in a majority, did not disturb the tranquillity of the Musalmans. They felt they had nothing to fear from the Congress and the prospects were that the Congress and the Muslim League would work the constitution in partnership. But, two years and three months of the Congress Government in the Hindu Provinces have completely disillusioned them and have made them the bitterest enemies of the Congress. The Deliverance Day celebration held on the 22nd December 1939 shows the depth of their resentment. What is worse, their bitterness is not confined to the Congress. The Musalmans, who at the Round Table Conference joined in the demand for Swaraj, are today the most ruthless opponents of Swaraj.

What has the Congress done to annoy the Muslims so much? The Muslim League has asserted that under the Congress regime the Muslims were actually tyrannized and oppressed. Two committees appointed by the League are said to have investigated and reported on the matter. But apart from these matters which require to be examined by an impartial tribunal, there are undoubtedly two things which have produced the clash: (1) the refusal by the Congress to recognize the Muslim League as the only representative body of the Muslims, (2) the refusal by the Congress to form Coalition Ministries in the Congress Provinces.

On the first question, both the Congress and the League are adamant. The Congress is prepared to accept the Muslim League as one of the many Muslim political organizations, such as the Ahrars, the National Muslims and the Jamiat-ul-Ulema. But it will not accept the Muslim League as the only representative body of the Muslims. The Muslim League, on the other hand, is not prepared to enter into any talk unless the Congress accepts it as the only representative body of the Musalmans of India. The Hindus stigmatize the claim of the League as an extravagant one and try to ridicule it. The Muslims may say that if the Hindus would only stop to inquire how treaties between nations are made, they would realize the stupidity of their view. It may be argued

that when a nation proceeds to make a treaty with another nation, it recognizes the Government of the latter as fully representing it. In no country does the Government of the day represent the whole body of people. Everywhere it represents only a majority. But nations do not refuse to settle their disputes because the Governments, which represent them, do not represent the whole people. It is enough if each Government represents a majority of its citizens. This analogy, the Muslims may contend, must apply to the Congress-League quarrel on this issue. The League may not represent the whole body of the Muslims but if it represents a majority of them, the Congress should have no compunction to deal with -it for the purpose of effecting a settlement of the Hindu-Muslim question. Of course, it is open to the Government of a country not to recognize the Government of another country where there is more than one body claiming to be the Government. Similarly, the Congress may not recognize the League. It must, however, recognize either the National Muslims or the Ahrars or the Jamiat-ul-Ulema and fix the terms of settlement between the two communities. Of course, it must act with the full knowledge as to which is more likely to be repudiated by the Muslims—an agreement with the League or an agreement with the other Muslim parties. The Congress must deal with one or the other. To deal with neither is not only stupid but mischievous. This attitude of the Congress only serves to annoy the Muslims and to exasperate them. The Muslims rightly interpret this attitude of the Congress as an attempt to create divisions among them with a view to cause confusion in their ranks and weaken their front.

On the second issue, the Muslim demand has been that in the cabinets there shall be included Muslim Ministers who have the confidence of the Muslim members in the Legislature. They expected that this demand of theirs would be met by the Congress if it came in power. But, they were sorely disappointed. With regard to this demand, the Congress took a legalistic attitude. The Congress agreed to include Muslims in their cabinets, provided they resigned from their parties, joined the Congress and signed the Congress pledge. This was resented by the Muslims on three grounds.

In the first place, they regarded it as a breach of faith. The Muslims say that this demand of theirs is in accordance with the spirit of the Constitution. At the Round Table Conference, it was agreed that the cabinets shall include representatives of the minority communities. The minorities insisted that a provision to that effect should be made a part of the statute. The Hindus, on the other hand, desired that the matter should be left to be regulated by convention. A *via media* was found. It was agreed that the provision should find a place in the Instrument of Instructions to the

Governors of the provinces and an obligation should be imposed upon them to see that effect was given to the convention in the formation of the cabinets. The Musalmans did not insist upon making this provision a part of the statute because they depended upon the good faith of the Hindus. This agreement was broken by a party which had given the Muslims to understand that towards them its attitude would be not only correct but considerate.

In the second place, the Muslims felt that the Congress view was a perversion of the real scope of the convention. They rely upon the text of the clause ⁵mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40B.Pakistan or the Partition of India PART I.htm - _msocom_5 in the Instrument of Instructions and argue that the words "member of a minority community" in it can have only one meaning, namely, a person having the confidence of the community. The position taken by the Congress is in direct contradiction with the meaning of this clause and is indeed a covert attempt to break all other parties in the country and to make the Congress the only political party in the country. The demand for signing the Congress pledge can have no other intention. This attempt to establish a totalitarian state may be welcome to the Hindus, but it meant the political death of the Muslims as a free people.

This resentment of the Muslims was considerably aggravated when they found the Governors, on whom the obligation was imposed to see that effect was given to the convention, declining to act. Some Governors declined, because they were helpless by reason of the fact that the Congress was the only majority party which could produce a

stable government, that a Congress Government was the only government possible and that there was no alternative to it except suspending the constitution. Other Governors declined, because they became active supporters of the Congress Government and showed their partisanship by praising the Congress or by wearing Khadi which is the official party dress of the Congress. Whatever be the reasons, the Muslims discovered that an important safeguard had failed to save them.

The Congress reply to these accusations by the Muslims is twofold. In the first place, they say that coalition cabinets are inconsistent with collective responsibility of the cabinets. This, the Musalmans refuse to accept as an honest plea. The English people were the first and the only people, who made it a principle of their system of government. But even there it has been abandoned since. The English Parliament debated [f.6] the issue and came to the conclusion that it was not so sacrosanct as it was once held and that a departure from it need not necessarily affect the efficiency or smooth working of the governmental machine. Secondly, as a matter of fact, there was no collective responsibility in the Congress Government. It was a government by departments. Each Minister was independent of the other and the Prime Minister was just a Minister. For the Congress to talk about collective responsibility was really impertinent. The plea was even dishonest, because it is a fact that in the provinces where the Congress was in a minority, they did form Coalition Ministries without asking the Ministers from other parties to sign the Congress pledge. The Muslims are entitled to ask ' if coalition is bad, how can it be good in one place and bad in another? '

The second reply of the Congress is that even if they take Muslim Ministers in their cabinet who have not the confidence of the

majority of the Muslims, they have not failed to protect their interests. Indeed they have done every thing to advance the interests of the Muslims. This no doubt rests on the view Pope held of government when he said :

“For forms of government let fools contest ; What is best administered is best.”

In making this reply, the Congress High Command seems to have misunderstood what the main contention of the Muslims and the minorities has been. Their quarrel is not on the issue whether the Congress has or has not done any good to the Muslims and the minorities. Their quarrel is on an issue which is totally different. Are the Hindus to be a ruling race and the Muslims and other minorities to be subject races under Swaraj? That is the issue involved in the demand for coalition ministries. On that, the Muslims and other minorities have taken a definite stand. They are not prepared to accept the position of subject races.

That the ruling community has done good to the ruled is quite beside the point and is no answer to the contention of the minority communities that they refuse to be treated as a subject people. The British have done many good things in India for the Indians. They have improved their roads, constructed canals on more scientific principles, effected their transport by rail, carried their letters by penny post, flashed their messages by lightning, improved their currency, regulated their weights and measures, corrected their notions of geography, astronomy and medicine, and stopped their internal quarrels and effected some advancement in their material conditions. Because of these acts of good government, did anybody ask the Indian people to remain grateful to the British and give up their agitation for self-government? Or because of these acts of social uplift, did the Indians give up their protest against being treated as a subject race by the British? The Indians did nothing of the kind. They refused to be satisfied with these good deeds and continued to agitate for their right to rule themselves. This is as it should be. For, as was said by Curran,

the Irish patriot, no man can be grateful at the cost of his self-respect, no woman can be grateful at the cost of her chastity and no nation can be grateful at the cost of its honour. To do otherwise is to show that one's philosophy of life is just what Carlyle called 'pig philosophy'. The Congress High Command does not seem to realize that the Muslims and other minorities care more for the recognition of their self-respect at the hand of the Congress than for mere good deeds on the part of the

Congress. Men, who are conscious of their being, are not pigs who care only for fattening food. They have their pride which they will not yield even for gold. In short "life is more than the meat".

It is no use saying that the Congress is not a Hindu body. A body which is Hindu in its composition is bound to reflect the Hindu mind and support Hindu aspirations. The only difference between the Congress and the Hindu Maha Sabha is that the latter is crude in its utterances and brutal in its actions while the Congress is politic and polite. Apart from this difference of fact, there is no other difference between the Congress and the Hindu Maha Sabha.

Similarly, it is no use saying that the Congress does not recognize the distinction between the ruler and the ruled. If this is so, the Congress must prove its bonafides by showing its readiness to recognize the other communities as free and equal partners. What is the test of such recognition? It seems to me that there can be only one—namely, agreeing to share power with the effective representatives of the minority communities. Is the Congress prepared for it? Everyone knows the answer. The Congress is not prepared to share power with a member of a community who does not owe allegiance to the Congress. Allegiance to the Congress is a condition precedent to sharing power. It seems to be a rule with the Congress that if allegiance to the Congress is not forthcoming from a community, that community must be excluded from political power.

Exclusion from political power is the essence of the distinction between a ruling race and a subject race ; and inasmuch as the Congress maintained this principle, it must be said that this distinction was enforced by the Congress while it was in the saddle. The Musalmans may well complain that they have already suffered enough and that this reduction to the position of a subject race is like the proverbial last straw. Their decline and fall in India began ever since the British occupation of the country. Every change, executive, administrative, or legal, introduced by the British, has inflicted a series of blows upon the Muslim Community. The Muslim rulers of India had allowed the Hindus to retain their law in civil matters. But, they abrogated the Hindu

Criminal Law and made the Muslim Criminal Law the law of the State, applicable to all Hindus as well as Muslims. The first thing the British did was to displace gradually the Muslim Criminal Law by another of their making, until the process was finally completed by the enactment of Macaulay's Penal Code. This was the first blow to the prestige and position of the Muslim community in India. This was followed by the abridgement of the field of application of the Shariat or the Muslim Civil Law. Its application was restricted to matters concerning personal relations, such as marriage and inheritance, and then only to the extent permitted by the British. Side by side came the abolition, in 1837, of Persian as the official language of the Court and of general administration and the substitution of English and the vernaculars in place of Persian. Then came the abolition of the Qazis, who, during the Muslim rule, administered the Shariat. In their places, were appointed law officers and judges, who might be of any religion but who got the right of interpreting Muslim Law and whose decisions became binding on Muslims. These were severe blows to the Muslims. As a result, the Muslims found their prestige gone, their laws replaced, their language shelved and their education shorn of its monetary value. Along with these came more palpable blows in the shape of annexation of Sind and Oudh and the Mutiny. The last, particularly, affected the higher classes of Muslims, who suffered enormously by the extensive confiscation of property inflicted upon them by the British, as a punishment for their suspected complicity in the Mutiny. By the end of the Mutiny, the Musalmans, high and low, were brought down by these series of events to the lowest depths of broken pride, black despair and general penury. Without prestige, without education and without resources, the Muslims were left to face the Hindus. The British, pledged the neutrality, were indifferent to the result of the struggle between the two communities. The result was that the Musalmans were completely worsened in the struggle. The British conquest of India brought about a complete political revolution in the relative position of the two communities. For six hundred years, the Musalmans had been the masters of the Hindus. The British occupation brought them down to the level of the Hindus. From masters to fellow subjects was degradation enough, but a change from the status of fellow subjects to that of subjects of the Hindus is

really humiliation. Is it unnatural, ask the Muslims, if they seek an escape from so intolerable a position by the creation of separate national States, in which the Muslims can find a peaceful home and in which the conflicts between a ruling race and a subject race can find no place to plague their lives?

PART II - HINDU CASE AGAINST PAKISTAN

Chapter IV : Break-up of Unity

Chapter V : Weakening of the Defences

Chapter VI : Pakistan and communal peace

HINDU CASE AGAINST PAKISTAN

There seem to be three reasons present to the mind of the Hindus who are opposing this scheme of Pakistan. They object to the scheme :—

1. 1. *Because it involves the breaking-up of the unity of India.*
2. 2. *Because it weakens the defence of India.*
3. 3. *Because it fails to solve the communal problem.*

Is there any substance in these objections? This part is concerned with an examination of the validity of these objections.

CHAPTER IV

BREAK-UP OF UNITY

I

Before the Hindus complain of the destruction of the unity of India, let them make certain that the unity they are harping upon does exist. What unity is there between Pakistan and Hindustan?

Those Hindus, who maintain the affirmative, rely chiefly upon the fact that the areas which the Muslims want to be separated from India have always been a part of India. Historically this is, no doubt, true. This area was a part of India when Chandragupta was the ruler; it continued to be a part of India when Hsuan Tsang, the Chinese pilgrim, visited India in the 7th century A. D. In his diary, Hsuan Tsang has recorded that India was divided into five divisions or to use his language, there were ' five Indies ' ¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40C.Pakistan or the Partition of India PART II.htm - _msocom_1: (1) Northern India, (2) Western India, (3) Central India, (4) Eastern India and (5) Southern India and that these five divisions contained 80 kingdoms. According to Hsuan Tsang, Northern India comprised the Punjab proper, including Kashmir and the adjoining hill States with the whole of Eastern Afghanistan beyond the Indus, and the present Cis-Satlaj States to the west of the Sarasvati river. Thus, in Northern India there were included the districts of Kabul, Jallalabad, Peshawar, Ghazni and Bannu, which were all subject to the ruler of Kapisa, who was a Hindu Kshatriya and whose capital was most probably at Charikar, 27 miles from Kabul. In the Punjab proper, the hilly districts Taxila, Singhapura, Urasa, Punch and Rajaori, were subject to the Raja of Kashmir; while the whole of the plains, including Multan and Shorkot, were dependent on the ruler of Taki or Sangala, near Lahore. Such was the extent of the northern boundary of India at the time when Hsuan Tsang came on his pilgrimage. But as Prof. Toynbee points out :

“We must be on our Guard against ' historical sentiment ', that is against arguments taken from conditions which once existed or were supposed to exist, but which are no longer real at the present moment

They are most easily illustrated by extreme examples. Italian newspapers have described the annexation of Tripoli as recovering the soil of the Fatherland because it was once a province of the Roman Empire; and the entire region of Macedonia is claimed by Greek Chauvinists on the one hand, because it contains the site of Pella, the cradle of Alexander the Great in the fourth century B.C. and by Bulgarians on the other, because Ochrida, in the opposite corner, was the capital of the Bulgarian Tzardom in the tenth century A. D., though the drift of time has buried the tradition of the latter almost as deep as the achievements of the 'Emathian Conqueror' on which the modern Greek nationalists insist so strongly."

The same logic applies here. Here also arguments are taken from conditions which once existed but which are no longer real and which omit to take into consideration later facts which history has to record during practically one thousand years—after the return of Hsuan Tsang.

It is true that when Hsuan Tsang came, not only the Punjab but what is now Afghanistan was part of India and further, the people of the Punjab and Afghanistan were either Vedic or Buddhist by religion. But what has happened since Hsuan Tsang left India?

The most important thing that has happened is the invasion of India by the Muslim hordes from the north-west. The first Muslim invasion of India was by the Arabs who were led by Mahommad Bin Qasim. It took place in 711 A. D. and resulted in the conquest of Sind. This first Muslim invasion did not result in a permanent occupation of the country because the Caliphate of Baghdad, by whose order and command the invasion had taken place, was obliged by the middle of the 9th century A. D. to withdraw ²mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40C.Pakistan or the Partition of India PART II.htm - _msocom_2 its direct control from this distant province of Sind. Soon after this withdrawal, there began a series of terrible invasions by Muhammad of Ghazni in 1001 A. D. Muhammad died in 1030 A. D., but within the short span of 30 years, he invaded India 17 times. He was followed by Mahommad Ghorī who began his career as an invader in 1173. He was killed in 1206. For thirty years had Muhammad of Ghazni

ravaged India and for thirty years Mahommad Ghori harried the same country in the same way. Then followed the incursions of the Moghul hordes of Chinghiz Khan. They first came in 1221. They then only wintered on the border of India but did not enter it. Twenty years after, they marched on Lahore and sacked it. Of their inroads, the most terrible was under Taimur in 1398. Then comes on the scene a new invader in the person of Babar who invaded India in 1526. The invasions of India did not stop with that of Babar. There occurred two more invasions. In 1738 Nadirshah's invading host swept over the Punjab like a flooded river "furious as the ocean". He was followed by Ahmadshah Abdalli who invaded India in 1761, smashed the forces of the Mahrattas at Panipat and crushed for ever the attempt of the Hindus to gain the ground which they had lost to their Muslim invaders.

These Muslim invasions were not undertaken merely out of lust for loot or conquest. There was another object behind them. The expedition against Sind by Mahommad bin Qasim was of a punitive character and was undertaken to punish Raja Dahir of Sind who had refused to make restitution for the seizure of an Arab ship at Debul, one of the sea-port towns of Sind. But, there is no doubt that striking a blow at the idolatry and polytheism of Hindus and establishing Islam in India was also one of the aims of this expedition. In one of his dispatches to Hajjaj, Mahommad bin Qasim is quoted to have said :

“The nephew of Raja Dahir, his warriors and principal officers have been dispatched, and the infidels converted to Islam or destroyed. Instead of idol-temples, mosques and other places of worship have been created, the Kulbah it read, the call to prayers is raised, so that devotions are performed at staled hours. The Takbir and praise to the Almighty God are offered every morning and evening.”³ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40C.Pakistan or the Partition of India PART II.htm - _msocom_3

After receiving the above dispatch, which had been forwarded with the head of the Raja, Hajjaj sent the following reply to his general:

“Except that you give protection to all, great and small alike, make no difference between enemy and friend. God, says, ' Give no quarter to infidels but cut their throats '. Then know that this is the command of

the great God. You shall not be too ready to grant protection, because it will prolong your work. After this give no quarter to any enemy except those who are of rank.”⁴ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40C.Pakistan or the Partition of India PART II.htm - _msocom_4

Muhammad of Ghazni also looked upon his numerous invasions of India as the waging of a holy war. Al' Utbi, the historian of Muhammad, describing his raids writes :

“He demolished idol temples and established Islam. He captured cities, killed the polluted wretches, destroying the idolaters, and gratifying Muslims. ' He then returned home and promulgated accounts of the victories obtained for Islam. and vowed that every year he would undertake a holy war against Hind
⁵mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40C.Pakistan or the Partition of India PART II.htm - _msocom_5.”Mahommed Ghori was actuated by the same holy zeal in his invasions of India. Hasan Nizami, the historian, describes his work in the following terms :

“He purged by his sword the land of Hind from the filth of infidelity and vice, and freed the whole of that country from the thorn of God-plurality and the impurity of idol-worship, and by his royal vigour and intrepidity left not one temple standing ⁶[f.6]

Taimur has in his Memoir explained what led him to invade India. He says:

“My object in the invasions of Hindustan is to lead a campaign against the infidels, to convert them to the true faith according to the command of Muhammad (on whom and his family be the blessing and peace of God), to purify the land from the defilement of misbelief and polytheism, and overthrow the temples and idols, whereby we shall be *Ghazis* and *Mujabids*, companions and soldiers of the faith before God.”⁷[f.7]

These invasions of India by Muslims were as much invasions of India as they were wars among the Muslims themselves. This fact has

remained hidden because the invaders are all lumped together as Muslims without distinction. But as a matter of fact, they were Tartars, Afghans and Mongols. Muhammad of Ghazni was a Tartar, Mahommed of Ghor was an Afghan, Taimur was a Mongol, Babar was a Tartar, while Nadirshah and Ahmadshah Abdali were Afghans. In invading India, the Afghan was out to destroy the Tartar and the Mongol was out to destroy the Tartar as well as the Afghan. They were not a loving family cemented by the feeling of Islamic brotherhood. They were deadly rivals of one another and their wars were often wars of mutual extermination. What is, however, important to bear in mind is that with all their internecine conflicts they were all united by one common objective and that was to destroy the Hindu faith.

The methods adopted by the Muslim invaders of India are not less significant for the subsequent history of India than the object of their invasions.

Mahommed bin Qasim's first act of religious zeal was forcibly to circumcise the Brahmins of the captured city of Debul ; but on discovering that they objected to this sort of conversion, he proceeded to put all above the age of 17 to death, and to order all others, with women and children, to be led into slavery. The temple of the Hindus was looted, and the rich booty was divided equally among the soldiers, after one-fifth, the legal portion for the government, had been set aside.

Muhammad of Ghazni from the first adopted those plans that would strike terror into the hearts of the Hindus. After the defeat of Raja Jaipal in A.D. 1001, Muhammad ordered that Jaipal "be paraded about in the streets so that his sons and chieftains might see him in that condition of shame, bonds and disgrace; and that fear of Islam might fly abroad through the country of the infidels."

"The slaughtering of ' infidels' seemed to be one thing that gave Muhammad particular pleasure. In one attack on Chand Rai, in A. D. 1019, many infidels were slain or taken prisoners, and the Muslims paid no regard to booty until they had satiated themselves with the slaughter of the infidels and worshippers of the sun and fire. The

historian naively adds that the elephants of the Hindu armies came to Muhammad of their own accord, leaving idols, preferring the service of the religion of Islam.”⁸[f.8]

Not infrequently, the slaughter of the Hindus gave a great setback to the indigenous culture of the Hindus, as in the conquest of Bihar by Muhammad Bakhtyar Khilji. When he took Nuddea (Bihar) the Tabaquat-i-Nasiri informs us that:

“great plunder fell into the hands of the victors. Most of the inhabitants were Brahmins with shaven heads. They were put to death. Large number of books were found..... but none could explain their contents as all the men had been killed, the whole fort and city being a place of study.”⁹[f.9]

Summing up the evidence on the point. Dr. Titus concludes :

“Of the destruction of temples and the desecration of idols we have an abundance of evidence. Mahommad bin Qasim carried out his plan of destruction systematically in Sind, we have seen, but he made an exception of the famous temple at Multan for purposes of revenue, as this temple was a place of resort for pilgrims, who made large gifts to the idol. Nevertheless, while he thus satisfied his avarice by letting the temple stand, he gave vent to his malignity by having a piece of cow's flesh tied around the neck of the idol.

“Minhaj-as-Siraj further tells how Mahommad became widely known for having destroyed as many as a thousand temples, and of his great feat in destroying the temple of Somnath and carrying off its idol, which he asserts was broken into four parts. One part he deposited in the Jami Masjid of Ghazni, one he placed at the entrance of the royal palace, the third he sent to Mecca, and the fourth to Medina.”¹⁰[f.10]“

It is said by Lane Poole that Muhammad of Ghazni”who had vowed that every year should see him wage a holy war against the infidels of Hindustan”could not rest from his idol-breaking campaign so long as the temple of Somnath remained inviolate. It was for this specific purpose that he, at the very close of his career, undertook his arduous

march across the desert from Multan to Anhalwara on the coast, fighting as he went, until he saw at last the famous temple:

“There a hundred thousand pilgrims were wont to assemble, a thousand Brahmins served the temple and guarded its treasures, and hundreds of dancers and singers played before its gates. Within stood the famous linga, a rude pillar stone adorned with gems and lighted by jewelled candelabra which were reflected in rich hangings, embroidered with precious stones like stars, that decked the shrine..... Its ramparts were swarmed with incredulous Brahmins, mocking the vain arrogance of foreign infidels whom the God of Somnath would assuredly consume. The foreigners, nothing daunted, scaled the walls; the God remained dumb to the urgent appeals of his servants; fifty thousand Hindus suffered for their faith and the sacred shrine was sacked to the joy of the true believers. The great stone was cast down and its fragments were carried off to grace the conqueror's palace. The temple gates were setup at Ghazni and a million pounds worth of treasure rewarded the iconoclast”¹¹[f.11]

The work done by Muhammad of Ghazni became a pious tradition and was faithfully followed by those who came after him. In the words of Dr. Titus ¹²[f.12]

"Mahommad Ghorī, one of the enthusiastic successors of Muhammad of Ghazni, in his conquest of Ajmir destroyed pillars and foundations of the idol-temples, and built in their stead mosques and colleges, and the precepts of Islam and the customs of the law were divulged and established. At Delhi, the city and its vicinity were freed from idols and idol worship, and in the sanctuaries of the images of the Gods mosques were raised by the worshippers of the one God.

“Qutb-ud-Din Aybak also is said to have destroyed nearly a thousand temples, and then raised mosques on their foundations. The same author states that he built the Jami Masjid, Delhi, and adorned it with the stones and gold obtained from the temples which had been demolished by elephants, and covered it with inscriptions (from the Quran) containing the divine commands. We have further evidence of

this harrowing process having been systematically employed from the inscription extant over the eastern gateway of this same mosque at Delhi, which relates that the materials of 27 idol temples were used in its construction.

“Ala-ud-Din, in his zeal to build a second Minar to the Jami Masjid, to rival the one built by Qulb-ud-Din, is said by Amir Khusru not only to have dug stones out of the hills, but to have demolished temples of the infidels to furnish a supply. In his conquests of South India the destruction of temples was carried out by Ala-ud-Din as it had been in the north by his predecessors.

“The Sultan Firoz Shah, in his Futuhat, graphically relates how he treated Hindus who had dared to build new temples. ' When they did this in the city (Delhi) and the environs, in opposition to the law of the Prophet, which declares that such are not to be tolerated, under Divine guidance I destroyed these edifices. I killed these leaders of infidelity and punished others with stripes, until this abuse was entirely abolished and where infidels and idolaters worshipped idols, Musalmans now by God's mercy perform their devotions to the true God.”

Even in the reign of Shah Jahan, we read of the destruction of the temples that the Hindus had started to rebuild, and the account of this direct attack on the piety of the Hindus is thus solemnly recorded in the Badshah-namah :

“It had been brought to the notice of His Majesty, says the historian, that during the late reign (of Akbar) many idol-temples had been begun but remained unfinished at Benares, the great stronghold of infidelity. The infidels were now desirous of completing them. His Majesty, the defender of the faith, gave orders that at Benares and throughout all his dominions in every place all temples that had been begun should be cast down. It was reported from the Province of Allahabad that 76 temples had been destroyed in the district of Benares.”¹³[f.13]

It was left to Aurangzeb to make a final attempt to overthrow idolatry.

The author of ' *Ma'athir-i-Alamgiri* dilates upon his efforts to put down Hindu teaching, and his destruction of temples in the following terms :

“In April, A. D. 1669, Aurangzib learned that in the provinces of Thatta, Multan and Benares, but especially in the latter, foolish Brahmins were in the habit of expounding frivolous books in their schools, and that learners, Muslims as well as Hindus, went there from long distances.... The ' Director of the Faith ' consequently issued orders to all the governors of provinces to destroy with a willing hand the schools and temples of the infidels; and they were enjoined to put an entire stop to the teaching and practising of idolatrous worship.. ...Later it was reported to his religious Majesty that the Government officers had destroyed the temple of Bishnath at Benares.”¹⁴[f.14]

As Dr. Titus observes ¹⁵ [f.15]—

“Such invaders as Muhammad and Timur seem to have been more concerned with iconoclasm, the collection of booty, the enslaving of captives, and the sending of infidels to hell with the ' proselytizing sword ' than they were with the conversion of them even by force. But when rulers were permanently established the winning of converts became a matter of supreme urgency. It was a part of the stale policy to establish Islam as the religion of the whole land.

"Qutb-ud-Din, whose reputation for destroying temples was almost as great as that of Muhammad, in the latter part of the twelfth century and early years of the thirteenth, must have frequently resorted to force as an incentive to conversion. One instance may be noted: when he approached Koil (Aligarh) in A. D. 1194, ' those of the garrison who were wise and acute were converted to Islam, but the others were slain with the sword '.

“Further examples of extreme measures employed to effect a change of faith are all too numerous. One pathetic case is mentioned in the lime of the reign of Firoz Shah (A. D. 1351—1388). An old Brahmin of Delhi had been accused of worshipping idols in his house, and of even leading Muslim women to become infidels. He was sent for and his case placed before the judges, doctors, elders and lawyers. Their

reply was that the provisions of the law were clear. The Brahmin must either become a Muslim or be burned. The true faith was declared to him and the right course pointed out, but he refused to accept it. Consequently he was burned by the order of the Sultan, and the commentator adds, ' Behold the Sultan's strict adherence to law and rectitude, how he would not deviate in the least from its decrees '."

Muhammad not only destroyed temples but made it a policy to make slaves of the Hindus he conquered. In the words of Dr. Titus:

“Not only was slaughter of the infidels and the destruction of their temples resorted to in earlier period of Islam's contact with India, but as we have seen, many of the vanquished were led into slavery. The dividing up of booty was one of the special attractions, to the leaders as well as to the common soldiers in these expeditions. Muhammad seems to have made the slaughter of infidels, the destruction of their temples, the capturing of slaves, and the plundering of the wealth of the people, particularly of the temples and the priests, the main object of his raids. On the occasion of his first raid he is said to have taken much booty ; and half a million Hindus, ' beautiful men and women ', were reduced to slavery and taken back to Ghazni.”¹⁶[f.16]

When Muhammad later took Kanauj, in A. D. 1017, he took so much booty and so many prisoners that * the fingers of those who counted them would have tired '. Describing how common Indian slaves had become in Ghazni and Central Asia after the campaign of A. D. 1019, the historian of the times says ¹⁷[f.17] :

"The number of prisoners may be conceived from the fact that each was sold for from two to ten dirhams. These were afterwards taken to Ghazni, and merchants came from far distant cities to purchase them ;.and the fair and the dark, the rich and the poor were commingled in one common slavery.

“In the year A.D. 1202, when Qulb-ud-Din captured Kalinjar, after the temples had been converted into mosques, and the very name of idolatry was annihilated, fifty thousand men came under the collar of slavery and the plain became black as pitch with Hindus.”

Slavery was the fate of those Hindus who were captured in the holy war. But, when there was no war the systematic abasement of the Hindus played no unimportant part in the methods adopted by the Muslim invaders. In the days of Ala-ud-Din, at the beginning of the fourteenth century, the Hindus had in certain parts given the Sultan much trouble. So, he determined to impose such taxes on them that they would be prevented from rising in rebellion.

“The Hindu was to be left unable to keep a horse to ride on, to carry arms, to wear fine clothes, or to enjoy any of the luxuries of life.”¹⁸[f.18]

Speaking of the levy of Jizyah Dr. Titus says ¹⁹[f.19] ”

“The payment of the Jizyah by the Hindus continued throughout the dominions of the sultans, emperors, and kings in various parts of India with more or less regularity, though often, the law was in force in theory only ; since it depended entirely on the ability of the sovereign to enforce his demands. But, finally, it was abolished throughout the Moghul Empire in the ninth year of the enlightened Akbar's reign (A. D. 1665), after it had been accepted as a fundamental part of Muslim government policy in India for a period of more than eight centuries.”

Lane Poole says that

“the Hindu was taxed to the extent of half the produce of his land, and had to pay duties on all his buffaloes, goats, and other milk-cattle. The taxes were to be levied equally on rich and poor, at so much per acre, so much per animal. Any collectors or officers taking bribes were summarily dismissed and heavily punished with sticks, pincers, the rack, imprisonment and chains. The new rules were strictly carried out, so that one revenue officer would string together 20 Hindu notables and enforce payment by blows. No gold or silver, not even the betelnut, so cheering and stimulative to pleasure, was to be seen in a Hindu house, and the wives of the impoverished native officials were reduced to taking service in Muslim families. Revenue officers came to be regarded as more deadly than the plague; and to be a government clerk was disgrace worse than death, in so much that no Hindu would

marry his daughter to such a man.”²⁰[f.20]

These edicts, says the historian of the period,

“were so strictly carried out that the *chaukidars* and *khuts* and *muqaddims* were not able to ride on horseback, to find weapon, to wear fine clothes, or to indulge in betel. No Hindu could hold up his head. Blows, confinement in the stocks, imprisonment and chains were all employed to enforce payment.”

All this was not the result of mere caprice or moral perversion. On the other hand, what was done was in accordance with the ruling ideas of the leaders of Islam in the broadest aspects. These ideas were well expressed by the Kazi in reply to a question put by Sultan Ala-ud-Din wanting to know the legal position of the Hindus under Muslim law. The Kazi said :—

“They are called payers of tribute, and when the revenue officer demands silver from them they should without question, and with all humility and respect, tender gold. If the officer throws dirt in their mouths, they must without reluctance open their mouths wide to receive it.... The due subordination of the Dhimmi is exhibited in this humble payment, and by this throwing of dirt into their mouths. The glorification of Islam is a duty, and contempt for religion is vain. God holds them in contempt, for he says, ' Keep them in subjection '. To keep the Hindus in abasement is especially a religious duty, because they are the most inveterate enemies of the Prophet, and because the Prophet has commanded us to slay them, plunder them, and make them captive, saying, ' Convert them to Islam or kill them, and make them slaves, and spoil their wealth and properly '. No doctor but the great doctor (Hani-fah), to whose school we belong, has assented to the imposition of jizya on Hindus ; doctors of other schools allow no other alternative but ' Death or Islam '.”²¹[f.21]

Such is the story of this period of 762 years which elapsed between the advent of Muhammad of Ghazni and the return of Ahmadshah

Abdalli.

How far is it open to the Hindus to say that Northern India is part of Aryavarta? How far is it open to the Hindus to say because once it belonged to them, therefore, it must remain for ever an integral part of India? Those who oppose separation and hold to the 'historic sentiment' arising out of an ancient fact that Northern India including Afghanistan was once part of India and that the people of that area were either Buddhist or Hindus, must be asked whether the events of these 762 years of incessant Muslim invasions, the object with which they were launched and the methods adopted by these invaders to give effect to their object are to be treated as though they were matters of no account?

Apart from other consequences which have flowed from them these invasions have, in my opinion, so profoundly altered the 'culture and character of the northern areas, which it is now proposed to be included in a Pakistan, that there is not only no unity between that area and the rest of India but that there is as a matter of fact a real antipathy between the two.

The first consequence of these invasions was the breaking up of the unity of Northern India with the rest of India. After his conquest of Northern India, Muhammad of Ghazni detached it from India and ruled it from Ghazni. When Mahommed Ghori came in the field as a conqueror, he again attached it to India and ruled it from Lahore and then from Delhi. Hakim, the brother of Akbar, detached Kabul and Kandahar from Northern India. Akbar again attached it to Northern India. They were again detached by Nadirshah in 1738 and the whole of Northern India would have been severed from India had it not been for the check provided by the rise of the Sikhs. Northern India, therefore, has been like a wagon in a train, which can be coupled or uncoupled according to the circumstances of the moment. If analogy is wanted, the case of Alsace-Lorraine could be cited. Alsace-Lorraine was originally part of Germany, like the rest of Switzerland and the Low Countries. It continued to be so till 1680, when it was taken by France and incorporated into French territory. It belonged to France till 1871, when it was detached by Germany and made part of her territory. In 1918, it

was again detached from Germany and made part of France. In 1940, it was detached from France and made part of Germany.

The methods adopted by the invaders have left behind them their aftermath. One aftermath is the bitterness between the Hindus and the Muslims which they have caused. This bitterness, between the two, is so deep-seated that a century of political life has neither succeeded in assuaging it, nor in making people forget it. As the invasions were accompanied with destruction of temples and forced conversions, with spoliation of property, with slaughter, enslavement and abasement of men, women and children, what wonder if the memory of these invasions has ever remained green, as a source of pride to the Muslims and as a source of shame to the Hindus? But these things apart, this north-west corner of India has been a theatre in which a stern drama has been played. Muslim hordes, in wave after wave, have surged down into this area and from thence scattered themselves in spray over the rest of India. These reached the rest of India in thin currents. In time, they also receded from their farthest limits ; while they lasted, they left a deep deposit of Islamic culture over the original Aryan culture in this north-west corner of India which has given it a totally different colour, both in religious and political outlook. The Muslim invaders, no doubt, came to India singing a hymn of hate against the Hindus. But, they did not merely sing their hymn of hate and go back burning a few temples on the way. That would have been a blessing. They were not content with so negative a result. They did a positive act, namely, to plant the seed of Islam. The growth of this plant is remarkable. It is not a summer sapling. It is as great and as strong as an oak. Its growth is the thickest in Northern India. The successive invasions have deposited their ' silt ' more there than anywhere else, and have served as watering exercises of devoted gardeners. Its growth is so thick in Northern India that the remnants of Hindu and Buddhist culture are just shrubs. Even the Sikh axe could not fell this oak. Sikhs, no doubt , became the political masters of Northern India, but they did not gain back Northern India to that spiritual and cultural unity by which it was bound to the rest of India before HsuanTsang. The Sikhs coupled it back to India. Still, it remains like Alsace-Lorraine politically detachable and spiritually alien so

far as the rest of India is concerned. It is only an unimaginative person who could fail to take notice of these facts or insist in the face of them that Pakistan means breaking up into two what is one whole.

What is the unity the Hindu sees between Pakistan and Hindustan? If it is geographical unity, then that is no unity. Geographical unity is unity intended by nature. In building up a nationality on geographical unity, it must be remembered that it is a case where Nature proposes and Man disposes. If it is unity in external things, such as ways and habits of life, that is no unity. Such unity is the result of exposure to a common environment. If it is administrative unity, that again is no unity. The instance of Burma is in point. Arakan and Tenas-serim were annexed in 1826 by the treaty of Yendabu. Pegu and Martaban were annexed in 1852. Upper Burma was annexed in 1886. The administrative unity between India and Burma was forged in 1826. For over 110 years that administrative unity continued to exist. In 1937, the knot that tied the two together was cut asunder and nobody shed a tear over it. The unity between India and Burma was not less fundamental. If unity is to be of an abiding character, it must be founded on a sense of kinship, in the feeling of being kindred. In short, it must be spiritual. Judged in the light of these considerations, the unity between Pakistan and Hindustan is a myth. Indeed, there is more spiritual unity between Hindustan and Burma than there is between Pakistan and Hindustan. And if the Hindus did not object to the severance of Burma from India, it is difficult to understand how the Hindus can object to the severance of an area like Pakistan, which, to repeat, is politically detachable from, socially hostile and spiritually alien to, the rest of India.

CHAPTER V

WEAKENING OF THE DEFENCES

How will the creation of Pakistan affect the question of the Defence of Hindustan? The question is not a very urgent one. For, there is no reason to suppose that Pakistan will be at war with Hindustan immediately it is brought into being. Nevertheless, as the question is sure to be raised, it is better to deal with it.

The question may be considered under three heads: (1) Question of Frontiers, (2) Question of Resources and (3) Question of Armed Forces.

I

QUESTION OF FRONTIERS

It is sure to be urged by the Hindus that Pakistan leaves Hindustan without a scientific frontier. The obvious reply, of course, is that the Musalmans cannot be asked to give up their right to Pakistan, because it adversely affects the Hindus in the matter of their boundaries. But banter apart, there are really two considerations, which, if taken into account, will show that the apprehensions of the Hindus in this matter are quite uncalled for.

In the first place, can any country hope to have a frontier which may be called scientific? As Mr. Davies, the author of *North-West Frontier*, observes:

“It would be impossible to demarcate on the North-West of our Indian Empire a frontier which would satisfy ethnological, political and military requirements. To seek for a zone which traverses easily definable geographical features; which does not violate ethnic considerations by cutting through the territories of closely related tribes; and which at the same time serves as a political boundary, is Utopian.”

As a matter of history, there has been no one scientific boundary for India and different persons have advocated different boundaries for India. The question of boundaries has given rise to two policies, the “Forward” Policy and the “Back to the Indus” Policy. The “Forward” Policy had a greater and a lesser intent, to use the language of Sir George Macmunn. In its greater intent, it meant active control in the affairs of Afghanistan as an *Etat Tampion* to India and the extension of Indian influence up to the Oxus. In its lesser intent, it was confined to the absorption of the tribal hills between the administered territory (*i.e.* the Province of N.-W.F.) and Afghanistan as defined by the Durand Line and the exercise of British control right up to that line.

The greater intent of the Forward Policy, as a basis for a safe boundary for India, has long been abandoned. Consequently, there remain three possible boundary lines to choose from: (1) the Indus River, (2) the present administrative boundary of the N.-W. F. P. and (3) the Durand Line. Pakistan will no doubt bring the boundary of Hindustan Back to the Indus, indeed behind the Indus, to the Sutlej. But this "Back to the Indus" policy was not without its advocates. The greatest exponent, of the Indus boundary was Lord Lawrence, who was strongly opposed to any forward move beyond the trans-indus foot-hills. He advocated meeting any invader in the valley of the Indus. In his opinion, it would be an act of folly and weakness to give battle at any great distance from the Indus base ; and the longer the distance an invading army has to march through Afghanistan and the tribal country, the more harassed it would be. Others, no doubt, have pointed out that a river is a weak line of defence. But the principal reason for not retiring to the Indus boundary seems to lie elsewhere. Mr. Davies gives the real reason when he says that the

" " Back to Indus ' cry becomes absurd when it is examined from the point of view of the inhabitants of the modern North-West Frontier Province. Not only would withdrawal mean loss of prestige, but it would also be a gross betrayal of those peoples to whom we have extended our beneficent rule."

In fact, it is no use insisting that any particular boundary is the safest, for the simple reason that geographical conditions are not decisive in the world today and modern technique has robbed natural frontiers of much of their former importance, even where they are mighty mountains, the broadest streams, widest seas or far stretching deserts.

In the second place, it is always possible for nations with no natural boundaries to make good this defect. Countries are not wanting which have no natural boundaries. Yet, all have made good the deficiencies of nature, by creating artificial fortifications as barriers, which can be far more impregnable than natural barriers. There is no reason to suppose that the Hindus will not be able to accomplish what other countries similarly situated have done. Given the resources, Hindus need have no

fear for want of a naturally safe frontier.

II

QUESTION OF RESOURCES

More important than the question of a scientific frontier, is the question of resources. If resources are ample for the necessary equipment, then it is always possible to overcome the difficulties created by an unscientific or a weak frontier. We must, therefore, consider the comparative resources of Pakistan and Hindustan. The following figures are intended to convey an idea of their comparative resources:—

Resources of Pakistan

Provinces	Area	Populati on	Revenues ²² [f.22]
			Rs.
N.-W. F. P.	13,51 8	2,425,00 3	1,90,11,842
Punjab	91,91 9	23,551,2 10	12,53,87,730
Sind	46,37 8	3,887,07 0	9,56,76,269
Baluchistan ..	54,22 8	420,648	
Bengal	82,95 5	50,000,0 00	36,55,62,485
Total ..	288,9 98	80,283,9 31	60,56,38,326

Resources of Hindustan

Provinces	Area	Populati on	Revenues ²³ [f.23]
			Rs.
Ajmer- Mcrwara	2,711	560,292	21,00,000
Assam	55,01 4	8,622,25 1	4,46,04,44 1
Bihar	69,34 8	32,371,4 34	6,78,21,58 8
Bombay	77,27 1	18,000,0 00	34,98,03,8 00
C. P. & Berar	99957	15,507,7 23	4,58,83,96 2
Coorg	1,593	163,327	11,00,000
Delhi	573	636,246	70,00,000
Madras	142,2 77	46,000,0 00	25,66,71,2 65
Orissa	32,69 5	8,043,68 1	87,67,269
U.P.	206,2 48	48,408,7 63	16,85,52,8 81
Total	607,6 57	178,513, 919	96,24,05,2 06

These are gross figures. They are subject to certain additions and deductions. Revenues derived by the Central Government from Railways, Currency and Post and Telegraphs are not included in these figures, as it is not possible to ascertain how much is raised from each Province. When it is done, certain additions will have to be made to the figures under revenue. There can be no doubt that the share from these heads of revenue that will come to Hindustan, will be much larger than the share that will go to Pakistan. Just as additions will have to be made to these figures, so also deductions will have to be made from them. Most of these deductions will, of course, fall to the lot of Pakistan. As will be shown later, some portion of the Punjab will have to be excluded from the scheme of Western Pakistan. Similarly, some portion of Bengal will have to be excluded from the proposed Eastern Pakistan, although a district from Assam will have to be added to it. According to me, fifteen districts will have to be excluded from Bengal and thirteen districts shall have to be excluded from the Punjab. Sufficient data are not available to enable any one to give an exact idea of what would be the reduction in the area, population and revenue, that would result from the exclusion of these districts. One may, however, hazard the guess that so far as the Punjab and Bengal are concerned, their revenues would be halved. What is lost by Pakistan by this exclusion, will of course be gained by Hindustan. To put it in concrete terms, while the revenues of Western and Eastern Pakistan will be 60 crores *minus* 24crores, i.e., 36 crores, the revenues of Hindustan will be about 96 crores *plus* 24 crores, i.e., 120 crores.

The study of these figures, in the light of the observations I have made, will show that the resources of Hindustan are far greater than the resources of Pakistan, whether one considers the question in terms of area, population or revenue. There need, therefore, be no apprehension on the score of resources. For, the creation of Pakistan will not leave Hindustan in a weakened condition.

III

QUESTION OF ARMED FORCES

The defence of a country does not depend so much upon its scientific frontier as it does upon its resources. But more than resources does it depend upon the fighting forces available to it.

What are the fighting forces available to Pakistan and to Hindustan?

The Simon Commission pointed out, as a special feature of the Indian Defence Problem, that there were special areas which alone offered recruits to the Indian Army and that there were other areas which offered none or if at all, very few. The facts revealed in the following table, taken from the Report of the Commission, undoubtedly will come as a most disagreeable surprise to many Indians, who think and care about the defence of India :

Areas of Recruitment	Number of Recruits drawn
1 N.-W. Frontier Province	5,600
2 Kashmir	6,500
3 Punjab	86,000
4 Baluchistan	300
5 Nepal	19,000
6 United Provinces	16,500
7 Rajputana	7,000
8 Central India	200
9 Bombay	7,000
10 Central Provinces	100
11 Bihar & Orissa	300

12 Bengal	Nil
13 Assam	Nil
14 Burma	3,000
15 Hyderabad	700
16 Mysore	100
17 Madras	4,000
18 Miscellaneous	1,900
TOTAL	158,200

The Simon Commission found that this state of affairs was natural to India, and in support of it, cited the following figures of recruitment from the different Provinces of India during the Great War especially because "it cannot be suggested that any discouragement was offered to recruitment in any area":

Province
Madras Bombay
Bengal
United Province
Punjab
North-West
Frontier
Baluchistan
Burma
Bihar and Orissa
Central Province
Assam
Ajmer-Marwar
Nepal
Total

These data reveal in a striking manner that the fighting forces available for the defence of India mostly come from areas

which are to be included in Pakistan. From this it may be argued, that without Pakistan, Hindustan cannot defend itself.

The facts brought out by the Simon Commission are, of course, beyond question. But they cannot be made the basis of a conclusion, such as is suggested by the Simon Commission, namely, that only Pakistan can produce soldiers and that Hindustan cannot. That such a conclusion is quite untenable will be seen from the following considerations.

In the first place, what is regarded by the Simon Commission as something peculiar to India is not quite so peculiar. What appears to be peculiar is not due to any inherent defect in the people. The peculiarity arises because of the policy of recruitment followed by the British Government for years past. The official explanation of this predominance in the Indian Army of the men of the North-West is that they belong to the Martial Classes. But Mr. Chaudhari²⁴ [f.24] has demonstrated, by unimpeachable data, that this explanation is far from being true. He has shown that the predominance in the Army of the men of the North-West took place as early as the Mutiny of 1857, some 20 years before the theory of Martial and Non-martial Classes was projected in an indistinct form for the first time in 1879 by the Special Army Committee²⁵ [f.25] appointed in that year, and that their predominance had nothing to do with their alleged fighting qualities but was due to the fact, that they helped the British to suppress the Mutiny in which the Bengal Army was so completely involved. To quote Mr. Chaudhari :

“The pre-Mutiny army *of* Bengal was essentially a Brahmin and Kshatriya army of the Ganges basin. All the three Presidency Armies of those days, as we have slated in the first part of this article, were in a sense quite representative of the military potentialities of the areas to which they belonged, though none of them could, strictly speaking, be correctly described as national armies of the provinces concerned, as there was no attempt to draw upon any but the traditional martial elements of the

population. But they all got their recruits mainly from their natural areas of recruitment, *viz.*, the Madras Army from the Tamil and Telugu countries, the Bombay Army from Western India, and the Bengal Army from Bihar and U. P. and to a very limited extent from Bengal. There was no official restriction on the enrolment of men of any particular tribe or caste or region, provided they were otherwise eligible. Leaving aside for the moment the practice of the Bombay and the Madras Armies, the only exception to this general rule in the Bengal Army was that which applied to the Punjabis and Sikhs, who, inspite of their magnificent military traditions, were not given a fair representation in the Army of Northern India. Their recruitment, on the contrary, was placed under severe restrictions by an order of the Government, which laid down that 'the number of Punjabis in a regiment is never to exceed 200, nor are more than 100 of them to be Sikhs'. It was only the revolt of the Hindustani regiments of the Bengal Army that gave an opportunity to the Punjabis to rehabilitate themselves in the eyes of the British authorities. Till then, they remained suspect and under a ban, and the Bengal Army on the eve of the Mutiny was mainly recruited from Oudh, North and South Bihar, especially the latter, principally Shahabad and Bhojpur, the Doab of the Ganges and Jumna and Rohilkhund. The soldiers recruited from these areas were mostly high-caste men. Brahmins of all denominations, Kshatriyas, Rajputs and Ahirs. The average proportion in which these classes were enrolled in a regiment was: (1) Brahmin 7/24, (2) Rajputs 1/4, (3) Inferior Hindus 1/6, (4) Musalmans 1/6, (5) Punjabis 1/8.

"To this army, the area which now-a-days furnishes the greatest number of soldiers—the Punjab, Nepal, N.-W. F. Province, the hill tracts of Kumaon and Garhwal, Rajpulana,—furnished very few recruits or none at all. There was practical exclusion in it of all the famous fighting castes of India,—Sikhs, Gurkhas, Punjabi Musalmans, Dogras, Jats, Pathans, Garhwalis, Rajpulana Rajpuls, Kumaonis, Gujars, all the tribes and seels, in fact, which are looked upon today as atower of strength of the Indian Army. A

single year and a single rebellion was, however, to change all this. The Mutiny, which broke out in 1857, blew up the old Bengal Army and brought into existence a Punjabized and barbarized army, resembling the Indian Army of today in broad lines and general proportions of its composition.

“The gaps created by the revolt of the Hindustani regiments (of the Bengal Army) were at once filled up by Sikhs and other Punjabis, and hillmen eager for revenge and for the loot of the cities of Hindustan. They had all been conquered and subjugated by the British with the help of the Hindustani soldiers, and in their ignorance, they regarded the Hindustanis, rather the handful of British, as their real enemies. This enmity was magnificently exploited by the British authorities in suppressing the Mutiny. When the news of the enlistment of Gurkhas reached Lord Dalhousie in England he expressed great satisfaction and wrote to a friend: ' Against the Oudh Sepoys they may confidently be expected to fight like devils'. And after the Mutiny, General Mansfield, the Chief of the Staff of the Indian Army, wrote about the Sikhs: ' It was not because they loved us, but because they hated Hindustan and hated the Bengal Army that the Sikhs had flocked to our standard instead of seeking the opportunity to strike again for their freedom. They wanted to revenge themselves and to gain riches by the plunder of Hindustani cities. They were not attracted by mere daily pay, it was rather the prospect of wholesale plunder and stamping on the heads of their enemies. In short, we turned to profit the *esprit de corps* of the old Khalsa Army of Ranjit Singh, in the manner which for a time would most effectually bind the Sikhs to us as long as the active service against their old enemies may last”.

“The relations thus established were in fact to last much longer. The services rendered by the Sikhs and Gurkhas during the Mutiny were not forgotten and henceforward the Punjab and Nepal had the place of honour in the Indian Army.”

That Mr. Chaudhari is right when he says that it was the Mutiny

of 1857 which was the real cause of the preponderance in the Indian Army of the men of the North-West is beyond the possibility of doubt. Equally incontrovertible is the view of Mr. Chaudhari that this preponderance of the men of the North-West is not due to their native superiority in fighting qualities, as the same is amply borne out by the figures which he has collected, showing the changes in the composition of the Indian Infantry before and after the Mutiny.

CHANGES IN THE COMPOSITION OF THE INDIAN INFANTRY

Percentage of men from different Parts

Year	North-West India		North-East India	South India	Burma
	Punjab, N.-W. F., Kashmir	Nepal, Garhwal, Kumaon	U. P., Bihar		
1856	Less than 10	Negligible	Not less than 90		Nil
1858	47	6	47		
18	48	17	35		

83					
18 93	53	24	23		
19 05	47	15	22	16	
19 19	46	14.8	25.5	12	1.7
19 30	58.5	22	11.0	5.5	3

These figures show that in 1856, one year before the Mutiny, the men from the North-West were a negligible factor in the Indian Army. But in 1858, one year after the Mutiny, they had acquired a dominant position which has never received a setback.

It will thus be seen that the distinction between Martial and Non-martial Classes, which was put forth for the first time in 1879, as a matter of principle, which was later on insisted upon as a matter of serious consideration by Lord Roberts ²⁶ [f.26] and which was subsequently recognised by Lord Kitchener as a principle governing recruitment to the Indian Army, had nothing to do with the origin of this preponderance of the men of the North-West in the Indian Army. No doubt, the accident that the people from North-West India had the good luck of being declared by the Government as belonging to the Martial Class, while most of the classes coming from the rest of India had the ill-luck of being declared Non-martial Classes had important consequences. Being regularly employed in the Army, the people of North-West India came to look upon service in the Army as an occupation with a security and a career which was denied to men from the rest of India. The large number of recruits drawn from North-West India, therefore, indicates nothing more than this—

namely, owing to the policy of the British Government, service in the Army has become their occupation and if people in other parts of India do not readily come forth to enlist in the Army, the reason is that Government did not employ them in the Army. People follow their ancestral occupations whether they like it or not. When a people do not take to a new occupation it does not necessarily mean that they are not fit for it. It only means that it is not their ancestral occupation.

This division between Martial and Non-martial Classes is, of course, a purely arbitrary and artificial distinction. It is as foolish as the Hindu theory of caste, making birth instead of worth, the basis for recognition. At one time, the Government insisted that the distinction they had adopted was a real distinction and that in terms of fighting qualities, it meant so much fighting value. In fact, this was their justification for recruiting more men from the North-West of India. That this distinction has nothing to do with any difference in fighting qualities has now been admitted.

Sir Phillip Chetwode,

²⁷ [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40C.Pakistan or the Partition of India PART II.htm - _msocom_27](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40C.Pakistan_or_the_Partition_of_India_PART_II.htm_-_msocom_27) late Commander-in-Chief of India, broadcasting from London on the constitution of the Indian Army, took pains to explain that the recruitment of a larger proportion of it from the Punjab, did not mean that the people of the Peninsula were without martial qualities. Sir Phillip Chetwode explained that the reason why men of the North were largely recruited for the Indian Army was chiefly climatic, as the men from the South cannot stand the extremes of heat and cold of North India. No race can be permanently without martial spirit. Martial spirit is not a matter of native instinct. It is a matter of training and anybody can be trained to it.

But apart from this, there is enough fighting material in Hindustan, besides what might be produced by special training. There are the Sikhs, about whose fighting equalities nothing need be said. There are the Rajputs who are even now included in the

category of Martial Classes. In addition to these, there are the Mahrattas who proved their calibre as a fighting race during the last European War. Even the people of the Madras Presidency can be depended upon for military purposes. Speaking of the Madrasis as soldiers, General Sir Frederick P. Haines, at one time Commander-in-Chief in India, observed :

“It has been customary to declare that the Madras Army is composed of men physically inferior to those of the Bengal Army, and if stature alone be taken into consideration, this is true. It is also said that by the force of circumstances the martial feeling and the characteristics necessary to the real soldier are no longer to be found in its ranks. I feel bound to reject the above assertions and others which ascribe comparative inefficiency to Madras troops. It is true that in recent years they have seen but little service; for, with the exception of the sappers, they have been specially excluded from all participation in work in the field. I cannot admit for one moment that anything has occurred to disclose the fact that the Madras Sepoy is inferior as a fighting man. The facts of history warrant us in assuming the contrary. In drill training and discipline, the Madras Sepoy is inferior to none; while in point of health, as exhibited by returns, he compares favourably with his neighbours. This has been manifested by the sappers and their followers in the Khyber; and the sappers are of the same race as the Sepoys.”

Hindustan need, therefore, have no apprehension regarding the supply of an adequate fighting force from among its own people. The separation of Pakistan cannot weaken her in that respect.

The Simon Commission drew attention to three features of the Indian Army, which struck them as being special and peculiar to India. It pointed out that the duty of the Army in India was two-fold; firstly, to prevent the independent tribes on the Indian side of the Afghan frontier from raiding the peaceful inhabitants of the plains below. Secondly, to protect India against invasion by countries lying behind and beyond this belt of unorganized

territories. The Commission took note of the fact that from 1850 to 1922, there were 72 expeditions against the independent tribes, an average of one a year, and also of the fact that in the countries behind and beyond this belt of unorganized territory, lies the direction from which, throughout the ages, the danger to India's territorial integrity has come. This quarter is occupied by "States which according to the Commission are not members of the League of Nations" and is, therefore, a greater danger to India now than before. The Commission insisted on emphasizing that these two facts constituted a peculiar feature of the problem of military defence in India and so far as the urgency and extent of the problem is concerned, they are "without parallel elsewhere in the Empire, and constituted a difficulty in developing self-government which never arose in any comparable degree in the case of the self-governing Dominions".

As a second unique feature of the Indian Army, the Commission observed:

"The Army in India is not only provided and organized to ensure against external dangers of a wholly exceptional character: it is also distributed and habitually used throughout India for the purpose of maintaining or restoring internal peace. In all countries . . . the military is not normally employed in this way, and certainly is not organized for this purpose. But the case of India is entirely different. Troops are employed many times a year to prevent internal disorder and, if necessary, to quell it. Police forces, admirably organized as they are, cannot be expected in all cases to cope with the sudden and violent outburst of a mob driven frantic by religious frenzy. It is, therefore, well understood in India both by the police and by the military—and, what is even more to the point, by the public at large—that the soldiers may have to be sent for. . . This Use of the Army for the purpose of maintaining or restoring internal order was increasing rather than diminishing, and that on these occasions the practically universal request was for British troops.

The proportion of the British to Indian troops allotted to this duty has in fact risen in the last quarter of a century. The reason, of course, is that the British soldier is a neutral, and is under no suspicion of favouring Hindus against Mahomedans or Mahomedans against Hindus Inasmuch as the vast majority of the disturbances which call for the intervention of the military have a communal or religious complexion, it is natural and inevitable that the intervention which is most likely to be authoritative should be that which has no bias, real or suspected, to either side. It is a striking fact in this connection that, while in regular units of the Army in India as a whole British soldiers are in a minority of about 1 to 21/2, in the troops allotted for internal security the preponderance is reversed, and for this purpose a majority of British troops is employed—in the troops car-marked (or internal security the proportion is about eight British to seven Indian soldiers."

Commenting upon this feature of the Indian Army the Commission said:

"When, therefore, one contemplates a future for India in which, in place of the existing Army organization, the country is defended and pacified by exclusively Indian units, just as Canada relies on Canadian troops and Ireland on Irish troops, it is essential to realize and bear in mind the dimensions and character of the Indian problem of internal order and the part which the British soldier at present plays (to the general satisfaction of the country-side) in supporting peaceful government."

The third unique feature of the Indian Army, which was pointed out by the Simon Commission, is the preponderance in it of the men from the North-West. The origin of this preponderance and the reasons underlying the official explanation given therefor have already been examined.

But, there is one more special feature of the Indian Army to

which the Commission made no reference at all. The commission either ignored it or was not aware of it. It is such an important feature that it overshadows all the three features to which the Commission refers, in its importance and in its social and political consequences.

It is a feature which, if widely known, will set many people to think furiously. It is sure to raise questions which may prove insoluble and which may easily block the path of India's political progress—questions of far greater importance and complexity than those relating to Indianization of the Army.

This neglected feature relates to the communal composition of the Indian Army. Mr. Chaudhari has collected the relevant data in his articles, already referred to, which throws a flood of light on this aspect of the Indian Army. The following table shows the proportion of soldiers serving in the Indian Infantry, according to the area and the community from which they are drawn:

Changes in the Communal Composition of the Indian Army

Area and Communities	Percentage in 1914	Percent age in 1918	Percent age in 1919	Percentage in 1930
I. The Punjab, N.-W. F. P. and Kashmir	47	46.5	46	58.5
(1) Sikhs	19.2	17.4	15.4	13.58
(2) Punjabi Musalmans	11.1	11.3	12.4	22.6

Selected Works of Dr BR Ambedkar

(3) Pathans	6.2	5.42	4.54	6.35
II. Nepal, Kumaon, Garhwal	15	18.9	14.9	22.0
(1) Gurkhas	13.1	16.6	12.2	16.4
III. Upper India	22	22.7	25.5	11.0
(1) U.P.Rajputs	6.4	6.8	7.7	2.55
(2) Hindustani Musalmans	4.1	3.42	4.45	Nil
(3) Brahmins	1.8	1.86	2.5	Nil
IV. South India	16	11.9	12	5.5
(1) Mahrattas	4.9	3.85	3.7	5.33
(2) Madras! Musalmans	3.5	2.71	2.13	Nil
(3) Tamils	2.5	2.0	1.67	Nil
V. Burma				
(1) Burmans	Nil	Negligi ble	1.7	3.0

This table brings out in an unmistakable manner the profound changes which have been going on in the communal composition of the Indian Army particularly after 1919. They are (1) a phenomenal rise in the strength of the Punjabi Musalman and the Pathan, (2) a substantial reduction in the position of Sikhs from first to third, (3) the degradation of the Rajputs to the fourth

place, and (4) the shutting out of the U. P. Brahmins, the Madrasi Musalmans, and the Tamilians, both Brahmins and Non-Brahmins.

A further analysis of the figures for 1930, which discloses the communal composition of the Indian Infantry and Indian Cavalry, has been made by Mr. Chaudhari in the following table. ²⁸[f.28]

Communal Composition of the Indian Army in 1930

Class	Areas	Percentage in Infantry		Percent age in Cavalry
		Exclu ding Gurk has	Includi ng Gurkh as	
1. Punjabi Musal man	Punjab	27	22.6	14.28
2. Gurkhas	Nepal		16.4	
3. Sikhs	Punjab	16.24	13.58	23.81
4. Dogras	North Punjab and	11.4	9.54	9.53
	Kashmir			
5. Jats	Rajputana , U. P.,	9.5	7.94	19.06

Selected Works of Dr BR Ambedkar

	Punjab			
6. Pathans	N.-W. F. Province	7.57	6.35	4.76
7. Mahrattas	Konkan	6.34	5.33	
8. Garhwali s	Garhwal	4.53	3.63	
9. U. P. Rajput s	U. P.	3.04	2.54	
10. Rajput ana Rajput s	Rajputana	2.8	2.35	
11. Kumaoni s	Kumaon	2.44	2.05	
12. Gujars	N. E. Rajputana	1.52	1.28	
13. Punjabi Hindus	Punjab	1.52	1.28	
14. Ahirs	Do.	1.22	1.024	
15. Musalma ns, Rajputs,	Neighbou rhood of	1.22	1.024	7.14

Ranghars.	Delhi			
16. Kaimkhanis	Rajputana			4.76
17. Kachins	Burma	1.22	1.024	
18. Chins	Do.	1.22	1.024	
19. Karens	Do.	1.22	1.024	
20. Dekhani Musalmans	Deccan			4.76
21. Hindustani Musalmans	U. P.			2.38

Reducing these figures in terms of communities, we get the following percentage as it stood in 1930 :—

Communities	Percentage in Infantry		Percentage -in Cavalry
	Including Gurkhas	Excluding Gurkhas	

Selected Works of Dr BR Ambedkar

1. Hindus and Sikhs	60.55	50.55 4	61.92
2. Gurkhas		16.4	
3. Muhammadans	35.79	29.97 4	30.08
4. Burmans	3.66	3.072	

These figures show the communal composition of the Indian Army. The Musalmans according to Mr. Chaudhari formed 36% of the Indian Infantry and 30% of the Indian Cavalry.

These figures relate to the year 1930. We must now find out what changes have taken place since then in this proportion.

It is one of the most intriguing things in the Military history of India that no information is available on this point after 1930. It is impossible to know what the proportion of the Muslims in the Indian Army at present is. There is no Government publication from which such information can be gathered. In the past, there was no dearth of publications giving this information. It is very surprising that they should have now disappeared, or if they do appear, that they should cease to contain this information. Not only is there no Government publication containing information on this point, but Government has refused to give any information on the point when asked by members of the Central Legislative Assembly. The following questions and answers taken from the proceedings of the Central Legislative Assembly show how Government has been strenuously combating every attempt to obtain information on the point :

There was an interpellation on 15th September 1938, when the following questions were asked and replies as stated below were given:—

Arrangements for the Defence of India. ²⁹[f.29]

Q. 1360: *Mr. Badri Dull Pande* (on behalf of Mr. Amarendra Nath Chattopadhyaya).

(a)	x	x	x	x
(b)	x	x	x	x
(c)	x	x	x	x

(d) How many Indians have been recruited during 1937 and 1938 as soldiers and officers during 1937-38 for the Infantry and Cavalry respectively? Amongst the soldiers and officers recruited, how many are Punjabi Sikhs, Pathans, Garhwalis, Mahrattas, Madrasis, Biharis, Bengalis and Hindustanis of the United Provinces and Gurkhas?

(e) If none but the Punjabi Sikhs, Pathans and Garhwalis have been recruited, is it in contemplation of the Honourable Member to recruit from all the Provinces for the defense of India and give them proper military training?

(f) Will the Defence Secretary be pleased to state if Provincial Governments will be asked to raise Provincial Regiments, trained and fully mechanised, for the defence of India? If not, what is his plan of raising an efficient army for the defence of India?

Mr. C.M.G. Oghie:

(a) (a) The Honourable Member will appreciate that it is not in the public interest to disclose the details of such arrangements.

(b) (b) 5 cadets and 33 Indian apprentices were recruited for the Indian Air Force during 1937-38.

(c) (c) During 1937-38, 5 Indians have already been recruited to

commissioned ranks in the Royal Indian Navy, 4 will be taken by competitive examination in October 1938, and 3 more by special examination of "Dufferin" cadets only. During the same period, 314 Indians were recruited to different non-commissioned categories in the Royal Indian Navy.

(d) (d) During the year ending the 31st March 1938, 54 Indians were commissioned as Indian Commissioned Officers. They are now attached to British units for training, and it is not yet possible to say what proportion will be posted to infantry and cavalry, respectively. During the same period, 961 Indian soldiers were recruited for cavalry, and 7,970 for infantry. Their details by classes are not available at Army Headquarters and to call for them from the recruiting officers all over India would not justify the expenditure of time and labour involved.

(e) (e) No.

(f) (f) The reply to the first portion is in the negative. The reply to the second portion is that India already possesses an efficient army and so far as finances permit, every effort is made to keep it up-to-date in all respects. *Mr. S. Satyamurti:* With reference to the answers to clauses (d) and (e) of the question taken together, may I know whether the attention of Government has been drawn to statements made by many public men that the bulk of the army is from the Punjab and from one community? Have Government considered those facts and will Government also consider the desirability of making the army truly national by extending recruitment to all provinces and communities, so as to avoid the danger present in all countries of a military dictatorship seizing political power?

Mr. C. M. G. Ogilvie : I am not sure how that arises from this question, but I am prepared to say that provincial boundaries do not enter into Government's calculations at all. The best soldiers are chosen to provide the best army for India and not for any province, and in this matter national considerations must come above provincial considerations. Where the bulk of best military

material is found, there we will go to get it, and not elsewhere.

Mr. S. Saty'amurti : May I know whether the bulk of the army is from the Punjab and whether the Government have forgotten the experience of the brave exploits of men from my province not very long ago in the Indian Army, and may I know if Madrasis are practically kept out and many other provinces are kept out of the army altogether?

Mr. C. M. G. Ogilvie : Madras is not practically kept out of the army. Government gladly acknowledge the gallant services of the Madrasis in the army and they are now recruited to those Units where experience has proved them to be best. There are some 4,500 serving chiefly in the Sappers and Miners and Artillery.

Mr. S. Sayamurti : Out of a total of 120,000?

Mr. C. M. G. Ogilvie : About that.

Mr. S. Satyamurti : May I take it, that, that is a proper proportion, considering the population of Madras, the revenue that Madras pays to the Central exchequer, and the necessity of having a national army recruited from all the provinces?

Mr. C. M. G. Ogilvie : The only necessity we recognise is to obtain the best possible army.

Mr. S. Satyamurti : May I know by what tests Government have come to the conclusion that provinces other than the Punjab cannot supply the best elements in the Indian Army?

Mr. Ogilvie : By experience.

Dr. Sir Ziauddin Ahmed: May I ask if it is not a fact that all branches of Accounts Department are monopolised by the Madrasis and will Government immediately reduce the number in proportion to their numerical strength in India?

Mr. Ogilvie : I do not see how that arises from this question either, but the Government are again not prepared to sacrifice

efficiency for any provincial cause.

Indian Regiment consisting of Indians belonging to Different Castes ³⁰[f.30]

Q. 1078 : *Mr.M.Anantasayanam Ayyangar* (on behalf of Mr. Manu Subedar):

- (a) (a) Will the Defence Secretary state whether any experiment has ever been made under British rule of having an Indian regiment consisting of Indians recruited from different provinces and belonging to the different castes and sections, such as Sikhs, Mahrattas, Rajputs, Brahmins and Muslims?
- (b) (b) If the reply to part (a) be in the negative, can a statement of Government's policy in this regard be made giving reasons why it has not been considered proper to take such action?
- (c) (c) Is His Excellency the Commander-in-Chief prepared to take up this matter with His Majesty's Government?
- (d) (d) Are Government aware that in the University Corps and in the Bombay Scout Movement, and in the Police Forces of the country, there is no separation by caste or creed?

Mr. C. M. G. Ogilvie :

- (a) (a) No.
- (b) (b) Government regard it as a fundamental principle of organization that Military Sub-Units, such as companies and squadrons, must be homogeneous.
- (c) (c) No, for the reason just mentioned.
- (d) (d) Yes.

Mr. S. Satyamurti: May I know the meaning which Government attach to the word "homogeneous"? Does it mean from the same province or the same community?

Mr. C. M. G. Ogilvie : It means that they must belong to the same class of persons.

Mr. S. Satyamurti : May I ask for some elucidation of this point? Do they make distinction between one class and another?

Mr. C. M. G. Ogilvie : Certainly.

Mr. S. Satyamurti: On what basis? Is it religious class or racial class or provincial class? .

Mr. C. M. G. Ogilvie : Neither. It is largely racial class.

Mr. S. Satyamurti: Which races are preferred and which are not preferred?

Mr. C. M. G. Ogilvie: I refer the Honourable Member to the Army List. *Recruitment to the Indian Army* ³¹[f.31]

Q. 1162: *Mr. Brojendra Narayan Chaudhary*: Will the Defence Secretary please state :—

- (a) (a) Whether the attention of Government has been drawn to the address of the Punjab's Premier, the Hon'ble Sir Sikander Hyat Khan to his brother soldiers, in these words :”No patriotic Punjabi would wish to impair Punjab's position of supremacy in the Army,”as reported by the Associated Press of India in *the Hindustan Times* of the 5th September 1938; and
- (b) (b) Whether it is the policy of Government to maintain the supremacy of Punjabis in the army by continuing to recruit the major portion from the Punjab ; or to attempt recruitment of the Army from all the provinces without racial or provincial considerations?

Mr. C. M. G. Ogilvie :

(a) Yes.

(b) I refer the Honourable Member to replies I gave to the supplementary questions arising from starred question No. 1060 asked by Mr. Amarendra Nath Chattopadhyaya on 15th September 1938.

Mr. S. Satyamurti : With reference to the answer to part (a) of the question, my Honourable friend referred to previous answers. As far as I remember, they were not given after this statement was brought before this House. May I know if the Government of

India have examined this statement of the Punjab Premier,"No patriotic Punjabi would wish to impair Punjab's position of supremacy in the Army"? May I know whether Government have considered the dangerous implications of this statement and will they take steps to prevent a responsible Minister going about and claiming provincial or communal supremacy in the Indian Army, which ought to remain Indian first and Indian last?

Mr. C. M. G. Ogilvie : I can only answer in exactly the same words as I answered to a precisely similar question of the Hon'ble Member on the 15th September last. The policy of Government with regard to the recruitment has been repeatedly stated and is perfectly clear.

Mr. S. Satyamurti: That policy is to get the best material and I am specifically asking my Honourable friend—I hope he realises the implications of that statement of the Punjab Premier. I want to know whether the Government have examined the dangerous implications of any provincial Premier claiming provincial supremacy in the Indian Army and whether they propose to take any steps to correct this dangerous misapprehension?

Mr. C. M. G. Ogilvie : Government consider that there are no dangerous implications whatever but rather the reverse.

Mr. Satyamurti : Do Government accept the supremacy of any province or any community as desirable consideration, even if it is a fact, to be uttered by responsible public men and do not the Government consider that this will give rise to communal and provincial quarrels and jealousies inside the army and possibly a military dictatorship in this country?

Mr. C. M. G. Ogilvie : Government consider that none of these foreboding have any justification at all.

Mr. M. S. Aney : Do the Government subscribe to the policy implied in the statement of Sir Sikander Hyat Khan?

Mr. C. M. G. Ogilvie : Government's policy has been repeatedly

stated and made clear.

Mr. M. S. Aney : Is it the policy that the Punjab should have its supremacy in the Army?

Mr. C. M. G. Ogilvie : The policy is that the best material should be recruited for the Army.

Mr. M. S. Aney : I again repeat the question. Is it the policy of Government that Punjab should have supremacy in the Army?

Mr. C. M. G. Ogilvie : I have repeatedly answered that question. The policy is that the Army should get the best material from all provinces and Government are quite satisfied that it has the best material at present.

Mr. M. S. Aney : Is it not, therefore, necessary that Government should make a statement modifying the policy suggested by Sir Sikander Hyat Khan?

Mr. C. M. G. Ogilvie : Government have no intention whatever of changing their policy in particular.

Another interpolation took place on 23rd November 1938 when the question stated below was asked :—

Recruitment to the Indian Army from the Central Provinces and Berar
³²[f.32]

Q. 1402 : *Mr. Govind V. Deshmukh* : Will the Defence Secretary please state :—

(a) The centres in the Central Provinces and Berar for recruiting men for the Indian Army ;

(b) The classes from which such men are recruited;

(c) The proportion of the men from the C. P. & Berar in the Army to the total strength of the Army, as well as to the population of these provinces ; and

(d) The present policy of recruitment, and if it is going to be revised; if not, why not?

Mr. C. M. G. Ogilvie :

(a) There are no recruiting centres in the C. P. or Berar. Men residing in the C. P. are in the area of the Recruiting Officer, Delhi, and those of Berar in the area of the Recruiting Officer, Poona.

(b) Mahrattas of Berar are recruited as a separate class. Other Hindus and Mussalmans who are recruited from the C. P. and Berar are classified as "Hindus" or "Musalmans", and are not entered under any class denomination.

(c) The proportion to the total strength of the Army is .03 per cent. and the proportion to the total male population of these provinces is .0004 per cent.

(d) There is at present no intention of revising the present policy, the reasons for which were stated in my reply to a supplementary question arising out of Mr. Satyamurti's starred question No. 1060, on the 15th September 1938, and in answer to part (a) of starred question No. 1086 asked by Mian Ghulam Kadir Muhammad Shahban on the same date, and in the reply of His Excellency the Commander-in-Chief to the debates in the Council of State on the Honourable Mr. Sushil Kumar Roy Chaudhary's Resolution regarding military training for Indians on the 21st February 1938 and on the Honourable Mr. P. N. Saprú's Resolution on the recruitment of all classes to the Indian Army in April 1935.

This was followed by an interpellation on 6th February 1939, when the below mentioned question was asked :—

*Recruitment to the Indian Army*³³[f.33]

Q. 729; *Mr. S. Satyamurti:* Will the Defence Secretary be pleased to state:

(a) (a) Whether Government have since the last answer on

this question reconsidered the question of recruiting to the Indian Army from all provinces and from all castes and communities;

- (b) (b) Whether they have come to any conclusion ;
- (c) (c) Whether Government will categorically state the reasons as to why other provinces and communities are not allowed to serve in the army ; and
- (d) (d) What are the tests by which they have come to the conclusion that other provinces and other communities than those from whom recruitment is made to the Indian Army to-day cannot come up to the standard of efficiency required of the Indian Army?

Mr. C.M.G.Ogilvie:

- (a) (a) No.
- (b) (b) Does not arise.
- (c) (c) and
- (d) (d) The reasons have been categorically stated in my replies to starred questions Nos. 1060 and 1086 of 15th September 1938, No. 1162 of 20th September 1938 and No. 1402 of 23rd November 1938 and also in the replies of His Excellency the Commander-in-Chief in the Council of State to the debates on the Honourable Mr. P. N. Saprú's Resolution regarding recruitment of all classes to the Indian Army and the Honourable Mr. Sushil Kumar Roy Chaudhary's Resolution regarding Military training for Indians, on the 13th March 1935 and 21st February 1938 respectively.

This conspiracy of silence on the part of the Government of India, was quite recently broken by the Secretary of State for India, who came forward to give the fullest information on this most vital and most exciting subject, in answer to a question in the House of Commons. From his answer given on 8th July 1943 we know the existing communal and provincial composition of the Indian Army to be as follows :—

1. 1. Provincial Composition of the Indian Army

Province	Percentage	Province	Percentage
1. Punjab	50	7. Bengal Presidency	2
2. U. P.	15	8. C. P. & Berar	
3. Madras Presidency	10	9. Assam	5
4. Bombay Presidency	10	10. Bihar	
5. N. W. F. Province	5	11. Orissa	
6. Ajmere & Merwara	3	12. Nepal	8

II. Communal Composition of the Indian Army

- | |
|--------|
| 1. Mu |
| 2. Hi |
| 3. Sik |
| 4. Ch |
| Rest |

The information given by the Secretary of State is indeed very welcome. But, this is the war-time composition of the Indian Army. The peace-time composition must be very different. It rested on the well-known distinction between the Martial and Non-Martial Races. That distinction was abolished during the War. There is, however, no certainty that it will not be revived now that peace has returned. What we want to know is the peacetime communal composition of the Indian Army. That still remains an unknown fact and a subject of speculation.

Some say that the normal pre-war proportion of Muslims was between 60 and 70 p.c. Others say that it is somewhere in the neighbourhood of 50 p.c. In the absence of exact information, one could well adopt the latter figure as disclosing the true situation especially, when on inquiry, it happens to be confirmed by those who are in a position to form some idea on the matter. Even if the proportion be 50% it is high enough to cause alarm to the Hindus. If this is true, it is a flagrant violation of well established principles of British Army policy in India, adopted after the Mutiny.

After the Mutiny, the British Government ordered two investigations into the organization of the Indian Army. The first investigation was carried out by the Peel Commission which was appointed in 1859. The second investigation was undertaken by a body, called the Special Army Committee, appointed in 1879 to which reference has already been made.

The principal question considered by the Peel Commission was to find out the weaknesses in the Bengal Army, which led to the Mutiny of 1857. The Peel Commission was told by witness after witness that the principal weakness in the Bengal Army which mutinied was that

“In the ranks of the regular Army men stood mixed up as

chance might befall. There was no separating by class and clan into companies..... In the lines, Hindu and Mahomedan, Sikh and Poorbeah were mixed up, so that each and all lost to some extent their racial prejudice and became inspired with one common sentiment.”³⁴[f.34]

It was, therefore, proposed by Sir John Lawrence that in organizing the Indian Army care should be taken”to preserve that distinctiveness which is so valuable, and while it lasts, makes the Mahomedan of one country despise, fear or dislike the Mahomedan of another; Corps should in future be provincial, and adhere to the geographical limits within which differences and rivalries are strongly marked. Let all races, Hindu or Mahomedan of one province be enlisted in one regiment and no others, and having created distinctive regiments, let us keep them so, against the hour of need. . . . By the system thus indicated two great evils are avoided : firstly, that community of feeling throughout the native army and that mischievous political activity and intrigue which results from association with other races and travel in other Indian provinces.”³⁵[f.35]

This proposal was supported by many military men before the Peel Commission and was recommended by it as a principle of Indian Army Policy. This principle was known as the principle of Class Composition.

The Special Army Committee of 1879 was concerned with quite a different problem. What the problem was, becomes manifest from the questionnaire issued by the Committee. The questionnaire included the following question :—

"If the efficient and available reserve of the Indian Army is considered necessary for the safety of the Empire, should it not be recruited and maintained from those parts of the country which give us best soldiers, rather than among the weakest and least warlike races of India, due regard, of course, being had to the necessity of not giving too great strength or prominence to any

particular race or religious group and with due regard to the safety of the Empire?"

The principal part of the question is obviously the necessity or otherwise of "not giving too great strength or prominence to any particular race or religious group". On this question official opinion expressed before the Committee was unanimous.

Lt.-General H. J. Warres, Commander-in-Chief of the Bombay Army, stated:—

"I consider it is not possible to recruit the reserve of the Indian Army altogether from those parts of India which are said to produce best soldiers, without giving undue strength and prominence to the races and religions of these countries."

The Commander-in-Chief, Sir Frederick P. Haines, said:—

"Distinct in race, language and interests from the more numerous Army of Bengal, it is, in my opinion, eminently politic and wise to maintain these armies (the Madras and Bombay Armies) as a counterpoise to it, and I would in no way diminish their strength in order that a reserve composed of what is called 'the most efficient fighting men whom it is possible to procure' may be established. If by this it is meant to replace Sepoys of Madras and Bombay by a reserve of men passed through the ranks of the Bengal Army and composed of the same classes of which it is formed, I would say, that anything more unwise or more impolitic could hardly be conceived."

The Lt-Governor of the Punjab also shared this view. He too declared that he was "opposed to having one recruiting field for the whole armies" in India. "It will be necessary," he added, "for political reasons, to prevent preponderance of one nationality."

The Special Committee accepted this view and recommended that the composition of the Indian Army should be so regulated that there should be no predominance of any one community or nationality in the Army.

These two principles have the governing principles of Indian Army policy. Having regard to the principle laid down by the Special Army Committee of 1879, the changes that have taken place in the communal composition of the Indian Army amount to a complete revolution. How this revolution was allowed to take place is beyond comprehension. It is a revolution which has taken place in the teeth of a well-established principle. The principle was really suggested by the fear of the growing predominance of the men of the North-West in the Indian Army and was invoked with the special object of curbing that tendency. The principle was not only enunciated as a rule of guidance but was taken to be rigorously applied. Lord Roberts, who was opposed to this principle because it set a limit upon the recruitment of his pet men of the North-West, had to bow to this principle during his regime as the Commander-in-Chief of India. So well was the principle respected that when in 1903, Lord Kitchener entered upon the project of converting fifteen regiments of Madras into Punjab regiments, he immediately setup a counterpoise to the Sikhs and the Punjabi Musalmans by raising the proportion of

the Gurkhas and the Pathans. As Sir George Arthur, his biographer, says:—

“The Government, mindful of the lesson taught by the Mutiny, was alive to the danger of allowing any one element in the Indian Army to preponderate unduly. An increase in the Punjabee infantry had as its necessary sequel a further recruitment of the valuable Gurkha material and the enlistment of more trans-border Pathans in the Frontier Militia.”

That a principle, so unanimously upheld and so rigorously applied upto the period of the Great War, should have been thrown to the wind after the Great War, without ceremony and without compunction and in a clandestine manner, is really beyond comprehension. What is the reason which has led the British to allow so great a preponderance of the Muslims in the Indian Army? Two explanations are possible. One is that the

Musalmans really proved, in the Great War, that they were better soldiers than the Hindus. The second explanation is that the British have broken the rule and have given the Musalmans such a dominating position in the Army because they wanted to counteract the forces of the Hindu agitation for wresting political power from the hands of the British.

Whatever be the explanation, two glaring facts stand out from the above survey. One is that the Indian Army today is predominantly Muslim in its composition. The other is that the Musalmans who predominate are the Musalmans from the Punjab and the N. W. F. P. Such a composition of the Indian Army means that the Musalmans of the Punjab and the N. W. F. P. are made the sole defenders of India from foreign invasion. So patent has this fact become that the Musalmans of the Punjab and the N. W. F. P. are quite conscious of this proud position which has been assigned to them by the British, for reasons best known to them. For, one often hears them say that they are the ' gatekeepers ' of India. The Hindus must consider the problem of the defence of India in the light of this crucial fact.

How far can the Hindus depend upon these ' gate-keepers' to hold the gate and protect the liberty and freedom of India? The answer to this question must depend upon who comes to force the gate open. It is obvious that there are only two foreign countries which are likely to force this gate from the North-West side of India, Russia or Afghanistan, the borders of both of which touch the border of India. Which of them will invade India and when, no one can say definitely. If the invasion came from Russia, it may be hoped that these gate-keepers of India will be staunch and loyal enough to hold the gate and stop the invader. But suppose the Afghans singly or in combination with other Muslim States march on India, will these gate-keepers stop the invaders or will they open the gates and let them in? This is a question which no Hindu can afford to ignore. This is a question on which every Hindu must feel assured, because it is the most

crucial question.

It is possible to say that Afghanistan will never think of invading India. But a theory is best tested by examining its capacity to meet the worst case. The loyalty and dependability of this Army of the Punjabi and N. W. F. P. Muslims can only be tested by considering how it will behave in the event of an invasion by the Afghans. Will they respond to the call of the land of their birth or will they be swayed by the call of their religion, is the question which must be faced if ultimate security is to be obtained. It is not safe to seek to escape from these annoying and discomfoting questions by believing that we need not worry about a foreign invasion so long as India is under the protection of the British. Such a complacent attitude is unforgivable to say the least. In the first place, the last war has shown that a situation may arise when Great Britain may not be able to protect India, although, that is the time when India needs her protection most. Secondly, the efficiency of an institution must be tested under natural conditions and not under artificial conditions. The behaviour of the Indian soldier under British control is artificial. His behaviour when he is under Indian control is his natural behaviour. British control does not allow much play to the natural instincts and natural sympathies of the men in the Army. That is why the men in the Army behave so well. But that is an artificial and not a natural condition. That the Indian Army behaves well under British control is no guarantee of its good behaviour under Indian control. A Hindu must be satisfied that it will behave as well when British control is withdrawn.

The question how this army of the Punjabi and the N. W. F. P. Muslims will behave if Afghanistan invades India, is a very pertinent and crucial question and must be faced, however unpleasant it may be.

Some may say—why assume that the large proportion of Muslims in the Army is a settled fact and that it cannot be unsettled? Those who can unsettle it are welcome to make what

efforts they can. But, so far as one can see, it is not going to be unsettled. On the contrary, I should not be surprised if it was entered in the constitution, when revised, as a safeguard for the Muslim Minority. The Musalmans are sure to make this demand and as against the Hindus, the Muslims somehow always succeed. We must, therefore, proceed on the assumption that the composition of the Indian Army will remain what it is at present. The basis remaining the same, the question to be pursued remains what it was : Can the Hindus depend upon such an Army to defend the country against the invasion of Afghanistan? Only the so-called Indian Nationalists will say * yes * to it. The boldest among the realists must stop to think before he can give an answer to the question. The realist must take note of the fact that the Musalmans look upon the Hindus as Kaffirs, who deserve more to be exterminated than protected. The realist must take note of the fact that while the Musalman accepts the European as his superior, he looks upon the Hindu as his inferior. It is doubtful how far a regiment of Musalmans will accept the authority of their Hindu officers if they be placed under them. The realist must take note that of all the Musalmans, the Musalman of the North-West is the most disaffected Musalman in his relation with the Hindus. The realist must take note that the Punjabi Musalman is fully susceptible to the propaganda in favour of Pan-Islamism. Taking note of all these considerations, there can be very little doubt that he would be a bold Hindu who would say that in any invasion by Muslim countries, the Muslims in the Indian Army would be loyal and that there is no danger of their going over to the invader. Even Theodore Morrison ³⁶[f.36] writing in 1899, was of the opinion that—

“The views held by the Mahomedans (certainly the most aggressive and truculent of the peoples of India) are alone sufficient to prevent the establishment of an independent Indian Government Were the Afghan to descend from the north upon an autonomous India, the Mahomedans, instead of uniting with the Sikhs and the Hindus to repel him, would be drawn by all

the ties of kinship and religion to join his flag."

And when it is recalled that in 1919 the Indian Musalmans who were carrying on the Khilafat movement actually went to the length of inviting the Amir of Afghanistan to invade India, the view expressed by Sir Theodore Morrison acquires added strength and ceases to be a matter of mere speculation.

How this Army composed of the Muslims of the Punjab and N. W. F. P. will behave in the case of an invasion by Afghanistan is not the only question which the Hindus are called upon to consider. There is another and equally important question on which the Hindus must ponder. That question is: Will the Indian Government be free to use this Army, whatever its loyalties, against the invading Afghans? In this connection, attention must be drawn to the stand taken by the Muslim League. It is to the effect that the Indian Army shall not be used against Muslim powers. There is nothing new in this. This principle was enunciated by the Khilafat Committee long before the League. Apart from this, the question remains how far the Indian Muslims will, in future, make it their article of faith. That the League has not succeeded in this behalf against the British Government does not mean that it will not succeed against an Indian Government. The chances are that it will, because, however unpatriotic the principle may be from the standpoint of the Hindus, it is most agreeable to the Muslim sentiment and the League may find a sanction for it in the general support of the Muslim community in India. If the Muslim League succeeds in enforcing this limitation upon Indians right to use her fighting forces, what is going to be the position of the Hindus? This is another question which the Hindus have to consider.

If India remains politically one whole and the two-nation mentality created by Pakistan continues to be fostered, the Hindus will find themselves between the devil and the deep sea, so far as the defence of India is concerned. Having an Army, they will not be free to use it because the League objects. Using it, it will not be

possible to depend upon it because its loyalty is doubtful. This is a position which is as pathetic as it is precarious. If the Army continues to be dominated by the Muslims of the Punjab and the N. W. F. P., the Hindus will have to pay it but will not be able to use it and even if they were free to use it against a Muslim invader, they will find it hazardous to depend upon it. If the Hague view prevails and India does not remain free to use her Army against Muslim countries, then, even if the Muslims lose their predominance in the Army, India on account of these military limitations, will have to remain on terms of subordinate co-operation with the Muslim countries on her border, as do the Indian States under British paramountcy.

The Hindus have a difficult choice to make: to have a safe Army or a safe border. In this difficulty, what is the wisest course for the Hindus to pursue? Is it in their interest to insist that the Muslim India should remain part of India so that they may have a safe border, or is it in their interest to welcome its separation from India so that they may have a safe Army? The Musalmans of this area are hostile to the Hindus. As to this, there can be no doubt. Which is then better for the Hindus : Should these Musalmans *be without and against or should they be within and against?* If the question is asked to any prudent man, there will be only one answer, namely, that if the Musalmans are to be against the Hindus, it is better that they should be without and against, rather than within and against. Indeed, it is a consummation devoutly to be wished that the Muslims should be without. That is the only way of getting rid of the Muslim preponderance in the Indian Army.

How can it be brought about? Here again, there is only one way. to bring it about and that is to support the scheme of Pakistan. Once Pakistan is created, Hindustan, having ample resources in men and money, can have an Army which it can call its own and there will be nobody to dictate as to how it should be used and against whom it should be used. The defence of Hindustan, far from being weakened by the creation of Pakistan, will be infinitely

improved by it.

The Hindus do not seem to realize at what disadvantage they are placed from the point of view of their defence, by their exclusion from the Army. Much less do they know that, strange as it may appear, they are in fact purchasing this disadvantage at a very heavy price.

The Pakistan area which is the main recruiting ground of the present Indian Army, contributes very little to the Central Exchequer as will be seen from the following figures :—

Contribution to the Central Exchequer

	Rs.
Punjab	1,18,01,385
North-West Frontier	9,28,294
Sind	5,86,46,915
Baluchistan	Nil
Total	7,13,76,594

As against this the provinces of Hindustan contribute as follows:—

	Rs.
Madras	9,53,26,745
Bombay	22,53,44,247
Bengal ³⁷ [f.37]	12,00,00,000

U.P.	4,05,53,000
Bihar	1,54,37,742
C.P. & Berar	31,42,682
Assam	1,87,55,967
Orissa	5,67,346
Total	51,91,27,729

The Pakistan Provinces, it will be seen, contribute very little. The main contribution comes from the Provinces of Hindustan. In fact, it is the money contributed by the Provinces of Hindustan which enables the Government of India to carry out its activities in the Pakistan Provinces. The Pakistan Provinces are a drain on the Provinces of Hindustan. Not only do they contribute very little to the Central Government but they receive a great deal from the Central Government. The revenue of the Central Government amounts to Rs.121 crores. Of this, about Rs. 52 crores are annually spent on the Army. In what area is this amount spent? Who pays the bulk of this amount of Rs. 52 crores? The bulk of this amount of Rs. 52 crores which is spent on the Army is spent over the Muslim Army drawn from the Pakistan area. Now the bulk of this amount of Rs. 52 crores is contributed by the Hindu Provinces and is spent on an Army which for the most part consists of non-Hindus !! How many Hindus are aware of this tragedy? How many know at whose cost this tragedy is being enacted? Today the Hindus are not responsible for it because they cannot prevent it. The question is whether they will allow this tragedy to continue. If they mean to stop it, the surest way of putting an end to it is to allow the scheme of Pakistan to take effect. To oppose it, is to buy a sure weapon of their own destruction. A safe Army is better than a safe border.

CHAPTER VI

PAKISTAN AND COMMUNAL PEACE

Does Pakistan solve the Communal Question is a natural question which every Hindu is sure to ask. A correct answer to this question calls for a close analysis of what is involved in it. One must have a clear idea as to what is exactly meant, when the Hindus and Muslims speak of the Communal Question. Without it, it will not be possible to say whether Pakistan does or does not solve the Communal Question.

It is not generally known that the Communal Question like the "Forward Policy" for the Frontier has a "greater" and a "lesser intent," and that in its lesser intent it means one thing, and in its greater intent it means quite a different thing.

I

To begin with the Communal Question in its "lesser intent". In its lesser intent, the Communal Question relates to the representation of the Hindus and the Muslims in the Legislatures. Used in this sense, the question involves the settlement of two distinct problems :—

- (1) (1) The number of seats to be allotted to the Hindus and the Muslims in the different legislatures, and
- (2) (2) The nature of the electorates through which these seats are to be filled in.

The Muslims at the Round Table Conference claimed :—

- (1) (1) That their representatives in all the Provincial as well as in the Central Legislatures should be elected by separate electorates ;
- (2) (2) That they should be allowed to retain the weightage in representation given to Muslim minorities in those Provinces in which they were a minority in the population, and that in addition, they should be given in those Provinces where they were a majority such as the Punjab, Sind, North-West Frontier Province and Bengal, a guaranteed statutory majority of seats.

The Hindus from the beginning objected to both these Muslim demands. They insisted on joint electorates for Hindus and Muslims in all elections to all the Legislatures, Central and Provincial, and on population ratio of representation, for both minorities, Hindus and Muslims, wherever they may be, and raised the strongest objections to a majority of seats being guaranteed to any community by statute.

The Communal Award of His Majesty's Government settled this dispute by the simple, rough and ready method of giving the Muslims all that they wanted, without caring for the Hindu opposition."The Award allowed the Muslims to retain weight-age and separate electorates, and in addition, gave them the statutory majority of seats in those provinces where they were a majority in the population.

What is it in the Award that can be said to constitute a problem? Is there any force in the objections of the Hindus to the Communal Award of His Majesty's Government? This question must be considered carefully to find out whether there is substance in the objections of the Hindus to the Award.

Firstly, as to their objection to the weightage to Muslim minorities in the matter of representation. Whatever may be the correct measure of allotting representation to minorities, the Hindus cannot very well object to the weightage given to Muslim minorities, because similar weightage has been given to the Hindus in those Provinces in which they are a minority and where there is sufficient margin for weightage to be allowed. The treatment of the Hindu minorities in Sind and the North-West Frontier Province is a case in point.

Secondly, as to their objection to a statutory majority. That again does not appear to be well founded. A system of guaranteed representation may be wrong and vicious and quite unjustifiable on theoretical and philosophical grounds. But considered in the light of circumstances, such as those obtaining in India, the system

of statutory majority appears to be inevitable. Once it is granted that the representation to be given to a minority must not reduce the majority to minority, that very provision creates, as a mere counterpart, a system of statutory majority to the majority community. For, fixing the seats of the minority involves the fixation of the seats of the majority. There is, therefore, no escape from the system of statutory majority, once it is conceded that the minority is not entitled to representation which would convert a majority into a minority. There is, therefore, no great force in the objections of the Hindus to a statutory majority of the Muslims in the Punjab, the North-West Frontier Province, Sind and Bengal. For, even in the Provinces where the Hindus are in a majority and the Muslims are in minority, the Hindus have got a statutory majority over the Muslims. At any rate, there is a parity of position and to that extent there can be said to be no ground for complaint.

This does not mean that because the objections set forth by the Hindus have no substance, there are no real grounds for opposing the Communal Award. There does exist a substantial ground of objection to the Communal Award, although, it does not appear to have been made the basis of attack by the Hindus.

This objection may be formulated in order to bring out its point in the following manner. The Muslim minorities in the Hindu Provinces insisted on separate electorates. The Communal Award gives them the right to determine that issue. This is really what it comes to when one remembers the usual position taken, viz., that the Muslim minorities could not be deprived of their separate electorates without their consent, and the majority community of the Hindus has been made to abide by their determination. The Hindu minorities in Muslim Provinces insisted that there should be joint electorates. Instead of conceding their claim, the Communal Award forced upon them the system of separate electorates to which they objected. If in the Hindu Provinces, the Muslim minorities are allowed the right of self-determination in

the matter of electorates, the question arises : Why are not the Hindu minorities in the Muslim Provinces given the right of self-determination in the matter of their electorates? What is the answer to this question? And, if there is no answer, there is undoubtedly a deep seated inequity in the Communal Award of His Majesty's Government, which calls for redress.

It is no answer that the Hindus also have a statutory majority based on separate electorates ³⁸[f.38] in those Provinces where the Musalmans are in a minority. A little scrutiny will show that there is no parity of position in these two cases. The separate electorates for the Hindu majorities in the Hindu Provinces are not a matter of their choice. It is a consequence resulting from the determination of the Muslim minorities who claimed to have separate electorates for themselves. A minority in one set of circumstances may think that separate electorates would be a better method of self-protection and may have no fear of creating against itself and by its own action a statutory majority based on separate electorates for the opposing community. Another minority or, for the matter of that, the same minority in a different set of circumstances would not like to create by its own action and against itself a statutory majority based upon separate electorates and may, therefore, prefer joint electorates to separate electorates as a better method of self-protection. Obviously the guiding principle, which would influence a minority, would be : Is the majority likely to use its majority in a communal manner and purely for communal purposes? If it felt certain that the majority community is likely to use its communal majority for communal ends, it may well choose joint electorates, because it would be the only method by which it would hope to take away the communal cement of the statutory majority by influencing the elections of the representatives of the majority community in the Legislatures. On the other hand, a majority community may not have the necessary communal cement, which alone would enable it to use its communal majority for communal ends, in which case a minority, having no fear from the resulting statutory majority and separate

electorates for the majority community, may well choose separate electorates for itself. To put it concretely, the Muslim minorities in choosing separate electorates are not afraid of the separate electorates and the statutory majority of the Hindus, because they feel sure that by reason of their deep-seated differences of caste and race the Hindus will never be able to use their majorities against the Muslims. On the other hand, the Hindu minorities in the Muslim Provinces have no doubt that, by reason of their social solidarity, the Muslims will use their statutory majority to set into operation a "Resolute Muslim Government", after the plan proposed by Lord Salisbury for Ireland as a substitute for Home Rule; with this difference, that Salisbury's Resolute Government was to last for twenty years only, while the Muslim Resolute Government was to last as long as the Communal Award stood."The situations, therefore, are not alike. The statutory majority of the Hindus based on separate electorates is the result of the choice made by the Muslim minority. The statutory majority of the Muslims based on separate electorates is something which is not the result of the choice of the Hindu minority. In one case, the Government of the Muslim minority by a Hindu communal majority is the result of the consent of the Muslim minority, In the other case, the Government of the Hindu minority by the Muslim majority is not the result of the consent of the Hindu minority, but is imposed upon it by the might of the British Government.

To sum up this discussion of the Communal Award, it may be said that, as a solution of the Communal Question in its "lesser intent", there is no inequity in the Award on the ground that it gives weightage to the Muslim minorities in the Hindu Provinces. For, it gives weightage also to Hindu minorities in Muslim Provinces. Similarly, it may be said that there is no inequity in the Award, on the ground that it gives a statutory majority to the Muslims in Muslim Provinces in which they are a majority. If there is any, the statutory limitation put upon the Muslim number of seats, also gives to the Hindus in Hindu Provinces a statutory majority. But the same cannot be said of the Award in the matter

of the electorates. The Communal Award is iniquitous inasmuch as it accords unequal treatment to the Hindu and Muslim minorities in the matter of electorates. It grants the Muslim minorities in the Hindu Provinces the right of self-determination in the matter of electorates, but it does not grant the same right to the Hindu minorities in the Muslim Provinces. In the Hindu Provinces, the Muslim minority is allowed to choose the kind of electorates it wants and the Hindu majority is not permitted to have any say in the matter. But in the Muslim Provinces, it is the Muslim majority which is allowed to choose the kind of electorates it prefers and the Hindu minority is not permitted to have any say in the matter. Thus, the Muslims in the Muslim Provinces having been given both statutory majority and separate electorates, the Communal Award must be said to impose upon the Hindu minorities Muslim rule, which they can neither alter nor influence.

This is what constitutes the fundamental wrong in the Communal Award. That this is a grave wrong must be admitted. For, it offends against certain political principles, which have now become axiomatic. First is, not to trust any one with unlimited political power. As has been well said,

“If in any state there is a body of men who possess unlimited political power, those over whom they rule can never be free. For, the one assured result of historical investigation is the lesson that uncontrolled power is invariably poisonous to those who possess it. They are always tempted to impose their canon of good upon others, and in the end, they assume that the good of the community depends upon the continuance of their power. Liberty always demands a limitation of political authority.....”

The second principle is that, as a King has no Divine Right to rule, so also a majority has no Divine Right to rule. Majority Rule is tolerated only because it is for a limited period and subject to the right to have it changed, and secondly because it is a rule of a political majority, i.e., majority which has submitted itself to the suffrage of a minority and not a communal majority. If such is the

limited scope of authority permissible to a political majority over a political minority, how can a minority of one community be placed under the perpetual subjection of a majority of another community? To allow a majority of one community to rule a minority of another community without requiring the majority to submit itself to the suffrage of the minority, especially when the minority demands it, is to enact a perversion of democratic principles and to show a callous disregard for the safety and security of the Hindu minorities.

II

To turn to the Communal Question in its "greater intent". What is it, that the Hindus say is a problem? In its greater intent the Communal Question relates to the deliberate creation of Muslim Provinces. At the time of the Lucknow Pact, the Muslims only raised the Communal Question in its lesser intent. At the Round Table Conference, the Muslims put forth, for the first time, the plan covered by the Communal Question in its greater intent. Before the Act of 1935, there were a majority of Provinces in which the Hindus were in a majority and the Muslims in a minority. There were only three Provinces in which the Muslims were in a majority and the Hindus in a minority. They were the Punjab, Bengal and the North-West Frontier Province. Of these, the Muslim majority in the North-West Frontier Province was not effective, because there was no responsible government in that province, the Montagu-Chemsford Scheme of Political Reforms not being extended to it. So, for all practical purposes, there were only two provinces—the Punjab and Bengal—wherein the Muslims were in majority and the Hindus in minority. The Muslims desired that the number of Muslim Provinces should be increased. With this object in view, they demanded that Sind should be separated from the Bombay Presidency and created into a new self-governing Province, and that the North-West Frontier Province, which was already a separate Province, should be raised to the status of a self-governing Province. Apart from other

considerations, from a purely financial point of view, it was not possible to concede this demand. Neither Sind nor the North-West Frontier Province were financially self-supporting. But in order to satisfy the Muslim demand, the British Government went to the length of accepting the responsibility of giving an annual subvention to Sind ³⁹[f.39] and North-West Frontier Province ⁴⁰[f.40] from the Central Revenues, so as to bring about a budgetary equilibrium in their finances and make them financially self-supporting.

These four Provinces with Muslims in majority and Hindus in minority, now functioning as autonomous and self-governing Provinces, were certainly not created for administrative convenience, nor for purposes of architectural symmetry—the Hindu Provinces poised against the Muslim Provinces. It is also true that the scheme of Muslim Provinces was not a matter of satisfying Muslim pride which demanded Hindu minorities under Muslim majorities to compensate the humiliation of having Muslim minorities under Hindu majorities. What was then, the motive underlying this scheme of Muslim Provinces? The Hindus say that the motive for the Muslim insistence, both on statutory majority and separate electorates, was to enable the Muslims in the Muslim Provinces to mobilize and make effective Muslim power in its exclusive form and to the fullest extent possible. Asked what could be the purpose of having the Muslim political power mobilized in this fashion, the Hindus answer that it was done to place in the hands of the Muslims of the Muslim Provinces an effective weapon to tyrannize their Hindu minorities, in case the Muslim minorities in the Hindu Provinces were tyrannized by their Hindu majorities. The scheme thus became a system of protection, in which blast was to be met by counter-blast, terror by terror and tyranny by tyranny. The plan is undoubtedly, a dreadful one, involving the maintenance of justice and peace by retaliation, and providing an opportunity for the punishment of an innocent minority, Hindus in Muslim Provinces and Muslims in Hindu Provinces, for the sins of their co-religionists in other

Provinces. It is a scheme of communal peace through a system of communal hostages.

That the Muslims were aware from the very start, that the system of communal Provinces was capable of being worked in this manner, is clear from the speech made by Maulana Abul Kalam Azad as President of the Muslim League Session held in Calcutta in 1927. In that speech the Maulana declared:—

“That by the Lucknow Pact they had sold away their interests. The Delhi proposals of March last opened the door for the first time to the recognition of the real rights of Musalmans in India. The separate electorates granted by the Pact of 1916 only ensured Muslim representation, but what was vital for the existence of the community was the recognition of its numerical strength. Delhi opened the way to the creation of such a state of affairs as would guarantee to them in the future of India a proper share. Their existing small majority in Bengal and the Punjab was only a census figure, but the Delhi proposals gave them for the first time five provinces of which no less than three (Sind, the Frontier Province and Baluchistan) contained a real overwhelming Muslim majority. If the Muslims did not recognise this great step they were not fit to live. There would now be nine Hindu provinces against five Muslim provinces, and whatever treatment Hindus accorded in the nine provinces, Muslims would accord the same treatment to Hindus in the five Provinces. Was not this a great gain? Was not a new weapon gained for the assertion of Muslim rights?”

That those in charge of these Muslim provinces know the advantage of the scheme, and do not hesitate to put it to the use for which it was intended, is clear from the speeches made not long ago by Mr. Fazl-ul-Huq, as Prime Minister of Bengal.

That this scheme of Communal Provinces, which constitutes the Communal Question in its larger intent, can be used as an engine of communal tyranny, there can be no doubt. The system of hostages, which is the essence of the scheme of communal

provinces, supported by separate electorates, is indeed insupportable on any ground. If this is the underlying motive of the demand for the creation of more Muslim Provinces, the system resulting from it is undoubtedly a vicious system.

This analysis leaves no doubt that the communal statutory majority based on separate communal electorates and the communal provinces, especially constituted to enable the statutory majority to tyrannize the minority, are the two evils which compose what is called, ' the Communal Problem '.

For the existence of this problem the Hindus hold the Muslims responsible and the Muslims hold the Hindus responsible. The Hindus accuse the Muslims of contumacy. The Muslims accuse Hindus of meanness. Both, however, forget that the communal problem exists not because the Muslims are extravagant and insolent in their demands and the Hindus are mean and grudging in their concessions. It exists and will exist wherever a hostile majority is brought face to face against a hostile minority. Controversies relating to separate *vs.* joint electorates, controversies relating to population ratio *vs.* weightage are all inherent in a situation where a minority is pitted against a majority. The best solution of the communal problem is not to have two communities facing each other, one a majority and the other a minority, welded in the steel-frame of a single government.

How far does Pakistan approximate to the solution of the Communal Question?

The answer to this question is quite obvious. If the scheme of Pakistan is to follow the present boundaries of the Provinces in the North-West and in Bengal, certainly it does not eradicate the evils which lie at the heart of the Communal Question. It retains the very elements which give rise to it, namely, the pitting of a minority against a majority. The rule of the Hindu minorities by the Muslim majorities and the rule of the Muslim Minorities by the Hindu majorities are the crying evils of the present situation. This very evil will reproduce itself in Pakistan, if the provinces marked

out for it are incorporated into it as they are, i.e., with boundaries drawn as at present. Besides this, the evil which gives rise to the Communal Question in its larger intent, will not only remain as it is but will assume a new malignity. Under the existing system, the power centered in the Communal Provinces to do mischief to their hostages is limited by the power which the Central Government has over the Provincial Governments. At present, the hostages are at least within the pale of a Central Government which is Hindu in its composition and which has power to interfere for their protection. But, when Pakistan becomes Muslim State with full sovereignty over internal and external affairs, it would be free from the control of the Central Government. The Hindu minorities will have no recourse to an outside authority with overriding powers, to interfere on their behalf and curb this power of mischief, as under the scheme, no such overriding authority is permitted to exist. So, the position of the Hindus in Pakistan may easily become similar to the position of the Armenians under the Turks or of the Jews in Tsarist Russia or in Nazi Germany. Such a scheme would be intolerable and the Hindus may well say that they cannot agree to Pakistan and leave their co-religionist as a helpless prey to the fanaticism of a Muslim National State.

III

This, of course, is a very frank statement of the consequences which will flow from giving effect to the scheme of Pakistan. But care must be taken to locate the source of these consequences. Do they flow from the scheme of Pakistan itself or do they flow from particular boundaries that may be fixed for it. If the evils flow from the scheme itself, i.e., if they are inherent in it, it is unnecessary for any Hindu to waste his time in considering it. He will be justified in summarily dismissing it. On the other hand, if the evils are the result of the boundaries, the question of Pakistan reduces itself to a mere question of changing the boundaries.

A study of the question amply supports the view that the evils of

Pakistan are not inherent in it. If any evil results follow from it they will have to be attributed to its boundaries. This becomes clear if one studies the distribution of population. The reasons why these evils will be reproduced within Western and Eastern Pakistan is because, with the present boundaries, they do not become single ethnic states. They remain mixed states, composed of a Muslim majority and a Hindu minority as before. The evils are the evils which are inseparable from a mixed state. If Pakistan is made a single unified ethnic state, the evils will automatically vanish. There will be no question of separate electorates within Pakistan, because in such a homogeneous Pakistan, there will be no majorities to rule and no minorities to be protected. Similarly, there will be no majority of one community to hold, in its possession, a minority of an opposing community.

The question, therefore, is one of demarcation of boundaries and reduces itself to this : Is it possible for the boundaries of Pakistan to be so fixed, that instead of producing a mixed state composed of majorities and minorities, with all the evils attendant upon it, Pakistan will be an ethnic state composed of one homogeneous community, namely Muslims? The answer is that in a large part of the area affected by the project of the League, a homogeneous state can be created by shifting merely the boundaries, and in the rest, homogeneity can be produced by shifting only the population.

In this connection, I invite the reader to study carefully the figures given in the Appendices V, X, XI showing the distribution of the population in the areas affected, and also the maps showing how new boundaries can create homogeneous Muslim States. Taking the Punjab, two things will be noted :—

- (i) (i) There are certain districts in which the Musalmans predominate. There are certain districts in which the Hindus predominate. There are very few in which the two are, more or less, evenly distributed; and
- (ii) (ii) The districts in which Muslims predominate and

the districts in which the Hindus predominate are not interspersed. The two sets of districts form two separate areas.

For the formation of the Eastern Pakistan, one has to take into consideration the distribution of population in both the Provinces of Bengal and Assam. A scrutiny of the population figures shows—

- (i) (i) In Bengal, there are some districts in which the Muslims predominate. In others, the Hindus predominate.
- (ii) (ii) In Assam also, there are some districts in which the Muslims predominate. In others, the Hindus predominate.
- (iii) (iii) Districts in which the Muslims predominate and those in which the Hindus predominate are not interspersed. They form separate areas.
- (iv) (iv) The districts of Bengal and Assam in which the Muslims predominate are contiguous.

Given these facts, it is perfectly possible to create homogeneous Muslim States out of the Punjab, Bengal and Assam by drawing their boundaries in such a way that the areas which are predominantly Hindu shall be excluded. That this is possible is shown by the maps given in the appendix.

In the North-West Frontier Province and Sind, the situation is rather hard. How the matter stands in the North-West Frontier Province and Sind may be seen by an examination of the figures given in the appendices VI to IX. As may be seen from the appendices, there are no districts in which the Hindus in the North-West Frontier Province and Sind are concentrated. They are scattered and are to be found in almost every district of the two provinces in small, insignificant numbers. These appendices show quite unmistakably that the Hindus in Sind and the North-West Frontier Province are mostly congregated in urban areas of the districts. In Sind, the Hindus outnumber the Muslims in most of the towns, while the Muslims outnumber the Hindus in villages. In

the North-West Frontier Province, the Muslims outnumber the Hindus in towns as well as in villages.

The case of the North-West Frontier Province and Sind, therefore, differs totally from the case of the Punjab and Bengal. In the Punjab and Bengal, owing to the natural segregation of the Hindus and Muslims in different areas, it is possible to create a homogeneous State by merely altering their boundaries, involving the shifting of the population in a very small degree. But in the North-West Frontier Province and Sind, owing to the scattered state of the Hindu population, alteration of boundaries cannot suffice for creating a homogeneous State. There is only one remedy and that is to shift the population.

Some scoff at the idea of the shifting and exchange of population. But those who scoff can hardly be aware of the complications, which a minority problem gives rise to and the failures attendant upon almost all the efforts made to protect them. The constitutions of the post-war states, as well as of the older states in Europe which had a minority problem, proceeded on the assumption that constitutional safeguards for minorities should suffice for their protection and so the constitutions of most of the new states with majorities and minorities were studded with long lists of fundamental rights and safeguards to see that they were not violated by the majorities. What was the experience? Experience showed that safeguards did not save the minorities. Experience showed that even a ruthless war on the minorities did not solve the problem. The states then agreed that the best way to solve it was for each to exchange its alien minorities within its border, for its own which was without its border, with a view to bring about homogeneous States. This is what happened in Turkey, Greece and Bulgaria. Those, who scoff at the idea of transfer of population, will do well to study the history of the minority problem, as it arose between Turkey, Greece and Bulgaria. If they do, they will find that these countries found that the only effective way of solving the minorities problem lay in

exchange of population. The task undertaken by the three countries was by no means a minor operation. It involved the transfer of some 20 million people from one habitat to another. But undaunted, the three shouldered the task and carried it to a successful end because they felt that the considerations of communal peace must outweigh every other consideration.

That the transfer of minorities is the only lasting remedy for communal peace is beyond doubt. If that is so, there is no reason why the Hindus and the Muslims should keep on trading in safeguards which have proved so unsafe. If small countries, with limited resources like Greece, Turkey and Bulgaria, were capable of such an undertaking, there is no reason to suppose that what they did cannot be accomplished by Indians. After all, the population involved is inconsiderable and because some obstacles require to be removed, it would be the height of folly to give up so sure a way to communal peace.

There is one point of criticism to which no reference has been made so far. As it is likely to be urged, I propose to deal with it here. It is sure to be asked, how will Pakistan affect the position of the Muslims that will be left in Hindustan? The question is natural because the scheme of Pakistan does seem to concern itself with the Muslim majorities who do not need protection and abandons the Muslim minorities who do. But the point is : who can raise it? Surely not the Hindus. Only the Muslims of Pakistan or the Muslims of Hindustan can raise it. The question was put to Mr. Rehmat Ali, the protagonist of Pakistan and this is the answer given by him :—

"How will it affect the position of the forty five million Muslims in Hindustan proper?

“The truth is that in this struggle their thought has been more than a wrench to me. They are the flesh of our flesh and the soul of our soul. We can never forget them ; nor they, us. Their present position and future security is, and shall ever be, a matter

of great importance to us. As things are at present, Pakistan will not adversely affect their position in Hindustan. On the basis of population (one Muslim to four Hindus), they will still be entitled to the same representation in legislative as well as administrative fields which they possess now. As to the future, the only effective guarantee we can offer is that of reciprocity, and, therefore, we solemnly undertake to give all those safeguards to non-Muslim minorities in Pakistan which will be conceded to our Muslim minority in Hindustan.

“But what sustains us most is the fact that they know we are proclaiming Pakistan in the highest interest of the 'Millet'. It is as much theirs as it is ours. While for us it is a national citadel, for them it will ever be a moral anchor. So long as the anchor holds, everything is or can be made safe. But once it gives way, all will be lost”.

The answer given by the Muslims of Hindustan is equally clear. They say, “We are not weakened by the separation of Muslims into Pakistan and Hindustan. We are better protected by the existence of separate Islamic States on the Eastern and Western borders of Hindustan than we are by their submersion in Hindustan.” Who can say that they are wrong? Has it not been shown that Germany as an outside state was better able to protect the Sudeten Germans in Czechoslovakia than the Sudetens were able to do themselves?⁴¹[f.41]

Be that as it may, the question does not concern the Hindus. The question that concerns the Hindus is : How far does the creation of Pakistan remove the communal question from Hindustan? That is a very legitimate question and must be considered. It must be admitted that by the creation of Pakistan, Hindustan is not freed of the communal question. While Pakistan can be made a homogeneous state by redrawing its boundaries, Hindustan must remain a composite state. The Musalmans are scattered all over Hindustan—though they are mostly congregated in towns—and no ingenuity in the matter of redrawing of

boundaries can make it homogeneous. The only way to make Hindustan homogeneous is to arrange for exchange of population. Until that is done, it must be admitted that even with the creation of Pakistan, the problem of majority *vs.* minority will remain in Hindustan as before and will continue to produce disharmony in the body politic of Hindustan.

Admitting that Pakistan is not capable of providing a complete solution of the Communal Problem within Hindustan, does it follow that the Hindus on that account should reject Pakistan? Before the Hindus draw any such hasty conclusion, they should consider the following effects of Pakistan.

First, consider the effect of Pakistan on the magnitude of the communal Problem. That can be best gauged by reference to the Muslim population as it will be grouped within Pakistan and Hindustan.

Muslim Popu Pakista	What do these figures indicate? What they indicate is that the Muslims who will be left in British Hindustan will be only 18,545,465 and the rest 47,897,301, forming a vast majority of the total Muslim population, will be out of it and will be the subjects of Pakistan States. This distribution of the Muslim population, in terms of the communal problem, means that while without Pakistan the communal problem in India involves 6 1/2 crores of Muslims, with the creation of Pakistan it will involve only 2 crores of Muslims. Is this to be no consideration for Hindus who want communal peace? To me, it seems that if Pakistan does not solve the communal problem within Hindustan, it substantially reduces its proportion and makes it of minor significance and much easier of peaceful solution.
1. Punjab	1
2. N.W.F.P.	2
3. Sind	2
4. Baluchistan	4
5. Eastern Bengal	2
Muslim States	In the second place, let the Hindus consider the effect of Pakistan on the communal representation in the Central Legislature. The following table gives the distribution of seats in the Central Legislature, as prescribed under the Government of India Act, 1935 and as it would be, if Pakistan came into being.
(i) Eastern Bengal	2
(ii) Sylhet	1
Total	4

Name of the Chamber	Distribution of seats.	
	I—As at present.	II.—After Pakistan.
	Non	Non-

	Total seats.	Muslim (Hindu) Territorial Seats.	Muslim Territorial Seats.	Total seats.	Muslim (Hindu) Territorial Seats.	Muslim Territorial Seats.
Council of State.	150	75	49	126	75	25
Federal Assembly.	250	105	82	211	105	43

To bring out clearly the quantitative change in the communal distribution of seats, which must follow the establishment of Pakistan, the above figures are reduced to percentage in the table that follows:—

Name of the Chamber.	Distribution of seats.		Distribution of seats.	
	1.—As at present.		II.—After Pakistan	
	Percent age of Muslim	Percent age of Muslim	Percent age of Muslim	Percent age of Muslim

	seats to Hindu seats.	scats to total seats.	seats to Hindu seats.	seats to total seats.
Council of State	33	66	25	33 1/3,
Federal Assembl y	33	80	21	40

From this table one can see what vast changes must follow the establishment of Pakistan. Under the Government of India Act, the ratio of Muslim seats to the total is 33% in both the Chambers, but to the Hindu seats, the ratio is 66% in the Council of State and 80% in the Assembly—almost a position of equality with the Hindus. After Pakistan, the ratio of Muslim seats to the total seats falls from 33 1/3 % to 25% in the Council and to 21% in the Assembly, while the ratio to Hindu seats falls from 66% to 33 1/3 % in the Council and from 80% to 40% in the Assembly. The figures assume that the weightage given to the Muslims will remain the same, even after Hindustan is separated from Pakistan. If the present weightage to Muslims is cancelled or reduced, there would be further improvement in the representation of the Hindus. But assuming that no change in weightage is made, is this a small gain to the Hindus in the matter of representation at the Centre? To me, it appears that it is a great improvement in the position of the Hindus at the Centre, which would never come to them, if they oppose Pakistan.

These are the material advantages of Pakistan. There is another which is psychological. The Muslims, in Southern and Central India, draw their inspiration from the Muslims of the North and the East. If after Pakistan there is communal peace in the North and the East, as there should be, there being no majorities and minorities therein, the Hindus may reasonably expect communal

peace in Hindustan. This severance of the bond between the Muslims of the North and the East and the Muslims of Hindustan is another gain to the Hindus of Hindustan.

Taking into consideration these effects of Pakistan, it cannot be disputed that if Pakistan does not wholly solve the communal problem within Hindustan, it frees the Hindus from the turbulence of the Muslims as predominant partners. It is for the Hindus to say whether they will reject such a proposal, simply because it does not offer a complete solution. Some gain is better than much harm.

IV

One last question and this discussion of Pakistan in relation to communal peace may be brought to a close. Will the Hindus and the Muslims of the Punjab and Bengal agree to redraw the boundaries of their provinces to make the scheme of Pakistan as flawless as it can be made?

As for the Muslims, they ought to have no objection to redrawing the boundaries. If they do object, it must be said that they do not understand the nature of their own demand. This is quite possible, since the talk that is going on among Muslim protagonists of Pakistan, is of a very loose character. Some speak of Pakistan as a Muslim National State, others speak of it as a Muslim National Home. Neither care to know whether there is any difference between a National State and a National Home. But there can be no doubt that there is a vital difference between the two. What that difference is was discussed at great length at the time of constituting in Palestine a Jewish National Home. It seems that a clear conception of what this difference is, is necessary, if the likely Muslim opposition to the redrawing of the boundaries is to be overcome.

According to a leading authority :—

“A National Home connotes a territory in which a people,

without receiving the rights of political sovereignty, has nevertheless a recognised legal position and receives the opportunity of developing its moral, social and intellectual ideals.”

The British Government itself, in its statement on Palestine policy issued in 1922, defined its conception of the National Home in the following terms :—

“When it is asked what is meant by the development of the Jewish National Home in Palestine, it may be answered that it is not the imposition of a Jewish nationality upon the inhabitants of Palestine as a whole, but the further development of the existing Jewish Community, with the assistance of Jews in other parts of the world, in order that it may become a centre in which the Jewish people as a whole may take, on grounds of religion and race, an interest and a pride. But in order that this community should have the best prospect of free development and provide a full opportunity for the Jewish people to display its capacities, it is essential that it should be known that it is in Palestine as of right and not on sufferance. This is the reason why it is necessary that the existence of a Jewish National Home in Palestine should be internationally guaranteed, and that it should be formally recognized to rest upon ancient historic connection.”

From this, it will be clear that there is an essential difference between a National Home and a National State. The difference consists in this : in the case of a National Home, the people who constitute it do not receive the right of Political sovereignty over the territory and the right of imposing their nationality on others also living in that territory. All that they get, is a recognized legal position guaranteeing them the right to live as citizens and freedom to maintain their culture. In the case of a National State, people constituting it, receive the rights of political sovereignty with the right of imposing their nationality upon the rest.

This difference is very important and it is in the light of this that one must examine their demand for Pakistan. What do the Muslim

want Pakistan for? If they want Pakistan to create a National Home for Muslims, there is no necessity for Pakistan. In the Pakistan Provinces, they already have their National Home with the legal right to live and advance their culture. If they want Pakistan to be a National Muslim State, they are claiming the right of political sovereignty over the territory included in it. This they are entitled to do. But the question is : Should they be allowed to retain, within the boundaries of these Muslim States, Non-Muslim minorities as their subjects, with a right to impose upon them the nationality of these Muslim States? No doubt, such a right is accepted to be an accompaniment of political sovereignty. But it is equally true that in all mixed States, this right has become a source of mischief in modern times. To ignore the possibilities of such mischief in the creation of Pakistan will be to omit to read the bloody pages of recent history on which have been recorded the atrocities, murders, plunders and arsons committed by the Turks, Greeks, Bulgars and the Czechs against their minorities. It is possible to take away from a state this right of imposing its nationality upon its subjects, because it is incidental to political sovereignty. But it is possible not to provide any opportunity for the exercise of such a right. This can be done by allowing the Muslims to have such National Muslim States as are strictly homogeneous, strictly ethnic states. Under no circumstances can they be allowed to carve out mixed states composed of Muslims opposed to Hindus, with the former superior in number to the latter.

This is probably not contemplated by the Muslims who are the authors of Pakistan. It was certainly not contemplated by Sir M. Iqbal, the originator of the scheme. In his Presidential address to the Muslim League in 1930, he expressed his willingness to agree to "the exclusion of Ambala Division and perhaps of some other districts where non-Muslims predominate" on the ground that such exclusion "will make it less extensive and more Muslim in population". On the other hand, it may be that those who are putting forth the Scheme of Pakistan, do contemplate that it will

include the Punjab and Bengal with their present boundaries. To them it must become clear, that to insist upon the present boundaries is sure to antagonise even those Hindus who have an open mind on the question. The Hindus can never be expected to consent to the inclusion of the Hindus in a Muslim State deliberately created for the preservation and propagation of Muslim faith and Muslim culture. The Hindus will no doubt oppose. Muslims must not suppose that it will take long to find them out. Muslims, if they insist upon the retention of the present boundaries, will open themselves to the accusation that behind their demand for Pakistan there is something more sinister than a mere desire to create a National Home or a National State. They will be accused of a design to perfect the scheme of Hindu hostages in Muslim hands by increasing the balance of Muslim majorities against Hindu minorities in the Muslim areas.

So much, for considerations which ought to weigh with the Muslims in the matter of changing the provincial boundaries to make Pakistan.

Now, as to the considerations which ought to weigh with the Hindus of the Punjab and Bengal. The Hindus are the more difficult of the two parties to the question. In this connection it is enough to consider the reaction of the high caste Hindus only. For, it is they who guide the Hindu masses and form Hindu opinion. Unfortunately, the high caste Hindus are bad as leaders. They have a trait of character which often leads the Hindus to disaster. This trait is formed by their acquisitive instinct and aversion to share with others the good things of life. They have a monopoly of education and wealth, and with wealth and education they have captured the State. To keep this monopoly to themselves has been the ambition and goal of their life. Charged with this selfish idea of class domination, they take every move to exclude the lower classes of Hindus from wealth, education and power, the surest and the most effective being the preparation of scriptures, inculcating upon the minds of the lower classes of

Hindus the teaching that their duty in life is only to serve the higher classes. In keeping this monopoly in their own hands and excluding the lower classes from any share in it, the high caste Hindus have succeeded for a long time and beyond measure, it is only recently that the lower class Hindus rose in revolt against this monopoly by starting the Non-Brahmin Parties in the Madras and the Bombay Presidencies and the C. P. Still the high caste Hindus have successfully maintained their privileged position. This attitude of keeping education, wealth and power as a close preserve for themselves and refusing to share it, which the high caste Hindus have developed in their relation with the lower classes of Hindus, is sought to be extended by them to the Muslims. They want to exclude the Muslims from place and power, as they have done to the lower class Hindus. This trait of the high caste Hindus is the key to the understanding of their politics.

Two illustrations reveal this trait of theirs. The Hindus in 1929 opposed the separation of Sind from the Bombay Presidency before the Simon Commission, strenuously and vehemently. But in 1915, the Hindus of Sind put forth the opposite plea and wanted Sind to be separated from Bombay. The reason in both the cases was the same. In 1915, there was no representative Government in Sind, which, if there was one would have undoubtedly been a Muslim Government. The Hindus advocated separation because in the absence of a Muslim Government, they could obtain jobs in Government in a greater degree. In 1929, they objected to the separation of Sind because they knew that a separate Sind would be under a Muslim Government, and a Muslim Government was sure to disturb their monopoly and displace them to make room for Muslim candidates. The opposition of the Bengali Hindus to the Partition of Bengal is another illustration of this trait of the high caste Hindus. The Bengali Hindu had the whole of Bengal, Bihar, Orissa, Assam and even U. P. for his pasture. He had captured the civil service in all these Provinces. The partition of Bengal meant a diminution in the

area of this pasture. It means that the Bengali Hindu was to be ousted from Eastern Bengal to make room for the Bengali Musalman who had so far no place in the civil service of Bengal. The opposition to the partition of Bengal on the part of the Bengali Hindus, was due principally to their desire not to allow the Bengal Musalmans to take their place in Eastern Bengal. Little did the Bengali Hindus dream that by opposing partition and at the same time demanding Swaraj they were preparing the way for making the Musalmans the rulers of both Eastern as well as Western Bengal.

These thoughts occur to one's mind because one fears that the high caste Hindus, blinded by their hereditary trait, might oppose Pakistan for no other reason except that it limits the field for their self-seeking careers. Among the many reasons that might come in the way of Pakistan, one need not be surprised, if one of them happens to be the selfishness of the high caste Hindus.

There are two alternatives for the Hindus of the Punjab and Bengal and they may be asked to face them fairly and squarely. The Muslims in the Punjab number 13,332,460 and the Hindus, with Sikhs and the rest, number 11,392,732. The difference is only 1,939,728. This means that the Muslim majority in the Punjab is only a majority of 8 p.c. Given these facts, which is better: To retain the unity of the Punjab and allow the Muslim majority of 54 p.c. to rule the Hindu minority of 46 p.c. or to redraw the boundaries, to allow the Muslims and the Hindus to be under separate national states, and thus rescue the whole body of Hindus from the terrors of the Muslim rule?

The Muslims in Bengal number 27,497,624 and the Hindus number 21,570,407. The difference is only of 5,927,217. This means that the Muslim majority in Bengal is only a majority of 12 p.c. Given these facts, which is better: To oppose the creation of a National Muslim State out of Eastern Bengal and Sylhet by refusing to redraw the boundaries and allow the Muslim majority of only 12 p.c. to rule the Hindu minority of 44 p.c.; or to consent

to redraw the boundaries, to have Muslims and Hindus placed under separate National States, and thus rescue the 44 p.c. of the Hindus from the horrors of the Muslim rule?

Let the Hindus of Bengal and the Punjab consider which alternative they should prefer. It seems to me that the moment has come when the high caste Hindus of Bengal and the Punjab should be told that if they propose to resist Pakistan, because it cuts off a field for gainful employment, they are committing the greatest blunder. The time for successfully maintaining in their own hands a monopoly of place and power is gone. They may cheat the lower orders of the Hindus in the name of nationalism, but they cannot cheat the Muslim majorities in the Muslim Provinces and keep their monopoly of place and power. The resolution of the Hindus—if their cry against Pakistan can be regarded as such—to live under a Muslim majority and oppose self-determination may be a very courageous thing. But it will not be a very wise thing if the Hindus believe that they will be able to maintain their place and power by fooling the Musalmans. As Lincoln said, it is not possible to fool all people for all times. If the Hindus choose to live under a Muslim majority the chances are that they may lose all. On the other hand, if the Hindus of Bengal and the

Punjab agree to separate, true, they will not get more, but they will certainly not lose all.

Part III - WHAT IF NOT PAKISTAN?

Chapter VII : Hindu alternative to Pakistan**Chapter VIII : Muslim alternative to Pakistan****Chapter IX : Lessons from abroad****Part III****WHAT IF NOT PAKISTAN?**

Having stated the Muslim case for Pakistan and the Hindu case against it, it is necessary to turn to the alternatives to Pakistan, if there be any. In forming one's judgement on Pakistan, one must take into account the alternatives to it. Either there is no alternative to Pakistan : or there is an alternative to Pakistan, but it is worse than Pakistan. Thirdly, one must also take into consideration what would be the consequences, if neither Pakistan nor its alternative is found acceptable to the parties concerned. The relevant data, having a bearing on these points, are presented in this part under the following heads :—

- 1 1 *Hindu alternative to Pakistan.*
- 2 2 *Muslim alternative to Pakistan.*
- 3 3 *Lessons from abroad.*

CHAPTER VII**HINDU ALTERNATIVE TO PAKISTAN****I**

Thinking of the Hindu alternative to Pakistan, the scheme that at once comes to one's mind is the one put forth by the late Lala Hardayal in 1925. It was published in the form of a statement which appeared in the *Pratap* of Lahore. In this statement, which he called his political testament, Lala Hardayal said:—

“I declare that the future of the Hindu race, of Hindustan and of the Punjab, rests on these four pillars: (1) Hindu Sangalhan, (2) Hindu Raj, (3) Shuddhi of Moslems, and (4) Conquest and Shuddhi

of Afghanistan and the Frontiers. So long as the Hindu nation does not accomplish these four things, the safety of our children and great-grandchildren will be ever in danger, and the safety of the Hindu race will be impossible. The Hindu race has but one history, and its institutions are homogeneous. But the Musalmans and Christians are far removed from the confines of Hindustan, for their religions are alien and they love Persian, Arab and European institutions. Thus, just as one removes foreign matter from the eye, Shuddhi must be made of these two religions. Afghanistan and the hilly regions of the frontier were formerly part of India, but are at present under the domination of Islam.... Just as there is Hindu religion in Nepal, so there must be Hindu institutions in Afghanistan and the frontier territory; otherwise it is useless to win Swaraj. For mountain tribes are always warlike and hungry. If they become our enemies, the age of Nadirshah and Zamanshah will begin anew. At present English officers are protecting the frontiers; but it cannot always be..... If Hindus want to protect themselves, they must conquer Afghanistan and the frontiers and convert all the mountain tribes."

I do not know how many Hindus would come forward to give their support to this scheme of Lala Hardayal as an alternative to Pakistan.

¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40D.Pakistan or the Partition of India PART III.htm - _msocom_1

In the first place, Hindu religion is not a proselytising religion. Maulana Mahomed Ali was quite right when, in the course of his address as President of the Congress, he said:

“Now, this has been my complaint for a long time against Hinduism, and on one occasion, lecturing at Allahabad in 1907, I had pointed out the contrast between Musalmans and Hindus, by saying that the worst that can be said of a Muslim was that he had a tasteless mess which he called a dish fit for kings, and wanted all to share it with him, thrusting it down the throats of such as did not relish it and would rather not have it, while his Hindu brother, who prided himself on his cookery, retired into the privacy of his kitchen and greedily devoured all that he had cooked, without permitting even the

shadow of his brother to fall on his food, or sparing even a crumb for him. This was said not altogether in levity; and in fact, I once asked Mahatma Gandhi to justify this feature of his faith to me.”

What answer the Mahatma gave to his question, Mr. Mahmed Ali did not disclose. The fact is that however much the Hindus may wish, Hindu religion cannot become a missionary religion like Islam or Christianity. It is not that the Hindu religion was never a missionary religion. On the contrary, it was once a missionary religion—indeed could not but have been a missionary religion, otherwise it is difficult to explain how, it could have spread over an area so vast as the Indian continent. ²mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40D.Pakistan or the Partition of India PART III.htm - _msocom_2 But once a missionary religion, Hinduism perforce ceased to be a missionary religion after the time when the Hindu society developed its system of castes. For, caste is incompatible with conversion. To be able to convert a stranger to its religion, it is not enough for a community to offer its creed. It must be in a position to admit the convert to its social life and to absorb and assimilate him among its kindred. It is not possible for the Hindu society to satisfy this prerequisite of effective conversion. There is nothing to prevent a Hindu, with a missionary zeal, to proceed to convert an alien to the Hindu faith. But before he converts the alien, he is bound to be confronted with the question: What is to be the caste of the convert? According to the Hindus, for a person to belong to a caste he must be born in it. A convert is not born in a caste, therefore he belongs to no caste. This is also an important question. More than political or religious, man is a social animal. He may not have, need not have, religion ; he may not have, need not have, politics. He must have society; he cannot do without society. For a Hindu to be without caste is to be without society. Where there is no society for the convert, how can there be any conversion? So long as Hindu society is fragmented in autonomous and autogenic castes, Hindu religion cannot be a missionary religion. The conversion of the Afghans and the frontier tribes to Hinduism is, therefore, an idle dream.

In the second place, Lala Hardayal's scheme must call for financial resources the immensity of which it is hardly possible to compute. , Who can furnish the funds necessary for the conversion of the Afghans and the Frontier Tribesmen to Hinduism? The Hindus, having ceased to convert others to their faith for a long time, have also lost the zeal for conversion. Want of zeal is bound to affect the question of finances. Further, Hindu society being moulded in the cast of the *Chaturvarna*, wealth has, from very ancient times, been most unevenly distributed. It is only the Baniya who is the heir to wealth and property among the Hindus. There are, of course, the landlords who are the creation of foreign invaders or native rebels, but they are not as numerous as the Baniya. The Baniya is money-made and his pursuits are solely for private gain. He knows no other use of money except to hold it and to transmit it to his descendants. Spread of religion or acquisition and promotion of culture do not interest him. Even decent living has no place in his budget. This has been his tradition for ages. If money is expected, he is not much above the brute in the conception and manner of life. Only one new service, on the expenditure side, has found a place in his budget. That service is politics. This happened since the entry of Mr. Gandhi as a political leader. That new service is the support of Gandhian politics. Here again, the reason is not love of politics. The reason is to make private gain out of public affairs. What hope is there that such men will spend money on such a bootless cause as the spread of Hindu religion among the Afghans and Frontier Tribes?

Thirdly, there is the question of facilities for conversion that may be available in Afghanistan. Lala Hardayal evidently thought that it is possible to say in Afghanistan, with the same impunity as in Turkey, that the Koran is wrong or out of date. Only one year before the publication of his political testament by Lala Hardayal, i.e., in 1924; one Niamatulla—a follower of Mirza Ghulam Ahamed of Quadiyan—who claimed to be the messiah and Mahdi and a prophet of a sort—was stoned to death ³ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40D.Pakistan or the Partition of India PART III.htm - _msocom_3 at Kabul by the order of the highest ecclesiastical tribunal of Afghanistan. The crime of this man was, as reported by a Khilafat paper, that he was professing and preaching ideas

and beliefs, inconsistent with Islam and Shariat. This man, says the same paper, was stoned to death according to the agreeing judgements of the first Shariat (canon) Court, the Central Appellate Court and the Ulema and Divines of the final Appellate Committee of the Ministry of Justice. In the light of these difficulties, the scheme must be said to be wild in its conception and is sure to prove ruinous in its execution. It is adventurous in character and is too fantastic to appeal to any reasonable man except perhaps some fanatical Arya Samajists of the Punjab.

II

The stand taken by Hindu Mahasabha has been defined by Mr. V. D. Savarkar, the President of the Sabha, in his presidential addresses at the annual sessions of the Sabha. As defined by him, the Hindu Maha Sabha is against Pakistan and proposes to resist it by all means. What these means are we do not know. If they are force, coercion and resistance, they are only negative alternatives and Mr. Savarkar and the Hindu Maha Sabha alone can say how far these means will succeed.

It would, however, not be fair to Mr. Savarkar to say that he has only a negative attitude towards the claim put forth by the Muslims of India. He has put forth his positive proposals in reply to them.

To understand his positive proposals, one must grasp some of his basic conceptions. Mr. Savarkar lays great stress on a proper understanding of the terms, Hinduism, Hindutva and Hindudom. He says : ⁴mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40D.Pakistan or the Partition of India PART III.htm - _msocom_4

“In expounding the ideology of the Hindu movement, it is absolutely necessary to have a correct grasp of the meaning attached to these three terms. From the word”Hindu”has been coined the word”Hinduism”in English. It means the schools or system of Religion the Hindus follow. The second word”Hindutva”is far more comprehensive and refers not only to the religious aspects of the Hindu people as the

word "Hinduism" does but comprehend even their cultural, linguistic, social and political aspects as well. It is more or less akin to "Hindu Polity" and its nearly exact translation would be "Hinduness". The third word "Hindudom" means the Hindu people spoken of collectively. It is a collective name for the Hindu World, just as Islam denotes the Moslem World."

Mr. Savarkar takes it as a gross misrepresentation to say that the Hindu Maha Sabha is a religious body. In refutation of this misrepresentation, Mr. Savarkar says :

⁵mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40D.Pakistan or the Partition of India PART III.htm - _msocom_5

"It has come to my notice that a very large section of the English educated Hindus hold back from joining the Hindu Maha Sabha... under the erroneous idea that it is an exclusively Religious organization— something like a Christian Mission. Nothing could be far from truth. The Hindu Maha Sabha is not a Hindu Mission. It leaves Religious questions regarding theism, monotheism. Pantheism or even atheism to be discussed and determined by the different Hindu schools of religious persuasions. It is not a Hindu Dharma Maha Sabha, but a Hindu National Maha Sabha. Consequently by its very constitution it is debarred to associate itself exclusively as a partisan with any particular religious school or sect even within the Hindu fold. As a national Hindu body it will of course propagate and defend the National Hindu Church comprising each and all religions of Hindusthani origin against any non-Hindu attack or encroachment. But the sphere of its activity is far more comprehensive than that of an exclusively religious body. The Hindu Maha Sabha identifies itself with the National life of Hindudom in all its entirety, in all its social, economical, cultural and above all political aspects and is pledged to protect and promote all that contributes to the freedom, strength and glory of the Hindu Nation; and as an indispensable means to that end to attain Puma Swarajya, absolute political Independence of Hindusthan by all legitimate and proper means."

Mr. Savarkar does not admit that the Hindu Maha Sabha is started to counteract the Muslim League and that as soon as the problems arising out of the Communal Award are solved to the satisfaction of both Hindus and Musalmans, the Hindu Maha Sabha will vanish. Mr. Savarkar insists that the Hindu Maha Sabha must continue to function even after India becomes politically free. He says : ‘[f.6]

"..... Many a superficial critic seems to fancy that the Maha Sabha was only contrived to serve as a make-weight, as a reaction checkmating the Moslem League or the anti-Hindu policy of the present leaders of the Congress and will be out of court or cease automatically 10 function as soon as it is shorne of this spurious excuse to exist. But if the aims and object of the Maha Sabha mean anything it is clear that it was not the outcome of any frothy effusion, any fussy agitation to remove a grievance here or oppose a seasonal party there. The fact is that every organism whether, individual or social which is living and deserves to survive throws out offensive and defensive organs as soon as it is brought to face adversely changing environments. The Hindu Nation too as soon as it recovered and freed itself from the suffocating grip of the pseudo-nationalistic ideology of the Congress brand developed a new organ to battle in the struggle for existence under the changed conditions of modem age. This was the Hindu Maha Sabha. It grew up of a fundamental necessity of the National life and not of any ephemeral incident. The constructive side of its aims and objects make it amply clear that its mission is as abiding as the life of the Nation itself. But that apart, even the day to day necessity of adapting its policy to the ever changing political currents makes it incumbent on Hindudom to have an exclusively Hindu organization independent of any moral or intellectual servility or subservience to any non-Hindu or jointly representative institution, to guard Hindu interests and save them from being jeopardised. It is not so, only under the present political subjection of Hindustan but it will be all the more necessary to have some such exclusively Hindu organization, some such Hindu Maha Sabha in substance whether it is identical with this present organization or otherwise to -serve as a watchtower at the gates of

Hindudom for at least a couple of centuries to come, even after Hindustan is partially or wholly free and a National Parliament controls its political destiny.

“Because, unless something altogether cataclysmic in nature upsets the whole political order of things in the world which practical politics cannot envisage today, all that can be reasonably expected in immediate future is that we Hindus may prevail over England and compel her to recognise India as a self-governing unit with the status contemplated in the Westminster Statute. Now a National Parliament in such a self-governing India can only reflect the electorate as it is, the Hindus and the Moslems as we find them, their relations a bit bettered, perhaps a bit worsened. No realist can be blind to the probability that the extraterritorial designs and the secret urge goading on the Moslems to transform India into a Moslem state may at any time confront the Hindustani state even under self-government either with a Civil War or treacherous overtures to alien invaders by the Moslems. Then again there is every likelihood that there will ever continue at least for a century to come a danger of fanatical riots, the scramble for services, legislative seats, weightages out of proportion to their population on the part of the Moslem minority and consequently a constant danger threatening internal peace. To checkmate this probability which if we are wise we must always keep in view even after Hindustan attains the status of a self-governing country, a powerful and exclusive organization of Hindudom like the Hindu MahaSabha will always prove a sure and devoted source of strength, a reserve force for the Hindus to fall back upon to voice their grievances more effectively than the joint Parliament can do, to scent danger ahead, to warn the Hindus in lime against it and to fight out if need be any treacherous design to which the joint state itself may unwittingly fall a victim.

"The History of Canada, of Palesline, of the movement of the Young Turks will show you that in every slate where two or more such conflicting elements as the Hindus and Moslems in India happen to exist as constituents, the wiser of them has to keep its

exclusive organization intact, strong and watchful to defeat any attempt at betrayal or capture of the National State by the opposite party; especially so if that party has extra-territorial affinities, religious or cultural, with alien bordering states."

Having stated what is Hindustan, and what is Hindu Maha Sabha, Mr. Savarkar next proceeds to define his conception of Swaraj. According to Mr. Savarkar : ⁷[f.7]

"Swaraj to the Hindus must mean only that in which their "Swaraj", their "Hindutva" can assert itself without being overlorded by any non-Hindu people, whether they be Indian Territorials or extra-Territorials—some Englishmen are and may continue to be territorially born Indians. Can, therefore, the overlords of these Anglo-Indians be a "Swarajya" to the Hindus? Aurangzeb or Tipu were hereditary Indians, nay, were the sons of converted Hindu mothers. Did that mean that the rule of Aurangzeb or Tipu was a "Swarajya" to the Hindus? No ! Although they were territorially Indians they proved to be the worst enemies of Hindudom and therefore, a Shivaji, a Gobindsingh, a Pratap or the Peshwas had to fight against the Moslem domination and establish real Hindu Swarajya."

As part of his Swaraj Mr. Savarkar insists upon two things.

Firstly, the retention of the name Hindustan as the proper name for India ⁸[f.8] "The name "Hindustan" must continue to be the appellation of our country. Such other names as India, Hind, etc., being derived from the same original word Sindhu may be used but only to signify the same sense—the land of the Hindus, a country which is the abode of the Hindu Nation. Aryavarta, Bharat-Bhumi and such other names are of course the ancient and the most cherished epithets of our Mother Land and will continue to appeal to the cultured elite. In this insistence that the Mother Land of the Hindus must be called but "Hindustan", no encroachment or humiliation is implied in connection with any of our non-Hindu countrymen. Our Parsee and Christian countrymen are already too akin to us culturally and are too patriotic and the Anglo-Indians too sensible to refuse to fall in line with us Hindus on so

legitimate a ground. So far as our Moslem countrymen are concerned it is useless to conceal the fact that some of them are already inclined to look upon this molehill also as an insuperable mountain in their way to Hindu-Moslem unity. But they should remember that the Moslems do not dwell only in India nor are the Indian Moslems the only heroic remnants of the Faithful in Islam. China has crores of Moslems. Greece, Palestine and even Hungary and Poland have thousands of Moslems amongst their nationals. But being there a minority, only a community, their existence in these countries has never been advanced as a ground to change the ancient names of these countries which indicate the abodes of those races whose overwhelming majority owns the land. The country of the Poles continues to be Poland and of the Grecians as Greece. *The* Moslems there did not or dared not to distort them but are quite content to distinguish themselves as Polish Moslems or Grecian Moslems or Chinese Moslems when occasion arises, so also our Moslem countrymen may distinguish themselves nationally or territorially whenever they want, as "Hindustance Moslems" without compromising in the least their separateness as Religious or Cultural entity. Nay, the Moslems have been calling themselves as "Hindustanis" ever since their advent in India, of their own accord.

"But if inspite of it all some irascible Moslem sections amongst our countrymen object even to this name of our Country, that is no reason why we should play cowards to our own conscience. We Hindus must not betray or break up the continuity of our Nation from the Sindhus. in Rigvedic days to the Hindus of our own generation which is implied in "Hindustan", the accepted appellation of our Mother Land. Just as the land of the Germans is Germany, of the English England, *of* the Turks Turkistan, of the Afghans Afghanistan—even so we must have it indelibly impressed on the map of the earth for all times to come a "Hindustan"—the land of the "Hindus".

The second is the retention of Sanskrit as sacred language, Hindi as national language and Nagari as the script of Hindudom. ⁹[f.9]

"The Sanskrit shall be our "Deva Bhasha)"¹⁰[f.10] our sacred language and the "Sanskrit Nishtha"¹¹[f.11] Hindi, the Hindi which is

derived from Sanskrit and draws its nourishment from the latter, is our ' 'mr' ' (Rashtra Bhasha) ¹²[f.12] our current national language— besides being the richest and the most cultured of the ancient languages of the world, to us Hindus the Sanskrit is the holiest tongue of tongues. Our scriptures, history, philosophy and culture have their roots so deeply imbedded in the Sanskrit literature that it forms veritably the brain of our Race. Mother of the majority of our mother tongues, she has suckled the rest of them at her breast. All Hindu languages current today whether derived from Sanskrit or grafted on to it can only grow and flourish on the sap of life they imbibe from Sanskrit. The Sanskrit language therefore must ever be an indispensable constituent of the classical course for Hindu youths.

“In adopting the Hindi as the National tongue of Hindudom no humiliation or any invidious distinction is implied as regards other provincial tongues. We are all as attached to our provincial tongues as to Hindi and they will all grow and flourish in their respective spheres. In fact some of them are today more progressive and richer in literature. But nevertheless, taken all in all the Hindi can serve the purpose of a National Pan-Hindu language best. It must also be remembered that the Hindi is not made a National Language to order. The fact is that long before either the English or even the Moslems stepped in India the Hindi in its general form had already come to occupy the position of a National tongue throughout Hindustan. The Hindu pilgrim, the tradesman, the tourist, the soldier, the Pandit travelled up and down from Bengal to Sind and Kashmere to Rameshwar by making himself understood from locality to locality through Hindi. Just as the Sanskrit was the National Language of the Hindu intellectual world even so Hindi has been for at least a thousand years in the past the National Indian Tongue of the Hindu community.....

"By Hindi we of course mean the pure”Sanskrit Nistha”Hindi, as we find it for example in the”Satyarthha Prakash”written by Maharsi Dayananda Saraswati. How simple and untainted with a single unnecessary foreign word is that Hindi and how expressive withal ! It

may be mentioned in passing that Swami Dayanandaji was about the first Hindu leader who gave conscious and definite expression to the view that Hindi should be the Pan-Hindu National language of India.”This Sanskrit Nistha”Hindi has nothing to do with that hybrid, the so-called Hindusthani which is being hatched up by the Wardha scheme. It is nothing short of a linguistic monstrosity and must be ruthlessly suppressed. Not only that but it is our bounden duty to oust as ruthlessly all unnecessary alien words whether Arabian or English, from every Hindu tongue—whether provincial or dialectical.
.....

"..... Our Sanskrit alphabetical order is phonetically about the most perfect which the world has yet devised and almost all our current Indian scripts already follow it. The Nagari Script too follows this order. Like the Hindi language the Nagari Script too has already been current for centuries all over India amongst the Hindu literary circles for some two thousand years at any rate in the past and was even popularly nick-named as the”Shastri Lipi”the script of our Hindu Scriptures.It is a matter of common knowledge that if Bengali or Gujarathi is printed in Nagari it is more or less understood by readers in several other provinces. To have only one common language throughout Hindustan at a stroke is impracticable and unwise. But to have the Nagari script as the only common script throughout Hindudom is much more feasible. Nevertheless, it should be borne in mind that the different Hindu scripts current in our different provinces have a future of their own and may flourish side by side with the Nagari. All that is immediately indispensable in the common interest of Hindudom as a whole is that the Nagari Script must be made a compulsory subject along with the Hindi language in every school in the case of Hindu students.”

What is to be the position of the Non-Hindu minorities under the Swaraj as contemplated by Mr. Savarkar? On this question, this is what Mr. Savarkar has to say : ¹³[f.13]

"When once the Hindu Maha Sabha not only accepts but maintains the principles of”one man one vote”and the public services to go by

merit alone added to the fundamental rights and obligations to be shared by all citizens alike irrespective of any distinction of Race or Religion . . . any further mention of minority rights is on the principle not only unnecessary but self-contradictory. Because it again introduces a consciousness of majority and minority on Communal basis. But as practical politics requires it and as the Hindu Sanghathanists want to relieve our non-Hindu countrymen of even a ghost of suspicion, we are prepared to emphasise that the legitimate rights of minorities with regard to their Religion, Culture, and Language will be expressly guaranteed: on one condition only that the equal rights of the majority also must not in any case be encroached upon or abrogated. Every minority may have separate schools to train up their children in their own tongue, their own religious or cultural institutions and can receive Government help also for these,—but always in proportion to the taxes they pay into the common exchequer. The same principle must of course hold good in case of the majority too.

"Over and above this, in case the constitution is not based on joint electorates and on the unalloyed National principle of one man one vote, but is based on the communal basis then those minorities who wish to have separate electorate or reserve seats will be allowed to have them,—but always in proportion to their population and provided that it does not deprive the majority also of an equal right in proportion of its population too."

That being the position assigned to the minorities, Mr. Savarkar concludes ¹⁴ [f.14] that under his scheme of Swaraj :

"The Moslem minority in India will have the right to be treated as equal citizens, enjoying equal protection and civic rights in proportion to their population. The Hindu majority will not encroach on the legitimate rights of any non-Hindu minority. But in no case can the Hindu majority resign its right which as a majority it is entitled to exercise under any democratic and legitimate constitution. The Moslem minority in particular has not obliged the Hindus by remaining in minority and therefore, they must remain satisfied with

the status they occupy and with the legitimate share of civic and political rights that is their proportionate due. It would be simply preposterous to endow the Moslem minority with the right of exercising a practical veto on the legitimate rights and privileges of the majority and call it a "Swarajya". The Hindus do not want a change of masters, are not going to struggle and fight and die only to replace an Edward by an Aurangzeb simply because the latter happens to be born within Indian borders, but they want henceforth to be masters themselves in their own house, in their own Land." And it is because he wants his Swaraj to bear the stamp of being a Hindu Raj that Mr. Savarkar wants that India should have the appellation of Hindustan.

This structure has been reared by Mr. Savarkar on two propositions which he regards as fundamental.

The first is that the Hindu are a nation by themselves. He enunciates this proposition with great elaboration and vehemence. Says ¹⁵[f.15] Mr. Savarkar :

"In my Presidential speech at Nagpur I had, for the first time in the history of our recent politics pointed out in bold relief that the whole Congress ideology was vitiated *ab initio* by its unwitting assumption that the territorial unity, a common habitat, was the only factor that constituted and ought to and must constitute a Nation. This conception of a Territorial Nationality has since then received a rude shock in Europe itself from which it was imported wholesale to India and the present War has justified my assertion by exploding the myth altogether. All Nations carved out to order on the Territorial design without any other common bond to mould each of them into a national being have gone to rack and ruin, tumbled down like a house of cards. Poland and Czechoslovakia will ever serve as a stem warning against any such efforts to frame heterogeneous peoples into such hotch-potch Nation, based only on the shifting sands of the conception of Territorial Nationality, not cemented by any cultural, racial or historical affinities and consequently having no common will to incorporate themselves into a Nation. These treaty-Nations broke up at the first opportunity they got: The German part of them went over to Germany, the Russian

to Russia, Czechs to Czechs and Poles to Poles. The cultural, linguistic, historical and such other organic affinities proved stronger than the Territorial one. Only those Nations have persisted in maintaining their National unity and identity during the last three to four centuries in Europe which had developed racial, linguistic cultural and such other organic affinities in addition to their Territorial unity or even at times in spite of it and consequently willed to be homogeneous National units—such as England, France, Germany, Italy, Portugal, etc.

“Judged by any and all of these tests which go severally and collectively to form such a homogeneous and organic Nation, in India we Hindus are marked out as an abiding Nation by ourselves. Not only do we own a common Fatherland, a Territorial unity, but what is scarcely found anywhere else in the world, we have a common Holy Land which is identified with our common Fatherland. This Bharat Bhumi, this Hindustan, India is both our 1^^ and gi^. Our patriotism therefore is doubly sure. Then, we have common affinities, cultural, religious, historical, linguistic, and racial which through the process of countless centuries of association and assimilation moulded us into a homogeneous and organic nation and above all induced a will to lead a corporate and common national life. The Hindus are no treaty Nation—but an organic National Being.

“One more pertinent point must be met as it often misleads our Congressite Hindu brethren in particular. The homogeneity that welds a people into a National Being does not only imply the total absence of all internal differences, religious, racial or linguistic, of sects and sections amongst themselves. It only means that they differ more from other people as a national unit than they differ amongst themselves. Even the most unitarian nations of today—say the British or the French—cannot be free from any religious, linguistic, cultural, racial or other differences, sects or sections or even some antipathies existing amongst themselves. National homogeneity connotes oneness of a people in relation to the contrast they present to any other people as a whole.

“We Hindus, in spite of thousand and one differences within our fold, are bound by such religious, cultural, historical, racial, linguistic and

other affinities in common as to stand out as a definitely homogeneous people as soon as we are placed in contrast with any other non-Hindu people— say the English or Japanese or even the Indian Moslems. That is the reason why today we the Hindus from Cashmere to Madras and Sindh to Assam will have to be a Nation by ourselves” . . .

The second proposition on which Mr. Savarkar has built up his scheme relates to the definition of the term Hindu. According to Mr. Savarkar a Hindu is a person:

“..... who regards-and owns this Bharat Bhumi, this land from the Indus to the Seas, as his Fatherland as well as his Holy Land;—i.e., the land of the origin of his religion, the cradle of his faith.

The followers therefore of Vaidicism, SanaUmism, Jainism, Buddhism, Lingaitism, Sikhism, the Arya Samaj, the Brahmosamaj, the Devasamaj, the Prarlhana Samajandsucholherreligionsofindianorigin are Hindus and constitute Hindudom, i.e., Hindu people as a whole.

Consequently the so-called aboriginal or hill-tribes also are Hindus : because India is their Fatherland as well as their Holy Land whatever form of religion or worship they follow. The definition rendered in Sanskrit stands thus:

ASINDHU SINDH PANYANTA YSMA BHARAT BHUMIKA I
PRITIBHU H PUNDYABHOOSHRAIV SA VAI
HINDURITISMRTAH II

This definition , therefore, should be recognized by the Government and made the test of ' Hindutva * in enumerating the population of Hindus in the Government census to come.”

This definition of the term Hindu has been framed with great care and caution. It is designed to serve two purposes which Mr. Savarkar has in view. First, to exclude from it Muslims, Christians, Parsis and Jews by

prescribing the recognition of India as a Holy Land as a qualification for being a Hindu. Secondly, to include Buddhists, Jains, Sikhs, etc., by not insisting upon belief in the sanctity of the Vedas as an element in the qualifications.

Such is the scheme of Mr. Savarkar and the Hindu Maha Sabha. As must have been noticed, the scheme has some disturbing features.

One is the categorical assertion that the Hindus are a nation by themselves. This, of course, means that the Muslims are a separate nation by themselves. That this is his view, Mr. Savarkar does not leave to be inferred. He insists upon it in no uncertain terms and with the most absolute emphasis he is capable of. Speaking at the Hindu Maha Sabha Session held at Ahmedabad in 1937, Mr. Savarkar said :—

“Several infantile politicians commit the serious mistake in supposing that India is already welded into a harmonious nation, or that it could be welded thus for the mere wish to do so. These our well-meaning but unthinking friends take their dreams for realities. That is why they are impatient of communal tangles and attribute them to communal organizations. But the solid fact is that the so-called communal questions are but a legacy handed down to us by centuries of a cultural, religious and national antagonism between the Hindus and the Muslims. When the time is ripe you can solve them; but you cannot suppress them by merely refusing recognition of them. It is safer to diagnose and treat deep-seated disease than to ignore it. Let us bravely face unpleasant facts as they are. India cannot be assumed today to be a unitarian and homogeneous nation, but on the contrary these are two nations in the main, the Hindus and the Muslims in India.”

Strange as it may appear, Mr. Savarkar and Mr. Jinnah instead of being opposed to each other on the one nation *versus* two nations issue are in complete agreement about it. Both agree, not only agree but insist that there are two nations in India—one the Muslim nation and the other the Hindu nation. They differ only as regards the terms and conditions on which the two nations should live. Mr. Jinnah says India should be cut

up into two, Pakistan and Hindustan, the Muslim nation to occupy Pakistan and the Hindu nation to occupy Hindustan. Mr. Savarkar on the other hand insists that, although there are two nations in India, India shall not be divided into two parts, one for Muslims and the other for the Hindus ; that the two nations shall dwell in one country and shall live under the mantle of one single constitution; that the constitution shall be such that the Hindu nation will be enabled to occupy a predominant position that is due to it and the Muslim nation made to live in the position of subordinate co-operation with the Hindu nation. In the struggle for political power between the two nations the rule of the game, which Mr. Savarkar prescribes, is to be one man one vote, be the man Hindu or Muslim. In his scheme a Muslim is to have no advantage which a Hindu does not have. Minority is to be no justification for privilege and majority is to be no ground for penalty. The State will guarantee the Muslims any defined measure of political power in the form of Muslim religion and Muslim culture. But the State will not guarantee secured seats in the Legislature or in the Administration and, if such guarantee is insisted upon by the Muslims, ¹⁶[f.16] such guaranteed quota is not to exceed their proportion to the general population. Thus by confiscating its weightages, Mr. Savarkar would even strip the Muslim nation of all the political privileges it has secured so far.

This alternative of Mr. Savarkar to Pakistan has about it a frankness, boldness and definiteness which distinguishes it from the irregularity, vagueness and indefiniteness which characterizes the Congress declarations about minority rights. Mr. Savarkar's scheme has at least the merit of telling the Muslims, thus far and no further. The Muslims know where they are with regard to the Hindu Maha Sabha. On the other hand, with the Congress the Musalmans find themselves nowhere because the Congress has been treating the Muslims and the minority question as a game in diplomacy, if not in duplicity.

At the same time, it must be said that Mr. Savarkar's attitude is illogical, if not queer. Mr. Savarkar admits that the Muslims are a separate nation. He concedes that they have a right to cultural

autonomy. He allows them to have a national flag. Yet he opposes the demand of the Muslim nation for a separate national home. If he claims a national home for the Hindu nation, how can he refuse the claim of the Muslim nation for a national home?

It would not have been a matter of much concern if inconsistency was the only fault of Mr. Savarkar. But Mr. Savarkar in advocating his scheme is really creating a most dangerous situation for the safety and security of India. History records two ways as being open to a major nation to deal with a minor nation when they are citizens of the same country and are subject to the same constitution. One way is to destroy the nationality of the minor nation and to assimilate and absorb it into the major nation, so as to make one nation out of two. This is done by denying to the minor nation any right to language, religion or culture and by seeking to enforce upon it the language, religion and culture of the major nation. The other way is to divide the country and to allow the minor nation a separate, autonomous and sovereign existence, independent of the major nation. Both these ways were tried in Austria and Turkey, the second after the failure of the first.

Mr. Savarkar adopts neither of these two ways. He does not propose to suppress the Muslim nation. On the contrary he is nursing and feeding it by allowing it to retain its religion, language and culture, elements which go to sustain the soul of a nation. At the same time he does not consent to divide the country so as to allow the two nations to become separate, autonomous states, each sovereign in its own territory. He wants the Hindus and the Muslims to live as two separate nations in one country, each maintaining its own religion, language and culture. One can understand and even appreciate the wisdom of the theory of suppression of the minor nation by the major nation because the ultimate aim is to bring into being one nation. But one cannot follow what advantage a theory has which says that there must ever be two nations but that there shall be no divorce between them. One can justify this attitude only if the two nations were to live as partners in friendly intercourse with mutual respect and accord. But that is not to be, because Mr. Savarkar will not allow the Muslim nation to be co-equal in

authority with the Hindu nation. He wants the Hindu nation to be the dominant nation and the Muslim nation to be the servient nation. Why Mr. Savarkar, after sowing this seed of enmity between the Hindu nation and the Muslim nation should want that they should live under one constitution and occupy one country, is difficult to explain.

One cannot give Mr. Savarkar credit for having found a new formula. What is difficult to understand is that he should believe that his formula is the right formula. Mr. Savarkar has taken old Austria and old Turkey as his model and pattern for his scheme of Swaraj. He sees that in Austria and Turkey there lived one major nation *juxtaposed* to other minor nations bound by one constitution with the major nation dominating the minor nations and argues that if this was possible in Austria and Turkey, why should it not be possible for the Hindus to do the same in India.

That Mr. Savarkar should have taken old Austria and old Turkey as his model to build upon is really very strange. Mr. Savarkar does not seem to be aware of the fact that old Austria and old Turkey are no more. Much less does he seem to know the forces which have blown up old Austria and old Turkey to bits. If Mr. Savarkar instead of studying the past—of which he is very fond—were to devote more attention to the present, he would have learnt that old Austria and old Turkey came to ruination for insisting upon maintaining the very scheme of things which Mr. Savarkar has been advising his "Hindudom" to adopt, namely, to establish a Swaraj in which there will be two nations under the mantle of one single constitution in which the major nation will be allowed to hold the minor nation in subordination to itself.

The history of the disruption of Austria, Czechoslovakia and Turkey is of the utmost importance to India and the members of the Hindu Maha Sabha will do well to peruse the same. I need say nothing here about it because I have drawn attention to lessons from their fateful history in another chapter. Suffice it to say that the scheme of Swaraj formulated by Mr. Savarkar will give the Hindus an empire over the Muslims and thereby satisfy their vanity and their pride in being an imperial race. But it can never ensure a stable and peaceful future for the Hindus, for the

simple reason that the Muslims will never yield willing obedience to so dreadful an alternative.

III

Mr. Savarkar is quite unconcerned about the Muslim reaction to his scheme. He formulates his scheme and throws it in the face of the Muslims with the covering letter 'take it or leave it'. He is not perturbed by the Muslim refusal to join in the struggle for Swaraj. He is quite conscious of the strength of the Hindus and the Hindu Maha Sabha and proposes to carry on the struggle in the confident hope that, alone and unaided, the Hindus will be able to wrest Swaraj from the British. Mr. Savarkar is quite prepared to say to the Musalmans :

"If you come, with you, if you don't, without you; and if you oppose, in spite of you—the Hindus will continue to fight for their national freedom as best as they can."

Not so Mr. Gandhi. At the very commencement of his career as a political leader of India when Mr. Gandhi startled the people of India by his promise to win Swaraj within six months, Mr. Gandhi said that he could perform the miracle only if certain conditions were fulfilled. One of these conditions was the achievement of Hindu-Muslim unity. Mr. Gandhi is never tired of saying that there is no Swaraj without Hindu-Muslim unity. Mr. Gandhi did not merely make this slogan the currency of Indian politics but he has strenuously worked to bring it about. Mr. Gandhi, it may be said, began his career as a political leader of India with the manifesto dated 2nd March 1919 declaring his intention to launch Satyagraha against the Rowlatt Act and asking those who desired to join him to sign the Satyagraha pledge. That campaign of Satyagraha was a short-lived campaign and was suspended by Mr. Gandhi on 18th April 1919. As a part of his programme Mr. Gandhi had fixed ¹⁷[f.17] the 6th March 1919 to be observed all over India as a day of protest against the Rowlatt Act. Mass meetings were to be held on that day and Mr. Gandhi had prescribed that the masses attending the meetings should take a vow in the following terms :

“With God as witness, we Hindus, and Mahomedans declare that we shall behave towards one another as children of the same parents, that we shall have no differences, that the sorrows of each shall be the sorrows of the other and that each shall help the other in removing them. We shall respect each other's religion and religious feelings and shall not stand in the way of our respective religious practices. We shall always refrain from violence to each other in the name of religion.” There was nothing in the campaign of Satyagraha against the Rowlatt Act which could have led to any clash between the Hindus and Muslims. Yet Mr. Gandhi asked his followers to take the vow. This shows how insistent he was from the very beginning upon Hindu-Muslim unity.

The Mahomedans started the Khilafat movement in 1919. The objective of the movement was two-fold; to preserve the Khilafat and to maintain the integrity of the Turkish Empire. Both these objectives were unsupportable. The Khilafat could not be saved simply because the Turks, in whose interest this agitation was carried on, did not want the Sultan. They wanted a republic and it was quite unjustifiable to compel the Turks to keep Turkey a monarchy when they wanted to convert it into a republic. It was not open to insist upon the integrity of the Turkish Empire because it meant the perpetual subjection of the different nationalities to the Turkish rule and particularly of the Arabs, especially when it was agreed on all hands that the doctrine of self-determination should be made the basis of the peace settlement.

The movement was started by the Mahomedans. It was taken up by Mr. Gandhi with a tenacity and faith which must have surprised many Mahomedans themselves. There were many people who doubted the ethical basis of the Khilafat movement and tried to dissuade Mr. Gandhi from taking any part in a movement the ethical basis of which was so questionable. But Mr. Gandhi had so completely persuaded himself of the justice of the Khilafat agitation that he refused to yield to their advice. Time and again he argued that the cause was just and it was his duty to join it. The position taken up by him may be summed up in his own words. ¹⁸mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/40D.Pakistan or the Partition of India PART III.htm - _msocom_18

“(1) In my opinion, the Turkish claim is not only not immoral and unjust, but it is highly equitable, only because Turkey wants to retain what is her own. And the Mahomedan manifesto has definitely declared that whatever guarantee may be necessary to be taken for the protection of the non-Muslim and non-Turkish races, should be taken so as to give the Christians theirs and the Arabs their self-government under the Turkish suzerainty;

(2) I do not believe the Turk to be weak, incapable or cruel. He is certainly disorganised and probably without good generalship. The argument of weakness, incapacity and cruelty one often hears quoted in connection with those from whom power is sought to be taken away. About the alleged massacres a proper commission has been asked for, but never granted. And in any case security can be taken against oppression;

(3) I have already stated that, if I were not interested in the Indian Mahomedans, I would not interest myself in the welfare of the Turks any more than I am in that of the Austrians or the Poles. But I am bound as an Indian to share the sufferings and trials of fellow-Indians. If I deem the Mahomedan to be my brother, it is my duty to help him in his hour of peril to the best of my ability, if his cause commends itself to me as just;

(4) The fourth refers to the extent Hindus should join hands with the Mahomedans. It is, therefore, a matter of feeling and opinion. It is expedient to suffer for my Mahomedan brother to the utmost in a just cause and I should, therefore, travel with him along the whole road so long as the means employed by him are as honourable as his end. I cannot regulate the Mahomedan feeling. I must accept his statement that the Khilafat is with him a religious question in the sense that it binds him to reach the goal even at the cost of his own life.”

Mr. Gandhi not only agreed with the Muslims in the Khilafat cause but acted as their guide and their friend. The part played by Mr. Gandhi in the Khilafat agitation and the connection between the Khilafat agitation and the Non-co-operation Movement has become obscure by the

reason of the fact that most people believed that it was the Congress which initiated the Non co-operation Movement and it was done as a means for winning Swaraj. That such a view should prevail is quite understandable because most people content themselves with noting the connection between the Non-co-operation Movement and the special session of the Congress held at Calcutta on 7th and 8th September 1920. But anyone, who cares to go behind September 1920 and examine the situation as it then stood, will find that this view is not true. The truth is that the non-co-operation has its origin in the Khilafat agitation and not in the Congress Movement for Swaraj : that it was started by the Khilafatists to help Turkey and adopted by the Congress only to help the Khilafatists : that Swaraj was not its primary object, but its primary object was Khilafat and that Swaraj was added as a secondary object to induce the Hindus to join it will be evident from the following facts.

The Khilafat movement may be said to have begun on 27th October 1919 when the day was observed as the Khilafat Day all over India. On 23rd November 1919 the first Khilafat Conference met at Delhi. It was at this session that the Muslims considered the feasibility of non-co-operation as a means of compelling the British Government to redress the Khilafat wrong. On 10th March 1920 the Khilafat Conference met at Calcutta and decided upon non-co-operation as the best weapon to further the object of their agitation.

On 9th June 1920 the Khilafat Conference met at Allahabad and unanimously reaffirmed their resolve to resort to non-co-operation and appointed an Executive Committee to enforce and lay down a detailed programme. On 22nd June 1920 the Muslims sent a message to the Viceroy stating that they would start non-co-operation if the Turkish grievances were not redressed before 1st August 1920. On 30th June 1920 the Khilafat Committee meeting held at Allahabad resolved to start non-co-operation, after a month's notice to the Viceroy. Notice was given on 1st July 1920 and non-co-operation commenced on 1st August 1920. This short resume shows that the non-co-operation was started by the Khilafat Committee and all that the Congress special session at Calcutta did was to adopt what the Khilafat Conference had already

done and that too not in the interest of Swaraj but in the interest of helping the Musalmans in furthering the cause of Khilafat. This is clear from the perusal of the Congress Resolution 19[f.19] passed at the special session held at Calcutta.

Although the Non-co-operation Movement was launched by the Khilafat Committee and merely adopted by the Congress primarily to help the Khilafat cause, the person who suggested it to the Khilafat Committee and who identified himself with the Committee and took the responsibility of giving effect to it and who brought about its adoption by the Congress was Mr. Gandhi. At the first Khilafat Conference held at Delhi on 23rd November

1919 Mr. Gandhi was present. Not only was Mr. Gandhi present but also it was he who advised the Muslims to adopt non-co-operation as a method for forcing the British to yield to their demands regarding the Khilafat. The joining of Mr. Gandhi in the Khilafat movement is full of significance. The Muslims were anxious to secure the support of the Hindus in the cause of Khilafat. At the Conference held on 23rd November 1919 the Muslims had invited the Hindus. Again on 3rd June 1920 a joint meeting of the Hindus and the Khilafatist Muslims was held at Allahabad. This meeting was attended among others by Sapru, Motilal Nehru and Annie Besant. But the Hindus were hesitant in joining the Muslims. Mr. Gandhi was the only Hindu who joined the Muslims. Not only did he show courage to join them, but also he kept step with them, nay, led them. On 9th June

1920 when the Khilafat Conference met at Allahabad and formed an Executive Committee to prepare a detailed programme of non co-operation and give effect to it, Mr. Gandhi was the only Hindu on that Executive Committee. On 22nd June 1920 the Muslims sent a message to the Viceroy that they would start non-co-operation if the Turkish grievances were not redressed before 1st August 1920. On the same day Mr. Gandhi also sent a letter to the Viceroy explaining the justice of the Khilafat cause, the reasons why he has taken up the cause and the necessity of satisfying the hands of the Khilafatists. For instance the notice given to the Viceroy on 1st July 1920 that non-co-operation will

be started on 1st August was given by Mr. Gandhi and not by the Khilafatists. Again when non-co-operation was started by the Khilafatist on 31st August 1920 Mr. Gandhi was the first to give a concrete shape to it by returning his medal. After inaugurating the Non-co-operation Movement as an active member of the Khilafat Committee Mr. Gandhi next directed his energy to the cause of persuading the Congress to adopt non-co-operation and strengthen the Khilafat movement. With that object in view Mr. Gandhi toured the country between 1st August and 1st September 1920 in the company of the Ali Brothers who were the founders of the Khilafat movement impressing upon the people the necessity of non-co-operation. People could notice the disharmony in the tune of Mr. Gandhi and the Ali Brothers. As the *Modern Review* pointed out: "Reading between the lines of their speeches, it is not difficult to see that with one of them the sad plight of the Khilafat in distant Turkey is the central fact, while with the other attainment of Swaraj here in India is the object in view". This dichotomy ²⁰[f.20] of interest did not augur well for the success of the ultimate purpose. Nonetheless Mr. Gandhi succeeded in carrying the Congress with him in support of the Khilafat cause. ²¹[f.21]

For a long time the Hindus had been engaged in wooing the Muslims to their side. The Congress was very anxious to bridge the gulf between itself and the Muslim League. The ways and means adopted in 1916 for bringing about this consummation and which resulted in the Lucknow Pact signed between the Congress and the Muslim League have been graphically told by Swami Shradhanand in his impressions of the Congress Session held in that year at Lucknow. Says the Swami ²²[f.22] :

"On sitting on the dias (Lucknow Congress platform) the first thing that I noticed was that the number of Moslem delegates was proportionately fourfold of what it was at Lahore in 1893. The majority of Moslem delegates had donned gold, silver and silk embroidered chogas (flowing robes) over their ordinary coarse suits of wearing apparel. It was rumoured that these 'chogas' had been put by Hindu moneyed men for Congress Tamasha. Of some 433 Moslem delegates only some 30 had come from outside, the rest belonging to

Lucknow City. And of these majority was admitted free to delegate seals, board and lodging. Sir Syed Ahmad's anti-Congress League had tried in a public meeting to dissuade Moslems from joining the Congress as delegates. As a countermove the Congress people lighted the whole Congress camp some four nights before the session began and advertised that that night would be free. The result was that all the "Chandul Khanas" of Lucknow were emptied and a huge audience of some thirty thousand Hindus and Moslems was addressed from half a dozen platforms. It was then that the Moslem delegates were elected or selected. All this was admitted by the Lucknow Congress organisers to me in private.

"A show was being made of the Moslem delegates. Moslem delegate gets up to second a resolution in Urdu. He begins : ' Hozarat, I am a Mahomedan delegate '. Some Hindu delegate gets up and calls for three cheers for Mahomedan delegates and the response is so enthusiastic as to be beyond description."

In taking up the cause of Khilafat Mr. Gandhi achieved a double purpose. He carried the Congress Plan of winning over the Muslims to its culmination. Secondly he made the Congress a power in the country, which it would not have been, if the Muslims had not joined it. The cause of the Khilafat appealed to the Musalmans far more than political safeguards, with the result that the Musalmans who were outside it trooped into the Congress. The Hindus welcomed them. For, they saw in this a common front against the British, which was their main aim. The credit for this must of course go to Mr. Gandhi. For there can be no doubt that this was an act of great daring.

When the Musalmans in 1919 approached the Hindus for participation in the Non-co-operation Movement which the Muslims desired to start for helping Turkey and the Khilafat, the Hindus were found to be divided in three camps. One was a camp of those who were opposed to non-co-operation in principle. A second camp consisted of those Hindus who were prepared to join the Muslims in their campaign of non-co-operation provided the Musalmans agreed to give up Cow Slaughter. A third group consisted of the Hindus who feared that the

Mahomedans might extend their non-co-operation to inviting the Afghans to invade India, in which case the movement instead of resulting in Swaraj might result in the subjection of India to Muslim Raj.

Mr. Gandhi did not care for those Hindus who were opposed to joining the Muslims in the Non-co-operation Movement. But with regard to the others he told them that their attitude was unfortunate.

To those Hindus who wanted to give their support on the condition that the Muslims give up cow killing, Mr. Gandhi said ²³[f.23] :

"I submit that the Hindus may not open the Goraksha (cow protection) question here. The test of friendship is assistance in adversity, and that too, unconditional assistance. Co-operation that needs consideration is a commercial contract and not friendship. Conditional co-operation is like adulterated cement which does not bind. It is the duty of the Hindus, if they see the justice of the Mahomedan cause to render co-operation. If the Mahomedans feel themselves bound in honour to spare the Hindu's feelings and to stop cow killing, they may do so, no matter whether the Hindus co-operate with them or not. Though therefore, I yield to no Hindu in my worship of the cow, I do not want to make the stopping of cow killing a condition precedent to co-operation. Unconditional co-operation means the protection of the cow."

To those Hindus who feared to join the Non-co-operation Movement for the reasons that Muslims may invite the Afghans to invade India, Mr. Gandhi said ²⁴[f.24] :

"It is easy enough to understand and justify the Hindu caution. It is difficult to resist the Mahomedan position. In my opinion, the best way to prevent India from becoming the battle ground between the forces of Islam and those of the English is for Hindus to make non-co-operation a complete and immediate success, and I have little doubt that, if the Mahomedans remain true to their declared intention and are able to exercise self-restraint and make sacrifices, the Hindus will ' play the game ' and join them in the campaign of non-co-operation. I feel equally certain that Hindus will not assist Mahomedans in promoting

or bringing about an armed conflict between the British Government and their allies, and Afghanistan. British forces are too well organised to admit of any successful invasion of the Indian frontier. The only way, therefore, the Mahomedans can carry on an effective struggle on behalf of the honour of Islam is to take up non-co-operation in real earnest. It will not only be completely effective if it is adopted by the people on an extensive scale, but it will also provide full scope for individual conscience. If I cannot bear an injustice done by an individual or a corporation, and, I am directly or indirectly instrumental in upholding that individual or corporation, I must answer for it before my Maker; but I have done all that is humanly possible for me to do consistently with the moral code that refuses to injure even the wrong-doers, if I cease to support the injustice in the manner described above. In applying, therefore, such a great force, there should be no haste, there should be no temper shown. Non-co-operation must be and remain absolutely a voluntary effort. The whole thing, then, depends upon Mahomedans themselves. If they will but help themselves, Hindu help will come and the Government, great and mighty though it is, will have to bend before the bloodless opposition of a whole nation.”

Unfortunately, the hope of Mr. Gandhi that ' no Government can possibly withstand the bloodless opposition of a whole nation ' did not come true. Within a year of the starting of the Non-co-operation Movement, Mr. Gandhi had to admit that the. Musalmans had grown impatient and that :

“In their impatient anger, the Musalmans ask for more energetic and more prompt action by the Congress and Khilafat organisations. To the Musalmans, Swaraj means, as it must mean, India's ability to deal effectively with the Khilafat question. The Musalmans, therefore, decline to wait if the attainment of Swaraj means indefinite delay of a programme that may require the Musalmans of India to become impotent witnesses of the extinction of Turkey in European waters.

“It is impossible not to sympathise with this attitude. I would gladly recommend immediate action if I could think of any effective course. I

would gladly ask for postponement of Swaraj activity if thereby we could advance the interest of Khilafat. I could gladly take up measures outside non-co-operation, if I could think of any, in order to assuage the pain caused to the millions of the Musalmans.

“But, in my humble opinion, attainment of Swaraj is the quickest method of righting the Khilafat wrong. Hence it is, that for me the solution of the Khilafat question is attainment of Swaraj and *vice versa*. The only way to help the affiliated Turks is for India to generate sufficient power to be able to assert herself. If she cannot develop that power in time, there is no way out for India and she must resign herself to the inevitable. What can a paralytic do to stretch forth a helping hand to a neighbour but to try to cure himself of his paralysis? Mere ignorant, thoughtless and angry outburst of violence may give vent to pent-up rage but can bring no relief to Turkey.”

The Musalmans were not in a mood to listen to the advice of Mr. Gandhi. They refused to worship the principle of non-violence. They were not prepared to wait for Swaraj. They were in a hurry to find the most expeditious means of helping Turkey and saving the Khilafat. And' the Muslims in their impatience did exactly what the Hindus feared they would do, namely, invite the Afghans to invade India. How far the Khilafatists had proceeded in their negotiations with the Amir of Afghanistan it is not possible to know. But that such a project was entertained by them is beyond question. It needs no saying that the project of an invasion of India was the most dangerous project and every sane Indian would dissociate himself from so mad a project. What part Mr. Gandhi played in this project it is not possible to discover. Certainly he did not dissociate himself from it. On the contrary his misguided zeal for Swaraj and his obsession on Hindu-Moslem unity as the only means of achieving it, led him to support the project. Not only did he advise ²⁵[f.25] the Amir not to enter into any treaty with the British Government but declared:

“I would, in a sense, certainly assist the Amir of Afghanistan if he waged war against the British Government. That is to say, I would openly tell my countrymen that it would be a crime to help a

government which had lost the confidence of the nation to remain in power”.

Can any sane man go so far, for the sake of Hindu-Moslem unity? But, Mr. Gandhi was so attached to Hindu-Moslem unity that he did not stop to enquire what he was really doing in this mad endeavour. So anxious was Mr. Gandhi in laying the foundation of Hindu-Moslem unity well and truly, that he did not forget to advise his followers regarding the national crisis. In an Article in *Young India* of 8th September 1920 Mr. Gandhi said :

“During the Madras tour, at Bezwada I had occasion to remark upon the national crisis and suggested that it would be better to have cries about ideals than men. I asked the audience to replace Mahatma Gandhi-ki-jai and Mahomed Ali Shoukat Ali-ki-jai by Hindu-Musalman-ki-jai. Brother Shoukat Ali, who followed, positively laid down the law. In spite of the Hindu-Muslim unity, he had observed that, if Hindus shouted Bande Mataram, the Muslims rang out with AllahoAkbar and *vice versa*. This, he rightly said jarred on the ear and still showed that the people did not act with one mind. There should be therefore only three cries recognised. Allaho Akbar to be joyously sung out by Hindus and Muslims, showing that God alone was great and no other. The second should be Bande Malaram (Hail Motherland) or Bharat Mata-ki-jai (Victory to Mother Hind). The third should be Hindu-Musalman-ki-jai without which there was no victory for India, and no true demonstration of the greatness of God.. I do wish that the newspapers and public men would take up the Maulana's suggestion and lead the people only to use the three cries. They are full of meaning. The first is a prayer and confession of our littleness and therefore a sign of humility. It is a cry in which all Hindus and Muslims should join in reverence and prayfulness. Hindus may not fight shy of Arabic words, when their meaning is not only totally inoffensive but even ennobling. God is no respecter of any particular tongue. Bande Mataram, apart from its wonderful associations, expresses the one national wish—the rise of India to her full height. And I should prefer Bande Mataram to Bharat Mata-ki-jai, as it would be a graceful

recognition of the intellectual and emotional superiority of Bengal. Since India can be nothing without the union of the Hindu and the Muslim heart, Hindu-Musalman-ki-jai is a cry which we may never forget.

“There should be no discordance in these cries. Immediately some one has taken up any of the three cries, the rest should take it up and not attempt to yell out their favourite. Those, who do not wish to join, may refrain, but should consider it a breach of etiquette to interpolate their own when a cry has already been raised. It would be better too, always to follow out the three cries in the order given above.”

These are not the only things Mr. Gandhi has done to build up Hindu-Moslem unity. He has never called the Muslims to account even when they have been guilty of gross crimes against Hindus.

It is a notorious fact that many prominent Hindus who had offended the religious susceptibilities of the Muslims either by their writings or by their part in the Shudhi movement have been murdered by some fanatic Musalmans. First to suffer was Swami Shradhanand, who was shot by Abdul Rashid on 23rd December 1926 when he was lying in his sick bed. This was followed by the murder of Lala Nanakchand, a prominent Arya Samajist of Delhi. Rajpal, the author of the *Rangila Rasool*, was stabbed by Ilandin on 6th April 1929 while he was sitting in his shop. Nathuramal Sharma was murdered by Abdul Qayum in September 1934. It was an act of great daring. For Sharma was stabbed to death in the Court of the Judicial Commissioner of Sind where he was seated awaiting the hearing of his appeal against his conviction under Section 195, 1. P. C., for the publication of a pamphlet on the history of Islam. Khanna, the Secretary of the Hindu Sabha, was severely assaulted in 1938 by the Mahomedans after the Session of the Hindu Maha Sabha held in Ahmedabad and very narrowly escaped death.

This is, of course, a very short list and could be easily expanded. But whether the number of prominent Hindus killed by fanatic Muslims is large or small matters little. What matters is the attitude of those who count, towards these murderers. The murderers paid the penalty of law

where law is enforced. The leading Moslems, however, never condemned these criminals. On the contrary, they were hailed as religious martyrs and agitation was carried on for clemency being shown to them. As an illustration of this attitude, one may refer to Mr. Barkat Alli, a Barrister of Lahore, who argued the appeal of Abdul Qayum. He went to the length of saying that Qayum was not guilty of murder of Nathuramal because his act was justifiable by the law of the Koran. This attitude of the Moslems is quite understandable. What is not understandable is the attitude of Mr. Gandhi.

Mr. Gandhi has been very punctilious in the matter of condemning any and every act of violence and has forced the Congress, much against its will to condemn it. But Mr. Gandhi has never protested against such murders. Not only have the Musalmans not condemned ²⁶[f.26] these outrages but even Mr. Gandhi has never called upon the leading Muslims to condemn them. He has kept silent over them. Such an attitude can be explained only on the ground that Mr. Gandhi was anxious to preserve Hindu-Moslem unity and did not mind the murders of a few Hindus, if it could be achieved by sacrificing their lives.

This attitude to excuse the Muslims any wrong, lest it should injure the cause of unity, is well illustrated by what Mr. Gandhi had to say in the matter of the Mopla riots.

The blood-curdling atrocities committed by the Moplas in Malabar against the Hindus were indescribable. All over Southern India, a wave of horrified feeling had spread among the Hindus of every shade of opinion, which was intensified when certain Khilafat leaders were so misguided as to pass resolutions of "congratulations to the Moplas on the brave fight they were conducting for the sake of religion". Any person could have said that this was too heavy a price for Hindu-Moslem unity. But Mr. Gandhi was so much obsessed by the necessity of establishing Hindu-Moslem unity that he was prepared to make light of the doings of the Moplas and the Khilafats who were congratulating them. He spoke of the Moplas as the "brave God-fearing Moplas who were fighting for what they consider as religion and in a manner which

they consider as religious". Speaking of the Muslim silence over the Mopla atrocities Mr. Gandhi told the Hindus:

"The Hindus must have the courage and the faith to feel that they can protect their religion in spite of such fanatical eruptions. A verbal disapproval by the Mussalmans of Mopla madness is no test of Mussalman friendship. The Mussalmans must naturally feel the shame and humiliation of the Mopla conduct about forcible conversions and looting, and they must work away so silently and effectively that such a thing might become impossible even on the part of the most fanatical among them. My belief is that the Hindus as a body have received the Mopla madness with equanimity and that the cultured Mussalmans are sincerely sorry of the Mopla's perversion of the teaching of the Prophet"

The Resolution ²⁷[f.27] passed by the Working Committee of the Congress on the Mopla atrocities shows how careful the Congress was not to hurt the feelings of the Musalmans.

"The Working Committee places on record its sense of deep regret over the deeds of violence done by Moplas in certain areas of Malbar, these deeds being evidence of the fact that there are still people in India who have not understood the message of the Congress and the Central Khilafat Committee, and calls upon every Congress and Khilafat worker to spread the said message of non-violence even under the gravest provocation throughout the length and breadth of India.

"Whilst, however, condemning violence on the part of the Moplas, the working Committee desires it to be known that the evidence in its possession shows that provocation beyond endurance was given to the Moplas and that the reports published by and on behalf of the Government have given a one-sided and highly exaggerated account of the wrongs done by the Moplas and an understatement of the needless destruction of life resorted to by the Government in the name of peace and order.

"The Working Committee regrets to find that there have been instances of so-called forcible conversion by some fanatics among

Moplas, but warns the public against believing in the Government and inspired versions. The Report before the Committee says:

“The families, which have been reported to have been forcibly converted into Mahomedanism, lived in the neighbourhood of Manjeri. It is clear that conversions were forced upon Hindus by a fanatic gang which was always opposed to the Khilafat and Non-co-operation Movement and there were only three cases so far as our information goes. ”

The following instances of Muslim intransigence, over which Mr. Gandhi kept mum are recorded by Swami Shradhanand in his weekly journal called the *Liberator*. Writing in the issue of 30th September 1926 the Swamiji says :
