On the basis of the doctrine of purchasing power parities as an explanation of actual exchange rates, one may be led to answer the question in the affirmative. For it may be argued that if the gold value of the rupee was maintained it is because gold prices and rupee prices were equal. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_6 This, it may be said, is all that the exchange standard aims at doing and can be claimed to have done, for the fact that the gold-standard reserve was seldom depleted is a proof that the general prices inside India were on the same level as those ruling outside India. On *a priori* considerations such as these, the exchange standard may be deemed to be as good as a gold standard.

One may ask as to why Indian prices should have been kept as high, if they were no higher than gold prices, and whether it would not have been better to have kept Indian prices on a lower level. But we shall not raise that question. We shall be satisfied if Indian prices were only as high as gold prices. Now did Indian prices rise only as much as gold prices? A glance at the chart reveals the surprising phenomenon that prices in India not only rose as much as gold prices, but rose more than gold prices. Of course in comparing Indian prices with gold prices to test the efficacy of the exchange standard we must necessarily eliminate the war period, for the reason that gold had been abandoned as a standard of value by most of the countries. And, even if we do take that period into account, it does not materially affect the conclusion, for although India was not a belligerent country, yet prices in India were not very much lower than prices in countries with most inflated currencies during the war, and barring a short period were certainly higher than gold prices in U.S.A.

It is obvious that the facts do not agree with the *a priori* assumption made in favour of the exchange standard. So noticeable must be said to be the local rise in Indian prices above the general price level in England that even Prof. Keynes, not given to exaggerate the faults of the exchange standard, was, as a result of his own independent investigation, convinced

thatmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_7

"a comparison with Sauerbeck's index number for the United Kingdom shows that the change in India is *much greater* than can be accounted for by changes occurring elsewhere."

What is then the explanation of this discrepancy between the *a priori* assumption and the facts of the case. The explanation is that the actual exchange rates correspond to the purchasing power parities of two currencies not with regard to *all* commodities but with regard to *some* only. In this connection it is better to re-state the doctrine of the relation of the purchasing power parities to exchange rates with the necessary qualification. A rigorously strict formulation of the doctrine should require us to state that Englishmen and others value Indian rupees inasmuch as and in so far as those rupees will buy *such Indian goods as Englishmen want*; while Indians value English pounds inasmuch as and in so far as those pounds will buy *such English goods as the Indians want*. So stated it follows that the actual exchange rates are related to purchasing power parities of the two currencies with regard to such commodities only as are internationally traded. To assume that the actual exchange rate is an exact index of the purchasing power parity of the two currencies with regard to *all* the commodities is to suppose that the variations in the purchasing power of a currency over commodities which are traded and which are not traded are the same.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_8 There is certainly a tendency for movements in the prices of these two classes of goods to influence one another *in the long run*; so that it becomes possible to say that the exchange value of a currency will be determined by its internal purchasing power. The doctrine of purchasing power parity as an explanation of exchange rates is valuable as an instrument of practical utility for controlling the foreign exchanges *and* it is as such that the doctrine was employed in an earlier portion of this study to account for the fall in the gold value of the rupee. But to proceed, on the basis of this relationship between the purchasing power of a currency and its exchange value, to argue that at any given time the exchange is more or less an exact measure of general purchasing power of the two currencies, is to assume what

cannot always be true, namely, that the prices of traded and non-traded goods move in sympathy. This assumption is too large and can only be said to be more or less true according to circumstances. Now as Prof. Kemmerer mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_9 points out :—

"While India's exports and imports in the absolute are large, still, in the main, the people of India live on their own products, and a large part of those products run their life history from production to consumption in a very small territory. They have only the remotest connection with foreign trade, gold, and the gold exchanges. In time, of course, any substantial disturbance in the equilibrium of values in the country's import and export trade will make itself felt in these local prices, but allowing for exceptions, it may be said that in a country like India the influences of such disturbances travel very slowly and lose much of their momentum in travelling."

In consequence of the thinness of connection between the two it is obvious that the prices of such Indian goods as do enter into international trade cannot always be said to move in more or less the same proportion as those which do not. Besides this thinness of connection which permits of deviations of the general purchasing power of a currency from the level indicated by the actual exchange rate, it is to be noted that the prices of Indian commodities which largely enter into international trade are not governed by local influences. Such exports of India as wheat, hides, rice and oil seeds are international commodities, not solely amenable to influences originating from changes that may be taking place in the prices of home commodities and services. The combined effect of these two circumstances, except in abnormal events such as the war, is to militate against the prices of traded and non-traded goods moving in quick sympathy mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_10

If this is true, then, although the maintenance of the exchange standard does imply a purchasing power parity of the rupee with gold, it is not a purchasing power parity of the two currencies with respect to *all* the commodities. All that it implies is that the

purchasing power of the rupee over such commodities as entered into international trade was on a par with gold, so that there did not often arise the necessity of exhausting the gold reserve. The preservation of the gold reserve only meant that there was equality of prices so far as internationally traded goods were concerned. Thus interpreted, the fact that the rupee maintained its gold value does not preclude the possibility of Indian prices being, on the whole, higher than gold prices, thereby vitiating the *a priori* view that the exchange standard is as good as the gold standard.

It should be pointed out mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_11 that all changes of prices affect more or less the welfare of the individual. However, the general flexibility of the modern economic organisation, with its mobility of capital and labour, free competition, power of choice, inventive genius and intellectual resources of entrepreneurs and merchants, takes care of the normal and temporary fluctuations of prices. But when a change in the price-level is general and persistent in one direction the case is otherwise. Arrangements based on the expectation that the price movement is only temporary, and that there will be a return to the former normal position, constantly come to naught. Suffering endured in holding on for the turn in the movement cannot be offset by gains in another. In short, such a persistent price movement in one direction is bound to confound ordinary business sagacity and so vitiate all calculations for the future as to result in unlimited dislocation or loss and subject the individual to such powerful and at the same time incalculable influences that his economic welfare cannot but escape entirely from his control, and prudence, forethought, and energy become of no avail in the struggle for existence. Perfect stability of value in a monetary standard is as yet only an ideal. 'But the evil consequences of instability are so great that Prof. Marshall, believing as he did that the general prejudice against tampering with the monetary foundations of economic life was a healthy prejudice, yet observed that much may be done towards safeguarding the economic welfare of communities by lessening its variability. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_12 A depreciating standard of value, as gold has been since 1896, is an evil. But can a standard of value,

undergoing a continuous depreciation as has been the case with the exchange standard, and that too of a greater depth than the gold standard—in other words, causing a greater rise of prices—be regraded as a good standard of value?

In the light of this it is strange that Prof. Keynes, in his treatise on *Indian Currency and Finance*, should have maintained that the exchange standard contained an essential element in the ideal standard of the future mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_13—a view subsequently endorsed by the Chamberlain Commission. If stability of purchasing power in terms of commodities in general is the criterion for judging a system of currency, then few students of economics will be found to agree with Prof. Keynes. Perhaps it is not too sanguine to say that even the Prof. Keynes of 1920 will prefer a gold standard to a gold-exchange standard, for under the former prices have varied much less than has been the case under the latter.

In this connection attention may be drawn to the prevalent misconception that India is a gold-standard country. It will be admitted that the best practical test whether any two countries have the same standard of value is to be found in the character of the movements in their price-levels. So sure is the test that Prof. Mitchell, after a very careful and wise survey of the price-level of different countries and the American price-level during the greenback period, was led to observe mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_14 that

"when two countries have a similar monetary system and important business relations with each other, the movements of their price-levels as represented by index-numbers are found to agree rather closely. This agreement is so strong that similarity of movement is usually found even when comparisons are made with material so crude as index-numbers compiled from unlike lists of commodities and computed on the basis of actual prices in different years."

Now, we know that before the war England was a gold-standard country, and we also know that there was no close correspondence between the contemporary movements of the

price-levels of India and England. In view of this, it is only a delusion to maintain that India has been a gold-standard country. On the other hand, it is better to recognise that India has yet to become a gold-standard country unless we are to fall into the same error that Prof. Fisher*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_15 must be said to have committed in attributing the extraordinary rise of prices in India to the existence of a gold standard, when, as a matter of fact, it should have been attributed to the want of a gold standard.

How can she become a gold-standard country? The obvious answer is, by introducing a gold currency. Prof. Kenyes scoffs at the view that there cannot be a gold standard without a gold currency as pure nonsensemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_16 He seems to hold that a currency and a standard of value are two different things. Surely there he is wrong. Because a society needs a medium of exchange, a standard of value, and a store of value to sustain its economic life, it is positively erroneous to argue that these three functions can be performed by different instrumentalities. On the other hand, as Professor Davenport insistsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_17

“all the different uses of money are merely different aspects or emphasis of the intermediate function. Deferred payments..... are merely deferred payments of the intermediate. So again of the standard aspect; whatever is the general intermediate is by that fact the standard. The functions are not two, but one..... Clearly, also, the intermediate may be a storehouse of purchasing power. The second half of the barter may be deferred. The intermediate is generalised purchasing power. Delay is one of the privileges which especially the intermediate function carries with it.”

Thus the rupee by reason of being the currency is also the standard of value. If we wish to make gold the standard of value in India we must introduce it into the currency of India. But it may be asked what difference could it make to the price level in India if gold were made a part of the Indian currency? To answer this

question it is necessary to lay bare the nature of the rupee currency. Now it will be granted that a standard of value which is capable of expansion as well as contraction is likely to be more stable than one which is incapable of (such a manipulation. The rupee currency is capable of) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_18 easy expansion, but is not capable of easy contraction by reason of the fact that it is neither exportable nor meltable, nor is it convertible at will. The effects, of such a currency as compared with those of an exportable currency were well brought out by the late Hon. Mr. Gokhale in a speech in which he observed. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_19

“Now, what is the difference if you have an automatic self-adjusting currency, such as we may have with gold or we had with silver before the year 1893, and the kind of artificial currency that we have at present? Situated as India is you will always require, to meet the demands of trade, the coinage of a certain number of gold or silver pieces, as the case may be, during the export season, that is for six months in the year. When the export season is brisk money has to be sent into the interior to purchase commodities. That is a factor common to both situations, whether you have an artificial currency, as now, or a silver currency, as before 1893. But the difference is this. During the remaining six months of the slack season there is undoubtedly experienced a redundancy of currency, and under a self-adjusting automatic system there are three outlets for this redundancy to work itself off. The coins that are superfluous may either come back to the banks and to the coffers of Government, or they may be exported, or they may be melted by people for purposes of consumption for other wants. But where you have no self-adjusting and automatic currency, where the coin is an artificial token currency, such as our rupee is at the present moment, two out of three of these outlets are stopped. You cannot export the rupee without heavy loss, you cannot melt the rupee without heavy loss, and consequently the extra coins must return to the banks and coffers of the government or they must be absorbed by the people. In the latter case the

situation is like that of a soil which is water-logged, which has no efficient drainage, and the moisture from which cannot be removed. In this country the facilities for banking are very inadequate, and therefore our money does not swiftly return back to the banks or Government Treasuries. Consequently, the extra money that is sent into the interior often gathers here and there like pools of water turning the whole soil into a marsh. I believe the fact cannot be gainsaid that the stopping of two outlets out of the three tends to raise prices by making the volume of currency redundant."

Had gold formed a part of the Indian currency it would have not only met the needs for expansion but would have permitted contraction of currency in a degree unknown to the rupee. Gold would be superior to the rupee as a standard of value for the reason that the former is expansible as well as contractible, while the latter is only expansible but not contractible. This is merely to state in different language what has already been said previously, that the Indian monetary standard, instead of being a gold or a gold-exchange standard, is in all essentials an inconvertible rupee standard like the paper pound of the Bank Suspension period, and the extra local rise of prices which in itself an inconvertible proof of the identity of the two systems, is characteristic of both, is, to use the language of the Bullion Report mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_20

"the effect of an excessive quantity of a circulating medium in a country which has adopted a currency not exportable to other countries, or not convertible at will into a coin which is exportable."

Therefore, if some mitigation of the rise in the Indian price-level is desirable, then the most essential thing to do is to permit some form of "exportable" currency such as gold to be a counterpart of the Indian monetary system.

The Chamberlain Commission expended much ingenuity in making out a case against a gold currency in India. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_21 The arguments it urged were : (1) Indian people will hoard gold and will not make it available in a crisis: (2)

that India is too poor a country to maintain such an expensive money material as gold ; (3) that the transactions of the Indian people are too small to permit of a gold circulation; and (4) paper convertible into rupees is the best form of currency for the people of India as being the most economical, and that the introduction of a gold currency will militate against the popularity of notes as well as of rupees. The bogey of hoarding is an old one, and would really be an argument of some force if hoarding was something which knew no law. But the case is quite otherwise. Money, being the most saleable commodity and the least likely, in a well-ordered monetary system, to deteriorate in value during short periods, is hoarded continually by all people, i.e, treated as a store of value. But in treating it as a store of value the possessor of money is comparing the utilities he can get for the money, by disposing of it now, with those he believes he can get for it in the future, and if the highest present utility is not so great as the highest future utility, discounted for risk and time, he will hoard the money. On the other hand, he will not hoard the money if the present use was greater than the future use. That being so, it is difficult to understand why hoarding should be an objection to a gold currency for the Indian people. If they hoard gold that means they do not care to spend it on current purchases or that they have another form of currency which is inferior to gold and which they naturally like to part with first. On the other hand, if they do wish to make current purchases and have no other form of currency they cannot hoard gold. There are instances when precious metals have been exported from India, when occasion had called for it, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_22](#) showing that the hoarding habit of the Indian peoples is not such an unknown quantity as is often supposed, and if on some occasions [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_23](#) they hoarded an exportable currency when they should have released it, it is not the fault of the people but of the currency system in which the component parts of the total stock of money are not equally good as a store of value. The argument from hoarding, if it is an argument, can be used against any people, and not particularly against the Indian people.

The second argument against a gold currency in India has no

greater force than the first. If gold were to disappear from circulation then the cause can be nothing else but the over-issue of another kind of money. In the nineties, when the question of establishing a gold standard in India was being considered, some people used to point to the vain efforts made by Italy and the Austrian Empire to promote the circulation of gold. That their gold used to disappear is a fact, but it was not due to their poverty. It was due to their paper issues. Any country can maintain a gold currency provided it does not issue a cheaper substitute.

Again, if gold will not circulate because transactions are too small the proper conclusion is not that there should be no gold circulation but that the unit of currency should be small enough to meet the situation. The difficulties of circulation raises a problem of coinage. But the considerations in respect of coinage cannot be allowed to rule the question as to what should be the standard of value. If the sovereign does not circulate it cannot follow that India should not have a gold currency. It merely means that the sovereign is too large for circulation. The case, if at all there is one, is against the sovereign as a unit and not against the principle of a gold currency. If the sovereign is not small enough the conclusion is we must find some other coin to make the circulation of gold effective.

The fourth argument against a gold currency is one of fact, and can be neither proved nor disproved except by an appeal to evidence whether or not gold currency has the tendency ascribed to it. But we may ask, is there no danger in a system of currency composed of paper convertible into rupees? Will the paper have no effect on the value of the rupee? The Commission, if it at all considered that question, which is very doubtful, was perhaps persuaded by the view commonly held, that as the paper currency was convertible it could not affect the value or the purchasing power of the rupee. In holding this view it was wrong ; for, the convertibility of paper currency to the extent it is uncovered does not prevent it from lowering the value of the unit of account into which it is convertible, because by competition it reduces the demand for the unit of account and thus brings about a fall in its value. Thus the paper, although economical as a currency, is a danger to the value of the rupee. This danger would have been of a limited character if the rupee had been freely convertible into

gold. But the danger of a convertible paper currency to the value of a unit of account becomes as great as that of an inconvertible paper currency if that unit is not protected against being driven below the metal of ultimate redemption by free convertibility into that metal.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_24 The rupee is not protected by such convertibility, and as the Commission did not want that it should be so protected it should have realised that it was as seriously jeopardizing the prospects of the rupee being maintained at par with commodities in general, and therefore with gold, by urging the extension of a paper currency, be it ever so perfectly convertible, as it could have done by making the paper altogether inconvertible. But so observed was the Commission with considerations of economy and so reckless was it with considerations of stability of value, that it actually proposed a change in the basis of the Indian paper currency from a fixed issue system to that of a fixed proportion system.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_25 That, at the dictates of considerations of economy, the Commission should have neglected to take account of this aspect of the question, is only one more evidence of the very perfunctory manner in which it has treated the whole question of stability of purchasing power so far as the Indian currency was concerned.

If there is any force in what has been urged above, then surely a gold currency is not a mere matter of "sentiment" and a "costly luxury," but a necessity dictated by the supreme interest of steadying the Indian standard of value, and thereby to some extent, however slight, safeguarding the welfare of the Indian people from the untoward consequences of a rising price-level.

We now see how very wrong the Chamberlain Commission was from every point of view in upholding the departure from the plan originally outlined by the Government of India and sanctioned by the Fowler Committee. But that raises the question : How did that ideal come to be so ruthlessly defeated? If the Fowler Committee had proposed that gold should be the currency of India, how is it that gold ceased to be the currency? It cannot be said that the door is closed against the entry of gold, for it has been declared legal tender. Speaking in the language of Prof. Fisher, the

movement of gold in the money reservoir of India is allowed a much greater freedom so far as law is concerned than can be said of silver. Silver, in the form of rupees, is admitted by a very narrow valve which gives it an inlet into that reservoir, but there is no outlet provided for it. On the other hand, gold is admitted into the same reservoir by a pipe-connection which gives it an inlet as well as an outlet. Why, then, does not gold flow into the currency reservoir of India? A proper understanding on this question is the first step towards a return to the sound system proposed in 1898.

On an examination of the literature which attempts to deal with this aspect of the question, it will be found that two explanations are usually advanced to account for the non-entry of gold into the currency system of India. One of them is the sale of council bills by the Secretary of State. The effect of the sale of council bills, it is said, is to prevent gold from going to India. Mr. Subhedar, said to be an authority on Indian currency, in his evidence before the Smith Committee (Q.3,502), observed:—

"Since 1905 it has been the deliberate attempt of those who control our currency policy to prevent gold going to India and into circulation."

The council bill has a history which goes back to the days of the East India Company.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_26 The peculiar position of the Government of India, arising from the fact that it receives its revenues in India and is obliged to make payments in England, imposes upon it the necessity of making remittances from India to England. Ever since the days of the East India Company the policy has been to arrange for the remittance in such a way as to avoid the transmission of bullion. Three modes of making the remittance were open to the Directors of the East India Company: (1) sending bullion from India to England; (2) receiving money in England in return for bills on the Government of India; and (3) making advances to merchants in India for the purchase of goods consigned to the United Kingdom and repayable in England to the Court of Directors of the Company to whom the goods were hypothecated. Out of these it was on the last two that greater reliance was placed by them. In time the mode of

remittance through hypothecation of goods was dropped” as introducing a vicious system of credit, and interfering with the ordinary course of trade.” The selling of bills on India survived as the fittest of all the three alternatives, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H.

[Problem of Rupee CHAPTER VII.htm - _msocom_27](Problem_of_Rupee_CHAPTER_VII.htm_-_msocom_27) and was continued by the Secretary of State in Council—hence the name, council bill—when the Government of India was taken over by the Crown from the Company. In the hands of the Secretary of State the council bill has undergone some modifications. The sales as now effected are weekly sales, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. [Problem of Rupee CHAPTER VII.htm - _msocom_28](Problem_of_Rupee_CHAPTER_VII.htm_-_msocom_28) and are managed through the Bank of England, which issues an advertisement on every Wednesday on behalf of the Secretary of State for India, inviting tenders to be submitted on the following Wednesday for bills payable on demand by the Government of India either at Bombay, Madras, or Calcutta. The minimum fraction of a penny in the price at which tenders of bills are received has now mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. [Problem of Rupee CHAPTER VII.htm - _msocom_29](Problem_of_Rupee_CHAPTER_VII.htm_-_msocom_29) been fixed at 1/32nd of a penny. The council bill is no longer of one species as it used to be. On the other hand there are four classes of bills: (1) ordinary bills of exchange, sold every Wednesday, known as “*Councils*”, (2) telegraphic transfers, sold on Wednesdays, called shortly “*Transfers*” mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. [Problem of Rupee CHAPTER VII.htm - _msocom_30](Problem_of_Rupee_CHAPTER_VII.htm_-_msocom_30) (3) ordinary bills of exchange, sold on any day in the week excepting Wednesday, called “*Intermediates*”, and (4) telegraphic transfers, sold on any day excepting Wednesday, named “*Specials*.” Now, in what way does the Secretary of State use his machinery of council bills to prevent gold from going to India? It is said that the price and the magnitude of the sale are so arranged that gold does not go to India. Before we examine to what extent this has defeated the policy of the Fowler Committee, the following figures (Tables LI and LI I, pp. 579 and 582) are presented for purposes of elucidation.

From an examination of these tables two facts at once become clear. One is the enormous amount of council bills the Secretary

of State sells. Before the closing of the Mints the sales of council bills moved closely with the magnitude of the home charges, and the actual drawings did not materially deviate from the amount estimated in the Budget. Since the closure of the Mints the drawings of the Secretary of State have not been governed purely by the needs of the Home Treasury. Since the closure, the Secretary of State has endeavoured

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H.Problem of Rupee CHAPTER VII.htm - _msocom_31—

"(1) To draw from the Treasuries of the Government of India during the financial year the amount that is laid down in the Budget as necessary to carry out the Ways and Means programme of the year.

“(2) To draw such further amounts as may be required to pay for purchases of silver bought for coinage purposes.

“(3) To draw such further amounts as an unexpectedly prosperous season may enable the Government to spare, to be used towards the reduction or avoidance of debt in England.

“(4) To sell additional bills and transfers to meet the convenience

of trade.

“(5) To issue telegraphic transfers on India in payment for sovereigns which the Secretary of State has purchased in transit from Australia or from Egypt to India.” The result of such drawings is that the councils are made to play an enormous part in the adjustment of the trade balance of India and the swelling of balances in the Home Treasury and the locking up of Indian funds in London.

The second point to note in comparing the preceding tables is with regard to the price at which the Secretary of State makes his sales. Before the closure of the Mints the price of the council bills was beyond the control of the Secretary of State, who had therefore to accept the price offered by the highest bidder at the weekly sale of his bills. But it is objected that there is no reason why the Secretary of State should have continued the old practice of auctioning the rupee to the highest bidder when the closing of the Mints had given him the sole right of manufacturing it. Availing himself of his monopoly position, it is insisted, the Secretary of State should not have sold his bills below 1s. 4 1/8d. or 1s. 4 3/32d., which, under the ratio of 15 rupees to the sovereign, was for India the gold-import point. In practice the Secretary of State has willed away the benefit of his position, and has accepted tenders at rates below gold-import point, as may be seen from the minimum rates he has accepted for his bills.

It is said that if the council bills were sold in amounts required strictly for the purposes of the Home Treasury, and sold at a price not below gold-import point, gold would tend to be imported into India and would thus become part of the Indian currency media. As it is, the combined effect of the operations of the Secretary of State is said to be to lock up Indian gold in London. With the use or misuse of the Indian gold in London we are not here concerned. But those who are inclined to justify the India Office scandals in the management of Indian funds in London, and have offered their services to place them on a scientific footing, may be reminded that a practice on one side of Downing Street which Bagehot said could not be carried on on the other side of it without raising a storm of criticism, would require more ingenuity than has been displayed in their briefs. This much seems to have

In deference to the united voice of the Council, the Government of India again asked the Secretary of State to approach the Treasury for its sanction. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_32 The Treasury on this occasion presented the Secretary of State mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_33 with two alternatives : (1) That a branch of the Royal Mint be established at Bombay solely for the purpose of coining gold into sovereigns, and exclusively under its control ; or (2) that the control of the Mint at Bombay should be entirely transferred to it. Neither of the two alternatives was acceptable to the Government of India ; and the Secretary of State, as a concession to Indian sentiment, sanctioned the issue of a ten-rupee gold coin from the Indian Mint. The Government of India preferred this solution to that suggested by the Treasury, but desired that the matter be dealt with afresh by the Chamberlain Commission then sitting. That Commission did not recommend a gold Mint, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_34 but saw no objection to its establishment provided the coin issued was a sovereign, and if the coinage of it was desired by Indian sentiment and if the Government did not mind the expense of coinage. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_35 This view of the Commission carried the proposition no further than where it was in 1900, until the war compelled the Government to open the Bombay Mint for the coinage of gold as a branch of the Royal Mint. But it was again closed in 1919. Its reopening was recommended by the Currency Committee of 1919 mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_36, and so enthusiastically was the project received that an Honourable Member of the Supreme Council took the unique step of tempting the Government into adopting

that recommendation by an offer to increase the Budget Estimates under "Mint" to enable the Government to bear the cost of it. The Government, however, declined the offer with thanks so we have in India the singular spectacle of a country in which there was a Gold Mint even when Gold was not legal tender, as was the case between 1835-93, while there is no gold Mint, when gold is legal tender, as has been the case since 1893. Just what an open Mint can do in the matter of promoting the ideal of the Fowler Committee it is difficult to imagine; but the following extracts from the evidence of a witness (Mr. Webb), than whom there was no greater advocate of an open gold Mint before the Chamberlain Commission, help to indicate just what is expected from a gold Mint.

"The principal advantage which you would expect to derive from a gold Mint is that you would increase the amount of gold coin in circulation?—That would be one of the tendencies.

"Is there any other advantage?—The advantage is that the country would be fitted with what I regard as an essential part of its monetary mechanism. I regard it as an essential part of its currency mechanism that it should have a Mint at which money could be coined at the requisition of the public.

"I want to get exactly at your reason why that is essential. Am I right in thinking that you consider it essential to a proper currency system that there should be a gold currency?— Yes.

"And essential to a gold currency that there should be a gold Mint?—Yes, on the spot in India itself..... It would do away, in a measure, with the management by the Secretary of State of the Foreign Exchanges, in that there would be always the Mint at which the public could convert their gold into legal-tender coins in the event of the Secretary of State taking any action of which the public did not approve. It is a safeguard, so to speak, an additional safeguard, that the people of India can on the spot obtain their own money on presentation of the metal."

Here, again, the assumption that a gold Mint is a guarantee that there will be a gold currency seems to be one as gratuitous as the former assumption that if gold were allowed to be freely imported it would on that account become part of the currency. On the

other hand, there are cases where Mints were open, yet there was neither gold coinage nor gold currency. Instances may be cited from the history of the coinage at the Royal Mint in London. The magnitude of gold coinage during the bank suspension period, 1797-1821, or the late war, 1914-18, is instructive from this point of view. The Mint was open in both cases, but what was the total coinage of gold? Throughout the suspension period the gold coined was negligible, and during the years 1807, 1812, and 1814-16 no gold was coined at all at the Royal Mint. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_37 Again, during the late war the coinage of gold fell off from 1915, and from 1917 it ceased altogether. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_38

These instances conclusively show that although a Mint is useful institution, yet there is no magic in a Mint to attract gold to it. The historical instances adduced above leave no doubt that the circulation of gold is governed by factors quite independent of the existence or non-existence of a Mint open to the free coinage thereof.

Now, it is an established proposition of political economy that when two kinds of media are employed for currency purposes the bad one drives out the good one from circulation. Applying this principle to the situation in India, it should be evident that so long as there is an unlimited issue of rupees gold cannot circulate in India. This important principle has been so completely overlooked by those who have insisted on the introduction of a gold currency that they have not raised a finger against the unlimited issue of rupees. Mr. Webb, the fiercest opponent of the India Office malpractices, and the staunchest supporter of the view that if only the Secretary of State could be made to contract his drawings gold would flow and be a part of the currency in India, recommended to the Chamberlain Commission that—

"The sales of Council Drafts should be strictly limited to the sum required to meet the Home Charges, and no allotments should in any circumstances be made below, say, 1s. 4 1/8d. to 1s. 4 3/32 d.—i.e. about the present equivalent of specie point for gold imports into India. The sum required in London for Home

Charges having been realised, *no further sales of Council Drafts should be made except for the express purpose—duly notified to the public—of purchasing metal for the manufacture of further token coinage.* Such special sales of Council Drafts should not be made at anything below specie point for gold importsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_39.”

Again, Sir V. Thackersay, in the course of his speech on March 22, 1912, moving a resolution in the Legislative Council, asking the Government to open the Mint for the coinage of gold in India, observed :—

“Let me make myself clear on one point. / *do not suggest that Government should give up the right to coin rupees or refuse to give rupees when people demand the same.* I do not propose to touch the gold-standard reserve, which must remain as it is as the ultimate guarantee of our currency policy. My proposal does not interfere with the existing arrangements in any way, but is merely supplementary to them..... Let the Government of India accumulate gold to the maximum limit of its capacity, but let the surplus gold which it cannot absorb be coined and circulated if the public chooses to do so. With our expanding trade and the balance in our favour, gold will continue to be imported in ordinary time, and *if the facilities of minting are provided in India, it will go into circulation.*”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_40

These are surely not the ways of promoting a gold currency. Indeed, they run counter to it. So long as the coinage of rupees goes on gold will not enter into currency. Indeed, to cry out on the one hand against the huge drawings of the Secretary of State and the consequent transfer of Indian funds to London and their mismanagement by the Secretary of State, and on the other hand to permit him to manufacture additional token coinage of rupees, is to display not only a lamentable ignorance of a fundamental principle of currency, but also to show a complete failure to understand the precise source from which the whole trouble arises. It is true that the Government of India cannot bind the Secretary of State to any particular course of action mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee

CHAPTER VII.htm - [_msocom_41](#), and he often does override the provisions of the Annual Budget. But the question remains. How is it that he is able to draw so much more after 1893 than he ever did before? It must be remembered that whatever the Secretary of State does with the funds in London he must pay for his drawings in India. Before 1893 he drew less because his means of payment were less ; after 1893 he drew more because his means of payment were greater. And why were his means of payment greater? Simply because he had been able to coin rupees. Indeed, the amount of drawings are limited by the demand for them and by his capacity to coin rupees. It is therefore foolish to blame the Secretary of State for betraying the interests of India and at the same time to permit him to coin rupees, the very means by which he is able to betray. If a gold currency is wanted, and it is wanted because the rupee is a bad standard of value, then what is necessary is not to put a limit on the drawings of the Secretary of State or the opening of a gold Mint, but a short enactment stopping the coinage of rupees. Then only gold—made legal tender, at a suitable ratio with the rupee—will become a part of Indian currency.

That the stoppage of rupee coinage is a sufficient remedy is amply corroborated by the now forgotten episode in the history of Indian currency during the years 1898-1902. Within the short space of a year and a half after gold had been made legal tender the Hon. C. E. Dawkins, notwithstanding the fact that there was no gold Mint, was able, in his Budget speech in March, 1901, to observe:—

“India has at length emerged from a period of transition in her currency, has reached the goal to which she has been struggling for years, has established a gold standard and a gold currency, and has attained that practical fixity in exchange which has brought a relief alike to the private individual and to the Government finances.”
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_42](#) So great was the plethora of gold that Mr. Dawkins further remarked
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_43](#)—

"..... We have been nearly swamped..... by gold.....”The transformation in the currency position which then took place

was graphically described by Lord Curzon, the then Viceroy, in the following words:
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_44:—

"Mr. Dawkins..... has successfully inaugurated the new era under which the sovereign has become legal tender in India, and stability in exchange has assumed what we hope may be a stereotyped form. This great change has been introduced in defiance of the vaticinations of all the prophets of evil, and more especially of the particular prophecy that we could not get gold to come to India, that we could not keep it in our hands if we got it here, but that it would slip so quickly through our fingers that we should have even to borrow to maintain the necessary supply. As a matter of fact, we are almost in the position of the mythological king, who prayed that all he touched might be turned into gold, and was then rather painfully surprised when he found that his food had been converted into the same somewhat indigestible material. So much gold, indeed, have we got, that we are now giving gold for rupees as well as rupees for gold, i.e. we are really in the enjoyment of complete convertibility—a state of affairs which would have been derided as impossible by the experts a year ago."

Compare this state of affairs in 1900-1 with that found to exist in 1910-11, for instance. Speaking of the currency situation as it was in that year, the Hon. Sir James (now Lord) Meston, observed:
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_45:—

“We have passed through many changes in currency policy and made not a few mistakes. but the broad lines of our action and our objects are clear and unmistakable, and there has been no great or fundamental sacrifice of consistency in progress towards our ideal. Since the Fowler Committee that progress has been real and unbroken. There is still one great step forward before the ideal can be reached. We have linked India with the gold countries of the world, we have reached a gold-exchange standard, which we are steadily developing and improving. The next and final step is a true gold currency. That, I have every hope, will come in time.....”

Leaving aside for the moment the extenuatory remarks of the speaker, the fact remains that in 1900 India had a gold currency. But, taking stock of the position at the end of 1910, it had ceased to have it. What is it that made this difference? Nothing but the fact that between 1893-1900 no rupees were coined, but between 1900-1910 the number of rupees coined was enormous. During the first period the inducement to coin rupees was very great indeed. The exchange was not quite stable, and the Government had still to find an increasing number of rupees to pay for the "Home Charges." And an Honourable Member mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_46 of the Supreme Legislative Council actually asked:—

"Is there any objection to the Government working the Mints on their own account? Considering the low value of

silver and the great margin between the respective prices of bullion and the rupee, would not Government by manufacturing rupees for itself make sufficient profit to meet at least a substantial portion of the present deficit? It seems to me to be a legitimate source of revenue and one capable of materially easing our finances."

But Sir James Westland, who was then in charge of the finances of India, replied mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_47 :—

"I must confess to a little surprise in finding the proposal put forward by one of the commercial members of your Excellency's Council that we should buy silver at its present low price, and coin it for issue at the appreciated value of the rupee..... I shall certainly refuse myself to fall into this temptation."

Again, 1898, when some of the followers of Mr. Lindsay desired that Government should coin rupees to relieve the monetary stringency, Sir James Westland remarked mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_48 :—

"..... in our opinion the silver standard is now a question of the past. It is a case of *vestigia nulla retrorsum*. The only question

before us is how best to attain the gold standard. We cannot go back to the position of the open Mints. There are only two ways in which we can go back to that position. We can either open the Mints to the public generally, or we can open them to coinage by ourselves. In either case what it means is that the value of the rupee will go down to something approaching the value of silver. If the case is that of opening the Mints to the public, the descent of the rupee will be rapid. If it is that of opening only to coinage by the Government, the descent of the rupee may be slow but it will be no less inevitable."

The Hon. C. E. Dawkins was equally emphatic in his denunciation of the project of Government coining rupees. When he was tempted to acquiesce in the proposal by holding out the prospects of a profit from coinage, he replied mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_49:—"I think I ought..... to beg my hon. friend not to dangle the profits on silver too conspicuously before the eyes even of a most virtuous government. Once let these profits become a determining factor in your action, then good-bye stability." Another instance of the Government's determination not to coin rupees is furnished by inquiring into the reasons as to why it is that the Government has never assumed the responsibility of selling council bills in indefinite amount and at a fixed rate. The Chamberlain Commission argued that the Government cannot undertake such a responsibility because it cannot hold out for a fixed rate, and may have to sell at any rate even lower than par. This is true so far as it is a confession of a position weakened by the Government's folly of indulging in excessive rupee coinage. But this was certainly not the explanation which the Government gave in 1900 when it was first asked to assume that responsibility. The Government knew perfectly well that to keep on selling bills indefinitely was to keep on coining rupees indefinitely. They refused to assume that responsibility because they did not want to coin rupees. That this was the original reason was made quite plain by the Hon. Mr. Dawkins, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_50 who reminded those who asked Government to undertake such a responsibility that "the silver coin reserve of Government in consequence rapidly neared a point at

which it was impossible to continue to meet unlimited transfers [i.e. council bills]. Therefore the Secretary of State decided to limit the demands by gradually raising the rate, thus meeting the most urgent demands, and weeding out the less urgent, while warning those whose demands were not so urgent to ship gold to India. No other course was practicable. The liability of the Secretary of State to keep the tap turned on indefinitely at 1s. 4 5/32d. has been asserted. But I cannot see that any positive liability exists, and I wonder if those who assert its existence would have preferred that the stability of our currency (whose situation they are well able to appreciate and follow) should have been affected by the reserve of rupees being dangerously reduced?"[and which could not be augmented except by coining more rupees].

Just at the nick of time, when the ideal of a gold standard with a gold currency was about to be realised, there came on the scene Sir Edward Law as the Finance Minister of India and tore the whole structure of the new currency to pieces with a piratical nonchalance that was as stupid as it was wanton. His was the Minute of June 28, 1900, which changed the whole course of events.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_51 In that Minute occurs the following important passage;—

"15. As a result of these considerations it must, I think, be admitted that the amount of gold which can safely be held in the currency reserve must for the present be regulated by the same rules as would guide the consideration of the amount by which the proportion invested in government securities could be safely increased. Pending an increase in the note circulation..... or some other change in existing conditions, I am of opinion that a maximum sum of approximately £ 7,000,000 in gold may now be safely held in the currency reserve. I should not, however, wish to be bound absolutely to this figure, which is necessarily an arbitrary one, and particularly I should not wish any public announcement to be made which might seem to tie the hands of the Government in the event of circumstances, at present unforeseen, rendering its reduction hereafter desirable."

In outlining this Minute, which with modifications in the maximum gold to be held in the currency reserve, remains the

foundation of the currency system in India, the author of it never seems to have asked for one moment what was to happen to the ideal of a gold standard and a gold currency? Was he assisting the consummation of the gold standard or was he projecting the abandonment of the gold standard in thus putting a limit on the holding of gold? Before the policy of this Minute was put into execution the Indian currency system was approximating to that of the Bank Charter Act of 1844, in which the issue of rupees was limited and that of gold unlimited. This Minute proposed that the issue of gold should be limited and that of rupees unlimited—an exact reversal to the system of the Bank Suspension period. In this lies the great significance of the Minute, which deliberately outlined a policy of substituting rupees for gold in Indian currency and thereby defeating the ideal held out since 1893 and well-nigh accomplished in 1900.

If Sir Edward Law had realised that this meant an abandonment of the gold standard, perhaps he would not have recorded the Minute. but what were the considerations alluded to in the Minute which led him thus to subvert the policy of a gold standard and a gold currency and put a limit on the gold part of the currency rather than on the rupee part of the currency? They are to be found in a despatch, No. 302, dated September 6, 1900, from the Government of India, which says:—

"2. the receipts of gold continued and increased after December last. For more than eight months the gold in the currency reserve has exceeded, and the silver has been less, than the limits suggested in the despatch of June 18. By the middle of January the stock of gold in the currency reserve in India reached £5,000,000. The proposal made in that despatch was at once brought into operation; later on we sent supplies of sovereigns to the larger District Treasuries, with instructions that they should be issued to anyone who desired to receive them in payments due or in exchange for rupees; and in March we directed the Post Office to make in sovereigns all payments of money orders in the Presidency towns and Rangoon, and we requested the Presidency Banks to make in the Presidency towns and Rangoon payments on Government account as far as possible in sovereigns. These measures were taken, not so much in the expectation that they would in the early future relieve us of any large part of our

surplus gold, but in the hope that they would accustom the people to gold, would hasten the time when it will pass into general circulation in considerable quantities, and by so doing, would mitigate in future years the difficulties that we were experiencing from the magnitude of our stock of gold and the depletion of our stock of rupees.

"3. In order to meet these difficulties and to secure, if possible, that we should have enough rupees for payment to presenters of currency notes and tenderers of gold, we began to coin additional rupees.....

"14. We may mention that we have closely watched the result of the measures described in paragraph 2. The issues of gold have been considerable; but much has come back to us through the Currency Department and the Presidency banks. The Comptroller-General estimated the amount remaining in circulation at the end of June at over a million and a quarter out of nearly two millions issued up to that time ; but there are many uncertain data in the calculation. We are not yet able to say that gold has passed into use as money to any appreciable extent.

"15. It is very desirable that we should feel assured of being able to meet the public demand for rupees, as indicated by the presentation of currency notes and gold. We therefore strongly press on your Lordship the expediency of sanctioning

the above proposal for further coinage [of rupees];...

"17. But we do not wish our proposal to be considered as dependent on such arguments as those just stated. We make it primarily on the practical ground that we consider it necessary in order to enable us to fulfil an obligation which, though we are not, and do not propose to be, legally committed thereto, we think it desirable to undertake so long as we can do it without excessive inconvenience; namely, to pay rupees to all tenderers of gold and to give rupees in encashment of currency notes to all

who prefer rupees to sovereigns."

The arguments advanced in this statement of the case for coining rupees are a motley lot. At the outset it is something unheard of that a Government which was proceeding to establish a gold standard and a gold currency should have been so very alarmed at the sight of increased gold when it should have thanked its stars for such an early consummation of its idea. Leaving aside the psychological aspect of the question, the government, according to its own statement, undertook to coin rupees for two reasons: (1) because it felt itself obliged to give rupees whenever asked for, and (2) because people did not want gold. What force is there in these arguments? Respecting the first argument it is difficult to understand why Government should feel itself obliged to give rupees. The obligation of a debtor is to pay the legal-tender money of the country. Gold had been made legal tender, and the Government could have discharged its obligations by paying out without shame or apology. Secondly, what is the proof that people did not want gold? It is said that the fact that the gold paid out by Government returned to it is evidence enough that people did not want it. But this is a fallacy. In a country like India Government dues form a large part of the people's expenditure, and if people used that gold to meet those dues—this is what is meant by the return of gold to Government—then it is an evidence in support of the contention that people were prepared to use gold as currency. But if it is true that people do not want gold, how does it accord with the fact that Government refuses to give gold when people make a demand for it? Does not the standing refusal imply that there is a standing demand? There is no consistency in this mode of reasoning. The fact is, all this confused advocacy is employed to divert attention from the truth that the Government was anxious to coin rupees not because people did not want gold, but because Government was anxious to build a gold reserve out of the profits of additional coinage of rupees. That this was the underlying motive is manifest from the minute of Sir Edward Law. That the argument about people disliking gold, and so forth, and so forth, was only a cover for the true motive comes out prominently from that part of the Minute in which its author had argued that —

"16. If it be accepted that £ 7,000,000 is the maximum sum

which, under existing conditions, can be held in gold in the currency reserve, in addition to the 10 crores already invested, it is evident that such assistance as can be obtained from manipulating the reserve will fail to provide the sum in gold which it is considered advisable to hold in connection with the maintenance of a steady exchange. So far no authority has ventured to name a definite sum which should suffice for this purpose, but there is a general consensus of opinion, in which I fully concur, that a very considerable sum is required. The most ready way of obtaining such a large sum is by gold borrowings, but the opinion of the Currency Commission was strongly hostile to such a course, and the question therefore remains unanswered : How is the necessary stock of gold to be obtained?

"17. I do not presume to offer any cut-and-dried solution of this difficult problem, but I venture to offer certain suggestions which, if adopted, would, I believe, go a considerable way towards meeting the difficulty. I propose to create a special 'Gold Exchange Fund,' independent of, but in case of extraordinary requirements for exchange purposes to be used in conjunction with the gold resources of the currency reserve. The foundation of this fund would be the profit to be realised by converting into rupees the excess above £7,000,000 now held in gold in the currency reserve."

Can there be any doubt now as to the true cause for coining rupees? Writers who have broadcasted that rupees were coined because people did not want gold cannot be said to have read correctly the history of the genesis of the exchange standard in India.

But was Sir Edward Law the evil genius who turned a sound system of currency into an unsound one by his disastrous policy of coining rupees? Opponents of the Government as well as its supporters are all agreed mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_52 that this was a departure from the ideal of the Fowler Committee. In what precise respect the Government has departed from the recommendations of the Fowler Committee has, however, never been made clear anywhere in the official or non-official literature on the subject of Indian

currency. What were the recommendations of the Fowler Committee? It is usually pointed out, to the shame of the Government of India, that the Fowler Committee had said (it is as well to repeat it) :—

“We are in favour of making the British sovereign a legal tender and a current coin in India. We also consider that, at the same time, the Indian Mints should be thrown open to the unrestricted coinage of gold..... Looking forward as we do to the effective establishment of a gold standard and currency based on the principles of the free inflow and outflow of gold, we recommend these measures for adoption.”

That is true. But those who have blamed the Government have forgotten that same Committee also recommended that—

"The exclusive right to coin fresh rupees must remain vested in the Government of India; and though the existing stock of rupees may suffice for some time, regulations will ultimately be needed for providing such additions to the silver currency as may prove necessary. The Government should continue to give rupees for gold, but fresh rupees should not be coined until the proportion of gold in the currency is found to exceed the requirements of the public. We also recommend that any profit on the coinage of rupees should not be credited to the revenue or held as a portion of the ordinary balance of the Government of India, but should be kept in gold as a special reserve, entirely apart from the paper-currency reserve and the ordinary Treasury balances"[and be made freely available for foreign remittances whenever the exchange falls below specie point.]

Taking the two recommendations of the Committee together, where is the departure? What the Government has done is precisely what the Committee had recommended. That the Government of India or the Chamberlain Commission should have admitted for a moment that there was a departure is not a little odd, for the very despatch which conveyed the Minute of Sir Edward Law to the Secretary of State opens with remarks which show that Government was earnestly following the recommendations of the Fowler Committee. It runs:—

"In our despatch No. 301 of August 24, 1899, we wrote with

reference to paragraph 60 of the Report of the Indian Currency Committee [i.e. the Fowler Committee], that any profit made on rupee coinage should be held in gold as a special reserve, has not escaped our attention ; but the need for the coinage of additional rupees is not likely to occur for some time, and a decision on this point may be conveniently deferred."

What Sir Edward Law did was to carry that recommendation into effect when the occasion arrived. In view of this it is useless to belabour the Government of India if the ideal of a gold standard with a gold currency was defeated by the coinage of rupees. But, even though the Government has in ignorance taken the blame on itself, it cannot be rightly thrown at its door. If the project has been defeated by the coinage of rupees, the question must be referred to the Fowler Committee. Why did the Committee permit the coinage of rupees? There is no direct answer, but it may be guessed. It seems the Committee first decided that there should be a gold standard and a gold currency as desired by the government of India. But then they seemed to have been worried by the question whether in the ideal they had sketched they had made enough provision for the maintenance of the gold value of the rupee. In the view of the opponents of the Government of India the rupee ought to have been made either convertible as a bank note or a limited legal tender as a shilling. The Committee rejected both these demands as being unnecessary. Stating their ground for refusing to reduce the rupee to the status of a shilling, the Committee argued mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_53:—

“It is true that in the United Kingdom the silver currency has a fixed limit of 40s., beyond which it cannot be used to pay a debt..... While it cannot be denied that 40s. limitation tends to emphasise and maintain the subsidiary character of our silver coinage, yet the essential factor in maintaining those tokens at their representative nominal value is not the statutory limit on the amount for which they are a legal tender in any one payment, but the limitation of their total issue. Provided the latter restriction is adequate, there is no essential reason why there need be any limit on the amount for which tokens are a tender by law.”Regarding the necessity for convertibility the Committee observed

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee
CHAPTER VII.htm - _msocom_54:—

"Outside the United Kingdom there are two principal instances of countries with a gold standard and currency, which admit silver coins to unlimited tender. These countries are France and the United States of America. In France the five-franc piece is an unlimited tender and for all internal purposes is equivalent to gold. The same remark applies in the United States to the silver dollar..... Both in France and the United States the Mints are now closed to the coinage of silver coins of ultimate tender. In neither country are such coins convertible by law into gold ; in both countries alike they are equivalent to gold for all internal purposes. For international payments, so far as specie is concerned, France and the United States depend ultimately on the international medium of exchange, which is gold. In the last resort, it is their gold which, acting through the foreign exchanges, maintains the whole mass of their currency at its nominal value for internal purposes.

"The position of the currency question in India being such as we have explained in the preceding paragraph, we do not consider it necessary to recommend a different policy in the case of that country from that which is found sufficient in France and the United States, by imposing a legal obligation on the Government of India to give gold for rupees, or, in other words, to substitute the former for the latter on the demand of the holders. This obligation would impose on the Government of India a liability to find gold at a moment's notice to an amount which cannot be defined beforehand, and the liability is one which, in our opinion, ought not to be accepted."

Although confident of its opinions, the Committee was considerably impressed by those who, owing to the large quantity of rupees in circulation, entertained doubts

"whether the mere closing of the Indian Mints to silver would in practice be attended with such a restriction of the rupee currency as would make the rupee permanently exchangeable for gold at a fixed rate." So much was the Committee shaken by these doubts that it admitted that

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee

[CHAPTER VII.htm - _msocom_55](#)

“the forces which affect the gold value of the rupee are complicated and obscure in their mode of operation, and we are unable, therefore, to say positively that the mere closing of the Mints to silver will, in practice, lead to such a limitation of the rupee currency, relatively to the demands for it, as will make the rupee permanently exchangeable for gold at a fixed rate.”

As a remedy against such a contingency the Committee thought that the Government of India should accept the obligation of convertibility of the rupee into gold for foreign remittances whenever the rupee fell below specie point. Having hit upon such a simple solution the next question was how was the Government to get its gold reserve? Borrowing for the purposes of such a gold reserve was one way of doing it. But that project was somehow unpalatable to the Committee. Perhaps because it had admonished the Government, in another part of its Report,[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_56](#) to

"husband the resources at their command, exercise a resolute economy, and restrict the growth of their gold obligations,"

or because it was a vicious principle to borrow

"for the establishment or the maintenance of a gold standard,'[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_57](#)

the Committee was averse to the proposal for gold borrowing. But if a gold reserve was not to be built up by borrowing, how could it be built up otherwise? The Committee seems to have been considerably troubled over the problem of finding an alternative mode of raising a reserve until some member of it, probably at a moment when his intellect was rather weak, proposed 'Well, why not allow the Governments to coin rupees? If that were allowed it could easily build up a gold reserve without having to borrow, and can then discharge the obligation of convertibility for foreign remittances.' So innocuous seemed the proposal that the Committee wholeheartedly adopted and incorporated it into its Report with a certain sigh of relief that is unmistakable from the

firm language in which it was expressed.

This may or may not be a correct interpretation of the reasoning employed by the Committee in permitting the Government to coin rupees. But the fact remains that the Committee did not realise what was involved in that recommendation. First of all, what was to happen to the gold standard and currency if the coinage of rupees was to go on? In this regard is it possible to have more respect for a Committee which lays down on the one hand the ideal of a gold standard and currency, and permits on the other hand the coinage of rupees, than Bagehot felt for the Directors of the Bank of England, who on March 25, 1819, passed that notorious resolution —

“That the Court cannot refrain from adverting to an opinion, strongly insisted upon by some, that the Bank has only to reduce its issues to obtain a favourable turn in the Exchanges, and a consequent influx of the precious metals; the Court conceives it to be its duty to declare that it is unable to discover any solid foundation for such a sentiment.”

If the opinions of the Directors were classical for their nonsense, are those of the Fowler Committee less so? Is there any difference between them? Bagehot, in commenting upon the sentiments embodied in the resolution, not dissimilar to the recommendations of the Fowler Committee, urged some extenuating circumstances which compel us to forgive the Bank Directors their nonsense. The Directors lived in an age when economic reasoning was in a confused state; nor were they anxious for the “influx of gold,” being perfectly satisfied with paper. None of these circumstances can excuse the nonsense of the Fowler Committee. They framed their recommendations at a time when the contrary of what the Bank Directors had held was an established axiom. Besides, it cannot be said that they were not anxious for the influx of gold into the Indian currency. On the other hand, that was just the thing they were looking forward to. Consequently, they should have carefully weighed their words and allowed nothing that was inconsistent with their main object. In not paying sufficient heed to that elementary principle known as Gresham's Law, the Committee not only made a fool of itself but defeated the principal object it had set forth in the earlier part of its Report.

Secondly, was it necessary to endow the Government with a power to coin rupees? What was the nature of the problem the Committee was called upon to decide? Let us re-state it. The Herschell Committee, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_58 by way of modifying the proposals of the Government of India, submitted to it in 1892, had introduced a proviso by which the Mints, although closed to the public, were to remain open to the Government for the coinage of rupees—a proviso which, by the way, reveals that after all that imposing survey the Committee remained supremely ignorant of the secret why, in the monetary systems it investigated, the currency maintained its parity with gold with little or no gold. If it had understood that it was limitation of issue which maintained this parity it would not have introduced the proviso which it did. However pernicious the proviso, the Committee must be excused for that indiscretion, for it was afraid that owing to the Mint closure there might be a sudden contraction of currency, and as it had not made gold general legal tender it had to provide for the necessary addition to the currency, and this it thought could best be done by Government having the power to coin rupees. Fortunately for the Government the occasion for an addition did not arise for some time, till 1898, and there was therefore no necessity to exercise, that power. But when such an occasion did arise the Government, as was pointed out before, refused to exercise that power—and held to the view that the additions to Indian currency, instead of being made by further coinage of rupees, should be made by an influx of gold. The government was the strongest opponent of Mr. Lindsay, who was then agitating that it was safe and economical to compel it to make the necessary additions by undertaking to coin rupees. It was to adjudicate in the dispute between the Government of India on the one hand and Mr. Lindsay on the other, the former desiring additions by gold coinage and the latter by rupee coinage, that the Fowler Committee was called into being. If the Government was anxious to add to the currency by coining more rupees rather than by the influx of gold, there was no necessity to appoint the Fowler Committee, Such a power had already been given to it by the Herschell Committee. It was because the Government did not want to exercise that ill-charged power that an appeal to a new

Committee became necessary. Faced with this immediate problem of how best to expand the currency in relief of monetary stringency, the Committee had solved it in one part of its Report by prescribing that gold should be made legal tender, so that any debtor who was unable to find rupees could have the option of paying his creditors in gold. If gold was allowed to be the general medium of exchange, was not the proposal to coin rupees a superfluous one, quite uncalled for?

Thirdly, could the proposal to coin rupees as a means of building up a gold reserve be justified as calculated to maintain the value of the rupee? The one thing essential to the maintenance of the value of the rupee was a limitation on its issue. The Committee talked in a very learned manner about the shilling as being maintained in value in consequence of a limitation in its issue. But did it understand how the shilling was maintained limited in quantity? If it is true that it is not the limit on legal tender, but the limit on the total volume, that maintains the value of the shilling, why is not the shilling issued in unlimited quantities? The manufacture of the shilling is profitable in the same way as is the manufacture of the rupee. Why does not the British Government coin it in unlimited quantities? Only because shillings cannot be paid out in unlimited quantities? If the Government could pay its Chancellors of Exchequer, Cabinet Ministers, and the hosts of officials and clerks, and if they in turn could pay their grocers, milkmen, brewers, and butchers in shillings, there could be nothing to prevent the overissue of shillings. But it is because nobody can pay out shillings in unlimited quantities that nobody will have them in unlimited quantities. It is the absence of a wholesale market, so to say, due to a limit on legal tender, that stops the Government from indulging in the over-issue of shillings. The Committee was therefore wrong in arguing that the limit on legal tender had nothing to do with the maintenance of the value of the shilling. On the other hand, if limitation of issue is the prime condition which maintains the value of a token coin, one means of making such a limit effective is to put a limit on its legal tender.

With regard to its views on convertibility, its reasoning was equally confused. To say what was sufficient for France and America should be sufficient for India, was like the blind leading the blind. It was entirely erroneous to argue that it was not

convertibility but their gold

"which acting through the foreign exchanges, maintains the whole mass of their currency at its nominal value for internal purposes."

Quite the contrary. France and America did not need convertibility to protect their currency because the silver franc and the silver dollar were absolutely limited in quantity. Indeed, far from being protected by the influx of gold, the limitation of issue not only maintained their value, but permitted the retention of whatever gold there was in those countries. Now, the Committee, instead of venturing into long-winded and pointless disquisitions, should have insisted that there was no necessity either to prescribe a limit of tender or convertibility with regard to the rupee, so long as there were other ways of restricting its over-issue. Limitation of legal tender or convertibility can be said to be essential only because they are the means of bringing about a limitation of issue, and if the requisite limitation of issue was provided for in other ways, the purpose for which convertibility or limitation of legal tender were asked for was accomplished. Now, was not the closing of the Mints a sufficient limitation on the volume of rupees? Indeed, if the closing of the Mints was not an effective limitation on the issue of rupees, what else could have been? Was not the closing of the Mints the same thing as regulating the currency on the principle of a fixed-issue system so well known in the matter of regulating paper currencies? That it was, could hardly be denied. That being so, the only question was whether the volume of rupees already in circulation was distinctly less than the minimum amount of legal-tender money ever necessary for the internal circulation of the country. The Government of India had foreseen the volume of rupees in circulation becoming in excess of such a minimum and had accordingly provided against it. In their despatch of March 3, 1898, outlining their plans, the Government observed:—

"9. We know now that one of the main reasons of this failure [to maintain the exchange value of the rupee] is that our rupee circulation had before the closing of the Mints been increased to such an extent that it fully, and more than fully, supplied all the demands of trade, and allowed no room for any

further addition in the form of gold..... The necessary condition of a fixed rate of exchange between two countries is that, when the currency of one of them becomes redundant as compared with that of the other, the redundancy may be relieved by the withdrawal, for a time, of the excess coin, and we wish, therefore, to reach the condition in which our circulating medium... is not composed wholly of silver coin which has no equal value outside the country, but contains also a margin of gold which is capable of being used elsewhere as coin, and will therefore in natural course flow to where it is most wanted. Our total rupee currency is estimated to be at present somewhere about 120 crores, to which we have to add 10 crores of fiduciary circulation of currency notes.

"10. It is impossible with any exactness to say, and it can only be ascertained by actual experience, by how much this rupee circulation has to be decreased in order to remove its redundancy.But some considerations point to the amount being within quite manageable limits. For example, there are twenty-four crores, more or less, of currency notes in circulation, including the amounts held in our Treasuries. If we could imagine that amount of circulation at present existing in the form of currency notes suddenly converted into £16,000,000 in gold, it seems impossible that Indian trade should be able to get on without having part at least of that amount held in actual circulation, in other words, it would not be possible for that amount of gold coin to be remitted out of the country without the value of the rupee being forced up to a point which would arrest the stream of export. If this is the case, twenty-four crores of rupees is the outside limit of the amount it might be necessary to convert into gold coin in order to introduce a stable exchange of 16d., accompanied by an actual (active or inactive) circulation of gold at that comparative value: and it is more than probable that the amount required may really fall far short of this.

"11. The mere reduction of circulation might be carried out in the same way in which it was effected in 1893, namely, by abstaining from withdrawing council bills, until we have an accumulation of, say, twenty crores in excess of our, ordinary balances. But this procedure would be both costly and, as we believe, ineffective; in the first place the permanent locking up of

twenty crores would cost us the interest on that amount, or on the amount of gold borrowed in England during the suspension of drawings, and in the second place the existence of this accumulation of silver coin would be a perpetual menace to the exchange market, and would entirely prevent any confidence in the future of the rupee. We must not only withdraw the amount from circulation, but we must show by the method we adopt that our intention is that it should cease to exist in the form of coin, and that its place, as coin, is to be taken by gold. Our proposal is therefore to melt down existing rupees, having first provided a reserve of gold [by borrowing] both for the practical purpose of taking the place of the silver and in order to establish confidence in the issue of our measures."

At the time the Committee reported the volume of rupees in circulation was not redundant, as was proved by the fact that exchange was rising and gold was flowing in. That the closing of the Mints had therefore brought about an effective limit is beyond dispute, and was even admitted by the Committee.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_59 But supposing that the closing of the Mints did not constitute an effective limitation on the volume of rupees in circulation, what was the remedy? Was the plan of a gold reserve to assure convertibility for foreign remittances calculated to promote that object if the gold reserve was to be got by coining more rupees? If the limitation of rupees was going to maintain their value, as it did the value of the shilling, was the permission to add to the volume of rupees which the Committee feared was overabundant if not redundant, for the sake of a gold reserve, designed to limit their volume?

It is difficult to read the report of the Fowler Committee without exasperation. The permission to coin rupees was mischievous in every way. It was destructive of a true gold standard ; it was not wanted as a relief against monetary stringency, and was calculated to lower the value of the rupee. If it was anxious for a gold standard and currency, as it undoubtedly was, it should have absolutely stopped the coinage of rupees and suppressed the notification holding the government ready to give rupees for gold. In failing to do that it not only deprived the country of a sound system, but actually, albeit unwittingly, helped to place the entire

Indian currency, including paper currency, on the basis of an inconvertible rupee. Few people seem to be alive to the precise significance of that pernicious proviso introduced by the Herschell Committee, and remorselessly upheld by the Fowler Committee, that the government shall always be ready to give rupees for gold, but there can be no doubt that in the absence of a counter-proviso, requiring Government to give gold for rupees, the proviso is simply a cover for an authority to the Indian Government to issue inconvertible rupee currency of unlimited legal tender in the same way as the bank restriction was for an authority to the bank of England to issue inconvertible notes in unlimited quantities. The first step in the right direction would be to scrap that Report and make a speedy return to the safe and sound proposals of the Government of India as outlined in the despatch referred to above. The primary condition is to stop the coinage of rupees and not merely close the Mints to the public. Whether it would be necessary to melt a portion of the rupees depends upon what gold value it is desired the rupee should have. Once the total contraction of the rupee is settled upon and all further coinage is stopped, India will be in a position to have an effective gold standard based on a free inflow and outflow of gold. There will be no necessity to reduce the rupee in legal tender and provide for its convertibility. Its value would be maintained intact by sheer force of its quantity being limited, provided the quantity in circulation has been reduced so far as to be always below the minimum demand.

Supporters of the existing system of rupee currency have ever since its inauguration held out that the currency is economical and secure. Its claim for security, both in terms of gold and commodities, has been tested, and the grounds of it have been analysed in the course of this and previous chapters, wherein is demonstrated how very much wanting it is in the essentials that go to make up a secure currency. We must now endeavour to assess whether it is economical, for if it were really so, then that might be a point of some value against its opponents. We must therefore scrutinise the economy effected by the rupee currency. Kemmerer says, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_60

“A convertible money finds its *raison d'etre* largely in the fact that it

economises the precious metals, and makes possible a saving to the community. If paper money or token money are substituted for primary money, their substitution reduces the demand for the precious metals by the difference between the amount of metal used in the token money introduced plus that contained in the primary money required for the redemption fund. This economy of the precious metals results in an increased supply being thrown upon the market”[which supply goes abroad and into the arts and increases the non-monetary wealth of the country by an equivalent amount: the gold obtained for the metal economised represents a net gain to the community]. The same kind of gain, says Kemmerer, attaches to the use of inconvertible money, and even on a larger scale, because there is no necessity to use primary money even for a redemption fund, as there is when the money is convertible. Such views as these have led Prof. Keynes to opine that the Indian currency system is a marvel of economy, and that other more advanced countries might usefully follow the lead. We will not draw from this the uncharitable conclusion that either Prof. Kemmerer or Prof. Keynes would recommend that because an inconvertible paper currency is the most economical currency a country should adopt it without remorse. What we are concerned with is to find out whether the rupee currency is really economical. When the process by which the rupee comes into being is carefully analysed it becomes impossible to take seriously the plea that the Indian currency is economical. First of all, gold is tendered to the Secretary of State in London for his council bills, or gold is tendered to the Government of India in India in payment of taxes or otherwise. Out of this gold the Secretary of State buys silver and coins rupees. As the price of silver is below the ratio, there arises a difference between the cost price of the rupee and its selling price in gold. To the extent of this difference there is, of course, a gain. But this gain or profit on coinage, as it is called, is no benefit to society. It is a hoard, and to that extent represents a useless abstraction of wealth. If the profit is not to be used for any current purposes of society it is as well not to coin rupees. It is therefore obvious that so long as the profits are merely held apart from the revenue resources of India there is no economy in the rupee currency worth naming. From another standpoint the currency of India is a wasteful asset to society. Metallic currency is primarily a capital good representing a form of social investment.

Consequently it is necessary to see that the capital value of the currency is maintained. It is a happy circumstance to note that the Government of India is not dead to this aspect of the question with regard to its paper-currency reserve, and has very recently instituted a depreciation fund for the preservation of its capital value. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_61 Now, the considerations that apply to the paper currency should apply also to the rupee currency. Has the rupee currency maintained its capital value? The gold part of it, called the gold-standard reserve, is invested in interest-bearing securities. Interest is no doubt an additional source of gain, but have the securities maintained their capital value? Far from it. Turn to the rupee half of the currency. Has the bullion in the rupee maintained its capital value? There have been endless charts and diagrams drawn by playful economists in which the black line, showing the nominal value of the rupee, has remained up while the red line, showing the bullion value of the rupee, has gone down with the falling gold value of silver. But what does that mean? Simply that the rupee is a wasting asset and is not worth at a later date what it cost to society when it was manufactured. Surely there was more economy in the project of the mad Chinaman who burnt his house to roast his pig than there is in the Indian rupee currency. The Chinaman's house must have been very old and uninhabitable. The same cannot, however, be said of this converting of gold money into silver money, because we know that silver is an inferior kind of investment to gold. Thus viewed, the currency is not in the least economical. It appears to be so because people look only to the rupee. But, adding the cost of the rupee currency to that of the gold-standard reserve, can it be said that India would have required more gold if she had a gold currency in place of a rupee currency? Bearing in mind that with a fixed limit on the issue of rupees there can be no reason for a gold reserve, the only result of a stoppage of rupee coinage would be that gold, instead of being, as now, part reserved as a sinking fund and part transmuted into a rupee currency, would enter into circulation without being subjected to this baneful and wasteful process.

No more gold would be required in the one case than in the other. We can therefore conclude without fear of challenge that

with a complete stoppage of rupee coinage Indian currency would be truly economical, prices would be more stable, and exchange secure, in the only way in which it can really be said to be secure, and the rupee, although inconvertible, will cease to be a problem, which it has been ever since 1873.

But will that be all the advantage to the country? By no means. In drawing a moral from his comparison of the paper pound of 1797 with the paper pound of 1914, Prof. Cannanmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_62 points out that—

"there can in these days be no doubt that the experiment of entrusting what no community should entrust to any institution, the power of creating money without limit, to the Bank of England, compares very favourably with the modern plan of entrusting it to the Government itself or to a State bank completely under the control of the Government. In the comparatively short war of 1914-18 currencies 'not convertible at will into a coin which is exportable' were issued by Governments and Government banks in amounts compared with which the 100 per cent. increase in thirteen years, which made the Bullion Committee complain so vigorously in 1810, look absolutely trifling."

There was a time when it could have been said that this indictment did not apply to the Government of India. Few Governments could be said to have been so very anxious to wash their hands of the responsibilities involved in the management of a currency as the Government of India once was. In 1861, when the Government first undertook the issue of paper money in India, the anxiety it displayed was laudable. An impecunious Government, made prostrate by the heavy burdens of the Mutiny, should have welcomed the project of a paper currency as a source of profit. But so great was its sense of responsibility that the Government refused to be content with convertibility as a check on over-issue. One of the principal reasons why the desperate paper-currency scheme, which that straitened financier Mr. Wilson had devised in 1860 to find ways and means for improving the finances of India, was rejected was so well stated by his successor, Mr. Laing, that in these days of frenzied finance his remarks may

as well be reproduced in full. He said mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_63 —

"There was another important reason why he (Mr. Laing) thought that Sir Charles Wood's principle was the soundest. All parties were agreed that a paper currency ought to be identical with the metallic currency which it displaced. But the system of issuing against two-thirds of securities and one-third of specie, as was proposed by Mr. Wilson, would not always ensure this identity, and there was considerable risk that in times of buoyancy and speculation the circulation would be unduly extended. He thought that that was a point of considerable importance, because if we looked at what had taken place in India during the last three years, we should find a great increase in the wages of labour and the prices of commodities, which should warn us as to what the consequences might be if we were to accelerate the process already going on so rapidly by any artificial inflation of the currency. If you unnaturally stimulated the rise of prices by an over-issue of paper circulation you ran considerable risk of changing the healthy action of commerce into a feverish excitement which was sure to bring about a reaction. If we continued to go on as we had done for the last two or three years, the result would be that many articles of Indian produce might be driven out of the market by the competition of other countries, and he therefore thought that the Government ought to be exceedingly cautious how it took any step that might unduly accelerate the tendency to a general advance, as might be the case under the system of paper currency which to any considerable extent represented securities and not bullion. Such an advance might even reach a point seriously embarrassing to the Government if the general rise in the rate of wages and cost of living made the present scale of salaries and the pay of troops no longer adequate. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_64 For these reasons he thought it by far the wisest course to adhere to the principle of paper currency adopted in England as laid down in Sir Charles Wood's despatch." Not only was the Government anxious to put a limit on the issue over and above making it convertible, but it did not

want to be vested with the legal authority to issue notes. In a despatch dated April 27, 1859,*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_65 to the Secretary of State, the Government of the day observed :—

“We believe that the convertibility of the notes on demand would not be a sufficient guarantee against over-issue. When once the paper currency is established in public confidence, the temptation to take dangerous advantage of this confidence will be very great in a time of difficulty, if the power of doing so is left in the hands of the Government of India alone. Restriction by law, either to a certain amount of issue absolutely, or to any amount relative to the balances in India, will, in our opinion, be necessary. We think that such a law ought to be passed by Parliament, and not by the Legislative Council of India.”

Equally sane was the view of the Government in 1876 with regard to the rupee currency. The Bengal Chamber of Commerce, it will be recalled, had urged upon the Government of India to close the Mints to the free coinage of silver, without opening them to the free coinage of gold—a project which practically meant that the Government should undertake the management of the rupee currency. The reply of the Government of India was a sharp rebuke. It declared mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_66 :—

"8.the Chamber invite the Government to take a measure calculated to enhance indefinitely the value of the rupee by suspending the long-established legal right of all comers to have silver bullion manufactured upon uniform conditions under State supervision into legal-tender coin, and temporarily substituting a system of coinage at the discretion of the State..... .

“11. It is essential to a sound system of currency that it be automatic. No man or body of men can ascertain whether at any particular moment the interests of the community as a whole require an increase or diminution of the currency; still less, how much increase or how much decrease is, at any moment, exactly needed. No Government which aspires to keep its currency in a

sound condition would be justified in attempting that impossible task, or in leaving the community, even for a short interval, without a fixed metallic standard of value. Under an 'open coinage system' these things regulate themselves without official interference." Now, compare with this the later pronouncements of the government with regard to the principles governing the paper and rupee currency respectively. During the war, when the Government of India resorted to the enlargement of paper issues, Honourable Members of the Supreme Legislative Council pointed out the effects it would produce on prices in India. But the late Hon. Sir Wm. Meyer, who as a Finance Minister piloted the Indian finances during the last war, in the course of a speech on the Indian Paper Currency (Amendment) Bill, dated September 5, 1917, replied mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_67:—

"The note circulation was sixty crores before the war and is now about a hundred crores. But the Hon. Mr. Sarma shivered at the idea of inflation. I may remind him that one of the accepted (!) doctrines of economists is that artificial inflation of paper currency only exists when the note circulation is not fully covered. Now we have covered every rupee of our note circulation. in securities....."[How could there be an inflation?]

The change in the Government's view with regard to the rupee currency is equally noteworthy. In 1908, when the exchange value of the rupee fell below par, the Government was reminded that it was the result of the excessive coinage of rupees. But although in 1876 the Government did not think it was possible for it to so increase and decrease the currency to suit the needs of commerce, yet in 1908 the Government advanced the opposite view. The Finance Minister, the Hon. Mr. Baker, in his reply, went on to argue mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_68:—

"In the first place the whole of the new coinage that we have undertaken during this period has been undertaken solely to meet the demands of trade. Not one single rupee has been added to the circulation except to enable us to meet these demands....."

Now, if it is dangerous to entrust a Government with the power to manage currency, how very dangerous is it to entrust it to the Government of India, which professes to carry out its trust on the basis of doctrines such as these! No one is so ill-instructed in these days as to suppose that these are sound maxims. If security is enough, what need is there for convertibility? If currency is issued only in response to trade demand, what fear is there of over-issue? A Government acting on such a principle may well go on indefinitely increasing the currency without remorse. History abounds with instances of ruin caused by the management of currencies on such naive principles as these.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_69 Happily for the country, the paper currency profoundly altered in its basis—one might almost say, tampered with—in 1920 by the Government is yet far away from currencies regulated on the theory enunciated by the Finance Minister. It is the rupee currency which has been, ever since the Mint closure, the chief source of danger to the welfare of the Indian people, particularly because of the principle governing its issue. Because that principle has the support, in itself a surprising thing, of such eminent authorities as Prof. Keynes,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_70 Mr. Shirras,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_71 and the Chamberlain Commission,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_72 it cannot alter the case for depriving the Government of this power of managing the rupee currency, for the principle is essentially unsound. The reason why the fallacy in the reasoning, that there could be no excess of rupees because of their being issued in response to trade demand, does not appear on the surface is due to the peculiar nature of money. Money is said to be wanted only because money has a purchasing power. That is no doubt true, but that does not quite explain why people so incessantly want money, even when they know that the value of money is so unstable. Indeed, if purchasing power was the only consideration we should not find such a desire for the current means of purchase. That desire can only be accounted for by the fact that money has a differential advantage over other goods, in that it has in the highest degree what Monger

called the quality of saleability. That one can more often buy at a bargain than sell at a bargain is simply another way of stating that every one desires to hold his resources in the most saleable form of money. In this sense it is absolutely true that no more money can be issued than there is demand for. But from that it does not follow that there can be no over-issue of money purely for the currency needs at any given time. All money is acquired in response to trade or services, but all money is not retained in currency. Indeed, all commodities are exchanged for money, because money is supposed to bear the option of being used for non-monetary purposes. In the case of the rupee the option-of-use quality is non-existent. Consequently, although issued in response to trade demand, it remains in currency whether it is wanted or not, and thus tends to bring about its depreciation. That such a depreciation is possible cannot be denied even by those who maintain that rupees are issued only in response to trade demand, otherwise why should they be so very anxious for an increase of the gold reserves of the country. But the danger to the rupee currency does not merely arise from the possibility of indiscretion on the part of the Government. Besides the Government there have been statesmen in India so interested in the welfare of their fellow-subjects that they have rebuked the Government on several occasions for not making the profits on rupee coinage available for the advancement of the moral and material progress of the country. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/28H. Problem of Rupee CHAPTER VII.htm - _msocom_73 and in 1907 the profits on rupees were actually employed in the extension of railways. It must fill every one with horror and despair to contemplate the consequences sure to emanate from the manipulation of currency for such ends. Is it not time this source of danger and temptation be removed by depriving the Government of this power to manage the rupee currency? But what is the means of bringing this about? If it is desirable to do away with the management then convertibility is an insufficient measure; for with convertibility the rupee will still remain a managed rupee. Only the complete stoppage of rupee coinage will remove the governmental interference in the management of Indian currency; and it is this that we must therefore ask for.

Queer as it may seem, SAFETY LIES IN AN
INCONVERTIBLE *Rupee with a fixed limit of Issue*

THE UNTOUCHABLES AND THE PAX BRITANNICA

[The Manuscript consisting of 123 typed pages is a presentation of the case of Ambedkar during his stay for the Round Table Conferences in London according to his Marathi biographer Mr. C. B. Khairmode. The MS. is printed herein as it was found—ed.]

* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_1 of the American Continent the objective of his voyage was reach India. Even this voyage of Columbus neglect of the Depressed Classes by the British Government which did not admit them as members of the Armed Forces. The manuscript, of which the first page is missing, was prepared by Dr. was not a sudden venture. It was a part of a plan of exploration of a sea route to India which he had received its first impetus from Prince Henry of Portugal, who was greatly interested in it and who in his reign of 42 years (1418—1460) helped it in every possible way.

What was the necessity for this quest for a direct sea route from Europe to India which impelled the Portuguese, the Dutch, the French and the English to come out of their seclusion. The coming of the English to India was not an adventure of a singular race. It was a concerted effort and there was so much eagerness on the part of each European nation that within this concert there was a competition for reaching India first. Because the Portuguese came first it does not follow that the rest were idle or indifferent. The English and the Dutch were under the belief that there was a shorter route to India than that of the Cape of Good Hope and their delay in their coming to India was due to the fact that they were busy in finding out its possibilities. The French, though last to arrive, were second only to the Portuguese, their first voyage being to Sumatra in 1529.

What was the origin of this eagerness to reach the Indies? Why did the Portuguese, Spaniards, English, French and Dutch vie with one another in centuries of strenuous effort to find a sea route to India? The object was to obtain luxuries and particularly spices— chillies, cloves, nutings etc., which could be had only from India and the East.

This seems rather strange—that all this run should be for spices. But the fact is that spices did play a very important part in this expansion of Europe.

How much spices were used and appreciated by the European peoples

in the fifteenth and sixteenth centuries can be, seen, from the following data collected by Prof. Cheyney
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_2 :

"One of the chief luxuries of the Middle Ages was the edible spices. Wines and ale were constantly used spiced with various condiments. In Sir Thopa's forest grew "*notemuge to putte in ale*".

"Froissart has the king's guests led to the "palace, where wine and spices were set before them". The dowry of a Marseilles girl, in 1224, makes mention of "mace, ginger, cardamom and galingale."

"When John Ball wished to draw a contrast between the lot of the lords and the peasants, he said, "They have wines, spices and fine bread, when we have only rye and the refuse of the straw,". When old Latiner was being bound to the stake he handed nutmegs to his friends as keepsakes.

"Pepper, the most common and at the same time the most valued of these spices, was frequently treated as a gift of payment instead of money." Matilda de Chaucer is in the gift of the king, and her land is worth '8s. 2d., and I pound of pepper and I pound of cinnamon and I ounce of silk", reads a chance record in an old English survey. The amount of these spices demanded and consumed was astonishing. Venetian galleys Genoese varracks, and other vessels of the Mediterranean brought many a cargo of them westward, and they were sold in fairs and markets every where. "Pepper-sack" was a derisive and yet not unappreciative epithet applied by German robber-barons to the merchants, who they plundered as they passed down the Rhine. For years the Venetians had a contract to buy from the Sultan of Egypt annually 420,000 pounds of pepper. One of the first vessels to make its way to India brought home 210,000 pounds. A fine of 200,000 pounds of pepper was imposed upon one petty prince of India by the Portuguese in 1520. In romances and chronicles, in cook-books, trades-lists, and customs-tariffs spices are mentioned with a frequency and consideration known in modern times."

Why were spices so necessary to the European peoples of those days? One answer is taste. "The monotonous diet, the coarse food, the unskillful cookery of mediaeval Europe had all their deficiencies covered by a charitable mantle of Oriental seasoning." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_3 While it was a matter of taste for all it was a matter of necessity for the poor. The poor needed spices. In ancient I

times when food was scarce and the productivity of man in the absence of machinery was very low; man could not afford to waste or throw away food as being stale. Whatever was left over or was not necessary for immediate consumption had to be preserved. Spices are the best preservatives. It was because of this as also for reasons of taste that spices were in mediaeval Europe in such universal demand.

Another question is why was a direct sea route necessary for these European nations to reach India and to obtain spices. Before the European nations discovered the sea route to India via the Cape of Good Hope there were in existence three well established land routes by which these luxuries and spices used to reach Europe and known as the Northern, the Middle and the Southern routes.

The Northern route lay between the Far East and the West, extending from the inland provinces of China westward across the great desert of Gobi, south of the Celestial mountains to Lake Lop then passing through a series of ancient cities, Khotan, Yarkand, Kashgar, Samaro and Bokhara, till it finally reached the region of the Caspian Sea. This main northern route was joined by others which crossed the passes of the Himalayas and the Hindookush, and brought into a United Stream, the products of India and China. A journey of eighty to a hundred days over desert, mountain, and steppes lay by this route between the Chinese wall and the Caspian. From still farther north in China a parallel road to this passed to the north of the desert and the mountains and by way of Lake Balkash, to the same ancient and populous land lying to the east of the Caspian Sea. Here the caravan routes again divided. Some led to the south-westward, where they united with the more central routes described above and eventually reached the Black Sea and the Mediterranean through Asia Minor and Syria. Others passed by land around the northern coast of the Caspian, or crossed it, reaching a further stage at Astrakhan. From Astrakhan the way led on by the Volga and on rivers, till its terminus was at last reached on the Black Sea at Tana near the mouth of the Don, or at Kaffa in the Crimea.

The Middle route lay through Mesopotamia and Syria to the Levant. Ships from India crept along the Asiatic shore to the Persian Gulf, and sold their costly freights in the marts of Chaldea or the lower Euphrates. A line of trading cities extending along its shores from Ormuz near the mouth of the gulf to Bassorah at its head served as ports of call for the vessels which carried this merchandise. Several of these coast cities were also termini of caravan routes entering them from eastward, forming a

net-work which united the various provinces of Persia and reached through the passes of Afghanistan into northern India. From the head of the Persian Gulf one branch of this route went up the line of the Tigris to Bagdad. From this point goods were taken by caravan through Kurdistan to Tabriz, the great northern capital of Persia, and thence westward either to the Black Sea or to Layas on the Mediterranean. Another branch was followed by the trains of camels which made their way from Bassorah along the tracks through the desert which spread like fan to the westward, till they reached the Syrian cities of Aleppo, Antioch, and Damascus. They finally reached the Mediterranean coast at Laodicea, Tripoli, Beirut, or Jaffa, while some goods were carried even as far south as Alexandria.

The southern route was a sea route in all except its very latest stages. It lay through the Red Sea and brought the products of India and the Far East by sea to Egypt, whence they passed to Europe from the mouths of the Nile.

The land routes were devious and dangerous. They were insecure and transportation over them was difficult and expensive. Robbers plundered the merchants and Governments taxed them beyond measure. Of the two land routes the Northern was not a highway to the same extent as the middle one was. With its deadly camel journey of alternate shows and torrid wastes, rendered it available only for articles of small bulk. It never attained the importance of the Middle route. Even this Middle or Indo-Syrian route was not always open. It was blocked twice. Once between 632—651 A. D. when the Saracen Arabs under the conquering impulse of Islam seized the countries of this Indo-Syrian route. For a second time it was blocked during the crusades in the 11th Century. The southern route which was for most part a sea route was equally unsafe.”The storms of the Indian Ocean and its adjacent waters were destructive to vast numbers of the frail vessels of the East ; piracy vied with storms in its destructiveness; and port dues were still higher than those of inland marts.”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_4 But as Prof. Cheyney observed,”With all these impediments. Eastern products, nevertheless, arrived at the Mediterranean in considerable quantities”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_5 and were available to the European merchants.

When these land routes existed why did there arise the necessity for a sea route? The answer is the Turkish and Mongol upheaval in further Asia which overthrew the Saracenic culture and ruined the trade with Europe. This upheaval was a new force. It first came into operation when about 1038 the selfwill Turks burst upon Persia. Two centuries later the Mongols poured over Asia under Chengizkhan. In 1258, the Mongols captured Bagdad. In 1403 Timur captured Syria. In 1453 Constantinople fell to the Turks. This upheaval of the Turks and the Mongols completely blocked the two land routes. The Southern route was the only route that was open for some time. But even that was blocked when Egypt was conquered by the Turks in 1516.

Two factors are responsible for bringing the European Nations to India. First spices. Second the blockade of the old overland Trade routes by the Turks and the Mongols. It is these factors which drove the European nations to search for a sea route to India and which they ultimately found. Having come to trade with the East Indies, these Europeans remained there to conquer it. That evidently resulted in a struggle for supremacy. The struggle between the English and the Portuguese and the Dutch on the other hand was for commercial supremacy. The theatre of the struggle between the English and the Portuguese was India and the Persian Gulf and ended in favour of the British in 1612, so far as India was concerned and in 1622 so far as the Persian Gulf was concerned. From 1622 India and the Persian Gulf lay open to England and the Portuguese ceased to be any menace to development of English trade and commerce. The theatre of the struggle between the English and the Dutch lay in Malaya Archipelego. It was decided against the English in 1823 by what is called the Mascaere of Amboyana whereby the English receded to India and left the Dutch to enjoy exclusively the trade with the Malaya Archipelego. The struggle between the English and the French was a mighty struggle. The theatre of this struggle was India proper. The object of this struggle was political sovereignty and not commerce. The French had established themselves in the South and the East. So far as Southern India is concerned the conflict began in 1744 and ended in 1760 at the battle of Wandiwash where the French were completely vanquished. So far as Eastern India is concerned the struggle was a single battle in 1757 — the battle of Plassey in which French lost along with the Nawab whom they supported as against the English. With the elimination of the French, the English alone were left to be the rulers of India.

[Britannica.htm - _msocom_6](#)

But how was the conquest of India received by the people of India?

From a certain point of view the conquest of India by the British was an accident. As an accident it has come to be regarded as a part of destiny. In this sense Lord Curzon was justified when he said—

(Quotation not given in the MS.—ed.)

What have they done for the people of India? This is too large a question. Many volumes having been written on it, is unnecessary for me to add to what has already been said. I am reducing the question to a narrow compass and ask what have the British done for the Untouchables? What did the British do when they became rulers to emancipate and elevate the Untouchables? There are many heads in relation to which this question may be raised. But I propose to it Public Service, Education and Social Reform.

What did the British Government do to secure to the Untouchables adequate representation in the Public Services of the Country?

I will take the Army first To understand and appreciate the fate that has befallen the Untouchables it is necessary to ask what is it that enabled the British to conquer India?

The conquest of India is an extraordinary event. And this is for two reasons.

The countries which were suddenly thrown open to the European nations at the end of the fifteenth century fall into three classes. Vasco Da Gama threw open countries in which for the most part thickly populated and which were governed by ancient, extensive and well organised states existed. In the second category fell countries discovered by Columbus in which the population was small and the state was of a very rudimentary character. The third category consisted of countries discovered by..... They were just empty areas with no population at all. India fell in the first of these three categories. This is one reason why the conquest of India must be said to be an extraordinary event.

The second reason why the conquest of India is an extraordinary event is the period during which this conquest has taken place. When was India conquered? India was conquered between 1757 and 1818.

In the year 1757 there was fought a battle between the forces of the East India Company and the Army of Siraj-ud-Daulah, the Nawab of Bengal. The British forces were victorious. It is known in history as the battle of Plassey and it is as a result of this battle that the British for the first time made territorial conquest in India. The last battle which

completed the territorial conquest was fought in 1818. It is known as the battle of Koregaon. This was the battle which destroyed the Maratha Empire and established in its place the British Empire in India. Thus the Conquest of India by the British took place during 1757 and 1818. What was the state of affairs in Europe during this very period and what was the position of the English people? This period was one of great turmoil in Europe. It was a period of Napoleonic wars the last of which was fought in 1815 at Waterloo. In these wars England was no idle spectator. It was deeply involved in these wars. It was at the head of all the European States which had formed an alliance to crush Napoleon and the French Revolution. In this grim struggle the English nation wanted every penny, every man, every ship and every gun for its own safety. It could spare nothing for the East India Company which was operating in a theatre far removed from the home base. Not only could they spare nothing to help the East India Company but they actually borrowed men, money and ships from the East India Company to fight Napoleon in the European War thereat. The following data from Macpherson gives an idea as to how much the East India Company had to contribute to the English nation for the support of the wars in Europe.

It is during this period when the English people were wholly occupied in Europe in a deadly struggle with Napoleon and when they could not assist the East India Company in any way that India was conquered. It is this which makes the conquest such an extraordinary event. How did this extraordinary event become possible? What is the explanation?

Macaulay has given his explanation. He says :

(Quotation not given in the MS.)

Macaulay's explanation is the explanation which all Englishmen believe, like to believe. Being current for a long time it has got a hold upon the minds of the English people and all European and American people. Indeed an endeavour is made to inculcate this view upon the minds of the younger generation of English people. It is quite understandable. An important element in the make up of an imperial race is the superiority complex and Macaulay's view goes to foster it as nothing else can.

But is Macaulay's view right? Do the facts of history support that view? Professor Seely who has studied this subject in a more realistic way than Macaulay did say :

"In the early battles of the Company by which its power was decisively established, at the siege of Arcot, at Plassey, at Buxer, there

seem almost always to have been more sepoys than Europeans on the side of the Company. And let us observe further that we do not hear of the sepoys as fighting ill, or of the English as bearing the whole brunt of the conflict. No one who has remarked the childish eagerness with which historians indulge their national vanity, will be surprised to find that our English writers in describing these battles seem unable to discern the sepoys. Read Macaulay's Essay on Clive; everywhere it is 'the imperial people,' 'the mighty children of the sea,' 'none could resist Clive and his Englishmen.' But if once it is admitted that the sepoys always outnumbered the English, and that they kept pace with the English in efficiency as soldiers, the whole theory which attributes our successes to an immeasurable natural superiority in valour falls to the ground. In those battles in which our troops were to the enemy as one to ten, it will appear that if we may say that one Englishman showed himself equal to ten natives, we may also say that one sepoy did the same. It follows that, though no doubt there was a difference it was not so much a difference of race as a difference of discipline, of military science, and also no doubt in many cases on difference of leadership.

Observe that Mill's summary explanation of the conquest of India says nothing of any natural superiority on the part of the English.' The two important discoveries for conquering India were; 1st the weakness of the native armies against European discipline, 2ndly the facility of imparting that discipline to natives in the European service'. He adds; 'Both discoveries were made by the French.'

And even if we should admit that the English fought better than the sepoys, and took more than their share in those achievements which both performed in common, it remains entirely incorrect to speak of the English nation as having conquered the nations of India. The nations of India have been conquered by an army of which on the average about a fifth part was English. But we do not only exaggerate our own share in the achievement; we at the same time entirely misconceive and misdescribe the achievement itself. From what race were the other four-fifths of the I Army drawn? From the Natives of India themselves! India can I hardly be said to have been conquered at all by foreigners; She has rather I conquered herself." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_7

This explanation of Prof. Seely is correct as far as it goes. But it is not going far enough. India was conquered by the British with the help of

an Army composed of Indians. It is well for Indians as well as for the British not to overlook this fact. But who were these Indians who joined the army of their foreigners? That question Prof. Seely did not raise. But it is a very pertinent question. Who were these people who joined the army of the East India Company and helped the British to conquer India? The answer that I can give—and it is based on a good deal of study—is that the people who joined the Army of the East India Company were the Untouchables of India. The men who fought with Clive in the battle of Plassey were the Dusads, and the Dusads are Untouchables. The men who fought in the battle of Koregaon were the Mahars, and the Mahars are Untouchables. Thus in the first battle and the last battle it was the Untouchables who fought on the side of the British and helped them to conquer India. The truth of this was admitted by the Marquess of Tweeddale in his note to the Peel Commission which was appointed in 1859 to report on the reOrganisation of the Indian Army. This is what he said — (Quotation not given in the MS.—ed.)

There are many who look upon this conduct of the Untouchables in joining the British as an act of gross treason. Treason or no treason, this act of the Untouchables was quite natural. History abounds with illustrations showing how one section of people in a Country have shown sympathy with an invader, in the hope that the new comer will release them from the oppressions of their countrymen. Let those who blame the Untouchables read the following manifesto issued by the English Labouring Classes in 17 (Left incomplete).

***(Extracts not given in MS.—ed.)

Was the attitude of the Untouchables in any way singular? After all, the tyranny under which the English Labourer lived was nothing as compared with the tyranny under which the Untouchables lived and if the English workmen had one ground to welcome a foreign invader the Untouchable had one hundred.

(Space left blank in the MS.—ed.)

Not only did the Untouchables enabled the British to conquer India, they enabled the British to retain. The Mutiny of 1857 was an attempt to destroy British Rule in India. It was an attempt to drive out the English and reconquer India. So far as the Army was concerned the Mutiny was headed by the Bengal Army. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_8 The Bombay Army and the Madras Army remained loyal and it was with their help that the Mutiny was

suppressed. What was the composition of the Bombay Army and the Madras Army? They were mostly drawn from the Untouchables, the Mahars in Bombay and the Pariahs in Madras. It is therefore true to say that the Untouchables not only helped the British to conquer India they helped them to retain India.

How have the British treated the Untouchables so far as service in the Army is concerned? Strange as it may appear, the answer is that the British Government has since about 1890 placed a ban on the recruitment of the Untouchables in the Indian Army. The result was that, those who had already been recruited remained. It is a great mercy that they were not disbanded. But in course of time they died or went on pension and ultimately by about 1910 completely disappeared from the Army. Nothing can be more ungrateful than this exclusion of the Untouchables from the Army.

Why did the British commit an act which appears to be an act of treachery and bad faith? No reason has ever been given by the British Government for this ban on the recruitment of the Untouchables into the Army. It is often heard that this exclusion is not intentional but is the consequence of a policy initiated in the interest of the efficiency of the Army in about the year 1890. But is this so?

This policy is based on two principles, one relating to Organisation and the other relating to recruiting.

The principle of Organisation that was introduced in 1890 is known as the principle of class composition as against the old principle of a mixed regiment. Under the new principle, the Indian Army was organized on the principle of class regiment or the class squadron or company system. This means, in the first case, that the whole regiment is composed of one class (or caste) and in the second case, that every squadron or company is formed entirely of one class. The old principle of recruiting was to take the best men available, no matter what his race or religion was. Under the new principle, race of the man became a more important factor than his physique or his intellect. For the purposes of recruitment, the different castes and communities of India are divided into categories, those belonging to the martial races and those belonging to the non-martial races. The non-martial races are excluded from military service. Only the castes and communities which are included in the category of martial races are drawn upon for feeding the Army.

It is difficult to approve of these two principles. The reasons which underlie the principle of class composition it is said, "are to a certain extent political, as tending to prevent any such formidable

coalition”against the British, as occurred in the Mutiny. I should have thought that the old system of a mixed regiment was safer. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_9 But assuming that the principle is sound, why should it come in the way of the recruitment of the untouchables? If, under the system of class composition, there can be regiments of Sikhs, Dogras, Gurkhas, Rajputs etc., why can there not be regiment of Untouchables? Again, assuming that recruitment from martial races only is in sound principle, why should it affect adversely (to) the untouchables unless they are to be treated as belonging to the non-martial races? And what justification is there for classing the untouchables who formed the backbone of the Indian Army and who were the mainstay of the Indian fighting forces for over 150 years as non-martial? That the British Government does not deem the Untouchables as belonging to non-martial classes is proved by the fact, that in the Great War, when more men were necessary for the Army, this ban on the recruitment of the Untouchables in the Army was lifted and one full battalion was raised and was known as the 111 Mahars. Its efficiency has been testified by no less a person than that (. . . .) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_10 When the need was over and the Battalion was disbanded much to the chagrin and resentment of the Untouchables. Sir said:

(Quotation not given in the MS.—ed.)

With this testimony who can say that the Untouchables are a non-martial race?

It is thus obvious that none of the two reasons supposed to be responsible for the exclusion of the Untouchables from the Army. What is then the real reason? In my opinion, the real reason for the exclusion of Untouchables from the Army is their Untouchability. Untouchables were welcome in the Army so long as their entry did not create a problem. It was no problem in the early part of the British history, because the touchable were out of British Army. They continued to be outside the British Army so long as there were Indian Rulers. When, after the Indian Mutiny, the Race of Indian rulers shriveled, the Hindus began to enter the British Army which was already filled with the Untouchables; then arose a problem—a problem of adjusting the relative position of the two groups—touchables and untouchables—and the”British, who always, in cases of conflict between justice and convenience, prefer convenience, solved the

problem — by just turning out the Untouchables and without allowing any sense of gratitude to come in their way.

Whatever the reasons of this' exclusion, whatever the justice of this exclusion, the fact remains that the effect of this exclusion has proved most disastrous in its social consequences to the life of the Untouchables. The Military Service was the only service in which it was possible for the Untouchables to earn a living and also to have a career. It is a part of history that many untouchables had done meritorious service in the field and hundreds had risen to the status of Jamadar, Subhedar and Subhedar Majors. The Military occupation had given them respectability in the eyes of the Hindus and had given them a sense of importance, by opening to them places of power, prestige and authority. Having been used to service in the Army for over 150 years, the Untouchables had come to regard it as a hereditary occupation and had not cared to qualify themselves for any other. Here in 1890 — they were told that they were not wanted in the Army, without giving them any time to adjust themselves to the new circumstances — as was done in the case of the Anglo-Indians in 1935. When this service was closed, the Untouchables received a stunning blow and setback from which they have not recovered. They were thrown from a precipice and without exaggeration, fell far below the level at which they had stood under the native Governments.

So much for the entry of the Untouchables in the Military service. What is the position with regard to their entry in the civil service?

The Civil Service requires a high degree of education from the entrant. Only those with University degrees can hope to secure admission. The Untouchables have been the most uneducated part of India's population. The Civil Service has been virtually closed to them. It is only recently, that there have been among them men, who have taken University degrees. What has been their fate? It is no exaggeration to say that they are begging from door to door. Two things have come in the way of their securing an entry in the Civil Services. Firstly, the British Government refused to give them any preference. Not that the British Government did not recognize the principle of giving preference to communities, which were not sufficiently represented in the Civil Services. For instance, the British Government has definitely recognized that the Mahomedans should get preference provided he has minimum qualification. That, this principle has been acted upon in their case, is evident from the nominations, which the Government of India has made to the I. C. S. since the year when the Government took over

power to fill certain places in the 1. C. S. by nomination.

Not a single candidate from the untouchables has been nominated by the British Government, although there were many, who called, have satisfied the test of minimum qualification.

The second reason, why the untouchables, though qualified by education, have not been able to find a place in the Civil Service is, because of the system of recruitment for these services, Under the British Government, the authority to fill vacancies is left with the head of the department. Heads of Department have been and will long continue to be high Caste Hindus. A caste Hindu by his very make up is incapable of showing any consideration to an untouchable candidate. He is a man (with) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_11 strong sympathies and strong antipathies. His sympathies make him look first to his family, then to his relations, then to his friends and then to members of his caste. Within this wide circle, he is sure to find a candidate for the vacancy. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_12 It is very seldom that he is required to travel beyond the limits of his caste. If he has to, then the Untouchable will have, only if there is no other touchable Hindu to compete with them. If there is a competitor from any of the touchable caste, the Untouchable will have no chance. Thus the Untouchable is always the last to be considered in the matter of appointments to the Civil Service. Being the last to be considered, his chances of securing a post are the least.

There are two services for which the Untouchable is particularly suited. One is the Police Service and the other is menial service in Government Offices. What is the position of the Untouchables so far as police service is concerned?

The answer is that the Police Service is closed to them.

On the 17th December 1925, a resolution was moved in the Legislative Council of the United Provinces, asking Government to remove all restrictions on the entry of the Untouchables in Government service and especially the Police Service, the Member of Government in charge of the Department, speaking on behalf of Government said:

“No, if the Honourable members wish to leave it open to all, I have no objection. But I will certainly object to any member of a criminal tribe or a low caste man like a chamar in this force at present.”

On 22nd July 1927, Lala Mohan Lal asked the following question in

the Punjab Legislative Council :

Lala Mohan Lal : Will the Hon'ble Member for Finance be pleased to state if members of the depressed classes are taken in the police? If not, does the Government intend to direct that, in the matter of recruitment of police constables, the members of the depressed classes should also be taken?

The Hon'ble Sir Geoffrey de Montmorency: Members of the depressed classes are not enrolled in the police. When there is evidence that the depressed classes are treated on an equal footing by all sections of the community, (which may not happen till dooms day) or when Government is satisfied that enrolment of members of these classes will satisfy the requirements of efficiency and be in the best interests of the composition of the service. Government will be quite prepared to throw open recruitment to them, provided they come up to the physical and other standards required of all recruits.

The Committee appointed by the Government of Bombay in 1928 reported as follows on this questions:

(Quotation not given in the MS.)

As to menial service, that also has been closed to them. Few will believe it, nonetheless it is a fact and few will be able to guess the reason, though it is quite plain. The reason why the untouchable is excluded from menial service is the same for which he is excluded from the Police Service. It is Untouchability. As part of his duty, a constable has to arrest a person. As a part of his duty, a constable has to enter the house of a person, for instance, to execute a search warrant. What would happen if the person arrested is a Hindu and the constable is an Untouchable? Police constables have to live in lines as neighbours, use the water taps. What would be the reactions of a Hindu constable if his neighbour is an Untouchable constable? These are the considerations which have barred the entry of the Untouchable in the Police Service. Exactly the same consideration have been operative in the case of menial service. A menial in Government office is, in law, required to serve in the office. But his service brings him in contact with others who are Hindus. His contact causes pollution. How could he be welcome. Besides, according to convention, a peon in office is supposed to serve the head of the Department and also his household. He has to bring tea for the boss, he has to do shopping for the wife of the boss, and he has to look after the children. The Head of the Department has to forego

these services if the menial appointments went to the Untouchables. Rather than forego these services, the Untouchable was deprived of his right to serve. So complete was this exclusion that the Bombay Committee had to make a special recommendation in this behalf.

III

What did the British Government do about the education of the Untouchables? I will take the Presidency of Bombay by way of an illustration. The period of British administration, so far as Education is concerned, can be divided into three convenient periods.

I - From 1813 to 1854

1. Education under the British Rule in the Bombay Presidency must be said to have begun with the foundation of the Bombay Education Society in 1815. That Society did not confine its efforts to the education of European children. Native boys were encouraged to attend its schools at Surat and Thana and at the beginning of 1820, four separate schools for natives had been opened in Bombay and were attended by nearly 250 pupils. In August of the same year, further measures were taken to extend native education. A special committee was appointed by the Society to prepare school books in the Vernacular languages, and to aid or establish Vernacular schools. But the wide scope of the undertaking was soon seen to be beyond the aims of a society established mainly for the education of the poor; and in 1822, the committee became a separate corporation, thenceforth known as the Bombay Native School Book and School Society, which name was in 1827 changed into the Bombay Native Education Society. The Honourable Mountstuart Elphinstone was the new Society's first President. The Vice-Presidents were the Chief Justice and the three members of the Executive Council of the Bombay Government; and the managing committee consisted of twelve European and twelve native gentlemen, with Captain George Jervis R. E., and Mr. Sadashiv Kashinath Chhatre as Secretaries. The Society started its work with a grant of Rs. 600 per mensem from the Government. As early as 1825, the Government of Bombay had along side, began to establish primary schools at its own expense in district towns and had placed them under the control of the Collectors. To co-ordinate the activities of these two independent bodies, there was established in 1840 a Board of Education composed of six members, 3 appointed by Government and 3 appointed by the Native Education Society. This Board was in charge of the Education Department till the appointment of the Director of

Public Instruction in 1855.

2. On the 1st March 1855, when the Board was dissolved, there was in the Presidency of Bombay under the charge of the Board, 15 English Colleges and Schools having 2850 students on the Register and 256 vernacular schools having 18,883 students on the Register. In the same report it is stated by the Board:

"24. In August (1855) we received a petition from certain inhabitants of Ahmednagar, praying for the establishment of *a school for the education of low castes* and engaging to defray one-half of the teacher's salary, in accordance with the terms of the late rules. A school room had been built by the petitioners and the attendance of boys was calculated at thirty. The establishment of such a school was opposed to the prejudice of the richer and higher castes, and there was some difficulty in procuring a teacher on a moderate salary, but as the application was made in strict accordance with the conditions stated in the late notification on the subject, we readily complied with the request, and the school was opened in November. We merely mention the subject, as it is the first occasion on which we have established a school for these castes".

3. The statement by the Board, that this was the first occasion when a school for the low castes was established in this Presidency, naturally raises the question what was the policy of the British Government in the matter of the education of the Depressed Classes before 1855? To answer this question, it is necessary to have a peep into the history of the educational policy of the British Government in this Presidency from 1813 to 1854. It must be admitted that under the Peshwa's Government the Depressed classes were entirely out of the pale of education. They did not find a place in any idea of state education, for the simple reason that the Peshwa's Government was a theocracy based upon the canons of Manu, according to which the Shudras and Atishudras (classes corresponding to the Backward classes of the Education department), if they had any right of life, liberty and property, had certainly no right to education. The Depressed classes who were labouring under such disabilities, naturally breathed a sigh of relief at the downfall of this hated theocracy. Great hopes were raised among the Depressed classes by the advent of the British Rule. Firstly, because, it was a democracy which, they thought, believed in the principle of one man (one)* value, be that man high or low. If it remained true to its tenets, such a democracy was a complete contrast to the theocracy of the Peshwa. Secondly, the Depressed classes had

helped the British to conquer the country and naturally believed that the British would in their turn help them, if not in a special degree, at least equally with the rest.

4. The British were for a long time silent on the question of promoting education among the native population. Although individuals of high official rank in the administration of India were not altogether oblivious of the moral duty and administrative necessity of spreading knowledge among the people of India, no public declaration of the responsibility of the State in that behalf was made till the year 1813, when by section 43 of the Statute 53 George IV chap. 155 Parliament laid down that "out of the surplus revenues of India, a sum of not less than one lakh of rupees in each year shall be set apart and applied to the revival and improvement of literature and the encouragement of the learned natives of India, and for the introduction and promotion of a knowledge of sciences among the inhabitants of British territories in India etc." This statutory provision, however, did not result in any systematic effort, to place the education of the natives upon a firm and organised footing till 1823. For, the Court of Directors in their despatch dated 3rd June 1814 to the Governor General in Council, in prescribing the mode of giving effect to section 43 of the statute of 1813, directed that the promotion of Sanskrit learning among the Hindus would fulfill the purposes which Parliament had in mind. But what a disappointment to the Depressed classes, there was, when systematic efforts to place the education of the natives upon a firm and organized footing came to be made! ! For, the British Government deliberately ruled that education was to be a preserve for the higher classes. Lest this fact should be regarded as a fiction, attention is invited to the following extracts from the Report of the Board of Education of the Bombay Presidency for the year 1850-51

“Paragraph 5th.— System adopted by the Board based on the views of Court of Directors.— Thus the Board of Education at this Presidency having laid down a scheme of education, in accordance with the leading injunctions of Despatches from the Honourable Court, and founded not more on the opinions of men who had been attentively considering the progress of education in India such as the Earl of Auckland, Major Candy and others, than on the openly declared wants of the most intelligent of the natives themselves, the Board, we repeat, were informed by your Lordships predecessor in Council that the process must be reversed.”

“Paragraph 8.— Views of Court on the expediency of

educating the upper classes.— Equally wise, if we may be permitted, to use the expression, do the indications of the Hon. Court appear to us to be as to the quarters to which Government education should be directed, and specially with the very limited funds which are available for this branch of expenditure. The Hon. Court write to Madras in 1830 as follows:”The improvements in education, however, which most effectively contribute to elevate the moral and intellectual condition of a people, are those which concern the education of the higher classes—of the persons possessing leisure and natural influence over the minds of their countrymen. By raising the standard of instruction amongst these classes, you would eventually produce a much greater and more beneficial change in the ideas and the feelings of the community than you can hope to produce by acting directly on the more numerous class. *You* are, moreover, acquainted with our anxious desire to have at our disposal a body of natives qualified by their habits and acquirements to take a larger share and occupy higher situations, in the civil administration of their country than has been hitherto the practice under our Indian Government; ' Never-the-less, we hear on so many sides, even from those who ought to know better of the necessity and facility for educating the masses for diffusing the arts and sciences of Europe amongst the hundred or the hundred and forty millions (for numbers count for next to nothing) in India, and other like generalities indicating cloudy notions on the subject, that a bystander might almost be tempted to suppose the whole resources of the State were at the command of Educational Boards, instead of a modest pittance inferior in amount to sums devoted to a single establishment in England.

“Paragraph 9.— Retrospect of principal Educational facts during the last ten years necessary.— The arguments adduced in the few last paragraphs appear to show that a careful examination of the real facts, and an analysis of the principal phenomena which have displayed themselves in the course of educational proceedings in the Presidency, would not be without their uses, if made with sufficient industry and impartiality to ensure confidence, and with a firm determination to steer clear of bootless controversy and all speculative inquiries. The present epoch, also, appears especially to commend itself for such a retrospect, as in 1850 the second decennial period commenced, during which the Schools of the Presidency have come under exclusive control of a Government

Board; and it is obvious that as a considerable body of information ought now to have been accumulated, and as the majority of the present members have had seats at the Board during the greater portion of that time, they would fain hope that by recording their experience, they may shed some light on certain obscure but highly interesting questions, which are certain to arise from time to time before their successors at this Board.

“Paragraph 10.— A uniform system developing itself spontaneously both in Bengal and Bombay.— We now proceed to give as minute a detail as comports with our limits, of the principal educational facts which have forced themselves upon our notice, and we think it will clearly appear, when those facts are duly appreciated, that many of the disputed questions, which arise in the Indian field of education, will be seen to solve themselves and that a system is generally evolving itself in other Presidencies as well as in Bombay, which is well suited to the circumstances of the country, and which, as the growth of spontaneous development, denotes that general causes are at work to call it forth.

“Paragraph II— Statistics of education in Bombay— In the return on the following page, a comparative view is given of the number of schools and of pupils receiving education under Government at the period when the Establishments first came under the control of the Board, in 1840 and in April 1850. It shows, in the latter period, an addition of four English and 83 vernacular schools and a general increase in pupils of above a hundred per cent. The total number receiving Government education at present is 12,712 in the following proportion :—

English Education	1,699
Vernacular Education	10,730
Sanskrit Education	283

(comparison from tables: in 1840 there were 97 schools, number of pupils 5,491 ; number of schools 185 and number of pupils 12,712).

“Paragraph 12.— Same Subject.— But the population of the Bombay Presidency is now calculated by the most competent authorizes to amount to ten millions. Now on applying the rule of statistics deduced from the Prussian census as noticed in a former Report (1842-43 page 26) a population of this amount will be found to contain no fewer than 900,000 male children between the ages of seven and fourteen years and of course, fit subjects for school. It

follows, therefore, that Government at this Presidency has not been able to afford an opportunity for obtaining education to more than one out of every sixty-nine boys of the proper school going age.

“Paragraph 13.— Same Subject.— Further, it is admitted that education afforded in the Vernacular School is far from efficient. A great portion of the strictures of Mr. Willoughby's Minute is directed against the defective character and insignificant results of these schools. The Board, not only acknowledge this fact, but they have been studious to point it out prominently for many years past, and indeed, in the opinion of some competent observers, have drawn too unfavourable a picture of the vernacular schools. But what are the obvious remedies for the defects indicated? Mr. Willoughby describes them very correctly: —”a superior class of school masters, normal schools, more efficient supervision, additions to the vernacular literature.”These are all subjects however, which have occupied the attention of the Board for many years past, and as to which not a step can be made in advance without additional expenditure. But we are given to understand from the letter of your Lordship in council that”it is not probable that the Government will have the power, for a considerable time to come, to afford the Board additional pecuniary assistance.”

“Paragraph 14.—Conclusion that no means exist-for educating the masses : It results most clearly from these facts that if sufficient funds are not available to put 175 Vernacular schools into a due state of organisation, and to give a sound elementary education to 10,730 boys, all question as to educating”the masses”the”hundred and forty millions”the 900,000 boys in the Bombay Presidency disappears. The object is not one that can be attained or approximated to by Government; and Educational Boards ought not to allow themselves to be distracted from a more limited practical field of benevolence.

“Paragraph 15.— Views of Court of Directors as to the best method of operation with limited means.— The Hon 'ble Court appear to have always kept the conclusion which has been arrived at in the last paragraph very distinctly in view. Perceiving that their educational efforts to improve the people could only be attempted on a very small scale, they have deemed it necessary to point out to their different Governments the true method of producing the greatest results with limited means. We have already cited their injunctions to the Madras Government on this head, (Para 7) and

their despatch to the Government on the same date enforce sentiment of exactly the same import:—"It is our anxious desire to afford to the higher classes of the Natives of India the means of instruction in European sciences and of access to the literature of civilised Europe. The character which may be given to the classes possessed of leisure and natural influence ultimately determines that of the whole people."

"Paragraph 16.— Inquiry as to upper classes of India.— It being then demonstrated that only a small section of the population can be brought under the influence of Government education in India, and the Hon'ble Court having in effect decided that this section should consist of the "upper classes" it is essential to ascertain who these latter consist of.—Here it is absolutely necessary for the European inquirer to divest his mind of European analogies which so often insinuate themselves almost involuntarily into Anglo-Indian speculations. Circumstances in Europe, especially in England have drawn a marked line, perceptible in manners, wealth, political and social influence, between the upper and lower classes. No such line is to be found in India, where, as under all despotisms the will of the Prince was all that was requisite to raise men from the humblest condition in life to the highest station, and where consequently great uniformity in manners has always prevailed.

A beggar, according to English notions, is fit only for the stocks or compulsory labour in the workhouse; in India he is a respectable character and worthy indeed of veneration according to the Brahminical theory, which considers him as one who has renounced all the pleasures and temptations of life for the cultivation of learning and undisturbed meditation of the Deity.

"Paragraph 17.— Upper classes in India.— The classes who may be deemed to be influential and in so far the upper classes in India may be ranked as follows:—

1 st.— The landowners and Jaghirdars, representatives of the former feudatories and persons in authorities under Native powers and who may be termed the Soldier class.

2nd.— Those who have acquired wealth in trade or commerce or the commercial class.

3rd.— The higher employees of Government.

4th.— *Brahmins*, with whom may be associated, though at long interval, those of higher castes of writers who live by the pen such

as Parbhus and Shenvis in Bombay, Kayasthas in Bengal provided they acquire a position either in learning or station.

“Paragraph 18.— Brahmins, the most influential.— Of these four classes, incomparably the most influential, the most numerous, and on the whole easiest to be worked on by the Government, are the latter. It is a well-recognized fact throughout India that the ancient Jaghirdars or Soldier class are daily deteriorating under our rule. Their old occupation is gone, and they have shown no disposition or capacity to adopt new one, or to cultivate the art of peace. In the Presidency, the attempts of Mr. Elphinstone and his successors to bolster up a landed aristocracy have lamentably failed ; and complete discomfiture has hitherto attended all endeavours to open up a path to distinction through civil honours and education, to a race to whom nothing appears to excite but vain pomp and extravagance, of the reminiscences of their ancestors' successful raids in the plains of Hindusthan'. Nor among commercial classes, with a few exceptions, is there much greater opening for the influences of superior education. As in all countries, but more in India than in the higher civilized ones of Europe, the young merchant or trader must quit his school at an early period in order to obtain the special education needful for his vocation in the market or the counting house. Lastly, the employees of the State, though they possess a great influence over the large numbers, who come in contact with Government, have no influence, whatever, with the still larger numbers who are independent of Government; and, indeed, they appear to inspire the same sort of distrust with the public as Government functionaries in England, who are often considered by the vulgar as mere hacks of the State.

“Pharagraph 19.— Poverty of Brahmins.— The above analysis, though it may appear lengthy, is nevertheless, indispensable, for certain important conclusions deducible from it. First, it demonstrates that the influential class, whom the Government are able to avail themselves of in diffusing the seeds of education, are the Brahmins and other high castes Brahmins proxmi. But the Brahimins and these high castes arc, for the most part, wretchedly poor; and in many parts of India, the term Brahmin is synonymous with”beggar.”

“Paragraph 20.— Wealthy classes will not at present support superior education.— We may see, then, how hopeless it is to enforce what your Lordship in council so strongly enjoined upon us

in your letter of the 24th April 1850— what appears, *prima fade*, so plausible and proper in itself — what in fact, the Board themselves have very often attempted, *viz*, the strict limitation of superior education”to the wealthy, who can afford to pay for it, and to youths of unusual intelligence.”The invariable answer the Board has received, when attempting to enforce a view like this, has been, that the wealthy are wholly indifferent to superior education and that no means for ascertaining unusual intelligence amongst the poor exist, until their faculties have been tested and developed by school training. A small section, from among the wealthier classes, is no doubt displaying itself, by whom the advantages of superior education are recognized, it appears larger in Bengal, where education has been longer fostered by Government, than in Bombay, and we think it inevitable that such class must increase, with the experience that superior attainments lead to distinction, and to close intercourse with Europeans on the footing of social equality; but as a general proposition at the present moment, we are satisfied that the academic instruction in the arts and sciences of Europe cannot be based on the contributions, either of students or of funds, from the opulent classes of India.

“Paragraph 21.— Question as to educating low castes.— The practical conclusion to be drawn from these facts which years of experience have forced upon our notice, is that a very wide door should be opened to the children of the poor higher castes, who are willing to receive education at our hands. But here, again, another embarrassing question arises, which it is right to notice: If the children of the poor are admitted I freely to Government Institutions, what is there to prevent all the despised castes—the Dheds, Mahars etc., from flocking in numbers to their walls?

"Paragraph 22.— Social Prejudice of the Hindus.— There is a little doubt, that if a class of these latter were to be formed in Bombay, they might be trained, under the guiding influence of such Professors and masters as are in the service of the Board, into men of superior intelligence to any in the community ; and with such qualifications, as they would then possess, there would be nothing to prevent their aspiring to the highest offices open to Native talent—to Judgeship the Grand Jury, Her Majesty's Commission of the Peace. Many benevolent men think, it is the height of illiberality and weakness in the British Government, to succumb to the prejudices, which such appointments would excite into disgust

amongst the Hindu community, and that an open attack should be made upon the barriers of caste.

"Paragraph 23.—Wise observations of the Hon. Mount Stuart Elphinstone cited.— But here the wise reflections of Mr. Elphinstone, the most liberal and large minded administrator, who has appeared on this side of India, point out the true rule of action."It is observed"he says,"that the missionaries find the lowest castes the best pupils; but we must be careful how we offer any special encouragement to men of that description; they are not only the most despised, but among the least numerous of the great divisions of society, and it is to be feared that if our system of education first took root among them it would never spread further, and we might find ourselves at the head of a new class, superior to the rest in useful knowledge, but hated and despised by the castes to whom these new attainment would be desirable, if we were contented to rest our power on our army or on the attachment of a part of the population but is inconsistent with every attempt to found it on a more extended basis."

5. It is, therefore obvious, that if no schools were opened for Depressed classes before 1855 in the Bombay Presidency, it was because the deliberate policy of the British Government was to restrict the benefits of education to the poor higher castes, chiefly the Brahmins. Whether this policy was right or wrong is another matter. The fact, however, is that during this period the Depressed classes were not allowed by Government to share in the blessings of education.

II.—From 1854 to 1882

6. In their Despatch No. 49 of 19th July 1854, the Court of Directors observed: —

“Our attention should now be directed to a consideration, if possible, still more important, and one which has hitherto, we are bound to admit, too much neglected, namely, how useful and practical, knowledge suited to every station in life, may be best conveyed to the great mass of the people who are utterly incapable of obtaining any education worthy of the name by their own efforts; and we desire to see the active measures of Government more especially directed, for the future, to this object, for the attainment of which, we are ready to sanction a considerable increase of expenditure.”

This despatch is very rightly regarded as having laid the foundation of mass education in this country. The results of this policy were first

examined by the Hunter Commission on Indian Education in 1882. The following figures show what was achieved during the period of 28 years.

PRIMARY EDUCATION 1881-82

	No. of scholars at School	Per cent on total
Christians	1,521	.49
Brahmins	63,071	20.17
Other Hindus	202,345	64.69
Mohammedans	39,231	12.54
Parsis	3,517	1.12
Aboriginal and Hill Tribes	2,713	.87
Low Caste Hindus	2,862	.87
Jews and Others	373	.12

SECONDARY EDUCATION 1881-82

		Middle Schools		High Schools	
		No. of scholars at School	Per cent on total	No. of scholars at School	Per cent on total
Christians		1,429	12.06	111	2.26
Brahmins		3,639	30.70	1,978	40.29
Other Hindus	Cultivators	624	5.26	140	2.85
	Low Castes	17	.14	---	---
	Other Castes	3,823	32.25	1,573	32.04
Mohammedans		687	5.80	100	2.04
Parsis		1,526	12.87	965	19.66

Aboriginal and Hill Tribes	6	.05	---	---
Others (including Jews etc.	103	.87	92	.86

COLLEGIATE EDUCATION 1881-82

		No. of scholars at School	Per cent on total No. of Scholars
Christians		14	3
Brahmins		241	50
Oth er Hin dus	Cultivators	5	1
	Low Castes	0	0
	Other Castes	103	21.3
Mohammedans		7	1.5
Parsis		108	21.5
Aboriginal and Hill Tribes		0	0
Others (including Jews etc.		2	0.4

7. What do these figures show? They show that although mass education was the policy of the Government, the masses were as outside the pale of education as they were before the year 1854 and that the lowest and aboriginal classes of the Hindus still remained lowest in order of education; so much so, that in 1881-82, there was no student from that community either in the High Schools or in the Colleges of this Presidency. What can this failure to bring the Depressed Classes to the level of the rest in the matter of education be due to? To answer this question, it is necessary again to go into the history of the educational policy of the Government of this Presidency.

8. The Despatch of the Court of Directors of the year 1954, for the first time recognised after a lapse of full 40 years that the duty of the State was to undertake the education of the great mass of the people. But there were still die-hards, who had great misgivings as to the

wisdom of the principle laid down in that Despatch and who were agitating for a reversal of that policy. The fears of dire consequences to the British Rule arising from elevating the Backward Classes above their station in life, still haunted men like Lord Ellenborough, President of the Board of Control, who in a letter to the Chairman of the Court of Directors dated 28th of April 1858, did not hesitate to strike the following note of caution :—

“Gentlemen:— Many letters have been lately before me, reviewing the state of education in different parts of India, under the instructions sent by the Court of Directors in 1854, and I confess, that they have not given me the impression that the expected good has been derived from the system which was then established, while all the increase of charge which might have been expected, appears to be in progress of realization.

“Paragraph 11: — I believe, we rarely, if even induce parents above the lower class to send their children to our schools, and we should practically, if we succeeded in intending education as we desire, give a high degree of mental cultivation to the labouring class, while we left the more wealthy in ignorance.

“Paragraph 12:— This result would not tend to create a healthy state of society. Our Government could not offer to the most educated of the lower class the means of gratifying the ambition we should excite.

“Paragraph 13 :— We should create a very discontented body of poor persons, having, through the superior education we had given to them, a great power over the mass of the people.

“Paragraph 14 :— Education and civilization may descend from the higher to the inferior classes, and so communicated may impart new vigour to the community, but they will never ascend from the lower classes to those above them ; they can only, if imparted solely to the lower classes, lead to general convulsion, of which foreigners would be the first victims.

“Paragraph 15:—If we desire to diffuse education, let us endeavour to give it to the higher classes first.

“Paragraph 16:— These are but two ways of doing this— by founding colleges to which the higher classes alone should be admitted, and by giving in the reOrganisation of the army, commissions at once, to such sons of native gentlemen as may be competent to receive them.”

9. This antipathy of the European officers towards the untouchable classes was finally corrected by the Secretary of State for India in his despatch of 1859, which again reiterated the responsibility of Government for mass education.

10. Singular as it may appear, the recognition by the Government of its responsibility for mass education conferred upon the Depressed classes a benefit only in name. For, although, schools were opened for the masses in the various districts, the question of the admission of the Depressed classes to these schools had yet to be solved. Such a question did practically arise in the year 1856. But the decision of the Government was not favourable to the Depressed classes as will be seen from the following extracts from the Report of the Director of Public Instruction for the Bombay Presidency for the year 1856-57 :—

“Paragraph 177.—Schools of Low castes and wild tribes.—There are no low class schools established directly by Government and the Supreme Government has expressed disapproval of such schools. The ordinary schools entirely supported by the state are in theory open indifferently to all castes. In the course of observation of my Report 1855-56 the Government issued the following order:—”The only case as yet brought before Government in which the question as to the admissions of the pupils of the lowest class to Government schools has been raised was that of a Mahar boy on whose behalf a petition was submitted in June 1856, complaining that though willing to pay the usual schooling fee, he had been denied admission to the Dharwar Government School.

“On this occasion. Government felt a great practical difficulty which attended the adjudication of a question in which their convictions of abstract right would be in antagonism to the general feelings of the mass of the natives, for whose enlightenment, to the greatest possible extent, the Government Educational Department has been established ; and it was decided, as will appear from the Resolution mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. [The Untouchables and the Pax Britannica.htm - _msocom_13](#) passed at the time with some hesitation, that it would not be right, for the sake of single individual, the only Mahar who had ever come forward to beg for admission into a school attended only by the pupils of castes and to force him into association with them, at the probable risk of making the institution practically useless for the great mass of natives”.

The proceedings of the Government of Bombay in this matter were noticed in the following terms by the Government of India, in a letter

No.111 dated 23rd January 1857:—

“Governor General in Council thinks it very probable that the Bombay Government has acted wisely in the matter; but it desires me (i. e. Secretary to the Government of India) to say that the boy would not have been refused admission to any Government school in the Presidency of Bengal”.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49 [The Untouchables and the Pax Britannica.htm - _msocom_14](#)

On receipt of this letter, it was resolved that Government of India should be assured that this Government would be most unwilling to neglect any means of rendering the schools throughout the country less exclusive than they practically are in the matter of caste; provided this could be effected without bringing the Government school into general disrepute, and thus destroying their efficiency and defeating the object for which they were intended. It was also determined that an enquiry should be made as to the practical working of the principle which was said to prevail in Bengal as affecting the general usefulness of the Government schools.

11. Inquiries as to the practice prevalent in Bengal revealed that the Bengal authorities, contrary to the supposition of the “Government of India” had left it to the District Committees of Instructions to grant or refuse admittance to candidates of inferior castes, with reference to the state of local native feeling in each case. The result of this was that the Depressed classes were left in the cold, because the touchable classes would not let them sit at the fire of knowledge which the Government had lit up in the interest of all its subjects.

12. Under these circumstances, mass education as contemplated by the Despatch of 1854 was in practice available to all except the Depressed classes. The lifting of the ban on the education of the Depressed classes in 1854 was a nominal affair only. For, although the principle of non-exclusion was affirmed by the Government, its practical operation was very carefully avoided ; so that, we can say, that the ban was continued in practice as before.

The only agency which could take charge of the education of the Depressed classes was that of Christian Missionaries. In the words of Mount Stuart Elphinstone they “found the lowest classes the best pupils”. But the Government was pledged to religious neutrality and could not see its way to support missionary schools, so much so that no pecuniary grant was made in this Presidency to any missionary

school in the early part of this period although the Educational Despatch of 1854 had not prohibited the giving of grants to missionary schools.

13. To find a way out of this *impasse* the Government adopted two measures: (1) the institution of separate Government schools for low caste boys, and (2) the extension of special encouragement to missionary bodies to undertake their education by relaxing the rules of grants-in-aid. Had these two measures not been adopted, the education of the Depressed classes would not have yielded the results, most meager as they were, at the stocktaking by the Hunter Commission in 1882.

III—From 1882 to 1923

14. After the year 1882, the year 1923 forms the next landmark in the educational history of the Bombay Presidency. That year marks the transfer of primary education from the control of Provincial Governments to the control of local bodies. It will therefore be appropriate to take stock of the position as it stood in 1923. The position of the different communities in the Bombay Presidency in 1923 in the matter of educational advancement may be summed up in a tabular form as follows :—

Classes	Order in respect of education	Order in respect of education		
		Pri mar y	Secon dary	Colle giate
Advanced Hindus	4 th	1 st	1 st	1 st
Intermediate Hindus	1 st	3 rd	3 rd	3 rd
Backward Hindus	2 nd	4 th	4 th	4 th
Mahomedans	3 rd	2 nd	2 nd	2 nd

15. From this table, one notices a great disparity in the comparative advancement of these different communities in the matter of education. Comparing these classes of people according to the order in which they stand in respect of their population and according to the order in which they stand in respect of their educational progress, we find that the Intermediate class, which is first in order of population is third in order

of college education, third in order of secondary education and third in order of primary education. The Depressed classes who are second in order of population, stand fourth i. e. last in order of college education, last in order of secondary education and last in order of primary education. The Mahomedans who are third in order of population are second in order of college education, second in order of secondary education and second in order of primary education ; while the "Advanced Hindoos" who occupy the fourth place in order of population stand first in order of college education, first in order of secondary education and first in order of primary education. From this we can safely say that in this respect there has been no improvement over the situation as it stood in 1882 relatively speaking.

16. The above statement which is based upon the Report of the Director of Public Instruction, Bombay Presidency for the year 1923-24 merely reveals the disparity that exists in the educational advancement of the different communities. But the disparity in the level of education among the different communities would be a very small matter if it be not very great. We can form no important conclusion unless we know the degree of disparity. To make this position clear from this point of view, the following table is presented:—

TABLE

Classes of Population	Primary Education, Students per 1000 of the population of the class	Secondary Education, Students per 1000 of the population of the class	College Education, Students per 1000 of the population of the class
Advance Hindus	119	3,000	1,000
Mahomedans	92	500	52
Intermediate class..	38	140	24
Backward class ..	18	14	Nil (or nearly one if at all).

17. The above figures give the lengths, as it were, by which each community is ahead of the rest in the matter of primary, secondary and collegiate education. They reveal a range of disparity between the different communities in this Presidency which shows that the position

of some of the communities in the matter of education is most shocking. From the statistics as given above, two facts stand out to be indisputable. (1) That the state of education of the Backward classes in this Presidency is deplorable. In the matter of population they occupy a place as high as second. But in the matter of Education, they occupy a place which is not only last but which also is the least ; (2) That the Muhammedans of the Presidency have made enormous strides in education ; so much so that within the short span of 30 years, they have not only stolen a march over other communities such as the Intermediate and the Backward class, but have also come close to the Brahmins and allied castes.

18. What can this be due to? To the policy of unequal treatment adopted by the Government must again be our reply to this ever present question. How unequal was the treatment of the two classes will be evident from the following extracts from the Quinquennial Reports on Education. With regard to the treatment of the Mahomedans in the matter of education, the following observations in the third Quinquennial Report (1892-96) are noteworthy:—

"Concerning the figures for Mahomedan Education in Bombay the Director remarks that the increase would have been larger”but for adverse circumstances”. It has long been recognized in Bombay that Mahomedans make a larger use of Public Institutions than the rest of the population..... On the general question of what has been done to encourage Mahomedan education, the Director writes:—

“In the first place, a Mahomedan officer is appointed to every District, either as Deputy or Assistant Deputy Inspector; and we have three Mahomedan graduates as Deputies, at Kaira, Sholapur, and Hyderabad, while a fourth has been drafted into the higher grades of the Revenue Department. There is thus, not a District where the staff is out of touch with the Mahomedan population. Again at Bombay, Karachi and Junagadh (a Muhammadan State in Kathiawar), special efforts have been made to provide High Schools for Muhammadans with low fee rates, and smaller schools have been opened by other Anjumans (Muhammadan associations) elsewhere. The Department also provides for their benefit, special standards and maintains special schools in certain localities, and reserves for them one-third of the Provincial and Local Boards scholarships. Then, there are the special scholarships founded by Khan Bahadur Kazi Shahbuddin (at one time Diwan

of Baroda) ; and in Sindh, a certain number of food scholarships have been given by the heir of the Native State of Khairpur for students attending in Arts College. (I had great difficulty in filling these up last year, though they are of the value of Rs. 25 a month). In Primary schools, Muhammadans are very leniently treated in the matter of fees. They are encouraged to come to the Training Colleges by special rules which (regime) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/49. The Untouchables and the Pax Britannica.htm - _msocom_16 from them an easier test than from Hindus; The Joint Schools Committee at Bombay has lately made special efforts to encourage Muhammadan education by the appointment of a Mahomedan Deputy Inspector....."

19. Compare with this the observations regarding the education of the Depressed classes in the fifth Quinquennial Report (1902-1907):

“959. Bombay— In the Central Division of Bombay, the low caste children are admitted free into schools and receive presents in the form of books, slates etc..... In Kathiawar only three children of the Depressed castes are receiving education. In the Southern division there are 72 special schools or classes of them, most of which are under unqualified teachers.”

20. This unequal treatment has its origin in the recommendations of the Hunter Commission. How partial was the Hunter Commission to the Mahomedans will be evident, if we compare the recommendations it made in their behalf to those it made in the interests of the Depressed classes. With respect to the Mahomedans the Commission made seventeen recommendations of which the following are worthy of note :—

(1) that the special encouragement of Mahomedan education be regarded as a legitimate charge on local, on Municipal, and on Provincial funds.

(7) that higher English education for Mahomedans, being the king of education in which that community needs special help, be liberally encouraged.

(8) that, where necessary, graduated system of special scholarships for Mahomedans be established to be awarded (a) in primary schools, and tenable in middle schools ; (b) in middle schools, and tenable in high schools; (c) on the results of Matriculation and First Arts examinations, and tenable in colleges also.

(9) that in all classes of schools maintained from public funds, a

certain proportion of free studentship be expressly reserved for Mahomedan students.

(10) that in places where educational endowments for the benefit of Mahomedans exist and are under the management of Government, the funds arising from each endowments be devoted to the advancement of education among the Mahomedans exclusively.

(11) that where Mahomedans exist, and are under the management of private individuals or bodies, inducements by liberal grants-in-aid be offered to them to establish English teaching schools or colleges on the grants-in-aid system.

(12) that, where necessary, the Normal Schools or classes for the training of Mahomedan teachers be established.

(16) that Mahomedan Inspecting Officers be employed more largely than hitherto for the inspection of primary schools for Mahomedans.

(17) that the attention of Local Governments be invited to the question of the proportion in which patronage is distributed among educated Mahomedans and others.

21. Every one of these recommendations made by the Hunter Commission was necessary in the interests of the Depressed classes also. But when we come to analyse the recommendations made by the Commission in the interest of the Backward classes, we do not find them directing that education of the Backward Classes be regarded a legitimate charge on Government funds, that scholarships and proceedings be reserved for them, that special inspecting staff be kept to look after their educational needs or that public patronage be given to them by way of encouraging the growth of education amongst them. All we find the Commission saying is that (1) the principle that "no boy be refused admission to a Government College or school merely on the ground of caste", be now reaffirmed as a principle and be applied with due caution to every institution, not reserved for special races, which is wholly maintained at the cost of public funds, whether provincial, municipal or local. (2) that the establishment of special schools or classes for children of low castes be liberally encouraged in places where there are a sufficient number of such children to form separate schools or classes and where the schools already maintained from public funds do not sufficiently provide for their education."As a matter of fact the recommendations made by the Commission for the Mahomedans were far more necessary in the interests of the Backward classes than in the interests of the Mahomedans."For even the Hunter Commission,

presided as it was by a chairman of pronounced sympathies for the Mahomedans, had to admit that "the inquiries made in 1871-73 went to prove that except in the matter of the higher education, there had been a tendency to exaggerate the backwardness of the Muhamadans." Notwithstanding this the only recommendations made by the Hunter Commission were the two mentioned above. Even these two recommendations, made by the Commission regarding the Depressed classes were not calculated to do much good. They were bound to be futile. The reaffirmation of the principle even if it be for the fifth time was useless. For under the proviso inserted by the Commission, the enforcement was to be avoided in practice. Similarly, the opening of the separate schools for the Depressed classes was hardly possible, which again was bound to be sterile. Separate schools involving additional expense could hardly be acceptable to a Government to which primary education was a task. Besides, the proviso, that such schools should be opened where Backward classes were in large numbers, was sufficient to negative the recommendations simply because in rural parts the Backward classes can seldom be found to be living in one locality in large numbers.

22. It is difficult to understand why the Hunter Commission paid such a scant attention to the educational needs of the Backward classes. If it felt necessary to be generous towards the Mahomedans, it should have at least seen that it was just to the Backward classes who were far behind the Mahomedans in education, wealth and social status. Once the Hunter Commission had thrown the Depressed classes into the background, they remained there and the Government never paid any attention to them. As an example of this neglect, attention may be drawn to the Resolution of the Government of India in the Department of Education dated Delhi the 21st February 1923. It was one of the most important resolutions ever issued by the Government of India in which they decided to assist local Government by means of large grants from imperial revenues as funds became available, to extend comprehensive systems of education in the several provinces. In that resolution, they were particular to point out to the provincial Governments, the educational needs of "Domiciled community" and the Mahomedan community. But they had not a word to say in the whole Resolution about the Backward classes. The Bombay Government readily accepted the suggestion and appointed in 1913 a Mahomedan on Education Committee to make recommendations for the promotion of education among the Mahomedans. One feels righteous indignation

against such criminal neglect on the part of the Government, particularly when, it is realized that the large grants given by the Government of India after 1913, were given by way of fulfillment of the declaration made by His Most Gracious Imperial Majesty, the King Emperor, in replying to the address of the Calcutta University on the 6th January, in which he said :—

“It is my wish that there may be spread *over* the land a network of Schools and Colleges, from which will go forth loyal and manly and useful citizens, able to hold their own industries and agriculture and all the vocations in life. And it is my wish too, that the homes of my Indian subjects may be brightened and their labour sweetened by the spread of knowledge with all that follows in its train, a higher level of thought, of comfort and health. It is through education that my wish will be fulfilled, and the cause of education in India will ever be very close to my heart.”

IV

What about social Reform under the British Government?

It was Raja Sir T. Madhavrao, a very prominent and progressive Hindu of the last generation, who said:—

“The longer one lives, observes, and thinks, the more deeply does he feel that there is no community on the face of the earth which suffers less from political evils and more from self-inflicted or self-accepted or self-created, and therefore avoidable evils, than the Hindu Community.”

Leaving aside the question of the comparative cost of the observation, there can be no doubt that Hindu Society suffers from social evils as no other community does.

Mahadeo Govind Ranade, another venerable name among earnest social reformers has made another and equally important observation, emphasizing another aspect of the Hindu Community :—

“Mere considerations of expediency or economical calculations of gains or losses can never move a community to undertake and carry through social reforms, especially with a community like ours, so spellbound by custom and authority. Our people feel, and feel earnestly, that some of our social customs are fraught with evil; but as this evil is of a temporal character, they think that it does not justify a breach of commands divine, for”such breach involves a higher penalty.—The truth is, the 'orthodox society has lost its power of life, it can initiate no reform nor sympathise with it.”

In other words all the social evils are based on religion. A Hindu man or woman, whatever he does, he does as a religious observance. A Hindu eats religiously, drinks religiously, bathes religiously, dresses religiously, is born religiously, is married religiously and is burned religiously. His acts are all pious acts. However evil they may be from a secular point of view, to him, they are not sinful because they are sanctioned and enjoined by his religion. If any one accuses a Hindu of Sin, his reply is, ' If I sin, I am sinning religiously.

Society is always conservative. It does not change unless it is compelled to and that too very slowly. When change begins, there is always a struggle between the old and the new, and the new is always in danger of being eliminated in the struggle for survival unless it is supported. The one sure way of carrying through a reform is to back it up by law. Without the help of legislation, there can never be any reform in any evil. The necessity of legislation is very great when the evil to be reformed based on religion.

What is the sum total of legislation in favour of social reform under the British Government? The record of the British Government, in the matter of social reform, is to say the least, very halting and very disappointing. In the course of 150 years, there are just six social evils which have been subjected to Legislation.

The first piece of Social Legislation which the British undertook, is contained in **Bengal Regulation XXI of 1795**. It is a regulation for Preventing the Brahmins in the Province of Benares establishing Koorhas, wounding or killing their female relations or children or sitting Dhurna and for preventing the Tribe of Raj Koomars in that Province killing their female children. It enacted as follows :—

Preamble

1. The reverence paid by the Hindoos to Brahmins, and the reputed inviolability of their persons, and the loss of, or prejudice to cast(e), that ensues from proving the casue of their death, have in some places in the province of Benares, and more especially in the pergunnahs of Kuntit and Budhoe been converted by some of the more unlearned part of them, into the means of setting the laws at defiance, from the dread and apprehensions of the persons of the Hindoo religion, to whose lot it must frequently fall to be employed, in enforcing against such Brahmins any process or demands on the part of Government The devices occasionally put in practice under

such circumstances by these Brahmins, are lacerating their own bodies, either more or less slightly, with knives or razors; threatening to swallow, or, sometimes actually swallowing poison, or some powder which they declare to be such; or, constructing a circular enclosure called a *koorb*, in which they raise a pile of wood or of other combustible and betaking themselves to fasting, real or pretended, place within the area of the *koorb*, an old woman, with a view to sacrifice her by setting fire to the *koorb*, on the approach of any person to serve them with any process, or to exercise coercion 'over them on the part of Government, or its delegates. These Brahmins likewise, in the event of their not obtaining relief within a given time, for any loss or disappointment that they may have justly *or* unjustly experienced, also occasionally bring out their women or children, and causing them to sit down in the view of the peon who is coming towards them on the part of Government, or its delegates, they brandish their swords, and threaten to behead, or otherwise slay, these females, or children, on the nearer approach of the peon; and there are instances, in which, from resentment at being subjected to arrest or coercion, or other molestation, they have actually not only inflicted wounds *on* their own bodies, but put to death with their swords, the females of their families, or their own female infants, or some aged female, procured for the occasion. Nor are the women always unwilling victims ; on the contrary, from the prejudices in which they are brought up, it is supposed that in general they consider it incumbent on them to acquiesce cheerfully in the species of self-devotement, either from motives of mistaken honor, or of resentment and revenge, believing that after death they shall become the tormentors of those who are the occasion of their being sacrificed. On similar principles, these Brahmins, to realize any claim or expectation, such as the recovery of a debt, or for the purpose of extorting some charitable donation, frequently proceed either with some offensive weapon, or with poison, to the door of another inhabitant of the same town or village, and take post there in the manner called *Dhurna*; and it is understood, according to the received opinions on this subject, that they are to remain fasting in that place until their object be attained; and that it is equally incumbent on the party who is the occasion of such Brahmins thus sitting, to abstain from nourishment until the latter be satisfied. Until this is effected, ingress and egress to and from his house are also more or less prevented, as according to the received opinion, neither

the one nor the other can be attempted, but at the risk of the Brahmin's wounding himself with the weapon, or swallowing the powder or poison, with which he may have come provided. These Brahmins, however are frequently obliged to desist and are removed from sitting Dhurna by the officers of the courts of justice, without any ill consequence resulting it, having been found by experience, that they seldom or ever attempt to commit suicide, or to wound themselves or others, after they are taken into the custody of Government. The rules and measures adopted for putting a stop to these abuses, and for preventing the revival of the still more savage custom, which until within these few years, had been generally prevalent amongst the tribe of Rajkoomars inhabiting the borders of the province near Juanpore, of destroying their infant female children, by suffering them to perish for want of sustenance, are hereby enacted, with modifications, into a regulation.

Brahmins establishing a koorh, or preparing to maim, wound, or slaughter his women or children

II. Upon information in writing being preferred to the magistrate of the city or a zillah court, against any Brahmin or Brahmins, for establishing a *koorb*, or for being prepared to maim, wound, or slaughter his women or children, or any, or either of them, in the manner described in the preamble to this regulation, or in any other account or manner substantially similar thereto, on account of any subject of discontent, or any other account whatsoever; in such case, upon oath being made to the truth of the information, the Magistrate is immediately to address to the said Brahmin or Brahmins, a written notice in the Persian language and character, and in the Hindoostanee language and Nagree character, and under his official seal, which notice is to be served on him or them, by such relations, friends, or connections of the said Brahmin or Brahmins, as the magistrate may think fit, and have an opportunity of employing for the purposes and in default of such relations, friends, or connections of the said Brahmin or Brahmins, the magistrate is to cause the notice to be served by a single peon of the same religion ; and the notice shall require the said Brahmin or Brahmins to remove the *koorb*, and the women and people that may be placed in it; or to desist from any preparation towards wounding or slaughtering the women or children according as either or both of these facts shall be charged in the information. The notice shall also contain a positive and encouraging assurance to the Brahmin or Brahmins in question, that on his or

their complying with the principal exigence thereof, by removing the *keorb*, and the person or persons, or by desisting from any preparation to wound or slaughter the women and children, and thereon repairing (as such Brahmin or Brahmins may think fit) in person, or by Vakeel to the city or zillah court, proper enquiry shall be made concerning the dispute that may have given occasion to the act or acts thus prohibited. But if the issuing of the notice shall not have the effect of inducing the said Brahmin or Brahmins to comply with the exigency thereof, a written return to that purpose is to be made and attested by the party or parties entrusted with the serving of it; and the magistrate is thereon to issue a warrant under his official seal and signature for the apprehension of the said Brahmin or Brahmins specifying the misdemeanor and contumacy with which he or they stand charged ; and the execution of the warrant is to be committed to peons of the Mahomedan religion, nor is any Hindoo to be sent on such duty. On the Brahmin or Brahmins against whom the warrant shall have been issued being brought before the magistrate, he or they are to be dealt with, in the mode prescribed in Section 5, Regulation IX, 1793, respecting persons charged with crimes or misdemeanors ; and if it shall appear to the magistrate on the previous enquiry, which by the said section he is himself directed to make, that the misdemeanor or misdemeanors charged, (that is, the constructing of the *keorb*, or being prepared to wound or slay the women or children, according as either or both of these acts shall have been charged) were actually committed, and that there are grounds for suspecting the prisoner or the prisoners respectively to have been concerned, either as a principal or an accomplice, in the perpetration of either or both of these acts ; the magistrate shall cause him or them to be committed to prison or held to bail, (according as the parties shall appear to have been principals or accomplices) to take his or their trial at the next session of the court or circuit, and shall bind over the informant or complainant, and the witnesses, to appear at the trial, in the manner prescribed in the aforesaid section.

**Process of trial and the punishment to be inflicted, for the
commission of the aforesaid offences.**

III. The court of circuit shall conduct the trial of Brahmin or Brahmins charged with the above offences, in the manner prescribed in Regulation IX, 1793 and XVI, 1795, in respect to the other offences, but as the Mahomedan law cannot adequately apply to offences of this local nature, it is therefore hereby provided and

ordered, that where in the opinion of the court of circuit, the charge of being a principal in respect to the constructing of a *keorbh*, or to having been prepared to wound or slay the women or children, shall be proved, the said court shall sentence the prisoner to the payment of a fine equal to the amount of his annual income, which is to be estimated according to the best information that they may be able to procure respecting it; and on proof to the court's satisfaction of the prisoner's being guilty only as an accomplice, he shall be sentenced to the payment of a fine equal to one-fourth of his estimated annual income. In all cases of parties being sentenced to the payment of such fines, they are to be committed to, and are to remain in jail until the amount thereof be paid, or until they shall have delivered to the court of circuit, or, after the said court's departure, to the magistrate, full and ample malzam-ines or security, to pay the same within six months from the date of their release ; and such parties, before their enlargement, either in consequence of their having liquidated, or having entered into security for the payment for the fine imposed on them, shall deliver into the court of circuit, or, in their absence, to the *magistrate, faelzaminee*, or satisfactory security from one or more creditable persons, not to offend in like manner in future.

Authority reserved to the Nizamut Adawlut to mitigate such fines

IV. All sentences passed by the court of circuit under Section 3, without however any intermediate suspension of their execution, are to be transmitted within ten days after their being passed, to the Nizamut Adawlut, which court may order such mitigation and restitution of the fine or fines thereby imposed, as may be thought proper ; but until the order be issued by the Nizamut Adawlut, the sentence of the court of circuit is to be considered in full force, and to be carried into effect accordingly.

Penalty for Brahmins absconding for whose apprehension the magistrate shall have issued a warrant under Section 2

V. In case any Brahmin or Brahmins, against whom the city or a Zillah magistrate may issue the warrant prescribed in Section 2, shall refuse to obey, or resist or cause to be resisted, the peons deputed to serve it, or escape after being taken by them into custody, or abscond, or shut himself or themselves up in any house or building, or retire to any place, so that the warrant cannot be served upon him or them, the magistrate shall issue a precept to the Collector, requiring him to cause to the nearest Tehsildar to attach the lands

that such Brahmin or Brahmins may possess in property, or in mortgage, or in farm, or *Lakharaje*. The lands shall remain attached until he or they surrender, and the collections made during the attachment, after deducting such revenue as may fall due to Government, shall be accounted for, and paid to, the party against, or on account of, or in resentment to, whom, the *Koorh* was originally established, or the woman or women, or child or children, were to be wounded *or* slain, and after the surrender or apprehension of the Brahmin or Brahmins who set on the *Koorh*, or was or were prepared to wound or slay his or their women or children, or either of them, his or their lands shall be released; but he or they shall be proceeded against, in respect to his or their lands shall be released; but he or they shall be proceeded against, in respect to his or their trial for the original offence or offences, as prescribed in Sections 3 and 4.

**Collector to apply to the magistrate in case of Brahmins
establishing a Koorh, or being prepared to kill or wound
women or children, on account of any process from the revenue
department**

VI. In the event of any Brahmin or Brahmins establishing a *Koorh*, or preparing to wound or slay his or their women or children, or any or either of them, with a view to prevent the serving of any *Dustuck* or writ on him or them, for arrears of revenue by the local Tehsildar, or by the Collector of Benares, in the manner in which by Regulation VI, 1795, they are respectively authorised to issue such *Dustucks*, if it be the *Dustuck* of the Tehsildar that is thus opposed, he is not, after being informed thereof, to persist in enforcing it, but is to report the case immediately to the Collector, accompanied by the written testimonies of the peon deputed to serve the *Dustuck*; upon receipt of which information, or in case of his own original process being in like manner resisted, the Collector is to represent; through the Vakeel of Government, the amount of the balance due by such Brahmin or Brahmins, and the circumstances attending the issuing of his own or of his 'Tehsildar's process for realizing it, to the judge and magistrate of the city or Zillah in whose jurisdiction the lands on account of which the arrears shall be due, may be situated; and upon the peon deputed with the 'Tehsildar's or the Collector's *Dustuck*, or any other creditable person or persons, attending in court, and making oath to the truth of the circumstance stated in the representation of the collector, either as to the constructing of a *koorh* by such Brahmin or

Brahmins, or as to his or their being prepared to wound or slay the women and children, or any of them, (according as one or both of these expedients, shall be stated to have been resorted to by the Brahmin or Brahmins in question) the magistrate is thereon to issue to such Brahmins a written notice under his official seal in the Persian language and character, and in the Hindoostanee language and Nagree character, which is to be served on him or them by such of the relations, friends or connections, of the said Brahmin or Brahmins as the magistrate may think fit, and have an opportunity of employing for the purpose ; and in default of such relations, friends, or connections, of the said Brahmin or Brahmins, the Magistrate is to cause the notice to be served by a single peon of the same religion, and the tenor of it shall require the said Brahmin or Brahmins to remove the koorh, and the women and people that may be placed in it, or to desist from any preparation for wounding or killing the women or children, (according as either or both of these offences may be charged in the information) as likewise, either to discharge the balance of rent or revenue that shall have been demanded from him or them or to appear, and entering security for such part of it as he or they may have pleas against the payment of, to file his or their objections to the payment of such part in the city or Zillah Court, that the merits of the case may be enquired into and decided, according to the principles by which other disputed demands and accounts of revenue are under Regulation VI, 1795, directed to be determined ; and the said notice is also to contain a positive and encouraging assurance to the Brahmin or Brahmins in question, that on his or their employing with the exigency of it, by removing the koorh and the persons therein, or by desisting from any preparation to wound or slay the women and children, and either discharging the balance of revenue in demand, or repairing in person, or deputing a Vakeel, to the city or Zillah Court, and entering security for the amount of it, proper enquiry shall be made into the pleas that he or they may have to state against the justice of the demand. If the issuing of the notice shall fail to induce the said Brahmin and Brahmins to comply with the requisitions of it, a written return to that effect is to be made and attested by the party or parties entrusted with the serving of it, and the magistrate is immediately to issue a warrant under his official seal and signature for the apprehension of such Brahmin or Brahmins in which shall be specified the misdemeanor, contumacy, and arrear, with which he or they stand

charged ; and the warrant shall be executed by peons of the Mahomedan religion, as directed in Section 2; and if the Brahmin or Brahmins shall refuse to obey or resist, or cause to be resisted, the peons deputed to serve it, or escape, after being taken by them into custody or abscond, or shut himself or themselves up in any house or building, or retire to any place, so that the warrant cannot be served on him or them ; the magistrate, on information to this effect, shall issue a precept to the collector, to cause the nearest Tehsildar to attach the lands that such Brahmin or Brahmins may possess in property, or in mortgage, or in the farm, *or Lakheraje* ; and the lands shall accordingly remain attached, and the profits of them be appropriated by Government, until the liquidation of the balance shall be effected, either from the produce, or in consequence of the said Brahmin or Brahmins making good the same from his or their other means ; and also, until the said Brahmin or Brahmins shall have been brought, or made his or their appearance before the court, when he or they shall be tried for being concerned either as principles or accomplices in setting up the koorh, or for having been prepared to wound *or* slay his or their women or children, or any or either of them, in the same manner, and with the same reservation as to the mitigation of the sentence, as is specified in Sections 2,3 and 4.

Brahmins causing the construction of a koorh, and persons firing it, to be tried on a charge of murder for the loss of the life or lives of any person or persons that may be thereby occasioned

VII. If any Brahmin or Brahmins, on account of any discontent or alarm, well or ill founded, either against Government, or its officers, or servants, shall establish a koorh, in which any person or persons shall, at any period from its construction until its removal, be burnt to death, or otherwise lose their lives, in consequence of such koorh's being set fire to, by any person whomsoever ; the Brahmin or Brahmins who shall have caused the construction thereof, shall be held chargeable with, and made amenable for, the crime of murder; as well as the party or parties who may have been immediately employed, or aided in setting fire to the pile or combustibles in question ; and upon proof of the fact to the satisfaction of the court of circuit, such Brahmin or Brahmins, and such person or persons, setting fire to the koorh, shall be sentenced on trial before the said court, to suffer the punishment of death, in the same manner as if they had committed and been convicted *of Kuti* and, or premeditated

murder, according to the doctrines of the Mahomedan law ; and with a view to render the example as public as possible such sentence (whether consistent with the future of the Mahomedan law officers, or otherwise) is in this case, to be accordingly formally passed by the court of circuit on the Brahmin or Brahmins thus convicted ; but it is to be at the same time explained to the party or parties thus condemned, as it is also hereby expressly provided, that all such trials, and the sentences passed, are by the court of circuit to be submitted (in like manner as is prescribed in Section 47, Regulation IX, 1793,) to the Nizamut Adawlut, and the party or parties condemned under this section, are to remain in Jail to await the final judgment of that court; and if the Nizam ut Adawlut shall approve of the condemnation, it shall order the Brahmin or Brahmins in question to be conveyed to Calcutta, to be thence transported for life, in conformity to Section 23, Regulation XVI, 1795, which establishes this commutation for the legal punishment of murder perpetrated by Brahmins within the province of Benares, or, if the court of Nizamut Adawlut shall see cause for not proceeding pursuant to the sentence passed by the court of circuit either in respect of the Brahmin or Brahmins, who may have caused the construction of the *keorh*, or to the party or parties who may have been employed or aided in firing it, they shall submit the case or cases to the Governor General in Council, and either recommend a pardon, or such other commutation by way of mitigation of the punishment, as to the said court may seem proper.

Punishment for Brahmins wounding women and children

VIII. If any Brahmin or Brahmins, under the circumstances, and in the manner, described in the preamble to, and the following sections of this regulation, or under such circumstances, and in such manner, as shall be substantially similar thereto, with a sword, or other offensive weapon, or otherwise, shall actually wound his or their women or children or other women or children, or any or either of them, on account of, in resentment of any real or supposed injury committed towards him or them, by aumils, tehsildars, or other officers, or servants, employed in the revenue or judicial departments ; or shall so wound any of his or their own women or children, or any other woman or child, on account or in resentment of, his or their differences with any individual ; he or they shall for such act or acts, be sentenced by the *court* of circuit to transportation, subject to the same reference to the Nizamut Adawlut and to the like commutation

of the punishment, or pardon, as in the cases referred to in section 7.

Punishment for Brahmins killing women or children

IX. If any Brahmin or Brahmins, under the circumstance and in the manner, described in the preamble to, and subsequent sections of this regulation, or under such circumstances, and in such manner, as shall be substantially similar thereto, with a sword or other offensive weapon, or otherwise, shall actually put to death his or their women or children, or other women or children, or any or either of them, on account or in resentment of any real or supposed injury, committed towards him or them by aumils, tehsildars, or any other officers, or servants, employed in the revenue or judicial departments ; or shall so put to death any of his or their own women or children, or any other woman *or* child, on account or in resentment of his or their differences with any individual ; he or they shall be tried for such homicide and on proof of the fact or facts, be accordingly sentenced by the court of circuit to capital punishment, subject to the same reference to the Nizamut Adawlut and to the like commutation of the punishment, or pardon, as in the cases referred to in section 7 ; and the families of any Brahmin or Brahmins found guilty of murder under this section, shall, according to the order of the Governor General in Council under date the 17th of June 1789, and the publication made in conformity to it by the Resident at Benares under date the 7th day of July of the same year, be banished from the province of Benares, and the Company's territories; and his and their estates in land shall be forfeited and disposed of as to Government shall seem proper ; and accordingly, the court of circuit is required to subjoin this order to all sentences that they may pass, on Brahmins for murder under this section, at the same time reporting such sentence and order to the Nizamut Adawlut, together with as accurate an account as they may be able to procure, of the number, sex, and age, of the persons composing the family of such Brahmin or Brahmins and annexing their opinion how far it may be advisable or otherwise, rigorously to enforce the banishment of the family of such Brahmin or Brahmins, or to confirm, or mitigate or annul, the order for the forfeiture of their real property ; and the Nizamut Adawlut, on consideration of this sentence and order, and of the opinion of the court of circuit, shall either wholly confirm, or recommend to the Governor General in Council such mitigation of the said sentence and order, as shall appear to them proper; and in all cases there the forfeiture of the landed property of such Brahmin or

Brahmins, and that of his or their family, shall be confirmed by the Nizamut Adawlut, the said Court is to advise the Governor General in Council thereof, nor shall such sentence be carried into execution as far as regards the forfeiture of the landed property, without an order from the Governor General in Council approving such part of the sentence, and directing in what manner the lands thus forfeited shall be disposed of.

Limitation as to the forfeiture of the family lands of the offenders

X. In the exercise of the discretion vested in the Nizamut Adawlut by section 9, of recommending to the Governor General in Council, the mitigation of sentences and orders passed by the Court of Circuit, under the said Section, it shall be a rule that whenever the Governor General in Council shall in consequence deem it proper to limit the banishment either to the party or parties committing the murder, or to a certain number only of his or their family or families; no confiscation or forfeiture of the landed-property shall in such instances take place, but the same shall be entirely left in the possession, and as the property, of those members of the family who shall be exempted from banishment.

Regulations respecting Brahmins sitting *dhurna*

XI. *First.*— In conformity to the order of the Governor General in Council, of the 2nd of November 1792, and the publication issued in consequence at Benares on the 22nd of December of the same year, and the further order of the Governor General in Council under date the 7th November 1794, the following rules are enacted for the preventing of *dhurna* ; and for the trial and punishment of Brahmins committing this offence.

Magistrate to cause Brahmins sitting *dhurna* to be apprehended

Second.— On a complaint in writing being presented to the Magistrate against any Brahmin or Brahmins for sitting *dhurna*, the Magistrate, upon oath being made to the truth of the information, shall issue a warrant under his seal and signature for the apprehension of the person or persons thus complained against, on the prisoner or prisoners being brought before the magistrate, he shall enquire into the circumstances of the charge, and examine the prisoner or prisoners and complainant, and also such other persons (whose

depositions are to be taken on oath) as are stated to have any knowledge of the misdemeanor alleged against him or them, and commit their respective depositions to writing ; and after this enquiry, if it shall appear to the magistrate that the misdemeanor charged against the prisoner or prisoners was never committed, or, that there is no ground to suspect him or them to have been concerned in the committing of it, the magistrate shall cause such Brahmin or Brahmins to be forthwith discharged, recording his reasons for the information of the Court of Circuit, in the manner specified in Section 17, Regulation IX, 1793. On the contrary, if it shall appear to the magistrate that the crime or misdemeanor was actually committed, and that there are grounds for suspecting the prisoner or prisoners to have been concerned therein as principals or accomplices, the magistrate shall cause him or them to be committed to prison or held to bail, (according as *in* his discretion he shall judge proper) to take his or their trial at the next session of the Court of Circuit, and shall bind over the complainant to appear and carry on the prosecution, and the witnesses to attend and give their evidence, in the manner required by Section 5, Regulation IX, 1793. The Trial shall take place before the court of circuit, in the manner prescribed in the said regulation, and in Regulation XVI, 1795 ; and after the evidence is closed, it shall be referred to the pundit of the court, to deliver in writing the *vyuvustha*, or exposition of the shaster, as to whether the facts contained in the evidence amount to proof of the prisoner or prisoners having committed *dhurna*, and in the event of such *vyuvustha* being in the affirmative, the Court of Circuit is to sentence the prisoner or prisoners to be expelled from the province of Benares, and to forfeit all title to the right or claim for the realizing of which the misdemeanor shall have been committed; but this sentence is not to be carried into execution until it shall have been reported by the Court of Circuit to the Nizamut Adawlut, and it shall have been either wholly confirmed, or directed to be enforced under such mitigation as to the expulsion from the province, or to the forfeiture of the right or claim of the prisoner or prisoners to the property for which he or they sat *dhurna*, as to the said court shall seem proper.

Court of Circuit bow to proceed in case all the legal requisites to constitute *dhurna* shall not be found, although the offence was substantially committed

XII. In the event of the *vyuvustha* which the *pundit* is required to deliver in Section II, not stating the circumstances sworn to in the evidence to amount to the offence of *dburna*, and the Court of Circuit shall nevertheless be of opinion, from the evidence before them that the prisoner did in fact commit *dburna*, according to the common construction and received meaning of the term, although the act may not have been attended with all the circumstances that may be legally required to constitute *dburna*, according to the description of it in the books of the Hindoos ; the said court is, under such circumstances, (as directed by the order of the Governor General in Council, under date the 7th of November 1794) to take from the prisoner or prisoners, a *moochulka* or engagement, conditioning that if such prisoner or prisoners shall again sit *dburna* on any one, or perform any act of a nature similar to *dburna* as shall, on their being prosecuted before the Court of Circuit, be deemed by the judges of the said court present at the trial, or the majority of them, equivalent or tantamount to *dburna*, the said prisoner or prisoners shall respectively for such second offence, suffer the full penalty of *dburna*, as provided for by the order of the Governor General in Council, by being expelled from the province, and by being made to forfeit all right and title to the claim in question.

How Rajkoomars are to be tried for leaving or causing their female infants to perish for want of nourishment

XIII. In the month of December 1789, the tribe of Rajkoomars having bound themselves to discontinue the practice of causing their female infants to be starved to death ; it is now accordingly ordained, that from the establishment and opening of the city and Zillah courts and of the Court of Circuit in Benares, if any Rajkoomar shall designedly prove the cause of the death of his female child, by prohibiting its receiving nourishment, as set forth in the preamble to this regulation, *or* in any other manner, the magistrate, on receiving information thereof upon oath, or such other information or proof as he shall deem sufficient to render the charge highly probable, shall cause such Rajkoomar to be apprehended in the manner prescribed, and make the enquiry ordered, in Section 5, Regulation IX, 1793 ; when if it shall appear to the magistrate that the crime has been actually committed, and that there are grounds for suspecting the prisoner to have been concerned in the perpetration of it, the magistrate shall cause him to be committed to prison to be tried before the Court of Circuit, and shall at the same time take all the

other precautions required in the section and regulation last quoted, relative to securing the attendance of the original complainant or informant, and of the witnesses; and the prisoner shall be tried accordingly, in the manner directed in Regulation IX, 1793, and Regulation XVI, 1795, with respect to other cases of murder.

The second piece of social Legislation which the British undertook is contained in Bengal Regulation VI of 1802. It is a regulation for preventing the Sacrifice of Children at Saugor and other places. It enacted as follows :—

REGULATION VI

A. D. 1802

A Regulation for preventing the Sacrifice of Children at Saugor and other Places. Passed by the Governor General in Council, on the 20th August 1802.

1. It has been represented to the Governor General in Council, that a criminal and inhuman practice of sacrificing children, by exposing them to be drowned, or to be devoured by sharks, prevails at the island of Saugor, and at Bansbaryah, Chaughadh, and other places on the Ganges. At Saugor especially, such sacrifices have been made at fixed periods, namely, the day of full moon in November and in January, at which time also grown persons have devoted themselves to a similar death. Children thrown into the sea at Saugor have not been generally rescued, as is stated to be the custom at other places ; but the sacrifice has, on the contrary, been completely effected, with circumstances of peculiar atrocity in some instances. This practice, which is represented to arise from superstitious vows is not sanctioned by the Hindoo law, nor countenanced by the religious orders or by the people at large ; nor was it at any time authorized by the Hindoo or Mahomedan Governments of India. The persons concerned in the perpetration of such crimes are therefore clearly liable to punishment, and the plea of custom would be inadmissible in excuse of the offence. But, for the more effectual prevention of so inhuman a practice, the Governor General in Council has enacted the following Regulation to be in force from the promulgation of it in the provinces of Bengal, Orissa, and Benares.

II. If any person or persons shall willfully, and with the intention of taking away life, throw or cause to be thrown, into the sea or into the river Ganges, or into any other river or water, any infant or person not arrived at the age of maturity, with or without his or her consent,

in consequence whereof such person, so thrown into water, shall be drowned, or shall be destroyed by sharks or by alligators, or shall otherwise perish, the person or persons so offending shall be held guilty of willful murder, and on conviction shall be liable to the punishment of death; and all persons aiding or abetting the commission of such act shall be deemed accomplices in the murder, and shall be subject to punishment accordingly. The trials of prisoners convicted as principals or accomplices of the crimes specified in this section shall be referred to the Court of Nizamut Adawlut, which is to pass sentence thereupon according to Section LXX, Regulation IX, 1793 whatever may be the *futwah* of the law officers of that Court. (or report to the Governor General in Council the case of any prisoner who may appear to that court to be a proper object of mercy, in conformity with Section LXXIX, Regulation IX, 1793).

III. If a child or any person not arrived at maturity, be thrown into water, as stated in the preceding section, and be rescued from destruction, or by any means escape from it, the persons who shall have been active in exposing him or her to danger of life, and all aiders and abettors of such act, shall be held guilty of a high misdemeanor, and on convicting shall be liable to such punishment as the Courts of Circuit, under *the futwah* of their law officers, may judge adequate to the nature and circumstances of the case.

IV. The magistrates of districts wherein the sacrificing of children may have been hitherto practiced are required to be vigilant to prevent the continuance of the practice, and shall cause the provisions of this Regulation to be from time to time proclaimed at the places, and in the season, where and when such sacrifices have hitherto been effected.

The Second piece of Social Legislation is one dealing with Suttee. It is Bengal Regulation XVII of 1829 ; It enacted as follows:—

REGULATION XVII

A. D. 1829

A Regulation for declaring the practice of Suttee, or of Burning or Burying alive the Widows of Hindoos, illegal, and punishable by the Criminal Courts. Passed by the. Governor General in Council, on the 4th December 1829.

Preamble

I. The practice of suttee, or of burning or burying alive the widows

of Hindoos, is revolting to the feelings of human nature; it is nowhere enjoined by the religion of the Hindoos as an imperative duty ; on the contrary, a life of purity and retirement on the part of the widow is more especially and preferable inculcated, and by a vast majority of that people throughout India the practice is not kept up nor observed; in some extensive districts it does not exist; in those in which it has been most frequent, it is notorious that, in many instances, acts of atrocity have been perpetrated, which have been shocking to the Hindoos themselves, and in their eyes unlawful and wicked. The measures hitherto adopted to discourage and prevent such acts have failed of success, and the Governor General in Council is deeply impressed with the conviction that the abuses in question cannot be effectually put an end to without abolishing the practice altogether. Actuated by these considerations, the Governor General in Council, without intending to depart from one of the first and most important principles of the system of British Government in India, that all classes of the people be secure in the observance of their religious usages, so long as that system can be adhered to without violation of the paramount dictates of justice and humanity, has deemed it right to establish the following rules, which are hereby enacted to be in force from the time of their promulgation throughout the territories immediately subject to the presidency of Fort William.

II. The practice of suttee, or burning or burying alive the widows of Hindoos, is hereby declared illegal, and punishable by the Criminal Courts.

III. *First.*—All zamindars, talookdars, or other proprietors of land, whether malguzarry or lakhiraj ; all sudder farmers and under-renters of land of every description ; all dependent talookdars, all naibs and other local agents ; all native officers employed in the collection of the revenue and rents of lands on the part of Government, or the Court of Wards; and all munduls or other head men of villages, are hereby declared especially accountable for the immediate communication to the officers of the nearest police station of any intended sacrifice of the nature described in the foregoing section ; and any zemindar, or other description of persons above noticed, to whom such responsibility is declared to attach, who may be convicted, of willfully neglecting or delaying to furnish the information above required, shall be liable to be fined by the magistrate or joint magistrate in any sum not exceeding two hundred

rupees, and in default of payment, to be confined for any period of imprisonment not exceeding six months.

Police Darogas, how to act on receiving the intelligence of the intended sacrifice

Second.— Immediately on receiving intelligence that the sacrifice declared illegal by this Regulation is likely to occur, the police darogah shall either repair in person to the spot, or depute his mohurrir or jamadar, accompanied by one or more burkundauzes of the Hindoo religion, and it shall be the duty of the police officers to announce to the persons assembled for the performance of the ceremony, that it is illegal, and to endeavour to prevail on them to disperse, explaining to them that, in the event of their persisting in it, they will involve themselves in a crime, and become subject to punishment by the Criminal Courts. Should the parties assembled proceed in defiance of these remonstrances to carry the ceremony, into effect, it shall be the duty of the police officers to use all lawful means in their power to prevent the sacrifice from taking place, and to apprehend the principal person aiding and abetting in the performance of it ; and in the event of the police officers being unable to apprehend them, they shall endeavour to ascertain their names and places of abode, and shall immediately communicate the whole of the particulars to the magistrate or joint magistrate for his orders.

How to act when the intelligence of sacrifice may not reach them until after it shall have actually taken place

Third.— Should intelligence of a sacrifice declared illegal by this Regulation, not reach the police officers until after it shall have actually taken place, or should the sacrifice have been carried into effect before their arrival at the spot, they will nevertheless institute a full inquiry into the circumstances of the case, in like manner as on all other occasions of unnatural death, and report them for the information and orders of the magistrate or joint magistrate to whom they may be subordinate.

IV. *First.*— On the receipt of the reports required to be made by the police darogahs, under the provisions of the foregoing section, the magistrate or joint magistrate of the jurisdiction in which the sacrifice may have taken place shall inquire into the circumstances of the case, and shall adopt the necessary measures for bringing the parties concerned in promoting it to trial before the Court of Circuit.

Persons convicted of aiding and abetting in the sacrifice of a Hindoo widow, shall be deemed guilty of culpable homicide, and liable to punishment

Second.— It is hereby declared, that after the promulgation of this Regulation, all persons convicted of aiding and abetting in the sacrifice of a Hindoo widow, by burning or burying her alive, whether the sacrifice be voluntary on her part or not shall be deemed guilty of culpable homicide, and shall be liable to punishment by fine or by imprisonment, or by both fine and imprisonment, at the discretion of the Court of Circuit, according to the nature and circumstances of the case and the degree of guilt established against the offender, nor shall it be held to be any plea of justification, that he or she was desired by the party sacrificed to assist in putting her to death.

Third.— Persons committed to take their trial before the Court of Circuit for the offence above mentioned, shall be admitted to bail or not, at the discretion of the magistrate or joint magistrate, subject to the general rules in force in regard to the admission of bail.

The Court of Nizamut Adawlut not precluded from passing sentence of death in certain cases

V. It is further deemed necessary to declare, that nothing contained in this Regulation shall be construed to preclude the Court of Nizamut Adawlut from passing sentence of death on persons convicted of using violence or compulsion, or of having assisted in burning or burying alive a Hindoo widow, while labouring under state of intoxication, or stupefaction, or other cause impeding the exercise of her free will, when, from the aggravated nature of the offence proved against the prisoner the court may see circumstances to render him or her a proper object of mercy.

The third piece of Social Legislation is the Caste Disabilities Removal Act XXI of 1850. It enacts as follows ;—

THE CASTE DISABILITIES REMOVAL ACT (XXI OF 1850)

An act for extending the principle of section 9, Regulation VII, 1832, of the Bengal Code throughout the Territories subject to the Government of the East India Company.

Preamble

WHEREAS, it is enacted by section 9, Regulation VII, 1832, of the Bengal Code that "whenever in any civil suit the parties to such suit may be of different persuasions, when one party shall be of the Hindu and

the other of the Muhammadan persuasion, or where one or more of the parties to the suit shall not be either of the Muhammadan or Hindu persuasions, the laws of those religions shall not be permitted to operate to deprive such party or parties of any property to which, but for the operation of such laws, they would have been entitled, and whereas it will be beneficial to extend the principle of that enactment throughout the territories subject to the Government of the East India Company it is enacted as follows:—

Law or Usage which inflicts forfeiture of, or affects, rights of change of religion or loss of caste to cease to be enforced

1. So much of any law or usage now in force within the territories subject to the Government of the East India Company as inflicts on any person forfeiture of rights or property, or may be held in any way to impair or affect any right of inheritance, by reason of his or her renouncing, or having been excluded from the communion of, any religion, or being deprived of caste, shall cease to be enforced as law in the Courts of the East India Company, and in the Courts established by Royal Charter within the said territories.”

The fourth piece of Social Legislation is the Hindu Widows' Remarriage Act XV of 1856. It enacts as follows :—

An Act to remove all legal obstacles to the marriage of Hindu Widows.

Preamble

WHEREAS, it is known that, by the law as administered in the Civil Courts reestablished in the territories in the possession and under the Government of the East Indian Company, Hindu widows with certain exceptions are held to be by reason of their having been once married, incapable of contracting a second valid marriage, and the offspring of such widows by any second marriage are held to be illegitimate and incapable of inheriting property ; and

WHEREAS, many Hindus believe that this imputed legal incapacity, although it is in accordance with a true interpretation of the precepts of their religion, and desire that the civil law administered by the Courts of Justice shall no longer prevent those Hindus who may be so minded from adopting a different custom, in accordance with the dictates of their own conscience ; and

WHEREAS, it is just to relieve all such Hindus from this legal incapacity of which they complain, and the removal of all legal obstacles to the marriage of Hindu widows will tend to the promotion of good

morals and to the public welfare; it is enacted as follows:—

Marriage of Hindu widows legalized

1. No marriage contracted between Hindus shall be invalid, and the issue of no such marriage shall be illegitimate, by reason of the woman having been previously married or betrothed to another person who was dead at the time of such marriage, any custom and any interpretation of Hindu law to the contrary notwithstanding.

Rights of widow in deceased husband's property to cease on her re-marriage

2. All rights and interests which any widow may have in her deceased husband's property by way of maintenance, or by inheritance to her husband or to his lineal successors, or by virtue of any will or testamentary disposition conferring upon her, without express permission to re-marry, only a limited interest in such property, with no power of alienating the same, shall upon her re-marriage cease and determine as if she had then died; and the next heirs of her deceased husband, or other persons entitled to the property on her death, shall thereupon succeed to the same.

The fifth piece of Social Legislation prescribed an age limit for, sexual intercourse with a woman., It is Act XLV of 1860 (Penal Code) Sec. 375. It enacted as follows :—

“A man is said to commit ' rape ' who except, in the case hereinafter excepted, has sexual intercourse with a woman under circumstances falling under any of the five following :—

First: Against her will. *Secondly :* Without her consent. *Thirdly :* With her consent, when the man knows that he is not her husband, and that her consent is given because she believes that he is another man to whom she is or believes herself to be lawfully married. *Fourthly:* (Left blank—ed.) *Fifthly :* With or without her consent, when she is under ten years of age.

Explanation: (Left blank—ed.)

Exception: Sexual intercourse by a man with his own wife not being under ten years of age, is not rape.”

WHAT ABOUT THE UNTOUCHABLES?

Caste and Untouchability are the two great social evils in India. Caste has disabled the whole Hindu Society. Untouchability has suppressed a large class of people. And yet the British Government has completely ignored the two evils. One may search in vain the Indian Code to find any law dealing with Caste or with Untouchability. It is true that caste

and untouchability are social matters. They will vanish when people will begin to inter-dine and inter-marry. Law cannot compel a person to dine with another. It is true, law cannot compel a person to marry with another. But it is also true that Law can prohibit a Caste from preventing a person from marrying a person outside his caste. Caste continues because a Caste can conspire to punish its members if they break the rules of caste by declaring a social boycott against him. It would have been perfectly possible to have enacted a law declaring such social boycott to be a crime. Again in the matter of Untouchability the disabilities are not merely social. They are fundamentally civic. Inability to get admission to school, to be able to take water from a public well, to be able to get into a public conveyance, to be able to get into public service, are all civic disabilities. It was the duty of the British Government to legislate at least to the extent necessary to protect their civic rights. It was possible to do so. A short Enactment on the lines of Caste Disabilities Removal Act would have been sufficient. Yet the British Government has gone on as though these two evils did not exist at all. Indeed it is most extraordinary thing to note that although Legislative Bodies were established in India in 1861 and have been passing laws on every social questions and discussing public questions, yet except on two occasions the Untouchables were not even mentioned. The first occasion on which they were mentioned was in 1916, when one Parsi gentleman Sir Maneckji Dadabhoy moved the following Resolution in the Central Legislature :—

“That this Council recommends to the Governor General in Council that measures be devised with the help, if necessary, of a small representative committee of officials and non-officials for an amelioration in the moral, material and educational condition of what are known as the Depressed Classes, and that, as a preliminary step the Local Government and Administrations be invited to formulate schemes with due regard to local conditions.”

There was no sympathy to this resolution. The Hindu members of the Legislature were angry with the mover for his having brought such a subject before the Legislature.

Pandit Madan Mohan Malviya said :—

"Sir, it seems rather ungracious to say so, but a sense of the dignity of the proceedings of this Council compels me to utter a protest against the manner in which sometimes subjects are brought before it for consideration

“In moving the Resolution the object of which I may at once say,

has my whole-hearted support, my friend, the Hon'ble Mr. Dadabhoy, went out of his way to make remarks against the Hindu community which, I think, he ought to have avoidedI am not here to defend everything Hindu that exists. I am not here to appologize for the many prejudices or superstitions, which I am sadly conscious are to be found among one portion or another of our community. But it is not the Hindu community alone which finds it difficult to get rid of prejudices Without meaning the smallest disrespect, I would instance the case of the marriage with a Deceased Wife's Sister Bill..... We Hindus have got some much worse prejudices to fight against..... But I do not think it is within the province of a member of this Council either to lecture to the Hindus present here or to those outside as to the socio-religious disabilities among themselves which they might fight against and remove. I think the province of Members of this Council is limited to dealing with matters of legislation or other administrative matters which may properly be taken up by the Government. As has been already pointed out, the Government have, in pursuance of a wise and liberal policy, laid it down that they shall not interfere in matters of a religious or socio-religious character, and accusations of the character in question ought, therefore, to be avoided there I do not wish to descend into a disputation as to the merits of the imputations or the justification for the general observations that have been made And yet, if I do not, I am left in the position that I have heard without protest remarks showing that the Hindu Community from one end of the country to the other was guilty of all that my friend, the Hon'ble Mover of the Resolution, has suggested..... I am conscious that we Hindus have many prejudices to fight against and conquer; but I submit that this is not the place to tell us of them.”

Even a social Reformer like Sir Surendranath Bannerjee was not happy. He said :—

* “.....I regret very much that my Hon'ble friend the Mover of this Resolution went somewhat out of his way to level (I do not think he did it intentionally) an attack against the Hindu Community. He must bear in mind that we are the inheritors of past traditions, of a civilization as ancient as the world. That civilization undoubtedly had its defects,

' but that civilization in the morning of the world was the guarantee for law and order and social stability. In the past it

afforded consolation to millions. We are trying to evolve a national system in conformity with our present environments, but we cannot push aside all those things which have come down to us from the past. We reverence the venerable fabric which has been built up by our ancestors. We notice their defects, and we are anxious to get rid of them gradually and steadily, not by any revolutionary movement, but the slow, steady process of evolution. My friend must have a little sympathy with us ; he must extend to us the hand of generosity in our efforts to deal with the problems. My Hon 'ble friend suggests that Government should take measures..... We welcome the action of Government in a matter of this kind, but after all, if you analyse the situation, it is a social problem, and the British Government, very properly, as I think, in conformity with its ancient traditions, holds aloof from all interference with social questions.

“Government can do a great by way of education, a great deal by helping forward the industrial movement among the Depressed Classes. But the vital problem, the problem of problems, is one of social uplifting, and there the Government can only afford to be a benevolent spectator. It may sympathize with our efforts, but it cannot actively participate in them.....”

The Hon 'ble Mr. Dadabhoy had to defend himself. In his reply he said:—

“Sir, I find myself in a very peculiar and unfortunate position. There are two parties in this Council, and they are both on the defensive on this occasion. My justification for bringing in this Resolution, if any justification were needed, is to be found in the unenthusiastic and half hearted support which I have received from my non-official colleagues. It was no pleasure, I assure you, Sir, to me to bring in this Resolution. If I could possibly have avoided it, I would have very cheerfully and very willingly done so. This is the sixth year of the life of this Reformed Council, as Hon'ble Members are aware, and the second term is now approaching expiration. During the major portion of that time—the five years that I have been on this Council—I anticipated that the champions of public liberty, public spirit and public enterprise and culture—men like my friends the Hon'ble Surendra Nath Bannerjee or the Honourable Pandit Madan Mohan Malaviya—would take the trouble of moving a Resolution to this effect. I waited all this time to see if one of these enthusiastic members would bring in a Resolution for the

amelioration of the Depressed Classes, but when I found that none of them had taken up the matter—though at times this matter is discussed even in the Congress Pandal in a certain manner; when I found that it was not taken up in this Council—..... I, as a Parsee, representing a Hindu constituency thought it my duty to bring this matter for public discussion in this Council.”

The Government naturally felt relieved by this quarrel. Resting behind the moral support of the Hindu members of the Legislature for covering up their delinquency Sir Reginald Crad-dock speaking on behalf of the Government disposed off the Resolution in the following terms :—

“Sir, we sympathize with the objects of the Hon'ble Mr. Dadabhoy's Resolution. We are willing to go so far as to ask Local Governments to put on record what they have done, are doing, and what further they can do, to improve the condition of these people. But we can place no faith in special committees. Have I not indicated to the Council how wide are the problems, and how impossible it would be to deal with them by means of Committees? The problems extend over the whole range of Government from top to bottom. What I say is that, while extending our sympathy to the objects aimed at by the Hon'ble Mr. Dadabhoy, we can go no further than promise to refer the question to Local Governments, and ask them whether they can do more than they are doing. That is as far as we can go, and with that assurance, I will ask the Hon'ble Member to withdraw his Resolution.”

The second time the Untouchables are mentioned in the proceedings of the Legislature was in 1928 when Mr. M. R. Jayakar moved the following Resolution :—

“This Assembly recommends to the Governor-General in Council to issue directions to all Local Governments to provide special facilities for the education of the Untouchables and other depressed classes, and also for opening all public services to them, specially the Police.”

On this occasion the Government of India was no more enthusiastic than it was in 1916. Mr. G. S. Bajpai, speaking on behalf of the Government of India said :—

“The Local Governments are alive to their responsibility, they are doing what they can. It is not my privilege to claim for them that they have achieved the ideal, but I do claim that there is an awakening and an awakened and roused sense of responsibility and a roused sense of endeavour for improving the position of these

depressed classes. That being so, it is no function to interfere by direction or by demand. They (i. e. the Government) can, if the House wishes, communicate to them the views of the House on this very national problem.”

For this speech, Mr. Bajpai, according to the official report of the proceedings, was cheered !!

Such is the record of the British Government in the matter of social Reform. What a miserable record it is? How meager a record it is; Six social Laws in sixty years of legislative activity !! From the very beginning, its attitude to social reform has been of a very halting character. It kept on some mask of a responsible Government up to 1860. After 1860 it threw off the mask. The Government would not move and reform came to a dead stop. In 1881 a great agitation was started in favour of legislation prohibiting child marriage. Rather than be pestered with social reform, it took courage to announce publicly and once for all its policy of opposition to reform. In a Government Resolution of that year, the British Government proclaimed :

“In dealing with such subjects as those raised in Mr. Malabari's Notes, the British Government in India has usually been guided by certain general principles. For instance, when caste or custom enjoins a practice which involves a breach of the ordinary criminal law, the State will enforce the law. When caste or, custom lays down a rule which is of its nature enforceable in the Civil Courts, but is clearly opposed to morality or public policy, the State will decline to enforce it. When caste or custom lays down a rule which deals with such matters as are usually left to the option of citizens, and which does not need the aid of Civil or Criminal Courts for its enforcement. State interference is not considered either desirable or expedient.

“In the application of such general principles to particular cases, there is doubtless room for differences of opinion ; but there is one common-sense test which may often be applied with advantage in considering whether the State should or should not interfere in its legislative or executive capacity with social or religious questions of the land now under notice. The test is, ' Can the State give effect to its commands by the ordinary machinery at its disposal? ' If not, it is desirable that the State should abstain from making a rule which it cannot enforce without a departure from its usual practice or procedure.

“If this test be applied in the present case, the reasons will be apparent why His Excellency in Council considers that interference

by the State is undesirable, and that the reforms advocated by Mr. Malabari, which affect the social customs of many races with probably as many points of difference as of agreement, must be left to the improving influence of time and to the gradual operation of the mental and moral development of the people by the spread of education.

“It is true that the British Government in India has by its legislation set up a standard of morality independent of, and in some material respects differing from, the standard set up by caste; and it may be that the former standard has had some beneficial effect in influencing native customs, practices, and modes of thought. But legislation, though it may be didactic purposes ; and in the competition of influence between legislation on the one hand, and caste or custom on the other, the condition of success on the part of the former is that the Legislature should keep within its natural boundaries, and should not, by overstepping those boundaries, place itself in direct antagonism to social opinion.”

The policy laid down in this Resolution has ever since remained the policy of the British Government in the matter of Social Reform.

Why did the British Government leave the Untouchables in the cold without any care or attention?

The explanation for so criminal a neglect was furnished by Sir Reginald Craddock. In replying on behalf of the Government of India on the Resolution moved by Sir Maneckji Dadabhoy in the Imperial Legislative Council in 1916, he stated what the position of the British Government took with regard to the Untouchables in the following terms:—

“With regard to them (i. e. the Untouchables) the difficulty is not that Government does not recognize them, but that, until the habits and prejudices of centuries are removed, the hands of their neighbours must necessarily press upon them..... you must remember that these people live mostly in villages and very often in the back lane of towns, and that their neighbours have not yet come under these broad and liberal minded influences. Therefore, as many speakers have indicated, the problem in dealing with this question is more social and religious than purely administrative.

“I know myself of many difficulties in the matter of schools. There are many places where the Maharboys will not be allowed into the school ; they may be allowed in the Verandah and get only a small part of the master's attention there, or they may be entirely excluded. But it is only gradually that the difficulty can be met. I have

constantly dealt with this very problem on the spot. I have reasoned with people ; I have said to them. There are tax payers like yourselves, either let them come into the school, or if you wish to indulge in your own prejudices—they may be reasonable prejudices, as you consider them—but if you wish to indulge them, should you not contribute something in order that these boys may have a school of their own? In that what some of the better people have come forward to help in the matter of wells, and schools for the low castes ; they have assisted, and the difficulties have been got over. But of course it is a matter which must take time, and Government itself cannot use compulsion. They go rather near to it sometimes, for example, in traveling by railway : and when petitions are presented in Court. But they cannot ensure that these people shall always be well treated in their offices. Very often, I think, some of these classes refrain from seeking service they might otherwise wish to secure, because their neighbours are not likely to treat them warmly. Although the Hon'ble mover described the statement made by the Government of Bombay as a ' magnificent *non- possumus* ', I think that it very accurately describes that the real difficulties of the situation are. Even though Government is willing to help in every way these unfortunate people, yet it remains true that ' the position of these castes and tribes in the future depends partly on their own selves, and partly those more favoured Indian Communities, which by extending the hand of human comradeship or hardening their hearts and averting their faces, have it in their power to elevate or to degrade them. '

“That Sir, I think, represents very true and accurately the position of affairs as regards these Depressed Classes.”

* * *

The same attitude was reiterated in 1928 when the resolution of Mr. Jayakar was discussed in the Central Legislative Assembly. Mr. Bajpai speaking on behalf of the Government said :—

“..... it is not by increasing the number of special schools or by providing special facilities that you are going to solve this problem (of the Untouchables) You will solve this problem only by a quickening and broadening the spirit of all sections of the community towards the so called depressed classes.”

Leaving the problem to be solved by the quickening of the consciences of the Hindus, the British Government just neglected the Untouchables and believed that as a Government they were not called

upon to do anything to help to improve the lot of the Untouchables. How did the British justify this neglect of so helpless and so downtrodden a class of their subjects as the Untouchables? The answer is very clear. They did it by taking the view that the evil of Untouchability was not of their making. They argued that if they did not deal with the evil of untouchability, they are not to be blamed for it because the system did not originate with them. This was clearly enunciated by the Government of Bombay in 1856. In June 1856 a petition was submitted on behalf of a Mahar boy to the Government of Bombay complaining that though willing to pay the usual Schooling fee, he had been denied admission to the Dharwar Government School. In disposing of the application, the Government of Bombay thought the matter so important that it issued a Resolution dated 21st July 1856 of which the following is the full text :—

“1. The question discussed in the correspondence is one of very great practical difficulty.

2. There can be no doubt that the Mahar petitioner has abstract justice on his side; and Government trust that the prejudices which at present prevent him from availing himself of existing means of education in Dharwar may be ere long removed.

3. But Government are obliged to keep in mind that to interfere with the prejudices of ages in a summary manner, for the sake of one or few individuals, would probably do a great damage to the cause of education. *The disadvantage under which the petitioner is not one which I has originated with the Government, and it is one which Government cannot summarily remove by interfering in his favour, as he begs them to do.*”

This is of course an easy view of the duties of a Government. It is not a responsible view. It is certainly not a view which a civilized Government would take. A Government which is afraid to govern is not a Government. It is only a corporation formed to collect taxes. The British Government undoubtedly meant to be more than a mere tax gathering machinery. It claimed to be a civilized Government. Then why did it not act to prevent wrong and injustice? Was it because it had no power or was it because it was afraid to use them or was it because it felt that there was nothing wrong in the social and religious system of India?

The answer is that it had the power, the amplest power. It did not use it because for a part of the period it did not think that there was anything wrong in the social system of the Hindus and during the

period when it became convinced that things were wrong it was overpowered by sense of fear.

It is notorious that the beginning of its career the British had a dread and a horror of the consequences of permitting the diffusion of "Christian truth". But it is not quite as notorious that the British at the same time were showing a corresponding respect for native prejudices. Mr. Ward, a Missionary in Calcutta records in his journal for 1802 the following fact :—

"Last week a deputation from the Government went in procession to Kali Ghat, and made a thank offering to this Goddess of the Hindoos, in the name of the Company, for the success which the English have lately obtained in this country. Five thousand rupees were offered. Several thousand natives witnessed the English presenting their offerings to this idol. We have been much grieved at this act, in which the natives exult over us." [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_17](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49.The Untouchables and the Pax Britannica.htm - _msocom_17)

Another illustration of the same is furnished by Mr. Robert Lindsay who was a civilian in the employment of the East India Company in the time of Warren Hastings. Describing his initiation into his new office of Resident at Sylhet he says —

"I was now told that it was customary for the new Resident to pay his respects to the shrine of the tutelary saint, Shaw Jullol. Pilgrims of the Islam faith flock to this shrine from every part of India, and afterwards found that the fanatics attending the tomb were not a little dangerous. It was not my business to combat religious prejudices, and I therefore went in state, as others had done before me, left my shoes on the threshold, and deposited on the tomb five gold mohurs as an offering. Being thus purified I returned to my dwelling and received the homage of my subjects."

How much the British Government had become associated with and interested in supporting native prejudices can be seen from the following memorial which was submitted to the Government of Madras by Bishop Corrie in 1833. The instances cited in the Memorial were these :—

"First, that it is now required of Christian servants of the Government, both civil and military, to attend to Heathen and Mahomedan religious festivals, with the view of showing them respect Second, that in some instances they are called upon to present offerings, and to do homage to idols. Third, that the impure and degrading services of the pagodas are now carried on under the

supervision and control of the principal European, and therefore, Christian officers of the Government, and the management and regulation of the revenues and endowments, both of these pagodas and mosques, so vested in them, under the provision of regulation vii of 1817, that no important idolatrous ceremony can be performed, no attendant of the various idols, not even the prostitutes of the temple, be entertained or discharged, nor the least expense incurred, without the official concurrence and orders of the Christian functionary. Fourth, that British officers, with the troops of the Government, are also now employed in firing salutes and in otherwise rendering homage to Mahomedan and idolatrous ceremonies, even on the Sabbath day ; and Christians are thus not unfrequently compelled by the authority of Government to desecrate their own most sacred institutions and to take part in unholy and degrading superstitions.”

This is enough to show that the British Government in India”not content with their exertions to suppress the diffusion of the saving truths of the Gospel was openly and authoritatively aiding and abetting the worst forms of devil-worship; that they were taking all the hideous indecencies and revolting cruelties of Hindooism under their especial patronage; sending their own masters-of-the-ceremonies to preside over the hellish orgies; and with paternal tenderness managing the property of the idol temples pampering the priests, cherishing the dancing girls, and doing such honour to heathen is generally as was best calculated to maintain it in a high state of exultant obesity.”

It was not till 1841 that Government dissociated itself from actual participation in the Hindu and Mahomedan religions I ceremonies and that too after a great deal of agitation by the Missionaries.

“In a circular letter signed by the Military Secretary to the Government of Fort St. George, and addressed to the Commander-in-Chief, under date of July 6, 1841, it is intimated,”under instructions from the Court of Directors, conveyed through the Government of India”, that”the attendance of troops or of military bands at native festivals or ceremonies, and the firing of salutes *on* occasions of that nature,”were”in future to be discontinued, with the object of separating the Government and its officers, as far as possible, from all connection with the ceremonies of the Hindoo and Mahomedan religions.”The ordinary marks of respect paid to native princes on the occasions of their going forth or returning

from such festivals or religious observances were, however, to be paid; and the change was to be effected”in a manner calculated not to alarm the minds of the natives or to offend their feelings.”These orders were circulated by the Commander in Chief to the Generals commanding divisions, and by them to the regiments under their several commands.”

What reform could be expected from a Government which had become so steeped in native prejudices and which wasted such official resources to tend them and keep them up?

It was stricken and paralyzed by sympathy. When it ceased to sympathise with the prejudices it was overtaken by fear. This fear arose out of two considerations.

The first consideration related to the promises it had made to the people of India. On assuming the Government of any new territory, previously under native rule, it was the practice of the British Government to announce to the people that they would be protected in the free exercise of their religions and that neither their institutions nor their usages would be assailed. Thus in 1801 a solemn declaration was made, in the following terms to the people of the Carnatic :—

“Although the Right Honourable the Governor in Council trusts that the experience which the inhabitants of the Carnatic have already had, will have rendered it unnecessary for His Lordship to explain the general principles of moderation, justice, protection, and security, which form the characteristic features of the British Government, yet His Lordship in accepting the sacred trust transferred to the Company by the present engagements, invites the people of the Carnatic to already and cheerful obedience to the authority of the Company, in a confident assurance of enjoying, under the protection of public and defined laws, every just and ascertained civil right, with a free exercise of the religious institutions and domestic usages of their ancestors”.

In May 1834 the following proclamation was issued to the people of Coorg when it was conquered :—

"Whereas it is the unanimous wish of the inhabitants of Coorg to be taken under the protection of the British Government, His Excellency the Right Honourable the Governor-General has been pleased to resolve that the territory heretofore governed by Veer Rajunder Woodyer shall be transferred to the Honourable Company. The inhabitants are hereby assured that they shall not again be subjected to native rule; that their civil rights and religious usages,

will be respected, and the greatest desire will invariably be shown by the British Government to augment their security, comfort, and happiness.”

In 1849, on the annexation of the Punjab, the following assurance was given to the people :—

"The British Government will leave to all the people whether Mussulman, Hindoo, or Sikh, the free exercise of their own religions; but it will not permit any man to interfere with the other in the observance of such forms and customs as their respective religions may either enjoin or permit."

Other similar proclamations may be cited. They were treated as pledges. Whether it was just and politic that such pledges should have been given, it was felt that it was impolitic to ignore them once they were given. This was the general view. But there were always some who construed them literally and whose point of view was not to draw any distinction and make any reservations and who wished to interpret the pledges as amounting to saying to the Indians, "You have enjoyed it undisturbedly under the new" and who argued that "any departure from this would be a breach of faith." Fear of breach of faith was one consideration. Fear of open rebellion was another. Fear of rebellion so far as the British Government in India was concerned was not a fear of the unknown. It was a fact of experience. There was one rebellion in 1801 which was known as the Vellore Mutiny. There was another rebellion in 1857. It was known as I the Sepoy Mutiny. The Vellore Mutiny was a small flame. But I the Sepoy Mutiny was a conflagration. In both cases the cause alleged was an interference with the religious practices of the Hindus. Two rebellions are enough to teach a lesson and the lesson of these two rebellions was not lost upon the British Government. The Vellore Mutiny of 1801 had made the British Government cautious in the matter of social innovations. The Sepoy Mutiny of 1857 made hostile to any kind of social reform. The British did not want to take any risk and from their point of view the risk was very great. The Mutiny made them so panicky that they felt that loss of India was the surest consequence of social reform and as they were anxious to keep India they refused to look at any project of Social Reform.

This attitude of the British Government to Social reform is quite understandable. However sovereign a Government may be its authority as pointed out by Prof. Dicey

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax

[Britannica.htm - _msocom_18](#) is circumscribed by two limitations: —

“There is first of all the internal limitation which arises from the character, motives and interests of those who are in power. If the Sultan does not abolish Mahomedanism, Pope ban Catholicism, the Brahmin condemn caste, or the British Parliament declare the preservation of blue-eyed babies illegal, it is not because they”cannot”do things, but it is because they”will”not do those things. In the same way if the Executive in India did not do certain things most conducive to progress, it I was because by reason of its being imperial and also by reason of its character, motives and interests, it could not sympathize with the living forces operating in the Indian Society, was not charged with its wants, its pains, its cravings and its desires, was inimical to its aspirations, did not. advance Education, disfavoured Swadeshi or snapped at anything that Smacked of nationalism, it was because all these things went against its grain. But an irresponsible government is powerless to do even such things as it may like to do. For its authority is limited by the possibility of external resistance. There are things which it would do but dare not do for the fear of provoking thereby resistance to its authority. Ceaser dare not subvert the worship of the Roman people, a modern parliament dare not tax the Colonies, however much they would. For the same reason the Government of India dared not abolish the caste system, prescribe monogamy, alter the laws of succession, legalize intermarriage or venture to tax the tea planters. Progress involves interference with the existing code of social life and interference is likely to cause resistance. None the less a Government which is of the people and is not detached from them can venture on the path of progress, because it is in a position to know where the obedience will end and resistance will begin. But the Indian Executive, not being of the people, could not feel the pulse of the people. The gist of the matter is that the irresponsible Executive which had been in power in India was paralysed between these two limitations on its authority and much of what to make life good was held up. Part of the programme it would not undertake and the other part it could not undertake. That there was some advancement in material progress is not to be denied. But no people in the world can long remain contented with the benefits of peace and order, for they are not dumb brutes. It is foolish to suppose that a people will indefinitely favour a bureaucracy because it has improved their roads, constructed canals on more scientific principles, effected their transportation by rail, carried their letters by penny post, flashed their messages by lightening, improved their currency, regulated

their weights and measures, corrected their notion of geography, astronomy and medicine and stopped their internal quarrels. 'Any people, however patient, will sooner or later demand a Government that will be more than a mere engine of efficiency.'

People wanted freedom political, economic and social. This the British Government declined to create :—

“As a result of this, so far as the moral and social life of the people was concerned, the change of Government by the Moghuls to a Government by the British was only a change of rulers rather than a change of system. Owing to the adoption of the principle of non-interference partly by preference and partly by necessity by the British ' the natives of India found themselves under a Government distinguished in no vital respect from those under which they had toiled and worshipped, lived and died through all their weary and forgotten history. From a political standpoint, the change was but the replacement of one despotism by_”another. It accepted the arrangements as it found themmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_19 and preserved them faithfully in the manner of the Chinese tailor who, when given an old coat as a pattern, produced with pride an exact replica, rents, patches and all.”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/49. The Untouchables and the Pax Britannica.htm - _msocom_20

This policy of non-intervention though understandable, was so far as the Untouchables were concerned, mistaken in its conception and disastrous in its consequences. It may be granted that Untouchables can only be lifted up by the Hindus recognizing his human rights and him as a human being as correct. But that does not dispose of the matter. Question remains how is this recognition of his rights as a human being to be secured. There are only two ways of helping to realize this object. One way is to make him worthy of respect and the other is to punish those who disrespect him and to deny him his rights. The first way involves the duty to educate him and to place him in positions of authority. The other way involves social reform by making recognition of Untouchability a penal offence. Neither of this the British Government was prepared to do. It would not give the Untouchables any preferential treatment in public service. It I would not undertake to reform Hindu Society. The result was that _ Untouchable has remained what he was before the British, namely an Untouchable. He was a citizen but he was not given the rights of a citizen. He paid taxes out of which schools were maintained but his children could not be admitted into those

schools. He paid taxes out of which wells were built but he had no right to take water from them. He paid taxes out of which roads were built. But he has no right to use them. He paid taxes for the upkeep of the State. But he himself was not entitled to hold offices in the state. He was a subject but not a citizen. The Untouchable stood most in need of education and supply of water. He stood mostly in need of office to protect himself. Owing to his poverty he should have been exempted from all taxes. All this was reversed. The Untouchable was taxed to pay for the education of the touchable. The Untouchable was taxed to pay for the water supply of the touchable. The Untouchable was taxed to pay for the salary of the touchables in office.

What good has British conquest done to the Untouchables? In education, nothing ; in service, nothing ; in status, nothing. There is one thing in which they have gained and that is equality in the eye of the law. There is of course nothing special in it because equality before law is common to all. There is of course nothing tangible in it because those who hold office often prostitute their position and deny to the Untouchables the benefit of this rule. With all this, the principle of equality before law has been of special benefit to the Untouchables for the simple reason that they never had it before the days of the British. The Law of Manu did not recognize the principle of equality. Inequality was the soul of the Law of Manu. It pervaded all walks of life, all social relationships and all departments of state. It had fouled the air and the Untouchables were simply smothered. The principle of equality before law has served as a great disinfectant. It has cleansed the air and the Untouchable is permitted to breath the air of freedom. This is a real gain to the Untouchables and having regard to the ancient past it is no small gain.

What Made the Brahmins Vegetarians?

Why Should Beef-Eating Make Broken Men Untouchables?

PART VI: UNTOUCHABILITY AND THE DATE OF ITS BIRTH

The Impure And The Untouchables When Did the Broken Men Become Untouchables?

PREFACE

This book is a sequel to my treatise called *The Shudras—Who they were and How they came to be the Fourth Varna of the Indo-Aryan Society* which was published in 1946. Besides the Shudras, the Hindu Civilisation has produced three social classes whose existence has not received the attention it deserves. The three classes are :-

- (i) (i) The Criminal Tribes who number about 20 millions or so;
- (ii) (ii) The Aboriginal Tribes who number about 15 millions; and
- (iii) (iii) The Untouchables who number about 50 millions.

The existence of these classes is an abomination. The Hindu Civilisation, gauged in the light of these social products, could hardly be called civilisation. It is a diabolical contrivance to suppress and enslave humanity. Its proper name would be infamy. What else can be said of a civilisation which has produced a mass of people who are taught to accept crime as an approved means of earning their livelihood, another mass of people who are left to live in full bloom of their primitive barbarism in the midst of civilisation and a third mass of people who are treated as an entity beyond human intercourse and whose mere touch is enough to cause pollution?

In any other country the existence of these classes would have led to searching of the heart and to investigation of their origin. But neither of these has occurred to the mind of the Hindu. The reason is simple. The Hindu does not regard the existence of these classes as a matter of apology or shame and feels no responsibility either to atone for it or to inquire into its origin and growth. On the other hand, every Hindu is taught to believe that his civilisation is not only the most ancient but that it is also in many respects altogether unique. No Hindu ever feels tired of repeating these claims. That the Hindu Civilisation is the most ancient, one can understand and even allow. But it is not quite so easy to understand on what grounds they rely for claiming that the Hindu Civilisation is a unique one. The Hindus may not like it, but so far as it strikes non-Hindus, such a claim can rest only on one ground. It is the existence of these classes for which the Hindu Civilisation is responsible. That the existence of such classes is a unique phenomenon, no Hindu need repeat, for nobody can deny the fact. One only wishes that the Hindu realised that it was a matter for which

there was more cause for shame than pride.

The inculcation of these false beliefs in the sanity, superiority and sanctity of Hindu Civilisation is due entirely to the peculiar social psychology of Hindu scholars.

Today all scholarship is confined to the Brahmins. But unfortunately no Brahmin scholar has so far come forward to play the part of a Voltaire who had the intellectual honesty to rise against the doctrines of the Catholic Church in which he was brought up; nor is one likely to appear on the scene in the future. It is a grave reflection on the scholarship of the Brahmins that they should not have produced a Voltaire. This will not cause surprise if it is remembered that the Brahmin scholar is only a learned man. He is not an intellectual. There is a world of difference between one who is learned and one who is an intellectual. The former is class-conscious and is alive to the interests of his class. The latter is an emancipated being who is free to act without being swayed by class considerations. It is because the Brahmins have been only learned men that they have not produced a Voltaire.

Why have the Brahmins not produced a Voltaire? The question can be answered only by another question. Why did the Sultan of Turkey not abolish the religion of the Mohammedan World? Why has no Pope denounced Catholicism? Why has the British Parliament not made a law ordering the killing of all blue-eyed babies? The reason why the Sultan or the Pope or the British Parliament has not done these things is the same as why the Brahmins have not been able to produce a Voltaire. It must be recognised that the selfish interest of a person or of the class to which he belongs always acts as an internal limitation which regulates the direction of his intellect. The power and position which the Brahmins possess is entirely due to the Hindu Civilisation which treats them as supermen and subjects the lower classes to all sorts of disabilities so that they may never rise and challenge or threaten the superiority of the Brahmins over them. As is natural, every Brahmin is interested in the maintenance of Brahmanic supremacy be he orthodox or unorthodox, be he a priest or a *grahastha*, be he a scholar or not. How can the Brahmins afford to be Voltaires? A Voltaire among the Brahmins would be a positive danger to the maintenance of a civilisation which is contrived to maintain Brahmanic supremacy. The point is that the intellect of a Brahmin scholar is severely limited by anxiety to preserve his interest. He suffers from this internal limitation as a result of which he does not allow his intellect full play which honesty and integrity demands. For, he fears that it may affect the interests of his class and therefore his own.

But what annoys one is the intolerance of the Brahmin scholar towards any attempt to expose the Brahmanic literature. He himself would not play the part of an iconoclast even where it is necessary. And he would not allow such non-Brahmins as have the capacity to do so to play it. If any non-Brahmin were to make such an attempt the Brahmin scholars would engage in a conspiracy of silence, take no notice of him, condemn him outright on some flimsy grounds or dub his work useless. As a writer engaged in the exposition of the Brahmanic literature I have been a victim of such mean tricks.

Notwithstanding the attitude of the Brahmin scholars, I must pursue the task I have undertaken. For the origin of these classes is a subject which still awaits investigation. This book deals with one of these unfortunate classes namely, the Untouchables. The Untouchables are the most numerous of the three. Their existence is also the most unnatural. And yet there has so far been no investigation into their origin. That the Hindus should not have undertaken such an investigation is perfectly understandable. The old orthodox Hindu does not think that there is anything wrong in the observance of untouchability. To him it is a normal and natural thing. As such it neither calls for expiation nor explanation. The new modern Hindu realises the wrong. But he is ashamed to discuss it in public for fear of letting the foreigner know that Hindu Civilisation can be guilty of such a vicious and infamous system or social code as evidenced by Untouchability. But what is strange is that Untouchability should have failed to attract the attention of the European student of social institutions. It is difficult to understand why. The fact, however, is there.

This book may therefore, be taken as a pioneer attempt in the exploration of a field so completely neglected by everybody. The book, if I may say so, deals not only with every aspect of the main question set out for inquiry, namely, the origin of Untouchability, but it also deals with almost all questions connected with it. Some of the questions are such that very few people are even aware of them; and those who are aware of them are puzzled by them and do not know how to answer them. To mention only a few, the book deals with such questions as : Why do the Untouchables live outside the village?

Why did beef-eating give rise to Untouchability? Did the Hindus never eat beef? Why did non-Brahmins give up beef-eating? What made the Brahmins become vegetarians, etc.? To each one of these, the book suggests an answer. It may be that the answers given in the book to these questions are not all-embracing. Nonetheless it will be found that the book points to a new way of looking at old things.

The thesis on the origin of Untouchability advanced in the book is an altogether novel thesis. It comprises the following propositions :-

- (1)(1) There is no racial difference between the Hindus and the Untouchables;
- (2)(2) The distinction between the Hindus and Untouchables in its original form, before the advent of Untouchability, was the distinction between Tribesmen and Broken Men from alien Tribes. It is the Broken Men who subsequently came to be treated as Untouchables;
- (3)(3) Just as Untouchability has no racial basis so also has it no occupational basis;
- (4)(4) There are two roots from which Untouchability has sprung:
 - (a)(a) Contempt and hatred of the Broken Men as of Buddhists by the Brahmins:
 - (b)(b) Continuation of beef-eating by the Broken Men after it had been given up by others.
- (5)(5) In searching for the origin of Untouchability care must be taken to distinguish the Untouchables from the Impure. All orthodox Hindu writers have identified the Impure with the Untouchables. This is an error. Untouchables are distinct from the Impure.
- (6)(6) While the Impure as a class came into existence at the time of the Dharma Sutras the Untouchables came into being much later than 400 A.D.

These conclusions are the result of such historical research as I have been able to make. The ideal which a historian should place before himself has been well defined by Goethe who said mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_1 :

"The historian's duty is to separate the true from the false, the certain from the uncertain, and the doubtful from that which cannot be accepted Every investigator must before all things look upon himself as one who is summoned to serve on a jury. He has only to consider how far the statement of the case is complete and clearly set forth by the evidence. Then he draws his conclusion and gives his vote, whether it be that his opinion coincides with that of the foreman or not."

There can be no difficulty in giving effect to Goethe's direction when the relevant and necessary facts are forthcoming. All this advice is of course very valuable and very necessary. But Goethe does not tell what the historian is to do when he comes across a missing link, when no direct evidence of connected relations between important events is available. I mention this because in the course of my investigations into the origin of

Untouchability and other interconnected problems I have been confronted with many missing links. It is true that I am not the only one who has been confronted with them. All students of ancient Indian history have had to face them. For as Mount Stuart Elphinstone has observed in Indian history "no *date* of a public event can be fixed before the invasion of Alexander: and no connected relation of the natural transactions can be attempted until after the Mohammedan conquest." This is a sad confession but that again does not help. The question is: "What is a student of history to do? Is he to cry halt and stop his work until the link is discovered?" I think not. I believe that in such cases it is permissible for him to use his imagination and intuition to bridge the gaps left in the chain of facts by links not yet discovered and to propound a working hypothesis suggesting how facts which cannot be connected by known facts might have been inter-connected. I must admit that rather than hold up the work, I have preferred to resort to this means to get over the difficulty created by the missing links which have come in my way.

Critics may use this weakness to condemn the thesis as violating the canons of historical research. If such be the attitude of the critics I must remind them that if there is a law which governs the evaluation of the results of historical results then refusal to accept a thesis on the ground that it is based on direct evidence is bad law. Instead of concentrating themselves on the issue of direct evidence *versus* inferential evidence and inferential evidence *versus* speculation, what the critics should concern themselves with is to examine (i) whether the thesis is based on pure conjecture, and (ii) whether the thesis is possible and if so does it fit in with facts better than mine does?

On the first issue I could say that the thesis would not be unsound merely because in some parts it is based on guess. My critics should remember that we are dealing with an institution the origin of which is lost in antiquity. The present attempt to explain the origin of Untouchability is not the same as writing history from texts which speak with certainty. It is a case of reconstructing history where there are no texts, and if there are, they have no direct bearing on the question. In such circumstances what one has to do is to strive to divine what the texts conceal or suggest without being even quite certain of having found the truth. The task is one of gathering survivals of the past, placing them together and making them tell the story of their birth. The task is analogous to that of the archaeologist who constructs a city from broken stones or of the palaeontologist who conceives an extinct animal from scattered bones and teeth or of a painter who reads the lines of the horizon and the smallest

vestiges on the slopes of the hill to make up a scene. In this sense the book is a work of art even more than of history. The origin of Untouchability lies buried in a dead past which nobody knows. To make it alive is like an attempt to reclaim to history a city which has been dead since ages past and present it as it was in its original condition. It cannot but be that imagination and hypothesis should pay a large part in such a work. But that in itself cannot be a ground for the condemnation of the thesis. For without trained imagination no scientific inquiry can be fruitful and hypothesis is the very soul of science. As Maxim Gorky has said*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_2 :

"Science and literature have much in common; in both, observation, comparison and study are of fundamental importance; the artist like the scientist, needs both imagination and intuition. Imagination and intuition bridge the gaps in the chain of facts by its as yet undiscovered links and permit the scientist to create hypothesis and theories which more or less correctly and successfully direct the searching of the mind in its study of the forms and phenomenon of nature. They are of literary creation; the art of creating characters and types demands imagination, intuition, the ability to make things up in one's own mind".

It is therefore unnecessary for me to apologise for having resorted to constructing links where they *were* missing. Nor can my thesis be said to be vitiated on that account for nowhere is the construction of links based on pure conjecture. The thesis in great part is based on facts and inferences from facts. And where it is not based on facts or inferences from facts, it is based on circumstantial evidence of presumptive character resting on considerable degree of probability. There is nothing that I have urged in support of my thesis which I have asked my readers to accept on trust. I have at least shown that there exists a preponderance of probability in favour of what I have asserted. It would be nothing but pedantry to say that a preponderance of probability is not a sufficient basis for a valid decision.

On the second point with the examination of which, I said, my critics should concern themselves what I would like to say is that I am not so vain as to claim any finality for my thesis. I do not ask them to accept it as the last word. I do not wish to influence their judgement. They are of course free to come to their own conclusion. All I say to them is to consider whether this thesis is not a workable and therefore, for the time being, a valid hypothesis if the test of a valid hypothesis is that it should fit in with

all surrounding facts, explain them and give them a meaning which in its absence they do not appear to have. I do not want anything more from my critics than a fair and unbiased appraisal.

PART I A COMPARATIVE SURVEY

CHAPTER I

UNTOUCHABILITY AMONG NON-HINDUS

WHO are the Untouchables and what is the origin of Untouchability? These are the main topics which it is sought to investigate and the results of which are contained in the following pages. Before launching upon the investigation it is necessary to deal with certain preliminary questions. The first such question is : Are the Hindus the only people in the world who observe Untouchability? The second is: If Untouchability is observed by Non-Hindus also how does Untouchability among Hindus compare with Untouchability among non-Hindus? Unfortunately no such comparative study has so far been attempted. The result is that though most people are aware of the existence of Untouchability among the Hindus they do not know what are its unique features. A definite idea of its unique and distinguishing features is however essential not merely for a real understanding of the position of the Untouchables but also as the best means of emphasising the need of investigating into their origin.

It is well to begin by examining how the matter stood in Primitive and Ancient Societies. Did they recognise Untouchability? At the outset it is necessary to have a clear idea as to what is meant by Untouchability. On this point, there can be no difference of opinion. It will be agreed on all hands that what underlies Untouchability is the notion of defilement, pollution, contamination and the ways and means of getting rid of that defilement.

Examining the social life of Primitive Society* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_3 in order to find out whether or not it recognised Untouchability in the sense mentioned above there can be no doubt that Primitive Society not only did believe in the notion of defilement but the belief had given rise to a live system of well-defined body of rites and rituals.

Primitive Man believed that defilement was caused by

- (1) (1) the occurrences of certain events;
- (2) (2) contact with certain things; and
- (3) (3) contact with certain persons.

Primitive Man also believed in the transmission of evil from one person to another. To him the danger of such transmission was peculiarly acute at particular times such as the performance of natural functions, eating, drinking, etc. Among the events the occurrence of which was held by Primitive Man as certain to cause defilement included the following :—

- (1) (1) Birth
- (2) (2) Initiation
- (3) (3) Puberty
- (4) (4) Marriage
- (5) (5) Cohabitation
- (6) (6) Death

Expectant mothers were regarded as impure and a source of defilement to others. The impurity of the mother extended to the child also.

Initiation and puberty are stages which mark the introduction of the male and the female to full sexual and social life. They were required to observe seclusion, a special diet, frequent ablutions, use of pigment for the body and bodily mutilation such as circumcision. Among the American Tribes not only did the initiates observe a special dietary but also took an emetic at regular intervals.

The ceremonies which accompanied marriage show that marriage was regarded by the Primitive Man as impure. In some cases the bride was required to undergo intercourse by men of the tribe as in Australia or by the chief or the medicine man of the tribe as in America or by the friends of the grooms as among the East African Tribes. In some cases there takes place the tapping of the bride by a sword by the bridegroom. In some cases, as among the Mundas, there takes place marriage to a tree before marriage with the bridegroom. All these marriage observances are intended to neutralise and prepare the individual against the impurity of marriage.

To the Primitive Man the worst form of pollution was death. Not only the corpse, but the possession of the belongings of the deceased were regarded as infected with pollution. The widespread custom of placing implements, weapons, etc., in the grave along with the corpse indicates that their use by others was regarded as dangerous and unlucky.

Turning to pollution arising out of contact with objects. Primitive Man had learned to regard certain objects as sacred and certain others as profane. For a person to touch the sacred was to contaminate the sacred

and to cause pollution to it. A most striking example of the separation of the sacred and the profane in Primitive Society is to be found among the Todas, the whole of whose elaborate ritual and (it would not be too much to say) the whole basis of whose social organisation is directed towards securing the ceremonial purity of the sacred herds, the sacred dairy, the vessels, and the milk, and of those whose duty it is to perform connected rites and rituals. In the dairy, the sacred vessels are always kept in a separate room and the milk reaches them only by transfer to and fro of an intermediate vessel kept in another room. The dairyman, who is also the priest, is admitted to office only after an elaborate ordination, which in effect is a purification. He is thereby removed from the rank of ordinary men to a state of fitness for sacred office. His conduct is governed by regulations such as those which permit him to sleep in the village and only at certain times, or that which entails that a dairyman who attends a funeral should cease from that time to perform his sacred function. It has, therefore, been conjectured that the aim of much of the ritual is to avert the dangers of profanation and prepare or neutralise the sacred substance for consumption by those who are themselves unclean.

The notion of the sacred was not necessarily confined to objects. There were certain classes of men who were sacred. For a person to touch them was to cause pollution. Among the Polynesians, the tabu character of a Chief is violated by the touch of an inferior, although in this case the danger falls upon the inferior. On the other hand, in Efate, the 'sacred man' who comes into contact with Namin (ceremonial uncleanliness) destroys his sacredness. In Uganda, before building a temple, the men were given four days in which to purify themselves. On the other hand, the Chief and his belongings are very often regarded as sacred and, therefore, as dangerous to others of an inferior rank. In the Tonga island, anyone who touches a Chief contacted tabu; it was removed by touching the sole of the foot of a superior chief. The sacred quality of the chief in Malaya Peninsula also resided in the Royal Regalia and anyone touching it was invited with serious illness or death.

Contact with strange people was also regarded as a source of Untouchability by the Primitive Man. Among the Bathonga, a tribe in South Africa, it is believed that those who travel outside their own country are peculiarly open to danger from the influence of foreign spirits and in particular from demoniac possession. Strangers are tabu because, worshipping strange gods, they bring strange influence with them. They are, therefore, fumigated or purified in some other way. In the Dieri and neighbouring tribes even a member of the tribe returning home after a

journey was treated as a stranger and no notice was taken of him until he sat down.

The danger of entering a new country is as great as that which attaches to those who come from thence. In Australia, when one tribe approaches another, the members carry lighted sticks to purify the air, just as the Spartan kings in making war had sacred fires from the altar carried before them to the frontier.

In the same manner, those entering a house from the outside world were required to perform some ceremony, even if it were only to remove their shoes, which would purify the incomer from the evil with which otherwise he might contaminate those within, while the threshold, door-posts and lintel—important as points of contact with outer world—are smeared with blood or sprinkled with water when any member of household or of the community has become a source of pollution, or a horse-shoe is suspended over the door to keep out evil and bring goodluck.

Of course, the rites and ceremonies connected with birth, death, marriage, etc., do not positively and unequivocally suggest that they were regarded as sources of pollution. But that pollution is one element among many others is indicated by the fact that in every case there is segregation. There is segregation and isolation in birth, initiation, marriage, death and in dealing with the sacred and the strange.

In birth the mother is segregated. At puberty and initiation there is segregation and seclusion for a period. In marriage, from the time of betrothal until the actual ceremony bride and bride-groom do not meet. In menstruation a woman is subjected to segregation. Segregation is most noticeable in the case of death. There is not only isolation of the dead-body but there is isolation of all the relatives of the dead from the rest of the community. This segregation is evidenced by the growth of hair and nail and wearing of old clothes by the relatives of the dead which show that they are not served by the rest of the society such as the barber, washerman, etc. The period of segregation and the range of segregation differ in the case of death but the fact of segregation is beyond dispute. In the case of defilement of the sacred by the profane or of defilement of the kindred or by intercourse with the non-kindred there is also the element of segregation. The profane must keep away from the sacred. So the kindred must keep away from the non-kindred. It is thus clear that in Primitive Society pollution involved segregation of the polluting agent.

Along with the development of the notion of defilement. Primitive Society had developed certain purificatory media and purificatory ceremonies for dispelling impurity.

Among the agents used for dispelling impurity are water and blood. The sprinkling of water and the sprinkling of blood by the person defiled were enough to make him pure. Among purificatory rites were included changing of clothes, cutting hair, nail, etc., sweat-bath, fire, fumigation, burning of incense and fanning with the bough of a tree.

These were the means of removing impurity. But Primitive Society had another method of getting rid of impurity. This was to transfer it to another person. It was transferred to some one who was already tabu.

In New Zealand, if anyone touched the head of another, the head being a peculiarly 'sacred' part of the body, he became tabu. He purified himself by rubbing his hands on femroot, which was then eaten by the head of the family in female line. In Tonga, if a man ate tabued food he saved himself from the evil consequences by having the foot of a chief placed on his stomach.

The idea of transmission also appears in the custom of the scapegoat. In Fiji, a tabued person wiped his hands on a pig, which became sacred to the chief, while in Uganda, at the end of the period of mourning for a king a 'scapegoat' along with a cow, a goat, a dog, a fowl and the dust and fire from the king's house was conveyed to the Bunyoro frontier, and there the animals were maimed and left to die. This practice was held to remove all uncleanness from the king and queen.

Such are the facts relating to the notion of pollution as it prevailed in Primitive Society.

II

Turning to Ancient Society the notion of pollution prevalent therein was not materially different from what was prevalent in Primitive Society. There is difference as to the sources of pollution. There is difference regarding purificatory ceremonies. But barring these differences the pattern of pollution and purification in Primitive and Ancient Society is the same.

Comparing the Egyptian system of pollution with the Primitive system there is no difference except that in Egypt it was practised on an elaborate scale.

Among the Greeks the causes of impurity were bloodshed, the presence of ghost and contact with death, sexual intercourse, childbirth, the evacuation of the body, the eating of certain food such as pea-soup, cheese and garlic, the intrusion of unauthorised persons into holy places, and, in certain circumstances, foul speech and quarrelling. The purificatory means, usually called *kaopoiia* by Greeks, were lustral water, sulphur, onions,

fumigation and fire, incense, certain boughs and other vegetative growths, pitch, wool, certain stones and amulets, bright things like sunlight and gold, sacrificed animals, especially the pig and of these specially the blood and the skin; finally, certain festivals and festival rites particularly the ritual of cursing and the scapegoat. One unusual method was the cutting of the hair of the polluted person or sacrificial communion with the deity.

A striking feature of the Roman notion of pollution and purification is to be found in the belief of territorial and communal pollution and purification. Parallel to the *lustratio* of the house is the periodical purificatory ritual applied to a country district (Pagi). The *lustratio pagi* consisted in a religious procession right round its boundaries, with sacrifice. There seems to have been in ancient days a similar procession round the walls of the city, called *amburbium*. In historical times special purification of the City was carried out when a calamity called for it, e.g. after the early disasters in the Second Punic War. The object of all such expiations was to seek reconciliation with the gods. Lustral ceremony accompanied the foundation of a colony. The *Therminalia* protective of boundaries, and the *Compitalia* of streets in the City were also probably lustral in their origin. Down to the late period, priests called *Luperci* perambulated in the boundaries of the earliest Rome, the settlement on the Palatinate. Earlier there was an annual solemn progress round the limits of the most ancient territory of the Primitive City. It was led by the Archaic priesthood called the *Arval* brotherhood. The ceremony was called *ambravalia* and it was distinctly piacular. When Roman territory was expanded no corresponding extension of the lustral rite seems ever to have been made. These round-about piacular surveys were common elsewhere, inside as well as outside Italy and particularly in Greece. The solemn words and prayers of the traditional chant, duly gone through without slip of tongue, seem to have had a sort of magical effect. Any error in the pronouncement of these forms would involve a need of reparation, just as in the earliest Roman legal system, the mispronunciation of the established verbal forms would bring loss of the lawsuit.

Other forms of quaint ancient ritual were connected with the piacular conception. The *Salii*, ancient priests of Mars, made a journey at certain times round a number of stations in the City. They also had a 'cleaning of the weapons' and a 'cleaning of the trumpets' which testify to a primitive notion that the efficiency of the army's weapons required purification. The 'washing' (*lustrum*) with which the census ended was in essence military; for it was connected with the *Comitia Centuriata*, which is merely the army in civil garb. *Lustratio exercitus* was often performed when the army was in

the field, to remove superstitious dread which sometimes attacked it at other times, it was merely prophylactic. There was also a illustration of the fleet.

Like all Primitive people the Hebrews also entertained the notion of defilement. The special feature of their notion of defilement was the belief that defilement was also caused by contact with the carcass of unclean animals, by eating a carcass or by contact with creeping things, or by eating creeping things and by contact with animals which are always unclean such as "every beast which divided the hoof, and is not cloven footed, nor chewed the cud. ..whatsoever goes upon his paws, among all manner of beasts that go on all four". Contact with any unclean person was also defilement to the Hebrews. Two other special features of the Hebrew notion of defilement may be mentioned. The Hebrews believed that defilement might be caused to persons by idolatrous practices or to a land by the sexual impurities of the people.

On the basis of this survey, we can safely conclude that there are no people Primitive or Ancient who did not entertain the notion of pollution.

CHAPTER II UNTOUCHABILITY AMONG HINDUS

IN the matter of pollution there is nothing to distinguish the Hindus from the Primitive or Ancient peoples. That they recognised pollution is abundantly clear from the *Manu Smriti*. *Manu* recognises physical defilement and also notional defilement.

Manu treated birth, who were they_why they became PART I.htm - _msocom_4 death and menstruationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_5 as sources of impurity. With regard to death, defilement was very extensive in its range. It followed the rule of consanguinity. Death caused difilement to members of the family of the dead person technically called *Sapindas* and *Samanodakas*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_6 It not only included maternal relatives such as maternal unclerk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_7 but also remote relativesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_8 It extended even to nonrelatives such as (1) teachermk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who

were they_why they became PART I.htm - _msocom_9 (2)
 teacher'smk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were

 corpse.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were
 they_why they became PART I.htm - _msocom_19

Anyone within the range of defilement could not escape it. There were only certain persons who were exempt. In the following verses Manu names them and specifies the reasons why he exempts them:—

- "V.93. The taint of impurity does not fall on kings and those engaged in the performance of a vow, or of a Sattrā; for the first are seated on the throne of India, and the (last two are) ever pure like Brahman.
94. 94. For a king, on the throne of magnanimity, immediate purification is prescribed, and the reason for that is that he is seated (there) for the protection of (his) subjects.
95. 95. (The same rule applies to the kinsmen) of those who have fallen in a riot or a battle, (of those who have been killed) by lightning or by the king, and for cows and Brahmins, and to those whom the king wishes to be pure (in spite of impurity).
96. 96. A king is an incarnation of the eight guardian deities of the world, the Moon, the Fire, the Sun, the Wind, Indra, the Lords of wealth and water (Kubera and Varuna) and Yama.
97. 97. Because the king is pervaded by those lords of the world, no impurity is ordained for him for purity and impurity of mortals is caused and removed by those lords of the world."

From this it is clear that the king, the kinsmen of those who have fallen in a noble cause as defined by Manu and those whom the king chose to exempt were not affected by the normal rules of defilement. Manu's statement that the Brahmin was 'ever pure' must be understood in its usual sense of exalting the Brahmin above everything. It must not be understood to mean that the Brahmin was free from defilement. For he was not. Indeed besides being defiled by births and deaths the Brahmin also suffered defilement on grounds which did not affect the Non-Brahmins. The Manu Smriti is full of tabus and don'ts which affect only the Brahmins and which he must observe and failure to observe which makes him impure.

The idea of defilement in Manu is real and not merely notional. For he makes the food offered by the polluted person unacceptable.

Manu also prescribes the period of defilement. It varies. For the death of a Sapinda it is ten days. For children three days. For fellow students one day. Defilement does not vanish by the mere lapse of the prescribed period. At the end of the period there must be performed a purificatory ceremony appropriate to the occasion.

For the purposes of purification Manu treats the subject of defilement from three aspects : (1) Physical defilement, (2) notional or psychological defilement, and (3) ethical defilement. The rulemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_20 for the purification of ethical defilement which occurs when a person entertains evil thoughts are more admonitions and exhortations. But the rites for the removal of notional and physical defilement are the same. They include the use of water.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_21 earthmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_22 cows urine,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_23 the kusa grassmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_24 and ashesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_25 Earth, cow's urine, Kusa grass and ashes are prescribed as purificatory agents for removing physical impurities caused by the touch of inanimate objects. Water is the chief agent for the removal of notional defilement. It is used in three ways (1) sipping, (2)

bath, and (3)
 abludonmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_26 Later on *panchagavya* became the most important agency for removing notional defilement. It consists of a mixture of the five products of the cow, namely, milk, urine, dung, curds and butter.

In Manu there is also provision for getting rid of defilement by transmission through a scapegoat mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_27 namely by touching the cow or looking at the sun after sipping water.

Besides the individual pollution the Hindus believe also in territorial and communal pollution and purification very much like the system that prevailed among the early Romans. Every village has an annual *jatra*. An animal, generally a he buffalo, is purchased on behalf of the village. The animal is taken round the village and is sacrificed, the blood is sprinkled round the village and towards the end toe meat is distributed among the villagers. Every Hindu, every Brahmin even though he may not be a beef eater is bound to accept his share of the meat. This is not mentioned in any of the Smritis but it has the sanction of custom which among the Hindus is so strong that it always overrides law.

II

If one could stop here, one could well say that the notion of defilement prevalent among the Hindus is not different from that which obtained in Primitive and in Ancient Societies. But one cannot stop here. For there is another form of Untouchability observed by the Hindus which has not yet been set out. It is the hereditary Untouchability of certain communities. So vast is the list of such communities that it would be difficult for an individual with his unaided effort to compile an exhaustive list. Fortunately such a list was prepared by the Government of India in 1935 and is attached to the Orders-in-Council issued under the Government of India Act of 1935. To this Order-in-Council there is attached a Schedule. The Schedule is divided into nine parts. One part refers to one province and enumerates the castes, races or tribes or parts of or groups within steps which are deemed to be Untouchables in that province either in the whole of that province or part thereof. The list may be taken to be both exhaustive and authentic. To give an idea of the vast number of communities which are regarded as hereditary Untouchables by the

Hindus. I reproduce below the list given in the Order-in-Council.

SCHEDULE

PART 1 – MADRAS

(1)(1) Scheduled Castes throughout the Province :—

Adi-Andhra.	Gosangi.	Paidi.
Adi-Dravida.	Haddi.	Painda.
Adi-Karnataka.	Hasla.	Paky.
Ajila.	Holeya.	Pallan.
Arunthuthiyar.	Jaggali.	Pambada.
Baira.	Jambuvulu.	Pamidi.
Bakuda.	Kalladi.	Panchama.
Bandi.	Kanakkan.	Paniyan.
Bariki.	Kodalo.	Panniandi.
Battada.	Koosa.	Paraiyan.
Bavuri	Koraga.	Parvan.
Bellara.	Kudumban.	Pulayan.
Bygari	Kuravan.	Puthirai Vanaa.
Chachati.	Madari.	Raneyar.
Chakkiliyan.	Madiga.	Relli
Chalvadi.	Maila.	Samagara.
Chamar.	Mala.	Samban.
Chandala.	Mala Dasu.	Separi
Cheruman.	Matangi.	Semman.
Dandasi.	Moger.	Thoti.
Devendrakulathan	Muchi.	Tiruvalhivr.
. Ghasi.	Mundala.	Valluvan.
Godagali.	Natekeyava.	Valmiki.
Godari.	Nayadi	Vettuvan.
Godda.	Paga dai	

(2) Scheduled Castes throughout the Provinces except in any special constituency constituted under the Government of India Act, 1935, for the election of a representative of backward areas and backward tribes to the

Legislative Assembly of the Province :—

Arnadan.	Kattunayakan.	Kuruman.
Dombo.	Kudiya.	Malasar.
Kadan.	Kudubi.	Mavilan.
Karimpalan.	Kurichchan.	Pano.

PART II.—BOMBAY

Scheduled Castes:—

(1)(1) Throughout the Province :—

Asodi.	Dhor.	Mang Garudi.
Bakad.	Garode.	Maghval, or Menghwar.
Bhambi.	Halleer.	Mini Madig.
Bhangi.	Halsar, or Haslar.	Mukri.
Chakrawadya-Dasar.	Hulsavar.	Nadia.
Chalvadi.	Holaya.	Shenva, or Shindhava.
Chambhar or Mochigar or'	Khalpa.	Shinghdav, or Shingadya.
Samagar.	Kolcha, or Kolgha.	Sochi.
Chena-Dasaru.	Koli-Dhor.	Timali.
Chuhar, or Chuhra.	Lingader.	Turi.
Dakaleru.	Madig, or Mang.	Vankar.
Dhed.	Mahar.	Vitholia.
Dhegu-Megu.		

(2)(2) Throughout the Province except in the Ahmedabad, Kaira, Broach and Panch Mahals and Surat Districts—Mochi.

(3) In the Kanara distirct—Kotegar.

PART III — BENGAL

Scheduled Castes throughout the Province :—

Agarua	Bhumij.	Gonrili.
Bagdi	Bind.	Hadi.
Bahelia.	Bmjhia.	Hajang.
Baiti.	Chamar.	Halalkor.
Bauri.	Dhenuar.	Hari.
Bediya.	Dhoba.	Ho.
Beddar.	Doai.	Jalia Kaibartta.
Berua.	Dom.	Jhalo Malo, or

Bhatiya.	Dosadh	Malo.
Bhiumali.	Garo.	Kadar.
Bhuiya.	Ghasi.	Kalpahariya.
Kandh.	Lodha.	Kan.
Kandra.	Lahor.	Oraon.
Kaora.	Mahli.	Paliya.
Kapuria.	Mal.	Pan.
Karenga.	Mahar.	Pasi.
Kastha.	Mallah.	Patni
Kaur.	Mech.	Pod.
Khaira.	Mehtor.	Rabha.
Khatik.	Muchi.	Rajbanshi.
Koch.	Munda.	Rajwar.
	Musahar.	Santal.
Konai.	Nagesia.	Sunn.
	Namasudm.	Tiyar.
Konwar.	Nat	Tun.
Kora.	Nuniya.	
Kotal.		
Lalbegi.		

PART IV — UNITED PROVINCES

Scheduled Castes:—

(1) Throughout the Province :—

Agaria.	Chamar.	Kharwar
Aheriya.	Chero.	(except
Badi.	Dabagar.	Benbansi)
Badhik.	Dhangar.	Khatik.
Baheliya.	Dhanuk(Bhangi).	Kol.
Bajaniya.	Dharikar.	Korwa.
Bajgi.	Dhobi.	Lalbegi.
Balahar.	Dom.	Majhwar.
Balmiki.	Domar.	Nat
Banmaus.	Ghaiami.	Pankha.
Bansphor.	Ghasiya.	Parahiya.
Barwar.	Gual.	Pasi.

Basor.	Habura.	Patari.
Bawariya.	Hari.	Rawat.
Beldar.	Hela.	Saharya.
Bengali.	Khairaha.	Sanaurhiya.
Berya.	Kalabaz.	Sansiya.
Bhantu.	Kanjar.	Shilpkar.
Bhuiya.	Kapariya.	Tharu.
Bhuiyar.	Karwal.	Turaiha.
Boriya.	Kharot.	

(2) Throughout the Province except in the Agra, Meerut and Rohilkhand divisions—Kori.

PART V—PUNJAB

Scheduled Castes throughout the Province :—

Ad Dharmis.	Marija, or Marecha.	Khatik.
Bawaria.	Bengali.	Kori.
Chamar.	Baiar.	Nat.
Chuhra, or Balmiki.	Bazigar.	Pasi.
Dagi and Koli.	Bhanjra.	Pema.
Dhumna.	Chanal.	Sepela.
Od.	Dhanak.	Siridband.
Sansi.	Gagra.	Meghi.
Sarera.	Gandhila.	Ramdasis.

PART VI.—BIHAR

Scheduled Castes:—

(1)(1) Throughout the Province :—

Chamar.	Halalkhor.	Mochi.
Chaupal.	Hari.	Musahar.
Dhobi.	Kanjar.	Nat.
Dusadh.	Kurariar.	Pasi.
Dom.	Lalbegi.	

(2)(2) In the Patna and Tirhut divisions and the Bhagalpur, Monghyr, Palamau and Pumea districts :—

Bauri.	Bhumij.	Rajwar.
Bhogta.	Ghasi.	Tun.

Bhaiiya. Pan.

(3)(3) In the Dhanbad sub-division of the Manbhum district and the Central Manbhum general rural constituency, and the Purulia and Raghunathpur municipalities:—

Bauri. Ghasi. Rajwar.
Bhogta. Pan. Turi.
Bhuiya.

PART VII—CENTRAL PROVINCES AND BERAR

<i>Scheduled Castes</i>	<i>Localities</i>
Basor, or Burud, Chamar, Dom, Ganda, Mang, Mehtar or Bhangi, Mochi, Satnami	Throughout the Province.
Audhelia	In the Bilaspur district.
Bahna	In the Arnraoti district
Balahi, or Balai	In the Berar division and the Balaghat, Bhandara Betul, Chanda, Chhindwara, Hoshangabad, Jabulpore, Mandia, Nagpur, Nimar, Saugor and Wardha districts.
Bedar	In the Akola, Arnraoti and Buldana districts.
Chadar	In the Bhandara and Saugor districts.
Chauhan	In the Durg district.
Dahayat	In the Damoh sub-division of the Saugor district.
Dewar	In the Bilaspur, Durg and Raipur districts.
Dhanuk	In the Saugor district, except in the Damoh sub-division thereof.
Dhimar	In the Bhandara district.
Dhobi	In the Bhandara, Bilaspur, Raipur and Saugor districts and the Hoshangabad and Seoni-Malwa tahsils of the Hoshangabad district.
Dohar	In the Berar division and the Balghat, Bhandara, Chanda, Nagpur and Wardha districts.
Ghasia	In the Berar division and in the Balaghat, Bhandara, Bilaspur, Chanda, Durg, Nagpur, Raipur and Wardha districts.

Selected Works of Dr BR Ambedkar

Holiya	In the Balaghat and Bhandara districts.
Jangam	In the Bhandara district.
Kaikari	In the Berar division, and in Bhandara, Chanda, Nagpur and Wardha districts.
Katia	In the Berar division, in the Balghat, Betui, Bhandara, Bilaspur, Chanda, Durg, Nagpur, Nimar, Raipur and Wardha districts, in the Hoshangabad and Seoni-Malwa tahsils of the Hoshangabad district, in the Chhindwara district, except in the Seoni sub-division thereof, and in the Saugor district, except in the Damoh sub-division thereof.
Khangar	In the Bhadara, Buldhana and Saugor districts and the Hoshangabad and Sconi Malwa tahsils of the Hoshangabad district.

Khatik	In the Berar division, in' the Balaghat, Bhandara, Chanda, Nagpur and Wardha districts, in the Hoshangabad tahsil of the Hoshangabad district, in the Chhindwara district, except in the Seoni sub-division thereof, and in the Saugor district, except in the Damoh sub-division thereof.
Koli	In the Bhandara and Chanda districts.
Kori	In the Arnraoti, Balaghat, Betui, Bhandara, Buldana, Chhindwara, Jubbulpore, Mandia, Nimar, Raipur'and Saugor districts, and in the Hoshangabad district, except in the Harda and Sohagpur tahsils thereof.
Kumhar	In the Bhandara and Saugor districts and the Hoshangabad and Seoni-Malwa tahsils of the Hoshangabad district.
Madgi	In the Berar division and in the Balaghat, Bhandara, Chanda, Nagpur and Wardha districts.
Mala	In the Balaghat, Betui, Chhindwara, Hoshangabad, Jubbuipwe Mandla, Nimar and Saugor districts.
Mehra or Mahar.	Throughout the Province, except in the Harda and Sohagpur tahsils of the Hoshangabad district
Nagarchi	In the Balaghat, Bhandara, Chhindwara, Mandla, Nagpur and Raipur districts.
Ojha	In the Balaghat, Bhandara and Mandia districts and the Hoshangabad tahsil of the Hoshangabad district
Panka	In the Berar division, in the Balaghat, Bhandara, Bilaspur, Chanda, Durg, Nagpur, Raipur, Saugor and Wardha districts and in the Chhindwara district, except in the Seoni sub-division thereof.
Pardhi	In the Narsinghpura sub-division of the Hoshangabad district.

Pradhan	In the Berar division, in the Bhandara, Chanda, Nagpur, Nimar, Raipur and Wardha districts and in the Chhindwara district, except in the Seoni sub-division thereof.
Rajjhar	In the Sohagpur tahsil of the Hoshangabad district.

PART VIII – ASSAM

Scheduled Castes :-

(1) In the Assam Valley :-

Namasudra.	Hira.	Mehtar, or
Bhangi.		
Kaibartta.	Lalbegi.	Bansphor.
Bania, or Brittial-Bania.		

(2) In the Surma Valley –

Mali, or Bhuimali.	Sutradhar.	Kaibartta, or Jaliya.
Dhupi, or Dhobi.	Muchi.	Lalbegi.
Dugla, or Dholi.	Patni.	Mehtar, or Bhangi.
Jhalo and Malo.	Namasudra.	Bansphor.
Mahara.		

PART IX - ORISSA

Scheduled Castes :-

(1)(1) Throughout the Province :-

Adi-Andhra.	Chamar.	Ghusuria.
Audhelia.	Chandala.	Godagali.
Bariki.	Dandasi.	Godari.
Bansor, or Burud.	Dewar.	Godra.
Bavuri.	Dhoba or Dhobi.	Gokha.
Chachati.	Ganda.	Haddi, or Hari.

Irika,	Mala.	Panchama.
Jaggali,	Mang.	Panka.
Kandra,	Mangan.	Relli.
Katia,	Mehra, or Mahar.	Sapari.
Kela.	Mehtar, <i>or</i> Bhangi.	Satnami.
Kodalo.	Mochi or Muchi.	Siyal.
Madari.	Paidi.	Valmiki.
Madiga.	Painda.	
Mahuria.	Pamidi.	

(2)(2) Throughout the Province except in the Khondmals district, the district of Sambalpur and the areas transferred to Orissa under the provisions of the Government of India (Constitution of Orissa) Order, 1936, from the Vizagapatam and Ganjam Agencies in the Presidency of Madras :-

Pan, or Pano.

(3)(3) Throughout the Province except in the Khondmals district and the areas so transferred to Orissa from the said Agencies :-

Dom, or Dambo.

(4)(4) Throughout the Province except in the district of Sambalpur :

Bauro. Bhumij. Turi.
Bhuiya. Ghasi, or Ghasia.

(5)(5) In the Nawapara sub-division of the district of Sambalpur :-

Kori. Nagarchi. Pradhan.

This is a very terrifying list. It includes 429 communities. Reduced to numbers it means that today there exist in India 50-60 millions of people whose mere touch causes pollution to the Hindus. Surely, the phenomenon of Untouchability among primitive and ancient society pales into insignificance before this phenomenon of hereditary Untouchability for so many millions of people, which we find in India. This type of

Untouchability among Hindus stands in a class by itself. It has no parallel in the history of the world. It is unparalleled not merely by reason of the colossal numbers involved which exceed the number of great many nations in Asia and in Europe but also on other grounds.

There are some striking features of the Hindu system of Untouchability affecting the 429 Untouchable communities which are not to be found in the custom of Untouchability as observed by Non-Hindu communities, primitive or ancient.

The isolation prescribed by Non-Hindu societies as a safeguard against defilement, if it is not rational, is at least understandable. It is for specified reasons such as birth, marriage, death, etc.. But the isolation prescribed by Hindu society is apparently for no cause.

Defilement as observed by the Primitive Society was of a temporary duration which arose during particular times such as the performance of natural functions, eating, drinking, etc. or a natural crisis in the life of the individual such as birth, death, menstruation, etc. After the period of defilement was over and after the purificatory ceremonies were performed the defilement vanished and the individual became pure and associable. But the impurity of the 50-60 millions of the Untouchables of India, quite unlike the impurity arising from birth, death, etc., is permanent. The Hindus who touch them and become polluted thereby can become pure by undergoing purificatory ceremonies. But there is nothing which can make the Untouchables pure. They are born impure, they are impure while they live, they die the death of the impure, and they give birth to children who are born with the stigma of Untouchability affixed to them. It is a case of permanent, hereditary stain which nothing can cleanse.

In the third place, Non-Hindu societies which believed in defilement isolated the individuals affected or at the most those closely connected with them. But the Untouchability among the Hindus involves the isolation of a class-a class which today numbers about 50 to 60 million people.

In the fourth place, Non-Hindu societies only *isolated* the affected individuals. They did not *segregate* them in separate quarters. The Hindu society insists on segregation of the Untouchables. The Hindu will not live in the quarters of the Untouchables and will not allow the Untouchables to live inside Hindu quarters. This is a fundamental feature of Untouchability as it is practised by the Hindus. It is not a case of social separation, a mere stoppage of social intercourse for a temporary period. It is a case of territorial segregation and of a *cordon sanitaire* putting the impure people inside a barbed wire into a sort of a cage. Every Hindu village has a

ghetto. The Hindus live in the village and the Untouchables in the ghetto.

Such is the Hindu system of Untouchability. Who can deny that it is not altogether different from what is found to exist among Non-Hindu societies? That Untouchability among Hindus is a unique phenomenon is beyond question. Persons were treated by non-Hindu communities as impure but as individuals. Never a whole class was treated as impure. But their impurity was of a temporary duration and was curable by the performance of some purifactory rites. There has never been a case of permanent impurity based on the rule 'once impure always impure'. Persons were treated as impure by Non-Hindu Communities and they were even cut off from social intercourse. But there has never been a case of persons having been put into permanent segregation camps. A whole body of people have been treated as impure by Non-Hindu communities. But they were strangers outside the fold of the kindred. There has never been a case of a people treating a section of their own people as permanently and hereditarily impure.

Untouchability among Hindus is thus a unique phenomenon, unknown to humanity in other parts of the world. Nothing like it is to be found in any other society- primitive, ancient or modern. The many problems that arise out of a study of Untouchability and which call for investigation may be reduced to two :

- (1)(1) Why do the Untouchables live outside the village?
- (2)(2) What made their impurity permanent, and ineradicable?

The following pages are devoted to finding answers to these two questions.

PART II

PROBLEM OF HABITAT

CHAPTER III

WHY DO THE UNTOUCHABLES LIVE OUTSIDE THE VILLAGE?

THAT the Untouchables live outside the village is so notorious a fact that it must be taken to be within the cognisance even of those whose

knowledge about them is not very profound. Yet, nobody has thought that this was a serious question calling for satisfactory answer. How did the Untouchables come to live outside the village? Were they declared to be Untouchables first and then deported out of the village and made to live outside? Or were they from the very beginning living outside the village and were subsequently declared to be Untouchables? If the answer is that they were living outside the village from the very beginning, there arises a further question, namely, what can be the reason for it?

As the question of the separate settlement of the Untouchables has never been raised before, naturally there exists no theory as to how the Untouchables came to live outside the village. There is, of course, the view of the Hindu Shastras and if one wants to dignify it by calling it a theory one may do so. The Shastras of course say that the *Antyajjas* should live and have their abode outside the village. For instance, 'Manu says:

- "X. 51. But the dwellings of the *Chandalas* and the *Shvapakas* shall be outside the village, they must be made *Apapatras* and their wealth (shall be) dogs and donkeys.
- X. 52. Their dress (shall be) the garments of the dead, (they shall eat) their food from broken dishes, black iron (shall be) their ornaments and they must always wander from place to place.
- X. 53. A man who fulfils a religious duty, shall not seek intercourse with them; their transactions (shall be) among themselves and their marriages with their equals.
- X. 54. Their food shall be given to them by others (than an Aryan giver) in a broken dish; at night they shall not walk about in village and in towns.
- X. 55. By day they may go about for the purpose of their work, distinguished by marks at king's command, and they shall carry out the corpses (of persons) who have no relatives; that is a settled rule.
- X. 56. By the King's order they shall always execute the criminals, in accordance with the law, and they shall take for themselves the clothes, the beds, and the ornaments of (such) criminals."

But what conclusion can one draw from these statements of the Shastras? They are capable of double interpretation. When the Shastras say that the Untouchables should stay outside the village, they may be purporting to say no more than that the Untouchables should stay where they have been staying, i.e. outside the village. This is one interpretation. The second

interpretation is that those who are declared Untouchables should not be allowed to stay inside the village but should be required to go out of the village and live outside. Following up the alternate interpretations of the Shastras there are two different possibilities which call for consideration. One is that the Untouchability has nothing to do with the Untouchables living outside the village. From the very beginning they lived outside the village. Thereafter when the stigma of Untouchability fell on them they were prohibited from coming to live inside the village. The other possibility is that Untouchability has everything to do with the Untouchables, living outside the village. In other words, the Untouchables originally lived inside the village and that thereafter when the stigma of untouchability fell on them they were forced to vacate and live outside the village.

Which of the two possibilities is more acceptable?

The second possibility is on the face of it absurd and fantastic. One argument is quite enough to expose its absurdity. The phenomenon we are discussing is not confined to a single village or single area. It exists all over India. The transplantation of the Untouchables from within the village to outside the village is a vast operation. How and who could have carried on an operation of such colossal dimensions? It could not have been carried out except by the command of an Emperor having his sway over the whole of India. Even to him such a transplantation would have been impossible. But possible and impossible it can only be the work of an Emperor. Who is the Emperor to whom the credit or discredit of this task can be assigned? Obviously, India had no Emperor to perform this task. If there was no Emperor to do the transplantation, then the second possibility must be abandoned.

That those who are called Untouchables lived outside the village from the very beginning even before they became Untouchables and that they continued to live outside the village because of the supervention of untouchability at a later stage is the only possibility worth consideration. But this raises a very difficult question: Why did they live outside the village? What made them or forced them to do so? The answer is that having regard to the factors which are known to students of Sociology to have influenced the transformation of Primitive Society into Modern Society all over the world it is only natural to suppose that the Untouchables should have from the beginning lived outside the village.

Not many will realise why this is natural without some explanation of the factors which have affected the condition of Primitive Society into Modern Society. For a clear understanding of the matter it is necessary to bear in

mind that Modern Society differs from Primitive Society in two respects. Primitive Society consisted of nomadic communities while Modern Society consists of settled communities. Secondly, Primitive Society consisted of tribal communities based on blood relationship. Modern Society consists of local communities based on territorial affiliation. In other words there are two lines of evolution along which Primitive Society has proceeded before it became transformed into Modern Society. One line of evolution has led the Primitive Society to become a territorial community from being a tribal community. There can be no doubt that such a change has taken place. Clear traces of the change are to be seen in the official style of kings. Take the style of the English kings. King John was the first to call himself the king of England. His predecessors commonly called themselves kings of the English. The former represent a territorial community. The latter represent a tribal community. England was once the country which Englishmen inhabited. Englishmen are now the people who inhabit England. The same transformation can be seen to have taken place in the style of the French kings who were once called kings of the Franks and later as kings of France. The second line of evolution had led Primitive Society to become a settled community instead of the Nomadic community which it was. Here again, the change is so definite and so impressive that no illustration is required to convince anybody of its reality.

For the purpose in hand all we need is to confine ourselves to a consideration of the second line of evolution. How did Primitive Society become a settled community? The story of how Primitive Society became a settled community is too long to be detailed in a chapter-much too long to be compressed in a section thereof. It is enough to note two things. The first thing to understand is what made Primitive Society give up its nomadic life and secondly what happened in the transition from nomadic to settled life.

Primitive Society was no doubt nomadic. But it was nomadic not because of any migratory instinct. Nor was it due to any mental trait peculiar to it. It was the result of the fact that the earliest form of the wealth held by Primitive Society was cattle. Primitive Society was migratory because its wealth, namely the cattle, was migratory. Cattle went after new pastures. Primitive Society by reason of its love for cattle, therefore, went wherever its cattle carried it. Primitive Society became fixed in its abode, in other words became a settled-community, when a new species of wealth was discovered. This new species of wealth was land. This happened when Primitive Society learned the art of farming and of cultivating land. Wealth became fixed at one place when it changed its form from cattle to land.

With this change Primitive Society also became settled at the same place.

This explains why Primitive Society was at one time nomadic and what led it take to settled life.

The next thing is to note the events that have happened when Primitive Society was on the road to becoming a Settled Society. The problems which faced Primitive Society in its transition from Nomadic life to Settled life were mainly two. One confronted the Settled Community. The other confronted the Broken men. The problem that confronted the Settled community was that of its defence against the Nomadic tribes. The problem which confronted the Broken men was that of the protection and shelter. It may be desirable to elucidate how and why these problems arose.

For an understanding of the problem which confronted the Settled tribes, it is necessary to bear in mind the following facts. All tribes did not take to settled life at one and the same time. Some became settled and some remained nomadic. The second thing to remember is that the tribes were never at peace with one another. They were always at war. When all tribes were in a Nomadic state the chief causes for intra-tribal warfare were (1) stealing cattle, (2) stealing women, and (3) stealthily grazing of cattle in the pastures belonging to other tribes. When some tribes became settled, the tribes that remained nomadic found it more advantageous to concentrate their fight against the settled tribes. It was more paying than a war against other Nomadic tribes. The Nomadic tribes had come to realise that the Settled tribes were doubly wealthy. Like the Nomadic tribes, they had cattle. But in addition to cattle, they had corn which the Nomadic tribes had not and which they greatly coveted. The Nomadic tribes systematically organized raids on the Settled tribes with the object of stealing the wealth belonging to the Settled tribes. The third fact is that the Settled tribes were greatly handicapped in defending themselves against these raiders. Being engaged in more gainful occupation, the Settled tribes could not always convert their ploughs into swords. Nor could they leave their homes and go in pursuit of the raiding tribes. There is nothing strange in this. History shows that peoples with civilization but no means of defence are not able to withstand the attacks of the barbarians. This explains how and why during the transition period the Settled tribes were faced with the problem of their defence.

How the problem of the Broken men arose is not difficult to understand. It is the result of the continuous tribal warfare which was the normal life of the tribes in their primitive condition. In a tribal war it often happened that a tribe instead of being completely annihilated was defeated and routed. In many cases a defeated tribe became broken into bits. As a consequence of

this there always existed in Primitive times a floating population consisting of groups of Broken tribesmen roaming in all directions. To understand what gave rise to the problem of the Broken men it is necessary to realise that Primitive Society was fundamentally tribal in its organisation. That Primitive Society was fundamentally tribal meant two things. Firstly, every individual in Primitive Society belonged to a tribe. Nay, he must belong to the tribe. Outside the tribe no individual had any existence. He could have none. Secondly tribal organisation being based on common blood and common kinship an individual born in one tribe could not join another tribe and become a member of it. The Broken Men had, therefore, to live as stray individuals. In Primitive Society where tribe was fighting against tribe a stray collection of Broken Men was always in danger of being attacked. They did not know where to go for shelter. They did not know who would attack them and to whom they could go for protection. That is why shelter and protection became the problem of the Broken Men.

The foregoing summary of the evolution of Primitive Society shows that there was a time in the life of Primitive Society when there existed two groups- one group consisting of Settled tribes faced with the problem of finding a body of men who would do the work of watch and ward against the raiders belonging to Nomadic tribes and the other group consisting of Broken Men from defeated tribes with the problem of finding patrons who would give them food and shelter.

The next question is: How did these two groups solve their problems? Although we have no written text of a contract coming down to us from antiquity we can say that the two struck a bargain whereby the Broken Men agreed to do the work of watch and ward for the Settled tribes and the Settled tribes agreed to give them food and shelter. Indeed, it would have been unnatural if such an arrangement had not been made between the two especially when the interest of the one required the co-operation of the other.

One difficulty, however, must have arisen in the completion of the bargain, that of shelter. Where were the Broken Men to live? In the midst of the settled community or outside the Settled community? In deciding this question two considerations must have played a decisive part. One consideration is that of blood relationship. The second consideration is that of strategy. According to Primitive notions only persons of the same tribe, i.e., of the same blood, could live together. An alien could not be admitted inside the area occupied by the homesteads belonging to the tribe. The Broken men were aliens. They belonged to a tribe which was

different from the Settled tribe. That being so, they could not be permitted to live in the midst of the Settled tribe. From the strategic point of view also it was desirable that these Broken men should live on the border of the village so as to meet the raids of the hostile tribes. Both these considerations were decisive in favour of placing their quarters outside the village.

We can now return to the main question, namely, why do the Untouchables live outside the village? The answer to the question can be sought along the lines indicated above. The same processes must have taken place in India when the Hindu Society was passing from Nomadic life to the life of a settled village community. There must have been in Primitive Hindu society, Settled tribes and Broken Men. The Settled tribes founded the village and formed the village community and the Broken Men lived in separate quarters outside the village for the reason that they belonged to a different tribe and, therefore, to different blood. To put it definitely, the Untouchables were originally only Broken Men. It is because they were Broken Men that they lived outside the village.

This explains why it is natural to suppose that the Untouchables from the very beginning lived outside and that Untouchability has nothing to do with their living outside the village.

The theory is so novel that critics may not feel satisfied without further questioning. They will ask:

- (1) (1) Is there any factual evidence to suggest that the Untouchables are Broken Men?
- (2) (2) Is there evidence that the process of settlement suggested above has actually taken place in any country?
- (3) (3) If Broken Men living outside the village is a universal feature of all societies, how is it that the separate quarters of the Broken Men have disappeared outside India but not in India?

CHAPTER IV

ARE THE UNTOUCHABLES BROKEN MEN?

To the question : Are the Untouchables in their origin only Broken Men, my answer is in the affirmative. An affirmative answer is bound to be followed by a call for evidence. Direct evidence on this issue could be had if the totems of the Touchables and the Untouchables in the Hindu villages had been studied. Unfortunately the study of the totemic organisation of the Hindus and the Untouchables has not yet been undertaken by students of anthropology. When such data is collected it

would enable us to give a decisive opinion on the question raised in this Chapter. For the present, I am satisfied from such inquiries as I have made that the totems of the Untouchables of a particular village differ from the totems of the Hindus of the village.

Difference in totems between Hindus and Untouchables would be the best evidence in support of the thesis that the Untouchables are Broken Men belonging to a tribe different from the tribe comprising the village community. It may, however, be admitted that such direct evidence as has a bearing on the question remains to be collected. But facts have survived which serve as pointers and from which it can be said -that the Untouchables were Broken men. There are two sets of such evidentiary facts.

One set of facts comprise the names *Antya*, *Antyaja* and *Antyavasin* given, to certain communities by the Hindu Shastras. They have come down from very ancient past. Why were these names used to indicate a certain class of people? There seem to be some meaning behind these terms. The words are undoubtedly derivative. They are derived from the root *Anta*. What does the word *Anta* mean? Hindus learned in the Shastras argue that it means one who is born last and as the Untouchable according to the Hindu order of Divine creation is held to be born last, the word *Antya* means an Untouchable. The argument is absurd and does not accord with the Hindu theory of the order of creation. According to it, it is the Shudra who is born last. The Untouchable is outside the scheme of creation. The Shudra is *Savarna*. As against him the Untouchable is *Avarna*, i.e. outside the *Varna* system. The Hindu theory of priority in creation does not and cannot apply to the Untouchable. In my view, the word *Antya* means not end of creation but end of the village. It is a name given to those people who lived on the outskirts of the village. The word *Antya* has, therefore, a survival value. It tells us that there was a time when some people lived inside the village and some lived outside the village and that those who lived outside the village, i.e. on the *Antya* of the village, were called *Antyaja*.

Why did some people live on the border of the village? Can there be any other reason than that they were Broken Men who were aliens and who belonged to tribes different from those who lived inside the village? I cannot see any. That this is the real reason is to be found in the use of these particular words to designate them. The use of the words *Antya*, *Antyaja* and *Antyavasin* has thus double significance. In the first place, it shows that living in separate quarters was such a peculiar phenomenon that a new terminology had to be invented to give expression to it. Secondly, the words chosen express in exact terms the conditions of the people to

whom it applied namely that they were aliens.

The second set of facts which shows that the Untouchables were Broken men relates to the position of a community called the Mahars. The Mahar community is a principle Untouchable community in Maharashtra. It is the single largest Untouchable community found in Maharashtra. The following facts showing the relations between the Mahars and the Touchable Hindus are worthy of note: (1) The Mahars are to be found in every village; (2) Every village in Maharashtra has a wall and the Mahars have their quarters outside the wall; (3) The Mahars by turn do the duty of watch and ward on behalf of the village; and (4) The Mahars claim 52 rights against the Hindu villagers. Among these 52 rights the most important are:-

- (i) (i) The right to collect food from the villagers;
- (ii) (ii) The right to collect corn from each villager at the harvest season; and
- (iii) (iii) The right to appropriate the dead animal belonging to the villagers.

The evidence arising from the position of the Mahars is of course confined to Maharashtra. Whether similar cases are to be found in other parts of India has yet to be investigated. But, if the Mahars case can be taken as typical of the Untouchables throughout India it will be accepted that there was a stage in the history of India when Broken Men belonging to other tribes came to the Settled tribes and made a bargain whereby the Broken men were allowed to settle on the border of the village, were required to do certain duties and in return were given certain rights. The Mahars have a tradition that the 52 rights claimed by them against the villagers were given to them by the Muslim kings of Bedar. This can only mean that these rights were very ancient and that the kings of Bedar only confirmed them.

These facts although meagre do furnish some evidence in support of the theory that the Untouchables lived outside the village from the very beginning. They were not deported and made to live outside the village *because* they were declared Untouchables. They lived outside the village from the beginning *because* they were Broken Men who belonged to a tribe different from the one to which the Settled tribe belonged.

The difficulty in accepting this explanation arises largely from the notion that the Untouchables were always Untouchables. This difficulty will vanish if it is borne in mind that there was a time when the ancestors of

the present day Untouchables were not Untouchables *vis-a-vis* the villagers but were merely Broken Men, no more and no less, and the only difference between them and the villagers was that they belonged to different tribes.

CHAPTER V

ARE THERE PARALLEL CASES?

ARE there any cases known to history of Broken Men living outside the village? To this question it is possible to give an affirmative answer. Fortunately for us we have two reported cases which show that what is said to have occurred in India particularly has also actually occurred elsewhere. The countries wherein such a development has actually been reported to have taken place are Ireland and Wales.

The organisation of the Irish village in primitive times can be seen from the Brehon Laws of Ireland. Some idea of it as revealed in these Laws may be obtained from the following summary given by Sir Henry Maine. Says Sir Henry Maine*[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables who were they_why they became PART I.htm - _msocom_28](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables%20who%20were%20they_why%20they%20became%20PART%20I.htm_-_msocom_28) :-

"The Brehon Law discloses a stage when the tribe has long been settled, in all probability upon the tribal territory. It is of sufficient size and importance to constitute a political unit, and possibly at its apex is one of the numerous chieftain whom the Irish records call kings. The primary assumption is that the whole of the tribal territory belongs to the whole of the tribe, but in fact large portions of it have been permanently appropriated to minor bodies of tribesmen. A part is allotted in special way to the chief as appurtenant to his office, and descends from chief to chief according to a special rule of succession. Other portions are occupied by fragments of the tribe, some of which are under minor chiefs while others, though not strictly ruled by a chief, have somebody of noble class to act as their representative. All the unappropriated tribal lands are in a more special way the property of the tribe as a whole, and no portion can theoretically be subjected to more than a temporary occupation. Such occupations are, however, frequent and among the holders of tribal land, on these terms, are groups of men calling themselves tribesmen, but being in reality associations formed by contract, chiefly for the purpose of pasturing cattle. Much of the common tribal land is not occupied at all, but constitutes, to use the English expression, the 'waste' of the tribe. Still this waste is constantly brought under tillage or permanent pasture by settlements of tribesmen, and upon it *cultivators and servile states are permitted*

to squat, particularly towards the border. It is part of the territory over which the authority of the chief tends steadily to increase, and here it is that he settles his 'fuidhir' or stranger-tenants a very important class—the outlaws and 'broken men' from other tribes who come to him for protection, and who are only connected with their new tribe by their dependence on its chief, and through the responsibility which he incurs for them".

Who were the Fuidhirs? According to Sir Henry Maine the Fuidhirs were:

"Strangers or fugitives from other territories, men in fact, who had broken the original tribal bond which gave them a place in the community, and who had to obtain and then as best they might in a new tribe and new place. Society was violently disordered. The result was probably to fill the country with 'Broken Men' and such men could only find a home and protection by becoming Fuidhir tenants.

"The Fuidhir was not a tribesman but an alien. In all societies cemented together by kinship the position of the person who has lost or broken the bond of union is always extraordinarily miserable. He has not only lost his natural place in them but they have no room for him anywhere else".

II

Now as to Wales. The organisation of the Welsh village in primitive times is described mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_29 by Mr. Seebhom. According to Mr. Seebhom a village in Wales was a collection of homesteads. The homesteads were separated into two groups, the homesteads of the Free-tenants and the homesteads of the Unfree-tenants. Mr. Seebhom says that this separation in habitation was a common feature of the primitive village in Wales. Why were these Unfree-tenants made to live in a separate and detached place? The reason for this separation is explained mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_30 by Mr. Seebhom in the following terms :-

"At first sight there is a great confusion in the class of men mentioned in the ancient Welsh Laws— of tribesmen, *Uchelore bryre* and *innate boneddings* : of non-tribesmen, *talogo Aillte*, *Alltude*, etc. The confusion vanishes only when the principle underlying the constitution of tribal society is grasped. And this principle would apparently be a very simple

one if could be freed from the complications of conquest and permanent settlement of land from the inroads of foreign law, custom, and nomenclature. To begin with there can be little doubt that the ruling principle underlying the structure of tribal society was that of blood relationship among the free tribesmen. No one who did not belong to a kindred could be a member of the tribe, which was in fact, a bundle of Welsh kindred. Broadly then under the Welsh tribal system there were two classes, those of Cymric blood—and those who were stranger in blood. There was a deep, if not unpassable, gulf between these two classes quite apart from any question of land or of conquest. It was a division in blood and it soon becomes apparent that the tenacity with which the distinction was maintained was at once one of the strong distinctive marks of the tribal system and one of the main secrets of its strength."

III

This description of the organisation of the Irish and the Welsh villages in the primitive times leave no doubt that the case of the Untouchables of India is not the only case of a people living outside the village. It proves that in it was exhibited a universal phenomenon, and was marked by the following features :

1. 1. That in primitive times the Village Settlement consisted of two parts. One part occupied by the community belonging to one tribe and another part occupied by the Broken Men of different tribes.
2. 2. The part of the settlement occupied by the tribal community was regarded as the village proper. The Broken Men lived in the outskirts of the village.
3. 3. The reason why the Broken Men lived outside the village was because they were aliens and did not belong to the tribal community.

The analogy between the Untouchables of India and the Fuidhirs of Ireland and the Alltudes of Wales is complete. The Untouchables lived outside the village for the same reason for which the Fuidhirs and Alltudes had to live outside the village in Ireland and Wales. It is, therefore, clear that what is said about the Untouchables on the issue of their living outside the village is not without a parallel elsewhere.

CHAPTER VI

HOW DID SEPARATE SETTLEMENTS FOR BROKEN MEN DISAPPEAR ELSEWHERE?

THAT the Fuidhirs of Ireland and the Alltudes of Wales were Broken Men is true. That they lived in separate quarters is also a fact. But it is also true that the separate quarters of those Broken Men disappeared and they became part of the Settled tribe and were absorbed in it. This is somewhat strange. The Broken Men according to the theory set out before were given quarters outside the village because they belonged to a different tribe and, therefore, to different blood. How is it then that they were absorbed by the tribe later on? Why such a thing did not happen in India? These are questions which are natural and which call for an answer.

The question is integrally connected with the process of evolution through which Primitive Society came to be transferred into Modern Society. As has already been said this evolution has proceeded along two different lines. One marked the transformation of Primitive Society from Nomadic into a settled community. The other marked the transformation of Primitive Society from tribal into a territorial community. The question with which we are immediately concerned relates to the second line of evolution. For it is the substitution of common territory for common blood as the bond of union that is responsible for the disappearance of the separate quarters of the Broken Men. Why did Primitive Society substitute common territory for common blood as the bond of union? This is a question for which there is no adequate explanation. The origin of the change is very-obscure. How the change was brought about is however quite clear.

At some stage there came into being in Primitive Society a rule whereby a non-tribesman could become a member of the tribe and become absorbed in it as a kindred. It was known as a rule of ennoblement. This rule was that if a non-tribesman lived next to the tribe or married within a tribe for a given number of generations he became their kindred. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_31 Mr. Seebhom gives the following rules for a non-tribesman becoming a tribesman as it was found in the Welsh village system.

- (1) (1) Residence in Cymru (Wales) according to the tradition of South Wales made the descendant of a stranger at last, a Cymru, but not until continued to the ninth generation.
- (2) (2) Intermarriage with innate Cymraeses generation after generation made the descendent of a stranger an innate Cymru in the *fourth* generation. In other -words, the original stranger's great grandson, whose blood was at least seven-eighths Cymric was allowed to attain the right to claim the privileges of a tribesman.

Should not such a thing have happened in India? It could have-indeed it should have. For a rule similar to that which existed in Ireland and Wales also existed in India . It is referred to by Manu. In Chapter X, verses 64-67, he says that a Shudra can be a Brahmin for seven generations (if he marries) within the Brahmin Community. The ordinary rule of *Chaturvarna* was that a Shudra could never become a Brahmin. A Shudra was born a Shudra and could not be made a Brahmin. But this rule of antiquity was so strong that Manti had to apply rule of Untouchability to the Shudra. It is obvious that if this rule had continued to operate in India, the Broken Men of India would have been absorbed in the village community and their separate quarters would have ceased to exist.

Why did this not happen? The answer is that the notion of Untouchability supervened and perpetuated difference between kindred and non-kindred, tribesmen and non-tribesmen in another form; namely; between Touchables and Untouchables. It is this new factor which prevented the amalgamation taking place in the way in which it took place in Ireland and Wales, with the result that the system of separate quarters has become a perpetual and a permanent feature of the Indian village.

PART III

OLD THEORIES OF THE ORIGIN OF UNTOUCHABILITY

CHAPTER VII

RACIAL DIFFERENCE AS THE ORIGIN OF UNTOUCHABILITY

WHAT is the origin of Untouchability? As has been said the field is quite unexplored. No student of Sociology has paid any attention to it. Writers, other than Sociologists, who have written about India and her people have

been content with merely recording the custom of Untouchability with varying degrees of disapprobation and leaving it at that. So far as my researches go, I have come across only one author who has attempted to explain how Untouchability has come about. It is Mr. Stanley Rice*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_32. According to Mr. Rice-

There is a strong probability that the outcasts were the survivors of the conquered peoples, who, as caste tended to coincide with occupation, became the drum-beating, leather-working, and farm labouring classes to which as serfs they had been relegated from early times. They were not the races conquered by the Aryans; the Paraiyans belonged to the aborigines who were conquered by the Dravidians and being of a different race they were not admitted to the totem of similar clans with which marriage is always intimately connected, since that would have led to free intercourse and the gradual degradation of race. But this prohibition cannot have been absolute; there are always exceptions. In the course of the centuries, some forty or more, the inevitable miscegenation may very well have obliterated the racial distinctions between aboriginal and early Dravidian. These people have been admitted to a sort of lowly participation in the Hindu system in the atmosphere of which they have lived for so long, for Hinduism is at once the most tolerant and intolerant of creeds. It does not proselytize; you cannot become a Hindu as you can become a Mussalman, and those within the fold are liable to the most rigid restrictions. But it has always been ready to embrace aboriginal tribes who are willing to submit to its laws, though it may assign to them a very lowly place and they have always been kept at a distance and have been excluded from the temples. It would seem, therefore, that anthropological arguments are in any case not conclusive when we consider these factors which must have profoundly modified the original racial characteristics and must have changed their outlook. Thus the Dravidians applied to the Paraiyans the same test which the Aryans are assumed to have applied to the conquered inhabitants. They reduced them to the position of serfs and assigned to them those duties which it was thought beneath their own dignity to perform. Nor was marriage the only consideration. The disabilities of the Paraiyans were due also- and to an even greater degree- to the mystical qualities inherent in Tabu. To admit such a man to the totem family was not only contrary to the social order; it would bring upon the clan the anger of their particular god. But to admit him to the worship of the god within the sacred precincts of a temple was to call down authentic fire from Heaven, whereby they would be consumed. It would be sacrilege of

the same kind as the offering of unconsecrated or unorthodox fire by Korah, Dathan and Abhiram. But though debarred from taking an active part in worship, the Paraiyans might yet do the menial services connected with it, provided that they did not entail the pollution of the sacred building. In Christian terminology the Paraiyan, although he could neither officiate at the altar, nor preach a sermon nor even be one of the congregation, might still ring the bell- on one condition. He could not regard himself as of the communion; he was, in fact, ex-communicate. And as such, he was ceremonially unclean. No washing with water, no cleansing ceremony, could remove that stain which was indelibly fixed by the operation of Tabu. To touch him, to have any dealings with him save as it were, at arm's length, was by a sort of contagious magic a defilement. You could employ him to till your field because that entailed no contact of any kind, beyond giving an order, you need have no further communication with him. The seal of pollution was set on his forehead; it was inherent in him as surely as the blood in his veins. And so from being the vile, degraded fellow which Indian opinion had made him, he became viler and more degraded from the kinds of occupation left open to him."

The theory of Mr. Rice really divides itself into two parts. For, according to him, the origin of untouchability is to be found in two circumstances—Race and Occupation. Obviously, they require separate consideration. This Chapter will be devoted to an examination of his theory of racial difference as the origin of untouchability.

The racial theory of Mr. Rice contains two elements :-

- (1)(1) That the Untouchables are non-Aryan, non-Dravidian aboriginals;
and
- (2)(2) That they were conquered and subjugated by the Dravidians.

This theory raises the whole question of the invasions of India by foreign invaders, the conquests made by them and the social and cultural institutions that have resulted therefrom. According to Mr. Rice, there have been two invasions of India. First is the invasion of India by the Dravidians. They conquered the non-Dravidian aborigines, the ancestors of the Untouchables, and made them Untouchables. The second invasion is the invasion of India by the Aryans. The Aryans conquered the Dravidians. He does not say how the conquering Aryans treated the conquered Dravidians. If pressed for an answer he might say they made them Shudras. So that we get a chain. The Dravidians invaded India and

conquered the aborigines and made them Untouchables. After Dravidians came the Aryans. The Aryans conquered the Dravidians and made them Shudras. The theory is too mechanical, a mere speculation and too simple to explain a complicated set of facts relating to the origin of the Shudras and the Untouchables.

When students of ancient Indian history delve into the ancient past they do often come across four names, the Aryans, Dravidians, Dasas and Nagas. What do these names indicate? This question has never been considered. Are these names Aryans, Dravidians, Dasas and Nagas the names of different races or are they merely different names for a people of the same race? The general assumption is that they are different races. It is an assumption on which theories like that of Mr. Rice, which seek to explain the social structure of the Hindu Society, particularly its class basis, are built. Before such a theory is accepted it is necessary to examine its foundations.

Starting with the Aryans it is beyond dispute that they were not a single homogeneous people. That they were divided into two [twomk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm](http://twomk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables%20who%20were%20they_why%20they%20became%20PART%20I.htm) - [_msocom_33sections](#) is beyond dispute. It is also beyond dispute that the two had different cultures. One of them may be called Rig Vedic Aryans and the other the Atharva Vedic Aryans. Their cultural cleavage appears to be complete. The Rig Vedic Aryans believed in Yajna. The Atharva Vedic Aryans believed the Magis. Their mythologies were different. The Rig Vedic Aryans believed in the Deluge and the creation of their race from Manu. The Atharva Vedic Aryans did not believe in Deluge but believed in the creation of their race from Brahma or Prajapati. Their literary developments also lay along different paths. The Rig Vedic Aryans produced Brahmanas, Śūtras and Aranyakas. The Atharva Vedic Aryans produced the Upanishads. Their cultural conflict was so great that the Rig Vedic Aryans would not for a long time admit the sanctity of the Atharva Veda nor of the Upanishads and when they did recognize it they called it Vedānta which contrary to the current meaning of the word—namely, essence of the Vedas—originally meant something outside the boundary of the Vedas and, therefore, not so sacred as the Vedas and regarded its study as Anuloma. Whether these two sections of Aryans were two different races we do not know. We do not know whether the word Aryan is a term indicative of race. Historians have therefore made a mistake in proceeding on the assumption that the Aryans were a separate race.

A greater mistake lies in differentiating the Dasas from the Nagas. The

Dasas are the same as Nagas. Dasas is merely another name for Nagas. It is not difficult to understand how the Nagas came to be called Dasas in the Vedic literature. Dasa is a Sanskritized form of the Indo-Iranian word Dahaka. Dahaka was the name of the king of the Nagas. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_34](#) Consequently, the Aryans called the Nagas after the name of their king Dahaka, which in its Sanskrit form became Dasa a generic name applied to all the Nagas.

Who were the Nagas? Undoubtedly they were non-Aryans. A careful study of the Vedic literature [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_35](#) reveals a spirit of conflict, of a dualism, and a race for superiority between two distinct types of culture and thought. In the Rig Veda, we are first introduced to the Snake-god in the form of Ahi Vitra, the enemy of the Aryan god Indra. Naga, the name under which the Snake-god was to become so famous in later days, does not appear in early Vedic literature. Even when it does for the first time in the Satapatha Brahmana (X1.2,7,12), it is not clear whether a great snake or a great elephant is meant. But this does not conceal the nature of Ahi Vitra, since he is described always in Rig Veda as the serpent who lay around or hidden in waters, and as holding a full control over the waters of heaven and earth alike.

It is also evident from the hymns that refer to Ahi Vitra, that he received no worship from the Aryan tribes and was only regarded as an evil spirit of considerable power who must be fought down.

The mention of the Nagas in the Rig Veda shows that the Nagas were a very ancient people. It must also be remembered that the Nagas were in no way an aboriginal or uncivilised people. History shows a very close association by intermarriage between the Naga people with the Royal families of India. The Devagiri record of the Kadamba king Krisnavarmam [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_36](#) connects the beginning of the Kadamba-kula with the Nagas. The Royakota [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_37](#) grant of 9th Century A.D.

mentions the marriage of Asvathama with a Nagi and the foundation of the Pallava line by Skandasishya, the issue of this marriage. Virakurcha, who according to another Pallava inscription dated in the 9th century A.D. was the ruler of the dynasty, is also mentioned in the same inscription as having married a Nagi and obtained from her the insignia of

royaltymk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_38 The marriage of Gautamiputra, the son of the Vakataka king Pravarasena, with the daughter of the Bharasiva king Bhava Naga, is a historical fact. So is the marriage of Chandragupta II with princess Kuvera Naga 'of Naga Kulamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_39 A Tamil poet asserts that Kokkilli, an early Chola king, had married a Naga princess.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_40 Rajendra Chola is also credited to have won 'by his radiant beauty the hand of the noble daughter of Naga race.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_41 The Navasahasanka Charita describes the marriage of the Paramara king Sindhuraja (who seems to have reigned towards the early part of the 10th Century A. D.) with the Naga princess Sasiprabha, with such exhaustive details in so matter-of-fact-a-manner as to make us almost feel certain that there must have been some historical basis for this assertionmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_42 From the Harsha inscription of V. S. 1030-973 A.D. we know that Guvaka I, who was the sixth king in the genealogy upwards from Vigharaja Chahamana and thus might be supposed to have been ruling towards the middle of the 9th Century was "famous as a hero in the assemblies of the Nagas and other princes."mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_43 Sanatikara of the Bhaumn dynasty of Orissa, one of whose dates was most probably 921 A.D., is mentioned in an inscription of his son as having married Tribhuana Mahadevi of the Naga familymk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_44

Not only did the Naga people occupy a high cultural level but history shows that they ruled a good part of India. That Maharashtra is the home of the Nagas goes without saying. Its people and its kings were Nagasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_45

That Andhradesa and its neighbourhood were under the Nagas during the early centuries of the Christian era is suggested by evidence from more sources than one. The Satavahanas, and their successors, the Chutu Kula Satakarnis drew their blood more or less from the Naga stock. As Dr. H.C. Roy Chaudhri has pointed out, the Dvatriṃsa satpukalitta represents

Salivahana, the mythological representative of the Satavahana dynasty, as of mixed Brahmana and the Naga originmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_46 This is amply attested to by the typical Naga names which occur in their dynastic lists. That the Naga grew to be very powerful towards the end of the Satavahana rule is also proved by a number of facts. A chief called Skandanaga is found ruling the Bellary district, in the reign of Pulumavi, the last king of the main Satavahana line. Secondly, Naga Mulanika the daughter of a Chutu king, is mentioned as making a gift of a Naga, together with her son, who is called Sivakanda-Naga-Sri. All the known kings of this line bear the same name and thus prove a close association with the Nagas. Thirdly, the name of Uracapura, the capital of Soringoi, suggests not an isolated reign of one Naga king but a Naga Settlement in that locality of tolerably long duration.

From Buddhist tradition of Ceylon and Siam we also know that there was a Naga country called Majerika near the Diamond Sands, i.e. Karachimk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_47

Then during the third and early part of the 4th Century A.D. Northern India also was ruled by a number of Naga kings is clearly proved by Puranic as well as numismatic and epigraphic evidence. Three independent groups of Vidisa, Campavati or Padmavati and Mathura are distinctly mentioned in such a way as to leave little doubt of their importance. The name Bhava Naga, the only known king of the Bharasiva dynasty, also seems to connect him with the Nagas. It is not possible to enter here into a discussion of the coins of the second group, or the question of identification of Achyuta Ganapati Naga or Nagasena of Allahabad Pillar inscription with these Puranic Naga kingsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_48 Of all the Nagas referred to in ancient Indian History, the North Indian Naga housesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_49 of the 4th century A.D. stand out as the most prominent and historically the most tangible. We do not know whether Nagabhatta and his son Maharaja Mohesvara Naga of the Lahore Copper Sealmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_50 belonged to any of these three groups or formed a separate Naga family by themselves. But all this sufficiently justifies the conclusion of Dr. C. C. Roy Chaudhari that the Kushana kingdom of Northern India disappeared in the 4th Century A.D.

having been conquered by the Nagas. These Nagas must have been ruling over different portions of Uttarapatha till they were themselves swept away before the conquering arms of Samudragupta.

As late as the time of Skandagupta, however we find one Sarvanaga as the governor

of Antarvedimk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_51 In the neighbourhood of Saurashtra and Bharukaccha especially, the Nagas seem to have held a prominent position down to the 6th Century A.D. From the Junagadh inscription Skandagupta appears to have dealt severely with a Naga rebellionmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_52 In 570 A, D. Dadda I Gurjara uprooted

the Nagasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_53 who have been indentified with the jungle tribes ruled over by Brihul laka of Broachmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_54 Dhruvasena 11's grant of G.S. 334 (645 A.D.) also mentions as Dutaka the Pramatri Srinagamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_55

The next important revival of the Nagas particularly in Central India seems to date about the 9th Century A.D. In 800 A.D. Maharaja Tivaradeva of Sripura in Kosala most probably defeated a Naga tribe.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_56 Sometime after this period, we also note two references to Nagas in the inscription of Bengal. The Ramganj record of Mahamandalika Isvara Ghosha introduces us to a Ghosha Naga family of Dhekkari, which was to be assigned to 11th centurymk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_57 A.D. The Bhuvaneshvara Prasasti of Bhatta Bhavadeva, the minister of Harivarmadeva in 12th century mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_58 A.D. also refers to destruction of Naga kings by him. The Ramacharita mentions the conquest of Utkala, the kingdom of Bhava-Bhushana-Santati, by Ramapala, but it is not clear whether in this case the Nagas or the Chandras were meant. The greater probability would however lie in favour of the former, since they were the more well known.

It was in the period 10th-12th Century A.D. that the different branches of the Sendraka, Sinda, or Chindaka family, which called themselves lords

of Bhogavati and Nagavarnsi gradually spread themselves over different portions of Central India, particularly Baster. The Nagattaras of Begur, too, appear in an inscription of the 10th Century mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_59.D. as having fought against king Viramahendra, on behalf of the W. Ganga king Ereyappa and being distinguished for bravery in the fight. If the evidence of Navashasanka Charita is accepted, then the Naga king, whose daughter Sasiprabha was married to Sindhuraja Paramara, must also have been ruling in Ratnavad on the Narmada at about this period.

Who are the Dravidians? Are they different from the Nagas? Chare they two different names for a people of the same race? The popular view is that the Dravidians and Nagas are names of two different races. This statement is bound to shock many people. Nonetheless, it is a fact that the term Dravidians and Nagas are merely two different names for the same people.

It is not to be denied that very few will be prepared to admit the proposition that the Dravidians and Nagas are merely two different names for the same people and fewer that the Dravidians as Nagas occupied not merely South India but that they occupied the whole of India- South as well as North. Nonetheless, these are historical truths.

Let us see what the authorities have to say on the subject. This is what Mr. Dikshitar, a well-known South Indian scholar, has to say on the subject in his mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_60 Paper on *South India in the Ramayana* :

"The Nagas, another tribe-semi-divine in character, with their totems as serpent, spread throughout India, from Taksasila in the North-West to Assam in the North-East and to Ceylon and South India in the South. At one time they must have been powerful. Contemporaneous with the Yakwas or perhaps subsequent to their fall as a political entity, the Nagas rose to prominence in South India. Not only parts of Ceylon but ancient Malabar were the territories occupied by the ancient Nagas In the Tamil classics of the early centuries after Christ, we hear frequent references to Naganadu..... Remnants of Naga worship are still lingering in Malabar, and the temple in Nagercoil in South Travancore is dedicated to Naga worship even today. All that can be said about them is that they were a sea-faring tribe. Their womenfolk were renowned for their beauty. Apparently the Nagas had become *merged* with the Cheras who rose to power and prominence at the commencement of the

Christian Era."

Further light is thrown on the subject by C. F. Oldham who has made a deep study of it. According to Mr. Oldham mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_61

"The Dravidian people have been divided, from ancient times, into Cheras, Cholas and Pandyas. Chera, or Sera (in old Tamil Sarai) is the Dravidian equivalent for Naga; Cheramandala, Nagadwipa, or the Naga country. This seems to point distinctly to the Asura origin of the Dravidians of the South. But in addition to this there still exists, widely spread over the Ganges valley, a people who call themselves Cherus or Seoris, and who claim descent from the serpent gods mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_62 The Cherus are of very ancient race; they are believed to have once held a great portion of the valley of the Ganges, which, as we have already seen, was occupied in very early times by Naga tribes. The Cherus appear to have been gradually ousted from their lands, during the troublous times of the Mohammedan invasions, and they are now poor and almost landless. There can be little doubt that these people are kinsmen of the Dravidian Cheras.

The Cherus have several peculiar customs and amongst them one which seems to connect them with the Lichhavis, as well as with the Newars of Nepal. This is the election of a raja for every five or six houses, and his investiture, in due form, with the tilak or royal frontal mark. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_63 Both Lichavis and Newars had many customs in common with the Dravidians of the South. Each venerated the serpent, Karkotaka Naga being to Nepal what Nila Naga was to Kashmir. A Naga, too, was the tutelary deity of Vaisali, the Lichavi capital. The marital relations of Newars and Lichavis closely resembled those of the Tamil people, and go far to show a common origin.

Property amongst the Newars descended in the female line, as it (Mice did amongst the Arattas, Bahikas or Takhas of the Punjab, whose sisters' sons, and not their own, were their heirs mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_64 This is still a Dravidian custom. In short, a recent Dravidian writer, Mr. Balakrishna Nair, says that his people 'appear to be, in nearly every particular, the kinsfolk of the Newars. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were

[they_why they became PART I.htm - _msocom_65](#)

Besides all this, however, there are other links connecting the Naga people of the South with those of the north of India. In an inscription discovered by Colonel Tod at Kanswah near the river Chambal, a Raja, called Salindra, 'of the race of Sarya, a tribe renowned amongst the tribes of the mighty' is said to be ruler of Takhya.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_66](#)

This was evidently the Takhya or Takha kingdom of the Punjab, which was visited by Hiou-en-Tsiang,
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_67](#) and which has been already referred to. It seems, therefore, that the Naga people of Takhya were known also. by the name of Sarya.

Again, in the outer Himalaya, between the Sudej and Beas Valleys, is a tract of country called Sara, or Seoraj. In this district the Naga demigods are the chief deities worshipped.

There is another Seoraj in the Upper Chinab Valley, and this too is occupied by a Naga worshipping people.

The name Saraj, or Seoraj, appears to be the same as the Sarya of Colonel Tod's inscription and as Scori, which is the alternative name of the Cherus of the Ganges Valley. It also seems to be identical with Sarai, which we have already seen, is the old Tamil name for the Chera or Naga. Apparently, therefore, the Saryas or Takhya, the Saraj people of the Sutlej Valley, the Scons or Cherus of the valley of the Ganges, and the Cheras, Seras, or Kerakis at Southern India, are but different branches of the same Naga-worshipping people.

It may be noted, too, that in some of the Himalayan dialects, Kira or Kiri means a serpent. This name, from which was perhaps derived the term Kirate so often applied to the people of the Himalayas, is found in the Rajatarangini, where it is applied to a people in or near Kashmir. The Kiras are mentioned by Varaha Mihira, and in a copper plate published by Prof. Kielhom.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_68](#)

An inscription at the Baijnath temple in the Kangra valley gives Kiragrams as the then name of the place.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_69](#) This, in the local dialect, would mean the village of serpents. The Naga is still a popular deity at Baijnath,

and throughout the neighbouring country. The term Kira is thus an equivalent for Naga, and it can scarcely be doubted that the serpent-worshipping Kiras of the Himalayas were closely related to the Dravidian Keras, Cheras or Keralas of the South.

Similarity of name is not always to be trusted, but here we have something more. These people, whose designation is thus apparently the same, are all of Solar race; they all venerate the hooded serpent; and they all worship, as ancestors, the Naga demi-gods.

From the foregoing it would seem tolerably certain that the Dravidians of Southern India were of the same stock as the Nagas or Asuras of the North."

It is thus clear that the Nagas and Dravidians are one and the same people. Even with this much of proof, people may not be found ready to accept the thesis. The chief difficulty in the way of accepting it lies in the designation of the people of South India by the name Dravidian. It is natural for them to ask why the term Dravidian has come to be restricted to the people of South India if they are really Nagas. Critics are bound to ask : If the Dravidians and the Nagas are the same people, why is the name Nagas not used to designate people of South India also. This is no doubt a puzzle. But it is a puzzle which is not beyond solution. It can be solved if certain facts are borne in mind.

The first thing to be borne in mind is the situation regarding language. Today the language of the Southern India differs from that of the people of Northern India. Was this always so? On this question the observations of Mr. Oldham mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_70 are worth attention.

"It is evident that the old Sanskrit grammarians considered the language of the Dravidian countries to be connected with the vernaculars of northern India; and that, in their opinion, it was especially related to the speech of those people who, as we have seen, were apparently descendants of the Asura tribes. Thus, in the 'Shahasha Chandrika', Lakshmidhara says that the Paisachi language is spoken in the Paisachi countries of Pandya, Kckaya, Vahlka, Sahya, Nepala, Kuntala, Sudesha, Bhota, Gandhara, Haiva and Kanoj; and that these are the Paisachi countries. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_71 Of all the vernacular dialects, the paisachi is said to have contained the smallest infusion of Sanskrit. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_72

That the Asuras originally spoke a language which differed from that of the Aryas seems evident. Several passages are quoted by Prof. Muir, from the Rig Veda, in which the word 'mridavach' is applied to the speech of the Asuras (R.vi.74, 2; v. vi.3; v.vii.6). Of these passages. Professor Muir observes: "The word mridavach, which I have translated "injuriously speaking", is explained by Sayana as meaning "one whose organs of speech are destroyed".
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables who were they_why they became PART I.htm - _msocom_73](#) The original meaning of the expression was, doubtless that the language of the Asuras was more or less unintelligible to the Aryas. The same explanation will apply to another passage in the Rig Veda, where it is said : 'May we (by propitiating Indra) conquer the ill speaking man.'
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables who were they_why they became PART I.htm - _msocom_74](#)

From the Satapatha Brahmana we find that 'the Asuras, being deprived of speech, were undone, crying. 'He lava', 'He lava'. Such was the unintelligible speech which they uttered. And he who speaks thus is a Miecha. Hence, let no Brahman speak barbarous language, since such is the speech of Asuras.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables who were they_why they became PART I.htm - _msocom_75](#)

We learn from Manu, that 'those tribes who are outside of the classes produced from the mouth, arms, thighs and feet of Brahman, whether they speak the language of the Miechas or of the Aryas, are called Dasyus.,
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables who were they_why they became PART I.htm - _msocom_76](#) In the time of Manu; therefore, the Aryan language and that of the Miechas or Asuras were both in use. At the period described in the Mahabharata, however, the Asura language must have almost died out amongst the Aryanized tribes; as Vidura addressed Yudhishtira in the Miecha tongue, so as to be unintelligible to all except Yudhishtira.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables who were they_why they became PART I.htm - _msocom_77](#)

At a later period than this, however, the grammarian Rama Tarkavagisa refers to 'those who speak like Nagas.'
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables who were they_why they became PART I.htm - _msocom_78](#) It would seem, therefore, that the unregenerate Asuras retained the language, as well as the religion and customs, of their forefathers long after their converted brethren had discarded them. It was evidently amongst these unregenerate tribes that

the Paisachi dialects were in use; and amongst these tribes, as we have just seen, were the Dravidian Pandyas
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_79

This view, that the Tamil and cognate tongues were founded upon the ancient Asura speech, is very strongly confirmed by the fact that the language of the Brahuis, a tribe on the borders of Sind, has been found to be very closely allied to them. Indeed, Dr. Caldwell says: "The Brahui (language) enables us to trace the Dravidian race, beyond the Indus, to the southern confines of Central Asia.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_80 This country, as I have already pointed out, was the home of the Asuras or Nagas, to which race apparently belonged the founders of the Dravidian kingdoms."

Taking into consideration all the evidence which has been brought forward, the only possible conclusion seems to be, that the Dravidians, of the south of India, were of the same stock as the Asuras or Nagas of the North."

The second thing to be borne in mind is that the word 'Dravida' is not an original word. It is the Sanskritized form of the word Tamil'.

The original word 'Tamil' when imported into Sanskrit became *Damita*
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_81 and later on *Damilla* became Dravida. The word Dravida is the name of the language of the people and does not denote the race of the people. The third thing to remember is that Tamil or Dravida was not merely the language of South India but before the Aryans came it was the language of the whole of India
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_82 and was spoken from Kashmere to Cape Camorin. In fact, it was the language of the Nagas throughout India. The next thing to note is the contact between the Aryan and the Nagas and the effect it produced on the Nagas and their language. Strange as it may appear the effect of this contact on the Nagas of North India was quite different from the effect it produced on the Nagas of South India. The Nagas in North India gave up Tamil which was their mother tongue and adopted Sanskrit in its place. The Nagas in South India retained Tamil as their mother tongue and did not adopt Sanskrit the language of the Aryans. If this difference is borne in mind it will help to explain why the name Dravida came to be applied only for the people of South India. The necessity for the application of the name Dravida to the Nagas of

Northern India had ceased because they had ceased to speak the Dravida language. But so far as the Nagas of South India are concerned not only the propriety of calling them Dravida had remained in view of their adherence to the Dravida language but the necessity of calling them Dravida had become very urgent in view of their being the only people speaking the Dravida language after the Nagas of the North had ceased to use it. This is the real reason why the people of South India have come to be called Dravidians.

The special application of the use of the word Dravida for the people of South India must not, therefore, obscure the fact that the Nagas and Dravidas are the one and the same people. They are only two different names for the same people. Nagas was a racial or cultural name and Dravida was their linguistic name.

Thus the Dasas are the same as the Nagas and the Nagas are the same as the Dravidians. In other words what we can say about the races of India is that there have been at the most only two races in the field, the Aryans and the Nagas. Obviously the theory of Mr. Rice must fall to the ground. For it postulates three races in action when as a matter of fact we see that there are only two.

II

Granting however that there was a third aboriginal race living in India before the advent of the Dravidians, can it be said that these pre-Dravidian aboriginals were the ancestors of the present day Untouchables of India? There are two tests we can apply to find the truth. One is the anthropometric test and the other is the ethnological. Considered in the light of the anthropometric characteristics of the Indian people Prof. Ghurye has something very striking to say in his volume on 'Caste and Race in India' from which the following is an extract:

"Taking the Brahmin of the United Provinces as the typical representative of the ancient Aryans we shall start comparisons with him. If we turn to the table of differential indices we find that he shows a smaller differential index as compared with the Chuhra and the Khatri of the Punjab than with any caste from the United Provinces except the Chhatri. The differential index between the Khatri and the Chuhramk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables who were they_why they became PART I.htm - _msocom_83 is the only slightly less than that between the Brahmin of the United Provinces and the Chuhra of the

punjab. This means that the Brahmin of the United Provinces has closer physical affinities with the Chuhra and the Khatri of the Punjab than with any caste from his own province except the very high caste of the Chhatri..... The reality of this close affinity between the United Provinces Brahmin and the Punjab Chuhra is more clearly brought out if we look at the table of differential indices between the United Provinces Brahmin and the Brahmins of other regions. Even the differential index between the United Provinces Brahmin and the Bihar Brahmins, who from what we know about the history of spread of the Aryan culture, is expected to be very nearly allied to the former, is just as high as that between the United Provinces Brahmin and the Chuhra..... On historical ground we expect Bihar to approximate to the United Provinces. On referring to the table we find that the Kurmi comes near to the Brahmin, and the Chamar and the Dommk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables who were they_why they became PART I.htm - _msocom_84 stand much differentiated from him. But the Chamar in this case is not as much distinct from the Brahmin as the United Provinces Chamar is from the United Provinces Brahmin.. The table for Bengal shows that the Chandalmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables who were they_why they became PART I.htm - _msocom_85 who stands sixth in the scheme of a social precedence and whose touch pollutes, is not much differentiated from the Brahmin, from whom the Kayasthas, second in rank, can hardly be said to be distinguished. In Bombay the Deshastha Brahmin bears as closer affinity to the Son-Koli, a fisherman caste, as to his own compeer, the Chitpavan Brahmin. The Mahar, the Untouchable of the Maratha region, come next together with the Kunbi, the peasant. Then follow in order the Shenvi Brahmin, the Nagar Brahmin and the high caste Maratha. These results are rather old. Stated in a generalised form they mean that there is no correspondence between social gradation and physical differentiation in Bombay.

Finally we come to Madras. Here we must treat the different linguistic areas separately for the schemes of social precedence in the various areas are different. According to the average given by Risely and by E. Thurston the order of castes is as follows: Kapu, Sale, Malla, Golla, Madiga, Fogata and Komati.

According to their social status they are ranked as below:

Brahmin, Komati, Golla, Kapu and others and Sale, Fagota and others. Mala Madiga occupy the lowest rank being the Pariahs of the Telugu country.

In the Canarese the nasal index gives the following order : Kamatak

Smarts, Brahmin, Bant, Billiva, Mandya Brahmin, Vakkaliga, Ganiga, Linga Banajiga, Panchala, Kurha, Holey, Deshastha Brahmift, Toreya and Bedar.

In the scheme of social precedence the castes are as under : Brahmin, Bant and Vakkaliga, Toreya, etc., Kuruba and Ganiga, Badaga and Krumba and Solaga, Billiva, Beda Holey.

The significance of the comparison is enhanced when we remember that the nasal index of the Holey, the Untouchables of the Canarese region is 75.1 that of the highest of the Brahmin being 71.5 while those of the jungle Krumba and the Solaga, who when Hinduised occupy the rank allotted to them in the list, are 86.1 and 85.1 respectively.

The Tamil castes may be arranged according to their nasal index as follows:

Ambattan, Vellai, Ediyayan, Agamudaiyan, Tamil Brahmin, Palli, Malaiyali, Shanan and Parayan. The Nasal indices of four typical Malayalam castes are: Tiyan, 75; Nambudri 75.5; Nayar 76.7; Charuman 77.2. The order of social precedence among these is : Nambudri, Nayar, Tiyan and Charuman. The nasal index of the Kanikar, a jungle tribe of Travancore is 84.6. Thus, the Charuman (an Unapproachable) belonging to the same race as the Brahmin rather than to Kanikar."

To omit from the above extract what is said about other communities and to draw attention to what relates to the Untouchables only, it is clear that the nasal index of the Chuhra (the Untouchables) of the Punjab is the same as the nasal index of the Brahmin of the United Provinces; the nasal index of the Chamar (the Untouchables) of Bihar is not very much distinct from the Brahmin of Bihar; the nasal index of the Holey (an Untouchable) of the Canarese is far higher than that of the Brahmin of Kamatak and that the nasal index of the Cheruman (an Unapproachable lower than the Pariah) of the Tamil belongs to the same race as the Brahmin of the Tamil Nad. If anthropometry is a science which can be depended upon to determine the race of a people, then the result obtained by the application of anthropometry to the various strata of Hindu society disprove that the Untouchables belong to a race different from the Aryans and the Dravidians. The measurements establish that the Brahmin and the Untouchables belong to the same race.

From this it follows that if the Brahmins are Aryans the Untouchables are also Aryans. If the Brahmins are Dravidians the Untouchables are also Dravidians. If the Brahmins are Nagas, the Untouchables are also Nagas. Such being the facts, the theory propounded by Mr. Rice must be said to be based on a false foundation.

III

The racial theory of Untouchability not only runs counter to the results of anthropometry, but it also finds very little support from such facts as we know about the ethnology of India. That the people of India were once organized on tribal basis is quite well known, and although the tribes have become castes the tribal organisation still remains intact. Each tribe was divided into clans and the clans were composed of groups of families. Each group of families had a totem which was some object, animate or inanimate. Those who had a common totem formed an exogamous group popularly known as *Gotra* or *Kula*. Families having a common *gotra* were not allowed to intermarry for they were supposed to be descended from the same ancestor having the same blood running in their veins. Having regard to this fact an examination of the distribution of the totems among the different castes and communities should serve as good a test for determining race as anthropometry has been.

Unfortunately, the study of the totems and their distribution among different communities has been completely neglected by students of sociology. This neglect is largely due to the current view propagated by the Census Commissioners that real unit of the Hindu social system and the basis of the fabric of Hindu society is the sub-caste founded on the rule of endogamy. Nothing can be a greater mistake than this. The unit of Hindu society is not the sub-caste but the family founded on the rule of exogamy. In this sense the Hindu family is fundamentally a tribal organisation and not a social organisation as the sub-caste is. The Hindu family is primarily guided in the matter of marriage by consideration of *Kul* and *Gotra* and only secondarily by considerations of caste and sub-caste. *Kul* and *Gotra* are Hindu equivalents of the totem of the Primitive Society. This shows that the Hindu society is still tribal in its organisation with the family at its base observing the rules of exogamy based on *Kul* and *Gotra*. Castes and sub-castes are social organisations which are superimposed over the tribal organisation and the rule of endogamy enjoined by them does not do away with the rule of exogamy enjoined by the tribal organisations of *Kul* and *Gotra*.

The importance of recognizing the fact that it is the family which is fundamental and not the sub-caste is obvious. It would lead to the study of the names of *Kul* and *Gotra* prevalent among Hindu families. Such a study would be a great help in determining the racial composition of the people of India. If the same *Kul* and *Gotra* were found to exist in different castes and communities it would be possible to say that the castes though socially

different were racially one. Two such studies have been made, one in Maharashtra by Risleymk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_86 and another in the Punjabmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39A.Untouchables who were they_why they became PART I.htm - _msocom_87 by Mr. Rose and the result flatly contradict the theory that the Untouchables are racially different from the Aryans or the Dravidians. The main bulk of the population in Maharashtra consists of Marathas. The Mahars are the Untouchables of Maharashtra. The anthropological investigation shows that both have the same *Kul*. Indeed the identity is so great that there is hardly a *Kul* among the Marathas which is not to be found among the Mahars and there is no *Kul* among the Mahars which is not to be found among the Marathas. Similarly, in the Punjab one main stock of people consists of Jats. The Mazabi Sikhs are Untouchables most of them being Chamars by caste. Anthropological investigation shows that the two have the same *Gotras*. Given these facts how can it be argued that the Untouchables belong to a different race? As I have said if totem, kul, and gotra, have any significance it means that those who have the same totem must have been kindred. If they were kindred they could not be persons of different race.

The racial theory of the origin of Untouchability must, therefore, be abandoned.

CHAPTER VIII OCCUPATIONAL ORIGIN OF UNTOUCHABILITY

WE may now turn to the occupational theory of the origin of Untouchability. According to Mr. Rice, the origin of Untouchability is to be found in the unclean and filthy occupations of the Untouchables. The theory is a very plausible one. But there are certain difficulties in the way of its being accepted as a true explanation of the origin of Untouchability. The filthy and unclean occupations which the Untouchables perform are common to all human societies. In every human Society there are people who perform these occupations. Why were such people not treated as Untouchables in other parts of the world? The second question is : Did the Dravidians have a nausea against such callings or against persons engaged in them? On this point, there is no evidence. But we have evidence about the Aryans. That evidence shows that the Aryans were like other people and their notions of purity and impurity did not fundamentally differ from

those of other ancient people. One has only to consider the following texts from Narada Smriti to show that the Aryans did not at all mind engaging themselves in filthy occupations. In Chapter V Narada is dealing with the subject matter of breach of contract of service. In this Chapter, there occur the following verses:

1. 1. The sages have distinguished five sorts of attendants according to law. Among these are four sorts of labourers; the slaves (are the fifth category of which there are) fifteen species.
 2. 2. A student, an apprentice, a hired servant, and fourthly an official.
 3. 3. The sages have declared that the state of dependence is common to all these but their respective position and income depends on their particular caste and occupations.
 4. 4. Know that there are two sorts of occupations; pure work and impure work; impure work is that done by the slaves. Pure work is that done by labourers.
 5. 5. Sweeping the gateway, the privy, the road and the place for rubbish; shampooing the secret parts of the body; gathering and putting away the leaving of food, ordure and urine.
 6. 6. And lastly, *rubbing the master's limbs when desired; this should be regarded as impure work. All other work besides this is pure.*
 25. 25. Thus have the four classes of servants doing pure work been enumerated. All the others who do dirty work are slaves, of whom there are fifteen kinds
- [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables who were they_why they became PART I.htm - _msocom_88](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39A.Untouchables%20who%20were%20they_why%20they%20became%20PART%20I.htm_-_msocom_88)

It is clear that impure work was done by the slaves and that the impure work included scavenging. The question that arises is: Who were these slaves? Were they Aryans or non-Aryans? That slavery existed among the Aryans admits of no doubt. An Aryan could be a slave of an Aryan. No matter to what Varna an Aryan belonged he could be a slave. A Kshatriya could be a slave. So could a Vaishya. Even a Brahmin was not immune from the law of slavery. It is when *Chaturvarna* came to be recognized as a law of the land that a change was made in the system of slavery. What this change was can be seen from the following extract from the Narada Smriti :

"39. In the inverse order of the (four) castes slavery is not ordained, except where a man violated the duties peculiar to his caste. Slavery (in that respect) is analogous to the condition of a wife".

Yajnavalkya also says that :

"183(2) Slavery is in the descending order of the Vamas and not in the ascending order"

This is explained by Vijnaneswara in his Mitakshara, a Commentary on Yajnavalkya Smriti in the following terms:-

"Of the Varna such as the Brahmin and the rest, a state of slavery shall exist in the descending order (Anulomeyna). Thus, of a Brahmin, a Kshatriya, and the rest may become a slave; of a Kshatriya, the Vaishya and the Shudra; and of a Vaishya, a Shudra; this state of slavery shall operate in the descending order."

The change was a mere reorganisation of slavery and the basis of the principles of graded inequality which is the soul of Chaturvarna. To put it in a concrete form, the new law declared that a Brahmin could have a Brahmin, Kshatriya, Vaishya and a Shudra as his slave. A Kshatriya could have Kshatriya, a Vaishya and a Shudra as his slave. A Vaishya could have a Vaishya and a Shudra as his slave. A Shudra could have a Shudra only. With all this, the law of slavery remained and all Aryans whether they were Brahmins, Kshatriyas, Vaishyas or Shudras if they become slaves were subject to it.

Having regard to the duties prescribed for the slaves, this change in the law of slavery does not matter at all. It still means that a Brahmin if he was a slave, a Kshatriya if he was a slave, a Vaishya if he was a slave, did the work of a scavenger. Only a Brahmin would not do scavenging in the house of a Kshatriya, Vaishya or a Shudra. But he would do scavenging in the house of a Brahmin. Similarly, a Kshatriya would do scavenging in the house of a Brahmin and the Kshatriya. Only he would not do in the house of a Vaishya or Shudra and a Vaishya would do scavenging in the house of a Brahmin, Kshatriya and Vaishya. Only he would not do it in the house of a Shudra. It is, therefore, obvious that the Brahmins, Kshatriyas and Vaishyas who are admittedly the Aryans did the work of scavengers which is the filthiest of filthy occupations. If scavenging was not loathsome to an Aryan how can it be said that engaging in filthy occupations was the cause of Untouchability. The theory of filthy occupation as an explanation of Untouchability is, therefore, not tenable.

NEW THEORIES OF THE ORIGIN OF UNTOUCHABILITY

CHAPTER IX

CONTEMPT FOR BUDDHISTS AS THE ROOT OF UNTOUCHABILITY

THE Census Reports for India published by the Census Commissioner at the interval of every ten years from 1870 onwards contain a wealth of information nowhere else to be found regarding the social and religious life of the people of India. Before the Census of 1910 the Census Commissioner had a column called "Population by Religion". Under this heading the population was shown (1) Muslims, (2) Hindus, (3) Christians, etc. The Census Report for the year 1910 marked a new departure from the prevailing practice. For the first time it divided the Hindus under three

separate categories, (i) Hindus, (ii) Animists and Tribal, and (iii) the Depressed Classes or Untouchables. This new classification has been continued ever since.

II

This departure from the practice of the previous Census Commissioners raises three questions. First is what led the Commissioner for the Census of 1910 to introduce this new classification. The second is what was the criteria adopted as a basis for this classification. The third is what are the reasons for the growth of certain practices which justify the division of Hindus into three separate categories mentioned above.

The answer to the first question will be found in the address presented in 1909 by the Muslim Community under leadership of H.H. The Aga Khan to the then Viceroy, Lord Minto, in which they asked for a separate and adequate representation for the Muslim community in the legislature, executive and the public services.

In the address*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_1 there occurs the following passage –

"The Mohamedans of India number, according to the census taken in the year 1901 over sixty-two millions or between one-fifth and one-fourth of the total population of His Majesty's Indian dominions, *and if a reduction be made for the uncivilised portions of the community enumerated under the heads of animist and other minor religions, as well as for those classes who are ordinarily classified as Hindus but properly speaking are not Hindus at all, the proportion of Mohamedans to the Hindu Majority becomes much larger*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_2 We therefore desire to submit that under any system of representation extended or limited a community in itself more numerous than the entire population of any first class European power except Russia may justly lay claim to adequate recognition as an important factor in the State.

"We venture, indeed, with Your Excellency's permission to go a step further, and urge that the position accorded to the Mohamedan community in any kind of representation direct or indirect, and in all other ways effecting their status and influence should be commensurate, not merely with their numerical strength but also with their political importance and the value of the contribution which they make to the defence of the empire, and we also hope that Your Excellency will in this

connection be pleased to give due consideration to the position which they occupied in India a little more than hundred years ago and of which the traditions have naturally not faded from their minds."

The portion in italics has a special significance. It was introduced in the address to suggest that in comprising the numerical strength of the Muslims with that of the Hindus the population of the animists, tribals and the Untouchables should be excluded. The reason for this new classification of 'Hindus' adopted by the Census Commissioner in 1910 lies in this demand of the Muslim community for separate representation on augmented scale. At any rate this is how the Hindus understood this demand mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39B.Untouchables who were they why they became PART II.htm - _msocom_3

Interesting as it is, the first question as to why the Census Commissioner made this departure in the system of classification is of less importance than the second question. What is important is to know the basis adopted by the Census Commissioner for separating the different classes of Hindus into (1) those who were hundred per cent Hindus and (2) those who were not.

The basis adopted by the Census Commissioner for separation is to be found in the circular issued by the Census Commissioner in which he laid down certain tests for the purpose mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39B.Untouchables who were they why they became PART II.htm - _msocom_4 of distinguishing these two classes. Among those who were not hundred percent Hindus were included castes and tribes which :-

- (1) (1) Deny the supremacy of the Brahmins.
- (2) (2) Do not receive the Mantra from a Brahmin or other recognized Hindu Guru.
- (3) (3) Deny the authority of the Vedas.
- (4) (4) Do not worship the Hindu gods.
- (5) (5) Are not served by good Brahmins as family priests.
- (6) (6) Have no Brahmin priests at all.
- (7) (7) Are denied access to the interior of the Hindu temples.
- (8) (8) Cause pollution (a) by touch, or (b) within a certain distance.
- (9) (9) Bury their dead.
- (10) (10) Eat beef and do no reverence to the cow.

Out of these ten tests some divide the Hindus from the Animists and the Tribal. The rest divide the Hindus from the Untouchables. Those that divide the Untouchables from the Hindus are (2), (5), (6), (7), and (10). It is

with them that we are chiefly concerned.

For the sake of clarity it is better to divide these tests into parts and consider them separately. This Chapter will be devoted only to the consideration of (2), (5), and (6).

The replies received by the Census Commissioner to questions embodied in tests (2), (5) and (6) reveal (1) that the Untouchables do not receive the Mantra from a Brahmin; (2) that the Untouchables are not served by good Brahmin priests at all; and (3) that Untouchables have their own priests reared from themselves. On these facts the Census Commissioners of all Provinces are unanimous.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_5

Of the three questions the third is the most important. Unfortunately the Census Commissioner did not realise this. For in making his inquiries he failed to go to the root of the matter to find out: Why were the Untouchables not receiving the Mantra from the Brahmin? Why Brahmins did not serve the Untouchables as their family priests? Why do the Untouchables prefer to have their own priests? It is the 'why' of these facts which is more important than the existence of these facts. It is the 'why' of these facts which must be investigated. For the clue to the origin of Untouchability lies hidden behind it.

Before entering upon this investigation, it must be pointed out that the inquiries by the Census Commissioner were in a sense one-sided. They showed that the Brahmins shunned the Untouchables. They did not bring to light the fact that the Untouchables also shunned the Brahmins. Nonetheless, it is a fact. People are so much accustomed to thinking that the Brahmin is the superior of the Untouchables and the Untouchable accepts himself as his inferior; that this statement that the Untouchables look upon the Brahmin as an impure person is sure to come to them as a matter of great surprise. The fact has however been noted by many writers who have observed and examined the social customs of the Untouchables. To remove any doubt on the point, attention is drawn to the following extracts from their writings.

The fact was noticed by Abbe Dubois who says
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_6:

"Even to this day a Pariah is not allowed to pass a Brahmin Street in a village, though nobody can prevent, or prevents, his approaching or passing by a Brahmin's house in towns. The Pariahs, on their part will under no circumstances, allow a Brahmin to pass through their *paracherries*

(collection of Pariah huts) as they firmly believe it will lead to their ruin". Mr. Hemingsway, the Editor of the Gazetteer of the Tanjore District says:

"These casts (Parayan and Pallan or Chakkiliyan castes of Tanjore District) strongly object to the entrance of a Brahmin into their quarters believing that harm will result to them therefrom". [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_7](#)

Speaking of the Holeyas of the Hasan District of Mysore, Captain J.S.F. Mackenzie says:-

"Every village has its Holigiri as the quarters inhabited by the Holiars, formerly agrestic serfs, is called outside the village boundary hedge. This, I thought was because they were considered as impure race, whose touch carries defilement with it." [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_8](#)

Such is the reason generally given by the Brahmins who refuse to receive anything directly from the hands of a Holiar, and yet the Brahmins consider great luck will wait upon them if they can manage to pass through the Holigiri without being molested. To this Holiars have a strong objection, and, should a Brahmin attempt to enter their quarters, they turn out in a body and slipper him, in former times, it is said, to death. Members of the other castes may come as far as the door, but they must not enter the house, for that would bring the Holiar bad luck. If, by chance, a person happens to get in, the owner takes care to tear the intruder's cloth, tie up some salt in one corner of it, and turn him out. This is supposed to neutralise all the good luck which might have accrued to the trespasser, and avert any evil which ought to have befallen the owner of the house.

What is the explanation of this strange phenomenon? The explanation must of course fit in with the situation as it stood at the start, *i.e.*, when the Untouchables were not Untouchables but were only Broken Men. We must ask why the Brahmins refused to officiate at the religious ceremonies of the Broken Men? Is it the case that the Brahmins refused to officiate? Or is it that the Broken Men refused to invite them? Why did the Brahmin regard Broken Men as impure? Why did the Broken Men regard the Brahmins as impure? What is the basis of this antipathy?

This antipathy can be explained on one hypothesis. It is that the Broken Men were Buddhists. As such they did not revere the Brahmins, did not employ them as their priests and regarded them as impure. The Brahmin

on the other hand disliked the Broken Men because they were Buddhists and preached against them contempt and hatred with the result that the Broken Men came to be regarded as Untouchables.

We have no direct evidence that the Broken Men were Buddhists. No evidence is as a matter of fact necessary when the majority of Hindus were Buddhists. We may take it that they were.

That there existed hatred and abhorrence against the Buddhists in the mind of the Hindus and that this feeling was created by the Brahmins is not without support.

Nilkant in his *Prayaschit Mayukhamk*:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_9 quotes a verse from Manu which says :-

"If a person touches a Buddhist or a follower of Pachupat, Lokayata, Nastika and Mahapataki, he shall purify himself by a bath."

The same doctrine is preached by Apararka in his Smriti. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_10 Vradha Harit goes further and declares entry into the Buddhist Temple as sin requiring a purificatory bath for removing the impurity.

How widespread had become this spirit of hatred and contempt against the followers of Buddha can be observed from the scenes depicted in Sanskrit dramas. The most striking illustration of this attitude towards the Buddhists is to be found in the Mricchakatika. In Act VII of that Drama the hero Charudatta and his friend Maitreya are shown waiting for Vasantasena in the park outside the city. She fails to turn up and Charudatta decides to leave the park. As they are leaving, they see the Buddhist monk by name Samvahaka. On seeing him, Charudatta says :-

"Friend Maitreya, I am anxious to meet Vasantsena ... Come, let us go. (After walking a little) Ah ! here's an inauspicious sight, a Buddhist monk coming towards us. (After a little reflection) well, let him come this way, we shall follow this other path. (Exit.)

In Act VIII the monk is in the Park of Sakara, the King's brother-in-law, washing his clothes in a pool. Sakara accompanied by Vita turns up and threatens to kill the monk. The following conversation between them is revealing :

"Sakara - Stay, you wicked monk.

Monk - Ah! Here's the king's brother-in-law! Because some monk has offended him, he now beats up any monk he happens to meet.

- Sakara- Stay, I will now break your head as one breaks a radish in a tavern. (*Beats him*).
- Vita- Friend, it is not proper to beat a monk who has put on the saffron-robcs, being disgusted with the world.
- Monk- (*Welcomes*) Be pleased, lay brother.
- Sakara- Friend, see. He is abusing me.
- Vita- What does he say?
- Sakara- He calls me lay brother (*upasaka*). Am I a barber?
- Vita- Oh! He is really praising you as a devotee of the Buddha.
- Sakara- Why has he come here?
- Monk- To wash these clothes.
- Sakara- Ah! you wicked monk. Even I myself do not bathe in this pool; I shall kill you with one stroke."

After a lot of beating, the monk is allowed to go. Here is a Buddhist Monk in the midst of the Hindu crowd. He is shunned and avoided. The feeling of disgust against him is so great that the people even shun the road the monk is travelling. The feeling of repulsion is so intense that the entry of the Buddhist was enough to cause the exit of the Hindus. The Buddhist monk is on a par with the Brahmin. A Brahmin is immune from death-penalty. He is even free from corporal punishment. But the Buddhist monk is beaten and assaulted without remorse, without compunction as though there was nothing wrong in it.

If we accept that the Broken Men were the followers of Buddhism and did not care to return to Brahmanism when it became triumphant over Buddhism as easily as other did, we have an explanation for both the questions. It explains why the Untouchables regard the Brahmins as inauspicious, do not employ them as their priest and do not even allow them to enter into their quarters. It also explains why the Broken Men came to be regarded as Untouchables. The Broken Men hated the Brahmins because the Brahmins were the enemies of Buddhism and the Brahmins imposed untouchability upon the Broken Men because they would not leave Buddhism. On this reasoning it is possible to conclude that one of the roots of untouchability lies in the hatred and contempt which the Brahmins created against those who were Buddhist.

Can the hatred between Buddhism and Brahmanism be taken to be the sole cause why Broken Men became Untouchables? Obviously, it cannot be. The hatred and contempt preached by the Brahmins was directed against Buddhists in general and not against the Broken Men in particular. Since untouchability stuck to Broken Men only, it is obvious that there was

some additional circumstance which has played its part in fastening untouchability upon the Broken Men. What that circumstance could have been? We must next direct our effort in the direction of ascertaining it.

CHAPTER X

BEEF EATING AS THE ROOT OF UNTOUCHABILITY

WE now take up test No. 10 referred to in the circular issued by the Census Commissioner and to which reference has already been made in the previous chapter. The test refers to beef-eating.

The Census Returns show that the meat of the dead cow forms the chief item of food consumed by communities which are generally classified as untouchable communities. No Hindu community, however low, will touch cow's flesh. On the other hand, there is no community which is really an Untouchable community which has not something to do with the dead cow. Some eat her flesh, some remove the skin, some manufacture articles out of her skin and bones.

From the survey of the Census Commissioner, it is well established that Untouchables eat beef. The question however is: Has beef-eating any relation to the origin of Untouchability? Or is it merely an incident in the economic life of the Untouchables? Can we say that the Broken Men came to be treated as Untouchables because they ate beef? There need be no hesitation in returning an affirmative answer to this question. No other answer is consistent with facts as we know them.

In the first place, we have the fact that the Untouchables or the main communities which compose them eat the dead cow and those who eat the dead cow are tainted with untouchability and no others. The co-relation between untouchability and the use of the dead cow is so great and so close that the thesis that it is the root of untouchability seems to be incontrovertible. In the second place if there is anything that separates the Untouchables from the Hindus, it is beef-eating. Even a superficial view of the food taboos of the Hindus will show that there are two taboos regarding food which serve as dividing lines. There is one taboo against meat-eating. It divides Hindus into vegetarians and flesh eaters. There is another taboo which is against beef eating. It divides Hindus into those who eat cow's flesh and those who do not. From the point of view of untouchability the first dividing line is of no importance. But the second is. For it completely marks off the Touchables from the Untouchables. The Touchables whether they are vegetarians or flesh-eaters are united in their

objection to eat cow's flesh. As against them stand the Untouchables who eat cow's flesh without compunction and as a matter of course and habit.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_11

In this context it is not far-fetched to suggest that those who have a nausea against beef-eating should treat those who eat beef as Untouchables.

There is really no necessity to enter upon any speculation as to whether beef-eating was or was not the principal reason for the rise of Untouchability. This new theory receives support from the Hindu Shastras. The Veda Vyas Smriti contains the following verse which specifies the communities which are included in the category of Antyajjas and the reasons why they were so included.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_12

L.12-13”The *Charmakars* (Cobbler), the *Bhatta* (Soldier), the *Bhilla*, the *Rajaka* (washerman), the *Puskara*, the *Nata* (actor), the *Vrata*, the *Meda*, the *Chandala*, the *Dasa*, the *Svapaka*, and the *Kolika*- these are known as Antyajjas as well as others who eat cow's flesh.”

Generally speaking the Smritikars never care to explain the why and the how of their dogmas. But this case is exception. For in this case, Veda Vyas does explain the cause of untouchability. The clause”as well as others who eat cow's flesh”is very important. It shows that the Smritikars knew that the origin of untouchability is to be found in the eating of beef. The dictum of Veda Vyas must close the argument. It comes, so to say, straight from the horse's mouth and what is important is that it is also rational for it accords with facts as we know them.

The new approach in the search for the origin of Untouchability has brought to the surface two sources of the origin of Untouchability. One is the general atmosphere of scorn and contempt spread by the Brahmins against those who were Buddhists and the second is the habit of beef-eating kept on by the Broken Men. As has been said the first circumstance could not be sufficient to account for stigma of Untouchability attaching itself to the Broken Men. For the scorn and contempt for Buddhists spread by the Brahmins was too general and affected all Buddhists and not merely the Broken Men. The reason why Broken Men only became Untouchables was because in addition to being Buddhists they retained their habit of beef-eating which gave additional ground for offence to the Brahmins to carry their new-found love and reverence to the cow to its logical conclusion. We may therefore conclude that the Broken Men were

exposed to scorn and contempt on the ground that they were Buddhists the main cause of their Untouchability was beef-eating.

The theory of beef-eating as the cause of untouchability also gives rise to many questions. Critics are sure to ask: What is the cause of the nausea which the Hindus have against beef-eating? Were the Hindus always opposed to beef-eating? If not, why did they develop such a nausea against it? Were the Untouchables given to beef-eating from the very start? Why did they not give up beef-eating when it was abandoned by the Hindus? Were the Untouchables always Untouchables? If there was a time when the Untouchables were not Untouchables even though they ate beef why should beef-eating give rise to Untouchability at a later-stage? If the Hindus were eating beef, when did they give it up? If Untouchability is a reflex of the nausea of the Hindus against beef-eating, how long after the Hindus had given up beef-eating did Untouchability come into being? These questions must be answered. Without an answer to these questions, the theory will remain under cloud. It will be considered as plausible but may not be accepted as conclusive. Having put forth the theory, I am bound to answer these questions. I propose to take up the following heads :-

- (1)(1) Did the Hindus never eat beef?
- (2)(2) What led the Hindus to give up be heating?
- (3)(3) What led the Brahmins to become vegetarians?
- (4)(4) Why did beef-eating give rise to Untouchability? and
- (5)(5) When was Untouchability born?

PART V

THE NEW THEORIES AND SOME QUESTIONS

CHAPTER XI

DID THE HINDUS NEVER EAT BEEF?

TO the question whether the Hindus ever ate beef, every Touchable Hindu, whether he is a Brahmin or a non-Brahmin, will say 'no, never'. In a certain sense, he is right. From times no Hindu has eaten beef. If this is all that the Touchable Hindu wants to convey by his answer there need be no quarrel over it. But when the learned Brahmins argue that the Hindus not only never ate beef but they always held the cow to be sacred and were

always opposed to the killing of the cow, it is impossible to accept their view.

What is the evidence in support of the construction that the Hindus never ate beef and were opposed to the killing of the cow?

There are two series of references in the Rig Veda on which reliance is placed. In one of these, the cow is spoken of as *Aghnya*. They are Rig Veda 1.164, 27; IV.1.6; V 82-8; V11.69. 71; X.87. *Aghnya* means 'one who does not deserve to be killed'. From this, it is argued that this was a prohibition against the killing of the cow and that since the Vedas are the final authority in the matter of religion, it is concluded that the Aryans could not have killed the cows, much less could they have eaten beef. In another series of references the cow is spoken of as sacred. They are Rig Veda VI.28.1.8. and VIII, 101. 15. In these verses the cow is addressed as Mother of Rudras, the Daughter of Vasus, the Sister of the Adityas and the Centre of Nectar. Another reference on the subject is in Rig Veda VIII. 101. 16 where the cow is called Devi (Goddess).

Reliance is also placed on certain passages in the Brahmanas and Sutras.

There are two passages in the Satapatha Brahmana which relate to animal sacrifice and beef-eating. One is at 111.1.2.21 and reads as follows :-

"He (the Adhvaryu) then makes him enter the hall. Let him not eat (the flesh) of either the cow or the ox, for the cow and the ox doubtless support everything here on earth. The gods spake, 'verily, the cow and the ox support everything here; come, let us bestow on the cow and the ox whatever vigour belonged to other species (of animals); and therefore the cow and the ox eat most. Hence were one to eat (the flesh) of an ox or a cow, there would be, as it were, an eating of everything, or, as it were, a going to the end (or, to destruction)... Let him therefore not eat (the flesh) of the cow and the ox."

The other passage is at 1, 2, 3, 6. It speaks against animal sacrifice and on ethical grounds.

A similar statement is contained in the Apastambha Dharma Sutra at 1, 5, 17, 29. Apastambha lays a general embargo on the eating of cow's flesh.

Such is the evidence in support of the contention that the Hindus never ate beef. What conclusion can be drawn from this evidence?

So far as the evidence from the Rig Veda is concerned the conclusion is based on a misreading and misunderstanding of the texts. The adjective *Aghnya* applied to the cow in the Rig Veda means a cow that was yielding milk and therefore not fit for being killed. That the cow is venerated in the Rig Veda is of course true. But this regard and veneration of the cow are

only to be expected from an agricultural community like the Indo-Aryans. This application of the utility of the cow did not prevent the Aryan from killing the cow for purposes of food. Indeed the cow was killed because the cow was regarded as sacred. As observed by Mr.Kane:

"It was not that the cow was not sacred in Vedic times, it was because of her sacredness that it is ordained in the Vajasaneyi Samhita that beef should be eaten."*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_13

That the Aryans of the Rig Veda did kill cows for purposes of food and ate beef is abundantly clear from the Rig Veda itself. In Rig Veda (X.86.14) Indra says:- "They cook for one 15 plus twenty oxen". The Rig Veda (X.91.14) says that for Agni were sacrificed horses, bulls, oxen, barren cows and rams. From the Rig Veda (X.72.6) it appears that the cow was killed with a sword or axe.

As to the testimony of the Satapatha Bramhana, can it be said to be conclusive? Obviously, it cannot be. For there are passages in the other Bramhanas which give a different opinion.

To give only one instance. Among the Kamyashtis set forth in the Taittiriya Bramhana, not only the sacrifice of oxen and cows are laid down, but we are even told what kind and description of oxen and cows are to be offered to what deities. Thus, a dwarf ox is to be chosen for sacrifice to Vishnu; a drooping horned bull with a blaze on the forehead to Indra as the destroyer of Vritra; a black cow to Pushan; a red cow to Rudra; and so on. The Taittiriya Bramhana notes another sacrifice called *Panchasaradiya-seva*, the most important element of which was the immolation of seventeen five-year old humpless, dwarf-bulls, and as many dwarf heifers under three year-old.

As against the statement of the Apastamba Dharma Sutra, the following points may be noted.

First is the contrary statement contained in that Very Sutra. At 15, 14, 29, the Sutra says :-

"The cow and the bull are sacred and therefore should be eaten". The second is the prescription of Madhuparka contained in the Grahya Sutras. Among the Aryans the etiquette for receiving important guests had become settled into custom and had become a ceremony. The most important offering was Madhuparka. A detailed descriptions regarding Madhuparka are to be found in the various Grahya Sutras. According to most of the Grahya Sutras there are six persons who have a right to be served with Madhuparka namely; (1) Ritwija or the Brahmin called to

perform a sacrifice, (2) Acharya, the teacher, (3) The bridegroom (4) The King (5) The Snatak, the student who has just finished his studies at the Gurukul and (6) Any person who is dear to the host. Some add Atithi to this list. Except in the case of Ritvija, King and Acharya, Madhuparka is to be offered to the rest once in a year. To the Ritvija, King and Acharya it is to be offered each time they come.

What was this Madhuparka made of? There is divergence about the substances mixed in offering Madhuparka. Asv.gr and Ap.gr. (13.10) prescribe a mixture of honey and curds or clarified butter and curds. Others like Par.gr.13 prescribe a mixture of three (curds, honey and butter). Ap.gr. (13.11-12) states the view of some that those three may be mixed or five (those three with fried *yava* grain and barley). Hir.gr.L, 12, 10-12 give the option of mixing three of five (curds, honey, ghee, water and ground grain). The Kausika Sutra (92) speaks of nine kinds of mixtures, viz., *Brahma* (honey and curds), *Aindra* (of payasa), *Saurnya* (curds and ghee), *Pausna* (ghee and mantha), *Sarasvata* (milk and ghee), *Mausala* (wine and ghee, this being used only in Sautramanai and Rajasuya sacrifices), *Parivrajaka* (sesame oil and oil cake). The Madhava gr.l.9.22 says that the Veda declares that the Madhuparka must not be without flesh and so it recommends that if the cow is let loose, goat's meat or payasa (rice cooked in milk) may be offered; the Hir.gr. 1.13, 14 says that other meat should be offered; Baud.gr. (1.2,51-54) says that when the cow is let off, the flesh of a goat or ram may be offered or some forest flesh (of a deer, etc.) may be offered, as there can be no Madhuparka without flesh or if one is unable to offer flesh one may cook ground grains.

Thus the essential element in Madhuparka is flesh and particularly cow's flesh.

The killing of cow for the guest had grown to such an extent that the guest came to be called 'Go-ghna' which means the killer of the cow. To avoid this slaughter of the cows the Ashvateyana Grahya Sutra (1.24.25) suggests that the cow should be let loose when the guest comes so as to escape the rule of etiquette.

Thirdly, reference may be made to the ritual relating to disposal of the dead to counter the testimony of the Apastamba Dharma Sutra. The Sutra says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/39B.Untouchables who were they_why they became PART II.htm - _msocom_14 :-

1. 1. He should then put the following (sacrificial) implements (on the dead body)
2. 2. Into the right hand the (spoon called) Guhu.
3. 3. Into the left the (other spoon called) Upabhrit.

4. 4. On his right side the wooden sacrificial sword called *Sphya*, on his left side the Agnihotrahavani (i.e., the laddle with which the Agnihotra oblations are sacrificed).
5. 5. On his chest the (big sacrificial laddle called) Dhruva. On his head the dishes. On his teeth the pressing stones.
6. 6. On the two sides of his nose, the two smaller sacrificial laddles called *Sruvas*.
7. 7. Or, if there is only one (Sruva), breaking it (in two pieces).
8. 8. On his two ears the two Prasitraharanas (i.e, the vessels into which the portion of the sacrificial food belonging to the Brahmin) is put
9. 9. Or, if there is only one (Prasitraharana), breaking it (in two pieces).
10. 10. On his belly the (vessel called) Patri.
11. 11. And the cup into which the cut-off portion (of the sacrificial food) are put.
12. 12. On his secret parts the (staff called) Samy.
13. 13. On his thighs two kindling woods.
14. 14. On his legs the mortar and the pestle.
15. 15. On his feet the two baskets.
16. 16. Or, if there is only one (basket), breaking it in two pieces.
17. 17. Those of the implements which have a hollow (into which liquids can be poured) are filled with sprinkled butter.
18. 18. The son (of the deceased person) should take the under and the upper mill-stone for himself.
19. 19. And the implements made of copper, iron and earthenware.
20. 20. Taking out the omentum of the she-animal he should cover therewith the head and the mouth (of the dead person) with the verse, 'But on the armour (which will protect thee) against Agni, by that which comes from the cows.' (Rig Veda. X. 16.7).
21. 21. Taking out the kidneys of the animal he should lay them into the hands (of the dead body) with the verse, escape the two hounds, the sons of Sarma (Rig Veda X 14.10) the right kidney into the right hand and the left into the left hand.
22. 22. The heart of the animals he puts on the heart of the deceased.
23. 23. And two lumps of flour or rice according to some teachers.
24. 24. Only if there are no kidneys according to some teachers.
25. 25. Having distributed the whole (animal), limb by limb (placing its different limbs on the corresponding limbs of the deceased) and having covered it with its hide, he recites when the Pranita water is

carried forward (the verse), 'Agni do not overturn this cup,' (Rig Veda, X. 16.8).

26. 26. Bending his left knee he should sacrifice Yugya oblation into the Dakshina fire with the formulas 'To Agni Svaha, to Kama Svaha, to the world Svaha, to Anumati Svaha'.
27. 27. A fifth (oblation) on the chest of the deceased with the formula 'from this one verily thou hast been born. May he now be born out of thee. To the heaven worlds Svaha.'"

From the above passage quoted from the Ashvalayan Grahya Sutra it is clear that among the ancient Indo-Aryans when a person died, an animal had to be killed and the parts of the animal were placed on the appropriate parts of the dead body before the dead body was burned.

Such is the state of the evidence on the subject of cow-killing and beef-eating. Which part of it is to be accepted as true? The correct view is that the testimony of the Satapatha Brahmana and the Apastamba Dharma Sutra in so far as it supports the view that Hindus were against cow-killing and beef-eating, are merely exhortations against the excesses of cow-killing and not prohibitions against cow-killing. Indeed the exhortations prove that cow-killing and eating of beef had become a common practice. That notwithstanding these exhortations cow-killing and beef-eating continued. That most often they fell on deaf ears is proved by the conduct of Yajnavalkya, the great Rishi of the Aryans. The first passage quoted above from the Satapatha Brahmana was really addressed to Yajnavalkya as an exhortation. How did Yajnavalkya respond? After listening to the exhortation this is what Yajnavalkya said :-"I, for one, eat it, provided that it is tender"

That the Hindus at one time did kill cows and did eat beef is proved abundantly by the description of the Yajnas given in the Buddhist Sutras which relate to periods much later than the Vedas and the Brahmanas. The scale on which the slaughter of cows and animals took place was colossal. It is not possible to give a total of such slaughter on all accounts committed by the Brahmins in the name of religion. Some idea of the extent of this slaughter can however be had from references to it in the Buddhist literature. As an illustration reference may be made to the Kutadanta Sutta in which Buddha preached against the performance of animal sacrifices to Brahmin Kutadanta. Buddha, though speaking in a tone of sarcastic travesty, gives a good idea of the practices and rituals of the Vedic sacrifices when he said:

"And further, O Brahmin, at that sacrifice neither were any oxen slain, neither goats, nor fowls, nor fatted pigs, nor were any kind of living creatures put to death. No trees were cut down to be used as posts, no Darbha grasses mown to stress around the sacrificial spot. And the slaves and messengers and workmen there employed were driven neither by rods nor fear, nor carried on their work weeping with tears upon their faces."

Kutadanta on the other hand in thanking Buddha for his conversion gives an idea of the magnitude of the slaughter of animals which took place at such sacrifices when he says :-

"I, even I betake myself to the venerable Gotama as my guide, to the Doctrine and the Order. May the venerable One accept me as a disciple, as one who, from this day forth, as long as life endures, has taken him as his guide. And I myself, O, Gotama, will have the seven hundred bulls, and the seven hundred steers, and the seven hundred heifers, and the seven hundred goats, and the seven hundred rams set free. To them I grant their life. Let them eat grass and drink fresh water and may cool breezes waft around them."

In the Samyuta Nikaya (111,1-9) we have another description of a Yajna performed by Pasenadi, king of Kosala. It is said that five hundred bulls, five hundred calves and many heifers, goats and rams were led to the pillar to be sacrificed.

With this evidence no one can doubt that there was a time when Hindus-both Brahmins and non-Brahmins ate not only flesh but also beef.

CHAPTER XII

WHY DID NON-BRAHMINS GIVE UP BEEF-EATING?

THE food habits of the different classes of Hindus have been as fixed and stratified as their cults. Just as Hindus can be classified on their basis of their cults so also they can be classified on the basis of their habits of food. On the basis of their cults, Hindus are either *Saivites* (followers of Siva) or *Vaishnavites* (followers of Vishnu). Similarly, Hindus are either *Mansahari* (those who eat flesh) or *Shakahari* (those who are vegetarians).

For ordinary purposes the division of Hindus into two classes *Mansahari* and *Shakahari* may be enough. But it must be admitted that it is not exhaustive and does not take account of all the classes which exist in Hindu society. For an exhaustive classification, the class of Hindus called *Mansahari* shall have to be further divided into two sub-classes : (i) Those who eat flesh but do not eat cow's flesh; and (ii) Those who eat flesh including cow's flesh; In other words, on the basis of food taboos, Hindu society falls into three classes : (i) Those who are vegetarians; (ii) Those who eat flesh but do not eat cow's flesh; and (iii) Those who eat flesh including cow's flesh. Corresponding to this classification, we have in Hindu society three classes : (1) Brahmins; (2) Non-Brahmins; and (3) The Untouchables. This division though not in accord with the fourfold division of society called Chaturvarnya, yet it is in accord with facts as they exist.

For, in the Brahminsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_15 we have a class which is vegetarian, in the non-Brahmins the class which eats flesh but does not eat cow's flesh and in the Untouchables a class which eats flesh including cow's flesh.

This threefold division is therefore substantial and is in accord with facts. Anyone who stops to turn over this classification in his mind is bound to be struck by the position of the Non-Brahmins. One can quite understand vegetarianism. One can quite understand meat-eating. But it is difficult to understand why a person who is a flesh-

eater should object to one kind of flesh namely cow's flesh. This is an anomaly which call for explanation. Why did the Non-Brahmin give up beef-eating? For this purpose it is necessary to examine laws on the subject. The relevant legislation must be found either in the Law of Asoka or the Law of Manu.

II

To begin with Asoka. The edicts of Asoka which have reference to this matter are Rock Edict No.I and Pillar Edict Nos.II and V. Rock Edict No.I reads as follows :-

"This pious Edict has been written by command of His Sacred and Gracious Majesty) the King. Here (in the capital) no animal may be slaughtered for sacrifice, nor may the holiday feast be held, because His Sacred and Gracious Majesty, the king sees much offence in the holiday feasts, although in certain places holiday feasts are excellent in the sight of His Sacred and Gracious Majesty the king.

"Formerly, in the kitchen of His Sacred and Gracious Majesty the King, each day many hundred thousands of living creatures were slaughtered to make curries. But now, when this pious edict is being written, only three living creatures are slaughtered (daily) for curry, to wit, two peacocks and one antelope: the antelope, however, not invariably. Even those three living creatures henceforth shall not be slaughtered."

Pillar Edict No.II was in the following terms :

"Thus saith His Sacred and Gracious Majesty, the King :-"The Law of Piety is excellent. But wherein consists the Law of Piety? In these things, to wit, little piety, many good deeds, compassion, liberality, truthfulness and purity.

The gift of spiritual insight I have given in manifold ways: whilst on two-footed and four-footed beings, on birds and the denizens of

the waters, I have conferred various favours-even unto the boon of life; and many other good deeds have I done.

For this purpose, have I caused this pious edict to be written, that men may walk after its teaching, and that it may long endure; and he who will follow its teaching will do well."

Pillar Edict V says :

"Thus said His Sacred and Gracious Majesty, the king :

When I had been consecrated twenty-six years the following species were declared *exempt from slaughter*, namely :

Parrots, starlings adjutants, Brahmany ducks, geese, *pandirnukhas*, *gelatas*, bats, queen-ants, female tortoises, boneless fish, *vedaveyakas*, *gangapuputakas*, skate, (river) tortoise, porcupines, tree-squirrels, *barasingha* stag, Brahmany bulls, monkeys, rhinoceros, grey doves village pigeons, and *all fourfooted animals which are not utilised or eaten*.

She-goats, ewes, cows, that is to say, those either with young or in milk, are exempt from slaughter as well as their off-spring up to six months of age. The caponing of cocks must not be done. Chaff must not be burned along with the living things in it Forests must not be burned either for mischief or so as to destroy living creatures.

The living must not be fed with the living. At each of the three seasonal full moons, and at the full moon of the month Tishya (December-January) for three days in each case, namely, the fourteenth and fifteenth days of the first fortnight, and the first day of the second fortnight, as well as on the first days throughout the year, fish is exempt from killing and may not be sold.

"On the same days, in elephant-preserves or fish-ponds no other classes of animals may be destroyed.

On the eighth, fourteenth and fifteenth days of each fortnight, as well as on the Tishya and Punarvasa days and festival days, the castration of bulls must not be performed, nor may he-goats, rams, boars and other animals liable to castration be castrated.

On the Tishya and Punarvasa days, on the seasonal full moon days, and during the fortnights of the seasonal full moons the branding of horses and oxen must not be done.

During the time upto the twenty-sixth anniversary of my consecration twenty-five jail deliveries have been effected."

So much for the legislation of Asoka.

III

Let us turn to Manu. His Laws contain the following provisions regarding meat-eating :-

- V.11. Let him avoid all carnivorous birds and those living in villages, and one hoofed animals which are not specially permitted (to be eaten), and the Tithbha (Parra) Jacana.
- V.12. The sparrow, the Plava, the Hamsa, the Brahmani duck, the village-cock, the Sarasa crane, the Raggudal, the woodpecker, the parrot, and the starling.
- V.13. Those which feed striking with their beaks, web-footed birds, the Koyashti, those which scratch with their toes, those which dive and live on fish, meat from a slaughter-house and dried meat.
- V.14. The Baka and the Balaka crane, the raven, the Khangartaka (animals) that eat fish, village-pigs, and all kinds of fishes.
- V.15. He who eats the flesh of any (animals) is called the eater of the flesh of that (particular) creature, he who eats fish is an eater of every (kind of) flesh; let him therefore avoid fish.
- V.16. (But the fish called) Pathine and (that called) Rohita may be eaten, if used for offering to the gods or to the manes; (one may eat) likewise Ragivas, Simhatundas, and Sasalkas on all occasions.
- V.17. Let him not eat solitary or unknown beasts and birds though they may fall under (the categories of) eatable creatures, not any five-toed (animals).
- V.18. The porcupine, the hedgehog, the iguana, the rhinoceros, the tortoise, and the hare they declare to be eatable; likewise those (domestic animals) that have teeth in one jaw excepting camels."

IV

Here is survey of the legislation both by Asoka and by Manu on the slaughter of animals. We are of course principally concerned with the cow. Examining the legislation of Asoka the question is: Did he prohibit the killing of the cow? On this issue there seem to be a

difference of opinion. Prof. Vincent Smith is of opinion that Asoka did not prohibit the killing of the cow. Commenting on the legislation of Asoka on the subject, Prof. Smith says: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_16

"It is noteworthy that Asoka's rules do not forbid the slaughter of cow, which, apparently, continued to be lawful."

Prof. Radhakumud Mookerji joins issue with Prof. Smith and says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_17 that Asoka did prohibit the slaughter of the cow. Prof. Mookerji relies upon the reference in Pillar Edict V to the rule of exemption which was made applicable to all four-footed animals and argues that under this rule cow was exempted from killing. This is not a correct reading of the statement in the Edict. The Statement in the Edict is a qualified statement. It does not refer to all four-footed animals but only to four-footed animals, *which are not utilised or eaten.* 'A cow cannot be said to be a four-footed animal which was not utilised or eaten. Prof. Vincent Smith seems to be correct in saying that Asoka did not prohibit the slaughter of the cow. Prof. Mookerji tries to get out of the difficulty by saying that at the time of Asoka the cow was not eaten and therefore came within the prohibition. His statement is simply absurd for the cow was an animal which was very much eaten by all classes.

It is quite unnecessary to resort as does Prof. Mookerji to a forced construction of the Edict and to make Asoka prohibit the slaughter of the cow as though it was his duty to do so. Asoka had no particular interest in the cow and owed no special duty to protect her against killing. Asoka was interested in the sanctity of all life human as well as animal. He felt his duty to prohibit the taking of life where taking of life was not necessary. That is why he prohibited slaughtering animal for sacrifice mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_18 which he regarded as unnecessary and of animals which are not utilised nor eaten which again would be want on and unnecessary. That he did not prohibit the slaughter of the cow in specie may well be taken as a fact which for having regard to the Buddhist attitude in the matter cannot be used against Asoka as a ground for casting blame.

Coming to Manu there is no doubt that he too did. not prohibit the slaughter of the cow. On the other hand he made the eating of cow's

flesh on certain occasions obligatory.

Why then did the non-Brahmins give up eating beef? There appears to be no apparent reason for this departure on their part. But there must be some reason behind it. The reason I like to suggest is that it was due to their desire to imitate the Brahmins that the non-Brahmins gave up beef-eating. This may be a novel theory but it is not an impossible theory. As the French author, Gabriel Tarde has explained that culture within a society spreads by imitation of the ways and manners of the superior classes by the inferior classes. This imitation is so regular in its flow that its working is as mechanical as the working of a natural law. Gabriel Tarde speaks of the laws of imitation. One of these laws is that the lower classes always imitate the higher classes. This is a matter of such common knowledge that hardly any individual can be found to question its validity.

That the spread of the cow-worship among and cessation of beef-eating by the non-Brahmins has taken place by reason of the habit of the non-Brahmins to imitate the Brahmins who were undoubtedly their superiors is beyond dispute. Of course there was an extensive propaganda in favour of cow-worship by the Brahmins. The Gayatri Purana is a piece of this propaganda. But initially it is the result of the natural law of imitation. This, of course, raises another question: Why did the Brahmins give up beef-eating?

CHAPTER XIII

WHAT MADE THE BRAHMINS BECOME VEGETARIANS?

THE non-Brahmins have evidently undergone a revolution. From being beef-eaters to have become non-beef-eaters was indeed a revolution. But if the non-Brahmins underwent one revolution, the Brahmins had undergone two. They gave up beef-eating which was one revolution. To have given up meat-eating altogether and become vegetarians was another revolution.

That this was a revolution is beyond question. For as has been shown in the previous chapters there was a time when the Brahmins were the greatest beef-eaters. Although the non-Brahmins did eat beef they could not have had it every day. The cow was a costly

animal and the non-Brahmins could ill afford to slaughter it just for food. He only did it on special occasion when his religious duty or personal interest to propitiate a deity compelled him to do. But the case with the Brahmin was different. He was a priest. In a period overridden by ritualism there was hardly a day on which there was no cow sacrifice to which the Brahmin was not invited by some non-Brahmin. For the Brahmin every day was a beef-steak day. The Brahmins were therefore the greatest beef-eaters. The Yajna of the Brahmins was nothing but the killing of innocent animals carried on in the name of religion with pomp and ceremony with an attempt to enshroud it in mystery with a view to conceal their appetite for beef. Some idea of this mystery pomp and ceremony can be had from the directions contained in the Atreya Brahamana touching the killing of animals in a Yajna.

The actual killing of the animal is preceded by certain initiatory Rites accompanied by incantations too long and too many to be detailed here. It is enough to give an idea of the main features of the Sacrifice. The sacrifice commences with the erection of the Sacrificial post called the Yupa to which the animal is tied before it is slaughtered. After setting out why the Yupa is necessary the Atreya Brahamana proceeds to state what it stands for. It says: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_19

"This Yupa is a weapon. Its point must have eight edges. For a weapon (or iron club) has eight edges. Whenever he strikes with it an enemy or adversary, he kills him. (This weapon serves) to put down him (every one) who is to be put down by him (the sacrificer). The Yupa is a weapon which stands erected (being ready) to slay an enemy. Thence an enemy (of the sacrificer) who might be present (at the sacrifice) comes of all ill after having seen the Yupa of such or such one."

The selection of the wood to be used for the Yupa is made to vary with the purposes which the sacrificer wishes to achieve by the sacrifice. The Atreya Brahamana says :

"He who desires heaven, ought to make his Yupa of Khadira wood. For the gods conquered the celestial world by means of a Yupa, made of Khadira wood. In the same way the sacrificer conquers the celestial world by means of a Yupa, made of Khadira wood."

"He who desires food and wishes to grow fat ought to make his

Yupa of Bilva wood. For the Bilva tree bears fruits every year; it is the symbol of fertility; for it increases (every year) in size from the roots up to the branches, therefore it is a symbol of fatness. He who having such a knowledge makes his Yupa of Bilva wood, makes fat his children and cattle.

"As regards the Yupa made of Bilva wood (it is further to be remarked), that they call light'Bilva. He who has such a knowledge becomes a light' among his own people, the most distinguished among his own people.

"He who desires beauty and sacred knowledge ought to make his Yupa of Palasa wood. For the Palasa is among the trees of beauty and sacred knowledge. He who having such a knowledge makes his Yupa of Palasa wood, becomes beautiful and acquires sacred knowledge.

"As regards the Yupa made of Palasa wood (there is further to be remarked), that the Palasa is the womb of all trees. Thence they speak on account of the palasam (foliage) of this or that tree (i.e. they call the foliage of every tree palasam). He who has such a knowledge obtains (the gratification of) any desire, he might have regarding all trees (i.e. he obtains from all trees any thing he might wish for)."

This is followed by the ceremony of anointing the sacrificial post.
[post.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables_who_were_they_why_they_became PART II.htm - _msocom_20](http://post.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables_who_were_they_why_they_became_PART_II.htm_-_msocom_20)

"The Adhvaryu says (to the Hotar):"We anoint the sacrificial post (Yupa);

repeat the mantra (required)". The Hotar then repeats the verse:"Amjanti tvam adhvarē"(3, 8, 1) i.e."The priests anoint thee, O tree! with celestial honey (butter); provide (us) with wealth if thou standest here erected, or if thou art lying on thy mother (earth)."The"celestial honey" is the melted butter (with which the priests anoint the Yupa). (The second half verse from)"provide us"&c. means:"thou mayest stand or lie, provide us with wealth."

"(The Hotar then repeats :)"jato jayate sudinatve"&c. (3, 8, 5) i.e., "After having been born, he (the Yupa) is growing (to serve) in the prime of his life the sacrifice of mortal men. The wise are busy in decorating (him, the Yupa) with skill. He, as an eloquent messenger of the gods, lifts his voice (that it might be heard by the gods)."He (the Yupa) is called jata, i.e., born, because he is born by this (by the recital of the first quarter of this verse). (By the word) vardhamana,

i.e., growing, they make him (the Yupa) grow in this manner. (By the words:) punanti (i.e. to clean, decorate), they clean him in this manner. (By the words:)"he as an eloquent messenger, &c."he announces the Yupa (the fact of his existence) to the gods.

The Hotar then concludes (the ceremony of anointing the sacrificial post) with the verse"yuva suvasah parivatah"(3, 8, 4), i.e."the youth decorated with ribands, has arrived; he is finer (than all trees) which ever grew; the wise priests raise him up under recital of well-framed thoughts of their mind."The youth decorated with ribands, is the vital air (the soul), which is covered by the limbs of the body. (By the words;)"he is finer,"&c. he means that he (the Yupa) is becoming finer (more excellent, beautiful) by this (mantra)."

The next ceremony is the carrying of fire round the sacrificial animal. The Attreya Brahmana gives the following directions on this point.

It says [mk:@MSITStore:C:\important\writing_of_babasaheb.chm::39B.Untouchables who were they_why they became PART II.htm - _msocom_21 :-](http://msitstore.c:\important\writing_of_babasaheb.chm::39B.Untouchables who were they_why they became PART II.htm - _msocom_21 :-)

"When the fire is carried round (the animal) the Adhvaryu says to the Hotar: repeat (thy mantras)'. The Hotar then repeats this triplet of verses, addressed to Agni, and composed in the Gayatri metre: Agnir Hota no adhvare (4.15.1-3) i.e. (1) Agni, our priest, is carried round about like a horse, he who is among gods, the god of sacrifices, (2) Like a charioteer Agni passes thrice by the sacrifice; to the gods he carries the offering, (3) The master of food, the seer of Agni, went round the offering; he bestows riches on the sacrificer.

"When the fire is carried round (the animal) then he makes him (Agni) prosper by means of his own deity and his own metre. 'As a horse he is carried' means: they carry him as if he were a horse, round about. Like a charioteer Agni passes thrice by the sacrifice means; he goes round the sacrifice like a charioteer (swiftly). He is called *vajapati* (master of food) because he is the master of (different kinds of) food.

"*The Adhvaryu says* : give Hotar! the additional order for despatching offerings to the gods.

"*The Hotar then says* : (to the slaughterers) : Ye divine slaughterers, commence (your work), as well as ye who are human! that is to say, he orders all the slaughterers among gods as well as among men (to commence).

Bring hither the instruments for killing, ye who are ordering the sacrifice, in behalf of the two masters of the sacrifice.

"The animal is the offering, the sacrificer the master of the offering. Thus he (the Hotar) makes prosper the sacrificer by means of his (the sacrificer's) own offering. Thence they truly say : for whatever deity the animal is killed, that one is the master of the offering. If the animal is to be offered to one deity only, the priest should say : *Medhapataye* 'to the master of the sacrifice (singular)', if to two deities, then he should use the dual 'to both masters of the offering', and if to several deities, then he should use the plural, 'to the masters' of the offering'. This is the established custom.

Bring ye for him fire! For the animal when carried (to the slaughter) saw death before it. Not wishing to go to the gods, the gods said to it: Come we will bring thee to heaven ! The animal consented and said: One of you should walk before me. They consented. Agni then walked before it, and it followed after Agni. Thence they say, every animal belongs to Agni, for it followed after him. Thence they carry before the animal fire (Agni).

Spread the (sacred) grass! the animal lives on herbs. He (the Hotar) thus provides the animal with its entire soul (the herbs being supposed to form part of it).

After the ceremony of carrying fire round the animal comes the delivery of the animal to the priests for sacrifice. Who should offer the animal for sacrifice? On this point the direction of the Atreya Brahmana

[ismk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_22](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_22) -

"The mother, the father, the brother, sister, friend, and companions should give this (animal) up (for being slaughtered)! When these words are pronounced, they seize the animal which is (regarded as) entirely given up by its relations (parents, &c.)"

On reading this direction one wonders why almost everybody is required to join in offering the animal for sacrifice. The reason is simple. There were altogether seventeen Brahmin priests who were entitled to take part in performing the sacrifice. Naturally enough they wanted the whole carcass to themselves.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_23 Indeed they could not give enough to each of the seventeen priests unless they had the whole carcass to distribute. Legally the Brahmins could not claim the whole carcass unless everybody who could not claim any right over the animal had been divested of it. Hence the direction requiring

even the companion of the sacrificer to take part in offering the animal.

Then comes the ceremony of actually killing the animal. The Atreya Brahmana gives the details of the mode and manner of killing the animal. Its directions

are [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_24](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm%20-_msocom_24%3A) :

"Turn its feet northwards! Make its eye to go to the sun, dismiss its breath to the wind, its life to the air, its hearing to the directions, its body to the earth. In this way he (the Hotar) places it (connects it) with these worlds.

Take off the skin entire (without cutting it). Before operating the naval, tear out omentum. Stop its breathing within (by stopping its mouth). Thus he (the Hotar) puts its breath in the animals.

Make of its breast a piece like an eagle, of its arms (two pieces like) two hatchets, of its forearms (two pieces like) two spikes, of its shoulders (two pieces like) two Kashyapas, its loins should be un-broken (entire); (make of) its thighs (two pieces like) two shields, of the two kneepans (two pieces like) two oleander leaves; take out its twenty-six ribs according to their order; preserve every limb of it in its integrity. Thus he benefits all its limbs."

There remain two ceremonies to complete the sacrificial killing of the animal. One is to absolve the Brahmin priests who played the butcher's part. Theoretically they are guilty of murder for the animal is only a substitute for the sacrificer. To absolve them from the consequences of murder, the Hotar is directed by the Atreya Brahmana to observe the following injunction [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm%20-_msocom_25%3A)

[who were they_why they became PART II.htm - _msocom_25](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm%20-_msocom_25%3A):

"Do not cut the entrails which resemble an owl (when taking out the omentum), nor should among your children, O slaughterers! or among their offspring any one be found who might cut them. By speaking these words he presents these entrails to the slaughterers among the gods as well as to those among men.

The Hotar shall then say thrice : O *Adhrigu* (and ye others), *kill* (the animal), *do it well*; kill it, O *Adhrigu*.

After the animal has been killed, (he should say thrice:) *Far may it* (the consequences of murder) be (from us). For *Adhrigu* among the gods is he who silences (the animal) and the *Apapa* (away, away!) is he who puts it down. By speaking those words he surrenders the animal to those who silence it (by stopping its mouth) and to those

who butcher it

The Hotar then mutters (he makes, *Japa*); "O slaughterers! may all good you might do abide by us! and all mischief you might do go elsewhere!" The Hotar Gives by (this) speech the order (for killing the animal), for Agni had given the order for killing (the animal) with the same words when he was the Hotar of the gods.

By those words (the *Japa* mentioned) the Hotar removes (all evil consequences) from those who suffocate the animal and those who butter it, in all that they might transgress the rule by cutting one piece too soon, the other too late, or by cutting a too large, or a too small piece. The Hotar enjoying this happiness clears himself (from all guilt) and attains the full length of his life (and it serves the sacrificer) for obtaining his full life. He who has such a knowledge, attains the full length of his life."

The Attreya Bramhana next deals with the question of disposing of the parts of the dead animal. In this connection its direction is mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_26-

"*Dig a ditch in the earth to hide its excrements.* The excrements consist of vegetable food; for the earth is the place for the herbs. Thus the Hotar puts them (the excrements) finally in their proper places. *Present the evil spirits with the blood!* For the gods having deprived (once) the evil spirits of their share in the Haviryajnas (such as the Pull and New Moon offerings) apportioned to them the husk and smallest grains, and after having them turned out of the great sacrifice (such as the *Soma* and animal sacrifices), presented to them the blood. Thence the Hotar pronounces the words : *present the evil spirits with the blood!* By giving them this share he deprives the evil spirits of any other share in the sacrifice. They say : one should not address the evil spirits in the sacrifice, and evil spirits whichever they might be (Rakshasa, Asuras etc.) : for the sacrifice is to be without (the) evil spirits (not to be disturbed by them). But others say: one should address them; for (he who deprives any one,"entitled to a share of this share, will be punished (by him whom he deprives); and if he himself does not suffer the penalty, then his son, and if his son be spared, then his grandson tviU suffer it, and thus he resents on him (the son or grandson) what he wanted to resent on you."

"However, if the Hotar addresses them, he should do so with a low voice. For both, the low voice and the evil spirits, are, as it

were, hidden. If he addresses them with a loud voice, then such one speaks in the voice of the evil spirits, and is capable of producing Rakshasa sounds (a horrible, terrific voice). The voice in which the haughty man *and* the drunkard speak is that *of* the evil spirits (Rakshasas). He who has such a knowledge will neither himself become haughty nor will such a man be among his offspring.”

Then follows the last and the concluding ceremony that of offering parts of the body of the animal to the gods. It is called the Manota.

According to the Atreya Brahmanamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_27-

"The Adhvaryu says (to the Hotar) : recite the verses appropriate to the offering of the parts of the sacrificial animal which are cut off for the Manota. He then repeats the hymn : Thou, O Agni, art the first Manotamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_28 (6.1)"

There remains the question of sharing the flesh of the animal. On this issue the division was settled by the Atreya Brahmana in the following

terms:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_29

"Now follows the division of the different parts of the sacrificial animal (among the priests). We shall describe it. The two jawbones with the tongue are to be given to the Prastotar, the breast in the form of an eagle to the Udgatar, the throat with the palate to the Ptatihartar, the lower part of the right loins to the Hotar: the left to the Brahma; the right thigh to *the* Maitravaruna; the left to the Brahmanachhamsi; the right side with the shoulder to the Adhvaryu; the left side to those who accompany the chants; the left shoulder to the Pratipashatar; the lower part of the right arm to the Neshtar; the lower part of the left arm to the Potar; the upper of the right thigh to the Achhavaka; the left to the Agnidhara; the upper part of the right arm to the Atreya; the left to the Sadasya; the back bone and the urinal bladder to the Grihapati (sacrificer); the right feet to the Grihapati who gives a feasting; the left feet to the wife of that Grihapati who gives a feasting; the upper lip is common to both (the Grihapati and his wife), which is to be divided by the Grihapati. They offer the tail of the animal to wives, but they should give it to a Brahmana; the fleshy processes (*manikah*) on the neck and three gristles (*fakasah*) to the Gravastut;

three other gristles and one-half of the fleshy part (on the back (*vaikartta*) to the Unnetar; the other half of the fleshy part on the neck and the left lobe (*kloma*) to the slaughterer, who should present it to a Brahmana, if he himself would *not* happen to be a Brahmana. The head is to be given to the Subrahmanya, the skin belongs to him (the Subrahmanya), who spoke, *svah sutyam* (tomorrow at the Soma sacrifice); that part of the sacrificial animal at a Soma sacrifice which belongs to Ha (sacrificial food) is common to all the priests; only for the Hotar it is optional.

All these portions of the sacrificial animal amount to thirtysix single pieces, each of which represents the pada (foot) of a verse by which the sacrifice is carried up. The Brihati metre consists of thirtysix syllables; and the heavenly worlds are of the Brihati nature. In this way (by dividing the animal into thirtysix parts) they gain life (in this world) and the heavens, and having become established in both (this and that world) they walk there.

To those who divide the sacrificial animal in the way mentioned, it becomes the guide to heaven. But those who make the division otherwise are like scoundrels and miscreants who kill an animal merely (for gratifying their lust after flesh). This division of the sacrificial animal was invented by the Rishi (*Devabhaga*, a son of *Sruta*). When he was departing from this life, he did not entrust (the secret to anyone). But a supernatural being communicated it to *Girija*, the son of *Babhru*. Since his time men study it."

What is said by the Atreya Brahmana places two things beyond dispute. One is that the Brahmins monopolised the whole of the flesh of the sacrificial animal. Except for a paltry bit they did not even 'allow the sacrificer to share in it. The second is that the Brahmins themselves played the part of butchers in the slaughter of the animal. As a matter of principle the Brahmins should not eat the flesh of the animal killed at a sacrifice. The principle underlying Yajna is that man should offer himself as sacrifice to the gods. He offers an animal only to release himself from this obligation. From this it followed that the animal, being only a substitute for the man, eating the flesh of animal meant eating human flesh. This theory was very detrimental to the interest of the Brahmins who had a complete monopoly of the flesh of the animal offered for sacrifice. The Atreya Brahmana which had seen in this theory the danger of the Brahmins being deprived of the flesh of sacrificial animal takes pains to explain away the theory by a simple negation. It

saysmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_30 :

"The man who is initiated (into the sacrificial mysteries) *offers* himself to all deities. Agni represents all deities and Soma represents all deities. When he (the sacrificer) offers the animal to Agni-Soma he releases himself (by being represented by the animal) from being offered to all deities.

They say:"do not eat from the animal offered to Agni-Soma. Who eats from this animal, eats from human flesh; because the sacrificer releases himself (from •being sacrificed) by means of the animal". But this (precept) is not to be attended to."

Given these facts, no further evidence seems to be necessary to support the statement that the Brahmins were not merely beef-eaters but they were also butchers.

Why then did the Brahmins change front? Let us deal with their change of front in two stages. First, why did they give up beef-eating?

II

As has already been shown cow-killing was not legally prohibited by Asoka. Even if it had been prohibited, a law made by the Buddhist Emperor could never have been accepted by the Brahmins as binding upon them.

Did Manu prohibit beef-eating? If he did, then that would be binding on the Brahmins and would afford an adequate explanation of their change of front. Looking into the Manu Smriti one does find the following verses:

"V. 46. He who does not seek to cause the sufferings of bonds and death to living creatures, (but) desires the good of all (beings), obtains endless bliss.

"V. 47. He who does not injure any (creature), attains without an effort what he thinks of, what he undertakes, and what he fixes his mind on.

"V. 48. Meat can never be obtained without injury to living creatures, and injury to sentient beings is detrimental to (the attainment of) heavenly bliss; let him therefore shun (the use of) meat.

"V. 49. Having well considered the (disgusting) origin of flesh and

the (cruelty of) fettering and slaying corporeal beings, let him entirely abstain from eating flesh."

If these verses can be treated as containing positive injunctions they would be sufficient to explain why the Brahmins gave up meat-eating and became vegetarians. But it is impossible to treat these verses as positive injunctions, carrying the force of law. They are either exhortations or interpolations introduced after the Brahmins had become vegetarians in praise of the change. That the latter is the correct view is proved by the following verses which occur in the same chapter of the Manu Smriti. :

- "V. 28 : The Lord of creatures (Prajapati) created this whole (world to be) the sustenance of the vital spirit; both the immovable and the movable creation is the food of the vital spirit.
- "V. 29. What is destitute of motion is the food of those endowed with locomotion; (animals) without fangs (are the food) of those with fangs, those without hands of those who possess hands, and the timid of the bold.
- "V. 30. The eater who daily even devours those destined to be his food, commits no sin; for the creator himself created both the eaters and those who are to be eaten (for those special purposes).
- "V. 56. There is no sin in eating meat, in (drinking) spirituous liquor, and in carnal intercourse, for that is the natural way of created beings, but abstention brings great rewards.
- "V. 27. . One may eat meat when it has been sprinkled with water, while Mantras were recited, when Brahmanas desire (one's doing it) when one is engaged (in the performance of a rite) according to the law, and when one's life is in danger.
- "V. 31. The consumption of meat (is befitting) for sacrifices,' that is declared to be a rule made by the gods, but to persist (in using it) on other (occasions) is said to be a proceeding worthy of Rakshasas.
- "V. 32. He who eats meat, when he honours the gods and manes commits no sin, whether *he* has bought it, or himself has killed (the animal) or has received it as a present from others.
- "V. 42. A twice-born man who, knowing the true meaning of the Veda, slays an animal for these purposes, causes both himself and the animal to *enter* a most blessed state.

"V. 39. Swayambhu (the self-existent) himself created animals for the sake of sacrifices; sacrifices (have been instituted) for the good of this whole (world); hence the slaughtering (of beasts) for sacrifice is not slaughtering (in the ordinary sense of the word).

"V. 40. Herbs, trees, cattle, birds, and other animals that have been destroyed for sacrifices, receive (being reborn) higher existences."

Manu goes further and makes eating of flesh compulsory. Note the following verse :-

"V. 35. But a man who, being duly engaged (to officiate or to dine at a sacred rite), refuses to eat meat, becomes after death an animal during twentyone existences."

That Manu did not prohibit meat-eating is evident enough. That Manu Smriti did not prohibit cow-killing can also be proved from the Smriti itself. In the first place, the only references to cow in the Manu Smriti are to be found in the catalogue of rules which are made applicable by Manu to the Snataka. They are set out below:-

1. 1. A Snataka should not eat food which a cow has smelt.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_31
2. 2. A Snataka should not step over a rope to which a calf is tied.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_32
3. 3. A Snataka should not urinate in a cowpan.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_33
4. 4. A Snataka should not answer call of nature facing a cow.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_34
5. 5. A Snataka should not keep his right arm uncovered when he enters a cowpan.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_35
6. 6. A Snataka should not interrupt a cow which is sucking her calf, nor tell anybody of it.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_36

- [were they_why they became PART II.htm - _msocom_36](#)
7. 7. A Snataka should not ride on the back of the cow.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables
[who were they_why they became PART II.htm - _msocom_37](#)
8. 8. A Snataka should not offend the cow.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables
[who were they_why they became PART II.htm - _msocom_38](#)
9. 9. A Snataka who is impure must not touch a cow with his hand.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables
[who were they_why they became PART II.htm - _msocom_39](#)

From these references it will be seen that Manu did not regard the cow as a sacred animal. On the other hand, he regarded it as an impure animal whose touch caused ceremonial pollution.

There are verses in Manu which show that he did not prohibit the eating of beef. In this connection, reference may be made to Chapter III. 3. It says :-

"He (Snataka) who is famous (for the strict performance of) his duties and has received his heritage, the Veda from his father, shall be honoured, sitting on couch and adomed with a garland with the present of a cow (the honey-mixture)."

The question is why should Manu recommend the gift of a cow to a Snataka? Obviously, to enable him to perform Madhuparka. If that is so, it follows that Manu knew that Brahmins did eat beef and he had no objection to it.

Another reference would be to Manu's discussion of the animals whose meat is eatable and those, whose meat is not. In Chapter V.18. he says :-

"The porcupine, the hedgehog, the iguana, the rhinoceros, the tortoise, and the hare they declare to be eatable, likewise those (domestic animals) that have teeth in one jaw only, excepting camels."

In this verse Manu gives general permission to eat the flesh of all domestic animals that have teeth in one jaw only. To this rule Manu makes one exception, namely, the camel. In this class of domestic animals those that have teeth in one jaw only- falls not only the camel but also the cow. It is noteworthy that Manu does not make an exception in the case of the cow. This means that Manu had no objection to the eating of the cow's flesh.

Manu did not make the killing of the cow an offence. Manu divides

sins into two classes (i) mortal sins and (ii) minor sins. Among the mortal sins Manu includes :

"XI. 55. Killing a Brahmana, drinking (the spirituous liquor called Sura) stealing the (gold of Brahmana) a adultery with a Gum's wife, and associating with such offenders."Among minor sins Manu includes:

"XI. 60. Killing the cow, sacrificing for those unworthy to sacrifice, adultery, setting oneself, casting off one's teacher, mother, father or son, giving up the (daily) study of the Veda and neglecting the (sacred domestic) fire."

From this it will be clear that according to Manu cow-killing was only a minor sin. It was reprehensible only if the cow was killed without good and sufficient reason. Even if it was otherwise, it was not heinous or inexplicable. The same was the attitude of Yajnavalkyamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_40'

All this proves that for generations the Brahmins had been eating beef. Why did they give up beef-eating? Why did they, as an extreme step, give up meat eating altogether and become vegetarians? It is two revolutions rolled into one. As has been shown it has not been done as a result of the preachings of Manu, their Divine Law-maker. The revolution has taken place in spite of Manu and contrary to his directions. What made the Brahmins take this step? Was philosophy responsible for it? Or was it dictated by strategy?

Two explanations are offered. One explanation is that this deification of the cow was a manifestation of the Advaita philosophy that one supreme entity pervaded the whole universe, that on that account all life human as well as animal was sacred. This explanation is obviously unsatisfactory. In the first place, it does not fit in with facts. The Vedanta Sutra which proclaims the doctrine of oneness of life does not prohibit the killing of animals for sacrificial purposes as is evident from 11.1.28. In the second place, if the transformation was due to the desire to realise the ideal of Advaita then there is no reason why it should have stopped with the cow. It should have extended to all other animals.

Another explanationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_41 more ingenious than the first, is that this transformation in the life of the Brahmin was due to

the rise of the doctrine of the Transmigration of the Soul. Even this explanation does not fit in with facts. The Brahadamyaka Upanishad upholds the doctrine of transmigration (vi.2) and yet recommends that if a man desires to have a learned son born to him he should prepare a mass of the flesh of the bull or ox or of other flesh with rice and ghee. Again, how is it that this doctrine which is propounded in the Upanishads did not have any effect on the Brahmins upto the time of the Manu Smriti, a period of at least 400 years. Obviously, this explanation is no explanation. Thirdly, if Brahmins became vegetarians by reason of the doctrine of transmigration of the soul how is it, it did not make the non-Brahmins take to vegetarianism?

To my mind, it was strategy which made the Brahmins give up beef-eating and start worshipping the cow. The clue to the worship of the cow is to be found in the struggle between Buddhism and Brahmanism and the means adopted by Brahmanism to establish its supremacy over Buddhism. The strife between Buddhism and Brahmanism is a crucial fact in Indian history. Without the realisation of this fact, it is impossible to explain some of the features of Hinduism. Unfortunately students of Indian history have entirely missed the importance of this strife. They knew there was Brahmanism. But they seem to be entirely unaware of the struggle for supremacy in which these creeds were engaged and that their struggle, which extended for 400 years has left some indelible marks on religion, society and politics of India.

This is not the place for describing the full story of the struggle. All one can do is to mention a few salient points. Buddhism was at one time the religion of the majority of the people of India. It continued to be the religion of the masses for hundreds of years. It attacked Brahmanism on all sides as no religion had done before.

Brahmanism was on the wane and if not on the wane, it was certainly on the defensive. As a result of the spread of Buddhism, the Brahmins had lost all power and prestige at the Royal Court and among the people. They were smarting under the defeat they had suffered at the hands of Buddhism and were making all possible efforts to regain their power and prestige. Buddhism had made so deep an impression on the minds of the masses and had taken such a hold of them that it was absolutely impossible for the Brahmins to fight the Buddhists except by accepting their ways and means and practising the Buddhist creed in its extreme form. After the death of

Buddha his followers started setting up the images of the Buddha and building stupas. The Brahmins followed it. They, in their turn, built temples and installed in them images of Shiva, Vishnu and Ram and Krishna etc.,-all with the object of drawing away the crowd that was attracted by the image worship of Buddha. That is how temples and images which had no place in Brahmanism came into Hinduism. The Buddhists rejected the Brahmanic religion which consisted of Yajna and animal sacrifice, particularly of the cow. The objection to the sacrifice of the cow had taken a strong hold of the minds of the masses especially as they were an agricultural population and the cow was a very useful animal. The Brahmins in all probability had come to be hated as the killer of cows in the same way as the guest had come to be hated as *Goghna*, the killer of the cow by the householder, because whenever he came a cow had to be killed in his honour. That being the case, the Brahmins could do nothing to improve their position against the Buddhists except by giving up the Yajna as a form of worship and the sacrifice of the cow.

That the object of the Brahmins in giving up beef-eating was to snatch away from the Buddhist Bhikshus the supremacy they had acquired is evidenced by the adoption of vegetarianism by Brahmins. Why did the Brahmins become vegetarian? The answer is that without becoming vegetarian the Brahmins could not have recovered the ground they had lost to their rival namely Buddhism. In this connection it must be remembered that there was one aspect in which Brahmanism suffered in public esteem as compared to Buddhism. That was the practice of animal sacrifice which was the essence of Brahmanism and to which Buddhism was deadly opposed. That in an agricultural population there should be respect for Buddhism and revulsion against Brahmanism which involved slaughter of animals including cows and bullocks is only natural. What could the Brahmins do to recover the lost ground? To go one better than the Buddhist Bhikshus not only to give up meat-eating but to become vegetarians- which they did. That this was the object of the Brahmins in becoming vegetarians can be proved in various ways.

If the Brahmins had acted from conviction that animal sacrifice was bad, all that was necessary for them to do was to give up killing animals for sacrifice. It was unnecessary for them to be vegetarians. That they did go in for vegetarianism makes it obvious that their motive was far-reaching. Secondly, it was unnecessary for them to

become vegetarians. For the Buddhist Bhikshus were not vegetarians. This statement might surprise many people owing to the popular belief that the connection between Ahimsa and Buddhism was immediate and essential. It is generally believed that the Buddhist Bhikshus eschewed animal food. This is an error. The fact is that the Buddhist Bhikshus were permitted to eat three kinds of flesh that were deemed pure. Later on they were extended to five classes. Yuan Chwang, the Chinese traveller was aware of this and spoke of the pure kinds of flesh as *San-Ching*. The origin of this practice among the Bhikshus is explained by Mr. Thomas Walters. According to the story told by himmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_42-

"In the time of Buddha there was in Vaisali a wealthy *general* named Siha who was a convert to Buddhism. He became a liberal supporter of the Brethren and kept them constantly supplied with good flesh-food. When it was noticed abroad that the Bhikshus were in the habit of eating such food specially provided for them, the Tirthikas made the practice a matter of angry reproach. Then the abstemious ascetic Brethren, learning this, reported the circumstances to the Master, who thereupon called the Brethren together. When they assembled, he announced to them the law that they were not to eat the flesh of any animal which they had seen put to death for them, or about which they had been told that it had been slain for them. But he permitted to the Brethren as 'pure' (that is, lawful) food the flesh of animals the slaughter of which had not been seen by the Bhikshus, not heard of by them, and not suspected by them to have been on their account. In the Pali and *Ssu-fen* Vinaya it was after a breakfast given by Siha to the Buddha and some of the Brethren, for which the carcass of a large ox was procured that the Nirgianthas reviled the Bhikshus and Buddha instituted this new rule declaring fish and flesh 'pure' in the three conditions. The animal food now permitted to the Bhikshus came to be known as the 'three pures' or 'three pure kinds of flesh', and it was tersely described as 'unseen, unheard, unsuspected', or as the Chinese translations sometimes have it 'not seen, not heard nor suspected to be on my account'. Then two more kinds of animal food were declared 'lawful for the Brethren viz., the flesh of animals which had died a natural death, and that of animals which had been killed by a bird of prey or other savage creature. So there

came to be five classes or descriptions of flesh which the professed Buddhist was at liberty to use as food. Then the 'unseen, unheard, unsuspected' came to be treated as one class, and this together with the 'natural death' and 'bird killed' made a *san-ching*"

As the Buddhist Bhikshus did eat meat the Brahmins had no reason to give it up. Why then did the Brahmins give up meat-eating and become vegetarians? It was because they did not want to put themselves merely on the same footing in the eyes of the public as the Buddhist Bhikshus.

The giving up of the Yajna system and abandonment of the sacrifice of the cow could have had only a limited effect. At the most it would have put the Brahmins on the same footing as the Buddhists. The same would have been the case if they had followed the rules observed by the Buddhist Bhikshus in the matter of meat-eating. It could not have given the Brahmins the means of achieving supremacy over the Buddhists which was their ambition. They wanted to oust the Buddhists from the place of honour and respect which they had acquired in the minds of the masses by their opposition to the killing of the cow for sacrificial purposes. To achieve their purpose the Brahmins had to adopt the usual tactics of a wreckless adventurer. It is to beat extremism by extremism. It is the strategy which all rightists use to overcome the leftists. The only way to beat the Buddhists was to go a step further and be vegetarians.

There is another reason which can be relied upon to support the thesis that the Brahmins started cow-worship gave up beef-eating and became vegetarians in order to vanquish Buddhism. It is the date when cow-killing became a mortal sin. It is well-known that cow-killing was not made an offence by Asoka. Many people expect him to have come forward to prohibit the killing of the cow. Prof. Vincent Smith regards it as surprising. But there is nothing surprising in it.

Buddhism was against animal sacrifice in general. It had no particular affection for the Cow. Asoka had therefore no particular reason to make a law to save the cow. What is more astonishing is the fact that cow-killing was made a *Mahapataka*, a mortal sin or a capital offence by the Gupta Kings who were champions of Hinduism which recognised and sanctioned the killing of the cow for sacrificial purposes. As pointed out by Mr. D. R. Bhandarkar [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm) - [_msocom_43-](#)

"We have got the incontrovertible evidence of inscriptions to show that early in the 5th century A. D. killing a cow was looked upon as an offence of the deepest turpitude, turpitude as deep as that involved in murdering a Brahman. We have thus a copper-plate inscription dated 465 A.D. and referring itself to the reign of Skandagupta of the Imperial Gupta dynasty. It registers a grant and ends with a verse saying : 'Whosoever will transgress this grant that has been assigned (shall become as guilty as) the slayer of a cow, the slayer of a spiritual preceptor (or) the slayer of a Brahman. A still earlier record placing *go-hatya* on the same footing as *brahma hatya* is that of Chandragupta II, grandfather of Skandagupta just mentioned. It bears the Gupta date 93, which is equivalent to 412 A.D. It is engraved on the railing which surrounds the celebrated Buddhist stupa at Sanchi, in Central India. This also speaks of a benefaction made by an officer of Chandragupta and ends as follows :"Whosoever shall interfere with this arrangement .. he shall become invested with (the guilt of) the slaughter of a cow or of a Brahman, and with (the guilt of) the five *anantarya*"Here the object of this statement is to threaten the resumer of the grant, be he a Brahminist or a Biddhist, with the sins regarded as mortal by each community. The *anantaryas* are the five *mahapatakas* according to Buddhist theology. They are: matricide, patricide, killing an Arhat, shedding the blood of a Buddha, and causing a split among the priesthood. The *mahapatakas* with which a Brahminist is here threatened are only two : viz., the killing of a cow and the murdering of a Brahman. The latter is obviously a *mahapataka* as it is mentioned as such in all the Smritis, but the former has been specified only an upapataka by Apastamba, Manu, Yajnavalkya and so forth. But the very fact that it is here associated with *brahma-hatya* and both have been put on a par with the *anantaryas* of the Buddhists shows that in the beginning of the fifth century A.D., it was raised to the category of *mahapatakas*. Thus *go-hatya* must have come to be considered a *mahapataka* at least one century earlier, i.e., about the commencement of the fourth century A.D."

The question is why should a Hindu king have come forward to make a law against cow-killing, that is to say, against the Laws of Manu? The answer is that the Brahmins had to suspend or abrogate a requirement of their Vedic religion in order to overcome the supremacy of the Buddhist Bhikshus. If the analysis is correct then it is obvious that the worship of the cow is the result of the struggle

between Buddhism and Brahminism. It was a means adopted by the Brahmins to regain their lost position.

CHAPTER XIV

WHY SHOULD BEEF-EATING MAKE BROKEN MEN UNTOUCHABLES?

THE stoppage of beef-eating by the Brahmins and the non-Brahmins and the continued use thereof by the Broken Men had produced a situation which was different from the old. This difference lay in the fact that while in the old situation everybody ate beef, in the new -situation one section did not and another did. The difference was a glaring difference. Everybody could see it. It divided society as nothing else did before. All the same, this difference need not have given rise to such extreme division of society as is marked by Untouchability. It could have remained a social difference. There are many cases where different sections of the community differ in their foods. What one likes the other dislikes and yet this difference does not create a bar between the two.

There must therefore be some special reason why in India the difference between the Settled Community and the Broken Men in the matter of beef eating created a bar between the two. What can that be? The answer is that if beef-eating had remained a secular affair—a mere matter of individual taste—such a bar between those who ate beef and those who did not would not have arisen. Unfortunately beef-eating, instead of being treated as a purely secular matter, was made a matter of religion. This happened because the Brahmins made the cow a sacred animal. This made beef-eating a sacrilege. The Broken Men being guilty of sacrilege necessarily became beyond the pale of society.

The answer may not be quite clear to those who have no idea of the scope and function of religion in the life of the society. They may ask: Why should religion make such a difference? It will be clear if the following points regarding the scope and function of religion are borne in mind.

To begin with the definition of religion. There is one universal feature which characterises all religions. This feature lies in

religion being a unified system of beliefs and practices which (1) relate to sacred things and (2) which unite into one single community all those who adhere to them. To put it slightly differently, there are two elements in every religion. One is that religion is inseparable from sacred things. The other is that religion is a collective thing inseparable from society.

The first element in religion presupposes a classification of all things, real and ideal, which are the subject-matter of man's thought, into two distinct classes which are generally designated by two distinct terms the *sacred* and the *profane*, popularly spoken of as secular.

This defines the scope of religion. For understanding the function of religion the following points regarding things sacred should be noted:

The first thing to note is that things sacred are not merely higher than or superior in dignity and status to those that are profane. They are just different. The sacred and the profane do not belong to the same class. There is a complete dichotomy between the two. As Prof. Durkhiem

observes mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_45 :-

"The traditional opposition of good and bad is nothing beside this; for the good and the bad are only two opposed species of the same class, namely, morals, just as sickness and health are two different aspects of the same order of facts, life, while the sacred and the profane have always and everywhere been conceived by the human mind as two distinct classes, as two worlds between which there is nothing in common."

The curious may want to know what has led men to see in this world this dichotomy between the sacred and the profane. We must however refuse to enter into this discussion as it is unnecessary for the immediate purpose we have in mind. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_46

Confining ourselves to the issue the next thing to note is that the circle of sacred objects is not fixed. Its extent varies infinitely from religion to religion. Gods and spirits are not the only sacred things. A rock, a tree, an animal, a spring, a pebble, a piece of wood, a house, in a word anything can be sacred.

Things sacred are always associated with interdictions otherwise

called *taboos*. To quote Prof. Durkhiem [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_47](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm%20-%20_msocom_47) again :

"Sacred things are those which the interdictions protect and isolate; profane things, those to which these interdictions are applied and which must remain at a distance from the first"

Religious interdicts take multiple forms. Most important of these is the interdiction on contact. The interdiction on contact rests upon the principle that the profane should never touch the sacred. Contact may be established in a variety of ways other than touch. A look is a means of contact. That is why the sight of sacred things is forbidden to the profane in certain cases. For instance, women are not allowed to see certain things which are regarded as sacred. The word (i.e., the breath which forms part of man and which spreads outside him) is another means of contact. That is why the profane is forbidden to address the sacred things or to utter them. For instance, the Veda must be uttered only by the Brahmin and not by the Shudra. An exceptionally intimate contact is the one resulting from the absorption of food. Hence comes the interdiction against eating the sacred animals or vegetables.

The interdictions relating to the sacred are not open to discussion. They are beyond discussion and must be accepted without question. The sacred is 'untouchable' in the sense that it is beyond the pale of debate. All that one can do is to respect and obey.

Lastly the interdictions relating to the sacred are binding on all. They are not maxims. They are injunctions. They are obligatory but not in the ordinary sense of the word. They partake of the nature of a categorical imperative. Their breach is more than a crime. It is a sacrilege.

The above summary should be enough for an understanding of the scope and function of religion. It is unnecessary to enlarge upon the subject further. The analysis of the working of the laws of the sacred which is the core of religion should enable any one to see that my answer to the question why beef-eating should make the Broken Men untouchables is the correct one. All that is necessary to reach the answer I have proposed is to read the analysis of the working of the laws of the sacred with the cow as the sacred object. It will be found that Untouchability is the result of the breach of the interdiction against the eating of the sacred animal, namely, the cow.

As has been said, the Brahmins made the cow a sacred animal. They

did not stop to make a difference between a living cow and a dead cow. The cow was sacred, living or dead. Beef-eating was not merely a crime. If it was only a crime it would have involved nothing more than punishment. Beef-eating was made a sacrilege. Anyone who treated the cow as profane was guilty of sin and unfit for association. The Broken Men who continued to eat beef became guilty of sacrilege.

Once the cow became sacred and the Broken Men continued to eat beef, there was no other fate left for the Broken Men except to be treated unfit for association, i.e., as Untouchables.

Before closing the subject it may be desirable to dispose of possible objections to the thesis. Two such objections to the thesis appear obvious. One is what evidence is there that the Broken Men did eat the flesh of the dead cow. The second is why did they not give up beef-eating when the Brahmins and the non-Brahmins abandoned it. These questions have an important bearing upon the theory of the origin of untouchability advanced in this book and must therefore be dealt with.

The first question is relevant as well as crucial. If the Broken Men were eating beef from the very beginning, then obviously the theory cannot stand. For, if they were eating beef from the very beginning and nonetheless were not treated as Untouchables, to say that the Broken Men became Untouchables because of beef-eating would be illogical if not senseless. The second question is relevant, if not crucial. If the Brahmins gave up beef-eating and the non-Brahmins imitated them why did the Broken Men not do the same? If the law made the killing of the cow a capital sin because the cow became a sacred animal to the Brahmins and non-Brahmins, why were the Broken Men not stopped from eating beef? If they had been stopped from eating beef there would have been no Untouchability.

The answer to the first question is that even during the period when beef-eating was common to both, the Settled Tribesmen and the Broken Men, a system had grown up whereby the Settled Community ate fresh beef, while the Broken Men ate the flesh of the dead cow. We have no positive evidence to show that members of the Settled Community never ate the flesh of the dead cow. But we have negative evidence which shows that the dead cow had become an exclusive possession and perquisite of the Broken Men. The evidence consists of facts which relate to the Mahars of the Maharashtra to whom reference has already been made. As has

already been pointed out, the Mahars of the Maharashtra claim the right to take the dead animal. This right they claim against every Hindu in the village. This means that no Hindu can eat the flesh of his own animal when it dies. He has to surrender it to the Mahar. This is merely another way of stating that when eating beef was a common practice the Mahars ate dead beef and the Hindus ate fresh beef. The only questions that arise are : Whether what is true of the present is true of the ancient past? Can this fact which is true of the Maharashtra be taken as typical of the arrangement between the Settled Tribes and the Broken Men throughout India.

In this connection reference may be made to the tradition current among the Mahars according to which they claim that they were given 52 rights against the Hindu villagers by the Muslim King of Bedar. Assuming that they were given by the King of Bedar, the King obviously did not create them for the first time. They must have been in existence from the ancient past. What the King did was merely to confirm them. This means that the practice of the Broken Men eating dead meat and the Settled Tribes eating fresh meat must have grown in the ancient past. That such an arrangement should grow up is certainly most natural. The Settled Community was a wealthy community with agriculture and cattle as means of livelihood. The Broken Men were a community of paupers with no means of livelihood and entirely dependent upon the Settled Community. The principal item of food for both was beef. It was possible for the Settled Community to kill an animal for food because it was possessed of cattle. The Broken Men could not for they had none. Would it be unnatural in these circumstances for the Settled Community to have agreed to give to the Broken Men its dead animals as part of their wages of watch and ward? Surely not. It can therefore be taken for granted that in the ancient past when both the Settled Community and Broken Men did eat beef the former ate fresh beef and the latter of the dead cow and that this system represented a universal state of affairs throughout India and was not confined to the Maharashtra alone.

This disposes of the first objection. To turn to the second objection. The law made by the Gupta Emperors was intended to prevent those who killed cows. It did not apply to the Broken Men. For they did not kill the cow. They only ate the dead cow. Their conduct did not contravene the law against cow-killing. The practice of eating the flesh of the dead cow therefore was allowed to

continue. Nor did their conduct contravene the doctrine of Ahimsa assuming that it has anything to do with the abandonment of beef-eating by the Brahmins and the non-Brahmins. Killing the cow was *Himsa*. But eating the dead cow was not. The Broken Men had therefore no cause for feeling qualms of conscience in continuing to eat the dead cow. Neither the law nor the doctrine of *Himsa* could interdict what they were doing, for what they were doing was neither contrary to law nor to the doctrine.

As to why they did not imitate the Brahmins and the non-Brahmins the answer is two fold. In the first place, imitation was too costly. They could not afford it. The flesh of the dead cow was their principal sustenance. Without it they would starve. In the second place, carrying the dead cow had become an obligation [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_48](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm_-_msocom_48) though originally it was a privilege. As they could not escape carrying the dead cow they did not mind using the flesh as food in the manner in which they were doing previously.

The objections therefore do not invalidate the thesis in any way.

PART VI

UNTOUCHABILITY AND THE DATE OF ITS BIRTH

CHAPTER XV

THE IMPURE AND THE UNTOUCHABLES

I

WHEN did Untouchability come into existence? The orthodox Hindus insist that it is very ancient in its origin. In support of their contention reliance is placed on the fact that the observance of Untouchability is enjoined not merely by the Smritis which are of a later date but it is also enjoined by the Dharma Sutras which are much earlier and which, according to certain authors, date some centuries before B.C.

In a study devoted to exploring the origin of Untouchability the question one must begin with is : Is Untouchability as old as is suggested to be?

For an answer to this question one has to examine the Dharma Sutras in order to ascertain what they mean when they refer to Untouchability and to the Untouchables. Do they mean by Untouchability what we understand by it to-day? Do the class, to which they refer. Untouchables in the sense in which we use the term Untouchables to-day?

To begin with the first question. An examination of the Dharma Sutras no doubt shows that they speak of a class whom they call Asprashya. There is also no doubt that the term Asprashya does mean Untouchables. The question however remains whether the Asprashya of the Dharma Sutras are the same as the Asprashya of modern India. This question becomes important when it is realised that the Dharma Sutras also use a variety of other terms such as Antya, Antyaja, Antyevasin and Bahya. These terms are also used by the later Smritis. It might be well to have some idea of the use of these terms by the different Sutras and Smritis. The following table is intended to serve that purpose:-

I. Asprashya

Dharma Sutra	Smriti
1. Vishnu V. 104.	1. Katyayana verses 433, 783.

II Antya

Dharma Sutras	Smriti
1. 1. Vasishtha. (16-30)	1. 1. Manu IV. 79;
2. 2. Apastambha (111.1)	VIII.. 68.
	2. 2. Yajnavalkyal.148.197.
	3. 3. Atri 25.
	4. 4. Likhita 92.

III. Bahya

Dharma Sutras	Smriti
1. 1. Apastambha 1,2,39.18	1. 1. Manu 28.
2. 2. Vishnu 16.14	2. 2. Narada 1.155.

IV. Antyavasin

Dharma Sutras	Smriti
1. 1. Gautama XXXI; XXIII 32	1. 1. Manu IV. 79; X. 39
2. 2. Vasishta XVIII. 3	2. 2. Shanti Parvan of the Mahabharatha 141; 29-32
	3. 3. Madhyamangiras (quoted in Mitakshara on Yaj. 3.280.

V. Antyaja

Dharma Sutras	Smriti
1. Vishnu 36.7	1. 1. Manu IV. 61; VIII. 279
	2. 2. Yajnavalkya 12.73
	3. 3. Brihadayama Smriti (quoted by Mitakshara on Yajnavalkya III. 260)
	4. 4. Atri. 199
	5. 5. Veda Vyas 1. 12.. 13.

II

The next question is whether the classes indicated by the terms Antya, Antyaja, Antyavasin and Bahya are the same as those indicated by the term *Asprashya* which etymologically means an Untouchable. In other words are they only different names for the same class of people?

It is an unfortunate fact that the Dharma Sutras do not enable us to answer this question. The term *Asprashya* occurs in two places (once in one Sutra and twice in one Smriti). But not one gives an enumeration of the classes included in it. The same is the case with

the term *Antya*. Although the word *Antya* occurs in six places (in two Sutras and four Smritis) not one enumerates who they are. Similarly, the word *Bahya* occurs in four places (in two Sutras and two Smritis), but none of them mentions what communities are included under this term. The only exception is with regard to the terms Antyavasin and Antyajas. Here again no Dharma Sutra enumerates them. But there is an enumeration of them in the Smritis. The enumeration of the Antyavasin occurs in the Smriti known as Madhyamangiras and that of the Antyajas in the Atri Smriti and Veda Vyas Smriti. Who they are, will be apparent from the following table:-

ANTYAVASIN	ANTYAJA	
Madhyamangiras	Atri	Veda Vyas
1. Chandala. 2. Shvapaka. 3. Kshatta. 4. Suta. 5. Vaidehika. 6. Magadha. 7. Ayogava.	1. Nata 2. Meda. 3. Bhilla. 4. Rajaka. 5, Charmakar. 6. Buruda. 7. Kayavarta.	1. Chandala* 2. Shvapaka. 3. Nata. 4. Meda. 5. Bhilla. 6. Rajaka. 7. Charmakar. 8. Virat. 9. Dasa. 10. Bhatt. 11. Kolika. 12. Pushkar.

From this table it is quite clear that there is neither precision nor agreement with regard to the use of the terms Antyavasin and Antyaja. For instance Chandala and Shvapaka fall in both the categories Antyavasin and Antyaja according to Madhyamangiras and Veda Vyas. But when one compares Madhyamanagiras with Atri they fall in different categories. The same is true with regard to the term Antyaja. For example while (1) Chandala and (2) Shvapaka are Antyajas according to Veda Vyas, according to Atri they are not. Again according to Atri (1) Buruda and (2) Kayavarta are Antyajas while according to Veda Vyas they are not. Again (1) Virat (2) Dasa (3) Bhatt (4) Kolika and (5) Pushkar are Antyaja according to Veda

Vyas but according to Atri they are not.

To sum up the position reached so far : neither the Dharma Sutras nor the Smritis help us to ascertain who were included in the category of Asprashya. Equally useless are the Dharma Sutras and the Smritis to enable us to ascertain whether the classes spoken of as Antyavasin, Antyaja and Bahya were the same as Asprashya. Is there any other way of ascertaining whether any of these formed into the category of Asprashya or Untouchables? It would be better to collect together whatever information is available about each of these classes.

What about the Bahyas? Who are they? What are they? Are they Untouchables? They are mentioned by Manu. To understand their position, it is necessary to refer to Manu's scheme of social classification. Manu divides the people into various categories. He first*[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_49](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm_-_msocom_49) makes a broad division between (1) Vaidikas and (2) Dasyus. He then proceeds to divide the Vaidikas into four sub-divisions: (1) Those inside Chaturvarnya (2) Those outside Chaturvarnya (3) Vratya and (4) Patitas or outcastes.

Whether a person was inside Chaturvarnya or outside, was a question to be determined by the Varna of the parents. If he was born of the parents of the same Varnas, he was inside the Chaturvarnya. If, on the other hand, he was born of parents of different Varnas i.e., he was the progeny of mixed marriages or what Manu calls *Varna Samkara*, then he was outside the Chaturvarnya. Those outside Chaturvarnya are further sub-divided by Manu into two classes. (1) Anulomas and (2) Pratilomas. [Anulomasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_50](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm_-_msocom_50) were those whose fathers were of a higher Varna and mothers of a lower Varna. Pratilomas, on the other hand, were those whose fathers were of a lower Varna and the mothers of a higher Varna. Though both the Anulomas and Pratilomas were alike for the reason that they were outside the Chaturvarnya. Manu proceeds to make a distinction between them. The Anulomas, he calls *Varna Bahya* or shortly *Bahyas*, while Pratilomas he calls *Hinas*. The Hinas are lower than the Bahyas. But neither the Bahyas nor the Hinas does Manu regard as Untouchables.

Antya as a class is mentioned in Manu IV.79. Manu however does not enumerate them. Medhatithi in his comentary suggests that

Antya means Miecha, such as Meda etc. Buhler translates Antya as a low-caste man.

There is thus nothing to indicate that the Antyas were Untouchables. In all probability, it is the name given to those people who were living in the outskirts or *end* (Anta) of the village. The reason why they came to be regarded as low is to be found in the story narrated in the Brahadaranyaka Upanishad (1.3) to which reference is made by Mr. Kanemk:[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_51](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm_-_msocom_51) The story is that-

"Gods and Asuras had a strike and the gods thought that they might rise superior to the Asuras by the Udgithana. In this occurs the passage 'this devata (Prana) throwing aside the sin that was death to these devatas (vak etc.) sent it to ends of these devatas there; therefore one should not go to the people outside the Aryan pale nor to *disam anta* (the ends of the quarters) thinking, otherwise I may fall in with *papmani* i.e., death".

The meaning of Antya turns on the connotation of the phrase 'disam Anta' which occurs in the passage quoted above. If the phrase 'ends of the quarters' can be translated as meaning the end of the periphery of the village, without its being called a far-fetched translation, we have here an explanation of what Antya originally meant. It does not suggest that the Antyas were Untouchables. It only meant that they were living on the outskirts of the village.

As to the Antyajas, what we know about them is enough to refute the view that they were Untouchables. Attention may be drawn to the following facts:[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_52](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm_-_msocom_52):

In the Shanti Parvan (109.9) of the Mahabharat there is a reference to Antyajas who are spoken of as Soldiers in the Army. According to Sarasvativilasa, Pitamaha speaks of the seven cases of Rajakas included in the term Antyajaja as Prakritis. That Prakritids mean trade guilds such as of washermen and others is quite clear from the Sangamner Plate of Bhillama II dated Saka 922 which records the grant of a village to eighteen Prakritis. Viramitrodaya says that Srenis mean the eighteen castes such as the Rajaka etc., which are collectively called Antyajajas. In view of these facts how could the Antyajajas be said to have been regarded as the Untouchables?

Coming to the Antyavasin, who were they? Were they

Untouchables? The term Antyavasin has been used in two different senses. In one sense it was applied to a Brahmachari living in the house of the Guru during his term of studentship. A Brahmachari was referred to as Antyavasin [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_53](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm%20-%20_msocom_53) It probably meant one who was served last. Whatever the reason for calling a Brahmachari Antyavasin it is beyond dispute that the word in that connection could not connote Untouchability. How could it when only Brahmins, Kshatriyas and Vaishyas could become Brahmacharis. In another sense they refer to a body of people. But even in this sense it is doubtful if it means Untouchables.

According to Vas.Dh.Sutra (18.3) they are the offspring of a Sudra father and Vaishya mother. But according to Manu (V.39) they are the offspring of a Chandala father and a Nishad mother. As to the class to which they belong, the Mitakshara says they are a sub-group of the Antyajas which means that the Antyavasin were not different from the Antyajas. What is therefore true of the Antyajas may also be taken as true of the Antyavasin.

III

Stopping here to take stock of the situation as it emerges from such information as we have regarding the social condition of the people called Antyavasin, Antya, Antyaja, as is available from ancient literature, obviously it is not open to say that these classes were Untouchables in the modern sense of the term. However, for the satisfaction of those who may still have some doubt, the matter may be further examined from another point of view. Granting that they were described as Asprashya we may proceed to inquire as to what was the connotation of the term in the days of the Dharma Sutras.

For this purpose we must ascertain the rules of atonement prescribed by the -Shastras. From the study of these rules we will be able to see whether the term Asprashya had the same connotation in the times of the Dharma Sutras as it has now.

Let us take the case of the Chandalas as an illustration of the class called Asprashya. In the first place, it should be remembered that the word Chandala does not denote one single homogenous class of people. It is one word for many classes of people, all different from one another. There are altogether five different classes of Chandalas

who are referred to in the Shastras. They are (i) the offspring of a Shudra father and a Brahmin mother mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_54 (ii) the offspring of an unmarried

woman mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_55 (iii) the offspring of union with a sagotra

woman mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_56 (iv) the offspring of a person who after becoming an ascetic turns back to the householder's

life mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_57 and (v) the offspring of a barber father and a Brahmin mother mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_58

It is difficult to say which Chandala calls for purification. We shall assume that purification is necessary in the case of all the Chandalas. What is the rule of purification prescribed by the Shastras?

Gautama in his Dharma Sutra (Chapter XIV, Verse 30) also refers to it in the following terms :-

"On touching an outcaste, a Chandala, a woman impure on account of her confinement a woman in her courses, or a corpse and on touching persons who have touched them, he shall purify himself by bathing dressed in his clothes."

Below is the text of the rule given by the Vasishta Dharma Sutra (Chapter IV. Verse 37) -

"When he has touched a sacrificial post, a pyre, a burial ground, a menstruating or a lately confined woman, impure men or Chandalas and so forth, he shall bathe, submerging both his body and his head."

Baudhayana agrees with Vasishta for he too in his Dharma Sutra (Prasna 1, Adhyaya 5, Khanda 6, Verse 5) says :-

"On touching a tree standing on a sacred spot, a funeral pyre, a sacrificial post, a Chandala or a person who sells the Veda, a Brahmin shall bathe dressed in his clothes."

The following are the rules contained in Manu :-

V. 85 : When he (the Brahmin) has touched a Chandala, a

menstruating woman, an outcaste, a woman in childbed, a corpse, or one who has touched a (corpse), he becomes pure by bathing.

V. 131 : Manu has declared that the flesh of an animal killed by dogs is pure, likewise (that) of a (beast) slain by carnivorous (animals) or by men of low caste (Dasya) such as Chandalas.

V. 143: He who, while carrying anything in any manner, is touched by an impure (person or thing), shall become pure, if he performs an ablution, without pulling down that object.

From these texts drawn from the Dharma Sutras as well as Manu, the following points are clear :-

- (1) (1) That the pollution by the touch of the Chandala was observed by the Brahmin only.
- (2) (2) That the pollution was probably observed on ceremonial occasions only.

IV

If these conclusions are right then this is a case of Impurity as distinguished from Untouchability. The distinction between the Impure and the Untouchable is very clear. The Untouchable pollutes all while the Impure pollutes only the Brahmin. The touch of the Impure causes pollution only on a ceremonial occasion. The touch of the Untouchable causes pollution at all times.

There is another argument to which so far no reference has been made which completely disproves the theory that the communities mentioned in the Dharma Sutras were Untouchables. That argument emerges out of a comparison of the list of communities given in the Order-in-Council (which is reproduced in Chapter II) with the list given in this chapter prepared from the Smritis. What does the comparison show? As anyone can see, it shows :-

Firstly : The maximum number of communities mentioned in the Smritis is only 12, while the number of communities mentioned in the Order-in-Council comes to 429.

Secondly : There are communities which find a place in the Order-in-Council but which do not find a place in the Smritis. [msitstore.c:\important\writing_of_babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_59](http://msitstore.c:\important\writing_of_babasaheb.chm::/39B.Untouchables%20who%20were%20they_why%20they%20became%20PART%20II.htm_-_msocom_59) Out of the total of 429 there are nearly 427 which are unknown to the Smritis.

Thirdly : There are communities mentioned in the Smritis which do not find a place in the Order-in-Council at all.

Fourthly : There is only one community which finds a place in both. It is the Charmakar community mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_60

Those who do not admit that the Impure are different from the Untouchables do not seem to be aware of these facts. But they will have to reckon with them. These facts are so significant and so telling that they cannot but force the conclusion that the two are different.

Take the first fact. It raises a very important question.

If the two lists refer to one and the same class of people, why do they differ and differ so widely? How is it that the communities mentioned in the Shastras do not appear in the list given in the Order-in-Council? Contrarywise, how is it that the communities mentioned in the Order-in-Council are not to be found in the list given by the Shastras? This is the first difficulty we have to face.

On the assumption that they refer to the same class of people, the question assumes a serious character. If they refer to the same class of people then obviously Untouchability which was originally confined to 12 communities came to be extended to 429 communities! What has led to this vast extension of the Empire of Untouchability? If these 429 communities belong to the same class as the 12 mentioned by the Shastras why none of the Shastras mention them? It cannot be that none of the 429 communities were not in existence at the time when the Shastras were written. If all of them were not in existence at least some of them must have been. Why even such as did exist find no mention?

On the footing that both the lists belong to the same class of people, it is difficult to give any satisfactory answer to these questions. If, on the other hand, it is assumed that these lists refer to two different classes of people, all these questions disappear. The two lists are different because the list contained in the Shastras is a list of the Impure and the list contained in the Order-in-Council is a list of the Untouchables. This is the reason why the two lists differ. The divergence in the two lists merely emphasizes what has been urged on other grounds, namely, that the classes mentioned in Shastras are only Impure and it is a mistake to confound them with the Untouchables of the present day.

Now turn to the second. If the Impure are the same as the Untouchables, why is it as many as 427 out of 429 should be unknown to the Smritis? As communities, they must have been in existence at the time of the Smritis. If they are Untouchables now, they must have been Untouchables then. Why then did the Smritis fail to mention them?

What about the third? If the Impure and the Untouchables are one and the same, why those communities which find a place in the Smritis do not find a place in the list given in the Order-in-Council? There are only two answers to this question. One is that though Untouchables at one time, they ceased to be Untouchables subsequently. The other is that the two lists contain names of communities who fall in altogether different categories. The first answer is untenable. For, Untouchability is permanent. Time cannot erase it or cleanse it. The only possible conclusion is the second.

Take the fourth. Why should Chamar alone find a place in the lists? The answer is not that the two lists include the same class of people. If it was the true answer, then not only the Chamar but all others included in the list given by the Smritis should appear in both the lists. But they do not. The true answer is that the two lists contain two different classes of people. The reason why some of those in the list of the Impure appear in the list of the Untouchables is that the Impure at one time became Untouchables. That the Chamar appears in both is far from being evidence to support the view that there is no difference between the Impure and the Untouchables. It proves that the Chamar who was at one time an Impure, subsequently became an Untouchable and had therefore to be included in both the lists. Of the twelve communities mentioned in the Smritis as Impure communities, only the Chamar should have been degraded to the status of an Untouchable is not difficult to explain. What has made the difference between the Chamar and the other impure communities is the fact of beef-eating. It is only those among the Impure who were eating beef that became Untouchables, when the cow became sacred and beef-eating became a sin. The Chamar is the only beef-eating community. That is why it alone appears in both the lists. The answer to the question relating to the Chamars is decisive on two points. It is conclusive on the point that the Impure are different from the Untouchables. It is also decisive on the point that it is beef-eating which is the root of Untouchability and which divides the Impure and the Untouchables.

The conclusion that Untouchability is not the same as Impurity has an important bearing on the determination of the date of birth of Untouchability. Without it any attempt at fixing the date would be missing the mark.

CHAPTER XVI

WHEN DID BROKEN MEN BECOME UNTOUCHABLES?

THE foregoing researches and discussions have proved that there was a time when the village in India consisted of a Settled Community and Broken Men and that though both lived apart, the former inside the village and the latter outside it, there was no bar to social intercourse between the members of the Settled Community and the Broken Men. When the cow became sacred and beef-eating became taboo, society became divided into two - the Settled Community became a touchable community and Broken Men became an untouchable community. When did the Broken Men come to be regarded as Untouchables? That is the last question that remains to be considered. There are obvious difficulties in the way of fixing a precise date for the birth of Untouchability. Untouchability is an aspect of social psychology. It is a sort of social nausea of one group against another group. Being an outgrowth of social psychology which must have taken some time to acquire form and shape, nobody can venture to fix a precise date to a phenomenon which probably began as a cloud no bigger than man's hand and grew till it took its final all-pervading shape as we know it today. When could the seed of Untouchability be said to have been sown? If it is not possible to fix an exact date, is it possible to fix an approximate date?

An exact date is not possible. But it is possible to give an approximate date. For this the first thing to do is to begin by fixing the upper time-limit at which Untouchability did not exist and the lower time-limit at which it had come into operation.

To begin with the question of fixing the upper limit the first thing to note is that those who are called Antyajias are mentioned in the Vedas. But they were not only not regarded as Untouchables but they were not even regarded as Impure. The following extract from Kane may be quoted in support of this conclusion. Says

Kanemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_61

"In the early Vedic literature several of the names of castes that are spoken of in the Smritis as Antyajias occur. We have Carmanna (a tanner of hides) in the Rig Veda (VIII.8,38) the Chandala and Paulkasa occur in Vaj. S., the Vepa or Vapta (barber) even in the Rig., the Vidalakara or Bidalakar (corresponding to the Buruda of the Smritis) occurs in the Vaj.S.and the Tai,Br-Vasahpalpuli (washer woman) corresponding to the Rajakas of the Smritis in Vaj.S.But there is no indication in these-passages whether they, even if they formed castes, were at all Untouchables."

Thus in Vedic times there was no Untouchability. As to the period of the Dharma Sutras, we have seen that there was Impurity but there was no Untouchability.

Was there Untouchability in the time of Manu? This question cannot be answered offhand. There is a passage [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_62](#) in which he says that there are only four vamas and that there is no fifth vama. The passage's enigmatical. It is difficult to make out what it means. Quite obviously the statement by Manu is an attempt by him to settle a controversy that must have been going on at the time he wrote. Quite obviously the controversy was about the status of a certain class in relation to the system of Chaturvarnya. Equally obvious is the point which was the centre of the controversy. To put briefly, the point was whether this class was to be deemed to be included within the Chaturvarnya or whether it was to be a fifth vama quite distinct from the original four vamas. All this is quite clear. What is, however, not clear is the class to which it refers. This is because Manu makes no specific mention of the class involved in the controversy.

The verse is also enigmatical because of the ambiguity in the decision given by Manu. Manu's decision is that there is no fifth Vama. As a general proposition it has a meaning which everybody can understand. But what does this decision mean in the concrete application to the class whose status was the stibjett-matter of controversy. Obviously it is capable of two interpretations. It may mean that as according to the scheme of Chaturvama there is no fifth vama the class in question must be deemed to belong to one of the four recognized vamas. But it may also mean that as in the original Vama System there is no provision for a fifth vama the class in

question must be deemed to be outside the Varna System altogether.

The traditional interpretation adopted by the orthodox Hindu is that the statement in Manu refers to the Untouchables, that it was the Untouchables whose Status was in controversy and that it was their status which is the subject-matter of Manu's decision. This interpretation is so firmly established that it has given rise to a division of Hindus into two classes called by different names, *Savarnas* or Hindus (those included in the Chaturvama) and *Avarnas* or Untouchables (those excluded from the Chaturvama). The question is, is this view correct? To whom does the text refer? Does it refer to the Untouchables? A discussion of this question may appear to be out of place and remote from the question under consideration. But it is not so. For if the text does refer to the Untouchables then it follows that Untouchability did exist in the time of Manu- a conclusion which touches the very heart of the question under consideration. The matter must, therefore, be thrashed out.

I am sure this interpretation is wrong. I hold that the passage does not refer to the Untouchables at all. Manu does not say which was the fifth class whose status was in controversy and about whose status he has given a decision in this passage. Was it the class of Untouchables or was it some other class? In support of my conclusion that the passage does not refer to Untouchables at all I rely on two circumstances. In the first place, there was no Untouchability in the time of Manu. There was only Impurity. Even the Chandala for whom Manu has nothing but contempt is only an impure person. That being so, this passage cannot possibly have any reference to Untouchables. In the second place, there is evidence to support the view that this passage has reference to slaves and not to Untouchables. This view is based on the language of the passage quoted from the Narada Smriti in the chapter on the Occupational Theory of Untouchability. It will be noticed that the Narada Smriti speaks of the slaves as the fifth class. If the expression fifth class in the Narada Smriti refers to slaves, I see no reason why the expression fifth class in Manu Smriti should not be taken to have reference to slaves. If this reasoning, is correct, it cuts at the very root of the contention that Untouchability existed in the time of Manu and that Manu was not prepared to include them as part of the Varna System. For the reasons stated, the passage does not refer to Untouchability and there is, therefore, no reason to conclude that there was Untouchability in the time of Manu.

Thus we can be sure of fixing the upper limit for the date of the birth of Untouchability. We can definitely say that Manu Smriti did not enjoin Untouchability. There, however, remains one important question. What is the date of Manu Smriti? Without an answer to this question it would not be possible for the average to relate the existence or non-existence of Untouchability to any particular point in time. There is no unanimity among savants regarding the date of Manu Smriti. Some regard it as very ancient and some regard it as very recent. After taking all facts into consideration Prof. Buhler has fixed a date which appears to strike the truth. According to Buhler, Manu Smriti in the shape in which it exists now, came into existence in the Second Century A.D. In assigning so recent a date to the Manu Smriti Prof. Buhler is not quite alone. Mr. Daphtary has also come to the same conclusion. According to him Manu Smriti came into being after the year 185 B.C. and not before. The reason given by Mr. Daphtary is that Manu Smriti has a close connection with the murder of the Buddhist Emperor Brihadratha of the Maurya dynasty by his Brahmin Commander-in-Chief Pushyamitra Sunga and as even that took place in 185 B.C., he concludes that Manu Smriti must have been written after 185 B.C. To give support to so important a conclusion it is necessary to establish a nexus between the murder of Brihadratha Maurya by Pushyamitra and the writing of Manu Smriti by strong and convincing evidence. Mr. Daphtary has unfortunately omitted to do so. Consequently his conclusion appears to hang in the air. The establishment of such a nexus is absolutely essential. Fortunately there is no want of evidence for the purpose.

The murder of Brihadratha Maurya by Pushyamitra has unfortunately passed unnoticed. At any rate it has not received the attention it deserves. It is treated by historians as an ordinary incident between two individuals as though its origin lay in some personal quarrel between the two. Having regard to its consequences it was an epoch - making event. Its significance cannot be measured by treating it as a change of dynasty-the Sungas succeeding the Mauryas. It was a political revolution as great as the French Revolution, if not greater. It was a revolution- a bloody revolution-engineered by the Brahmins to overthrow the rule of the Buddhist Kings. That is what the murder of Brihadratha by Pushyamitra means.

This triumphant Brahmanism was in need of many things. It of course needed to make Chaturvama the law of the land the validity of which was denied by the Buddhists. It needed to make animal

sacrifice, which was abolished by the Buddhists, legal. But it needed more than this. Brahmanism in bringing about this revolution against the rule of the Buddhist Kings had transgressed two rules of the customary law of the land which were accepted by all as sacrosanct and inviolable. The first rule-made it a sin for a Brahmin even to touch a weapon. The second made the King's person sacred and regicide a sin. Triumphant Brahmanism wanted a sacred text, infallible in its authority, to justify their transgressions. A striking feature of the *Manu Smriti* is that it not only makes *Chaturvama* the law of the land, it not only makes animal sacrifice legal but it goes to state when a Brahmin could justifiably resort to arms and when he could justifiably kill the King. In this the *Manu Smriti* has done what no prior *Smriti* has done. It is a complete departure. It is a new thesis. Why should the *Manu Smriti* do this? The only answer is, it had to strengthen the revolutionary deeds committed by Pushyamitra by propounding philosophic justification. This interconnection between Pushyamitra and the new thesis propounded by *Manu* shows that the *Manu Smriti* came into being some time after 185 B.C., a date not far removed from the date assigned by Prof. Buhler. Having got the date of the *Manu Smriti* we can say that in the Second Century A.D., there was no Untouchability.

Now to turn to the possibility of determining the lower limit to the birth of Untouchability. For this we must go to the Chinese travellers who are known to have visited India and placed on record what they saw of the modes and manners of the Indian people. Of these Chinese travellers *Fah-Hian* has something very interesting to say. He came to India in 400 A.D. In the course of his observations occurs the following passage¹ :-

"Southward from this (Mathura) is the so-called middle-country (*Madhyadesa*). The climate of this country is warm and equable, without frost or snow. The people are very well off, without poll-tax or official restrictions. Only those who till the royal lands return a portion of profit of the land. If they desire to go, they go; if they like to stop they stop. The kings govern without corporal punishment; criminals are fined, according to circumstances, lightly or heavily. Even in cases of repeated rebellion they only cut off the right hand. The King's personal attendants, who guard him on the right and left, have fixed salaries. Throughout the country the people kill no living thing nor drink wine, nor do they eat garlic or onion, with the exception of Chandalas only. The Chandalas are

named 'evil men' and dwell apart from others; if they enter a town or market, they sound a piece of wood in order to separate themselves; then, men knowing they are, avoid coming in contact with them. In this country they do not keep swine nor fowls, and do not deal in cattle; they have no shambles or wine shops in their market-places. In selling they use cowrie shells. The Chandalas only hunt and sell flesh."

Can this passage be taken as evidence of the prevalence of Umouchability at the time of Fah-Hian? Certain parts of his description of the treatment given to the Chandalas do seem to lend support to the conclusion, that is, a case of Untouchability.

There is, however, one difficulty in the way of accepting this conclusion. The difficulty arises because the facts relate to the Chandalas. The Chandala is not a good case to determine the existence or non-existence of Untouchability. The Brahmins have regarded the Chandalas as their hereditary enemies and are prone to attribute to them abominable conduct; hurl at them low epithets and manufacture towards them a mode of behaviour which is utterly artificial to suit their venom against them. Whatever, therefore, is said against the Chandalas must be taken with considerable reservations.

This argument is not based on mere speculation. Those who doubt its cogency may consider the evidence of Bana's Kadambari for a different description of the treatment accorded to the Chandalas.

The story of Kadambari is a very complex one and we are really not concerned with it. It is enough for our purpose to note that the story is told to King Shudraka by a parrot named Vaishampayana who was the pet of a Chandala girl. The following passages from the Kadambari are important for our purpose. It is better to begin with Bana's description of a Chandala settlement. It is in the following terms: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_63:-

"I beheld the barbarian settlement, a very market-place of evil deeds. It was surrounded on all sides by boys engaged in the chase, unleashing their hounds, teaching their falcons, mending snares, carrying weapons, and fishing, horrible in their attire, like demoniacs. Here and there the entrance to their dwellings, hidden by thick bamboo forests, was to be inferred, from the rising of smoke of orpiment. On all sides the enclosures were made with skulls; (627) the dust-heaps on the roads were filled with bones; the yards of the huts were miry with blood, fat, and meat chopped up.

The life there consisted of hunting; the food, of flesh; the ointment, of fat; the garments, of coarse silk; the couches, of dried skins; the household attendants, of dogs; the animals for riding, of cows; the men's employment, of wine and women; the oblation to the gods, of blood; the sacrifice, of cattle. The place was the image of all hells."

It is from such a settlement that the Chandala girl starts with her parrot to the palace of King Shudraka. King Shudraka is sitting in the Hall of Audience with his Chieftains. A portress enters the Hall and makes the following announcement

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_64 :-

"Sire, *there* stands at the gate a Chandala maiden from the South, a royal *glory* of the race of that Tricamku who climbed the sky, but fell from it at the order of wrathful Indra, She bears a parrot in a cage, and bids me thus hail your majesty:"Sire, thou, like the ocean, art alone worthy to receive the treasures of whole earth. In the thought that this bird is a marvel and the treasure of the whole earth, I bring it to lay at thy feet, and desire to behold thee. Thou, 0 king, hast heard her message, and must decide!"so saying, she ended her speech. The king, whose curiosity was aroused, looked at the chiefs around him, and with the words Why not? Bid her enter' gave his permission.

Then the portress, immediately on the king's order ushered in the Candala maiden. And she entered."

The King and the Chieftains did not at first take notice of her. To attract attention she struck a bamboo on the mosaic floor to arouse the King. Bana then proceeds to describe her personal appearance

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_65

"Then the king, with the words, look yonder* to his suite, gazed steadily upon the Candala maiden, as she was pointed out by the portress. Before her went a man, whose hair was hoary with age, whose eyes were the colour of the red lotus, whose joints, despite the loss of youth, were firm from incessant labour, whose form, though that of Matanga, was not to be despised, and who wore the white raiment meet for a court. Behind *her* went a Candala boy, with locks falling on either shoulder, bearing a cage, the bars of which, though of gold, shone like emerald from the reflection of the parrot's plumage. She herself seemed by the darkness of her hue to

imitate Krishna when he guilefully assumed a woman's attire to take away the arnritit seized by the demons. She was, as it were, a doll of sapphire walking alone; and over the bine garment, which reached to her ankle, there fell a veil of red silk, like evening sunshine falling on blue lotuses. The circle of her cheek was whitened by the earring that hung from one ear, like the *(ace* of night inlaid with the rays of the rising moon: she had a tawny tilaka of gorocana, as if it woe a third eye, like Parvati in mountaineer's attire, after the fashion of the garb of Civa.

She was like Cri. darkened by the sapphire glory of Narayana reflected on the robe on her breast; or like Rati, stained by smoke which rose as Madana was burnt by the fire of wrathful Civa: *or* like Yamuna, fleeing in fear of being drawn along by the ploughshare of wild Balarama; or, from the rich lac that turned her lotus feet into budding shoots, like Durga, with *her* feet crimsoned by the blood of the Asura Mahisha she had just trampled upon.

Her nails were rosy from the pink glow of *her* fingers; the mosaic pavement seemed too hard for her touch, and she came for placing her feet like tender twigs upon the ground.

The rays of *her* anklets, rising in flame-colour, seemed to encircle her as with the arms of Agni, as though, by his love for her beauty, he would purify the strain of her birth, and so set the Creator at naught.

Her girdle was like the stars wreathed on the brow of the elephant of Love; and her necklace was a rope of large bright pearls, like the stream of Ganga just tinged by Yamuna.

Like autumn, she opened her lotus eyes; like the rainy season, she had cloudy tresses; like the circle of the Malaya Hills, she was wreathed with sandal; like the zodiac, she was decked with starry gems; like Cri, she had the fairness of a lotus in her hand; like a swoon, she entranced the heart; like a forest, she was endowed with living beauty; like the child of a goddess, she was claimed by no tribe; like sleep, she charmed the eyes; as a lotus-pool in a wood is troubled by elephants, so was she dimmed by her Matanga birth; like spirit, she might *not*. be touched; like a letter, she gladdened the eyes alone; like the blossoms of spring she lacked the jati flower, her slender waist, like the line of Love's bow, could be spanned by the hands; with *her* curly hair, she was like the Lakshmi of the Yaksha king in Alaka. She had but reached the flower of *her* youth, and was beautiful exceedingly. And the king was amazed; and the

thought arose in his mind. Ill-placed was the labour of the Creator in producing this beauty! For if she has been created as though in mockery of her Candala form, such that all the world's wealth of loveliness is laughed to scorn by her own, why was she born in a race with which none can mate? Surely by thought alone did Prajapati create her, fearing the penalties of contact with the Matanga race, else whence this unsullied radiance, a grace that belongs not to limbs sullied by touch? Moreover, though fair in form, by the baseness of her birth, whereby she, like a Lakshmi of the lower world, is a perpetual reproach to the gods, she, lovely as she is, causes fear in Brahma, the maker of so strange a union.' While the king was thus thinking the maiden, garlanded with flowers, that fell over her ears, bowed herself before him with a confidence beyond her years. And, when she had made her reverence and stepped on to the mosaic floor, her attendant, taking the parrot, which had just entered the cage, advanced a few steps, and, showing it to the King, said: 'Sire, this parrot, by name Vaicampayana, knows the meaning of all the castes, is expert in the practice of royal policy, skilled in tales, history, and Puranas, and acquainted with songs and with musical intervals. He recites, and himself composes graceful and incomparable modern romances, love-stories, plays, and poems, and the like; he is versed in witticisms and is an unrivalled disciple of the vina, flute, and drum. He is skilled in displaying the different movements of dancing, dextrous in painting, very bold in play, ready in resources to calm a maiden angered in a lover's quarrel, and familiar with the characteristics of elephants, horses, men, and women. He is the gem of the whole earth; and in the thought that treasures belong to thee, as pearls to the ocean, the daughter of my lord has brought him hither to thy feet, O king! Let him be accepted as thine.'

On reading this description of a Chandala girl many questions arise. Firstly, how different it is from the description given by Fa-Hian? Secondly Bana is a Vatsyayana Brahmin. This Vatsyayana Brahmin, after giving a description of the Chandala Settlement, finds no compunction in using such eloquent and gorgeous language to describe the Chandala girl. Is this description compatible with the sentiments of utter scorn and contempt associated with Untouchability? If the Chandalas were Untouchables how could an Untouchable girl enter the King's palace? How could an Untouchable be described in the superb terms used by Bana? Far from being

degraded, the Chandalas of Bana's period had Ruling Families among them. For Bana speaks of the Chandala girl as a Chandala princess mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_66 Bana wrote some time about 600 A.D., and by 600 A.D. the Chandalas had not come to be regarded as Untouchables. It is, therefore, quite possible that the conditions described by Fa-Hian, though bordering on Untouchability, may not be taken as amounting to Untouchability. It may only be extreme form of impurity practised by the Brahmins who are always in the habit of indulging in overdoing their part in sacerdotalism. This becomes more than plausible if we remember that when Fa-Hian came to India it was the reign of the Gupta Kings. The Gupta Kings were patrons of Brahmanism. It was a period of the triumph and revival of Brahmanism. It is quite possible that what Fa-Hian describes is not Untouchability but an extremity to which the Brahmins were prepared to carry the ceremonial impurity which had become attached to some community, particularly to the Chandalas.

The next Chinese traveller who came into India was Yuan Chwang. He came to India in 629 A.D. He stayed in India for 16 years and has left most accurate records of journeys up and down the country and of the manners and customs of the people. In the course of his description of general characters of the cities and buildings of India, he says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/39B.Untouchables who were they_why they became PART II.htm - _msocom_67 :-

"As to their inhabited towns and cities the quadrangular walls of the cities (or according to *one* text, of the various regions) are broad and high, while the thoroughfares are narrow tortuous passages. The shops are on the highways and booths, or (inns) line the roads. Butchers, fishermen, public performers, executioners, and scavengers have their habitations marked by a distinguishing sign. They are forced to live outside the city and they sneak along on the left when going about in the hamlets."

The above passage is too short and too brief for founding a definite conclusion thereon. There is, however, one point about it which is worthy of note. Fa-Hian's description refers to the Chandalas only while the description given by Yuan Chwang applies to communities other than the Chandalas. This is a point of great importance. No such argument can be levelled against the acceptance of a description since it applies to communities other than the Chandalas. It is,

therefore, just possible that when Yuan Chwang came to India, Untouchability had emerged.

On the basis of what has been said above we can conclude that while Untouchability did not exist in 200 A.D. it had emerged by 600 A.D.

These are the two limits, upper and lower, for determining the birth of Untouchability. Can we fix an approximate date for the birth of Untouchability? I think we can, if we take beef-eating, which is the root of Untouchability, as the point to start from. Taking the ban on beef-eating as a point to reconnoitre from, it follows that the date of the birth of Untouchability must be intimately connected with the ban on cow-killing and on eating beef. If we can answer when cow-killing became an offence and beef-eating became a sin, we can fix an approximate date for the birth of Untouchability. When did cow-killing become an offence? We know that Manu did not prohibit the eating of beef nor did he make cow-killing an offence. When did it become an offence? As has been shown by Dr. D. R. Bhandarkar, cow killing was made a capital offence by the Gupta kings some time in the 4th Century A.D.

We can, therefore, say with some confidence that Untouchability was born some time about 400 A.D. It is born out of the struggle for supremacy between Buddhism and Brahmanism which has so completely moulded the history of India and the study of which is so woefully neglected by students of Indian history.

THOUGHTS ON LINGUISTIC STATES

PREFACE

The creation of Linguistic States is a burning question of the day. I regret that owing to my illness I was not able to take part in the debate that took place in Parliament much less in the campaign that is carried on in the country by partisans in favour of their views. The question is too important for me to sleep over in silence. Many have accused me for remaining quiet not knowing what the cause was.

I have therefore taken the other alternative i.e. to set out my views in writing.

Readers may find certain inconsistencies in my views as expressed in this brochure and as expressed formerly in certain public statements. Such changes in my view are, I am sure, very few. The former statements were made on the basis of fragmentary data. The whole picture was then not present to the mind. For the first time it met my eye when the report of the S.R.C. came out. This is sufficient justification for any change in my views which a critic may find.

To a critic who is a hostile and malicious person and who wants to make capital out of my inconsistencies my reply is straight. Emerson has said that consistency is the virtue of an ass and I don't wish to make an ass of myself. No thinking human being can be tied down to a view once expressed in the name of consistency. More important than consistency is responsibility. A responsible person must learn to unlearn what he has learned. A responsible person must have the courage to rethink and change his thoughts. Of course there must be good and sufficient reasons for unlearning what he has learned and for recasting his thoughts. There can be no finality in thinking.

The formation of Linguistic States, although essential, cannot be decided by any *sort* of hooliganism. Nor must it be solved in a manner that will serve party interest. It must be solved by cold blooded reasoning. This is what I have done and this is what I appeal to my readers to do.

THE WORK OF THE COMMISSION CHAPTER I

LINGUISTIC AND NOTHING ELSE

The present Constitution of India recognises the following States which are enumerated in the Schedule :

Part 'A' States	Part 'B' States	Part 'C' States
1. 1. Andhra	1. 1. Hyderabad	1. 1. Ajmer
2. 2. Assam	2. 2. Jammu & Kashmir	2. 2. Bhopal
3. 3. Bihar	3. 3. Madhya Bharat	3. 3. Coorg
4. 4. Bombay	4. 4. Mysore	4. 4. Delhi
5. 5. Madhya Pradesh	5. 5. Patiala	5. 5. Himachal Pradesh
6. 6. Madras	6. 6. Rajasthan	6. 6. Kutch
7. 7. Orissa	7. 7. Saurashtra	7. 7. Manipur
8. 8. Punjab	8. 8. Travancore - Cochin	8. 8. Tripura
9. 9. Uttar Pradesh		9. 9. Vindhya Pradesh

Article 3 of the Constitution gives power to Parliament to create new States. This was done because there was no time to reorganize the States on linguistic basis for which there was a great demand.

In pursuance of this incessant demand the Prime Minister appointed the States Reorganisation Commission to examine the question. In its report the States Reorganisation Commission has recommended the creation of the following States:

Proposed New States

Name of the State	Area (Sq. Miles)	Population (Crores)	Language
Madras	50,170	3.00	Tamil
Kerala	14,980	1.36	Malyalam
Karnatak	72,730	1.90	Kanarese
Hyderabad	45,300	1.13	Telugu
Andhra	64,950	2.09	Telugu
Bombay	151,360	4.02	Mixed
Vidarbha	36,880	0.76	Marathi
Madhya Pradesh	171,200	2.61	Hindi
Rajasthan	132,300	1.60	Rajasthani
Punjab	58,140	1.72	Punjabi
Uttar Pradesh	113,410	6.32	Hindi
Bihar	66,520	3.82	Hindi
West Bengal	34,590	2.65	Bengali
Assam	89,040	0.97	Assamese
Orissa	60,140	1.46	Oria
Jammu and Kashmir	92,780	0.14	Kashmiri

The important thing is to compare the size of the states -

Taking population as the measuring red the result may be presented as follows:

There are 8 states with a population between 1 and 2 crores each.

There are 4 states with a population between 2 and 4 crores each.

There is one state above 4 crores.

There is one state above 6 crores.

The result, to say the least, is fantastic. The Commission evidently thinks that the size of a state is a matter of no consequence and that the equality in the size of the status constituting a federation is a matter of no moment.

This is the first and the most terrible error cost which the commission has committed. If not rectified in time, it will Indeed be a great deal.

Chapter 2 LINGUISM IN EXCELSIS

In the first chapter it has been pointed out that one result of the recommendations of the states Reorganisation Commission is the

disparity in the size of the different States the Commission has suggested for creation.

But there is another fault in the recommendation of the commission which perhaps is hidden but which is nonetheless real.

It lies in not considering the North in relation to the South. This will be clear from following table :

Southern States		Central States		Northern States	
Name	Population (in crores)	Name	Population (in crores)	Name	Population (in crores)
Madras	3.00	Maharashtra	3.31	Uttar Pradesh	6.32
Kerala	1.36	Gujarat	1.13	Bihar	3.85.
Karnataka	1.90	Saurashtra	0.4	Madhya Pradesh	
Andhra	1.09	Kutch	0.5	Rajasthan	2.61
Hyderabad	1.13			Punjab	1.72

This scheme of dividing India in the name of Linguistic States cannot be overlooked. It is not so innocuous as the Commission thinks. It is full of poison. The poison must be emptied right now.

The nature of Union of India expresses only an idea. It does not indicate an achievement. Bryce in his "*American Commonwealth*" relates the following incident which is very instructive. This is what he says :

"A few years ago the American Protestant Episcopal Church was occupied at its annual conference in revising liturgy. It was thought desirable to introduce among the short sentence prayers a prayer for the whole people; and an eminent New England Divine proposed the words 'O Lord, bless our Nation'. Accepted one afternoon on the spur of the moment, the sentence was brought up next day for reconsideration, when so many objections were raised by the laity to the word, 'Nation', as importing too definite recognition of national unity, that it was dropped, and instead there were adopted the words, 'O Lord, bless these United States.'"

India is not even mentally and morally fit to call itself the United States of India. We have to go a long way to become the United States of India. The Union of India is far, far away, from the United States of India. But this consolidation of the North and balkanisation of the South is not the way to reach it.

Part II

THOUGHTS ON LINGUISTIC STATES

PART II

THE LIMITATIONS OF LINGUISTIC STATES

CHAPTER III

THE PROS AND CONS OF A LINGUISTIC STATE

“One State, one language” is a universal feature of almost every State. Examine the constitution of Germany, examine the constitution of France, examine the constitution of Italy, examine the constitution of England, and examine the constitution of the U.S.A.” One State, one language” is the rule.

Wherever there has been a departure from this rule there has been a danger to the State. The illustration of the mixed States are to be found in the old Austrian Empire and the old Turkish Empire. They were blown up because they were multi-lingual States with all that a multi-lingual State means. India cannot escape this fate if it continues to be a congerium of mixed States.

The reasons why a unilingual State is stable and a multi-lingual State unstable are quite obvious. A State is built on fellow feeling. What is this

fellow-feeling? To state briefly it is a feeling of a corporate sentiment of oneness which makes those who are charged with it feel that they are kith and kin. This feeling is a double-edged feeling. It is at once a feeling of fellowship for one's own kith and kin and anti-fellowship for those who are not one's own kith and kin. It is a feeling of "consciousness of kind" which on the one hand, binds together those who have it so strongly that it over-rides all differences arising out of economic conflicts or social gradations and, on the other, severs them from those who are not of their kind. It is a longing not to belong to any other group.

The existence of this fellow-feeling is the foundation of a stable and democratic State.

This is one reason why a linguistic State is so essential. But there are other reasons why a State should be unilingual. There are two other reasons why the rule "one State, one language" is necessary.

One reason is that democracy cannot work without friction unless there is fellow-feeling among those who constitute the State. Faction fights for leadership and discrimination in administration are factors ever present in a mixed State and are incompatible with democracy.

The present State of Bombay is the best illustration of the failure of democracy in a mixed State. I am amazed at the suggestion made by the States Reorganisation Commission that the present Bombay State should be continued as it is to enable us to gain experience of how a mixed State flourishes. With Bombay as a mixed State for the last 20 years, with the intense enmity between the Maharashtrians and Gujaratis, only a thoughtless or an absent-minded person could put forth such a senseless proposal. The former State of Madras is another illustration of the failure of democracy in a mixed State. The formation of a mixed State of United India and the compulsory division of India into India and Pakistan are other illustrations of the impossibility of having democracy in a mixed State.

Another reason why it is necessary to adopt the rule of "one State, one language" is that it is the only solvent to racial and cultural conflicts.

Why do Tamils hate Andhras and Andhras hate Tamils? Why do Andhras in Hyderabad hate Maharashtrians and Maharashtrians hate Andhras? Why do Gujaratis hate Maharashtrians and Maharashtrians hate Gujaratis? The answer is very simple. It is not because there is any

natural antipathy between the two. The haired is due to the fact that they are put in juxtaposition and forced to take part in a common cycle of participation, such as Government. There is no other answer.

So long as this enforced juxtaposition remains, there will be no peace between the two.

There will be people who would cite the cases of Canada, Switzerland and South Africa. It is true that these cases of bilingual States exist. But it must not be forgotten that the genius of India is quite different from the genius of Canada, Switzerland and South Africa. The genius of India is to divide—the genius of Switzerland, South Africa and Canada is to unite.

The fact that they have been held together up till now is not in the natural course of things. It is due to the fact that both of them are bound by the Congress discipline. But how long is the Congress going to last? The Congress is Pandit Nehru and Pandit Nehru is Congress. But is Pandit Nehru immortal? Any one who applies his mind to these questions will realise that the Congress will not last till the sun and the moon. It must one day come to an end. It might come to an end even before the next election. When this happens the State of Bombay will find itself engaged in civil war and not in carrying on administration.

We therefore want linguistic States for two reasons. To make easy the way to democracy and to remove racial and cultural tension.

In seeking to create linguistic States India is treading the right road. It is the road which all States have followed. In the case of other linguistic States they have been so, from the very beginning. In the case of India she has to put herself in the reverse gear to reach the goal. But the road she proposes to travel is well-trying road. It is a road which is followed by other States.

Having stated the advantages of a linguistic State I must also set out the dangers of a linguistic State.

A linguistic State with its regional language as its official language may easily develop into an independent nationality. The road between an independent nationality and an independent State is very narrow. If this happens, India will cease to be Modern India we have and will become the medieval India consisting of a variety of States indulging in rivalry and warfare.

This danger is of course inherent in the creation of linguistic States. There is equal danger in not having linguistic States. The former danger a wise and firm statesman can avert. But the dangers of a mixed State are greater and beyond the control of a statesman however eminent.

How can this danger be met? The only way I can think of meeting the danger is to provide in the Constitution that the regional language shall not be the official language of the State. The official language of the State shall be Hindi and until India becomes fit for this purpose English. Will Indians accept this? If they do not, linguistic States may easily become a peril.

One language can unite people. Two languages are sure to divide people. This is an inexorable law. Culture is conserved by language. Since Indians wish to unite and develop a common culture it is the bounden duty of all Indians to own up Hindi as their language.

Any Indian who does not accept this proposal as part and parcel of a linguistic State has no right to be an Indian. He may be a hundred per cent Maharashtrian, a hundred per cent Tamil or a hundred per cent Gujarathi, but he cannot be an Indian in the real sense of the word except in a geographical sense. If my suggestion is not accepted India will then cease to be India. It will be a collection of different nationalities engaged in rivalries and wars against one another.

God seems to have laid a heavy curse on India and Indians, saying 'Ye Indians ye shall always remain divided and ye shall always be slaves !'

I was glad that India was separated from Pakistan. I was the philosopher, so to say, of Pakistan. I advocated partition because I felt that it was only by partition that Hindus would not only be independent but free. If India and Pakistan had remained united in one State Hindus though independent would have been at the mercy of the Muslims. A merely independent India would not have been a free India from the point of view of the Hindus. It would have been a Government of one country by two nations and of these two the Muslims without question would have been the ruling race notwithstanding Hindu Mahasabha and Jana Sangh. When the partition took place I felt that God was willing to lift his curse and let India be one, great and prosperous. But I fear that the curse may fall again. For I find that those who are advocating linguistic States have at heart the ideal of making the regional language their official language.

This will be a death knell to the idea of a United India. With regional languages as official languages the ideal to make India one United country and to make Indians, Indians first and Indians last, will vanish. I can do no more than to suggest a way out. It is for Indians to consider it.

CHAPTER IV

MUST THERE BE ONE STATE FOR ONE LANGUAGE?

What does a linguistic State mean?

It can mean one of two things. It can mean that all people speaking one language must be brought under the jurisdiction of one State. It can also mean that people speaking one language may be grouped under many States provided each State has under its jurisdiction people who are speaking one language. Which is the correct interpretation?

The Commission took the view that the creation of one single State for all people speaking one and the same language was the only rule to be observed.

Let the reader have a look at map No. 1. He will at once note the disparity between the Northern and Southern States. This disparity is tremendous. It will be impossible for the small States to bear the weight of the big States.

How dangerous this disparity is, the Commission has not realised. Such disparity no doubt exists in the United States. But the mischief it might cause has been prevented by the provisions in the Constitution of the United States.

One such safeguard in the Constitution of the United States has been referred to by Mr. Pannikar in his dissenting minute to the Report (*See* Table No. 2).

I give below the following extract from his minute

"I consider it essential for the successful working of a federation that the units should be fairly evenly balanced. Too great a disparity is likely to create not only suspicion and resentment but generate forces likely to undermine the federal structure itself and thereby be a danger to the

unity of the country. This is clearly recognised everywhere. In most federal constitutions, though wide variation exists in respect of the population and resources of the unit, care is taken to limit the influence and authority of the larger States. Thus in the United States of America, for example, though the States are of varying population and resources and the State of New York has many times the population, say of Nevada, the constitution provides for equal representation of every State in the Senate."

On this point Mr. Pannikar also refers to the Soviet Union and old Germany. This is what he says :

"In the Soviet Union also, in which great Russia has a larger population than most other units of the Federation taken together, representation in the House of Nationalities is weighed against her so that the other units of the Federation may not be dominated by the larger unit. In the Bismarckian Reich again, though Prussia had a dominant position from the point of view of population, she was given less representation in the *Reichsrat* or the house representing the states than she was entitled to (less than one-third) and the permanent presidency of that body was vested in Bavaria, clearly demonstrating that even here—where there was concentration of political, military and economic power in one State—it was considered necessary, in the interest of the union, to give weightage to the smaller units and also to reduce Prussia to the position of minority in the *Reichsrat*, States Council, which enjoyed greater powers than the *Reichstag* or the House of the People."

Mr. Pannikar has however not mentioned one other safeguard in the Constitution of the United States against the evils of disparity. In our Constitution the two Houses are not co-equal in authority. But the position in the Constitution of the United States is quite different. In the U.S.A. the two Houses are co-equal in authority. Even for money bills the consent of the Senate is necessary. This is not so in India. This makes a great difference to the disparity in the population.

This disparity in the population and power between the States is sure to plague the country. To provide a remedy against it is most essential.

CHAPTER V

THE NORTH VERSUS THE SOUTH

What the Commission has created is not a mere disparity between the States by leaving U.P. and Bihar as they are, by adding to them a new and a bigger Madhya Pradesh with Rajasthan it creates a new problem of North *versus* South.

The North is Hindi speaking. The South is non-Hindi speaking. Most people do not know what is the size of the Hindi-speaking population. It is as much as 48 per cent of the total population of India. Fixing one's eye on this fact one cannot fail to say that the Commission's effort will result in the consolidation of the North and the balkanisation of the South.

Can the South tolerate the dominance of the North?

It may now not be a breach of a secret if I revealed to the public what happened in the Congress Party meeting when the Draft Constitution of India was being considered, on the issue of adopting Hindi as the national language. There was no article which proved more controversial than Article 115 which deals with the question. No article produced more opposition. No article, more heat. After a prolonged discussion when the question was put, the vote was 78 against 78. The tie could not be resolved. After a long time when the question was put to the Party meeting the result was 77 against 78 for Hindi. Hindi won its place as a national language by one vote. I am stating these facts from my personal knowledge. As Chairman of the Drafting Committee I had naturally entry to the Congress Party enclosure.

These facts reveal how much the South dislikes the North. This dislike may grow into hatred if the North remains consolidated and the South becomes disintegrated and if the North continues to exercise a disproportionate influence on the politics of India (*See* Map 1).

To allow one State to have such preponderating influence in the Centre is a dangerous thing.

Mr. Pannikar has referred to this aspect of the case. In his dissenting minute he says:

"The consequence of the present imbalance, caused by the denial of the federal principal of equality of units, has been to create feelings of distrust and resentment in all the States outside Uttar Pradesh. Not only in the Southern States but also in the Punjab, Bengal and elsewhere the view was generally expressed before the Commission that the present

structure of government led to the dominance of Uttar Pradesh in all-India matters. The existence of this feeling will hardly be denied by anyone. That it will be a danger to our unity, if such feelings are allowed to exist and remedies are not sought and found now, will also not be denied."

There is a vast difference between the North and the South. The North is conservative. The South is progressive. The North is superstitious, the South is rational. The South is educationally forward, the North is educationally backward. The culture of the South is modern. The culture of the North is ancient.

Did not Prime Minister Nehru on the 15th of August 1947 sit at the Yajna performed by the Brahmins of Benares to celebrate the event of a Brahmin becoming the first Prime Minister of free and independent India and wear the Raja Danda given to him by these Brahmins and drink the water of the Ganges brought by them?

How many women have been forced to go Sati in recent days and immolate themselves on the funeral pyre of their dead husbands. Did not the President recently go to Benares and worship the Brahmins, washed their toes and drank the water?

The North still has its Satis, its Nanga Sadhus. What havoc the Nanga Sadhus made at the last Hardwar Fair! Did anyone in U.P. protest against it?

How can the rule of the North be tolerated by the South? Already there signs of the South wanting to break away from the North.

Mr. Rajagopalachari has made a statement on the recommendations of the States Reorganisation Commission which has appeared in the *Times of India* of the 27th November, 1955. This is what he says :

"If it is impossible to put the States Reorganisation Schemes in cold storage for the next 15 years, the only alternative is for the Centre to govern India as a unitary state and deal with district officers and district boards directly, with regional commissioners' supervision.

"It would be utterly wrong to fritter away national energy in dispute over boundaries and divisions conceived in the drawing room and not on the background of conditions that have resulted historically.

“Apart from the general convictions of mine, I feel that a large southern State is absolutely essential for preserving the political significance of that part of the country. To cut the South up into Tamil, Malayalam and other small States will result only in complete insignificance of everybody and, in the net result, India as a whole will be the poorer.”

Mr. Rajagopalachari has not expressed himself fully. He did do so fully and openly to me when he was the Head of the State and I was the Law Minister in charge of drafting the constitution. I went to Mr. Rajagopalachari for my usual interview which was the practice of the day. At one such interview Mr. Rajagopalachari, referring to the sort of constitution which the Constituent Assembly was making, said to me, “You are committing a great mistake. One federation for the whole of India with equal representation for all areas will not work. In such a federation the Prime Minister and President of India will always be from the Hindi speaking area. You should have two Federations, one Federation of the North and one Federation of the South and a Confederation of the North and the South with three subjects for the Confederation to legislate upon and equal representation for both the federations.”

These are the real thoughts of Mr. Rajagopalachari. They came to me as a revelation coming as they did from the innermost heart of a Congressman. I now regard Mr. Rajagopalachari as a prophet predicting the break-up of India into the North and the South. We must do everything to falsify Mr. Rajagopalachari's prophecy.

It must not be forgotten that there was a civil war in the U.S.A. between the North and the South. There may also be a civil war between the North and the South in India. Time will supply many grounds for such a conflict. It must not be forgotten that there is a vast cultural difference between the North and the South and cultural differences are very combustible.

In creating this consolidation of the North and balkanisation of the South the Commission did not realise that they were dealing with a political and not a merely linguistic problem.

It would be most unstatesman like not to take steps right now to prevent such a thing happening. What is the remedy?

Part III**THOUGHTS ON LINGUISTIC STATES**

PART III**SOLUTION****CHAPTER VI****THE DIVISION OF THE NORTH**

The problem having been realised we must now search for a solution.

The solution lies obviously in adopting some standard for determining the size of a State. It is not easy to fix such a standard. If two crores of population be adopted as a standard measure most of the Southern States will become mixed States. The enlargement of the Southern States to meet the menace of the Northern States is therefore impossible. The only remedy is to break up the Northern States of U.P., Bihar and Madhya Pradesh.

How did this solution not strike the Congress Working Committee I am unable to understand. It is so obvious.

Division of the Northern States

As I have said the Commission in designing linguistic States has created a consolidation of the North and balkanisation of the South. The Commission has not I am sure done this intentionally. But intentionally or unintentionally the fact is there. Its evil consequences are also clear.

It is therefore necessary that this situation must be rectified. The only way to do this is to divide the three States of (1) Uttar Pradesh, (2) Bihar and (3) Madhya Pradesh into smaller units. In this behalf I make bold to offer certain tentative proposals.

This division does not conflict with the underlying principles of a linguistic State. For, if these States are divided in the way suggested, each resulting State will be a linguistic State.

I am happy to find Mr. Pant saying in the recent debate in Parliament on the subject that he has no objection to the cutting up of the U.P. What he said for U.P. may well be taken as applicable to Bihar and Madhya Pradesh.

Division of Uttar Pradesh.—My proposal with regard to the Uttar Pradesh is to divide it into three States (*See* Map 2). Each of these three States should have a population of approximately two crores which should be regarded as the standard size of population for a State to administer effectively. Where the boundary lines of these three States should be drawn I have shown in the accompanying Map No. 2.

The three States of the Uttar Pradesh could have as their capitals

(2) (2) Meerut (2) Cawnpore and (3) Allahabad. They are situated quite in the centre of each of these three States.

Division of Bihar.—My proposal with regard to Bihar is to divide it into two States (*See* Map 3). Each of these two States will have a population of a little over one and half crores. It is not a small population for one Government to administer.

Where the boundary lines should be drawn I have shown in the accompanying Map No. 3.

The two States of Bihar could have as their capitals (1) Patna and (2) Ranchi. They are situated quite in the centre of the two States.

Division of Madhya Pradesh.—Madhya Pradesh stands before us in two forms. The old Madhya Pradesh and the new Madhya Pradesh.

The old Madhya Pradesh consisted of :

(2) (2) the Province at one time known as C. P. and Berar, and
(2) some Indian States out of the States known as the Eastern States.

This old State of Madhya Pradesh had a population of 2 1/2 crores. It consisted of 22 districts. Its legislature had 223 members.

The new Madhya Pradesh as planned by the Commission will consist of:

(2) (2) the 14 districts of the old Madhya Pradesh,
(2) the whole of Bhopal,
(3) the whole of Vindhya Pradesh,

- (4) Madhya Bharat except : Sunel enclave of Mandasaur district, and
- (5) the Sironj sub-division of Kola district of Rajasthan.

The total population of this new Madhya Pradesh will be 26.1 million and its area will be about 171,200 square miles.

I suggest that it should be divided into two States : (1) Northern Madhya Pradesh, (2) Southern Madhya Pradesh (*See Map 4*).

The State of New Madhya Pradesh should consist of the following areas :

- (2) (2) The whole of Vindhya Pradesh.
- (2) The whole State of Bhopal.

The State of Southern Madhya Pradesh should consist of—

- (2) (2) the whole State of Indore, and
- (2) the 14 districts of Mahakosal.

The population of this Indore State will be about 2 crores and the population of this Vindhya Pradesh will be about 1.30 crores. (*See Map No. 4*).

Why the Commission created this monster State it is no way to know. Even Prime Minister Nehru was surprised at its creation.

All that one can think of is that the Commission has been under the impression that one language, one State is a categorical imperative from which there is no escape. As I have shown one language, one State can never be categorical imperative. In fact one State, one language should be the rule. And therefore people forming one language can divide themselves into many States.

CHAPTER VII

THE PROBLEMS OF MAHARASHTRA

I

THE PROPOSALS TO DEAL WITH MAHARASHTRA

Maharashtra is another area which is a subject of controversy. There are

four proposals in the field :

(1) To retain the Bombay State as it is i.e. to retain it as a mixed State consisting of Maharashtra, Gujarat and Bombay.

(2) To disrupt the existing State and to separate Maharashtra and Gujarat and make them into two separate States.

(3) To make united Maharashtra with Bombay as one State.

(4) To separate Bombay from Maharashtra and make it a separate City State.

I would like to state what my proposals are. They are as follows : Bombay as a mixed State should be done away with. I would divide Maharashtra into four States (*See* Map 5) : (1) Maharashtra City State (Bombay), (2) Western Maharashtra, (3) Central Maharashtra and (4) Eastern Maharashtra.

Maharashtra City State— The City of Bombay *plus* such area of Maharashtra as would enable it to be a good and strong City State.

Western Maharashtra— (1) Thana, (2) Kolaba, (3) Ratnagiri, (4) Poona, (5) North Satara, (6) South Satara, (7) Kolhapur and (8) the Marathi-speaking territories given over to Karnataka.

Central Maharashtra—(1) Dang, (2) East Khandesh, (3) West Khandesh, (4) Nasik, (5) Ahmednagar, (6) Aurangabad, (7) Nanded, (8) Parbhani, (9) Beed, (10) Usmanabad, (II) Sholapur City and the Marathi-speaking area of Sholapur District and (12) the Marathi-speaking territories given over to Telangana.

Eastern Maharashtra.—(1) Buldhana, (2) Yeotmal, (3) Akola, (4) Arnraoti, (5) Wardha, (6) Chanda, (7) Nagpur, (8) Bhandara and (9) the Marathi-speaking territories given to Hindi States.

I will next proceed to examine the merits of these proposals.

II

MAHARASHTRIANS UNDER THE MIXED STATE

Should Bombay remain a mixed State? It is a most unusual procedure. The City of Calcutta is not a separate City State. Madras is not a separate City State. Why Bombay alone be made the exception?

Secondly, it is already a mixed State. What is the experience of the Maharashtrians under this mixed State? The Maharashtrians have suffered terribly under this mixed State. What is the position of the Maharashtrians in the Bombay Cabinet?

Let us consider the distribution of Ministership :

Gujarathi Ministers	4
Marathi Ministers	4
Kannada Ministers	1
Total ...				9

Gujarathi members in the Assembly are only 106, Marathi members are 149 and yet the number of Gujarathi Ministers is equal to that of Maharashtrian Ministers.

Let us come to Deputy Ministers :

Marathi speaking	5
Gujarathi speaking	2
Kannada speaking	2
Total ...	9

Only among Deputy Ministers do the Maharashtrians have a majority of one.

But how the power and subjects are distributed among the Ministers and Deputy Ministers is the most important matter. It shows what power and authority the Maharashtrian Ministers possess in this mixed Cabinet of the Bombay State.

Allocation of Subjects among Ministers

	Gujarathi Ministers			Maharashtrian Ministers		
1	Morarji Desai	105	subs	Hirey	49	subs
2	Dinkerrao Desai	26	subs	Nimbalkar	20	subs

3	Jivaraj Mehta	43	subs	Tapase	15	subs
4	Shantilal Shah	28	subs	Chavan	4	subs

The allocation of subjects among Deputy Ministers is also done on the same pattern.

Allocation of Subjects among Deputy Ministers

Allocation of Subjects among Ministers

	Gujarathi Deputy Ministers				Maharashtrian Deputy Ministers	
1	Indumati Sheth	12	subs	Wandrekar	12	subs
2	Babubhai J Patel	3	subs	Deshmukh	4	subs
				Naravane	5	subs
				Sathe	5	subs
				Faki	3	subs

Let us now consider how much money is spent on development in Maharashtra and in Gujarat. The following figures will give an idea of the Per Capita Expenditure for the three years on Maharashtra and Gujarat :

<i>Per Capita Expenditure on Development in Rupees</i>				
		<i>Years</i>		
	Population	1950-51	1951-52	1952-53
Maharashtra	21720091	1.7	2.3	1.8
Gujarath	11896789	2.9	3.1	3.2

What a differential treatment? What a discrimination? What an injustice? Can anybody blame the Maharashtrians if they felt disputed with the mixed State of Bombay?

Such a position of subordination no Maharashtrian can tolerate. The idea of a mixed State must be blown off once for all.

III

THE POSITION OF THE CITY OF BOMBAY

The Bombay City is an area which is a subject matter of controversy. The controversy has become very acute.

Maharashtrians want the City to be part of Maharashtra. Gujarathis want the City to be a separate State. Heads have been broken over the controversy. But there has been no agreement. It is therefore necessary to go to the root of the matter.

The Gujarathis do not claim Bombay City as their own. But will not let go their hold on it. They claim a sort of easement over it by reason of the fact that they control the trade and industry of the City. The issue is: should it become part of Maharashtra or should it be constituted into a separate State? The Gujarathis and Maharashtrians are sharply divided on the issue. The Maharashtrians want that Bombay should become exclusively a part of the new Maharashtra State. The Gujarathis are stoutly opposed to it. They have presented two alternatives. One alternative is not to break up the existing bi-lingual State of Bombay into two linguistic units of Gujarath and Maharashtra. The Congress Working Committee's decision is to make the city of Bombay into a separate State.

The Gujarathis are happy. The Maharashtrians are naturally angry. The resentment of the Maharashtrians is well justified. The arguments urged against the claim of the Maharashtrians have no force at all.

The first argument that is urged is that the Marathi-speaking population of Bombay City does not form a majority of the total population of the City. The total population of Bombay City is very large (*See* Statistical Appendix). Marathi-speaking population is 48 per cent.

Those who use this kind of argument do not seem to realise the weakness of it.

The total Marathi population of Bombay City is no doubt less than 50 per cent. but it has to be valued against two factors. One is that geographically no one can deny that Bombay is part of Maharashtra even if the Maharashtrians are in a minority in the City. Even Mr. Morarji Desai admitted in the course of his speech in the meeting of the Gujarath Pradesh Congress Committee that Bombay is part of Maharashtra.

The second point to be taken into consideration in valuing the population factor is the continued influx of population from the rest of India who come to Bombay either for making profits or for earning their bread. None of them regard Bombay as their home; they should not therefore be counted as permanent residents of Bombay City. Many come for a few months and go back.

Bombay is a home only to the Maharashtrians and none else. It is not therefore logical or fair to count the non-Maharashtrians for the purpose of coming to the conclusion as to who form the majority of population in the Bombay City.

Again it is not realised that the increase in the non-Marathi-speaking people in the Bombay City is due to the absence of a local law restricting citizenship. If Bombay State had such a law all this influx into Bombay from all parts of India could have been shut out and the Maharashtrian majority retained.

It is also not realised that the influx of the non-Maharashtrians in Bombay is due to the fact that Bombay is a port, and it is a port on the Western Coast. The route from Europe to Bombay is much shorter than the route from Europe to Calcutta or Europe to Madras. That is why large number of poor people from other parts of India leave their homes and come to Bombay as temporary residents. It is easier to find a job in Bombay than elsewhere.

Really speaking the matter has to be looked at from a different point of view. People have been coming to Bombay for the last two hundred years or so. Yet this influx has not reduced the Maharashtrian population in the city below 48 per cent. After two hundred years, the bedrock of its population remains Maharashtrian in its composition. This is due to the migratory character of City (*See Appendix 3*). The Gujarathis are migratory population.

There are also other arguments which could be urged in favour of

allowing Bombay to remain as part of Maharashtra.

Bombay is not the only composite city in India. Calcutta and Madras are also composite cities. If Calcutta can be part of Western Bengal and Madras can be part of Madras State what objection can there be to Bombay being made part of Maharashtra? This is the question that every Maharashtrian will ask. I see no answer to this question. The only answer that comes to one's mind is that the Congress High Command thinks that Maharashtrians are unfit to rule others. This is a slur on the Maharashtrian character and they will not tolerate it.

It is said that Bombay has been built up by the capital belonging to non-Maharashtrians. That may be so. But has Madras been built by the capital of Madrases? Has Calcutta been built by the capital of Bengalees? Without the capital of Europeans Madras and Calcutta would have been villages. Then why urge this point against the Maharashtrians when they claim Bombay to themselves? Maharashtrians have at least contributed labour without which Bombay could not have been what it is. It must always be remembered that the life lines of Bombay lie in Maharashtra. The sources of its electricity lie in Maharashtra. Sources of its water supply lie in Maharashtra. The sources of its labour lie in Maharashtra. Maharashtra can at any time make the city of Bombay ' *Mohenjodaro* ' a City of the Dead.

The Gujarathi population is filled with fear that Maharashtrians will practise discrimination against them. But under our Constitution discrimination is not possible for the reason that the Constitution contains a list of fundamental rights and remedies by way of writs from the High Court and the Supreme Court which can immediately provide redress for a wrong. For every wrong of a discriminative character there is a remedy provided by the Constitution. Why should the Gujarathis have any fear?

Let us now consider what benefit the Gujarathis are going to get from Bombay being made a separate City State. Their population in the Bombay State is only ten per cent. How many seats can they get in the Bombay City State Legislature? Not even ten per cent. How can ten per cent protect their clients against 90 per cent?

It must be remembered that the feelings between the Maharashtrians and the Gujarathis would hereafter be running high as never before. A Maharashtrian will not vote for a Gujarathi candidate and a Gujarathi

voter will not vote for a Maharashtrian candidate. Hitherto the Gujarathis have been able to plough the sands of Maharashtra with their money. But money may not succeed once self-respect is aroused. The Gujarathis must consider whether goodwill is not a better protection than a paltry share in the Government of the City.

While the case of Maharashtra is as strong as steel there are some points on the other side which they must not fail to consider in their anger.

They want Bombay to be within Maharashtra. But the question which they must consider is: What do they want? Do they want prosperous Bombay or do they want decadent Bombay? Can Bombay be prosperous under Maharashtra? This in other words means : can Maharashtra provide the capital necessary for the growing trade and industry of the City? No Maharashtrian can answer this question in the affirmative. The Maharashtrians may be able to supply the need for capital after a course of years. But certainly not now.

The second point is : what would be the effect on the standard of living of Maharashtrians living in Bombay if the City's prosperity declines either by flight of capital or removal of business houses. The Maharashtrians must not forget, however it may hurt their pride, that they are a nation of clerks and coolies. What employment can they get in a declining city?

The Maharashtrian should consider the question of Bombay from this point of view. There is a saying which says :

There is also another reason why Bombay City should be made a separate state. The minorities and the Scheduled Castes who are living in the village are constantly subjected to tyranny, oppression, and even murders by the members of the majority communities. The minorities need an asylum, a place of refuge where they can be free from the tyranny of the majority. If there was a United Maharashtra with Bombay included in it where they can go to for safety? The same tyranny was practised over the Brahmins, Marwaris and Gujarathis living in the villages when Godse killed Mr. Gandhi. All the Brahmins, Marwaris and Gujarathis who were once living in villages ran away and are now living in towns and forgetting their experiences are shouting for United Maharashtra, after having reached a safe harbour.

It seems to me that Maharashtrians will do well to accept the decision of the Congress High Command for the time being.

The Maharashtrians need have no fear of losing Bombay. Nobody can dispossess Maharashtrians of Bombay. Much less can there be any ouster of them by anybody.

The real objection to the creation of Bombay as a separate State arises from the fact that the name Bombay does not carry within it the sense that it is part of Maharashtra. It is to remove this objection that I propose that the new State of Bombay should be renamed by another name which will carry on its face the word Maharashtra.

Supposing in terms of this suggestion instead of saying that Bombay be made a separate State it is said that Maharashtra be divided into four States, (1) Maharashtra City State (which is Bombay City), (2) Western Maharashtra, (3) Central Maharashtra, (4) Eastern Maharashtra; what objection can there be to the creation of a separate State of Bombay?

This also involves the separation of Bombay. With this change in the name of the City I like to know which Maharashtrian can raise objection to the creation of Bombay as a separate City State on the ground that this scheme separates Bombay from Maharashtra? To say that Bombay be made a separate State is merely stating that Maharashtra be divided into four States. If there is no objection to Maharashtra being divided into *two* or *three* States what objection can there be to Maharashtra being divided into four? I can see none. For the sake of similarity in language I propose that Calcutta be called Bengal City State and Madras be called Tamil City State.

This is one proposal which I make to ease the tension between Maharashtrians and Gujarathis.

The Maharashtra City State will be a surplus State. Those who are wanting United Maharashtra with Bombay are hoping to get the benefit of this surplus for Maharashtra.

The surplus revenue of the City State arises because of (1) The Property Tax and (2) The Electricity Tax. Can the revenue from these two sources be appropriated by Maharashtra if Bombay becomes a separate City State?

Nothing can be done to take away the yield of the Property Tax from the Bombay City State Property Tax. It is a local tax, on local situated property. The State within which the property is situated is entitled to the yield of the Tax.

With regard to the Electricity Tax the situation is different.

When Gujarat and Maharashtra are separated—and they must be—Gujarath will claim the revenue derived from electricity produced and consumed within Gujarath. Maharashtra will claim the revenue derived from electricity produced and consumed within Maharashtra. Bombay City as a State will do the same. Can Bombay be allowed to do so and appropriate the revenue to itself? Is it just? Bombay City does not produce electricity. It is produced outside Bombay City in Maharashtra. Therefore the new Bombay City State has no right to appropriate to itself the whole revenue derived from electricity. The proper thing to do is to apply the principle of the segregation of the sources and division of the yield well known to all students of State Finance.

To put it in concrete shape let the Centre take over the taxation of Electricity and divide the yield among the four States of Maharashtra—(1) Bombay, (2) Western Maharashtra, (3) Central Maharashtra, (4) Eastern Maharashtra according to their needs. It will also ease the financial strain that the three Maharashtras are likely to suffer on account of the separation of Bombay.

IV

UNITED OR DIVIDED?

I have said that Bombay be given a new area and made into a separate City State.

There now remains the question of how to deal with the rest of the Maharashtra. I have suggested that the rest of the Maharashtra should be divided into three States.

From very ancient times Maharashtra has been divided into three States.

Maharashtra first comes to be known in history during the time of Ashok. It is mentioned in *Mahavansa* in connection with reference to the missionaries sent by Ashok to different parts of India for the purpose of propagating Buddhism. But thereafter the Pali literature speaks of *Trai Maharashtrika* or three Maharashtras. It means that from very ancient times there have been three Maharashtras. My proposal is not therefore new.

The distribution of population, area and revenue would be as shown in Table (on page 160).

The accompanying map No. 5 will show the area and boundaries of

each of the three divisions.

For the present, from the point of view of area and population there is nothing to complain against the three divisions.

From the earliest times they have always been spoken of as *Trai Maharashtra*.

The division does no wrong to the language principle. In fact if all the three Maharashtra have the same language it can help to develop the Marathi language if it is worth their while to do so.

The question of viability I will consider later on. I propose to deal with it separately in a special chapter.

Bombay was then unknown. Otherwise it would have been the fourth part of Maharashtra.

Of the remaining three parts what I call Eastern Maharashtra is already a separate State. All that required is that it should be allowed to remain separate. It has got a well-established administration system, a well-established revenue system and a well-established judicial system. It has been separated from the trammels of the Hindi-speaking people.

The only problem that remains is how to divide the area covered by the Maharashtra which is part of the present Bombay State and the Marathwada of the Hyderabad State.

Instead of forming a merger of the two into one and joining it to the third which I call Eastern Maharashtra, why not divide the Maharashtra part of Bombay and Marathwada into two equal States? This is my scheme. I transfer six districts of Maharashtra part of the Bombay State and make them part of Marathwada. (*See Map No. 5*). The distribution of the area and population of the three Maharashtra are shown below :

The Population Area and Revenue of the Three Maharashtra States will be approximately as follows:

Name of State	Total Population of the territory	Area in square miles	Total Revenue	Total expenditure

Western Maharashtra	12677316	30028	262420441	not known
Central Maharashtra	12409044	55482	216380095	not known
Eastern Maharashtra	8027130	39004	94111012	not known
Total	33113490	124514	572911548	not known

I will now proceed to state my reasons in support of my plan.

I have said that Maharashtra has always been divided into three. This is a historical argument. It at least shows that the tradition, the way of life and the social and economic condition of what is called United Maharashtra is not one. Those who are in a hurry to have United Maharashtra may not take it seriously. But there are other arguments which arise out of the present condition and which cannot be ignored. I mention a few.

My first argument is that a single Government cannot administer such a huge State as United Maharashtra.

The total population of the Marathi-speaking area is 3,30,83,490. The total area occupied by the Marathi-speaking people is 1,74,514 sq. miles. It is a vast area and it is impossible to have efficient administration by a single State. Maharashtrais who talk about Samyukta Maharashtra have no conception of the vastness as to the area and population of their Maharashtra. But why there should be one single Maharashtraian State. I am quite unable to understand. To have a separate Maharashtra State is one thing. To have a single Maharashtra State is quite a different thing. I am in favour of a separate Maharashtra, separate from Gujarathis and separate from Hindi-speaking people. But I am unable to understand why a free Maharashtra should be made into one single State. The Maharashtrais are not planning to declare war on U.P. and therefore they need not have a common front.

Even from the point of view of Marathas why should there be this consolidation? What affiliation has a Maratha of Satara got with the Maratha of Aurangabad? What affiliation has a Maratha of Nasik got with the Maratha of Ratnagiri? What care and interest a Maratha of Satara is going to bestow upon the problems of the Maratha of Aurangabad? What

care and interest a Maratha of Nasik is going to bestow upon the problems of the Maratha of Ratnagiri? The consolidation has no meaning and can serve no purpose.

All Maratha Ministers in the present Bombay Cabinet come from Satara District or Nasik District. There is none from Konkan.

The second consideration is the economic inequality between the three parts of Maharashtra. Marathwada has been solely neglected by the Nizam. What guarantee is there that the other two Maharashtra will look after the interests of what I call the Central Maharashtra?

The third consideration is industrial inequality between the three parts of Maharashtra. Western Maharashtra and Eastern Maharashtra are industrially well developed. What about the Central Maharashtra? What guarantee is there of its industrial development? Will Western Maharashtra and Eastern Maharashtra take interest in the industrial development of Central Maharashtra?

The fourth consideration is the inequality of education between Eastern and Western Maharashtra on the one hand and Central Maharashtra on the other. The inequality between them is marked. If the Central Maharashtra goes under the Poona University its destiny is doomed.

I am greatly worried about Marathwada. It was hitherto part of the Nizam's Territory for the last 200 years. The Nizam had criminally neglected this area. He took no interest in it. There is not a mile of canal irrigation in Marathwada. There is hardly a high school in taluka places in Marathwada. There is hardly a youth in Nizam's public service from Marathwada. I speak from knowledge and experience. People are not only down and out they are ignorant. They are being grabbed by highly advanced people on both sides. When their avenues of employment are closed there will be further degradation in their position.

I shudder to think what would happen when Marathwada goes under the Poona University. The standard of education in the schools and colleges under the Poona University is so high that hardly any boy from Marathwada can hope to pass the examination. It is quite possible that with the madness for united Maharashtra there will develop a madness for a single and common University.

The creation of United Maharashtra will be followed by the onrush of Poona and Nagpur Brahmins in Marathwada to pick up the jobs.

There is a further reason why Maharashtra should be divided into three.

The total strength of the Bombay Legislative Assembly is 315, Out of them 149 members are Marathi-speaking. The total strength of the Bombay Legislative Council is 72; out of them 34 are Marathi-speaking. Obviously some Marathi-speaking person should have been the Chief Minister of the Bombay State. Mr. Hirey stood up as a candidate for the Chief Ministership, But he was made to sit down by the Congress High Command. Not only was Mr. Hirey made to sit down but he was forced to move that Mr. Morarji Desai be made the Chief Minister. What a humiliation for a Maharashtrian leader ! And what value does the Congress High command attach to the political intelligence of Maharashtrians?

The same incapacity of the Maratha Ministers is clear from the division of subjects referred earlier.

It is obvious from the facts given above that the Marathas are lacking in political talent. There is no man of eminence among them such as Tilak, or Gokhale or Ranade. The Maharashtrian today counts for nothing. The Congress Maharashtrian coin is for much less in the Congress. The non-Congress Maharashtrian also counts for nothing. It is therefore absolutely essential to train up Maharashtrians in political life. This political training has become fundamental because of the transfer of power to the masses. The word Marathas is used in two senses. In one sense it means all those who speak the Marathi language. In another sense it means all those who are Marathas by caste. They are all spoken of as Marathas. But they all fail to make the distinction between Marathas i.e. those who speak the Marathi language and Marathas i.e. those who are Marathas by caste.

Those who are going to rule Maharashtra are not Marathas by speech but Marathas by caste, notwithstanding the hopes of the Brahmins. Now it cannot be denied that Marathas are politically the most backward community. It is fundamental that they should receive political training. If there is only one Maharashtra only *one* Maratha can be trained as Chief Minister and five or six as Ministers. On the other hand if there are three Maharashtra. States, three Marathas can find training as Chief Ministers and thirty Marathas can get training as Ministers. We can do real service to ourselves by helping to educate our Masters.

The only way of educating the Marathas is to give them more field for developing their abilities and exercising their abilities. Only the creation of

three Maharashtra can do this.

There is a story which is very appropriate to the occasion. The father of a young girl had taken her for an outing in a jungle. She found that under big trees there stood small shrubs. Finding this to be uniformly so, she asked her father why these small shrubs under the big trees do not grow. The father not being a botanist could not give an answer. So he said : Oh ! I do not know. He, however, felt that the question was very significant. He was a Professor in a college. Next day he went to the college and put the question to his Botanist colleague. The Botanist replied: Why! The answer is simple. The big trees use up all the sun's rays to themselves. The shrubs do not get any rays. That is why they do not grow. The Marathwada people must not forget the moral of this story.

The only argument in favour of United Maharashtra is that it is like a meeting of the two brothers Rama and Bharat in Ramayana after a long separation. It is a silly argument, not worth consideration.

There are some Maharashtrians who are satisfied with some kind of Political Treaty with Western Maharashtra guaranteeing some concessions. Treaties are like scraps of paper. They cannot be enforced. Instead of political treaties which nobody can enforce is it not better to have power in one's own hands?

What a poor and wretched show by Maharashtrians in the Government of Bombay ! If this is the show that the most advanced and educated part of Maharashtrians can make, what can be expected from the people of Marathwada?

I advise the people of Marathwada or Central Maharashtra to have a State of their own so that they have power in their own hands to improve their own lot.

RECLAMATION OF LOST TERRITORY

Should all the Marathi-speaking people be huddled up under one State? Or should they be divided into two or more States.

How to dispose of the remainder when Bombay is separated is the next question. The remainder consists of two parts: (1) Gujarath, (2) Maharashtra.

I am concerned with Maharashtra.

While creating Linguistic Provinces the Commission has given over Marathi-speaking areas to non-Marathi-speaking areas. The number of such excluded areas are as follows :

1. Belgaum Taluka with the City of Belgaum.
2. Khanapur Taluka.
3. Chikori Taluka including Nipani.
4. Supa Taluka.
5. Karwar Taluka.
6. Nilanga Taluka in Bidar.
7. Ahamadpur Taluka in Bidar.
8. Udgir Taluka in Bidar.
9. Rajgir Taluka in Adilabad.
10. Some portion from Vidarbha given to the neighbouring Hindi-speaking State.

The Maharashtrians excluded from Maharashtra come to 13,89,648 in terms of population.

The Commission in retaining the mixed State of Bombay had to secure two most important objects. One is not to allow Bombay to go into the hands of Maharashtrians. This the Commission did by creating a mixed State. The second thing they had to do was to secure equality between Maharashtrians and the Gujarathis. The necessity of equality between the two In the future Legislature of the Bombay State as planned by the Commission had become urgent as the members of Karnatak in the old Assembly on whom the Gujarathis depended for their majority *were* to disappear in the new Karnatak State. This the Commission did by clipping the wings of Maharashtra by handing over Marathi-speaking people to non-Marathi-speaking States. There seems to be no other reason for this political vandalism.

This wrong done by the Commission to Maharashtra must now be remedied and fortunately it can be undone. The proposal of a mixed State

is gone and there is no necessity for equality between Maharashtrians and Gujarathis.

CHAPTER VIII

SUMMARY OF PRICIPLES COVERING THE ISSUE

For the sake of the reader I summarise below the principles which should underly the creation of Linguistic States which are already enunciated In

the foregoing pages but which lie about scattered. These principles may be staled as below :

- (1) The idea of having a mixed State must be completely abandoned.
- (2) Every State must be an unilingual State. One State, one language.
- (3) The formula one State, one language must not be confused with the formula of one language, one State.
- (4) The formula one language, one State means that all people speaking one language should be brought under one Government irrespective of area, population and dissimilarity of conditions among the people speaking the language. This is the idea that underlies the agitation for a united Maharashtra with Bombay. This is an absurd formula and has no precedent for it. It must be abandoned. A people speaking one language may be cut up into many States as is done in other parts of the world.
- (5) Into how many States a people speaking one language should be cut up, should depend upon (1) the requirements of efficient administration, (2) the needs of the different areas, (3) the sentiments of the different areas, and (4) the proportion between the majority and minority.
- (6) As the area of the State increases the proportion of the minority to the majority decreases and the position of the minority becomes precarious and the opportunities for the majority to practise tyranny over the minority become greater. The States must therefore be small.

(7) The minorities must be given protection to prevent

the tyranny of the majority. To do this the Constitution must be amended and provisions must be made for a system on plural member constituencies (two or three) with cumulative voting.

Part IV

THOUGHTS ON LINGUISTIC STATES

PART IV

THE PROBLEMS OF LINGUISTIC STATES

CHAPERT IX

VIABILITY

Will the three Maharashtrian States be viable? Will their Revenue be sufficient to meet their expenditure? Such a question is bound to be asked.

It is not that such a question can be asked about Maharashtra alone. It can be asked about many other States in India.

I give four statements relating to Part A States, Part B States and the Central Government from Part III of the Report of the Taxation Inquiry Committee presided over by Dr. John Mathai (*See* Tables 4, 5, 6 and 7).

From these statements the following propositions stand out:

(1) That up to a certain year in the life of the States there was no deficit. They were all viable. It is only after Congress came into office that States ceased to be viable.

(2) That since the Congress came into office the Excise Revenue has begun to dwindle. It has gone down to a vanishing point.

(3) That Income Tax and Sales Tax have increased enormously.

These are the causes which explain why States have ceased to be viable.

The Excise Revenue is being sacrificed for a false ideology which has no meaning, no sense and no reality.

To regard to the Policy of Prohibition followed by the Congress, the following conclusions can be drawn without fear of challenge :

- (1) An enormous amount of revenue is sacrificed for nothing.
- (2) People have not ceased to drink. There is enormous amount of illicit manufacture of liquor which is being sold to the public clandestinely.
- (3) The money lost by Government is picked up by the illicit manufacturer.
- (4) Prohibition has demoralised Society. Formerly only male members of the family drank because they alone could go to the liquor shop. Now illicit liquor manufacture has become a Home Industry. Liquor being now made at home both men and women drink.
- (5) In addition to the loss of revenue on account of Prohibition Government has to undertake increased expenditure on Police to enforce Prohibition which, however, they never do.

What good is this Prohibition which does not prohibit? The Congress threatens to extend this Prohibition to the whole of India. God bless the Congress! It *is* said that God first makes them mad whom He wishes to destroy. God is doing the same with Congressmen.

It is enough for me to say that Congress cannot have both viability and Prohibition.

Coming to the Land Revenue it could certainly be increased. But the Congress is afraid to touch the agriculturist for fear of losing votes. It is therefore raising money from the Sales Tax and the Income Tax both of which fall so heavily on the urban classes as is apparent from Table No. 6.

It is therefore clear that viability is no problem. Only the Congress has to revise its Taxation Policy.

Viability is a question of capacity to bear taxation and will to tax. There is enough capacity. What is wanted is will.

The whole of the Indian Taxation system requires to be changed. It is a question of altering the Constitution. I cannot deal with it now. I must reserve it for another occasion.

CHAPTER X

MAJORITIES AND MINORITIES

Politics is nothing if not realistic. There is very little in it that is academic. It is therefore follows that before passing any judgement on any scheme of politics it is essential that one must consider the ground plan.

Someone may ask what do I mean by "Ground Plan". To me the ground plan means the social structure of a community to which the political plan is sought to be applied.

It needs no argument to show that the political structure rests on the social structure. Indeed the social structure has a profound effect on the political structure. It may modify it in its working. It may nullify it or it may even make a mockery of it.

In the case of India the social structure is built up on the caste system, the special product of Hindu civilisation and culture.

The caste system is so well known that one need not wait to explain its nature. One can straight proceed to show what effect it is likely to have on Linguistic States.

There are some peculiar features of the caste system which must however be noted—

- (1) Castes are so distributed that in any given area there is one caste which is major and there are others which are small and are subservient to the major caste owing to their comparative smallness and their economic dependence upon the major caste which owns most of the land in the village.
- (2) The caste system is marked not merely by inequality but is affected by the system of graded inequality. All castes are not on a par. They are one above the other. There is a kind of ascending scale of hatred and a descending scale of contempt.
- (3) A caste has all the exclusiveness and pride which a nation has. It is therefore not improper to speak of collection of castes as a collection of major and minor nations.

I am sorry, I cannot illustrate these points by reference to facts and figures. The census which is the only source of information on these points fails to help me. The last census omits altogether the caste tables which had been the feature of the Indian census ever since its birth. The Home Minister of the Government of India who is responsible for this omission was of the opinion that if a word does not exist in a dictionary it can be proved that the fact for which the word stands does not exist. One can only pity the petty intelligence of the author.

The consequences of the caste system on politics are quite obvious. The interesting part is to see what effect it has upon elections which is the foundation of Representative Government which is reared up on a system of single member constituencies.

The effects may be summarised as follows :

- (1) Voting is always communal. The voter votes for the candidate of his community and not for the best candidate.
- (2) The majority community carries the seat by sheer communal majority.
- (3) The minority community is forced to vote for the candidate of the majority community.
- (4) The votes of the minority community are not enough to enable the candidate to win the seat against the candidate put up by the majority community.
- (5) As consequence of social system of graded inequality the voter of the higher (major) communities can never condescend to give his vote to a candidate of a minority community. On the other hand the voter of the minority community who is socially on a lower level takes pride in giving his vote to the candidate of the majority community. That is another reason why a candidate of a minority community loses in election.

The Congress always wins, so it is found. But no one asks why does the Congress win? The answer is that Congress is very popular. But why is the Congress popular? The true answer is that Congress always puts up candidates which belong to castes which are in the majority in the constituencies. Caste and Congress are closely linked. It is by exploiting the caste system that the Congress wins.

These evil consequences of the caste system are sure to be sharpened by creation of Linguistic States. Minority communities may be crushed. If not crushed they may be tyrannised and oppressed. They are sure to be discriminated against and denied equality before law and equal opportunity in public life.

The history of nations and the changes in their ideologies have been well traced by Lord Acton :

“In the old European system, the rights of nationalities were neither recognised by governments nor asserted by the people. The interest of the reigning families, not those of the nations, regulated the frontiers, and the administration was conducted generally without any reference to popular desires. Where all liberties were suppressed, the claims of national independence were necessarily ignored, and a princess, in the words of Fenelon, carried a monarchy in her wedding portion.”

Nationalities were at first listless. When they became conscious:

"They first rose against their conquerors in defence of their legitimate rulers. They refused to be governed by usurpers. Next came a time when they revolted because of the wrongs inflicted upon them by their rulers. The insurrections were provoked by particular grievances justified by definite complaints. Then came the French Revolution which effected a complete change. It taught the people to regard their wishes and wants as the supreme criterion of their right to do what they like to do with themselves. It proclaimed the idea of the sovereignty of the people uncontrolled by the past and uncontrolled by the existing state." "The caste is a nation but the rule of one caste over another may not be admitted to be the same as the rule of one nation over another. But supposing the case is not carried so far but is limited to majority and minority even then the question remains : What right has the majority to rule the minority?"

The answer is that whatever the majority does it is right. What complain the minorities can have?

People who rely upon majority rule forget the fact that majorities are of two sorts : (1) Communal majority and (2) Political majority.

A political majority is changeable in its class composition. A political majority grows. A communal majority is born. The admission to a political majority is open. The door to a communal majority is closed. The politics of a political majority are free to all to make and unmake. The

politics of a communal majority are made by its own members born in it.

How can a communal majority run away with the title deeds given to a political majority to rule? To give such title deeds to a communal majority is to establish a hereditary Government and make the way open to the tyranny of that majority. This tyranny of the communal majority is not an idle dream. It is an experience of many minorities. This experience to Maharashtrian Brahmins being every recent it is unnecessary to dilate upon it.

What is the remedy? No doubt some safeguards against this communal tyranny are essential. The question is: What can they be? The first safeguard is not to have too large a State. The consequences of too large a State on the minority living within it are not understood by many. The larger the State the smaller the proportion of the minority to the majority. To give one illustration—If Mahavidarbha remained separate, the proportion of Hindus to Muslims would be four to one. In the United Maharashtra the proportion will be fourteen to one. The same would be the case of the Untouchables. A small stone of a consolidated majority placed on the chest of the minority may be borne. But the weight of a huge mountain it cannot bear. It will crush the minorities. Therefore creation of smaller States is a safeguard to the minorities.

The second safeguard is some provision for representation in the Legislature. The old type of remedy provided in the Constitution were (1) certain number of reserved seats and (2) separate electorates. Both these safeguards have been given up in the new Constitution. The lambs are shorn of the wool. They are feeling the intensity of the cold. Some tempering of the wool is necessary.

Separate electorates or reservation of seats must not be restored to. It would be enough to have plural member constituencies (of two or three) with cumulative voting in place of the system of single-member constituency embodied in the present Constitution. This will allay the fears which the minorities have about Linguistic States.

THOUGHTS ON LINGUISTIC STATES

PART V

THE NEED FOR A SECOND CAPITAL

CHAPTER XI

INDIA AND THE NECESSITY OF A SECOND CAPITAL

A WAY TO REMOVE TENSION BETWEEN THE NORTH AND THE SOUTH

Can India afford to have one Capital? That India has now one capital does not close the question. If the Capital of India is not satisfactorily located, now is the time for considering the question.

Since the departure of the British, India has only one capital and that is Delhi. Before the British, India has always had two capitals. During the Moghal period, India had Delhi as one Capital and Shrinagar in Kashmir as another Capital. When the British came they too had two capitals, one was Calcutta and another was Simla. Even when they left Calcutta for Delhi, they retained Simla as their summer Capital. The two capitals maintained by the Moghuls and by the British were the results of climatic conditions. Neither the British nor the Moghuls were able to live in Delhi or in Calcutta continuously for 12 months. The summer months in Delhi were unbearable to the Moghuls. They made Shrinagar their second capital for summer months. The summer months in Calcutta were equally unbearable to the British. They, therefore, established a second capital. To these climatic conditions must now be added three other conditions. There was no popular Government when the Moghuls ruled or when the British ruled. Now we have popular Government and the convenience of the people is an important factor. Delhi is most inconvenient to the people of the South. They suffer the most from cold as well as distance. Even the Northern people suffer in the summer months. They do not complain because they are nearer home and they are nearer the seat of power. Second is the feeling of the Southern people and the third is the consideration of Defence. The feeling of the Southern people is that the Capital of their Country is far away from them and that they are being ruled by the people of Northern India. The third consideration is of course more important. It is that Delhi is a vulnerable place. It is within bombing distance of the neighbouring countries. Although India is trying

to live in peace with its neighbours it cannot be assumed that India will not have to face war sometime or other and if war comes, the Government of India will have to leave Delhi and find another place for its location. Which is the place to which the Government of India can migrate? A place that one can think of is Calcutta. But Calcutta is also within bombing distance from Tibet. Although India and China today are friends, how long the friendship would last no one can definitely say. The possibility of conflict between India and China remains. In that event Calcutta would be useless. The next town that could be considered as a refuge for the Central Government is Bombay. But Bombay is a port and our Indian Navy is too poor to protect the Central Government if it came down to Bombay. Is there a fourth place one could think of? I find Hyderabad to be such a place. Hyderabad Secunderabad and Bolarum should be constituted into a Chief Commissioner's Province and made a second capital of India. Hyderabad fulfils all the requirements of a capital for India. Hyderabad is equidistant to all States. Anyone who looks at the table of distances given below will realise it:

	From Delhi – miles	From Hyderabad – miles
To Bombay	798	440
To Calcutta	868	715
To Madras	1198	330
To Karnul	957	275
To Trivandrum	1521	660
To Patiala	124	990
To Chandigarh	180	1045
To Lucknow	275	770

From the defence point of view it would give safety to the Central Government. It is equidistant from all parts of India. It would give satisfaction to the South Indian people that their Government is

sometimes with them. The Government may remain in Delhi during winter months and during other months it can stay in Hyderabad. Hyderabad has all the amenities which Delhi has and it is a far better City than Delhi. It has all the grandeur which Delhi has. Buildings are going cheap and they are really beautiful buildings, far superior to those in Delhi. They are all on sale. The only thing that is wanting is a Parliament House which the Government of India can easily build. It is a place in which Parliament can sit all the year round and work, which it cannot do in Delhi. I do not see what objection there can be in making Hyderabad a second capital of India. It should be done right now while we are reorganising the States.

Hyderabad, Secunderabad and Bolarum should be constituted into a second capital of India. Fortunately, it can be very easily done with satisfaction to the whole of South India, to Maharashtra and to the Andhras.

This is another remedy for easing the tension between the North and the South.

46. West Virginia	24,181	1,715,984
47. Wisconsin	56,154	2,975,910
48. Wyoming	97,914	257,108

The population of the Bombay City according to the Communities given in the Census of 1941 is as follows:

Hindu	8,99,398
Scheduled Castes	1,21,352
Muslims	2,51,518
Indian Christians	1,22,683
Anglo-Indians	8,787
Parsees	58,813
Sikhs	2,418
Jains	33,281
Buddhists	912
Tribes	4,606
Others	29,847
Total	1,489,883

The area of the Bombay City according to the Census of 1941 was 30 sq. miles.

APPENDIX IX
Statistics of Chief Castes

Caste	Strength	Where chiefly found
Agri	265,285	Bombay.
Ahar, Ahir, Gopi, <i>Gosbi, Goala</i> Golla, Gowari, Gaura, Kavundan Idaiyan.	14,170,032	Most Provinces.
Ahom	249,434	Assam.
Arain, Kunjra, Koeri, Kachli, Murao.	5,048,849	Most Provinces.
Arora, Bhansali, Lohana	1,499,407	Baluchistan, Bombay, N.W.F.P. Panjab, Jammu and Kashinir, W.I. States
Babhan, Bhuinihar	1,113,541	Bihar and Orissa, U.P.C.P.
Baidya	110,739	Bengal.
Baiga, Bhanua, Binjwar, Bharia, Kadar, Bhumia, Bhunja, Bhuiya, Ghatwar, Naiya, Pao.	1,050,760	Bengal, Bihar and Orissa, C.P., C.I, Rajputana, Sikkim.
Bairagi	838,285	Most Provinces.
Baloch	1,333,215	Baluchistan, Bombay, Punjab, N.W.F.P.
Baniya, Bhatia, Chetti, Khatri, Kamati (Vaishya).	5,176,383	Most Provinces,
Banjara, Lumbadi, Labana, Lamani.	951,022	Bombay, C.P., C.L. Gvvalior-Hyderabad, Mysore, Rajputana
Bania, Bhalia, Chodhra, Gedia, Khant, KOLI,	3,418,643	Most Provinces.

Kotwal, Naikda, Patclia, Patanwadia, Thakarda, Talabda, Valvi.		
Bauri, Bagdi	1,671,481	Bengal, Bihar and Orissa, Rajputana.
Bawaria, Bavari, Baori, Bagari, Vagri, Badhik.	309,720	Most Provinces.
Bayar, Barmanu, Dhangar, Musahar.	811,746	Bengal, Bihar and Orissa, U.P."Central India.
BeDar, Boya	991,536	Bombay, Madras, Hyderabad, C.P.
Bhandari, Idiga, Iruvan, Siyal	1,253,403	Bihar and Orissa, Cochin, Mysore, Madras. Travancore, Rajputana; Baroda.
Bhangi	797,599	Ajmer-Merwara, Bombay, U.P., Baroda, Gwalior, Rajputana, W. I. States
Bharwad, Dhangar, Gadariya, Kumba.	1,816,283	Most Provinces.
Bhat, Barhmabhatt, Chamn, Jasondhi.	397,274	Most Provinces
Bhatra, Pardhana, Parja	353,183	Madras, C.P. and Berar.
Bhil, Barda Bhilala. Dhanka, Mankar, Mavchi, Pathia, Rathia, Tadv.	1,454,144	Most Provinces.
Bhisti, Bhoi, Dhimar, Jhinwar, Kabar, Machhi, Tiya.	3,575,941	Most Provinces.
Bohra	212,752	Bombay, Baroda, C.I., Gwalior, C.P., Rajputana, W.I. States Travancore.
Brahman	15,207,277	Most Provinces.

Brahui	224,415	Baluchistan, Bombay.
Chamar, Khalpa, Samagara	12,195,516	Most Provinces.
Chasa, Raju	835,236	Bengal, Bihar and Orissa.
Chasi, Kajbartta (Mahisya)	2,381,266	Bengal.
Chuhra	721,981	N.W.F. Piov. Punjab, Delhi.
Dhanuk, Kandra	758,671	Bihar and Orissa, Bengal, C.P., C.I., Ajmer- Merwara, Rajputana, Delhi, Gwalior.
Dhobi, Parit, Vanran, Velutte-dan.	3,161,428	Most Provinces.
Dom, Dombar, Bansphor, Dharkar, Dholi.	907,776	Most Provinces.
Dhor, Chak.kliyal'l	671,926	Bombay, C.P., Madras, Cochin, Travancore, W.I. States.
Dusadh	1,400,878	Bengal, Bihar and Orissa, U.P.
Fakir	820,577	Punjab, U.P., C.P., Rajputana C.I., Agency Gwalior.
Garo, Hajong, Kachari, Mech, Rabha.	695,648	Assam, Bengal.
Gond, Dhanwar, Kalota, Kamar, Karwar, Kolam, Kondh, Konda, Dora, Koya, Maria, Muria Nagarchi.	4,719,222	Andamans and Nicobars, Bengal, Bihar and Orissa, Bombay, C.P., and Berar, Madras, U.P. C.I. Hyderabad, Gwalior, Rajputana.
Gujar	2,430,669	Ajmer-Merwara, Bombay, C.P. and Berar, Delhi, N.W. Frontier, Punjab, U.P., C.I.,

		Rajputana.
Guria, Halwai	246,583	Bihar and Orissa, U.P., C.I., Rajaputana, Gwalior.
Hajjam, Ambattan, Bhandari, Kelashi, Mhali, Nadig, Nai"Naibrahman", Napit, Nhavi, Pandithar, Vellakat-talavan.	3,725,860	Most Provinces.
Hari	418,830	Assam, Bengal, Bihar and Orissa Madras.
Jat	8,377,819	N.W. Frontier, Punjab, U.P. Kashmir, Rajputana.
Jogi	111,586	Gwalior, C.I., Agency, Raj-putana, Jammu and Kashmir.
Kaikolan	419,078	Madras, Cochin, Travancore.
Kalar	1,017,179	Ajmer-Merwara, Bengal, C.P. and Berar, U.P., Baroda, C.I., Gwalior, Hyderabad, Rajputana, Sikkim.
Kallavan, Maravan	948,630	Madras, Cochin, Travancore.
Kamalan, "Viswabrahman", Panchal.	7,735,393	Most Provinces.
Karen	1,367,673	Burma.
Kayastha, Karan, Prabhu . .	2,946,228	Most Provinces.
Kewat, Kaibartta	1,813,278	Assam, Bengal, Bihar and Orissa, C.P. and Berar, U.P.
Kolita	109,250	Bihar and Orissa, C.P.

		and Berar.
Koshti, Devang	921,201	Bengal, Bombay, C. P. and Berar, Madras, C.I., Hyderabad, Mysore, Gwalior, Cochin.
Khandayat, Paik	1,060,587	Bihar and Orissa, Bengal, Madras.
Kisan	431,044	Bengal, Bihar and Orissa, U.P.
Khasi, Synteng .	232,595	Assam, Andamans and Nico-bars.
Khatik, Chick	412,520	U.P., C.P., Bengal, Delhi, Ajmcr-Merwara, Baluchistan Hyderabad, Rajputana Gwalior.
Kori, Katia, Balai, Chaupal, Jugi.	2,165,953	Most Provinces.
Korku, Korwa	246,765	Bihar and Orissa, C.P., C.I., U.P.
Kumhar, Kusavan	3,580,143	Most Provinces.
Kunbi, Karbi, Kurmi, Kshatriya, Kapu, Kapewar, Raddi, Vakkaliga, Vellala	11,082,108	Most Provinces.
Labbai	374,829	Coorg, Madras, Mysore, Travancore.
Lodhi	1.742,470	C.P. and Berar, U.P., C.I., Bengal, Delhi, Rajputana, Hyderabad, Gwalior.
Lushei, Sokte, Thado	192,520	Assam, Bengal, Burma.
Mahar, Mehra, Dhed, Vankar, Holiya, Pulayan, Cheruman.	4,729,405	Most Provinces.
Mala	852,050	C.P. and Berar, Madras.

UNTOUCHABLES OR THE CHILDREN OF INDIA'S GHETTO

(This is a 208-page MS (Second copy) under the title "Untouchables or The Children of India's Ghetto". The whole MS forms an independent book by itself. It has a ' Table of Contents ' divided into 4 parts, which are further sub-divided into 14 chapters. Slight modifications had to be made in the arrangement of the chapters to bring them in conformity with that of ' Table of Contents '. Except few corrections in the titles of the chapters, the text is untouched by the author.)

PART I

What it is to be an Untouchable .

CHAPTER I UNTOUCHABILITY—ITS SOURCE

It is usual to hear all those who feel moved by the deplorable condition of the Untouchables unburden themselves by uttering the cry "We must do something for the Untouchables". One seldom hears any of the persons interested in the problem saying ' Let us do something to change the Touchable Hindu '. It is invariably assumed that the object to be reclaimed is the Untouchables. If there is to be a Mission, it must be to the Untouchables and if the Untouchables can be cured, untouchability will vanish. Nothing requires to be done to the Touchable. He is sound in mind, manners and morals. He is whole, there is nothing wrong with him. Is this assumption correct? Whether correct or not, the Hindus like to cling to it. The assumption has the supreme merit of satisfying themselves that they are not responsible for the problem of the Untouchables.

How natural is such an attitude is illustrated by the attitude of the Gentile towards the Jews. Like the Hindus the Gentiles also do not admit that the Jewish problem is in essence a Gentile problem. The observations of Louis Goulding on the subject are therefore very illuminating. In order to show how the Jewish problem is in its essence a Gentile problem, he says:

"I beg leave to give a very homely instance of the sense in which I consider the Jewish Problem in essence a Gentile Problem. A close acquaintance of mine is a certain Irish terrier of mixed pedigree, the dog Paddy, who is to my friend John Smith as the apple of both his eyes. Paddy dislikes Scotch terriers; it is enough for one to pass within twenty yards of Paddy to deafen the neighbourhood with challenges and insults. It is a practice which John Smith deplores, which, therefore, he does his best to check—all the more as the objects of Paddy's detestation are often inoffensive creatures, who seldom speak first. Despite all his affection for Paddy, he considers, as I do, that Paddy's unmannerly behaviour is due to some measure of original sin in Paddy. It has not yet been suggested to us that what is here involved is a Scotch Terrier Problem and that when Paddy attacks a neighbour who is peacefully engaged in inspecting the evening smells it is the neighbour who should be arraigned for inciting to attack by the fact of his existence."

There is here a complete analogy between the Jewish Problem and the problem of the Untouchables. What Paddy is to the Scotch Terrier, the

Gentile is to the Jews, and the Hindu is to the Untouchables. But there is one aspect in which the Jewish Problem stands in contrast to the Gentile Problem. The Jews and the Gentiles are separated by an antagonism of the creeds. The Jewish creed is opposed to that of the Gentile creed. The Hindus and the Untouchables are not separated by any such antagonism. They have a common creed and observe the same cults.

The second explanation is that the Jews wish to remain separate from the Gentiles. While the first explanation is chauvinistic the second seems to be founded on historical truth. Many attempts have been made in the past by the Gentiles to assimilate the Jews. But the Jews have always resisted them. Two instances of this may be referred.

The first instance relates to the Napoleonic regime. After the National Assembly of France had agreed to the declaration of the 'Rights of man' to the Jews, the Jewish question was again reopened by the guild merchants and religious reactionaries of Alsace. Napoleon resolved to submit the question to the consideration of the Jews themselves. He convened an Assembly of Jewish Notables of France, Germany and Italy in order to ascertain whether the principles of Judaism were compatible with the requirements of citizenship as he wished to fuse the Jewish element with the dominant population. The Assembly consisting of 111 deputies, met in the Town Hall of Paris on the 25th of July 1806, and was required to frame replies to twelve questions relating mainly to the possibility of Jewish patriotism, the permissibility of inter-marriage between Jew and Non-Jew, and the legality of usury. So pleased was Napoleon with the pronouncements of the Assembly that he summoned a Sanhedrin after the model of the ancient council of Jerusalem to convert them into the decree of a Legislative body. The Sanhedrin, comprising of 71 deputies from France, Germany, Holland and Italy met under the presidency of Rabbi Sinzheim, of Strassburg on 9th February 1807, and adopted a sort of Charter which exhorted the Jews to look upon France as their fatherland, to regard its citizens as their brethren, and to speak its language, and which also pressed toleration of marriages between Jews and Christians while declaring that they could not be sanctioned by the synagogue. It will be noted that the Jews refused to sanction intermarriages between Jews and non-Jews. They only agreed to tolerate them.

The second instance relates to what happened when the Batavian Republic was established in 1795. The more energetic members of the Jewish community pressed for a removal of the many disabilities under

which they laboured. But the demand for the fuller rights of citizenship made by the progressive Jews was at first, strangely enough, opposed by the leaders of the Amsterdam community, who feared that civil equality would militate against the conservation of Judaism and declared that their co-religionists renounced their rights of citizenship in obedience to the dictates of their faith. This shows that the Jews preferred to live- as strangers rather than as members of the community.

Whatever the value of their explanations the Gentiles have at least realized that there rests upon them a responsibility to show cause for their unnatural attitude towards the Jews. The Hindu has never realised this responsibility of justifying his treatment of the Untouchables. The responsibility of the Hindus is much greater because there is no plausible explanation he can offer in justification of untouchability. He cannot say that the Untouchable is a leper or a mortal wretch who must be shunned. He cannot say that between him and the Untouchables, there is a gulf due to religious antagonism which is not possible to bridge. Nor can he plead that it is the Untouchable who does not wish to assimilate with the Hindus.

But that is not the case with the Untouchables. They too are in a different sense an eternal people who are separate from the rest. But this separateness, their segregation is not the result of their wish. They are punished not because they do not want to mix. They are punished because they want to be one with the Hindus. In other words, though the problem of the Jews and of the Untouchables is similar in nature—inasmuch as the problem is created by others—it is essentially different. The Jew's case is one of the voluntary isolation. The case of the Untouchables is that of compulsory segregation. Untouchability is an infliction and not a choice.

CHAPTER 2

UNTOUCHABLES—THEIR NUMBERS

Before one tries to know what it is to be an Untouchable one would like to know what is the total population of the Untouchables of India. For this one must go to the Census Report.

The first general census of India was taken in the year 1881. Beyond listing the different castes and creeds and adding up their numbers so as to arrive at the total figure of the population of India the Census of 1881 did nothing. It made no attempt to classify the different Hindu castes either into higher and lower or touchable and untouchable. The

second general census of India was taken in the year 1891. It was at this census that an attempt to classify the population on the basis of caste and race and grade was made by the Census Commissioner for the first time. But it was only an attempt.

The third general census of India was taken in 1901. At this census a new principle of classification was adopted namely "Classification by Social precedence as recognised by native public opinion". To this serious opposition was raised by high caste Hindus to the enumeration by caste in the Census Report. They insisted on the omission of the question regarding caste.

This objection did not have any effect on the Census Commissioner. In the opinion of the Census Commissioner enumeration by caste was important and necessary. It was argued by the Census Commissioner that "whatever view may be taken of the advantages or disadvantages of caste as a social institution, it is impossible to conceive of any useful discussion of the population questions in India in which caste would not be an important element. Caste is still 'the foundation of the Indian social fabric' and the record of caste is still 'the best guide to the changes in the various social strata in the Indian Society' Every Hindu (using the term in its most elastic sense) is born into a caste and his caste determines his religious, social, economic and domestic life from the cradle to the grave. In western countries the major factors which determine the different strata of society viz. wealth, education and vocation are fluid and catholic and tend to modify the rigidity of birth and hereditary position. In India spiritual and social community and traditional occupation override all other factors. Thus where in censuses of western countries an economic or occupational grouping of the population affords a basis for the combination of demographic statistics, the corresponding basis in the case of the Indian population is the distinction of religion and caste. Whatever view may be taken of caste as a national and social institution it is useless to ignore it, and so long as caste continues to be used as one of the distinguishing features of an individual's official and social identity it cannot be claimed that a decennial enumeration helps to perpetuate an undesirable institution.

This Census of 1901 did not result in fixing the total population of the Untouchables at any exact figure. This was due to two reasons. In the first place no exact tests were applied to determine who is an Untouchable. Secondly a class of the population which was economically and educationally backward but not Untouchable was mixed up with those who were actually Untouchables.

The Census of 1911 went a step further and actually laid down ten tests to mark off the Untouchables from those who were Touchable. Under these tests the Census Superintendents made a separate enumeration of castes and tribes who (1) denied the supremacy of the Brahmins; (2) did not receive the Mantra from Brahmana or other recognised Hindu Guru; (3) denied the authority of the Vedas; (4) did not worship the great Hindu Gods; (5) were not served by good Brahmanas; (6) have no Brahmin priests at all; (7) have no access to the interior of the ordinary Hindu temple; (8) cause pollution; (9) bury their dead and (10) eat beef and do not reverence the cow. The separation of the Untouchables from the Hindus was insisted upon by the Muslims in a memorial to the Government dated 27th January 1910 in which they claimed that their representation in the political bodies of the country should be in proportion to the population of Touchable Hindus and not Hindus as a whole because they contended that the Untouchables were not Hindus.

Be that as it may the Census of 1911 marks the beginning of the ascertainment of the population of the Untouchables. Efforts in the same direction were continued at the Census of 1921 and 1931.

As a result of these efforts the Simon Commission which came to India in 1930 was able to state with some degree of surety that total population of Untouchables in British India was 44.5 millions.

Suddenly, however, in 1932 when the Lothian Committee came to India to investigate the question of franchise for the reformed Legislatures and began its investigation, the Hindus adopted a challenging mood and refused to accept the figure given by the Simon Committee as a true figure of the Untouchables of India. In some provinces the Hindus went to the length of denying that there were any Untouchables at all. This is due to the fact that the Hindus had by now realised the danger of admitting the existence of the Untouchables. For it meant that a part of the representation enjoyed by the Hindus will have to be given up by them to the Untouchables.

The Census of 1941 must be left out of consideration. It was taken during the war and it was a sort of a rough measure.

The latest Census is that of 1951. The following figures are taken from the statement issued by the Census Commissioner. The Census Commissioner gives the population of the Scheduled Castes in India as 513 lakhs.

The total population of India, as shown by the 1951 census is 3,567 lakhs, excluding 1.35 lakhs, the enumeration records in whose case were

destroyed by fire in the Census Tabulation Office at Jullundur.

Out of the total population of 3,567 lakhs, 2,949 lakhs live in rural areas and 618 lakhs in the urban areas. The Scheduled Castes in rural areas total 462 lakhs and in urban areas their figures are 51 lakhs.

Non-agricultural classes for the whole population total 1,076 lakhs, the Scheduled Castes 132 lakhs.

Cultivators of land, wholly or mainly owned, and their dependants total 1,674 lakhs for the whole population, 174 lakhs for the Scheduled Castes.

Cultivators of land, wholly or mainly un-owned and their dependants are 316 lakhs for the whole of India, 56 lakhs for the Scheduled Castes.

Cultivating labourers and their dependants are 448 lakhs for the whole of India, 148 lakhs for the Scheduled Castes. Figures for non-agricultural classes are as follows:

Production other than Cultivation: Total 377 lakhs. Scheduled Castes 53 lakhs.

Commerce: Total 213 lakhs. Scheduled Castes 9 lakhs. Transport: Total 56 lakhs. Scheduled Castes 6 lakhs. Other services and miscellaneous sources: Total 430 lakhs, Scheduled Castes 64 lakhs.

Out of a total Scheduled Caste population of over 513 lakhs, 114 lakhs live in North India (Uttar Pradesh); 128 lakhs in East India (Bihar, Orissa, West Bengal, Assam, Manipur and Tripura); 110 lakhs in South India (Madras, Mysore, Travancore-Cochin and Coorg); 31 lakhs in West India (Bombay, Saurashtra and Kutch); 76 lakhs in Central India (Madhya Pradesh, Madhya Bharat, Hyderabad, Bhopal and Vindhya Pradesh); and 52 lakhs in North-West India (Rajasthan, Punjab, Patiala and East Punjab States Union, Ajmer, Delhi, Bilaspur and Himachal Pradesh).

CHAPTER 3 SLAVES AND UNTOUCHABLES

Far from being ashamed of untouchability, the Hindus try to defend it. The line of their defence is that the Hindus have never upheld slavery as other nations have done and that in any case, untouchability is not worse than slavery. This argument was used by no less a person than the late Lala Lajpat Rai in his book called ' Unhappy India '. It would have been unnecessary to waste one's time in refuting this countercharge had it not been that on account of its plausibility the world at large not

having witnessed anything worse than slavery is likely to believe that untouchability cannot be worse than slavery.

The first reply to the counter-charge is that it is quite untrue that slavery was not recognised by the Hindus. Slavery is a very ancient institution of the Hindus. It is recognised by Manu, the Hindu lawgiver and has been elaborated and systematised by the other Smriti writers who followed Manu. Slavery among the Hindus was never merely ancient institution, which functioned, only in some hoary past. It was an institution which continued throughout Indian history down to the year 1843 and if it had not been abolished by the British Government by law in that year, it might have continued even today.

As to the relative merits of slavery and untouchability, the best way to meet the counter-charge is to compare and contrast untouchability with slavery as it existed in ancient Rome and in modern America.

What was the *de facto* condition of the slaves in the Roman Empire? The best description I know of is to be found in Mr. Barrow's *Slavery in the Roman Empire*. Says Mr. Barrow:

“Hitherto, it is the repulsive side of household slavery that has been sketched. There is also another aspect. The literature reveals the vast household as normal. It is, of course, the exception. Large slave staffs undoubtedly existed, and they are generally to be found in Rome. In Italy and the Provinces there was less need of display; many of the staff of the Villa were engaged in productive work connected with land and its produce. The old-fashioned relationship between foreman and slave remained there; the slave was often a fellow worker. The kindness of Pliny towards his staff is well known. It is in no spirit of self-righteousness, and in no wish to appear in a favourable light in the eyes of the future generations which he hoped would read his letters that he tells of his distress at the illness and death of his slaves. The household (or Pliny) is the slaves' republic. Pliny's account of his treatment of his slaves is sometimes regarded as so much in advance of general or even occasional practice as to be valueless as evidence. There is no reason for this attitude.

From reasons both of display and genuine literary interest, the rich families attached to their households, slaves trained in literature and art. Clavisces Sabinus is said by Seneca to have had eleven slaves taught to recite Homer, Hesiod, and nine lyric poets by heart. 'Book cases would be cheaper', said a rude friend. 'No, what the household knows the master knows' was the answer. But, apart from such abuses, educated slaves must have been a necessity in the absence of printing;.. .. The

busy lawyer, the dilettante poet, the philosopher and educated gentlemen of literary tastes and need of copyists and readers and secretaries. Such men were naturally linguistic also; a *librarius* who dies at the age of twenty boasts that he was ' *ligeratus Graecis Latinis* '. *Amanuenses* were common enough; librarians are to be found in public and private libraries.... Shorthand writing was in common use under the Empire, and slave *Notarii* were regularly employed. Many freemen, rhetoricians and grammarians are collected by Snetonius in a special treatise. Verrius Flaccus was tutor to Augustus's grandsons, and at death was publicly honoured by a statue. Scribonius Aphrodisius was the slave and disciple of Orbilius and was afterwards freed by Scribenia. Hyginus was librarian of the Palatine Library, in which office he was followed by Julius Modestus, his own freeman. We hear of freemen historians of a slave philosopher who was encouraged to argue with his master, friends of slaves and freed architects. Freemen as doctors occur frequently in the inscriptions, some of them specialists, they had been trained in big households as slaves, as is shown by one or two examples; after Manumission they rose to eminence and became notorious for their high fees." The tastes of some section of society demanded that dancer, singers, musicians, mountebanks, variety artists, athletic trainers and messieurs should be forthcoming. All these are to be found in slavery often trained by teachers who had acquired some reputation¹[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22A.Untouchables or the children of India's Ghetto PART I.htm - _msocom_1.](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22A.Untouchables_or_the_children_of_India's_Ghetto_PART_I.htm_-_msocom_1.) '

The age of Augustus was the beginning of a period of commercial and industrial expansion.... Slaves had indeed been employed (in arts and crafts) before, but the sudden growth of trade.... their employment in numbers that would otherwise have been unnecessary. Romans engaged more freely and more openly in various forms of commercial and industrial venture. Yet, even so, the agent became more important, for commercial activities became more widespread; and such agents were almost necessarily slaves.... (this is so) because the bonds of slavery (are elastic). (They could be) so relaxed as to offer an incentive to the slave to work by the prospect of wealth and freedom, and so tightened as to provide a guarantee to the master against loss from the misconduct of his slave. In business contracts between slave and master or third person seem to have been common, and the work thus done, and no doubt, the profits were considerable.... Renting of land to the slave has already been noticed.... and in industry much the same system was used in various forms; the master might lease a bank, or a business of the use of a ship,

the terms being a fixed return or the slave being paid on a commission basis'mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22A.Untouchables or the children of India's Ghetto PART I.htm - _msocom_2.

The earnings of the slave became in law his peculium was saved it might be used to a variety of purpose. No doubt in many cases this fund was expended in providing food or pleasure. But peculium must not be regarded merely as petty savings, casually earned and idly spent. The slave who made his master's business yield profits, to his own profit too, very often, had a keen sense of the best use to make up his own money. Often he reinvested it in his master's business or in enterprises entirely unrelated to it. He could enter into business relations with his master, from whom he came to be regarded as entirely distinct, or he could make contracts with a third person. He could even have procurators to manage his own property and interests. And so with the peculium may be found not only land, houses, shops, but rights and claims.

The activities of slaves in commerce are innumerable; numbers of them are shopkeepers selling every variety of food, bread, meat, salt, fish, wine, vegetables, beans, lupine-seed, honey, curd, ham, ducks and fresh fish; others deal in clothing— sandals, shoes, gowns and mantles. In Rome, they plied their trade in the neighbourhood of the Circus Mamimus, or the Porticus Trigemimus; or the Esquiline Market, or the Great Mart (on the Caolian Hill) or the Suburramk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22A.Untouchables or the children of India's Ghetto PART I.htm - _msocom_3....

The extent to which slave secretaries and agents acted for their masters is shown very clearly in the receipts found in the house of Caecillius Jucundus at Pompei mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22A.Untouchables or the children of India's Ghetto PART I.htm - _msocom_4

That the State should possess slaves is not surprising; war, after all, was the affair of the State and the captive might well be State-property. What is surprising is the remarkable use made of public slaves under the Empire and the extraordinary social position occupied by them....

“Public slave ' came to mean before the Empire a slave of the State employed in its many offices, and the term implied a given occupation and often social position. The work of slaves of the State, slaves of the townships, and slaves of Caesar comprises much of what would now fall to parts of the higher and the whole of the lower branches of the civil services and of the servants of Municipal Corporations, working both with head and hands.... In the subordinate levels (of the Treasury) there

worked numbers of clerks and financial officers, all freedmen and slaves. The business dealt with must have been of vast range.... The Mint.. .. the immediate head was a knight, in charge of the minting processes.... a freedman was placed; under him served freedmen and slaves.... From one branch of State service, at any rate, slaves were rigorously excluded, except on one or two occasions of exceptional stress. They were not allowed to fight in the Army because not thought worthy of honour. Doubtless other motives were present also; it would be dangerous experiment to train too many slaves systematically in the use of Arms. If, however, slaves served rarely in the fighting line, they are regularly to be found in great numbers behind it employed as servants, and in the commissariat and transport. In the fleet slaves were common enough

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22A.Untouchables or the children of India's Ghetto PART I.htm - _msocom_5."

II

Let us turn to the *de facto* position of the Negro in the United States during the period in which he was slave in the eye of the law. Here are some facts

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22A.Untouchables or the children of India's Ghetto PART I.htm - _msocom_6 which shed a good deal of light on his position:

“Lafayette himself had observed that white and black seamen and soldiers had fought and messed together in the Revolution without bitter difference. Down in Granville County, North Carolina, a full blooded Negro, John Chavis, educated in Princeton University, was conducting a private school for white students and was a licentiate under the local Presbytery, preaching to white congregations in the State. One of his pupils became Governor of North Carolina, another the State's most prominent Whig senator. Two of his pupils were sons of the Chief Justice of North Carolina. The father of the founder of the greatest military Academy of the State attended his school and boarded in his home Slave labour was used for all kinds of work and the more intelligent of the Negro slaves were trained as artisans to be used and leased. Slave artisans would bring twice as much as an ordinary field hand in the market. Master craftsmen owned their staff. Some masters, as the system became more involved, hired slaves to their slave artisans. Many slave artisans purchased their freedom by the savings allowed them above the normal labour expected.”

“The advertisements for runaways and sales are an index to this skill. They received the same or better wages than the poor white labourer

and with the influence of the master got the best jobs. The Contractors for masons' and carpenters' work in Athens, Georgia in 1838 were petitioned to stop showing preference to Negro labourers."The white man is the only real, legal, moral, and civil proprietor of this country and state. The right of his proprietorship reached from the date of the studies of those whitemen, Copernicus and Galileo, who indicated the sphericity of the earth; which sphericity hinted to another white man, Columbus, the possibility by a westerly course of sailing, of finding land. Hence by whitemen alone was this continent discovered, the whitemen alone, aye, those to whom you decline to give money for bread or clothes for their famishing families, in the logical manner of withholding work from them defending Negroes too in the bargain."In Atlanta in 1858 a petition signed by 2 white mechanics and labourers sought protection against the black slave artisans of masters who resided in other sections. The very next year sundry white citizens were aggrieved that the City Council tolerated a Negro dentist to remain and operate in their midst. ' In justice to ourselves and the community it ought to be abated. We, the residents of Atlanta, appeal to you for justice '. A Census of free Negroes in Richmond County, Georgia, in 1819 showed carpenters, barbers, boatcorkers, saddlers, spinners, millwrights, holsters, weavers, harness makers, sawmill attendants and steamboat pilots. A Negro shoe-maker made by hand the boots in which President Munrow was inaugurated. Harriet Martineau marvelled at the slave workmanship in the delicately tiled floors of Thomas Jefferson's home at Monticello. There still stands in the big house of the old plantation, heavy marks of the hands of these Negro craftsmen, strong mansions built of timber hewn from the original oak and pinned together by wooden pins. Negro women skilled in spinning and weaving worked in the mills. Buckingham in 1839 found them in Athens, Georgia, working alongside with white girls without apparent repugnance or objection. Negro craftsmen in the South, slave and free fared better than their brothers in the North. In 1856 in Philadelphia, of 1637 Negro craftsmen recorded, less than two-thirds could use their trades; 'because of hostile prejudice '. The Irish who were pouring into America from the very beginning of the nineteenth century were being used in the North on approximately the same motives of preference, which governed Negro slavery. ' An Irish Catholic, it was argued in their favour, seldom attempts to rise to a higher condition than that in which he is placed, while the Negro often makes the attempt with success. Had not the old Puritan Oliver Cromwell, while the traffic in black slaves was on, sold all

the Irish not killed in the Drogheda Massacre, into Barbados? Free and fugitive Negroes in New York and Pennsylvania were in constant conflict with this group and the bitter hostility showed itself most violently in the draft riots of the New York. These Hibernians controlled the hod carrying and the common labour jobs, opposing every approach of the Negro as a menace to their slight hold upon America and upon a means of livelihood."

III

Such was the *de facto* condition of the Roman slave and the American Negro slave. Is there anything in the condition of the Untouchables of India which is comparable with the condition of the Roman slave and the American Negro slave? It would not be unfair to take the same period of time for comparing the condition of the Untouchables with that of the slaves under the Roman Empire. But I am prepared to allow the comparison of the condition of the slaves in the Roman Empire to be made with the condition of the Untouchables of the present day. It is a comparison between the worst of one side and the best of the other, for the present times are supposed to be the golden age for the Untouchables. How does the *de facto* condition of the Untouchables compare with the *de facto* condition of the slaves? How many Untouchables are engaged as the slaves in Rome were, in professions such as those of Librarians, Amanuenses, Shorthand writers? How many Untouchables are engaged, as the slaves in Rome were, in such intellectual occupations as those of rhetoricians, grammarians, philosophers, tutors, doctors and artists? How many Untouchables are engaged, as the slaves in Rome? Can any Hindu dare to give an affirmative answer to anyone of these queries? The Untouchables are completely shut out from any of these avenues in which the slaves found so large a place. This proves how futile is the line of defence adopted by the Hindus to justify untouchability. The pity of the matter is that most people condemn slavery simply because they hold that for one man or class to have by law the power of life and death over another is wrong. They forget that there can be cruel oppression, tyranny, and persecution, with the train of misery, disappointment and desperation even when there is no slavery. Those who will take note of the facts stated above relating to the *de facto* condition of the slaves will admit that it is idle to condemn slavery lightly or hurriedly on the mere *de jure* conception of it. What the law permits is not always evidence of

the practices prevalent in society. Many a slave would readily have admitted that they owed everything to slavery, and many did so whether they would have admitted it or not.

Slavery, it must be admitted, is not a free social order. But can untouchability be described as a free social order? The Hindus who came forward to defend untouchability no doubt claim that it is. They, however, forget that there are differences between untouchability and slavery, which makes untouchability a worse type of an un-free social order. Slavery was never obligatory. But untouchability is obligatory. A person is *permitted* to hold another as his slave. There is no compulsion on him if he does not want to. But an Untouchable has no option. Once he is born an Untouchable, he is subject to all the disabilities of an Untouchable. The law of slavery permitted emancipation. Once a slave always a slave was not the fate of the slave. In untouchability there is no escape. Once an Untouchable always an Untouchable. The other difference is that untouchability is an indirect and therefore the worst form of slavery. A deprivation of a man's freedom by an open and direct way is a preferable form of enslavement. It makes the slave conscious of his enslavement and to become conscious of slavery is the first and most important step in the battle for freedom. But if a man is deprived of his liberty indirectly he has no consciousness of his enslavement. Untouchability is an indirect form of slavery. To tell an Untouchable 'you are free, you are a citizen, you have all the rights of a citizen ', and to tighten the rope in such a way as to leave him no opportunity to realise the ideal is a cruel deception. It is enslavement without making the Untouchables conscious of their enslavement. It is slavery though it is untouchability. It is real though it is indirect. It is enduring because it is unconscious. Of the two orders, untouchability is beyond doubt the worse.

Neither slavery nor untouchability is a free social order. But if a distinction is to be made—and there is no doubt that there is distinction between the two—the test is whether education, virtue, happiness, culture, and wealth is possible within slavery or within untouchability. Judged by this test it is beyond controversy that slavery is hundred times better than untouchability. In slavery there is room for education, virtue, happiness, culture, or wealth. In untouchability there is none. Untouchability has none of the advantages of an un-free social order such as slavery. It has all the disadvantages of a free social order. In an un-free social order such as slavery there is the advantage of apprenticeship in a business, craft or art or what Prof. Mures calls 'an

initiation into a higher culture'. Neither the crushing of untouchability nor the refusal of personal growth was necessary inherent in slavery, especially slavery as it existed in Roman Empire. It is therefore overhasty to say that slavery is better than untouchability.

This training, this initiation of culture was undoubtedly a great benefit to the slave. Equally it involved considerable cost to the master to train his slave, to initiate him into culture. There can have been little supply of slaves educated or trained before enslavement. The alternative was to train them when young slaves in domestic work or in skilled craft, as was indeed done to some extent before the Empire, by Cato, the Elder, for example. The training was done by his owner and his existing staff... indeed the household of the rich contained special pedagogue for this purpose. Such training took many forms, industry, trade, arts and letters

The reason why the master took so much trouble to train the slave and to initiate him in the higher forms of labour and culture was undoubtedly the motive of gain. A skilled slave as an item was more valuable than an unskilled slave. If sold, he would fetch better price, if hired out he would bring in more wages. It was therefore an investment to the owner to train his slave.

In an un-free social order, such as slavery, the duty to maintain the slave in life and the body falls upon the master. The slave was relieved of all responsibility in respect of his food, his clothes and his shelter. All this, the master was bound to provide. This was, of course, no burden because the slave earned more than his keep. But a security for boarding and lodging is not always possible for every freeman, as all wage earners now know to their cost. Work is not always available even to those who are ready to toil and a workman cannot escape the rule according to which he gets no bread if he finds no work. This rule—no work no bread—has no applicability to the slave. It is the duty of the master to find bread and also to find work. If the master fails to find work, the slave does not forfeit his right to bread. The ebbs and tides of business, the booms and depressions are vicissitudes through which all free wage earners have to go. But they do not affect the slave. They may affect his master. But the slave is free from them. He gets his bread, perhaps the same bread, but bread whether it is boom or whether it is depression.

In an un-free social order, such as slavery, the master is bound to take great care of the health and well being of the slave: The slave was property of the master. But this very disadvantage gave the slave an advantage over a freeman. Being property and therefore valuable, the

master for sheer self-interest took great care of the health and well-being of the slave. In Rome, the slaves were never employed on marshy and malarial land. On such a land only freemen were employed. Cato advises Roman farmers never to employ slaves on marshy and malarial land. This seems strange. But a little examination will show that this was quite natural. Slave was valuable property and as such a prudent man who knows his interest will not expose his valuable possession to the ravages of malaria. The same care need not be taken in the case of freeman because he is not valuable property. This consideration resulted into the great advantage of the slave. He was cared for as no one was.

Untouchability has none of the three advantages of the un-free social order mentioned above. The Untouchable has no entry in the higher arts of civilisation and no way open to a life of culture. He must only sweep. He must do nothing else. Untouchability carries no security as to livelihood. None from the Hindus is responsible for the feeding, housing and clothing of the Untouchable. The health of the Untouchable is the care of nobody. Indeed, the death of an Untouchable is regarded as a good riddance. There is a Hindu proverb, which says 'The Untouchable is dead and the fear of pollution has vanished'.

On the other hand, untouchability has all the disadvantages of a free social order. In a free social order the responsibility for survival in the struggle for existence lies on the individual. This responsibility is one of the greatest disadvantages of a free social order. Whether an individual is able to carry out this responsibility depends upon fair start, equal opportunity and square deal. The Untouchable, while he is a free individual, had neither fair start, nor equal opportunity nor square deal. From this point of view, untouchability is not only worse than slavery but is positively cruel as compared to slavery. In slavery, the master has the obligation to find work for the slave. In a system of free labour workers have to compete with workers for obtaining work. In this scramble for work what chances has the Untouchable for a fair deal? To put it shortly, in this competition with the scales always weighing against him by reason of his social stigma he is the last to be employed and the first to be fired. Untouchability is cruelty as compared to slavery because it throws upon the Untouchables the responsibility for maintaining himself without opening to him fully all the ways of earning a living.

To sum up, the Untouchables unlike the slaves are owned by the Hindus for purposes which further their interests and are disowned by them, when owning them places them under burden. The Untouchables

can claim none of the advantages of an un-free social order and are left to bear all the disadvantages of a free social order.

CHAPTER 4

THE INDIAN GHETTO—THE CENTRE OF UNTOUCHABILITY— Outside the Fold

What is the position of the Untouchables under the Hindu social order? To give a true idea of their position is the main purpose of this chapter. But it is not easy to strike upon the best means of conveying a realistic and concrete picture of the way the Untouchables live or rather are made to live under the Hindu social order to one who has no conception of it. One way is to draw a model plant so to say of the Hindu social order and show the place given to the Untouchables therein. For this it is necessary to go to a Hindu village. Nothing can serve our purpose better. The Hindu village is a working plant of the Hindu social order. One can see there the Hindu social order in operation in full swing. The average Hindu is always in ecstasy whenever he speaks of the Indian village. He regards it as an ideal form of social organisation to which he believes there is no parallel anywhere in the world. It is claimed to be a special contribution to the theory of social organisation for which India may well be proud of.

How fanatic are the Hindus in their belief in the Indian village as an ideal piece of social organisation may be seen from the angry speeches made by the Hindu members of the Indian Constituent Assembly in support of the contention that the Indian Constitution should recognise the Indian village as its base of the constitutional pyramid of autonomous administrative units with its own legislature, executive and judiciary. From the point of view of the Untouchables, there could not have been a greater calamity. Thank God the Constituent Assembly did not adopt it. Nevertheless the Hindus persist in their belief that the Indian village is an ideal form of social organisation. This belief of the Hindus is not ancestral belief, nor does it come from the ancient past. It is borrowed from Sir Charles Metcalfe—a civil servant of the East India Company. Metcalfe, who was a revenue officer, in one of his Revenue Papers described the Indian village in the following terms¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/22A.Untouchables or the children of India's Ghetto PART I.htm - _msocom_7:

"The village communities are little republics, having nearly everything they want within themselves and almost independent of any foreign relations. They seem to last when nothing else lasts. Dynasty after dynasty tumbles down, revolution succeeds to revolution; Hindu, Pathan, Moghul, Maratha, Sikh, English, all are masters in turn, but the village communities remain the same. In times of trouble they arm and fortify themselves. An hostile army passes through the country, the village communities collect their cattle within their walls and let the enemy pass unprovoked. If plunder and devastation be directed against them selves, and the forces employed be irresistible, they flee to friendly villages at a distance; but when the storm has passed over, they return and resume their occupations. If a country remains for a series of years the scene of continued pillage and massacre so that the villages cannot be inhabited, the scattered villagers nevertheless return whenever the power of peaceable possession revives. A generation may pass away, but the succeeding generation will return. The sons will take the place of their fathers; the same site for the village, the same position for their houses, the same lands will be reoccupied by the descendants of those who were driven out when the village was repopulated; and it is not a trifling matter that will drive them out, for they will often maintain their post through times of disturbances and convulsion, and acquire strength sufficient to resist pillage and oppression with success. This union of the village communities, each one forming a little state in itself, has, I conceive, contributed more than any other cause to the preservation of the people of India, through all the revolutions and changes which they have referred, and is in a high degree conducive to their happiness and to the enjoyment of a great portion of freedom and independence." Having read this description of an Indian village given by a high-placed member of the governing class, the Hindus felt flattered and adopted his view as a welcome compliment. In adopting this view of the Indian village, the Hindus have not done any justice to their intelligence or their understanding. They have merely exhibited the weakness common to all subject people. Since many foreigners are led to accept this idealistic view of the Indian village, it would be better to present a realistic picture of the Society as one finds it in an Indian village.

The Indian village is not a single social unit. It consists of castes. But for our purposes, it is enough to say—

1. The population in the village is divided into two sections—(I) Touchables and (ii) Untouchables.

II. The Touchables form the major community and the Untouchables a minor community.

III. The Touchables live inside the village and the Untouchables live outside the village in separate quarters.

IV. Economically, the Touchables form a strong and powerful community, while the Untouchables are a poor and a dependent community.

V. Socially, the Touchables occupy the position of a ruling race, while the Untouchables occupy the position of a subject race of hereditary bondsmen.

What are the terms of associated life on which the Touchables and Untouchables live in an Indian village? In every village the Touchables have a code which the Untouchables are required to follow. This code lays down the acts of omissions and commissions which the Touchables treat as offences. The following is the list of such offences:

1. The Untouchables must live in separate quarters away from the habitation of the Hindus. It is an offence for the Untouchables to break or evade the rule of segregation.

2. The quarters of the Untouchables must be located towards the South, since the South is the most inauspicious of the four directions. A breach of this rule shall be deemed to be an offence.

3. The Untouchable must observe the rule of distance pollution or shadow of pollution as the case may be. It is an offence to break the rule.

4. It is an offence for a member of the Untouchable community to acquire wealth, such as land or cattle.

5. It is an offence for a member of the Untouchable community to build a house with tiled roof.

6. It is an offence for a member of an Untouchable community to put on a clean dress, wear shoes, put on a watch or gold ornaments.

7. It is an offence for a member of the Untouchable community to give high sounding names to their children. Their names be such as to indicate contempt.

8. It is an offence for a member of the Untouchable community to sit on a chair in the presence of a Hindu.

9. It is an offence for a member of the Untouchable community to ride on a horse or a palanquin through the village.

10. It is an offence for a member of the Untouchable community to take a procession of Untouchables through the village.

11. It is an offence for a member of the Untouchable community not to salute a Hindu.

12. It is an offence for a member of the Untouchable community to speak a cultured language.

13. It is an offence for a member of the Untouchable community, if he happens to come into the village on a sacred day which the Hindus treat as the day of fast and at or about the time of the breaking of fast, to go about speaking, on the ground that their breath is held to foul the air and the food of the Hindus.

14. It is an offence for an Untouchable to wear the outward marks of a Touchable and pass himself as a Touchable.

15. An Untouchable must conform to the status of an inferior and he must wear the marks of his inferiority for the public to know and identify him such as— (a) having a contemptible name. (b) not wearing clean clothes. (c) not having tiled roof. (d) not wearing silver and gold ornaments. A contravention of any of these rules is an offence. Next come the duties which the Code requires members of the Untouchable community to perform for the Touchables. Under this head the following may be mentioned:

1. A member of an Untouchable community must carry a message of any event in the house of a Hindu such as death or marriage to his relatives living in other villages no matter how distant these villages may be.

2. An Untouchable must work at the house of a Hindu when a marriage is taking place, such as breaking fuel, and going on errands.

3. An Untouchable must accompany a Hindu girl when she is going from her parent's house to her husband's village no matter how distant it is.

4. When the whole village community is engaged in celebrating a general festivity such as Holi or Dasara, the Untouchables must perform all menial acts which are preliminary to the main observance.

5. On certain festivities, the Untouchables must submit their women to members of the village community to be made the subject of indecent fun. These duties have to be performed without remuneration.

To realise the significance of these duties, it is important to note why they have come into being. Every Hindu in the village regards himself as a superior person above the Untouchables. As an overlord, he feels it absolutely essential to maintain his prestige. This prestige he cannot maintain unless he has at his command a retinue to dance attendance on him. It is in the Untouchable that he finds a ready retinue, which is at

his command and for which he does not have to pay. The Untouchables by reason of their helplessness cannot refuse to perform these duties and the Hindu villager does not hesitate to exact them since they are so essential to the maintenance of his prestige.

These offences are not to be found in the Penal Code, enacted by the British Government. Nonetheless so far as the Untouchables are concerned, they are real. A breach of any of them involves sure punishment for the Untouchables. How they are enforced will be clear from Chapter 5 & 6.

Another important thing to note is that the punishment for these offences is always collective. The whole community of Untouchables is liable for punishment though the offence may have been committed by an individual.

How do the Untouchables live? How do they earn their living? Without a knowledge of the ways of earning a livelihood which are open to the Untouchables it would not be possible to have a clear idea of their place in the Hindu Society.

In an agricultural country, agriculture can be the main source of living. But this source of earning a living is generally not open to the Untouchables. This is so for a variety of reasons. In the first place purchase of land is beyond their means. Secondly even if an Untouchable has the money to purchase land he has no opportunity to do so. In most parts the Hindus would resent an Untouchable coming forward to purchase land and thereby trying to become the equal of the Touchable class of Hindus. Such an act of daring on the part of an Untouchable would not only be frowned upon but might easily invite punishment. In some parts they are disabled by law from purchasing land. For instance in the Province of Punjab there is a law called the Land Alienation Act. This law specifies the communities which can purchase land and the Untouchables are excluded from the list. The result is that in most part the Untouchables are forced to be landless labourers. As labourers they cannot demand reasonable wages. They have to work for the Hindu farmer for such wages as their masters choose to give. On this issue the Hindu farmers can combine to keep the wages to the lowest level possible for it is to their interests to do so. On the other hand the Untouchables have no holding power. They must earn or starve. Nor have they any bargaining power. They must submit to the rate fixed or suffer violence.

The wages paid to the Untouchables are either paid in cash or in corn. In parts of the Uttar Pradesh the corn given to the Untouchables as

their wages is called "Gobaraha". "Gobaraha" means privy corn or corn contained in the dung of an animal. In the month of March or April when the crop is fully grown, reaped and dried, it is spread on the threshing floor. Bullocks are made to tread over the corn in order to take the corn out of husk by the pressure of their hooves. While treading over the corn, the bullocks swallow up the corn as well as the straw. As their intake is excessive they find it difficult to digest the corn. Next day, the same corn comes out of their stomach along with their dung: The dung is strained and the corn is separated and given to the Untouchable workmen as their wages which they convert into flour and make into bread.

When the agricultural season is over the Untouchables have no employment and no means of earning a living. In such seasons they subsist by cutting grass and firewood from the jungle and sell it in a nearby town. Even when it is open it depends upon the forest guard. Only if he is bribed he will let them take some grass and firewood from the Government forest. When it is brought to the town they have always to face a buyer's market. The Hindus who are the main body of buyers will always conspire to beat down the wages. Having no power to hold out, the Untouchables have to sell their stuff for whatever is offered to them. Often times they have to walk 10 miles each way from the village to the town and back to sell their stuff.

There is no trade in which they are engaged themselves as a means of earning a livelihood. They have not the capital for it and even if they had, no one would buy from them.

All these sources of earning are obviously precarious and fleeting. There is no security. There is only one secure source of livelihood open to the Untouchables *in* some parts of the country known to me. It is the right—to beg food from the Hindu farmers of the village. Every village has its machinery of administration. The Untouchables of the village are hereditary menials employed in the village administration. As part of their remuneration the whole body of Untouchables get a small parcel of land assigned in the ancient past which is fixed and is never increased and which the Untouchables prefer to leave uncultivated because of its excessive fragmentation. Coupled with this is given to them the right to beg for food.

Shocking as it may seem, this has become a customary right of the Untouchables and even Government takes into account the value of the food obtained by the Untouchables by begging in fixing the

remuneration of an Untouchable if he were to be employed in Government job.

This right to beg for food from the Touchables is now the principal means of livelihood for 60 millions of Untouchables in India. If anyone were to move in a village after the usual dinner time, he will meet with a swarm of Untouchables moving about the village begging for food and uttering the formula.

This statutory beggary as a means of livelihood for the Untouchables has been reduced to a system. The Untouchable families are attached to different Touchable families in the village as did the serfs and villains to the Lords of the Manors in Medieval Europe. The Untouchable families attached to the Touchable families are at the command of the latter. This relationship has become so personal that one always hears a Touchable speaking of an Untouchable as 'my man ' as though he was his slave. This relationship has helped to systematise this matter of begging food by the Untouchables from the Touchable households.

This is the Village Republic of which the Hindus are so proud. What is the position of the Untouchables in this Republic? They are not merely the last but are also the least. He is stamped as an inferior and is held down to that status by all ways and means, which a majority can command. This inferiority is the destiny not merely of an individual but of the whole class. All Untouchables are inferior to all Touchables irrespective of age or qualification. A Touchable youth is above an aged Untouchable and an educated Untouchable must rank below an illiterate Touchable.

The established order is the law made by the Touchables. The Untouchables have nothing to do with it except to obey it and respect it.

The Untouchables have no rights against the Touchables. For them there is no equal right, no justice by which that which is due to the Untouchables is allowed to them. Nothing is due to them except what the Touchables are prepared to grant. The Untouchables must not insist on rights. They should pray for mercy and favour and rest content with what is offered.

This established order is a hereditary order both in status as well as in function. Once a Touchable, always a Touchable. Once an Untouchable, always an Untouchable. Once a Brahmin, always a Brahmin. Once a sweeper, always a sweeper. Under it, those who are born high, remain high; those who are born low, remain low. In other words, the established order is based on an inexorable law of karma or destiny, which is fixed once for all and can never be changed. This destiny has

no relation to the merits of the individuals living under it. An Untouchable however superior he may be mentally and morally, is below a Touchable in rank, no matter how inferior he may be mentally or morally. A Touchable however poor he may be must always take rank above an Untouchable, however rich he may be.

Such is the picture of the inside life in an Indian village. In this Republic, there is no place for democracy. There is no room for equality. There is no room for liberty and there is no room for fraternity. The Indian village is the very negation of a Republic. If it is a republic, it is a republic of the Touchables, by the Touchables and for the Touchables. The republic is an Empire of the Hindus over the Untouchables. It is a kind of colonialism of the Hindus designed to exploit the Untouchables. The Untouchables have no rights. They are there only to wait, serve and submit. They are there to do or to die. They have no rights because they are outside the village republic and because they are outside the so-called republic, they are outside the Hindu fold. This is a vicious circle. But this is a fact which cannot be gainsaid.

CHAPTER 5 UNFIT FOR HUMAN ASSOCIATION

The Untouchables as explained in the last Chapter are outside the Hindu fold. The question however remains How far removed are they from the Hindus? What respect, what consideration do the Hindus show to them as human beings if not as Hindus? Without an answer to these questions, one cannot get a complete picture of the life of the Untouchables. The answer is there for anyone who cares to note it. The only difficulty is how to present it. There are two ways of presenting it. Either in the form of a statement or by citation of cases. I will adopt the latter. I do not wish to weary the reader with many cases. I will cite only a few, which are quite telling. The first case is from the State of Madras. In the year 1909 an appeal was filed in the Madras High Court by Mr. Venkata Subba Reddy and others all of whom were Hindus against their conviction by the Magistrate under section 339, Indian Penal Code, for causing obstruction to the complainant and his party who were also caste Hindus. The judgment mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22A.Untouchables or the children of India's Ghetto PART I.htm - _msocom_8 of the Madras High Court which gives the facts of the case and illustrates the position of the

Untouchables vis-à-vis the Hindus in a very striking manner. The judgement is therefore worth quoting. It is as follows:

"The Appellants (Venkata Subba Reddy and others) have been convicted of wrongful restraint for having caused certain Pariahs² to stand in the public street in the vicinity of a temple with the object of preventing the complainant from conducting a procession from the temple through the street. It is found that the complainant, deterred by fear of the pollution which he would have suffered had he passed near the *Pariahs*, did not conduct the procession, and that the accused maliciously caused the *Pariahs* to take up their positions in the street with the sole object of deterring the complainant from going where he had a right to go.

We do not think that the accused has committed the offence of wrongful restraint; in our opinion this act did not amount to an obstruction within the meaning of section 339. The Pariahs were no obstruction; in fact there was nothing to prevent the complainant from taking his procession past them and they had a right to be where they were; and it is not suggested that their presence was intended to cause fear of physical injury or any fear that anything would happen to the complainant except the pollution of the procession by their presence.

It was not the presence of the *Pariahs* but the complainant's own disinclination to go near them which prevented him from going where he would; it was his own choice which kept him from leaving the temple as Mr. Kuppuswami Aiyer put it, it was with his own consent that he remained there and there was no fear of injury within the meaning of the Penal Code which would prevent that consent from being a free consent. If it were otherwise, it would follow that a person in the position of the complainant would be justified in complaining of wrongful restraint against any *Pariah*, who having been lawfully in the public street on his own business, refused to move when directed to remove himself to a distance, knowing that if he remained, the complainant would be deterred by fear of pollution from passing near him.

It is clear that there would be no wrongful restraint in such a case and we think, it makes no difference that the *Pariahs* were posted by the accused.

We therefore set aside the conviction and sentence and direct refund of the fines if paid."

The case is very illuminating. There were in this case two parties. Venkata Subba Reddy was the leader of one party. Both parties were caste Hindus. The quarrel between the parties was over the right to take out a procession. Venkata Subba Reddy wanted to stop his opponents from taking out a procession and did not know how best to do it. It struck him that the effective way would be to get a few Untouchables and ask them to stand on the road and hold fast to it. The trick succeeded and his opponents could not dare to go in the procession for fear of being polluted. The fact that the Madras High Court gave a judgment to the effect that making the *Pariahs* stand on the road does not constitute obstruction in the legal sense of the term is another matter. The fact remains that the mere presence of the *Pariahs* was enough to drive the Hindus away. What does this mean? It means that the Hindus have an absolute feeling of revulsion towards the Untouchables.

The next case is equally illuminating. It is a case of an Untouchable school teacher in a village in Kathiavar and is reported in the following letter which appeared in the '*Young India*' a journal published by Mr. Gandhi in its issue of 12th December 1929. It expresses the difficulties he had expressed in persuading a Hindu doctor to attend to his wife who had just delivered and how the wife and child died for want of medical attention. The letter says:

“On the 5th of this month a child was born to me. On the 7th, she fell ill and suffered from loose stools. Her vitality seemed to ebb away and her chest became inflamed. Her breathing became difficult and there was acute pain in the ribs. I went to call doctor—but he said he would not go to the house of a Harijan nor was he prepared to examine the child. Then I went to Nagarseth and Garasia Darbar and pleaded them to help me. The Nagarseth stood surety to the doctor for my paying his fee of two rupees. Then the doctor came but on condition that he would examine them only outside the Harijan colony. I took my wife out of the colony along with her newly born child. Then the doctor gave his thermometer to a Muslim, he gave it to me and I gave it to my wife and then returned it by the same process after it had been applied. It was about eight o'clock in the evening and the doctor on looking at the thermometer in the light of a lamp said that the patient was suffering from pneumonia. Then the doctor went away and sent the medicine. I brought some linseed from the bazaar and used it on the patient. The doctor refused to see her later, although I gave the two rupees fee. The disease is dangerous and God alone will help us.

The lamp of my life has died out. She passed away at about two o'clock this afternoon."

The name of the Untouchable schoolteacher is not given. So also the name of the doctor is not mentioned. This was at the request of the Untouchable teacher who feared reprisals. The facts are indisputable.

No explanation is necessary. The doctor, who in spite of being educated refused to apply the thermometer and treat an ailing woman in a critical condition. As a result of his refusal to treat her, the woman died. He felt no qualms of conscience in setting aside the code of conduct, which is binding on his profession. The Hindu would prefer to be inhuman rather than touch an Untouchable. The third case is taken from '*Prakash*' of 23rd August 1932:

"In the village of Jagwal, tahsil Jafarwal on the 6th August, a calf fell into a well. Rammahashaya, a Dommk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22A.Untouchables or the children of India's Ghetto PART I.htm - _msocom_11 by caste was standing nearby. He at once jumped into the well and caught the calf in his arms. On three or four men coming to help, the calf was safely rescued from the well.

The Hindus of the village, however, raised a hue and cry that their well had been defiled and victimised the poor man. Fortunately, a barrister had come to the scene. He soundly rebuked the men who were tormenting Sadharam and thus brought them to their senses. Thus, the man's life was saved otherwise no one knows what might have happened."

What is important: saving of the calf by the Untouchable and his polluting the well or the death of the calf and saving the well from being polluted by the Untouchable? From the point of view of the Hindus, it would be better if the calf had died than an Untouchable even for the purpose of saving the calf should have polluted the well.

Another case of similar sort is reported in the '*Bombay Samachar*' of 19th December 1936:

"In Kaladi, a village of Calicut, the child of a young woman fell into a well. The woman raised an alarm but none present dared to go down the well. A stranger who was passing by jumped into the well and rescued the child. Later, when the people asked the benefactor who he was, he said, he was an Untouchable. Thereupon instead of being thankful, the man was fully abused and assaulted as he had polluted the well."

How unclean and unfit for association an Untouchable is to a Hindu be evident from the following incident reported in the '*Adi Hindu*' of Lucknow for July 1937: It says:

“An employee of the Madras Holmes Company, who claimed to be one of the high caste persons, passed away recently. When at the cremation ground his pyre was set fire to, his friends and kinsmen threw rice on it. Among these friends unfortunately there was an Untouchable, an Adi-Dravida of Madras. He also joined in the throwing of the rice. At this, the high caste Hindus rebuked him for defiling the pyre. This led on to a heated argument and the upshot was that two men were stabbed in the stomach, one of them died at once upon reaching the hospital and the condition of the other one is said to be critical.”

There is one other incident more telling than this. On the 6th of March 1938, a meeting of the Bhangis was held at Kasarwadi (behind Woollen Mills) Dadar, Bombay, under the Chairmanship of ' Mr. Indulal Yadnik. In this meeting, one Bhangi boy narrated his experience in the following terms:

"I passed the Vernacular Final Examination in 1933. I have studied English up to the 4th Standard. I applied to the Schools Committee of the Bombay Municipality for employment as a teacher but I failed, as there was no vacancy. Then, I applied to the Backward Classes Officer, Ahmedabad, for the job of a Talati (village Patwari) and I succeeded. On 19th February 1936, I was appointed a Talati in the office of the Mamlatdar of the Borsad Taluka in the Kheda District.

Although my family originally came from Gujarat, I had never been in Gujarat before. This was my first occasion to go there. Similarly, I did not know that untouchability would be observed in Government offices. Besides in my application the fact of my being a Harijan was mentioned and so I expected that my colleagues in the office would know before-hand who I was. That being so, I was surprised to find the attitude of the clerk of the Mamlatdar's office when I presented myself to take charge of the post of the Talati.

The Karkun contemptuously asked, "Who are you?" I replied, "Sir, I am a Harijan"; He said, ' Go away, stand at a distance. How dare you stand so near me. You are in office, if you were outside I would have given you six kicks, what audacity to come here for service!' Thereafter, he asked me to drop on the ground my certificate and the order of appointment as a Talati. He then picked them up. While I was working in the Mamlatdar's office at Borsad I experienced great difficulty in the matter of getting water for drinking. In the verandah of the office there

were kept cans containing drinking water. There was a waterman in-charge of these water cans. His duty was to pour out water to clerks in office whenever they needed it. In the absence of the waterman they could themselves take water out of the cans and drink it. That was impossible in my case. I could not touch the cans for my touch would pollute the water, I had therefore to depend upon the mercy of the water-man. For my use there was kept a small rusty pot. No one would touch it or wash it except myself. It was in this pot that the waterman would dole out water to me. But I could get water only if the waterman was present. This waterman did not like the idea of supplying me with water. Seeing that I was coming for water he would manage to slip away with the result that I had to go without water and the days on which I had no water to drink were by no means few.

I had the same difficulties regarding my residence. I was a stranger in Borsad. No caste Hindu would rent a house to me. The Untouchables of Borsad were not ready to give me lodgings for the fear of displeasing the Hindus who did not like my attempt to live as a clerk, a station above me. Far greater difficulties were with regard to food. There was no place or person from where I could get my meals. I used to buy 'Bhajhas' morning and evening, eat them in some solitary place outside the village and come and sleep at night, on the pavement of the verandahs of the Mamlatdar's office. In this way, I passed four days. All this became unbearable to me. Then I went to live at Jentral, my ancestral village. It was six miles from Borsad. Every day I had to walk eleven miles. This I did for a month and a half.

Thereafter the Mamlatdar sent me to a Talati to learn the work. This Talati was -in charge of three villages, Jentral, Khapur and Saijpur. Jentral was his headquarters. I was in Jentral with this Talati for two months. He taught me nothing and I never once entered the village office. The headman of the village was particularly hostile. Once he had said 'you fellow, your father, your brother are sweepers who sweep the village office and you want to sit in the office as our equal? Take cares, better give up this job.'

One day the Talati called me to Saijpur to prepare the population table of the village. From Jentral I went to Saijpur. I found the Headman and the Talati in the village office doing some work. I went, stood near the door of the office and wished them 'good morning ' but they took no notice of me. I stood outside for about 15 minutes. I was already tired of life and felt enraged at being thus ignored and insulted. I sat down on a chair that was lying there. Seeing me seated on the chair the Headman

and the Talati quietly went away without saying anything to me. A short while after, people began to come and soon a large crowd gathered round me. This crowd was led by the Librarian of the village library. I could not understand why an educated person should have led this mob. I subsequently learnt that the chair was his. He started abusing me in the worst terms. Addressing the Ravania (village servant) he said 'who allowed this dirty 'dog of a Bhangi to sit on the chair?' The Ravania unseated me and took away the chair from me. I sat on the ground. Thereupon the crowd entered the village office and surrounded me. It was a furious crowd raging with anger, some abusing me, some threatening to cut me to pieces with Dharya (a sharp weapon like the sword). I implored them to excuse me and to have mercy upon me. That did not have any effect upon the crowd. I did not know how to save myself. But an idea came to me of writing to the Mamlatdar about the fate that had befallen me and telling him how to dispose of my body in case I was killed by the crowd. Incidentally, it was my hope that if the crowd came to know that I was practically reporting against them to the Mamlatdar they might hold their hands. I asked the Ravania to give me a piece of paper which he did. Then with my fountain pen I wrote the following on it in big bold letters so that everybody could read it:

"To
The Mamlatdar, Taluk Borsad.

Sir,

Be pleased to accept the humble salutations of Parmar Kalidas Shivram. This is to humbly inform you that the hand of death is falling upon me today. It would not have been so if I had listened to the words of my parents. Be so good as to inform my parents of my death."

The Librarian read what I wrote and at once asked me to tear it off, which I did. They showered upon me innumerable insults. 'You want us to address you as our Talati? You are a Bhangi and you want to enter the office and sit on the chair? I implored for mercy and promised not to repeat this and also promised to give up the job. I was kept there till seven in the evening when the crowd left. Till then the Talati and the Mukhiya had not come. Thereafter I took fifteen days' leave and returned to my parents in Bombay.'"There is another facet of the social outlook of the Hindus towards the Untouchables, which cannot be

neglected. This outlook is best illustrated by a study of the following cases. In the '*Alfzal*' of 8th September 1943:

"It was reported from Nasik on 1st September that the Hindus of a village attacked an Achchut family; tied the hands and feet of an elderly woman, placed her on a pile of wood which was subsequently set on fire. All this because they thought she was the cause of the Cholera in the village." The '*Times of India*' of August 29, 1946.

"The Harijan quarters of a village in Kaira District are reported to have been raided by Caste Hindus on suspicion that the Harijans were causing the death of cattle by witchcraft.

It is alleged that about 200 villagers armed with sticks raided the Harijan quarters and tying an old woman to a tree, burnt her feet. Another woman is reported to have been belaboured.

The Harijans evacuated the village in panic, but Mr. Chhotabhai Patel, Secretary of the District Harijan Sevak Sangh who was apprized of the incidents has brought back the Harijans to the village and applied to the authorities for their protection.

A similar incident is reported from another village, where Harijans are alleged to have been severely belaboured." The matter did not end there. There was a recurrence of violence in which the whole body of Hindus are reported to have taken part in general assault on the Untouchables. The news appeared in the '*Bharat Jyoti*' of 22nd September 1946. which is reproduced below:

"Five Harijans, including one woman, were injured seriously when a crowd of villagers attacked them with dharias and lathis in a village in Borsad Taluka in Kaira District according to a report received by the Secretary of the Borsad Taluka Harijan Sevak Sangh. The attack was a sequel to the death of about seven buffaloes which the villagers attributed to black magic practised by the Harijans.

The injured have been sent to hospital. Police rushed to the spot, and some persons have been arrested.

The villagers, it is learnt, are threatening the Harijans that if they make any complaints to the authorities they would be burnt alive.

Such incidents often occur in Kaira villages, and the District Magistrate of Kaira has instructed all police and other executive officers to take strong measures against such harassment of Harijans."

The tale told by these cases is clear and simple. No comment is necessary. To the average Hindu, the Untouchable is not fit even for human association. He is the carrier of evil. He is not a human being. He must be shunned.

PART II**Untouchables or The Children of India's Ghetto**

Contents**PART II****Chapter 6 : Untouchability and lawlessness****Chapter 7 : Why lawlessness is lawful?****PART II****CHAPTER 6****UNTOUCHABILITY AND
LAWLESSNES**

There are many people who must be wondering as to how such an established order so full of inequalities could have survived. What are the forces, which go to support it? The forces which sustain the system the most important is the determination of the Hindus to maintain it at all cost. The Hindus are prepared to use every means to suppress the Untouchables whenever the Untouchables try to upset it even in the slightest degree. The ordinary non-violent Hindu will not hesitate to use the utmost violence against the Untouchables. There is no cruelty, which he will not practice against them to sustain the established order. Not many will readily believe this. But this is a fact. For those who have any doubt on the point, I reproduce below some cases of tyrannies and oppressions practised by the Hindus against the Untouchables as have been reported from time to time in the newspapers:

I

The following news item appeared in the "*Tej*" of Delhi in its issue of 4th September 1927:

"The Shiv Temple of Vykomb has been desecrated by the Harijans by their coming too near to the temple. Now the Hindus of that area have decided that the ceremony of purifying the temple should be elaborately performed at great expense before the place is fit for worship again." The correspondent of '*Pratap*' reports the following incident which appears in its issue of 2nd September 1932:

"Meerut August 1932. On the day of Janmashtami some Harijans tried to gain admittance into Caste Hindu Temple but nothing came except widespread troubles and unrest. This year the local Dalit Association has decided that if the doors of the temples are not opened to them, they will undertake Satyagraha. When the Hindus came to know of this, they started making plans to defeat the moves of the Harijans. At last on the night of Janmashtami, the members of the Harijan community came in the form of a procession and tried to gain access to the temple Gods. The priests, however, refused them permission to enter and said, "You can have audience of the Gods standing outside on the street." Upon this a great crowd gathered at the place. The priests tried to enter the temple and thus a clash took place between the two parties and blows were freely exchanged."

The Hindus do not allow the Untouchables to enter the Hindu temples. It would be thought that they would allow the Untouchables to have their own temples and install therein the image of God. That is a mistake. The Hindus will not allow even that. It is enough to quote two instances. One is from the "*Pratap*" of 12th February 1923:

"In the District of Agra, a Chamar who had seen a Brahmin worshipping the image of Vishnu in his house, began to do the same himself. When the Brahmin came to know of this he was most indignant and with the help of a number of villagers caught hold of the ill-fated Harijan, gave him a sound beating saying, 'How dare you try to win over the God Vishnu'. Finally, they stuffed his mouth with filth and left him. In sheer desperation the

Chamar abandoned the Hindu faith and embraced Islam.”The other is from the '*Hindu*' of 4th July 1939:

“A meeting of the Bellary District Harijan Advisory Board was held on 29th June 1939 at the Collector's Bunglow. Mr. A. D. Crombie, CIE., ICS., President of the Committee and Collector presided.

With regard to the grievances of the Harijans of Narayanadevarakeri including allegations of extraction of forced labour from them and harassment by moneylenders, the Committee decided to call for official report, with a view to taking action, if necessary.

The religious disabilities of the Harijans residing in Kudathini village were brought to the notice of the Committee. It was alleged that though the Harijans constructed a temple in their colony as long as twelve years ago, they could not install the image of God which was also ready in the temple, owing to the objections raised by a section of the Caste Hindus in the place to the Harijans taking out the image in procession in the village before the installation."

How any attempt to take water from the Hindu well is dealt with by the Hindus can be seen from the following instances. The first one appeared in the '*Pratap*' of 12th February 1923:

“Mahashaya Chhedi Lalji has reported that a Chamar was going for idol worship, when on the way he felt thirsty. He cast his own iron pail into a well and drew out some water. Upon this he was rebuked by a high caste Hindu and then soundly beaten and locked up in a room. As it happened, I was passing by and when I enquired why this man was being kept under lock and key, the Diwan Saheb replied that this man cast his own pail into our well and wants to profane religion."

That even the Hindu women will not hesitate to take part in the assaults committed by the Hindus against the Untouchables who dare to take water from the Hindu well is a fact. Compare the following report which appeared in the '*Pratap*' of 26th February 1932:

"On 19th February 1932, a very tragic incident took place in the village of Pul Bajwan. This happened when Mahashaya Ramlal went to fetch some water from a well, the same well at which on 13th January 1932 some Rajputs had belaboured Mahashaya Ramlal and his companion. Pandit Bansilal. At that time, a crowd of Rajput women came up armed with all sorts of bats and sticks and gave such a sound beating to the Mahashaya

that it is difficult to describe. All his body was covered with blood by the time the Rajput women had done with him. At this time, he is admitted in the hospital of Phuklian."

That even the support of an officer of Government in the exercise of their right to take water from the well will not save the Untouchables from assault is clear from the following incident which appeared in the '*Milap*' of 7th June 1924:

"Some days ago, an officer of the Canal Department came to the village of Rahian in Tehsil Sabha and he ordered some Megha Untouchables to help in drawing out water from a well. At first they refused but the officer rebuked them sternly and forced them to draw water. The next day the Hindus gathered at the well and sent for the Megha through a Chowkidar and asked them why they dared to climb up to the well. One Megha replied that they were obliged to do so and it was no fault of theirs. For this cheek he was attacked by the Hindus with sticks and hands and until the time of writing this, he is lying unconscious. Although the doctor has declared that the injuries are minor ones, a report of attempted murder and unlawful assembly has been filed with the Police. This however has been ignored and the indifference of the police has created a feeling of great insecurity among the Megha people. The villagers are persecuting the Meghas very much, even their cattle are not allowed to drink water and all wells and ponds have been closed to them."

The Untouchables cannot take water from the Hindu well is not all. They must not build a pucca brick well for themselves even though they may have the money to do so. For having a pucca well for them selves means an attempt to raise themselves to the status of the Hindus which is contrary to the Established Order. The '*Milap*' of 6th June 1934 reports the following incidents:

"Lala Ram Prashadji, Secretary of the Achhut Udharak Committee, Punjab, has written to the following effects:

"During this hot season, complaints are being received from everywhere that the supply of water is becoming a great problem. The Depressed Class people, who have no wells of their own sit near the well with their vessels in their hands. If someone is kind enough to pour out some water, well and good, otherwise they sit helpless. In some places, however, no one is allowed to pour out water to these people even for money and if anyone does so, mortal fights ensue. Not only is the use of the village wells

forbidden to them, but they are not even allowed to make wells of their own with their own money."

To the same effect is the incident reported in the "Tej" of 21st April 1924:

"The Chamars of the village, Opad, numbered about 250. About a month and half ago, they gave up drinking water out of the leather bags of the Muslim water carriers (on the suggestions of the Arya Samaj Pandits?) and now they are in great difficulties about their water supply. The Jats of the village not only refuse to let them draw water out of the village wells but do not even let them make wells of their own. The poor Chamars are living on water from ponds and ditches. Yesterday, Dr. Sukhdevji, Secretary of Dalit Sudhar (Harijan Uplift) Committee came to make investigations in Upad and saw everything with his own eyes. He found the condition of the Chamars abject beyond words and their persecution by the Jats a real fact." The following is from the 'Times of India' dated 9th May 1931:

"In the Baroda State the Untouchables are supposed to be better treated than in the adjoining British territory, because the State has made laws recognising the equality of the Antyaja with caste people. And yet in Padras Taluka the other day the standing crop of a poor Antyaja woman was fired and she herself brutally assaulted, because she dared to send her little son to the local primary school. Now comes a tale of woe from Chanasma in Kadi Prant where an artesian well has been sunk and built with the labour of the Antyajjas who were promised the use of the well. But when the well was ready for use they were first flatly told it was not for them, and when they complained to the Punch the latter generously allowed them to lay a pipe 500 feet long at the end of which they could have a tap all for themselves. Now an unexpected owner of the land at the tap had cropped up, so the pipeline was taken somewhere near to the local tank, but this meant pollution of the tank and therefore of the dirty linen washed there. So the tap was accommodated elsewhere. But did this mean the end of the trouble? No, the enraged caste people have cut the pipeline several times and the Antyajjas are without water to drink. How very 'adequate' to use Mr. Gandhi's term, must the Untouchables feel the treatment given to them by their coreligionists."

Mr. Sanjana in a letter to the 'Times of India' of the 7th November 1928 reports what Mr. Thakkar saw in the year 1927 regarding the awful plight of the Untouchables in the matter of water.

“In Balsad Taluk, Mr. Thakkar saw a Bhangi woman waiting near a well for some merciful ' people ' to give her some water. She had waited from morning till noon, and none had given her any. But the most exquisite touch of spirituality is revealed in the manner of giving water to the Bhangis; it cannot be poured direct into their pots—any ' people ' doing so would get polluted. Says, Mr. Thakkar, ' once our teacher Chunibhai had shown the temerity of pouring water direct from his bucket into a Bhangi's pot and he had received a stern warning in consequence ' Master this sort of thing won't be (tolerated) here '. A small cistern is built below the slope of the well. Anyone who is moved by pity may pour some water in the cistern. A bamboo pipe just out of the cistern, and the Bhangi women must put her pot under the pipe, and it may get filled in an hour or so. For, adds Mr. Thakkar, it is only the unwanted water remaining over in the bucket of the woman drawing it that is as a rule thrown into the cistern, and that too if she takes pity on the waiting Bhangi woman.”

III

Under the established order, the Untouchables have no right to education and certainly have no right to be admitted to the village school. Those Untouchables who have dared to make a breach in these rules of the Established Order have been severely punished by the Hindus. The following are only a few of the numerous cases that have happened:

From the "*Arya Gazette*" of Lahore dated 30th June 1921:

"A Mahashaya wrote an article in the paper '*Young India*', in which he reported that in district surat there is a village called Sisodri. In a very short span of time it has made such progress on the path of nationalism that it could be held up as a model of non-co-operation. With all this, however, the old contempt for the Harijan remains. The writer says that in the nationalist school of that place, I saw a Dhed caste child sitting all apart in one corner of the classroom and proclaiming by his very looks that he was an untouchable. I asked the students why they did not let this boy sit with them and they replied that this could not be until the Harijan left drinking wine and eating meat. The Harijan boy at once said that he had already given these up. The high caste students could say nothing now."

From the '*Pratap*' of 12th February 1923:"Mahashaya Santramji has reported :

It happened recently that a Brahmin teacher was appointed by the Government to go and teach in a village school for Chamar boys. When he came there, the Brahmins, Kshatrias and others boycotted the teacher saying, ' You have come here to teach the Chamars and raise them to our level. Have You?"From the '*Tej*' of 11th April 1924:"Swami Shradhanandji has written: There was a nationalist school in Khatsayas which I visited towards the end of November 1921. When I enquired how many Harijan children read there, I was told only three and they too, sit outside the classroom in the verandah. In my lecture I objected to this procedure and said that in a nationalist institution, it was only proper that these boys should be allowed to sit inside the classroom. The manager of the school acted on my advice. The next day the benches of the school were all deserted and till this day the Grand building of that nationalist school stands locked out and dreary."From"*Milap*"dated 18th April 1924:

"Here is an incident from Hoshungabad. The district Council sent a circular letter to the schools that the Harijan children should be educated in the schools. The headmasters began to act on the orders. When one of the schools admitted some Harijan children the Honorary Magistrate took great offence at it and withdrew his children from that school; other guardians also followed suit and all together got a meeting of the school committee convened and resolutions passed in it, that the education of Harijans in the school is against the Public wishes. They said that after coming into contact with Harijans, the Brahmin children change their Janayu (a religious thread) therefore this school committee could not undertake the education of Harijan children."From"*Pratap*"dated 3rd April 1932:

"Ahmeda-bad, 1st April 1932: A report has been received from the village of Nawagaon, Baroda State, that ever since the Harijan schools were closed down and permission given to the Harijans to enter the ordinary village schools, the villagers have been subjecting the Harijans to endless persecution. It is reported that the thousand stacks of hay belonging to Harijan farmers, were burnt down, Kerosine oil has been sprinkled into the Harijan wells and attempts made to set fire to their houses. A Harijan boy was assaulted on his way to school and a general boycott of the Harijans has been declared."

The "*Hindustan Times*" in its issue of 26th May 1939 says: "Several persons are reported to have raided a night school in village Catipore in the district where Kisans and others used to be taught. The teacher was caught hold of by them, and asked to close the school on the ground that the boys of the Untouchables, after acquiring education will begin to assert themselves to treat them on a footing of equality. When the teacher refused to do so he was belaboured and the students were asked to disperse." The last instance I would like to refer occurred in the year 1935 in *the* village of Kavitha in Dholka Taluka of the Ahmedabad District of the Bombay Presidency. The incident occurred on 8th August 1935.

As the Bombay Government had issued orders requiring the admission of the children of the Untouchables in public schools, the Untouchables of village Kavitha thought of taking advantage of the order. What happened to them is reported below:

"On 8-8-1935, the Untouchables of the village Kavitha took four of their children to be admitted in the village school. Much caste Hindus from the village had gathered near the school to witness this. This occasion for admission passed off quietly and nothing untoward happened. From the next day however the caste Hindus of the village withdrew their children from the school as they did not like their children sitting with those of the Untouchables and getting themselves polluted."

"Some time thereafter an Untouchable from the village was assaulted by a Brahmin on 13th August 1935. The male members of the Untouchables of the village had come to Dholka to file a criminal complaint against the Brahmin in the court of the Magistrate. Coming to know that the adult members of the Untouchables were absent the Hindus of the village invaded the quarters of the Untouchables. They were armed with sticks, spears and swords. Among the invaders was caste Hindu women. They started attacking the old men and women of the Untouchables. Some of the victims fled into the jungle some shut themselves up. These invaders directed their vehemence against those Untouchables who were suspected to have taken a lead in the matter of the admission of their children in the village school. They broke open their doors and not finding them in, they broke the tiles and the rafters of the roofs over their houses.

"Terror-stricken these Untouchables men and women who were assaulted and beaten were anxious about the safety of those of their elders who had gone to Dholka and who were expected back that night. The caste Hindus knowing that the leaders of Untouchables who had gone to Dholka would

be returning had concealed themselves behind the bushes and shrubs on the way to the village. Having come to know of this, an old Untouchable woman sneaked out of the village in the dark, met the leaders who were returning and informed them that armed gangs of caste Hindus were hiding themselves to waylay them and that therefore they should not come into the village. They refused to listen fearing that the caste Hindus might do greater mischief in their absence. At the same time, they were afraid that if they did enter they might be assaulted. They therefore decided to wait outside the village in the field till after midnight. In the meantime, the gang of caste Hindus who were in ambush waited and waited and finally gave up the game and retired. The leaders of the Untouchables entered the village after about 3 a.m. in the night. If they had come earlier and met the murderous gang they would probably have been done to death. On seeing the harm done to person and property they left the village for Ahmedabad before day break, and informed the Secretary of the Harijan Sevak Sangh, a body organised by Mr. Gandhi to look after the welfare of the Untouchables. But the Secretary was helpless. Not only did the caste Hindus use physical violence, but they conspired to make the life of the Untouchables intolerable. They refused to engage them as labourers; they refused to sell them foodstuffs. They refused to give them facilities for grazing their cattle and they used to commit stray assaults on Untouchable men and women. Not only this, but the caste Hindus in their frenzy poured kerosine oil in the well from which the Untouchables used to get their supply of drinking water. This, they did for days together. The result was that the Untouchables of the village had no water. When things reached this stage the Untouchables thought of filing criminal complaint before a Magistrate which they did on 17th October, making some of the caste Hindus as the accused."

"The strange part of the case is the part played by Mr. Gandhi and his henchman, Sardar Vallabhbhai Patel. With all the knowledge of tyranny and oppression practised by the caste Hindus of Kavitha against the Untouchables all that Mr. Gandhi felt like doing was to advise the Untouchables to leave the village. He did not even suggest that the miscreants should be hauled up before a court of law. His henchman Mr. Vallabhbhai Patel, played a part which was still more strange. He had gone to Kavitha to persuade the caste Hindus not to molest the Untouchables. But they did not even give him a hearing. *Yet* this very man was opposed to the Untouchables hauling them up in a court of Law and getting them punished. The Untouchables filed the complaint notwithstanding his

opposition. But he ultimately forced them to withdraw the complaint on the caste Hindus making some kind of a show of an understanding not to molest, an undertaking, which the Untouchables can never enforce. The result was that the Untouchables suffered and their tyrants escaped with the aid of Mr. Gandhi's friend, Mr. Vallabhbhai Patel. IV

The Untouchables are claimed by the Hindus as Hindus. But the dead body of an Untouchable cannot be cremated in the Hindu cremation ground.

The "*Free Press*" of 7th June 1946 reports the following:

"Citing a recent criminal case in which two Madura Harijans were sentenced to four months rigorous imprisonment for doing an act which was likely to wound the feelings of others, Mr. A. S. Vaidyanatha Iyer in a communication to the press draws the attention of the public to the 'cruel suffering which the Harijans have to bear by reason of Untouchability.'

Mr. Vaidyanatha Iyer says: 'A Madura Harijan who had lost his eldest child cremated the body in the Madura municipal burning ghat in a shed which is said to be set apart for caste Hindus instead of in the one reserved for Harijans. The Harijan's plea was, he did not know of any such reservation, that it was drizzling and that the former place was better. No caste Hindu raised any objection nor was there any proof that anyone's feelings were wounded. The incident came to the notice of the Madura police who prosecuted the father of the child and another near relation on the ground that such act was likely to wound the feelings of others because the Harijans were Untouchables. Mr. Iyer adds, "he brought this case to the notice of the Madras Ministry."

The '*Savadhan*' of 22nd April 1945 says:

"On 18th March 1945, a sweeper died in the village Floda, District Muzaffarnagar. The Sweepers of the village took the dead body to the cremation grounds. This enraged the Tyagi Brahmins of the village who abused the sweepers for their audacity in bringing their dead to the caste Hindu grounds. The sweepers protested that they were Hindus and would cremate the dead. But the Brahmins were not at all amenable to reason and told the sweepers that irrespective of their being Hindus and Muslims they must bury their dead and if they failed to do it they (Brahmins) would themselves bury the dead body. When the poor sweepers were thus threatened and were also afraid of being beaten they buried the dead

body.”This is not all. There is a further point to be noted. The Touchable Hindus dispose of the dead body by cremating it. Just because it is a presumption on the part of the Untouchables to imitate the ways of the Hindus, which are marks of their superior status, the Untouchables must necessarily bury their dead even if they do not wish to do so. An instance of this compulsory burial was reported in the '*Milap*' of 6th June 1924:

"The chief cause of the awakening among the Untouchables is the tyranny of the Hindus. I was not aware of this but the reports that I have received from various workers has caused me much pain. From one place I am informed that the Untouchables of that place are not allowed to even burn their dead. This, however it seems has created a new spirit among the sweepers of the place. They have started burying their dead with the head downwards probably to distinguish themselves from others who bury the corpse in a lying position. The Sweepers think that if they also act in imitation of others, it is derogatory."

V

The wearing of the sacred thread is evidence of noble birth. The Untouchables with the idea of ennobling themselves thought of wearing the sacred thread. The atrocities committed by the caste Hindus on the Untouchables of the village Ringwari in Garhwal District in U. P. are reported in the '*National Herald*' of 6th June”After leading a fugitive life for well nigh two months as a result of persecution at the hands of the caste Hindus, ten families consisting of 33 Harijans have now been able to return to their-homes in village Ringwari of Chandkot with the help of the district authorities of Garhwal. These Harijans, it may be recalled, had taken full advantage of the social movement started for their uplift by Mahatma Gandhi and the late Swami Shradhanand. They had taken the sacred thread and made it a part of their duty to perform 'Sandhya'. But this was resented very much by the caste Hindus of Garhwal as according to them it amounted to a virtual invasion of their 'right and privileges'. The resentment found expression in a number of assaults on Harijans and persistent social persecution. They were asked to desist from using 'polies' and 'palkies' in their marriage procession and four of them were compelled at one place to kill a buffalo and eat its flesh. At Ringwari these

atrocities reached a climax, when all the water springs, grazing grounds and other public places were closed to the Harijans who refused to submit to the caste Hindus. In consequence the above mentioned ten families had to leave their villages at dead of night, in order to avoid further persecution." Other instances of similar sort are given below:

1."Some Arya Samajists managed to raise the caste of some Untouchables and gave them the sign of the caste, namely, the religious thread worn round the neck. But the mass of the Sanatanists could not bear even this because their religion does not allow the Untouchables to wear the thread. This is why thread-wearing Untouchables are daily persecuted by the high caste Hindus."

2."Bhagat Harichand of Moila, District Mirpur, Jammu State was purified by the Arya Samajists and given the thread to wear. The Hindu Jats of the place began to victimize him and ask him to put off the thread. Harichand however remained steadfast on his religion. At last one day when the Bhagat Harichand had finished the Gaitri Path, he was caught hold of by the Hindu Jats and severely beaten and his thread broken. The cause of their incensement was this that wheareas before the Shudh, Shudha Meghs had addressed the Jats as ' Gharib Nawaz ' (the benefactors of the poor), now they only use 'Namastey'." From the *Arya Gazette* dated 14th September 1929:

"The Hindu Rajputs of the village Ramani, near the town Berhampur, Distt. Gurdaspur, called the Untouchables of their villages from their homes and ordered them to put off the holy thread at once and swear never to put it on again otherwise their lives were in danger. Upon this Untouchables calmly replied ' Maharaj why are you angry with us. Your own brothers, the Arya Samajists have very kindly put these threads round our necks and have ordered us to always protect them for they are the true symbols of the Hindu faith. If you take objection to them, you can tear them off our bodies with your own hands'. Upon this the Rajputs fell upon the poor men with their lathis and kept on thrashing them for a long time. The Untouchables put up with this persecution with great fortitude and refused to resist or protest. But their torments took no pity on their helpless condition and three or four Rajputs actually tore the holy thread off the body of a Harijan named Gori Ram and bruised his body with a hoe in mock imitation of the sign of the thread." From the '*Milap*' dated 12th October 1929:

"The Rajputs of the village Bahmani have from time past launched a programme against the Untouchables. There is a case going on in the court about the breaking of a holy thread and there is another case too, about an Untouchable woman who was going on to the field to cut the harvest on 7th October 1929 when a Rajput severely thrashed her and caused serious bruises. The woman was brought home on a bed."

VI

What happens to an Untouchable if he remains seated on a cot in the presence of a Hindu can be seen from the following incident reported in '*Jivan*' of July 1938:

"Nanda Ram and Mangali Prasad of village Pachhahera, Police Post Margaon, Tehsil and District Sitapur, invited their friends and relatives for a communal feast. When the guests were sitting on cots and smoking, Thakkur Sooraj Baksh Singh and Harpal Singh, Zamindars of the village, came there, sent for Nanda Ram and Mangali Prasad and asked who the people sitting and smoking were and why they were sitting on cots. Mangali Prasad said that they were his friends and relatives and asked if only Thakkurs could sit on cots. Enraged by this, the Thakkurs beat both the brothers and their men beat the guests severely as a result of which one man and one woman became senseless and others sustained serious injuries."

VII

The Untouchables are Hindus. They are also citizens with the same civic rights. But the Untouchables cannot claim the right of the citizenship if it conflicts with any rules of the Established Order. For instance, no Untouchable can claim lodging in an inn even though it is public. In '*Jivan*' of August 1938, is reported the experience of an Untouchable named Kannhaiya Lal Jatav of Fetegarh:

"When I went to stay in Dharmashala near Allahabad Junction on 15th August 1938 at 10 p.m. there was no difficulty and I laid down on a cot after paying an advance of Re. 1. But at 11 p.m. when the lodgers went to

the Manager of the Dharmashala to note down their addresses, and while noting down my address I put down my caste as Jatav; the Manager got wild and said that the Dharmashala was not meant for the stay of low caste people and asked me to get out at once. I pointed out to him that according to the rules of the Dharmashala, it was meant for Hindus only and there was no ban on Untouchables and asked if I was not a Hindu that he was asking me to leave. I also pleaded that being resident of Farrukabad and not acquainted with anyone in Allahabad there was no place where I could go at 11 p.m. On this, the Manager got furious and repeating the couplet from Ramayan (Shudras illiterate, cattle and women all these deserve to be beaten) said that in spite of being a low-caste he dared to talk about rules and law and will not get out unless he is beaten. Then suddenly he got my bedding etc., threw out of the Dharmashala and all of them were ready to beat me. In the face of such odds, I at once left the Dharmashala and lay down on a plank of wood in front of a shop facing the Dharmashala and had to pay annas 2 as rent to the shopkeeper for a night. I therefore appeal to my Scheduled Caste brethren to hold meetings everywhere and request Government to construct separate Dharmashalas for our people in every town or to get all the existing Dharmashalas opened for us."

VIII

Under the Established Order, the work of lifting and removing dead cattle as well as doing the scavenger's work is beneath the dignity of the Hindus. It must be done by the Untouchables. The Untouchables have also begun to think that it is derogatory to their status and are refusing to do it. The Untouchables, however, are forced by the Hindus to do it against their will. The '*Jivan*' of June 1938 reports:"One day, in May 1938, Bhajju Ram Jatav of village Bipoli, Police post Baria, District Aligarh was sitting in his house at about 11 a.m. when some Brahmins namely Prithik, Hodal, Sita Ram, Devi and Chuni, all of whom had lathis came and tried to force him to lift dead cattle; and when he refused saying that he was not used to that work and asked them to go to some one who does that sort of work, he was mercilessly belaboured with lathis."

The same journal in its issue of October 1938 gives the following news item:

"On 24th October 1938, some cattle of a Brahmin of village Lodhari, Tehsil Sadabad, District Muttra, died. The Scheduled Caste people of the village who were asked to lift it refused to do so. This enraged the caste Hindus so much that they have asked the Scheduled Caste people not to go to their fields for ablutions nor to allow their cattle to graze in their (caste Hindus) fields."

IX

The Untouchables must not wear decent and clean clothes and they must not wear gold or silver ornaments. If the Untouchables defy these rules, the Hindus will not hesitate to bring them to book. The Untouchables have been trying to defy these rules, with what consequences will be seen from the following incidents, which have been reported in the newspapers:

"Until 1922, the Untouchable caste of Dalai in Berar District of Bundi, were forbidden to eat wheat. In February 1922, a Chamar woman was put on the Rock in Sakatgarh, Jaipur, simply because she was wearing silver ornaments on her feet. The reason given was this that only men of the high castes were allowed to wear silver or to eat wheat. The low caste people should not dare to aspire to these things. So far we had been thinking that such antiquated ideas were supposed to have had probably died out by this time." The '*Times of India*' in its issue of 4th January 1928 reports the tyranny and oppression practised upon the Balais who form an Untouchable community in Central India for their daringness to wear clean clothes and golden ornaments. Says the 'Times':

"In May (1927) high caste Hindus viz., Kalotas Rajputs and Brahmins including the Patils and Patwaris of villages Kanana, Bicholee Hafsi, Bicholi Mardana and of about 15 other villages in the Indore district informed the Balais of their respective villages that if they wished to live among them, they must conform to the following rules:

1. Balais must not wear gold lace bordered pugrees;
2. They must not wear dhoties with coloured or fancy borders;
3. They must convey intimation of the death of any Hindu to relatives of the deceased—no matter how far away these relatives may be living;

4. In all Hindu marriages, the Balais must play music before the processions, and during the marriages;
5. The Balai women must not wear fancy gowns for jackets;
6. Balai women must attend all cases of confinement of Hindu women;
7. The Balais must render services without demanding remuneration, and must accept whatever a Hindu is pleased to give;
8. If the Balais do not agree to abide by these terms, they must clear out of the villages.

The Balais refused to comply; and the Hindu element proceeded against them. Balais were not allowed to get water from the village wells; they were not allowed to let their cattle to graze. Balais were prohibited from passing through land owned by a Hindu; so that if the field of a Balai was surrounded by fields owned by Hindus, the Balai could have no access to his own field. The Hindus also let their cattle graze down the fields of Balais.

The Balais submitted petitions to the Darbar of Indore against these persecutions, but as they could get no timely relief, and the oppression continued, hundreds of Balais with their wives and children, were obliged to abandon their homes in which their ancestors lived for generations, and to migrate to adjoining states, viz. to villages in Dhar, Dewas, Bagli, Bhopal, Gwalior and other states.

Only a few days ago the Hindus of Reoti village barely 8 miles to the North of Indore city ordered the Balais to sign a stamped agreement in accordance with the rules framed against the Balais by the Hindus of other villages. The Balais refused to comply, It, is alleged that some of them were beaten by the Hindus; and one Balai was fastened to a post, and was told that he would be let go, on agreeing to sign the agreement. He signed the agreement, and was released". The next is from the '*Arya Gazette*' dated 21st January 1928:

“Up till now the tales of woe that were usually related of the persecution of the Harijans were mostly from the Madras province, but now thanks to the treatment of the Maharana of the Simla Hills, one has not to go so far to search for these stories. In the Simla district, there dwells a caste called '*Collie*' whose members are very handsome and hard working. The Hindus of that area consider them to be Untouchables although they do not

engage in any such work which should render them objectionable in the eyes of the Hindu religion. The members of this caste are not only powerful and well built but intelligent also. Almost all the songs that the dwellers of the Simla Hills sing are composed by the ' *Collies* '. These people labour all day long and venerate the Brahmins excessively but still they cannot so much as pass near the house of a Brahmin. Their children cannot read in schools and ' *Pathashalas* ' (religious monastic schools). Their women folk cannot wear gold ornaments. It has even been reported that some *Collies* have gone to the Punjab and earned some money with which they have bought gold rings and earrings. When however they have brought these back to their homes, they have been cast into the jail and not freed until the ornaments had passed into the pockets of the State Officers."

The following letter appeared in the ' *Pratap* ' of 23rd June 1926:"Swami Ramanandji Sanyasi writes :

On the 23rd of March 1926, in the evening a Chamar came to me who had recently managed to escape from the clutches of the Jats. He related to me a moving tale of the sufferings that his caste had to put up with in the village of Kheri near Faridabad in the District of Gurgaon. On the morning of 24th March I reached Faridabad in the District of Gurgaon, so as to investigate the state of affairs myself. The result of my enquiries is briefly as follows:

"On the 5th of March the marriage took place of the daughter of a Chamar called Gorkhi. The financial condition of the Chamar was comparatively good and he entertained his guests in the same way as people of the high castes do. Moreover, before handing away his daughter, he gave her three gold ornaments. This news spread amongst the Jats and was widely discussed. It was decided finally that the high castes had been insulted by the fact that the lower castes have started viewing with them. Till the 20th of March nothing untoward happened but on the morning of the 21st the Jats called a meeting of the Panchayat (village council) to consider the matter. Just at that moment a party of the Chamars of which the greater portion was composed of boys, girls and women was setting out for Faridabad on its daily duty. The party had just gone out of the village as far as the Dharmashala when the Jats attacked it. All the men of the party were belaboured and the women were thrashed with shoes. The backs of some were broken and of some the arms. Not only this, even their implements were robbed. A Muslim happened to pass along that way and

the Jats took hold of him also and robbed him of his big gold ear-rings as well as of twenty-eight rupees. On the 22nd of March some groups of the Jats went into the fields of the Chamar and played havoc with them. The crop thus destroyed was estimated at about a thousand rupees. At that time, Nanwa, the son of Kori, was working in the fields. The Jats gave him also a thorough beating. On the 22nd of March again a party of the Jats sallied forth armed with flaming torches dipped in Kerosene oil, with the intention of setting fire to the houses of the Chamars but later came away. On the 23rd of March at midnight a house was set on fire belonging to the grandfather of that married girl who has been mentioned above. The house is now a heap of ashes. It contained sixteen skins ready to be made into shoes and worth 90 rupees. They also got burnt up together with the other household goods. The general situation now is that the Jats have surrounded the town and no Chamar is allowed to go out. The Baniyas also, out of fear of the Jats, have refused to sell anything to the Chamars. For three days the Chamars as well as their cattle have been starving.”The following is a more recent occurrence. It has happened in Malabar. The facts of the case are revealed by the following resolution passed at the first Chirakal Taluka Harijan Conference held at Cherukunn in Malabar on 5th June 1945 with Shri K. Kannan, M.L.A., presiding:

“This Conference invites the urgent attention of the Government and the public to the increasing cases of inhuman oppressions of the Scheduled Castes of Malabar by Hindus, Muslims and Christians, particularly to the severest type of oppression now going on, almost with impunity, in the Nattika Firka, Ponnani Taluk, where something like a regular Harijan hunting is taking place every day as a result of the Harijans trying to wear gold ornaments and use clean clothes and umbrellas. In addition to numerous cases of assaults a Harijan marriage party was way-laid and assaulted and the shirts of men and the sarees of women removed by force and a Harijan student mercilessly beaten in Vadanpilly on 27th May 1945. This Conference while congratulating the progressive Thiya youths of the place under the enlightened leadership of Messrs. C. S. Gopalan, M. S. Sankaranarayan and P. C. Ramakrishna Vydier for their magnificent efforts to help the Harijans, most emphatically protests against the callous indifference of the local authorities, particularly \ of the Police Department in that the ill-treated Harijans did not get any timely protection from them.

This conference desires to state that almost in all cases of the above-said oppressions, the aggrieved Harijans have received neither protection nor justice from the police. There are instances where poor Harijans were even

beaten by the Police for their coming forward to give evidence in such cases. In so far as these events have reduced the Harijans of Malabar to a very miserable plight and the situation, if left alone, is likely to develop into a crisis endangering the lives of all progressive Harijans who are trying to break the shackles of caste and economic exploitation of the vested interests in Malbar. This Conference most earnestly appeals to the Government of India, the Hon'ble Dr. B. R. Ambedkar and all the enlightened people in the country to see that the Harijans are allowed to live in this land as free citizens of a democratic country unmolested by any people and promptly protected by the administration whenever they are oppressed by others."

X

The Untouchables must not eat rich food even if they can afford it.

It is an offence for the Untouchables to live above their station in life. The '*Pratap*' of 26th February 1928 relates the following occurrence:

"In the State of Jodhpur at a place Chandayal, you will still see men who do not think that the Harijans have even the right to eat Halva. One of the Untouchable castes is that of Sargaroes. Sometime back on the occasion of the Marriage ceremony of two or three girls, Halva was prepared for the members of the marriage party. For this purpose, maida (white flour) was brought from the Thakur Sahib. At mealtime, the marriage party came for meals but just at that time the Kanwar Sahib of Chandawala sent orders to the Saragaroes that they could not eat Halva. Some cringing sycophants negotiated a compromise in this way that the Kanwar Sahib be presented with Rs. 200 and then permission will be given to eat Halva. At this the Sargaroes got infuriated and refused to pay the money."

XI

To lead a marriage procession through the main streets of the village is the right of every caste Hindu. It is also in evidence that the community, which enjoys this right, is accepted as a respectable community. The Untouchables have no such right. But they have been seeking to establish such a right by taking their marriage procession through the main streets of

the village with the object of establishing their social status. The following incidents show how the Hindus have dealt with this claim. From the '*Adi-Hindu*' dated July 1927:

"Bangalore, 27th May 1927: Seven Brahmins were sentenced to pay a fine of hundred rupees each, by the First Class Magistrate. These men had wantonly attacked a procession of the well-known Pariah Untouchable caste when it was passing along the Mallkot Road where only Brahmins live."

From the '*Pratap*' dated 25th October 1931:"In the village of Hargaon, district Garhwal when the high caste Hindus heard that a marriage party of the Untouchables was coming and the bridegroom was sitting in a palanquin they sallied forth in great numbers and surrounded the party and gave it a severe beating. In intense cold they held up the marriage party and kept it without food for 24 hours. The members of the party were inhumanly treated and were only rescued from this difficult situation by the coming of the Police."

From the '*Satya Samvad*' Lahore dated 3rd November 1931:"A marriage party was passing near Delhi, carrying the bridegroom in a palanquin. The high caste Hindus took offence at this for they thought it to be an insult to them. They held up the party for two days and gave it nothing either to eat or drink. At last the police came and chased away these tyrants and rescued the marriage party."

The '*Jivan*' a Hindu journal for June 1938 reports,

1."In village Sehra, the Golas (Purva Thakurs) who boast of being Congressites, have so mercilessly beaten with spears and lathis the unarmed Jatavs of that village that five of them were lying wounded in the hospital with arms and ribs broken. Bansi has sustained fracture of the skull bone and is still unconscious in the hospital. All this happened because when a marriage party came to the village the bridegroom was wearing a glittering crown (Pukka Mohar) which offended the Thakurs, who wanted to attack the marriage party; but desisted because of the party's superior strength and were therefore content with only insulting the marriage party within the Zamindari at that time."

2."In village Dorra, Tehsil Fatechand, District Agra, a marriage party came to the house of Moti Ram Jatav from village Rampur. The bridegroom was wearing a glittering crown and the party also brought band

music and fireworks. The Caste Hindus objected to the party proceeding with the music band playing and displaying fireworks. Moti Ram protested against this and said that they were also as good human beings as any others. On this, the caste Hindus caught hold of Moti Ram and gave him a severe beating and also attacked the marriage party. A sum of Rs. 15-1-0 tied in Moti Ram's turban was also removed."

3."While a marriage party was on its way to the house of Prem Singh and Girvar Singh, Jatavs of village Khurva, Police post Sakini, District Aligarh, it was prevented by the caste Hindus from proceeding further unless the music band stopped playing, and the procession was threatened to be killed and looted if the music was not stopped. Caste Hindus were also enraged for refusal by the Jatavs to do 'Begar'"and for the audacity to have music band playing with a marriage party. On the marriage party's refusal to stop music, the caste Hindus were so much enraged that they threw brick-bats and stones at the party."

The '*Hindustan Times*' of the 24th of March 1945 reports the following incident relating to the same subject:

"A Shilpakar marriage party of the village of Dhanuri in Lands down sub-division carrying the bridegroom in a 'palki' was proceeding to the bride's house in the village of Mall Dhangu. A man introducing himself as an agent of the Patwari of Mall Dhangu advised the party to go through an out of the way route to avoid disturbance by caste Hindus.

The party, accordingly, took a forest path and when they were at a lonely spot a whistle brought out about 200 caste Hindus who, it is alleged, attacked the party and carried away the 'palki'".

The Shilpakar party reached the bride's house two days later and the marriage was, it is reported, performed in the presence of the Sub-divisional Magistrate and a police party brought by him.

The Patwari has been suspended in this connection."

The *Civil and Military Gazette of Lahore* in its issue of 24th June 1945 reports:

"A party of Rajputs, armed with axes, lathis and daggers, attacked yesterday Harijans of a village in Gwalior State, killing one and inflicting serious injuries on four.

The Rajputs and the Harijans of the village were on hostile terms for some time past ever since the Harijans took out a procession to celebrate the birth of an heir apparent to the Gwalior Darbar. The Rajputs strongly protested against it, as according to them, Harijans were not entitled to the privileges of such celebrations.

Last month, a proclamation was issued by the Maharaja giving equal rights to the Harijans."

Here are a few cases to show how the Hindus treat with violence any attempt on the part of the Untouchables to imitate the ways and manners of the Hindus and to have a little pride in themselves. The following is from the "*Bombay Samachar*" of 4th November 1936:

"At Uttapalam (in Malabar) an Ezhava by caste named Sivaraman, aged 17, went to the shop of a caste Hindu to buy salt and asked in the Malayalam language for 'uppu'. In Malabar, according to custom, caste Hindus alone can use the word 'uppu' for salt; being only a Harijan he ought to have used the word 'pulichatan'. Consequently, the high caste grocer was very angry and is alleged to have thrashed Sivaraman so severely that the latter died." The following instances are collected from the '*Samata*':

(1) "At Kathi (District Poona) the people have begun to persecute the Untouchables because the latter have begun saying ' Ram, Ram and Namaskar '. Be it known to the un-intimated that these are salutations which only the higher castes have the right to employ; the Mahars, etc. must say 'Johar' or 'Paya Lagu'(I touch your feet) to the people.

(2) The Untouchables of Tanoo (District Poona) tried to behave 'like Touchable Hindu people'; the result of this impudent encroachment is that many of them have had to leave the village and some have migrated to Bavda.

(3) At Valapur (District of Sholapur) the Mahars are persecuted because they have dared to refuse to address Touchables as ' Saheb ' and to say ' Paya Lagu ' (' I touch your feet ') in salutation.

(4) At Jambad (District Sholapur) the Untouchables refused to make ' Nautch ' and ' Tamasha ' for the diversion of their Touchable lords. Therefore these Untouchables were thrashed, their huts were burnt down or pulled down, and they were driven out of the village limits.

(5) At Bavda (District Poona) some Untouchables exhorted their fellow-outcastes to give up eating the leavings of higher caste people, dead animals, etc., and to refuse to do the dirty work of the people. The elders of the village have told these Mahars with new fangled notions that it is their 'Dharma' to eat what they have always been eating and do what they have been doing. Those Mahars who do not follow their ancient and eternal 'Dharma' have been thrashed by the people and threatened with expulsion from the village."

XII

The Hindu treats the Untouchables as being born to serve the Hindu community. It being his duty to serve, the Untouchables cannot refuse to serve the Hindu whenever the latter call upon to do so. The Hindus of the village hold the belief that they can commandeer the labour of the Untouchables. The system is known as 'Begar', or forced labour. A few instances will show that dire consequences follow from the refusal of the Untouchables to submit to the system.

The '*Jivan*' of December 1938 report the following incidents:"On 29th November 1938, the Jatavs of village Kohana, district Muttra were seriously tortured by the Jats and Brahmins for refusing Begar.

The Thakkurs and the Brahmins of this village used to extract Begar from the Jatavs and to harass them. The latter decided not to do Begar and do only that work for which wages were paid. Recently, a bullock died in the village and the Thakkurs and other caste Hindus tried to force the Jatavs to lift it, but they said that they could do that only if they were paid. This enraged the caste Hindus so much that they asked a sweeper to fill the Jatavs' well with excreta and make them not to go to their fields for ablutions and decided to tease them in every way. When the Jatavs prevented the Sweeper from putting excreta in their well, he called the Jats, Thakkurs and Brahmins who were all ready for an attack. They attacked the Jatavs with lathis and seriously belaboured them and also set fire to their houses as a result of which six houses were burnt to ashes and 18 Jatavs were wounded seriously and a lot of their household property was taken away by the rowdies."The same *Journal* in its issue of February 1939 reports:

"The Jats of village Abhaipura, tehsil Kirvali, district Agra, are used to extract Begar (Forced labour) from the poor Scheduled Caste people and beat them on demanding wages. Some three months back Sukhi Jat forced Sukh Ram, Ghanshyam and Humka, Jatavs to do work for them and did not pay any wages. These persons are so much fed up with such high-handedness that they have left the villages and lived with their relatives in other villages, while their utensils and other household goods have been taken away by the Jats and concealed in some barn." The '*Savadhan*' in its issue of 3rd June 1945 reports the following incident:

"Mehraji Kori, a Scheduled Caste woman has filed a complaint in the court of Mr. Mahboob Alam, City Magistrate under Sections 376, 341 and 354-A against Brahma Singh, Suleman and Aftab, constables of Jubi Police post. It is alleged that at about 10-30 p.m. on 2nd May 1945 these three constables, Sumar, Kahar, Kallu Bibis son and some others came and searched her house and then took her to the police station and kept her there for the whole night. In the early hours of the morning these constables took her to a small room bolted it and then all three of them violated her modesty one by one. Then she was removed to another small room where charcoal and pieces of paper were filled in her private part and they put their private organs in her mouth. Her clothes were torn and saturated with blood. The following day her mother was forced to do begar work for the whole day and then both of them were left off at 10 p.m.

Murala, wife of Maharaji's husband's younger brother has also filed a similar complaint. She has alleged that the same constables took her to the police post the same night and returned her to her house. On the way she was caught by Madari Teli, near Kumar Tola, to the ruins of a house and her modesty violated. Messrs. Munna Lal, Bhushan and Ram Bharose, advocates are appearing for the complainant."

In the '*Hindustan Times*' of 15th April 1945 occurs the following news item:

"For refusal to do forced labour, it is alleged, a large number of Harijans in the village of Dukheri in Ambala District were recently assaulted by a party of Rajputs. A man and a woman, both Harijans, were killed. It is also alleged that a large number of houses belonging to Harijans were set on fire. Telegrams have been sent to the Commissioner and the Deputy Inspector General of Police to inquire into the matter."

From these instances, it will be clear to anyone that the Hindus do not hesitate to use violence to hold down the Untouchables and maintain the established order and even to commit, murder. Mr. Lajpat Rai in his book 'Unhappy India' in which he tried to reply to and refute the charges levelled by Miss Mayo in her 'Mother India' gives a lengthy and lucid description of the lynching of the Negroes in the United States and the atrocities committed upon them by the members of the Ku Klux Klan and asks:

“What however is very relevant to her to ask is: is the unjustifiable and cruel attitude of the Brahmins towards the *Pariyah* more unjustifiable and more cruel than that of the Klansmen of America towards the Negroes?”

“What are the caste cruelties of India put by the side of what the whiteman has done to the non-white people?” Lala Lajpatrai, if he had cared to investigate could have found that the cruelties and atrocities practised by the Hindus against the Untouchables were no less than those practised by the Americans upon the Negroes. If these atrocities are not so well known to the world as are those practised upon the Negro, it is not because they do not exist. They are not known because there is no Hindu, who will not do his best to conceal truth in order to hide his shame, Some might think that this description of the Established Order and the rules made thereunder are matters of ancient past. This is a complete mistake. The Established Order subsists even today and the rules are as operative today as they were when they were made. This will be evident from the two following statements on the condition of the Untouchables which have appeared in the '*Hindustan Times*'. The first appeared in the issue of 8th March 1945. The first one is written by one Kesarilaji Bordia, Headmaster of a school called Vidya Bhuwan in Udaipur. It reads as follows:

“Many are the disabilities under which the Harijans in Mewar live. They cannot enter temples, nor can they draw water from public wells. They cannot join the caste Hindus in festivals and processions. They have to take out their Rath Yatra or Doll procession through a different route and on a different day. And they cannot ride through the village.

Even silver ornaments, let alone gold ones on their person are resented by the caste Hindus. The result is, they have to content themselves with tin and brass articles. Age-old usage prevents them from using butter or gur in wedding feasts.

In Schools and other public places, Harijan boys cannot sit with the children of caste Hindus. They are asked to absent themselves on the inspection day in order to save the Inspector from embarrassment.

A memorandum has been submitted to the State Government. If the Government chooses to declare in unequivocal terms the disapproval of these disabilities, the hands of non-official bodies which are fighting untouchability will be strengthened."The second is in the form of a statement issued by the President of the *Harijan Sevak Sangh* and refers to the condition of the Untouchables in the State of Mewar. It reads as under:

"The Mewar Harijan Sevak Sangh has sent a Memorandum to the Mewar Government drawing their attention to the various disabilities of Harijans in the State and their consequent hardships. The Memorandum brings out how civil liberties of Harijans are curtailed in several ways by the orthodoxy and prejudices of caste Hindus.

I enumerate below some of the unjust practices, which still persist in the State and for the rectification of which the State has taken no effective measures. They are as follows:

1. Harijans have no liberty in the selection of clothes to wear. The form of dress must follow the age-long pattern; personal tastes and desires have no place in the choice of the dress.
2. At wedding feasts they have no choice in the selection of food materials. Even on payment they cannot use costly articles.
3. They cannot ride the village on a horse.
4. They are not allowed accommodation in public vehicles.
5. On religious festivals they cannot take out procession of their idols except through specified routes.
6. They have no access to wells and temples." *The writer adds:*

"Three years ago in company with Thakkur Bapa, I travelled all over the State and placed before the Government and public my impressions of the conditions obtaining there and pleaded for reform. On perusal of the above mentioned memorandum and other reports sent to me, I find that the past few years have hardly brought any change and conditions are more or less static.

It is heart breaking to find that passage of time cuts no ice with us. The result is that there is hardly any change in our age-long practices and prejudices. This perversity which blinds us to the tyranny and injustices of our ways also makes us impervious to the incalculable harm we have already suffered as a result of it. Even if the ignorant prejudice of the common man is unshaken the enlightened Governments of the twentieth century ought to be more alive to their responsibilities."

The dates of these communications are important. They are of the year 1945. None can say that this Hindu Established Order is a thing of the ancient past. The fact that these latest accounts refer to the Indian States should not be understood to mean that the established Order has vanished from British India. The chapters to follow will present enough evidence to show that the same Established Order is very much alive in British India.

In the "*Times of India*" of 31st August 1950 occurs the following news item:

"The following facts of a case revealed in the hearing of an appeal in the Allahabad High Court, are illustrative of the socio-economic conditions of lower castes in the rural areas:

Chiranji, a dhobi of the village of Sarras in the District of Etah, went out as a military employee in the last war and remained out of his village for four or five years. When he was discharged, he returned to his home. He stopped washing clothes and used to go about in the village in his military uniform. This coupled with the fact that he refused to wash clothes even for the men of the Raja of Sarras the sole zamindar in the village, was resented by the villagers.

On December 31, 1947, when the dhobi was washing his clothes, four villagers, including the Raja's servants, approached him and asked him to wash their clothes which he refused. The villagers took Chiranji to the Raja's house and gave him a beating. His mother and mother's sister went there to intercede on his behalf but they too were assaulted.

The attackers then went away leaving Chiranji in the custody of one Ram Singh; finding him alone, Chiranji was alleged to have slapped him and run away. Ram Singh and other servants of the Raja chased him to his house where he had taken shelter. The villagers insisted upon his opening the door but when there was no response, his house was set on fire. A number of other huts were also reduced to ashes.

The dhobi lodged a complaint with the Police who disbelieved his story and wanted to prosecute him for a false report. He then filed a complaint in a Magistrate's Court. The accused were convicted and sentenced to three years' imprisonment, each. The High Court upheld the sentences imposed by the Magistrate. The following news item has appeared in the '*Indian News Chronicle*' dated 31st August 1950.

Inhuman Treatment towards Harijans in Pepsu: Depressed Classes League's Memorandum to Government.

Patiala, August 1950:"The unprovoked thrashing of the Backward Class people, inhuman insults heaped upon their women folk, indiscriminate detachment of the Harijans from the lands, the virtual confinement of the Harijans and their cattle in their mud houses for days together without any fault is a long tale of suffering whose echoes are rising in proportion to the diminishing echoes of crime in general," says a memorandum presented by the PEPSU Provincial Depressed Classes League to the State Government.

"While crime in PEPSU is on the decrease due to the vigorous efforts of the police," the memorandum adds, "it is a pity that the sector of the Backward Class should be deprived of the protection from the unsociable elements". The Backward Classes economically handicapped as they are, find it very difficult to ventilate their day-to-day grievances to the authorities concerned who could immediately come to their rescue, and are perforce, compelled to submit to their lot, to the encouragement of the aggressor, and thus the wail of disgust against the present state of affairs grows still louder which in its turn is made stock of by the interested parties."

The Provincial Depressed Classes League further quoted an instance to show how much inhuman treatment was being meted out to Harijans in PEPSU. Chand Singh a Harijan of village Katu, district Bernala, was made to go round the village on the back of donkey with face blackened for the fault of having drunk water at the well of a high caste zamindar."In the changed atmosphere of free India, the members of the Scheduled Castes in the PEPSU are daily finding themselves put in a tight corner as a result of the unprecedented repression let loose upon them by the members of high castes."

The Provincial Depressed Classes League has further suggested formation of district and central special commissions in the State with wide powers to

deal with the complaints on Harijans on the spot and afford them other facilities.

Concluding, the League has urged upon the State Government that pending an all-India enactment in this connection, it may, temporarily be provided that the Harijans have equal rights in the village common, to ease the situation from further deterioration.

CHAPTER 7

WHY LAWLESSNESS IS LAWFUL?

The foregoing discussion mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22B.Untouchables or the children of India's Ghetto PART II.htm - _msocom_1 must have made clear two things, which must be borne in mind. One is the sharp division between the touchables and untouchables, the other is the deep antagonism between the two.

Every village has two parts, the quarters of the touchables and the quarters of the untouchables. Geographically the two are separate. There is always appreciable distance between the two. At any rate there is no contiguity or proximity between them. The untouchables quarters have a distinct name such as Maharwada, Mangwada, Chamrotti, Khatkana, etc. *De jure* for the purposes of Revenue Administration or Postal Communication, the quarters of the untouchables are included in the village. But *de-facto* it is separate from the village. When the Hindu resident of a village speaks of the village he means to include in it only the caste Hindu residents and the locality occupied by them. Similarly when the untouchable speaks of the village he means to exclude from it the untouchables and the quarters they occupy. Thus in every village the touchables and untouchables form two separate groups. There is nothing common between them. They do not constitute a folk. This is the first thing which must be noted.

The second thing to note with regard to this division of the village into two groups is that these groups are real corporations which no one included within them can escape. As has been well said the American or

European belongs to groups of various kinds, but he "joins" most of them. He of course is born into a family, but he does not stay in it all his life unless he pleases. He may choose his own occupation, residence, wife, political party, and is responsible generally speaking for no one's acts but his own. He is an "individual" in a much fuller sense because all his relationships are settled by himself for himself. The touchables or untouchables are in no sense individuals because all or nearly all of his relationships are fixed when he is born in a certain group. His occupation, his dwelling, his gods and his politics are all determined for him by the group to which he belongs. When the touchables and untouchables meet they meet not as man to man, individual to individual but as members of groups or as nationals of two different States.

This fact has an important effect upon the mutual relationship between the touchables and untouchables in a village. The relationship resembles the relationship between different clans in primitive society. In primitive society the member of the clan has a claim, but the stranger has no standing. He may be treated kindly, as a guest, but he cannot demand "justice" at the hands of any clan but his own. The dealing of clan with clan is a matter of war or negotiation, not of law; and the clan less man is an 'outlaw', in fact as well as in name and lawlessness against the strangers is therefore lawful. The untouchable not being a member of the group of touchables is a stranger. He is not a kindred. He is an outlaw. He cannot claim justice. He cannot claim rights which the touchable is bound to respect.

The third thing to note is that the relationship between the two, the touchables and the untouchables, has been fixed. It has become a matter of status. This status has unmistakably given the untouchables a position of inferiority vis-a-vis the touchables. This inferiority is embodied in a Code of Social conduct to which the untouchables must conform. What kind of a code it is, has already been stated. The untouchable is not willing to conform to that Code. He is not prepared to render unto Caesar what belongs to Caesar. The untouchable wants to have his relationship with the touchables by contract. The touchable wants the untouchables to live in accordance with the rules of status and not rise above it. Thus the two halves of the village, the touchables and the untouchables are now struggling for resettling what the touchable thinks is settled forever. The conflict is centred round one question—What is to be the basis of this relationship? Shall it be contract or shall it be status?

This raises some very interesting questions. How did the untouchables come to have the status of the lowliest and the low? Why has the Hindu cultivated this hostility and contempt for the untouchables? Why does the Hindu indulge in lawlessness in suppressing the untouchables as though such lawlessness is lawful? To give an adequate answer to these questions one has to go to the law of the Hindus. Without a working knowledge of the rules of the Hindu Law, it would be impossible to give any satisfactory answer to this question. For our purpose, it is not necessary to cover the whole field of Hindu Law in all its branches. It is enough to know that branch of the Hindu law which may be called the law of persons—or to put it in non-technical language—that part of the Hindu law which deals with differences of right, duty or capacity which result from differences of status.

It is therefore proposed to give a catalogue of the rules of the Hindu Law which relate to the law of persons. These rules are collected from the Law Books of Manu, Yajnavalkya, Narada, Vishnu, Katyayana etc. who are some of the principal lawgivers recognised by the Hindus as persons having authority to lay down the law. A mere reproduction of the rules however interesting cannot be helpful in enabling a person who goes through them to have an idea of the basic conceptions which underlie the Hindu Law of Persons. For that purpose mere reproduction of the rules will not do. Some order is evidently necessary. What is therefore done is to group these rules under certain heads. The whole thing is cast in the form of a digest divided into sections, each section being an assembly of rules dealing with one definite matter.

DIFFERENT CLASSES: THEIR ORIGIN AND THEIR DUTIES

1. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22B.Untouchables or the children of India's Ghetto PART II.htm - _msocom_2](#) This (Universe) existed in the shape of Darkness, unperceived destitute of distinctive marks, untenable by reasoning, unknowable, wholly immersed, as it were in a deep sleep."

2. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22B.Untouchables or the children of India's Ghetto PART II.htm - _msocom_3](#) Then the divine self-existent (Svayambhu, himself) indiscernible (but) making (all) this, the great elements and the

rest, discernible, appeared with irresistible (creative) power, dispelling the darkness.

3. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22B.Untouchables or the children of India's Ghetto PART II.htm - _msocom_4](#) But for the sake of the prosperity of the worlds, he caused the Brahmana, the Kshatriya, the Vaishya, and the Shudra to proceed from his mouth, his arms, his thighs and his feet.

4. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22B.Untouchables or the children of India's Ghetto PART II.htm - _msocom_5](#) But in order to protect this Universe He, the most resplendent one, assigned separate (duties and) occupations to those who sprang from his mouth, arms, thighs and feet.

5. [f.6] To the Brahmans he assigned teaching and studying (the veda), sacrificing (performing sacrificial ceremonies) for their own benefit and for others, giving and accepting (of alms).

6. [f.7] The Kshatriya he commanded to protect the people, to bestow gifts, to offer sacrifices, to study (the Veda), and to abstain from attaching himself to sensual pleasures.

7. [f.8] *The Vaishya to tend cattle, to bestow gifts, to offer sacrifices, to study (the Veda), to trade, to lend money and to cultivate the land.*

8. [f.9] One occupation only the lord prescribed to the Shudra, to serve meekly even these (other) three castes.

9. [f.10] A student, an apprentice, a hired servant, and fourthly, an official: these must be regarded as labourers. Slaves are those who are born in the house and the rest.

10. [f.11] The Sages have distinguished five sorts of attendants according to law. Among these are four sorts of labourers (mentioned above). The slaves (are the fifth category, of which there are) fifteen species.

11. [f.12] One born at (his master's) house; one purchased; one received (by gift); one obtained by inheritance; one maintained during a general famine; one pledged by his rightful owner.

12. [f.13] One released from a heavy debt; one made captive in a fight; one won through a wager; one who has come forward declaring 'I am thin' an apostate from asceticism; one enslaved for a stipulated period.

13. [f.14]One who has become a slave in order to get a maintenance; one enslaved on account of his connection with a female slave; and oneself sold. These are fifteen classes of slaves as declared in law.

14. [f.15]Among these the four named first cannot be released from bondage, except by the favour of their owners. Their bondage is hereditary.

15. [f.16]The Sages have declared that the state of dependence is common to all these; but that their respective position and an income depends on their particular caste & occupation.

EQUALITY BEFORE LAW

1. [f.17]When two persons abuse each other, their punishment shall be equal if they are equals in caste; if one is inferior to the other, his punishment shall be double; for a superior, half (of the ordinary punishment) is ordained.

2. [f.18]When persons equal in caste and qualities abuse one another, the punishment ordained for them in the system of law is thirteen Panas and a half.

3. [f.19]For a Brahman abusing a Kshatriya, the fine shall be half a hundred (Fifty Panas); for abusing a Vaishya, half of fifty (twenty-five Panas); for abusing a Shudra, twelve & a half.

4. [f.20]This punishment has been declared for (abusing) a virtuous Shudra who has committed no wrong; no offence is imputable to a Brahman for abusing (a Shudra) devoid of virtue.

5. [f.21]A Vaishya shall be fined a hundred (Panas) for reviling a Kshatriya, a Kshatriya reviling a Vaishya shall have to pay half of that amount as a fine.

6. [f.22]In the case of a Kshatriya reviling a Shudra, the fine shall be twenty Panas; in the case of a Vaishya, the double amount is declared to be the proper fine by persons learned in law.

7. [f.23]A Shudra shall be compelled to pay the first fine for abusing a Vaishya; the middling fine (for abusing) a Kshatriya; the highest fine (for abusing) a Brahman.

8. [f.24] A Kshatriya having defamed a Brahmana shall be fined one hundred (panas); a Vaishya one hundred and fifty or two hundred; a Shudra shall suffer corporal punishment.

9.[f.25] A Brahmana shall be fined fifty (panas) for defaming a Kshatriya; in (the case of) a Vaishya the fine shall be twenty-five panas; in (the case of) a Shudra twelve.

10. [f.26] A once born man (a Shudra), who insults a twice born man with gross invective, shall have his tongue cut out; for he is of low origin.

11. [f.27] If he mentions the names and castes (Jati) of the (twice born) with contumely an iron nail, ten fingers long, shall be thrust red hot into his mouth.

12. [f.28] If he arrogantly teaches Brahmans their duty, the King shall cause hot oil to be poured into his mouth and into his ears.

13. [f.29] For mutual abuse by a Brahmana and a Kshatriya a fine must be imposed by a discerning (King), on the Brahmana the lowest amercement, but on the Kshatriya the middle most.

14.[f.30] With whatever limb a man of a low caste does hurt to (a man of three) highest (castes) even that limb shall be cut off; that is the teaching of Manu.

15. [f.31] He (low caste man) who raises his hand or a stick, shall have his hand cut off; he who in anger kicks with his foot, shall have his foot cut off.

16.[f.32] A low caste man who tries to place himself on the same seat with a man of a high caste, shall be branded on his hip and be banished, or (the King) shall cause his buttock to be gashed.

17. [f.33] If out of arrogance he spits (on a superior) the King shall cause both his lips to be cut off, if he urinates (on him), the penis; if he breaks wind (against him) the anus.

18. [f.34] If he lays hold of the hair (of a superior), let the (King) unhesitatingly cut off his hands, likewise (if he takes him by the feet) the beard, the neck or the scrotum.

STATUS, DIGNITY AND POSITION OF EACH CLASS

1. [f.35]Man is stated to be purer above the navel (than below); hence the self-existent (Swayambhu) has declared the purest (part) of him to be his mouth.
2. [f.36]As the Brahmana sprang from the mouth, as he was the firstborn and as he possesses the Veda, he is by right the lord of his whole creation.
3. [f.37]For the self-existent (Swayambhu) having performed austerities, produced him first from his own mouth, in order that the offerings might be conveyed to the gods and manes and that this universe might be preserved.
4. [f.38]What created being can surpass him, through whose mouth the gods continually consume the sacrificial viands and the manes, the offerings of the dead.
5. [f.39]Of created beings the most excellent are said to be those who are animated; of the animated, those who subsist by intelligence; of the intelligent mankind, and of men the Brahmanas.
6. [f.40]A Brahmana coming into existence is born as the highest on earth, the lord of all created things.
7. [f.41]Whatever exists in the world is the property of the Brahmana; on account of the excellence of his origin the Brahmana is indeed, entitled to all.
8. [f.42]A Brahmana be he ignorant or learned is a great divinity, just as the fire, whether carried forth (for the performance of a burnt oblation) or not carried forth, is a great divinity.
9. [f.43]Thus though Brahmins employ themselves in all (sorts of) mean occupations, they must be honoured in every way; for (each of) them is a great divinity.
10. [f.44]But let (the father perform or) cause to be performed the Namadheya (the right of naming the child) on the tenth or twelfth (day after birth), or on a lucky lunar day, in a lucky Muhurta, under an auspicious constellation.

11. [f.45]Let (the first part of) a Brahman's name (denote something) auspicious, a Kshatriya's be connected with power, and a Vaishya's with wealth, but a Shudra's (express something) contemptible.

12. [f.46](The second part of) a Brahmana's (name) shall be (a word) implying happiness, of a Kshatriya's (a word) implying protection, of a Vaishya's (a term) expressive of thriving and of a Shudra's (an expression) denoting service.

13. [f.47]Let him (a Brahmana) not dwell in a country where the rulers are Shudras, nor in one which is surrounded by unrighteous men, nor in one which has become subject to heretics, nor in one swarming with men of the lowest castes.

14. [f.48]When the King cannot himself decide the causes (of litigants) then he should appoint thereto a Brahmana learned in the various Shastras.

15. [f.49]Where a Brahmana (endowed with the qualities enumerated) cannot be had (the King) should appoint a Kshatriya or a Vaishya, proficient in the Sacred law, but the (the King) should carefully avoid a Shudra as a Judge,

16. [f.50]Whatever is done by others (as Judges) than these must be regarded as done wrongly, even if they be officers (of the King) and even if by chance the decision is according to the Sacred texts.

17. [f.51]A Brahmana who subsists only by the name of his caste (Jati), or one who merely calls himself a Brahmana (though his origin be uncertain), may, at the King's pleasure interpret the law to him, but never a Shudra.

18. [f.52]The Kingdom of that Monarch, who looks on while a Shudra settles the law, will sink (low), like a cow in a morass.

19. [f.53]A Brahmana who knows the law need not bring any (offence) to the notice of the King, by his own power alone he can punish those men who injure him.

20. [f.54]His own power is greater than the power of the King; the Brahmana therefore, may punish his foes by his own power alone.

21. [f.55]The Brahmana is declared (to be) the creator (of the world), the punisher, the teacher, (and hence) a benefactor (of all created beings); to him let no man say anything unpropitious, nor use any harsh words.

INTER-RELATIONSHIP BETWEEN THE CLASSES I

- 1.[f.56] In the inverse order of the four castes slavery is not ordained.
2. [f.57]Members of three Varnas can become slaves but a Brahman can never become a slave. Slavery in the case of the (three) Varnas viz., Kshatriyas, Vaishyas and Shudras is in their direct order and not in their inverse order. A Shudra could be the slave of any master of the four castes, a Vaishya of any master of the first three castes but not of a Shudra Master, a Kshatriya could be the slave of a Brahman or Kshatriya Master but not of a Vaishya or Shudra Master.
3. [f.58]Even one of the same caste (i.e. a Brahman) should not make a Brahmana work as a Slave A man who is Kshatriya, Vaishya or Shudra may occasionally do the work of slave for a man of the same caste (as his own) but a Brahman should never be made to do the work of a slave.

II

4. [f.59]For the first marriage of twice born men (wives) of equal caste are recommended; but for those who through desire proceed (to marry again) the following females (chosen) according to the (direct) order (of the castes), are most approved.
5. [f.60]It is declared that a Shudra woman alone (can be) the wife of a Shudra, she and one of his own caste (the wives) of a Vaishya, those two and one of his own caste (the wives) of a Kshatriya, those three and one of his own caste (the wives) of a Brahmana.
6. [f.61]If twice born men wed women of their own and of other (lower castes), the seniority, honour and habitation of those (wives) must be (settled) according to the order of the castes (Varna).
7. [f.62]Among all (twice born men) the wife of equal caste alone, not a wife of a different caste by any means, shall personally attend her husband and assist him in his daily sacred rights.

8. [f.63]A Shudra who has inter-course with a woman of a twice born caste, guarded or unguarded (shall be punished in the following manner); if she was unguarded, he loses the part (offending) and all his property; if she was guarded, everything (even his life).

9. [f.64](For inter-course with a guarded Brahmani) a Vaishya shall forfeit all his property after imprisonment for a year; a Kshatriya shall be fined one thousand (panas) and be shaved with the urine (of an ass).

10. [f.65]If a Vaishya or a Kshatriya has connection with an unguarded Brahmani, let him fine the Vaishya five hundred (panas) and the Kshatriya one thousand.

11. [f.66]If a Vaishya approaches a guarded female of the Kshatriya caste, or a Kshatriya a (guarded) Vaishya woman, they both deserve the same punishment as in the case of an unguarded Brahmana female.

12. [f.67]A Brahmand shall be compelled to pay a fine of one thousand (panas) if he has inter-course with guarded (females of) those two (castes); for (offending with) a (guarded) Shudra female a fine of one thousand (panas shall be inflicted) on a Kshatriya or a Vaishya.

13.[f.68] For (intercourse with) an unguarded Kshatriya (female) a fine of five hundred (panas shall fall) on a Vaishya; but (for the same offence) a Kshatriya shall be shaved with the urine (of a donkey) or (pay) the same fine.

14. [f.69]A Brahmana who approaches unguarded females (of the) Kshatriya or Vaishya (castes), or a Shudra female, shall be fined five hundred (panas); but (for intercourse with) a female (of the) lowest (castes), one thousand.

III

15. [f.70]But let (a householder) offer, in accordance with the rule, to a guest who has come (of his own accord) a seat and water, as well as food, garnished (with seasoning) according to his ability.

16. [f.71]But a Kshatriya (who comes) to the house of a Brahman is not called a guest (atithi), nor a Vaishya, nor a Shudra, nor a personal friend, nor a relative, nor the teacher.

17. [f.72]But if a Kshatriya comes to the house of a Brahman in the manner of a guest, (the householder) may feed him according to his desire, after the Brahmans have eaten.

18. [f.73]Even a Vaishya and a Shudra who have approached his house in the manner of quests, he may allow to eat with his servants, showing (thereby) his compassionate disposition.

DUTIES—PRIVILEGES—IMMUNITIES— DISABILITIES

(1)

1. [f.74]Brahmans who are intent on the means (of gaining union with) Brahman and firm in (discharging) their duties, shall live by duly performing the following six acts, (which are enumerated) in their (proper) order.

2. [f.75]Teaching, studying, sacrificing for him self, sacrificing for others, making gifts and receiving them are the six acts (prescribed) for -a Brahmana.

3. [f.76]But among the six acts (ordained) for him three are his means of subsistence, (viz.) sacrificing for others, teaching and accepting gifts from pure men.

4. [f.77](Passing) from the Brahman to the Kshatriya, three acts (incumbent on the former) are forbidden (viz.,) teaching, sacrificing for others, and thereby, the acceptance of gifts.

5. [f.78]The same are likewise forbidden to a Vaishya that is a settled rule; for Manu, the lord of creatures (Prajapati), has not prescribed them for (men of) those two (castes).

6. [f.79]To carry arms for striking and for throwing (is prescribed) for Kshatriyas as a means of subsistence; to trade, (to rear) cattle, and agriculture for Vaishyas; but their duties are liberality, the study of the Veda and the performance of sacrifices.

7. [f.80]Among the several occupations the most commendable are, teaching the Veda for a Brahamana, protecting the people for a Kshatriya and trade for a Vaishya.

8. [f.81]The service of Brahmanas alone is declared (to be) an excellent occupation for a Shudra; for whatever else besides this he may perform will bear him no fruit.

(II)

9. [f.82]But a Brahmana unable to subsist by his peculiar occupations just mentioned, may live according to the law applicable to the Kshatriyas; for the latter is "next to him in rank.

10. [f.83]If it be asked "How shall it be, if he cannot maintain himself by either (of these occupations? the answer is) he may adopt a Vaishya's mode of life, employing himself in agriculture and rearing cattle.

11. [f.84]A Kshatriya who has fallen into distress may subsist by these means (open to the Vaishya).

12. [f.85]A Vaishya who is unable to subsist by his own duties, may even maintain himself by a Shudra's mode of life, avoiding (however) acts forbidden (to him), and he should give it up, when he is able to do so.

13. [f.86]But a Shudra being unable to find service with the twice-born and threatened with the loss of his sons and wife (through hunger), may maintain himself by handicrafts.

14. [f.87]A Kshatriya must never arrogantly adopt the mode of life (prescribed for his) betters (that is for the Brahmanas).

15. [f.88](The King) should order a Vaishya to trade, to lend money, to cultivate the land, to lend cattle and the Shudra to serve the twice born castes.

16. [f.89](The King) should carefully compel Vaishyas and Shudras to perform the work (prescribed) for them; for if these two (castes) swerved from their duties, they would throw this (whole) world into confusion.

(IV)

1. [f.90]A blind man, an idiot, (a cripple) who moves with the help of a board, a man full seventy years old, and he who confers benefits on Srotriyas, shall not be compelled by any (king) to pay a tax.

2. [f.91]Though dying (with want) a King must not levy a tax on Srotriyas, and no Srotriya residing in his kingdom must perish from hunger.

3. [f.92]Let the King make the common inhabitants of his realm who live by traffic, pay annually some trifle, which is called a tax.

4. [f.93]Mechanics and artisans, as well as Shudras who subsist by manual labour, he (the king) may cause to work (for himself) one (day) in each month.

5. [f.94]Tonsure (of the head) is ordained for a Brahmana (instead of capital punishment); but men of other castes shall suffer capital punishment.

6. [f.95]Let him (the King) never slay a Brahmana though he have committed all (possible) crimes; let him banish such an (offender) leaving all his property (to him) and (his body) unharmed.

7. [f.96]No greater crime is known on the earth than slaying a Brahmana: a King, therefore, must not even conceive in his mind the thought of killing a Brahmana.

8. [f.97]When a learned Brahmana has found treasure deposited in former (times), he may take even the whole (of it); for he is master for everything.

9. [f.98]When the King finds treasure of old concealed in the ground, let him give one half to the Brahmanas and place the (other) half in his treasury.

MODE OF LIFE

1. [f.99](A Shudra who is) pure, the servant of his betters, gentle in his speech, and free from pride, and always seeks a refuge with Brahmanas, attains (in the next life) a higher caste.

2. [f.100]But let a Shudra serve Brahmanas, either for the sake of heaven, or with a view to both (this life and the next); for he who is called the servant of a Brahmana thereby gains all his ends.

3. [f.101]If a Shudra (unable to subsist by serving Brahmanas) seeks a livelihood, he may serve Kshatriyas, or he may also seek to maintain himself by attending on a wealthy Vaishya.

4. [f.102]They must allot to him out of their own family (property) a suitable maintenance, after considering his ability, his industry, and the number of those whom he is bound to support.

5. [f.103]The remnants of their food must be given to him, as well as, their old clothes, the refuse of their grain and their old household furniture.

6. [f.104]No collection of wealth must be made by a Shudra, even though he be able (to do it); for a Shudra who has acquired wealth, gives pain to the Brahmana.

7. [f.105]Shudras who live according to the law, shall each month shave (their heads); their mode of purification (shall be) the same as that of Vaishyas and their food the fragments of an Aryan's meal. As has been said the society for which the ancient lawgivers laid down their ordinances consisted of two parts—one part consisted of those who were comprised *within* the system of Chaturvarna. The other part consisted of those who were without the pale of Chaturvarna. They are spoken of in Manu as Bahyas i.e. outside the pale of Chaturvarna. They are spoken of as low castes. The origin of these low castes is a subject with which I am not concerned for the moment. It is enough to say that according to these ancient law givers of Hindus these low castes are the result of the progeny of intermarriages between those four classes—the Brahmanas-Kshatriyas-Vaishyas-Shudras—who are included within the system of Chaturvarna. How far this is true will be examined at another time. We are primarily concerned with social relationship and not with origin. So far the ordinances relating to those who were within the Chaturvarna have been given. It now remains to give the ordinances which relate to those who

were outside the Chaturvarna or who were called the low castes. The ordinances which regulate the life of the low castes are strange to say very few. Few though they be they give them such a short shrift that one does not find any necessity for more detailed code of ordinances. They are as follows:

1. [f.106]All those tribes in this world, which are excluded from (the community of) those born from the mouth, the arms, the thighs, and the feet (of Brahman), are called Dasyus, whether they speak the language of the Mlenchhas (barbarians) or that of the Aryans.

2. [f.107]Near well-known trees and burial ground, on mountains and in groves, let these (tribes) dwell, known (by certain marks), and subsisting by their peculiar occupations.

3. [f.108]But the dwelling of the Chandalas and Shwapakas shall be outside the village, they must be made Apapatras and their wealth (shall be) dogs and donkeys.

4. [f.109]Their dress (shall be) the garments of the dead, (they shall eat) their food from broken dishes, black iron (shall be) their ornaments, they must always wander from place to place.

5. [f.110]A man who fulfils a religious duty, shall not seek intercourse with them; their transactions (shall be) among themselves, and their marriages with their equals.

6. [f.111]Their food shall be given to them by others (than an Aryan giver) in a broken dish; at night they shall not walk about in villages and in towns.

7. [f.112]By day they must go about for the purpose of their work, distinguished by marks at the King's command, and they shall carry out the corpses (of persons) who have no relatives, that is a settled rule.

8. [f.113]By the King's order they shall always execute the Criminals in accordance with the law, and they shall take for themselves the clothes, the beds and the ornaments of (such) criminals.

9. [f.114]He who has had connection with a woman of one of the lowest castes shall be put to death.

10. [f.115]If one who (being a member of the Chandala or some other low caste) must not be touched, intentionally defiles by his touch one who

(as a member of a twice born caste) may be touched (by other twice born persons only) he shall be put to death.

Chapter 11 : The hindu and his belief in caste

PART III

Roots of the Problem

CHAPTER 8

PARALLEL CASES

1. Slavery in Rome. II. Villeinage in England. III. Jews and Servility. IV. Negroes and slavery.

Social inequality is not confined to Hindus only. It prevailed in other countries also and was responsible for dividing society into higher and lower, free and un-free, respectable and despised. It would be interesting to compare the condition and status of the untouchables in India with the condition and status of the un-free and the despised classes in other

countries ancient and modern. For an intelligent understanding of the differences and similarities it is essential to have some idea of the history of such parallel cases before any comparison can be instituted. It is not possible to give a survey of all such classes in all parts of the world. Nor is it necessary. A few typical cases can only be taken as illustrations.

In studying the relationship between the Hindus and the Untouchables three questions at once come to one's mind. Why has untouchability not vanished? Why does the Hindu regard lawlessness against the Untouchables as legitimate and lawful? Why does the Hindu feel no qualms of conscience in his dealings with the Untouchables?

I

Classes, which like the Untouchables were lowly and despised have at one time existed in other societies also. For instance, they existed in once ancient Rome. The population of ancient Rome fell into five classes: (1) Patricians, (2) Plebians, (3) Clients, (4) Slaves and (5) Freemen.

The Patricians were the ruling class. They were the civics in every sense. The rest were all servile in status. The Plebs and the Clients were destroyed by war. Those of the new comers who invoked the protection of the heads of Patrician families of repute and were ready to become their vassals were known as clients. Those who were too independent to brook submission to a private patron put themselves under the direct protection of the sovereign and became royal tenants and were known as Plebians. The Plebians had the right to hold property both movable and immovable to transfer it by quirtian modes of conveyance, and to have the protection for it of the tribunals. But the Plebian had no share in the Government of the City. He was a half-fledged citizen— *civies sine suffragio*. The Plebs were denied any participation in the religion of the city and as men to whom the suspicion were incompetent, any intermarriage between the Patrician and the Plebian was out of question. The client had to look to his Patrician patron for support and maintenance. The Patrician patron had to provide all that was necessary for his sustenance and that of his wife and children. This relation was a hereditary one, a client passed on from father to son. The client had not only to depend upon his Patrician patron for his maintenance but he had also to depend upon him for his legal protection. Not being a civic, a client had no right of suit and his Patrician patron had to assist his client in his redress for him for his injuries and represent him before the tribunals when he became involved in litigation.

As to the slaves there were millions of them. A single rich landholder might own hundreds and even thousands, and it was a poor man that did not have several at least. They were just things to be owned. They were not persons in the eye of the law and had therefore no rights. They received kind treatment from a few humane masters. But generally they were treated with the greatest cruelty."If a slave coughs or sneezes during a meal, if he lets a key fall noisy to the floor, we fall into a great rage Often we strike too hard and shatter a limb or break a tooth,"said Seneca. One rich Roman used to punish his slaves for carelessness by casting them into a fishpond as food for lampreys. The slaves who displeased their masters were ordinarily sent to an underground prison. During the day, they had to work loaded with heavy iron chains. Many were branded with red-hot iron. The mill where the slaves had to work is thus described by a Roman author; 'Gods! What poor shrunken up men? With white skins striped with blows of the whip..... They were only the shreds of tunis; bent forward, head shaved, the feet held in a chain, the body deformed by the heat of the fire, the eyelids eaten away by the fumes, everything covered with grain dust'.¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_1

English society also had at one time its servile classes. One has only to turn to the Domesday Book to see what the state of English Society was at the time of the Norman conquest.

The Domesday Book which is a social survey of the land in England and its various kinds of tenants made by William the Conqueror immediately after his conquest in 1086 shows the following classes in which the population was divided:

1.Gentry & Clergy	Made up of	Tenants in Chief	1,400	9,300
		Under tenants	7,900	
2.Freeholders Yeomen	made up of	Freemen Socmen	12,000 32,000	44,000
3. Half-free or Unfree	made up of	Villeins Cottars and Borders	169,000 90,000	259,000
4. Slaves				25,000

Out of a total of 3,37,000 souls as many as 2,84,000 were either unfree or slaves.

These are examples of servility in which race or religion played no part. But examples of servility by reason of race or religion are not wanting in history. The principal one is that of the Jews. On account of the belief that the Jews were responsible for the death of Christ, the Jews have been subjected to persecution. During the Middle ages in almost all the European towns, the Jews were compelled to reside within a restricted quarter in a separate part of the town, and this Jewish quarter came to be known as the ' Ghetto '. A Council held in Coyanza in Auستراليا in 1050 enacted 'that no Christian shall reside in the same house with Jews, nor partake of the food; whoever transgresses this decree shall perform penances for seven days, or, refusing to do it, if a person of rank, he shall be excommunicated for a year; if of an inferior degree, he shall receive 100 lashes.' The Council of Falencia in 1388 enacted that "Christians must not dwell within the quarters assigned to the Jews and Moors, and those that resided within them were to remove therefrom within two months after the publication of this decree in the Cathedral and if they did not, were to be compelled by Ecclesiastical censure." In the Middle ages the Jews were obliged to have communal baths. No Jewish community could be destitute of such baths because the State often forbade the Jews to bathe in the rivers which the Christians used. In the fourteenth Century the Jews of Augers were readmitted to the town on several onerous conditions, one being that they would not bathe in the river Maine. The State also levied certain taxes upon the Jews. They were of three kinds—poll taxes, and particular fines and dues for individual transactions and privileges. The age at which Jews or Jewesses became liable to the poll tax varied considerably but the age was very young, and in Spain, as in England in 1273, every Jew above the age of ten was rateable. The billeting of soldiers on Jews in times of peace was a frequent species of exaction. So many were the vexatious dues exacted from the Jews everywhere throughout the Middle ages that it would be impossible to enumerate them all. To crown all this Pope Innocent III decided in 1215 that thenceforward the Jews must be marked off from the Christians by a badge prominently fastened to their outermost garment. Clear and emphatic in its demand that the Jews must wear badges, the Laternan council nevertheless avoided details. It left the definition of the size, colour, and character of the degrading mark to the taste of local Governors and States. Each Governor and State devised a badge of its own pattern. On account of the extraordinary number of modification, size and

shape the badge sometimes became obsolete and the Jews managed to evade it. As the badge was often hidden, in 1525 Pope Clement VII changed it for a yellow hat or bonnet.

A consideration of the position of the Untouchables reminds one of the positions of the Catholics in England. The Catholics were subjected to many disabilities. The catalogue of their disabilities is given below:

"1. That of Catholic marriages or of marriages Catholics celebrated by Catholic priests being deemed invalid by the existing laws, so that if one of the parties quit the other *quicumque de causa* (from any reason whatsoever), the deserted party receives no relief from the parish, nor redress from the law of his or her country. The priest, also it is said, may be transported, or put in prison and condemned to transportation for having married the parties.

2. That of foundations or of moneys appropriated for the maintenance of priests, or to support the Catholic worship, being deemed by the existing laws to be appropriated to *superstitious purposes* and as such are liable to confiscation; and when alienated or seized upon by malevolent person cannot be recovered by law; Instances of such alienation and seizures might be adduced.

3. That of Catholics serving in His Majesty's Army and Navy being withheld from attending Divine Service according to the rite of their own religion on Sundays and festivals, and of their being compelled to go to Protestant Churches on those days against their will, an evil which leads brave and loyal subjects to complain and be discontented at a time when every heart and hand should be united to oppose the enemy; and the United Kingdom should be as one man.

4. By the 13th Charles II, commonly called the Corporation Act, their whole body is excluded from offices in cities and corporations.

5. By the 25th Charles II, commonly called the Test Act, their whole body is excluded from civil and military offices.

6. By the 7th and 8th William III, c. 27 Roman Catholics are liable to be prevented from voting at elections.

7. By the 30th Charles II, s. 2. c. 1, Roman Catholic peers are prevented from filling their hereditary seats in Parliament.

8. By the same statute Roman Catholics are prevented from sitting in the House of Commons.

9. By several statutes Roman Catholics are disabled from presenting to advowsons, a legal incident of property which the law allows even to the Jew.

10. Though a considerable proportion of His Majesty's fleets and armies was Catholic, not only is no provision made for their religious comforts etc., but by the articles of war they are liable to the very heaviest pains and penalties for refusing to join in those acts of conformity to the religious rites of the Established Church. By the articles of war, section I, a soldier absenting himself from Divine service and sermon is liable, for the first offence, to forfeit one Shilling, and for the second and every other offence, to forfeit one Shilling and to be put in irons. By the same articles section 2, article 5, 'if he shall disobey any lawful command of his superior (and of course if he shall disobey any lawful command of his superior to attend Divine Service and Sermon) he shall suffer death or such punishment as by general court martial shall be awarded.

11. In common with the rest of his Majesty's subjects the Roman Catholics contribute to the support of the Established Religion; they have also to support their own religious functionaries; and thus have a double religious establishment to defray. Of course, however, they do not complain; but they think it a serious grievance that their own religious endowments are not legalised like those of the Protestant Dissenters.

12. In hospitals, workhouses, and other public institutions the attendance of the ministers of their own communion is sometime denied to the poor of the Roman Catholic religion, and the children of the Roman Catholic poor are sometimes forced into Protestant schools under the eyes of their parents."

Like Catholics, the Untouchables also suffer from certain disabilities.

II

[The following essay has been received from Shri S. S. Rege. As it deals with 'Negroes & Slavery' (One of the subjects of the scheme of this Chapter) which has not been dealt with in the above discussion, it has been included here—Ed.]

Providence it seems has inexorably doomed the continent of Africa to be only a nursery of slaves for the free and civilised peoples of Asia and

Europe. The Negro was imported as a slave by the Arabs into Asia long before he was introduced as a slave by the Europeans into America. Although this is so, Negro slavery in America and in the English Colonies has had a sorrowful history which has made people forget the importation of the Negro as a slave in Asia and quite naturally because Negro slavery in America as carried on by the Europeans was a most revolting thing. It began in the first decade of the 16th Century and lasted till the middle of the 19th Century.

In the half century after Columbus first landed in the Bahama Island in 1492, the Spaniards conquered and partly occupied a huge area stretching from Mexico through Peru to Uruguay and including all the larger west Indian Islands, while in 1531 the Portuguese began the colonisation of Brazil. At once the new comers, the Portuguese and the Spaniards, set themselves to exploit the great natural wealth of their acquisitions, to work the gold and silver mines on the main land and to lay out plantations of tobacco indigo and sugar in the rich soil of the island. But they were soon confronted by the difficulty of procuring the requisite supply of labour. A great deal of it was needed, and the cost of white men's wages and the heat of the tropical sun made it virtually impossible for the Europeans to provide it for themselves. The only labour supply of a non-European character available on the spot consisted of the native Indians. The Portuguese and the Spaniards had massacred many Indians during the conquest. Many had fled to the mountains and forest from the scourge of the invaders. Those that were available were made slaves and made to work in the mines. Under the lash of the Portuguese and the Spaniards and the relentless labour that was exacted from them in the mines and in the fields the Indians sickened and died.

The conquistadors—as the Spanish pioneers in South America were called—under the leadership of Nicholas de Ovando who followed promptly the trail of Columbus, brought with them a young priest Batrolome' de Las Casas who was well known for his piety. Las Casas was charged by the Court of Spain to deal lovingly with the Indians in the hope of bringing them to a knowledge of the sacred Christian faith. Las Casas was the first Bishop of Mexico. In performing the duty with which he was charged Las Casas while in Haiti witnessed the cruelties that were practised by the conquistadors upon the Indians and engaged himself passionately to the end of his life in preserving the pitiable remnants of the Caribbeans as the Indians of Haiti were called, from the inevitable destruction at the hands of their masters. The Caribbeans were a gentle, un-offending and

hospitable race. They numbered no less than 1,000,000 persons when Columbus found them, formed into kingdoms and ruled peacefully by their caciques. Under the systematic cruelty of these Spanish adventurers who came after Columbus their numbers were reduced to a bare 60,000. It is recorded that entire villages committed suicide inviting others to join them as the only way of escaping this scourge and this tyranny. Las Casas was a spectator to many of these scenes of self immolations. He protested in righteous anger. But his protests went in vain and were bound to go in vain. The clearing of the forest, the tilling of the soil and the working of the mines had to go on. Without this the kingdom given by God could not become the Paradise of man. Las Casas realised this. But he was also overwhelmed with grief at the thought of what the Indians would have to go through if this plan was to be realised. His benevolent instincts led him to petition the King of Spain to allow the free importation of Negroes. The Spanish Government in 1511 decreed that a large number of Negroes should be transported to the New World. In pursuance of this there came ships laden with African Negroes as cargo to make the New World a Paradise for man. For a few years both worked under the Conquistadors, Indians as well as Negroes. The sturdiness of the Negroes as compared with the Indians was soon proved. One of the Conquistadors has testified that when he prepared his timbers for the four brigantines that pass through the Isthmus from the Atlantic to the waters which flowed into the Pacific, he had used several hundred Indians and thirty Negroes, and, in the execution of this task, he found that 500 Indians perished and the thirty Negroes survived. The Negroes not only survived but prospered so much that it came to be a common opinion "that unless a Negro should happen to be hanged he would never die; for as yet, none had been known to perish from infirmity". The Negro by his own conduct and character gave evidence that he was a more efficient tool than the Indian. The result was that the Indian was let go and the Negro was preferred for the labour, the former because God made him less sturdy and the latter because God made him more sturdy. The result was that the Indian escaped slavery and the Negro took over the destiny which was intended by the Conquistadors to apply to him a destiny to which he was invited by the pious and benevolent priest Las Casas and for which the Negro showed his own credentials of fitness.

Having found that "one Negro does more work than four Indians" there was opened at once a regular market for trading in Negroes. The market which was opened by the Portuguese on the West Coast of Africa began

immediately to show its profits and quite naturally because the exploitation of the untold wealth of the New World was impossible without Negro labour. People became so engrossed in this new business in human beings that the search for a new route to the East, which began it all, was abandoned.

There was a keen competition between the various nations of Europe for a share in this new line in commerce. A papal Bull of demarcation had created for Spain and Portugal a monopoly on the wealth flowing in from the New World. The English and the Dutch feared there was danger to all Europe in this monopoly of American resources and were determined not to allow it.

The English took a good hand in securing this trade for the benefit of their nation. The first deal took place in 1553 when 24 Negroes were brought from the Coast of Africa and quietly sold in the English market. The most intrepid, and who later became the most heartless of man stealers known to history was John Hawkins. Under Elizabeth he sailed forth in the good ship *Jesus* to get Negroes from Africa whom he sold into the Spanish Colonies. Bent on breaking the monopoly of Spain Sir Francis Drake followed Hawkins. International disputes over the pirating of these adventures arose which culminated in the clash and destruction of the Spanish Armada. It is interesting to bear in mind that in these disputes each nation shamelessly asserted that these acts of piracy committed by their subjects in stealing Negro slaves were "no private but public actions" supported by the respective states.

As though the irony involved in using the Ship *Jesus* for carrying the Negroes for enslavement was not enough there occurred another event which also was full of irony. It was the simultaneous landing of the Pilgrim Fathers on Plymouth Rock in the *Mayflower*, and the landing of twenty Negroes at Jamestown in Virginia from a barnacled and sea worn brig which sailed up the James river and brought them for the use of the gentlemen adventurers of the first successful English Colony of Virginia in America.

Thus were introduced into America the Negroes and the Pilgrim Fathers who stepped into it almost at the same time, the Pilgrim Fathers for preserving their liberty and the Negro for losing his freedom. For a long time the Negro formed a dominant element in the population of the American Colonies so far as numbers were considered. In a real sense America including its islands was settled chiefly from Africa and by

Negroes. Before 1800 the number of Negroes brought in America was more than twenty times that of all Europeans combined. This was inevitable. The population of Europe was small, reduced further by its long wars and just emerging itself from a backward culture. For a long time the status of the imported Negro was undefined. The twenty Negroes brought by the Dutch and who landed in Jamestown were not immediately stamped in the Colony as slaves. They were accepted on much the same basis as the indentured servants. It has been found that in the muster rolls of the Colony of Virginia in 1624 and 1625 there were recorded 23 Negroes all of whom were listed as 'servants' as were the whites of the same class. It is also recorded that thirty-four years after the arrival of the twenty Negroes one of them Anthony Johnson got a judgment from the Court sustaining his claim to perpetual service of John Caster, another Negro. The status of slavery was not crystallised for fifty years and steps by which it became crystallised were very gradual.

To begin with there was the law of servitude which applied to all servants whether they were Negroes or whites. In course of time a distinction came to be made in the treatment of the Negroes and white servants due to the fear of an alien and pagan people which as they became traditional and gained the sanction of custom, gradually modified the status of the African and transformed Negro servitude into Negro slavery. The slavery of the Negro in the American Colonies grew by the gradual addition of incidents modifying the law and custom of servitude. In this transition from servitude to slavery there are two principal steps. The first step in the transition was taken when the custom of holding Negroes' servants for life' was recognised. As has been observed, the distinguishing mark of the state of slavery is not the loss of liberty, political and civil but the perpetuity and absolute character of that loss, whether voluntary or involuntary in origin. It differs then from other forms of servitude limited in place or time, such as medieval vassalage, villeinage, modern serfdom, and technical servitude, in degree rather than in kind. The efforts of the planters to lengthen the terms of the service of their servants which failed with the white servants succeeded with the black. Public opinion supported the change because the blacks were regarded as dangerous if left uncontrolled. The second step by which Negro servitude was converted into Negro slavery was taken when the condition and status of the mother was extended to and continued in her offspring. The transmission from mother to child of the conditions of slavery for life grew naturally out of the fact that the master necessarily controlled the child, controlling the

mother. It was evident that parents, under an obligation of life service, could make no valid provision for the support of their offspring and that a just title to the service of the child might rest on the master's maintenance. This change which had undoubtedly been effected in custom long before it was formally sanctioned by law was recognised by statute in the different states of America between 1662 and 1741.

This is how the Negro who was originally only a servant became a slave. It is to be noted that slavery in Africa the home of the Negro is a native institution and is very ancient. The most common ways of becoming a slave were: (1) By being born a slave, (2) by being sold into slavery for debt, (3) by becoming a slave through capture in war and (4) by kidnapping individuals and selling them into slavery due to revenge or greed and gain. The Negro was really familiar with the slave system and tasted the pleasures of a slave owner. One therefore may not feel the same sympathy with the Negro when he was made to give up the status of a master and made to occupy the position of a slave. But looked at even as a case of retribution well deserved, his condition as a slave in the New World to which he was transplanted, cannot fail to excite a righteous indignation for the miseries to which he was subjected by his new and alien masters.

How great were the miseries of the Negro in the New World when he became subject to the system of slavery, it is not possible for the inhabitants of Europe or Asia to imagine. They may be described under three heads. The miseries of his capture, the miseries of travel and the miseries of his toil. First as to the ways of capturing Negroes for enslavement. In the early days Negroes could be rounded up by sudden landings on the coast: but in time the Negroes learned to watch for the coming of the ships and take refuge in the bush; and, though adventurous traders sometimes penetrated inland themselves, their usual custom was to do business with professional native or half caste dealers who took the cheap goods they had bought from Europe cloth, beads, hardware, muskets and powder, spirit—and bartered them for slaves with chiefs up-country. There is nothing to show that the chiefs, of the stronger tribes at any rate, resisted or wanted to resist the fascination of these wares, especially the guns and drink. Enslavement within a tribe, it was observed, became the penalty for less and less serious offences; and inter-tribal warfare with slaves for its motive as well as the kidnapping of women and children in peacetime became a more or less constant feature of African life, spreading steadily into the interior of the continent with the steady infiltration of the trade.

Secondly as to the mode of transporting the Negro to America. Having bought his slaves, the dealer marshalled them, men, women and children, in a caravan for the march, sometimes a very long march to the coast. Usually fetters were put on them to prevent escape and often they were locked in the "slave stick"—a long pole with a crutch at the end for fastening round the neck. They carried on their heads the loads of foodstuffs and other baggage required for the journey or the ivory or other native produce which the dealer might have bought. The rigours of the march were often too much for the weaker members of the party. Slaves who fell sick were killed or left to die. The more frequented slavetracks were strewn with human bones. Arrived at the coast, they were stowed on board the slave ships, which were specially fitted for their transport. The hold was divided horizontally by decks about three feet apart with a gangway down the middle. On these shelves the slaves were laid, handcuffed in pairs, men and women in separate holds. Since the bigger the cargo, the bigger the profit, they were some times packed so tightly that they could scarcely turn round. In a ship of 150 tons as many as 600 slaves were carried. The direct voyage to Brazil was fairly short, but the so-called "Middle Passage" to the West Indies—the main centre of distribution—might be protracted for several weeks by adverse or dropping winds. If it was calm enough, the slaves were brought up on deck and urged or forced to dance for exercise. In rough weather conditions of the slaves in the hold may be imagined. Disease of course, was rife on board. Though instruments were provided for forcibly feeding those who refused to eat, it was reckoned in the latter eighteenth century that on the average at least one-sixth of a cargo died on the voyage. As the end of the voyage approached, the slaves were examined and prepared for sale. Wounds, caused by storm or ill usage, were doctored up and as far as possible concealed. But the agents at the ports often complained that the "parcels of Negroes" landed were "bad" or "mean" or "much abused". Finally, on shipboard or in the public slave market, the slaves were put up for sale by "scramble" or auction. The price of a healthy man rose as high as £ 60 during the eighteenth century. The sick and injured were lumped with feeble women and children and sold off cheap as "refuse". Even when at last they reached the plantations, the slaves had to face one more ideal before they settled down to endure what was left to them of life. The first months of employment were known as the period of "seasoning" and during it no less on an average of one third of the novices failed to adjust themselves in body or spirit to the new conditions of climate or food or labour and died. Taking all the deaths together in the slave-catching wars or

raids, on the march to the sea, during the "Middle Passage" and in "seasoning"—it has been moderately reckoned that for every African Negro who became "seasoned" at least one other Negro was killed.

Thirdly as to the actual conditions of life which a "seasoned" Negro slave had to undergo. The Negro slavery gave the Master two rights, which were indisputably established, the right to own and the right to punish. The right to own was given a wide meaning. By virtue of it the Master had not merely a right to the services of the Negro as a servant, but he had also the right to sell those services, to transmit by inheritance and to alienate them in any way he liked. The effect of this conception of the right was "to completely confound and identify the person of the slave with the thing owned." The conception of the slave as property made the Negro liable to be seized in payment of his master's debts. Even after such slaves had been emancipated they were still liable to seizure for the payment of debts contracted prior to their emancipation. The conception of a slave as property rather than as person added further disability to the legal or civil status. He could neither own nor enjoy property in his own right. This was unlike the Roman Law, which did allow the slaves to own property, which was called *peculiar*. It was a limited right but it was still an important right because it shows that the Roman Law did recognise that a slave *I* though property was also a person. Not being a person a Negro as a slave could neither engage in trade nor marry. The right of the Master to punish a slave was also given a very cruel interpretation in its application to the Negro. In a case which arose in the state of North Carolina Court in 1829 the Chief Justice in acquitting the Master who was indicted for beating his slave observed:

"It was a mistake to say that the relations of Master and slave were like those of parent and child. The object of the parent in training his son was to render him fit to live the life of a free man, and, as a means to that end, he gave him moral and intellectual instruction. With the case of the slave it was very different. There could be no sense in addressing moral considerations to a slave. The end of slavery is the profit of the Master, his security and public safety; the subject, one doomed in his own person and his posterity to live without knowledge and without capacity to make anything his own, and to toil that neither may reap the fruits. What moral consideration shall be addressed to such a being to convince him, that it is impossible, but that the most stupid must feel and know can never be true—that he is thus to labour on a principle of natural duty, or for the sake of his own personal happiness? Such services can only be expected

from one who has no will of his own, who surrenders his will in implicit obedience to that of another. Such obedience is the consequence only of uncontrolled authority over the body. There is nothing else, which can operate to produce the effect. The power of the Master must be absolute to render the submission of the slave perfect."

The result of such an interpretation of the Master's right to punish was that for a long time in the U.S.A. if a Negro slave chanced to die as a consequence of "a lawful correction" it was regarded by law as a lamentable and accidental homicide. How mercilessly this right to punish was exercised by the masters will be realized by a perusal of the extracts from letters written by a resident in Antigna in 1787. Says the writer—

"The Negroes are turned out at sunrise, and employed in gangs from twenty to sixty or upwards, under the inspection of white overseers, generally poor scotch lads, who by their assiduity and industry frequently become masters of the plantations, to which they make out as indentured servants. Subordinate to these overseers are drivers, who are mostly black or mulatto fellows of the worst dispositions; these men are furnished with whips, while on duty, which they are obliged on pain of severe punishment to have with them, and are authorised to flog wherever they see the least relaxation from labour; nor is it a consideration with them, whether it proceeds from idleness, or inability, paying at the same time, little or no regard to age or sex. At twelve they are turned in (that is leave off work) to get what they can to refresh nature with; at half past one the bell rings, when they turn out and resume their labour until sunset.....

"The punishments inflicted on slaves in this island, are various and tormenting.... Among which is the thumbscrew, a barbarous invention to fasten the thumbs together, which appears to cause excruciating pain. The "iron necklace" "is a ring, locked and riveted about the neck; to these, collars are frequently added. Which prevent the wearers from laying down their heads with any degree of comfort. The "boots" are strong iron rings, full four inches in circumference:. Closed just above the ankles; to these some owners prefix chain, which the miserable sufferers, if able to work, must manage as well as they can, and it is not un frequent to see in the streets of this town, at midday, Negroes chained together by these necklaces, as well as the boots.... The 'spurs' are rings of iron, similar to the boots, to which are added spikes from three to four inches long, placed horizontally. A chain fastened about the body with a padlock is another mode of tormenting this oppressed race of being."

It would be a great mistake of judging a whole class of slave owners by the vice of individuals. Often enough, the attitude of slaves to their Masters was quite friendly and equally often the attitude of the Masters to their slaves was kindly. None the less the system was a system founded on a purely economic basis making it inevitable that human being be created as mere tools to be used without being influenced by any considerations of humanity.

It is unnecessary to adduce any more cases to illustrate the fact that the lowly, unfree and unprivileged classes have existed in the past in countries other than India. What is of importance is that these unfree, unprivileged classes have disappeared as a separate class and have become part and parcel of the great Society. The question is: Why has untouchability not disappeared?

There are various reasons. They are discussed in the following Chapters.

Chapter 9

HINDUS AND WANT OF PUBLIC CONSCIENCE

The cases in which the Hindus have indulged in violence against the Untouchables are cases of fight for equal freedom to all. If the Untouchables want to go in procession, they have no objection to the Hindus doing the same. If the Untouchables want to wear gold and silver ornaments, they do not object to the Hindus having the same right. If the Untouchables want to send their children to schools, they are not against the children of the Hindus having full freedom for education. If the Untouchables wish to draw water from the well, they have no objection to the Hindus exercising their right to take water. One can go on *ad infinitum*. But it is unnecessary. The point is easy and simple to grasp. It is that whatever freedom the Untouchables claim is not exclusive to them and is not inconsistent with the right of the Hindus to equal freedom. Why then does the Hindus use violence to put down such innocent and perfectly lawful acts? Why does he regard his lawlessness as lawful? Who cannot see that the acts and omissions of the Hindus in his dealings with the Untouchables cannot be called by any other name except that of social wrongs. The acts and omissions are not mere inequities; they are not mere indignities. They are gross instances of man's inhumanity to man. For a

doctor not to treat a patient because the patient is an Untouchable, for a body of Hindu villages to burn the houses of the Untouchables, to throw human excreta in their well if these are not acts of inhumanity, I wonder what can be? The question is why has the Hindu no conscience?

There is only one answer to these questions. The class composition in other countries were based on economic and social considerations. Slavery and serfdom had no foundation in religion. Untouchability though it can give and does economic advantages to the Hindus, is primarily based on religion. There is nothing sacrosanct in economic and social interests. They yield to time and circumstances. This is the broad explanation why slavery and serfdom have vanished and why untouchability has not. The same is the answer to the two other questions. If the Hindu observes untouchability it is because his religion enjoins him to do so. If he is ruthless and lawless in putting down the Untouchables rising against his Established Order, it is because his religion not only tells him that the Established Order is divine and therefore sacrosanct but also imposes upon him a duty to see that this Established Order is maintained by all means possible. If he does not listen to the call of humanity, it is because his religion does not enjoin him to regard the Untouchables as human beings. If he does not feel any qualms of conscience in assaulting, looting, burning and other acts of atrocities against the Untouchables, it is because his religion tells him that nothing is sin, which is done in defence of the social order.

Many Hindus would regard this as a travesty of their religion. The best way to meet the charge is to quote Chapter and verse from Manu who is the architect of Hindu Society. Let anyone, who denies what I have said, read the following Commands of Manu regarding untouchability. Untouchables and the duties of the Hindus in regard to them:

“1. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_2](#) All those tribes in this world, which are excluded from (the community of) those born from the mouth, the arms, the thighs, and the feet (of Brahman), are called Dasyus, whether they speak the language of the Mlenchhas (barbarians) or that of the Aryans.

2. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_3](#) Near well known trees and burial ground, on mountains and in groves, let these (tribes) dwell, known (by certain marks), and subsisting by their peculiar occupations.

3. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_4](#) But the dwellings of the Chandalas and Shwapakas shall be outside the village, they must be made Apatras and their wealth (shall be) dogs and donkeys.

4. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_5](#) Their dress (shall be) the garments of the dead, (they shall eat) their food from broken dishes, black iron (shall be) their ornaments, they must always wander from place to place.

5. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_6](#) A man who fulfils a religious duty shall not seek intercourse with them; their transactions (shall be) among themselves, and their marriages with their equals.

6. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_7](#) Their food shall be given to them by others (than an Aryan giver) in a broken dish; at night they shall not walk about in villages and in towns.

7. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_8](#) By day they must go about for the purpose of their work, distinguished by marks at the king's command, and they shall carry out the corpses (of persons) who have no relatives, that is a settled rule.

8. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_9](#) By the king's order, they shall always execute the criminals in accordance with the law, and they shall take for themselves the clothes, the beds and the ornaments of (such) criminals.

9. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_10](#) He who has had connection with a woman of one of the lowest castes shall be put to death.

10. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_11](#) If one who (being a member of the Chandalas, or some other low caste) must not be touched, intentionally defiles by his touch one who (as a member of a twice born caste) may be touched (by the other twice born persons only) he shall be put to death." Can anybody, who reads these Commandments of Manu deny that it is Hindu religion, which is responsible for the perpetuation of untouchability and for the lawlessness and want of conscience on the part

of the Hindus towards the Untouchables? Indeed, if the acts of omission and commission which have been detailed in the earlier Chapters of this book were correlated to these ten Commandments, it will be found that the Hindus in committing these acts are merely following the Commandments of Manu. If the Hindu will not touch an Untouchable and regards it as an offence if an Untouchable touches him, it is because of the Commandments Nos. 5 and 10. If the Hindus insist upon the segregation of the Untouchables, it is because of Commandment No. 3. If the Hindu will not allow the Untouchable to wear clean clothes, gold ornaments, he is only following Commandment No. 8. If the Hindu will not tolerate an Untouchable acquiring property and wealth, he is only following Commandment No. 3.

It is really unnecessary to labour the matter further. It is incontrovertible that the main cause which is responsible for the fate of the Untouchables is the Hindu religion and its teachings. A comparison between Paganism and Christianity in relation to slavery and Hinduism in relation to untouchability reveals how different has been the influence of the two religions on human institutions, how elevating has been the influence of the former and how degrading that of the latter. Those who are fond of comparing slavery with Untouchability do not realize that they are facing a paradox. Legally the slave was not a freeman. Yet, socially he had all the freedom necessary for the growth of his personality. Legally the Untouchable is a freeman. Yet, socially he has no freedom for the growth of his personality.

This is indeed a very glaring paradox. What is the explanation of this paradox? There is only one explanation of this paradox. It is that while religion was on the side of the slave, religion has been against the Untouchables. The Roman law declared that the slave was not a person. But the religion of Rome refused to accept that principle, at any rate, refused to extend that principle to social field. It treated him as a human being fit for comradeship. The Hindu Law declared that the Untouchable was not a person. Contrary to Paganism, the Hindu religion not only accepted the principle but also extended it to the social field. As the Hindu Law did not regard the Untouchable a person, Hinduism refused to regard him as a human being fit for comradeship.

That the Roman religion saved the slave from the social degradation consequent upon his legal degradation is beyond question. It saved him from such degradation in three different ways. One way by which the

Roman religion saved the slave was to keep the most sacred place open for the slave to occupy. As has been observed:

“..... Roman religion was never hostile to the slave. It did not close the temple doors against him; it did not banish him from its festivals. If slaves were excluded from certain ceremonies the same may be said of freemen and women—men being excluded from the rites of Bona Dea, Vesta and Ceras, women from those of Hercules at the Ara Maxima. In the days when the old Roman divinities counted for something, the slave came to be informally included in the family, and could consider himself under the protection of the Gods of the household. Augustus ordered that freed women should be eligible as priestesses of Vesta. The law insisted that a slave's grave should be regarded as sacred and* for his soul Roman Mythology provided no special heaven and no particular hell. Even Juvenal agrees that the slave's soul and body, is made of the same stuff as his master.”

The second way in which the Roman religion helped the slave was equivalent to lodging a complaint before the City Prefect whose duty it became to hear cases of wrong done to slaves by their masters. This was a secular remedy. But the Roman religion had provided another and a better remedy. According to it, the slave was entitled to throw himself before the altar and demand that he should be sold to a kinder master.

The third way in which the Roman religion saved the slave by preventing the Roman Law from destroying the sanctity of his personality as a human being. It did not make him unfit for human association and comradeship. For the Roman slave this was the greatest saving grace. Suppose Roman society had an objection to buy vegetables, milk, butter or take water or wine from the hands of the slave; suppose Roman society had an objection to allow slaves to touch them, to enter their houses, travel with them in cars, etc., would it have been possible for the master to train his slave to raise him from semi-barbarism to a cultured state? Obviously not; it is because the slave was not held to be an Untouchable that the master could train him and raise him. We again come back therefore to the same conclusion, namely, that What has saved the slave is that his personality was recognised by society and what has ruined the Untouchable is that Hindu society did not recognise his personality, treated him as one whose personality was unclean which rendered him as unfit for human association and common dealing.

There was no gulf, social or religious, which separated the slave from the

rest of the society. In outward appearance he did not differ from the freeman; neither colour nor clothing revealed his condition; he witnessed the same games as the freeman; he shared in the life of the Municipal towns and got employed in the State service, engaged himself in trade and commerce as all freemen did. Often apparent equality in outward things counts far more to the individual than actual identity of rights before the law. Between the slave and the freed there seems often to have been little social barrier, Marriage between the slave and freed and even freed and slave was very common. The slave status carried no stigma on the man in the slave. He was Touchable and even respectable. All this was due to the attitude of the Roman religion towards the slave.

There is no space to describe at length the attitude of Christianity to slavery. But it was different from Paganism. It is not known to many that during the period of slavery in America, Christian priests were not prepared to convert Negro slaves to Christianity because of their view that it would degrade Christianity if the convert remained a slave. In their opinion, one Christian could not hold another Christian as a slave. He was bound to offer him fellowship.

To sum up. Law and Religion are two forces which govern the i conduct of men. At times, they act as handmaids to each other. At other times, they act as check and counter-check. Of the two forces, Law is personal while religion is impersonal. Law being personal it is Capable of being unjust and iniquitous. But religion being impersonal, it can be impartial. If religion remains impartial, it is capable of defeating the inequity committed by law. This is exactly what happened in Rome in regard to the slave. That is why religion is believed to ennoble man and not to degrade him. Hinduism is an exception. It has made the Untouchable sub-human. It has made the Hindu inhuman. There is no escape to either from the established order of the sub-human and the inhuman.

CHAPTER 10

HINDUS AND THEIR WANT OF SOCIAL CONSCIENCE

Everyone who feels moved by the deplorable condition of the Untouchables begins by saying: "We must do something for the Untouchables". One seldom hears any of the persons interested in the

problem saying: "Let us do something to change the Hindu." It is invariably assumed that the object to be reclaimed is the Untouchables as though untouchability was due to his depravity and that he alone is responsible for his condition. If there is to be a Mission, it must be to the Untouchables. Nothing requires to be done to the Hindu. He is sound in mind, manners and morals. He is whole, there is nothing wrong with him. He is not the Sinner.

What is the real state of affairs? This argument that there is nothing wrong with the Hindus and that the Untouchable is responsible for whatever wrong he suffers is very much the argument that is used by the Christians for defending themselves against the inhuman treatment accorded by them to the Jews. A very crushing reply has been given by Mr. Louis Goulding to the Christians on behalf of the suffering Jews. In discussing the source of the Jewish Problem Mr. Louis Goulding says:

"I beg leave to give a very homely instance of the sense in which I consider the Jewish Problem in essence a Gentile Problem. A close acquaintance of mine is a certain Irish Terrier of mixed pedigree, the dog Paddy, who is to my friend John Smith as the apple of both his eyes. Paddy dislikes Scotch terriers; it is enough for one to pass within twenty yards of Paddy to deafen the neighbourhood with challenges and insults. It is a practice which John Smith deplures, which, therefore, he does his best to check—all the more as the object of Paddy's detestation are often inoffensive creatures, who seldom speak first. Despite all his affection for Paddy, he considers, as I do, that Paddy's unmannerly behaviour is due to some measure of original sin in Paddy. It has not yet been suggested to us that what is here involved is a Scotch Terrier Problem and that when Paddy attacks a neighbour who is peacefully engaged in inspecting the evening smells it is the neighbour who should be arraigned for inciting to attack by the fact of his existence."

If we equate Paddy to the Hindu and Scotch Terrier to the Untouchable the argument of Goulding will apply to the Hindus no less than it does to the Christians. If for the reasons given by Mr. Goulding the Jewish Problem is in reality a Christian Problem then the Problem of the Untouchables is primarily a Hindu Problem.

Are the Hindus conscious, do they recognise that the Untouchables are a problem to them? Are they worried about it? Is it weighing on their minds? Certain obvious tests may be applied in order to ascertain the truth. One test is the volume of literature on the subject. One can take the volume of

literature issued on the Negroes of America as a standard measure. One is amazed at the huge amount of printed material that exists in the United States on the subject of the Negroes. It is said that a really complete bibliography on the Negro Problem would run up to several hundred thousand titles. The literature is really immeasurable. This proves as nothing else can, how much it is a problem to the Whites. It has disturbed through several generations all classes of people in America, the religious moralists, the political philosophers, the Statesmen, the philanthropists, the social scientists, the politicians, the businessmen and the plain ordinary citizen as well.

What is the amount of literature on the Untouchables that exists in India? Not more than half a dozen pamphlets!

Another test would be the test of social behaviour. I give below two cases reported in the papers. One is from the '*Pratap*' of 5th March 1926. It gives the following news:

"On the 23rd of February at about 11 o'clock in the day, a group of about 12 or 13 were digging earth in Begumganj, Lucknow when the quarry collapsed and they were all buried under heaps of earth. One boy and six women were rescued after the earth had been removed out of whom only one woman turned out to be alive, who belonged to Mirpur. She had received grievous injuries and her condition was very critical. The Hindu inhabitants of Begumganj however refused to give a bed to lay that woman on. At last a Muslim offered a bed; now there was no Hindu prepared to help to carry the poor woman as far as her house. At last, a sweeper was called and he undertook to carry the woman to her home as she lay on the bed."

The best illustration of the absence of conscience in the Hindu towards the Untouchables is to be found in the following incident which is reported by the Correspondent of the '*Sangram*' and published in its issue of 10th July 1946. The correspondent says:

"A woman died on the 8th of July 1946 in the Anath Ashram (Beggars Home) called Azil situated in a village called Mhapse (in Goa) and maintained by Christians. The woman was believed to be a Hindu. She was alone and had no relations. Seeing that there was no one to dispose of the dead body and to perform funeral rites, the Hindus of the village came together and raised a subscription for the purpose. They brought the dead body out of the Beggars' Home. Just about that time some

Untouchables, who knew the woman came there and recognized the dead body. The moment the Hindus came to know that the woman belonged to the Untouchables the Hindus who had gathered there deserted the dead body and started walking away. The Untouchables who had come requested the Hindus to give them the amount they had collected for buying the coffin and the shroud. The Hindus refused to part with the money saying that the money was collected from the subscribers on the representation that the deceased woman was a Hindu woman. As she is not a Hindu but an Untouchable, they can't spend the money on her funeral. The Untouchables had to do their best to dispose of their dead body. The Untouchables had good evidence of the love and affection the Hindus bear towards them.

The following is from the '*Milap*' of 2nd October 1925. Its correspondent reports:

“News has been received from Ruddurprayag that one evening in the first week of September a Harijan came to the Dharmashala (or monastery) of Ruddurprayag. When he learnt that a tiger came there every night, he requested the pastor of the Dharmashala to let him lie hidden in some corner of the Dharmashala for the night, so that he may remain safe from the tiger. The callous pastor, however, paid no heed to the request and closed the gates of the Dharmashala. The ill-starred Harijan laid himself down outside in one corner, full of apprehensions of the tiger. Towards the end of the night the tiger came and attacked the Harijan. As the man was quite strong and healthy and despair made him fearless, he caught hold of the tiger's neck and shouted ' I have grabbed the tiger. Come and kill him'. But the high caste pastor did not open the door, nor did he offer any sort of help, so that very soon the grip of the Harijan loosened and the tiger also ran away. At present the man is lying wounded in Shrinagar (Garhwal) where he is getting himself treated. His condition is said to be critical.”

The heartlessness disclosed by these instances shows that the Hindu does not bother about what he does to the Untouchables or about what happens to the Untouchables.

A third test would be the test of service and sacrifice for the uplift of the Untouchables. Here again, one may adopt the service and sacrifice of the Americans for raising the Negroes as our standard measure. Here are some

figures.

Consider the requests
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_12 made by the Whites for the benefit of the Negro education.

Testator	Amount (in Dollars)	Testator	Amount (in Dollars)
Kane	50.000	Mason	1.00.000
Harton	5.000	Naunbert	40.000
Troughton	1.60.600	Harrison	2.30.000
Ottinger	500	Munger	75.000
Gambrille	35.000	Corliss	45.000
Jarepki	1.000	Rosenbani n	1.000
Strock	500	Burton	1.000
Kidder	5.000	Conroy	1.00.000
Clodin	10.000	Kent	10.000
Wood	500	Duke	1.40.000
Harkness	12.50.000	Marciliat	5.000
Beatie	2.90,000	Masey	25.000
Marquant	5.000	Nicholas	20.000
Newton	5.000	Garretson	15.00.000
Hummington	25,000	Hatcher	20.000
Phelps-Stokes	2.80.000	Wright	10.000
Butler	30.000		

These figures relate to the period before 1930. They do not take account of residuary bequests.

Compare the Educational funds mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_13 that exist for the advancement of education among the Negroes. They are:

- | | | |
|--------|--------|---|
| (i) | (i) | The Avery Fund. |
| (ii) | (ii) | The Vilas Bequest. |
| (iii) | (iii) | The African Fund. |
| (iv) | (iv) | The Buckingham Fund. |
| (v) | (v) | The George Washington Educational Fund. |
| (vi) | (vi) | The Miner Fund. |
| (vii) | (vii) | The Steward Missionary Foundation. |
| (viii) | (viii) | The Daniel Hand Fund. |
| (ix) | (ix) | The John Slater Fund. |
| (x) | (x) | The Phelps-Stokes Fund. |

In addition to this, there are general Funds such as the Carnegie Corporation Julius Rosenwald Fund and the Rockefeller Foundation which also help the Negroes. The amounts distributed by these funds is not known. But they must be amounting to millions.

Compare the amount spent by Religious organizations on the education of the Negroes. Here are some interesting mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_14 figures.

	Annual Expenditure (In Dollars)	Permanent fund for Negro Education (In Dollars)	Value of school plants, etc. (In Dollars)
American Baptist Home Mission Board	116,247	1,597,700	3,594,251
American Church Institute	185,100	450,000	3,000,000

for Negroes			
(Episcopal)			
American Missionary Association	368.057	3.228.421	3.200.000
Church of Christ (Disciples) United	91,072		500,000
Christian Missionary Society			
Lutheran Evangelical Synodical Conference of North America Board Colored Mission	74,900		175,000
Methodist Episcopal Church Board of Education. Institutions for Negroes	259.264	1,962.729	5,000.000
Methodist Episcopal Church Woman's	104,975		360,000
Home Missionary Society of			
Presbyterian Church in the U.S.A. Division	405,327	1,994.032	3.560.000
of Missions for Colored People			
United Presbyterian Church Board of Mission for Freemen	98,000	645,000	1.000.000

It is estimated that the total amount spent for the religious and philanthropic organizations between 1865 and 1930 comes to 135,000,000 dollars on the advancement of the Negroes. Of this amount, 85,000,000 dollars have been contributed by the Whites.

What is the measure of service and sacrifice of the Hindus for the elevation of the Untouchables. The only organization the Hindus can

boast of is the Harijan Sevak Sangh mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_15 . Its capital fund does not probably go beyond 10 lakhs. Its annual expenditure does not go beyond a few thousand rupees on petty and insignificant and insubstantial purposes. The Fund is not a welfare fund. It is essentially a Political Fund intended to make the Untouchables vote with the Hindus.

Why is this difference? Why do the Americans exert so much in service and sacrifice for the elevation of the Negroes and why have the Hindus cared to do nothing for the elevation of the Untouchables? The answer is that the Americans have a social conscience while the Hindus have none. It is not that the Hindus have no sense of right and wrong, good and bad, moral and immoral. What is wrong with the Hindu is that his sense of moral obligation towards others is restricted to a limited class of people, namely, the members of his caste. As Mr. H. J. Paton says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_16:

“Clearly a man may be a good member of a limited society without being a morally good man. There seem indeed to be already shadows or anticipations of moral excellence even in the man who carries out coherently an individual policy of life; and we begin to find something which we may almost mistake for virtue itself, when we consider the man who is a loyal member of any society, even of a gang of thieves. Yet although there must be honour among thieves, a thief is not therefore an honourable man. The morally good man seems to be the man who is good as a member not of a limited society but of an unlimited society—of a society of societies whose purpose includes all purposes, and beyond which there is no other society to be a source of conflicting claims of duties.”The Untouchable does not belong to the society of the Hindus and the Hindu does not feel that he and the Untouchables belong to one society. This is the reason why the conduct of the Hindu is marked by a moralistic unconcernedness.

Not having conscience, the Hindu has no such thing in him as righteous indignation against the inequities and injustices from which the Untouchable has been suffering. He sees no wrong in these inequities and injustices and refuses to budge. By his absence of conscience the Hindu is a great obstacle in the path of the removal of untouchability.

CHAPTER 11

THE HINDU AND HIS BELIEF IN CASTE

Among the Hindu social reformers there is a moderate section. This section holds that untouchability is separate from the caste system. Following this ideology they hold that it is possible to remove untouchability without attacking the caste system. The religious minded Hindu is as opposed to the removal of untouchability as he is to the removal of the caste system. He is as opposed to dealing with social reform in two stages as he is in dealing with it in one stage. But the politically minded Hindu is tremendously fond of the idea. That is obviously for two reasons. In the first place, it gives the Hindu the chance of showing himself in international world as a better specimen of democracy than he really is. Secondly, by leaving caste alone there is no risk of the caste Hindus forsaking the Congress.

Those who propose to deal with untouchability without damaging the caste system, rest their case on verse 4 of Chapter X of the Manu Smriti. In the verse, Manu says that there are only four varnas and that there is no fifth varna. This verse is interpreted to mean that the untouchables are included in the fourth varna, that they are part of the Shudras and as there is no objection to touching the Shudras there could be no objection to touching the Untouchables. However pleasing this construction may be to the politically minded Hindu, it does accord with the intention of what Manu wanted to convey. The verse is open to another construction. It may mean that Manu was not prepared to enlarge the Chaturvarnya and make it a Panchavarnya by recognising these communities which were outside the four varnas as constituting the fifth varna. In saying that there is no fifth varna what he means to suggest is that he did not want to incorporate those outside the four varnas into the Hindu society by making the Hindu society consist of five varnas instead of four. That he wanted to convey the latter intention is abundantly clear by speaking of a category of people as Bahyas* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_17 or Varna Bahyas which means those outside the varna system. If Manu wanted to include all persons within the four varnas there was no reason for speaking of some people as varna Bahyas. Indeed, he recognises two sub-divisions within the class of Varna Bahyas. He calls them

Hinasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_18 and Antayevasinmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22C.Untouchables or the children of India's Ghetto PART III.htm - _msocom_19' Given these facts, it is obvious that the construction sought to be placed in the verse in the Manu Smriti will not deceive the orthodox Hindu into accepting that the maintenance of untouchability is contrary to the Manu Smriti and that its abolition is not therefore contrary to the tenets of the Hindu religion.

The argument based on the interpretation of Manu's text is too intellectual for the ordinary uneducated Hindu. He knows only two things. One thing he knows is that there are three barriers in the matter of social intercourse which he must observe. They are (1) prohibition against inter-dining, (2) prohibition against inter-marriage, while in untouchability there is third barrier added and (3) prohibition against physically touching certain class of people. The first two barriers make up the caste. The third forms untouchability. The caste Hindu does not bother about the number of barriers. He is particular about the observance of the barrier. When he is asked not to observe, he turns round and asks why not? His argument is that, if I am free to observe the first two barriers, what is wrong if I observe the third? Psychologically, caste and untouchability are one integral system based on one and the same principle. If the caste Hindus observe untouchability it is because they believe in caste.

Looked at from this point of view, the idea of hoping to remove untouchability without destroying the caste system is an utter futility. The underlying idea that caste and untouchability are two different things is founded on a fallacy. The two are one and are inseparable. Untouchability is only an extension of the caste system. There can be no severance between the two. The two stand together and will fall together.

There is another reason why untouchability cannot disappear by a stratagem, legal or rational. As has already been pointed out, the Hindu social order is based on the principle of graded inequality. It may not be an exaggeration to say that not many people understand the significance of this principle. The social system based on inequality stands on a different footing from a social system based on graded, inequality. The former is a weak system which is not capable of self-preservation. The latter on the other hand, is capable of self-preservation. In a social system based on inequality, the low orders can combine to overthrow the system. None of them have any interest to preserve it. In a social system based on graded

inequality the possibility of a general common attack by the aggrieved parties is non-existent. In a system of graded inequality, the aggrieved parties are not on a common level. This can happen only when they are only high and low. In the system of graded inequality there are the highest (the Brahmins). Below the highest are the higher (the Kshatriyas). Below the higher are those who are high (Vaishya). Below the high are the low (Shudra) and below the low are those who are lower (the Untouchables). All have a grievance against the highest and would like to bring about their down fall. But they will not combine. The higher is anxious to get rid of the highest but does not wish to combine with the high, the low and the lower lest they should reach his level and be his equal. The high wants to overthrow the higher who is above him but does not want to join hands with the low and the lower, lest they should rise to his status and become equal to him in rank. The low is anxious to pull down the highest, the higher and the high but he would not make a common cause with the lower for fear of the lower gaining a higher status and becoming his equal in the system of graded inequality there is no such class as completely unprivileged class except the one which is at the base of the social pyramid. The privileges of the rest are graded. Even the low is a privileged class as compared with the lower. Each class being privileged, every class is interested in maintaining the social system.

Untouchability may be a misfortune to the Untouchables. But there is no doubt that it is a good fortune to the Hindus. It gives them a class which they can look down upon. The Hindus do not want a system in which nobody will be anybody. They also do not want a system in which everybody may be somebody. They want a system in which they will be some bodies and others will be nobodies. The Untouchables are nobodies. This makes the Hindus some bodies. The system of untouchability sustains the natural pride of the Hindus and make them feel as well as look big. This is an additional reason why the Hindus are not likely to give up untouchability particularly those large majority who are small men.

Untouchability will vanish only when the whole of the Hindu Social Order, particularly the caste system will be dissolved. Is this possible? Every institution is sustained by some sort of a sanction. There are three kinds of sanction, which supply life force to an institution. They are legal, social and religious. The vitality of the institution depends upon the nature of the sanction. What is the nature of the sanction behind the caste system? Unfortunately, the sanction behind the caste system is the religious sanction, for, the caste as a new form of the Varna system derives its

sanction from the Vedas which form the sacred book of the Hindu religion and which are infallible. I say unfortunately because anything which has a religious sanction becomes by virtue of it sacred and eternal. To the Hindu, caste is sacred and caste is eternal. If caste cannot vanish what hope is there for untouchability to disappear?

What the Untouchables have to face

CHAPTER 12

ANTAGONISM OF THE ADMINISTRATION

Section 2 of the Indian Penal Code reads as follows: "Every person shall be liable to punishment under this Code and not otherwise for every act or omission contrary to the provisions thereof, of which he shall be guilty within British India." The Law Commissioners who prepared the draft Penal Code in their address to the Secretary of State thought it necessary to draw pointed attention to the words 'Every Person'. In the course of their observation, they said:

"Your Lordship in Council will see that we have not proposed to except from the operation of this Code any of the ancient sovereign houses of India residing within the Company's territories. Whether any such

exception ought to be made is a question which, without a more accurate knowledge that we possess of existing treaties, of the sense in which those treaties have been understood, of the history of negotiations, of the temper and of the power of particular families, and of the feeling of the body of the people towards those families, we could not venture to decide. We will only beg permission most respectfully to observe that every such exception is an evil; that is an evil that any man should be above the law; that it is still greater evil that the public should be taught to regard as a high and enviable distinction the privilege of being above the law; that the longer such privileges are suffered to last, the more difficult it is to take them away; that there can scarcely even be a fairer opportunity for taking them away than at the time when the Government promulgates a new Code binding alike on persons of different races and religions; and that we greatly doubt whether any consideration, except that of public faith solemnly pledged, deserves to be weighed against the advantages of equal justice."

It might have been thought that this principle of equal justice would strike a death blow to the Established Order. As a matter of fact, far from suffering any damage the Established Order has continued to operate in spite of it. It might be asked why the principle of equal justice has failed to have its effect. The answer to this is simple. To enunciate the principle of justice is one thing. To make it effective is another thing. Whether the principle of equal justice is effective or not must necessarily depend upon the nature and character of the civil services who must be left to administer the principle. If the civil service is by reason of its class bias the friend of the Established Order and the enemy of the new Order, the new Order can never come into being. That a civil service in tune with the new order was essential for the success of the new order was recognised by Karl Marx in 1871 in the formation of the Paris Commune and adopted by Lenin in the constitution of Soviet Communism. Unfortunately, the British Government never cared about the personnel of the Civil Service. Indeed it opened the gates of the administration to those classes who believed in the old Established Order of the Hindus in which the principle of equality had no place. As a result of this fact, India has been ruled by the British but administered by the Hindus. A few statistics of the composition of the Civil Service will fully demonstrate this fact.

From the capital of India down to the village the whole administration is rigged by the Hindus. The Hindus are like the omnipotent almighty pervading all over the administration in all its branches having its authority in all its nooks and corners. There is no loophole for anyone opposed to

the old order to escape. No matter what the Department, whether it is Revenue, Police or Justice it is manned by the Hindu. If the Established Order has continued to exist, it is because of the unfailing support it received from the Hindu officials of the State. The Hindu officials are not merely administering the affairs on their merit. They are administering them with an eye to the parties. Their principle is not equal justice to all. Their motto is justice consistent with the Established Order. This is inevitable. For they carry over into administration the attitude towards different classes in society under the Established Order. This is well illustrated by the attitude of the State officials towards the Untouchables in the field of administration.

As every Untouchable will be able to testify, if an Untouchable goes to a police officer with a complaint against the caste Hindu, instead of receiving any protection he will receive plenty of abuses. Either he will be driven away without his complaint being recorded or if it is recorded, it would be recorded quite falsely to provide a way of escape to the Touchable aggressors. If he prosecutes his offenders before a Magistrate the fate of his proceedings could be foretold. The Untouchables will never be able to get Hindus as witnesses because of the conspiracy of the villagers not to support the case of the Untouchables, however just it may be. If he brings witnesses from the Untouchables, the Magistrate will not accept their testimony because he can easily say that they are interested and not independent witnesses or, if they are independent witnesses the Magistrate has an easy way of acquitting the accused by simply saying that the Untouchables compliment did not strike him as a truthful witness. He can do this fearlessly knowing full well that the higher tribunal will not reverse his finding because of the well-established rule which says that an appellate court should not disturb the finding of the trial Magistrate based upon the testimony of witness whose demeanour he had no opportunity to observe:

That such a discrimination is practised has now been admitted even by Congressmen. The annual Report of the Tamil Nad Harijan Sevak Sangh for the year ending September 30, 1937 says mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/22D.Untouchables or the children of India's Ghetto PART IV.htm - _msocom_1

"The political consciousness of the Harijans having been roused by the rights in the remotest villages where it is only the policeman that reign, it is not always possible for the Harijan to do this, for the assertion of his rights means a clash between him and the castemen, in which it is always the latter that have the upper hand. The natural consequences of this scuffle is a complaint either to the police or the Magistrate. The latter course is

beyond the means of a Harijan while the former resort is worse than useless. The complaints are in many cases not inquired into at all, while in others a verdict favourable to the castemen is entered. Our complaints to the Police also meet with similar fate. The trouble seems to us to be that there is no change in the mentality of the lower policeman. Either he is unaware of the rights of the Harijans of which he is supposed to be the guardian or he is influenced by caste men. Or, it may also be that he is absolutely indifferent. In other cases, corruption is responsible for his taking the side of the richer caste men." This shows how the Hindu official is anti-Untouchable and pro-Hindu. Whenever he has any authority or discretion, it is always exercised to the prejudice of the Untouchables.

The police and the Magistrate are sometimes corrupt. If they were only corrupt, things would not perhaps be so bad because an officer who is corrupt is open to purchase by either party. But the misfortune is that the Police and Magistrates are often more partial than corrupt. It is this partiality to the Hindus and his antipathy to the Untouchables which results in the denial of protection and justice to the Untouchables. There is no cure for this partiality to the one and antipathy to the other, because it is founded in the social and religious repugnance, which is inborn in every Hindu. The Police and the Magistrates by reason of their motives, interest and their breeding, do not sympathise with the living force operating among the Untouchables. They are not charged with the wants, the pains, the cravings and the desires, which actuate the Untouchables. Consequently, they are openly hostile and inimical to their aspirations, do not help them to advance, disfavour their cause and snap at everything that smacks of pride and self-respect. On the other hand, they share the feelings of the Hindus, sympathise with them in the attempt to maintain their power, authority, prestige and their dignity over the Untouchables. In any conflict between the two, they act as the agents of the Hindus in suppressing this revolt of the Untouchables and participate quite openly and shamefacedly in the nefarious attempt of all Hindus to do every thing possible by all means, fair or foul, to teach the Untouchables a lesson and hold them down in their own places.

The worst of it is that all this injustice and persecution can be perpetrated within the limits of the law. A Hindu may well say that he will not employ an Untouchable, that he will not sell him anything, that he will evict him from his land, that he will not allow him to take his cattle across his field without offending the law in the slightest degree. In doing so, he is only expressing his right. The law does not care with what motive he does it. The law does not see what injury it causes to the Untouchable. The police

may misuse his power and his authority. He may deliberately falsify the record by taking down something, which has not been stated or by taking down some thing which is quite different from what has been stated. He may disclose evidence to the side in which he is interested. He may refuse to arrest. He may do a hundred and one things to spoil the case. All this he can do without the slightest fear of being caught. The loopholes of law are many, and he knows them well. The Magistrate has vested in him an enormous amount of discretion. He is free to use it. The decision of a case depends upon the witnesses who can give evidence. But the decision of the case depends upon whether the witnesses are reliable or not. It is open to the Magistrate to believe one side and disbelieve the other side. He may be quite arbitrary in believing one side, but it is his discretion, and no one can interfere with it. There are innumerable cases in which this discretion has been exercised by the Magistrates to the prejudice of the Untouchables. However truthful the witnesses of the Untouchables the Magistrates take a common line by saying 'I disbelieve the witnesses', and nobody has questioned that discretion. What sentence to inflict is also a matter of discretion with the Magistrate. There are sentences, which are non appealable. An appeal is a way of getting redress. But this way may be blocked by a Magistrate by refusing to give an appealable sentence.

If the Hindu society plays its part in maintaining the Established Order, so does the Hindu officials of the State. The two have made the Established Order impregnable.

CHAPTER 13

PROBLEM OF DISCRIMINATION

To the Untouchables the problem of discrimination in order of seriousness is only next to the problem of recovering their manhood. The discrimination against the Untouchables is practised by the Hindus on a scale, the extent of which it is impossible for an outsider to imagine. There is no field of life in which the Untouchables and the Hindus come into competition and in which the former is not subjected to discrimination. It is also of the most virulent type.

In the matter of social relationship, it takes the form of barriers against dancing, bathing, eating, drinking, wrestling, worshipping. It puts a ban on all common cycles of participation.

In the use of public facilities, the spirit of discrimination manifests itself in the exclusion of Untouchables from schools, wells, temples and means of conveyance. Public administration is most deeply drenched by the spirit

of discrimination against the Untouchables. It has affected Law Courts, Government Departments, Co-operative Banks, and particularly the Police. Discrimination against Untouchables in the matter of securing land, credit, jobs exist in the most rampant form. It is in service that discrimination shows itself most strongly. Though there are no regulations, there are well-recognised rules, which govern the entry and promotion of the Untouchables in the matter of service. Most often an Untouchable will not get an entry. Whole departments are closed to them. The weaving side of the Textile Mills the whole of Army is closed to the Untouchables. If did, there is a well-set limit beyond which the Untouchable may not rise, no matter what his efficiency or length of service. The principle in general is maintained that the Untouchables shall not be placed in administrative authority over the Hindus. The consequence is that unless some entire branch of service is turned over the Untouchables, there are very few posts of consequence, which the Untouchables are allowed to fill. To put it concretely, the only field of service in which there is no discrimination against the Untouchables is scavenging. There is no need for discrimination in this field because the whole of it is made over to the Untouchables and there is no competition from the Hindus. Even here discrimination steps in the matter of higher posts. All unclean work is done by the Untouchables. But all supervisory posts which carry higher salary and which do not involve contact with filth are all filled by Hindus. In this situation rights of citizenship cannot mean the rights of the Untouchables. Government of the people and for the people cannot mean Government for the Untouchables; equal opportunity for all cannot mean equal opportunity for the Untouchables; equal rights for all cannot mean equal rights for the Untouchables. All over the country in every nook and corner the Untouchable faces handicaps, suffers discriminations, is meted injustices to the Untouchables, the most unprivileged people in India. The extent to which this is true is known only to the Untouchables who labour under the disadvantages. This discrimination is the strongest barrier against the Untouchables. It prevents them from rising out of it. It has made the life of the Untouchables one of the constant fears of one thing or another, of unemployment, assault, persecution, etc. It is a life of insecurity.

There is another form of discrimination, which though subtle is nonetheless real. Under it a systematic attempt will be made to lower the dignity and status of a meritorious Untouchable. A Hindu leader would be described merely as a great Indian leader. No one would describe him as the leader of Kashmiri Brahmin even though he be one. If a leader who happens to be an Untouchable is to be referred to he will be described as

so and so, the leader of the Untouchables. A Hindu doctor would be described as a great Indian doctor. No one would describe him as a lyengar even though he be one. If a doctor happens to be an Untouchable doctor, he would be referred to as so and so, the Untouchable doctor. A Hindu singer would be described as a great Indian singer. If the same person happens to be an Untouchable he would be described as an Untouchable singer. A Hindu wrestler would be described as a great Indian Gymnast. If he happens to be an Untouchable he would be described as an Untouchable gymnast.

This type of discrimination has its origin in the Hindu view that the Untouchables are an inferior people and however qualified, their great men are only great among the Untouchables. They can never be greater nor even equal to the great men among the Hindus. This type of discrimination, though social in character, is no less galling than economic discrimination.

Discrimination is merely another name for absence of freedom. For as Mr. Tawney says* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22D.Untouchables or the children of India's Ghetto PART IV.htm - _msocom_2: "There is no such thing as freedom in the market, divorced from the realities of a specific time and place. Whatever else it may or may not imply, it involves the power of choice between alternatives a choice which is real, not merely nominal, between alternatives which exist in fact, not only on paper. It means, in short, the ability to do or refrain from doing definite things, at a definite moment, in definite circumstances, or it means nothing at all. Because a man is most a man when he thinks, wills and acts, freedom deserves the outline things, which poets have said about it; but, as a part of the prose of every day life, it is quite practical and realistic. Every individual possesses certain requirements ranging from the material necessities of existence to the need to express himself in speech and writing, to share in the conduct of affairs of common interests, and to worship God in his own way or to refrain from worshipping him the satisfaction of which it is necessary to his welfare. Reduced to its barest essential, his freedom consists in the opportunity secured by him, within the limits set by nature and the enjoyment of similar opportunities by his fellows, to take the action needed to order to ensure that these requirements are satisfied."

It is not my intention to add yet another catalogue of essential rights to the liberties of such lists, which already exist; but these are two observations, which apply to all of them. In the first place, if the rights are to be an effective guarantee of freedom, they must not be merely formed, like the right of all who can afford it to dine at the Ritz. They must be such

that, whenever the occasion arises to exercise them, they can in fact be exercised. The rights to vote and to combine, if not wholly valueless, are obviously attenuated, when the use of the former means eviction and of the latter the sack; the right to the free choice of an occupation, if the expenses of entering a profession are prohibitive; the right to justice, if no poor man can pay for it; the right to life, liberty, and the pursuit of happiness, if the environment is such as to ensure that a considerable proportion of those born will die within twelve months, and that the happiness investments of the remainder are a gambling stock. In the second place, the rights which are essential to freedom must be such as to secure the liberties of all, not merely of a minority. Some sage has remarked that marriage would not be regarded as a national institution if, while 5 per cent of the population were polygamous, the majority passed their lives unsolved and unencumbered by husbands or wives. The same is true of freedom. Society in which some groups can do much what they please, while others can do little of what they ought, may have virtues of its own; but freedom is not one of them. It is free in so far, and only in so far, as all the elements composing it are able in fact, and not merely in theory, to make the most of their powers, to grow to their full stature, to do what they conceive to be their duty, and since liberty should not be too austere to have their fling when they feel like it. In so far as the opportunity to lead a life worthy of human beings is restricted to a minority, what is commonly described, as freedom would more properly be called privilege.

The discriminations against the Untouchables are merely the reflections of that deep and strong Hindu sentiment which is carried over in law and administration which justifies the making of distinctions between Hindus and Untouchables to the disadvantage of the Untouchables. Those discriminations have their roots in fear of the Hindus that in a free field, the Untouchables may rise above the prescribed station in life and become a menace to the Hindu Social Order the cardinal principle of which is the maintenance of Hindu superiority and Hindu domination over the Untouchables. So long as the Hindu Social Order lasts, discriminations against the Untouchables continue to exist.

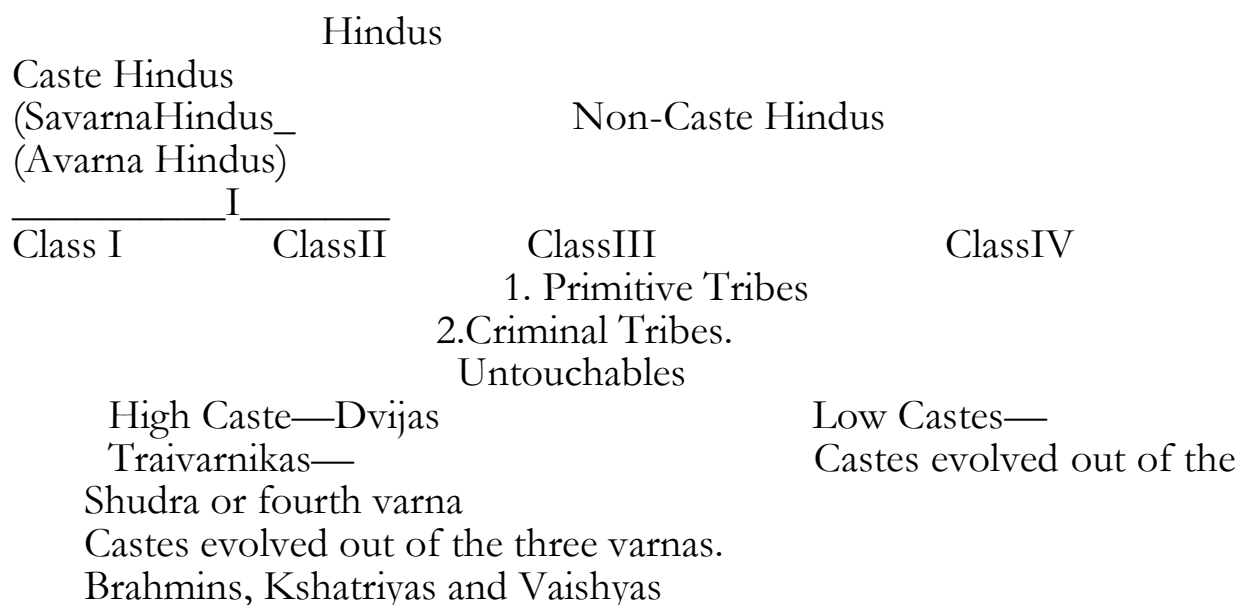

CHAPTER 14

PROBLEM OF ISOLATION

Why has the movement of the Untouchables not succeeded? Have they no allies? If there are allies why do they not help and co-operate with the

Untouchables? This is a very pertinent question and it is necessary that it should be properly understood. For answering this question, it is essential to have a very clear idea of the Hindu social organisation and the classes of which it is composed.

The structure of Hindu society is a very complicated one and it would be difficult for one, whose life has not been woven into it, to know the pattern. Perhaps, a diagrammatic presentation may be helpful. I give below one which, in my judgement, facilitate the understanding of the social structure of the Hindus:

The diagram shows that although there are innumerable castes among the Hindus, they can all be grouped under four classes. Of these four, Class I forms the *Herenfolk* or the Ruling Class, Classes III and IV form the subject people.

Let us now consider which of these classes can be the natural ally of the Untouchables.

Those in Class I form the privileged classes of the Hindu society. The Hindu social order was created by them. They alone benefit by it while the aim of these in Class I is to save it. Neither by community of interest nor by reason of ideological affinity can the two friends and allies disagree.

What about the Criminal and Primitive Tribes? They have the strongest ground for over-throwing the Hindu Social Order. What about the Shudras?

The laws of the Hindu Social Order are as repulsive to Class II, the Shudras as they are to Class IV, the Untouchables. It is interesting to know

the status of the Shudras in the Hindu society as prescribed by Manu the Law-giver and the Architect of Hindu society. For an easy understanding of the subject, the rules regarding the status of the Shudras are set out below under separate heads:

Manu asks the householders of the Brahmans, Kshatriyas and Vaishyas:

IV. 61"Let him not dwell in a country where the rulers are Shudras."

A Shudra is not to be deemed to be a respectable person. For Manu enacts that:

XI. 24."A Brahmin shall never beg from a Shudra, property for (performing) a sacrifice i.e., for religious purposes." All marriages with the Shudra were proscribed. Marriage with a woman belonging to any of three other classes was forbidden. A Shudra was not to have a connection with a woman of the higher classes and an act of adultery committed by a Shudra with her was considered by Manu to be an offence involving capital punishment.

VIII. 374."A Shudra who has an intercourse with a woman of the higher caste guarded or unguarded shall be punished in the following manner; if she was unguarded, he loses the offending part; if she was guarded then he should be put to death and his property confiscated."

VIII. 20. A Brahmana who is only a Brahman by decent i.e., one who has neither studied nor performed any other act required by the Vedas may, at the king's pleasure, interpret the law to him i.e., act as the judge, but never a Shudra (however learned he may be). VIII. 21. The Kingdom of that monarch, who looks on while a Shudra settles the law, will sink low like a cow in the morass. VIII. 272. If a Shudra arrogantly presumes to preach religion to Brahmans, the king shall have poured burning oil in his mouth and ears.

In the matter of acquiring learning and knowledge Manu ordains as follows:

III. 156. He who instructs Shudra pupils and he whose teacher is a Shudra shall become disqualified for being invited to a Shradha.

IV. 99. He must never read the Vedas in the presence of the Shudras.

Manu's successors went much beyond him in the cruelty of their punishment of the Shudra for studying the Veda. For instance, Katyayana lays down that if a Shudra overheard the Veda or ventured to utter a word of the Veda, the King shall cut his tongue in twain and pour hot molten lead in his ears. As to property by the Shudra, Manu enjoins as follows:

X. 129. No superfluous collection of wealth must be made by a Shudra, even though he has power to make it, since a servile man, who has amassed

riches, becomes proud, and, by his insolence or neglect, gives pain to Brahmins.

VIII. 417. A Brahman may seize without hesitation, if he be in distress for his subsistence, the goods of his Shudra. The Shudra can have only one occupation. This is one of the inexorable laws of Manu. Says Manu:

1. 91. One occupation only, the Lord prescribed to the Shudra, to serve meekly these other three castes (namely Brahmin, Kshatriya and Vaishya).

X. 121. If a Shudra, (unable to subsist by serving Brahmana), seeks a livelihood, he may also seek to maintain himself by attending on a wealthy Vaishya.

X. 122. But let a (Shudra) serve Brahmans, either for the sake of heaven, or with a view to both (this life and the next) for he who is called the servant of a Brahman thereby gains all his ends.

X. 123. The service of Brahmans alone is declared (to be) an excellent occupation for a Shudra for whatever else besides this he may perform will bear him no fruit.

Service by Shudra is not left by Manu to be regulated as a free contract. If the Shudra refused to serve, there is a provision for conscription which runs as follows:

VIII. 413. A Brahmana may compel a Shudra, whether bought or unbought, to do servile work for he is created by the creator to be the slave of a Brahmana.

X. 124. They must allot to him out of their own family (property) a suitable maintenance, after considering his ability, his industry, and the number of those whom he is bound to support.

X. 125. The remnants of their food must be given to him as well as their old household furniture.

A Shudra is required by Manu to be servile in his speech and manner towards the other classes.

VIII. 270. A Shudra who insults a twice born man with gross invectives shall have his tongue cut out; for he is of low origin.

VIII. 271. If he mentions the names and castes of the (twice born) with contumely, an iron nail, ten fingers long, shall be thrust red hot into his mouth.

Manu is not satisfied with this. He wants this servile status of the Shudra to be expressed in the names and surnames of persons belonging to that community. Manu says:

II. 31. Let the first part of a Brahman's name denote something auspicious, a Kshatriya's be connected with power, and a Vaishya's with wealth but a Shudra's express something contemptible.

II. 32. The second part of a Brahmin's name shall be a word implying happiness, of a Kshatriya's (a word) implying protection, of a Vaishya's a term expressive of thriving and of a Shudra's an expression denoting service."

It is obvious that these three classes are naturally allies. There is every ground for them to combine for the destruction of the Hindu Social Order. But they have not. It is not that no attempt has been made to unite them. The non-Brahmin Party which held the field between 1919-1935 was an attempt to unite them into one political organisation to destroy the dominance of the Brahmins who are the architects of the Hindu Social Order and being the chief beneficiaries of it are its strongest supporters.

This was not the only attempt to bring about solidarity among the three classes. Another attempt is being made by the labour leaders particularly the Communists. They preached that there is an identity of interest of the working class, no matter to what community they belong. There must be developed in them class consciousness and class unity. Once united they could employ the terrifying power of their numbers to break down the economic order and once the economic order falls to the ground the social order of the Hindus is bound to go to pieces. What has been the result? The result is that the solidarity has failed to come. The Shudras and the Criminal and Primitive Tribes are more hostile to the Untouchables than they are to the Brahmins. Indeed it is the Shudras who act as the police force of the Brahmins for repelling the attack of the Untouchables on the Hindu social order. This is a strange phenomenon. But it is a fact. The atrocities that are committed upon the Untouchables, if they commit any breach of the rules and regulations of the established order and of which description has been given in earlier chapters are all the doings of the Shudras.

The reasons for this want of solidarity is not far to seek. It is to be found in the system of graded inequality whereby the Brahmin is above everybody, the Shudra is below the Brahmin and above the Untouchable. If the Hindu social order was based on inequality, it would have been overthrown long ago. But it is based on graded inequality so that the Shudra while he is anxious to pull down the Brahmin, he is not prepared to see the Untouchable raised to his level. He prefers to suffer the indignities heaped upon him by the Brahmins to join the Untouchables for a general levelling down of the social order. The result is that, there is nobody to join the Untouchable in his struggle. He is completely isolated. Not only is he isolated he is opposed by the very classes who ought to be his natural allies. This isolation is one more obstacle in the removal of untouchability.

APPENDIX * mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22D.Untouchables or the children of India's Ghetto PART IV.htm - _msocom_3

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/22D.Untouchables or the children of India's Ghetto PART IV.htm - _msocom_4 MATTERS MADE WORSE BY UNTOUCHABILITY

A correspondent from Jaipur reports the following incident which occurred in June 1953:

"Jaipur, June 25: The guinea worm, called *nabru* or *bala* by people here, is a disease prevalent in the State which keeps the patient suffering for months, sometimes for a year or two. Many lose the use of a limb as a result of this disease. The disease spreads through the medium of drinking water. The only preventive steps doctors advice is that water should be drunk after boiling and filtering.

The disease frequently occurs as the rains set in, which is also the time for sowing with the result that at a time when he should be preparing to earn his living a villager is confined to bed.

On investigation in the village of Kopra near Banswara it was found that in 57 families there were 125 sufferers from guinea worm. There were six members in a Harijan family, five of whom had guinea worm. They had only a few bits of dry meat to eat.

Often the trouble is thrust on these people by society. A pond from which Harijans drink water was so dirty that it must have been a nursery for the guinea worm. When showed to the Collector of Banswara he was shocked and ordered the pond closed immediately.

Nearby, was a pucca well from which water could be taken by entering into it. Hindu were entreated to permit Harijans, to take water from this well but they would not agree. The Collector asked them if they would drink the water from the pond, if told to. They admitted that the water was unfit for human use, yet they would not allow Harijans use of the pucca well.

Conditions are bad and Harijans are the worst sufferers. The law has made untouchability a crime. The Harijan Sevak Sangh has long been working for its oblation, but it cannot be said that the hearts and minds of caste Hindus in the countryside have undergone a change. The State Governments have not been able to do much in this connection.

APPENDIX II

From 'Sunday Times', March 9, 1952

WHERE WEARING A SHIRT IS AN OFFENCE

Woes of Harijans in S. India A Social Worker's Experience

(By Swami Anand Thirth, Regional Officer, All India Harijan Sevak Sangh)

It is sad to notice that the various civil disabilities of Harijans still continue to exist in our villages in spite of the Civil Disabilities Removal Act which came into force about five years ago. It is now 9 months since the All India Harijan Sevak Sangh started its intensive work for the removal of social disabilities of Harijans in Melur Taluk in Mathurai district. Several disabilities of Harijans regarding tea shops, barber saloons, wells, tanks, chavadies, etc., have been brought to light during this period. In some places it is the Village Munsifs who were expected to give wide publicity to the Act and enforce it, that are very reactionary forces standing in the way of the poor Harijans exercising their elementary rights. A few instances are cited below to show how deep-rooted is the prejudice against the Harijans in our society.

In Parli near Natham, a Harijan youth who refused to take tea in a cocoanut shell and desired to be served in the glass tumbler was kicked and shoed on the head by a caste Hindu who was subsequently convicted and fined only Rs. 10 by the Sub-Magistrate, Melur. At Melavalvoo, when I went to a tea shop with two Harijan boys, a group of people threatened to assault me and drove away the boys. A glass tumbler was wantonly broken by the tea shopkeeper and they all demanded that I must pay for it on penalty of being thrashed. I, however, took shelter in an Elementary School nearby and the crowd disappeared only on the intervention of the President of the Panchayat Board.

At Kelavalvoo, the Harijans take water from a dirty pond in which men bathe and cattle are washed. The Harijans were encouraged to go to the public Oorani (protected water tank), but they were abused and threatened by the caste Hindus so that they dare not take water from the Oorani. There is a Police Station at Kelavalvoo, but the police here are indifferent towards the disabilities of the Harijans. In Attukulam the caste Hindus put

night-soil in the public well because they could not physically obstruct the Harijans who took water from it under our directions. In Ettimangalam, the caste Hindus destroyed the paddy seedlings raised by some Harijans in Government poromboke and because the Harijans had got into the chavadi during a public meeting held in the village. No action was taken by the police on the complaint given by the poor Harijans.

In Tiruvadur when we directed Harijans to take water from the Oorani, a caste Hindu youth assaulted a pregnant Harijan woman and broke her pot as well. The caste Hindu was charged by the police and convicted by the Sub-Magistrate to pay a fine of only Rs. 15 and thereafter the Harijans are freely taking water from this Oorani. In Kottagudi, a village barber, who refused hair-cut to a Harijan boy was charged by the police and convicted by the Sub-Magistrate. But thereafter, the Harijans were summoned by the caste Hindus to the chavadi and warned that in case they sought the service of this barber, a collective fine would be imposed on them.

In Kidaripatti, the Harijans are not allowed to take the corpse through the public foot path and they are also not permitted to ride on cycle through the village streets. A case regarding the alleged obstruction of a Harijan from riding on cycle is pending trial in the Sub-Magistrate's Court, Melur. In Nundikovilpatti, only three furlongs from the Taluk Office, Melur, the Harijans were taking drinking water from a dirty channel because they had no access to the Oorani. Two complaints were given to the police regarding this and now the caste Hindus dare not obstruct the Harijans. In Thekkitheru, when the Harijans sat on the Manthai chavadi during a public meeting held at the chavadi, pebbles were thrown at them till they quitted the place out of fear.

In Navinipatti about two miles from Melur, the village Munsif himself is alleged to have taken objection to the Harijans wearing decent dress on Pongal festival day and made two Harijan youths to remove their shirts and upper cloth. The youths were made to do Kumbidal (full prostration on the ground) and go away in loin-cloth only.

The most painful oppression has been in Mankulam, about ten miles from Mathurai city, where the village Munsif took a hostile attitude. Two Harijan youths went to tea shop and as they were denied admission, they complained to the police. For this, one of them was tied to a pillar and mercilessly beaten by a caste Hindu boy under instructions from the elders. Another Harijan was assaulted with a knife by a servant of the village Munsif. The Harijans were socially boycotted and denied labour because they took water from the public Oorani. The shopkeepers refused to sell provisions to them and they were put to starvation for two days. The

situation improved only after the intervention of the Revenue Divisional Officer. Recently, two Harijans and myself were brutally attacked by a band of caste Hindus and beaten with firewood cudgels for having bathed in the tank and gone into a coffee club in front of the chavadi. We were admitted and treated in the Government Hospital in Mathurai. I sustained a fracture in the right foot due to which I cannot use the right leg and walk. Sixteen persons including the village Munsif have been charged by the police for rioting. Some Congress-men are, however, trying for a compromise because some of their relations are involved in this. These friends are also known to have approached the authorities in this connection. Mahatmaji had desired us to consider the Harijans as blood brothers, but alas ! blood is thicker than water.

One feels so dejected and disheartened at the attitude of the caste Hindus towards the Harijans in spite of the great sacrifices of Mahatmaji, who won Swaraj for us and desired us to concede freedom to these down-trodden people as well. The Revenue and police authorities can do a lot to remove the disabilities of the Harijans. Mahatmaji's son Manilal is offering satyagraha in South Africa for the civil disabilities of Indians. But we are denying similar liberties to the Harijans whom Mahatmaji owned as his kith and kin. Let the caste Hindus and Congressmen who adore Mahatmaji remember that his spirit will not rest in peace till the curse of untouchability is wiped out, root and branch, from the nook and corner of our land. The Government must realise the deed for greater efforts to remove this bane from our society.

APPENDIX III

LYNCH LAW AGAINST HARIJANS

(Painful and shameful atrocities in Thumbapatti)
Stop the Chavadi Courts in our Villages

The Chavadi Courts:

It is a well known fact that though the Harijans are denied entry in the public chavadies in the villages in Tamilnad, they are tried by the caste Hindus at these chavadies and victimised to such an extent that they always live in fear of the caste Hindus. One of the reasons why the Harijans in the villages do not respond to our movement of the removal of their civil disabilities is their constant fear of this victimisation by the caste Hindus

under the leadership of the village Periambalagar, the chief of the caste Hindus. In several places, the villagers run these chavadi courts under the colour of holding Panchayats. The poor Harijans are summoned to the chavadi and tried like slaves. If any of them go against the order of the Periambalagar then the Lynch Law is put into operations and they are subjected to merciless beating and torture with a view to strike terror in them and to demonstrate the absolute power of the Periambalagar. The victimisation of the Harijans at the chavadi takes place in various forms according to the circumstances and the whims of the Periambalagar and his council—public whipping, imposition of heavy fines and confiscation of their properties on failure to pay the same, foisting of false cases, economic boycott by denying labour and with holding wages, social ostracism by prohibiting their taking part in social functions and religious ceremonies, denial of water by preventing access to tanks and wells, denial of foodstuffs by banning sale of articles to them in the village-shops etc. etc. The liberation of the Harijans is possible only if the Government takes strong measure against the villagers for holding these illegal and unlawful courts in the name of the village panchayat. No civilised Government can tolerate the persecution of a backward and minority community by the villages in the various manners mentioned above.

Atrocities in Thumbapatti:

The following account of the trial of Harijans at Thumbapatti on 1st August 1953 would make any heart bleed. This village is 22 miles from Madurai and it is the native place of Shri P. Kakkan, M. P., one of the prominent Harijan Leaders of Tamilnad. It is learnt that all the adults in the Harijan cherri were summoned to the mandai (common place) in front of the chavadi. The caste Hindus did obeisance to the Periambalagar and his council, in the usual manner, by doing full prostration, their belly touching the ground to pick up the dust. About a dozen Harijan youths were then picked out for trial on the charge they were suspected of the various petty thefts occurring in the village. It is however learnt that youths who were a bit assertive and not usually submissive to the caste Hindus had been singled out for punishment. They were given blows with sticks and were asked to admit having committed the thefts. The other Harijans were questioned and under fear of victimisation they are said to have thrown all the thefts on the accused. Judgement was passed that the youths were guilty and some of them were handcuffed for being duly punished. It is learnt that one of them however remonstrated and tried to escape on some plea. This disrespect to the chavadi court was immediately resented by the

villagers and it is learnt that the Periambalagar promulgated the chavadi ordinance that the Harijan youths be severely dealt with. The Lynch law was put into operation and a most merciless attack was made on the Harijan youths. All those who had some grudge or prejudice against the Harijans got the opportunity to wreak vengeance on them with impunity. The Harijan youth who had tried to escape was dragged by his legs over the rough and stony ground. The others were beaten with sticks and tied to the trees and again beaten so mercilessly till their bones were almost broken. There they were made to stand, tied to the trees for about eight hours, as the pitiable objects of public scorn. The Harijans in general appear to have been warned that they should not co-operate with the Harijan workers.

False Case Foisted:

What the villagers did thereafter is still more shameful. It is the usual practice to foist cases on the Harijans and to get the police to take immediate action. When it was discovered that the Harijans had sustained serious injuries, the villagers realised that they would get into trouble. It is learnt that Shri Poosari Kakkan, the Eighty-years old father of Shri P. Kakkan, M.P., who is working as the village Thotti, was therefore asked to give a false complaint that some articles in the Harijan temple were found missing since the previous evening and a report was sent to the Police by the village Munsif, that these articles were recovered from the Harijan youths. Shri Poosari Kakkan, and his relation, another village Thotti named Etti Kakkan, are said to have brought these articles and given to the village Munsif. Immediately on receipt of the report the Police came, arrested the Harijan youths on a charge of theft and sent them to the Hospital as they were found wounded. We do not propose to publicly criticise the action of the Police. Enough to say, the atrocities on the Harijans by the villagers, did not catch the official eye of the Police!

The Truth Known:

The villagers were good enough to send a mass petition supporting their action to Shri A. Vaidyanatha Iyer, President, Tamilnad Harijan Sevak Sangh. It was forwarded to me for enquiry and report. A small committee consisting of the President of Melur Taluk Congress Committee, the Secretary of Melur Taluk Harijan Sevak Sangh, the Secretary of the Seva Samaj, Melur and myself accordingly enquired into the matter and found that the villagers had made a merciless attack on the Harijan youths and kept them tied to the trees for about eight hours till the arrival of the

Police. The complaint given by Shri Poosari Kakkan and the Periambalagar were examined by Shri Vaidyanath Iyer and they admitted to him that the complaint given to the Police was a false and concocted one. The Periambalagar also expressed regret for the wrongs done to the Harijans. Meanwhile the police also investigated into the complaint given by Shri Poosari Kakkan and referred the case as ' undetectable '. No case was however taken against the villagers. It appears the bones of the Harijan youths had not actually broken. The marks of beatings with sticks and of the rope-tie were visible on their bodies for several days. Two of them were kept at the hospital for two days and their legs were X-rayed to make sure if their bones were broken. They were sent out with plaster bandages on their legs. They were not able to walk properly for a fortnight.

Two enquiries conducted:

An enquiry was conducted by the Dy. Welfare Officer, Madurai under orders from the Dy. Collector and another enquiry was recently conducted by the Revenue Divisional Officer, Madurai under orders from the Government. The result is yet to be known.

Civil Disabilities in Thumbapatti:

There was terrible opposition from the villagers of Thumbapatti when the Harijans took water from the public Oorani in 1948. Till then the Harijans were taking water from a dirty pond where cattle are washed and men bathe. Some Harijan youths were severely beaten and an attempt was made to set fire to Harijan houses. The village Munsif and others are said to have been warned by the authorities in this connection. One case, where a Harijan was denied coffee in the glass tumbler in a teashop in Thumbapatti, was reported to the Police on 19th August 1953 and the tea shopkeeper was convicted and sentenced to pay a fine of Rs. 10 by the Sub-Magistrate. The village barber declares that he is willing to serve Harijans. Yet the Harijans do not go to him probably because of the secret warning given to them by the caste Hindus. Some Harijans had gone to the barber on 1st July 1953 and there is reason to believe that the trial of the Harijan youths on 1st August 1953 was an arrangement made to strike terror in the Harijans.

Our general experience:

It is our general experience that when the Harijans make bold to assert their elementary rights, the villagers summon them to the chavadi and persecute them in one form or other. Such happenings took place in Mangulam, Kuruvankulam, Adanoor, Pathiattamgudi and Karugakottai.

The higher officials of the Police were good enough to visit these places. In some places, the Harijans were summoned to the chavadi and warned as at Kottagudi, Kidaripatti and Pullipatti. The subordinate Police officials usually support the caste Hindus and thus the latter get the freedom to apply their Lynch law and bring the Harijans to a sense of their social servility.

Can we tolerate this:

The question before us is whether we can tolerate this kind of public lynching and humiliation of the Harijans in these days when we had revolted against the atrocities of the Dyers at Jallianwalla bagh. In Jallianwala, the atrocities were committed by foreign bureaucrats on men and women who had assembled in a gathering. Here similar atrocities were committed by our villagers on a few Harijan youths who were tried at the chavadi with a view to strike terror in the Harijans in general.

What the Government must do:

Village Panchayats consisting of elected members including Harijans, have been formed by the Government in the villages. One wonders why the caste Hindus should be allowed to run their chavadi courts in parallel to these Government recognised Panchayats. These chavadi courts are a menace to the social, economic and political progress of the poor backward class communities in the villages. There can be no salvation or freedom to the Harijans in the villages unless these chavadi courts are banned by the Government. All our efforts for the removal of the civil disabilities of Harijans will go in vain till the chavadi courts are prohibited from dealing with the Harijans. Before spending 3 lakhs of rupees for the eradication of untouchability, the Government must take necessary measures to stop the victimisation of the Harijans at the chavadi and enable them to raise their heads as human beings. Untouchability in public places has become a thing of the past in Kerala because of the non-existence of these chavadi courts in that part of the country.

An Appeal:

It was Mahatma Gandhi who made us realise the great injustice we do to poor Harijans in the villages by treating them as low castes and slaves. But for him the Harijans in the various parts of the country would have gone out of the Hindu fold because of the unbearable sufferings under the caste Hindus. It is now 21 years since Mahatma Gandhi observed the Epic Fast at Poona to create public opinion in favour of the Harijans. No doubt

there has been a great awakening during the last decades and there is now general sympathy towards the Harijan movement. The Government is pledged to the removal of all the social and civil disabilities of Harijans and it is giving full co-operation to all peaceful and legitimate efforts to improve the status of the Harijans. But we have to admit that there is still, lot of prejudice towards the Harijans in the villages. We appeal to all public workers to bring about a change of heart of the caste Hindus in the villages so that the Harijans are no longer treated as a separate Untouchable class. We appeal to all leaders to work for the eradication of untouchability and to see that the Harijans are treated as part and parcel of the Hindu society.

Southern Range,
Head Office: Melur.

Swami Anand Tirth, M.A., Regional Officer,
All India Harijan Sevak Sangh.

WAITING FOR A VISA

Here are some of the reminiscences drawn by Dr. Ambedkar in his own handwriting. The MSS traced in the collection of the People's Education Society were published by the society as a booklet on 19th March 1990— ed.

WAITING FOR A VISA

Foreigners of course know of the existence of untouchability. But not being next door to it, so to say, they are unable to realise how oppressive it is in its actuality. It is difficult for them to understand how it is possible for a few untouchables to live on the edge of a village consisting of a large number of Hindus, go through the village daily to free it from the most disagreeable of its filth and to carry the errands of all the sundry, collect food at the doors of the Hindus, buy spices and oil at the shops of the Hindu Bania from a distance, regard the village in every way as their home, and yet never touch nor be touched by any one belonging to the village. The problem is how best to give an idea of the way the untouchables are treated by the caste Hindus. A general description or a record of cases of the treatment accorded to them are the two methods by which this purpose could be achieved. I have felt that the latter would be more effective than the former. In choosing these illustrations I have drawn partly upon my experience and partly upon the experience of others. I begin with events that have happened to me in my own life.

ONE

Our family came originally from Dapoli Taluka of the Ratnagiri District of the Bombay Presidency. From the very commencement of the rule of the East India Company my fore-fathers had left their hereditary occupation for service in the Army of the Company. My father also followed the family tradition and sought service in the Army. He rose to the rank of an officer and was a Subhedar when he retired. On his retirement my father took the family to Dapoli with a view to settling down there. But for some reasons my father changed his mind. The family left Dapoli for Satara where we lived till 1904. The first incident which I am recording as well as I can remember, occurred in

about 1901 when we were at Satara. My mother was then dead. My father was away on service as a cashier at a place called Goregaon in Khatav Taluka in the Satara District, where the Government of Bombay had started the work of excavating a Tank for giving employment to famine stricken people who were dying by thousands. When my father went to Goregaon he left me, my brother who was older than my self and two sons of my eldest sister who was dead, in charge of my aunt and some kind neighbours. My aunt was the kindest soul I know, but she was of no help to us. She was somewhat of a dwarf and had some trouble with her legs, which made it very difficult for her to move about without the aid of somebody. Often times she had to be lifted. I had sisters. They were married and were away living with their families. Cooking our food became a problem with us especially as our aunty could not on account of her helplessness, manage the job. We four children went to school and we also cooked our food. We could not prepare bread. So we lived on Pulav which we found to be the easiest dish to prepare, requiring nothing more than mixing rice and mutton.

Being a cashier my father could not leave his station to come to Satara to see us, therefore he wrote to us to come to Goregaon and spend our summer vacation with him. We children were thoroughly excited over the prospect especially as none of us had up to that time seen a railway train.

Great preparations were made. New shirts of English make, bright beje welled caps, new shoes, new silk-bordered dhoties were ordered for the journey. My father had given us all particulars regarding our journey and had told us to inform him on which day we were starting so that he would send his peon to the Railway Station to meet us and to take us to Goregaon. According to this arrangement myself, my brother and one of my sister's sons left Satara, our aunt remaining in charge of our neighbours who promised to look after her. The Railway Station was 10 miles distant from our place and a *tonga* (a one-horse carriage) was engaged to take us to the Station. We were dressed in the new clothing specially made for the occasion and we left our home full of joy but amidst the cries of my aunt who was almost prostrate with grief at our parting.

When we reached the station my brother bought tickets and gave me and my sister's son two annas each as pocket money to be spent at our pleasure. We at once began our career of riotous living and each ordered a bottle of lemonade at the start. After a short while the train whistled in and we boarded it as quickly as we could for fear of being

left behind. We were told to detrain at Masur, the nearest railway station for Goregaon.

The train arrived at Masur at about 5 in the evening and we got down with our luggage. In a few minutes all the passengers who had got down from the train had gone away to their destination. We four children remained on the platform looking out for my father or his servant whom he had promised to send. Long did we wait but no one turned up. An hour elapsed and the station-master came to enquire. He asked us for our tickets. We showed them to him. He asked us why we tarried., We told him that we were bound for Goregaon and that we were waiting for father or his servant to come but that neither had turned up and that we did not know how to reach Goregaon. We were well dressed children. From our dress or talk no one could make out that we were children of the untouchables. Indeed the station-master was quite sure we were Brahmin children and was extremely touched at the plight in which he found us. As is usual among the Hindus the station-master asked us who we were. Without a moment's thought I blurted out that we were Mahars. (Mahar is one of the communities which are treated as untouchables in the Bombay Presidency). He was stunned. His face underwent a sudden change. We could see that he was overpowered by a strange feeling of repulsion. As soon as he heard my reply he went away to his room and we stood where we were. Fifteen to twenty minutes elapsed; the sun was almost setting. The father had not turned up nor had he sent his servant, and now the station-master had also left us. We were quite bewildered and the joy and happiness which we felt at the beginning of the journey gave way to the feeling of extreme sadness.

After half an hour the station-master returned and asked us what we proposed to do. We said that if we could get a bullock-cart on hire we would go to Goregaon and if it was not very far we would like to start straightway. There were many bullock-carts plying for hire. But my reply to the station-master that we were Mahars had gone round among the cartmen and not one of them was prepared to suffer being polluted and to demean himself carrying passengers of the untouchable classes. We were prepared to pay double the fare but we found that money did not work. The station-master who was negotiating on our behalf stood silent not knowing what to do. Suddenly a thought seemed to have entered his head and he asked us, "Can you drive the cart?" Feeling that he was finding out a solution of our difficulty we shouted, "Yes, we can". With that answer he went and proposed on our behalf that we were to pay the

cartman double the fare and drive the cart and that he should walk on foot along with the cart on our journey. One cartman agreed as it gave him an opportunity to earn his fare and also saved him from being polluted.

It was about 6.30 p.m. when we were ready to start. But we were anxious not to leave the station until we were assured that we would reach Goregaon before it was dark. We therefore questioned the cartman as to the distance and the time he would take to reach Goregaon. He assured us that it would be not more than 3 hours. Believing in his word, we put our luggage in the cart, thanked the station-master and got into the cart. One of us took the reins and the cart started with the man walking by our side.

Not very far from the station there flowed a river. It was quite dry except at places where there were small pools of water. The owner of the cart proposed that we should halt there and have our meal as we might not get water on our way. We agreed. He asked us to give a part of his fare to enable him to go to the village and have his meal. My brother gave him some money and he left promising to return soon. We were very hungry and were glad to have had an opportunity to have a bite. My aunty had pressed our neighbours' women folk into service and had got some nice preparation for us to take on our way. We opened tiffin basket and started eating. We needed water to wash things down. One of us went to the pool of water in the river basin nearby. But the water really was no water. It was thick with mud and urine and excreta of the cows and buffaloes and other cattle who went to the pool for drinking. In fact that water was not intended for human use. At any rate the stink of the water was so strong we could not drink it. We had therefore to close our meal before we were satisfied and wait for the arrival of the cartman. He did not come for a long time and all that we could do was to look for him in all directions. Ultimately he came and we started on our journey. For some four or five miles we drove the cart and he walked on foot. Then he suddenly jumped into the cart and took the reins from our hand. We thought this to be rather a strange conduct on the part of a man who had refused to let the cart on hire for fear of pollution to have set aside all his religious scruples and to have consented to sit with us in the same cart but we dared not ask him any questions on the point. We were anxious to reach Goregaon our destination as quickly as possible. And for sometime we were interested in the movement of the cart only. But soon there was darkness all around us. There were no street lights to relieve the darkness. There

were no men or women or even cattle passing by to make us feel that we were in their midst. We became fearful of the loneliness which surrounded us. Our anxiety was growing. We mustered all the courage we possessed. We had travelled far from Masur. It was more than three hours. But there was no sign of Goregaon. There arose a strange thought within us. We suspected that the cartman intended treachery and that he was taking us to some lonely spot to kill us. We had lot of gold ornaments on us and that helped to strengthen our suspicion. We started asking him how far Goregaon was, why we were so late in reaching it. He kept on saying, "It is not very far, we shall soon reach it". It was about 10.00 at night when finding that there was no trace of Goregaon we children started crying and abusing the cartman. Our lamentations and wailings continued for long. The cartman made no reply. Suddenly we saw a light burning at some distance. The cartman said, "Do you see that light? That is a light of the toll-collector. We will rest there for the night." We felt some relief and stopped crying. The light was distant, but we could never seem to reach it. It took us two hours to reach the toll-collector's hut. The interval increased our anxiety and we kept on asking the cartman all sorts of questions, as to why there was delay in reaching the place, whether we were going on the same road, etc.

Ultimately by mid-night the cart reached the toll-collector's hut. It was situated at the foot of a hill but on the other side of the hill. When we arrived we saw a large number of bullock-carts there all resting for the night. We were extremely hungry and wanted very much to eat. But again there was the question of water. So we asked our driver whether it was possible to get water. He warned us that the toll-collector was a Hindu and that there was no possibility of our getting water if we spoke the truth and said that we were Mahars. He said, "Say you are Mohammedans and try your luck". On his advice I went to the toll-collector's hut and asked him if he would give us some water. "Who are you?", he inquired. I replied that we were Musalmans. I conversed with him in Urdu which I knew very well so as to leave no doubt that I was a real Musalman. But the trick did not work and his reply was very curt. "Who has kept water for you? There is water on the hill, if you want to go and get it, I have none." With this he dismissed me. I returned to the cart and conveyed to my brother his reply. I don't know what my brother felt. All that he did was to tell us to lie down.

The bullocks had been unyoked and the cart was placed sloping down on the ground. We spread our beds on the bottom planks inside

the cart, and laid down our bodies to rest. Now that we had come to a place of safety we did not mind what happened. But our minds could not help turning to the latest event. There was plenty of food with us. There was hunger burning within us ; with all this we were to sleep without food; that was because we could get no water and we could get no water because we were untouchables. Such was the last thought that entered our mind. I said, we had come to a place of safety. Evidently my elder brother had his misgivings. He said it was not wise for all four of us to go to sleep. Anything might happen. He suggested that at one time two should sleep and two should keep watch. So we spent the night at the foot of that hill.

Early at 5 in the morning our cartman came and suggested that we should start for Goregaon. We flatly refused. We told him that we would not move until 8 O'clock. We did not want to take any chance. He said nothing. So we left at 8 and reached Goregaon at 11. My father was surprised to see us and said that he had received no intimation of our coming. We protested that we had given intimation. He denied the fact. Subsequently it was discovered that the fault was of my father's servant. He had received our letter but failed to give it to my father.

This incident has a very important place in my life. I was a boy of nine when it happened. But it has left an indelible impression on my mind. Before this incident occurred, I knew that I was an untouchable and that untouchables were subjected to certain indignities and discriminations. For instance, I knew that in the school I could not sit in the midst of my class students according to my rank but that I was to sit in a corner by myself. I knew that in the school I was to have a separate piece of gunny cloth for me to squat on in the class room and the servant employed to clean the school would not touch the gunny cloth used by me. I was required to carry the gunny cloth home in the evening and bring it back the next day. While in the school I knew that children of the touchable classes, when they felt thirsty, could go out to the water tap, open it and quench their thirst. All that was necessary was the permission of the teacher. But my position was separate. I could not touch the tap and unless it was opened for it by a touchable person, it was not possible for me to quench my thirst. In my case the permission of the teacher was not enough. The presence of the school peon was necessary, for, he was the only person whom the class teacher could use for such a purpose. If the peon was not available I had to go without water. The situation can be summed up in the statement—no peon, no water. At home I knew that the work of washing clothes was done by

my sisters. Not that there were no washermen in Satara. Not that we could not afford to pay the washermen. Washing was done by my sisters because we were untouchables and no washerman would wash the clothes of an untouchable. The work of cutting the hair or shaving the boys including my self was done by our elder sister who had become quite an expert barber by practising the art on us, not that there were no barbers in Satara, not that we could not afford to pay the barber. The work of shaving and hair cutting was done by my sister because we were untouchables and no barber would consent to shave an untouchable. All this I knew. But this incident gave me a shock such as I never received before, and it made me think about untouchability which, before this incident happened, was with me a matter of course as it is with many touchables as well as the untouchables.

TWO

In 1916 I returned to India. I had been sent to America by His Highness the Maharaja of Baroda for higher education. I studied at Columbia University in New York from 1913 to 1917. In 1917 I came to London and joined the post-graduate department of the School of Economics of the University of London, In 1918 I was obliged to return to India without completing my studies. As I was educated by the Baroda State I was bound to serve the State. Accordingly on my arrival I straightway went to Baroda. The reasons why I left Baroda service are quite irrelevant to my present purpose. I do not therefore wish to enter into them. I am only concerned with my social experiences in Baroda and I will confine myself to describing them.

My five years of stay in Europe and America had completely wiped out of my mind any consciousness that I was an untouchable and that an untouchable whenever he went in India was a problem to himself and to others. But when I came out of the station my mind was considerably disturbed by a question, "Where to go? Who will take me?" I felt deeply agitated. Hindu hotels, called Vishis, I knew, there were. They would not take me. The only way of seeking accommodation therein was by impersonation. But I was not prepared for it because I could well anticipate the dire consequences which were sure to follow if my identity was discovered as it was sure to be. I had friends in Baroda who had come to America for study. "Would they welcome me if I went?" I could not assure myself. They may feel embarrassed by admitting an untouchable in their household. I stood under the roof of the station for sometime thinking, where to go, what to do. It then

struck me to enquire if there was any place in the camp. All passengers had by this time gone. I alone was left. Some hackney drivers who had failed to pick up any traffic were watching and waiting for me. I called one of them and asked him if he knew if there was a hotel in the camp. He said that there was a Parsi inn and that they took paying guests. Hearing that it was an inn maintained by the Parsis my heart was gladdened. The Parsis are followers of the Zoroastrian religion. There was no fear of my being treated by them as an untouchable because their religion does not recognise untouchability. With a heart glad with hope and a mind free from fear I put my luggage in a hackney carriage and asked the driver to drive me to Parsi inn in the camp.

The inn was a two storied building on the ground floor of which lived an old Parsi with his family. He was a caretaker and supplied food to tourists who came there to stay. The carriage arrived and the Parsi caretaker showed me upstairs. I went up while the carriage driver brought up my luggage. I paid him and he went away. I felt happy that after all I had solved my problem of finding a sojourn. I was undressing as I wanted to be at ease. In the meantime the caretaker came with a book in his hand. Seeing as he could well see from my half undressed state that I had no Sadra and Kasti, the two things which prove that one is a Parsi, in a sharp tone he asked me, who I was. Not knowing that this inn was maintained by the Parsi community for the use of Parsis only, I told him that I was a Hindu. He was shocked, and told me that I could not stay in the inn. I was thoroughly shocked by his answer and was cold all over. The question returned again where to go? Composing myself I told him that though a Hindu I had no objection to staying there if he had no objection. He replied, "How can you? I have to maintain a register of all those who stay here in the inn." I saw his difficulty. I said I could assume a Parsi name for the purpose of entering it in the register. "Why do you object if I do not object, you will not lose, you will earn something if I stay here." I could see that he was inclined favourably. Evidently he had had no tourist for a long time and he did not like to forego the opportunity of making a little money. He agreed on condition that I pay him a rupee and a half per day for board and lodging and entered myself as a Parsi in his register. He went downstairs and I heaved a sigh of relief. The problem was solved and I felt very happy. But alas ! I did not then know how short was to be this happiness. But before I describe the tragic end of my stay in this inn I must describe how I passed my time during the short period I lived therein.

The inn on the first floor had a small bedroom and adjoining it was one small bathroom with a water tap in it. The rest was one big hall. At the time of my stay the big hall was filled up with all sorts of rubbish, planks, benches, broken chairs, etc. In the midst of the surroundings I lived a single solitary individual. The caretaker came up in the morning with a cup of tea. He came again at about 9.30 with my breakfast or morning meal. A third time he came up at about 8.30 in the evening with my dinner. The caretaker came up only when he could not avoid it and on these occasions he never stayed to talk to me. The day was spent somehow.

I was appointed a probationer in the Accountant General's Office by the Maharaja of Baroda. I used to leave the inn at about 10 a.m. for the office and return late at about 8 in the evening contriving to while away outside the inn as much time in company of friends as I could. The idea of returning to the inn to spend the night therein was most terrifying to me and I used to return to the inn only because I had no other place under the sky to go for rest. In this big hall on the first floor of the inn there were no fellow human beings to talk to. I was quite alone. The whole hall was enveloped in complete darkness. There were no electric lights nor even oil lamps to relieve the darkness. The caretaker used to bring up for my use a small hurricane lamp. Its light could not extend beyond a few inches. I felt that I was in a dungeon and I longed for the company of some human being to talk to. But there was none. In the absence of the company of human beings I sought the company of books and read and read. Absorbed in reading I forgot my lonely condition. But the chirping and flying about of the bats, which had made the hall their home, often distracted my mind and sent cold shivers through me reminding me of what I was endeavouring to forget, that I was in a strange place under strange conditions. Many a time I must have been angry. But I subdued my grief and my anger by the feeling that though it was a dungeon, it was a shelter and that some shelter was better than no shelter. So heart-rending was my condition that when my sister's son came from Bombay bringing my remaining luggage which I had left behind and when he saw my state, began to cry so loudly that I had to send him back immediately. In this state I lived in the Parsi inn impersonating a Parsi. I knew that I could not long continue this impersonation as I would be discovered some day. I was therefore trying to get a State bungalow to stay in. But the Prime Minister did not look upon my request with the same urgency. My petition went from officer to officer and before I got the final reply the

day of my doom arrived.

It was 11th day of my stay in the inn. I had taken my morning meal and had dressed up and was about to step out of my room to go to office. As I was picking up some books, which I had borrowed overnight for returning them to the library I heard footsteps of a considerable number of people coming up the staircase. I thought they were tourists who had come to stay and was therefore looking out to see who these friends were. Instantly I saw a dozen angry looking, tall, sturdy Parsis, each armed with a stick, coming towards my room. I realised that they were not fellow tourists and they gave proof of it immediately. They lined up in front of my room and fired a volley of questions. "Who are you? Why did you come here? How dare you take a parsi name? You scoundrel ! You have polluted the Parsi inn !" I stood silent. I could give no answer. I could not persist in impersonation. It was in fact a fraud and the fraud was discovered, and I am sure if I had persisted in the game I was playing I would have been assaulted by the mob of angry and fanatic Parsis and probably doomed to death. My meekness and my silence averted this doom. One of them asked when I thought of vacating. At that time my shelter I prized more than my life. The threat implied in this question was a grave one. I therefore broke my silence and implored them to let me stay for a week at least, thinking that my application to the Minister for a bungalow would be decided upon favourably in the meantime. But the Parsis were in no mood to listen. They issued an ultimatum. They must not find me in the inn in the evening. I must pack off. They held out dire consequences and left. I was bewildered. My heart sank within me. I cursed all and wept bitterly. After all I was deprived of my precious possession—namely my shelter. It was no better than a prisoners' cell. But it was to me very precious.

After the Parsis were gone I sat for some time engaged in thinking to find a way out. I had hopes that I would soon get a State bungalow and my troubles would be over. My problem was therefore a temporary problem and I thought that going to friends would be a good solution. I had no friends among the untouchables of Baroda State. But I had friends among other classes. One was a Hindu, the other was an Indian Christian. I first went to my Hindu friend and told- him what had befallen me. He was a noble soul and a great personal friend of mine. He was sad and also indignant. He, however, let fall one observation. He said, "If you come to my home my servants will go". I took the hint and did not press him to accommodate me. I did not like to go to the Indian Christian friend. Once he had invited me to go and stay with him. But I

had declined preferring to stay in the Parsi inn. My reason was that his habits were not congenial to me. To go now would be to invite a rebuff. So I went to my office but I could not really give up this chance of finding a shelter. On consulting a friend I decided to go to him and ask him if he would accommodate me. When I put the question his reply was that his wife was coming to Baroda the next day and that he would have to consult her. I learnt subsequently that it was a very diplomatic answer. He and his wife came originally from a family which was Brahmin by caste and although on conversion to Christianity the husband had become liberal in thought, the wife had remained orthodox in her ways and would not have consented to harbour an untouchable in her house. The last ray of hope thus flickered away. It was 4 p.m. when I left the house of my Indian Christian friend. Where to go was the one supreme question before me. I must quit the inn and had no friend to go to !! The only alternative left was to return to Bombay.

The train to Bombay left Baroda at 9 p.m. There were five hours to be spent. Where to spend them? Should I go to the inn? Should I go to my friend? I could not buck up sufficient courage to go back to the inn. I feared the Parsis might come and attack me. I did not like to go to my friend. Though my condition was pitiable I did not like to be pitied. I decided to spend the five hours in the public garden which is called Kamathi Baug, on the border of the city and the camp. I sat there partly with a vacant mind, partly with sorrow at the thought of what had happened to me, and thought of my father and mother as children do when they are in a forlorn condition. At 8 p.m. I came out of the garden, took a carriage to the inn, brought down my luggage. The caretaker came out but neither he nor I could utter a word to each other. He felt that he was in some way responsible for bringing him into trouble. I paid him his bill. He received it in silence and I took his leave in silence. I had gone to Baroda with high hope. I had given up many offers. It was war time. Many places in the Indian Educational service were vacant. I knew very influential people in London. But I did not seek any of them. I felt that my duty was to offer my services first to the Maharaja of Baroda who had financed my education. And here I was driven to leave Baroda and return to Bombay after a stay of only eleven days.

This scene of a dozen Parsis armed with sticks lined before me in a menacing mood and myself standing before them with a terrified look imploring for mercy is a scene which so long a period as 18 years has not succeeded in fading away. I can even now vividly recall it and never

recall it without tears in my eyes. It was then for the first time that I learnt that a person who is an untouchable to a Hindu is also an untouchable to a Parsi.

THREE

The year was 1929. The Bombay Government had appointed a Committee to investigate the grievances of the untouchables. I was appointed a member of the Committee. The Committee had to tour all over the province to investigate into the allegations of injustice, oppression and tyranny. The Committee split up. I and another member were assigned the two districts of Khandesh. My colleague and myself after finishing our work parted company. He went to see some Hindu saint. I left by train to go to Bombay. At Chalisgaon I got down to go to a village on the Dhulia line to investigate a case of social boycott which had been declared by the caste Hindus against the untouchables of that village. The untouchables of Chalisgaon came to the station and requested me to stay for the night with them. My original plan was to go straight to Bombay after investigating the case of social boycott. But as they were keen I agreed to stay overnight. I boarded the train for Dhulia to go to the village, went there and informed myself of the situation prevailing in the village and returned by the next train to Chalisgaon.

I found the untouchables of Chalisgaon waiting for me at the station. I was garlanded. The Maharwada, the quarters of the untouchables, is about 2 miles from the Railway station and one has to cross a river on which there is a culvert to reach it. There were many horse carriages at the station plying for hire. The Maharwada was also within walking distance from the station. I expected immediately to be taken to the Maharwada. But there was no movement in that direction and I could not understand why I was kept waiting. After an hour or so a *tonga* (one horse carriage) was brought close to the platform and I got in. The driver and I were the only two occupants of the *tonga*. Others went on foot by a short cut. The *tonga* had not gone 200 paces when there would have been a collision with a motor car. I was surprised that the driver who was paid for hire every day should have been so inexperienced. The accident was averted only because on the loud shout of the policeman the driver of the car pulled it back.

We some how came to the culvert on the river. On it there are no walls as there are on a bridge. There is only a row stones fixed at a distance of five or ten ft. It is paved with stones. The culvert on the river is at right angles to the road we were coming by. A sharp turn has

to be taken to come to the culvert from the road. Near the very first side stone of the culvert the horse instead of going straight took a turn and bolted. The wheel of *the tonga* struck against the side stone so forcibly that I was bodily lifted up and thrown down on the stone pavement of the culvert and the horse and the carriage fell down from the culvert into the river. So heavy was the fall that I lay down senseless. The Maharwada is just on the other bank of the river. The men who had come to greet me at the station had reached there ahead of me. I was lifted and taken to the Maharwada amidst theories and lamentations of the men, women and children. As a result of this I received several injuries. My leg was fractured and I was disabled for several days. I could not understand how all this happened. The *tongas* pass and repass the culvert every day and never has a driver failed to take the tonga safely over the culvert.

-On enquiry I was told the real facts. The delay at the railway station was due to the fact that the tongawalas were not prepared to drive the tonga with a passenger who was an untouchable. It was beneath their dignity. The Mahars could not tolerate that I should walk to their quarters. It was not in keeping with their sense of my dignity. A compromise was therefore arrived at. That compromise was to this effect: the owner of the tonga would give the tonga on hire but not drive. The Mahars may take the *tonga* but find someone to drive it. The Mahars Sought this to be a happy solution. But they evidently forgot that the safety of the passenger was more important than the maintenance of his dignity. If they had thought of this they would have considered whether they could get a driver what could safely conduct me to my destination. As a matter of fact none of them could live because it was not their trade. They therefore asked someone from amongst themselves to drive. The man took the reins in his hand and started thinking there was nothing in it. But as he got on he felt his responsibility and became so nervous that he gave up all attempt to control. To save my dignity the Mahars of Chalisgaon had put my very life in jeopardy. It is then I learnt that a Hindu *tonganwalla*, no better than a menial, has a dignity by which he can look upon himself as a person who is superior to all untouchables even though he may be a Barristar-at-law.

FOUR

In the year 1934, some of my co-workers in the movement of the depressed classes expressed a desire to go on a sight-seeing tour if I

agreed to join them. I agreed. It was decided that our plan should at all events include a visit to the Buddhist caves at Verul. It was arranged that I should go to Nasik and the party should join me at Nasik. To go to Verul we had to go to Aurangabad. Aurangabad is a town in the Mohammedan State of Hyderabad and is included in the dominion of His Exalted Highness, the Nizam. On the way to Aurangabad we had first to pass another town called Daulatabad which is also in the Hyderabad State. Daulatabad is a historical place and was, at one time, the capital of a famous Hindu King by name Ramdeo Rai. The fort of Daulatabad is an ancient historical monument and no tourist while in that vicinity should omit a visit to it. Accordingly our party had also included in its programme a visit to the fort of Daulatabad.

We hired some buses and touring cars. We were about 30 in number. We started from Nasik to Yeola as Yeola is on the way to Aurangabad. Our tour programme had not been announced and quite deliberately. We wanted to travel incognito in order to avoid difficulties which an untouchable tourist has to face in outlying parts of the country. We had informed our people at those centres only at which we had decided to halt. Accordingly, on the way although we passed many villages in the Nizam State none of our people had come to meet us. It was naturally different at Daulatabad. There our people had been informed that we were coming. They were waiting for us and had gathered at the entrance to the town. They asked us to get down and have tea and refreshment first and then to go to see the fort. We did not agree to their proposal. We wanted tea very badly but we wanted sufficient time to see the fort before it was dusk. We therefore left for the fort and told our people that we would take tea on our return. Accordingly we told our drivers to move on and within a few minutes we were at the gate of the fort.

The month was Ramjan, the month of fast for the Mohammedans. Just outside the gate of the fort there is a small tank of water full to brim. There is all around a wide stone pavement. Our faces, bodies and clothes were full of dust gathered in the course of our journey and we all wished to have a wash. Without much thought some members of the party washed their faces and their legs on the pavement with the water from the tank. After these ablutions we went to the gate of the fort. There were armed soldiers inside. They opened the big gates and admitted us into the archway. We had just commenced asking the guard the procedure for obtaining permission to go into the fort. In the meantime an old Mohammedan with white flowing beard was coming from behind shouting "the Dheds (meaning untouchables) have polluted

the tank". Soon all the young and old Mohammedans who were near about joined him and all started abusing us."The Dheds have become arrogant. The Dheds have forgotten their religion (i.e. to remain low and degraded). The Dheds must be taught a lesson". They assumed a most menacing mood. We told them that we were outsiders and did not know the local custom. They turned the fire of their wrath against the local untouchables who by that time had arrived at the gate."Why did you not tell these outsiders that this tank could not be used by untouchables !"was the question they kept on asking them. Poor people ! They were not there when we entered tank. It was really our mistake because we acted without inquiry. They protested that it was not their fault. But the Mohammedans were not prepared to listen to my explanation. They kept on abusing them and us. The abuse was so vulgar that it had exasperated us. There could easily have been a riot and possibly murders. We had however to restrain ourselves. We did not want to be involved in a criminal case which would bring our tour to an abrupt end.

One young muslim in the crowd kept on saying that every one must conform to his religion, meaning thereby that the untouchables must not take water from a public tank. I had grown quite impatient and asked him in a some what angry tone,"Is that what your religion teaches? Would you prevent an untouchable from taking water from this tank if he became a Mohammedan?"These straight questions seemed to have some effect on the Mohammedans. They gave no answer and stood silent. Turning to the guard I said, again in an angry tone,"Can we get into the fort or not? Tell us, if we can't we don't want to stop". The guard asked for my name. I wrote it out on a piece of paper. He took it to the Superintendent inside and came out. We were told that we could go into the fort but we could not touch water anywhere in the fort and an armed soldier was ordered to go with us to see that we did not transgress the order.

I gave one instance to show that a person who is an untouchable to a Hindu is also an untouchable to a Parsi. This will show that person who is an untouchable to a Hindu is also an untouchable to a Mohammedan.

FIVE

The next case is equally illuminating. It is a case of an Untouchable school teacher in a village in Kathiawar and is reported in the following letter which appeared in the '**Young India**' a journal published by Mr. Gandhi in its issue of 12th December 1929. It expresses the difficulties he had expressed in persuading a Hindu doctor to attend to his wife who had just delivered and how the wife and child died for want of

medical attention. The letter says :

"On the 5th of this month a child was born to me. On the 7th, she fell ill and suffered from loose stools. Her vitality seemed to ebb away and her chest became inflamed. Her breathing became difficult and there was acute pain in the ribs. I went to call a doctor—but he said he would not go to the house of a Harijan nor was he prepared to examine the child. Then I went to Nagarseth and Garasia Darbar and pleaded them to help me. *The* Nagarseth stood surety to the doctor for my paying his fee of two rupees. Then the doctor came but on condition that he would examine them only outside the Harijan colony. I took my wife out of the colony along with her newly born child. Then the doctor gave his thermometer to a Muslim, he gave it to me and I gave it to my wife and then returned it by the same process after it had been applied. It was about eight o'clock in the evening and the doctor on looking at the thermometer in the light of a lamp said that the patient was suffering from pneumonia. Then the doctor went away and sent the medicine. I brought some linseed from the bazar and used it on the patient. The doctor refused to see her later, although I gave the two rupees fee. The disease is dangerous and God alone will help us.

The lamp of my life has died out. She passed away at about two o'clock this afternoon."

The name of the Untouchable school teacher is not given. So also the name of the doctor is not mentioned. This was at the request of the Untouchable teacher who feared reprisals. The facts are indisputable.

No explanation is necessary. The doctor, who in spite of being educated refused to apply the thermometer and treat an ailing woman in a critical condition. As a result of his refusal to treat her, the woman died. He felt no qualms of conscience in setting aside the code of conduct which is binding on his profession. The Hindu would prefer to be inhuman rather than touch an Untouchable.

SIX

There is one other incident more telling than this. On the 6th of March 1938, a meeting of the Bhangis was held at Kasarwadi (behind Woollen Mills) Dadar, Bombay, under the Chairmanship of Mr. Indulal Yadnik. In this meeting, one Bhangi boy narrated his experience in the following terms :

"I passed the Vernacular Final Examination in 1933. I have studied English up to the 4th Standard. I applied to the Schools

Committee of the Bombay Municipality for employment as a teacher but I failed as there was no vacancy. Then, I applied to the Backward Classes Officer, Ahmedabad, for the job of a Talati (village Patwari) and I succeeded. On 19th February 1936, I was appointed a Talati in the office of the Mamlatdar of the Borsad Taluka in the Kheda District.

Although my family originally came from Gujarat, I had never been in Gujarat before. This was my first occasion to go there. Similarly, I did not know that untouchability would be observed in Government Offices. Besides in my application the facts of my being a Harijan was mentioned and so I expected that my colleagues in the office would know before-hand who I was. That being so, I was surprised to find the attitude of the clerk of the Mamlatdar's office when I presented myself to take charge of the post of the Talati.

The Karkun contemptuously asked, "Who are you?" I replied, "Sir, lama Harijan". He said, "Go away, stand at a distance. How dare you stand so near me. You are in office, if you were outside I would have given you six kicks, what audacity to come here for service?" Thereafter, he asked me to drop on the ground my certificate and the order of appointment as a Talati. He then picked them up. While I was working in the Mamlatdar's office at Borsad I experienced great difficulty in the matter of getting water for drinking. In the verandah of the office there were kept cans containing drinking water. There was a waterman in-charge of these water cans. His duty was to pour out water to clerks in office whenever they needed it. In the absence of the waterman they could themselves take water out of the cans and drink it. That was impossible in my case. I could not touch the cans for my touch would pollute the water, I had therefore to depend upon the mercy of the waterman. For my use there was kept a small rusty pot. No one would touch it or wash it except myself. It was in this pot that the waterman would dole out water to me. But I could get water only if the waterman was present. This waterman did not like the idea of supplying me with water. Seeing that I was coming for water he would manage to slip away with the result that I had to go without water and the days on which I had no water to drink were by no means few.

I had the same difficulties regarding my residence. I was a stranger in Borsad. No caste Hindu would rent a house to me. The Untouchables of Borsad were not ready to give me lodgings for the

fear of displeasing the Hindus who did not like my attempt to live as a clerk, a station above me. Far greater difficulties were with regard to food. There was no place or person from where I could get my meals. I used to buy ' Bhajhas ' morning and evening, eat them in some solitary place outside the village and come and sleep at night, on the pavement of the verandahs of the Mamlatdar's office. In this way, I passed four days. All this became unbearable to me. Then I went to live at Jentral, my ancestral village. It was six miles from Borsad. Every day I had to walk eleven miles. This I did for a month and a half.

There after the Mamlatdar sent me to a Talati to learn the work. This Talati was in charge of three villages, Jentral, Khapur and Saijpur. Jentral was his headquarters. I was in Jentral with this Talati for two months. He taught me nothing and I never once entered the village office. The headman of the village was particularly hostile. Once he had said, ' you fellow, your father, your brother are sweepers who sweep the village office and you want to sit in the office *as* our equal? Take care, better give up this job.'

One day the Talati called me to Saijpur to prepare the population table of the village. From Jentral I went to Saijpur. I found the Headman and the Talati in the viUege office doing some work. I went, stood near the door of the office and wished them ' good morning ' but they took no notice of me. I stood outside for about 15 minutes. I was already tired of life and felt enraged at being thus ignored and insulted. I sat down on a chair that was lying there. Seeing me seated on the chair the Headman and the Talati quietly went away without saying anything to me. A short while after, people began to come and soon a large crowd gathered round me. This crowd was led by the Librarian of the village library. I could not understand why an educated person should have led this mob. I subsequently learnt that the chair was his. He started abusing me in the worst terms. Addressing the Ravania (village servant) he said, ' Who allowed this dirty dog of a Bhangi to sit on the chair? ' The Ravania unseated me and took away the chair from me. I sat on the ground. Thereupon the crowd entered the village office and surrounded me. It was a furious crowd raging with anger, some abusing me, some threatening to cut me to pieces with Dharya (a sharp weapon like the sword). I implored them to excuse me and to have mercy upon me. That did not have any effect upon the crowd. I did not know how to save myself. But an idea came to me of writing

to the Mamlatdar about the fate that had befallen me and telling him how to dispose of my body in case I was killed by the crowd. Incidentally, it was my hope that if the crowd came to know that I was practically reporting against them to the Mamlatdar they might hold their hands. I asked the Ravana to give me a piece of paper which he did. Then with my fountain pen I wrote the following on it in big bold letters so that everybody could read it:

"To,
The Mamlatdar, Taluka Borsad.
Sir,

Be pleased to accept the humble salutations of Parmar Kalidas Shivram. This is to humbly inform you that the hand of death is falling upon me today. It would not have been so if I had listened to the words of my parents. Be so good as to inform my parents of my death."

The Librarian read what I wrote and at once asked me to tear it off, which I did. They showered upon me innumerable insults. 'You want us to address you as our Talati? You are a Bhangi and you want to enter the office and sit on the chair?' I implored for mercy and promised not to repeat this and also promised to give up the job. I was kept there till seven in the evening when the crowd left. Till then the Talati and the Mukhiya had not come. Thereafter I took fifteen days' leave and returned to my parents in Bombay."

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

"It may be your interest to be our masters, but how can it be ours to be
your slaves?"

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

Dedication

(11) And Naomi said, Turn again, my Daughters; why will ye go with me? (12) go your way. . . (14) And they lifted up their voice, and weft again, and Orpah kissed her mother-in-law; but Ruth clave unto her, (15) And she said. Behold thy sister-in-law is gone back unto her people, and unto her gods ; return thou after thy sister-in-law. (16) And Ruth said. Intreat me not to leave them; or to return from following after thee ; for whither thou goest, I will go; and where thou lodgest, I will lodge ; thy people shall be my people, and thy God my God. (17) Where thou diest, will I die, and there will be buried; the LORD do so to me, and more also, if ought but death part thee and me”

I know how, when we used to read the Bible together, you would be affected by the sweetness and pathos of this passage. While you will be glad to read it again you will, I am sure, ask me what made me recall it in this connection. I wonder if you remember the occasion when we fell into discussion about the value of Ruth's statement”Thy people shall be my people, and thy God my God.”I have a clear memory of it and can well recall our difference of opinion, You maintained that its value lay in giving expression to the true sentiments appropriate to a perfect wife. I put forth the view that the passage had a sociological value and its true interpretation was the one given by Prof. Smith, namely, that it helped to distinguish modern society from ancient society. Ruth's

statement”Thy people shall be my people and thy God my God”defined ancient society by its most dominant characteristic namely that it was a society of man plus God while modern society is a society of men only (pray remember that in men I include women also). My view was not then acceptable to you. But you were interested enough to urge me to write a book on this theme. I promised to do so. For as an oriental I belong to a society which is still ancient and in which God is a much more important member than man is. The part of the conversation which is important to me at this stage is the promise I then made to dedicate the book to you if I succeeded in writing one. Prof. Smith's interpretation had opened a new vista before me and I had every hope of carrying out my intention. The chances of developing the theme in a book form are now very remote. As you know, I am drawn in the vortex of politics which leaves no time for literary pursuits. I do not know when I shall be out of it. The feeling of failure to fulfil my promise has haunted me ever since the war started. Equally distressing was the fear that you might pass away as a war casualty and not be there to receive if I were to have time to complete it. But the unexpected has happened. There you are, out of the throes of Death. Here is a book ready awaiting dedication. This happy conjunction of two such events has suggested to me the idea that rather than postpone it indefinitely I might redeem my word, by dedicating this book which I have succeeded in bringing to completion. Though different in theme it is not an unworthy substitute. Will you accept it?

In Thy Presence is the Fullness of Joy.

PREFACE

"In 1892, there took place in England a new election to Parliament, in which the Conservatives headed by Lord Salisbury lost and the Liberals headed by Mr. Gladstone won. The remarkable thing about this election was that notwithstanding the defeat of his party at the polls. Lord Salisbury—contrary to Parliamentary convention—refused to surrender his office to the leader of the Liberal Party. When Parliament assembled, the Queen delivered the usual gracious speech from the throne containing the legislative programme of Lord Salisbury's Government and the usual address to Her Majesty was moved from the Government

side. Lord Salisbury's Government was an illegitimate Government. It was a challenge to the fundamental principle of the British Constitution, which recognised parliamentary Majority as the only title deed for a Party's right to form a Government. The Liberals took up the challenge and tabled an amendment to the address. The amendment sought to condemn Lord Salisbury's Government for its insistence on continuing in office, notwithstanding the fact that it had no majority behind it. The task of moving the amendment was entrusted to the late Lord (then Mr.) Asquith. In his speech in support of the amendment, Mr. Asquith used the now famous phrase—"Causa finita est: Roma locuta est." (Rome has spoken and the dispute must end). The phrase was originally used by St. Augustine but in a different context. It was used in the course of a religious controversy and had come to be used as a foundation for Papal Sovereignty. Mr. Asquith used it as a political maxim embodying the basic principle of Parliamentary Democracy. Today it is accepted as the fundamental principle on which Popular Government rests, namely, the Right of a Political Majority to Rule. It told instantaneously against Salisbury's Government and must tell against all parties who fail at the polls wherever Parliamentary Democracy is in operation.

I was reminded of this maxim when the results of the Elections to the Provincial Legislatures in India, which took place in February 1987 under the Government of India Act, 1985, were announced. Congressmen did not actually say "Causa finita est : India locuta est." But so far as the parties, which had opposed the Congress in the Elections, were concerned, that is what the results of the Elections seemed, to proclaim. Having led the Untouchables against the Congress for full five years in the Round Table Conference and in the Joint Parliamentary Committee, I could not pretend to be unaffected by the results of the Elections. To me the question was: Had the Untouchables gone over to the Congress? Such a thing was to me unimaginable. For, I could not believe that the Untouchables—apart from a few agents of the Congress who are always tempted by the Congress gold to play the part of the traitor—could think of going over to the Congress en masse forgetting how Mr. Gandhi and the Congress opposed, inch by inch up to the very last moment, every one of their demands for political safeguards. I had therefore decided to study the Returns of the election that took place in 1937. .

While I was convinced that such a study was of great necessity from the point of view of the Untouchables, the work proceeded at a snail's

pace. This was due to three causes. The work had to be kept aside for some time to give precedence to other literary projects, the urgency of which demanded a degree of priority which it was not possible to refuse. Secondly, the Blue Book on the Election Results of 1937, which was submitted to Parliament soon after the elections had taken place and which is the primary source for figures regarding the elections, proved inadequate and insufficient for my purpose. It does not give separately figures showing how the Scheduled Castes electors voted and how many votes the Scheduled Caste candidates got. It gives figures showing how electors in different constituencies voted, without making any distinction between Hindu voters and the Scheduled Castes voters. Circular letters had therefore to be issued to the various Provincial Governments requesting them to send me the figures showing distribution of voting by Scheduled Caste electors and the number of votes secured by each Scheduled Caste candidate. This inevitably delayed the work.. Thirdly, the examination of these election returns proved a very laborious task as the statistical tables given In the Appendices to this book will show.

The work thus lingered on. I regret very much this delay. For I know how much mischief has been done by the Congress during the interval. The Congress has advertised the election results to bolster up its claim to represent the Untouchables. The main point in the advertisement is that out of 151 seats assigned to the Scheduled Castes the Independent Labour Party which was organised by me got only 12 seats and the rest of the seats were captured by the Congress. This mess is served out from the Congress kitchen as conclusive proof to show that the Congress represents the Untouchables. This false propaganda seems to have gone home in some quarters. Even a man like Mr. H. N. Brailsford has reproduced in his 'Subject India' this absurd Congress version, without any attempt at verification and with apparent acceptance of its truth. I am sure that the results of the elections as set out in this book will hit the nail squarely on the head of this false propaganda. For, the Congress version of the results of the election is an utter perversion. As a matter of fact the results of 1937 Election conclusively disprove the Congress claim to represent the Untouchables. Far from supporting the Congress version the results of the Election show : (1) that out of 151 the Congress got only 78 seats; (2) that the Untouchables in almost every constituency fought against the Congress by putting up their own candidates; (3) that the majority of 78 seats won by the Congress were won with the help of Hindu votes and they do not therefore in any way

represent the Scheduled Castes ; and (4.) that of 151 seats those won by the Congress in the real sense i.e., with the majority of votes of the Scheduled Castes, were only 88. As to the Independent Labour Party it was started in 1987 just a few months before the elections. It functioned only in the Province of Bombay. There was no time to organise branches in other Provinces. Elections on the ticket of the Independent Labour Party were fought only in the Province of Bombay and there the Independent Labour Party for from being a failure obtained an astonishing degree of success. Out of the 15 seats assigned to the Scheduled Castes in Bombay Presidency it captured 18 and in addition it won 2 general seats. I am therefore glad that at long last I have succeeded in completing the work which proves beyond the shadow of doubt that the story that the Congress captured all the seats reserved for the Scheduled Castes and that the Independent Labour Party was a failure, is a wicked lie. I trust that the book will prove interesting and instructive for all those who are interested in the subject and who desire to know the truth.

Before closing this preface, I wish to express my gratitude to those from whom I have received assistance in one form or another. I am grateful to the Provincial Governments for the troubles they have taken in responding to my circular and sending me additional facts and figures which I had called for. My thanks are also due to Mr. Karan Singh Kane, B.A., M.L.A., at one time, Parliamentary Secretary in the U. P. Congress Government, for the help he has rendered in the most laborious task of preparing the tables."

The reader who reads the above preface and compares it with the table of contents will at once find that the book deals with topics which lie far outside its boundary. The curious may like to know how the foregoing part of the preface is related to the table of contents. The explanation lies in the fact that the book in its present final form is quite different from what it was in its original form. In its original form it covered in very brief compass matter now dealt with on a vastly bigger scale in Chapters IV, V, VI, VII and IX and the statistical appendices. The foregoing part of the preface belonged to the book in its original form. That is why I have put it in inverted commas. The curious may also like to know why the final form of the book came to be so different from the original. The explanation is quite simple. The proofs of the book in its original form were seen by a friend and co-worker. He was dissatisfied with the scope of the book and insisted that it is not enough to deal with election results to expose the Congress claim to represent

the Untouchables, I must do more. I must expose the efforts of the Congress and Mr. Gandhi to improve the lot of the Untouchables for the information of the Untouchables and also of the foreigners whom the Congress had deluded into accepting its side by misrepresentation of facts. Besides the difficulties arising out of the fact that the book was already in proof form, this was a tall order and appeared to be beyond me having regard to other claims on my time. He would not, however, give way and I had therefore to accept his plan. The original work which would have been about 75 pages in print had to be completely recast and enlarged. The book in the present form is a complete transformation. It records the deeds of the Congress and Mr. Gandhi from 1917 to date in so far as they touch the problem of the Untouchables. Much is written about the Congress, far more about Mr. Gandhi. But no one has so far told the story of what they have done about the Untouchables. Everyone knows that Mr. Gandhi values more his reputation as the saviour of the Untouchables than his reputation as the champion of Swaraj or as the protagonist of Akimsa. At the Round Table Conference he claimed to be the sole champion of the Untouchables and was not even prepared to share the honour with anyone else, I remember what a scene he created when his claim was contested. Mr. Gandhi does not merely claim for himself the championship of the Untouchables. He claims similar championship for the Congress. The Congress, he says, is fully pledged to redress the wrongs done to the Untouchables and argues that any attempt to give political safeguards to the Untouchables is unnecessary and harmful. It is therefore a great pity that no detailed study of these claims by Mr. Gandhi and the Congress has been undertaken so far.

With the Hindus who have been blind devotees of Mr. Gandhi this study, although it is the first of its kind, will not find favour: indeed it is sure to provoke their wrath. How can it be otherwise when the conclusion arrived at is "Beware of Mr. Gandhi"? Looking at it from a wider point of view, there is no reason for the Hindus to be enraged about it. The Untouchables are not the only community in India which thinks of Mr. Gandhi in these terms. The same view of Mr. Gandhi is entertained by the Muslims, the Sikhs and the Indian Christians. As a matter of fact, the Hindus should cogitate over the question and ask: why no community trusts Mr. Gandhi although he has been saying that he is the friend of the Muslims, Sikhs and the Scheduled Castes and what is the reason for this distrust? In my judgment, there cannot be a greater tragedy for a leader to be distrusted by everybody as Mr. Gandhi

is today. I am however certain that this is not how the Hindus will react. As usual, they will denounce the book and call me names. But as the proverb says: "The caravan must pass on, though the dogs bark." In the same way, I must do my duty, no matter what my adversaries may have to say. For as Voltaire observed: Who writes the history of his own time must expect to be attacked for everything he has said, and for everything he has not said : but these little drawbacks should not discourage a man who loves truth and liberty, expects nothing, fears nothing, asks nothing and limits his ambition to the cultivation of letters."

The book has become bulky. It may be said that it suffers by reason of over-elaboration and even by repetition. I am aware of this. But I have written the book especially for the Untouchables and for the foreigners. On behalf of neither could I presume knowledge of the relevant facts. For the particular audience I have in view, it is necessary for me to state both facts as well as arguments and pay no regard to the artistic sense or the fastidious taste of a cultivated and informed class of readers.

As it is my intention to make the book a complete compendium of information regarding the movement of the Untouchables for political safeguards, I have added several appendices other than those of statistical character. They contain relevant documents both official and non-official which have a bearing upon the movement. Those who are interested in the problem of the Untouchables will, I believe, be glad to have this information ready at hand. The general reader may complain that the material in the Appendices is much too much. Here again, I must state that the Untouchables are not likely to get the information which to the general reader may be easily accessible. The test adopted is the need of the Untouchables and not of the general reader.

One last word. The reader will find that I have used quite promiscuously in the course of this book a variety of nomenclature such as Depressed Classes, Scheduled Castes, Harijans and Servile Classes to designate the Untouchables. I am aware that this is likely to cause confusion especially for those who are not familiar with conditions in India. Nothing could have pleased me better than to have used one uniform nomenclature. The fault is not altogether mine. All these names have been used officially and unofficially at one time or other for the Untouchables. The term under the Government of India Act is 'Scheduled Castes.' But that came into use after 1985. Before that they were called 'Harijans' by Mr. Gandhi and 'Depressed Classes' by Government. In a flowing situation like that it is not possible to fix upon one name, which may be correct designation at one stage and

incorrect at another. The reader will overcome all difficulties if he will remember that these terms are synonyms and represent the same class.

I am grateful to Professor Manohar Chitnis for the preparation of the Index and to Mr. S. C. Joshi for help in correcting the proofs.

Chapter I

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

CHAPTER I A STRANGE EVENT

I

IN the annual session of the Indian National Congress held at Calcutta in the year 1917 a strange event took place. In that session the Congress passed the following resolution:—

"This Congress unglues upon the people of India the necessity, justice and righteousness of removing all disabilities imposed by custom upon the Depressed Classes, the disabilities being of a most vexatious and oppressive character, subjecting those classes to considerable hardship and inconvenience."

The President of the session was Mrs. Annie Besant. The resolution was moved by Mr. G. A. Natesan of Madras and was supported by Mr. Bhulabhai Desai from Bombay, by Mr. Rama Iyer from Malabar and by

Mr. Asaf Ali from Delhi. In moving the resolution, Mr. Natesan said :—

"Ladies and Gentlemen, —This question has been receiving great attention for years in other platforms; but in view of the unique character of this Congress, the Subjects Committee thought it necessary, after having framed a scheme of self-government for India, that we should complete that by asking us to prepare ourselves for the task of self-government. The first great duty is to see that all inequalities and injustices are removed. You will see that this resolution specially asks you to remove disabilities of a most vexatious and oppressive character. Without injuring your religious feelings, without giving up all that is best in your religious tradition, I think the Congress has a right to ask of you and of me and of others elsewhere that such absurd restrictions as the non-admission of these people to schools should be removed. The Congress has also a claim upon all human beings to see that in some portions of the country where these people are refused even the use of common well, these restrictions should disappear. In attempting to elevate ourselves and in trying to remove these galling restrictions we are but elevating Indian manhood; and when Responsible self-government is to be given to us we shall be in a position to say that Indians of all classes, of all creeds, have the fullest rights, the commonest social rights, have free access to all schools, to all institutions so that Indian manhood may develop in all its truest, best and noblest traditions."

Mr. Bhulabhai Desai in supporting the resolution pointed out that:—

"The disabilities under which some of our brethren suffer are a great blow to the equality and brotherhood of man that we preach. From the great height of the resolution that you have passed this morning, with what face will we approach the British Democracy or any other power if we are unable to uplift our own brethren? They will say 'What lies in your own power, the obliteration of the social degradation of a section of your own people, you have been unable to do ! ' We can do it by self-help and by self-help alone and in this matter we need not approach any other power but ourselves. That proves the necessity of the great forward step that this Congress has taken in allowing this resolution to be moved before you. The existence of this great bane is an insult to the name of Hinduism. Therefore, both on the ground of necessity and on the ground of justice, as well as on the ground of righteousness, for the truth that you cherish, how can you deny them

what this resolution demands, when the justice lies in your own hands? And if you fail to do that, with what justice, with what face, will you demand self-government?"

Mr. Rama Iyer said:—

"This resolution calls for social freedom by which we shall shatter the shackles that bind the lower classes. They are the foot of the nation and if you and I would climb the hill of Home Rule, we must first shatter the shackles on our feet and then and then only will Home Rule come to us.. You cannot be political democrats and at the same time social autocrats. Remember that a man, a social slave, cannot be politically a free man. We all have come here to see the vision of United India, not only politically united but united all along the line.. Therefore, let those of us, who are Brahmins, who belong to the higher castes, go to our villages and shatter the shackles of the low castes, people who are struggling against our own men—the social Bureaucrats of our own land."

Mr. Asaf Ali observed that :—

"The problem of the Depressed Classes was one of the most difficult of all. They had been crying shame upon the arbitrary and autocratic action of the bureaucratic bunglers, but now it was the turn of the Depressed Classes—the Untouchables—to cover them, Indians, with shame. There were many millions of these victims of misfortune who had been plying their degraded trades in utter muteness for thousands of years, never emerging from the abyss of degradation into which the cruel and utterly unjustified customs of the country had buried them. Whether it was the spring-time of hope, or the summer of realisation to others, to these unfortunate creatures it was always the winter of black despair. It seemed a cruel irony of fate that those who were vociferously clamouring for the attainment or preservation of human rights themselves were so little mindful of the legitimate rights of others under them. Was it just or fair that a mute section of humanity should be left to suffer the very wrongs for whose redress others were shedding their blood in the battlefield? Why, even the 'untouchables,' in spite of all that cruel custom had subjected them to, were human beings and children of the soil, in whose veins coursed the self-same 'red-blood' as in the veins of those who arrogated superiority to themselves. The Depressed Classes were entitled to the same privileges as their betters in worldly circumstances and could not be debarred

from the birthright of man. It was a standing reproach to the Indians that they had any Depressed Classes at all, and it was for the extinction of this reproach that they prayed."

Many people would wonder why I describe the passing of the Resolution by the Congress moved and supported in such eloquent terms, as a strange event. But those who know the antecedents will admit that it is not an improper description. It was strange for many reasons.

In the first place, the President of the Session was the late Mrs. Annie Besant. She was a well-known public figure and had many things for which she will be remembered by the future historian of India. She was the founder of the Theosophical Society which has its Home at Adyar. Mrs. Annie Besant was well-known for rearing up Mr. Krishnamurti, the son of a Brahmin retired Registrar for a future Messiah. Mrs. Annie Besant was known as the founder of the Home Rule League. There may be other things for which friends of Mrs. Annie Besant may claim for her a place of honour. But I don't know, that she was ever a friend of the Untouchables. So far as I know she felt great antipathy towards the Untouchables. Expressing her opinion on the question whether the children of the Untouchables should or should not be admitted to the common school, Mrs. Annie Besant in an article headed "The Uplift of the Depressed Classes" which appeared in the Indian Review for February 1909 said :—

"In every nation we find, as the basis of the social Pyramid, a large class of people, ignorant, degraded, unclean in language and habits, people, who perform many tasks which are necessary for Society, but who are despised and neglected by the very Society to whose needs they minister. In England, this class is called the 'submerged tenth,' forming, as it does, one-tenth of the total population. It is ever on the verge of starvation, and the least extra pressure sends it over the edge. It suffers chronically from under-nutrition, and is a prey to the diseases which spring there from. It is prolific, like all creatures in whom the nervous system is of a low type, but its children die off rapidly, ill-nourished, rickety, often malformed. Its better type consists of unskilled labourers, who perform the roughest work, scavengers, sweepers, navvies, casual dock-labourers, costermongers; and into it, forming its worse type, drift all the wastrels of Society, the drunkards, the loafers, the coarsely dissolute, the tramps, the vagabonds, the clumsily criminal, the ruffians.

The first type is, as a rule, honest and industrious; the second ought to be under continued control, and forced to labour sufficiently to earn its bread. In India, this class forms one-sixth of the total population, and goes by the generic name of the 'Depressed Classes.' It springs from the aboriginal inhabitants of the country, conquered and enslaved by the Aryan invaders,.. .It is drunken and utterly. indifferent to cleanliness, whether of food, person or dwelling; but marriage is accompanied with some slight formality, children are kindly treated, and there is very little brutality, violence or criminality. Criminal communities, such as hereditary thieves, live apart, and do not mingle with the scavengers, sweepers, husbandmen and the followers of other simple crafts who make up the huge bulk of the depressed. They are gentle, docile, as a rule industrious, pathetically submissive, merry enough when not in actual want, with a bright though generally very limited intelligence; of truth and the civic virtues they are for the most part utterly devoid—how should they be anything else?—but they are affectionate, grateful for the slightest kindness, and with much 'natural religion.' In fact, they offer good material for simple and useful though humble civic life.

"What can be done for them by those who feel the barbarity of the treatment meted out to them, by those who feel that the Indians who demand freedoms should show respect to others, and give to others a share of the consideration they claim for themselves?

"Here, as everywhere, education is the lever by which we may hope to raise them. but a difficulty arises at the outset, for one class of the community, moved by & noble feeling of compassion and benevolence, but not adding thereto a careful and detailed consideration of the conditions, demands, for the children of the pariah community admission to the schools frequented by the sons of the higher classes, and charges with lack of brotherhood those who are not in favour of this policy. It becomes, therefore, necessary to ask whether brotherhood is to mean levelling down, and whether it is usual in family to treat the elder children and the babies in exactly the same way. It is a zeal not according to knowledge —and not according to nature—which would substitute equality for brotherhood, and demand from the cultured and refined that they should forfeit the hardly won fruits of the education of generations, in order to create an artificial equality, as disastrous to the progress of the future as it would be useless for the improvement of the present. The children of the depressed classes need, first of all, to be taught cleanliness, outside decency of behaviour, and the earliest

rudiments of education, religion and morality. Their bodies, at present, are ill-odorous and foul with the liquor and strong-smelling food, out of which for generations they have been built up; it will need some generations of purer food and living to make their bodies fit to sit in the dose neighbourhood of a school-room with children who have received bodies from an ancestry trained in habits of exquisite personal cleanliness, and fed on pure food-stuffs. We have to re-use the Depressed Classes to a similar level of physical purity, not to drag down the dean to the level of the dirty, and until this is done, dose association is undesirable. We are not blaming these children, nor their parents, for being what they are; we are stating a mere palpable fact. The first daily lesson in a school for these children should be a bath, and the putting on of a dean doth; and the second should be a meal of dean wholesome food; those primary needs cannot be supplied in a school intended for children who take their daily bath in the early morning and who come to school well-fed.

Another difficulty that faces teachers of these children are the contagious diseases that are bred from first; to take one example, eye-disease, wholly due to neglect, is one of the most common and "catching" complaints among them. In our Panxhama schools in Madras, the teachers are ever on the alert to detect Amy check this, and the children's eyes are daily washed and disease is thus prevented. But is it to be expected that fathers and mothers, whose daily care protects their children from such dirty diseases should deliberately expose them at school to this infection?

"Nor are the manner and habits of these forlorn little ones desirable things to be imitated by gently-nurtured children. Good manners, for instance, are the result of continual and rigid self-control, and of consideration for the comfort and convenience of others; children learn manners chiefly by imitation from well-bred parents and teachers and, secondarily, by suitable precept and reproof. If, at the school, they are to be made to associate with children not thus trained, they will quickly fall into the ways, which they see around them. For, until good habits are rendered fixed by long, practice, it is far easier to be slipshod than accurate, to be careless than careful. Ought the children of families in which good manners and courtesy are hereditary, to be robbed of their heritage, a robbery that enriches no one, but drags the whole nation down? Gentle speech, well-modulated voice, pleasant ways, these are the valuable results of long culture, and to .let them be swamped out is no

true brotherhood

"In England, it has never been regarded as desirable to educate boys or girls of all classes side by side, and such grotesque equalising of the unequal would be scouted. Eton and Harrow are admittedly the schools for the higher classes, Hubgy and Winchester are also schools for gentlemen's sons, though somewhat less aristocratic. Then come a number of schools, frequented chiefly by sons of the provincial middle class. Then the Board Schools, where the sons of artisans and the general manual labour classes are taught; and below all these, for the waifs and strays, are the 'ragged schools, the name of which indicates the type of their scholars, and the numerous charitable institutions." An insane in England who proposed that ragged school children should be admitted to Eton and Harrow would not be argued with, but laughed at. Here, when a similar proposition is made in the name of brotherhood, people? Seem ashamed to point out frankly its absurdity, and they do not realise that the proposal is merely a violent reaction against the cruel wrongs, which have been inflicted on the Depressed Classes, the outcry .of an awakened conscience, which has not yet had time to call right reason to guide its emotions. It is sometimes said that Government schools pay no attention to social differences {therein they show that they are essentially 'foreign' in their spirit. They would not deal so with the sons of their own people, though they may be careless of the sons of Indians, and lump them all together, clean and dirty alike. It is very easy to see the differences of 'tone' in the youths when only the sons of the cultured classes are admitted to a school, and it is to the interest of the Indians that they should send their sons where they are guarded from coarse influences as Englishmen guard their own sons in England."

* * *

The second reason why one is justified in describing the passing of this resolution as a strange event lies in the fact that it-was entirely opposed to the declared policy of the Congress. In these days when the "Constructive Programme" of the Congress is hawked from every street and at all times when the Congress is resting after an active campaign of non co-operation and civil disobedience, this statement

may well cause surprise to present day Congressmen and their friends. The following extracts from the addresses of the Presidents who presided at the Annual Sessions of the Congress will suffice to bring home the fact that the Congress policy was to give no place to questions of Social Reform in the aims and objects of the Congress.

To begin with, Mr. Dadabhai Naoroji who presided at the Second Session of the Indian National Congress held in Calcutta in the year 1886. In this presidential address he referred to the Congress attitude towards Social Reform and said: —

"It has been asserted that this Congress ought to take up questions of social reform (Cheers and cries of 'Yes, Yes') and our failure to do this has been urged as a reproach against us. Certainly no member of this National Congress is more alive to the necessity of social reform than I am; but. Gentlemen, for everything there are proper times, proper circumstances, proper parties and proper places (Cheers); we are met together as a political body to represent to our rulers our political aspirations, not to discuss social reforms,' and if you blame us for ignoring these, you should equally blame the House of Commons for not discussing the abstruse problems of mathematics or meta-physics. But, besides this, there are here Hindus of every caste, amongst whom, even in the same province, customs and social arrangements differ widely there are Mohammedans and Christians of various denominations, Parsis, Sikhs, Brahmans and what not men indeed of each and of all those numerous classes which constitute in the aggregate the people of India. (Loud Cheers). How can this gathering of all classes discuss the social reforms needed in each individual class? Only the members of that class can effectively deal with the reforms therein needed. A National Congress must confine itself to questions in which the entire nation has a direct participation, and it must leave the adjustment of social reforms and other class questions to Class Congresses.

The subject was again referred to by the Hon. Mr. Budruddin Tyabji who presided over the Third Annual Session of the Congress held in 1887. Mr. Tyabji observed:

"It has been urged solemnly urged as an objection against our proceedings that this Congress does not discuss the question of Social Reforms I must confess that the objection seems to me strange, seeing that this Congress is com-posed of the representatives, not of any one

class or community, not of one part of India, but of all the different parts, and of all the different classes, and of all the different communities of India. Whereas any question of Social Reform must of necessity affect some particular part or some particular community of India only and, therefore. Gentlemen, it seems to me, that although we, Mussalmans, have our own social problems to solve, just as our Hindu and Parsi friends have theirs, yet these questions can be best dealt with by the leaders of the particular communities to which they relate (Applause). I, therefore, think. Gentlemen, that the only wise and, indeed, the only possible course we can adopt is to confine our discussions to such questions as affect the whole of India at large, and to abstain from the discussion of questions that affect a particular part or a particular community only."

The third occasion when the subject was referred to was in 1892, when Mr. W.C. Bannerjee in his Presidential address to the Eighth Session of the Congress gave expression to the following sentiments:—

"Some of our critics have been busy in telling us, thinking they knew our affairs better than we know them ourselves, that we ought not to meddle with political matters, but leaving politics aside devote ourselves to social subjects and so improve the social system of our country; I am one of those who have very little faith in the public discussion of social matters; those are things which I think, ought to be left to the individuals of a community who belong to the same social organisation to do what they can for its improvement. We know how excited people become when social subjects are discussed in public. Not long ago we had an instance of this when what was called the Age of Consent Bill was introduced into the Viceroy Legislative Council. I do not propose to say one word as to the merits of the controversy that arose over that measure, but I allude to it to illustrate how apt the public mind is to get agitated over these social matters if they are discussed in a hostile and unfriendly spirit in public. I may point out that we do not all understand in the same sense what is meant by social reform. Some of us are anxious that our daughters should have the same education as our sons, that they should go to 'Universities, that they should adopt learned professions; others who are more timid would be content with seeing that their children are not given in marriage when very young, and that child widows should not remain widows all the days of their lives. Others more timid still would allow social problems to solve themselves. The Congress commenced and

has since remained, and will, I sincerely trust, always remain as a purely political organisation devoting its energies to political matters and political matters only. I am afraid that those whether belonging to our own country or to any other country, who find fault with us for not making social subjects a part of our work, cherish a secret wish that we might all be set by the ears, as we are all set by the ears by the Age of Consent Bill, and that thus we might come to an ignominious end. They mean us no good, and when we find critics of that description talking of the Congress as only fit to discuss social problems, I think the wider the berth we give them, the better. “

"I, for one, have no patience with those who say we shall not be fit for political reform until we reform our social system. I fail to see any connection between the two. Let me take, for instance, one of the political reforms which we have been suggesting year after year viz., the separation of judicial from executive functions in the same officer. What possible connection can there be between this, which is a purely political reform and social reform? in the same way, take the Permanent Settlement which we have been advocating, the amendment of the law relating to forests and other such measures;— and I ask again, what have these to do with social reform? Are we not fit for them because our widows remain unmarried and our girls are given in marriage earlier than in other countries? Because our wives and daughters do not drive about with us visiting our friends? Because we do not send our daughters to Oxford or Cambridge? (Cheers.)"

The last occasion when a Congress President is found to refer to this subject was in 1895 when the Congress Session was held in Poona and was presided over by Mr. Surrendranath Bannerjee. Touching upon the subject, in his presidential address, Mr. Bannerjee said :—

"We cannot afford to have a schism in our camp. Already they tell us that it is & Hindu Congress, although the presence of our Mohammedans friends completely contradicts the statement. Let it not be said that this is the Congress of one social party rather than that of another. It is the Congress of United India, of Hindus and Mahomedans, of Christians, of Parsis and of Sikhs, of those who would reform their social customs and those who would not. Here we stand upon a common platform—here we have all agreed to bury our social and religious differences and recognise the one common fact that being subjects of the same Sovereign and living under the same .

Government and the same political institutions, we have common rights and common grievances. And we have called forth this Congress into existence with a view to safeguard and extend our rights and redress our grievances. What should we say of a Faculty of Doctors who fell out, because though in perfect accord as to the principles of their science, they could not agree as to the age at which they should marry their daughters, or whether they should remarry their widowed daughters or not. . Ours is a political and not a social movement; and it cannot be made a matter of complaint against us that we are not a social organisation any more than it can be urged against any of my lawyer friends that they are not doctors. Even in regard to political matters, such is our respect for the opinions of minorities, that so far back as 1887, I think it was at the instance of Mr. Budruddin Tyabji, who once was our President and whose elevation to the Bench of the Bombay High Court is a matter of national congratulation, a resolution was passed to the effect that where there is practical unanimity among a class, though in a minority in the Congress, that a question should not be discussed, it should forthwith be abandoned."

"There is special danger to which an organisation such as ours, is exposed and which must be guarded against, the danger of there being developed from within the seeds of dissension and dispute."

II

There are two questions about these statements, which need explanation. First is to know what the Social Reform party was to which the Presidents refer. The second is why Mr. Surrendranath Bannerjee's address to the Congress in 1895 was the last occasion when a Congress President found it necessary to refer to the relation of the Congress to the problem of Social Reform and why no president after 1895 thought it necessary to dwell on it.

To understand the first question it is necessary to note that when the Indian National Congress was founded at Bombay in 1885, it was felt by the leaders of the movement that the National movement should not be exclusively political but that side by side with the consideration of political questions, questions affecting Indian social economy should

also be discussed and that the best endeavours of all should be put forth for vitalizing Hindu Society by removing all social evils and social wrongs. With this view, Dewan Bahadur R. Raghunath Rao and Mr. Justice (then Rao Bahadur) M. G. Ranade delivered addresses on Social Reform on the occasion of the meeting of the First Congress at Bombay. In 1886, at Calcutta, nothing further was done. Discussion, however, was going on among the leaders of the Congress movement and other leaders of educated Indian thought whether the Congress as such should concern itself with social questions or whether a separate body should be set up for the discussion of social questions. It was at last resolved after mature deliberation by, among others, Dewan Bahadur R. Raghunath Rao, Mr. Mahadev Govind Ranade, Mr. Narendra Nath Sen and Mr. Janakinath Ghosal, that a separate organisation called the Indian National Social Conference, should be started for the consideration of subjects relating to Indian social economy. Madras had the honour of being the birth-place of the Conference, for, the First Indian National Social Conference was held at Madras in December 1887, with no less a man than the late Rajah Sir T. Madhavrao, K.C.S.I., the premier Indian statesman of his time, as the President. The work done at this First Conference, however, was not much. Among other important resolutions members then present recognised the necessity of holding annual National Conferences in different parts of India for considering and adopting measures necessary for the improvement of the status of our society, and of our social usage; and taking steps to organise and establish Provincial Sub-Committees of the Conferences. It was agreed that among social subjects which the Conference might take up, those relating to 'the disabilities attendant on distant sea-voyages, the ruinous expenses of marriage, the limitations of age below which marriages should not take place, the remarriages of youthful widows, the evils of the re-marriages of old men with young girls, the forms and evidences of marriages and inter-marriages between sub-divisions of the same caste should form the subjects for discussion and determination.

As to sanctions it was thought there should be different Sub-Committees appointed for dealing with different social questions. The Sub-Committees were to be left to evolve certain fundamental principles and penalties for breach of these principles, to be carried out and enforced as regards the members of Social Reform Party who might agree to be bound by such penalties, (1) ' by the Sub-Committees

themselves, or (2) through their spiritual heads, never it was possible to do so, or (0) through Civil Courts, or failing all (4) by application to Government for enabling the Committees to enforce the rules in respect of their own pledged members.

While the Social Reform Party had formed a separate organisation of its own to discuss the many social evils which festered. Hindu Society, they were not satisfied with the Congress attitude of completely dissociating itself from questions of social reform. Some of them were anxious to make it an issue whether Social Reform should not precede Political Reform and press for a decision. In this they had many friends to support them. Among them was to be found the Government of India. Sir Auckland Colvin, a member of the Viceroy's Executive Council, very clearly and very emphatically stated that Indians ought to turn their attention to Social Reform in preference to endeavours they were making "to teach the British what their duties were in regard to the Government of India."

The reference to Social Reform in the addresses of the Congress Presidents referred to above can now be easily understood. They are a reply to the criticism by the Social Reform Party against the Congress dissociating itself from the problem of removing social evils.

Turning to the second question as to why no Congress President has retired to the question of Social Reform in his presidential address after 1895, the answer is that before 1895 there were two schools among Congressmen on the issue of social reform versus political reform. The viewpoint of one school was that expressed by Mr. Dadabhai Naoroji, Mr. Budruddin Tyabji and Mr. Surrendranath Bannerjee. The viewpoint of the other school was that expressed by Mr. W. C. Banerjee. The former did recognise the need of social reform but thought that the Congress Session was not the proper platform for it. The latter denied that there was need for social reform and challenged the view that there cannot be political reform without social reform. Though the two schools within the Congress were fundamentally opposed to each other, they had not upto 1895 developed a spirit of antagonism and intolerance towards each other. The former school was in a dominant position and the result was that the Indian National Congress and the Social Conference functioned as two parallel organisations each devoting itself to its own particular aims and objects. So great was the spirit of co-operation and good will between the two that the annual sessions of the

National Congress and Social Conference were held in immediate succession in the same panda and a large majority of those who came to attend the Congress Session also attended the Social Conference. The Social Conference was, however, an eyesore to the Congressmen who belonged to the Anti-social Reform Section. This section was evidently getting restive at the kindly disposition and the accommodating spirit which the dominant section in the Congress was showing to the Social Conference particularly in the matter of allowing it to use the Congress panda for holding its session. In 1895 when the Congress met in Poona, this Anti-Social Reform section rebelled and threatened to burn the Congress panda if the Congress allowed it to be used by the Social Conference. This opposition to the Social Conference was headed by no other person than the late Mr. Tilak one of those social tones and political radicals with which India abounds and who was the father of the slogan "Swaraj is my birthright" which is now seen blazoned on Congress banners. The rebellion succeeded largely because the Pro-Social Reform Party in, the Congress was not prepared to fight its opponents ¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41B.What Congress and Gandhi CHAPTER I.htm - _msocom_1. This rebellion had one effect. It settled that the Congress was not to entertain any question of social reform no matter how urgent ²mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41B.What Congress and Gandhi CHAPTER I.htm - _msocom_2. This is the explanation why no Congress President after 1895 has referred to the question of social reform in his presidential address. The Congress by its action in 1895 had become a purely political body with no interest and no concern in the removal or mitigation of social wrongs.

III

Against this background the resolution passed by the Congress about the Depressed Classes in 1917 is obviously a strange event. The Congress had never done such a thing before although it had functioned for thirty-two years. It was even contrary to its declared policy.

Why did the Congress think it necessary to pass such a resolution in the year 1917? What made it take cognisance of the Untouchables? What did it want to gain? Whom did it want to deceive? Was it because of a change in its angle of vision or was it because of some ulterior motive? For an answer to these questions one must turn to the following resolutions passed by the Depressed Classes in the year 1917

at two separate meetings held in the City of Bombay under two different Presidents. The first of these meetings was held on the 11th November 1917 under the Chairmanship of the late Sir Narayan Chandavarkar. In that meeting the following resolutions³ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41B.What Congress and Gandhi CHAPTER I.htm - _msocom_3 were passed :—

"First Resolution- Loyalty-Loyalty to British Government and prayer for victory to the Allies."

"Second Resolution carried at the meeting by an overwhelming majority, the dissentients being about a dozen, expressed approval of the scheme of reform in the administration of India recommended by the Indian National Congress and the All-India Muslim League"

"Third Resolution carried unanimously was;"As the population of the Depressed Classes in India considered Untouchable and treated as such, is very large, as their condition is very degraded owing to that treatment and as they are behind the rest of the people in point of education, being unable to secure fair opportunities for their improvement, this public meeting of the Depressed Classes strongly feeds that in the scheme of reform and reconstitution of the Legislative Councils which Government may be pleased to adopt, due regard be paid to the interests of the said classes. This meeting therefore prays the British Government to be so gracious as to protect those interests by granting to those classes the right to elect their own representatives to the said Councils in proportion to their numbers."

Fourth Resolution unanimously carried at the meeting was:"That the Government be prayed for the adoption, with all convenient speed, of a compulsory and free system of education rendered necessary by the fact that the social elevation of any community depends upon the universal spread of education among its members and that degradation of the Depressed Classes is due to their illiteracy and ignorance."

"Fifth Resolution carried unanimously was as follows: — "That the Chairman of this public meeting be authorised to request the Indian National Congress to pass at its forthcoming session a distinct and independent resolution declaring to the foetal of India at large the necessity, justice, and righteousness of removing all the disabilities imposed by religion and custom upon the De-pressed Classes, those disabilities being of a, most vexatious and oppressive character,

subjecting those classes to considerable hardship and inconvenience by prohibiting them from admission into public schools, hospitals, courts of justice and public offices, and the use of public wells, etc. These disabilities social in origin, amount in law and practice to political disabilities and as such fall legitimately within the political mission and propaganda of the Indian National Congress."

"Sixth Resolution prays all Hindus of the castes other than the Untouchables and Depressed, especially those of the higher castes, who claim political rights, to take steps for the purpose of removing the blot of degradation from the Depressed Classes, which 'has subjected those classes to the worst of treatment in their own country.'"

The second meeting was also held in November 1917 a week or so after the first meeting. The Chairman was one Bapuji Namdeb Bagade a leader of the Non-Brahmin Party. At this meeting the following resolutions ⁴mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/41B.What Congress and Gandhi CHAPTER I.htm - _msocom_4 were unanimously adopted :—

"(1) Resolution of loyalty to the British throne."

"(2) That this meeting cannot give its support to the Congress-League Scheme in spite of its having been declared to have been passed at the meeting of 11th November. 1917 by an overwhelming majority."

"(3) That it is the sense of this meeting that the administration of India should be largely under the control of the British till all classes and specially the Depressed Classes, rise up to a condition to effectual participate in the administration of the country."

"(4) That if the British Government have decided to give political concession to the Indian Public, this meeting prays that Government should grant the Untouchables their. own representatives in the various legislative bodies to ensure to them their civil and political rights."

"(5) That this meeting approves of the objects of the Bahiskrit Bharat Samaj (Depressed India Association) and supports the deputation to be sent on its behalf to Mr. Montagu."

"(6) That this meeting prays that Government, looking to the special

needs of the Depressed Classes, should make primary education both free and compulsory. That the meeting also requests the Government to give special facilities by way of scholarships to the students of the Depressed Classes."

"(7) That the meeting authorises the President to forward the above resolutions to the Viceroy and the Government of Bombay."

It is obvious that there is a close inter-connection between the resolution passed by the Depressed Classes at their meeting in Bombay under the chairmanship of Sir Narayan Chandavarkar and the Congress resolution of 1917 on the elevation of the Depressed Classes. This inter-connection will be easily understood by adverting to the political events of the year 1917. It will be recalled that it was in 1917 or to be precise, on the 20th August 1917 the late Mr. Montague the then Secretary of State for India announced in the House of Commons the new policy of His Majesty's Government towards India, namely, the policy of 'gradual development of self-governing institutions with a view to progressive realisation of responsible government in India as an integral part of the British Empire.' Leading Indian politicians were expecting some such declaration of policy on the part of His Majesty's Government and were preparing schemes for changes in the constitutional structure of India in anticipation of such a policy. Of the many schemes that were formulated, there were two around which public attention was centred. One was called 'the Scheme of the Nineteen.' The second was called 'the Congress-League Scheme' The first was put forth by the 19 elected additional Members of the then Imperial Legislative Council. The second was an agreed scheme of political reforms supported by the Congress and the League otherwise known as the Lucknow Pact, Both these schemes had come into existence in 1910, a year before the announcement made by Mr. Montagu.

Of the two schemes, the Congress was interested in seeing that its own scheme was accepted by His Majesty's Government. The Congress with that purpose in view was keen on giving the Congress-League scheme the status and character of a National Demand. This could happen only if the scheme had the backing of all communities in India. In as much as the Muslim League had accepted the scheme, the problem of securing the backing of the Muslim Community did not arise. Next in numbers came the Depressed Classes, Though not as well organised as the Muslims, they were politically very conscious as their Resolutions show.

Not only were they politically conscious but they were all along anti-Congress. Indeed in 1895 when Mr. Tilak's followers threatened to bum the Congress pandal if its use was allowed to the Social Conference for ventilating social wrongs, the Untouchables organised a demonstration against the Congress and actually burned its effigy. This antipathy to the Congress has continued ever since. The resolutions Passed by both the meetings of the Depressed Classes held in Bombay in 1917 give ample testimony to the existence of this antipathy in the minds of the Depressed Classes towards the Congress. The Congress while anxious to get the support of the Depressed Classes to the Congress-League scheme of Reforms knew very well that it had no chance of getting it "As the Congress did not then practise—it had not learned it then—the art of corrupting people as it does now, it enlisted the services of the late Sir Narayan Chandavarkar, an Ex-President of the Congress. As the President of the Depressed Classes Mission Society he exercised considerable influence over the Depressed Classes. It was as a result of his influence and out of respect for him that a section of the Depressed Classes agreed to give support to the Congress" League Scheme,

The revolution as its text show did not give unconditional support to the Congress-League scheme. It agreed to give support on the condition that the Congress passed a resolution for the removal of the social disabilities of the Untouchables. The Congress resolution was a fulfilment of its part of the contract with the Depressed Classes which was negotiated through Sir Narayan Chandavarkar.

This explains the genesis of the Congress Resolution of 1917 on the Depressed Classes and its inter-connection with the Resolutions of the Depressed Classes passed under the Chairmanship of Sir Narayan Chandavarkar. This explanation proves that there was an ulterior motive behind the Congress Resolution. That motive was not a spiritual motive. It was a political motive.

What happened to the Congress Resolution? The Depressed Classes in their Resolution had called upon the "higher castes, who claim political rights, to take steps tot the purpose of removing the blot of degradation from the Depressed Classes, which has subjected these classes to the worst of treatment in their Own country." What did the Congress do to give effect to this demand of the Depressed Classes? In return for the support it got, the Congress was bound to organise a drive against untouchability to give effect to the sentiments expressed in its

Resolution. The Congress did nothing. The passing of the Resolution was a heartless transaction. It was a formal fulfilment of a condition, which the Depressed Classes had made for giving their support to the Congress-League scheme. Congressmen did not appear to be charged with any qualms of conscience or with any sense of righteous indignation against man's inhumanity to man, which is what untouchability is. They forgot the Resolution the very day on which it was passed. The Resolution was a dead letter. Nothing came out of it.

Thus ended the first chapter in the history of what the Congress has done to the Untouchables.

Chapter II

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

CHAPTER II A SHABBY SHOW

Congress Abandons Its Plan

I

MR. GANDHI Entered Indian, politics in 1919. Very soon thereafter, he captured the Congress. He not only captured it but overhauled it completely and changed it out of recognition. He introduced three main changes. The Old Congress had no sanctions. It only passed a resolution and left it there, hoping that the British Government will take some

action on it. If the British Government did not, it merely repeated the resolution next year and year after it. The old Congress was purely a gathering of intellectuals. It did not go down to the masses to secure their active participation in the political movement, as it did not believe in mass action. The old Congress had no machinery and no funds to carry on mass agitation. It did not believe in spectacular political demonstration to impress the British Government of the magnitude of its strength or to attract and interest the masses. The new Congress changed all this. It made the Congress a mass organisation by opening its membership to all and sundry. Any one paying four annas a year could be a member of the Congress. It forged sanctions behind its resolutions. by adopting the policy of non-co-operation and civil disobedience. It made it a policy to stage demonstration of non-co-operation and civil disobedience and to court gaol. It launched a countrywide organisation and propoganda in favour of the Congress. It put out what is called a Constructive Programme of social amelioration. To finance these activities it started a fund of one crore of rupees. It was called the Tilak Swaraj Fund. Thus by 1922, the Congress was completely transformed by Mr. Gandhi. The new Congress was entirely different from the old, except in, name.

The Constructive Programme of social amelioration was an important feature of the Congress. It was outlined by the Working Committee of the Congress at its meeting in Bardoli, held in February 1922. It was also known as the Bardoli Programme. The resolution setting out the details of the programme ran as follows :—

"The Working Committee advises all Congress Organisations to be engaged in the following activities: —

(1)(1) To enlist at least one crore members of the Congress.

(2)(2) To popularise the spinning wheel and to organise the manufacture of hand-spun and hand-woven khaddar.

(3)(3) To organise national schools.

(4)(4) To organise the Depressed Classes for a better life, to improve their social, mental and moral condition, to induce them to send their children to national schools and to provide for them the ordinary facilities which the other citizens enjoy.

(5)(5) To organise the temperance campaign amongst the people addicted to the drink habit by house to house visits and to rely more upon appeal to the drinker in his home than upon picketing.

(6)(6) To organise village and town Panchayats for the private settlement of all disputes, reliance being placed solely upon force of public opinion and the truthfulness of Panchayat decisions to ensure obedience to them,

(7)(7) In order to promote and emphasise unity among all classes and races and mutual goodwill, the establishment of which is the aim of the movement of non-co-operation, to organise a social service department that will render help to all, irrespective of differences, in times of illness or accident.

(8)(8) To continue the Tilak Memorial Swaraj Fund collections and call upon every Congressman or Congress sympathiser to pay at least one-hundredth part of his annual income for 1921. Every province to send every month twenty-five per cent of its income from the Tilak Memorial Swaraj Fund to the All-India Congress Committee."

The resolution was placed before the All-India Congress Committee at its meeting held in Delhi on 20th February 1922 for confirmation, which it did. I am not concerned to set out what happened to the different items in this Programme of constructive work. I am concerned with only one item namely that which relates to the Depressed Classes and it is that part of it which I propose to deal with.

I will relate the story of the fate, which overtook this part of the Bardoli resolution relating to the Untouchables, stage by stage. To begin

with the story, after the Bardoli resolution was confirmed by the All-India Congress Committee, the matter was remitted to the Working Committee for action. The Working Committee took up the matter at its meeting held in Lucknow in June 1922. On that part of the Bardoli problem, which related to the uplift of the Untouchables, the Working Committee passed the following resolutions: -

"This Committee hereby appoints a Committee consisting of Swami Shradhanandji, Mrs. Sarojini Naidu and Messrs. 1. K. Yajnik and G. B. Deshpande to formulate a scheme embodying practical measures to be adopted for bettering the condition of the so-called Untouchables throughout the country and to place it for consideration before the next meeting of this Committee, the amount to be raised for the scheme to be Rs. 2 lakhs for the present."

This resolution of the Working Committee was placed before the All-India Congress Committee at its meeting held in Lucknow in June 1922. It accepted the resolution of the Working Committee after making an amendment to it saying that "the amount to be raised for the scheme should be 5 lakhs for the present" instead of 2 lakhs as put forth in the resolution of the Working Committee.

It seems that before the resolution appointing the Committee was adopted by the Working Committee, one of its Members Swami Shradhanandji tendered his resignation of the membership of the Committee. At the very sitting at which the Working Committee passed the resolution appointing a Committee, another resolution on the same subject and to the following effect was passed by it: —

"Read letter from Swami Shradhanandji, dated 8th June 1922 for an advance for drawing up a scheme for Depressed Classes work. Resolved that Mr. Gangadhar Rao B. Deshpande be appointed convenor of the Sub-Committee appointed for the purpose and he be requested to convene a meeting at an early date, and that Swami Shradhananda's letter be referred to the Sub-Committee."

The formation of a Committee marks the second stage in the history of this interesting resolution.

The next reference to the resolution appointing the Committee is found in the proceedings of the Congress Working Committee held in Bombay in July 1922. At that meeting the Committee passed the following resolution: —

"That the General Secretary be asked to request Swami Shradhanand to reconsider his resignation and withdraw it and a sum of Rs. 500 be remitted to the Convener, Syt. G. B. Deshpande, for the contingent expenses of the Depressed Classes Sub-Committee."

Here the matter ended, so far as the year 1922 was concerned. Nothing further seems to have been done. The year 1928 came on. Seeing that nothing was done to set going the Scheme for ameliorating the condition of the Untouchables, the Working Committee which met also at Gaya in January, 1928 took up the matter and passed the following resolution; —

"With reference to Swami Shradhanand's resignation, resolved that the remaining members of the Depressed Classes Sub-Committee do form the Committee and Mr. Yajnik be the convener."

Thereafter* the All-India Congress Committee which met Bombay in May 1923 passed the following resolution: —

"Resolved that the question, of the condition of the Untouchables be referred to the Working Committee for necessary action."

Here ends the second stage in the history of the resolution remitting the question of the Untouchables to a special Committee. The third stage in its history is marked by the resolution of the Working Committee passed in May 1923 at its meeting held in Bombay. This resolution ran as follows: —

"Resolved that while some improvement has been effected in the treatment of the so-called Untouchables in response of the policy of the Congress, this Committee is conscious that much work remained yet to be done in this respect and in as much as this question of untouchability concerns the Hindu community particularly, it requests the All-India

Hindu Mahasabha also to take up this matter and to make strenuous efforts to remove this evil from amidst the Hindu Community."

Thus is told the sad tale of the resolution and how it began and how it ended. What shameful close to a flaring start!

It will be seen how the Congress washed its hands of the problem of the Untouchables. It need not have added insult to injury by relegating it to the Hindu Mahasabha. There could not be a body most unsuited to take up the work of the uplift of the Untouchables than the Hindu Mahasabha. If there is any body which is quite unfit for addressing itself to the problem of the Untouchables, it is the Hindu Mahasabha. It is a militant Hindu organisation. Its aim and object is to conserve in every way everything that is Hindu, religious and cultural. It is not a social reform association. It is a purely political organisation, whose main object and aim are to combat the influence of the Muslims in Indian politics. Just to preserve its political strength, it wants to maintain its social solidarity, and its way to maintain social solidarity is not to talk about caste or untouchability. How could such a body have been selected by the Congress for carrying on the work of the Untouchables passes my comprehension. This shows that the Congress wanted somehow to get rid of an inconvenient problem and wash its hands of it. The Hindu Mahasabha of course did not come forth to undertake the work for it had no urge for it and also because the Congress had merely passed a pious resolution recommending the work to them without making any promise for financial provision. So the project came to an inglorious and an ignominious end.

Before closing this chapter, it would not be unprofitable to ascertain why did the Congress abandon the work of social amelioration of the Untouchables of which it had made so much show? Was it because the Congress intended that the scheme should be a modest one not costing more than two to five lakhs of rupees but felt that from that point of view they had made a mistake in including Swami Shradhanand in the Committee and rather than allow the Swami to confront them with a huge scheme which the Congress could neither accept nor reject? The Congress thought it better in the first instance to refuse to make him the

convener⁵mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41C.What Congress and Gandhi CHAPTER II.htm - _msocom_1 and subsequently to dissolve the Committee and hand over the work to the Hindu Mahasabha. Circumstances are not quite against such a conclusion. The Swami was the greatest and the most sincere champion of the Untouchables. There is not the slightest doubt that if he had worked on the Committee he would have produced a very big scheme. That the Congress did not want him in the Committee and was afraid that he would make big demand on Congress funds for the cause of the Untouchables is clear from the correspondence ⁶mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41C.What Congress and Gandhi CHAPTER II.htm - _msocom_2 that passed between him and Pandit Motilal Nehru, the then General Secretary of the Congress, and which is printed in the Appendix. If this conclusion is right, then it shows how empty of sincerity were the words of the Congress, which passed that resolution.

Did the Congress abandon the programme because it was revolutionary? The resolution was in no sense a revolutionary resolution. This will be clear from the note which the Working Committee had appended to the resolution and which the All-India Congress Committee had approved. The note said: —

"Whilst therefore in places, where the prejudice against the Untouchables is still strong separate schools and separate wells must be maintained out of Congress funds, every effort should be made to draw such children to national schools and to persuade the people to allow the Untouchables to use the common wells."

Obviously, the Congress was not out for the abolition of Untouchability. It had accepted the policy of separate schools and separate wells. The resolution did no more than to undertake amelioration of the condition of the Untouchables. And even such a timid and mild programme the Congress was unable to carry through and which it gave up without remorse or shame.

II

Did the Congress abandon the programme because it had no funds? Quite the contrary. The Congress had started the Tilak Swaraj Fund in 1921. How much money did the Congress collect? The following table will give some idea. Rupees one crore and thirty lakhs were contributed by the public to the fund. The fund was collected to carry out Congress propaganda and to finance the constructive programme of the Congress as drafted by the Working Committee at Bardoli. How was this huge amount spent by the Congress? Some idea as to the purposes on which the money out of this fund was spent can be gathered from the list of grants voted by the Working Committee during the years 1921, 1922 and 1923.

⁸mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41C.What Congress and Gandhi CHAPTER II.htm - _msocom_4

1. Grants voted by the Working Committee at its meeting held in Calcutta on January 31st and February 1st, 2nd and 3rd 1921 :—

1. Rs. 1,00,000 to remain at the disposal of Mahatma Gandhi for the support of lawyers who give up their practice and stand in need of support (iv).

2. Read the following telegram dated the 31st January 1921 from Syt. C. Rajagopalachariar :—

"Regret unable to attend meeting. Selected full time public workers for Tamil, Kerala part Karnatak about hundred, of whom about forty lawyers suspending practice. Pending collection Tilak Fund sanction drawing Rs. 5,600 per month. Students' movement progressing

rapidly though newspapers do not show up news. Must carry on against parental opposition, least two months. Must draw three thousand per month for this. Committee must immediately wire authority issuing Swarajya Fund receipts in name of Congress for convenient denominations like Khilafat receipts. Confident to make up all advances in three months. Do not hope large sums Madras."

Resolved that a sum of Rs. 8,600 be advanced to Tamil, Kerala and the Karnatak parts of the Madras Presidency for one month for the present, and for future advances the matter be placed before the next meeting of the Working Committee (xx).

II. Grants voted by the Working Committee at its meeting held at Bezwada on the 81st March and 1st April 1921 :—

3. A lump sum of Rs. 6,000 be advanced to Pandit Mohanlal Nehru, Secretary, U.P. Provincial Congress Committee, for carrying on propaganda and collecting funds (v),

4. Rs. 17,000 be sanctioned for the remainder of the current year for the expenses of the office of the President, the Secretaries, the Cashier, and that out of the above a sum of Rs. 300 per mensem be assigned to Mr. C. Rajagopalachariar for the expenses of his secretary and the President's steno-typist (vii), 5. A sum of 1,000 dollars remitted by cable to Mr. D. V. S. Rao of the India Home Rule League of America, 1,400 Broad-way, New York (viii)."

III. The Working Committee at its resolution No. 18 dated 81st July 1921 appointed a Grants Sub-Committee to dispose of ail applications for grants. The Sub-Committee consisted of Mr. Gandhi, Pandit Motilal Nehru and Seth Jamnalal Bajaj The following grants were voted by the Grants Sub-Committee in the course of several meetings :—

"6. A sum of Rs. I lakh be voted as a grant for Swadeshi work in Bihar and a loan of Rs. 4 lakhs recommended for the same purpose (i).

7. A loan of Rs. 35,000 to the C. P. (Hindustani) Provincial Congress Committee for Swadeshi (ii).

8. Rs. 25,000 for famine relief in the U.P. (iii).
9. Rs. 25,000 to the Punjab Provincial Congress Committee for famine relief, and the Jagraon School (iv).
10. Rs. 50,000 on the telegraphic application for the relief of the distressed in Malabar (v).
11. Rs. 15,000 to the Gandhi Ashram, Benares City (vi).
12. Rs. 10,000 to the Pallipadu Ashram (vii).
13. Rs. 15,000 to the Andhra Jatheeya Kalashala, Masuli-patam (viii).
14. Rs. 10,000 to the Secretary, Taluka Congress Committee, Karjat (Maharashtra) (xx).
15. Rs. 10,000 to the Anatha Vidyarthi Griha, Chinchwad (Maharashtra) (x).
16. The applications of (1) Mr, K, G. Patade, Assistant General Secretary of the Depressed Classes Mission Society of India, (2) of the Kulladaikurichi National School, Vidyasangam and (3) of the Rajahmundry Depressed Classes Mission were rejected as unbacked and not in accordance with the instructions issued by the Sub-Committee (xii),
17. Rs. 10000 to the Kerala Provincial Congress Committee to be principally spent on Swadeshi and the popularising of the hand-spinning and hand-weaving (xx).
18. Rs. 60,000 to the Madras Provincial Congress Committee (xxii).
19. Rs. 1,50,000 set apart for the U. P. Provincial Congress Committee (xxiii).
20. Rs. 63,000 to the Sind Provincial Congress Committee (xxiv).
21. Rs. 25,000 for famine relief in the Ceded Districts in Andhra (xxv).
22. Rs. 20,000 to the Maharashtra Provincial Congress Committee (xxvi).

23. Rs. 20,000 be granted to the Ganjam District Congress Committee for Swadeshi and for popularising hand-spinning and hand-weaving (xvii)."

The Working Committee dissolved the Sub-Committee by resolution No. 8 dated the 6th November 1921 and took the question, of voting grants in its own hands.

IV. Grants voted by the Working Committee at its meeting held at Delhi on the 3rd, 5th and 6th November 1921;—

"24. Rs. 25,000 to Mr. Phukan of Assam for the purchase of cotton to be used in the manufacture of hand-spun yarn and khaddar (ix).

25. Rs. 5,000 to the Krishnapuram, Guntur District Andhra (x),

26. Rs. 10,000 as an additional grant to the Andhra Jateeya Kalashala (xi).

27. Rs. 1,000 to the Rajahmundry Depressed Classes Mission (xii).

28. Rs. 5,000 to the Angalur Jateeya Parishramalayam (xM).

29. Rs. 3,000 to Kautaram, Andhra (xiv). 30. Rs. 15,000 to the Andhra Provincial Congress Committee for general Swadeshi work (xv).

31. Rs. 3,000 to the Masulipatam District Congress Committee (xvi).

32. Rs. 30,000 to the Utkal Provincial Congress Committee earmarked for the manufacture of handspun yarn and khaddar (xvii).

33. Rs. 3,000 to help the toddy tappers of the Thana District who wanted to give up their profession (xviii).

34. Rs. 5,000 to the Nagpur Tilak Vidyalaya (xix).

35. Rs. 5,000 to the Nagpur Asahyogashram (xx).

36. Rs. 25,000 to the Ajmere Provincial Congress Committee for the purpose of increasing the production of khaddar and charkah yarn (xxi).

37. Rs. 18,00,000 if possible, and in any case, at least Rs, 10,00,000 for Gujarat (xxii).

38. Rs. 40,000 to be immediately remitted to Sjt. C. Raja-gopalachariar for the relief of the distressed in Malabar (xxiii)."

V. Grants voted by the Working Committee at its meeting held in Bombay on the 22nd and 28rd November 1921 :—

"39. Rs. 10,000 to the Jat Anglo Sanskrit High School, Rohtak, Punjab (iii).

40, Rs. 25,000 to the Bijapur District Congress Committee for famine relief and Swadeshi work (iii).

41. Rs, 30,000 to help the dismissed mill-labourers of Madras by giving them Swadeshi work (iii)."

II. Grants Voted in 1922.

1. Grants voted by the Working Committee at its meeting held in Bombay on 17th January 1922 :—

"42. Application by the U. P. Provincial Congress Committee for Rs. 50,000 already sanctioned and for a further grant of one lakh of rupees for Swadeshi work, be referred to Mahatma Gandhi for final disposal (ii).

43, The application of the Assam Provincial Congress Committee for a remittance of Rs. 25,000, the balance out of the sanctioned grant of Rs. 50,000 be referred to Mahatma Gandhi for final disposal (vi)."

II. Grants voted by the Working Committee at its meeting held in Delhi on 26th February 1922 ;—

"44. Rs. 10,000 for initial expenditure on foreign scheme prepared by Mahatma Gandhi (i).

45. Rs. 14,000 for the office expenditure for the current year (iv).! "

III. Grants voted by the Working Committee at its meeting held in Ahmedabad on 17th and 18th March 1922 ;—

"46. Rs. 3,00,000 for organizing a larger production and marketing of khaddar (i).

47. Rs. 10,000 out of Rs. 50,000 already sanctioned for the U.P. Provincial Congress Committee (ix).

48. Rs. 5,000 to the Kerala Provincial Congress Committee for general Congress work; amount to be deducted from the sum of Rs. 84,000 sanctioned for relief in Malabar and further Rs. 20,000 out of the above amount of Rs. 84,000 be remitted for relief work (x).

49. Rs. 10,000 to the Rohtak Anglo-Vernacular School {xi).

50. Rs. 15,000 out of the amount of Rs. 25,000 sanctioned for famine relief in the Ceded Districts be paid to Sjt. T. Prakasam representing the Andhra Provincial Congress Committee (xii)."

IV. Grants voted by the Working Committee at its meeting held at Calcutta on the 20th, 21st and 22nd April 1922:—

"51. Rs. 5,000 to the Antyala Karyalaya, Ahmedabad, for organizing education amongst Depressed Classes in Gujarat (v).

52. Rs. 40,000 as loan to Moulvi Badrul Hasan of Hyderabad Deccan to be exclusively devoted to the Khaddar work (vi). 53. Rs. 25,000 to the Nationalist Journals Ltd., to enable them to re-start the Independent and run it on Congress lines, providing for a lien on. properties of the Company for the amount advanced {xix),"

V. Grants voted by the Working Committee at its meeting held in Bombay on the 12th, 18th, 14th and 15th May 1922 :—

"54. Rs. 17,381 to the Antyaja Karyalaya, Ahmedabad, in addition to Rs. 5,000 already granted (x).

55. Resolved that the Punjab Provincial Congress Committee's application for Rs. 1,25,000 for Shahadara Depressed Classes settlement

cannot be considered unless the Working Committee is satisfied that sufficient funds are raised locally to start the scheme and the scheme so started is in working order (xi).

56. Resolved that Rs. 5,000 be earmarked for Ahmednagar Depressed Classes home and that the amount be recommended to be paid when the Working Committee is satisfied that the home is started by local efforts and is in working order (xii).

57. Rs. 10,000 be earmarked for Depressed Classes work in Madras, as applied for by Mr. S. Srinivas Iyengar, to be paid when the application is sent to this Committee through the Provincial Congress Committee and on this Committee being satisfied that at least an equal amount is raised by local effort (xlii).

58. Rs. 7,000 to Mr. T. Prakasam for Depressed Classes work in Andhra (xxiv)."

VI. Grants voted by the Working Committee at its meeting held in Lucknow on June 6th, 7th and 10th, 1922 :—

"59. Rs. 50,000 for khaddar work in Sind Province (vii). 60. Rs. 1,000 be advanced to Sjt. C. Rajagopalachariar for contingent expenses (viii)."

VII. Grants voted by the Working Committee at its meeting held in Delhi on 30th June 1922 :—

"61. Rs. 180 per mensem for the next three months be sanctioned for the expenses of six workers from Bengal to serve in Assam (vi)."

VIII. Grants voted by the Working Committee at its meeting held in Bombay on 18th and 19th July 1922 :—"62. Rs. 5,000 to Assam (i).

63. Rs. 1,50,000 each as loan for Khaddar work in Andhra and Utkal (x)."

IX. Grants voted by the Working Committee at its meeting held in Calcutta on 18th, 19th and 25th November 1922 ;—

"64. Rs. 3,00,000 to Gujarat as grant (xii). 65. Rs. 16,000 for the expenses of the Civil Disobedience Enquiry Committee (xxi)."

III. Grants Voted in 1923.

1. Grants voted by the Working Committee at its meeting held in Gaya on the 1st and 2nd of January 1928 :—

"66. Rs. 3,000 to the General Secretary, Indian National Social Conference, for the removal of untouchability and the promotion of temperance and inter-communal unity (xxii),

67. Rs. 1,200 as aid to the Navayuga, a Hindi daily paper of Allahabad, on condition that it would carry on propaganda in pursuance of the resolutions of the Congress held at Gaya (xxxix), 68. Rs. 10,000 for the Congress Publicity Bureau {xxxii}."

II. Grants voted by the Working Committee at its meeting held in Allahabad on 26th and 28th February 1928 :—

"69. Rs. 10,000 for the Depressed Classes work by the Tamil Desh Provincial Congress Committee (vi).

70. Loan of Rs. 15,000 be advanced to the U.P. Provincial Congress Committee on the application of Pandit Jawaharlal Nehru {x}.

71. A loan of Rs. 15,000 be advanced to Tamil Desh-Provincial Congress Committee on the application of Mr. C. Rajagopalachariar (x).

72. Rs. 5,000 granted to the U. P. Provincial Congress Committee for Gandhi Ashram, Benares {xi}."

III. Grants voted by the Working Committee at its meeting held in Bombay on 23rd, 24th, 25th, 26th 27th and 28th May 1923 :—

"73. Loan of Rs. 5 lakhs to the Gujarat Provincial Congress Committee to relieve the surplus stock of khadi in various provinces in the country (v),

74. Loan of Rs. 50,000 be advanced to Bengal Provincial Congress Committee for Khadi work (viii).

75. Rs. 15,000 to the Bihar Rashtriya Vidyalaya (xii),

76. Rs. 10,000 for the Satyavadi Vidyalaya.

77. Rs. 5,000 Swavalamban Rashtriya Pathshala (xiv).

78. Rs. 5,000 to Dr. Sathaye for carrying on such work as the Congress Labour Committee decides (xxxiv)."

IV. Grants voted by the Working Committee at its meeting held in Nagpur on 7th, 8th, 11th and 12th July 1928 :—

"79. Rs. 20,000 to Sjt. Brajaraj, Secretary, Hindi Sahitya Sammelan for the work of teaching Hindustani in the Madras Presidency (ix).

80. Rs. 2,000 to the C. P. Hindustani Provincial Congress Committee to be utilized for general Congress purposes with special regard to rendering help to Satyagraha in Nagpur (xi)"

The reader may not get a precise idea of the management or mismanagement of public funds by the Congress from this itemized account of expenditure. Was this expenditure regulated by any principle? Was it distributed according to the needs of the Provinces? Consider the following table:—

Table 2

Provinces	Amount Granted	Population	Percentage Grant	Percentage of Grant actually
		9 mk:@MSITSt		

		ore:C:\Import ant\Writing_O f_Babasaheb.c hm::/41C.Wha t Congress and Gandhi CHAPTER II.htm - _msocom_5	due on the basis of Populati on ratio to total Populati on	paid
	Rs.			
General-All- India ¹⁰ [f.6]	4,94,000	227,238,00 0		10
Bombay	26,90,38 1	16,012,623	8	54.3
Madras	5,05,000	42,319,000	18	10.1
Bihar and Orissa	5,65,000	33,820,000	15	11.3
U.P.	3,11,200	45,376,000	20	6.26
Sind	1,13,000	3,279,377	—	2.2
Assam	51,080	6,735,000	3	1.1
Bengal	50,000	46,241,000	20	1.0
O.P.	47,000	12,780,000	5	.95
Punjab	45,000	20,675,000	9	.9
Hyderab	40,000	—	—	.81
AJmer	25,000	—	—	.5
Foreign	14,000	—	—	.28
Total	49,50,66			

	1			
--	---	--	--	--

Was it distributed on the basis of cultural units and their relative size? Compare the following figures;—

Table 3

Linguistic Areas	Total Grant	Amount of Grant	Percentage of the Total Grant to the Province	Percentage of Population of the Area to the Population of the Province
	Rs.	Rs.		
Bombay Presidency	26,90,381	—	—	100
Gujarat	—	26,22,381	97.4	18
Maharashtra	—	43,000	1.6	69
Karnatak,,	—	25,000	0.93	13
Central	47,000	—	—	100
Marathi Districts		10,000	21.2	45
Hindustani	—	37,000	78.7	55

Madras Presidency	5,05,000	—	—	100
Tamil Nad	—	1,03,000	20.4	38
Andhra	—	3,02,000	60.0	52
Kerala	—	1,00,000	19.6	10
Bihar and Orissa	5,65,000	—	—	100
Bihar	—	5,15,000	91.0	73
Orissa	—	50,000	0.9	27

From these figures it is clear that the distribution of these sums was not made on the basis of any intelligible principle. There is no relation between the grants and the population, nor between the grants and the claims of the cultural units. A province like Bombay with a population of one and a half crores gets as much as 27 lakhs while U. P. and Madras with a population of about 4 crores each get no more than about five lakhs severally. Consider the grants in relation to cultural units. Take Bombay Presidency. It includes three cultural units, Maharashtra, Gujrath and Karnatak. Out of the 26 lakhs and 90 thousand given to the Bombay Presidency Gujrath with only 18 percent of the population of the Province got as much as 26 lakhs and 22 thousand i.e., 97.4 percent and Maharashtra with a population of 69 per cent got only Rs. 48,000 or 1.6 per cent and Karnatak, with a population of 13 per cent got Rs. 25,000 or .9 per cent of the grant. In C. P. out of a total grant of Rs. 47,000 the Hindustani districts having 55 per cent of the population got Rs. 37,000 or 78.7 per cent while the Marathi speaking districts having

45 per cent of the population got only Rs. 10,000 i.e., 21.2 per cent. In Bihar and Orissa out of the total grant of 5 lakhs and 65 thousand Bihar got 5 lakhs and 15 thousand or 91 per cent with a population of 78 per cent, and Orissa got only 50 thousand or 9 per cent while its population was as much as 27 percent. The same inequity is noticeable in the distribution of grants in the three areas of the Madras Presidency.

There was not only no principle, there was shameful favouritism in the distribution of the fund. Out of the total of 49 1/2 lakhs which was distributed in the three years Gujrath— Mr. Gandhi's province—got 26 1/4 lakhs while the rest of India got 23 lakhs. This means that a population numbering 29 1/2 lakhs got 26 1/4 lakhs while the rest of India numbering about 23 crores got 23 lakhs !

There was no check, no control, no knowing for what purpose money was voted, and to whom it was granted. Note the following cases :—

Table 4

Moneys allotted but kept at the Disposal of Individuals without Appropriating them to any specified purpose	Moneys allotted without Appropriation to any purpose without naming the guarantee
Rs.	Rs.
Moulvi Badrul Haaan 40,000	To Gujrath 3,00,000
T. Prakasam 7,000	To Gujrath 18,00,000
C. Rajagopalachariar 1,000	To Gujrath 3,00,000
Barajaj 20,000	

Mr. Gandhi	1,00,000	
------------	----------	--

It is not known whether these huge sums kept at the disposal of the named payees were accounted for or who received the formidable amounts made payable to the nameless payees. Even if there were satisfactory answers to these questions there can be no doubt that a worse case of frenzied finance of extravagance and waste, it would be very difficult to find. It is a sad episode marked by a reckless plunder committed by the predatory leaders of the Congress of public money for nursing their own constituencies without any qualms of conscience.

It is unnecessary to pursue the story of the organised and systematic loot by Congressmen of the balance of 1 crore and 80 lakhs which was spent in subsequent years. It is enough to say that never was there such an organised loot of public money. The point of immediate interest however is that the scrutiny of this list of grants does not show the amelioration of the Untouchables, which has been one of the purposes for which money has been advanced from the Swaraj Fund. One would have expected the Congress to make the amelioration of the Untouchables as the first charge on the Swaraj Fund. It should have at least made it a charge if not the first charge especially when thousands of rupees were spent on feeding briefless lawyers who were alleged to have given up practice in the cause of the nation without even an inquiry whether they had any, when thousands of rupees were spent to feed toddy drawers who had given up their profession for living on alms from public fund and many other wild cat schemes carrying the marks of dishonesty on their faces. But it did nothing of the kind. Instead, the Congress proposed that a separate fund should be started for the amelioration of the Untouchables. And what was to be the dimension of this separate Untouchable Fund? The All-India Congress Committee fixed it at five lakhs. The Working Committee felt it was too big an amount for so unimportant and so unprofitable a work as the amelioration of the Untouchables and reduced its total to Rs. two lakhs. Two lakhs for sixty millions Untouchables!!

This was the grand sum that was fixed by the Congress for the salvage of the Untouchables. How much of this was actually appropriated? Here are the figures:—

Table 5

Purpose	Amount Sanctioned
	Rs.
Rajamuhendry Depressed Class Mission	1,000
Antyaj Karyalaya, Ahmedabad	5,000
Antyaj Karyalaya, Ahmedabad	17,381
Depressed Classes Work in Andhra	7,000
National Social Conference for Depressed Classes Work	3,000
Tamil District P.C.C. for Depressed Classes Work	10,000
Total	43,381

To sum up, the Congress could find only Rs. 48,881 out of Rs. 49 1/2 lakhs which it spent for carrying out the Constructive otherwise known as the Bardoli Programme in which the uplift of the Untouchables was given so much prominence. Can there be a grosser instance of insincerity than this? Where is the love for the Untouchables which the Congress professed for the Untouchables? Where is the desire of the Congress to undertake the uplift of the Untouchables? Would it be wrong to say that the Bardoli resolution was a fraud in so far as it related to the Untouchables?

One is however bound to ask one question. Where was Mr. Gandhi when all this was happening to the cause of the Untouchables in the Congress Camp? The question is very relevant because it was Mr. Gandhi who had laid stress, ever since he entered the Congress, upon the intimate relation between the winning of Swaraj and the abolition of Untouchability. In the Young India, which was Mr. Gandhi's organ of 8rd November 1921, Mr. Gandhi wrote :—

"Untouchability cannot be given a secondary place on the programme. Without the removal of the taint Swaraj is & meaningless term. Workers should welcome social boycott and even public execration in the prosecution of their work. I consider the removal of untouchability as a most powerful factor in the process of attainment of Swaraj."

Accordingly, he had been exhorting the Untouchables not to join hands with the British against Swaraj but to make common cause with the Hindus and help to win Swaraj. In an article in Young India dated 20th October 1920, Mr. Gandhi addressed the Untouchables in the following terms ;—

"There are three courses open to these down-trodden members of the nation. For their impatience they may call in the assistance of the slave-owning Government. They will get it, but they will fall from the frying pan into the fire. Today they are slaves of slaves. By seeking Government aid, they will be used for suppressing their kith and kin. Instead of being sinned against, they will themselves be the sinners. The Musalmans tried it and failed. They found that they were worse than before. The Sikhs did it unwittingly and failed. Today there is no more discontented community in India than the Sikhs. Government aid is, therefore, no solution.

The second is rejection of Hinduism and wholesale conversion to Islam or Christianity. And if a change of religion could be justified for worldly betterment I would advise it without hesitation. But religion is a matter of the heart. No physical inconvenience can warrant abandonment of one's own religion. If the inhuman treatment of the

Panchamas were a part of Hinduism, its rejection would be a paramount duty both for them and for those like me who would not make a fetish even of religion and condone every evil in its sacred name. But I believe that untouchability is no part of Hinduism. It is rather its excrescence to be removed by every effort. And there is quite an army of Hindu reformers who have set their heart upon ridding Hinduism of this blot. Conversion therefore, I hold, is not remedy whatsoever.

Then, there remains, finally, self-help and self-dependence, with such aid as the non-Panchama Hindus will render of their own motion, not as a matter of duty. And herein comes the use of Non-co-operation. . . Therefore, by way of protest against Hinduism, the Panchamas can certainly stop all contact and connection with the other Hindus so long as the special grievances are maintained. But this means organised intelligent effort. And so far as I can see, there is no leader among the Panchamas who can lead them to victory through Non-cooperation,

The better way therefore, perhaps, is for the Panchamas heartily to join the great national movement that is now going on for throwing off the slavery of the present Government. It is easy enough for the Panchama friends to see that Non co-operation against this evil Government pre-supposes cooperation. between the different sections forming the Indian nation."

In the same article Mr. Gandhi told the Hindus ;—

"The Hindus must realise that, if they wish to offer successful Non-co-operation against the Government they must make common cause with the Panchamas; even as they have made common cause with the Musalmans."

He repeated the warning in the Young India of 29th December 1920 in which he said : —

"Non-co-operation against the Government means cooperation among the governed, and if Hindus do not remove the sin of untouchability, there will be no Swaraj whether in one year or in one

hundred years. Swaraj is as unattainable without the removal of the sins of untouchability as it is without Hindu-Muslim unity."

From all this, one would expect Mr. Gandhi to see that the Congress policy of ameliorating the condition of the Untouchables as set out in the Bardoli resolution was given effect to. The fact is that Mr. Gandhi, besides giving utterance to pious platitude, did not take the slightest interest in the programme of the amelioration. If he was so minded, he could have appointed another Committee. If he was so minded, he could have saved a large part of the Tilak Swaraj Fund from the organised loot that was being carried on by Congressmen and reserved it for the benefit of the Untouchables. Strange as it may appear, he sat silent and unconcerned. Instead of feeling any remorse, Mr. Gandhi justified his indifference to the cause of the Untouchables by arguments so strange that no one would believe them. They are to be found in the Young India of 20th October 1920:--

"Should not we the Hindus wash our bloodstained hands before we ask the English to wash theirs? This is a proper question reasonably put. And if a member of a slave, nation could deliver the suppressed classes from their slavery, without freeing myself from my own I would do so today. But it is an impossible task. A slave has not the freedom even to do the right thing."

Mr. Gandhi concluded by saying ;--

"That process has commenced and whether the Panchamas deliberately take part in it or not, the rest of the Hindus dare not neglect them without hampering their own progress. Hence though the Panchama problem is as dear to me as life, itself, I rest satisfied with the exclusive attention to national non-co-operation. I feel sure that the greater includes the less."

Thus ended the second chapter of what the Congress has done to the Untouchables. The regrettable part of this tragedy is the realisation of the fact how Mr. Gandhi has learned to find uncton in illusions. Whether Mr. Gandhi likes to live in a world of illusions may be a matter of doubt. But there is no doubt he likes to create illusions in order to

use them as arguments to support his cherished proposition. The reason he has given for not taking personal responsibility for the uplift of the Untouchables furnishes the best evidence of this habit of Mr. Gandhi. To tell the Untouchables that they must not act against the Hindus, because they will be acting against their kith and kin, may be understood. But to assume that the Hindus regard the Untouchables as their kith and kin is to set up an illusion. To ask the Hindus to undertake the removal of untouchability is good advice. But to go to the length of assuring oneself that the Hindus are so overwhelmed with a sense of shame for the inhuman treatment they have accorded to the Untouchables that they dare not fail to abolish untouchability and that there is a band of Hindu Reformers pledged to do nothing but remove untouchability is to conjure an illusion to fool the Untouchables and to fool the world at large. It may be sound logic to argue that what benefits the whole also benefits the part and that one need not confine himself to looking after the part. But to assume that a piece, as separate as the Untouchables, is a part of the Hindu whole is to deceive oneself. Few know what tragedies the Untouchables as well as the country have had go through on account of the illusions of Mr. Gandhi.

Chapter III

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

CHAPTER III A MEAN DEAL

Congress Refuses To Part With Power

I

IN the Government of India Act of 1919, there was a provision which had imposed an obligation on, His Majesty's Government to appoint at the end of ten years a Royal Commission to investigate into the working of the Constitution and report upon, such changes as may be found necessary. Accordingly, in 1928 a Royal Commission was appointed under the Chairmanship of Sir John Simon. Indians expected that the Commission would be mixed in its personnel. But Lord Birkenhead who was then the Secretary of State for India was opposed to the inclusion of Indians and insisted on making it a purely Parliamentary Commission. At this, the Congress and the Liberals took great offence and treated it as an insult. They boycotted the Commission and carried on a great agitation against it. To assuage this feeling of opposition it was announced, by His Majesty's Government that after the work of the Commission was completed representative Indians would be assembled for a discussion before the new constitution for India is settled. In accordance with this announcement representative Indians were called to London at a Round Table Conference with the Representatives of Parliament and of His Majesty's Government.

On the 12th November 1930, His late Majesty King George V formally inaugurated the Indian Round Table Conference. From the point of view of Indians the Round Table Conference was an event of great significance. Its significance lay in the recognition by His Majesty's Government of the right of Indians to be consulted in the matter of framing a constitution for India. For the Untouchables it was a landmark in their history. For, the Untouchables were for the first time allowed to be represented separately by two delegates who happened to be myself and Dewan Bahadur R. Srinivasan. This meant that the Untouchables were regarded not merely a separate element from the Hindus but: also of such importance as to have the right to be consulted in, the framing of a constitution for India.

The work of the Conference was distributed among nine committees. One of these committees was called the Minorities Committee to which

was assigned the most difficult work of finding a solution, of the Communal question. Anticipating that this Committee was the most important committee the Prime Minister, the late Mr. Ramsay MacDonald, himself assumed its chairmanship. The proceedings of the Minorities Committee are of the greatest importance to the Untouchables. For, much of what happened, between the Congress and the Untouchables and which has led to bitterness between them will be found in the proceedings of that Committee.

When the Round Table Conference met, the political demands of communities other than the Untouchables were quite well known. Indeed the Constitution of 1919 had recognised them as statutory minorities and provisions relating to their safety and security were embodied in it. In their case the question was of expanding those provisions or altering their shape. With regard to the Depressed Classes the position was different. The Montagu-Chelmsford Report which preceded the Constitution of 1919 had said in quite unmistakable terms that provision must be made in the Constitution for their protection.

But unfortunately when the details of the Constitution were framed, the Government of India found it difficult to devise any provisions for their protection except to give them token representation in the legislatures by nomination. The first thing that was required to be done was to formulate the safeguards deemed necessary by the Untouchables for their protection against the tyranny and oppression of the Hindus. This I did by submitting a Memorandum to the Minorities Committee of the Round Table Conference. To give an idea of the safeguards that were formulated by me, I reproduce below the text of the Memorandum :—

A Scheme of Political Safeguards for the Protection of the Depressed Classes in the Future Constitution of a self-governing India, submitted to the Indian Round Table Conference.

The following are the terms and conditions on which the Depressed Classes will consent to place themselves under a majority rule in a self-governing India.

Condition No. I: EQUAL CITIZENSHIP

The Depressed Classes cannot consent to subject themselves to majority rule in their present state of hereditary bondsmen. Before majority rule is established their emancipation from the system of untouchability must be an accomplished fact. It must not be left to the will of the majority. The Depressed Classes must be made free citizens entitled to all the rights of citizenship in common with other citizens of the State.

(A) To secure the abolition of untouchability and to create the equality of citizenship, it is proposed that the following fundamental right shall be made part of the constitution of India,

FUNDAMENTAL RIGHT

U.S.A constitution amendment XIV and Government of-Ireland Act 1920, 10 & 11, Geo. V. Ch. 67, Sec. 5(2).	"All subjects of the State in India are equal before the law and possess equal civic rights. Any existing enactment, regulation, order, custom or interpretation of law by which any penalty, disadvantage, disability is imposed upon or any discrimination is made against any subject of the State on account of untouchability shall, as from the day on which this Constitution comes into operation, cease to have any effect in India."
--	--

(B) To abolish the immunities and exemptions now enjoyed by executive

This is so in all Constitutions. See Prof.	officers by virtue of Sections 110 and 111 of the Government of India Act 1919 and their liability for executive action be made co-
--	---

Keith's remarks in Cmd. 207, p.56.	extensive with what it is in the case of a European British Subject.
------------------------------------	--

Condition No. 11:

FREE ENJOYMENT OF EQUAL RIGHTS

It is no use for the Depressed Classes to have a declaration of equal rights. There can be no doubt that the Depressed Classes will have to face the whole force of orthodox society if they try to exercise the equal rights of citizenship. The Depressed Classes therefore feel that if these declarations of rights are not to be mere pious pronouncements, but are to be realities of everyday life, then they should be protected by adequate pains and penalties from interference in the enjoyment of these declared rights.

(A)(A) The Depressed Classes therefore propose that the following section should be added, to Part XI of the Government of India Act 1919, dealing with Offers, Procedure and Penalties :—

(i) Offence of infringement of Citizenship.

U.S. Status At Large civil Rights Protection Acts of April	"Whoever denies to any person except for reasons by law applicable to persons of all classes and regardless of any previous condition of untouchability the full enjoyment of any of the accommodations, advantages, facilities, privilege of inns, educational institutions, roads, paths, streets, tanks, wells and other watering places, of public
--	--

9, 1866, and of March 1, 1875 - passed in the interest of the Nagroes after their emancipation.	conveyances on land, air or water, theatres or other places of public amusement, resort or convenience whether they are dedicated to or maintained or licensed for the use of the public shall be punished with imprisonment of either description for a term which may extend to five years and shall also be liable to fine."
---	---

(B) Obstruction by orthodox individuals is not the only menace to the Depressed Classes in the way of peaceful enjoyment of their rights. The commonest form of obstruction is the social boycott. It is the most formidable weapon in the hands of the orthodox classes with which they beat down any attempt on the part of the Depressed Classes to undertake any activity if it happens to be unpalatable to them. The way it works and the occasions on which it is brought into operation are well described in the Report of the Committee appointed by the Government of Bombay in 1928 "to enquire into the educational, economic and social condition of the Depressed Classes (untouchables) and of the Aboriginal Tribes in the Presidency and to recommend measures for their uplift." The following is an extract from the same :—

Depressed Classes and Social Boycott

"102. Although we have recommended various remedies to secure to the Depressed Classes their rights to all public utilities we fear that there will be difficulties in the way of their exercising them for a long time to come. The first difficulty is the fear of open violence against them by the orthodox classes. It must be noted that the Depressed Classes form a small minority in every village, opposed to which is a great majority of the orthodox who are bent on protecting their interests and dignity from any supposed invasion by the Depressed Classes at any cost. The danger of prosecution by the Police has put a limitation upon the use of violence by the orthodox classes and consequently such cases are rare.

"The second difficulty arises from the economic position in which the

Depressed Classes are found to-day. The Depressed Classes have no economic independence in most parts of the Presidency. Some cultivate the lands of the orthodox classes as their tenants at will. Others live on their earnings as farm labourers employed by the orthodox classes and the rest subsist on the food or grain given to them by the orthodox classes in lieu of service rendered to them as village servants. We have heard of numerous instances where the orthodox classes have used their economic power as a weapon against those Depressed Classes in their villages, when the latter have dared to exercise their rights, and have evicted them from their land, and stopped their employment and discontinued their remuneration as village servants. This boycott is often planned on such an extensive scale as to include the prevention of the Depressed Classes from using the commonly used paths and the stoppage of sale of the necessaries of life by the village Bania. According to the evidence sometimes small causes suffice for the proclamation of a social boycott against the Depressed Classes. Frequently it follows on the exercise by the Depressed Classes of their right to the use of the common well, but cases have been by no means rare where a stringent boycott has been proclaimed simply because a Depressed Class man has put on the sacred thread, has bought a piece of land, has put on good clothes or ornaments, or has carried a marriage procession with the bridegroom on the horse through the public street.

"We do not know of any weapon more effective, than this social boycott which could have been invented for the suppression of the Depressed Classes. The method of open violence pales away before it, for it has the most far reaching and deadening effects. It is the more dangerous because it passes as a lawful method consistent with the theory of freedom of contract. We agree that this tyranny of the majority must be put down with a firm hand, if we are to guarantee the Depressed Classes the freedom of speech and action necessary for their uplift."

In the opinion of the Depressed Classes the only way to overcome this kind of menace to their rights and liberties is to make social boycott an offence punishable by law. They are therefore bound to insist that the following sections should be added to those included in Part XI, of the

Government of India Act 1919, dealing with Offences, Procedure and Penalties.

1. 1. OFFENCE OF BOYCOTT DEFINED

(i) A person shall be deemed to boycott another who—

<p>This and the following legal provisions are bodily taken from Burma Anti Boycott Act 1822 with a few changes to suit the necessities of the case.</p>	<p>(a) (a) refuses to let or use or occupy any house or land, or to deal with, work for hire, or do business with another person, or to render to him or receive from him any service, or refuses to do any of the said things on the terms on which such things should commonly be done in the ordinary course of business, or</p> <p>(b) abstains from such social, professional or business relations as he would, having regard to such existing customs in the community which are not inconsistent with any fundamental right or other rights of citizenship declared in the Constitution ordinarily maintain with such person, or</p> <p>(c) in any way injures, annoys or interferes with such other person in the exercise of his lawful rights.</p>
--	---

II. PUNISHMENT FOR BOYCOTTING

Whoever, in consequence of any person having done any act which he was legally entitled to do or of his having omitted to do any act which he was legally entitled to omit to do, or with intent to cause any person to do any act which he is not legally bound to do or to omit to do any act which

he is legally entitled to do, or with intent to cause, harm to such person in body, mind, reputation or property, or in his business or means of living, boycotts such person or any person in whom such person is interested, shall be punished with imprisonment of either description which may extend to seven years or with fine or with both,

Provided that no offence shall be deemed to have been committed under this Section, if the Court is satisfied that the accused person has not acted at the instigation of or in collusion with any other person or in pursuance of any conspiracy or of any agreement or combination to boycott.

III. PUNISHMENT FOR INSTIGATING OR PROMOTING A BOYCOTT

Whoever—

(a) publicly makes or publishes or circulates a proposal for, or (b) makes, publishes or circulates any statement, rumour or report with intent to, or which he has reason to believe to be likely to, cause or

(c) in any other way instigates or promotes the boycotting of any person or class of persons, shall be punished with imprisonment which may extend to five years, or with fine or with both.

Explanation.—An offence under this section shall be deemed to have been committed although the person affected or likely to be affected by any action of the nature referred to herein is not designated by name or class but only by his acting or abstaining from acting in some specified manner.

IV. PUNISHMENT FOR THREATENING A BOYCOTT

Whoever, in consequence of any person having done any act. which he

was legally entitled to do or of his having omitted to do any act which he was legally entitled to omit to do, or with intent to cause any person to do any act which he is not legally bound to do, or to omit to do any act which he is legally entitled to do, threatens to cause such person or any person in whom such person is interested, to be boycotted shall be punished with imprisonment, of either description for a term which may extend to five years or with fine or with both.

Exception :—It is not boycott

- (i) (i) to do any act in furtherance of a bona fide labour dispute,
- (ii) (ii) to do any act in the ordinary course of business competition. N.B.—All these offences shall be deemed to be cognisable offences.

Condition No. III.

PROTECTION AGAINST DISCRIMINATION

The Depressed Classes entertain grave fears of discrimination either by legislation or by executive order being made in the future. They cannot therefore consent to subject themselves to majority rule unless it is rendered impossible in law for the legislature or the executive to make any invidious discrimination against the Depressed Classes.

It is therefore proposed that the following Statutory provision be made in the constitutional law of India :—

“It shall not be competent for any Legislature or executive in India to pass a law or issue an order, rule or regulation so as to violate the rights of the Subjects of the 'State, regardless of any previous condition of untouchability, in all territories subject to the jurisdiction of the dominion of India,

- (1) (1) to make and enforce contracts, to sue, he parties, and give evidence, to inherit, purchase, lease, sell, hold and convey real and personal property,
- (2) (2) to be eligible for entry into the civil and military employ and to all educational institutions except for such conditions and limitations as may be necessary to provide for the due and adequate representation of all classes of the subjects of the State,
- (3) (3) to be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, educational institutions, privileges of inns, rivers, streams, wells, tanks, roads, paths, streets, public conveyances on land, air and water, theatres, and other places of public resort or amusement except for such conditions and limitations applicable alike to all subjects of every race, class, caste, colour or creed,
- (4) (4) to be deemed fit for and capable of sharing without distinction the benefits of any religious or charitable trust dedicated to or created, maintained or licensed for the general public or for persons of the same faith and religion,
- (5) (5) to claim full and equal benefit of all laws and proceedings for the security of person and property as is enjoyed by other subjects regardless of any previous condition of untouchability and be subject to like punishment pains and penalties and to none other.

Condition No. IV

ADEQUATE REPRESENTATION IN THE LEGISLATURES

The Depressed Classes must be given sufficient political power to influence legislative and executive action for the purpose of securing their welfare. In view of this they demand that the following provisions shall be made in the electoral law so as to give them—

- (1) (1) Right to adequate representation in the Legislatures of the

Country, Provincial and Central.

- (2) (2) Right to elect their own men as their representatives,
 - (a) (a) by adult suffrage, and
 - (b) (b) by separate electorates for the first ten years and thereafter by joint electorates and reserved seats, it being understood that joint electorates shall not be forced upon the Depressed Classes against their will unless such joint electorates are accompanied by adult suffrage.

N.B.—Adequate Representation for the Depressed Classes . cannot be defined in quantitative terms until the extent of representation allowed to other communities is known. But it must be understood that the Depressed Classes will not consent to the representation of any other community being settled on better terms than those allowed to them. They will not agree to being placed at a disadvantage in this matter. In any case the Depressed Classes of Bombay and Madras must have weightage over their population ratio of representation irrespective of the extent of representation allowed to other minorities in the Provinces.

Condition No. V

ADEQUATE REPRESENTATION IN THE SERVICES

The Depressed Classes have suffered enormously at the hands of the high caste officers who have monopolised the Public Services by abusing the law or by misusing the discretion vested in them in administering it to the prejudice of the Depressed Classes and to the advantage of the caste Hindus without any regard to justice, equity or good conscience. This mischief can only be avoided by destroying the monopoly of caste Hindus in the Public Services and by regulating the recruitment to them in such a manner that all communities including the Depressed will have an adequate share in. them. For this purpose the Depressed Classes have to make the following proposals for statutory enactment as part of the constitutional law;—

- (1)(1) There shall be established in India and in each Province in India a public Services Commission to undertake the recruitment and control of the Public Services.
- (2) (2) No member of the Public Service Commission shall be removed except by a resolution passed by the Legislature nor shall he be appointed to any office under the Crown after his retirement.
- (3) (3) It shall be the duty of the Public Service Commission, subject to the tests of efficiency as may be prescribed
- (a)(a) to recruit the Services in such a manner as will secure due and adequate representation of all communities, and
 - (b)(b) to regulate from time to time priority in employment in accordance with the existing extent of the representation of the various communities in any particular service concerned.

Condition No. VI

REDRESS AGAINST PREJUDICIAL ACTION OR NEGLECT OF INTERESTS

In view of the fact that the Majority Rule of the future will be the rule of the orthodox, the Depressed Classes fear that such a Majority Rule will not be sympathetic to them and that the probability of prejudice to their interests and neglect of their vital needs cannot be overlooked. It must be provided against particularly because, however adequately represented the Depressed Classes will be in a minority in all legislatures. The Depressed Classes think it very necessary that they should have the means of redress given to them in the constitution. It is therefore proposed that the following provision should be made in the constitution of India :—

British North America Act, 1867, Sec.93

"In and for each Province and in and for India it shall be the duty and obligation of the Legislature and the Executive or any other Authority established by Law to make adequate provision for the education,

sanitation, recruitment in Public Services and other matters of social and political advancement of the Depressed Classes and to do nothing that will prejudicially affect them.

"(2) Where in any Province of in India the provisions of this section are violated an appeal shall lie to the Governor-General in Council from any act or decision of any Provincial Authority and to the Secretary of State from any act or decision of a Central Authority affecting the matter.

“(3) In every such case where it appears to the Governor-General in Council or to the Secretary of State that the Provincial Authority or Central Authority does not take steps requisite for the due execution of the provisions of this Section then and in every such case, and as far only as the circumstances of each case require the Governor-General in Council or the Secretary of State acting as an appellate authority may prescribe, for such period as they may deem fit, take remedial measures for the due execution of the provisions of this Section and of any of its decisions under this Section and which shall be binding upon the authority appealed against,

Condition No. VII

SPECIAL DEPARTMENTAL CARE

The helpless, hapless and sapless condition of the Depressed Classes must be entirely attributed to the dogged and determined opposition of the whole mass of the orthodox population which will not allow the Depressed Classes to have equality of status or equality of treatment. It is not enough to say of their economic condition that they are poverty-stricken or that they are a class of landless labourers, although both these statements are statements of fact. It has to be noted that the poverty of the Depressed Classes is due largely to the social prejudices in consequence of which many an occupation for earning a living is closed to them. This is a fact

which differentiates the position of the Depressed Classes from that of the ordinary caste labourer and is often a source of trouble between the two. It has also to be borne in mind that the forms of tyranny and oppression practised against the Depressed Classes are very various and the capacity of the Depressed Classes to protect themselves is extremely limited. The facts, which obtain in this connection and which are of common occurrence throughout India, are well described in the Abstracts of Proceedings of the Board of Revenue of the Government of Madras dated 5th Nov., 1892, No. 723, from which the following is an extract :—

"134. There are forms of oppression only hitherto hinted at which must be at least cursorily mentioned. To punish disobedience of Pariahs, their masters —

- (a) (a) Bring false cases in the village court or in the criminal courts.
- (b) (b) Obtain, on application, from Government waste lands lying all round the paracheri, so as to impound the Pariahs' cattle or obstruct the way to their temple.
- (c) (c) Have mirasi names fraudulently entered in the Government account against the paracheri.
- (d) (d) Pull down the huts and destroy the growth in the backyards.
- (e) (e) Deny occupancy right in immemorial sub-tenancies.
- (f) (f) (f) Forcibly cut the Pariahs' crops, and on being resisted, charge them with theft and rioting.
- (g) (g) Under misrepresentations, get them to execute documents by which they are afterwards ruined.
- (h) (h) Cut off the flow of water from their fields.
- (i) (i) Without legal notice, have the property of sub-tenants attached for the land-lords' arrears of revenue.

"135. It will be said there are civil and criminal courts for the redress of any of these injuries. There are the courts indeed; but India does not breed village Hampdens. One must have courage to go to the courts ; money to employ legal knowledge, and meet legal expenses ; and means to live during the case and the appeals. Further most cases depend upon the decision of the first court; and these courts are presided over by officials who are sometimes corrupt and who generally, for other reasons, sympathize with

the wealthy and landed classes to which they belong.

“136. The influence of these classes with the official world can hardly be exaggerated. It is extreme with natives and great even with Europeans. Every office, from the highest to the lowest, is stocked with their representatives, and there is no proposal affecting their interests but they can bring a score of influence to bear upon it in its course from inception to execution.”

There can be no doubt that in view of these circumstances the uplift of the Depressed Classes will remain a pious hope unless the task is placed in the forefront of all governmental activities and unless equalisation of opportunities is realized in practice by a definite policy and determined effort on the part of Government. To secure this end the proposal of the Depressed Classes is that the Constitutional Law. should impose upon the Government of India a statutory obligation to maintain at all times a department to deal with their problems by the addition of a section in the Government of India Act to the following effect:—

"1. Simultaneously with the introduction of this Constitution and as part thereof, there shall be created in the Government of India a Department to be incharge of a Minister for the purpose of watching the interests of the Depressed Classes and promoting their welfare.

"2. The Minister shall hold office so long as he retains the confidence of the Central Legislature.

"3. It shall be the duty of the Minister in the exercise of any powers and duties conferred upon him or transferred to him by law, to take all such steps as may be desirable to secure the preparation, effective carrying out and co-ordination of measures preventative of acts of social injustice, tyranny or oppression against the Depressed Classes and conducive to their welfare through-out India.

"4. It shall be lawful for the Governor-General—

(a) to transfer to the Minister all or any powers or duties in respect of the welfare of the Depressed Classes arising from any enactment relating to education, sanitation, etc. (b) to appoint Depressed Classes welfare bureaus

in each province to work under the authority of and in co-operation with the Minister,

Condition No. VIII

DEPRESSED CLASSES AND THE CABINET

Just as it is necessary that the Depressed Classes should have the power to influence governmental action by seats in the Legislature so also it is desirable that the Depressed Classes should have the opportunity to frame the general policy of the Government. This they can do only if they can find a seat in the Cabinet. The Depressed Classes therefore claim that in common with other minorities, their moral rights to be represented in the Cabinet should be recognised. With this purpose in view the Depressed Classes propose :

that in the Instrument of Instructions an obligation shall be placed upon the Governor and the Governor-General to endeavour to secure the representation of the Depressed Classes in his Cabinet.

II

What happened to these demands of the Untouchables and how the members of the Minorities Committee reacted to them can be well understood by a perusal of the Report made by the Minorities Committee to the Round Table Conference. I give below a few extracts from that Report :—

"5. Claims were therefore advanced by various committees that arrangements should be made for communal representation and for fixed proportions of seats. It was also urged that the number of seats reserved for a minority community should in no case be less than its proportion in the population. The methods by which this could be secured were mainly

three: (1) nomination, (2) electorates and (3) separate electorates.

"6. Nomination was unanimously deprecated.

"7. Joint electorates were proposed with the proviso that a proportion of seats should be reserved to the communities. Thus a more democratic form would be given to the elections whilst the purpose of the electorate system would be secured. Doubts were expressed that, whilst such a system of election might secure the representation of minorities, it provided no guarantee that the representation would be genuine, but that it might, in its working, mean the nomination or, in any event, the election of minority representatives by the majority communities.

It was pointed out that this was in fact only a form of community representation and had in practice all the objections to the more direct form of community electorates.

"8. The discussion made it evident that the demand which remained as the only one which would be generally acceptable was separate electorates. The general objection to this scheme has been subject to much previous discussion in India. It involves what is a very difficult problem for solution, viz., what should be the amount of communal representation in the various provinces and in the Centre ; that, if the whole, or practically the whole, of the seats in a legislature are to be assigned to communities, there will be no room for the growth of independent political opinion or of true political parties, and this problem received a serious complication by the demand of the representative of the Depressed Classes that they should be deducted from the Hindu population and be regarded, for electoral purposes, as a separate community.

"9. It was suggested that, in order to meet the most obvious objection to the ear-marking of seats to communities, only a proportion should be so assigned—say 80 per cent. or 90 per cent.—and that the rest should be filled by open election. This, however, was not regarded by some of the communities as giving them the guarantees they required.

"10. The scheme proposed by Maulana Muhammad Ali, a member of the Sub-Committee, whose death we deplore, that, as far as possible no

communal candidate should be elected unless he secured at least 40 per cent. according to arrangement, of the votes of the other community, was also considered. It was, however, pointed out that such a scheme necessarily involved the maintenance of communal registers and so was open to objections similar to those urged against separate electorates.

“11. No claim for separate electorate or for the reservation of seats in joint electorates was made on behalf of women who should continue to be eligible for election on the same footing as men. But, in order to familiarise the public mind with the idea of women taking an active part in political life and to secure their interim representation on the legislature, it was urged that 5 per cent. of the seats in the first three Councils should be reserved for women and it was suggested that they should be filled by co-option by the elected members voting by proportional representation.

"12. There was general agreement with the recommendation of Sub-Committee No. II (Provincial Constitution) that the representation on the Provincial Executive of important minority communities was a matter of the greatest practical importance for the successful working of the new constitution, and it was also agreed that, on the same grounds, Mohammedans should be represented on the Federal Executive. On behalf of the smaller minorities a claim was put forward for their representation, either individually or collectively, on the Provincial and Federal Executives or that, if this should be found impossible, in each Cabinet there should be a Minister specially charged with the duty of protecting minority interests.

(Dr. Ambedkar and Sardar Ujjal Singh would add the words”and other important minorities”after the word Mohammedans in line 6).

The difficulty of working jointly responsible Executives under such a scheme as this was pointed out.

"13. As regards the administration, it was agreed that recruitment to both Provincial and Central Services should be entrusted to Public Service Commissions, with instructions to reconcile the claims of the various communities to fair and adequate representation in the Public Services, whilst providing for the maintenance of a proper standard of efficiency.

“16. It has also been made clear that the British Government cannot, with any chance of agreement, impose upon the communities an electoral principle which, in some feature or other, would be met by their opposition. It was therefore plain that, failing an agreement, separate electorates, with all their drawbacks and difficulties, would have to be retained as the basis of the electoral arrangements under the new constitution. From this the question of proportions would arise. Under these circumstances, the claims of the Depressed Classes will have to be considered adequately.

“18. The Minorities and Depressed Classes were definite in their assertion that; they could not consent to any self-governing constitution for India unless their demands were met in a reasonable manner.”

The Federal Structure Committee, another Committee appointed by the Round Table Conference to discuss the form and functions of the Central Government, had also to consider the question, of the Untouchables in connection with the composition of the Federal Legislatures. In the report it made to the Conference it said :—

"Opinion was unanimous in the sub-committee that, subject to any report of the Minorities Sub-Committee, provision should be made for the representation, possibly in both Chambers and certainly in the Lower Chamber, of certain special interests, namely, the Depressed Classes, Indian Christians, Europeans, Anglo-Indians, Landlords, Commerce (European and Indian) and Labour."

III

Before the first session of the Round Table Conference was concluded the reports of both the Committees were placed before the Conference and were passed by the Conference. It will be noticed that although agreement on details was lacking it was unanimously accepted that the Untouchables were entitled to recognition as a separate entity for political and constitutional purposes.

The only party in the country whose attitude to this decision of the Round Table Conference was not known when the First Session of the Round Table Conference was closed, was the Congress. This was because the Congress had boycotted the Round Table Conference and was busy in carrying on, civil disobedience against the Government. By the time the Second Session of the Round Table Conference became due, a compromise between His Majesty's Government and the Congress was reached as a result of which the Congress agreed to participate in, it and make its contribution to the solution of the many problems confronting the Conference. Everybody, who had witnessed the good temper, happy relationship and the spirit of give and take shown by the delegates at the first session of the Round Table Conference, hoped that the progress made would be maintained from session to session. Indeed the rate of progress in forging an agreement was expected to be much more rapid as a result of the advent of the Congress. In fact, friends of Congress were alleging that if the session did not produce an agreement it was because of the absence of the Congress.

Everybody was therefore looking forward to the Congress to lead the Conference to success. Unfortunately, the Congress chose Mr. Gandhi as its representative. A worse person could not have been chosen to guide India's destiny. As a unifying force he was a failure. Mr. Gandhi presents himself as a man full of humility. But his behaviour at the Round Table Conference showed that in the flush of victory Mr. Gandhi can be very petty-minded. As a result of his successful compromise with the Government just before he came, Mr. Gandhi treated the whole Non-Congress delegation with contempt. He insulted them whenever an occasion furnished him with an excuse by openly telling them that they were nobodies and that he alone, as the delegate of the Congress, represented the country. Instead of unifying the Indian delegation, Mr. Gandhi widened the breach. From the point of view of knowledge, Mr. Gandhi proved himself to be a very ill-equipped person. On the many constitutional and communal questions with which the Conference was confronted, Mr. Gandhi had many platitudes to utter but no views or suggestions of a constructive character to offer. He presented a curious complex of a man who in, some cases would threaten to resist in every

possible way any compromise on, what he regarded as a principle though others regarded it as a pure prejudice but in other cases would not mind making the worst compromises on, issues which appeared to others as matters of fundamental principle on which no compromise should be made.

Mr. Gandhi's attitude to the demands of the Untouchables at the second session of the Round Table Conference furnishes the best illustration of this rather queer trait in his character. When the delegates assembled for the second session of the Round Table Conference the Federal Structure Committee met first. In the very first speech which he made in the Federal Structure Committee on 15th September 1931, Mr. Gandhi referred to the question of the Untouchables. Mr. Gandhi said:—

"The Congress has, from its very commencement, taken up the cause of the so-called 'Untouchables.' There was a time when the Congress had at every annual session as its adjunct the Social Conference, to which the late Ranade dedicated his energies, among his many other activities. Headed by him you will find, in the programme of the Social Conference, reform in connection with the 'Untouchables' taking a prominent place. But, in 1920, the Congress took a large step and brought in the question of the removal of untouchability as a plank on the political platform, making it an important item of the political programme. Just as the Congress considered the Hindu-Muslim unity—thereby meaning unity amongst all the classes—to be indispensable for the attainment of Swaraj, so also did the Congress consider the removal of the curse of untouchability as an indispensable condition for the attainment of full freedom. The position the Congress took up in 1920 remains the same today; and so you will see the Congress has attempted from its very beginning to be what it described itself to be, namely, national in every sense of the term."

Anyone, who has perused how the Congress failed to carry out the 1922 programme for the uplift of the Untouchables which was included in the Bardoli programme and how it left it to the Hindu Maha Sabha, could have no hesitation in saying that what Mr. Gandhi said was untrue. The speech however gave no indication as to what line Mr. Gandhi was going to take

on the demands presented by the Untouchables, although I could see the drift of it.¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41D.What Congress and Gandhi CHAPTER III.htm - _msocom_1¹ But he did not leave people long in imagining what his position, was going to be. The meeting of the Federal Structure Committee held on the 17th of September 1931 provided him the necessary occasion. The agenda for the meeting included the question of election of members of the Federal Legislatures. Expressing his views on the subject, Mr. Gandhi made the following statement :—

"I come to sub-head (v)—representation by special constituencies of special interests. I here speak for the Congress. The Congress has reconciled itself to special treatment of the Hindu-Muslim-Sikh tangle. There are sound historical reasons for it but the Congress will not extend that doctrine in any shape or form. I listened to the list of special interests. So far as the Untouchables are concerned, I have not yet quite grasped what Dr. Ambedkar has to say : but of course, the Congress will share the honour with Dr. Ambedkar of representing the interests of the Untouchables. They are as clear to the Congress as the interests of any other body or of any other individual throughout the length and breadth of India. Therefore I would most strongly resist any further special representation."

This was nothing but a declaration, of War by Mr. Gandhi and the Congress against the Untouchables. In any case it resulted in a war between the two. With this declaration by Mr. Gandhi, I knew what Mr. Gandhi would do in the Minorities Committee which was the main forum for the discussion of this question.

Mr. Gandhi was making his plans to bypass the Untouchables and to close the communal problem by bringing about a settlement between the three parties, the Hindus, the Muslims and the Sikhs. He had been carrying on negotiations privately with the Muslims before the Minorities Committee met, but evidently they had not been concluded. Consequently, when the Minorities Committee met on 28th September 1931, Sir Ali Imam representing the Nationalist Muslim point of view started the debate. He began by saying :—

"I am personally not aware if there are any negotiations going on so far as the Muslim Delegation is concerned. I have had no opportunity of knowing that there are, any proposals at present that are under consideration. It may be, as I have heard generally, that some kind of understanding may be arrived at. I do not vouch for it ; I know nothing about it. If you desire, Sir, that I should put before you the Muslim Nationalists' point of view, I shall be ready to do so ; but. of course, I must have your permission, because it may take a little time and economy of time in a meeting like this is one's principal aim.

"Chairman: The point is that this Committee's business, is very strictly limited to a consolidation of the Minorities problem.

Sir Ali Imam: It is from that point of view that I shall approach the subject.

Chairman : If there is no other official intervention shall I call on Sir Ali Imam?

Then followed His Highness the Aga Khan who said :—

"I believe that Mahatma Gandhi is going to see the Muslim Delegation to-night. We hope to-night to have a friendly talk with our friend. That is all that I can tell you as far as any possible negotiation is concerned."

Pandit Madan Mohan Malaviya also suggested that a short adjournment may be fruitful of results. Knowing that this was a mischievous move I got up and spoke as follows :—

"I should like to say one word before we adjourn. As regards your suggestion—that while these negotiations are going on members of the other minority communities should prepare their case—I should like to say that so far as the Depressed Classes are concerned, we have already presented our case to the Minorities Sub-Committee last time.

"The only thing which remains for me to do is to put before this Committee a short statement
¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41D.What Congress and Gandhi CHAPTER III.htm - _msocom_2² suggesting the quantum of representation which

we want in the different Legislatures. Beyond that I do not think I am called upon to do anything; but the point I am anxious to make at the very outset is this. I have heard with great pleasure that further negotiations are going to take place for the settlement of the communal issue, but I would like to make our position clear at the very start. I do not wish any doubt should be left on this question. Those who are negotiating ought to understand that they are not plenipotentiaries appointed by the Committee to negotiate a settlement ; that whatever may be the representative character of Mr. Gandhi or of the other parties with whom he wishes to negotiate, they certainly are not in a position to bind us— certainly not. I say that most emphatically in this meeting.

"Another thing I want to say is this—that the claims put forward by the various minorities are claims put forward by them irrespective of the consideration as to whether the claims that they have put forward are consistent with the claims of the other minorities. Consequently, any settlement which takes place between one minority on the one hand and the Congress or any other party for the matter of that on the other hand, without taking into consideration the claims which have been put forward by other minorities, can have no binding force as far as I am concerned. I have no quarrel with the question whether any particular community should get weightage or not, but I do want to say most emphatically that whoever claims weightage and whoever is willing to give that weightage he must not give it—he cannot give it—out of my share. I want to make that absolutely plain."

What followed will be clear from the extract from the proceedings given below:—

"Chairman: Do not let there be any misunderstanding. This is the body before which the final settlement must come, and the suggestion is merely that if there are minorities or communities that hitherto have been in conflict with each other they should use a short time for the purpose of trying to overcome their difficulties. That will be a step and a very important and essential step, towards a general agreement, but the agreement is going to be a general one.

Dr. Ambedkar : I have made my position absolutely clear.”Chairman: Dr. Ambedkar's position has been made absolutely clear ; in his usual splendid way he has left no doubt at all about it, and that will come up when this body resumes its discussion. What I would like to do is to get you all to feel that we are co-operating together for a general settlement ; not for a settlement between any two or any three, but a complete settlement.

”Chairman: The position is this. We will adjourn now, I think, and later continue our meetings. Pending any negotiations that may be going on between any two or any three of you, we can take up the time in listening to a statement of the claims of the other minorities. I think that would be very useful. It would save time, and it would not mar the possibility of any harmony that may be reached between, say, our Sikh friends—who, we know, can look after themselves with a great deal of persistence—Mr. Gandhi and his friends and the Aga Khan and his.

”Dr. Ambedkar: I should like to Suggest whether it would not be possible for you to appoint a small Committee consisting of members drawn from the various minority communities, along with the Congress representatives, to sit in an informal manner and discuss this problem during the period of the adjournment.

”Chairman: I was going to make this suggestion. Do not ask me to appoint that Committee; do it yourselves. I have invited you to get together. Could not you manage to hold an informal meeting amongst yourselves and talk the matter over, and then when you speak here you will speak with some sort of knowledge of the effect of what you are saying on others? Could we leave it in that way?”Dr. Ambedkar : As you like.”Chairman .' That would be far better."

No settlement was evidently arrived at between, the three parties during the adjournment. Consequently when the Minorities Committee met again on 1st October 1931, Mr. Gandhi said :—

”Prime Minister, after consultation with His Highness the Aga Khan and other Muslim friends last night, we came to the conclusion that the purpose for which we meet here would be better served if a week's

adjournment was asked for. I have not had the opportunity of consulting my other colleagues, but I have no doubt that they will also agree in the proposal I am making."

The proposal was seconded by the Aga Khan. I got up to oppose the motion. What I said will be clear from the following extract from the proceedings :—

"Dr. Ambedkar : I do not wish to create any difficulty in our making every possible attempt to arrive at some solution of the problem with which this Committee has to deal, and if a solution can be arrived at by the means suggested by Mahatma Gandhi, I, for one, will have no objection to that proposal.

"But there is just this one difficulty with which I, as representing the Depressed Classes, am faced. I do not know what sort of committee Mahatma Gandhi proposes to appoint to consider this question during the period of adjournment, but I suppose that the Depressed Classes will be represented on this Committee.

"Mr. Gandhi: Without doubt.

"Dr. Ambedkar: Thank you. But I do not know whether in the position in which I am today it would be of any use for me to work on the proposed Committee. And for this reason. Mahatma Gandhi told us on the first day that he spoke in the Federal Structure Committee that as a representative of the Indian National Congress he was not prepared to give political recognition to any community other than the Mohammedans and the Sikhs. He was not prepared to recognise the Anglo-Indians, the Depressed Classes, and the Indian Christians. I do not think that I am doing any violence to etiquette by stating in this Committee that when I had the pleasure of meeting Mahatma Gandhi a week ago and discussing the question of the Depressed Classes with him, and when we, as members of the other minorities, had the chance of talking with him yesterday in his office, he told us in quite plain terms that the attitude that he had taken in the Federal Structure Committee was a firm and well considered attitude. What I would like to say is that unless at the outset I know that the Depressed Classes are going to be

recognised as a community entitled to political recognition in the future Constitution of India, I do not know whether it will serve any purpose for me to join the committee that is proposed by Mahatma Gandhi to be constituted to go into this matter. Unless, therefore, I have an assurance that this Committee will start with the assumption that all those communities which the Minorities Sub-Committee last year recommended as fit for recognition in the future constitution of India will be included, I do not know that I can whole-heartedly support the proposition for adjournment, or that I can whole-heartedly co-operate with the Committee that is going to be nominated. That is what I wish to be clear about.

"Dr. Ambedkar : I should like to make my position further clear. It seems that there has been a certain misunderstanding regarding what I said. It is not that I object to adjournment ; it is not that I object to serving on any Committee that might be appointed to consider the question. What I would like to know before I enter upon, this committee, if they give me the privilege of serving on it, is : What is the thing that this Committee is going to consider? Is it only going to consider the question of the Mohammedans vis-a-vis the Hindus? Is it going to consider the question of the Mohammedans vis-a-vis the Sikhs in the Punjab? Or is it going to consider the question of the Christians, the Anglo-Indians and the Depressed Classes?

"If we understand perfectly well before we start that this committee will not merely concern itself with the question of the Hindus and the Mohammedans, of the Hindus and the Sikhs, but will also take upon itself the responsibility of considering the case of the Depressed Classes, the Anglo-Indians and the Christians, I am perfectly willing to allow this adjournment resolution to be passed without any objection. But I do want to say this, that if I am to be left out in the cold and if this interval is going to be utilised for the purposes of solving the Hindu-Muslim question, I would press that the Minorities Committee should itself grapple with the question and consider it, rather than allow the question to be dealt with by some other informal Committee for arriving at a

solution of the communal question in respect of some minorities only.

"Mr. Gandhi : Prime Minister and friends, I see that there is some kind of misunderstanding with reference to the scope of the work that some of us have set before ourselves. I fear that Dr. Ambedkar, Colonel Gidney and other friends are unnecessarily nervous about what is going to happen. Who am I to deny political status to any single interest or class or even individual in India? As a representative of the Congress I should be unworthy of the trust that has been reposed in me by the Congress if I were guilty of sacrificing a single national interest. I have undoubtedly given expression to my own views on these points. I must confess that I hold to those views also. But there are ways and ways of guaranteeing protection to every single interest. It will be for those of us who will be putting our heads together to try to evolve a scheme. Nobody would be hampered in pressing his own views on the members of this very informal conference or meeting.

"I do not think, therefore, that anybody need be afraid as to being able to express his opinion or carrying his opinion also. Mine will be there equal to that of every one of us ; it will carry no greater weight; I have no authority behind me to carry my opinion against the opinion of anybody. I have simply given expression to my views in the national interest, and I shall give expression to these views whenever they are opportune. It will be for you, it is for you to reject or accept these opinions. Therefore please disburse your minds, to everyone of us, of the idea that there is going to be any steam-rolling in the Conference and the informal meetings that I have adumbrated. But if you think that this is one way of coming closer together than by sitting stiffly at this table, you will not carry this adjournment motion but give your whole-hearted co-operation to the proposal that I have made in connection with these informal meetings.

"Chairman .' Then I shall proceed to put it. I put it on the clear understanding, my friends, that the time is not going to be wasted and that these conferences—as Mr. Gandhi has said, informal conferences,

but nevertheless I hope very valuable and fruitful conferences—will take place between now and our next meeting. I hope you will all pledge yourselves to use the time in that way."

It is unnecessary for me to recite what happened at the informal meeting held after the adjournment. It was a complete failure if not a fiasco. The meeting was presided over by Mr. Gandhi. Mr. Gandhi began with the most difficult part of the Communal question namely the dispute between the Sikhs and the Muslims in the Punjab. This problem at one stage appeared to be nearer solution when the parties agreed to abide by the decision of an Arbitrator. The Sikhs, however, refused to proceed further in the matter until they knew who the Arbitrator was. As the Musalmans were not prepared to have the name of the Arbitrator disclosed the matter fell through. Mr. Gandhi was not interested in the problem of the other minorities, such as the Untouchables although he enacted the farce of calling upon the representatives of the other minorities to present a catalogue of their demands. He heard them but took no notice of them much. Did he place them before the meeting for its consideration? As soon as the Sikh-Muslim settlement broke up, Mr. Gandhi dissolved the meeting. The Minorities Committee met on 8th October 1931. The Prime Minister having called upon Mr. Gandhi to speak first, the latter said :—

"Prime Minister and friends, it is with deep sorrow and deeper humiliation that I have to announce utter failure on my part to secure an agreed solution of the communal question through informal conversations among and with the representatives of different groups. I apologise to you, Mr. Prime Minister, and the other colleagues for the waste of a precious week. My only consolation lies in the fact that when I accepted the burden of carrying on these talks I knew that there was much hope of success and still more in the fact that I am not aware of having spared any effort to reach a solution.

"But to say that the conversations have to our utter shame failed is not to say the whole truth. Causes of failure were inherent in the composition of the Indian Delegation. We are almost all not elected representatives of the parties or groups whom we are presumed to represent; we are here by nomination of the Government. Nor are those whose presence was

absolutely necessary for an agreed solution to be found here. Further, you will allow me to say that this was hardly the time to summon the Minorities Committee. It lacks the sense of reality in that we do not know what it is that we are going to get. If we knew in a definite manner that we were going to get the thing we want, we should hesitate fifty times before we threw it away in a sinful wrangle as it would be if we are told that the getting of it would depend upon the ability of the present Delegation to produce an agreed solution of the communal tangle. The solution can be the crown of the Swaraj constitution, not its foundation—if only because our differences have hardened, if they have not arisen, by reason of the foreign domination. I have not a shadow of a doubt that the ice bag of communal differences will melt under the warmth of the sun of freedom.

"I, therefore, venture to suggest that the Minorities Committee be adjourned sine die and that the fundamentals of the constitution be hammered into shape as quickly as may be. Meanwhile, the informal work of discovering a true solution of the communal problem will and must continue ; only it must not balk or be allowed to block the progress of constitution-building. Attention must be diverted from it and concentrated on the main part of the structure.

"I hardly need point out to the Committee that my failure does not mean the end of all hope of arriving at an agreed solution. My failure does not even mean my utter defeat; there is no such word in the dictionary. My confession merely means failure of special effort for which I presumed to ask for a week's indulgence, which you so generously gave.

"I propose to use the failure as a stepping-stone to success, and I invite you all to do likewise; but, should all effort at agreement fail, even when the Round Table Conference reaches the end of its labours, I would suggest the addition of a clause to the expected constitution appointing a judicial tribunal that would examine all claims and give its final decision on all the points that may be left unsettled."

In the discussion that followed everybody refuted Mr. Gandhi's allegation that the delegates were nominated by Government and did not represent

the people. Getting up to make my position clear, I said :—

"Mr. Prime Minister, last night when we parted at the conclusion of the meeting of the informal Committee, we parted, although with a sense of failure, at least with one common understanding, and that was that when we met here today none of us should make any speech or any comment that would cause exasperation. I am sorry to see that Mr. Gandhi should have been guilty of a breach of this understanding. Excuse me, I must have the opportunity to speak. He started by giving what were, according to him, the causes of the failure of the informal Committee. Now, I have my own view of the causes which I think were responsible for the failure of the informal Committee to reach an agreement, but I do not propose to discuss them now. What disturbs me after hearing Mr. Gandhi is that instead of confining himself to his proposition, namely, that the Minorities Committee should adjourn sine die, he started casting certain reflections upon the representatives of the different communities who are sitting round this table. He said that the Delegates were nominees of the Government, and that they did not represent the views of their respective communities for whom they stood. We cannot deny the allegation that we are nominees of the Government, but, speaking for myself, I have not the slightest doubt that even if the Depressed Classes of India were given the chance of electing their representatives to this Conference, I would, all the same, find a place here. I say therefore that whether I am a nominee or not, I fully represent the claims of my community. Let no man be under the mistaken impression as regards that.

"The Mahatma has been always claiming that the Congress stands for the Depressed Classes, and that the Congress represents the Depressed Classes more than I or my colleague can do. To that claim I can only say that it is one of the many false claims which irresponsible people keep on making, although the persons concerned with regard to those claims have been invariably denying them.

"I have here a telegram which I have just received from a place which I have never visited and from a man whom I have never seen—from the President of the Depressed Classes Union, Kumaun, Almora, which I believe is in the United Provinces, and which contains the following

resolution :

"This Meeting declares its non-confidence in the Congress movement which has been carried on in and outside the country, and condemns the methods adopted by the Congress workers."

I do not care to read further, but I can say this (and I think if Mr. Gandhi will examine his position he will find out the truth), that although there may be people in the Congress who may be showing sympathy towards the Depressed Classes, the Depressed Classes are not in the Congress. That is a proposition which I propose to substantiate. I do not wish to enter into these points of controversy. They seem to be somewhat outside the main proposition. The main proposition which Mr. Gandhi has made is that this Committee should be adjourned sine die. With regard to that proposition, I entirely agree with the attitude taken up by Sir Muhammad Shafi. I, for one, cannot consent to this proposition. It seems to me that there are only two alternatives—either that this Minorities Committee should go on tackling the problem and trying to arrive at some satisfactory solution, if that is possible, and then, if that is not possible, the British Government should undertake the solution of that problem. We cannot consent to leave this to the arbitration of third parties whose sense of responsibility may not be the same as must be the sense of responsibility of the British Government.

"Prime Minister, permit me to make one thing clear. The Depressed Classes are not anxious, they are not clamorous, they have not started any movement for claiming that there shall be an immediate transfer of power from the British to the Indian people. They have their particular grievances against the British people and I think I have voiced them sufficiently to make it clear that we feel those grievances most acutely. But, to be true to facts, the position is that the Depressed Classes are not clamouring for transfer of political power. Their position, to put it plainly, is that we are not anxious for the transfer of power; but if the British Government is unable to resist the forces that have been set up in the country which do clamour for transference of political power—and we know the Depressed Classes in their present circumstances are not in a position to resist that—then our submission is that if you make that

transfer, that transfer will be accompanied by such conditions and by such provisions that the power shall not fall into the hands of a clique, into the hands of an oligarchy, or into the hands of a group of people, whether Mohammedans or Hindus ; but that that solution shall be such that the power shall be shared by all communities in their respective proportions. Taking that view, I do not see how I, for one, can take any serious part in the deliberation of the Federal Structure Committee unless I know where I and my community stand."

The Prime Minister in his concluding observations said:—"Let us adjourn, and I will call you together again. In the meantime what I would like would be if those of you are sitting opposite me, the representatives of the small minorities, would also try your hands.

"If there are any common agreements among yourselves, I would suggest that you circulate them. . .It is not the British Government that is going to stand in the way of any agreement . . .Therefore what I would like you to have in your minds after the rather depressing statements to which we have listened, is this: That the British Government wants to go on; the British Government wants you to go on. The British Government will take its action if you cannot go on to an end, because we are determined to make such improvements in the Government of India as will make the Government of India consistent with our own ideas, as will make the Government of India something that is capable of greater and greater expansion towards liberty. That is what we want. I appeal to the Delegates here today—Delegates representing all communities —Do not stand in our way ; because that is what is happening."

IV

Acting on the suggestion of the Prime Minister the minorities met to consider if they could produce a settlement. They tried and produced a settlement which was submitted to the Prime Minister in the evening before the next meeting of the Minorities Committee which took place on 13th November 1931. In his opening remarks the Prime Minister said :—

"The work of this Committee, therefore, was from the very beginning of supreme importance, and I am sorry that you have been unable to present to us an agreed plan.

"Last night, however, I received a deputation representing the Mohammedans, the Depressed Classes, at any rate a section of the Indian Christians, the Anglo-Indians and the British Community. I think that is the complete range. They came and saw me in my room in the House of Commons last night with a document which embodied an agreement that they had come to amongst themselves. They informed me, in presenting the document to me, that it covered something in the region of 46 per cent. of the population of British India.

"I think the best thing would be, as we have had no time to consider this, to treat this document as a document which is official to the records of this Committee and in order that that may be done I shall ask His Highness The Aga Khan formally to present it here, so that it may be entered in our official record."

His Highness The Aga Khan then got up and said :—

"Mr. Prime Minister, on behalf of the Mohammedans, the Depressed Classes, the Anglo-Indians, the Europeans and a considerable section of the Indian Christian groups, I present the document embodying the agreement which has been arrived at between them with regard to the inter communal problem with which the Round Table Conference in general and the Minorities Committee in particular are concerned. We desire to make it clear that this agreement has been arrived at after careful and anxious consideration of this difficult and complicated problem and must be taken as a whole. All parts of the agreement are interdependent and agreements stand or fall as a whole."

This document was known as the Minorities Pact.¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41D.What Congress and Gandhi CHAPTER III.htm - _msocom_3³ In the general discussion that followed Mr. Gandhi's speech no doubt attracted the greatest attention. Mr. Gandhi was furious. He attacked everybody who had taken part in producing the Minorities Pact. He was particularly furious for the recognition given to the

Untouchables as a separate political entity. This is what Mr. Gandhi said :—

"I would like to repeat what I have said before, that, while the Congress will always accept any solution that may be acceptable to the Hindus, the Mohammedans and the Sikhs, Congress will be no party to the special electorates for any other minorities. One word more as to the so-called Untouchables. I can understand the claims advanced by other minorities, but the claims advanced on behalf of the Untouchables, that time is the 'unkindest cut of all.' It means the perpetual bar-sinister. I would not sell the vital interests of the Untouchables even for the sake of winning the freedom of India. I claim myself in my own person to represent the vast mass of the Untouchables. Here I speak not merely on behalf of the Congress, but I speak on my own behalf, and I claim that I would get, if there was a referendum of the Untouchables, their vote, and that I would top the poll. And I would work from one end of India to the other to tell the Untouchables that separate electorates, and separate reservation is not the way to remove this bar-sinister, which is the shame, not of them, but of orthodox Hinduism.

"Let this Committee and let the whole world know that today there is a body of Hindu reformers who are pledged to remove this blot of untouchability. We do not want on our register and on our census Untouchables classified as a separate class. Sikhs may remain as such in perpetuity, so may Mohammedans so may Europeans. Will Untouchables remain Untouchables in perpetuity? I would far rather that Hinduism died than that Untouchability lived. Therefore, with all my regard for Dr. Ambedkar, and for his desire to see the Untouchables uplifted, with all my regard for his ability, I must say in all humility that here the great wrong under which he has laboured and perhaps the bitter experiences that he has undergone have for the moment warped his judgement. It hurts me to have to say this, but I would be untrue to the cause of the Untouchables, which is as dear to me as life itself, if I did not say it. I will not bargain away their rights for the kingdom of the whole world. I am speaking with a due sense of responsibility, and I say that it is not a proper claim which is registered by Dr. Ambedkar when he seeks to

speaking for the whole of the Untouchables of India. It will create a division in Hinduism which I cannot possibly look forward to with any satisfaction whatsoever. I do not mind Untouchables, if they so desire, being converted to Islam or Christianity. I should tolerate that, but I cannot possibly tolerate what is in store for Hinduism if there are two divisions set forth in the villages. Those who speak of the political right of Untouchables do not know their India, do not know how Indian Society is today constructed, and therefore I want to say with all the emphasis that I can command that if I was the only person to resist this thing I would resist it with my life."

The Chairman knowing that there was no hope of getting an agreed solution before adjourning the Minorities Committee sine die made a suggestion to the delegates. He said :—

"Will you, each of you, every member of this Committee, sign a request to me to settle the community question and pledge yourselves to accept my decision? That, I think, is a very fair offer. I do want any section, or any one man. Will the members of this Committee sign a declaration asking me to give a decision, even a temporary one, on the community question, and say that you will agree? I do not want it now. I say, will you put your names to it and give that to me, with the assurance that the decision come to will be accepted by you and will be worked by you to the best of your ability in the course of the working of the new constitution? I have asked several sections—at least, individuals—from time to time for that, and I have never got it. That would certainly straighten out the position, but apart from that, do, please, not forget what I said in opening this meeting—that the Government will not allow community differences to prevent it from carrying out its pledges and producing a constitution. Therefore do not make the community difference more important than it is."

V

Thus ended the efforts by the Minorities Committee to bring about a solution of the communal problem. The discussion in the Committee

threw Mr. Gandhi's attitude to the Untouchables in relief. Everybody felt that Mr. Gandhi was the most determined enemy of the Untouchables. So much of his energy and attention did Mr. Gandhi concentrate on the question of the Untouchables that it would not be unfair if it was said that the main purpose for which Mr. Gandhi came to the Round Table Conference was to oppose the demands of the Untouchables.

Those, who were friends of Mr. Gandhi, could not understand Mr. Gandhi's attitude to the demands of the Untouchables. To give recognition to the Muslims and the Sikhs and to refuse it to the Untouchables came to them as a surprise and a puzzle. Whenever they asked for an explanation, Mr. Gandhi did nothing except to get angry. Mr. Gandhi himself could not give a logical and consistent defence of his opposition to the Untouchables. Inside the Round Table Conference his defence was that the Hindus had seriously taken up the cause of the Untouchables and that therefore there was no reason to give them political safeguards. Outside the Round Table Conference he gave totally different reasons. In a speech in, defence of his position Mr. Gandhi said :—

"Muslims and Sikhs are all well organised. The 'Untouchables' are not. There is very little political consciousness among them and they are so horribly treated that I want to save them against themselves. If they had separate electorates their lives would be miserable in villages which are the strongholds of Hindu orthodoxy. It is the superior class of Hindus who have to do penance for having neglected the 'Untouchables' for ages. That penance can be done by active social reform and by making the lot of the 'Untouchables' more bearable by acts of service, but not by asking for separate electorates for them. By giving them separate electorates you will throw the apple of discord between the 'Untouchables' and the orthodox. You must understand I can tolerate the proposal for special representation of the Musalmans and the Sikhs only as a necessary evil. It would be a positive danger for the 'Untouchables.' I am certain that the question of separate electorates for the 'Untouchables' is a modern manufacture of Government. The only thing needed is to put them on the voters' list, and provide for fundamental rights for them in the constitution. In cases they are unjustly treated and their representative is

deliberately excluded they would have the right to special election tribunal which would give them complete protection. It should be open to these tribunals to order the unseating of an elected candidate and the election of the excluded men.

"Separate electorates to the 'Untouchables' will ensure them bondage in perpetuity. The Musalmans will never cease to be Musalmans by having separate electorates. Do you want the 'Untouchables' to remain 'Untouchables' for ever? Well, the separate electorates would perpetuate the stigma. What is needed is destruction of untouchability, and when you have done it, the bar-sinister which has been imposed by an insolent 'superior' class upon an 'inferior' class will be destroyed. When you have destroyed the bar-sinister, to whom will you give the separate electorates? Look at the history of Europe. Have you got separate electorates for the working classes or women? With adult franchise, you give the 'Untouchables' complete security. Even the orthodox would have to approach them for votes.

"Now then you ask, does Dr. Ambedkar, their representative, insist on separate electorates for them? I have the highest regard for Dr. Ambedkar. He has every right to be bitter. That he does not break our heads is an act of self-restraint on his part. He is today so much saturated with suspicion that he cannot see anything else. He sees in every Hindu a determined opponent of the 'Untouchables' and it is quite natural. The same thing happened to me in my early days in South Africa, where I was bounded out by Europeans wherever I went. It is quite natural for him to vent his wrath. But the separate electorates that he seeks will not give him social reform. He may himself mount to power and position but nothing good will accrue to the 'Untouchables.' I can say all this with authority, having lived with the 'Untouchables' and having shared their joys and sorrows all these years."

Mr. Gandhi at the Round Table Conference was not satisfied with mere propaganda. When he found that the propaganda was not succeeding as well as he expected he resorted to intrigue. When Mr. Gandhi heard that at the suggestion of the Prime Minister the minorities were about to produce a settlement and that this settlement would have the effect of the

Untouchables getting the support of the other minorities and particularly of the Muslims, Mr. Gandhi felt considerably disturbed. He devised a scheme to isolate the Untouchables. For this Mr. Gandhi planned to buy out the Musalmas by giving to the Musalmans their fourteen demands, which Mr. Gandhi was not in the beginning prepared to agree. When he found the Musalmans were lending their support to the Untouchables Mr. Gandhi agreed to them their fourteen points on condition that they withdrew their support from the Untouchables. The agreement was actually drafted. The text of it is given below:—

"DRAFT OF GANDHI-MUSLIM PACT¹

MUSLIM DELEGATION TO THE ROUND TABLE CONFERENCE
¹⁵mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/41D.What Congress and Gandhi CHAPTER III.htm - _msocom_5

TEL. : VICTORIA 2360

TELEGRAMS:"COURTLIKE" LONDON.

QUEEN'S HOUSE
 57, ST. JAMES' COURT,
 BUCKINGHAM GATE,
 LONDON, S.W. 1

6th October 1931.

The following proposals were discussed by Mr. Gandhi and the Muslim Delegation at 10 p.m. last night. They are divided into two parts—The

proposals made by the Muslims for safeguarding their rights and the proposals made by Mr. Gandhi regarding the Congress policy. They are given herewith as approved by Mr. Gandhi, and placed for submission to the Muslim Delegation for their opinion.

MUSLIM PROPOSALS	MR. GANDHI'S PROPOSALS
<p>1. 1. In the Punjab and Bengal bare majority of one per cent. of Musalmans but the question of whether it should be by means of joint electorates and reservation of 51 per cent. of the whole house should be referred to the Musalman voters before the new constitution comes into force and their verdict should be accepted.</p>	<p>1. 1. That the Franchise should on the basis of adult suffrage. 2. 2. No special reservations to any other community save Sikhs and Hindu Minorities. (Italics are not in the original). 3. 3. The Congress demands : A. Complete Independence.</p>
<p>2. In other provinces where the Musalmans are in a minority the present weightage enjoyed by them to continue, but whether the seats should be reserved to a joint electorate, or whether they should have separate electorates should be determined by the Musalman voters by a referendum under the new constitution, and their verdict should be accepted.</p>	<p>B. B. Complete control over the defence immediately. C. C. Complete control over external affairs. D. D. Complete control over Finance. E. E. Investigation of public debts and other obligations by an independent tribunal. F. F. As in the case of a partnership, right of either party to terminate</p>

<p>3. That the Musalman representatives to the Central Legislature in both the houses should be 26 per cent. of the total number of the British India representatives, and 7 per cent. at least by convention should be Musalmans, out of the quota that may be assigned to Indian States, that is to say, one-third of the whole house when taken together.</p> <p>4. That the residuary power should vest in the federating Provinces of British India.</p> <p>5. That the other points as follows being agreed to :</p> <ol style="list-style-type: none">1. Sindh.¹[f.6]⁶2. N.W.F.P.¹⁷[f.7]3. Services.¹⁸[f.8]4. Cabinet.¹⁹[f.9]5. Fundamental rights and safeguards for religion and culture.6. Safeguards against legislation affecting any	<p>it.</p>
--	------------

community.	
------------	--

It is true that the Untouchables are not mentioned in this draft agreement. But that the Musalmans are bound not to support any other minority except the Sikhs makes it quite clear that they were not to support the Untouchables. In this intrigue, Mr. Gandhi failed as he was bound to. The Musalmans who were out to demand safeguards for themselves could not stand up and oppose the demands of the Untouchables. Mr. Gandhi in his passion for suppressing the Untouchables had lost his sense of discrimination to such extent as not to be able to distinguish between means which are fair and means which are foul. Mr. Gandhi did not care to honour his word. In the Minorities Committee, Mr. Gandhi had said that if the Committee agreed to accept the claim of the Untouchables for separate recognition it was free to do so, which meant that he would abide by the decision of the majority. But when he came to know that the other minorities had agreed to support the Untouchables, he did not hesitate to approach the Musalmans and turn them against the Untouchables by accepting their fourteen points which the Congress, the Hindu Maha Sabha and even the Simon Commission had rejected. Even if Mr. Gandhi was prepared to flout public opinion, and public morality this diabolical plot of Mr. Gandhi fell through because the Musalmans refused to disgrace themselves by joining in it. When the second session of the Round Table Conference was dissolved the delegates to the Minorities Committee accepted the proposal of the Prime Minister to put in a signed requisition authorizing him to arbitrate and give his decision on, the communal issue. Many delegates did it including Mr. Gandhi.²⁰[f.10] There was nothing left for the delegates but to return to India and await the decision of the Prime Minister and having made him the sole arbitrator to accept it with good cheer.

VI

Before I resume the narrative and state what decision the Prime Minister

gave, I must describe the strange phenomenon which I, as a member of the Franchise Committee, witnessed. After the close of the second session of the Round Table Conference, the Prime Minister thought it advisable to have the question of franchise for the new constitution examined by a Committee. Accordingly, in December 1931 he appointed a Committee with the late Lord Lothian as its Chairman. Its main term of reference was to devise a system of franchise whereby, to use the language of the Prime Minister's letter of instructions to the Chairman,

"The legislatures to which responsibility is to be entrusted should be representative of the general mass of the population, and that no important section of the community may lack the means of expressing its needs and its opinions."

The Committee started its work early in January 1932. For doing its work the Committee took the help of the Provincial Governments and of the Provincial Franchise Committees consisting of non-officials specially constituted for that purpose province by province. The Committee issued questionnaires. They were replied to by the Provincial Governments, by the Provincial Franchise Committees and by individuals. Witnesses were examined by the Committee sitting with each Provincial Franchise Committee. The Provincial Governments and the Provincial Committees submitted their reports separately to the Committee. They were discussed by the Committee with the Provincial Government and the Provincial Committee before it came to its own conclusion. Besides the general tasks assigned to the Lothian Committee, it had a special task with which it was charged by the Prime Minister. It had relation, to the political demands of the Untouchables which the Prime Minister had referred to in the following terms in his letter of instruction to the Chairman :—

"It is evident from the discussions which have occurred in various connections in the Conference that the new constitution must make adequate provision for the representation of the Depressed Classes, and that the method of representation by nomination is no longer regarded as appropriate. As you are aware, there is a difference of opinion whether the system of separate electorates should be instituted for the Depressed Classes and your committee's investigations should contribute towards

the decision of this question by indicating the extent to which the Depressed Classes would be likely, through such general extension of the franchise as you may recommend, to secure the right to vote in ordinary electorates. On the other hand, should it be decided eventually to constitute separate electorates for the Depressed Classes, either generally or in those provinces in which they form a distinct and separable element in the population, your Committee's inquiry into the general problem of extending the franchise should place you in possession of facts which would facilitate the devising of a method of separate representation for the Depressed Classes."

Following upon, these instructions, it became the task of the Committee to come to some conclusion as to the total population, of the Untouchables in British India.

To the question what is the population of the Untouchables the replies received were enough to stagger anybody. Witness after witness came forward to say that the Untouchables in his Province were infinitesimally small. There were not wanting witnesses who said that there were no Untouchables at all!! It was a most extraordinary sight to see Hindu witnesses perjuring themselves regardless of truth by denying the existence of the Untouchables or by reducing their number to a negligible figure. The members of the Provincial Franchise Committee were also a party to this plan. Strange to say that some of the Hindu members of the Lothian Committee were in the game. This move of denying the very existence of the Untouchables or reducing their number almost to nil was particularly rampant in certain Provinces. How the Hindus were prepared to economise truth, even to a vanishing point, will be evident from the following figures. In the United Provinces, the Census Commissioner in 1931 had estimated the total population of the Untouchables at 12.6 millions, the Provincial Government at 6.8 millions but the Provincial Franchise Committee at .6 millions only!! In Bengal, the Census gave the figures of 10.3 millions, Provincial Government fixed it as 11.2 millions but the Provincial Franchise Committee at .07 millions only !

Before the Round Table Conference no Hindu bothered about the exact population of the Untouchables and were quite satisfied with the accuracy

of the Census figures which gave the total of the Untouchables at about 70 to 80 millions. Why did then the Hindus start suddenly to challenge this figure when the question was taken up by the Lothian Committee? The answer is very clear. Before the time of the Lothian Committee the population of the Untouchables had no value. But after the Round Table Conference the Hindus had come to know that the Untouchables were demanding separate allotment of their share of representation, that such share must come out of the lump which the Hindus had been enjoying in the past and that the measure of the share must depend upon the population of the Untouchables. The Hindus had realized that to admit the existence of the Untouchables was detrimental to their interest. They did not mind sacrificing truth and decency and decided to adopt the safest course, namely, to deny that there are any Untouchables in India at all, and thereby knock out the bottom of the political demands of the Untouchables and leave no room for argument. This shows how the Hindus can, conspire in a cold, calculated manner against the Untouchables out of pure selfishness and do indirectly what they cannot do directly.

VII

To resume the thread. Having been, disgusted with the Round Table Conference where there were critics but no devotees, Mr. Gandhi was the first to return to India. On account of a statement which he is alleged to have made in an interview he gave to a newspaper correspondent in Rome wherein he threatened to revive his campaign of civil disobedience, Mr. Gandhi on his arrival was arrested and put in jail. Though in jail, not Swaraj but the Untouchables were on, his brain. He feared that, notwithstanding his threat to resist it with his life, the Prime Minister as a sole arbitrator might accept the claims made on behalf of the Untouchables at the Round Table Conference. Long before any decision was given, by the Prime Minister, Mr. Gandhi on 11th March 1932 addressed from jail a letter to Sir Samuel Hoare, the then Secretary of State for India, reminding him of his opposition to the claim of the Untouchables. The following is the text of

that letter :—

"DEAR SIR SAMUEL,

You will perhaps recollect that at the end of my speech at the Round Table Conference when the Minorities' claim was presented, I had said that I should resist with my life the grant of separate electorates to the Depressed Classes. This was not said in the heat of the moment nor by way of rhetoric. It was meant to be a serious statement. In pursuance of that statement, I had hoped on my return to India to mobilize public opinion against separate electorates, at any rate, for the Depressed Classes. But it was not to be.

"From the newspapers, I am permitted to read, I observe that any moment His Majesty's Government may declare their decision. At first I had thought, if the decision was found to create separate electorates for the Depressed Classes, I should take such steps as I might then consider necessary to give effect to my vow. But I feel it would be unfair to the British Government for me to act without giving previous notice. Naturally, they could not attach the significance I give to my statement.

"I need hardly reiterate all the objections I have to the creation of separate electorates for the Depressed Classes. I feel as if I was one of them. Their case stands on a wholly different footing from that of others. I am not against their representation in the legislatures. I should favour everyone of their adults, male and female, being registered as voters irrespective of education or property qualification, even though the franchise test may be stricter for others. But I hold that separate electorate is harmful for them and for Hinduism, whatever it may be from the purely political standpoint. To appreciate the harm that separate electorate would do them, one has to know how they are distributed amongst the so-called Caste Hindus and how dependent they are on the latter. So far as Hinduism is concerned, separate electorates would simply vivisect and disrupt it.

"For me the question of these classes is predominantly moral and religious. The political aspect, important though it is, dwindles into insignificance compared to the moral and religious issue.

"You will have to appreciate my feelings in this matter by remembering that I have been interested in the condition of these classes from my boyhood and have more than once staked my all for their sake. I say this not to pride myself in any way. For, I feel that no penance that the Hindus may do can in any way compensate for the calculated degradation to which they have consigned the Depressed Classes for centuries.

"But I know that separate electorate is neither a penance nor any remedy for the crushing degradation they have groaned under. I therefore, respectfully inform His Majesty's Government that in the event of their decision creating separate electorate for the Depressed Classes, I must fast unto death.

"I am painfully conscious of the fact that such a step, whilst I am a prisoner, must cause grave embarrassment to His Majesty's Government, and that it will be regarded by many as highly improper on the part of one holding my position to introduce into the political field methods which they would describe as hysterical if not much worse. All I can urge in defence is that for me the contemplated step is not a method, it is part of my being. It is the call of conscience which I dare not disobey, even though it may cost whatever reputation for sanity I may possess. So far as I can see now my discharge from imprisonment would not make the duty of fasting any the less imperative. I am hoping, however, all my fears are wholly unjustified and the British Government have no intention whatever of creating separate electorate for the Depressed Classes."

The following reply was sent to Mr. Gandhi by the Secretary of State:—

INDIA OFFICE, WHITEHALL,

April 13, 1932.

DEAR MR. GANDHI,

"I write this in answer to your letter of 11th March, and I say at once I realize fully the strength of your feeling upon the question of separate electorates for the Depressed Classes. I can only say that we intend to give

any decision that may be necessary solely and only upon the merits of the case. As you are aware, Lord Lothian's Committee has not yet completed its tour and it must be some weeks before we can receive any conclusions at which it may have arrived. When we receive that report we shall have to give most careful consideration to its recommendations, and we shall not give a decision until we have taken into account, in addition to the view expressed by the Committee, the views that you and those who think with you have so forcibly expressed. I feel sure if you were in our position you would be taking exactly the same action we intend to take. You would admit the Committee's report, you would then give it your fullest consideration, and before arriving at a final decision you would take into account the views that have been expressed on both sides of the controversy. More than this I cannot say. Indeed I do not imagine you would expect me to say more."

After giving this warning, Mr. Gandhi slept over the matter thinking that a repetition of his threat to fast unto death was sufficient to paralyse the British Government and prevent them from accepting the claim of the Untouchables for special representation. On the 17th August 1932 the decision of the Prime Minister on the communal question, was announced.

That part of the decision which relates to the Untouchables is produced below:—

Communal Decision by His Majesty's Government 1932.

1. 1. In the statement made by the Prime Minister on 1st December last on behalf of His Majesty's Government at the close of the second session of the Round Table Conference, which was immediately afterwards endorsed by both Houses of Parliament, it was made plain that if the communities in India were unable to reach a settlement acceptable to all parties on the communal questions which the Conference had failed to solve, His Majesty's Government were determined that India's constitutional advance should not on that account be frustrated, and that they would remove this obstacle by devising and applying themselves a provisional scheme.
2. 2. On the 19th March last His Majesty's Government, having been

informed that the continued failure of the communities to reach agreement was blocking the progress of the plans for the framing of a new Constitution, stated that they were engaged upon a careful re-examination of the difficult and controversial questions which arise. They are now satisfied that without a decision of at least some aspects of the problems connected with the position of minorities under the new Constitution, no further progress can be made with the framing of the Constitution.

3. 3. His Majesty's Government have accordingly decided that they will include provisions to give effect to the scheme set out below in the proposals relating to the Indian Constitution to be laid in due course before Parliament. The scope of this scheme is purposely confined to the arrangements to be made for the representation of the British Indian communities in the Provincial Legislatures, consideration of representation in the Legislature at the Centre being deferred for the reason given in paragraph 20 below. The decision to limit the scope of the scheme implies no failure to realize that the framing of the Constitution will necessitate the decision of a number of other problems of great importance to minorities, but has been taken in the hope that once a pronouncement has been made upon the basic questions of method and proportions of representation the communities themselves may find it possible to arrive at *modus vivendi* on other communal problems, which have not received the examination they require.
4. 4. His Majesty's Government wish it to be most clearly understood that they themselves can be no parties to any negotiations which may be initiated with a view to the revision of their decision, and will not be prepared to give consideration to any representation aimed at securing the modification of it which is not supported by all the parties affected. But they are most desirous to close no door to an agreed settlement should such happily be forthcoming. If, therefore, before a new Government of India Act has passed into law, they are satisfied that the communities who are concerned are mutually agreed upon a practicable alternative scheme, either in respect of any one or more of the Governors' Provinces or in respect of the whole of the British India, they will be prepared to recommend to Parliament that that alternative should be substituted for the provisions now outlined.

5. 5. ***
6. 6. ***
7. 7. ***
8. 8. ***
9. 9. Members of the "depressed classes" qualified to vote will vote in a general constituency. In view of the fact that for a considerable period these classes would be unlikely, by this means alone, to secure any adequate representation in the Legislature, a number of special seats will be assigned to them as shown in the table. These seats will be filled by election from special constituencies in which only members of the "depressed classes" electorally qualified will be entitled to vote. Any person voting in such a special constituency will, as stated above, be also entitled to vote in a general constituency. It is intended that these constituencies should be formed in selected areas where the depressed classes are most numerous, and that, except in Madras, they should not cover the whole area of the Province.

In Bengal it seems possible that in some general constituencies a majority of the voters will belong to the Depressed Classes. Accordingly, pending further investigation, no number has been fixed for the members to be returned from the special Depressed Class constituencies in that Province. It is intended to secure that the Depressed Classes should obtain not less than 10 seats in the Bengal Legislature.

The precise definition in each Province of those who (if electoral qualified) will be entitled to vote in the special Depressed Class constituencies has not yet been finally determined. It will be based as a rule on the general principles advocated in the Franchise Committee's Report. Modification may, however, be found necessary in some Provinces in Northern India where the application of the general criteria of untouchability might result in a definition unsuitable in some respects to the special conditions of the Province.

His Majesty's Government do not consider that these special Depressed Classes constituencies will be required for more than limited time. They intend that the Constitution shall provide that they shall come to an end after 20 years if they have not previously been abolished under the general

powers of electoral revision referred to in paragraph 6.

VIII

Mr. Gandhi found that his threat had failed to have any effect. He did not care that he was a signatory to the requisition asking the Prime Minister to arbitrate. He forgot that as a signatory he was bound to accept the award. He started to undo what the Prime Minister had done. He first tried to get the terms of the Communal Award revised. Accordingly, he addressed the following letter to the Prime Minister:—

YERAVDA CENTRAL PRISON,

August 18, 1932.

DEAR FRIEND,

"There can be no doubt that Sir Samuel Hour has showed you and the Cabinet my letter to him of 11th March on the question of the representation of the Depressed Classes. That letter should be treated as part of this letter and be read together with this.

"I have read the British Government's decision on the representation of minorities and have slept over it. In pursuance of my letter to Sir Samuel Hoare and my declaration at the meeting of the Minorities Committee of the Round Table Conference on 13th November, 1931, at St: James' Palace, I have to resist your decision with my life. The only way I can do so is by declaring a perpetual fast unto death from food of any kind save water with or without salt and soda. This fast will cease if during its progress the British Government, of its own motion or under pressure of public opinion, revise their decision and withdraw their scheme of communal electorates for the Depressed Classes, whose representatives should be elected by the general electorate under the common franchise, no matter how wide it is.

"The proposed fast will come into operation in the ordinary course from the noon of 20th September next, unless the said decision is meanwhile revised in the manner suggested above.

"I am asking the authorities here to cable the text of this letter to you so as to give you ample notice. But in any case, I am leaving sufficient time for this letter to reach you in time by the slowest route.

"I also ask that this letter and my letter to Sir Samuel Hoare already referred to be published at the earliest possible moment. On my part, I have scrupulously observed the rule of the jail and have communicated my desire or the contents of the two letters to no one, save my two companions, Sardar Vallabhbhai Patel and Mr. Mahadev Desai. But I want, if you make it possible, public opinion to be affected by my letters. Hence my request for their early publication.

"I regret the decision I have taken. But as a man of religion that I hold myself to be, I have no other course left open to me. As I have said in my letter to Sir Samuel Hoare, even if His Majesty's Government decided to release me in order to save themselves from embarrassment, my fast will have to continue. For, I cannot now hope to resist the decision by any other means; and I have no desire whatsoever to compass my release by any means other than honourable.

"It may be that my judgement is warped and that I am wholly in error in regarding separate electorates for the Depressed Classes as harmful to them or to Hinduism. If so, I am not likely to be in the right with reference to other parts of my philosophy of life. In that case, my death by fasting will be at once a penance for my error and a lifting of a weight from off these numberless men and women who have childlike faith in my wisdom. Whereas if my judgement is right, as I have little doubt it is, the contemplated step is but due to the fulfilment of the scheme of life which I have tried for more than a quarter of a century, apparently not without considerable success.

I Remain,

Your Faithful Friend,

M. K. GANDHI."

The Prime Minister replied as under :—

"10, DOWNING STREET,

September 8th, 1932.

"DEAR MR. GANDHI,

"I have received your letter with much surprise and, let me add, with very sincere regret. Moreover, I cannot help thinking that you have written it under a misunderstanding as to what the decision of His Majesty's Government as regards the Depressed Classes really implies. We have always understood you were irrevocably opposed to the permanent segregation of the Depressed Classes from the Hindu community. You made your position very clear on the Minorities Committee of the Round Table Conference and you expressed it again in the letter you wrote to Sir Samuel Hoare on 11th March. We also knew your view was shared by the great body of Hindu opinion, and we, therefore, took it into most careful account when we were considering the question of representation of the Depressed Classes.

"Whilst, in view of the numerous appeals we have received from Depressed Class Organisations and the generally admitted social disabilities under which they labour and which you have often recognised, we felt it our duty to safeguard what we believed to be the right of the Depressed Classes to a fair proportion of representation in the legislatures we were equally careful to do nothing that would split off their community from the Hindu world. You yourself stated in your letter of March 11, that you were not against their representation in the legislatures.

"Under the Government scheme the Depressed Classes will remain part of the Hindu community and will vote with the Hindu electorate on an equal footing but for the first twenty years, while still remaining electorally part of the Hindu community, they will receive through a limited number of special constituencies, means of safeguarding their rights and interests that, we are convinced, is necessary under present conditions.

"Where these constituencies are created, members of the Depressed Classes will not be deprived of their votes in the general Hindu constituencies, but will have two votes in order that their membership of

the Hindu community should remain unimpaired.

"We have deliberately decided against the creation of what you describe as a communal electorate for the Depressed Classes and included all Depressed Class voters in the general or Hindu constituencies so that the higher caste candidates should have to solicit their votes or Depressed Class candidates should have to solicit the votes of the higher castes at elections. Thus, in every way was the unity of Hindu society preserved.

"We felt, however, that during the early period of responsible Government, when power in the Provinces would pass to whoever possessed a majority in the legislatures, it was essential that the Depressed Classes whom you have yourself described in your letter to Sir Samuel Hoare as having been consigned by Caste Hindus to calculated degradation for centuries, should return a certain number of members of their own choosing to legislatures of seven of the nine provinces to voice their grievances and their ideals and prevent decisions going against them without the legislature and the Government listening to their case—in a word, to place them in a position to speak for themselves, which every fair-minded person must agree to be necessary. We did not consider the method of electing special representatives by reservation of seats in the existing conditions, under any system of franchise which is practicable, members who could genuinely represent them and be responsible for them, because in practically all cases, such members would be elected by a majority consisting of higher caste Hindus.

"The special advantage initially given under our scheme to the Depressed Classes by means of a limited number of special constituencies, in addition to their normal electoral rights in the general Hindu constituencies, is wholly different in conception and effect from the method of representation adopted for a minority such as the Moslems by means of separate communal electorates. For example, a Moslem cannot vote or be a candidate in a general constituency, whereas any electoral qualified member of the Depressed Classes can vote in and stand for the general constituency.

"The number of territorial seats allotted to Moslems is naturally

conditioned by the fact that it is impossible for them to gain any further territorial seats and in most provinces they enjoy weightage in excess of their population ratio ; the number of special seats to be filled from special Depressed Classes constituencies will be seen to be small and has been fixed not to provide a quota numerically appropriate for the total representation of the whole of the Depressed Class population, but solely to secure a minimum number of spokesmen for the Depressed Classes in the legislatures who are chosen exclusively by the Depressed Classes. The proportion of their special seats is everywhere much below the population percentage of the Depressed Classes.

"As I understand your attitude, you propose to adopt the extreme course of starving yourself to death not in order to secure that the Depressed Classes should have joint electorate with other Hindus, because that is already provided, nor to maintain the unity of Hindus, which is also provided, but solely to prevent the Depressed Classes, who admittedly suffer from terrible disabilities today, from being able to secure a limited number of representatives of their own choosing to speak on their behalf in the legislatures which will have a dominating influence over their future.

"In the light of these very lair and cautious proposals, I am quite unable to understand the reason of the decision you have taken and can only think you have made it under a misapprehension of the actual facts.

"In response to a very general request from Indians after they had failed to produce a settlement themselves the Government much against its will, undertook to give a decision on the minorities question. They have now given it, and they cannot be expected to alter it except on the condition they have stated. I am afraid, therefore, that my answer to you must be that the Government's decision stands and that only agreement of the communities themselves can substitute other electoral arrangements for those that Government have devised in a sincere endeavour to weigh the conflicting claims on their just merits.

"You ask that this correspondence, including your letter to Sir Samuel Hoare of March 11 th, should be published. As it would seem to me unfair if your present internment were to deprive you of the opportunity of

explaining to the public the reason why you intend to fast, I readily accede to the request, if on reconsideration you repeat it. Let me, however, once again urge you to consider the actual details of Government's decision and ask yourself seriously the question whether it really justifies you in taking the action you contemplate.

I am,

Yours Very Sincerely,

J. RAMSAY MACDONALD."

Finding that the Prime Minister would not yield he sent him the following letter informing him that he was determined to carry out his threat of fast unto death: —

"YERAVDA CENTRAL PRISON,

September 9th, 1932.

DEAR FRIEND,

"I have to thank you for your frank and full letter telegraphed and received this

day. I am sorry, however, that you put upon the contemplated step an interpretation that never crossed my mind. I have claimed to speak on behalf of the very class, to sacrifice whose interests you impute to me a desire to fast myself to death. I had hoped that the extreme step itself would effectively prevent any such selfish interpretation. Without arguing, I affirm that for me this matter is one of pure religion. The mere fact of the Depressed Classes having double votes does not protect them or Hindu society in general from being disrupted. In the establishment of separate electorate at all for the Depressed Classes I sense the injection of poison that is calculated to destroy Hinduism and do no good whatever to the Depressed Classes. You will please permit me to say that no matter how sympathetic you may be, you cannot come to a correct decision on a matter of such vital and religious importance to the parties concerned.

"I should not be against even over-representation of the Depressed

Classes. What I am against is their statutory separation even in a limited form, from the Hindu fold, so long as they choose to belong to it. Do you realise that if your decision stands and the constitution comes into being, you arrest the marvellous growth of the work of Hindu reformers, who have dedicated themselves to the uplift of their suppressed brethren in every walk of life?

"I have, therefore, been compelled reluctantly to adhere to the decision conveyed to you.

"As your letter may give rise to a misunderstanding, I wish to state that the fact of my having isolated for special treatment the Depressed Classes question from other parts of your decision does not in any way mean that I approve of or am reconciled to other parts of the decision. In my opinion, many other parts are open to very grave objection. Only, I do not consider them to be any warrant for calling from me such self immolation as my conscience has promoted me to in the matter of the Depressed Classes.

I Remain,

Your Faithful Friend.

M. K. GANDHI."

Accordingly, on. the 20th September 1932, Mr. Gandhi commenced his "fast unto death" as a protest against the grant of separate electorates to the Untouchables.

The story of this fact has been told by Mr. Pyarelal in a volume which bears the picturesque and flamboyant title of "The Epic Fast." The curious may refer it. I must, however, warn him that it is written by a Boswell and has all the faults of a Boswelliana. There is another side to it, but there is neither time nor space to present it here. All I can do is to invite attention to the statement ²¹[f.11] I issued to the Press on the eve of Mr. Gandhi's fast exposing his tactics. Suffice it is to say that although Mr. Gandhi declared a fast unto death, he did not want to die. He wanted very much to live.

The fast nonetheless created a problem, and that problem was how to

save Mr. Gandhi's life. The only way to save his life was to alter the Communal Award which Mr. Gandhi said hurt his conscience so much. The Prime Minister had made it quite clear that the British Cabinet would not withdraw it or alter it of its own, but that they were ready to substitute for it a formula that may be agreed upon by the Caste Hindus and the Untouchables. As I had the privilege of representing the Untouchables at the Round Table Conference, it was assumed that the assent of the Untouchables would not be valid unless I was a party to it. The surprising fact is that my position as the leader of the Untouchables of India was not only not questioned by Congressmen but it was accepted as a fact. All eyes naturally turned to me as the man of the moment or rather as the villain of the piece.

As to myself it is no exaggeration to say that no man was placed in a greater and graver dilemma than I was then. It was a baffling situation. I had to make a choice between two different alternatives. There was before me the duty, which I owed as a part of common humanity, to save Gandhi from sure death. There was before me the problem of saving for the Untouchables the political rights which the Prime Minister had given them. I responded to the call of humanity and saved the life of Mr. Gandhi by agreeing to alter the Communal Award in a manner satisfactory to Mr. Gandhi. This agreement is known as the Poona Pact.

TEXT OF POONA PACT

The following is the text of the agreement:—

(1) There shall be seats reserved for the Depressed Classes out of the general electorate seats in the Provincial Legislatures as follows:

Madras 30 ; Bombay with Sind 15 ; Punjab 8; Bihar and Orissa 18 ; Central Provinces 20 ; Assam 7 ; Bengal 30 ; United Provinces 20 ; Total 148.

These figures are based on the total strength of the Provincial Councils, announced in the Prime Minister's decision.

(2) Election to these seats shall be by joint electorates subject, however, to the following procedure :

All the members of the Depressed Classes, registered in the general electoral roll in a constituency, will form an electoral college, which will elect a panel of four candidates belonging to the Depressed Classes for each of such reserved seats, by the method of the single vote ; the four persons getting the highest number of votes in such primary election shall be candidates for election by the general electorate.

(3) Representation of the Depressed Classes in the Central Legislature shall likewise be on the principle of joint electorates and reserved seats by the method of primary election in the manner provided for in Clause 2 above, for their representation in the Provincial Legislatures.

(4) In the Central Legislature, eighteen per cent of the seats allotted to the general electorate for British India in the said legislature shall be reserved for the Depressed Classes.

(5) The system of primary election to a panel of candidates for election to the Central and Provincial Legislatures, as hereinbefore mentioned, shall come to an end after the first ten years, unless terminated sooner by mutual agreement under the provision of Clause 6 below.

(6) The system of representation of the Depressed Classes by reserved seats in the Provincial and Central Legislatures as provided for in Clauses I and 4 shall continue until determined by mutual agreement between the communities concerned in the settlement.

(7) Franchise for the Central and Provincial Legislatures for the Depressed Classes shall be as indicated in the Lothian Committee Report.

(8) There shall be no disabilities attaching to any one on the ground of his being a member of the Depressed Classes in regard to any elections to local bodies or appointment to the Public Services. Every endeavour shall be made to secure fair representation of the Depressed Classes in these respects, subject to such educational qualifications as may be laid down for appointment to the Public Services.

(9) In every province out of the educational grant, an adequate sum shall be earmarked for providing educational facilities to the Members of the Depressed Classes.

The terms of the Pact were accepted by Mr. Gandhi and given effect to by Government by embodying them in the Government of India Act. The Poona Pact had produced different reactions. The Untouchables were sad. They had every reason to be. There are, however, people who do not accept this. They never fail to point out that the Poona Pact gave the Untouchables larger number of seats than what was given to them by the Prime Minister in his Communal Award. It is true that the Poona Pact gave the Untouchables 148 seats, while the Award had only given them 78. But to conclude from this that the Poona Pact gave them more than what was given by the Award is to ignore what the Award had in fact given to the Untouchables.

The Communal Award gave the Untouchables two benefits:— (i) a fixed quota of seats to be elected by separate electorate of Untouchables and to be filled by persons belonging to the Untouchables ; (ii) double vote, one to be used through separate electorates and the other to be used in the general electorates.

Now, if the Poona Pact increased the fixed quota of seats it also took away the right to the double vote. This increase in Seats can never be deemed to be a compensation, for the loss of the double vote. The second vote given by the Communal Award was a priceless privilege. Its value as a political weapon was beyond reckoning. The voting strength of the Untouchables in each constituency is one to ten. With this voting strength free to be used in the election of caste Hindu candidates, the Untouchables would have been in a position to determine, if not to dictate, the issue of the General Election. No caste Hindu candidate could have dared to neglect the Untouchable in his constituency or be hostile to their interest if he was made dependent upon, the votes of the Untouchables. Today the Untouchables have a few more seats than were given to them by the Communal Award. But this is all that they have. Every other member is indifferent, if not hostile. If the Communal Award with its system of double voting had remained the Untouchables would have had a few seats

less but every other member would have been a member for the Untouchables. The increase in the number of seats for the Untouchables is no increase at all and was no recompense for the loss of separate electorate and the double vote. The Hindus, although they did not celebrate the Poona Pact, did not like it. Throughout their commotion to save Mr. Gandhi's life there was a definite current of conscious feeling that the cost of saving his life may be great. Therefore, when they saw the terms of the Pact they very definitely disliked it, although they had not the courage to reject it. Disliked by the Hindus and disfavoured by the Untouchables, the Poona Pact was given recognition by both parties and was embodied in the Government of India Act.

IX

The signing of the Poona. Pact was followed by the appointment of the Hammond Committee to demarcate constituencies, to fix the number of seats for each constituency and settle the system of voting for the legislatures to be set up under the new constitution.

In carrying out its functions, the Hammond Committee had to take into account the terms of the Poona, Pact and the special sort of electoral plan, agreed upon to meet the needs of the Untouchables. Unfortunately, the Poona Pact having been concluded in a hurry had left many things undefined. Of the things that were left undefined the most important were two namely: (1) Does the 'panel of four' to be elected at the primary election imply four as a. maximum or a minimum? (2) What was intended to be the method of voting in the final election? It was contended on behalf of the Hindus that the panel of four was intended to be a minimum. If four candidates are not forthcoming there could be no primary election and therefore, there can be no election for the reserved seat, which they said must remain vacant and the Untouchables should go without representation. On behalf of the Untouchables, I was called to state my interpretation of the disputed points. I contended that four in the Poona Pact meant "not more than four." It did not mean "not less than four." On the question of voting the Hindus contended that the compulsory distributive vote was the most appropriate. On behalf of the Untouchables I contended that the cumulative system of voting was the proper system to

be introduced. Fortunately for the Untouchables the Hammond Committee accepted the views propounded by me and rejected those of the Hindus. It is interesting to know why the caste Hindus put forth their contentions. One may well stop here for a moment and ask why did the Hindus raise their particular contentions before the Hammond Committee? Was there any particular motive behind the stand they took? So far as I am able to see the object which the Hindus had in demanding four candidates as the minimum for a valid primary election was to place the Hindus in a position to capture the seat for an election of such a representative of the Untouchable candidate, who would be their nominee and who would be most willing to be the tool of the Hindus. To get such an Untouchable elected in the final election he must first come in the panel, and he can come in the Panel only if the panel is a large panel. As the election to the panel is by separate electorates consisting exclusively of Untouchable voters it is obvious that if there is only one candidate in the Panel then he would be the staunchest representative of the Untouchable and worst from the standpoint of the Hindus. If there are two, the second will be less staunch than the first and therefore good from the standpoint of the Hindus. If there are three, the third will be less staunch than the second and therefore better from the standpoint of the Hindus. If there be four the fourth will be less staunch than the third and therefore best from the point of view of the Hindus. The Panel of four could therefore give to the Hindus the best chance of getting into the Panel such representatives of the Untouchables as is most suitable to the Hindus. That is why they insisted before the Hammond Committee that for a valid panel the minimum number must be four.

The object of insisting upon the system of compulsory distributive vote was the same namely to enable the Hindus to capture the seats reserved for the Untouchables. Under the cumulative vote the elector has as many votes as there are seats. He may give them all to one candidate or he may distribute them over two or more candidates as he may desire. Under the distributive system of voting the elector has also as many votes as there are seats, but he can give only one vote to any one candidate. Although the two look different yet in effect there may be no difference, because even under the cumulative vote a voter is not prevented from distributing his

votes. He is free to give one vote to one candidate. But the Hindus did not want to take any chance. Their main object was to flood the election to the seat reserved for the Untouchables in the joint electorate by, using the surplus votes of the Hindus in favour of the Untouchable candidate, who happens to be their nominee. The object was to outnumber the Untouchable voters and prevent them from electing their own, nominee. This cannot be done unless the surplus votes of the Hindu voters were diverted from the Hindu candidate towards the Untouchable candidates. There is a greater chance of the diversion of these surplus votes under the distributive system than there is under the cumulative system. Under the former the Hindu voter can give only one vote to the Hindu candidate. The other vote not being of use to the Hindu candidate is usable only for an Untouchable candidate. The distributive system thus had the possibility of flooding the election to the seat reserved for the Untouchables and this is why the Hindus preferred it to the system of cumulative voting. But they did not want to leave it to chance. For, even the distributive system from their point of view was not fool-proof. Under the distributive system there was no compulsion upon the voter to use all his votes. He may use one vote for the caste Hindu candidate and may not at all use the balance of his votes. If this happened the purpose of getting in their untouchable nominee would be defeated. Not to leave things to chance, the Hindus wanted that the distributive system of voting should be made compulsory so that a caste Hindu voter whether he wants it or not can have no option but to vote for the Untouchable candidate who may be the nominee of the Hindus, and thus make his election sure and certain.

In the light of these considerations, it cannot but appear that the Poona Pact was only the first blow inflicted upon the Untouchables and that the Hindus who disliked it were bent on inflicting on it other blows as and when circumstances gave them an occasion to do so. The two contentions, which the Hindus raised before the Hammond Committee, furnish the best evidence of the existence of a conspiracy by the Hindus the object of which was to make the Poona Pact, as it could not be repudiated, of no benefit to the Untouchables. The story of how the Congress dealt with the political demands of the Untouchables cannot be left here for the simple reason that it does not end here. The subsequent parts of it are more

instructive than those that have gone before.

Continuing the story, the next part of it relates to the election that took place in February 1937 to the Provincial Legislatures, as reconstituted under the Government of India Act, 1935.

This was the first occasion in its life-time that the Congress came down to fight an election. It was also the first time that the Untouchables got the privilege to elect their own representatives. Some leaders of the Untouchables, who were siding with the Congress when the Poona Pact was being forged— such as the late Dewan Bahadur M. C. Raja—cherished the fond hope that the Congress will not inter-meddle in the elections of the Untouchables to the seats reserved for them. But this hope was dashed to pieces. The Congress had a double purpose to play its part in the election to the reserved seats of the Untouchables. In, the first place, it was out to capture in order to build up its majority which was essential for enabling it to form a Government. In the second place, it had to prove the statement of Mr. Gandhi that the Congress represented the Untouchables and that the Untouchables believed in the Congress. The Congress, therefore, did not hesitate to play a full, mighty and, I may say so, a malevolent part in the election of the Untouchables by putting up Untouchable candidates on Congress ticket pledged to Congress programme for seats reserved for the Untouchables. With the financial resources of the Congress it made a distinct gain.

The total number of seats allotted to the Untouchables under the Government of India Act, 1935 are 151 ²²[f.12]. The following table shows how many were captured by Untouchable candidates who stood on the Congress Ticket.

Table. 5

Province	Total Seats Reserved for the Untouchables	Total Seats Captured by the Congress

United Provinces	20	16
Madras	30	26
Bengal	30	6
Central Provinces	20	7
Bombay	15	4
Bihar	15	11
Punjab	8	Nil
Assam	7	4
Orissa Total	G	4
	151	78

This shows that the Congress got just about fifty-one per cent of the seats reserved for the Untouchables.

The Congress in capturing 78 seats left only 73 seats to be filled by true and independent representatives of the Untouchables. The Untouchables were worse off under the Poona Pact than they would have been under the Prime Minister's Award. In point of effective representation, the Untouchables got less than what the Prime Minister had given them. The Congress on the other hand gained by the Poona Pact. Although under the Poona Pact it gave 151 to the Untouchables it took back 78 and thereby made a handsome profit on its political transaction.

This is by no means the sum total of the losses which the Congress inflicted on the Untouchables in the elections of 1937. There was another and a greater blow which the Congress inflicted on the Untouchables. It deprived them of any share in the Executive.

From the very beginning, I had been pressing in the discussions in the

Round Table Conference that the Untouchables must not only have the right to be represented in the legislature, they must also have the right to be represented in the Cabinet. The woes of the Untouchables are not due so much to bad laws as to the hostility of the administration, which is controlled by the Hindus who import into administration their age old prejudices against the Untouchables. The Untouchables can, never hope to get protection from the police, justice from the judiciary or the benefit of a statutory law from the administration, so long as the Public Services continued to be manned by the Illinois. The only hope of making the Public Services less malevolent and more responsible to the needs of the Untouchables is to have members of the Untouchables in the higher Executive. For these reasons, I had at the Round Table Conference pressed the claim of the Untouchables for the recognition of their right to representation in, the Cabinet with the same emphasis as I had done for the recognition of their right to representation in the Legislature. The Round Table Conference accepted the validity of the claim and considered ways and means of giving effect to it. There were two ways of giving effect to this proposal. One was to have a statutory provision in the Government of India Act so as to make it a binding obligation which it would be impossible to evade or to escape ; the other way was not to have a statutory provision but to leave it to a gentleman's agreement—to a convention—as is the case in the English Constitution. I and the representatives of the other minorities although we did not insist upon the first in deference to the wishes of some leading Indians not to show such distrust in our own countrymen were not prepared to accept the second alternative as there was no enforceable sanction behind it. A *via media* was agreed upon. It was to introduce a clause in, the Instrument of instructions to the Governors imposing an obligation upon them to see that in, the formation of the Cabinet representatives of the Minorities were included. The clause ran as follows :—

"In making appointments to his Council of Ministers our Governor shall use his best endeavours to select his Ministers in the following manner, that is to say, to appoint in consultation with the person who in his judgement is most likely to command a stable majority in the Legislature those persons (including so far as practicable members of

important minority communities) who will best be in a position collectively to command the confidence of the Legislature. In so acting, he shall bear constantly in mind the need for fostering a sense of joint responsibility among his Ministers."

What happened to this provision is an interesting story. The Congress declared that they were not prepared to accept the Government of India Act 1935 for various reasons which it is not necessary to reproduce. It was obvious to all and even to many Congressmen that there was no sincerity behind this declaration. It had no other motive but to enhance the prestige of the Congress in the eyes of the public by making it appear that the Congress was a radical and revolutionary body which was out to destroy and bury British Imperialism which is a legend, the Congress has all along tried to create. It was a mere matter of tactics. The Congress wanted to take the powers which the Governors had been given under the Constitution to intervene whenever matters which were his special responsibilities were involved. The Congress did not mind, making the declaration rejecting the Constitution because it thought that as it was the only body which could run the new Parliamentary system the British Government would be obliged to come to terms with it. The British Government threatened to bypass the Congress. It not only appointed 1st April 1937 as the date of the inauguration of the Provincial part of the Constitution but actually went to the length of appointing an interim Ministry of non-Congressmen. Congressmen, who were hungering for power and who constitute a most jealous crowd of politicians, were shaken and felt that they were going to be deprived of the fruits of their labours. Negotiations were started between His Majesty's Government and the Congress High Command. The Congress High Command demanded that if an undertaking was given by His Majesty's Government that the Governors will not use their powers given to them under the Special Responsibility Clauses in the Constitution by interfering in the day to day administration of the Provinces, the Congress, which was most anxious that the new Constitution should begin to operate with the goodwill of the majority, agreed to give the undertaking demanded. The surprising part of it is that the Congress High Command enlarged the scope of this undertaking so as to include in the undertaking the non-exercise by the

Governors of the Provinces of the powers given to them under the Instruments of Instructions to see that the representatives of the minorities were included in the Provincial Ministries. The Governors who gave full accommodation to the Congress surrendered their authority and allowed the Congress to ride rough shod through a very important part of the Constitution with the result that the Untouchables and the other minorities were deprived of their right to representation in the Cabinet by the Congress with impunity and with alacrity.

The deprivation of the Untouchables by the Congress of their right to representation in the Cabinet has the appearance of malice aforethought. One of the grounds, urged by the Congress for the non-inclusion of representatives of the minorities in their Cabinets, was that a cabinet must be a party Cabinet if it is to take collective responsibility and that the Congress was quite ready to include members of the Minority communities in its Cabinet provided they were prepared to join the Congress and sign the Congress pledge. Whatever may be the value of such argument against other minorities, it had absolutely no value against the Untouchables. The Congress could not use it to defend its conduct in excluding the Untouchables from the Cabinet for two reasons. In the first place, the Congress was bound by the terms of the Poona Pact to give representation to the Untouchables in the Cabinet. In the second place, the Congress could not say that there were no Untouchables in the Legislatures who were not members of the Congress Party. On the contrary, there were as many as 78 Untouchables returned on the Congress ticket and pledged to the Congress policy. Why then did the Congress not include them in the Cabinet? The-only answer is that it was a part of the Congress policy not to admit the right of the Untouchables to be represented in the Cabinet and that this policy had the support of Mr. Gandhi. Those who may have any doubt as to the correctness of this statement may well consider the evidence set out below.

The first piece of evidence lies imbedded in the story of the expulsion of the Hon'ble Dr. Khare from the Congress. As is well-known, Dr. Khare was the Prime Minister in the Congress Ministry in the Central Provinces. Owing to internal quarrels among the members of his Cabinet, Dr. Khare

to get rid of those that were inconvenient adopted the perfectly normal course of tendering his own resignation and that of the other ministers to the Governor with a view to form a new Cabinet. Thereafter, the Governor in full conformity with constitutional practice recalled Dr. Khare and asked him to form another Cabinet with himself as the Premier. Dr. Khare accepted the invitation and formed a new Cabinet dropping old and inconvenient hands and taking in some new ones. Dr. Khare's new Cabinet was different from the old in one important respect namely, that it included Mr. Agnibhoj, an Untouchable, who was a member of the Central Provinces, who belonged to the Congress Party and who by his education well qualified to be a minister. On the 26th July 1938, the Congress Working Committee met in, Wardha and passed a resolution condemning Dr. Khare on the ground that in tendering the resignation of his colleagues in the old ministry he was guilty of a grave error of judgement and that in forming a new ministry he was guilty of indiscipline. In explaining what was behind this charge of indiscipline in forming a new ministry. Dr. Khare openly said that according to Mr. Gandhi the act of indiscipline consisted in the inclusion of an Untouchable in the Ministry. Dr. Khare also said that Mr. Gandhi told him that it was wrong on his part to have. raised such aspirations and ambitions in the Untouchables and it was such an act of bad judgement that he would never forgive him. This statement was repeatedly made by Dr. Khare from platforms. Mr. Gandhi has never contradicted it.

There is, however, more direct evidence on this point. In 1942 there was held All-India Conference of the Untouchables. In that Conference resolutions setting out the political demands of the Untouchables were passed. An Untouchable of the Congress Party who attended the Conference went to Mr. Gandhi to ascertain what Mr. Gandhi had to say about these demands and put him the following five questions :---

“1. What will be the position of the Harijans in the future constitution to be framed?

"2. Will you advise the Government and the Congress to agree to fix the five seats from a Panchayat Board upwards to the State Council on population basis?

"3. Will you advise the Congress and the leaders of the various majority parties in the legislatures in the provinces to nominate the Cabinet members from among the Scheduled Caste legislators who enjoy the confidence of the majority of Scheduled Caste members?

"4. In view of the backwardness of the Harijans, will you advise the Government to make a provision in the Act that Executive posts in the Local Boards and Municipal Councils be held on communal rotation, so as to enable the Harijans to become Presidents and Chairmen?

"5. Why do you not fix some percentage of seats for Harijans from District Congress Committee upwards to the Working Committee of the Congress?

Mr. Gandhi gave his answers in the issue of the Harijan dated 2nd August 1942. This is what Mr. Gandhi said :—

"1. The constitution, which I could influence, would contain a provision making the observance of untouchability in any shape or form an offence. The so-called 'untouchables' would have seats reserved for them in all elected bodies according to their population within the elected area concerned.

"2. You will see that the answer is covered by the foregoing.

"3. I cannot. The principle is dangerous. Protection of its neglected classes should not be carried to an extent which will harm them and harm the country. A cabinet minister should be a topmost man commanding universal confidence. A person after he has secured a seat in an elected body should depend upon his intrinsic merit and popularity to secure coveted positions.

"4. In the first place, I am not interested in the present Act which is as good as dead. But I am opposed to your proposal on the ground already mentioned.

"5. I am opposed for the reasons mentioned. But I should like to compel large elective Congress organisations to ensure the election of Harijan members in proportion to their numbers on the Congress

register. If Harijans are not interested enough in the Congress to become 4 anna members, they may not expect to find their names in elective bodies. But I would strongly advise Congress workers to see that they approach Harijans and induce them to become members of the Congress."

Is there any doubt that Mr. Gandhi and the Congress were determined on principle not to recognise the right of the Untouchables to be represented in the Cabinet? As to the question of qualifications, there would have been some sense if Mr. Gandhi had that limiting condition applicable to all minorities. Dare Mr. Gandhi say that about the Muslim demand? What is the use in shutting it out in the case of the Untouchables only? Nobody has claimed that an unqualified Untouchable should be made a Minister. It only confirms the inner feeling of opposition that lies locked in the heart of Mr. Gandhi.

In the series of acts which the Congress perpetrated in order to nullify the Poona Pact there remain two more to mention. First relates to the policy adopted by the Congress Parliamentary Board in selecting candidates for election. Unfortunately, this question has not been studied as deeply as its importance demands. I have examined this question, and I hope to publish the results along with the evidence in a separate treatise. Here, all I can do is to set out the general principles which seem to have been adopted by these Boards in selecting candidates for election. Communal principle played a very great part in it. In a constituency where there were two candidates to choose from, the Congress did not feel it necessary to choose the one more worthy. It chose the one who belonged to a caste which was more numerous. Considerations of wealth also played their part. A wealthier candidate was often preferred to a poor and a better qualified candidate. These considerations were unjustifiable. But they could be understood as the object was to adopt a safe candidate who will pull through. But there were other principles followed which reveal a deep-seated plot. Different classes of qualifications were set down, for different classes of candidates. From candidates who came from high caste Hindus as Brahmins and the allied communities those with the highest qualifications were selected. In the case of the Non-Brahmins those with

low qualifications were preferred to those with higher qualifications. And in the case of the

Untouchables those with little or no qualifications were selected in preference to those who had. I don't say that is true in every case. But the general result was that of the candidates selected by the Congress, the candidates from the Brahmin and allied communities were the most highly educated, candidates from the non-Brahmins were moderately educated and those from the Untouchables just about literates. This system of selection is very intriguing. There seems to be a deep laid game behind it. Any one who studies it carefully will find that it is designed to allow none but the Brahmins and the allied castes to form the main part of the ministry and to secure for them the support of a docile unintelligent crowd of non-Brahmins and Untouchables who by their intellectual attainments could never dream of becoming rivals of the minister-folk but would be content to follow the lead for no other consideration except that of having been raised to the status of members of the Legislatures. Mr. Gandhi did not see this aspect of the case when he said that to be a minister the Untouchable aspiring for it must be a qualified person. Otherwise, he would have seen that if there were no qualified persons among the Untouchable Congressmen, it was because the Congress Parliamentary Board did not choose well-qualified candidates from the Untouchables.

If the present system of election continues the Congress can always prevent educated Indians from becoming members of the Legislature which is the stepping-stone for becoming a member of the Cabinet. It is a very grave prospect and some steps will have to be taken to retrieve the position. In the meantime, it is enough to say that the scheme of selecting candidates adopted by the Congress dealt the Untouchables a severe blow by depriving them of Executive power under the cover of there being no qualified men to hold it which it created for itself by such clandestine and subterranean means.

The second misdeed of the Congress was to subject the Untouchable Congressmen to the rigours of party discipline. They were completely under the control of the Congress Party Executive. They could not ask a question which it did not like. They could not move a resolution which it

did not permit. They could not bring in legislation to which it objected. They could not vote as they chose and could not speak what they felt. They were there as dumb driven cattle. One of the objects of obtaining representation in the Legislature for the Untouchables is to enable them to ventilate their grievances and to obtain redress for their wrongs. The Congress successfully and effectively prevented this from happening.

To end this long and sad story, the Congress sucked the juice out of the Poona Pact and threw the rind in the face of the Untouchables.

Chapter IV

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

CHAPTER IV AN ABJECT SURRENDER

Congress Beats An Inglorious Retreat

I

THE Poona Paet was signed on, the 24th September 1932. On 25th September 1932, a public meeting of the Hindus was held in Bombay to accord to it their support. At that meeting the following resolution was passed :—

"This Conference confirms the Poona agreement arrived at between the leaders of the Caste Hindus and Depressed Classes on September 24, 1932, and trusts that the British Government will withdraw its decision creating separate electorates within the Hindu community and

accept the agreement in full. The Conference urges that immediate action be taken by Government so as to enable Mahatma Gandhi to break his fast within the terms of his vow and before it is too late. The Conference appeals to the leaders of the communities concerned to realise the implications of the agreement and of this resolution and to make earnest endeavour to fulfil them.

"This Conference resolves that henceforth, amongst Hindus, no one shall be regarded as an Untouchable by reason of his birth, and that those who have been so regarded hitherto will have the same right as other Hindus in regard to the use of public wells, public schools, public roads, and all other public institutions. This right shall have statutory recognition at the first opportunity and shall be one of the earliest Acts of the Swaraj Parliament, if it shall not have received such recognition before that time.

"It is further agreed that it shall be the duty of all Hindu leaders to secure, by every legitimate and peaceful means, an early removal of all social disabilities now imposed by custom upon the so-called Untouchable Classes, including the bar in respect of admission to temples."

This resolution was followed by a feverish activity on the part of the Hindus to throw open Temples to the Untouchables. No week passed in which the Harijan a weekly paper started by Mr. Gandhi which did not publish a long list of temples thrown open, wells thrown open and schools thrown open to the Untouchables set out under special column headed "Week to Week" on the first page. As samples I produce below these "Week to Week" columns from two issues from the Harijan.

'HariJan' of 18th February 1933

WEEK: TO WEEK

(During the Week ending 7th February 1933)

TEMPLES THROWN OPEN	Gorakhpur Town, U.P.
<p>One temple recently built at a cost of a lakh and half rupees in North Calcutta.</p>	<p>One night school in Hata Tehsil, District Gorakhpur, U.P.</p>
<p>One temple in village Bhapur, district Ganjam, Madras.</p>	<p>One night school at Sak-honia.</p>
<p>One Thakurdwar temple at Naurania, in Jullundar, Punjab.</p>	<p>INDIAN STATES</p>
<p>WELLS OPENED</p>	<p>1. The Palitana State (Kathiawar) Assembly has passed by a large majority three resolutions relating to the facilities to be given to the Harijans.</p>
<p>One Municipal well at Guriapur in Jaipur town, district Cuttack, Orissa.</p>	<p>2. A standing committee has been appointed by the Government of Sandhur State, Madras, to concert measures calculated to ameliorate the condition of the Harijans in the State.</p>
<p>Two wells in Wazirpura and Nikigali, Agra, U.P.</p>	<p>GENERAL</p>
<p>In Trichinopoly (Madras) an orthodox Brahmin has offered expenses necessary for digging three wells for the common use of Harijans and caste Hindus.</p>	<p>1. The Harijans in various villages near Kashia in Gorakhpur district have given up carrion eating.</p>

scholarship by Principal Thadani of the College.

One night school for adult Harijans was opened under decided to start a hostel for Harijan students in Uravakonda. Some provisions and money have already been collected and it is intended to start the hostel with 20 students.

Owing to the unremitting efforts of the District Harijan Seva Sangham, Guntur, Harijan boys have been allowed into the savarna schools in a manner of villages and towns.

WELLS

Three wells in Coimbatore District which were in a bad condition, were cleaned and made available for use.

The District Board President, South Arcot, has promised to dig four wells in cheris selected by the S.U.S.

During the fortnight ending 31-5-33, no less than 125 wells in all were opened to Harijans and 5 new ones constructed in Andhradesh.

which will be started with 15 students.

The Anantapur District Harijan Seva Sangam has Three new district centres of S.U.S. have been opened during the month in Bankura, Murshidabad, and 24 Par-gana.s.

Trichinopoly, Tanjore, Tin-nevelley, Salem. Dindigul, North Arcot and Madura have all taken up the idea of a Gandhi Harijan Service corps for direct and personal service in the cheris.

Alandural, a Harijan village 12 miles from Coimbatore was given Rs. 25 worth of grain, Rs. 100 worth of cloth and Rs. 5 worth of oil, as relief after a lire in the village.

A Harijan Youth League has been formed in Chidambaram.

A shop to supply provisions at cost price to the Harijans has been set up in Tenali and is being made use of by them.

<p>GENERAL</p> <p>A shop has been opened in a bustee near Hogg Market (Calcutta) where Doms live, for supplying them with articles of food at cheap rates.</p> <p>Rs. 60 has been paid by the S.U.S. Bengal for paying up the debts of a Harijan family at Bibi Bagan bustee (Calcutta).</p> <p>The Arnrita Samaj (Calcutta) has given service to some Harijans.</p> <p>450 Harijans of Bolpur (Birbhum) have given up drinking habits and 1,275 Muchis have taken a vow not to take beef.</p>	<p>A sum of Rs. 110 was spent in giving help for rebuilding houses of Harijans in Valanna Paleni (East Kistna) recently destroyed by Fire.</p> <p>A sum of Rs. 100 was contributed by the Provincial Committee towards the relief of Harijans in Yellamanchili (Vizag) who lost their houses by a fire. The local Harijan Seva Sangham is endeavouring to erect new houses for the Harijans in a better locality and is collecting donations— in cash and building materials.</p> <p>One Harijan has been employed as a servant by a savarna gentleman in Gollapalem.</p>
--	---

When the owners or trustees of temples were not prepared to throw open their temples to the Untouchables, the Hindus actually started satyagraha against them to compel them to fall in line. The satyagraha by Mr. Kelappan for securing entry to the Untouchables in the temple at Guruvayur was a part of this agitation. To force the hands of the trustees of the temples who had the courage to stand against the current, many Hindu legislators came forward, tumbling over one another, with Bills requiring the trustees to throw open temples to the Untouchables if a referendum showed that the majority of the Hindu worshippers voted

in favour. There was a spate of such Bills and a race among legislators to take the first place. There was a Temple Entry Bill by Dr. Subbaroyan of the Madras Legislative Council. There were four Bills introduced in the Central Assembly. One was by Mr. C. S. Ranga Iyer, another by Mr. Harabilas Sarada, a third by Mr. Lalchand Navalrai, and a fourth one by Mr. M. R. Jayakar.

In this agitation Mr. Gandhi also joined. Before 1932, Mr. Gandhi was opposed to allow Untouchables to enter Hindu Temples. To quote his own, words Mr. Gandhi said

²³mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/41E.What Congress and Gandhi CHAPTER IV.htm - _msocom_1 :—

"How is it possible that the Antyajias (Untouchables) should have the right to enter all the existing temples? As long as the law of caste and ashram has the chief place in Hindu Religion, to say that every Hindu can enter every temple is a thing that is not possible today."

His joining the movement for Temple entry must therefore remain a matter of great surprise. Why Mr. Gandhi took this somersault it is difficult to imagine. Was it an honest act of change of heart, due to a conviction that he was in error in opposing the entry of the Untouchables in Hindu temples? Was it due to a realisation that the political separation between the Hindus and the Untouchables brought about by the Poona Pact might lead to a complete severance of the cultural and religious ties and that it was necessary to counteract the tendency by some such measure as Temple Entry as will bind the two together? Or was his object in joining the Temple Entry movement to destroy the basis of the claim of the Untouchables for political rights by destroying the barrier between them and the Hindus which makes them separate from the Hindus? Or was it because Mr. Gandhi saw before him looming large a possibility of adding to his name and fame and rushed to make the most of it, as is his habit to do? The second or the third explanation may be nearer the truth.

What was the attitude of the Untouchables to this movement for Temple entry? I was asked by Mr. Gandhi to lend my support to the

movement for Temple entry. I declined to do so and issued a statement on the subject to the Press. As it will help the reader to know the grounds for my attitude to this question I have thought it well to set it in full. Here it is !

Statement on Temple Entry Bill

14th February, 1933

Although the controversy regarding the question of Temple Entry is confined to the Sanatanists and Mahatma Gandhi, the Depressed Classes have undoubtedly a very important part to play in it, in so far as their position is bound to weigh the scales one way or the other when the issue comes up for a final settlement. It is, therefore, necessary that their viewpoint should be defined and stated so as to leave no ambiguity about it.

To the Temple-Entry Bill of Mr. Ranga Iyer as now drafted, the Depressed Classes cannot possibly give their support. The principle of the Bill is that if a majority of Municipal and Local Board voters in the vicinity of any particular temple on a referendum decide by a majority that the Depressed Classes shall be allowed to enter the temple, the Trustees or the Manager of that temple shall give effect to that decision. The principle is an ordinary principle of Majority rule, and there is nothing radical or revolutionary about the Bill, and if the Sanatanists were a wise lot, they would accept it without demur.

The reasons why the Depressed Classes cannot support a Bill based upon this principle are two: One reason is that the Bill cannot hasten the day of temple-entry for the Depressed Classes any nearer than would otherwise be the case. It is true that under the Bill, the minority will not have the right to obtain an injunction against the Trustee, or the Manager who throws open the temple to the Depressed Classes in accordance with the decision of the majority. But before one can draw any satisfaction from this clause and congratulate the author of the Bill,

one must first of all feel assured that when the question is put to the vote there will be a majority in favour of Temple Entry. If one is not suffering from illusions of any kind one must accept that the hope of a majority voting in favour of Temple-Entry will be very rarely realised, if at all. Without doubt, the majority is definitely opposed to-day—a fact which is conceded by the author of the Bill himself in his correspondence with the Shankracharya.

What is there in the situation as created after the passing of the Bill, which can lead one to hope that the majority will act differently? I find nothing. I shall, no doubt, be reminded of the results of the referendum with regard to the Guruvayur Temple. But I refuse to accept a referendum so overweighted as it was by the life of Mahatma Gandhi as the normal result. In any such calculations, the life of the Mahatma must necessarily be deducted.

Secondly, the Bill does not regard Untouchability in temples as a sinful custom. It regards Untouchability merely as a social evil not necessarily worse than social evils of other sorts. For, it does not declare Untouchability as such to be illegal. Its binding force is taken away, only, if a majority decides to do so. Sin and immorality cannot become tolerable because a majority is addicted to them or because the majority chooses to practise them. If Untouchability is a sinful and an immoral custom, then in the view of the Depressed Classes it must be destroyed without any hesitation even if it was acceptable to the majority. This is the way in which all customs are dealt with by Courts of Law, if they find them to be immoral and against public policy.

This is exactly what the Bill does not do. The author of the Bill takes no more serious view of the custom of Untouchability than does the temperance reformer of the habit of drinking. Indeed, so much is he impressed by the assumed similarity between the two that the method he has adopted is a method which is advocated by temperance reformers to eradicate the evil habit of drinking, namely, by local option. One cannot feel much grateful to a friend of the Depressed Classes, who holds Untouchability to be no worse than drinking. If Mr. Ranga Iyer had not forgotten that only a few months ago Mahatma Gandhi

had prepared himself to fast unto death if Untouchability was not removed, he would have taken a more serious view of this curse and proposed a most thoroughgoing reform to ensue its removal lock, stock and barrel. Whatever its shortcomings may be from the standpoint of efficacy, the least that the Depressed Classes could expect is for the Bill to recognise the principle that Untouchability is a sin.

I really cannot understand how the Bill satisfies Mahatma Gandhi, who has been insisting that Untouchability is a sin ! It certainly does not satisfy the Depressed Classes. The question whether this particular Bill is good or bad, sufficient or insufficient, is a subsidiary question.

The main question is: Do the Depressed Classes desire Temple Entry or do they not? This main question is being viewed by the Depressed Classes by two points of view. One is the materialistic point of view. Starting from it, the Depressed Classes think that the surest way for their elevation lies in higher education, higher employment and better ways of earning a living. Once they become well placed in the scale of social life, they would become respectable and once they become respectable the religious outlook of the orthodox towards them is sure to undergo change, and even if this did not happen, it can do no injury to their material interest. Proceeding on these lines the Depressed Classes say that they will not spend their resources on such an empty thing as Temple Entry. There is also another reason why they do not care to fight for it. That argument is the argument of self-respect.

Not very long ago there used to be boards on club doors and other social resorts maintained by Europeans in India, which said "Dogs and Indians" not allowed. The temples of Hindus carry similar boards to-day, the only difference is that the boards on the Hindu temples practically say : "All Hindus and all animals including dogs are admitted, only Untouchables not admitted." The situation in both cases is on a parity. But Hindus never begged for admission in those places from which the Europeans in their arrogance had excluded them. Why should an Untouchable beg for admission in a place from which he has been excluded by the arrogance of the Hindus? This is the reason of the Depressed Class man who is interested in his material welfare. He is

prepared to say to the Hindus,"to open or not to open your temples is a question for you to consider and not for me to agitate. If you think, it is bad manners not to respect the sacredness of human personality. open your temples and be a gentleman. If you rather be a Hindu than be gentleman, then shut the doors and damn yourself for I don't care to come."

I found it necessary to put the argument in this form, because I want to disabuse the minds of men like Pandit Madan Mohan Malaviya of their belief that the Depressed Classes are looking forward expectantly for their patronage.

The second point of view is the spiritual one. As religiously minded people, do the Depressed Classes desire temple entry or do they not? That is the question. From the spiritual point of view, they are not indifferent to temple entry as they would be, if the material point of view alone were to prevail. But their final answer must depend upon the reply which Mahatma Gandhi and the Hindus give to the question namely : What is the drive behind this offer of temple entry? Is temple entry to be the final goal of the advancement in the social status of the Depressed Classes in the Hindu fold? Or is it only the first step and if it is the first step, what is the ultimate goal? Temple Entry as a final goal, the Depressed Classes can never support. Indeed they will not only reject it, but they would then regard themselves as rejected by Hindu Society and free to find their own destiny elsewhere. On the other hand, if it is only to be a first step in the direction they be may be inclined to support it. The position would then be analogous to what is happening in the politics of India to-day. All Indians have claimed Dominion Status for India. The actual constitution will fall short of Dominion Status and many Indians will accept it. Why? The answer is that as the goal is defined, it does not matter much if it is to be reached by steps and not in one jump. But if the British had not accepted the goal of Dominion Status, no one would have accepted the partial reforms which many are now prepared to accept. In the same way, if Mahatma Gandhi and the reformers were to proclaim what the goal which they have set before themselves is for the advancement of the Social Status of the Depressed

Classes in the Hindu fold, it would be easier for the Depressed Classes to define their attitude towards Temple Entry. The goal of the Depressed Classes might as well be stated here for the information and consideration of all concerned. What the Depressed Classes want is a religion, which will give them equality of social status. To prevent any misunderstanding, I would like to elaborate the point by drawing a distinction between social evils which are the results of secular causes and social evils which are founded upon the doctrine of religion. Social evils can have no justification whatsoever in a civilised society. But nothing can be more odious and vile than that admitted social evils should be sought to be justified on the ground of religion. The Depressed Classes may not be able to overthrow inequities to which they are being subjected. But they have made up their mind not to tolerate a religion that will lend its support to the continuance of these inequities.

If the Hindu religion is to be their religion, then it must become a religion of Social Equality. The mere amendment of Hindu religious code by the mere inclusion in it of a provision to permit temple entry for all, cannot make it a religion of equality of social status. All that it can do is to recognise them as nationals and not aliens, if I may use in this connection terms which have become so familiar in politics. But that cannot mean that they would thereby reach a position where they would be free and equal, without being above or below any one else, for the simple reason that the Hindu religion does not recognise the principle of equality of social status; on the other hand it fosters inequality by insisting upon grading people as Brahmins, Kshatrias, Vaishyas and Shudras, which now stand towards one another in an ascending scale of hatred and descending scale of contempt. If the Hindu religion is to be a religion of social equality then an amendment of its code to provide temple-entry is not enough. What is required is to purge it of the doctrine of Chaturvarna. That is the root cause of all inequality and also the parent of the caste system and Untouchability, which are merely forms of inequality. Unless it is done not only will the Depressed Classes reject Temple Entry, they will also reject the Hindu faith. Chaturvarna and the Caste system are incompatible with the self-

respect of the Depressed Classes. So long as they stand to be its cardinal doctrine the Depressed Classes must continue to be looked upon as low. The Depressed Classes can say that they are Hindus only when the theory of Chaturvarna and caste system is abandoned and expunged from the Hindu Shastras. Do the Mahatma and the Hindu reformers accept this as their goal and will they show the courage to work for it? I shall look forward to their pronouncements on this issue, before I decide upon my final attitude. But whether Mahatma Gandhi and the Hindus are prepared for this or not, let it be known once for all that nothing short of this will satisfy the Depressed Classes and make them accept Temple Entry. To accept temple entry and be content with it; is to temporise with evil and barter away the sacredness of human personality that dwells in them.

There is, however, one argument which Mahatma Gandhi and the reforming Hindus may advance against the position I have taken. They may say: "acceptance by the Depressed Classes of Temple Entry now, will not prevent them from agitating hereafter for the abolition of Chaturvarna and Caste. If that is their view, I like to meet the argument right at this stage so as to clinch the issue and clear the road for future developments. My reply is that it is true that my right to agitate for the abolition of Chaturvarna and Caste System will not be lost, if I accept Temple Entry now. But the question is on what side will Mahatma Gandhi be at the time when the question is put. If he will be in the camp of my opponents, I must tell him that I cannot be in his camp now. If he will be in my camp he ought to be in it now.

B. R. AMBEDKAR.

Dewan Bahadur R. Srinivasan who along with me represented the Untouchables at the Round Table Conference also did not support the movement for Temple entry. In a statement to the Press, he said :—

"When a Depressed Classes member is permitted to enter into the caste Hindu temples he would not be taken into any one of the four castes, but treated as man of fifth or the last or the lower caste, a

stigma worse than the one to be called an Untouchable. At the same time he would be subjected to so many caste restrictions and humiliations. The Depressed Classes shun the one who enters like that and exclude him as casteman. The crores of Depressed Classes would not submit to caste restrictions. They will be divided into sections if they do. "Temple entry cannot be forced by law. The village caste-men openly or indirectly defy the law. To the village Depressed Class man it would be like a scrap of paper on which the "sugar" was written and placed in hands for him to taste. The above facts are placed before the public in time to save confusion and disturbance in the country."

To the question I put to Mr. Gandhi in, my statement he gave a straight reply. He said that though he was against untouchability he was not against caste. If at all, he was in favour of it and that he would not therefore carry his social reform beyond removing untouchability. This was enough for me to settle my attitude. I decided to take no further part in it.

The only leading member from the Untouchable community was the late Dewan Bahadur Rajah. One cannot help saying that he played a very regrettable part in this business. The Dewan Bahadur was a nominated member of the Central Assembly from 1927. He had nothing to do with the Congress either inside or outside the Assembly. Neither by accident nor by mistake did he appear on the same side of the Congress. Indeed, he was not merely a critic of the Congress but its adversary. He was the staunchest friend of the Government and never hesitated to stand by the Government. He stood for separate electorates for the Untouchables to which the Congress was bitterly opposed. In the crisis of 1932, the Dewan Bahadur suddenly decided to desert the Government and take sides with the Congress. He became the spearhead of the Congress movement for joint electorates and Temple entry. It is impossible to discover a parallel in the conduct of any other public cause. The worst part of the business was that it had none but personal motive behind. The Dewan Bahadur was deeply cut because the Government did not nominate him as a delegate to the Round Table Conference to represent the Untouchables and in his stead nominated

Dewan Bahadur R. Srinivasan. The Government of India had good ground for not nominating him. It was decided that neither the members of the Simon Commission nor the members of the Central Legislative Committee should have a place in the Round Table Conference. The Dewan Bahadur was a member of the Central Legislative Committee and had therefore to be dropped. This was quite a natural explanation. But the wounded pride of Dewan Bahadur Rajah could not let him see it. When the Congress Ministry took office in Madras, when he saw how the Poona Pact was being trampled upon, how his rival was made a Minister and how notwithstanding his services to the Congress he was left out, he bitterly regretted what he did! The fact, however, remains that in the critical year of 1932, Dewan Bahadur Rajah lent his full support to the Congress. He was not only running with the Congress crowd but he took care not to fall out in the race for legislation against untouchability. He too had sponsored two Bills. One of them was called the Removal of Untouchability Bill and the other was called the Criminal Procedure Amendment Bill.

Mr. Gandhi did not mind any opposition and was indifferent as to whether it came from the orthodox Hindus or from the Untouchables. He went on in mad pursuit of his object. It is interesting to ask, what happened to this movement? Within the short compass of this book it is not possible to spread out this inquiry and cover everything that was done and claimed as evidence of the success of the movement.

To put it briefly, after a short spurt of activity in, the direction of removing untouchability by throwing open temples and wells the Hindu mind returned to its original state. The reports appearing in the "Week to Week" columns of the Harijan subsided, became few and far between and ultimately vanished. For myself I was not surprised to find that the Hindu heart was so soon stricken with palsy. For I never believed that there was so much milk of human kindness locked up in the Hindu breast as the "Week to Week" column in the Harijan would have the world believe. As a matter of fact a large part of the news that appeared in the "Week to Week" was faked and was nothing but a lying propaganda engineered by Congressmen to deceive the world that the

Hindus were determined to fight untouchability. Few temples if any were really opened and those that were reported to have been, opened most of them were dilapidated and deserted temples which were used by none but dogs and donkeys. One of the evil effects of the Congress agitation is that it has made the political minded Hindus a lying squad which will not hesitate to tell any lie if it can help the Congress. Thus ended the part which the Hindu public played or was made to appear to play in this Temple-Entry movement. The same fate overtook the Guruvayur Temple satyagraha and the legislation for securing Temple-Entry for the Untouchables. As these are matters which were pursued by Mr. Gandhi and Congressmen their history might be told in some detail inasmuch as it reveals the true mentality of Mr. Gandhi and the Congress towards the Untouchables.

IV

To begin with the Guruvayur Temple Satyagraha. A temple of Krishna is situated at Guruvayur in, the Ponnani taluk in Malabar. The Zamorin of Calicut is the trustee of the temple. One Mr. Kelappan, a Hindu who was working for the cause of the Untouchables of Malabar, began an agitation for securing the Untouchables entry into the temple. The Zamorin of Calicut as the trustee of the temple refused to throw open the temple to the Untouchables and in support of his action, cited Section 40 of the Hindu Religious Endowments Act which said that no trustee could do anything against the custom and usage of the temples entrusted to him. On the 20th September 1932, Mr. Kelappan commenced a fast in, protest lying in front of the temple in. the sun till the Zamorin revised his views in favour of the Untouchables. To get rid of this annoyance and embarrassment the Zamorin, appealed to Mr. Gandhi to request Mr. Kelappan to suspend his fast for a time. After a fast for ten, days Mr. Kelappan. at the request of Mr. Gandhi suspended the fast on 1st October 1932 for three months. The Zamorin did nothing. Mr. Gandhi sent him a wire telling him that he must move in the matter and get over all difficulties legal or otherwise. Mr. Gandhi also told the Zamorin that as Mr. Kelappan had suspended his fast on his advice he had become responsible for securing to the Untouchable entry into the temple to the extent of sharing the fast with Mr.

Kelappan. On 5th November 1932, Mr. Gandhi issued the following statement to the press :—

"There is another fast which is a near possibility and that in connection with the opening of the Guruvayur temple in Kerala. It was at my urgent request that Mr. Kelappan suspended his fast for three months, a fast that had well nigh brought him to death's door. I would be in honour bound to fast with him if on or before 1st January 1933 that temple is not opened to the Untouchables precisely on the same terms as to the Touchables, and if it becomes necessary for Mr. Kelappan to resume his fast."

The Zamorin refused to yield and issued a counter-statement to the press in which he said :—

"The various appeals that are being made for throwing open the temples to Avarnas proceed upon an inadequate appreciation of such difficulties. In these circumstances, there is hardly any justification for thinking that it is in my power to throw open the Guruvayur temple to the Avarnas as desired by the supporters of the temple-entry campaign."

In these circumstances a fast by Mr. Gandhi became inevitable, and obligatory. But Mr. Gandhi did not go on fast. He modified his position and said that he would, refrain from fasting if a referendum was taken in Ponnani taluk in which the temple was situated and if the referendum showed that the majority was against the throwing open of the temple to the Untouchables. Accordingly, a referendum was taken. Voting was confined to those who were actual temple goers. Those who were not entitled to enter the temple and those who would not enter it were excluded from the voters' list. It was reported that 73 per cent. of eligible voters voted. The result of the poll was 56 per cent. were in favour of temple entry, 9 per cent. against, 8 per cent. were neutral and 27 per cent. abstained from recording their votes,

On this result of the referendum, Mr. Gandhi was bound to start the fast. But he did not. Instead, on, the 29th of December 1932 Mr. Gandhi issued a statement to the press which he concluded by saying

:—

"In view of the official announcement that the Viceregal decision as to sanction for the introduction, in the Madras Legislative Council, of Dr. Subbaroyan's permissive Bill with reference to the temple-entry could not possibly be announced before the 15th January, the fast contemplated to take place on the second day of the New Year will be indefinitely postponed and in any case up to the date of the announcement of the Viceregal decision. Mr. Kelappan concurs in this postponement."

The Viceregal pronouncement mentioned by Mr. Gandhi had reference to the Viceroy's granting permission or refusing permission to the moving of the Temple Entry Bills in the Legislature. That permission was given by the Viceroy. Yet Mr. Gandhi did not fast. Not only did he not fast, he completely forgot the matter as though it was of no moment! Since then nothing has been heard about Guruvayur Temple Satyagraha though the Temple remains closed to the Untouchables even to-day.

V

Thus ended Guruvayur. Let me now turn to the other project namely legislation for Temple-Entry. Of the many bills the one in the name of Mr. Ranga Iyer in the Central Legislature was pursued. The rest were dropped. There was a storm at the very birth of the Bill. Under the Government of India Act as it then stood no legislative measure which affected religion and customs and usages based on religion could be introduced in the Assembly unless it had the previous sanction of the Governor-General. When the Bill was sent for such sanction another commotion was created by the reports that were circulated that the Governor-General was going to refuse his sanction. Mr. Gandhi was considerably excited over these reports. In a statement to the press issued on the 21st January 1933, Mr. Gandhi said :—

"If the report is an intelligent anticipation of the forth-coming Viceregal decision, I can only say that it will be a tragedy. . . I emphatically repudiate the suggestion that there is any political

objective behind these measures. If court decisions had not hardened a doubtful custom into law, no legislation would be required. I would myself regard State interference in religious matters as an intolerable nuisance. But here legislation becomes an imperative necessity in order to remove the legal obstruction and based as it will be on popular will, as far as I can see, there can be no question of clash between parties representing rival opinions."

The decision, of the Government was announced on, the 23rd of January 1933. Lord Willingdon, refused sanction to Dr. Subbaroyan's Temple-Entry Bill in the Madras Council, but His Excellency permitted the introduction, in the Legislative Assembly, of Mr. Ranga Iyer's Untouchability Abolition, Bill. The Government emphasised the need of ascertainment of Hindu opinion before they (Government) could decide what attitude to adopt. The announcement further stated that the Governor-General and the Government of India desired to make it plain that it was essential that consideration of any such measure should not proceed unless the proposals were subjected to the fullest examination in all their aspects, not merely in the Legislature but also outside it, by all who would be affected by them. This condition can only be satisfied if the Bill is circulated in the widest manner for the purpose of eliciting public opinion. It must also be understood that the grant of sanction to the introduction in the Central Legislature, Bills relating to temple entry do not commit the Government in any way to the acceptance or support of the principles contained therein. On the next day, Mr. Gandhi issued a statement in which he said:—

"I must try to trace the hand of God in it. He wants to try me through and through. The sanction given to the All-India Bill was an unintentional challenge to Hinduism and the reformer. Hinduism will take care of itself if the reformer will be true to himself. Thus considered the Government of India's decision must be regarded as God-send. It clears the issue. It makes it for India and the world to understand the tremendous importance of the moral struggle now going on in India. But whatever the Sanatanists may decide the movement for Temple-Entry now broadens from Guruvayur in the

extreme south to Hardwar in the north and my fast, though it remains further postponed, depends not now upon Guruvayur only but extends automatically to temples in general."

One can well realize under what fanfare the Bill began, its legislative career. On the 24th of March 1933, Mr. Ranga Iyer formally introduced the Bill in the Assembly. As it was a Bill for Mr. Gandhi the Congress members of the Assembly were of course ready to give it their support. Mr. Gandhi had appointed Mr. Rajagopalachari and Mr. G. D. Birla to canvass support for the Bill among the Non-Congress members with a view to ensure safe passage for the Bill. He said they were better lobbyists than he was. The motion for introduction was opposed by the Rajah of Kollengode and Mr. Thampan raised a preliminary objection that the Bill was ultra vires of the legislature. The latter objection was overruled by the President and the House allowed the Bill to be introduced. Mr. Ranga Iyer next moved that the Temple-Entry Bill be circulated to elicit public opinion by the 30th July. Raja Bahadur Krishnamachari opposed the circulation motion and condemned the proposed legislation, in, strong terms. At last he urged that the date for circulation should be 31st December instead of 31st July. Mr. Gunjal opposed the circulation motion and asked the House not to support the Bill. As it was already 5 p.m. and as that was the last day of the session for non-official business, the President wanted to take the sense of the House for a late sitting. As there was no overwhelming majority for it, the President adjourned the House. So the Bill stood postponed to the Autumn session of the Assembly.

The discussion of the Bill was resumed on 24th August 1933 during the Autumn session of the Central Legislature. Sir Harry Haig on behalf of the Government explained that their support to the motion for circulation of the Bill should in no way be construed as implying support to its provisions. It was true that the Government sympathized for the Depressed Classes and were anxious to do what they could for their social and economic improvement. He quoted from the communiqué issued in January last, wherein the Government's view was fully explained. In his opinion, circulation by the end of June was a fair

and reasonable time to secure the widest possible circulation. As regards the limit of circulation to temple going Hindus, Sir Harry Haig said from the practical viewpoint that it would really hardly be possible to impose the restriction as proposed. The Government wanted the matter to be fully discussed by all classes of Hindus and were therefore prepared to give their support to the amendment of Mr. Sharma. Closure was moved and the House accepted Mr. Sharma's motion, for circulation of the Bill by the end of June 1934. Opinions were duly received. They fill a whole volume of over a thousand foolscap pages. The Bill was ready for the next stage namely to move for the appointment of a Select Committee. Mr. Ranga Iyer had even given notice for such a motion. A strange thing happened. The Government of India decided to dissolve the Assembly and order new election. The result of this announcement was a sudden change in the attitude of the Congress members in the Central Legislature towards Mr. Ranga's Bill. One and all stood out against it and refused to give any further support to the Bill. They were terrified of the electorates. Mr. Ranga Iyer's position was very pitiable. He described it in very biting Language, the venom of which could hardly be improved upon. So well did he describe the situation that I make no apology for reproducing the following extract from his speech Rising to move his motion Mr. Ranga Iyer said:

"Sir, I rise to move what is known as the Temple-Entry Bill, to remove the disabilities of the so-called Depressed Classes. Sir, I move :—

' That the Bill to remove the disabilities of the so-called Depressed Classes in regard to entry into Hindu temples be referred to a Select Committee consisting of the Honourable Sir Nripendra Sircar, the Honourable Sir Henry Craik, Bhai Parma Nand, Rao Bahadur M. C. Rajah, Mr. T. N. Ramakrishna Reddi, Rao Bahadur B. L. Patil and the Mover.'

"I will delete with your permission, the words 'with instructions to report within & fortnight' and then I will continue the remaining portion of the motion: 'and that the number of members whose presence shall be necessary to constitute a meeting of the Committee

shall be five.'

"Sir, at the time I gave notice of this motion, I did not think that before a fortnight we would be going into the wilderness. Therefore, I recognise the limitations of this motion, for there will be no time even to go to a Select Committee. I recognise that it gives us an opportunity to express our opinion on the subject.

"I have already stated that I owed an apology to Mr. Satya-murthi for while interrupting Mr. Mudaliar, I was not in a position naturally as he was rushing along with his speech to explain myself fully and he would have been at a disadvantage if I had done so. I recognise that Mr. Satyamurthi, who was at no time in favour of the Temple Entry Bill, has succeeded in making the Congress drop it. I read the following written statement of Mr. C. Rajagopalachariar in the Hindu of Madras, dated the 16th August. The Hindu is a very responsible newspaper, and as it is not a mere telegraphic interview but a written statement, I believe Mr. Rajagopalachariar's statement can be taken as accurate. Mr. Rajagopalachariar is apologising to the public for his betrayal of the cause of the Untouchables. As the principal lieutenant of Mahatma Gandhi, his betrayal must be placed on record. He says :

'The question has been asked by some Sanatanists whether Congress candidates will give an undertaking that Congress will not support any legislative interference with religious observances. Similar questions may be asked on a variety of topics by persons and groups interested in each one of them. That such questions are asked only of the Congress candidates and similar elucidation is not attempted in respect of other parties and independent candidates is a very great compliment paid to the Congress.'

"So says, Sriman Rajagopalachariar. And, instead of following up the compliment and arousing public opinion on. an unpopular measure, here is a great Congress leader who sat dharna at our house with his son-in-law, Devidas Gandhi, who repeatedly called on me at Delhi and said 'We seek joint support for this legislative measure,'— here is a man who goes back 'like a crab,' to borrow the language of

Shakespeare. Political parties, explains this subtle brain from the South, have distinctive policies on various questions covering a wide field :

'Not all of them, however, are made into election issues at any one time.'

"Sir. this Congress leader is afraid of facing the public opinion which he has roused." "Sir, are the Congress people slaves?"

'They are slaves who fear to speak,

For the fallen and the weak.'

"According to Milton, 'To say and straight unsay argues no liar but a coward traced.' Mr. Rajagopalachariar unsays now what he had been saying long before the General Election from every platform in the following words :

'The Congress candidates go to the electorate in this election on well-defined political issues.'

"That is to say, they go to the electorate with a view to pandering to the prejudice of the masses whom they have misled, so much so, that they have got themselves into a bog. Lord Willingdon came to their rescue, to take them out of the bog by announcing the dissolution of this Assembly and giving them an opportunity, as a Constitutional Viceroy, to return to the sheltered paths of constitutionals. Therefore, they have run away from their own convictions and are playing every trick to come back to the Legislature with as large a number as possible. Had they gone on with the Temple Entry Bill or the Untouchability question, they would have lost many votes, for it is not a popular issue. I said so, though Mahatma Gandhi contradicted me publicly at the time, I said so when Shankaracharya was staying in Malabar in my brother's house at Palghat. My brother came on a deputation to the Viceroy to oppose the Bill. I said: 'I know, the reformer is not in a majority in Malabar.' Nowhere else are the reformers in a majority but the reformers believe in persuading the majority to their way of thinking. Then, I said—whatever the result of a referendum, the Congress people might have taken in Guruvayur in

Malabar, might be, I could not for a moment believe that the majority of the temple-going people in Malabar were in favour of admitting the Untouchables into the temples: but I was prepared to fight them, also to argue with them and to persuade them and to make them take an interest in the cause and the case of the Untouchables, for, I feel, the Untouchables are a part of my community. Sir, if one-third of my community is to remain submerged in exclusion in the name of religion, I feel, as I have always felt and said, that that community has no right to existence. It is with a view to the unification of the Hindu community, it is with a view to building up the greatness of the future of that community on the past of that community, when Untouchability was quite unknown as in the Vedic ages, that I have taken up their cause. And now, I find Congressmen, so keen about Untouchability yesterday, explaining why they are not taking it up today. Mr. Raja-gopalachariar has driven the last nail into the coffin of the Temple Entry Bill as Raja Bahadur Krishnamachariar, the Raja Saheb of Kollengode or Sir Satya Charan Mukherji would perhaps like to say, representing as they do the various Sana-tanist groups of the country.

"Sir, Mr. Rajagopalachariar goes on to say that they asked to be returned 'on no other issue,' that is to say, not on Temple Entry issue, but merely on a political Anglo-phobia issue, an anti-British issue, because, having traded on public feeling, having tried to give it as much racial antipathy as possible in the name of non-violence, in the name of religion itself, because non-violence was sometimes given a religious bias, having created that atmosphere of distrust in the country, finding that that atmosphere might not help them in the election if they fought it on a bigger, a cleaner and higher issue, namely, the removal of Untouchability itself, they side-track the issue, they run away from their conviction :

' They are slaves who dare not be

In the right with two or three.'

"Then he a principal lieutenant of Gandhiji goes on to say ; ' If

successful at the polls, they cannot believe they will receive the mandate of the electorate on any other questions.'

"That is to say, they are not receiving the mandate of the electorate on the Temple Entry Bill. This man, who came screaming at our doors, begging us for support—these beggars in the cause of the Congress—who just begged of us to proceed with this Temple Entry Bill, are not only betraying the cause of the Untouchables, but they are betraying the principles of the Mahatma himself, for, we know, that Mahatma's fast was directed toward the uplift of the Untouchables by giving them concession in regard to the Communal Award, which the Congress naturally has hesitated to repudiate, and we, therefore, know that that has a direct bearing on the Untouchability question to approach which, to solve which, the Mahatma, the great Mahatma, wanted to tour the country, but today the Congress, who betrayed him first in the betrayal of the Congress boycott of the Councils, have, by seeking to come to the Councils, further betrayed him with the assistance of his own samandhi, Rajagopalachariar, and they say that they are not going to proceed with the Untouchability question and the Temple Entry Bill without a mandate from the people !

"Sir, where is the difference, I ask, between Raja Bahadur Krishnamachariar and Sriman Rajagopalachariar? Raja Bahadur Krishnamachariar has always conceded—'take a mandate from the people and then come and legislate.' Sir, he is not a coward; a great Sanatanist himself, he is willing to face the musio. On the contrary, these people who pillory the Sanatanists up and down the country, forgetting that Sanatan Dharma is eternal truth itself, are behaving in a manner which even the Sanatanists will not appreciate, for Sanatan Dharma is eternal truth and the betrayal of truth is worthy only of untruthful people I Having betrayed many a principle which would lead us to our national goal, having taken up the case of the Untouchables only to save their faces, with no conviction behind them, as we now see, the great Congress leaders with the exception of Mahatma Gandhi, have said through Rajagopalachariar, the Organiser-in-chief of the coming elections on behalf of the Congress :

It will be open to all Congressmen to have the matter duly considered before it is ever made into an official Congress Bill.'

"For this betrayal of the cause of the Untouchables, I hope constitutionalists will organise themselves, whether Hindus or Mussalmans. They can agree to differ later on communal issues, but they will unite and offer a great battle to the Congress and bring that organ of masqueraders down on its knees. Sir, I think here is a betrayal of the cause of the Untouchables and the Depressed Classes; and, if I did not believe in this movement before Mahatma Gandhi could take it up or Mr. Rajagopalachariar went from door to door in Delhi, I should not have been here to move this Bill."

VI

Here was a case of retreat from glory! And what an inglorious retreat? How did Mr. Gandhi react to it? In a statement issued on, 4th November 1932, Mr. Gandhi said :—

"Untouchables in the villages should be made to feel that their shackles have been broken, that they are in no way inferior to their fellow villagers, that they are worshippers of the same God as the other villagers and entitled to the same rights and privileges that the latter enjoy.

"But if these vital conditions of the Pact are not carried out by caste-Hindus, could I possibly live to face God and man? I ventured even to tell Dr. Ambedkar, Rao Bahadur M. C. Raja and other friends belonging to the suppressed group that they should regard me as a hostage for the due fulfilment by caste-Hindus of the conditions of the Pact. The fast, if it is to come, will not be for coercion of those who are opponents of reform, but it will be intended to sting into action those who have been my comrades or who have taken pledges for the removal of Untouchability. If they belie their pledges or if they never meant to abide by them and their Hinduism was a mere camouflage, I should have no interest left in life."

He was never tired of repeating this. Exclusion of the Untouchables from the Hindu Temples, he described, as the agony of his soul. What did Mr. Gandhi do in this connection? Did he resent this betrayal by Mr. Rajagopalachari of this project without which he said he had no interest left in life? One would naturally expect Mr. Gandhi to denounce this betrayal by the Congress Party to achieve success at the polls? Quite the contrary. Instead of blaming Mr. Rajagopalachari, he blamed Mr. Ranga Iyer for his violent denunciation of the Congress Party for withdrawing its support to the Bill. This is what Mr. Gandhi said in the issue of the Harijan dated August 31, 1934 :—

"The ill-fated Temple Entry Bill deserved a more decent burial, if it deserved it at all, than it received at the hands of the mover of the Bill. It was not a bill promoted by, and on behalf of, the reformers. The mover should, therefore, have consulted reformers and acted under instructions from them. So far as I am aware, there was hardly any occasion for the anger into which he allowed himself to be betrayed or the displeasure which he expressed towards Congressmen. On the face of it, it was, and was designed to be, a measure pertaining to religion, framed in pursuance of the solemn declaration publicly made in Bombay at a meeting of representative Hindus, who met under the chairmanship of Pandit Malaviyaji on 25th September, 1932. The curious may read the declaration printed almost every week on the front page of Harijan. Therefore, every Hindu, caste or Harijan, was interested in the measure. It was not a measure in which Congress Hindus were more interested than the other Hindus. To have, therefore, dragged the Congress name into the discussion was unfortunate. The Bill deserved a gentler handling."

The Temple Entry, what one is to say of, except to describe it a strange game of political acrobatics! Mr. Gandhi begins as an opponent of Temple Entry. When the Untouchables put forth a demand for political rights, he changes his position and becomes a supporter of Temple Entry. When the Hindus threaten to defeat the Congress in the election, if it pursues the matter to a conclusion, Mr. Gandhi, in order to preserve political power in the hands of the Congress, gives up Temple

Entry ! Is this sincerity? Does this show conviction? Was the "agony of soul" which Mr. Gandhi spoke of more than a phrase?

Chapter V

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

CHAPTER V A POLITICAL CHARITY

Congress Plan to Kill Untouchables by Kindness

I

On the 30th September 1932, a largely attended meeting of the Hindus of Bombay was held in, the Cowasjee Jehangir Hall under the Presidentship of Pandit Malaviya. The object of the meeting was to form an, All-India Anti-Untouchability League with branches in different provincial centres. The headquarters of the League were to be in Delhi. Mr. G. D. Birla was to be the President and Mr. Amritlal V. Thakkar, General Secretary. The All-India Anti-Untouchability League was Mr. Gandhi's project. It was inspired by him and was the direct outcome of the Poona Pact. At any rate, Mr. Gandhi adopted it as his baby, the moment it was born. The first thing Mr. Gandhi did was to change its name. In a press message issued on 9th December 1932, Mr. Gandhi told the public that the organisation, would thenceforth be known as Servants of the Untouchables Society. This name also did not appear to Mr. Gandhi as the best. He was searching for another.

Ultimately he decided to give it a new name. He called it the Harijun Sevak Singh. Which means a society of those engaged in Service to the Untouchables. This was a natural sequence of the name Harijan by which Mr. Gandhi used to call the Untouchables. This change did not pass off without a controversy between the Shaivas and Vaishnavas. Hari is one of the hundred names of Vishnu, while Har is one of the hundred names of Shiva. In choosing the name Harijan, Mr. Gandhi was accused of sectarian partiality. The Shaivas contended that the Untouchables should be called Harijan. Mr. Gandhi did not yield and as the first fruits of this new organisation the Untouchables got a new name.

On the 3rd November 1932, Mr. Birla and Mr. Thakkar issued a statement to the Press in. which they set out the programme of this organisation and the set-up of the machinery to carry out the programme.

As to the programme the statement said:—

"The League believes that reasonable persons among the Sanatanists are not much against the removal of Untouchability as such, as they are against inter-caste dinners and marriages. Since it is not the ambition of the League to undertake reforms beyond its own scope, it is desirable to make it clear that while the League will work by persuasion among the caste Hindus to remove every vestige of untouchability, the main line of work will be constructive, such as the uplift of Depressed Classes educationally, economically and socially, which itself will go a great way to remove Untouchability. With such a work, even a staunch Sanatanist can have nothing but sympathy. And it is for such work mainly that the League has been established. Social reforms like the abolition of the caste system and inter-dining are kept outside the scope of the League."

For the convenient prosecution, of the programme it was proposed that each Province should be divided into a number of units and each unit to be in charge of paid workers. A unit may or may not be coterminous with a district. It may be formed by grouping together two districts or two States.

The statement also set out a normal Budget for the year. It was to be of the following dimensions :—

"Not less than two-thirds of the expenditure should be devoted to actual welfare work, the remaining one-third to staff and their allowances. Two paid workers are considered the minimum staff and they should be moving about 15 to 29 days in a month in villages.

Maintenance allowance for two itinerant workers	$30+20 = 50 \times 12 = 600$
Travelling charges for two Itinerant workers	$2 \times 10 \times 12 = 240$
Miscellaneous expenditure by and through the workers	$2 + 10 \times 12 = 240$
Welfare work, i.e. cost of school books, scholarships, prizes, contributions for wells, if any, and formation of Harijan Panchayats	2,000
Total	3080

BUDGET FOR THE WHOLE COUNTRY

We give below a rough idea of the minimum total amount which may have to be spent for the whole of India. The scheme is modest enough in view of the gigantic nature of the work and it should not be difficult for the public to raise the required fund. Every pie contributed to the fund will make a valuable contribution and therefore we appeal to the public to make some sacrifices for the cause. The number of units proposed for each province is only a tentative proposal. The final decision, of course, will have to be taken by the Provincial Boards themselves.

"It is calculated that at least the following number of units will be required to be worked in different provinces, the number of districts and states being shown against each province :—

Name of Province	No. of Dists.	No. of Units
Assam	11	6
Andhra		6
Bengal	26	15
Calcutta City	1	3
Bihar	16	16
Bombay, Bombay City & Suburban District	1	3
Maharashtra	10	8
Gujarat, Baroda, Kathiawar, Cutch and other States 5 and States 10		
Central Provinces and Berar(Marathi)	9	7
Central India States	11	8
Delhi Province	1	2
Kashmir	1	1
Malabar, Cochin and Travancore	4	10
Mysore & Karnatak Dists. of Bombay &	8	10

Madras		
Nizam's Dominion	14	10
Orissa Feudatory States States	5 + 26 =	8
Punjab & N.W.F. Province and the Punjab States	39 32+7	10
Rajputana States Ajmer-Merwar State	18	
Br.Dist.	19	9
Sind	8	5
Tamil Nadu	13	8
United Provinces	48	24
Total		18 4

The expenditure for 184 Units would be $3,000 \times 184 =$	552000
---	--------

CENTRAL & PROVINCIAL OFFICES

Central Office, $1,000 \times 12 =$	12000
Provincial Offices, $4,000 \times 12 =$	48000
Total	60000
Grand Total	612000
Or say	600000

This amount will have to be made up both from the Central Fund as well as from funds raised by provinces and districts.

It can be seen that a sum of six lakhs of rupees is intended to be collected and spent per year in the whole country for the removal of Untouchability and ameliorative work of Harijans. This programme, particularly if the ameliorative work is to be effective, should continue at least for 5 years. When spread out over 22 provinces, including States and 4 crores or 400 lakhs of Harijans in the country, this is a small budget indeed."

To provide funds for the work of the Singh Mr. Gandhi started an, All-India tour which began on, November 7, 1933 and ended on, July 29, 1934. Total collection was rupees eight lakhs.²⁴ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41F.What Congress and Gandhi CHAPTER V.htm - _msocom_1 As the object of the tour was to arouse enthusiasm among the Hindus for the cause of the Untouchables as also to collect funds, Mr. Gandhi did most of the tour on foot. Mr. Gandhi collected Rs. 8 lakhs. With this amount and the annual donation of Mr. Gandhi's monied friends the Singh started its work.

The Harijan Sevak Singh has been going on, since September 1932. It has been, held out as a glorious testimony to the agony of Mr. Gandhi's soul for the condition of the Untouchables and to the passion he feels for their elevation. The General Secretary of the Singh has invited many Americans to the Home of the Singh in Delhi and shown them round as an unrivalled piece of social work that is being done by Mr. Gandhi for the welfare of the Untouchables.

Any welfare work for a down-trodden people must be welcomed by all. But this does not mean that it must never be criticised. That can hardly be accepted. It would be legitimate to inquire what work the Singh is doing since so much is made of it. Any one who has read the Annual Reports of the Singh will see that it follows certain well defined and stereotyped lines. In, the field of education, the Singh has sought to encourage higher education among the Untouchables by instituting scholarships for the Arts, technical and professional courses. The Singh

also gives scholarships to High School students. The Singh also maintains Hostels for Untouchable students attending colleges and high schools. The great part of the educational activities of the Singh is taken up in maintaining separate schools for primary stage children, where there were no common schools in the vicinity or where common, schools were closed to them.

Next comes the welfare activities of the Singh. The medical aid which the Singh undertakes to render to the Untouchables falls under this head. This is done by itinerant workers of the Singh who go in Harijan quarters to give medical aid to the sick and ailing among the Untouchables. The Singh also maintains a few dispensaries for the use of the Untouchables. This is a very small activity of the Singh.

The more important part of the welfare activity of the Singh relates to water supply. The Singh does this by (1) sinking new wells or installing tube wells and pumps for the use of the Untouchables ; (2) repairing old ones; and (3) persuading Local Governments and Bodies to sink and repair wells for the Untouchables.

The third line of activity undertaken by the Singh is economic. The Singh seems to run a few industrial schools and it is claimed that the industrial schools run by the Singh produced a number of trained artisans who have taken to independent living. But according to the reports, more successful and substantial work was done by way of organising and supervising co-operative societies among the Untouchables.

II

From this summary of its activities an impression may be created that the Singh must be spending quite a lot of money on the welfare of the Untouchables. What are the facts? It will be recalled that the normal amount of money which the Singh expected to be able to spend on the uplift work among the Untouchables was to be about Rs. 6,00,000 per year. How much has the Singh been actually spending? The Secretary of the Singh in his Report issued in, May 1941 says

²⁵ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41F.What Congress and Gandhi

CHAPTER V.htm - _msocom_2:—

"During the course of the last 8 years the various branches and the central office of the Singh have spent approximately Rs. 24,25,700 and Rs. 3,41,607 respectively, on the Harijan work. Looking to the needs of the problem, this sum of Rs. 27,67,307 is too insignificant an amount."

On this basis the Singh's expenditure comes to about Rs. 3,43,888 per year, which is 50 per cent. less than what the Singh hoped to collect. It will be seen that the Singh is not as big as it is made out to be by its friends. The Singh has been carrying on a very poor existence. A Budget of three lakhs per year for a population of 50 millions of Untouchables is not a matter on which the Untouchables need be very jubilant. Even this much show, the Singh would not have been able to put up if during the two years that they were in office the Congress Governments in different Provinces had not given large grants to the Singh.

The Singh cannot be blamed for its poor finances. The blame lies with the Hindus. The stagnant, if not the deteriorating, condition of the Singh shows how little the Hindus care for the welfare of the Untouchables. For political purposes they contributed one crore of Rupees which went to make up the Tilak Swaraj Fund. For General Welfare work they have very recently contributed one crore and 15 lakhs which will make up the Kasturba Memorial Fund. Compared with these the contributions made by the Hindus to the Harijan Sevak Singh are paltry.

One may differ with the Singh on the nature of the welfare work it does. Much of the work the Singh does is obviously the work which any civilized Government is bound to undertake out of public revenues. It may well be asked: why should the Singh ask Government to undertake this work and use its funds on projects which Government does not do and yet is urgently required to be done?

This however cannot give rise to feelings of animosity on the part of the Untouchables towards the Singh. It may be admitted that such animosity does exist. This circumstance and its causes were referred

²⁶mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41F.What Congress and Gandhi

[CHAPTER V.htm - _msocom_3](#) to by a writer in the Indian Social Reformer of 14th October 1944. He said :—

"A deputation of Harijans waited on Gandhiji at Sevagram with the request that members of the castes grouped under the head of 'Scheduled Castes' should be allowed representation on the governing body of the Harijan Sevak Singh. Gandhiji is reported to have replied that the Singh is meant to help Harijans and was not a Harijan organisation and, therefore, their request was inadmissible. At the Round Table Conference Gandhiji opposed reservation of seats for Harijans on the ground that they were Hindus and should not be separated from the general body. Subsequently in the Yeravda Pact he was obliged to consent to an allocation of seats for them specially, from the Hindu quota. When the draft formula conceding this came up for ratification before a general meeting in Bombay, over which Pandit Madan Mohan Malaviya presided, one of those present pointed out to an impatient audience that it was not necessary to collect a large fund (as Panditjee suggested) to remove from Hindu society the blot of Untouchability and that if each one of those present resolved that he or she (a large number of women were present) would receive Harijans in their homes just like other Hindus, the problem would at once cease to exist. A Bombay business magnate turned to the intruder and remarked quietly: 'You have told them a home truth. None of them is prepared to follow it.' From the first it has struck me that this has been the fundamental weakness of the Harijan Sevak Singh. What is the result? Nearly every beneficiary of the Singh is an ardent follower of Dr. Ambedkar, which is nothing, but for the fact that they share to the full the fanatical and bitter hatred of Dr. Ambedkar to the Hindus. I can give several instances to illustrate this statement. But that would only make matters worse. I think that this may be avoided by associating Harijan gentlemen and women with other Hindus in all important bodies, local and central, thus giving them the decisive voice in moulding policy. The idea of helping Harijans without associating with them, is contrary to the spirit of social reform. I was associated with the earlier movements for the uplift of Harijans and I never found this spirit of antagonism aroused among the men and women with whom one

came in contact. This was because the promoters of the movement—1 have the Depressed Classes Mission prominently in view—were by religious faith and social conviction pledged to avoid all discrimination in their behaviour to members of the Depressed Classes. I think that Gandhiji was not quite right when he said that the Harijan Singh could not admit members of the Scheduled Castes. Dr. Ambedkar, a friend reminds me, was a member of the Singh when it was formed."

I quote this because it gives me the occasion, to explain the causes of the hostility and expose the true character of the Singh.

III

The writer in the Indian Social Reformer pleads that Untouchables should be associated with the management of the Singh. His statement might lead people to believe that Untouchables were never represented on the Central Board of the Singh. That would be a mistake. The correct position is that when the Singh was started prominent Untouchables in substantial numbers were on the Central Board of the Singh. The statement issued by Mr. Birla and Mr. Thakkar on 3rd November 1932 gives the names of those who were constituting the Central Board. It was announced that :—

"The Central Board has been constituted with the following organising members:—

Sjt. G. D. Birla, Delhi and Calcutta; Sir Purshotamdas Thakurdas, Bombay; Sir Lallubhai Samaldas, Bombay; Dr. B. R. Ambedkar, Bombay; Sheth Ambalal Sarabhai, Ahmedabad; Dr. B. C. Roy, Calcutta, Lala Shri Ram, Delhi; Rao Bahadur M. C. Raja, Madras; Dr. T. S. S. Rajan, Trichinopoly; Rao Bahadur Srinivasan, Madras; Mr. A. V. Thakkar, General Secretary, Delhi."

It will be seen that out of 8 members 3 were drawn from the Untouchables. After my retirement from the Board, the other two namely Rao Bahadur M. C. Rajah and Rao Bahadur Srinivasan also retired. I do not know the reasons why they dissociated themselves from

the Singh.

It is right and proper that I should state the reasons why I severed my connection with the Singh. After the Poona Pact I proceeded in a spirit of forget and forgive. I accepted the bona fides of Mr. Gandhi as I was asked to do by many of his friends. It was in that spirit that I accepted a place on the Central Board of the Singh and was looking forward to play my part in its activities. In fact, I wanted to discuss with Mr. Gandhi the programme of work which I felt the Singh should undertake. Before I could do that, I was called to go to London to attend the third Round Table Conference. The next best thing I could do was to communicate my views to

Mr. A. V. Thakkar, the Secretary of the Singh. Accordingly I wrote the following letter from the steamer :—

M/N"VICTORIA,"

PORT SAID,

Nov. 14, 1932.

DEAR MR. THAKKAR,

I received your wire previous to my departure to London, informing me of the acceptance of my suggestion regarding the nomination of Rao Bahadur Shrinivasan to the Central Board and Mr. D. V. Naik to the Bombay Provincial Board, I am glad that this question has been amicably settled and that we can now con jointly work out the programme of the Anti-Untouchability League.²⁷ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41F.What Congress and Gandhi CHAPTER V.htm - _msocom_4 I wish I had an opportunity to meet the members of the Central Board to discuss with them the principles which the League should follow in framing its programme of work, but unfortunately owing to my having to. leave for London at a very short notice, I have had to forego that opportunity. I am however doing the second best namely to convey to you my views in writing for placing them before the Board for their consideration.

In my opinion there can be two distinct methods of approaching the task of uplifting the Depressed Classes. There is a school, which proceeds on the assumption that the fact of the individual belonging to the Depressed Classes is bound up with his personal conduct. If he is suffering from want and misery it is because he must be vicious and sinful. Starting from this hypothesis this School of social workers concentrates all its efforts and its resources on fostering personal virtue by adopting a programme which includes items such as temperance, gymnasium, co-operation, libraries, schools, etc., which are calculated to make the individual a better and virtuous individual. In my opinion, there is also another method of approach to this problem. It starts with the hypothesis that the fate of the individual is governed by his environment and the circumstances he is obliged to live under, and if an individual is suffering from want and misery it is because his environment is not propitious. I have no doubt that of the two views the latter is the more correct, the former may raise a few stray individuals above the level of the class to which they belong. It cannot lift the class as a whole. My view of the aim of the Anti-Untouchability League is that it has come into existence not for helping a few individuals at random or a few selected boys belonging to the Depressed Classes but for raising the whole class to a higher level. Consequently, I would not like the League to dissipate its energies on a programme calculated to foster private virtue. I would like the Board to concentrate all its energies on a programme that will effect a change in the social environment of the Depressed Classes. Having stated in general terms my views, I venture to place some concrete proposals for work to be undertaken by the League.

1. 1. A CAMPAIGN TO SECURE CIVIL RIGHTS

I think the first thing that the League should undertake is a campaign all over India to secure to the Depressed Classes the enjoyment of their civic rights such as taking water from the village wells, entry in village schools, admission to village chawdi, use of public conveyance, etc. Such a programme if carried into villages will bring about the necessary

social revolution in the Hindu Society, without which it will never be possible for the Depressed Classes to get equal social status. The Board must, however, know what difficulties it will have to face if this campaign of civic rights is to be carried through. Here I can speak from experience, because I, as President, know what happened when the Depressed Classes Institute and the Social Equality League launched such a plan in the Kolaba and the Nasik Districts of the Bombay Presidency. First of all, there will be riots between the Depressed Classes and the caste Hindus which will result in breaking heads and in criminal prosecutions of one side or the other. In this struggle, the Depressed Classes will suffer badly because the Police and the Magistracy will always be against them. There has not been a single case in the course of the social struggle carried on in these two districts, in which the Police and the Magistracy have come to the rescue of the Depressed Classes even when justice was on their side. The Police and the Magistracy are as corrupt as they could be, but what is worse is that they are definitely political in the sense that they are out not to see that justice is done but to see that the dignity and interests of the caste Hindus as against the Depressed Classes are upheld. Secondly, the villages will proclaim a complete boycott of the Depressed Classes, the moment they see the latter are trying to reach a status of equality along with them. You know what harrowing tales of harassment, unemployment and starvation, which the Depressed Classes repeated before the Starte Committee of which you were a member. I therefore do not think it necessary to say anything more about the severity of this weapon and of its dreadful power to bring all efforts of the Depressed Classes to rise above their degraded station to a standstill.

I have mentioned only two of the many obstacles which the League will have to overcome, if this campaign of civic rights is to be successful and the League will have to have an army of workers in the rural parts, who will encourage the Depressed Classes to fight for their rights and who will help them in any legal proceedings arising therefrom to a successful issue. I am so much convinced by the efficiency of this programme that I have not the slightest hesitation in saying that the League ought to look upon this as primary in comparison to everything

else. It is true that this programme involves social disturbance and even bloodshed. But I do not think that it can be avoided. I know the alternative policy of adopting the line of least resistance. I am convinced that it will be ineffective in the matter of uprooting untouchability. The silent infiltration of rational ideas among the ignorant mass of caste Hindus cannot, I am sure, work for the elevation of the Depressed Classes. First of all, the caste Hindu like all human beings follows his customary conduct in observing untouchability towards the Depressed Classes. Ordinarily people do not give up their customary mode of behaviour because some-body is preaching against it. But when that customary mode of behaviour has or is believed to have behind it the sanction of religion mere preaching, if it is not resented and resisted, will be allowed to waft along the wind without creating any effect on the mind. The salvation of the Depressed Classes will come only when the Caste Hindu is made to think and is forced to feel that he must alter his ways. For that you must create a crisis by direct action against his customary code of conduct. The crisis will compel him to think and once he begins to think he will be more ready to change than he is otherwise likely to be. The great defect in the policy of least resistance and silent infiltration of rational ideas lies in this that they do not compel thought, for they do not produce crisis. The direct action in respect of Chawdar Tank in Mahad, the Kalaram Temple in Nasik and the Gurwayur Temple in Malabar have done in a few days what million days of preaching by reformers would never have done. I therefore strongly recommend this campaign of direct action for securing civic rights of the Depressed Classes for adoption by the Anti-Untouchability League. I know the difficulties of this campaign, and from such experience as I have of it I am convinced that the forces in charge of Law and Order must be on our side, if it is to end in success. It is because of this that I have deliberately excluded temples from its scope and confined it only to public rights of a civic nature, the exercise of which I feel Government is bound to protect.

2. 2. EQUALITY OF OPPORTUNITY

The second thing I would like the Anti-Untouchability League to work for, is to bring about equality of opportunity for the Depressed Classes. Much of the misery and poverty of the Depressed Classes is due to the absence of equality of opportunity which in its turn is due to untouchability. I am sure you are aware that the Depressed Classes in villages and even in towns cannot sell vegetables, milk or butter—ways of earning a living which are open to all and sundry. A caste Hindu will buy these things from a non-Hindu, but he will not buy them from the Depressed Classes. In the matter of enjoyment, his condition is the worst. In Government Departments the bar-sinister operates and he is denied the place of a constable or even a messenger. In industries he fares no better. Like the Negro in America he is the last to be employed in days of prosperity and the first to be fired in days of adversity. And even when he gets a foothold, what are his prospects? In the Cotton Mills in Bombay and Ahmedabad he is confined to the lowest paid department where he can earn only Rs. 25 per month. More paying departments like the weaving department are permanently closed to him. Even in the low paid departments he cannot rise to the highest rung of the ladder. The place of the boss is reserved for the caste Hindu while the Depressed Class worker must slave as his underdog, no matter how senior or how efficient. In departments where the earning depends on piece work, he has failed to earn as well as Caste Hindu employees because of social discrimination. Depressed Classes women working in the Winding and Reeling Departments have come to me in hundreds complaining that the Naikins instead of distributing the raw material to all employees equally or in fair proportion, give all of it to the caste Hindu women and leave them in the cold. I have given only a few of the instances of the gross inequality of opportunity from which the Depressed Classes are suffering mainly at the hands of the Hindus. I think it would be fit and proper, if the Anti-Untouchability League were to take up this question by creating public opinion in condemnation of it and establishing bureaus to deal with urgent cases of inequality. I would particularly desire the League to tackle the problem of opening the Weaving department of the Cotton mills to the Depressed Classes as it is likely to make a very large opening for prosperous employment to members of the Depressed Classes. Much can be done by private firms

and companies managed by Hindus by extending their patronage to the Depressed Classes and by employing them in their offices in various grades and occupations suited to the capacities of the applicants.

3. 3. SOCIAL INTERCOURSE

Lastly, I think the League should attempt to dissolve that nausea, which the touchables feel towards the Untouchables and which is the reason why the two sections have remained so much apart as to constitute separate and distinct entities. In my opinion the best way of achieving it is to establish closer contact between the two. Only a common cycle of participation can help people to overcome the strangeness of feeling which one has, when brought into contact with the other. Nothing can do this more effectively in my opinion than the admission of the Depressed Classes to the houses of the* caste Hindus as guests or servants. The live contact thus established will familiarise both to a common and associated life and will pave the way for that unity which we are all striving after. I am sorry that many caste Hindus who have shown themselves responsive are not prepared for this. During those ten days of the Mahatma's fast that shook the Indian world, there were cases in Vile Parle and in Mahad where the caste Hindu servants had struck work because their masters had abrogated the rules of untouchability by fraternising with the Untouchables. I expected that they would end the strike and teach a lesson to the erring masses by filling the vacancies by employing Depressed Classes in their place. Instead of doing that they capitulated with the forces of orthodoxy and strengthened them. I do not know how far such fair-weather friends of the Depressed Classes would be of help to them. People in distress can have very little consolation from the fact that they have sympathisers, if those sympathisers will do nothing more than sympathise, and I may as well tell the League that the Depressed Classes will never be satisfied of the bona fides of these caste Hindu sympathisers until it is proved that they are prepared to go to the same length of fighting against their own kith and kin actual warfare if it came to that for the sake of the Depressed Classes as the Whites of the North did against their own kith

and kin, namely, the Whites of the South for the sake of the emancipation of the Negro. But this thing apart, I think it is necessary that the League should endeavour to inculcate upon the mind of the Hindu public the necessity of establishing contact and social intercourse between the touchables and the untouchables in the way I have mentioned.

4. AGENCY TO BE EMPLOYED

The League will have to employ a very large army of workers to carry out its programme. The appointment of social workers might perhaps be looked upon as a minor question. Speaking for myself, I attach very great importance to the selection of a proper agency to be employed in this behalf. There can always be found workers to do a particular piece of work or any other for the matter of that if they are paid for it. I am sure such mercenary workers will not serve the purpose of the League. As Tolstoy said ;"Only those who love can serve."In my opinion that test is more likely to be fulfilled by workers drawn from the Depressed Classes. I should therefore like the League to bear this aspect of the question in mind in deciding upon whom to appoint and when not to appoint. I do not suggest that there are not scoundrels among the Depressed Classes who have not made social service their last refuge. But largely speaking you can be more sure that a worker drawn from the Depressed Classes will regard the work as love's labour—a thing which is so essential to the success of the League. Secondly, there are agencies which are already engaged in some sort of social service without any confines as to class or purpose —and may be prepared to supplement their activity by taking up the work of Anti-Untouchability League in consideration of a grant-in-aid. I am sure this hire-purchase system of work— if I may use that expression—can produce no lasting good. What is wanted in an agency is a single minded devotion to one task and one task only. We want bodies and organisations which have deliberately chosen to be narrow-minded in order to be enthusiastic about their cause. The work it is to be assigned must be assigned to those who would undertake to devote themselves exclusively to the work of the

Depressed Classes.

I am afraid I have already trespassed the limits of a letter and I do not think I can err further in that direction without being tediously long. I had many other things to say but I now propose to reserve them for another occasion. Before closing this I wish to say just this. It was Balfour I think who said' that what could hold the British Empire together was love and not law. I think that observation applies equally to the Hindu Society. The touchables and the untouchables cannot be held together by law certainly not by any electoral law substituting joint electorates for separate electorates. The only thing that can hold them together is love. Outside the family justice alone in my opinion can open the possibility of love, and it should be the duty of the Anti-Untouchability League to see that the touchable does, or failing that is made to do, justice to the Untouchable. Nothing else in my opinion can justify the project or the existence of the League. With best wishes and kind regards.

I am, Yours sincerely,

(Sd.) B. R. AMBEDKAR.

F.S.

I am releasing this to the Press so that the general public may know my views and have an opportunity to consider them.

To

A. A. V. THAKKAR, ESQ.,
General Secretary,

Anti-Untouchability League,

Birla House,

New Delhi.

IV

To my great surprise, I found that no attention, was paid to my

proposals. Indeed, my letter was not even acknowledged! I felt that there was no use in my remaining in the Singh. I dissociated myself from it. I found that in my absence the aims and objects had undergone a complete change. At the meeting held in Cowasjee Jehangir Hall in Bombay on the 80th September 1932 the aims of the organisation were stated to be:—

"Carrying propaganda against Untouchability and taking immediate steps 'to secure as early as practicable that all public Wells, dharamshalas, roads, schools, crematoriums, burning ghats and all public temples be declared open to the Depressed Classes, provided that no compulsion or force shall be used and that only peaceful persuasion shall be adopted towards this end.'"

But in the statement issued by Mr. G. D. Birla and Mr. A. V. Thakkar on the 8rd November two months after its inauguration it was stated :—

"The League believes that reasonable persons among the Sanatanists are not much against the removal of Untouchability as such, as they are against inter-caste dinners and marriages. Since it is not the ambition of the League to undertake reforms beyond its own scope, it is desirable to make it clear that while the League will work by persuasion among the caste Hindus to remove every vestige of Untouchability, the main line of work will be constructive, such as the uplift of Depressed Classes educationally, economically and socially, which itself will go a great way to remove untouchability. With such a work even a staunch Sanatanist can have nothing but sympathy. And it is for such work mainly that the League has been established. Social reforms like the abolition of the caste system and inter-dining are kept outside the scope of the League."

Here there was a complete departure from the original aims of the organisation. Removal of Untouchability had only a nominal place in the programme. Constructive work became the main part of the work of the Singh. It is pertinent to ask why this change in the aims and objects was made. This change in the aims and objects could not have been brought about without, the knowledge and consent of Mr. Gandhi. The only

reason one can see is that the original programme was most inconvenient to Mr. Gandhi. Removal of Untouchability as a platform was very good, but as a programme of action it was bound to have made Mr. Gandhi very unpopular with the Hindus. He was not prepared to court such unpopularity. He therefore preferred the programme of constructive work which had all advantages and no disadvantages. The Hindus did not mind it. Mr. Gandhi could pursue it without incurring the displeasure of the Hindus. The programme of constructive work had no such disadvantage. On the other hand, it had a positive advantage to recommend it. It had the possibility of destroying the independent movement which the Untouchables had built up and which had forced Mr. Gandhi in 1932 to yield to its demands by agreeing to the Poona Pact by dangling well before them the benefits of the constructive work, a consummation which all Congressmen so devoutly wish. It could make Untouchables Congressmen and most gracefully too. The programme of constructive work had the possibility of being converted into a plan to kill Untouchables by kindness. This as a matter of fact has happened. The Harijan Sevak Singh is intolerant of any movement on the part of the Untouchables which is independent and opposed to the Hindus and the Congress and is out to destroy it. Anticipating that such would be the consequences of the change in the aims and objects, I retired from the Singh.

Since the first batch of the Untouchables left the Singh no attempt was made by Mr. Gandhi to appoint other Untouchables in their places. Instead, the management of the Singh has been allowed to pass entirely into the hands of the Hindus of the Congress persuasion. Indeed, it is now the policy of the Singh to exclude Untouchables from the management and higher direction of the Singh. As will be seen from the refusal of Mr. Gandhi to agree to the suggestion made by deputation of Untouchables ²⁸ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41F.What Congress and Gandhi CHAPTER V.htm - _msocom_5 requesting him to appoint Untouchables to the managing body. Mr. Gandhi has propounded a new doctrine to console the deputations. He says;”the Welfare work for the Untouchables is a penance which the Hindus have to do. for the sin of Untouchability. The money that has been collected has been

contributed by the Hindus. From both points of view the Hindus alone must run the Singh. Neither ethics nor right would justify Untouchables in, claiming a seat on the Board of the Singh."Mr. Gandhi does not realise how greatly he has insulted the Untouchables by his doctrine, the ingenuity of which has not succeeded in concealing its gross and coarse character. If Mr. Gandhi's point is that the money is collected by the Hindus and the Untouchables have therefore no right to say how it shall be spent, no self respecting Untouchable will bother him and fortunately those Untouchables who have gone to him for such favour are just unemployed loafers who are seeking to make politics a source of their livelihood. But Mr. Gandhi must realise that what he says is only a justification for the change. It does not explain what has been the cause of this profound change in the original conception of the Singh. It is pertinent to ask: why at one time he was anxious to have Untouchables on the Governing Body of the Singh and why he is determined now to exclude them?

V

The writer of the letter in the Indian Social Reformer is right when he says the Untouchables felt no hostility towards the Depressed Classes Mission, Society which like the Harijan, Sevak Singh was also engaged in. doing welfare work among the Untouchables. Hindus and Untouchables both worked together in, perfect harmony towards furthering the work of the Mission. The writer is not quite correct when he says that this was due to the Depressed Classes Mission, having always taken care to have on its Managing Committee a certain number of Untouchables. This is quite true. But the reason why there was no hostility between the Mission, and the Untouchables and why there is between the Untouchables and the Singh is quite different. It lies in the fact that the Mission had no political objective behind its work but the Singh has.

It is true that the original intention, was to keep the Singh scrupulously aloof from politics. It was stated in the statement issued on 3rd November 1932 that:—

"The League may be able to carry on its work on a non-party basis, it has decided not to associate itself with politics or religious propaganda of any kind. The heads of Provincial as well as Central Executive will, therefore, have to be very careful in the selection of their active workers. With this object in view it is necessary that all whole-time paid workers of the League should not take part in politics or in any sectional or religious propaganda."

But this pronouncement was respected more in its breach than in the observance thereof. It may be that it was impossible to resist the temptation of using the Harijan Sevak Singh for bringing the Untouchables into the Congress fold, make them accept Congress politics and impress upon them Congress ideologies, especially when the sense of gratitude for service rendered, no matter how petty, would make them receptive for such processes. It may be that it was necessary to make the Harijan Sevak Singh a political manufactory in addition to its being a service station for the Untouchables. To have equipped the Untouchables for their struggle in life and to have left them free to choose their politics would be charity pure and simple. But how long would the Hindus have supported such a charity? Not very long. There being no sense of sin behind the treatment of Untouchables by the Hindus and no cause for repentance or expiation, the charity on which the Singh lives would have dried out. To prevent this the Singh may have felt that to get continued charity it must show results i.e. to prove to the Hindus that the Untouchables are no longer independent of and opposed to the Hindus in the matter of religion and politics. My analysis of the causes may not be accurate. But there is no denying the fact that the Harijan Sevak Singh is a political organisation the aim and object of which are to draw the Untouchables into the Congress fold.

I can give only a few instances which strike me as important. The Harijan Sevak Singh holds Conferences of its workers. These Conferences were ostensibly "organised for the purpose of examining the progress of work in different linguistic provinces and for exchanging ideas and experiences." One such conference was held in Poona in the first week of June 1939. It was found that this Conference had planned

to pass a resolution asking Government to change the system of voting under the Poona Pact by substituting distributive system for cumulative voting. I have already pointed out how after its surrender marked by the Poona Pact, the Congress insisted upon the adoption of the distributive system of voting and how dangerous it was to the Untouchables and how it would have nullified the Poona Pact. The Congress failed. What the Congress failed to do the Singh took upon itself to advocate knowing full well that it was opposed by the Untouchables. A strange resolution for a non-political body! It is like a drunkard with a red nose trying to convince his neighbours that he is a teetotaller. The Singh was prevented from pursuing the course by a demonstration of the Untouchables.

I am in a position to state that the Bombay Branch of the Harijan Sevak Singh had followed the policy of black listing some of the Untouchable communities residing in Bombay on account of its Anti-Congress attitude. Students from communities which were black listed were refused scholarships and other educational aids. The Mahar Community, which forms the spearhead of the political movement of the Untouchables and has all along fought with the Congress, was black listed and Mahar students were generally subjected to discrimination unless the student proved that he did not share the Anti-Congress sentiments of the Community.

The last instance I would refer to has reference to Mr. A. V. Thakkar the General Secretary of the Harijan Sevak Singh. Mr. Thakkar is also a member of the Backward Classes Board of the Bombay Government. It was established in 1929. It meets periodically and advises Government on matters affecting the Untouchables and other backward Classes.

Mr. Thakkar brought a resolution in the meeting of the Board recommending to Government that scholarships set apart by Government for Untouchable boys should not be given to the Mahar boys alleging that the Mahar Community had become very much advanced in education and was appropriating—or according to him misappropriating—the share of Government funds which ought to be reserved for other Untouchable Communities. The resolution was sent

down for investigation of the facts on which it was found. The inquiry showed that the facts were wrong and that the Mahars instead of being forward were really backward in education as compared with other Untouchable Communities. The resolution was nothing but a political manoeuvre by no less a person than the General Secretary of the Harijan Sevak Singh to punish the Mahars for their Anti-Congress politics.

What does all this show? Does it not show that the Harijan Sevak Singh is a charitable organisation only in name, and that its real aim is to ensnare the Untouchables, to make them the camp-followers of the Hindus and the Congress and to scotch any movement by them the aim and object of which are to free themselves from the social, religious, economic and political domination of the Hindus? Is there any wonder if the Untouchables look upon the Harijan Sevak Singh as an abomination, the object of which is to kill them by kindness?

Chapter VI

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

CHAPTER VI A FALSE CLAIM

I

The Congress has been, loudly and insistently claiming that it is the only political organisation in India which is representative of the people of India. At one time it used to claim that it represents the Musalmans also. This it does not now do, at any rate not so loudly and insistently. But so far

as the Untouchables are concerned the Congress maintains most vehemently that it does represent them. On the other hand, the non-Congress political parties have always denied this claim. This is particularly true of the Untouchables who have never hesitated to repudiate the Congress claim to represent them.

In this rivalry the Congress has been able to beat down the Untouchables and the other non-Congress Parties by the sheer strength of the resources in publicity and propaganda. The result has been that most foreigners interested in Indian affairs have become infected by this propaganda, and have come to believe in the validity of the Congress claim. So long as the world had to depend upon nothing but propaganda, the Congress could very easily fool the foreigner and there was no help for those who denied the Congress claim to represent all. They had no means of coping with the situation. But since the Election of 1937 to the Provincial Legislatures the situation has been altered. Instead of depending upon general statements backed by propaganda, one can now determine the issue in terms of seats and votes which is a more concrete measure of appraisal than mere propaganda.

What do the election returns show? What is the total number of seats captured by the Congress? What is the total number of votes secured by the Congress?

First, let us ascertain the number of seats captured by the Congress. Soon after the elections had taken place, the Congress held a Convention of all those who were elected to the Provincial Legislatures on the Congress ticket, which met in New Delhi on March 19, and 20, 1937. In that connection, the Congress issued a bulletin in which their names are given. Taking that information as accurate, the following appears to be the strength of the Congress in each Provincial Legislature ;—

Table 6

Congress Strength in Provincial Assemblies

Province	Total Strength of the Assembly	Congress Strength in the Assembly
Assam	108	35
Bengal	250	60
Bihar	152	95
Bombay	175	85
C. P. and Berar	112	70
Madras	215	159
Oriasa	60	36
Punjab	175	18
Sind	60	8
U.P.	228	134
N.W.F.P. 1	50	19
Total	1,585	719

Table 7

Congress Strength in Provincial Councils

<i>Province</i>	Total Strength of the Council	Congress Strength in the Council
Assam	18	Nil
Bengal	57	10
Bihar	26	8

Bombay	26	14
Madras	46	26
Total	173	58

These tables show that taking the two Houses together the Congress secured 777 seats out of a total of 1,758. The Congress obviously is not a majority party. It did not secure even half the number of seats.

This is the position of the Congress in terms of the number of seats. What is the position of the Congress in terms of voting strength? The following figures will show that even in point of voting strength the Congress came out as a minority.

Table 8

Abstract of Votes Cast in the Election distributed as between Congress and Non-Congress Parties

			Total Votes cast	Votes cast in favour of Congress	Votes cast in favour of Non- Congress
Madras		Assembly Council	4,327,734 33,511	2,658,966 16,907	1,668,768 16,604
Bombay		Assembly Council	3,408,308 23,730	1,568,093 9,420	1,840,215 14,310
Bengal		Assembly	3,475,730	1,055,900	2,419,830

		Council	5,593	1,489	4,104
U.P.		Assembly	3,362,736	1,899,325	1,463,411
		Council	9,795	1,580	8,215
Bihar		Assembly	1,477,668	992,642	485,026
	..	Council	4,318	96	4,222
Punjab		Assembly	1,710,934	181 -265	1,529,669
C. P.		Assembly	1,317,461	678,265	639,196
Assam		Assembly	522,332	129,218	393,114
		Council	2,623	Nil	2,623
N.W.F.P.		Assembly	179,529	43,845	135,684
Oriasa		Assembly	304,749	198,680	106,069
Sind		Assembly	333,589	18,944	314,645
		Total .	20,500,340	9,454,635	11,045,705

It is not enough to know these figures. They must be read in the light of other circumstances. The first such circumstance is the level of the franchise. The other is the relative position of the two parties in the election. Without taking these into account it would not be possible to understand the full significance of the election results. As to franchise, it is very high, and the electorate, compared with the total population, is indeed very small. How small a part of the total population it formed will be seen from the comparative figures given in the following table:--

Table 9

Province	Population	Electorate
----------	------------	------------

	(1931)	
Madras .	47,193,602	6,145,450
Bombay and Sind	26,398,997	3,249,500
Bengal ..	51,087,338	6,695,483
U.P	49,614,833	5,335,309
Punjab	24,018,639	2,686,094
Bihar and Orissa	42,329,583	2,932,454
C.P.	17,990,937	1,741,364
Assam	9,247,857	815,341
N.W.F.P	4,684,364	246,609
Total	272,566,150	29,847,604

Only about ten per cent of the population was given the right to vote. The high franchise made the electorate a hive of the middle and the intellectual classes, both of which were intensely pro-Congress. Coming to the relative position of the Congress and the Non-Congress Parties, the following points call for special notice. On the Congress side there were massed all the sinews of war, money and organisation. The Non-Congress candidates were without a party chest and had no organisation. The Congress candidates were the blue boys of the public. They were enemies of British Imperialism, out to achieve freedom and independence of the country. Gaol life had invested the Congress candidates with the halo of martyrdom. As a rule no one was selected as a Congress candidate who had not gone to gaol. The Non-Congress candidates were represented by the congress Press—and as I have said there is no other press in India—as the showboys of the British, with no record of service to or sacrifice for the country, agents of British Imperialism, enemies of the country, job-hunters, fellows out to sell the interests of the country for a mess of pottage and so on. There was another factor which told in favour of the Congress

candidates and against the Non-Congress candidates. The Congress had boycotted the Montagu-Chelmsford Reforms of 1920 and the Congress candidates had not to answer for any act of commission or omission in regard to the administration of the country. The Non-Congress candidates on the other hand were drawn from those who had worked the Reforms and had to answer for many acts of omission and commission, which is the lot of all those who have the courage to take upon their shoulders the responsibilities of administration. The Non-Congress candidates were accused of having made the places dirty and the Congress candidates were proclaimed as angels going to clean the Aegean stables. In a situation like this, any one, knowing how the dice was loaded in favour of the Congress, cannot but feel surprised at the sorry figure the Congress cut in the election. With all its resources, prestige and public sympathy the Congress should have swept the polls. But it did not even get fifty per cent of the seats or the votes.

Is there any doubt that the Congress claim to represent all classes and communities is a hollow claim with no foundation in fact?

Let me next proceed to examine the Congress claim to represent the Untouchables. This claim also can now be determined by reference to the results of the elections that took place in 1937. A correct understanding of the results of the electoral contests between Congress and the Untouchables, I fear, will not be possible to those who have no knowledge of the electoral plan devised to give representation to the Untouchables. I therefore feel it necessary to explain in the first instance the Indian Electoral system, particularly for the benefit of the foreigner. It may be described by reference to the four elements of an Electoral System, namely, (1) Electorates which is the Indian term for constituencies, (2) Right to vote, (3) Right to stand as a candidate for election and (4) Rules for determining who is a successful candidate.

1. There are two sorts of Electorates recognised by the Government of India Act, 1935, (1) Non-Territorial. (2) Territorial.

2. Non-Territorial Electorates are Electorates which are designed to give representation to special interests such as Landlords, Chambers of

Commerce, Trade Unions, etc.

3. Territorial Electorates fall into three categories :—

- (i) (i) Separate Territorial Electorates known in their abbreviated form as Separate Electorates.
- (ii) (ii) General Territorial Electorates.
- (iii) (iii) Joint Territorial Electorates with Reserved Seats, commonly spoken of as Joint Electorates.

4. Separate Electorates are Communal Electorates. They are designed to give representation to specified Communities, namely, Muslims, Indian Christians, Europeans and Anglo-Indians. The voters of each of these Communities in a given area are grouped into one Electorate, separate from the rest. They elect a voter of their Community as their representative exclusively by their own votes. The governing feature of a separate electorate is that in an election through a separate electorate only voters of a Community can vote and stand for election. If it is a Muslim Electorate the voter and the candidate must be a Muslemean; if it is a Christian, Electorate the voter and the candidate must be a Christian and so on. The election is decided by a majority of votes cast by voters of the particular community.

5. A General Electorate is the normal usual form of the electorate, an electorate which comprises of voters of all communities living in an area but which are outside the system of Separate Electorates. It is called a General Electorate because it is an electorate in which neither community nor religion finds any recognition. It is an electorate of the Rest i.e. other than Muslims, Indian Christians, Europeans and Anglo-Indians. In a General Electorate :—

- (i) (i) No voter who is in a Separate Electorate has a right to vote in or stand for election.
- (ii) (ii) Every voter who is on its electoral roll has a right to vote and to stand for election without reference to his caste, creed or community.
- (iii) (iii) The result of the election is determined by a simple majority of votes cast.

6. A Joint Electorate is a cross between Separate Electorate and the General Electorate. It has some things in common with Separate Electorate and the General Electorate, But it also differs from both in other particulars. The points of agreement and of difference are set out below :—

(i) Joint Electorate compared with Separate Electorate :

(1)(1) Joint Electorate is akin to Separate Electorate in as much as both aim to earmark a seat for a particular community.

(2)(2) Joint Electorate differs from a Separate Electorate in two respects :—

(a) (a) In a Separate Electorate the right to vote in the election is confined to voters of the community for which the seat is earmarked, while in a Joint Electorate, though the seat is earmarked for a particular community, in other words though the right to stand is confined to a member of a particular community, the right to vote in the election for that seat is open to other communities which make up the General Electorate.

(b) (b) In both cases the poll is declared on the basis of majority votes. But in the case of a separate electorate the majority is and must be of the voters belonging to the same community as that of the candidate, while in the case of a joint electorate majority need not be of the same community as that of the candidate.

(ii) Joint Electorate compared with General Electorate :—

(1)(1) A Joint electorate is akin to a General Electorate in as much as in both a voter is free to vote for any candidate standing for a general Constituency.

(2)(2) A Joint Electorate differs from a Separate Electorate in two respects :—

(a) (a) A General Electorate may be a single member electorate. But a Joint Electorate must at least be a two-member electorate one general and one reserved.

(b) (b) In a General Electorate no seat is earmarked for any community. But in a Joint Electorate one at least must be reserved.

7. Special Features of Joint Electorate.

A Joint Electorate with Reserved Seats is essentially a General Electorate with the following distinguishing features:—

- (1) (1) A General Electorate may be a single member electorate. But a Joint Electorate must necessarily be a plural member Electorate.
- (2) (2) In a General Electorate the seat or seats to be filled by Election are open to all, and all communities not enclosed in separate electorates are entitled to contest and the result of the election is determined by majority of the votes polled by the candidates without reference to community of the voter or the candidate. But in a Joint Electorate at least one seat is reserved for some particular community which means that the right to stand as a candidate for such reserved seat is restricted to members of that community.
- (3) (3) While the right to stand in a Joint Electorate is restricted, the right to vote is unrestricted and all voters in the General Electorates, i.e., even voters of communities other than the one for which the seat is reserved are free to vote for the election of the candidate for the Reserved Seat.
- (4) (4) In declaring the result of the election to the reserved seat, there is no requirement that the successful candidate must have obtained a specified quantum of votes of the voters of this community. The rule is that the candidate of the community for which the seat is reserved if there is only one or if there be more than one candidate then the one who polls the highest number of votes must be declared to be elected even if another candidate belonging to the general community has secured a greater number of votes than the community's candidate.

Such is the Electoral system which obtains in India. The system made applicable to the Untouchables is the one referred to as the system of Joint Electorates with Reserved Seats and described under 7 above. To give effect to the principle of reservation for the Untouchables what is done is to pick out a requisite number of General Electorates, convert them into plural Member electorates and reserve in each such electorate one or two seats for the Scheduled Castes. Different Provinces have different number of such Joint Electorates. Their actual number is determined by the

number of seats allotted to the Scheduled Castes in the Provincial Legislature and by the number of seats reserved for them in each Joint Electorate. Attention may also be drawn to some features of the plan, which from the point of view of results are of crucial character.

The Joint Electorate is a general electorate. But it must not on that account be supposed that it is a constituency consisting of the generality of voters. As has already been pointed out, the Muslims, Indian Christians, Anglo-Indians and Europeans, have been given, separate electorates and consequently, the Muslim, Indian, Christian, Anglo-Indian and European voters are excluded from a Joint Electorate. The result is that the Joint Electorate is a constituency in which the only voters who are included are those belonging to the Scheduled Castes, Hindus, Parsis and Jews. As the Parsis and Jews are negligible except in Bombay, the Joint Electorate consists of Hindus and Scheduled Castes only.

Although the General Electorate selected for reserving a seat for the Untouchables may be bigger than a two-member constituency and although it is open to reserve more than one seat for the Untouchables in one General Electorate, in all provinces the general plan is to select a two-member General Electorate, and to reserve one seat for the Hindus and one seat for the Scheduled Castes. It is only in Bengal there are three constituencies in which two seats are reserved for the Scheduled Castes. The Joint Electorate is thus a linked constituency. Two features of this Joint Electorate should be noted : (1) The Hindu voters in a Joint Electorate are almost always in a majority, if not in an overwhelming majority and the Scheduled Castes voters are almost always in a minority, if not in a hopeless minority. (2) A Hindu voter can vote for the election of a Scheduled Caste candidate standing for the seat reserved for the Scheduled Castes and a Scheduled Caste voter can vote for the election of a Hindu candidate standing for the Hindu seat.

Under the system what are the probabilities? Will the Scheduled Castes be able to elect a Scheduled Caste candidate who has their confidence to the seat reserved for them or will the Hindus be able to elect a Scheduled Caste candidate who is their tool and who has no confidence of the Scheduled Castes? The probabilities will be determined by two considerations: (1) by

the number of seats reserved for the Hindus and (2) by the nature of the political organisations prevailing among the Hindus. If there is only one seat reserved for the Hindus and if the Hindus are so organised that they can prevent a contest for their seat and avoid frittering away their votes then it is absolutely certain that the Hindu nominee from the Scheduled Castes will win. The reason is that the Hindus who have a larger voting strength will find a surplus of votes which they do not need for election to their seat and which they can bestow upon their nominee from the Scheduled Castes and help him to win the seat reserved for the Scheduled Castes. The system of joint electorate and reserved seats which is in operation is a system of two member constituency. The Hindus under the Congress are so completely organised that there is no possibility of an electoral contest and consequent waste of votes. The result is that the system helps the Hindus to win the reserved seats and works against the Scheduled Castes. The Hindus are greatly aided in this matter by reason of the fact that for winning the seat reserved for the Scheduled Castes in a Joint Electorate it is not necessary that the majority of voters should belong to the Scheduled Castes for whom the seat is reserved.

How these weaknesses in the system of joint electorate were exploited by the Congress in the Elections which took place in 1937, will be explained later on. For the moment, I am only drawing attention to the Electoral plan devised for the purpose of giving representation to the Scheduled Castes and how vulnerable some of its features are.

III

We may now proceed to examine the Election Returns. It may be well to begin by asking a simple question: What do Congressmen mean when they say that the Election of 1937 shows that the Congress represents the Untouchables? A clarification is necessary, because quite obviously the question can have two meanings. It may mean that those Untouchable candidates who stood on the Congress ticket for seats reserved for the Untouchables were elected as against those Untouchable candidates who did not stand on the Congress ticket. It may also mean that more votes were cast by the Untouchable voters in favour of those Untouchable

candidates who stood on the Congress ticket than other Untouchable candidates. I propose to examine the returns from both points of view.

The results of the Election, in terms of seats won, have already been presented. It is not necessary to repeat those figures here. It was shown that out of 151 seats the Congress won 78. One cannot say that this result of the contest between the Congress and the Untouchables is a strong piece of evidence to support the Congress claim that it represents the Untouchables. If the Congress got 78 the Untouchables got 73. It was a neck to neck race.

Let us examine the claim of the Congress to represent the Untouchables in term of votes cast in favour of the Congress Untouchable candidates. The total number of votes cast by the Untouchable Voters in the election of 1937 numbered 1,586,456.

The following table shows how they were distributed, how many were cast in favour of the Congress Untouchable candidates and how many in favour of Non-Congress Untouchable candidates:

Table 10

Province.			Voting by Untouchable Voters		
			In favour of Congress	Against Congress	Total of Untouchable Votes cast in the Election
United Provinces		52,609	79,571	132,180	
Madras		126,152	195,464	321,616	
Bengal		59,646	624,797	684,443	
Central		19,507	115,354	134,861	
			158,076	171,047	
				30,841	

Provinces			12,971	22,187	69,126
Bombay			8,654	69,126	27,757
Bihar			Nil	22,437	14,585
Punjab			5,320	8,707	
Assam			5,878		
Orissa					
Total			290,737	1,295,719	1,586,456

It is well-known that the number of seats captured by a party is not always in proportion to the number of votes cast in favour of the party and often a party carries a majority of seats with a minority of votes. This is particularly true where the single member constituency system prevails as it does in India. The real strength is measured by the number of votes secured by the party. Applying this test, it is clear that out of 1,586,456 votes only 290,737 i.e., eighteen per cent have been cast in favour of the Congress. Eighty-two per cent have been against the Congress. Can there be any evidence more conclusive against the Congress claim to represent the Untouchables? Congressmen may not accept voting strength as a measuring rod. They may continue to base the claim of the Congress to represent the Untouchables on the ground of seats captured. No sane man will look upon 78 out of 151 or majority of five as a victory worth talking about. As a matter of fact the Congress claim even on the basis of seats is futile. For, a further analysis of the Election Returns shows that the Congress far from capturing a majority of seats got only a minority of seats reserved for the Scheduled Castes.

If the credit side of the Congress is to be real and not bogus, then the following deductions must be made from the total of 78 which the Congress has won:

- (1)(1) Seats won by the Congress with the help of Hindu voters and which if left to be decided by the votes of the Untouchables only

would have been lost by the Congress.

- (2)(2) Seats won by the Congress not by reason of an absolute majority but by reason of the splitting of the Untouchable votes due to too many Non-Congress Untouchable Candidates having stood to contest the seat against the Congress Untouchable candidate.
- (3)(3) Seats which, it was in the power of Untouchables to win, if they had used their votes in the election to the seats reserved for them and not cast them away in the election of candidates contesting the general or nonreserved seats.

I cannot see how a fair minded person can object to these deductions being made. A candidate whose majority is due to votes of persons other than Untouchables has no right to say that he is a representative of the Untouchables and the Congress cannot claim to represent the Untouchables through him merely because he belongs to the Untouchables and stood on a Congress ticket. An Untouchable candidate whose majority is the result of split in the camp of his opponents and who if there had been no split would have lost, cannot be taken as a real representative of the Untouchables and the Congress cannot claim to represent the Untouchables merely because he belongs to the Untouchables and stood on the Congress ticket. A candidate for a seat reserved for the Untouchables who succeeds in an election in which a large majority of the electors have not played their part cannot be a representative of the electors merely because the seat is an Untouchable seat. Untouchable seats captured by such Untouchable candidates must also be deducted from the total number of seats won by the Congress. The only Untouchable seats which the Congress can claim to have won are those which it has won, exclusively by the votes of the Untouchable voters. All the rest must be deducted. The following table gives the distribution of the seats reserved for the Scheduled Castes and won by the Congress and the circumstances responsible for its success.

Table 11

Analysis of Circumstances which helped Congress to Win the Seats it has Captured

Province	Number of Seats won by the Congress				Total
	With Hindu	Without Hindu	Due to Splitting of Scheduled	By want of interest shown by Scheduled Castes in the	
	Votes	Votes	Castes	Election to	
			Votes	Scheduled	
				Castes	
	(1)	(2)	(3)	(4)	(5)
United Provinces	3	6	3	4	16
Madras	5	15	4	2	26
Bengal	1	4	—	2	0
Central Provinces		5		1	7
Bombay	1	1	1	1	4
Bihar	1	3		7	11
Punjab Assam	1	2	—	1	4
Orissa	1	2	—	1	4
Total	13	38	8	19	78

These are the facts revealed by a study of the Election Returns. They are

incontrovertible and must be accepted. Judged by the test of voting the Congress far from representing the Untouchables, the Untouchables are proved to have repudiated the Congress. Judged by the test of seats, the Congress has only won 38 seats out of the total of 151. The account shows that 73 seats it failed to win, 13 it won by Hindu Votes, 8 as a result of split due to too many Untouchables standing against the Congress Untouchable candidate and 19 on account of the foolishness of the Untouchables in not taking sufficient interest in the election to the seats reserved for them.

The following table specifies the Constituencies where such phenomena have occurred. They are classified under three heads and shown Province-wise and referred to by their serial number as shown in the Appendices.

Table 12 mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41G.What Congress and Gandhi CHAPTER VI.htm - _msocom_1

Provinces	Analysis of Scheduled Castes Constituencies.		
	Serial Numbers of Constituencies in which Congress won with Hindu Votes	Serial Numbers of Constituencies in which Congress won because of splitting of Scheduled Castes Votes	Serial Numbers of Constituencies in which Congress won because the Scheduled Castes were indifferent
United Provinces	1,3 &4	8,9 & 10	11, 13, 14 & 18
Madras	1, 22, 23,24 & 25	8, 12, 15 & 17	4 &21
Bengal	Nil	Nil	6 &7

Central Provinces	6	Nil	15
Bombay	1	14	3
Bihar	11	Nil	2,6,7,8,9,10 & 13
Punjab	Nil	Nil	Nil
Assam	1	Nil	4
Orissa	6	Nil	2

The claim that the Congress represents the Untouchables is thus a false claim from beginning to end. It is a myth which in the light of the results of the election stands completely exploded.

The results of the election reveal other interesting facts which are summarised in the following two tables :

Table 13

Election to Scheduled Castes Seats

Provinces	Contested	Uncontested	Total
United Provinces	15	5	20
Madras	26	4	30
Bengal	28	2	30
Central Provinces	19	1	20
Bombay	14	1	15
Bihar	6	9	15

Punjab	6	2	8
Assam	6	1	7
Orissa	4	2	6
Total	124	27	151

Table 14

Scheduled Castes Seats won by the Congress

Provinces	On Contest	Without Contest	Total
United Provinces	14	2	16
Madras	24	2	26
Bengal	6	Nil	6
Central Provinces	6	1	7
Bombay	3	1	4
Bihar	4	7	11
Punjab	Nil	Nil	Nil
Assam	3	1	4
Orissa	4	Nil	4
Total	64	14	78

Table 13 shows what keen interest the Untouchables have taken in the election to the seats reserved for them. Out of 151 as many as 121 were contested. This disproves the allegation that used to be made that it was no use giving political rights to the Untouchables as they had neither political education nor political consciousness. Table 14 shows that the Untouchables far from looking upon the Congress as their friend and ally have regarded it as their political enemy No. 1. They have very seldom allowed the entry of the Congress in the election to the seat reserved for the Untouchables to go unchallenged. In most of the cases where the Congress had put up an Untouchable candidate on the Congress ticket for a seat reserved for the Untouchables, the Untouchables did not meekly surrender the seat to the Congress but came forward to contest the election by putting up their own candidate on a Non-Congress ticket. Out of the 78 candidates put up by the Congress for the Scheduled Castes seats as many as 64 were contested.

IV

To say that the elections of 1937 do not prove that the Congress was

victorious over the Untouchables in the electoral fight is an understatement. In a real sense the Untouchables triumphed over the Congress. If not many are found to admit this, their inability or unwillingness to do so must be attributed to their ignorance of the difficulties which the Untouchables have had to face in their contest with the Congress. These difficulties were very real and very great. It is worthwhile to detail them so that people may know the courage and tenacity with which the Untouchables have fought to prove that they are independent of the Congress and that the Congress does not represent them.

These difficulties can be classified under two heads (1) Organisational and (2) Electoral.

Under the first head special mention may be made of two :— The first was the difference in the relative degree of resources at the command of the Congress and of the Untouchables. That the Congress is the richest political party goes without saying. No estimate has so far been made of the money the Congress spent in the elections of 1937. If an investigation was made it would be found that the money it spent in advertisement, in conveyance and in canvassing for the candidates who stood on its ticket was simply colossal. All these resources were placed by the Congress at the service of those Untouchables who stood on the Congress ticket. Not one millionth part of these resources were available to those Untouchable candidates who stood against the Congress. Some of them had even to borrow money to pay their deposits. They fought their elections without the help of advertisement, canvassing or conveyance.

The second is the existence of a party machine on the side of the Congress and the complete absence of it on the side of the Untouchables. The party machine as every one knows constitutes the real strength of the Congress. The credit for the creation of a party machine must be given to Mr. Gandhi. It has been in existence for the last 20 years and with the resources it possesses the Congress has kept the machine well oiled and in perfect order always ready to be put in motion by merely pressing the button. It is a vast machine which covers every town and every village in the country. There is no area in which there is no agent of the Congress to

operate this machine. The Untouchables who stood on the Congress ticket had their electioneering done for them by this party machine of the Congress. Those Untouchables who stood against the Congress had no such party machine to help them. The scheme of separate representation was first introduced in Indian politics in the year 1909. The benefit of it was however given only to one community, namely, the Muslims. In 1920 the constitution was revised. In this revised constitution it was extended to the Non-Brahmins. The Untouchables were again left out. They were consoled with representation with one or two seats in the various Provincial Legislatures filled by nomination. It is for the first time in 1935 that they got the franchise and the right to representation through election. It is obvious that not having had any franchise the Untouchables had felt no need to set up a party machine of their own as there were no elections to be fought. They hardly had any time to organise themselves and to set up a party machine when suddenly in 1937 they were called upon to fight the elections. The fight between the Congress and the Untouchables was a fight between an army and a crowd.

The electoral difficulties in the way of the Untouchables were equally great. The first electoral difficulty arose from the unequal voting strength between the Hindus and the Untouchables in those General Electorates in which seats are reserved for the Untouchables. The following table contains figures showing the relative voting strength of the two.

This table shows how in the General Electorates the Scheduled Castes voters are outnumbered by the Hindu voters. Special attention should be paid to the proportion in which they are outnumbered by the Hindus. As the figures in the table show, in 20 constituencies the proportion of Scheduled Castes voters to Hindu voters is 10 to 100, in 27 constituencies between 11 and 15 to 100, in 18 constituencies between 15 and 20 to 100, in 27 constituencies between 21 and 25 to 100 and in 11 constituencies between 20 and 30 to 100. These instances will show how overwhelming is the majority of Hindu voters and by what a substantial margin the Hindus can overpower the Scheduled Castes voters. In, this connection it must also be remembered that every Scheduled Caste Constituency is a Joint Electorate in which both classes of voters—those belonging to the

Scheduled Castes and those belonging to the Hindus—can vote for the Scheduled Castes seat and compete to capture it. In this game the relative disproportion in voting strength of the two becomes of immense importance. For success in election in such a linked constituency primarily depends upon relative voting strength of the competing groups.

The second electoral difficulty arose out of the number of the seats fixed for the general constituencies in which seats were reserved for the Untouchables. The following table shows the system adopted in the different provinces.

Table 16

Classification of General Constituencies in which Seats for Untouchables are Reserved

Province	No. of Seats Reserved for Untouchables	No. of Constituencies with 2 Seats	No. of Constituencies with 3 Seats	No. of Constituencies with 4 Seats
Madras	30	30	Nil	Nil
Bombay	15	Nil	6	9
Bengal	30	20	5	Nil
United Provinces	20	20	Nil	Nil
Punjab	8	8	Nil	Nil
Bihar	5	15	Nil	Nil
Central Provinces	20	20	Nil	Nil
	7	6	1	Nil

Assam	6	6	Nil	Nil
Orissa				
	151	125	12	9

This table shows that out of 151 General Constituencies required to be declared as reserved for the Scheduled Castes as many as 130 were two-member constituencies in which one seat was reserved for the Scheduled Castes and the other was kept as a general seat. It is quite possible that many will not realize the electoral danger that is involved to the Untouchables in this two-member constituency system. But the danger is very real. How real it is, will become clear if it was considered along with the relative voting strength of the Hindus and the Untouchables in the General constituency to which attention has already been drawn. Where the constituency is a plural constituency of—say three or four members—one reserved for the Scheduled Castes and two or three left for the general community, the relatively higher voting strength of the Hindus is not so much a matter of danger as it is when under the two-member constituency the Hindus have only one candidate to elect. With more candidates to elect the voting strength of the Hindus is split as they become engaged in fighting out the election of their candidates to the general seat and there is no surplus votes left with them, with the result that their excessive voting strength in the constituency does not become a menace to the Scheduled Castes. But, when they have only one seat to win, the chances of their votes being frittered away are remote. Under an organised party system such as that established by the Congress, they are nil. The excess of unused voting strength which they are thus able to retain becomes surplus and unnecessary for them, and which they are quite free to use in supporting a Scheduled Caste candidate of their choice, standing on their ticket as against another Scheduled Caste candidate who is independent and who is not prepared to be their tool. What havoc the Hindus played with their

surplus votes is clear from the result of the elections.

When one considers the method of voting and the number of seats fixed and the distribution of the voting strength in the general constituencies one feels whether any better electoral system for deceiving the Untouchables could have been devised. The Joint Electorates to which the Scheduled Castes are tied are like the Rotten Boroughs which existed in England before the Reform Act of 1832. Under the Rotten Borough, the candidate elected was in fact nominated by the boss who controlled the Borough. Similarly, under the system of Joint Electorates the Scheduled Caste candidate who is elected to the Legislature is virtually nominated by the Hindus. That is the reason why Mr. Gandhi is so keenly devoted to the system of Joint Electorates.

One hears a great deal about the Muslim League having grown from strength to strength. But few realize how sheltered the Muslim League is by reason of the system of separate electorates. The Muslims are secure from the menace and mischief of the Congress. Not so are the Untouchables. They are open to the full blast of the Congress money, Congress votes and Congress propaganda. That the Untouchables overcame all these difficulties without resources, without a party machine and in spite of all electoral difficulties shows their triumph over the Congress and their desire to maintain their independent existence.

Chapter VII

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

CHAPTER VII A FALSE CHARGE

Are Untouchables the Tools of the British?

As I have said before, the Congress since the time it came under the auspices of Mr. Gandhi underwent a complete transformation. One of these transformations is noteworthy, for it is this which has made the Congress so famous and which has enabled it to capture the imagination of the people. Before Mr. Gandhi's time it did nothing more than meet annually at different places in India and pass certain and sometimes the same resolutions touching some flaw in the British Administration of India. After Mr. Gandhi took charge of the Congress in 1919, it became a party of action, or, as Congressmen like to put it, the congress forged sanctions—a thing never thought of before. The sanctions, which make up the Congress armoury and which it has put into action one time or another are: (1) Non-co-operation; (2) Boycott; (3) Civil Disobedience and (4) Fast. The aim of non-co-operation was to make government useless by refusal to recognise or resort to Government schools, colleges, courts and to make it impossible by refusing to engage in Government service. Boycott was a weapon, the aim of which was to coerce individuals not prepared to follow the dictates of the Congress. It had two edges, social or economic. The social edge cut off all social intercourse even withdrawing the services of barbers, washermen, butchers, grocers, merchants, etc., in short, making life of the culprit impossible in every way. The economic edge cut off all business relations, such as buying and selling of goods. Its objective was the merchant class selling foreign goods. Civil Disobedience was intended to give a direct blow aimed at the British Government. It was a deliberate breach of law with a view to court imprisonment, fill gaols and thereby discredit Government. It is practised either as mass civil disobedience or individual civil disobedience. Unfortunately fasting on a mass scale has not been resorted to by Congressmen. Fasting has only been an individual activity. Unfortunately fasting unto death has also not been practised by Congressmen. It has always been for a term. It is a weapon particularly reserved by Mr. Gandhi for himself. Even he uses it

for a term. These are the four weapons which the Congress forged to give sanction to its demand for India's freedom.

Having forged the sanctions, the Congress has gone on to give demonstrations of the use of these sanctions. Between 1920 and 1942, the country has witnessed demonstrations staged by Congressmen of one form or the other of these sanctions. The din and dust they raised filled the air and drew crowds to witness them. They have come to be described as "Fight for Freedom." What has been the use of such sanctions is a subject which demands serious consideration. But this is not the place for it. One must remain content with the observation that the old Congress could not have done worse. The use of sanctions has really been a tragedy, Swaraj is as far as it has been, but the reckless use of sanctions has made partition of India starker, surer and nearer. While it is not possible to discuss the gains resulting from the use of sanctions, the fact must be mentioned that this "Fight for Freedom" has been carried on mostly by the Hindus. It is only once that the Musalmans took part in it and that was during the shortlived Khilafat agitation. They soon got out of it. The other communities, particularly the Untouchables, never took part in it. A few stray individuals may have joined it for personal gain. But the community as such has stood out. This was particularly noticeable in the last campaign of the "Fight for Freedom," which followed the 'Quit India' resolution passed by the Congress in August 1942.

This is a glaring fact especially to a foreigner who comes to India and witnesses how more than half the population non-co-operates with the Congress in this "Fight for Freedom." Quite naturally he feels stupefied by this strange phenomenon. He asks: Why are the Muslims, Christians and Untouchables not participating in the "Fight for Freedom?" and turns to the Congress for an explanation. The Congress has a ready-made answer. It is that the Untouchables are the tools of British Imperialism and that is why they do not join the "Fight for Freedom." The echo of this charge was heard from the mouth of many foreigners whom one came across during the war. What is most disconcerting is the experience that most of these foreigners seemed to

have accepted the allegation as being true. The simplicity and plausibility of the argument could be the only reason which can account for such an easy conversion. It serves a double purpose. It enables the Congress to account for a strange phenomenon and it gives an explanation to which circumstances lend an apparent plausibility.

Had it not been for the fact that even influential foreigners have been infected by this idea, one would hardly bestir himself to take notice of such malicious propaganda. For the explanation given by the Congress for the non-participation by the Untouchables in what is called "the Fight for Freedom" is an absurd explanation. It is an explanation which only a knave can venture to offer and which none but a fool can be expected to accept as satisfactory. But as it is almost certain that in the events that are coming, what foreigners think about India's problems will be a matter of some moment, I think it necessary to explain the correct situation and allow no room for such erroneous notions about the Untouchables to take roots in their mind especially when there can be no difficulty in proving that it is a false charge against the Untouchables and to prove that if the Untouchables have not joined the "Fight for Freedom" it is not because they are the tools of the British Imperialism but because they fear that freedom of India, will establish Hindu domination which is sure to close to them and for ever all prospect of life, liberty and pursuit of happiness and that they will be made the hewers of wood and drawers of water.

That the Untouchables should have refused to join the Congress in the "Fight for Freedom" is in, itself a proof positive that their reason for non-co-operation with the Congress cannot be the puerile one suggested by the Congress. It must be something real and substantial. What is it? The reason which has led the Untouchables to non-co-operate with the Congress has been popularly expressed by them when they say that they do not wish to be placed under Hindu Raj in which the governing class would be the Bania and the Brahma-1 mm with low class Hindus as their policemen, all of whom have been the hereditary enemies of the Untouchables. This language is held to offend against good taste. That may be so. But it must not be supposed that because

such slogans are offensive in their tone they are devoid of sense or that the outlook which they typify and the ideals which they embody have no compelling force or that they cannot be made to wear the garb of a true and respectable political philosophy.

Translated in the language of political science, what do these slogans mean? They mean that the Untouchables are not opposed to freedom from British Imperialism. But they refuse to be content with mere freedom from British Imperialism. What they insist upon is that free India is not enough. Free India should be made safe for democracy. Starting with this aim, they say that on account of the peculiar social formation in India there are minority communities pitted against a Hindu Communal Majority, that if no provisions are made in the constitution to cut the fangs of the Hindu. Communal Majority, India will not be safe for democracy. The Untouchables therefore insist on devising a constitution which will take note of the special circumstances of India and contain safeguards which will prevent this Hindu Communal Majority in Indian society from getting possession of political power to suppress and oppress the Untouchables and which will directly invest the Untouchables with at least a modicum of political power to prevent their suppression and exploitation, and to enable them at least to hold their own, in their struggle for existence against the Communal Majority. In short, what the Untouchables want are safeguards in the constitution itself which will prevent the tyranny of a Hindu Communal Majority from coming into being.

The Congress on the other hand regards the freedom of India from British Imperialism to be the be-all and end-all of Indian nationalism. Nothing more, it thinks, is necessary for the welfare of the Indian people in a free India. As to the question of a constitution for a free India, the Congress simply does not look upon it as a problem. Asked, what about the constitution of a free India? The Congress reply is that it will be a democracy. What sort of democracy would it be? The Congress answer is that it will be based on adult franchise. Will there be any other safeguard, besides adult suffrage for preventing the tyranny of a Hindu Communal Majority? The Congress reply is emphatically in the negative.

Asked, why this opposition to safeguards? the Congress says that it is a vivisection of the nation,—an argument the pictures queerness of which is intended to cover its stupidity and which has its origin in the genius of Mr. Gandhi, and for which the high class Hindus, who stand to lose by these safeguards, feel so grateful to him.

The Untouchables refuse to accept this silly sophism. They say that Indian social life has to be reckoned in terms of communities. There is no escape. Communities are such hard facts of Indian social life that it would be wrong to accept that communal impulse and communal prejudice do not dominate the relations of the communities. The social psychology of the Hindu Communal Majority is dominated by the dogma which recognises not merely inequality but graded inequality as the rule governing the inter-relationship among the various communities. This dogma of graded inequality is absolutely inimical to liberty and fraternity. It cannot be believed that this graded inequality will vanish or that the Hindus will strive to abolish it. That is impossible. This graded inequality is not accidental or incidental. It is the religion of the Hindus. It is the official doctrine of Hinduism. It is sacred and no Hindu can think of doing away with 'it. The Hindu Communal Majority with its religion of graded inequality is not therefore a passing phase. It is a permanent fact and a menace for ever. In making a constitution for India the existence of a standing Communal Majority cannot be ignored and the problem of devising safeguards so as to reconcile it with political democracy must be faced. That is the reasoning of the Untouchables.

The constitutional safeguards which the Untouchables have been demanding are detailed in the Resolutions recently passed by the Working Committee of the All-India Scheduled Castes Federation and which are printed in Appendix XI. For purposes of argument I take three of them. (i) Guaranteed minimum representation in the Legislature; (ii) Guaranteed minimum representation in the Executive and (iii) Guaranteed minimum representation in the Public Services. These demands are ridiculed by the Congress as communalism and the leaders of the Untouchables are represented as job hunters. The

Congress places its opposition to these guarantees on the high pedestal of nationalism, of which it holds itself as the guardian angel. The foreigner may find it difficult to see the absurdity of the Congress argument against safeguards. But if he were to take into account the purposes for which these guarantees are sought, he will find that the attempt of the Congress to represent them as a piece of communalism is arrant nonsense.

The purpose of these guarantees demanded by the Untouchables is not to fill the Legislature, the Executive and the Administration by the representatives of the Untouchables. These guarantees are really floorings below which the Untouchables will not fall under the crushing pressure of the Hindu Communal Majority. They are intended to keep the Hindu Communal Majority within bounds. For, if there were no such guarantees to the Untouchables, the result will be that the Hindu Communal Majority will not only capture the Legislature, the Executive and the Administration, but the Legislature, the Executive and the Administration will be over-run by the Hindu Communal Majority and these powerful organs of the State, instead of protecting the minorities, will become the tools of the Hindu Communal Majority doing its biddings.

In the light of this explanation there ought to be no difficulty for any outsider of average intelligence in understanding the issues between the Congress and the Untouchables. In the first place, he ought to be able to realize that the issue between them is created by the former refusing to recognise that in the existence of a Communal Majority there lies a great menace to political democracy and the latter maintaining the contrary and insisting that the constitution should contain positive provisions to curb this menace. In other words, the Untouchables are anxious to make India safe for democracy, while the Congress, if it is not opposed to democracy, is certainly opposed to creating conditions which will make democracy real.

In the second place, the foreigner should be able to see that this demand by the Untouchables for safeguards is not a novel demand. His understanding will be facilitated if he were to regard these safeguards as

another name for checks and balances and to bear in mind that there is no constitution which does not contain such checks and balances to protect political democracy from being subverted and to note how the constitution of the U.S.A. is full of such checks and balances which are embodied in clauses relating to Fundamental Rights and Separation of Powers. If he does this, he need not feel puzzled if the safeguards demanded by the Untouchables take a different form than they do in other countries. For, the nature of safeguards must differ with the nature of the forces which constitute a menace to political democracy and as these forces in India are of a different character, the safeguards must necessarily take a different form.

In the third place, the foreigner should have no difficulty in realizing that if anybody is communal it is the Congress and not the Untouchables, and that whatever the philosophic grounds advanced by the Congress the real motive of the Congress in opposing the demand for constitutional guarantees is to keep the political field a free pasture for the Hindu Majority. He should be able to see, though the Congress does not openly say so, how natural it is for the Congress to be communal. The Hindu Communal Majority is the back-bone of the Congress. It is made up of the Hindus and is fed by the Hindus. It is this Majority which constitutes the clientele of the Congress and the Congress, therefore, is bound to protect the rights of its clients. If he realizes this, he will not be deceived by the arguments of the Congress that it is opposing these demands in the name of nationalism. On the other hand, he will realize that the Congress is deceiving the world by using nationalism as a cloak for a free field for rank communalism.

Lastly, he will know why the representative character of the Congress has become an issue of such importance in Indian politics. He will realize that nobody would have cared to bother about the representative character of the Congress and to inquire, whom it represents and whom it does not, if the Congress were not to arrogate to itself the right to say what should be the constitution of a free India. But as it does, its right to speak in the name of the country forms a vital issue and those who do not accept this have no alternative but to challenge it.

II

With all this, foreigners have said—"Why not join the Congress in the 'Fight for Freedom'? ; why make agreement on constitutional safeguards a condition precedent to cooperation with the Congress? After all, safeguards can come only after freedom is won." A foreigner who has followed the foregoing discussion as to matters which divide the Congress can be left to understand why the Untouchables have not thought it safe to co-operate with the Congress in this "Fight for Freedom." But there may be some who may not be able to imagine them and who would like to know what they are. Rather than leave them to find wrong reasons it is better to take the trouble to let them have the right ones. The reasons are various. Only the most important are set out below.

The first reason is founded in common-sense. The Untouchables say: "What harm is there in demanding from the Congress an agreement in advance? What is lost, if a guarantee is given by the Congress in advance?" They argue that if the Congress agreed to this demand for safeguards in advance it will have a double effect. In the first place, it will give an assurance to the Untouchables who entertain so much dread as to what their lot would be under a Hindu Communal Majority. Secondly, such an assurance would go a long way in inducing the Untouchables to co-operate with the Congress. After all, why are the Untouchables non-co-operating? Because, they are afraid that if this freedom is achieved it will enable the Hindu Majority once again to enslave them. Why not remove this fear if it can be done at so small a cost, namely, by an agreement in advance?

The second reason is founded in experience. The Untouchables say that the experience of the world does not justify the hope that when the "Fight for Freedom" ends, the stronger elements have shown the generosity to give security to the weaker elements.

Many examples of this betrayal could be cited. The most notorious one relates to the betrayal of the Negroes in the United States after the Civil

War. Speaking of the part played by the Negroes in the Civil War Mr. Herbert
 Apthekar

saysmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41H.What Congress and Gandhi
 CHAPTER VII.htm - _msocom_1 :

"One hundred and twenty-five thousand Negroes from the slave states served in the Federal armies. They, together with the eighty thousand from the North, fought in four hundred and fifty battles, with an inspiring and inspired courage that was of the utmost importance in bringing about the collapse of the Confederacy and the abolition of slavery.

"Here were over two hundred thousand armed Negro men fighting within a state built upon and dedicated to the pro-position that the Negro was, if at all a human being an innately and in eradicably inferior one, fit only to be a slave.

"And the Negro soldiers of the Republic fought notwithstanding shameful discriminations and disadvantages. White soldiers received thirteen dollars a month. Negroes received but seven dollars (until July 14, 1864, when the pay was equalized, retroactively to January 1, 1864) ; there were enlistment bounties for white recruits, none for Negroes (until June 15, 1864) ; and there was no possibility for advancement into the ranks of commissioned officers for Negroes. . . . The Confederacy never recognised captured Negro soldiers who had been slaves as prisoners of war, and did not accord this status to captured free Negroes until October 1864. The Negroes were either killed, returned to slavery, or confined at hard labour.

"Here were these scores of thousands of hitherto enslaved and oppressed masses, armed, and sent forth into their own country, whose every creek and knoll was known to them, to maintain their newly obtained freedom, to prove their manhood and to liberate their own people, their own parents and children and wives, from a slavery that they know only too well. And let it always be remembered that in the

war to save the republic thirty-seven thousand Negro soldiers were killed in action."

What happened to the Negroes after the Civil War was over? In, the first flush of victory, the Republicans, who waged the war for saving the Union and obtained the help of the Negroes to win it, carried the Thirteenth Amendment to the Constitution. Under it the Negroes ceased to be slaves in the legal sense of the term. But did the Negroes get any right to participate in the Government as voters or officials? The Republicans did take some action in order to make the Southern States accept that the Negroes were to be treated as the political equals of the Whites. This was done by the Fourteenth Amendment which conferred citizenship, State as well as Federal, on all persons including the Negroes born or naturalized in the United States and subject to the jurisdiction thereof, forbade legislation by a State abridging the privileges or immunities of a citizen of the United States, and provided for reducing the representation, in the Congress of any State in proportion to the number of its citizens excluded from the suffrage. The Southern States had no intention to respect the Fourteenth Amendment. All except Tennessee had rejected the amendment and had set up governments of the White inhabitants. The Republicans then proceeded (March 2, 1867) to pass the so-called Reconstruction Act (a bill to provide efficient governments for the insurrectionary States) designed to create legitimate governments in the States not yet readmitted to the Union (ignoring the governments set up by the White inhabitants), and to determine the conditions proper for their readmission. By this Act these States, that is the whole seceding South except Tennessee, were divided into five military districts, each to be governed by a Brigadier-General of the Federal Army, until such time as (1) a State convention had framed a new constitution, (2) the Fourteenth Amendment had been ratified and (3) the States had been duly readmitted. The Republicans carried another amendment called the Fifteenth Amendment, forbidding the voting right of citizen to be denied or abridged on account of race, colour or previous condition of servitude which also became by similar acceptance part of the Constitution and binding on, all the States.

The Whites in the South had no intention to admit the Negroes to equal citizenship. Disfranchisement of the Negro proceeded apace. It was undertaken as a solemn duty both by the State Governments of the South as well as by the Whites of the Southern States. To evade the Fifteenth Amendment the State Governments spent their ingenuity in framing franchise laws which denied the Negroes the right to vote on grounds other than race or colour. Most of them decided upon the grandfather clause mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41H.What Congress and Gandhi CHAPTER VII.htm - _msocom_2 which effectively excluded the Negroes but fully included the Whites. On the people's side the process was carried out by the Ku Klux Klan. The Klan was in its origin a secret combination formed in Tennessee by youths for purposes of amusement. It was transferred into an organisation to suppress the Negroes and prevent them from exercising their political rights. It started committing outrages upon Negroes, and (less frequently) upon Whites supposed to be in sympathy with the Negroes, in the rural South. These gang-men were never discovered. This shows that the whole of the White population of the South supported the Klan men. No open resistance to the Federal troops was attempted; but neither their activity nor the penal laws passed by the Congress were effective in checking the flogging, house-burnings, and murders which during these years disgraced some districts.

The purposes of the Southern States and the Southern Whites were facilitated by the decisions of the Supreme Court of the United States. The Supreme Court held that the State laws disfranchising the Negroes were valid notwithstanding the Fifteenth Amendment because the disfranchisement was not based on race and colour. Similarly the Supreme Court held that if the activities of the Ku Klux Klan, prevented the Negro from exercising his electoral rights there was no redress: for, the Fifteenth Amendment, while it prevented the States from interfering with the electoral rights, did not prevent interference by private bodies.

What did the Republicans do? Instead of amending the Constitution to give better and more effective guarantees to the Negroes, they agreed to recognise the Southern States and admit them to the Union, to grant

general amnesty to the rebels and to withdraw the troops stationed therein leaving the Negroes to the tender mercy of their masters. As Mr. Apthekar says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41H.What Congress and Gandhi CHAPTER VII.htm - _msocom_3 :

"But the heroic fight of the Negro people and their allies for democracy, land and civil rights in the South was defeated chiefly as a result of shameful betrayal, by the industrial and financial bourgeoisie of the North. In 1877, the latter came to an understanding with the reactionary plantocracy of the South. Working through the reactionary wing of the Republican Party, the Northern Lig bourgeoisie sold out the Revolution by giving the old slave oligarchy a free hand (home rule) in the Southern States. This 'gentleman's agreement' meant disenfranchisement for the Negro, sharecropping peonage, lynch terrorism, and the loss of civil liberties and educational opportunities."

The story of the betrayal is not complete. It is necessary to add that if the Republicans were to carry their party opposition with the Democrats into the South, the Negro could still be saved from damnation. For it is the opinion, of those who know that if the Whites of the South were divided into Republicans and Democrats as they are in, the North there is hardly a State in the South which would not be largely controlled by the Negro voters. Even the Republicans will not do. The Republicans seem to have entered into a compact with the Democrats not to canvass for the votes of the Negroes. Indeed, the Republican Party in the South does not exist. It does not exist because it is afraid of having to take sides with the Negroes. The Untouchables cannot forget the fate of the Negroes. It is to prevent such treachery that the Untouchables have taken the attitude they have with regard to this 'Fight' for "Freedom." What is wrong in this? Are they doing anything more than, follow the advice of Burke, who has said that it is better to be accused of timidity than to be ruined by over-confident security.

The third argument is that there is no justification for the Congress to say that the "Fight for Freedom" must come first and the agreement about constitutional safeguards afterwards. The Untouchables feel that having regard to the attitude of the British Government to India's right to freedom, this fight, which the Congress loves so much, is uncalled for, at any rate, it is putting the cart before the horse. The attitude of the

British towards India's claim for freedom has since the Mutiny of 1857 undergone a complete change. There was a time when the British Government held the view which was a complete negation of India's claim for freedom. It was proclaimed by Lawrence whose statue in Calcutta has the motto : "The British conquered India by the sword and they will hold it by sword." This attitude is dead and buried and it is no exaggeration to say that every Englishman today is ashamed of it. This stage was followed by another in which the argument of the British Government against India's freedom was the alleged incapacity of Indians for Parliamentary institutions. It began with Lord Ripon's regime which was followed by an attempt to give political training to Indians, first in the field of Local Self-Government, and then under the Montagu-Chelmsford reforms in the field of Provincial Government. We have now entered the third or the present stage. British Government is now ashamed to say that they will hold India by the sword. It no longer says that Indians have no capacity to run Parliamentary institutions. The British Government admits India's right to freedom, even to independence, if Indians so desire. The British Government admits the right of Indians to frame their own constitution. There can be no greater proof of this new angle of vision than the Cripps Proposals. The condition precedent laid down by the British Government for India's freedom is that Indians must produce a constitution which has the concurrence of the important elements in the national life of the country. Such is the stage we have reached. The Untouchables cannot therefore understand why the Congress, instead of trying to achieve agreement among Indians, should keep on talking in terms of a "Fight for Freedom" and maligning the Untouchables in not joining in it,

III

Why does the Congress oppose the proposal of the British Government? It seeks to justify its opposition on two grounds. It says that the condition prescribed by the British Government puts a veto on freedom of India in the hands of the Untouchables. This is a stupid argument and for two reasons. In the first place, the Untouchables in India have never made impossible demands. They have not even made

unreasonable demands. They do not say as Carson did to Redmond: "Damn your safeguards. We don't wish to be ruled by you." The Untouchables are quite prepared to submit themselves to the rule of the Hindu Majority, not with standing the unsocial and the undemocratic character of its ethics, provided the constitution gives them reasonable safeguards. To say, that the Untouchables will exercise a veto on India's freedom by raising impossible demands is thus a gross libel, for which there is not the slightest justification. Assuming the fear is well-founded, the Congress is not altogether without a remedy. For it is still open to the Congress to say that if there is no agreement between the Hindus and the Untouchables the dispute should be referred to an International Board of Arbitration. If the Congress took this stand, I am sure, neither the British Government nor the Untouchables will have the slightest objection to it. But when, instead of making an honest and sincere attempt to bring about an agreed constitution, the Congress goes on launching its campaigns for achieving freedom—not without occasional rests and retreats—the only conclusion, which the Untouchables can draw, is that the Congress wants to coerce the British Government to transfer its power or to use Mr. Gandhi's phrase, "hand over the keys to the Congress," without being obliged to agree to the safeguards demanded by the Untouchables. In short, what the Congress wants is a free India with full, unrestricted freedom to the Hindus in a free India to dispose of the Untouchables in any way they liked. No wonder the Untouchables have refused to take part in such a dishonest agitation, elevated though it may be by such high sounding name as "Fight for Freedom"!

The other ground urged by the Congress for not taking up the question of bringing about an agreement is that the British Government is not honest, and that notwithstanding its declarations it will not transfer power even if Indians agreed upon a constitution, and that ultimately Indians will have to struggle with the British in order to wrest power from their hands. The reply of the Untouchables is that they see no reason why Indians should start, with such complete distrust of the British intentions. After all, the British Government has moved in the direction of fulfilling Indian aspirations and is moving. If it is slow in

moving it is due to Indians being content with small things. Right from the conquest of India by the British upto 1886, Indians never cared who ruled them nor how they were ruled. They were content to live without troubling themselves about these questions. In 1886 the Congress was organised and for the first time Indians began to take interest in the government of India.. But even the Congress upto 1910 was content in agitating for good Government only. It was in 1910 that the Congress first demanded Self-Government. When in 1919 the Montagu-Chelmsford Reforms were on the anvil, Indians had an occasion to state the scope of their demand for Self-Government. What is known as the Memorandum of the Nineteen defined the aspirations of the Indians as they stood in 1917. Any one who knows it will remember that the best and the most radical Indians were content only with Dyarchy in the Provinces. Even this was regarded as a big jump by some Indian leaders such as Sir Dinshaw Wacha and Mr. Samarathmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41H.What Congress and Gandhi CHAPTER VII.htm - _msocom_4 In 1930 notwithstanding the Congress Resolution insisting on Independence, Mr. Gandhi at the R. T. C. was prepared mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41H.What Congress and Gandhi CHAPTER VII.htm - _msocom_5to be content with Provincial autonomy. The British granted more than that. If from 1939 there has been a halt, it is mainly because Indians are not agreed on the sort of constitution they want for their country.

The Untouchables think that the stage, when the British were sitting upon the freedom of India, as the snake in the fable is said to sit on a treasure, not allowing anyone to come near it, is gone long past. India's Freedom is like property held by a Receiver. The British Government has placed itself in the position of a Receiver. As soon as the dispute is over and the right kind of constitution is settled, it has bound itself to hand over the property to its rightful owners, namely, Indians. The Untouchables ask: why not take advantage of this? why not adopt the straight and honest course of arriving at an agreement among the important elements in the country and then make a joint application for the release of the property? That the Congress does not want to follow this line of action shows, say the Untouchables, that the Congress"Fight

for Freedom”is nothing more than mere tactics, the object of which is to by-pass the necessity of an agreed constitution demanded by the Untouchables and made a condition precedent by the British Government for the grant of freedom.

The Untouchables do not say that they are out to underwrite the declarations made by the British Government, they do not say that if Indians are agreed it must necessarily be a case of”knock and it will open : ask and it shall be given unto you.”They admit that the British may not act up to the declarations they have made. It may be that even when an agreed constitution is produced, they may not act up to their promises, and a fight for freedom may become necessary. The Untouchables do not overlook these possibilities. But what they do say is that the Indians have not put the British to the test. They can't be put to test unless they are presented with an agreed constitution. So long as the Congress does not adopt this course as the first—though it may not be last —line of action, the Untouchables feel that the Congress is not honest in its dealings with them, not even to the country. Who can say that the Untouchables have not sufficient justification for refusing to participate in the Congress”Fight for Freedom”?

Chapter VIII

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

CHAPTER VIII THE REAL ISSUE

Aren't The Untouchables A Separate Element?

I

What is the fundamental issue in the controversy between the Congress and the Untouchables? As I understand the matter, the fundamental issue is: Are the Untouchables a separate element in the national life of India or are they not?

This is the real issue in the controversy and it is on this issue that the Congress and the Untouchables have taken opposite sides. The answer of the Untouchables is yes. They say, they are distinct and separate from the Hindus. The Congress on the other hand says 'No' and asserts that the Untouchables are a chip of the Hindu block. This is the attitude of the parties to the issue. The attitude of the British Government was made clear by Lord Linlithgow mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/411.What Congress and Gandhi CHAPTER VIII.htm - _msocom_1 in his statements as Viceroy and Governor-General of India in which he declared in quite explicit terms that the Untouchables were a separate element in the national life of India. Many people who regard the issue of constitutional safeguards as the fundamental issue will feel surprised that I should regard as fundamental an issue so apparently different from what they regard as fundamental. Really speaking there is no difference. It all depends upon what one regards as the proximate and what as ultimate. Others regard the question of constitutional safeguards as ultimate. I regard as proximate. What I have stated as fundamental I regard as ultimate from which the proximate follows, as the conclusion does from the premise in a logical syllogism. It may be as well for me to state why I have thought it necessary to make this difference. The evolution of the Indian Constitution appears to me to have established a sort of a logical syllogism. The major premise in the syllogism is that where there exists an element in the national life of India, which is definable as a separate and distinct element it is entitled to constitutional safeguards. An element, making a claim for constitutional safeguards, must show that it is definable as separate and distinct from the rest. If it shows that it is separate and distinct, its right to constitutional safeguards is held admissible.

That is how the provisions for constitutional safeguards for Muslims, Indian Christians, Anglo-Indians, Europeans and Sikhs have come into being. It is true that the constitution of India has not been framed in the light of principles. It has grown in an haphazard manner, more in answer to exigencies than in accordance with principles. Nevertheless, this silent postulate, if not a principle to which I have referred, seems to be working throughout. The right of a group to constitutional safeguards has come to be treated as consequential. It is deemed to follow automatically when the fundamental condition is satisfied, namely that they do constitute a separate and a distinct element in the national life of India. In dealing with this controversy, one must deal with it as one is required to do with a syllogism. In a syllogism both are fundamental, the conclusion as well as the premise and to close the argument it is not enough to deal with the conclusion and omit to examine the premise. Looking at the question from this angle I think I ought not to close the case of the Untouchables with no more than a discussion of the constitutional safeguards. I feel that I ought to deal also with the premise, the ultimate, or the fundamental proposition, from which the constitutional safeguards seem to follow, if not as a matter of course at least as a matter of precedent.

It will thus be seen that the decision I have taken to give a separate treatment to the ultimate as distinguished from the proximate proposition is not without justification. It also seems to be necessary to deal with it separately and substantially, because the Congress seems to be fully -aware of the fact that this is the fundamental issue and knows that once it concedes that the Untouchables are a separate element it cannot prevent them from succeeding in their claim for constitutional safeguards. If the Congress has come forward to contest this proposition it is because it thinks that it is the first trench and if it fails to maintain it, it cannot save the situation.

II

It must be a matter of considerable surprise to those who know the conditions in India that the Congress should come forward to

controvert what is incontrovertible, namely, that the Untouchables are separate from the Hindus. But since the Congress has chosen to do so, I must deal with the issue as best as I can.

The grounds advanced by the Untouchables that they are separate from the Hindus are not difficult to comprehend. Nor do they require a long and an elaborate statement. The statement of their case can be fully covered by a simple question. In what sense are they Hindus? In the first place, the word 'Hindu' is used in various senses and one must know in what sense it is used before one can give a proper answer to the question. It is used in a territorial sense. Everyone who is an inhabitant of Hindustan is a Hindu. In that sense it can certainly be claimed that the Untouchables are Hindus. But so are the Muslims, Christians, Sikhs, Jews, Parsis, etc. The second sense in which the word 'Hindu' is used is in a religious sense. Before one can draw any conclusion, it is necessary to separate the dogmas of Hinduism from the cults of Hinduism. Whether the Untouchables are Hindus in the religious sense of the word depends upon whether one adopts as his tests the dogmas or the cults. If the tests of Hinduism are the dogmas of Caste and Untouchability then every Untouchable would repudiate Hinduism and the assertion that he is a Hindu. If the test applied is the acceptance of a cult such as the worship of Rama, Krishna, Vishnu and Shiva and other Gods and Goddesses recognised by Hinduism the Untouchables may be claimed to be Hindus. The Congress as usual maintains a body of agents from among the Untouchables to shout when need be that the Untouchables are Hindus and that they will die as Hindus. But even these paid agents will not agree to be counted as Hindus if they are asked to proclaim themselves as Hindus, if Hinduism means belief in caste and Untouchability.

One more point must be stressed. On the foregoing analysis the Untouchable may be classed as a Hindu if the word Hindu is used in the religious but in the limited sense of a follower of a recognised cult. Even here, there is a necessity for giving a warning against concluding that the Hindu and the Untouchable have a common religion. The fact is that even as followers of recognised cults they cannot be said to have a

common religion. The exact and appropriate expression would be to say that they have a similar religion. A common religion means a common cycle of participation. Now, in the observances of the cults there is no such common cycle of participation. The Hindus and the Untouchables practise their cults in segregation so that notwithstanding the similarity of their cults they remain as separate as two aliens do. Neither of these two senses of the word 'Hindu' can yield any result which can be of help in determining the political question, which alone can justify the discussion.

The only test which can be of use is its social sense as indicating a member of the Hindu Society. Can an Untouchable be held to be part of the Hindu Society? Is there any human tie that binds them to the rest of the Hindus? There is none. There is no connubium. There is no commensalism. There is not even the right to touch, much less to associate. Instead, the mere touch is enough to cause pollution to a Hindu. The whole tradition of the Hindus is to recognise the Untouchable as a separate element and insist upon it as a fact. The traditional terminology of the Hindus to distinguish Hindus and Untouchables furnishes the best evidence in favour of the contention of the Untouchables. According to this traditional terminology, Hindus are called Savarnas and the Untouchables are called Avarnas. It speaks of the Hindus as Chaturvarnikas and of the Untouchables as Panchamas. Such a terminology could not have come into existence if separation had not become so prominent and its observance so necessary as to require coining of special terms to give expression to the fact.

There is thus hardly any substance in the Congress argument that the Untouchables are Hindus and that they cannot therefore demand the same political rights as the Muslims and others can. While the argument from tradition is a good and valid argument to prove that the Untouchables are not Hindus, it may appear to some to be a weak one. I do not wish to leave the field without directly meeting the Congress argument. For this purpose, I will grant that the Untouchables are Hindus by religion. But the question is: Does it matter if they are Hindus? Can it come in the way of their being recognised as a separate

element in the national life of India? It is difficult to understand how the mere fact that they might be called Hindus by religion in such a limited sense can be the basis of an argument that they are an integral part of the Hindu society.

Admitting for the sake of argument that they are Hindus by religion, can it mean anything more than what I have said—namely that they worship the same Gods and Goddesses as the rest of the Hindus, they go to the same places of pilgrimage, hold the same supernatural beliefs and regard the same stones, trees, mountains as sacred as the rest of the Hindus do? Is this enough to conclude that the Untouchables and the Hindus are parts of one single community? If that be the logic behind the contention of the Congress then, what about the Belgians, Dutch, Norwegians, Swedes, Germans, French, Italians, Slavs, etc.? are they not all Christians? Do they not all worship the same God? Do they not all accept Jesus as their Saviour? Have they not the same religious beliefs? Obviously, there is a complete religious unity between all of them in thought, worship and beliefs. Yet, who can dispute that the French, Germans and Italians and the rest are not a single community? Take another case, that of the Whites and the Negroes in the U.S.A. They too have a common religion. Both are Christians. Can any one say that the two on that account form a single community? Take a third case, that of the Indian Christians, Europeans and Anglo-Indians. They profess and follow the same religion. Yet it is admitted that they do not form one single Christian community. Take the case of the Sikhs. There are Sikhs, Mazbi Sikhs and Ramdasia Sikhs. All profess Sikhism. But it is accepted that they do not form one community. In the light of these illustrations it is obvious that the argument of the Congress is full of fallacies.

The first fallacy of the Congress lies in its failure to realize that the fundamental issue for settling the question whether to grant or not to grant constitutional safeguards is union versus separation of a social group in the population. Religion is only a circumstance from which unity or separation may be inferred. The Congress does not seem to have understood that the Musalmans and the Indian Christians have been given separate political recognition not because they are

Musalmans or Christians but fundamentally because they form in fact separate elements from the Hindus.

The second fallacy of the Congress lies in, its attempt to prove that where there is a common religion social union must be presumed. It is on the basis of this reasoning that the Congress hopes to win. Unfortunately for the Congress, it cannot. For the facts are strongly against making a conclusive inference. If religion was a circumstance from which social union was made the only permissible inference then, the fact that the Italians, French, Germans and Slavs in Europe, the Negroes and the Whites in the U.S.A. and the Indian Christians, Europeans, Anglo-Indians in India do not form a single community although they all profess the same religion is enough to negative such a contention. The pity of the matter is that the Congress is so completely enamoured of its argument based on religion as an unifying factor, that it has failed to realize that there is no concomitance between the two and that there are cases where there is no separation although religions are separate, that there are cases where separation exists in spite of a common religion and what is worst, separation exists because religion prescribes it.

To give a quietus to the Congress argument, it may be desirable to give one illustration of each of these cases. Of the first case the best and the easiest illustration I can think of is that of the Sikhs and the Hindus. They differ in religion. But they are not socially separate. They dine together ; they marry together; they live together. In a Hindu family one son may be a Sikh, another a Hindu. Religious difference does not break the social nexus. Of the second, the case of the Italians, French, Germans in Europe and Whites and Negroes in America are as good illustrations as one would want. This happens where religion is a binding force but is not powerful enough to withstand other forces tending to divide such as the sentiment of race. Hindus and Hinduism are the best and perhaps the only illustrations of the third case, where separation is the effect of religion itself. That there can be such a case, Hindus at any rate need not require ' to be told. For, it is well known that Hinduism preaches separation instead of union. to be a Hindu means not to mix,

to be separate in everything. The language commonly used that Hinduism upholds Caste and Untouchability perhaps I disguises and conceals its genius. The real genius of Hinduism is I to divide. This is beyond dispute. For, what do Caste and Un- touchability stand for? Obviously for separation. For Caste is another name for separation and untouchability typifies the extremist form of separation of community from community. It is also beyond dispute that Caste and Untouchability are not innocuous dogmas to be compared with other dogmas relating to the condition of the soul after death. They are parts of the code of conduct which every Hindu is bound to observe during his life on earth. Caste and Untouchability Far from being mere dogmas are among the foremost observances prescribed by Hinduism. It is not enough for a Hindu to believe in the dogmas of Caste and Untouchability. He must also observe Caste, and Untouchability, in the conduct of his daily life.

The separation, which Hinduism has brought about, between the Hindus and the Untouchables by its dogma of Untouchability is not a mere imaginary line of separation, such as the one which the Pope once drew in a quarrel between the Portuguese and their rivals for Colonial possessions; it is not like the colour line which has length but no breadth and which one may observe or one may not observe ; it is not like the race line, which involves distinction but no discrimination. It has both depth and width. Factually the Hindus and the Untouchables are divided by a fence made of barbed wire. Notionally it is cordon sanitaire which the Untouchables have never been allowed to cross and can never hope to cross.

To put the matter in general terms, Hinduism and social union are incompatible. By its very genius Hinduism believes in social separation which is another name for social disunity and even creates social separation. If Hindus wish to be one they will have to discard Hinduism. They cannot be one without violating Hinduism. Hinduism is the greatest obstacle to Hindu Unity. Hinduism cannot create that longing to belong which is the basis of all social unity. On the contrary Hinduism creates an eagerness to separate.

The Congress does not seem to realize that the argument it is using goes against itself. Far from supporting the Congress contention, it is the best and the most effective argument that can be advanced to prove the contention of the Untouchables. For, if any conclusion is to be drawn from the hypothesis that the Untouchables are Hindus it is that Hinduism has always insisted both in principle and in practice that the Untouchables are not to be recognised a chip of the Hindu block but are to be treated as a separate element and segregated from the Hindus.

If therefore the Untouchables say that they are a separate element, nobody can accuse them of having invented a new theory for the sake of political advantages. They are merely pointing out what the facts are and how these facts are the heritage of Hinduism itself. The Congress cannot honestly and convincingly use Hinduism as an argument for refusing to recognise the Untouchables as a separate element. If it does, it is only because it is actuated by selfish motives. It knows that the recognition of the Untouchables as an element in the national life of India, as distinct and separate from the Hindus, must result in the apportionment of places in the Executive, the Legislature, and in the Public Services between the Untouchables and the Hindus and thus limit the share of the Hindus. The Congress does not like that the Hindus should be deprived of the share of the Untouchables which the Hindus are in the habit of appropriating to themselves. That is the real reason why the Congress refuses to recognise 'that the Untouchables are a separate element in the national life of India.

The second argument of the Congress is that the political recognition of the Untouchables as a separate element in the national life of India should not be permitted on the ground that it will perpetuate the separation between the Untouchables and the Hindus.

This is hardly an argument worth consideration. It is the weakest of its kind and shows that the Congress has nothing better to advance. Besides contradicting its previous argument, it is entirely misconceived.

If there is a real separation between the Hindus and the Untouchables and if there is the danger of discrimination being practised by the

'Hindus against the Untouchables then the Untouchables must receive political recognition, and must be given political safeguards to protect themselves against the tyranny of the Hindus. The possibility of a better future cannot be used as an argument to prevent the Untouchables from securing the means of protecting themselves against the tyranny of the present.

In the second place, this argument can be used only by those who believe in the social fusion of the Hindus and the Untouchables and are actively engaged in pursuing means and methods which will bring about such a fusion. Congressmen have often been heard to say that the problem of the Untouchables is social and political. But the point is, are Congressmen sincere when they say that it is a social question? Or do they use it as an excuse with a view to avoid the consequences of having to share -political power with the Untouchables? And, if they are sincere in holding that it is a social question, what proof is there of their sincerity in this matter? Have Congressmen sponsored social Reform among Hindus? Have they carried on a crusade in favour of inter-dining and intermarriages? What is the record of Congressmen in the field of Social Reform?

III

It might be well to state what view the Untouchables took of the problem of Untouchables. Until the advent of the British, the Untouchables were content to remain Untouchables. It was a destiny preordained by the Hindu God and enforced by the Hindu State. As such there was no escape from it. Fortunately or unfortunately, the East India Company needed soldiers for their army in India and it could find none but the Untouchables. The East India Company's army consisted, at any rate in the early part of its history, of the Untouchables and although the Untouchables are now included among the non-martial classes and are therefore excluded from the Army, it is with the help of an army composed of Untouchables that the British conquered India. In the army of the East India Company there prevailed the system of compulsory education for Indian soldiers and their children both

male and female. The education received by the Untouchables in the army while it was open to them gave them one advantage which they never had before. It gave them a new vision and a new value. They became conscious that the low esteem in which they had been held was not an inescapable destiny but was a stigma imposed on their personality by the cunning contrivances of the priest. They felt the shame of it as they had never done before and were determined to get rid of it. They too in the beginning thought their problem was social and struggled along the social lines for its solution. This was quite natural. For they saw that the outward marks of their social inferiority were prohibition of interdining and intermarriage between the Untouchables and the Hindus. They naturally concluded that for the removal of their stigma what was necessary was to establish social intercourse with the Hindus on terms of equality which in its turn meant the abolition of rules against interdining and intermarriage. In other words, first programme of action which the Untouchables launched out for their salvation after they became aware of their servile position was to bring about Social Equality among all those, who come within the fold of Hinduism by insisting upon the abolition of the Caste System.

In this, the Untouchables found an ally in a section of the Hindus. Like the Untouchables, the Hindus also by the contact with the British had come to realize that their social system was very defective and was the parent of many social evils. They too desired to launch forth a movement of social Reform. It began with Raja Ram Mohan Roy in Bengal and from there had spread all over India and ultimately culminated in the formation of the Indian, Social Reform Conference with its slogan of Social Reform before Political Reform. The Untouchables followed the Social Reform Conference and stood behind it as a body and gave it their full support. As every one knows the Social Reform Conference is dead and buried and forgotten. Who killed it? The Congress. The Congress with its slogans "Politics First, Politics Last," "Politics by Each, Politics by All" regarded the Social Reform Conference as its rival. It denied the validity of the creed of the Conference that social reform was a necessary precursor of political reform. Under a constant and steady fire from the Congress platform

and from individual Congress leaders, the Social Reform Conference was burnt down and reduced to ashes. When the Untouchables lost all hope of their salvation through social reform, they were forced to seek political means for protecting themselves. Now for Congressmen to turn round and say that the problem is social is nothing but hypocrisy.

It is wrong to say that the problem of the Untouchables is a social problem. For, it is quite unlike the problems of dowry, widow remarriage, age of consent, etc., which are illustrations of what are properly called social problems. Essentially, it is a problem of quite a different nature in as much as it is a problem of securing to a minority liberty and equality of opportunity at the hands of a hostile majority which believes in the denial of liberty and equal opportunity to the minority and conspires to enforce its policy on the minority. Viewed in this light, the problem of the Untouchables is fundamentally a political problem. Granting however for the sake of argument that it is a social problem, it is difficult to understand why political recognition of and political safeguards for the security of the Untouchables should retard their social unification with the Hindus if there is a genuine desire to set in motion processes which will bring about such a result. Congressmen appear to be arguing with no definite conception in their mind. They don't seem to have a clear idea of the inter-relation between political and social factors. This is well illustrated by its opposition to separate electorates and its preference to joint electorates. The process of reasoning is worth attention. In a joint electorate the Hindu votes for an Untouchable and the Untouchable votes for the Hindu. This builds up social solidarity. In, a separate electorate the Hindu votes for a Hindu and an Untouchable votes for an Untouchable. This prevents social solidarity. This is not the point of view from which the Untouchables look at the question of electorates. Their point of view is which of the two will enable the Untouchables to get an Untouchable of their choice elected. But I am interested in scrutinising the Congress argument. I do not wish to enlarge upon and complicate the argument. The reasoning of the Congress appears to be correct. But it is only a superficial view of the matter. These elections take place once in five years. It may well be asked how can social solidarity between the Hindus and the

Untouchables be advanced by one day devoted to joint voting if for the rest of the five years they are leading severely separate lives. Similarly, it may well be asked how can one day devoted to separate voting in the course of five years make greater separation than what already exists or contrarywise how can one day in five years devoted to separate voting prevent those who wish to work for union from carrying out their purposes. To make it concrete how can separate electorate for the Untouchables prevent intermarriage or interdining being introduced between them and the Hindus? Only a congenital idiot will say that they can. It is therefore puerile to say that the political recognition of the Untouchables as a separate element and granting them constitutional safeguards will perpetuate separation between them and the Hindus if the Hindus desire to put an end to it.

IV

There are other floating arguments against the claim of the Untouchables for political safeguards which must also be examined. One such argument is that there are social divisions everywhere Europe; but they are not taken into account by the people of Europe in framing their constitutions. Why should they be taken into account in India? The thesis is general. But it may be extended to such a length that even the claim of the Untouchables may be enveloped by it. As such I prefer to state why I think it is unsound.

In making my comments I propose to make a distinction between the statement and the argument founded on it and deal with them separately. The statement is good up to a point. In so far as it alleges that every society consists of groups it cannot be challenged. For even in European or American society there are groups associated together in various ways and for various purposes. Some are like the kindred closely bound together by blood or language. Some are of the nature of social classes differentiated on the basis of rank and status. Others are religious associations upholding particular dogmas; not to mention, political parties and industrial corporations, criminal gangs and so on in an endless variety with differing aims and bound together some loosely some closely by differing degrees of affinity. But when the statement

goes beyond and says that the castes in India are not different from Groups and classes in Europe and America it is nothing but an arrant nonsense. The groups and classes of Europe may be the same as the caste in India to look at. But fundamentally two are quite different. The chief distinguishing feature is the isolation and exclusiveness which are the hall-marks of the castes in India and which are maintained as matter not of routine but of faith none of which characteristics is to be found in the group or the class system of Europe or America.

Turning to the thesis the social organisation of India being different from what it is in Europe and America it follows that while Europe and America need not take into account the facts and circumstances of their social organisation in framing their constitution, India cannot omit to take account of her Caste and Untouchability. For a fuller understanding of the matter I may explain why Europe need not and why India must. The danger to a society organised, in groups is that each group develops what are called "its own interests" and the question of forging constitutional safeguards arises from the necessity of counteracting the mischief that such interest might cause to others outside it., Where there is a possibility of counteracting the mischief by non-political means there is no necessity for forging constitutional safeguards. If, on the other hand, non,-political means of counteracting it do not exist then constitutional means must be forged. In Europe the possibility of counteracting mischief arising from -a' group seeking to maintain "its own interest" does exist. It exists because of the absence of isolation and exclusiveness among the various groups which allows free scope for interaction with the result that the dominant purpose of a group to stand out for its own interests and always seek to protect them as something violate and sacred gives way to a broadening and socialisation of its aims and purposes. This endosmosis between groups in Europe affects dispositions and produces a society which can be depended upon for community of thought, harmony of purposes and unity of action. But the case of India is totally different. The caste in India is exclusive and isolated. There is no interaction and no modification of aims and objects. What a caste or a combination of castes regard "as their own interest" as against other castes remains as sacred and inviolate as ever.

The fact that they mingle and co-operate does not alter their character. These acts of co-operation are mechanical and not social. Individuals use one another so as to get desired results, without reference to the emotional and intellectual disposition. The fact that they give and take orders modify actions and results. But it does not affect their dispositions. That being the case the "Indian constitution must provide safeguards to prevent castes with their own interests" from doing mischief to other helpless castes.

There is another distinguishing feature of the Indian caste system which justifies why the Indian Constitution must take account of it and provide against mischief arising from it. Every society consists of groups. But it must be recognised that the mutual relations of the groups are not the same everywhere. In one society groups may be only non-social in their attitude towards one another. But in another they may be anti-social. Where the spirit which actuates the various social groups is only non-social their existence may not be taken into account in framing a constitution. There is no cause for danger in a group which is only non-social. But where a group is actuated by an anti-social spirit towards another and to which alien is synonymous with enemy the fact must be taken into account in framing the constitution and the class which has been the victim of anti-social spirit must be given protection by proper safeguards. In India the castes are not merely non-social. Often they are anti-social. This is particularly true of the "Hindus towards the Untouchables. A few facts will suffice to show how anti-social the Hindus are towards the Untouchables. For instance, the Hindus will not allow the Untouchables to take water from a well. The Hindus will not allow the Untouchables entry in schools. The Hindus will not allow the Untouchables to travel in buses. The Hindus will not allow the Untouchables to travel in the same railway compartment. The Hindus will not allow Untouchables to wear clean clothes. The Hindus will not allow Untouchables to wear jewellery. The Hindus will not allow Untouchables to put tiles on the roofs of their houses. The Hindus will not tolerate Untouchables to own land. The Hindus will not allow Untouchables to keep cattle. The Hindus will not allow an Untouchable to sit when Hindu is standing. They are not isolated acts of a few bad

men among the Hindus. They are the emanations of the permanent anti-social attitude of the Hindu community against the Untouchables.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/411.What Congress and Gandhi CHAPTER VIII.htm - _msocom_2

It is unnecessary to carry the matter further. It is enough to say that the thesis is full of fallacies and it would be a most shameful piece of chicanery if it was used as a ground for opposing the demand of the Untouchables for constitutional safeguards.

V

There is another floating argument one sometimes comes across. The basis of the argument is that Untouchability is a vanishing thing and therefore there is no use recognising the Untouchables as a separate element in the national life of India. Everything is vanishing and there is nothing that is permanent in human history. The point may be considered when Untouchability has gone root and branch. Until that state arrives, it is unnecessary to pay any regard to it. We must all hope for the disappearance of Untouchability. But we must be careful not to be misled by people who boast of being incorrigible optimists. An optimist is a good companion to cheer up when one is in a state of depression. But he is not always a truthful witness of facts.

This argument is no argument at all. But since some people may be allured by it I wish to expose it and to show how futile it is. Those who raise this point do not seem to make a distinction between Untouchability as a touch-me-not-ism and Untouchability as a mental attitude manifesting itself in social discrimination. The two are quite different. It may be that Untouchability as a touch-me-not-ism may be gradually vanishing in towns, although I am doubtful if this is happening in any appreciable degree. But I am quite certain Untouchability as a propensity on the part of the Hindus to discriminate against the Untouchables will not vanish either in towns or in villages within an imaginable distance of time. Not only Untouchability as a discriminating propensity will not disappear but Untouchability as touch-me-notism will not disappear within a measurable distance of time in the vast number of villages in which the vast number of Hindus live and will

continue to live. You cannot untwist a two-thousand-year-twist of the human mind and turn it in the opposite direction.

I am quite aware that there are some protagonists of Hinduism who say that Hinduism is a very adaptable religion, that it can adjust itself to everything and absorb anything. I do not think many people would regard such a capacity in a religion as a virtue to be proud of just as no one would think highly of a child because it has developed the capacity to eat dung, and digest it. But that is another matter. It is quite true that Hinduism can adjust itself. The best example of its adjust ability is the literary production called Allahupanishad which the Brahmins of the time of Akbar produced to give a place to his Dine-llahi within Hinduism and to recognise it as the Seventh system of Hindu philosophy. It is true that Hinduism can absorb many things. The beef-eating Hinduism (or strictly speaking Brahmanism which is the proper name of Hinduism in its earlier stage) absorbed the non-violence theory of Buddhism and became a religion of vegetarianism. But there is one thing which Hinduism has never been able to do—namely to adjust itself to absorb the Untouchables or to remove the bar of Untouchability. There have been many reformers who, long before Mr. Gandhi came on the scene, tried to remove the stain of Untouchability. But they have all failed. The reason for their failure appears to me to be very simple. Hindus have nothing to fear from the Untouchables, nor have they anything to gain by the abolition of Untouchability. Hindus gave up beef-eating because they were afraid that otherwise Buddhism would overpower Hinduism. Hindus wrote Allah-upanishad because they had everything to gain by helping Akbar to establish a new religion. The author gained money by pleasing the Emperor and by lending aid to establish a religion which promised less tyranny and oppression to the Hindus than Islam held out. Neither of these considerations exist for the most sanguine among the Untouchables to expect that the Hindus will readily put an end to this curse of Untouchability.

Not only have the Hindus nothing to fear and nothing to gain, they have in fact much to lose by the abolition of Untouchability. The system of Untouchability is a gold mine to the Hindus. In it the 240 millions of

Hindus have 60 millions of Untouchables to serve as their retinue to enable the Hindus to maintain pomp and ceremony and to cultivate a feeling of pride and dignity befitting a master class which cannot be fostered and sustained unless there is beneath it a servile class to look down upon. In it the 240 millions of Hindus have 60 millions of Untouchables to be used as forced labour and because of their state of complete destitution and helplessness can be compelled to work on a mere pittance and sometimes on nothing at all. In it the 240 millions of Hindus have 60 millions of Untouchables to do the dirty work of scavengers and sweepers which the Hindu is debarred by his religion to do and which must be done for the Hindus by non-Hindus who could be no others than Untouchables. In it the 240 millions of Hindus have 60 millions of Untouchables who can be kept to lower jobs and prevented from entering into competition for higher jobs which are preserved for the Hindus. In it the 240 millions of Hindus have 60 millions of Untouchables who can, be used as shock-absorbers in slumps and dead weights in booms, for in slumps it is the Untouchable who is fired first and the Hindu is fired last and in booms the Hindu is employed first and the Untouchable is employed last.

Most people believe that Untouchability is a religious system. That is true. But it is a mistake to suppose that it is only a religious system. Untouchability is more than a religious system. It is also an economic system which is worse than slavery. In slavery the master at any rate had the responsibility to feed, clothe and house the slave and keep him in good, condition lest the market value of the slave should decrease. But in the system of Untouchability the Hindu takes no responsibility for the maintenance of the Untouchable. As an economic system it permits exploitation without obligation. Untouchability is not only a system of unmitigated economic exploitation, but it is also a system of uncontrolled economic exploitation."That is because there is no independent public opinion to condemn it and there is no impartial machinery of administration to restrain it. There is no appeal to public opinion, for whatever public opinion there is it is the opinion of the Hindus who belong to the exploiting class and as such favour exploitation. There is no check from the police or the judiciary for the

simple reason that they are all drawn from the Hindus, and take the side of the Exploiters.

Those who believe that Untouchability will soon vanish do not seem to have paid attention to the economic advantages which it gives to the Hindus. Untouchable cannot do anything to get rid of his untouchability. It does not arise out of any personal fault on his part. Untouchability is an attitude of the Hindu. For Untouchability to vanish, it is the Hindu who must change. Will he change?

Has a Hindu any conscience? Is he ever known to have been fired with a righteous indignation against a moral wrong? Assuming he does change so much as to regard Untouchability a moral wrong, assuming he is awakened to the sense of putting himself right with God and Man, will he agree to give up the economic and social advantages which Untouchability gives? History, I am afraid, will not justify the conclusion that a Hindu has a quick conscience or if he has it is so active as to charge him with moral indignation and drive him to undertake a crusade to eradicate the wrong. History shows that where ethics and economics come in conflict "victory is always with economics. Vested interests have never been known to have willingly divested themselves unless there was sufficient force to compel them. The Untouchables cannot hope to generate any compelling force. They are poor and they are scattered. They can be easily suppressed should they raise their head.

On this analysis, Swaraj would make Hindus more powerful and Untouchables more helpless and it is quite possible that having regard to the economic advantages which it gives to the Hindus, Swaraj, instead of putting an end to Untouchability, may extend its life. That Untouchability is vanishing is therefore only wishful thinking and a calculated untruth. It would be most stupid—if not criminal—to take it into account in -considering the demands of the Untouchables for constitutional safeguards and ignore the hard facts of the present and their certainty to continue in the indefinite future.

Chapter IX

**WHAT CONGRESS AND GANDHI HAVE DONE
TO
THE UNTOUCHABLES**

**CHAPTER IX
A PLEA TO THE FOREIGNER**

Let not Tyranny Have Freedom to Enslave

I

'Tt is a matter of common experience that barring a few exceptions, almost all foreigners, who show interest in Indian political affairs, take the side of the Congress. This quite naturally puzzles and annoys the other political parties in the country, such as the Muslim League, claiming to represent the Musalmans, the Justice Party—now in a state of suspended animation but still—claiming to speak in the name of the non-Brahmins and the All-India Scheduled Castes Federation, claiming to represent the Untouchables, all of whom have been appealing to the foreigner for support but to whom the foreigner's not even prepared to give a sympathetic hearing. Why does the foreigner support the Congress and not the other political parties in India? Two reasons are usually assigned by the foreigner for his behaviour. One reason assigned by him for supporting the Congress is that it is the only representative political organisation of the Indians and can speak in the name of India and even for the Untouchables. Is such a belief founded on facts?

It must be admitted that there have been circumstances which are responsible for creating such a belief. The first and foremost circumstance for the spread of this view is the propaganda by the Indian Press in favour of the Congress. The Press in India is an accomplice of the Congress, believes in the dogma that the Congress is never wrong and acts on the principle of not giving any publicity to any news, which is inconsistent with the Congress prestige or the Congress ideology. To the foreigner the Press

is the principal medium of information about the Indian political affairs. The cry of the Indian Press being what it is, there is therefore no wonder if the people in England and America know one thing and only one thing, namely, that the Congress is the only representative body in India including even the Untouchables.

The effect of this propaganda is considerably heightened because of the absence of counter-propaganda on behalf of the Untouchables to advertise their case against the Congress clam. There are various explanations for this failure on the part of the Untouchables.

The Untouchables have no Press. The Congress Press is closed to them and is determined not to give them the slightest publicity. They cannot have their own Press and for obvious reasons. No paper can survive without advertisement revenue. Advertisement revenue can come only from business and in India all business, both high and small, is attached to the Congress and will not favour any Non-Congress organisation. The staff of the Associated Press in India, which is the main news distributing agency in India, is entirely drawn from the Madras Brahmins—indeed the whole of the Press in India is in their hands and they, for well-known reasons, are entirely pro-Congress and will not allow any news hostile to the Congress to get publicity. These are reasons beyond the control of the Untouchables.

To a large extent the failure of the Untouchables to do propaganda, it must be admitted, is also due to the absence of will to do propaganda. This absence of will arises from a patriotic motive not to do anything, which will damage the cause of the country in the eyes of the world outside. There are two different aspects to the politics of India, which may be distinguished as foreign politics and constitutional politics. India's foreign politics relate to India's freedom from British Imperialism, while the constitutional politics of India centre round the nature of a constitution for a free India. For a discriminating student the two issues are really separate. But the Untouchables fear that though the two aspects of India's politics are separable, the foreigner, who counts in this matter and whose misunderstanding has to be guarded against, is not only incapable of separating them but is very likely to mistake a quarrel over constitutional

politics for a, disagreement over the ultimate purposes of India's foreign politics. This is why the Untouchables have preferred to remain silent and allowed the Congress propaganda to go unchallenged.

The Congressmen will not admit the patriotic motives of the Untouchables in keeping silent over Congress propaganda which is directed against them. The fact, however, remains that the silence and the desire to avoid open challenge on the part of the Untouchables have been materially responsible for the general belief that the Congress represents all, even the Untouchables.

While, as explained above, there are circumstances which are responsible for creating the belief that Congress represents all including the Untouchables, such a belief is not warranted by the facts as disclosed by the elections that took place in 1937. How the claim of the Congress to represent all has been disproved by those elections, has already been described in an earlier part of this book, both generally and also with particular regard to the claim of the Congress to represent the Untouchables. If the foreigner will make a note of it he will see how wide the propaganda is from the facts.

At a time when the representative character of the Congress was not put to test in an election it was excusable for a foreigner to be carried away by propaganda. But the matter has now been put to test in the elections that took place in 1937. With the results of the elections available to check the position, it may be hoped that the foreigners will revise their view that the Congress represents all, including the Untouchables, and that they will realise that the other parties are equally representative of elements in the social life of India which are outside the Congress and have therefore the right to be heard.

II

There is another reason why the foreigner lends his support to the Congress. It lies in the difference between the demonstrative activities of the Congress and the other political parties in the country. While he compares the activities of the different political parties, he sees

Congressmen engaged in a conflict with the British Government, launching campaigns of civil disobedience, breaking laws made by a foreign Government, organising movements for non-payment of taxes, courting prison, preaching non-co-operation with Government, refusing offices and exhibiting themselves in other ways as men out to sacrifice themselves for the freedom of the country. On the other hand, he sees the other political parties uninterested, passive and taking no part in such a struggle. From this, he concludes that the Congress is a body struggling for the freedom of India, while the other parties are indifferent, if not obstructive and as a lover of freedom feels bound to support the Congress as a body carrying on a 'Fight for Freedom' in preference to other parties.

This is quite natural. But a question arises which calls for attention. Is this partiality to the Congress the result of an infatuation for the 'Fight for Freedom' movement? Or, is it the result of a conviction that this 'Fight for Freedom' is going to make the people of India free? If it is the former, all I can do is to regret that what I have said in Chapter VII in explanation as to why the Untouchables have not joined with the Congress in this 'Fight for Freedom' has not produced the desired effect on the foreigner. But I cannot quarrel, with him on that account. For it is quite understandable that many a foreigner on reading that chapter may say that while the reasons adduced by me as to why the Untouchables refuse to join the 'Fight for Freedom' are valid and good, I have shown no ground why he should not support a body which is carrying on a fight for freedom.

If the basis of his partiality to the Congress is of the latter sort then the matter stands on a different footing. It then becomes necessary to examine the rationale of his attitude and to save him from his error.

Ordinarily, no one trusts the word of a person who is not prepared to place all his cards on the table and commit himself to something clear and definite, so as to prove his bona fides, to inspire confidence and secure the co-operation of those who have doubts about his motives. The same rule must apply to the Congress. But as I have shown in Chapter VII the Congress has not produced its blue print of the sort of democracy it aims to establish in India, showing what place the servile classes and particularly the Untouchables will have in it. Indeed, it has refused to produce such a

blue print, notwithstanding the insistent demand of the Untouchables and the other minority communities. In the absence of such a pronouncement it appears to be a strange sort of credulity on the part of the foreigner to give support to the Congress on the ground that it stood for democracy.

There is certainly no ground for thinking that the Congress is planning to establish democracy in India. The mere fact that the Congress is engaged in a ' Fight for Freedom ' does not warrant such a conclusion. Before any such conclusion is drawn it is the duty of the foreigner to pursue the matter further and ask another question, namely, ' For whose freedom is the Congress fighting? ' The question whether the Congress is fighting for freedom has very little importance as compared to the question, ' for whose freedom is the Congress fighting? ' This is a pertinent and necessary inquiry and it would be wrong for any lover of freedom to support the Congress without further pursuing the matter and finding out what the truth is. But the foreigner who takes the side of the Congress does not care even to raise such a question. One should have thought that he would very naturally raise such a question and if he did raise it and pursue it, I am confident, he will find abundant proof that the Congress far from planning for democracy is planning to resuscitate the ancient form of Hindu polity of a hereditary governing class ruling a hereditary servile class.

The attitude of the foreigner to the cause of the servile classes and particularly to the cause of the Untouchables is a vital matter and no party can leave it out of consideration, as a case of idiosyncrasy. For any one representing the Untouchables it is necessary to take note of it and do his best to convince the foreigner that in supporting the Congress he is supporting a wrong party.

III

Apart from the question of likes and dislikes, the real explanation for this strange attitude of the foreigner towards the Congress seems to be in certain notions about freedom, self-government and democracy propounded by western writers on Political Science and which have become the stock-in-trade of the average foreigner.

As to freedom, the foreigner does not stop to make a distinction between the freedom of a country and the freedom of the people in the country. He takes it for granted that the freedom of a country is the same as the freedom of the people in the country and once the freedom of the country is secured the freedom of the people is also thereby assured.

As regards self-government he believes that all that is wanted in a people is a sense of constitutional morality, which Grote mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41J.What Congress and Gandhi CHAPTER IX.htm - _msocom_1 defined as habits of "paramount reverence for the form of the constitution, enforcing obedience to the authorities acting under and within those forms, yet combined with the habit of open speech, of action subject only to definite legal control, and unrestrained censure of those very authorities as to all their public acts—combined, too, with a perfect confidence in the bosom of every citizen, admits the bitterness of party contest, that the forms of constitution will be not less sacred in the eyes of his opponents than in his own." If in a populace these habits are present, then according to the western writers on Politics, self-government can be a reality and nothing further need be considered. As to democracy he believes that what is necessary for achieving it is the establishment of universal adult suffrage. Other aids have been suggested such as recall, plebiscite and frequent elections and in some countries they have been brought into operation. But in a majority of countries nothing more than adult suffrage and frequent elections is deemed to be necessary for ensuring Government by the people, of the people and for the people.

I have no hesitation in saying that all these notions are fallacious and grossly misleading.

Not to make a distinction between the freedom of the country and the freedom of the people in the country is to allow oneself to be misled, if not deceived. For, words such as society, nation and country are just amorphous if not ambiguous terms. There is no gainsaying that 'nation' though one word means many classes. Philosophically, it may be possible to consider a nation as a unit but sociologically it cannot but be regarded as consisting of many classes and the freedom of the nation, if it is to be a reality, must vouchsafe the freedom of the different classes comprised in it,

particularly of those who are treated as the servile classes.

Habits of constitutional morality may be essential for the maintenance of a constitutional form of Government. But the maintenance of a constitutional form of Government is not the same thing as a self-government by the people. Similarly, it may be granted that adult suffrage can produce government of the people in the logical sense of the phrase, i.e., in contrast to the government of a king. But it cannot by itself be said to bring about a democratic government, in the sense of the government by the people and for the people.

Anyone who knows the tragic fate of Parliamentary Democracy in Western Europe will not require more and better evidence to prove the fallacy underlying such notions of democracy mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41J.What Congress and Gandhi CHAPTER IX.htm - _msocom_2 . If I may quote myself from what I have said in another place, the causes which have led to the failure of democracy in Western Europe may be summarised in the following words:

“The Government of human society has undergone some very significant changes. There was a time when the government of human society had taken the form of autocracy by Despotic Sovereigns. This was replaced after a long and bloody struggle by a system of government known as Parliamentary Democracy. It was felt that this was the last word in the framework of government. It was believed to bring about the millennium in which every human being will have the right to liberty, property and pursuit of happiness. And there were good grounds for such high hopes. In parliamentary democracy there is the Legislature to express the voice of the people; there is the executive which is subordinate to the Legislature and bound to obey the Legislature. Over and above the Legislature and the Executive there is the Judiciary to control both and keep them both within prescribed bounds. Parliamentary democracy has all the marks of a popular Government, a government of the people, by the people and for the people. It is therefore a matter of some surprise that there has been a revolt against parliamentary democracy although not even a century has elapsed since its universal acceptance and inauguration. There is revolt against it in Italy, in Germany, in Russia and in Spain, and there are very few countries

in which there has not been discontent against parliamentary democracy. Why should there be this discontent and dissatisfaction against parliamentary democracy? It is a question worth considering. There is no country in which the urgency of considering this question is greater than it is in India. India is negotiating to have parliamentary democracy. There is a great need of some one with sufficient courage to tell Indians: "Beware of parliamentary democracy, it is not the best product as it appears to be.

Why has parliamentary democracy failed? In the country of the dictators it has failed because it is a machine whose movements are very slow. It delays swift action. In a parliamentary democracy the Executive may be held up by the Legislature which may refuse to pass the laws which the Executive wants and if it is not held up by the Legislature it may be held up by the judiciary which may declare the laws as illegal. Parliamentary democracy gives no free hand to dictatorship and that is why it became a discredited institution in countries like Italy, Spain and Germany which readily welcomed dictatorships. If dictators alone were against parliamentary democracy it would not have mattered at all. Their testimony against parliamentary democracy would be welcomed for the reason that it can be an effective check upon dictatorship. But unfortunately there is a great deal of discontent against parliamentary democracy even in countries where people are opposed to dictatorship. That is the most regrettable fact about Parliamentary democracy. This is all the more regrettable because parliamentary democracy has not been at a standstill. It has progressed in three directions. It began with equality of political rights in the form of equal suffrage. There are very few countries having parliamentary democracy which have not adult suffrage. It has progressed by expanding the notion of equality of political rights to equality of social and economic opportunity. It has recognised that the State cannot be held at bay by corporations which are anti-social in their purpose. With all this, there is immense discontent against parliamentary democracy even in countries pledged to democracy. The reasons for discontent in such countries must obviously be different from those assigned by the dictator countries. There is no time to go into details. But it can be said in general terms that the discontent against parliamentary democracy is due to the realisation that it has failed to assure to the masses the right to liberty, property or the

pursuit of happiness. If this is true, it is important to know the causes which have brought about this failure. The causes for this failure may be found either in wrong ideology or wrong organisation or in both. I think the causes are to be found in both.

Of the erroneous ideologies which have been responsible for the failure of parliamentary democracy I have no doubt that the idea of freedom of contract is one of them. The idea became sanctified and was upheld in the name of liberty. Parliamentary democracy took no notice of economic inequalities and did not care to examine the result of freedom of contract on the parties to the contract, in spite of the fact that they were unequal in their bargaining power. It did not mind if the freedom of contract gave the strong the opportunity to defraud the weak. The result is that parliamentary democracy in standing out as protagonist of liberty has continuously added to the economic wrongs of the poor, the downtrodden and the disinherited class.

The second wrong ideology which has vitiated parliamentary democracy is the failure to realise that political democracy cannot succeed where there is no social and economic democracy. Some may question this proposition. To those who are disposed to question it, I will ask a counter-question. Why did parliamentary democracy collapse so easily in Italy, Germany and Russia? Why did it not collapse so easily in England and the U.S.A.? To my mind there is only one answer. It is that there was a greater degree of economic and social democracy in the latter countries than existed in the former. Social and economic democracy are the tissues and the fibre of a political democracy. The tougher the tissue and the fibre, the greater the strength of the body. Democracy is another name for equality. Parliamentary democracy developed a passion for liberty. It never made even a nodding acquaintance with equality. It failed to realise the significance of equality and did not even endeavour to strike a balance between liberty and equality with the result that liberty swallowed equality and has made democracy a name and a farce.

I have referred to the wrong ideologies which in my judgement have been responsible for the failure of parliamentary democracy. But I am equally certain that more than bad ideology it is bad organisation which has been

responsible for the failure of democracy. All political societies get divided into two classes—the Rulers and the Ruled. This is an evil. If the evil stopped here it would not matter much. But the unfortunate part of it is that the division becomes so stereotyped and stratified that Rulers are always drawn from the ruling class and the class that is ruled never becomes the ruling class. This happens because generally people do not care to see that they govern themselves. They are content to establish a government and leave it to govern them. This explains why parliamentary democracy has never been a government of the people or by the people and why it has been in reality a government of a hereditary subject class by a hereditary ruling class. It is this vicious organisation of political life which has made parliamentary democracy such a dismal failure. It is because of this that parliamentary democracy has not fulfilled the hope it held out to the common man of ensuring to him liberty, property and pursuit of happiness."

If this analysis of the causes which have led to the failure of democracy is correct, it must serve as a warning to the protagonists of democracy that there are certain fundamental considerations which go to the root of democracy and which they cannot ignore without peril to democracy. For the sake of clarity these considerations may be set down in serial order.

First is the recognition of the hard fact of history that in every country there exist two classes,—the governing class and the servile class between whom there is a continuous struggle for power. Second is that by reason of its power and prestige the governing class finds it easy to maintain its supremacy over the servile class. Third is that adult suffrage and frequent elections are no bar against governing class reaching places of power and authority. Fourth is that on account of their inferiority complex the members of the servile classes regard the members of the governing class as their natural leaders and the servile classes themselves volunteer to elect members of the governing classes as their rulers. Fifth is that the existence of a governing class is inconsistent with democracy and self-government and that given the fact that where the governing class retains its power to govern, it is wrong to believe that democracy and self-government have become realities of life. Sixth is that self-government and democracy

become real not when a constitution based on adult suffrage comes into existence but when the governing class loses its power to capture the power to govern. Seventh is that while in some countries the servile classes may succeed in ousting the governing class from the seat of authority with nothing more than adult suffrage, in other countries the governing class may be so deeply entrenched that the servile classes will need other safeguards besides adult suffrage to achieve the same end.

That there is great value in having these considerations drawn up and hung up, so to say on the wall, before every lover of democracy, so that he may see them and note them, goes without saying. For they will help, as nothing else can, to make him realise that in devising a constitution for democracy he must bear in mind: that the principal aim of such a constitution must be to dislodge the governing class from its position and to prevent it from remaining as a governing class for ever; that the machinery for setting up a democratic government cannot be a matter of dogma; that ousting the governing class from power being the main object the machinery for setting up a democratic government cannot be uniform and that variations in the machinery of Democracy must not merely be tolerated but accepted for the reason that the processes by which the governing classes obtain their mastery over the servile classes vary from country to country.

This is what democracy means and involves. But unfortunately Western writers on Politics from whom the foreigner draws his notions have failed to take such a realistic view of democracy. Instead, they have taken a very formal and a very superficial view of it by making constitutional morality, adult suffrage and frequent elections as the be-all and end-all of democracy.

Those who propound the view that democracy need involve no more than these three devices are probably unaware of the fact that they are doing nothing more than and nothing different from expressing the point of view of the governing classes. The governing classes know by experience that such mechanisms have not proved fatal to their power and their position. Indeed, they have helped to give to their power and prestige the virtue of legality and made themselves less vulnerable to attack by the servile classes.

Those who wish that democracy and self-government should come into their own, and should not remain as mere forms, cannot do better than start with the recognition of the crucial fact that the existence of a permanently settled governing class is the greatest danger to democracy. It is the only safe and realistic approach for a democrat to adopt. It is a fatal blunder to omit to take account of its existence in coming to a conclusion as to whether in a free country freedom will be the privilege of the governing class only or it will be the possession of all. In my view, therefore, what the foreigner who chooses to side with the Congress should ask is not whether the Congress is fighting for freedom. He should ask: For whose freedom is the Congress fighting? Is it fighting for the freedom of the governing class in India or is it fighting for the freedom of the people of India? If he finds that the Congress is fighting for the freedom of the governing class, he should ask Congressmen: Is the governing class in India fit to govern? This is the least he can do before siding with the Congress.

What are the answers which Congressmen have to give to these questions? I do not know. But I will give what I think are the only true answers to these questions.

IV

I cannot say if the foreigner will be impressed by what has been said in the foregoing section of this chapter. If he is he will no doubt ask for proof in support of the statement that the Congress is fighting for the freedom of the country is really fighting not to establish democracy but is planning to resuscitate the ancient Hindu polity of a hereditary governing class ruling a hereditary servile class. I am not certain that the foreigner will be satisfied with the evidence. But I am prepared to place it before him for what it is worth.

Who constitute the governing class in India? For Indians such a question is unnecessary. But for the foreigner it is a necessary preliminary and it must therefore be dealt with. The governing class in India consists principally of the Brahmins. Strangely enough some present-day Brahmins

repudiate the allegation that they belong to the governing class though at one time they described themselves as Bhudevas (Gods on earth). What can this volte face be due to? The intellectual class in every community is charged by its moral code with one sacred duty, namely, to safeguard the interest of the community and not to sacrifice it to the interest of their own class. No intellectual class has so grossly related this trust as have the Brahmins in India. When one finds the Brahmins repudiating their position as the governing class in India one begins to think whether it is due to a guilty conscience, born out of the realisation that they have committed a criminal breach of this trust and therefore dare not stand before the bar of the world. Or is it due to their sense of modesty? It is not necessary to speculate as to what the truth is. For, it is hardly open to question that in India the Brahmins are a governing class. If necessary there are two tests which one could apply for the purpose of ascertaining the truth. First is the sentiment of the people and the second is the Brahmin's share in administration. Taking the attitude of the people towards the Brahmin, nobody can deny that the person of the Brahmin is regarded as sacred by every Hindu, high or low. He is the most "Worshipful Master" to whom everyone high and low must bow. In pre-British days he had immunities and privileges which were denied to the servile class. For instance he could not be hanged even if he committed murder. That was because he was a sacred person. There was a time when no person of the servile class could take his food without drinking the water in which the toes of the Brahmins were washed. Sir P. C. Ray once described how in his childhood, rows of children belonging to the servile classes used to stand for hours together in the morning on the roadside in Calcutta with cups of water in their hands waiting for a Brahmin to pass, ready to wash his feet and take the sacred liquid to their parents who would not take their food without having a sip of it first. He was entitled to first fruits. In Malabar, where the Sambandham form of marriage prevails, the servile classes, such as the Nairs, regard it an honour to have their females kept as mistresses by the Brahmins. Even kings invited Brahmins to deflower their queens on prima noctis. ⁵ mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/41J.What Congress and Gandhi CHAPTER IX.htm - _msocom_3 Under the British Government and by reason of its equalitarian jurisprudence these rights, immunities and privileges of the Brahmins have ceased to exist. Nonetheless the advantages they gave still

remain and the Brahmin is still pre-eminent and sacred in the eyes of the servile classes and is still addressed by them as "Swami" which means ' Lord.'

The second test gives an equally positive result. To take only the Madras Presidency by way of illustration. Consider Table 18 (see page 218). It shows the distribution of gazetted posts between the Brahmins and the other communities in the year 1948. Similar data from the other provinces could also be adduced to support this conclusion. But it is unnecessary to labour the point. Whether the Brahmins accept or deny the status the facts that they control the State and that their supremacy is accepted by the servile classes, are enough to prove that they form the governing class.

It is of course impossible for the Brahmins to maintain their supremacy as a governing class without an ally to help them on account of their being numerically very small. Consequently, as history shows, the Brahmins have always had other classes as their allies to whom they were ready to accord the status of a governing class provided they were prepared to work with them in subordinate co-operation. In ancient and mediaeval times they made such an alliance with the Kshatriyas or the warrior class and the two not merely ruled the masses, but ground them down to atoms, pulverised them so to say—the Brahmin with his pen and the Kshatriya with his sword. At present, Brahmins have made an alliance with the Vaishya class called Banias. The shifting of this alliance from the Kshatriya to the Bania is in the changed circumstances quite inevitable. In these days of commerce money is more important than sword. That is one reason for this change in party alignment. The second reason is the need for money to run the political machine. Money can come only from and is in fact coming from the Bania. If the Bania is financing the Congress it is because he has realised—and Mr. Gandhi has taught him—that money invested in politics gives large dividends. Those who have any doubt in the matter might do well to read what Mr. Gandhi told Mr. Louis Fischer on June 6, 1942. In his book *A Week with Mr. Gandhi*, Mr. Fischer records very revealing answers to some of his most interesting and pertinent questions.

Table 18 (1)1

Communities	Approximate Population in Lakhs	Percentage of Population	No. of Posts held out of Total No. Gazetted Posts (2,200)	Percentage of Appointments held	Non-Gazetted Posts			
					Over Rs. 100 Total No. 7,500	Over Rs. 35 Total No. 20,782	No. held by	% of Appointments held

Mr. Fischer writes mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/41J.What Congress and Gandhi CHAPTER IX.htm - _msocom_4 :

“I said I had several questions to ask him (Mr. Gandhi) about the Congress Party. Very highly placed Britishers, I recalled, had told me that Congress was in the hands of big business and that Mr. Gandhi was supported by the Bombay Mill owners who gave him as much money as he wanted. 'What truth is there in these assertions,' I asked, 'Unfortunately, they are true,' he declared simply. 'Congress hasn't enough money to conduct its work. We thought in the beginning to collect four annas (about eight cents) from each member per year and operate on that. But it hasn't worked.' 'What proportion of the Congress budget,' I asked, 'is covered by rich Indians?' 'Practically all of it,' he stated 'In this ashram, for instance, we could live much more poorly than we do and spend less money. But we do not and the money comes from our rich friends.'”

Being dependent on his money, it is impossible for the Brahmin to

exclude the Bania from the position of a governing class. In fact, the Brahmin has established not merely a working but a cordial alliance with the Bania. The result is that the governing class in India to-day is a Brahmin-Bania instead of a Brahmin-Kshatriya combine as it used to be.

Enough has been said to show who constitute the governing class in India. The next inquiry must be directed to find out how the governing class fared in the elections to the Provincial Legislatures that took place in 1937.

The elections that took place in 1937 were based on a franchise which though it was neither universal nor adult was wide enough to include classes other than the governing class, certainly wider than any existing prior to 1937. The elections based on such a franchise may well be taken as a test to find out how the governing class fared as against the servile classes in this electoral contest.

Unfortunately, no Indian publicist has as yet undertaken to compile an Indian counterpart of Dodd's Parliamentary Manual. Consequently, it is difficult to have precise particulars regarding the caste, occupation, education and social status of members of the legislature elected on the Congress ticket. The matter is so important that I thought of collecting the necessary information on these points relating to members of the Provincial Legislatures elected in 1937. I did not succeed in getting precise information about every member. There are many whom I have had to leave as unclassified. But the information I have been able to gather is I believe sufficient to warrant our drawing certain definite conclusions.

As an answer to the question as to how the governing class fared in the electoral contest of 1937, attention maybe drawn to Table 19 (see page 216) which shows the proportion of Brahmins and Banias (landlords and moneylenders) representing the governing class and non-Brahmins and the Scheduled Castes representing the servile classes, that were elected to the Provincial Legislative Assemblies on the Congress ticket.

Those, who do not know how small is the proportion of the Brahmins to the total population of Hindus, may not be able to realise the degree of over-representation which the Brahmins have secured in the election. But

there is no doubt that on comparison with their numbers the Brahmins have secured overwhelming representation.

Those, who wish to know what degree of representation the propertied classes, such as Banias, businessmen and landlords obtained, may see the figures given in Table 20 (see page 217). It shows how many Banias, businessmen and landlords were elected on the Congress ticket. Here again the representation secured by the Banias, landlords and businessmen is quite out of proportion to their numbers.

Such is the position of the governing class in the legislatures constituted under the elections that took place in 1937. Some may say that on the whole the governing classes were in a minority in the legislature. As against this, it must be pointed out that the supremacy of the governing class can be measured not by its position in the legislature but by its ability to get possession of executive authority. An inquiry into the class composition of the Ministers is therefore very pertinent. Information on this point will be found in Tables 21 and 22 (see pages 218 and 219). A glance at the tables mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41J.What Congress and Gandhi CHAPTER IX.htm - _msocom_5 is enough to show that the Brahmins—the premier governing class— succeeded in capturing an overwhelming majority of seats in the Cabinet.

United Province	12	1	11	1	8	1

Compiled from Indian Information Issue of July 15, 1939. Question mark indicate inability to classify whether Brahmin or non-Brahmin.

In all the Hindu Provinces, the Prime Ministers were Brahmins. In all Hindu provinces, if the non-Hindu ministers were excluded, the majority of ministers were Brahmins and even parliamentary secretaries were Brahmins.

What has been said so far makes two things as clear as daylight. First is that there is in India a well defined governing class, distinct and separate

from the servile class. Second is that the governing class is so powerful that though small in number in the elections of 1987 it quite easily captured political power and established its supremacy over the servile classes. There remains only one more point for me to establish to be able to put my thesis across. It is to show how far Congress was responsible for the victory of the governing class in the elections of 1987. I know I must prove beyond reasonable doubt that the Congress is responsible for placing the governing class in the position of supremacy over the servile class. For it might be said that the Congress had nothing to do with this, that even if the Congress was responsible for it the result was an accident and that there was no intention on the part of the Congress to help the governing classes to win this position of supremacy.

V

The first line of these suggested defences can be easily disposed of. It is probable that those who raise this defence do not know the political colour of the province to which the figures given in Tables 19,20,21 and 22 relate. If they knew it they would give up this line of defence. For they relate to what are called the Congress Provinces. In these provinces the majority party was the Congress Party and the Cabinets were Congress Cabinets. Obviously, if in these Congress provinces the governing classes succeeded in establishing their rule over the servile classes it is difficult to see how the Congress could be absolved from responsibility for such a result. The Congress is a well disciplined party. It had a plan for fighting the elections. In every province there was established a Parliamentary Board, the functions of which were (1) to choose candidates for elections, (2) to decide upon the formation of Cabinets, and (8) to control the actions of ministers. Over and above these Provincial Parliamentary Boards there was a Central Parliamentary Board to superintend and control the work of the Provincial Parliamentary Boards. It was an election which was planned and controlled by the Congress. It is therefore futile to argue that if the governing classes captured power in the elections of 1987 in the Congress Provinces the Congress is not responsible for the result.

The second line of defence is as fragile as the first. Those who wish to

argue that the dominance of the governing class in the Congress provinces is accidental and not intentional should know that they are advancing an argument which will not stand. I would invite the attention of those who are inclined to treat it as an accident to consider the following circumstances.

First let them consider the mentality of the leading members of the Congress High Command who have guided the destiny of the Congress in the past and who are at present running the affairs of the Congress. It would be well to begin with Mr. Tilak. He is dead. But while he was alive he was the most leading man in the Congress and exercised the greatest sway over it. Mr. Tilak was a Brahmin and belonged to the governing class. Though he had acquired the reputation of being the father of the Swaraj movement his antipathy to the servile classes was quite well known. For want of space I will cite only one instance of his mentality towards the servile classes. In 1918, when the non-Brahmins and the Backward classes had started an agitation for separate representation in the legislature, Mr. Tilak in a public meeting held in Sholapur said that he did not understand why the oil pressers, tobacco shopkeepers, washermen, etc.—that was his description of the Non-Brahmins and the Backward classes—should want to go into the legislature. In his opinion, their business was to obey the laws and not to aspire for power to make laws.

Next after Tilak I may take Mr. Vallabhbhai Patel. Here again, I will cite only one instance to indicate Ins mentality. In 1942, Lord Linlithgow invited 52 important Indians representing different sections of the people to discuss the steps that might be taken to make the Central Government more popular and thereby enlist the sympathy and co-operation of all Indians in war effort. Among those that were invited were members belonging to the Scheduled Castes. Mr. Vallabhbhai Patel could not bear the idea that the Viceroy should have invited such a crowd of mean men. Soon after the event, Mr. Vallabhbhai Patel made a speech in Ahmedabad and said [f.7] :—

“The Viceroy sent for the leaders of the Hindu Mahasabha, he sent for the leaders of the Muslim League and he sent for Ghanchis (oil pressers), Mochis (cobblers) and the rest.”

Although Mr. Vallabhbhai Patel in his malicious and stinging words referred only to Ghanchis and Mochis his speech indicates the general contempt in which he holds the servile classes of his country.

It may be well to know the reactions of Pandit Jawaharlal Nehru. Pandit Jawaharlal Nehru is a Brahmin but he has the reputation of being non-communal in his outlook and secular in his beliefs. Facts do not seem to justify the reputation he carries. A person cannot be called secular if he, when his father dies, performs the religious ceremonies prescribed by orthodox Hinduism at the hands of Brahmin priests on the banks of the river Ganges as Pandit Jawaharlal did when his father died in 1931. As to his being non-communal it is stated by no less a person than Dr. Pattabhi Sitaramayya that Pandit Nehru is very conscious of the fact that he is a Brahmin.[f.8] This must come as a most astonishing fact to those who believe the Pandit to have the reputation of being the most nationally minded Hindu leader in India. But Dr. Sitaramayya must be knowing what he is talking about. More disturbing is the fact that in the United Provinces from which he hails and over which he exercises complete authority the ministers in the cabinet of the province were all Brahmins. Mrs. Vijaya Laxmi Pandit, the well-known sister of Pandit Jawaharlal Nehru, also seems to be conscious of herself being Brahmin by caste. It is said that at the All-India Women's Conference held in Delhi in December 1940, the question of not declaring one's caste in the Census Return was discussed. Mrs. Pandit disapproved [f.9] of the idea and said that she did not see any reason why she should not be proud of her Brahmin blood and declare herself as a Brahmin at the Census. Who are these men? What is their status? Mr. Tilak has the reputation of being the father of the Swaraj movement. Mr. Patel and Pandit Nehru come next in command in the Congress hierarchy after Mr. Gandhi.

Some might think that these are the individual and private opinions of the members of the Congress High Command. But that would be an error. Several cases could be pointed out in which such opinions have been acted upon in election campaigns run by the Congress.

'Ever since 1919 when Mr. Gandhi captured the Congress, Congressmen have looked upon the boycott of legislatures as one of the sanctions for

making the British Government concede the demand for Swaraj. Under this policy, every time there was an election in which the Congress decided not to take part, the Congress would not only refuse to put candidates on the Congress ticket but would carry on propaganda against any Hindu proposing to stand for election as an independent candidate. One need not quarrel over the merits of such a policy. But what were the means adopted by the Congress to prevent Hindus-standing on an independent ticket? The means adopted were to make the legislatures objects of contempt. Accordingly, the Congress in various Provinces started processions carrying placards with these significant and telling words: "Who will go in the legislatures? Only barbers, cobblers, potters and sweepers." In the processions one man would utter the question as part of the slogan and the whole Congress crowd would shout as answer the second part of the slogan. When the Congressmen found that this was not enough to deter persons from standing for the elections, they decided to adopt sterner measures. Believing that respectable people would not be prepared to stand for election if they felt certain that they would have to sit with barbers, potters and sweepers, etc., in the legislatures, the Congress actually went to the extent of putting up candidates from these despised communities on the Congress ticket and got them elected. A few illustrations of this outrageous conduct of the Congress may be mentioned. In the 1920 election, the Congress elected a cobbler mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41J.What Congress and Gandhi CHAPTER IX.htm - _msocom_10 to the legislature of the Central Provinces. In the 1930 election they elected in the Central Provinces two cobblers, [f.11] one milkman [f.12] and one barber, [f.13] and in the Punjab one sweeper mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41J.What Congress and Gandhi CHAPTER IX.htm - _msocom_14. In 1984, the Congress elected to the Central Legislature a potter mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41J.What Congress and Gandhi CHAPTER IX.htm - _msocom_15. It might be said that this is old history. Let me correct such an impression by referring to what happened in 1948, in the Municipal elections in Andheri—a suburb of Bombay. The Congress put up a barber to bring the Municipality in contempt.

What a mentality for a Governing class I What a brazen facedness for a governing class to use the servile class for such an ignominious purpose

and yet claim to be fighting for their freedom! What a tragedy for the servile class to take pride in its own disgrace and join in it voluntarily! The Sinn Fein Party in Ireland also boycotted the British Parliament. But did they make such hideous use of their own countrymen for effecting their purposes? The campaign of boycott of legislature which took place in 1980 is of particular interest. The elections to the Provincial legislatures in 1980 in which these instances occurred coincided with Mr. Gandhi's Salt Satyagraha campaign of 1930; I hope that the future (the official historian, Dr. Pattabhi Sitaramayya, has failed to do so) historian of Congress while recording how Mr. Gandhi decided to serve notice on the Viceroy, Lord Irwin, presenting him with a list of demands to be conceded before a certain date and on failure by the Viceroy in this behalf, how Mr. Gandhi selected Salt Act as a target for attack, how he selected Dandi as a scene of battle, how he decided to put himself at the head of the campaign, how he marched out from his Ashram in Ahmedabad with all pomp and ceremony, how the women of Ahmedabad came out with Arthi and applied tilak (saffron mark) to his forehead wishing him victory, how Mr. Gandhi assured them that Gujarat alone would win Swaraj for India, how Mr. Gandhi proclaimed his determination by saying that he would not return to Ahmedabad until he had won Swaraj, will not fail to record that while on the one hand Congressmen were engaged in fighting for Swaraj, which they said they wanted to win in the name of and for the masses, on the other hand and in the very year they were committing the worst outrages upon the very masses by exhibiting them publicly as objects of contempt to be shunned and avoided.

VI

This mentality of the Congress High Command towards the servile classes is enough to negative the theory that the supremacy of the governing classes in the Congress Provinces was an accident. There are other facts which also go to negative the theory of accident and which are set out in Table 23 (see page 226). They relate to the educational qualifications of the several classes of candidates selected by the Congress for fighting the elections. What does the table show? It is crystal clear that

in the case of the Brahmins the relative proportion of graduates to non-graduates is far higher than what it is in the case of non-Brahmins and the Scheduled Castes. Was this an accident or was this a matter of policy? This sort of selection is marked by such a state of uniformity that it could hardly be doubted that the Congress High Command in selecting a candidate had a definite policy, namely, in the case of Brahmins, to give preference to a candidate who had the highest educational qualifications and in the case of the non-Brahmins and the Scheduled Castes, to give preference to a candidate who had the lowest educational qualifications. The difference in terms of graduates and non-graduates does not really reveal the real difference between the status and position of the Brahmin candidates and non-Brahmin candidates. The Brahmin candidates were not merely graduates but they were seasoned politicians of high repute, while the non-Brahmin graduates were raw graduates with nothing but the career of second class politicians behind them.

Why did the Congress select the best educated Brahmins as its candidates for election? Why did the Congress select the least educated non-Brahmins and Scheduled Castes as its candidates for election? To this question I can see only one answer. It was to prevent the non-Brahmins—the representatives of the servile classes—from forming a ministry. It cannot be that better educated non-Brahmins were not available. What the Congress seems to have done is deliberately to prefer an uneducated non-Brahmin to an educated non-Brahmin.

Table 23

Classification of Brahmin and Non-Brahmin Congress Partymen by Literacy

Provincial Assemblies	<i>Castes</i>	Total	Graduates	Non-Graduates	Matriculates	Illiterates	Not stated
Assam	Brahmin	6	5	1			

	Non-Brahmin	21	15	2	—	1	9
	Brahmin	15	14	1			
Bengal	Non-Brahmin	27	21	4	—	1	7
	Scheduled Castes	6	3	—	1	2	—
	Brahmin	31	11	5	8	4	3
Bihar	Non-Brahmin	39	23	4	3	8	13
	Scheduled Castes	—	1	1	4	10	—
	Brahmin	39	15		2	9	2
Central Provinces	Non-Brahmin Scheduled Castes	54	15	—	2	17 6	1
	Brahmin	38	16	2	3	4	13
Madras	Non-Brahmin	90	31	3	1	7	61
	Scheduled Castes	26	1	1	1	14	—
	Backward Class	—	1	—	—		—
	Brahmin	11	6	1		3	1
Orissa	Non-Brahmin	20	7	3	2	7	1

	Scheduled Castes	5	—	-	—	5	
--	---------------------	---	---	---	---	---	--

And why? Because from the point of view of the governing class, the uneducated non-Brahmin has two definite advantages over an educated non-Brahmin. In the first place, he is likely to be more grateful to the Congress High Command for having got him elected than an educated non-Brahmin is likely to be. In the second place, the uneducated non-Brahmin is less likely to join hands with the educated non-Brahmins in the Congress Party and overturn the ministry of the governing classes and form a non-Brahmin ministry. In the third place, the greater the number of raw non-Brahmins in the Congress the lesser is the possibility of the non-Brahmins in the Congress forming a competent and alternative Ministry to the detriment of the governing class.

Given these circumstances, can there be any doubt that the Congress'Fight for Freedom'is for the freedom of nobody except that of the governing class? Is there any doubt that the Congress is the governing class and the governing class is the Congress? Is there any doubt that when Swaraj came in 1937 in the form of Provincial autonomy, the Congress deliberately and shamelessly put the governing class in places of power and authority?

VII

The facts set out above prove beyond cavil that the'Fight for Freedom'launched by the Congress has ended in perverting the aim and object of Indian freedom and that the Congress itself is a party to such a perversion. The result is an enormity, the character of which it would not be possible for the foreigner to realise unless he has an adequate idea of the social outlook and social philosophy of the Governing Classes in India.

Starting with the Brahmins who form a strong and powerful element in the governing class in India it is no exaggeration to say that they have been the most inveterate enemies of the servile classes, the Shudras (the old

name for the non-Brahmins) and the Untouchables who together constitute about 80 or 90 percent of the total Hindu population of India. If the common man belonging to the servile classes in India is today so fallen, so degraded, so devoid of self-respect, hope or ambition, and so lifeless, it is entirely due to the Brahmins and their philosophy. The cardinal principles of this philosophy of the Brahmins were six—to use a correct expression, techniques of suppression—(1) graded inequality between the different classes; (2) complete disarmament of the Shudras and the Untouchables; (3) complete ban on the education of the Shudras and the Untouchables; (4) total exclusion of the Shudras and the Untouchables from places of power and authority; (5) complete prohibition against the Shudras and the Untouchables acquiring property, and (6) complete subjugation and suppression of women. Inequality is the official doctrine of Brahmanism and the suppression of the lower classes aspiring to equality has been looked upon by them and carried out by them, without remorse as their bounded duty. There are countries where education did not spread beyond a few. But India is the only country where the intellectual class, namely, the Brahmins not only made education their monopoly but declared acquisition of education by the lower classes, a crime punishable by cutting off of the tongue or by the pouring of molten lead in the ear of the offender. The result is that for centuries the Brahmins have denied the servile classes the right to education. Even to-day the Brahmins exhibit the same hostility to their education. Mr. Baines, the Census Commissioner for 1891 in discussing the causes why education was not spreading among the masses said :—

“The second influence antagonistic to a more general spread of literacy is the long continued existence of a hereditary class whose object it has been to maintain their own monopoly of all book-learning as the chief buttress of their social supremacy, Sacerdotalism knows that it can reign over none but an ignorant populace. The opposition of the Brahmin to the rise of the writer castes has been already mentioned, and the repugnance of both, in the present day, to the diffusion of learning amongst the masses can only be appreciated after long experience. It is true that the recognition by the British Government of the virtue and necessity of primary education has met with some response on the part of

the literate castes, but it is chiefly in the direction of academic utterances, which cannot, in the circumstances, be well avoided. It is welcome too, in its capacity of affording the means of livelihood to many of these castes, as they have to be engaged as teachers, and are bound accordingly to work up to the State standard of efficient tuition. The real interest of the castes in question is centred on secondary education, of which they almost exclusively are in a position to reap the advantage."

The Congress politicians complain that the British are ruling India by a wholesale disarmament of the people of India. But they forget that disarmament of the Shudras and the Untouchables was the rule of law promulgated by the Brahmins. Indeed, so strongly did the Brahmins believe in the disarmament of the Shudras and the Untouchables that when they revised the law to enable the Brahmins to arm themselves for the protection of their own privileges, they maintained the ban on the Shudras and the Untouchables as it was without lessening its rigour. If the large majority of people of India appear today to be thoroughly emasculated, spiritless, with no manliness, it is the result of the Brahmanic policy of wholesale disarmament to which they have been subjected for the untold ages. There is no social evil and no social wrong to which the Brahmin has not given his support. Man's inhumanity to man, such as the feeling of caste, untouchability, unapproachability and unseeability is a religion to him. It would, however, be a mistake to suppose that only the wrongs of man are a religion to him. The Brahmin has given his support to some of the worst wrongs that women have suffered from in any part of the world. In India widows were burnt alive as suttees and the Brahmin gave his fullest support to the practice. Widows were not allowed to remarry. The Brahmins upheld the doctrine. Girls were required to be married before 8 and the husbands were permitted to claim the right to consummate the marriage at any time thereafter whether she had reached puberty or not. The Brahmin defended the system. The record of the Brahmins as law givers for the Shudras, for the Untouchables and for women is the blackest as compared with the record of the intellectual classes in other parts of the world, For no intellectual class has prostituted its intelligence for the sole purpose of inventing a philosophy to keep his uneducated countrymen in a perpetual state of servility, ignorance and poverty as the Brahmins have

done in India. Every Brahmin to-day believes in this philosophy of Brahmanism propounded by his forefathers. He is an alien element in the Hindu Society. The Brahmin vis-a-vis the Shudras and the Untouchables is as foreign as the German is to the French, as the Jew is to the Gentile or as the White is to the Negro. There is a real gulf between him and the lower classes of Shudras and Untouchables. He is not only alien to them but he is also hostile to them. In relationship with them, there is in him no room for conscience and no call for justice.

The Bania is the worst parasitic class known to history. In him the vice of money-making is unredeemed by culture or conscience. He is like an undertaker who prospers when there is an epidemic. The only difference between the undertaker and the Bania is that the undertaker does not create an epidemic while the Bania does. He does not use his money for productive purposes. He uses it to create poverty and more poverty by lending money for unproductive purposes. He lives on interest and as he is told by his religion that money-lending is the occupation prescribed to him by the divine Manu, he looks upon money-lending as both right and righteous. With the help and assistance of the Brahmin judge who is ready to decree his suits, the Bania is able to carry on his trade with the greatest ease. Interest, interest on interest, he adds on and on, and thereby draws millions of families perpetually into his net. Pay him as much as he may, the debtor is always in debt. With no conscience to check him there is no fraud, and there is no chicanery which he will not commit. His grip over the nation is complete. The whole of poor, starving, illiterate India is irredeemably mortgaged to the Bania.

In every country there is a governing class. No country is free from it. But is there anywhere in the world a governing class with such selfish, diseased and dangerous and perverse mentality, with such a hideous and infamous philosophy of life which advocates the trampling down of the servile classes to sustain the power and glory of the governing class? I know of none. It is true that the governing classes in other countries do not readily admit into their society those who do not belong to their class. But they do not refuse admission to those who have risen to their level. Nor do they prevent any person from rising to their level. In India the governing class is

a close corporation unwilling to admit anyone who does not belong to it by birth and ready to use every means to prevent the servile classes from rising to their level.

VIII

There was a governing class in France before the French Revolution. There was a governing class in Japan before the seventies of the nineteenth century when Japan decided to modernise its constitution. In both countries the governing classes realising that it was an hour of national crisis decided to shed their ancient rights and privileges in order to make the transition from oligarchy to democracy smooth and easy.

In France, when the Revolution broke out and demanded equality the governing class in France voluntarily came forward to give up its powers and its privileges and to merge itself in the mass of the nation, This is clear from what happened when the States-General was called. The Commons got 600 representatives, while the clergy and the Nobles got 300 each. The question arose how were the 1,200 members to sit, debate and vote. The Commons insisted upon the union of all the estates in one Chamber and ' vote by head.' It was impossible to expect the clergy and the Nobles to accept this position. For it meant the surrender of their most ancient and valuable privileges. Yet a good part of them agreed to the demand of the Commons and gave France a constitution based upon liberty, equality and fraternity.

The attitude of the governing classes in Japan during the period between 1855 to 1870, a period in which the Japanese people were transformed from a feudal society into a modern nation—was even more self-sacrificing than the attitude of the governing classes in France. As students of Japanese history know, there were four classes in Japanese Society: (1) The Damiyos, (2) The Samurai, (3) The Hemin or the Common folk and (4) The Eta or the outcasts, standing one above the other in an order of graded inequality. At the bottom were the Eta numbering a good many thousands. Above the Eta were the Hem in numbering about 25/30 millions. Over them were the Samurai who numbered about 2 millions and

who had the power of life and death over the Hemin. At the apex were the Damiyos or the Feudal Barons who exercised sway over the rest of the three classes and who numbered only 300. The Damiyos and the Samurai realised that it was impossible to transform this feudal society with its class composition and class rights into a modern nation with equality of citizenship. Accordingly the Damiyos charged with the spirit of nationalism and anxious not to stand in the way of national unity, came forward to surrender their privileges and to merge themselves in the common mass of people. In a memorial submitted to the Emperor on the 5th March 1869 they said [f.16] :—

“The Place where we live is the Emperor's land. The food that we eat is grown by the Emperor's men. How then can we claim any property as our own? We now reverently offer up our possessions and also our followers (Samurai as well as ' common folk ') with the prayer that the Emperor will take good measures for rewarding those to whom reward is due, and for fining such as do not deserve reward. Let imperial orders be issued for altering and remodelling the territories of the various clans. Let the civil and penal codes, the military laws down to the rules for uniform and for the construction of engines of war, all proceed from the Emperor. Let all affairs of the Empire, both great and small, be referred to him.”

How does the governing class in India compare in this behalf with the governing class in Japan? Just the opposite. Unfortunately, the history of the struggle of the servile classes in India against the governing class has not yet been written. But those who know anything about it will know that the governing class in India has no intention of making any sacrifice not even on the altar of Indian Freedom for which it is thirsting. Instead, the governing class is using every means to retain them. For this it is using two weapons. First is the weapon of nationalism. Whenever the servile classes ask for reservations in the legislatures, in the Executive and in Public Services, the governing class raises the cry of ' nationalism in danger.' What are these reservations for? To put it briefly they are intended to provide floorings below which the governing class will not be able to push down the servile classes in their struggle for existence. There, is nothing sinister

and nothing wrong in this demand for reservations. How does the governing class react to them? It loses no occasion to deprecate them and to ridicule them. People are led to believe that if they are to achieve national freedom, they must maintain unity, that all questions regarding reservations in the Legislatures, Executives and the Public Services are inimical to national unity and that, therefore, for anyone interested in national freedom it is a sin to support those who ask for such reservation?."That is the attitude of the governing class in India. It stands in glaring contrast with that of the governing class in Japan. It is a misuse of nationalism. But the governing class does not feel any compunction for such misuse.

The second means employed by the governing class is the writing of the lampoons and parodies calculated to pour ridicule on the demand for reservations. Such lampoons are by no means few and far between. Even the most respectable members of the governing class do not mind indulging in such compositions, Even Dr. R. P. Paranjape, now India's High Commissioner for Australia, who stands for an advanced type of liberalism, could not withstand the temptation of trying his hand in writing such a parody#. Among the parodies composed by members of the governing class his was the most colourful and had, when it appeared, excited the greatest resentment among the servile classes.

#The parody written by Dr. R. P. Paranjape appeared in a magazine called Gujarathi Punch 1m May 1926 under the heading "A Peep into the Future."As a specimen of this class of writing by members of the governing clam it is worth perusal. It is a satire based on certain incidents which are imagined to have occurred under the principle of communal reservation a. As The magazine if not easily available, I reproduce it below with a view to rescue it from oblivion:—

' A PEEP INTO THE FUTURE '

The following extracts are taken from reports of Commissions, records of police courts cases, judicial trials. Council Proceedings, Administration Reports, etc., issued between the year 1930-50 and are

published for the exclusive benefit of the reader of the Gujarati Punch.

I

Report of the Royal Commission on the Government of India, 1930 :

We have given our closest consideration to the representations made on behalf of several communities in India. Taking the figures of the last census as our basis we can only give an approximate satisfaction to all the claims made before us, for it is not possible to give an absolutely accurate solution to the problem of constructing a machinery of Government unless every single person in the country is made a member thereof, the numbers of the several communities do not possess a common measure. We lay down the number 2375 as the fundamental number in the constitution and this number is divided into parts attached to the several communities as shown in the schedule attached to our report. The claims of each community will henceforward be represented by its proper number, and all appointments, memberships of various bodies, and in fact everything in the country will be awarded according to the proportion given in the schedule wherever possible. The Viceroy's Executive Council will consist of 475 members selected as far as may be according to one-fifth the numbers belonging to each community and these members will hold office for one year so that each community will have attained its exact share of membership in five years. There will be 125 Judges in each High Court, each judge holding office for one year, though according to this arrangement, each section will have obtained its exact share only after the lapse of 19 years. The number of other kinds of appointments will be determined on the same basis for the accurate adjustment of all claims.

To allow for the proper functioning of all bodies with these numbers as many existing Government buildings as may be necessary may be pulled down and rebuilt so as to be of the proper size.

II

(Notification of the Government of India, 1932)

In accordance with the provisions of the Government of India Act, 1931. His Majesty the King Emperor has been pleased to appoint the following 475 gentlemen as members of the Executive Council of the Governor-General :

267. Matadin Raman (caste Barber) member in charge of the Surgical Branch of the Medical Department.

372. Allabux Peerbux (Mahomedan Camel driver) in charge of the camel transport division of the Army Department.

433. Ramaswamy (caste, Andhra Sweeper) in charge of the road cleaning branch of the P.W.D.

437. Jagannath Bhattacharya (Kulin Brahmin Priest) in charge of the domestic section of the Registration Department.

IV

(Letter to all Local Governments, 1934)

In response to a resolution passed by the Legislative Assembly, with which the Government of India are in full agreement, I am directed to say that henceforward every appointment under Government should go by rotation to each community irrespective of the merits of the applicants.

V

(Notification in the Bombay Government Gazette, 1934)

The Government of Bombay will proceed to make the following appointments in December. The applicants for the several appointments should belong to the castes mentioned against each according to the rotation fixed by Government Order No. , dated November 30th, 1934.

8. 1. Chief Engineer for Irrigation (Sind) : Kunbi from North Kanara.
9. 2. Professor of Sanskrit, Elphinstone College, Bombay: Balachi Pathan from Sind.
10. 3. Commandant of His Excellency's Bodyguard: Marwari from North Gujarat.
11. 4. Consulting Architect to Government: Wadari (wandering gypsy) from the Deccan.
12. 5. Director of Islamic Culture : Karhada Brabmin
13. 6. Professor of Anatomy : (Grant Medical College) Mahomedan Butcher.
14. 7. Superintendent of Yeravda. Jail : Ghantichor.
15. 8. Two organisers of prohibition: Dharala (Kaira District Bhil) (Panch Mahals).

VI

(Report of a Case from the High Court, 1935)

A.B. (caate Teli) was charged with the cold-blooded murder of his father while he was asleep. The judge summing up against the accused, the jury brought in a verdict of guilty. Before passing sentence the judge asked the pleader for the accused if he had to say anything. The pleader, Mr. Bomanji, said he agreed with the verdict but that according to Law the accused could not be sentenced at all, much less sentenced to death, as during the current year seven Telis had already been convicted and sentenced two of them with death, that several other communities had not yet reached their quota of convictions as given in the Government of India Act, who the Telis had already reached theirs. His Lordship accepted the contention of the defence pleader and acquitted the accused.

VII

(Extract from the ' Indian Daily Mail,' 1936)

Annaji Ramchandra (Chitpavan Brahmin) was found wandering in the streets of Poona with a long knife attacking whomsoever he met. When brought up before the Magistrate he was shown by the police to have been recently let off from the Mental Hospital. The Superintendent of the Hospital in his evidence said that Annaji had been in the hospital as a dangerous insane for three years, but as there was the quota for the Chitpavanas and as the inmates belonging to other communities had not finished their year-quotas he could not keep him any longer and show any special favouritism to the Chitpavans and he had therefore let him off according to Government Order No... in the Medical Department. The Magistrate ordered Annaji to be discharged.

VIII

(Extract from the Report of the Administration of Jails in the Bombay Presidency, 1937)

In spite of every precaution the numbers in the jails did not correspond to the quotas fixed for each community. The Superintendent had already asked for instructions from Government with a view to remedying the discrepancy.

Resolution of Government: Government view with serious displeasure this grave dereliction of duty on the part of the I. G. of prisons. Immediate steps should be taken to arrest and put in jail as many members of the various communities as are required to bring their quotas up to the proper level. If enough persons required cannot be caught, a sufficient number of inmates should be let off to bring down all to the same level.

IX

(Proceeding of the Legislative Council, 1940)

Mr. Chennappa asked: Has the attention of Government been called to

the fact that class list of the recent M.A. Examination in Pali do not show the proper quota for mang-garudis?

The Hon. Mr. Damn Shroff (Minister of Education) : The University Registrar reports that no candidate from among Mang-garudis offered himself for examination.

Mr. Chennappa: Will Government be pleased to atop this examination until such a candidate offers himself and if the University disobeys the order of Government to take away the University grant and amend the University Act?

The Hon. Member: Government will be pleased to consider the suggestion favourably. (Cheers).

X

(Extract from 'The Times of India,' 1942)

The Coroner Mr. was suddenly called last evening to inquire into the death of Ramji Sonu at the J. J. Hospital as the result of a surgical operation. Dr. Tanu Pandav (Caste Barber) deposed that he had conducted the operation. He wished to open an abscess in the abdomen but his knife pierced the heart and the patient expired. Asked whether he had ever carried out any operation of this nature before, he said that he was appointed as the principal surgeon to the hospital only one day before as it was then the turn of his community and that he had never held a surgical instrument in his hand before except a razor for shaving. The jury returned a verdict of death by misadventure 'best' by the Jews? There can, hardly be any doubt as to the correct answer to these questions. Class qualifications can never be ignored. Man is not a mere machine. He is a human being with feelings of sympathy for some and antipathy for others. This is even true of the 'best' man. He too is charged with the feelings of class sympathies and class antipathies. Having regard to these considerations the 'best' man from the governing class may well turn out to be the worst from the point of view of the servile classes. The difference between the governing classes and the servile classes in the matter of their

attitudes towards each other is the same as the attitude a person of one nation has for that of another nation. Persons of the governing class in parodying the demands of the servile classes seem to forget that the difference between the governing class and the servile class in India is of the same nature as the difference between French and Germans, Turks and Greeks or Poles and Jews and the reasons why one will not tolerate the government of the other although it may be of the 'best' men are the same in both cases.

The governing class in their attempt to ridicule the demand also forget by what means it has built up their power. Let them refer to their own Manu Smriti and they will find that the ways they got their power were very much the same as the imaginary resolutions suggested by Dr. Paranjpe. A reference to Manu Smriti will show that the view that Brahmins, the chief and the leading element in the governing class, acquired their political power not by force of intellect—intellect is nobody's monopoly—but by sheer communalism. According to the Laws Manu Smriti the post of the Purohit, King's Chaplain and Lord Chancellor, the posts of the Chief Justice and Judges of the High Court and the posts of Ministers to the Crown were all reserved for the Brahmins. Even for the post of the Commander-in-Chief the Brahmin was recommended as a fit and a proper person though it was not in terms reserved for him. All the strategic posts having been reserved for the Brahmins it goes without saying that all ministerial posts came to be reserved for the Brahmins. This is not all. The Brahmin was not content with reserving places of profit and power for his class. He knew that mere reservation will not do. He must prevent rivals shooting up from other non-Brahmin communities equally qualified to hold the posts and agitate and blow up the system of reservations. In addition to reserving all executive posts in the State for Brahmins a law was made whereby education was made the monopoly and privilege of Brahmins. As has already been pointed out the law made it a crime for the Shudra, i.e. the lower orders of Hindu Society to acquire learning, the infringement of which was followed by not only heavy but cruel and inhuman punishment such as cutting the tongue of the criminal and filling his ear with hot molten lead. Congressmen cannot escape by saying that these privileges no longer exist. They must admit that while the privileges

have gone the advantages derived from their continuance over several centuries have remained. Nor can Congressmen honestly turn down the demands of the servile classes as Communalism knowing full well that a worst form of communalism had been the recognised means adopted by the Brahmins for acquiring power and that if the servile classes are to-day driven to ask for safeguards it is because the Brahmins in order to maintain their privileges passed laws which made it a crime for them to acquire learning or property. Surely what the servile classes are demanding is not half so bad as was done by the Brahmins for their own aggrandisement and for the perpetuation of their own domination.

In the light of what has been said, it will be found that the Fight for Freedom led by the governing class is, from the point of view of the servile classes, a selfish, if not a sham, struggle. The freedom which the governing class in India is struggling for is freedom to rule the servile classes. What it wants is the freedom for the master race to rule the subject race which is nothing but the Nazi or Nietchian doctrine of freedom for superman to rule the common man.

VIII

The foreigner who wishes to know the what and where for of Indian politics and desires to make a contribution to the solution of the problems arising out of it must know the basic considerations which lie behind Indian politics. If he fails to have a full grasp of them he is bound to be at sea and cannot but be the sport of a party which may happen to capture him or captivate him. These basic considerations of Indian politics are : (1) The philosophy and outlook of the governing class in, relation to the servile classes (2) The relation of the governing class to the Congress and (3) The *raison d'etre* of the political demands of the servile classes for constitutional safeguards.

Regarding the first enough has been said to enable the foreigner to form his own opinion. The thesis I have endeavoured to present and to support with facts and arguments may be simply stated. It maintains that the only way to ensure that a sovereign and independent India will be a different

India in which there will be no servile class doing duty to the governing class, is to frame a constitution which will by proper safeguards, circumscribe the power of the governing class to capture government and to put a limit upon its predatory powers. This is what the Untouchables are urging and this is what the Congress is opposing. The whole controversy between the Congress and the Untouchables centres round the question of constitutional safeguards. The issue is: Is the constitution of India to be with safeguards or without safeguards for the Scheduled Castes? The foreigner does not realize this to be the issue nor does he realize that the alleged representative character of the Congress is absolutely irrelevant to the issue. The Congress may be a representative body but that has nothing to do with the decision of the issue, whether the constitution of India should or should not contain any safeguards for the Scheduled Castes. For the decision of this issue, the representative character of the Congress is beside the point. The decision can rest only on the basis of needs and the question that will be relevant is: Do the Scheduled Castes need the safeguards they have been asking for? The foreigner is not justified in supporting the Congress as against the Scheduled Castes on the ground that the Congress is a representative body. The foreigner is, of course, justified in asking the Scheduled Castes to prove their case for safeguards. He is even justified in saying that the existence of a governing class is not enough and that they must further prove something that the governing class in India is so vile, so wicked, so entrenched that it will not yield to the forces of adult suffrage. Such a stand it is proper to take and the Scheduled Classes are prepared to face it. For, beyond doubt, the governing class in India does occupy a different position in India than it does in other countries of the world. In other countries, there is, at the most, a hyphen between the governing class and the rest. In India, there is a bar between the two. A hyphen is only separation. ; but a bar is a severance with interests and sympathies completely divided. In other countries, there is a continuous replenishment of the governing class by the incorporation of others who do not belong to it but who have reached the same elevation as the governing class. In India, the governing class is a close corporation in which nobody, not born in it, is admitted. This distinction is very important. In the case where the governing class is a close corporation, tradition, social philosophy and social outlook remain unbroken and the

distinction between masters and slaves, between privileged and unprivileged continues hard in substance and fast in colour. On the other hand, where the governing class is not a close preserve, where there is social endosmosis between it and the rest, there is a mental assimilation which makes the governing class more flexible, its philosophy less anti-social. On realizing the truth behind these distinctions, a foreigner should be able to see that mere adult suffrage while it may suffice to hold the governing class in check in other countries, cannot have, in India, that effect and that consequently those parties in India like the Untouchables who are advocating additional safeguards in the constitution, are more worthy of support for their anxiety to make free India safe for democracy, than the Congress which opposes such safeguards and which aims to place free India in the hands of a governing class.

The facts bearing on the second consideration have also been fully set out. From these facts he should be able to see how intimate is the connection between the Congress and the governing class. They will explain why the governing class in India has placed itself in the vanguard of the Congress movement and why it strives to bring everybody within the Congress fold. To put it briefly the governing class is aware that a political campaign based on class ideology, class interests, class issues and class conflicts will toll its death knell. It knows that the most effective way of side tracking the servile classes and fooling them is to play upon the sentiment of nationalism and national unity and realizes that the Congress platform is the only platform that can most effectively safeguard the interest of the governing class. For if there is any platform from which all talk of conflict between rich and poor, Brahmin and Non-Brahmin, landlord and tenant, creditor and debtor which does not suit the governing class, can be effectual banned it is the Congress platform which is not only bound to preach nationalism and national unity which is what the governing classes want and on which their safety entirely depends, but which prohibits any other ideology in-consistent with nationalism being preached from its platform.

If these two considerations are grasped, the foreigner will not find it difficult to understand the third namely the *raison d'être* of the political

demands of the servile classes.

The reservations demanded by the servile classes are really controls over the power of the governing classes. Even in European countries there is a demand for controls over the powers of certain classes of society. There is control on producers, distributors, money-lenders and landlords. If the necessity for controls over the power of certain classes is admitted in countries where there is much greater degree of homogeneity and identity of interests than there exists in India, a foreigner should not find it difficult to appreciate. The reservations do no more than correlate the constitution to the social institutions of the country in order to prevent political power to fall into the hands of the Governing class.

After so much of explanation of facts and arguments I do not think it will be difficult for the foreigner at least to believe that there is another side to the Congress propaganda, if he is not prepared to agree with the point of view herein presented. It would indeed be a sad commentary on the character and intelligence of a foreigner who even after his having gone through the facts and figures given above was not able to cultivate a cool and a dispassionate attitude towards those who do not share the Congress point of view.

IX

There is a tragic side to the foreigner's view of Indian politics to which it is impossible not to make a reference. The foreigners who take interest in Indian politics fall into three groups. The first group is aware of the social cleavages which rend Indian politics, cleavages of majorities and minorities, Hindus and Untouchables and so on. Their main object is not to solve these cleavages by appropriate constitutional safeguards and to open the way to constitutional advancement of India but to use these cleavages to block constitutional progress. The second group of foreigners are those who pay no attention to the cleavages, who care a button what happens to the minorities and to the Untouchables. They are out to support the Congress demand and would fulfil it without bothering about safeguards. The third group consists of tourists who come 'to do' India and learn about

its politics if possible overnight. All three are dangerous people. But the third group is the most dangerous from the point of view of the ultimate interest of the Indian people.

That there should be foreigners of the tourist sort who cannot understand the intricacies of Indian politics and who therefore support the Congress on no other ground except that which Mr. Pickwick gave to Sam Weller—to shout with the biggest crowd—is quite understandable. But what annoys most is the attitude of the leaders of the British Labour Party, heads of radical and leftist groups in Europe and America, represented by men like Laski, Kingsley Martin, Brailsford and editors of journals like the Nation in America, and the New Statesman in England championing the cause of the oppressed and the suppressed people. How can these men support the Congress passes one's comprehension. Do they not know that the Congress means the governing class and that the governing class means the Congress ; Do they not know that the governing class in India is a Brahmin-Bania combine? That masses are drawn in the Congress only to be camp followers with no say in the making of Congress policy? Do they not realize that for the reasons for which the Sultan could not abolish Islam or the Pope could not repudiate Catholicism, the governing class in India will not decree the destruction of Brahmanism and that so long as the governing class remains what it is, Brahmanism which preaches the supremacy of Brahmans and the allied castes and which recognises the suppression and degradation of the Shudras and the Untouchables as the sacred duty of the State will continue to be the philosophy of the State even if India became free? Do they not know that this governing class in India is not a part of the Indian people, is not only completely isolated from them, but believes in isolating itself, lest it should be contaminated by them, has implanted in its mind by reason of the Brahmanic philosophy, motives and interests which are hostile to those who are outside its fold and therefore does not sympathise with the living forces operating in the servile masses whom it has trodden down, is not charged with their wants, their pains, their cravings, their desires, is inimical to their aspirations, does not favour any advance in their education, promotion to high office and disfavours every movement calculated to raise their dignity and their self-respect? Do they not know that in the Swaraj of India is involved the fate

of 60 millions of Untouchables? It would be impossible to say that the leaders of the British Labour Party, that Kingsley Martin, Brailsford and Laski whose writings on liberty and democracy are a source of inspiration to all suppressed people, do not know these facts. Yet if they refer to India, it is always to support the Congress. It is very, very seldom that they are found to discuss the problem of the Untouchables which ought to make the strongest appeal to all radicals and democrats. Their exclusive attention to Congress activities and their utter neglect of other elements in the national life of India shows how misguided they have been. One could well understand their support to the Congress if the Congress was fighting for political democracy. But is it? As every one knows, the Congress is only fighting for national liberty and is not interested in political democracy. The party in India who is fighting for political democracy is the party of the Untouchables who fear that this Congress fight for liberty, if it succeeds, will mean liberty to the strong and the powerful to suppress the weak and the down-trodden unless they are protected by constitutional safeguards. It is they who ought to receive the help of these radical leaders. But the Untouchables have been waiting in vain for all these years even for a gesture of good-will and support from them. These radicals and leftists in Europe and America have not even cared to know the forces behind the Congress. Ignorant or unmindful one does not know, but the fact remains that these leftists and radical leaders have been giving blind and unquestioning support to the Congress which admittedly is run by capitalists, landlords, money-lenders and reactionaries, only because the Congress calls its activities by the grandiloquent name of "Fight for Freedom." All battles for freedom are not on equal moral plane for the simple reason that the motives and purposes behind these battles of freedom are not always the same. To take only a few illustrations from English History. 'The Barons' Rebellion against John which resulted in the Magna Charta could be called a battle for freedom. But could any democrat in modern times give it the same support which he would give say to the Levellers' Rebellion or to the Peasant's Revolt in English History, merely because it could logically be described as a battle for freedom? To do so will be to respond to a false cry of freedom. Such crude conduct would have been forgivable, had it proceeded from groups not intelligent enough to make a distinction between freedom to live and freedom to

oppress. But it is quite inexcusable in radical and leftist groups led by Messrs. Laski, Kingsley Martin, Brailsford, Louis Fisher and other well-known champions of democracy. When pressed to explain why they don't support Indian Parties which stand for true democracy, they are reported to meet the charge by a counter question. Are there any such parties in India? Insist that there are such parties and they turn round and say : if such parties exist, how is it the Press does not report their activities? When told that the Press is a Congress Press, they retort : how is it that the foreign correspondents of the English Papers do not report them? I have shown why nothing better can be expected from these foreign correspondents. The Foreign Press Agency in India is no better than the Indian Press. Indeed it cannot be better. There are in India what are called foreign correspondents. In a large majority of cases they are Indians. Only a very few are foreigners. The selection of Indians as foreign correspondents is so made that they are almost always from the Congress camp. The foreign correspondents who are foreigners fall into two groups. If they are Americans they are just Anti-British and for that reason pro-Congress. Any political party in India which is not madly Anti-British does not interest them. Those who are not in the Congress will testify how hard it was for them to persuade the American War Correspondents who trooped into this country in 1941-42, even to entertain the possibility of the Congress not being the only party, much less to induce them to interest themselves in other political parties. It took a long time before they recovered their sanity and when they did, they either abused the Congress as an organisation led by impossible men or just lost interest in Indian politics. They never got interested in other political parties in India and never cared to understand their point of view. The situation is no better in the case of foreign correspondents who are Britishers. They too are interested only in that kind of politics which is first and foremost Anti-British. They are uninterested in those political parties in India whose foremost concern is to make a free India safe for democracy. The result is that the foreign press provides the same kind of news about Indian politics as does the Indian Press. These reasons cannot be beyond the ken of these radicals. Correspondents or no correspondents, is it not the duty of radicals to keep in touch with their kindred in other parts of the world to encourage them, to help them and to see that true democracy lives

everywhere? It is a most unfortunate thing that the Radicals of England and America should have forgotten the class to whom they owe a duty to help and have become the publicity agents of Indian Tories who are just misusing the slogan of liberty to be fool and befog the world.

The sooner they get out of this fog created by the Congress and realize that democracy and self-government in India cannot be real unless freedom has become the assured possession of all, the better for them and the better for the people of India. But if they persist in giving their blind support to the Congress on the basis of an empty slogan without examining its relation to facts and intentions, I for one will have no hesitation in saying that far from being the friends of India they are a positive menace to the freedom of the Indian masses. It is a pity that they do not seem to distinguish the case of a tyrant who is held down and who pleads for liberty because he wants to regain his right to oppress and the case of an oppressed class seeking to be free from the oppression of the tyrant. In their hurry to bring freedom to India they have no time to realize that by siding with the Congress what they are doing is not to make India safe for democracy but to free the tyrant to practise his tyrannies. Is it necessary to tell them that support Congress is to let tyranny have freedom to enslave?

Chapter X

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

CHAPTER X WHAT DO THE UNTOUCHABLES SAY?

Beware Of Mr. Gandhi

Congressmen never hesitate to impress upon the Untouchables that Mr. Gandhi is their saviour. Not only do Congressmen all over India hold out Mr. Gandhi as a real saviour but they go forth to persuade the Untouchables to accept the fact that he is their only saviour. When pressed for evidence, they tell the Untouchables that if any one ever took a vow to go on a fast unto death for the sake of the Untouchables it was Mr. Gandhi and none else. Indeed, without any compunction they tell the Untouchables that whatever political rights the Untouchables have got under the Poona Pact, they are the result of Mr. Gandhi's efforts. As an illustration of such propaganda I refer to what one Rai Bahadur Mehrchand Khanna is reported to have said at a meeting of the Untouchables held at Peshawar on April 12, 1945 under the auspices of the Depressed Classes League :

"Your best friend is Mahatma Gandhi who even resorted to a fast for your sake and brought about the Poona Pact under which you have been enfranchised and given representation on local bodies and legislatures. Some of you, I know, have been running after Dr. Ambedkar, who is just a creation of the British Imperialists and who uses you to strengthen the hands of the British Government in order that India may be divided and the Britishers continue to retain power. I appeal to you in your interests, to distinguish between self-styled leaders and your real friends."

If I refer to the statement of Rai Bahadur Mehrchand Khanna it is not because he is worth taking notice of. For there cannot be any one guilty of bigger blackguardism in Indian politics than this man. In the course of one year—not in very remote time but in 1944—he successfully played three different roles. He started as Secretary of the Hindu Mahasabha, turned agent of British Imperialism, went abroad to explain India's war effort to the British and American people and is now agent of the Congress in N.W.F. Province. The opinion of a man like Rai Bahadur Khanna, who, to use Dryden's language, is so various as to be

everything by starts, and nothing long, and who in the course of one revolving moon, can be a chemist, fiddler, statesman and buffoon, must be beneath contempt. If I refer to him it is only because I wish to illustrate what sort of propaganda friends of Mr. Gandhi are carrying on in order to beguile the Untouchables.

I do not know how many Untouchables will be found prepared to swallow such a lie. But this much I think has been proved by the Nazis that if a lie is a big lie too big for the common man's intelligence to scrutinise and if it is repeated continuously, the lie has all the chances of being accepted as truth and if not accepted as truth has all the chances of growing upon, the victims of propaganda and win their acquiescence. It is, therefore, necessary for me to expose the part played by Mr. Gandhi in the movement of the Untouchables and to warn the Untouchables against succumbing to this propaganda.

I

In making a survey of the part played by Mr. Gandhi it is well to begin by ascertaining when Mr. Gandhi for the first time realized that Untouchability was an evil. On this point, we have the direct testimony of Mr. Gandhi himself. In an, address delivered as President of the Suppressed Classes Conference, held at Ahmedabad on the 14th and 15th April 1921, Mr. Gandhi said :—

"I was hardly yet twelve when this idea had dawned on me. A scavenger named Ukha, an Untouchable, used to attend our house for cleaning latrines. Often I would ask my mother why it was wrong to touch him, why I was forbidden to touch him. If I accidentally touched Ukha, I was asked to perform ablutions, and though I naturally obeyed, it was not without smilingly protesting that untouchability was not sanctioned by religion, that it was impossible that it should be so. I was a very dutiful and obedient child and so far as it was consistent with respect for parents. I often had tussles with

them on this matter. I told my mother that she was entirely wrong in considering physical contact with Ukha as sinful.

"While at school I would often happen to touch the 'Untouchables' and as I never would conceal the fact from my parents, my mother would tell me that the shortest cut to purification after the unholy touch was to cancel the touch by touching any Musalman passing by. And simply out of reverence and regard for my mother I often did so, but never did so believing it to be a religious obligation. After some time we shifted to Porebandar, where I made my first acquaintance with Sanskrit. I was not yet put to an English School, and my brother and I were placed in charge of a Brahmin, who taught us Ram Raksha and Vishnu Punjar. The texts 'Jale Vishnuh' 'Sthale Vishnuh' (there is he Lord (present) in water, there is the Lord (present) in earth, have never gone out of my memory. A motherly old dame used to live close by. Now it happened that I was very timid then,' and would conjure up ghosts and goblins whenever the lights went out, and it was dark. The old mother, to disabuse me of fears, suggested that I should mutter the Ramraksha texts whenever I was afraid, and all evil spirits would fly away. This I did and, as I thought with good effect. I could never believe then that there was any text in the Ramraksha pointing to the contact of the 'untouchables' as a sin. I did not understand its meaning then, or understood it very imperfectly. But I was confident that Ramraksha which could destroy all fear of ghosts, could not be countenancing any such thing as fear of contact with the 'untouchables.'

"The Ramayana used to be regularly read in our family. A Brahmin called Ladha Maharaj used to read it. He was stricken with leprosy, and he was confident that a regular reading of the Ramayana would cure him of leprosy, and indeed, he was cured of it. 'How can the Ramayana,' I thought to myself 'in which one is regarded nowadays as an 'untouchable,' took Rama across the Ganges in his boat, countenance the idea of any human beings being 'untouchables' on the ground that they were polluted souls? The fact that we addressed God as the 'purifier of the polluted' and by similar appellations,

shows that it is a sin to regard any one born in Hinduism as polluted or untouchable—that it is satanic to do so. I have hence been never tired of repeating that it is a great sin. I do not pretend that this thing had crystallised as a conviction in me at the age of twelve, but I do say that I did then regard untouchability as a sin. I narrate this story for the information of the Vaishnavas and orthodox Hindus."

It is no doubt very interesting to know that in that age of blind orthodoxy Mr. Gandhi should have become aware that Untouchability was a sin and that too at so early an age as 12. What the Untouchables, however, want to know is what did Mr. Gandhi do to remove the evil. I give below an extract from a biographical note about Mr. Gandhi by the publishers, Tagore & Co., of Madras to their volume called Young India, issued in, 1922, to show the principal activities, which Mr. Gandhi launched since the time he started his public career. This is what the note says :—

"Mohandas Karamchand Gandhi was born on October 5, 1869. Caste Bania; son of Karamchand Gandhi, Dewan of Porebunder, Rajkote and some other Kathiawar States; He was educated at the Kathiawad High School, later at London University and the Inner Temple. On return from London was enrolled as advocate of the Bombay High Court. Went to Natal and thence to the Transvaal on a legal mission. Was enrolled as advocate of the Natal Supreme Court. Decided to remain there. Founded the Natal Indian Congress, 1894. Returned to India, 1895. Agitation in India on behalf of the Natal and Transvaal Indians. Return to Durban. On landing attacked by the mob and narrowly escaped death; led an Indian Ambulance Corps in the Anglo-Boer War 1899 ; Returned to India in 1901 to recoup his health. Again returned to South Africa to lead the Indian deputation to place the Indian view of the South African Indian trouble before Mr. Chamberlain. Enrolled as attorney of the Supreme Court of Transvaal and founded the Transvaal British Indian Association and was its Honorary Secretary and Principal legal adviser. Founded the Indian Opinion in 1903 and the "Phoenix" Settlement. Led a Stretcher Bearer Corps in the native rebellion in 1906; Agitation against the Anti-Asiat

Act 1906 ; Deputation to England for the repeal of the Act ; Passive Resistance movement begun against the Act; Negotiations between General Smuts and Mr. Gandhi and compromise. Smuts later denying the promise of repeal of the law, and again commenced passive resistance. Imprisoned twice for breaking the law. Again went to England in 1909 to lay the Indian case before the British public; Provisional Settlement in 1911 Mr. Gokhale's visit to South Africa. On the Government declining to fulfil the settlement of 1911 organised a revival of the passive resistance movement. Final settlement in 1914. Visit to England ; Raised an Indian Ambulance Corps in 1914."

From this biographical note, it is clear that Mr. Gandhi began his public life in 1894 when he founded the Natal Indian Congress. From 1894 to 1915, he was in South Africa. During this period, he never thought of the Untouchables and never even inquired after Ukha.

Mr. Gandhi returned to India in 1915. Did he then take up the cause of the Untouchables? Let me again quote from the same biographical note which says:—

"Returned to India 1915; Founded the Satyagrah Ashram at Ahmedabad. Took part in the Settlement of the Champaran Labour troubles in 1917 and Kaira famine and Ahmedabad mill strike, 1918 ; Recruiting Campaign 1918 ; Agitation against the Rowlatt Act and the inauguration of the Satyagraha movement, 1919; Arrested at Kosi on his way to Delhi and sent back to Bombay ; Punjab disorders and the official atrocities 1919; Was member of the Congress Committee of Enquiry into the Punjab atrocities ; Took part in the Khilafat Agitation. Inauguration of the Non-Co-operation campaign, 1920; Interview with Lord Reading May 1921 ; appointed sole executive authority of the Congress in 1921 Session of the Congress; Civil Disobedience Programme, February 1922; Suspension of Civil Disobedience campaign on account of Chauri Chaura riots, February 1922; Arrested on March 10, 1922 tried and sentenced to six years simple imprisonment."

This note is obviously incorrect. It omits some very significant and

quite well-known events in the life of Mr. Gandhi. To make it complete, the following items must be added :—

"1919 declared readiness to welcome Afghan invasion of India to Free India from British Imperialism ; 1920 put before the country the Bardoli Programme of Constructive work; 1921 started Tilak Swaraj Fund and collected one crore and 25 lakhs to be used for preparing the country for winning swaraj."

In these five years, Mr. Gandhi was completely absorbed in transforming the Congress into a militant organisation—a war machine fit to fight and shake British Imperialism. He took up the cause of the Khilafat with a view to bring the Muslims to join the Congress and did his level best to rally the Hindus for the support of the Khilafat.

What did Mr. Gandhi do for the Untouchables during this period? Congressmen will of course refer to the Bardoli Programme. It is true that in the Bardoli Programme the uplift of the Untouchables was an item. But what is important is to know what happened to it? To tell the story in a summary mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41K.What Congress and Gandhi CHAPTER X.htm - _msocom_3 form the Bardoli Programme was not a programme for the removal of Untouchability. It was a programme of amelioration which was defined by Disraeli as a combination of ancient institutions and modern improvements. The programme, openly recognised Untouchability and planned to do no more than provide separate wells and separate schools for the Untouchables. The Sub-Committee appointed to draw up a programme for the uplift of the Untouchables consisted of persons, who had never shown any interest in the Untouchables and some of them were even hostile to them. Swami Shraddhanand, the one and only person in the Sub-Committee who can be said to be charged with the desire to do something substantial for the Untouchables, was forced to resign. A paltry sum of money was allotted for carrying on the work of the Committee. The Committee was dissolved without meeting even once. The work of the uplift of the Untouchables was declared to be a work best suited to the Hindu Mahasabha. Mr. Gandhi took no interest in that part of the Bardoli Programme, which related to the Untouchables.

On the contrary instead of siding with Swami Shraddhanand he sided with the reactionaries and opponents of Swami Shraddhanand, knowing full well that they did not want anything on a big scale done for the Untouchables.

So much for what Mr. Gandhi did in 1921 in connection, with the Bardoli Programme.

What did Mr. Gandhi do after 1922? The publication from which the previous extract from the biographical note was taken is dated 1922. It is necessary to make the following additions to bring the biographical note up to date :—

“1924 was released from prison; Forged a compromise between the two wings of the Congress who in his absence were fighting over the issue of Council Entry versus Constructive programme; 1929 proclaimed complete independence as the political goal of India ; 1930 launched Civil Disobedience movement ; 1931 went to London to represent Congress at the Round Table Conference. 1932 was imprisoned. Declared fast unto death against the Communal Award of His Majesty's Government and saved his life agreeing to the Poona Pact 1933 planned a campaign in favour of temple-entry for Untouchables and established the Harijan Sevak Sangh; 1934 ceased to be a member of the Congress; 1942 planned 'Quit India' movement and was imprisoned; 1934 went on fast and was released; 1944 engaged in correspondence with Lord Wavell and in issuing statements explaining away the 8th August 1942 Resolution; 1945 occupied with Kasturba Fund.”

The year 1924 gave Mr. Gandhi another opportunity to push forth his campaign for the removal of Untouchability and make it effective. What did Mr. Gandhi do?

The years between 1922 and 1944 have a special significance in the history of Congress politics. The Programme of non-cooperation was accepted by the Congress at a special session held in Calcutta in September 1920. The programme included the well known five boycotts : the boycott of the Legislature, boycott of foreign cloth etc. The

resolution on non-cooperation was opposed by the leaders of the intellectual classes, namely Bepin Chandra Pal, C. R. Das, Lala Lajpat Rai to mention only a few names, but was passed notwithstanding their opposition. The regular Annual Session of the Congress was held in Nagpur in December 1920. The resolution on non-co-operation again came up for discussion. Strange as it may seem the same resolution was moved by Mr. C. R. Das mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41K.What Congress and Gandhi CHAPTER X.htm - _msocom_4 and seconded by Lala Lajpat Rai and confirmed. The result was that 1921 saw non-co-operation galore. On 19th March 1922, Mr. Gandhi was tried for sedition and sentenced to six years' imprisonment. Immediately Mr. Gandhi was put behind the prison bars, Mr. C. R. Das seems to have recovered his balance and started a campaign to lift the boycott of the Legislature. In this he was joined by Vithalbhai Patel, Pandit Motilal Nehru and Pandit Malaviya. This move was opposed by the followers of Mr. Gandhi, who were not prepared to abate a jot or a tittle from the terms of the resolution on non-co-operation passed in Calcutta and confirmed in Nagpur. This led to a schism in the Congress. In 1924, Mr. Gandhi on account of his illness was released from gaol, before his time. When he came out, Mr. Gandhi found that the Congress was divided into two warring camps on the issue of the boycott of the Legislature. The quarrel was a bitter one and both sides were engaged in slinging mud at each other. Mr. Gandhi knew that if the quarrel continued the Congress would be weakened and wanted to patch it up. Neither side was prepared to give in. There were statements and counter statements. Ultimately, Mr. Gandhi made certain proposals for restoring peace between the two wings which were accepted by both sides. The proposals were intended to please both sides. To please the protagonists of Council Entry he proposed that the Congress should recognise entry in the Legislatures as legitimate part of Congress activity and the opponents of Council Entry should stop their propaganda against it. To please the opponents of Council Entry he proposed that the Congress should accept a new basis for franchise namely: (i) the Congress franchise instead of being 4 annas per annum should be a tender of 2,000 yards of hand-spun and self-spun yarn with the penalty clause attached to it by which any default in this behalf

would automatically disqualify a person from being a member of the Congress and that (ii) the observance of five boycotts, of foreign cloth, Government Law Courts, schools and colleges, and of titles should be deemed as a qualification for a post within the Congress organisation and any person who did not believe in the principle of boycott and who did not carry them out in his own person must be deemed to be disqualified as a candidate.

Here was an opportunity for Mr. Gandhi to advance his anti-Untouchability campaign. He could have proposed that if a Hindu wishes to enroll himself as a member of the Congress he should prove that he does not observe untouchability and that the employment of an Untouchable in his household should be adduced in support of his claim in this behalf and that no other evidence would be allowed to be tendered. Such a proposal could not have been impracticable for almost every Hindu, certainly those who call themselves high Caste Hindus, keeps more than one servant in, his household. If Mr. Gandhi could make the Hindu accept spinning and boycott as franchises for membership of the Congress he could also make acceptable the employment of an Untouchable in a Hindu household a franchise for membership of the Congress. But Mr. Gandhi did not do it.

After 1924 till 1930 there is a complete blank. Mr. Gandhi does not appear to have taken any active steps for the removal of Untouchability or got himself interested in any activity beneficial to the Untouchables during this period. While Mr. Gandhi was inactive the Untouchables had started a movement called the satyagraha movement. The object of the movement was to establish their right to take water from public wells and public temples. The satyagraha at the Chowdar Tank situated in Mahad, a town in, the Kolaba District of the Bombay Presidency, was organised to establish the right of the Untouchables to take water from public watering places. The satyagraha at the Kala Ram Temple situated in Nasik, a town in the Nasik District of the Bombay Presidency, was organised to establish the right of the Untouchables to enter Hindu temples. There were many minor satyagrahas. These were, however, the two principal ones over which the efforts of the Untouchables and their

opponents, the Caste Hindus, were concentrated. The din and noise caused by them were heard all over India. Thousands of men and women from the Untouchables took part in these satyagrahas. Both men and women belonging to the Untouchables were insulted and beaten by the Hindus. Many were injured and some were imprisoned by Government on the ground of causing breach of the peace. This satyagraha movement went on for full six years when it was brought to a close in 1935 at a Conference held in Yeola in Nasik District in which the Untouchables as a result of the adamant attitude of the Hindus in refusing to give them equal social rights resolved to go out of the Hindu fold. This satyagraha movement was no doubt independent of the Congress. It was organised by the Untouchables, led by the Untouchables and financed by the Untouchables. Yet the Untouchables were not without hope of getting the moral support of Mr. Gandhi. Indeed they had very good ground for getting it. For the weapon of satyagraha—the essence of which is to melt the heart of the opponent by suffering—was the weapon which was forged by Mr. Gandhi, and who had led the Congress to practise it against the British Government for winning Swaraj. Naturally the Untouchables expected full support from Mr. Gandhi to their satyagraha against the Hindus the object of which was to establish their right to take water from public wells and to enter public Hindu temples. Mr. Gandhi however did not give his support to the satyagraha. Not only did he not give his support, he condemned it in strong terms.

In this connection reference may be made to two novel weapons for redressing human wrongs. Mr. Gandhi claims exclusive credit for forging and perfecting them. First is satyagraha. Mr. Gandhi has put into action this weapon of satyagraha many a times against the British Government for the removal of political wrongs. But Mr. Gandhi has never used the weapon of satyagraha against Hindus to get them to throw open wells and temples to the Untouchables. Fasting is another weapon of Mr. Gandhi. It is said that there have been altogether 21 fasts to the credit of Mr. Gandhi. Some were for the sake of Hindu-Muslim unity and quite a number as atonements for the immoralities committed by the inmates of his Ashram. One was against the order of the

Government of Bombay refusing to give the work of a scavenger in the gaol to a prisoner by name Mr. Patwardhan although he demanded it. In these 21 fasts there is not one undertaken for the removal of Untouchability. These are very significant facts.

In 1980 came the Round Table Conference. Mr. Gandhi joined the deliberations of the Conference [mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/41K.What Congress and Gandhi CHAPTER X.htm - _msocom_5](http://msitstore.c:\important\writing_of_babasaheb.chm::/41K.What Congress and Gandhi CHAPTER X.htm - _msocom_5) in 1981. The Conference was concerned with a vital question of framing a constitution for a self-governing India. It was unanimously held that if India was to be a self-governing country then the government must be a government of the people, by the people and for the people. Everybody agreed that only when a government is in a real sense a government by the people that it could be a government of the people and for the people. The problem was how to make it a government by the people in a country rent into communities, majorities and minorities, who are charged not merely with social cleavages but also with social antagonisms. Having regard to these circumstances it was agreed that in India there was no possibility of government by the people unless Legislature and the Executive were framed on the basis of communal representation. The problem of the Untouchables loomed large at the Conference. It assumed a new aspect. The question was; Should the Untouchables be left as they were to the tender mercies of the Hindus or should they be given the means to protect themselves by extending to them the principle of communal representation? The Untouchables strongly objected to be left to the pleasure of the Hindus and demanded the same protection as was given to the other minorities. The contention of the Untouchables was accepted by all. It was just and logical. They contended that the chasm between the Hindus and Muslims, between Hindus and Sikhs, between Hindus and Christians is nothing as compared with the chasm between the Hindus and the Untouchables. It is the widest and the deepest. The chasm between the Hindus and the Muslims is religious and not social. That between the Hindus and the Untouchables is both religious and social. The antagonism arising out of the chasm existing between Hindus and Muslims cannot spell political disaster to the Muslims

because the relationship between the Hindus and the Muslims is not that of master and slave. It is one of mere estrangement. On the other hand, the chasm between Hindus and the Untouchables must spell political disaster for the Untouchables because the relationship between the two is that of master and slave. The Untouchables contended that the attempts to close the gap between them and the Hindus by means of social process had been tried for ages. They had all failed. There was no hope of their success. Since power is being transferred into the hands of the Hindu majority they must have political safeguards of the same sort as, if not better, than those conceded to the Muslims and other minorities.

Here was an opportunity to Mr. Gandhi to show his sympathy to the Untouchables by lending his support to their demand and thereby strengthen their power of resistance against the tyranny and oppression of the Hindus. Instead of showing his sympathy, Mr. Gandhi used every means in his power to defeat them. He made a pact with the Muslims with a view to isolate the Untouchables. Failing to win the Musalmans to his side, he went on a fast unto death to compel the British Government to withdraw their decision for give to the Untouchables the same political rights as given to the Muslims and other minority communities. When the fast failed and Mr. Gandhi was obliged to sign a pact -called the Poona Pact—which conceded the political demands of the Untouchables he took his revenge by letting the Congress employ foul electioneering tactics to make their political rights of no avail.

In 1933, Mr. Gandhi took up two movements. First was the Temple-entry Movement. [f.6] He took personal responsibility for seeing through these two measures. One was the opening of the Guruvayur temple. The other was the passing of the Temple-entry Bill sponsored by Mr. Ranga Iyer in the Central Legislature. Mr. Gandhi said that he would fast unto death if the trustee of the Guruvayur temple did not throw it open to the Untouchables by a certain date. The Guruvayur temple still remains closed to the Untouchables but Mr. Gandhi has not fulfilled his vow of going on, fast. Surprising as it may be he has done nothing to get the temple declared open to the Untouchables although it

is now thirteen years since he took the vow. Mr. Gandhi virtually coerced the Governor-General to give his sanction to the introduction of the Temple-entry Bill. The Congress party in the Central legislature which was pledged to carry through the Bill refused to support it when the stage of referring it to a Select Committee came on the ground that the Bill gave offence to the Hindus and in the election that was pending the Hindus would seek revenge on the Congress and defeat it at the poll if the Congress supported the Bill. To the great chagrin of Mr. Ranga Iyer, the Congress party let him down, by leaving the Bill to die. Mr. Gandhi did not mind this. He even went to the length of justifying the conduct of the Congress Party.

The other movement which Mr. Gandhi sponsored in 1933 was the establishment of the Harijan Sevak Sangh[f.7] with a net-work of branches all over India. There were three motives which lay behind the organisation of the Sangh. First was to prove that Hindus had enough charitable spirit towards the Untouchables and that they would show it by their generous contributions towards their uplift. The second motive was to serve the Untouchables by helping them in the many difficulties with which they were faced in their daily life. The third motive was to create in the minds of the Untouchables a sense of confidence in the Hindus from whom they were estranged in matters political. None of the three objects has been realized. In the first flush the Hindus contributed a total of about 8 lakhs of rupees for the Sangh which is of course nothing as compared to the crores they have contributed for general political purposes. After that they have gone dry. The Sangh is now depending for its finances either on Government grants or on the income derived from the sale of Mr. Gandhi's autographs or on the munificence of some wealthy merchant who makes a contribution, to the Sangh, not because he loves the Untouchables but because he thinks it profitable to please Mr. Gandhi. The branches of the Sangh are being closed every year. The Sangh is contracting and contracting so rapidly that very soon it will have only a centre and no circumference. That the Hindus have lost interest in the Sangh is not the only regrettable aspect of this activity of Mr. Gandhi. The Sangh has not been able to secure the good will and the co-operation of the Untouchables for whose

benefit it is supposed to have been, started. This is due to various reasons. The work of the Sangh is of the most inconsequential kind. It does not catch anyone's imagination. It neglects most urgent purposes for which the Untouchables need help and assistance. The Sangh rigorously excludes the Untouchables from its management. The Untouchables are no more than beggars mere recipients of charity. The result is that the Untouchables feel no concern for the Sangh. They look upon it as a foreign body set up by the Hindus with some ulterior motive. Here was an opportunity for Mr. Gandhi to make the Sangh a real bridge between the Hindus and the Untouchables. He could make it a virile institution by improving its programme of work and by allowing the Untouchables to participate in its working. Mr. Gandhi has done nothing of the kind. He has allowed the Sangh to languish. It is dying peacefully and may perish even during the life-time of Mr. Gandhi.

There need be no surprise if this survey of Mr. Gandhi's anti Untouchability campaign, of his sayings and his doings baffles and puzzles the reader. There need be no wonder if the reader were to pause and ask a few questions on the lines set out below to clear his own mind :

(1) In 1921, Mr. Gandhi collected 1 crore and 35 lakhs of rupees for the Tilak Swaraj Fund. Mr. Gandhi insisted that there was no possibility of winning swaraj unless Untouchability was removed. Why did he not protest when only a paltry sum of Rs. 43,000 was given to the cause of the Untouchables?

(2) In 1922 there was drawn up the Bardoli Programme of constructive work. Uplift of the Untouchables was an important item in it. A Committee was appointed to work out the details. The Committee never functioned and was dissolved and the uplift of the Untouchables as an item in the constructive programme was dropped. Only Rs. 800 were allotted to the Committee for working expenses. Why did Mr. Gandhi not protest against this niggardly and step-motherly treatment of the Committee by the Congress Working Committee? Why did not Mr. Gandhi support Swami Shradhanand who was fighting with the Congress Working Committee for large funds being assigned to the

Committee? Why did not Mr. Gandhi protest against the dissolution of the Committee? Why did not Mr. Gandhi appoint another Committee? Why did he allow the work for the Untouchables to drop out as though it was of no importance?

(8) Mr. Gandhi had at the very outset of his campaign for Swaraj insisted that there were five conditions precedent for winning swaraj: (i) Hindu-Moslem Unity; (ii) Removal of Untouchability; (iii) Universal adoption of hand-spun and hand-woven khadi; (iv) absolute non-violence and (v) complete non-co-operation. Mr. Gandhi had not only laid down these conditions but had told Indians that without the fulfilment of these conditions there could be no Swaraj. In 1922, he fasted for the sake of Hindu-Moslem unity. In 1924, he made production of hand-spun yarn the basis of franchise for Congress membership. Why did he not make non-observance of Untouchability the basis of Congress franchise in 1924 or at any time subsequent thereto?

(4) Mr. Gandhi has gone on fast many a time to achieve a variety of objects which are dear to him. Why has Mr. Gandhi not fasted even once for the sake of the Untouchables?

(5) Mr. Gandhi has devised satyagraha as a weapon to redress wrongs and to win freedom and has practised it against the British Government. Why has not Mr. Gandhi started satyagraha even once against the Hindus on behalf of the Untouchables for securing admission to wells, temples and other public places to which access is denied by the Hindus?

(6) Following Mr. Gandhi's lead the Untouchables started satyagraha from 1929 onwards against the Hindus for admission to wells and temples. Why did Mr. Gandhi condemn their satyagraha?

(7) Mr. Gandhi declared that he would fast if the Guruvayur temple was not thrown open to the Untouchables by the Zamorin. The temple has not been thrown open. Why did not Mr. Gandhi go on fast?

(8) Mr. Gandhi in 1982 threatened the British Government with dire

consequences if the Governor-General did not give permission to Mr. Ranga Iyer to introduce his Temple-entry Bill on behalf of the Congress Party in the Central Legislature. As fresh elections to the Central Legislature were announced the Congress Party withdrew its support to the Bill and Mr. Ranga Iyer had to drop it. If Mr. Gandhi was earnest and sincere about Temple-entry, why did Mr. Gandhi support the action of the Congress Party? What was more important— Temple-entry for the Untouchables or Electoral victory to the Congress?

(9) Mr. Gandhi knows that the difficulty of the Untouchables does not lie in their not having civic rights. Their difficulty lies in the conspiracy of the Hindus who threaten them with dire consequences if the Untouchables dare to exercise them. The real way of helping the Untouchables is to have some organisation for the protection of civic rights which will undertake the duty of prosecuting Hindus who assault the Untouchables or proclaim social and economic boycott against them and thereby prevent them from exercising their civic rights. Why did not Mr. Gandhi include this as one of the objects of the Harijan Sevak Sangh?

(10) Before Mr. Gandhi came on the scene the Depressed Classes Mission Society was formed by the caste Hindus for the uplift of the Untouchables. The moneys were subscribed by the Hindus. Yet the Society's affairs were conducted by Joint Boards consisting of Hindus and Untouchables. Why has Mr. Gandhi excluded the Untouchables from the management of the Harijan Sevak Sangh?

(II) If Mr. Gandhi is the real friend of the Untouchables, why did he not leave it to the Untouchables to decide whether political safeguards were the best means for their protection? Why did he go to the length of making a pact with the Muslims in order to isolate and defeat the Untouchables? Why did Mr. Gandhi declare a fast unto death the object of which was to deprive the Untouchables of the benefit of the Communal Award by this extreme form of coercion?

(12) After having accepted the Poona Pact, why did not Mr. Gandhi keep faith with the Untouchables by telling the Congress not to despoil

the politics of the Untouchables by contesting the seats reserved for the Untouchables by getting such Untouchables elected as were prepared to become the tools of the Hindus?

(13) After having accepted the Poona Pact why did not Mr. Gandhi keep up the gentleman's agreement and instruct the Congress High Command to include representatives of the Untouchables in, the Congress Cabinets?

(14) Why did Mr. Gandhi disapprove of the appointment by Dr. Khare of Mr. Agnibhoj—a member of the Scheduled Castes—as a minister in the Congress Cabinet in the C. P. when Mr. Agnibhoj was in every way qualified to be a Minister? Did Mr. Gandhi say that he was opposed to the creation of such high ambitions among persons belonging to the Scheduled Castes?

III

What is the explanation that Mr. Gandhi has to offer? What is the explanation that Mr. Gandhi's friends have to offer? Mr. Gandhi's anti-untouchability campaign is marked by so many twists and turns, inconsistencies and contradictions, attacks and surrenders, advances and retreats that the whole campaign has become a matter of mystery. Few have a belief in its efficacy and quite a large number hold that there is not enough earnestness and sincerity behind it. Some explanation is therefore necessary. It is more for the sake of Mr. Gandhi's reputation for earnestness and sincerity that for the sake of giving a clear understanding of Mr. Gandhi's aims and methods to the reader that one would like Mr. Gandhi and his friends to explain the points raised in the foregoing questions.

It would no doubt be interesting to know what Mr. Gandhi and his friends may have to say in reply to these questions. Everybody interested in this question will naturally be looking forward to it. It will not however do for anyone else to anticipate the reply and then dead with it. They must be left to frame it in their own way and select their own time to do so. In the meantime one may well ask what the

Untouchables have to say about Mr. Gandhi and his anti-untouchability campaign. It is not difficult to state what view the Untouchables take of Mr. Gandhi's anti-untouchability campaign.

Do the Untouchables regard Mr. Gandhi as being in earnest? The answer is in the negative. They do not regard Mr. Gandhi as being in earnest. How can they? How can they look upon a man being in earnest who when in 1921 the whole country was aroused to put the Bardoli programme in action remained completely indifferent to the anti-untouchability part of it? How could they look upon a man as being in earnest who, when out of 1 crore and 25 lakhs of Swaraj Fund, found that only 43 thousands rupees were allotted to the cause of the Untouchables did not raise any protest at this niggardly treatment of a long neglected cause? How can they regard a man as being in earnest who when, in 1924 he got an opportunity to impose upon the Hindus the obligation to remove Untouchability did not do so even though he had the power and the occasion to enforce it? Such a step would have served three purposes. It would have put the nationalism of Congressmen to test. It would have helped to remove Untouchability, and it would have proved that Mr. Gandhi was sincere in his talks about the evil of Untouchability and its being a sin and a stigma on Hinduism. Why did not Mr. Gandhi do it? Does this not show that Mr. Gandhi was more interested in the spread of spinning than in the removal of Untouchability? Does this not show that removal of Untouchability was the least part of Mr. Gandhi's programme and that it was not even last? Does it not show that the statements by Mr. Gandhi that Untouchability is a blot on Hinduism and that there will be no Swaraj without the removal of Untouchability were just empty phrases with no earnestness behind them? How could they believe in the earnestness of a person who takes a vow to fast if the Guruvayar temple is not opened to the Untouchables but will not go on fast even when the temple remains closed? How could they accept a man to be in earnest when he sponsors a Bill for securing Temple-entry and subsequently becomes a party to dropping it? How could they accept the earnestness of a man who contents himself with saying he will not go into a temple if it is not open to the Untouchables when what is required of him is to adopt

every means to get the temples thrown open to the Untouchables? How could they believe in the earnestness of a man who is ready to fast for everything but will not fast for the Untouchables? How can they believe in the earnestness of a man who is prepared to practise *dasyagraha* for everything and against everybody but who will not practise it against the Hindus for the sake of the Untouchables? How can they believe in the earnestness of a man who does nothing more than indulge in giving sermons, on the evils of Untouchability?

Do they regard Mr. Gandhi as honest and sincere? The answer is that they do not regard Mr. Gandhi as honest and sincere. At the outset of his campaign for Swaraj Mr. Gandhi told the Untouchables not to side with the British. He told them not to embrace Christianity or any other religion. He told them that they could find salvation in Hinduism. He told Hindus that they must remove Untouchability as a condition precedent to Swaraj. Yet in 1921 when only a paltry sum out of the Tilak Swaraj Fund was allotted to the Untouchables, when the Committee to plan the uplift of the Untouchables was unceremoniously wound up Mr. Gandhi did not raise a word of protest.

Mr. Gandhi had under his command a sum of Rs. 1 crore and 25 lakhs belonging to the Tilak Swaraj Fund. Why did Mr. Gandhi not insist upon a substantial portion of this amount being ear-marked for the uplift of the Untouchables? That Mr. Gandhi showed almost complete indifference to the cause of the Untouchables is beyond dispute. What is surprising is the explanation which Mr. Gandhi offered for his indifference. He said that he was busy in planning a campaign to win swaraj and that he had no time to spare for the cause of the Untouchables. He not only did not blush at his explanation but he offered a moral justification for his indifference to the cause of the Untouchables. He took the stand that there was nothing wrong in his devoting himself entirely to the political cause of India to the exclusion of the cause of the Untouchables for in his opinion the good of the whole includes the good of the part and that as the Hindus are slaves of the British, slaves cannot emancipate slaves. Phrases such as 'slaves of slaves' and 'greater includes the less' may be admirable dialectics, though

they cannot have more truth than the saying that because the country's wealth has increased, therefore everybody's wealth has increased. But we are not considering Mr. Gandhi's ability as a dialectician. We are testing his sincerity. Can we accept a man's sincerity who evades his responsibility and contents himself with an excuse? Can the Untouchables believe that Mr. Gandhi is the champion of their cause?

How can they regard Mr. Gandhi as honest and sincere if they consider Mr. Gandhi's conduct towards them and towards the Muslims and Sikhs in the matter of constitutional safeguards?

Mr. Gandhi used to justify his discrimination between the Scheduled Castes and other Minorities in the matter of constitutional safeguards by another plea. The plea was that there were historical reasons, which compel him to recognise the Muslims and the Sikhs. He has never explained what those reasons are. They cannot be other than those, which hold the Muslims and the Sikhs as the fragments of old ruling communities. One does not mind Mr. Gandhi having succumbed to such puerile and undemocratic arguments, though he could have insisted that he would treat all minorities on equal basis and would not give any weight to such illogical and irrelevant considerations. The question is : How could the admission of such a plea have prevented Mr. Gandhi from opposing the demand of the Scheduled Castes? Why did Mr. Gandhi regard himself as bound by no other reasons except the historical reasons? Why did not Mr. Gandhi think that if historical reasons were decisive in the case of Muslims and Sikhs, moral reasons were decisive in the case of the Untouchables? The fact is that the plea of historical reasons is a hollow plea. It was not a plea at all. It was an excuse for not conceding the demand of the Untouchables.

Mr. Gandhi is never so much disgusted as he is when he is confronted with the question of Majority versus Minority. He would like to forget it and ignore it. But circumstances will not let him do either and he is often forced to deal with the issue. The last time he dealt with it was on the 21st October 1989 in the form of an Editorial in the Harijan under the heading "The Fiction of Majority." The article is full of venom and Mr. Gandhi has not hesitated to pour all the ridicule he could on those

who were constantly raising the question. In the article he vehemently denied that the Muslims are a Minority. He denied that the Sikhs are a Minority and denied that the Indian Christians are a Minority. His contention was that they were not minorities in the technical sense of Oppressed Communities they were minorities they were to in the numerical sense only, which meant that they were no minorities at all. What did Mr. Gandhi have to say about the Scheduled Castes? Could he deny their contention that they are a Minority? Let me quote Mr. Gandhi's own words. Mr. Gandhi said :—”I have endeavoured to show that there is no such things as real minorities in India whose rights can be endangered by India becoming independent. With the exception of the Depressed Classes there is no minority which is not able to Take care of itself.”

Here is an, admission, on, the part of Mr. Gandhi that the Scheduled Castes are a minority in, the real sense of the word and that they are the only minority in India who will not be able to take care of themselves in, a free India governed by a Hindu Communal Majority. Notwithstanding this inner conviction Mr. Gandhi maintained in a most vehement manner that he would not concede any political safeguards to the Untouchables. How can the Untouchables accept such a man as sincere and honest?

Mr. Gandhi opposed the demands of the Untouchables for political safeguards at the Round Table Conference. He did everything to defeat the object of the Untouchables. To weaken, the force behind their demand and isolate them he tried to buy over the Muslims by offering to concede the whole of their fourteen demands. Mr. Gandhi at the meeting of the Minorities Sub-Committee had said:”Who am I to oppose the demand of the Untouchables if the Committee gave it its approval.”It was wrong for Mr. Gandhi to have tried to defeat the verdict of the Committee by offering to give the Muslims their full demand formulated in. Mr. Jinnah's fourteen points in return for their agreeing to oppose the demands of the Scheduled Castes!! His was a most subtle piece of strategy. He offered the Musalmans a most difficult choice between having their 14 points and withdrawing their support to

the demand of the Untouchables or siding with the Untouchables and losing their 14 points. In the end Mr. Gandhi's strategy failed and neither did the Musalmans lose their 14 points nor did the Untouchables lose their case. But the episode remains as a witness to Mr. Gandhi's perfidy. What else can be the appropriate description of the conduct of a man who offers criminal inducement to another for getting him to break his promise, who calls a person his friend and then contrives to stab him in the back? How can such a man be regarded by the Untouchables as honest and sincere?

Mr. Gandhi left the decision of the communal question to the arbitration of the British Prime Minister. Notwithstanding Mr. Gandhi's efforts to defeat the Untouchables His Majesty's Government conceded them their political demands. As a party to the arbitration Mr. Gandhi was bound to abide by the decision. But Mr. Gandhi decided to defy it and he did it by going on a fast unto death. Mr. Gandhi shook India and the the world outside by his Fast unto Death. The object of the Fast was to compel the British Government to withdraw the Constitutional Safeguards which the British Prime Minister had proposed in his Award for the protection of the Untouchables under the new Constitution. One of Mr. Gandhi's disciples has described the fast as an Epic Fast. Why it should be described as an Epic Fast it is not easy to follow. There was nothing heroic about it. It was the opposite of heroic. It was an adventure. It was launched by Mr. Gandhi because he believed that both the Untouchables and the British Government would quake before his threat of fast unto death, and surrender to his demand. Both were prepared to call off his bluff and as a matter of fact did call it off. All his heroism vanished the moment Mr. Gandhi found that he had overdone the trick. The man who started by saying that he would fast unto death unless the safeguards to the Untouchables were completely withdrawn and the Untouchables reduced to the condition of utter helplessness without rights and without recognition was plaintively pleading "My life is in your hands, will you save me?" Mr. Gandhi's over impatience to sign the Poona Pact—though it did not cancel the Prime Minister's Award as he had demanded but only substituted another and a different system of constituent safeguards—is the strongest evidence that the

hero had lost his courage and was anxious to save his face and anyhow save his life.

There was nothing noble in the fast. It was a foul and filthy act. The Fast was not for the benefit of the Untouchables. It was against them and was the worst form of coercion against a helpless people to give up the constitutional safeguards of which they had become possessed under the Prime Minister's Award and agree to live on the mercy of the Hindus. It was a vile and wicked act. How can the Untouchables regard such a man as honest and sincere?

After having gone on a fast unto death, he signed the Poona Pact. People say that Mr. Gandhi sincerely believed that political safeguards were harmful to the Untouchables. But how could a honest and sincere man who opposed the political demands of the Untouchables who was prepared to use the Muslims to defeat them, who went on a Fast unto Death, in the end accept the very same demands—for there is no difference between the Poona Pact and the Communal Award—when he found that there was no use opposing, as opposition would not succeed? How can an honest and sincere man accept as harmless the demands of the Untouchables which once he regarded as harmful?

Do the Untouchables regard Mr. Gandhi as their friend and ally? The answer is in the negative. They do not regard him as their friend. How can they? It may be that Mr. Gandhi honestly believes that the problem of the Untouchables is a social problem. But how can they believe him to be their friend when he wishes to retain caste and abolish Untouchability it being quite clear that Untouchability is only an extended form of caste and that therefore without abolition of caste there is no hope of abolition of Untouchability? It may be that Mr. Gandhi honestly believes that the problem of Untouchables can be solved by social processes. But how can the Untouchables regard a man as their friend who develops a fanatic and frantic opposition to political processes being employed when everyone was agreed that the use of political processes cannot mar the effect of social process and may be depended upon to help and accelerate the solution of the problem. How could a man be regarded as the friend of the Untouchables when he

does not believe the Untouchables reaching to places of power and authority in the State. In this controversy over political safeguards Mr. Gandhi could have pursued any of the following courses. He could have been the champion of the Untouchables. As such, he should not only have welcomed their demand for safeguards but he should have proposed them himself without waiting for the Untouchables to do so. Not only should he have proposed them himself but he should have fought for them. For, what could give greater happiness to a genuine champion of the Untouchables than to see that provision was made to enable them to become members of the Legislature, Ministers of Executive, and occupants of high offices in the State? Surely, if Mr. Gandhi is a champion of the Untouchables these are the very provisions he should have fought for. Secondly, if he did not wish to be the champion of the Untouchables, he could have been their ally. He could have helped them by giving them his moral and material support. Thirdly, if Mr. Gandhi did not like to play the part of a champion and was averse to be even an ally of the Untouchables, the next thing he could have done consistent with his proclaimed and much advertised sympathies for the Untouchables, was to be their friend. Again as a friend he could have taken up the attitude of benevolent neutrality—declining to fight but ready to render all help for getting the demand for safeguards accepted. Failing benevolent neutrality he could have taken the attitude of strict neutrality and could have told the Untouchables to get the safeguards if the Round Table Conference was prepared to give them and that he would neither help nor hinder. Abandoning all these sober considerations Mr. Gandhi came out as an, open enemy of the Untouchables. How can the Untouchables regard such a man as their friend and ally?

IV

That Mr. Gandhi's anti-untouchability campaign has failed is beyond cavil. Even the Congress papers admit it. I give below a few quotations from some of them :

On 17th August 1939 Mr. B. K. Gaikwad, a member of the Scheduled

Castes in the Bombay Legislative Assembly, asked a question as to how many temples in the Bombay Presidency were thrown open to the Untouchables since 1932 when. Mr. Gandhi started, his Temple-entry movement. According to the figures given by the Congress Minister the total number of temples thrown open was 142. Of these 121 were ownerless temples standing on the wayside. which were under the care of nobody in particular and which nobody used as places of worship. Another fact revealed was that not a single temple was thrown open to the Untouchables in Gujarat, the district which is the home of Mr. Gandhi.

Writing on 10th March 1940 the Harijan Bandu, Mr. Gandh's Gujarathi paper, said;

"The Untouchability of the 'Harijans' in the matter of entry into schools persists nowhere so much still as in Gujarat." [f.8]

The Bombay Chronicle in its issue of 27th August 1940 reproduced an extract from a monthly letter of the Harijan Sevak Sangh. It

"States that Harijans of Godhavi in Ahmedabad District were so persecuted by caste Hindus for sending their children to Local Board School that ultimately 42 Harijan families left that place. . .and went to the Taluka town of Sanand."

On 27th August 1948, Mr. M. M. Nandgaonkar, a leader of the Untouchables residing in Thana in the Bombay Presidency and ex-Vice President of Thana Municipality was refused tea in a Hindu hotel. The Bombay Chronicle commenting upon this incident in its issue dated 28th August 1948 said :

"When Gandhiji fasted in 1932, some feverish attempts were made to have some temples and hotels opened to Harijans, Now the actual position is nearly what it used to be before with regard to temple entry and access to, hotels. The cleanest Harijan is not admitted to temples and hotels. Yet many anti-Untouchability workers take a complacent view of these disabilities and patronisingly talk of 'uplift first' for Harijans, saying that when Harijans learn to be clean, their civic

disabilities will fall off automatically. This is rank nonsense."

Writing on the proceedings of the All-India Scheduled Castes Federation held in Cawnpore in January 1944 the Bombay Chronicle in its issue of 4th February 1944 said :

"But such is the passivity of Hindu society that both caste and Untouchability still thrive. Nay, several Hindu leaders. . . misguided by the interested propaganda by certain Britishers, still plead that there is some mysterious virtue in caste because Hindu culture has remained today. Else, they argue, caste would not have survived the shocks of centuries... It is most tragic to find that, in spite of all that Gandhiji and other reformers have done, Untouchability still persists to no small extent. It is most rampant in villages. Even in a city like Bombay, a person known to be a sweeper, let alone a scavenger, however clean dressed he may be, is not allowed to enter a caste Hindu restaurant, nay, even an Iran's restaurant for tea."

The Untouchables have always said that Mr. Gandhi's anti-Untouchability campaign has failed. After 25 years of labour, hotels have remained closed, wells have remained closed, temples have remained closed and in very many parts of India— particularly in Gujarat—even schools have remained closed. The extracts produced from the papers form therefore a very welcome testimony especially because the papers are Congress papers. As they fully corroborate what the Untouchables have been saying on the point, nothing further need be said on the subject except to ask one question.

Why has Mr. Gandhi failed? According to me, there are three reasons which has brought about this failure.

The first reason is the Hindus to whom he makes his appeal for the removal of Untouchability do not respond. Why is this so? It is a common experience that the words a man uses and the effect they produce are not always commensurate. What he says has its momentum indefinitely multiplied, or reduced to nullity, by the impression that the hearer for good reason or bad happens to have formed of the spirit of the speaker. This gives a clue to know why Mr. Gandhi's sermons on

Untouchability have completely failed to move the Hindus, why people hear his after-prayer sermons for few minutes and then go to the comic opera and why there is nothing more to it. The fault is not entirely of the Hindu public. The fault is of Mr. Gandhi himself. Mr. Gandhi has built up his reputation of being a Mahatma on his being an harbinger of political freedom and not on his being a spiritual teacher. Whatever may be his intentions, Mr. Gandhi is looked upon as an apostle of Swaraj. His anti-Untouchability campaign is looked upon as a fad if not a side-show. That is why the Hindus respond to his political biddings but never to his social or religious preaching. The momentum of his anti-Untouchability campaign must therefore remain a nullity. Mr. Gandhi is a political shoe-maker. He must stick to his political last. He thought he could take up the task of solving the social question. That was a mistake. A politician is not the man for it. That is why the hope held out to the Untouchables that Mr. Gandhi's sermons will do the trick has failed.

The second reason is that Mr. Gandhi does not wish to antagonise the Hindus even if such antagonism was necessary to carry out his anti-Untouchability programme. A few instances will illustrate Mr. Gandhi's mentality.

Most of Mr. Gandhi's friends give credit to Mr. Gandhi for sincerity and earnestness for the cause of the Untouchables and expect the Untouchables to believe in it on the mere ground that Mr. Gandhi is the one man who keeps on constantly preaching to the Hindus the necessity of removing Untouchability. They have lost sight of the old proverb that an ounce of practice is worth a ton of preaching and have never cared to ask Mr. Gandhi to explain why does he not cease to preach to the Hindus the necessity of removing Untouchability and launch a campaign of satyagraha or start a fast. If they would ask for such an explanation they would know why Mr. Gandhi merely contents himself with sermons on Untouchability.

The true reasons why Mr. Gandhi will not go beyond sermons were revealed to the Untouchables for the first time[f.9] in, 1929 when the Untouchables in the Bombay Presidency opened a campaign of satyagraha against the Hindus for establishing their civic rights in the

matter of temple-entry and taking water from public wells. They hoped to get the blessings of Mr. Gandhi in as much as satyagraha was Mr. Gandhi's own weapon to get wrongs redressed.. When appealed to for support, Mr. Gandhi surprised the Untouchables by issuing a statement condemning their campaign of satyagraha against the Hindus. The argument urged by Mr. Gandhi was very ingenious. He stated that satyagrahs was to be used only against foreigners ; i it must not be used against one's own kindred or countrymen and as the Hindus were the kindred and countrymen of the Untouchables by rules of satyagraha the latter were debarred from using the weapon against the former !! What a fall from the sublime to the ridiculous ! By this Mr. Gandhi made nonsense of satyagraha. Why did Mr. Gandhi do this? Only because he did not want to annoy and exasperate the Hindus.

As a second piece of evidence, I would refer to what is known as the Kavitha incident Kavitha is a village in the Ahmedabad District in Gujarat. In 1935, the Untouchables of the village demanded from the Hindus of the village that their children should be admitted in the common school of the village along with other Hindu children. The Hindus were enraged at this outrage and took. their revenge by proclaiming a complete social boycott. The events connected with. this boycott were reported by Mr. A. V. Thakkar, who went to Kavitha to intercede with the Hindus on behalf of the Untouchables. The story told by him runs as follows :—

"The Associated Press announced on the 10th inst. that the Caste Hindus of Kavitha agreed to admit Harijan boys to the village school in Kavitha and that matters were amicably settled. This was contradicted on the 13th instant by the Secretary of the Ahmedabad Harijan Sevak Sangh, who said in his statement that the Harijans had undertaken (privately of course) not to send their children to the school. Such an undertaking was not given, voluntarily, but was extorted from them by the Caste Hindus, in this case the Garasias of the village; who had proclaimed a social boycott against poor Harijans-weavers, chamars and others, who number over 100 families. They were deprived of agricultural labour, their animals of grazing in the

pasture land and their children of buttermilk. Not only this, but a Harijan leader was compelled to take an oath by Mahadev that he and others would not hereafter even make an effort to reinstate their children in the school. The so-called settlement was brought about in this way.

"But even after the bogus settlement reported on the 10th and the complete surrender by poor Harijans, the boycott was not lifted up to the 19th and partly up to the 22nd from the weavers, it was lifted somewhat earlier from the head of the chamars, as Garasias themselves could not remove the carcasses of their dead animals, and thus had to come to terms with the Chamars earlier. As if the enormities perpetrated so far were not enough, kerosine was poured into the Harijans' well, once on the 15th instant, and again on the 19th instant. One can imagine what terrorism was thus practised on poor Harijans because they had dared to send their children to sit alongside of the ' princely ' Garasia boys.

"I met the leaders of the Garasias on the morning of the 22nd. They said they could not tolerate the idea of boys of Dheds and Chamars sitting by the side of their own boys. I met also the District Magistrate of Ahmedabad on the 23rd with a view to finding out if he would do something to ease the situation, but without any result.

"Harijan boys are thus practically banned from the village school with nobody to help them. This has caused despondency among the Harijans to such an extent that they are thinking of migration in a body to some other village."

This was a report made to Mr. Gandhi. What did Mr. Gandhi do? The followings ⁶⁴ [f.10] is the advice Mr. Gandhi gave to the Untouchables of Kavitha:-

"There is no help like self-help. God helps those who help themselves. If the Harijans concerned will carry out their reported resolve to wipe the dust of Kavitha off their feet, they will not only be happy themselves but they will pave the way for others who may be similarly treated. If people migrate in search of employment how

much more should they do so in search of self-respect? I hope that well-wishers of Harijans will help these poor families to vacate inhospitable Kavitha."Mr. Gandhi advised the Untouchables of Kavitha to vacate. But why did he not advise Mr. Thakkar to prosecute the Hindus of Kavitha and help the Untouchables to vindicate their rights?" "Obviously, he would like to uplift the Untouchables If he can but not by offending the Hindus. What good can such a man do to promote the cause of the Untouchables? All this shows that Mr. Gandhi is most anxious to be good to the Hindus. That is why he opposes satyagraha against the Hindus. That is why he opposed the political demands of the Untouchables as he believed that they were aimed against them. He is anxious to be so good to the Hindus that he does not care if he is thereby becoming good for nothing for the Untouchables. That is why Mr. Gandhi's whole programme for the removal of Untouchability is just words, words and words and why there is no action behind it.

The third reason is that Mr. Gandhi does not want the Untouchables to organise and be strong. For he fears that they might thereby become independent of the Hindus and weaken the ranks of Hindus. This is best illustrated by the activities of the Harijan Sevak Sangh. The whole object of the Sangh is to create a slave mentality among the Untouchables towards their Hindu masters. Examine the Sangh from any angle one may like and the creation of slave mentality will appear to be its dominant purpose.

The work of the Sangh reminds one of the mythological demoness Putana described in the Bhagvat—a companion to the Mahabharat. Kamsa the king of Mathurra, wanted to kill Krishna, as it was predicted that Kamsa will die at the hands of Krishna. Having come to know of the birth of Krishna, Kamsa asked Putana to undertake the mission to kill Krishna while he was yet a baby. Putana took the form of a beautiful woman and went to Yashoda, the foster mother of Krishna and having applied liquid poison to her breast pleaded to be employed as a wet nurse for suckling the baby Krishna and thus have the opportunity to kill it. The rest of the story it is unnecessary to pursue. The point of the

story is that the real purpose is not always the same as the ostensible purpose and a nurse can be a murderess. The Sangh is to the Untouchables what Putana was to Krishna. The Sangh under the pretence of service is out to kill the spirit of independence from among the Untouchables. The Untouchables, in the early stages of their agitation, had taken the support of some well-meaning Hindus and had followed their leadership. By the time of the Round Table Conference, the Untouchables had become completely self-reliant and independent. They were no longer satisfied with charity from the Hindus. They demanded what they said was their right. There is no doubt that it is to kill this spirit of independence among the Untouchables that Mr. Gandhi started the Harijan Sevak Sangh. The Harijan Sevak Sangh by its petty services has collected a swarm of grateful Untouchables who are employed to preach that Mr. Gandhi and the Hindus are the saviours of the Untouchables. Daniel O'Connell the Irish leader once said that no man can be grateful at the cost of his honour, no woman can be grateful at the cost of her chastity and no country can be grateful at the cost of its liberty. The Untouchables are too simple-minded to know that the cost of the service which the Harijan Sevak Sangh offers to render is loss of independence. This is exactly what Mr. Gandhi wants.

The worst part of the activities of the Harijan Sevak Sangh is the help rendered to the Untouchable students kept in the hostels maintained by the Sangh. These Untouchable students remind me of Bhishma and Kocha, two prominent characters which figure in the Mahabharata. Bhishma proclaimed with great show that the Pandavas were right and the Kauravas wrong. Yet when it came to a war between the two he fought on the side of the Kauravas and against the Pandavas. When asked to justify his conduct he was not ashamed to say that he fought for the Kauravas because they fed him. Kocha belonged to the community of the Devas who were engaged in a war against the Rakshasas. The spiritual head of the Rakshasas knew a mantra (incantation) by which he could revive a dead Rakshasa. The Devas were losing the battle since their head did not know the mantra and could not revive their dead. The Devas planned to send Kacha to the head of the Rakshasas with instructions somehow to learn the mantra

and come back. Kacha in the beginning could not succeed. Ultimately he entered into an agreement with Devayani the daughter of the spiritual head of the Rakshasas that if she helped him to acquire the mantra he would be prepared to marry her. Devayani succeeded in fulfilling her part of the contract. But Kacha refused to perform his part alleging that the interests of his community were more important than his promise to her.

Bhishma and Kacha, in my opinion, are typical of the morally depraved characters who know no other purpose but to serve their own interests for the time being. The Untouchable students in the Harijan hostels are acting the part of both Bhishma and Kacha. During their stay in the hostels they play the part of Bhishma by singing the praises of Mr. Gandhi and the Congress. When they come out of the hostels they play the part of Kacha and denounce Mr. Gandhi and the Congress. I am extremely pained to see this. Nothing worse could happen to the youth of the Untouchables than this moral degeneration. But this is the greatest disservice which his Harijan Sevak Sangh has done to the Untouchables. It has destroyed their character. It has destroyed their independence. This is what Mr. Gandhi wants to happen.

Take a fourth illustration. The Sangh is run by the Caste Hindus. There are some Untouchables who have demanded that the institution should be handed over to the Untouchables and should be run by them. Others have demanded that the Untouchables should have representation on the governing Board. Mr. Gandhi has flatly refused to do either on two very ingenious grounds which no man with the greatest cunning could improve. Mr. Gandhi's first argument is that the Harijan Sevak Sangh is an act of penance on the part of the Hindus for the sin of observing Untouchability. It is they who must do the penance. Therefore the Untouchable can have no place in running the Sangh. Secondly Mr. Gandhi says the money collected by him is given by the Hindus and not by the Untouchables and as the money is not of the Untouchables, the Untouchables have no right to be on the Governing Body. The refusal of Mr. Gandhi may be tolerated but his arguments are most insulting and a respectable Untouchable will be forgiven if he refuses to have

anything to do with the Sangh. One should have thought that the Harijan Sevak Sangh was a Trust and the Untouchables its beneficiaries. Any trio in law would admit that the beneficiaries have every right to know the aims and objects of the Trust, its funds and whether the objects are properly carried out or not. The beneficiaries have even the right to have the Trustees removed for breach of trust. On that basis it would be impossible to deny the claim of the Untouchables for representation on the Managing Board. Evidently Mr. Gandhi does not wish to accept this position. A self-respecting Untouchable who has no desire to cringe and who does not believe in staking the future of the Untouchables on the philanthropy of strangers cannot have any quarrel with Mr. Gandhi, He is quite prepared to say that if meanness is a virtue then Mr. Gandhi's logic is superb and Mr. Gandhi is welcome to the benefit of it. Only he must not blame the Untouchables if they boycott the Sangh.

These however could not be the real reasons for not allowing the Untouchables to run the Sangh. The real reasons are different. In the first place, if the Sangh was handed over to the Untouchables Mr. Gandhi and the Congress will have no means of control over the Untouchable?. The Untouchables will cease to be dependent on the Hindus. In the second place, the Untouchables having become independent will cease to be grateful to the Hindus. These consequences will be quite contrary to the aim and object, which have led Mr. Gandhi to found the Sangh, He wants to create among the Untouchables what is known among Indian Christians as the mission compound mentality. That is why Mr. Gandhi does not wish to hand over the Sangh to the control and management of the Untouchables. Is this consistent with a genuine desire for the emancipation of the Untouchables? Can Mr. Gandhi be called a liberator of the Untouchables? Does this not show that Mr. Gandhi is more anxious to tighten the tie which binds the Untouchables to the apron strings of the Hindus than to free them from the thralldom of the Hindus?

These are the reasons why Mr. Gandhi's anti-Untouchability campaign has failed.

V

To sum up, can it be said that Mr. Gandhi has recovered the title deeds to humanity which the Untouchables have lost? Obviously not. Those title deeds are still with the Hindus. He has done nothing to recover them. Nor has he helped the Untouchables to recover them. On the contrary, Mr. Gandhi has put every obstacle in their way. The Untouchables feel that their title deeds to humanity—"which means their emancipation from their thralldom of the Hindus can be secured by them by political power, and by nothing else. Mr. Gandhi, on the other hand, believes that his preaching and the charity and zeal of the Hindus are sufficient panacea for all the ills of the Untouchables. Can the Untouchables rely on a sustained flow of Hindu charity and Hindu zeal? Charity which has its fury is worth talking about. Zeal which has its vengeance is worth building upon. But which friend of the Untouchables can ask them to depend upon the miserable measure 'of Hindu charity and the Hindu zeal? Untouchability has been in existence for the last two thousand years during which period the Hindus have day in and day out sucked the very blood of the Untouchables and have mutilated them and trodden upon them in every way. During these two thousand years what amount of charity have the Hindus done to the Untouchables? Only 8 lakhs and that too when Mr. Gandhi personally went round the country with a begging bowl ! ! ! Having put his programme to test, Mr. Gandhi might have shown, his willingness to concede the Untouchables' demand for political power as their only means of salvation. Indeed so obvious is the justice of this demand that a man with no more than common sense could have understood that executive power in the hands of the Untouchables could do more in a year than the whole order of preaching friars could be relied upon, to do in, a century. But. the very idea of political power to the Untouchables is hateful to Mr. Gandhi. Why should not the Untouchables say—"Beware of Mr. Gandhi' when they know that he would not allow the use of political processes for the emancipation of the Untouchables though Mr. Gandhi is fully alive to the fact that the social processes on which he laid so much store for helping them have completely failed.

In this connection, one is reminded of the attitude of President Lincoln in the American Civil War towards the two questions of union and slavery. This attitude is well revealed by the correspondence [f.11] that passed in 1862 between, Mr. Horace Greeley and President Lincoln., In, a letter addressed to the President entitled "The Prayer of Twenty Millions," Mr. Greeley said :

"On the face of this wide earth, Mr. President, there is not one disinterested, determined, intelligent champion of the Union cause who does not feel that all attempts to put down the rebellion and at the same time uphold its inciting cause (namely slavery) are preposterous and futile."

"To this, President Lincoln's reply was :

"If there be those who would not save the Union unless they could at the same time save slavery, I do not agree with them.

"If there be those who would not save the Union unless they could at the same time destroy slavery, I do not agree with them.

"My paramount object is to save the Union, and not wether to save or to destroy slavery.

"If I could save the Union without freeing any slave, I would do it. If I could save it by freeing all the slaves, I would do it and if I could do it by freeing some and leaving others alone, I would also do that."

These were the views of President Lincoln about Negro slavery and its relation to the question of Union. They certainly throw a very different light on one who is reputed to be the liberator of the Negroes. As a matter of fact he did not believe in the emancipation of the Negroes as a categorical imperative. Obviously the author of the famous Gettysberg oration about Government of the people, by the people and for the people would not have minded if his statement had taken the shape of government of the black people by the white people and for the white people provided there was union. Mr. Gandhi's attitude towards Swaraj and the Untouchables resembles very much the attitude of President Lincoln towards the two questions of the Negroes and the Union,. Mr.

Gandhi wants Swaraj as did President Lincoln want Union. But he does not want Swaraj at the cost of disrupting the structure of Hinduism which is what political emancipation of the Untouchables means as President Lincoln did not want to free the slaves if it was not necessary to do so for the sake of the Union. There is of course this difference between Mr. Gandhi and President Lincoln. President Lincoln was prepared to emancipate the Negro slaves if it was necessary to preserve the Union. Mr. Gandhi's attitude is in marked contrast. He is not prepared for the political emancipation, of the Untouchables even if it was essential for winning Swaraj. Mr. Gandhi's attitude is let Swaraj perish if the cost of it is the political freedom of the Untouchables.

Some Untouchables are probably under the impression that all this is a matter of the dead past and that Mr. Gandhi having accepted the Poona Pact cannot now oppose the political demands of the Untouchables for as a party to the Poona Pact Mr. Gandhi must be assumed to have conceded that the Untouchables are a separate element in the national life of India, This is a complete misunderstanding. For there are grounds to,, believe that the Poona Pact has made no difference in Mr. Gandhi's view and he still maintains the same attitude to the Untouchables' claim for political safeguards as he did at the Round Table (conference and before the Poona Pact. These grounds have their foundation in. the fact that when His Majesty's Government declared in 1940 that the Untouchables are a separate element in the National life of India and that their consent to the Constitution, is necessary Mr. Gandhi came out with a protest. When the Viceroy Lord Linlithgow referred to the Untouchables as a separate element and said that their consent to the Constitution was necessary, Mr. Gandhi said [f.12] -"-

"I felt that the putting up by the Viceroy, and then the Secretary of State of want of agreement by the Congress with the Princes, the Muslim League and even the Scheduled Classes as a barrier to the British recognition of India's right to freedom was more than unjust to the Congress and the people".

"The introduction of the Scheduled Classes in the controversy has made the unreality of the case of the British Government doubly unreal. They know that these are the special care of the Congress, and that the Congress is infinitely more capable of guarding their interests than the British Government. Moreover, the Scheduled Classes are divided into as many castes as the Caste Hindu Society. No single Scheduled classes member could possibly and truthfully represent the innumerable castes."

The argument advanced by Mr. Gandhi is puerile. It may be pointed out that in the hurry he made in stating his opposition to the position assigned to the Scheduled Castes by the Viceroy, Mr. Gandhi forgot that if the Scheduled Castes are divided into many wastes and no single caste could represent them all, the case of the Muslims and the Indian Christians is in no way different. The Muslims are divided into three groups: (1) Sunnis; (2) Shias and (8) Momins each of which consists: of many castes who interdine but do not intermarry. Indian Christians are divided into (1) Catholics, and (2) Protestants. Catholics are again subdivided into (1) Caste Christians and (2) Non-caste Christians. Both Catholics and Protestants have castes which do not intermarry and caste Christians and Non-caste Christians do not even interline or go to the same church. This shows that Mr. Gandhi not with-standing his being a party to the Poona Pact is determined not to allow the Scheduled Castes being given the status of a separate element and that he is prepared to adopt any argument however desperate to justify his attitude of opposition.

In short Mr. Gandhi is still on the war path so far as the Untouchables are concerned. He may start the trouble over again. The time to trust him has not arrived. The Untouchables must still hold that the best way to safeguard themselves is to say 'Beware of Mr. Gandhi.'

Chapter XI

**WHAT CONGRESS AND GANDHI HAVE DONE
TO
THE UNTOUCHABLES**

**CHAPTER XI
GANDHISM**

The Doom of the Untouchables

I

Hitherto when Indians have been talking about the reconstruction of Indian social and economic life they have been talking in terms of individualism versus collectivism, capitalism versus socialism, conservatism versus radicalism and so on. But quite recently a new 'ism' has come on the Indian horizon. It is called Gandhism. It is true that very recently Mr. Gandhi had denied that there is such a thing as Gandhism. This denial is nothing more than the usual modesty which Mr. Gandhi wears so well. It does not disprove the existence of Gandhism. There have been quite a number of books with the title of Gandhism without any protest from Mr. Gandhi. It has already caught the imagination of some people both inside and outside India. Some have so much faith in it that they do not hesitate to offer it as an alternative to Marxism.

The followers of Gandhism who may happen to read what is said in the foregoing pages may well ask; Mr. Gandhi may not have done what the Untouchables expected him to do; but does not Gandhism offer any hope to the Untouchables? The followers of Gandhism may accuse me of remembering only the short, slow, intermittent steps taken by Mr. Gandhi for the sake of the Untouchables and of forgetting the potential length of the principles enunciated by him. I am prepared to admit that it does sometimes happen that a person, who enunciates a long principle takes only a short step and that he may be forgiven for the short step in the hope that some day the principle will by its native dynamics force a long step covering all who were once left out. Gandhism is in itself a very interesting subject for study. But to deal with Gandhism after having dealt with Mr. Gandhi is bound to be a tedious task and

therefore my first reaction was to leave out the consideration of Gandhism and. Untouchables. At the same time, I could hardly remain indifferent to the facts that the effect of my omission to consider the subject might be very unfortunate. For Gandhists, notwithstanding my exposure of Mr. Gandhi, might take advantage of it and continue to preach that if Mr. Gandhi has failed to solve the problem of the Untouchables still the Untouchables will find their salvation in Gandhism. It is because I wish to leave no room for such propaganda that I have overcome my original disinclination and engage upon discussion of Gandhism.

II

What is Gandhism? What does it stand for? What are its teachings about economic problem? What are its teachings about social problem?

At the outset it is necessary to state that some Gandhists have conjured up a conception of Gandhism which is purely imaginary. According to this conception Gandhism means return to the village and making the village self-sufficient. It makes Gandhism a mere matter of regionalism. Gandhism, I am sure, is neither so simple nor so innocent as regionalism is. Gandhism has a much bigger content than regionalism. Regionalism is a small insignificant part of it. It has a social philosophy and it has an economic philosophy. To omit to take into account the economic and social philosophy of Gandhism is to present deliberately a false picture of Gandhism. The first and foremost requisite is to present a true picture of Gandhism.

To start with Mr. Gandhi's teachings on social problem. Mr. Gandhi's views on the caste system—which constitutes the main, social problem in India—were fully elaborated by him in 1921-22 in a Gujarathi Journal called NavaJivan. The article mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41L.What Congress and Gandhi CHAPTER XI.htm - _msocom_1⁷ is written in Gujarathi. I give below an English translation of his views as near as possible in his own words. Says Mr. Gandhi:

"1. I believe that if Hindu Society has been able to stand it is because it is founded on the caste system.

“2. The seeds of Swaraj are to be found in the caste system. Different

castes are like different sections of military division. Each division is working for the good of the whole.

"3. A community which can create the caste system must be said to possess unique power of organisation.

"4. Caste has a ready made means for spreading primary education. Every caste can take the responsibility for the education of the children of the Caste. Caste has a political basis. It can work as an electorate for a representative body. Caste can perform judicial functions by electing persons to act as judges to decide disputes among members of the same caste. With castes it is easy to raise a defence force by requiring each caste to raise a brigade.

"5. I believe that interdining or intermarriage are not necessary for promoting national unity. That dining together creates friendship is contrary to experience. If this was true there would have been no war in Europe... Taking food is as dirty an act as answering the call of nature. The only difference is that after answering call of nature we get peace while after eating food we get discomfort. Just as we perform the act of answering the call of nature in seclusion so also the act of taking food must also be done in seclusion.

"6. In India children of brothers do not intermarry. Do they cease to love because they do not intermarry? Among the Vaishnavas many women are so orthodox that they will not eat with the members of the family nor will they drink water from a common water pot. Have they no love? The Caste system cannot be said to be bad because it does not allow inter-dining or intermarriage between different Castes."

"7. Caste is another name for control. Caste puts a limit on enjoyment. Caste does not allow a person to transgress caste limits in pursuit of his enjoyment. That is the meaning of such caste restrictions as interdining and intermarriage.

"8. To destroy caste system and adopt Western European social system means that Hindus must give up the principle of hereditary occupation which is the soul of the caste system. Hereditary principle is an eternal principle. To change it is to create disorder. I have no use for a Brahmin if I cannot call him a Brahmin for my life. It will be a chaos if every day a Brahmin is to be changed into a Shudra and a Snudra is to be changed into a Brahmin.

"9. The caste system is & natural order of society. In India it has been given a religious coating. Other countries not having understood the utility of the Caste System it existed only in a loose condition and consequently those countries have not derived from Caste system the same degree of advantage which India has derived.

These being my views I am opposed to all those who are out to destroy the Caste System,"

In 1922, Mr. Gandhi was a defender of the caste system. Pursuing the inquiry, one comes across a somewhat critical view of the caste system by Mr. Gandhi in the year 1925. This is what Mr. Gandhi said on 3rd February 1925 :—

"I gave support to caste because it stands for restraint. But at present caste does not mean restraint, it means limitations. Restraint is glorious and helps to achieve freedom. But limitation is like chain. It binds. There is nothing commendable in castes as they exist today. They are contrary to the tenets of the shastras. The number of castes is infinite and there is a bar against intermarriage. This is not & condition of elevation. It is a state of fall."

In reply to the question: What is the way out Mr. Gandhi said:

"The best remedy is that small castes should fuse themselves into one big caste. There should be four such big castes so that we may reproduce the old system of four varnas."

In short, in 1925 Mr. Gandhi became an upholder of the Varna system.

The old Varna system prevalent in ancient India had society divided into four orders : (1) Brahmins, whose occupation was learning; (2) Kshatriyas whose occupation was warfare, (3) Vaishyas, whose occupation was trade and (4) Shudras, whose occupation was service of the other classes. Is Mr. Gandhi's Varna System the same as this old Varna system of the orthodox Hindus? Mr. Gandhi explained his Varna system.

in the following terms: mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/41L.What Congress and Gandhi CHAPTER XI.htm - _msocom_2 :

"1. I believe that the divisions into Varna is based on birth.

"2. There is nothing in the Varna system which stands in the way of the Shudra acquiring learning or studying military art of offence or defence. Contra it is open to a Kshatriya to serve. The Varna system is no bar to him. What the Varna system enjoins is that a Shudra will not make learning a way of earning a living. Nor will a Kshatriya adopt service as a way of earning a living. [Similarly a Brahmin may learn the art of war or trade.. But he must not make them a way of earning his living. Contra a Vaishya may acquire learning or may cultivate the art of war. But he must not make them a way of earning his living.

"3. The varna system is connected with the way of earning a living. There is no harm if a person belonging to one varna acquires the knowledge or science and art specialised in by persons belonging to other varnas. But as far as the way of earning his living is concerned he must follow the occupation of the varna to which he belongs which means he must follow the hereditary profession of his forefathers.

"4. The object of the varna system is to prevent competition and class struggle and class war. I believe in the varna system because it fixes the duties and occupations of persons,

"5. Varna means the determination of a man's occupation before he is born.

"6. In the Varna system no man has any liberty to choose his occupation. His occupation is determined for him by heredity."

Turning to the field of economic life, Mr. Gandhi stands for two ideals:

One of these is the opposition to machinery. As early as 1921 Mr. Gandhi gave vent to his dislike for machinery. Writing in the Young India of 19th January 1921, Mr. Gandhi said :

"Do I want to put back the hand of the clock of progress? Do I want to replace the mills by hand-spinning and hand-weaving? Do I want to replace the railway by the country-cart? Do I want to destroy machinery altogether? These questions have been asked by some journalists and public men. My answer is: I would not weep over the disappearance of machinery or consider it a calamity."

His opposition to machinery is well evidenced by his idolisation of charkha (the spinning wheel) and by insistence upon hand-spinning and

hand-weaving. This opposition to machinery and his love for charkha is not a matter of accident. It is a matter of philosophy. This philosophy Mr. Gandhi took special occasion to propound in his presidential address at the Kathiawad Political Conference held on 8th January 1925. This is what Mr. Gandhi said:

"Nations are tired of the worship of lifeless machines multiplied ad infinitum. We are destroying the matchless living machines viz., our own bodies by leaving them to rust and trying to substitute lifeless machinery for them. It is a law of God that the body must be fully worked and utilised. We dare not ignore it. The spinning wheel is the auspicious symbol of Sharir Yajna— body labour. He who eats his food without offering this sacrifice steals it. By giving up this sacrifice we became traitors to the country, and banged the door in the face of the Goddess of Fortune."

Anyone who has read Mr. Gandhi's booklet on Hind Swaraj (Indian Home Rule) will know that Mr. Gandhi is against modern civilisation. The book was first published in 1908. But there has been no change in his ideology. Writing in 1921 Mr. Gandhi said mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41L.What Congress and Gandhi CHAPTER XI.htm - _msocom_3 :

"The booklet is a severe condemnation of 'modern civilisation.' It was written in 1908. My conviction is deeper today than ever. I feel that, if India would discard 'Modern civilisation' she can only gain by doing so." In Mr. Gandhi's view mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41L.What Congress and Gandhi CHAPTER XI.htm - _msocom_4 :

"Western civilisation is the creation of satan."

The second ideal of Mr. Gandhi is the elimination of class-war and even class struggle in the relationship between employers and employees and between landlords and tenants. Mr. Gandhi's views on the relationship between employers and employees were set forth by him in an article on the subject which appeared in the Navajivan of the 8th June 1921 from which the following is an extract :

"Two paths are open before India, either to introduce the Western principle of 'Might is right' or to uphold the Eastern principle that truth alone conquers, that truth knows no mishap, that the strong and

the weak have alike a right to secure justice. The choice is to begin with the labouring class. Should the labourers obtain an increment in their wages by violence? Even if that be possible, they cannot resort to anything like violence, howsoever legitimate may be their claims. To use violence for securing rights may seem an easy path, but it proves to be thorny in the long run. Those who live by sword die also by sword. The swimmer often dies by drowning. Look at Europe. No one seems to be happy there, for not one is contented. The labourer does not trust the capitalist and the capitalist has no faith in the labourer. Both have a sort of vigour and strength but even the bulls have it. They fight to the very bitter end. All motion is not progress. We have got no reason to believe, that the people of Europe are progressing. Their possession of wealth does not argue the possession of any moral or spiritual qualities.

"What shall we do then? The labourers in Bombay made a fine stand. I was not in a position to know all the facts. But this much I could see that they could fight in a better way. The millowner may be wholly in the wrong. In the struggle between capital and labour, it may be generally said that more often than not the capitalists are in the wrong box. But when labour comes fully to realise its strength, I know it can become more tyrannical than capital. The millowners will have to work on the terms dictated by labour, if the latter could command intelligence of the former. It is clear, however, that labour will never attain to that intelligence. If it does; labour will cease to be labour and become itself the master. The capitalists do not fight on the strength of money alone. They do possess intelligence and tact.

"The question before us is this: When the labourers, remaining what they are, develop a certain consciousness, what should be their course?' It would be suicidal 'if the labourers rely upon their numbers or brute-force, i.e., violence. By so doing, they will do harm to industries in the country. If, on the other hand, they take their stand on pure justice and suffer in their person to secure It, not only will they always succeed but they will reform their masters, develop industries and both master and men will be as members of one and the same family."

Referring to the same theme on another occasion Mr. Gandhi said
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/41L.What Congress and Gandhi CHAPTER XI.htm - _msocom_5 :

"Nor was it otherwise before. Indians history is not one of strained relations between capital and labour."

Particularly noteworthy are the views of Mr. Gandhi on strike as a weapon, in the hand of the workers to improve their economic condition. Mr. Gandhi says [f.6] :

"Speaking, therefore, as one having handled large successful strikes, I repeat the following maxims, already stated in these pages, for the guidance of all strike leaders :

- (1)(1) There should be no strike without a real grievance.
- (2)(2) There should be no strike, if the persons concerned are not able to support themselves out of their own savings or by engaging in some temporary occupation, such as carding, spinning and weaving. Strikers should never depend upon public subscriptions or other charity.
- (3)(3) Strikers must fix an unalterable minimum demand, and declare it before embarking upon their strike.

"A strike may fail in spite of a just grievance and the ability of strikers to hold out indefinitely, if there are workers to replace them. A wise man, therefore, will not strike for increase of wages or other comforts, if he feels that he can be easily replaced. But a philanthropic or patriotic man will strike in spite of supply being greater than the demand, when he feels for and wishes to associate himself with his neighbour's distress. Needless to say, there is no room in a civil strike of the nature described by me for violence in the shape of intimidation, incendiarism or otherwise.. Judged by the tests suggested by me, it is 'clear that friends of the strikers could never have advised them to apply for or receive Congress or any other public funds for their support. The value of the strikers' sympathy was diminished to the extent, that they received or accepted financial aid. The merit of a sympathetic strike lies in the inconvenience and the loss suffered by the sympathisers."

Mr. Gandhi's view on the relationship between landlords and tenants were expounded by him in the Young India of 18th May 1921 in the form of instructions [f.7] to the tenants of U.P. who had risen against their landlords. Mr. Gandhi said:

"Whilst the U. P. Government is crossing the bounds of propriety, and intimidating people, there is little doubt that the Kisans too are not

making wise use of their newly found power. In several Zamindaries, they are said to have overstepped the mark, taken the law into their own hands and to have become impatient of anybody who would not do as they wish. They are abusing social boycott and are turning it into an instrument of violence. They are reported to have Stopped the supply of water, barber and other paid services to their Zamindars in some instances and even suspended payment of the rent due to them. The Kisan movement has received an impetus from Non-co-operation but it is anterior to and independent of it. Whilst we will not hesitate to advise the Kisans when the moment comes, to suspend payment of taxes to Government, it is not contemplated that at any stage of Non-co-operation we would seek to deprive the Zamindars of their rent. The Kisan movement must be confined to the improvement of status of the Kisans and the betterment of the- relations between the Zamindars and them. The Kisans must be advised scrupulously to abide by the terms of their agreement with the Zamindars, whether such is written or inferred from custom. Where a custom or even a written contract is bad, they may not try to uproot it by violence or without previous reference to the Zamindars. In every case there should be a friendly discussion with the Zamindars and an attempt made to arrive at a settlement."

Mr. Gandhi does not wish to hurt the propertied class. He is even opposed to a campaign against them. He has no passion for economic equality. Referring to the propertied class Mr. Gandhi said quite recently that he does not wish to destroy the hen that lays the golden egg. His solution for the economic conflict between the owners and workers, between the rich and the poor, between landlords and tenants and between the employers and the employees is very simple. The owners need not deprive themselves of their property. All that they need do is to declare themselves Trustees for the poor. Of course the Trust is to be a voluntary one carrying only a spiritual obligation.

III

Is there anything new in the Gandhian analysis of economic ills? Are the economics of Gandhism sound? What hope does Gandhism hold out to the common man, to the down-and out? Does it promise him a better life, a life of joy, and culture, a life of freedom, not merely freedom from want but freedom to rise, to grow to the full stature

which his capacities can reach?

There is nothing new in the Gandhian analysis of economic ills in so far as it attributes them to machinery and the civilisation that is built upon it. The arguments that machinery and modern civilisation help to concentrate management and control into relatively few hands, and with the aid of banking and credit facilitate the transfer into still fewer hands of all materials and factories and mills in which millions are bled white in order to support huge industries thousands of miles away from their cottages, or that machinery and modern civilisation cause deaths, maimings and crippling far in, excess of the corresponding injuries by war, and are responsible for disease and physical deterioration caused directly and indirectly by the development of large cities with their smoke, dirt, noise, foul air, lack of sunshine and out-door life, slums, prostitution and unnatural living which they bring about, are all old and worn out arguments. There is nothing new in them. Gandhism is merely repeating the views of Rousseau, Ruskin, Tolstoy and their school.

The ideas which go to make up Gandhism are just primitive. It is a return to nature, to animal life. The only merit is their simplicity. As there is always a large corps of simple people who are attracted by them, such simple ideas do not die, and there is always some simpleton to preach them. There is, however, no doubt that the practical instincts of men---which seldom go wrong---have found them unfruitful and which society in search of progress has thought it best to reject.

The economics of Gandhism are hopelessly fallacious. The fact that machinery and modern civilisation have produced many evils may be admitted. But these evils are no argument against them. For the evils are not due to machinery and modern civilisation. They are due to wrong social organisation which has made private property and pursuit of personal gain matters of absolute sanctity. If machinery and civilisation have not benefited everybody the remedy is not to condemn machinery and civilisation but to alter the organisation of society so that the benefits will not be usurped by the few but will accrue to all.

In Gandhism the common man has no hope. It treats man as an animal and no more. It is true that man shares the constitution and functions of animals, nutritive, reproductive, etc. But these are not distinctively human functions. The distinctively human function is reason, the purpose of which is to enable man to observe, meditate, cogitate, study and discover the beauties of the Universe and enrich his

life and control the animal elements in his life. Man thus occupies the highest place in the scheme of animate existence. If this is true what is the conclusion that follows? The conclusion that follows is that while the ultimate goal of a brute's life is reached once his physical appetites are satisfied, the ultimate goal of man's existence is not reached unless and until he has fully cultivated his mind. In short, what divides the brute from man is culture. Culture is not possible for the brute, but it is essential for man. That being so, the aim of human society must be to enable every person to lead a life of culture which means the cultivation of the mind as distinguished from the satisfaction of mere physical wants. How can this happen?

Both for society and as well as for the individual there is always a gulf between merely living and living worthily. In order that one may live worthily one must first live. The time and energy spent upon mere life, upon gaining of subsistence detracts from that available for activities, of a distinctively human nature and which go to make up a life of culture. How then can a life of culture be made possible? It is not possible unless there is sufficient leisure. For it is only when there is leisure that a person is free to devote himself to a life of culture. The problem of all problems which human society has to face is how to provide leisure to every individual. What does leisure mean? Leisure means the lessening of the toil and, effort necessary for satisfying the physical wants of life. How can leisure be made possible? Leisure is quite impossible unless some means are found whereby the toil required for producing goods necessary to satisfy human needs is lessened. What can lessen such toil? Only when machine takes the place of man. There is no other means of producing leisure. Machinery and modern civilisation are thus indispensable for emancipating man from leading the life of a brute, and for providing him with leisure and making a life of culture possible. The man who condemns machinery and modern civilisation simply does not understand their purpose and the ultimate aim which human society must strive to achieve.

Gandhism may be well suited to a society which does not accept democracy as its ideal. A society which does not believe in democracy may be indifferent to machinery and the civilisation based upon it. But a democratic society cannot. The former may well content itself with life of leisure and culture for the few and a life of toil and drudgery for the many. But a democratic society must assure a life of leisure and culture to each one of its citizens. If the above analysis is correct then the

slogan of a democratic society must be machinery, and more machinery, civilisation and more civilisation. Under Gandhism the common man must keep on toiling ceaselessly for a pittance and remain a brute. In short, Gandhism with its call of back to nature, means back to nakedness, back to squalor, back to poverty and back to ignorance for the vast mass of the people.

The division of life into separate functions and of society into separate classes may not be altogether obliterated. In spite of many social and economic changes, in spite of the abolition of legal serfdom, legal slavery and the spread of the notion of democracy, with the extension of science, of general education through books, newspapers, travel and general intercourse in, schools and factories there remains and perhaps will remain enough cleavage in society into a learned and an ignorant class, a leisure and a labouring class.

But Gandhism is not satisfied with only notional class distinctions. Gandhism insists upon class structure. It regards the class structure of society and also the income structure as sacrosanct with the consequent distinctions of rich and poor, high and low owners and workers as permanent parts of social organisation. From the point of view of social consequences nothing can be more pernicious. Psychologically, class structure sets in motion influences which are harmful to both the classes. There is no common plane on which the privileged and the subject classes can meet. There is no endosmosis, no give and take of life's hopes and experiences. The social and moral evils of this separation to the subject class are of course real and obvious. It educates them into slaves and creates all the psychological complex which follows from a slave mentality. But those affecting the privileged class, though less material and less perceptible, are equally real. The isolation and exclusiveness following upon the class structure creates in the privileged classes the anti-social spirit of a gang. It feels it has interests 'of its own' which it makes its prevailing purpose to protect against everybody even against the interests of the State. It makes their culture sterile, their art showy, their wealth luminous and their manners fastidious. Practically speaking in a class structure there is, on the one hand, tyranny, vanity, pride, arrogance, greed, selfishness and on the other, insecurity, poverty, degradation, loss of liberty, self-reliance, independence, dignity and self-respect. Democratic society cannot be indifferent to such consequences. But Gandhism does not mind these consequences in the least. It is not enough to say that Gandhism is not satisfied with mere class

distinctions. It is not enough to say that Gandhism believes in a class structure. Gandhism stands for more than that. A class structure which is a faded, jejune, effete thing a mere sentimentality, a mere skeleton is not what Gandhism wants. It wants class structure to function as a living faith. In this there is nothing to be surprised at. For class structure in Gandhism is not a mere accident. It is its official doctrine.

The idea of trusteeship which Gandhism proposes as a panacea by which the moneyed classes will hold their properties in trust for the poor is the most ridiculous part of it. All that one can say about it is that if anybody else had propounded it the author would have been laughed at as a silly fool who had not known the hard realities of life and was deceiving the servile classes by telling them that a little dose of moral rearmament to the propertied classes—those who by their insatiable cupidity and indomitable arrogance have made and will always make this world a vale of tears for the toiling millions—will recondition them to such an extent that they will be able to withstand the temptation to misuse the tremendous powers which the class structure gives them over servile classes.

The social ideal of Gandhism is either caste or varna. Though it may be difficult to say which, there can be no doubt that the social ideal of Gandhism is not democracy. For whether one takes for comparison caste or varna both are fundamentally opposed to democracy. It would have been something if the defence of caste system which Gandhism offers was strong and honest. But his defence of the caste system is the most insensible piece of rhetoric one can think of. Examine Mr. Gandhi's arguments in support of caste and it will be found that everyone of them is specious if not puerile. To run through the arguments summarised earlier in this Chapter [f.8].

The first three arguments call for pity. That the Hindu Society has been able to stand while others have died out or disappeared is hardly a matter for congratulation. If it has survived it is not because of caste but because the foreigner who conquered the Hindus did not find it necessary to kill them wholesale. There is no honour in mere survival. What matters is the plane of survival. One can survive by unconditional surrender. One can survive by beating a cowardly retreat and one can survive by fighting. On what plane have the Hindus survived? If they can be said to have survived after fighting and beating their enemies the virtue ascribed to the caste system by Mr. Gandhi could be admitted.

The history of the Hindus has been one of surrender—abject surrender. It is true others have surrendered to their invaders. But in their case surrender is followed by a revolt against the foreign ruler. The Hindus have not only never withstood the onslaught of the foreign invader, they have never even shown the capacity to organise a rebellion to throw off the foreign yoke. On the other hand the Hindus have tried to make slavery comfortable. On this one may well argue the contrary namely that this helpless condition of the Hindus is due entirely to the caste system.

Argument in para 4 is plausible. But it cannot be said that caste is the only machinery for discharging such functions as the spread of primary education or the judicial settlement of disputes. Caste is probably the worst instrument for the discharge of such functions. It can be easily influenced and easily corrupted. Such functions have been discharged in other countries much better than they have been in India although they have had no caste system. As to using the caste as basis for raising military units the idea is simply fantastic. Under the occupational theory underlying the caste system this is unthinkable. Mr. Gandhi knows that not a single caste in his own Province of Gujarat has ever raised a military unit. It did not do it in the present World War. But it did not do so even in the last World War, when Mr. Gandhi toured through Gujarat as a Recruiting Agent of British Imperialism. In fact under the caste system a general mobilisation of the people for defence is impossible since mobilisation requires a general liquidation of the occupational theory underlying the caste system.

Arguments contained in paras 6 and 6 are as stupid as they are revolting. The argument in para 5 is hardly a good argument. It is quite true the family is an ideal unit in which every member is charged with love and affection for another member although there is no intermarriage among members of a family. It may even be conceded that in a Vaishnava family members of the family do not interdine and yet they are full of love and affection for one another. What does all this prove? It does not prove that interdining and intermarrying are not necessary for establishing fraternity. What it proves is that where there are other means of maintaining fraternity—such as consciousness of family tie—interdining and intermarriage are not necessary. But it cannot be denied that where—as in the caste system—no binding force exists intermarriage and interdining are absolutely essential. There is no analogy between family and caste, Inter-caste dinner and inter-caste

marriage are necessary because there are no other means of binding the different castes together while in the case of a family there exists other forces to bind them together. Those who have insisted upon the ban against inter-dining and inter-marriage have treated it as a question of relative values. They have never elevated it to the level of a question of absolute value. Mr. Gandhi is the first one to do it. Inter-dining is bad and -even if it was capable of producing good it-should not be resorted to and why? Because eating is a filthy act, as filthy as answering the call of nature ! The caste system has been defended by others. But this is the first time I have seen such an extraordinary if not a shocking argument used to support it, Even. the orthodox may say, "Save us from Mr. Gandhi," It. shows what a deep-dyed Hindu Mr. Gandhi is. He has outdone the most orthodox of orthodox Hindus. It is not enough to say that it is an argument of a cave man. It is really an argument of a mad man.

The argument in favour of the caste system outlined in para 7 is not worth much in terms of building up moral strength. The caste system no doubt prohibits a man from satisfying his lust for a woman who is not of his caste. The caste system no doubt prohibits a man from satisfying his craving for food cooked in the house of a man who is not of his caste. If morality consists of observing restraints without regard to the sense or sensibility of restraints then the caste system, may be admitted to be a moral system. But Mr. Gandhi does not see that these easy restraints are more than balanced by vast liberties permitted by Hinduism. For Hinduism places no restraint upon a man marrying hundred women and keeping hundred prostitutes within the ambit of his caste. Nor does it stop him from indulging in his appetite with his castemen to any degree.

The argument in para 8 begs the whole question. The hereditary system may be good or may not be good. It may be agreeable to some. It may be disagreeable to others. Why elevate it into an official doctrine? Why make it compulsory? In Europe it is not an official doctrine and it is not compulsory. It is left to the choice of an individual most of whom do follow the profession of their ancestors and some don't. Who can say that compulsory system has worked better than the voluntary system? If a comparison of the economic condition of the people in India and the people of Europe is any guide there would be very few rationally-minded people who would be found to support the caste system on. this ground. As to the difficulty in changing nomenclature to keep pace with

frequent changes in occupation it is only artificial, it arises out of the supposed necessity of having labels for designating persons following a particular profession. The class labels are quite unnecessary and could well be abolished altogether without causing difficulty. Besides what happens today in India? Men's callings and their class labels are not in accord. A Brahmin sells shoes. Nobody is disturbed because he is not called a Chamar. A Chamar becomes an officer of the State. Nobody is disturbed because he is not called a Brahmin. The whole argument is based on a misunderstanding. What matters to society is not the label by which the individual's class is known but the service he offers.

The last argument set out in para 9 is one of the most astounding arguments I have heard in favour of the caste system. It is historically false. No one who knows anything about the Manu Smriti can say that the caste system is a natural system. What does Manu Smriti show? It shows that the caste system is a legal system maintained at the point of a bayonet. If it has survived it is due to (1) prevention of the masses from the possession of arms; (2) denying to the masses the right to education and (3) depriving the masses of the right to property. The caste system far from natural is really an imposition by the ruling classes upon the servile classes.

That Mr. Gandhi changed over from the caste system to the varna system does not make the slightest difference to the charge that Gandhism is opposed to democracy. In the first place, the idea of varna is the parent of the idea of caste. If the idea of caste is a pernicious idea it is entirely because of the viciousness of the idea of varna. Both are evil ideas and it matters very little whether one believes in varna or in caste. The idea of varna was most mercilessly attacked by the Buddhists who did not believe in it. Orthodox or the Sanatan Vedic Hindus had no rational defence to offer. All that they could say was that it was founded on the authority of the Vedas and that as the Vedas were infallible so was the varna system. This argument was not enough to save the varna system against the rationalism of the Buddhists. If the idea of the varna survived it was because of the Bhagvat Gita, which gave a philosophical foundation to the varna system by arguing that the varna was based on the innate qualities of man. The Bhagvat Gita made use of the Sankhya philosophy to bolster and buttress the varna idea which would have otherwise petered away by making sense of a thing that is absolute nonsense. Bhagvat Gita had done enough mischief by giving a fresh lease of life to the varna system by basing it upon a new and plausible

foundation, namely that of innate qualities.

The varna system of the Bhagvat Gita has at least two merits. It does not say that it is based on birth. Indeed it makes a special point that each man's varna is fixed according to his innate qualities. It does not say that the occupation of the son shall be that of the father. It says that the profession of a person shall be according to his innate qualities, the profession of the father according to the father's innate quality and that of the son according to the son's innate qualities. But Mr. Gandhi has given a new interpretation of the varna system. He has changed it out of recognition. Under the old orthodox interpretation caste connoted hereditary occupation but varna did not. Mr. Gandhi by his own whim has given a new connotation to the varna. With Mr. Gandhi varna is determined by birth and the profession of a varna is determined by the principle of heredity so that varna is merely another name for caste. That Mr. Gandhi changed from caste to varna does not indicate the growth of any new revolutionary ideology. The genius of Mr. Gandhi is elvish, always and throughout. He has all the precocity of an elf with no little of its outward guise. Like an elf he can never grow up and grow out of the caste ideology.

Mr. Gandhi sometimes speaks on social and economic subjects as though he was a blushing Red. Those who will study Gandhism will not be deceived by the occasional aberrations of Mr. Gandhi in favour of democracy and against capitalism. For Gandhism is in no sense a revolutionary creed. It is con-servatism in excelsis. So far as India is concerned, it is a reactionary creed blazoning on its banner the call of Return to Antiquity. Gandhism aims at the resuscitation and reanimation of India's dread, dying past.

Gandhism is a paradox. It stands for freedom from foreign domination, which means the destruction of the existing political structure of the country. At the same time it seeks to maintain intact a social structure which permits the domination of one class by another on a hereditary basis which means a perpetual domination of one class by another. What is the explanation of this paradox? Is it a part of a strategy by Mr. Gandhi to win the whole-hearted support of the Hindus, orthodox and unorthodox, to the campaign of Swaraj? If it is the latter, can Gandhism be regarded as honest and sincere? Be that as it may there are two features of Gandhism which are revealing but to which unfortunately no attention has so far been paid. Whether they will make

Gandhism more acceptable than Marxism is another matter. But as they do help to distinguish Gandhism from Marxism, it may be well to refer to them.

The first special feature of Gandhism is that its philosophy helps those who have, to keep what they have and to prevent those who have not from getting what they have a right to get. No one who examines the Gandhian attitude to strikes, the Gandhian reverence for Caste and the Gandhian doctrine of Trusteeship by the rich for the benefit of the poor can deny that this is upshot of Gandhism. Whether this is the calculated result of a deliberate design or whether it is a matter of accident may be open to argument. But the fact remains that Gandhism is the philosophy of the well-so-do and the leisure class.

The second special feature of Gandhism is to delude people into accepting their misfortunes by presenting them as best of good fortunes. One or two illustrations will suffice to bring out the truth of this statement.

The Hindu sacred law penalized the Shudras (Hindus of the fourth class) from acquiring wealth. It is a law of enforced poverty unknown in any other part of the world. What does Gandhism do? It does not lift the ban. It blesses the Shudra for his moral courage to give up property ! ! It is well worth quoting Mr, Gandhi's own words. Here they are[f.9] :

"The Shudra who only serves (the higher caste) as a matter of religious duty, and who will never own any property, who indeed has not even the ambition to own anything, is deserving of thousand obeisance. The very Gods will shower down flowers on him.

Another illustration in support is the attitude of Gandhism towards the scavenger. The sacred law of the Hindus lays down that a scavenger's progeny shall live by scavenging. Under Hinduism scavenging was not a matter of choice, it was a matter of forced What does Gandhism do? It seeks to perpetuate this system by praising scavenging as the noblest service to society ! ! Let me quote Mr. Gandhi : As a President of a Conference of the Untouchables, Mr. Gandhi said [f.10]:

"I do not want to attain Moksha. I do not want to be reborn. But if I have to be reborn, I should be born an untouchable, so that I may share their sorrows, sufferings and the affronts levelled at them, in

order that I may endeavour to free myself and them from that miserable condition. I, therefore prayed that if I should be born again, I should do so not as a Brahmin, Kshatriya, Vaishya, or Shudra, but as an Atishudra.

"I love scavenging. In my Ashram, an eighteen years old Brahmin lad is doing the scavenger's work in order to teach the Ashram scavenger cleanliness. The lad is no reformer. He was born and bred in orthodoxy. But he felt that his accomplishments were incomplete until he had become also a perfect sweeper, and that. if he wanted the Ashram sweeper to do his work well, he must do it himself and set an example.

"You should realise that you are cleaning Hindu Society."

Can there be a worse example of false propaganda than this attempt of Gandhism to perpetuate evils which have been deliberately imposed by one class over another? If Gandhism preached the rule of poverty for all and not merely for the Shudra the worst that could be said about it is that it is a mistaken idea. But why preach it as good for one class only? Why appeal to the worst of human failings, namely, pride and vanity in order to make him voluntarily accept what on a rational basis he would resent as a cruel discrimination against him? What is the use of telling the scavenger that even a Brahmin is prepared to do scavenging when it is clear that according to Hindu Shastras and Hindu notions even if a Brahmin did scavenging he would never be subject to the disabilities of one who is a born scavenger? For in India a man is not a scavenger because of his work. He is a scavenger because of his birth irrespective of the question whether he does scavenging or not. If Gandhism preached that scavenging is a noble profession with the object of inducing those who refuse to engage in it, one could understand it. But why appeal to the scavenger's pride and vanity in order to induce him and him only to keep on to scavenging[f.11] by telling him that scavenging is a noble profession and that he need not be ashamed of it? To preach that poverty is good for the Shudra and for none else, to preach that scavenging is good for the Untouchables and for none else and to make them accept these onerous impositions as voluntary purposes of life, by appeal to their failings is an outrage and a cruel joke on the helpless classes which none but Mr. Gandhi can perpetuate with equanimity and impunity. In this connection one is reminded of the words of Voltaire who in repudiation of an 'ism' very much like

Gandhism said: "Oh ! mockery to say to people that the suffering of some brings joy to others and works good to the whole I What solace is it to a dying man to know that from his decaying body a thousand worms will come into life?"

Criticism apart) this is the technique of Gandhism, to make wrongs done appear to the very victim as though they were his privileges. If there is an 'ism' which has made full use of religion as an opium to lull the people into false beliefs and false security, it is Gandhism. Following Shakespeare one can well say: Plausibility I Ingenuity ! Thy name is Gandhism.

IV

Such is Gandhism. Having known what is Gandhism the answer to the question, 'Should Gandhism become the law of the land what would be the lot of the Untouchables under it,' cannot require much scratching of the brain. How would it compare with the lot of the lowest Hindu? Enough has been said to show what would be his lot should the Gandhian social order come into being. In so far as the lowest Hindu and the Untouchable belong to the same disinherited class, the Untouchable's lot cannot be better. If anything it might easily be worse. Because in India even the lowest man among the Caste Hindus—why even the aboriginal and Hill Tribe man—though educationally and economically not very much above the Untouchables is still superior to the Untouchables. It is not he regards himself as superior to the Untouchables. The Hindu society accepts his claim to superiority over the Untouchables. The Untouchable will therefore continue to suffer the worst fate as he does now namely, in prosperity he will be the last to be employed and in depression the first to be fired.

What does Gandhism do to relieve the Untouchables from this fate? Gandhism professes to abolish Untouchability. That is hailed as the greatest virtue of Gandhism. But what does this virtue amount to in actual life? To assess the value of this anti-Untouchability which is regarded as a very big element in Gandhism, it is necessary to understand fully the scope of Mr. Gandhi's programme for the removal of Untouchability. Does it mean anything more than that the Hindus will not mind touching the Untouchables? Does it mean the removal of the ban on the right of the Untouchables to education? It would be better to take the two questions separately.

To start with the first question, Mr. Gandhi does not say that a Hindu should not take a bath after touching the Untouchables. If Mr. Gandhi does not object to it as a purification of pollution then it is difficult to see how Untouchability can be said to vanish by touching the Untouchables. Untouchability centres round the idea of pollution by contact and purification by bath to remove the pollution. Does it mean social assimilation with the Hindus? Mr. Gandhi has most categorically stated that removal of Untouchability does not mean inter-dining or inter-marriage between the Hindus and the Untouchables. Mr. Gandhi's anti-Untouchability means that the Untouchables will be classed as Shudras instead of being classed as Ati-Shudras[f.12] There is nothing more in it. Mr. Gandhi has not considered the question whether the old Shudras will accept the new Shudras into their fold. If they don't then the removal of Untouchability is a senseless proposition for it will still keep the Untouchables as a separate social category. Mr. Gandhi probably knows that the abolition of Untouchability will not bring about the assimilation of the Untouchables by the Shudras. That seems to be the reason why Mr. Gandhi himself has given a new and a different name to the Untouchables. The new name registers by anticipation what is likely to be the fact. By calling the Untouchables Harijans Mr. Gandhi has killed two birds with one stone. He has shown that assimilation of the Untouchables by the Shudras is not possible. He has also by his new name counteracted assimilation and made it impossible.

Regarding the second question, it is true that Gandhism is prepared to remove the old ban placed by the Hindu Shastras on the right of the Untouchables to education and permit them to acquire knowledge and learning. Under Gandhism the Untouchables may study law, they may study medicine, they may study engineering or anything else they may fancy. So far so good. But will the Untouchables be free to make use of their knowledge and learning? Will they have the right to choose their profession? Can they adopt the career of lawyer, doctor or engineer? To these questions the answer which Gandhism gives is an emphatic 'no. [f.13] 'The Untouchables must follow their hereditary professions. That those occupations they are unclean is no answer; That before the occupation became hereditary it was the result of force and not volition does not matter. ..The argument of Gandhism is that what is once settled is settled for ever even if it was wrongly settled. Under Gandhism the Untouchables are to be eternal scavengers. There is no doubt that the Untouchables would much prefer the orthodox system of

Untouchability. A compulsory state of ignorance imposed upon the Untouchables by the Hindu Shastras made scavenging bearable. But Gandhism which compels an educated Untouchable to do scavenging is nothing short of cruelty. The grace in Gandhism is a curse in its worst form. The virtue of the anti-Untouchability plank in Gandhism is quite illusory. There is no substance in it.

V

What else is there in Gandhism which the Untouchables can accept as opening a way for their ultimate salvation? Barring this illusory campaign against Untouchability Gandhism is simply another form of Sanatanism which is the ancient name for militant orthodox Hinduism. What is there in Gandhism which is not to be found in orthodox Hinduism? There is caste in Hinduism, there is caste in Gandhism. Hinduism believes in the law of hereditary profession, so does Gandhism. Hinduism enjoins cow-worship. So does Gandhism. Hinduism upholds the law of karma, predestination of man's condition in this world, so does Gandhism. Hinduism accepts the authority of the Shastras. So does Gandhism. Hinduism believes in avatar or incarnations of God. So does Gandhism. Hinduism believes in idols, so does Gandhism[f.14]. All that Gandhism has done is to find a philosophic justification for Hinduism and its dogmas. Hinduism is bald in the sense that it is just a set of rules which bear on their face the appearance of a crude and cruel system. Gandhism supplies the philosophy which smoothens its surface and gives it the appearance of decency and respectability and so alters it and embellishes it as to make it even attractive. What philosophy does Gandhism propound to cover the nudity of Hinduism? This philosophy can be put in a nutshell. It is a philosophy which says that "All that is in Hinduism is well, all that is in Hinduism is necessary for public good." Those who are familiar with Voltaire's *Candide* will recognise that it is the philosophy of Master Pangloss and recall the mockery Voltaire made of it. The Hindus are of course pleased with it. No doubt it suits them and accords with their interest. Prof. Radhakrishnan—whether out of genuine feeling or out of sycophancy we need not stop to inquire—has gone to the length of describing Mr. Gandhi as * God on earth.' What do the Untouchables understand this to mean? To them it means that: "This God by name Gandhi came to console an afflicted race: He saw India and changed it not saying all is well and will be, if the Hindus will only fulfil the law of

caste. He told the afflicted race, ' I have come to fulfil the law of caste.' Not a tittle, not a jot shall I allow to abate from it."

What hope can Gandhism offer to the Untouchables? To the Untouchables Hinduism is a veritable chamber of horrors. The sanctity and infallibility of the Vedas, Smritis and Shastras, the from law of caste, the heartless law of karma and the senseless law of status by birth are to the Untouchables veritable instruments of torture which Hinduism has forged against the Untouchables. These very instruments which have mutilated, blasted and blighted the life of the Untouchables are to be found intact and untarnished in the bosom of Gandhism. How can the Untouchables say that Gandhism is a heaven and not a chamber of horrors as Hinduism has been? The only reaction and a very natural reaction of the Untouchables would be to run away from Gandhism.

Gandhists may say that what I have stated applies to the old type of Gandhism. There is a new Gandhism, Gandhism without caste. This has reference to the recent statement[f.15] of Mr. Gandhi that caste is an anachronism. Reformers were naturally gladdened by this declaration of Mr. Gandhi. And who would not be glad to see that a man like Mr. Gandhi having such terrible influence over the Hindus, after having played the most mischievous part of a social reactionary, after having stood out as the protagonist of the caste system, after having beguiled and befooled the unthinking Hindus with arguments which made no distinction between what is fair and foul should have come out with this recantation? But is this really a matter for jubilation? Does it change the nature of Gandhism? Does it make Gandhism a new and a better 'ism' than it was before. Those who are carried away by this recantation of Mr. Gandhi, forget two things. In the first place all that Mr. Gandhi has said is that caste is an anachronism. He does not say it is an evil. He does not say it is anathema. Mr. Gandhi may be taken to be not in favour of caste. But Mr. Gandhi does not say that he is against the Varna system. And what is Mr. Gandhi's varna system? It is simply a new name for the caste system and retains all the worst features of the caste system.

The declaration of Mr. Gandhi cannot be taken to mean any fundamental change in Gandhism. It cannot make Gandhism acceptable to the Untouchables. The Untouchables will still have ground to say :

"Good God I Is this man Gandhi our Saviour?"

APPENDIX I SHRADHANAND ON BARDOLI PROGRAMME FOR UNTOUCHABLES

Correspondence between Swami Shradhanand and Pandit Motilal Nehru, General Secretary of the Congress, on the Congress Sub-Committee appointed in 1922 to frame a Scheme for the uplift of the Untouchables,

(1)(1) SWAMIJI'S LETTER

The General Secretary,
All India Congress Committee,
Camp, Delhi.

I acknowledge, with thanks, receipt of your letters Nos. 331 and 332 embodying resolutions of the Working Committee and of the All-India Congress Committee about Untouchability. I observe with pain, that the resolution of the All India Congress Committee, as at present worded, does not include the whole of what was passed by the Committee.

The facts are these : I sent the following letter to Mr. Vithalbai Patel (the then) General Secretary on 23rd May 1922, which was also published by the principal dailies of the country.

'MY DEAR MB. PATEL,

There was a time (vide *Young India* of 25th May, 1921) when Mahatmajji put the question of Untouchability in the forefront of the Congress programme. I find now that the question of raising the Depressed Classes has been relegated to an obscure corner. While Khadi claims the attention of some of our best workers and a liberal sum has been earmarked for it, for the year, while a strong sub-committee has been appointed to look after national education and a special appeal for fund is to be made for the same, the question of the removal of

Untouchability has been shelved by making small grants to Ahmedabad, Ahmednagar and Madras. I am of opinion that with a majority of 6 crores of our brethren set against us by the bureaucracy, even the Khadi Scheme cannot succeed completely. The Members of the Working Committee, perhaps, do not know that on this side, our suppressed brethren are leaving off khadi and taking to buying cheap foreign cloth. I want to move the following resolution in the meeting of the All-India Congress Committee which comes off on the 7th of June next at Lucknow, that a sub-committee consisting of three members of the All-India Congress Committee be appointed to give effect to the resolution about the so-called Depressed Classes, that a sum of five lakhs of rupees be placed at their disposal for propaganda work and that in future all applications for grants be referred to the said subcommittee for disposal." My proposal was amended by the Working Committee and ran as follows:—

"This Committee hereby appoints a committee consisting of Swami Shradhanand, Mrs. Sarojini Naidu and Messrs. G. B. Deshpande and 1. K. Yajnik to formulate a scheme embodying practical measures to be adopted for bettering the condition of the so-called Untouchables throughout the country and to place it for consideration before the next meeting of the Working Committee, the amount to be raised for the scheme to be Rs. 2 lakhs for the present."

Mr. Patel asked me to accept the Working Committee's proposed resolution *in toto*. I refused to accept the Working Committee's resolution and in the very first sitting of the All-India Congress Committee substituted 5 lakhs for 2 lakhs with the condition that one lakh of the same be allotted by the All-India Congress Committee out of the funds in its hands, in cash and an appeal be made for the balance.

Mr. Rajagopalachariar, on behalf of the Working Committee, proposed that instead of fixing the amount to be allotted out of the Congress funds now, it should be provided that when the Scheme was accepted by the Working Committee that Committee should allot as much cash as it could then spare for this purpose. I do not recollect the exact words but the purport of the amendment as given above is, to my knowledge, true.

On this an uproar arose and the query was pressed from all sides that the cash balance in the hands of the All-India Congress Committee ought to be announced. The President called me aside and told me in confidence that the Congress possessed very little cash balance and if pressed to disclose the true state of affairs it would harm the movement,

as outsiders and even C.I.D. people were also present. On this I accepted the amendment of Mr. Rajagopalachariar in spite of protests from my seconder and supporters. But my surprise was great when I found the resolution in the dailies, as reported by the Associated Press, shorn of Mr. Rajagopalachariar's amendment.

After the above resolution was passed, some members suggested that a convener of the sub-committee ought to be appointed and several members proposed me as the convener. On this, Mr. Vithalbhai Patel (the then General Secretary) got up and said : "As Swami Shradhanand's name occurs first, naturally he will be the convener and therefore there was no need of moving any fresh resolution at all."

Members from all parts of the country began to give information to me about Untouchability in their provinces and pressed me to visit their parts. On this, I made some promises. Then I thought that without some cash for preliminary expenses, no enquiries on the spot could be made and hence no proper scheme could be formulated. I also learnt that Rs. 25,000 had been voted by the Working Committee for "the Independent" of Allahabad and that an application for grant of Rs. 10,000 to the Urdu daily *Congress* of Delhi had been placed by Hakim Ajmal Khan and Dr. Ansari before the Working Committee. So, considering that after all, the Congress might not be so hard pressed 'for cash, I wrote a letter addressed to the President, asking him to give the Untouchability Sub-Committee an advance of Rs. 10,000 for preliminary expenses.

After all this, the following resolution of the Working Committee forwarded by your letter No. 331 presents a very interesting reading;—

"Read letter from Swami Shradhanand, dated 8th June 1922 for an advance for drawing up a scheme for Depressed Class work— Resolved that Mr. Gangadharrao B. Deshpande be appointed convener of the sub-committee appointed for the purpose and he be requested to convene a meeting at an early date, and that Swami Shradhanand's letter be referred to the Sub-Committee"

There is another matter which is inexplicable. After my first letter had been acknowledged, I addressed the following letter from Haridwar on 3rd June 1922:—

"MY DEAR MR. PATEL,

I shall leave Haridwar the day after tomorrow and reach Lucknow on the morning of June 9th. You know by now, that I feel the most for the so-called Depressed Classes. Even in the Punjab I find that no attention worth the name has been paid to this item of the constructive

programme. In the U. P. of course it will be an uphill work. But there is another very serious difficulty.

The Bardoli programme in its note under item (4) lays down that where prejudice is still strong, separate wells and separate schools must be maintained out of the Congress Funds. This leaves a loophole for those Congress workers who are either prejudiced against the Depressed Classes or are weak and no work can be done in inducing people to agree to allow the Untouchables to draw water from common wells. In the Bijnoor District, I learn there was no restriction and the Untouchables drew water freely from common wells. But in some places, fresh prejudice is being engendered under the aegis of the Bardoli resolution note. In my recent visits to Ambala Cant., Ludhiana, Batala, Lahore, Amritsar and Jandiala, I found that the question of the removal of disabilities of the Untouchables is being ignored. In and near Delhi, it is the Dalitodhar Sabha, of which I am the president, rather than the Congress which is doing appreciable work. I think that unless item (4) of the Bardoli constructive programme is amended in proper form, the work which I consider to be the most important plank in the Congress programme, will suffer.

Kindly place the following proposal before the President and if he allows it to be placed before the next meeting, of the All-India Congress Committee, I shall move it there—"Instead of the Note under item (4) of the Bardoli resolution substitute the following note;—,

"The following demands of the Depressed Classes ought to be complied with at once, namely that (a) they are allowed to sit on the same carpet With citizens of other classes ; (b) they get the right to draw water from common wells and (c) their children get admission into National schools and Colleges and are allowed to mix freely with students drawn from the so-called higher castes."

I want to impress upon the members of the All-India Congress Committee the great importance of this .term. I know of cases where the Depressed Classes are in open revolt against tyranny of the so-called upper castes and unless the above demands are conceded to them, they will succumb to the machine of the bureaucracy.

After my first proposals were passed in the All-India Congress-Committee Meeting on *June* 7th at Lucknow, I asked Mr. Patel to put my proposed amendment of Note to item (4) of Bardoli resolution before the meeting. He told me that the Working Committee would refer it to the .Sub-Committee and asked me not to press it there. I agreed. But I have not received copy ,of my resolution of the Working

Committee, referring my proposal to the Untouchability Sub-Committee.

The Untouchability question is very acute in and near Delhi and I have to grapple with it at once. But the Sub-Committee cannot begin work off-hand because the Working Committee has to take several other political situations in the country into consideration before deciding upon any scheme of practical measures to be adopted for uprooting Untouchability on behalf of the Congress. Under these circumstances, I cannot be of any use to the Subcommittee and beg to resign from membership.

Yours sincerely,
SHRADHANAND SANYASI.

Delhi, Jan. 80.

SECRETARY'S REPLY

DEAR SWAMIJI,

Your letter, dated June 1922 received in my office on the 30th of that month, has by a resolution of the Working Committee passed in Bombay on the 18th instant been referred to me with instructions to explain facts and request you to be good enough to reconsider your resignation from the Depressed Classes Sub-Committee.

As you are aware, I have no personal knowledge of the facts which happened prior to my release from the jail. But I was present at the meeting of the Working Committee which passed the resolution dated 10th June 1922, appointing Mr. Deshpande as the Convener of the Sub-Committee. It was not then mentioned that there was any understanding about any particular member acting as the convener of the Sub-Committee and the whole resolution was passed merely to complete the necessary formalities in regard to the payment of money. It was felt that a formal resolution of the Sub-Committee was necessary before any expenditure could be sanctioned. Mr. Deshpande was accordingly appointed as the convener and a sum of Rs. 500/- was voted for the expense of these preliminary steps. By an oversight, the resolution as drafted omitted to mention the sanction of Rs. 500/-. You will thus observe that it was not due to the unwillingness of the Working Committee to sanction Rs. 10,000/- for Untouchability, but the true reason for framing the resolution in the manner it was framed was that I have explained above. Nothing could be farther from the intention of the Working Committee than a desire to under-rate the importance of the work your Sub-Committee was called upon to do or in any way to ignore the valuable advice tendered by you. On your letter being placed

before the last meeting of the Working Committee, the omission of the grant of Rs. 500/- was supplied and I was instructed to communicate with you on the subject. It will be a great pity if the Sub-Committee is deprived of the benefit of your experience and special knowledge of the whole question of Untouchability and I will ask you, therefore, in public interest, to reconsider your decision and wire to my office at Allahabad withdrawing your resignation from the Sub-Committee. I need hardly add that any resolutions arrived at by your Sub-Committee will receive all the consideration they deserve at the hands of the Working Committee.

As to the alteration in the Working Committee's resolution in regard to separate wells and schools, the best course would be for your Sub-Committee to recommend the change and for the Working Committee to adopt it.

I am afraid you are under a misapprehension as regards the grant to *The Independent*, of Allahabad, and *The Congress* of Delhi. In reference to the former, all that has been done is to sanction the application of the U. P. Provincial Committee to advance as a loan to the "Nationalist Journals" Ltd., Rs. 25,000/- from the funds already granted to that Committee and in reference to the latter, the application for a grant of a loan was wholly rejected.

Yours sincerely,
MOTILAL NEHRU,
Bombay,
General Secretary,

July 23, 1922.

(2) (2) SWAMIJI'S REJOINDER

DEAR PANDIT MOTILALJI,

I received your letter of 23rd July 1922 addressed from Bombay about my resignation from the Untouchability Sub-Committee, I am sorry I am unable to reconsider it because some of the facts brought out by me in my first letter have simply been ignored.

- (1)(1) Kindly enquire of Mr. Rajagopalachariar Whether I did not first propose that at least one lakh should be given in cash out of the funds in the hands of the All-India Congress Committee, whether he did not move an amendment substituting words for the above which purported to promise that when the plan of work formulated by the Sub-Committee was accepted by the Working Committee, that Committee would allot as much money for Untouchability

department as it could then spare and whether I did not accept his amendment when the President called me aside and explained the exact financial position at the time. If this is the fact, then why did the amendment not appear with the resolution?

- (2)(2) Did you enquire of Mr. Vithalbai J. Patel whether the members of the All-India Congress Committee did not propose me as the convener of the Sub-Committee and whether he did not then say—"As Swami Shradhanand's name occurs first naturally he will be the convener and therefore there was no need of moving any fresh resolution at all?" I enquired about this from Dr. Ansari and he wrote back to me on June 17th, 1922, saying that I was appointed convener. Dr. Ansari is with you and you can verify it from him. I hope Mr. Patel has not forgotten all about it.
- (3)(3) Then the immediate work among the Untouchables here is very urgent and I cannot delay it for any reason whatsoever. Kindly have my resignation accepted in the next meeting of the Working Committee, so that I may be free to work out my own plan about the removal of Untouchability. This was my position at the end of July last. My experience in the Amritsar and Mianwali Jails and the information I gathered there have confirmed me in the belief that unless sexual purity (Brahmacharya) is revived on the ancient Aryan lines and the curse of Untouchability is blotted out of the Indian Society, no efforts of the Congress nor of other patriotic organisations out of the Congress will avail in their efforts for the attainment of Swaraj. And as national self-realization and virile existence is impossible without Swaraj, I, as a Sanyasi, should devote the rest of my life to this sacred cause—the cause of sexual purity and true national unity.

Yours, etc.

SHRADHANAND SANYASI.

Delhi, July 23, 1922.

APPENDIX II

POLITICAL SAFEQUARDS FOR DEPRESSED CLASSES

Supplementary Memorandum on the claims of the Depressed Classes for Special Representation, submitted to the R. T. C, by Dr, Bhimrao R. Ambedkar and Rao.Bahadur R. Srinivasan,

In the memorandum that was submitted by us last year dealing with the question of political safeguards for the protection of the Depressed Classes in toe constitution for a self-governing India, and which forms

Appendix III to the printed volume of Proceedings of the Minorities Sub-Committee, we had demanded that special representation of the Depressed Classes must form one of such safeguards. But we did not then define the details of the special representation we claimed as being necessary for them. The reason was that the proceedings of the Minorities Sub-Committee came to an end before the question was reached. We now propose to make good the omission by this supplementary memorandum so that the Minorities Sub-Committee, if it comes to consider the question this year, should have the requisite details before it.

(1)(1) EXTENT OF SPECIAL REPRESENTATION

A. A. *Special Representation in provincial Legislature*

- (I) (I) In Bengal, Central Provinces, Assam, Bihar and Orissa, Punjab and the United Provinces, the Depressed Classes shall have representation in proportion to their population as estimated by the Simon Commission and the Indian Central Committee.
- (II) (II) In Madras, the Depressed Classes shall have twenty-two per cent representation.
- (III) (III) In Bombay:
- (a) (a) in the event of Sind continuing to be a part of the Bombay Presidency, the Depressed Classes shall have sixteen per cent. Representation;
- (b) (b) in the event of Sind being separated from the Bombay Presidency the Depressed Classes shall enjoy the same degree of representation as the Presidency Muslims, both being equal in population. '

B. B. *Special Representation in the Federal Legislature.*

In Both Houses of the Federal Legislature, the Depressed Classes shall have representation in proportion to their *population in India*.

RESERVATIONS

We have fixed this proportion of representation in the Legislatures on the following assumptions:—

- (1) (1) We have assumed that the figures for the population of the Depressed Classes given by the Simon Commission (Vol. I, p. 40) and the Indian Central Committee (Report p. 44) will be acceptable as sufficiently correct to form a basis for distributing seats.
- (2) (2) We have assumed that the Federal Legislature will comprise the whole of India, in which case the population of the Depressed

Classes in Indian States, in Centrally Administered Areas, and in Excluded Territories, besides their population in Governor's Provinces, will form very properly an additional item in calculating the extent of representation of the Depressed Classes in the Federal Legislature.

- (3) (3) We have assumed that the administrative areas of the Provinces of British India will continue to be what they are at present.

But if the assumptions regarding figures of population are challenged, as some interested parties threaten to do, and if under a new census the Depressed Classes show a lower proportion, or if the administrative areas of the Provinces are altered, resulting in disturbing the existing balance of population, the Depressed Classes reserve their right to revise their proportion of representation and even to claim weightage. In the same way, if the All-India Federation does not come into being, they will be willing to submit to readjustment in their proportion of representation calculated on that basis in the Federal Legislature.

(2) (2) METHOD OF REPRESENTATION

1. 1. The Depressed Classes shall have the right to elect their representatives to the Provincial and Central Legislature through separate electorates of their voters.

For their representation in the Upper House of the Federal or Central Legislature, if it is decided to have indirect election by members of the Provincial Legislatures, the Depressed Classes will agree to abandon their right to separate electorates so far as their representation to the Upper House is concerned subject to this: that in any system of proportional representation arrangement shall be made to guarantee to them their quota of seats.

2. 2. Separate electorates for the Depressed Classes shall not be liable to be replaced by a system of joint electorates and reserved seats, except when the following conditions are fulfilled :—

(a) A referendum of the voters held at the demand of a majority of their representatives in the Legislatures concerned and resulting in an absolute majority of the members of the Depressed Class having the franchise.

{b) No such referendum shall be resorted to until after twenty years and until universal adult suffrage has been established.

(3) NECESSITY OF DEFINING THE DEPRESSED CLASSES

The representation of the Depressed Classes has been grossly abused in the past inasmuch as persons other than the Depressed Classes were nominated to represent them in the Provincial Legislatures, and cases are not wanting in which persons not belonging to the Depressed Classes got themselves nominated as representatives of the Depressed Classes. This abuse was due to the fact that while the Governor was given the power to nominate persons to represent the Depressed Classes, he was not required to confine his nomination to persons belonging to the Depressed Classes. Since nomination is to be substituted by election under the new constitution, there will be no room for this abuse. But in order to leave no loophole for defeating the purpose of their special representation we claim

- (i) That the Depressed Classes shall not only have the right to their own separate electorates, but they shall also have the right to be represented by their own men.
- (ii) That in each Province the Depressed Classes shall be strictly defined as meaning persons belonging to communities which are subjected to the system of Untouchability of the sort prevalent therein and which are enumerated by name in a schedule prepared for electoral purposes.

(4) NOMENCLATURE

In dealing with this part, of the question we would like to point out that the existing nomenclature of Depressed Classes is objected to by members of the Depressed Classes who have given thought to it and also by outsiders who take interest in them. It is degrading and contemptuous, and advantage may be taken of this occasion for drafting the new constitution to alter for official purposes the existing nomenclature. We think that they should be called "Non-Caste Hindus," "Protestant Hindus," or "Non-Conformist Hindus," or some such designation, instead of "Depressed Classes." We have no authority to press for any particular nomenclature. We can only suggest them, and we believe that if properly explained the Depressed Classes will not hesitate to accept the one most suitable for them.

We have received a large number of telegrams from the Depressed Classes all over India, supporting the demands contained in this Memorandum.

Nov. 4th 1931.

WHAT CONGRESS AND GANDHI HAVE DONE TO THE

UNTOUCHABLES

APPENDICES

Appendix III : Minorities Pact

APPENDIX III

MINORITIES PACT

Provisions for a Settlement of the Communal Problem, put forward jointly by Muslims, Depressed Classes, Indian Christians, Anglo-Indians and Europeans,

CLAIMS OF MINORITY COMMUNITIES

1. 1. No person shall by reason of his origin, religion, caste or creed, be prejudiced in any way in regard to public employment, office of power or honour, or with regard to enjoyment of his civic rights and the exercise of any trade or calling.
2. 2. Statutory safeguards shall be incorporated in the constitution with a view to protect against enactments of the Legislature of discriminatory laws affecting any community.
3. 3. Full religious liberty, that is, full liberty of belief, worship observances, propaganda, associations and education, shall be guaranteed to all communities subject to the maintenance of public order and morality.
No person shall merely by change of faith lose any civic right or privilege, or be subject to any penalty.
4. 4. The right to establish, manage and control, at their own expense, charitable, religious and social institutions, schools and other educational establishments with the right to exercise their religion therein.
5. 5. The constitution shall embody adequate safeguards for the protection of religion, culture and personal law, and the promotion of education, language, charitable institutions of the minority communities and for their due share in grants-in-aid given by the State

and by the self-governing bodies.

6. 6. Enjoyment of civic rights by all citizens shall be guaranteed by making any act or omission calculated to prevent full enjoyment an offence punishable by law.
7. 7. In the formation of Cabinets in the Central Government and Provincial Governments, so far as possible, members belonging to the Mussalman community and other minorities of considerable number shall be included by convention.
8. 8. There shall be Statutory Departments under the Central and Provincial Governments to protect minority communities and to promote their welfare.
9. 9. All communities at present enjoying representation in any Legislature through nomination or election shall have representation in all Legislatures through separate electorates and the minorities shall have not less than the proportion set forth in the Annexure but no majority shall be reduced to a minority or even an equality, Provided that after a lapse of ten years it will be open to Muslims in Punjab and Bengal and any minority communities in any other Provinces to accept joint electorates, or joint electorates with reservation of seats, by the consent of the community concerned. Similarly after the lapse of ten years, it will be open to any minority in the Central Legislature to accept joint electorates with or without reservation of seats with the consent of the community concerned.

With regard to the Depressed Classes, no change to joint electorates and reserved seats shall be made until after 20 years' experience of separate electorates and until direct adult suffrage for the community has been established.
10. 10. In every Province and in connection with the Central Government, a Public Services Commission shall be appointed, and the recruitment to the Public Services, except the proportion, if any, reserved to be filled by nomination by the Governor-General and the Governors, shall be made through such commission in such a way as to secure a fair representation to the various communities consistently with the considerations of efficiency and the possession of the necessary qualifications. Instructions to the Governor-General and the Governors in the Instrument of Instructions with regard to recruitment shall be embodied to give effect to this principle, and for that purpose to review periodically the composition of the Services.
11. 11. If a Bill is passed which, in the opinion of two-thirds of the

members of any Legislature representing a particular community, affects their religion or social practice based on religion, or in the case of fundamental rights of the subjects if one-third of the members object, it shall be open to such members to lodge their objection thereto, within a period of one month of the Bill being passed by the House, with the President of the House who shall forward the same to the Governor-General or the Governor, as the case may be, and he shall thereupon suspend the operation of that Bill for one year, upon the expiry of which period he shall remit the said Bill for further consideration by the Legislature. When such Bill has been further considered by the Legislature and the Legislature concerned has refused to revise or modify the Bill so as to meet the objection thereto, the Governor-General or the Governor, as the case may be, may give or withhold his assent to it in the exercise of his discretion, provided, further, that the validity of such Bill may be challenged in the Supreme Court by any two members of the denomination affected thereby on the ground that it contravenes *one* of their fundamental rights.

SPECIAL CLAIMS OF MUSSULMANS

- A. A.* The North -West Frontier Province shall be constituted a Governor's Province on the same footing as other Provinces with due regard to the necessary requirements for the security of the Frontier. In the formation of the Provincial Legislature, the nominations shall not exceed more than 10 per cent. of the whole.
- B. B.* Sind shall be separated from the Bombay Presidency and made a Governor's Province similar to and on the same footing as other Provinces in British India.
- C. C.* Mussulman representation in the Central Legislature shall be one-third of the total number of the House, and their representation in the Central Legislature shall not be less than the proportion set forth in the Annexure.

SPECIAL CLAIMS OF THE DEPRESSED CLASSES

- A. A.* The constitution shall declare invalid any custom or usage by which any penalty or disadvantage or disability is imposed upon or any discrimination is made against any subject of the State in regard to the enjoyment of the civic rights on account of Untouchability.
- B. B.* Generous treatment in the matter of recruitment to Public Services and the opening of enlistment in the Police and Military

Service.

- C. C. The Depressed Classes in the Punjab shall have the benefit of the Punjab Land Alienation Act extended to them.
- D. D. Right of Appeal shall lie to the Governor or Governor-General for redress of prejudicial action or neglect of interest by any Executive Authority.
- E. E. The Depressed Classes shall have representation not less than set forth in the Annexure.

SPECIAL CLAIMS OF THE ANGLO-INDIAN COMMUNITY

- A. A. Generous interpretation of the claims admitted by Subcommittee No. VIII (Services) to the effect that in recognition of the peculiar position of the community, special consideration should be given to the claim for public employment, having regard to the maintenance of an adequate standard of living.
- B. B. The right to administer and control its own educational institutions, i.e. European education, subject to the control of the Minister.
- Provisions for generous and adequate grants-in-aid and scholar-silip on the basis of present grants.
- (c) (c) Jury rights equal to those enjoyed by other communities in India unconditionally of proof of legitimacy and descent and the right of accused persons to claim trial by either a European or an Indian jury.

ANNEXURE—*Representation in Legislatures*. Figures in brackets
=Population basis 1931 figures and depressed percentages as per Simon
Report

Sind & N.W.F.P. Weightage similar to that enjoyed by the Musalmans in the Provinces in which they constitute a minority of the population, shall be given to the Hindu minority in Sind and to the Hindu and Sikh minorities in the N.W.P.P.

SPECIAL CLAIMS OF THE EUROPEAN COMMUNITY

- A. A.* Equal rights and privileges to those enjoyed by Indian-born subjects in all industrial and commercial activities.
- B. B.* The maintenance of existing rights in regard to procedure of criminal trials, and any measure or bill to amend, alter, or modify such a procedure cannot be introduced except with the previous consent of the Governor-General.

Agreed by:—

HIS HIGHNESS THE AGA KHAN (Muslims)

DR. AMBEDKAR (Depressed Classes)

RAO BAHADUR PANNIR SELVAM (Indian Christians)

SIR HENRY GIDNEY (Anglo-Indians)

SIR HUBERT CARR (Europeans).

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

APPENDICES

Appendix IV : Statement by B. R. Ambedkar on Gandhi's fast

Appendix V: Temple Entry in Travancore

APPENDIX IV

STATEMENT BY B. R. AMBEDKAR ON GANDHI'S FAST

Statement on Mr. Gandhi's attitude at the Round Table Conference to the Untouchables and their demand for Constitutional Safeguards, 19th September 1932.

I need hardly say that I was astounded to read the correspondence between Mahatma Gandhi, Sir Samuel Hoare and the Prime Minister, which was published recently in the Papers, in which he has expressed his determination to starve himself unto death till the British Government of its own accord or under pressure of public opinion revise their opinion and withdraw their scheme of communal representation for the Depressed Classes. The unenviable position, in which I have been placed by the Mahatma's vow of self-immolation, can easily be imagined.

It passes my comprehension why Mr. Gandhi should stake his life on an issue arising out of the communal question which he, at the Round Table Conference, said was one of a comparatively small importance. Indeed, to adopt the language of those of Mr. Gandhi's way of thinking, the communal question was only an appendix to the book of India's constitution and not the main chapter. It would have been justifiable, if Mr. Gandhi had resorted to this extreme step for obtaining independence for the country on which he was so insistent all through the R. T. C. debates. It is also a painful surprise that Mr. Gandhi should single out special representation for the Depressed Classes in the Communal Award as an excuse for his self-immolation. Separate electorates are granted not only to the Depressed Classes, but to the Indian Christians, Anglo-Indians, Europeans, as well as to the Mohammedans and the Sikhs. Also separate electorates are granted to landlords, labourers and traders. Mr. Gandhi had declared his opposition to the special representation of every other class and creed except the Mohammedans and the Sikhs. All the same, Mr. Gandhi chooses to let everybody else except the Depressed Classes retain the special electorates given to them.

The fears expressed by Mr. Gandhi about the consequences of the arrangements for the representation of the Depressed Classes are, in my opinion, purely imaginary. If the nation is not going to be split up by separate electorates to the Mohammedans and the Sikhs, the Hindu society cannot be said to be split up if the Depressed Classes are given separate electorates. His conscience is not aroused if the nation is split by the arrangements of Special Electorates for classes and communities other than the Depressed Classes.

I am sure many have felt that if there was any class which deserved to be given special political rights in order to protect itself against the

tyranny of the majority under the Swaraj constitution it was the Depressed Classes. Here is a class which is undoubtedly not in a position to sustain itself in the struggle for existence. The religion to which they are tied, instead of providing for them an honourable place, brands them as lepers, not fit for ordinary intercourse. Economically, it is a class entirely dependent upon the high-caste Hindus for earning its daily bread with no independent way of living open to it. Nor are all ways closed by reason of the social prejudices of the Hindus but there is a definite attempt all throughout the Hindu Society to bolt every possible door so as not to allow the Depressed Classes any opportunity to rise in the scale of life. Indeed it would not be an exaggeration to say that in every village the caste Hindus, however divided among themselves, are always in a standing conspiracy to put down in a 'merciless manner any attempt on the part of the Depressed Classes who form a small and scattered body of an ordinary Indian citizen.

In *these* circumstances, it would be granted by all fair-minded persons that as the only path for a community so handicapped to succeed in the struggle for life against organised tyranny, some share of political power in order that it may protect itself is a paramount necessity.

I should have thought that a well-wisher of the Depressed Classes would have fought tooth and nail for securing to them as much political power as might be possible in the new Constitution. But the Mahatma's ways of thinking are strange and are certainly beyond my comprehension. He not only does not endeavour to augment the scanty political power which the Depressed Classes have got under the Communal Award, but on the contrary he has staked his very life in order to deprive them of little they have got. This is not the first attempt on the part of the Mahatma to completely dish the Depressed Classes out of political existence. Long before, there was the Minorities Pact. The Mahatma tried to enter into an agreement with the Muslims and the Congress. He offered to the Muslims all the fourteen claims which they had put forth on their behalf, and in return asked them to join with him in testing the claims for social representation made by me on behalf of the Depressed Classes.

It must be said to the credit of the Muslim delegates, that they refused to be a party to such a black act, and saved the Depressed Class from 'what might as well have developed into a calamity for them as a result of the combined opposition of the Mohammedans and Mr. Gandhi.

I am unable to understand the ground of hostility of Mr. Gandhi to the Communal Award. He says that the Communal Award has separated' the Depressed Classes from the Hindu Community. On the other hand,- Dr. Moonje, a much stronger protagonist of the Hindu case and a militant advocate of its interests, takes a totally different view of the matter. In the speeches which he has been delivering since his arrival from London, Dr. Moonje has been insisting that the Communal Award does not create any separation between the Depressed Class and the Hindus. Indeed, he has been boasting that he has defeated me in my attempt to politically separate the Depressed Class from the Hindus. I am sure that Dr. Moonje is right in his interpretation of the Communal Award although, I am not sure that the credit of it can legitimately go to Dr. Moonje. It is therefore surprising that Mahatma Gandhi who is a nationalist and not known to be a communalist should read the Communal Award, in so far as it relates to the Depressed Class, in a manner quite contrary to that of a communalists like Dr. Moonje. If Dr. Moonje does not sense any separation of the Depressed Classes from the Hindus in the Communal Award the Mahatma ought to feel quite satisfied on that score.

In my opinion, that Communal Award should not only satisfy the Hindus, but also satisfy those individuals among the Depressed Classes such as Rao Bahadur Rajah, Mr. Baloo or Mr. Govai, who are in favour of Joint Electorates. Mr. Rajah's fulminations in the Assembly have amused me considerably. An intense supporter of Separate Electorates and the bitterest and the most vehement critic of caste Hindu tyranny, now professes faith in the Joint Electorates and love for the Hindus ! How much of that is due to his natural desire to resuscitate himself from the oblivion in which he was cast by his being kept out of the Round Table Conference and how much of it is to his honest change of faith, I do not propose to discuss.

The points on which Mr. Rajah is harping by way of criticism on the Communal Award are two: One is that the Depressed Classes have gained lesser number of seats than they are entitled to on the population basis, and the other is that the Depressed Classes have been separated from the Hindu fold.

I agree in his first grievance, but when the Rao Bahadur begins to accuse those who represented the Depressed Classes at the R. T. C. for having sold their rights, I am bound to point out what Mr. Rajah did as

a member of the Indian Central Committee. In that Committee's report, the Depressed Classes were given in Madras 10 seats out of 150; in Bombay 8 seats out of 14; in Bengal 8 seats out of 200 ; in U. P. 8 seats out of 182; in the Punjab 6 seats out of 150 ; in Behar and Orissa 6 out of 150; in C. P. 8 out of 125 and in Assam, 9 seats for the Depressed Classes and the indigenous and primitive races out of 75. I do not wish to overburden this statement by pointing out how this distribution compares with the population ratio. But there can be no doubt that this meant a terrible under-representation of the Depressed Classes. To this distribution of seats Mr. Rajah was a party. Surely, Mr. Rajah, before he criticises the Communal Award and accuses others, should refresh his memory of what he accepted as Member of the Indian Central Committee on behalf of the Depressed Classes without any protest. If the population ratio of representation was to him a natural right of Depressed Classes and its full realisation was a necessity for their protection, why did not Mr. Rajah insist upon it in the Central Committee when he had an opportunity to do so?

As to his contention that in the Communal Award, the Depressed Classes have been separated from the caste Hindus, it is a view to which I cannot subscribe. If Mr. Rajah has any conscientious objection to separate Electorates, there is no compulsion on him to stand as a candidate in the Separate Electorates. The opportunity to stand as a candidate in the general electorate as well as the right to vote in it are there, and Mr. Rajah is free to avail himself of the same. Mr. Rajah is crying at the top of his voice to assure to the Depressed Classes that there is a complete change of heart on the part of the Caste Hindus towards the Depressed Class. He will have the opportunity to prove that fact to the satisfaction of the Depressed Class, who are not prepared to take his word by getting himself elected in the general constituency. The Hindus, who profess love and sympathy for the Depressed Classes, will have also an opportunity to prove their *bona fides* by electing Mr. Rajah to the legislature.

The Communal Award, therefore, in my opinion, satisfied both those who want separate Electorates and those who want joint Electorates. In this sense, it is already a compromise and should be accepted as it is. As to the Mahatma, I do not know what he wants. It is assumed that although Mahatma Gandhi is opposed to the system of separate electorates, he is not opposed to the system of Joint Electorates and Reserved Seats. That is a gross error. Whatever his views are today,

while in London he was totally opposed to any system of Special representation for the Depressed Classes whether by joint Electorates or by Separate Electorates. Beyond the right to vote in a general electorate based upon Adult Suffrage, he was not prepared to concede anything to the Depressed Classes by way of securing their representation in the legislatures. This was the position he had taken at first. Towards the end of the R. T. C. he suggested to me a scheme, which he said, he was prepared to consider. The scheme was purely conventional without any constitutional sanction behind it and without any single seat being reserved for the Depressed Classes in the electoral law. The scheme was as follows :

Depressed Class candidates might stand in the general electorate as against other high caste Hindu candidates. If any Depressed Class Candidate was defeated in the election, he should file an election petition and obtain the verdict that he was defeated because he was an Untouchable. If such a decision was obtained, the Mahatma said he would undertake to induce some Hindu members to resign and thus create a vacancy. There would be then another election in which the defeated Depressed Class candidate or any other Depressed Class candidate might again try his luck as against the Hindu candidates. Should he be defeated again, he should get similar verdict that he was defeated because he was an Untouchable and so on *ad infinitum*. I am disclosing these facts as some people are even now under the impression that the Joint Electorates and Reserved Seats would satisfy the conscience of the Mahatma. This will show why I insist that there is no use discussing the question until the actual proposals of the Mahatma are put forth.

I must, however, point out that I cannot accept the assurances of the Mahatma that he and his Congress will do the needful. I cannot leave so important a question as the protection of my people to conventions and understandings. The Mahatma is not an immortal person, and the Congress, assuming it is not a malevolent force, is not to have an abiding existence. There have been many Mahatmas in India whose sole object was to remove Untouchability and to elevate and absorb the Depressed Classes, but every one of them has failed in his mission. Mahatmas have come and Mahatmas have gone. But the Untouchables have remained as Untouchables.

I have enough experience of the pace of Reform and the faith of

Hindu reformers in the conflicts that have taken place at Mahad and Nasik, to say that no well-wisher of the Depressed Classes will ever consent to allow the uplift of the Depressed Classes to rest upon such treacherous shoulders. Reformers who in moments of crises prefer to sacrifice their principles rather than hurt the feelings of their kindred can be of no use to the Depressed Classes.

I am therefore bound to insist upon a Statutory guarantee for the protection of my people. If Mr. Gandhi wishes to have the Communal Award altered, it is for him to put forth his proposals and to prove that they give a better guarantee than has been given to us under the Award.

I hope that the Mahatma will desist from carrying out the extreme step contemplated by him. We mean no harm to the Hindu society when we demand separate electorates. If we choose separate electorates, we do so in order to avoid the total dependence on the sweet will of the Caste Hindus in matters affecting our destiny. Like the Mahatma we also claim our right to err, and we expect him not to deprive us of that right. His determination to fast himself unto death is worthy of a far better cause. I could have understood the propriety of the Mahatma contemplating such extreme step for stopping riots between Hindus and Mohammedans or between the Depressed Classes and the Hindus or any other national cause. It certainly cannot improve the lot of the Depressed Classes. Whether he knows it or not, the Mahatma's act will result in nothing but terrorism by his followers against the Depressed Classes all over the country.

Coercion of this sort will not win the Depressed Classes to the Hindu fold if they are determined to go out. And if the Mahatma chooses to ask the Depressed Classes to make a choice between Hindu faith and possession of political power, I am quite sure that the Depressed Classes will choose political power and save the Mahatma from self-immolation. If Mr. Gandhi coolly reflects on the consequences of his act, I very much doubt whether he will find this victory worth having. It is still more important to note that the Mahatma is releasing reactionary and uncontrollable forces, and is fostering the spirit of hatred between the Hindu Community and the Depressed Classes by resorting to this method and thereby widening the existing gulf between the two. When I opposed Mr. Gandhi at the R. T. C. there was a hue and cry against me in the country and there was a conspiracy in the so-called nationalist press to represent me as a traitor to the nationalist cause, to suppress

correspondence coming from my side .and to boost the propaganda against my party by publishing exaggerated reports of meetings and conferences, many of which were never held. "Silver bullets" were freely used for creating divisions *in* the ranks of the Depressed Classes. There have been also a few clashes ending in violence.

If the Mahatma does not want all this to be repeated on a larger scale, let him, for God's sake, reconsider his decision and avert the disastrous consequences, I believe the Mahatma does not want this. But if he does not desist, in spite of his wishes these consequences are sure to follow as night follows the day.

Before concluding this statement, I desire to assure the public that although I am entitled to say that I regard the matter as closed, I am prepared to consider the proposals of the Mahatma. I how' ever trust the Mahatma will not drive me to the necessity of making a choice between his life and the rights of my people. For I can never consent to deliver my people bound hand and foot to the .Caste Hindus for generations to come.

B. R. AMBEDKAR.

APPENDIX V

TEMPLE ENTRY IN TRAVANCORE

His Highness the Maharaja of Travancore issued a Proclamation «n the 12th November 1936 opening the Temples in the State to the Untouchables. The Proclamation reads as follows :—

"Profoundly convinced of the truth and validity of our religion, believing tbat_it is based on divine guidance and on all-comprehending toleration, knowing that in its practice it has throughout the centuries adapted itself to the need of the changing times, solicitous that none of our Hindu subjects should, by reason of birth, caste or community, be denied the consolation and solace of the Hindu faith, we have decided and hereby declare, ordain and command that, subject to such rules and conditions as may be laid down and imposed by us for preserving their proper atmosphere and maintaining their rituals and observances, there should henceforth be no restriction placed on any Hindu by birth or religion on entering or worshipping at temples controlled by us and our Government."

A great lot has been made by the Congressmen and by Mr. Gandhi about this Proclamation. It is regarded as heralding the birth of a new conscience in the Hindu world. I don't feel quite so sure of this. At any rate there are facts on the other side, which are worth bearing in mind.

The proclamation was issued by the Maharaja of Travancore in his name. But the real active force behind the scene was the Prime Minister, Sir C. P. Ramaswami Iyer. It is his motives that we must understand. In 1932, Sir C. P. Ramaswami Iyer was also the Prime Minister of Travancore. In 1932, when Mr. Gandhi had raised a controversy over the entry of the Untouchables into the Guruvayur Temple, Sir C. P. Ramaswami Iyer had taken part in the controversy on the side of those who were against Temple Entry. In the course of this controversy, Sir C. P. Ramaswami Iyer issued a statement (*Times of India dated November 10, 1932*) to the Press.

This is what he said :

"Personally I do not observe caste rules. I realise there are strong, though not very articulate, feelings in this matter in the minds of men who believe that the present system of temple worship and its details are based on divine ordinances. The problem can be permanently solved only by a process of mutual adjustment and by the awakening of religious and social leaders of Hindu society to the realities of the present situation and to the need for preserving the solidarity of the Hindu community.

"Shock tactics will not answer the purpose and direct action will be even more fatal in this sphere than in the political. I have the misfortune to differ from Mr. Gandhi when he says that the problem of temple-entry can be divorced from such topics as inter-dining and I agree with Dr. Ambedkar that the social and economic uplift of the Depressed Classes should be our immediate and urgent programme."

This statement shows that in 1933 spiritual considerations did not move Sir C. P. Ramaswami Iyer. Spiritual considerations have become operative after 1933. What made Sir C. P. Ramaswami Iyer take a different view in 1936? What had happened in Travancore in 1936 to compel this change of opinion? It may be recalled that in 1936, there was held in Travancore a Conference of the Yezawa Community. The Yezawas are an Untouchable community spread over Malabar. It is an educated community and economically quite strong. It is also a vocal community and has been carrying on agitation in the State against social and religious disabilities. The Conference was held to consider whether the Yezawas

should not abandon the Hindu Religion in favour of some other religion (**This was in pursuance of the decision taken at Yeola in 1935 under my chairmanship**). The Yezawas form a very large community. The cessation of so large a community would be death-knell to the Hindus and the Conference had made the danger real.

It may not be far fetched to say that the Proclamation was issued to forestall this danger. If this is correct, there is very little spiritual substance behind the proclamation. It must not be forgotten that Sir C. P. Ramaswamy Iyer has his own way of giving spiritual colouring to a material act. The Brahmins have been, in accordance with the Hindu Law, exempt from capital punishment which applied to all Brahmins. This was a very glaring case of discrimination. Sir C. P. Ramaswami Iyer very recently announced the abolition of capital punishment in Travancore State and took credit for having carried out a great humanitarian Reform. As a matter of fact, the object was really preventing the Brahmin from being brought under the guillotine in obedience to the principle of equality before law.

How far did this Proclamation change facts and how far it has remained a show? It is not possible to get real facts as they exist in Travancore. In the course of the discussion on the Malabar Temple Entry Bill in the Madras Legislative Assembly, certain facts relating to Travancore were mentioned by Sir T. Pannirselvam which, if true, would show that the whole thing is hollow.

Sir T. Pannirselvam said ;—

"One of the arguments advanced by the Premier in support of the measure was that temples in Travancore had been thrown open to the 'Untouchables.' A Maharaja vested with autocratic powers did so by an order. But how was it working there? From representations received, he was led to believe that after the first flush of enthusiasm, Harijans had left off going to temples, and people who used to worship previously before Harijans were allowed to enter the temples, had stopped worshipping in temples. He would ask the Government to tell them if the measure was really a success in Travancore."

On the third reading of the Bill, Sir T. Pannirselvam made a statement which must have come as a surprise to many. He said :

"He wanted to know whether it was a fact that the private temples of

the Senior Maharani were excluded from the Proclamation. What was the reason for it? Again during the celebration of the marriage of the daughter of the Senior Maharani, it was found necessary, so he was told, to perform purificatory ceremony of the temple. If such a purification of temples took place, what happened to the Proclamation?"

These facts were not challenged by anybody, either by Sir C. P. Ramaswami Iyer or C. Rajagopalachariar. Evidently, they cannot be challenged. If they are incontrovertible, then the less said about the Malabar Temple Entry Proclamation as a spiritual testament, the better.

Is this Temple Entry in Travancore the be-all and end-all of the social reform in Travancore? Is there to be just Temple Entry and no further or is it going to lead to equality in the matter of religious status? Will, for instance, the Devasthan Department be placed in the hands of the Untouchables and the Shudras? Nine years since the Proclamation have passed, there has been no move in democratisation of religion in Travancore.

Will the Untouchables of Travancore have to pay for Temple Entry? I am not in a position to say. But I like to reproduce below a letter addressed to me by Sri Narayan Swami of the All-Travancore Pulayar Cheramar Aykia Maha Sangham. It is dated 24th November 1938.

"Camp Mayyanad
Quilon, 24-11-1938.

To Dr, Ambedkar,
Bombay.

RESPECTED SIR,

I have unaffected pleasure to draw your attention to the following facts for obtaining the valuable advice from you. Being the leader of a Harijan Community of the Travancore State, I think, it is my paramount duty to suggest you definitely all the grievances that the Harijans of this State are enduring.

1. 1. The Temple Entry Proclamation issued by His Highness The Maharaja is indeed a boon to Harijans ; but the Harijans are enjoying all the other social disabilities except the temple Entry. The Government do not take any step for the amelioration of the

Harijans.

2. 2. Among 15 lakhs of Harijans, there are a few graduates, half a dozen undergraduates and 50 school finals and more than 200 vernacular certificates holders. Though the Government have appointed a Public Service Commission, appointments to the Harijans are very few. All the appointments are given to Savarnas. If a Harijan is appointed, it will be for one week or two weeks. According to the rules of the recruitment in Public Service, the applicant is allowed to apply only after a year again. While a Savarna will be appointed for a year or more. When the list of the appointments is brought before the Assembly, the number of appointments will be equal to the communal representation; but the duration of the post of all the Harijans will be equal to one Savarna. This kind of fraud is associating with the officials. Thus the public service is a common property of the Savarnas. No Harijan is benefited by it.
3. 3. There was a proclamation from H. H. The Maharaja, a few years ago that three acres of ground should be given to each Harijan to live in; but the officials are Savarnas who are always unwilling to carry out the proclamation. Even though the Government is willing to grant large extent of ground for pasturing near towns, not a piece of the ground is given to the Harijans. The Harijans are still living in the compounds of the Savarnas and are undergoing manifold difficulties. Though large extents of ground lay in "Reserve," the applications of the Harijans for granting grounds are not at all regarded with importance or listened to. The most parts of *the* lands are benefited by the Savarnas.
4. 4. The Government nominates every year, for the election of members of the Assembly, one member from each Harijan Community. Though they are elected to present the grievances of the Harijans before the Assembly, they are found to be the machinery of the Government, viz., the toys of the Savarna officers, who are benefited by them. Thus the grievances of the Harijans cannot be redressed any way.
5. 5. All the Harijans of Travancore are labourers in the fields and compounds. They are the servants of the Savarnas who behave with them as beasts—nobody to look after for protection. Every Harijan gets only 2 chs (one anna) as the wage in most parts of the State. The social disabilities are the same to them even after the Temple Entry. The workers in the factories in various parts of the State of

Travancore and the Officers of the State are all Savarnas and they are at present agitating for responsible Government. Now the Harijans are demanding jobs in Government and in factories but the agitation in Travancore is a Savarna agitation by which the Savarnas are making arrangements to get rid of Harijans in Public Service and factories. They plead for higher salaries and more privileges. They pay the least care to the Harijan labourers while the people of Travancore are maddened with the agitation of the workers in the factories. The standard of salary of Harijan worker is very low while the standard of a factory worker is thrice the former.

6. 6. Due to starvation and want of proper means of livelihood, the heads of the children of Harijans are heated as a result of which they are likely to fail in school. Before proclamation, the duration of Concession in high schools was for 6 years; now, it has been reduced to three years by which a good number of students stopped their education after their failure.
7. 7. There is a department for the Depressed Classes, the head of which is Mr. C. O. Damodaran (the protector of the Backward Communities). Though every year a big amount is granted for the expenditure, at the end of the year, two-thirds of the sum is lapsed by his sagacity. He used to submit reports to the Government that there is no way of spending the amount. Ninety-five per cent of the sum allotted for the Depressed Class is spent as the salary of the officials who are always Savarnas and 5 per cent. is benefited. Now the Government is going to make some colonies in three parts of Travancore. The officers are Savarnas. This scheme is, in my opinion, not a success for the Government do not pay greater attention to it. I regret that Travancore Government spends one anna for the Harijan cause, while Cochin State spends a rupee, for the same.
8. 8. The majority of the subjects of Travancore are now agitating strongly for Responsible Government under an organisation 'The State Congress.' The leaders of this popular organisation belong to the four major communities of the State, namely, the Nair, Mahomedan, Christian and Ezhava community. The President of the State Congress Mr. Thanu Pillai issued a statement in which he stressed that special concessions would be given to the Depressed Class. All the leaders of the Depressed Class have been awaiting for a time to see the attitude of the State Congress. Now we come to understand that there is no reality in the promise of these leaders.
9. 9. Now I am sure that the leaders have neglected the cause of the

Depressed Class. The State Congress was started on the principles of nationalism and now it has become an institution of communalism. Communal spirit is now working among the leaders. In every public speech, statement or article, the leaders mention only these four major communities, while they have no thought on us. I fear, if this is the case of the leaders of the political agitation of Travancore, the situation of the Depressed Class will be more deplorable when the Responsible Government is achieved, for the entire possession of the Government will be then within the clutches of the above mentioned communities and the Depressed Classes' rights and privileges will be devoured by the former. In the meetings of the working committee of the States Congress, two-thirds of the time was devoted in discussion concerning the strike of the Alleppey Coir Factories; but nothing was mentioned in the meeting about the Harijan workers who are undergoing manifold difficulties. The workers in Factories are Savarnas and the agitation for obtaining Responsible Government is a kind of anti-Harijan movement. The motive of every leader of the State Congress is to improve the situation (circumstance) of the Savarna. The leaders of the major communities have some mercenary attitude who are going to sacrifice the Depressed for their progress.

10. 10. These are the conditions of the Depressed Class of the State. What are the ways by which we have to establish our rights in the State? I humbly request you to be good enough to render me your advice at this occasion. I am awaiting for the reply. Excuse me for the trouble,

Yours faithfully,

SHRI
NARAYANASWAMI

If the plan of Temple Entry is ultimately to deprive the Untouchables of their statutory rights, then the movement is not only not spiritual but it is positively mischievous and it would be the duty of all honest people to warn the Untouchables.

UNTOUCHABLES**

APPENDICES

Appendix VI : Recognition of Untouchables as a Separate Element

APPENDIX VI**RECOGNITION OF UNTOUCHABLES AS A SEPARATE
ELEMENT**

Pronouncements of the British Government on the position of the Untouchables in the Constitution of India,

INTRODUCTION

The necessity for recalling the pronouncements of the Viceroys and of the Secretaries of State has arisen because of the recent criticism in the Press against the reply of 15th August 1944 given by Lord Wavell to Mr. Gandhi stating that the Scheduled Castes are a separate element in the national life of India and that their consent to the new Constitution was essential before power is transferred to Indian hands. This criticism is based upon the supposition that the Cripps's proposals did not recognise the Scheduled Castes as a separate element and did not make their consent necessary. Reliance is placed 'upon the fact that the Cripps's proposals spoke of "racial and religious minorities" only and it is argued that the Scheduled Castes are neither a racial nor a religious minority.

It is hardly necessary to point out how ignorant this criticism is. The Scheduled Castes are really a religious minority. The Hindu religion by its dogma of untouchability has separated the Scheduled Castes from the main body of the Hindus in a manner which makes the separation far more real and far wider than the separation which exists either between Hindus and Muslims or Hindus and Sikhs or Hindus and Christians. It is difficult to conceive of a more effective method of separation and segregation than the principle of untouchability and it is only those who are actuated by malicious spirit of finding excuses to deny the Scheduled Castes their claim to political rights would indulge in this kind of jugglery. Those who regard the statement of Lord Wavell as a new departure have completely forgotten what attitude His Majesty's Government has taken in the matter of the Scheduled Castes from the very beginning when the transfer of political power from British to Indian hands was thought of. Ever since 1917 when the Montagu-Chelmsford Report advocated responsible Government, the British Government have taken a definite

stand that they would, under no circumstances, transfer power to Indian hands until they were satisfied that the position of the Scheduled Castes was safeguarded by adequate Constitutional provisions. A few of the many declarations made by Secretaries of State and Viceroys of India from 1917 to 1941 *are* collected together in the following pages. It will be found that the recognition that the Scheduled Castes are a separate and important element in the national life of the country and that their consent is necessary are in no way new proposals. Both the statements have been made by responsible representatives of His Majesty's Government, viz., the Secretary of State and the Viceroy long before the Cripps's proposals came into being. Particular attention is drawn to Mr, Amery's statement on 14th August 1940 and Lord Linlithgow's statement on 10th January 1940. It is hoped that a perusal of these declarations will enable those who are trying to negative the claim of the Scheduled Castes for political rights to realise that their propaganda is both foolish and malicious.

Extract from the Montagu-Chdmsford Report on Indian Constitutional Reform—1917.

155. ... , .. We have shown that the political education of the ryot cannot be a very rapid, and may be a very difficult process. Till it is complete, he must be exposed to the risk of oppression by people who are stronger and cleverer than he is : and until it is clear that his interests can safely be left in his own hands or that the legislative councils represent and consider his interest, we must retain power to protect him. So with the depressed classes. We intend to make the best arrangements that we can for their representation, in order that they too may ultimately learn the lesson of self-protection. But if it is found that their interests suffer and that they do not share in the general progress, we must retain the means in our own hands of helping them,

(2)

Extract from the Fifth Despatch of the Government of India dated 23rd April 1919 on the Report of the Southborough Committee on Franchise,

13. We have analysed in the statement (printed at the top of the next page) the interests which in the committee's opinion should be represented by non-official nomination.

We accept these proposals generally. But there is one community whose case appears to us to require more consideration than the committee gave it. The Report on Indian Constitutional Reforms dearly recognises the

problem of the depressed classes and gave a pledge respecting them."We intend to make the best arrangements that we can for their representation."The castes described as"Hindus—others"in the committee's report, though they are defined in varying terms, are broadly speaking all the same kind of people.

WHAT CONGRESS AND GANDHI HAVE DONE TO THE UNTOUCHABLES

APPENDICES

Appendix VI : Recognition of Untouchables as a Separate Element

Continued...

Except for differences in the rigidity of their exclusion they are all more or less in the position of the Madras Panchamas, definitely outside that part of the Hindu community which is allowed access to their temples. They amount to about one-fifth of the total population, and have not been represented at all in the Morley-Minto Councils. The committee's report mentions the depressed classes twice, but only to explain that in the absence of satisfactory electorates they have been provided by nomination, It does not discuss the position of these people or their capacity for looking after themselves. Nor does it explain the amount of nomination which it suggests for them. Para 24 of the report justifies the restriction of the nominated seats on grounds which do not suggest that the committee were referring to the depressed classes. The measures of representation which they propose for this community is as follows;—

	<i>Total Population</i>		<i>Population of Depressed Classes</i>		<i>Total Seats</i>	<i>Seats for Depressed Classes</i>
	<i>(millions)</i>		<i>(millions)</i>			
Madras	39	8	6.3	a	120	2
Bombay	19.5	5		6	113	1
Bengal	48	0	9.9	9	127	1

United Provinces		47	0	10	1	150	1
Punjab		19	19. 5	1	7	85	-
Bihar and Orissa		33	4	9	3	100	1
Central Provisions		12	12. 2	3	7	72	1
Assam		6	0	0	3	54	--
Total		221.4		41 9		791	7

These figures speak for themselves. It is suggested that one-fifth of the entire population of British India should be allotted seven seats out of practically eight hundred. It is true that in all the councils there will be roughly a one-sixth proportion of officials who may be expected to bear in mind the interests of the depressed ; but that arrangement is not, in our opinion, what the Report on reforms aims at. The authors stated that the depressed classes also should learn the lesson of self-protection. It is surely fanciful to hope that this result can be expected from including a single member of the community in an assembly where there are sixty or seventy caste Hindus. To make good the principles of paras 151, 152, 154 and 155 of the Report we must treat the out-castes more generously. We think there should be in each council enough representatives of the depressed classes to save them from being entirely submerged, and at the same time to stimulate some capacity for collective action. In the case of Madras, we suggest that they should be given six seats; in Bengal, the United Provinces and Bihar and Orissa, we would give them four; in the Central Provinces and Bombay two and elsewhere one. In these respects we think that the committee's report clearly requires modification.

(3)

Extract from Lord Birkenhead's speech as Secretary of State for India in the House of Lords on the 30th March 1927 on the appointment of Statutory Commission.

Let me take the case of the depressed classes. There is in India a vast population even in relation to the numbers with which we are dealing, a population of sixty millions of the depressed classes. Their condition is not quite as terrible, quite as poignant as it has been in the past, but it is still terrible and poignant. They are repelled from all social intercourse. If they come between the gracious light of the sun and one who despised

them the sun is disfigured for that man. They cannot drink at the public water-supply. They must make diversions of miles in order to satisfy thirst and they are tragically known and they have been known for generations as the "untouchables." There are sixty millions of them in India. Am I to have a representative of them upon this Commission? Never, never would I form a Commission nor would anyone in a democratic country, nor would my friends opposite recommend it, from which you have excluded a member of this class which more than any other requires representation if you are indeed to put the matter to a mixed jury of the kind I am indicating.

(4)

Extract from the Report of the Simon Commission, Vol. II.

78. In no other province has it been possible to get an estimate of the number of the depressed classes who are qualified to vote. It is clear that even with a considerable lowering of the franchise—which would no doubt increase the proportion of the depressed class voters—there would be no hope of the depressed classes getting their own representatives elected in general constituencies without special provision being made to secure it. In the long run the progress of the depressed classes, so far as it can be secured by the exercise by them of political influence, will depend on their getting a position of sufficient importance for other elements to seek their support and to consider their needs.

80. It will be seen, therefore, that we do not recommend allocating seats to the depressed classes on the basis of their full population ratio. The scale of reserved representation suggested will secure a substantial increase in the number of the M.L.C's. drawn from the depressed classes. The poverty and want of education which so widely prevail amongst them make it extremely doubtful whether a large number of adequately equipped members could be at once provided, and it is far better that they should be represented by qualified spokesmen rather than by a larger number of ineffective who are only too likely to be subservient to higher castes. The re-distribution of seats which is now being attempted among different kinds of representatives cannot be permanent, and provision must be made for its revision. But we think that our proposal is adequate for the present, especially as the representation of opinion by reservation of seats does not exclude the possibility of the

capture of other seats not so reserved.

(5)

Extract from the Government of India's Despatch on Proposals for Constitutional Reform (as set out by the Simon Commission).

35. *The Representation of the Depressed Classes.*--The suggestions made by the Commission for the representation of the depressed classes have been much criticized by the provincial Governments. The difficulty of framing for each province a definition of the "depressed classes" is probably inherent in any scheme for the special representation of this class other than by nomination; but the Commission's proposals place a peculiarly embarrassing duty on the Governor to certify candidates authorised to stand for the depressed classes ; and the proportion of representation which the Commission suggest, namely, in the ratio of three-quarters of the proportion of the depressed classes population to the total population of the electoral area of the provinces, seems likely to be unduly high. The Government of the United Provinces have calculated that in that province the Commission's proposal would result in the return to the provincial legislature of no less than forty members in place of the single nominated member who at present represents the community. The whole problem of the representation of the depressed classes will require careful investigation by the Franchise Committee ; and at this stage we only wish to make plain that in our view their adequate representation should be secured by the best means that may be found practicable. Though there are some differences of opinion within the community, recent meetings of depressed classes associations have re-affirmed their belief in separate electorates.

(6)

Extract from the Terms of Reference to the Lothian Committee (on Franchise) 1932.

3. You are aware that the present electorate in Indian provinces amounts to less than 8 per cent. of the population of the areas returning members to provincial Councils, and it is obvious that under this limited franchise, the majority of the people and many large and important sections of the community can enjoy no effective representation in the Legislatures. The principle of a responsible Federal Government, subject to certain reservations and safeguards, has been accepted by His Majesty's

Government while it has been decided that the Governors' provinces are to become responsibly governed units, enjoying the greatest possible measure of freedom from outside interference and dictation in carrying out their own policies in their own sphere. In these circumstances, it is clearly necessary so to widen the electorate that the legislatures to which responsibility is to be entrusted should be representative of the general mass of the population and that no important section of the community may lack the means of expressing its needs and its opinions.

6. It is evident from the discussions which have occurred in various connections in the Conference that the new Constitution must make adequate provision for the representation of the De-profiled Classes and that the method of representation by nomination is no longer regarded as appropriate. As you are aware, there is difference of opinion whether the system of separate electorates should be instituted for the Depressed Classes and your Committee's investigations should contribute towards the decision of this question by indicating the extent to which the Depressed Classes would be likely, through such general extension of the franchise as you may recommend, to secure the right to vote in ordinary electorates. On the other hand, should it be decided eventually to constitute separate electorates for the Depressed Classes, either generally or in those provinces in which they form a distinct and separate element in the population, your committee's inquiry into general problem of extending the franchise should place you in possession of facts which would facilitate the devising of a method of separate representation for the Depressed Classes.

(7)

Extract from the Statement issued by H. E. Lord Linlithgow the Viceroy and Governor General of India, dated 17th October 1939.

"Be that as it may, His Majesty's Government recognise that when the time comes to resume consideration of the plan for the future federal Government of India, and of the plan destined to give effect to the Assurance given in Parliament by the late Secretary of State, to which I have just referred, it will be necessary to reconsider in the light of the then circumstances to what extent the details of the plan embodied in the Act of 1935 remain appropriate.

And I am authorised now by His Majesty's Government to say that at the end of the war they will be very willing to enter into consultation with

representatives of the several communities) parties and interests in India, and with the Indian Princes, with a view to securing their aid and co-operation in the framing of such modifications as may seem desirable."

(8)

Extract from a Statement made on 7th November 1989 by Lord Zetland, Secretary of State for India in the House of Lords.

"The Congress have further consistently taken the line, which they still maintain, that the fact that there are racial and religious minorities in India is of no relevance in that connexion, and that it has always been the intention of the Congress to secure, through the Constitution to be framed by Indians themselves, such protection for their rights as may prove acceptable to the minorities.

His Majesty's Government find it impossible to accept this position. The long-standing British connexion with India has left His Majesty's Government with obligations towards her which it is impossible for them to shed by disinteresting themselves wholly in the shaping of her future form of Government. Moreover, one outstanding result of the recent discussions in which the Governor-General has been engaged with representatives of all parties and interests in India has been to establish beyond doubt the fact that a declaration in the sense proposed, with the summary abandonment by His Majesty's Government of their position in India, would be far from acceptable to large sections of the Indian population."

(9)

Extract from the Speech made by H. E. Lord Linlithgow, Viceroy and Governor-General at the Orient Club, Bombay, on January 10, 1940.

"Nor must we forget the essential necessity, in the interests of Indian unity, of the inclusion of the Indian States in any Constitutional scheme. There are the insistent claims of the minorities. I need refer only to two of them—the great Muslim minority and the Scheduled Castes—there are the guarantees that have been given to the minorities in the past; the fact that their position must be safeguarded, and that those guarantees must be honoured.

(10)

Extract from a Speech made by the Right Hon'ble Mr. L. S. Amery, Secretary of State for India in the House of Commons on August 14, 1940.

"Congress leaders have built up a remarkable organization, the most efficient political machine in India, ..if only they had succeeded, if the Congress could, in fact speak, as it professes to speak, for all the main elements in India's national life, then however advanced their demands, our problem would have been in many respects far easier than it is to-day. It is true that they are numerically the largest single party in British India, but their claim in virtue of that fact to speak for India is utterly denied by very important elements in India's complex national life. These others assert their right to be regarded not as mere numerical minorities but as separate constituent factors in any future Indian policy. The foremost among these elements stands the great Muslim community. They will have nothing to do with a constitution framed by a constituent assembly elected by a majority vote in geographical constituencies. They claim the right in any constitutional discussions to be regarded as an entity against the operations of a mere numerical majority. The same applies to the great body what are known *as* the Scheduled Castes who feel that in spite of Mr. Gandhi's earnest endeavours on their behalf, that, as a community, they stand outside the main body of the Hindu community which is represented by the Congress.

(11)

Extract from the Speech of the Right Hon'ble Mr. L. S. Amery, Secretary of State for India in the House of Commons on 23rd April 1941.

"India's future Constitution should be devised by Indians for themselves and not by the British Government. India's future Constitution should be essentially an Indian Constitution, framed in accordance with the Indian conception of Indian conditions and Indian needs. The only essential condition is that the Constitution itself and the body which is to frame it must be the outcome of agreement between principal elements in India's national life.

(12)

Extract from a Statement by H. E. Lord Linlithgow Viceroy and Governor-General, of India on 8th August 1940.

"These are two main points which have emerged. On these two points. His Majesty's Government now desire me to make their position clear. The first is as to the position of the minorities in relation to any future Constitutional scheme It goes without saying that they (H. M. Government) could not contemplate the transfer of their present responsibilities for the peace and welfare of India to any system of Government whose authority is directly denied by large and powerful elements in India's national life. Nor could they be parties to the coercion of such elements into submission to such a Government."

APPENDIX VII

MINORITIES AND- WEIGHTAGE

Views of the Montagu-Ohdmsford Report find of the Simon Commission on the iniquitous distribution of weightage.

(1)

MONTAOU-CHILMSIORD Report.

Extyact from the Moniagu'Chelmsford Report on Indian Constitutional Reforms.

163. Important minorities, it is proposed, should be represented by election. This appears to point to a system of specified only for Mohammedans, who are no longer to be allowed to vote in the general electorates as well as in their own special ones. We have elsewhere touched upon the difficulty of denying to certain other communities, such as the Sikhs in the Punjab, a concession which i"granted to Mohammedans, The authors of the scheme have also agreed upon, and

set forth the proportions of the seats to be reserved for the special Muslim electorates in the various provinces. We are not aware on what basis, other than that of negotiation, the figures were arrived at. Separate electorates are proposed in all provinces even where Mohammedans are in a majority: and wherever they are numerically weak, the proportion suggested is in excess of their numerical strength or their present representation. At the same time, nearly all the Muslim associations which addressed us urged upon us that it should be still further increased. Now a privileged position of this kind is open to the objection, that if any other community hereafter makes good a claim to separate representation, it can be satisfied only by deduction from the non-Muslim seats, or else by a rateable deduction from both Muslim and non-Muslim; and Hindu and Muslim opinions are not likely to agree which process should be adopted. While, therefore, for reasons that we explain subsequently, we assent to the maintenance of separate representation for Mohammedans, we are bound to reserve our approval of the particular proposals set before us until we have ascertained what the effect upon other interests will be, and have made fair provision for them. We agree with the authors of the scheme that Mohammedans should not have votes both in their own special, and in the general electorates—and we welcome the Muslim League's assent to the revision in this respect of existing arrangements."

(2)

Extract from the Report of the Indian Statutory Commission, Vol. II.

NUMBER OF MOHAMMEDAN SEATS

Para 85. We now take up the question of the proportion of seats in the various provincial councils to be set aside for Mohammedan members,

The Lucknow Pact, as we have already pointed out, included an 'agreement between Hindus and Moslems as to the proportion of Indian elected seats allotted in each province to the Mohammedan community, and its terms have been followed closely in the allocation of Mohammedan seats in the existing provincial legislatures. The Pact is no longer accepted by either side as offering a fair basis of representation and the rival contentions now put forward are indicated in paragraph 70 above. It is very much to be hoped that a renewed effort will be made between the two communities themselves to arrive at a fresh accommodation; but in the absence of agreement, a decision will have to be reached by others, on the assumption that separate electorates remain.

Our own opinion is that in view of the existing position and of the weakness of the Moslem minority in six out of the eight provinces (*Burma is not in question*), the present scale of weightage in favour of Mohammedans in those provinces might properly be retained. Thus, the proportion to be allotted to them, of seats filled from the "general" constituencies (other than the European general constituencies) would be determined as at present. But a claim has been put forward for a guarantee of Mohammedan representation which goes further than this—see paragraph 70 above and Appendix VII at the end of this chapter. This claim goes to the length of seeking to preserve the full security for representation now provided for Moslems in these six provinces and at the same time to enlarge in Bengal and the Punjab the present proportion of seats secured to the community by separate electorates to figures proportionate to their ratio of population. This would give Mohammedans a fixed and unalterable majority of the "general constituency" seats in both provinces. We cannot go so far. The continuance of the present scale of weightage in the six provinces could not—in the absence of a new general agreement between the communities—equitably be combined with so great a departure from the existing allocation in Bengal and the Punjab.

It would be unfair that Mohammedans should retain the very considerable weightage they now enjoy in the six provinces, and that there should at the same time be imposed, in face of Hindu-Sikh opposition, a definite Moslem majority in the Punjab and in Bengal unalterable by any appeal to the electorate. On the other hand, if by agreement separate electorates in Bengal were abandoned, so that each community in that province was left to secure such seats as it could gain by appeal to a combined electorate, we should not, on that account, seek to deprive the Moslem community of its existing weightage in the six provinces where they are in a minority. In the same way in the Punjab, if Moslems, Sikhs and Hindus were prepared to seek election through a joint electorate covering all three communities, here again we should still be prepared to see this combined with the preservation of the present numerical proportion secured to the Mohammedans by separate electorates in the six other provinces.

We make this last suggestion, which really involves giving the Moslem community the advantage of a choice between two courses to follow, because we sincerely desire to see all practicable means attempted for reducing the extent of separate electorates and for giving the other system a practical trial.

APPENDIX VIII

CRIPPS PROPOSALS

DRAFT DECLARATION FOR DISCUSSION WITH INDIAN LEADERS

The conclusions of the British War Cabinet set out below are those which Sir Stafford Cripps has brought with him for discussion with Indian Leaders, and the question as to whether they will be implemented will depend upon the outcome of those discussions which are now taking place.

His Majesty's Government having considered the anxieties expressed in this country and in India as to the fulfilment of promises made in regard to the future of India have decided to lay down in precise and clear terms, the steps which they propose shall be taken for the earliest possible realisation of self-government in India. The object is the creation of a new Indian Union which shall constitute a Dominion associated with the United Kingdom and other Dominions by a common allegiance to the Crown but equal to them in every respect, in no way subordinate in any aspect of its domestic or external affairs.

His Majesty's Government, therefore, make the following Declaration:—

- (a) (a) Immediately upon cessation of hostilities, steps shall be taken to set up in India, in manner described hereafter, an elected body charged with the task of framing a new Constitution for India.
- (b) (b) Provision shall be made, as set out below, for participation of Indian States in the Constitution-making body.
- (c) (c) His Majesty's Government undertake to accept and implement forthwith the Constitution so framed subject only to:—

- (i) (i) The right of any Province of British India that is not prepared to accept the new Constitution, to retain its present constitutional position, provision being made for its subsequent accession if it so decides.

With such non-acceding Provinces, should they so desire, His Majesty's Government will be prepared to agree upon a new Constitution giving them the same full status as the Indian Union and arrived at by a procedure analogous to that here laid down.

- (ii) (ii) The signing of a Treaty which shall be negotiated between His Majesty's Government and the Constitution-

making body. This Treaty will cover all necessary matters arising out of the complete transfer of responsibility from British to Indian hands ; it will make provision, in accordance with undertakings given by His Majesty's Government, for the protection of racial and religious minorities; but will not impose any restriction on the power of the Indian Union to decide in future its relationship to other Member States of the British Commonwealth.

Whether or not an Indian State elects to adhere to the Constitution, it will be necessary to negotiate a revision of its Treaty arrangements so far as this may be required in the new situation.

(d) (d) The Constitution-making body shall be composed as follows unless the leaders of Indian opinion in the principal communities agree upon some other form before the end of hostilities:—

Immediately upon the result being known of Provincial Elections which will be necessary at the end of hostilities, the entire membership of the Lower Houses of Provincial Legislatures shall as a single electoral college proceed to the election of the Constitution-making body by the system of proportional representation, This new body shall be in number about 1/10th of the number of the electoral college,

Indian States shall be invited to appoint representatives in the same proportion to their total population as in the case of representatives of British India as a whole and with the same powers as British Indian Members,

{e) During the critical period which now faces India and until the New Constitution can be framed, His Majesty's Government must inevitably bear the responsibility for and retain the control and direction of the defence of India as part of their world war effort, but the task of organising to the full the military) moral and material resources of India must be the responsibility of the Government of India with the co-operation of the peoples of India. His Majesty's Government desire and invite the immediate and effective participate on of the leaders of the principal sections of the Indian people in the counsels of their country, of the Commonwealth and of the united nations. Thus they will be enabled to give their active and constructive help in the in-charge of a task which is vital and essential for the future freedom of India.

APPENDIX IX OBJECTIONS TO ORIPPS PROPOSALS

Statement by B. R. Ambedkar showing how the CRIPPS Proposals would affect the Untouchables

The War Cabinet proposals show a sudden *Volte Face* on the part of His Majesty's Government. The putting forth of these proposals, which were denounced by them as an invasion of minority rights, is an indication of their complete surrender of right to win might. This is Munich mentality, the essence of which is to save oneself by sacrificing others, and it is this mentality which is writ large on these proposals. It is reported that the American and English people are annoyed at Indians not welcoming the proposals of His Majesty's Government relating to the constitutional advancement of India and hereby allowing the mission of Sir Stafford Cripps to fail. One can forgive the Americans for their attitude, but surely the English people and Sir Stafford Cripps ought to know better. It does not seem to have been sufficiently realised that the proposals of His Majesty's Government now put forth as the best are the very proposals which have been rejected and condemned by His Majesty's Government as the worst, only a few months previously. Those who realise this cannot but help saying that this is the ugliest part of the whole business of constitutional advance, which His Majesty's Government is now suddenly and contrary to its previous declarations, rushing to undertake. The proposals fall into three parts; (1) There is to be a constituent assembly with a right to frame the Constitution for India. This Assembly is to have the fullest power to frame such constitution as the majority in the Assembly may choose to decide; (2) The new Constitution is not to include all of the present Provinces of India but only such Provinces as may be willing to be bound by it. For this the Provinces have been given a right to decide whether they shall join the new Constitution or stay out of it. This is left to be done by a plebiscite in which a bare majority is declared enough to decide the issue ; (3) The Constituent Assembly shall be required to enter into a treaty with the British Government. The treaty is to contain provisions for the safety and security of racial and religious minorities. After such a treaty is signed, the British Government is to withdraw its sovereignty and the Constitution framed by the Constituent Assembly is to come into operation.

Such, in brief outline, is the scheme of His Majesty's Government.

The proposal regarding Constituent Assembly is not a new proposal. It

was put forth by the Congress when the war broke out and what is important is that this proposal of the Congress was rejected by His Majesty's Government. This is what Mr. Amery said in the House of Commons on August 14, 1940, regarding Constituent Assembly:—

"Congress leaders have built up a remarkable organization, the most efficient political machine in India. .. If only they had succeeded, if the Congress could, in fact speak, as it professes to speak, for all the main elements in India's national life, then however advanced their demands.-our problem would have been in many respects far easier than it is today. It is true that they are numerically the largest single party in British India, but their claim in virtue of that fact to speak for India is utterly denied by very important elements in India's complex national life. These others assert their right to be regarded not as mere numerical minorities but as separate constituent factors in any future Indian policy. The foremost among these elements stands the great Muslim community. They will have nothing to do with a Constitution framed by a Constituent Assembly elected by a majority vote in geographical constituencies. They claim the right in any constitutional discussions to be regarded as an entity and are determined only to accept a Constitution whose actual structure will secure their position as an entity against the operations of a mere numerical majority. The same applies to the great body of what are known as the *Scheduled Castes* who feel, in spite of Mr. Gandhi's earnest endeavours on their behalf, that, as a community, they stand outside the main body of the Hindu Community which is represented by the Congress."

This statement was made by Mr. Amery when he was elucidating the announcement made by the Viceroy on 6th August 1941 in which he had given the following pledge to the minorities on behalf of His Majesty's Government;—

"There are two main points which have emerged. On these two points. His Majesty's Government now desire me to make their position clear. The first is as to the position of the minorities in relation to any future constitutional scheme. . . It goes without saying that they (H. M. Government) could not contemplate the transfer of their present responsibilities for the peace and welfare of India to any system of government whose authority is directly denied by large and powerful elements in India's national life. Nor could they be parties to the coercion of such elements into submission to such a government."

Again on the 23rd April 1941, Mr. Amery referred to the demand of the Constituent Assembly and expressed himself in the following terms:—

"India's future Constitution should be devised by Indians for themselves and not by the British Government. India's future Constitution should be essentially an Indian Constitution, framed in accordance with the Indian conception of Indian conditions and Indian needs. The only essential condition is that the Constitution itself and the body which is to frame it, must be the outcome of agreement between principal elements in India's national life."

Such were the views and pledges given by H. M. Government regarding Constituent Assembly, which is now conceded. Regarding the demand for Pakistan, it was a demand put forward by the Muslim League. This demand was also rejected by His Majesty's Government. This is what Mr. Amery said in regard to it in the House of Commons on August 1, 1940 :—

“This reaction against the dangers of what is called the Congress Raj or Hindu Raj has gone so far as to lead to a growing demand from Muslim quarters for a complete breaking up of India into separate Hindu and Muslim dominions. I need say nothing to-day of the manifold and to my mind, insuperable objections to such a scheme, at any rate in its extreme form. I would only note that it merely shifts the problem of permanent minorities to somewhat smaller areas, without solving it.”

Again on April 23, 1941, he referred to it in his speech in the House of Common and spoke about it in the following terms :—

"I am not concerned here to discuss the immense practical difficulties in the way of this so-called Pakistan project nor need I go back to the dismal record of India's history in the 18th century or to the disastrous experience of the Balkan countries before our eyes, to-day, in order to point out the terrible dangers inherent in any break up of the essential unity of India, at any rate in its relation to the outside world. After all, there is no British achievement in India of which we have reason to be proud than the unity. . .we have given her."

Such were the views of His Majesty's Government only a year ago regarding Constituent Assembly and Pakistan.

It is quite obvious that the proposal for a Constituent Assembly is intended to win over the Congress, while the proposal for Pakistan is designed to win over the Muslim League. How do the proposals deal with the Depressed Classes? To put it shortly, they are bound hand and foot and handed over to the caste Hindus. They offer them nothing; stone instead of bread. For the Constituent Assembly is nothing short of a betrayal of the Depressed Classes. There can be no doubt as to what

the position of the Depressed Classes will be in the Constituent Assembly; nor can there be any doubt regarding the political programme of the Constituent Assembly. In the Constituent Assembly, there may be no representatives of the Depressed Classes at all because no communal quotas are fixed by these proposals. If they are there, they cannot have a free, independent and decisive vote. In the first place, the representatives of the Depressed Classes will be in a hopeless minority. In the second place, all decisions of the Constituent Assembly are not required to be by a unanimous vote. A majority vote is enough to decide any question no matter what its constitutional importance is. It is clear that under this system the voice of the Depressed Classes in the Constituent Assembly cannot count. In the third place, the present system of proportional representation by which the members to the Constituent Assembly are to be elected under the terms contained in His Majesty's proposals cannot but result in the caste Hindus having virtually the right to nominate the representatives of the Depressed Classes to the Constituent Assembly. Such representatives of the Depressed Classes will be the tools of the caste Hindu. In the fourth place, the Constituent Assembly will be filled with the Congressites who will form the dominant majority party able to carry out its own programme. There is no doubt that Mr. Gandhi, whatever may be said about his endeavours in the matter of the social uplift of the Depressed Classes, is totally opposed to giving political recognition to the Depressed Classes in the Constitution as a separate and distinct element in the national life of India. That being the case, the programme of the majority party in the Constituent Assembly will be to wipe out the political safeguards already granted to the Depressed Classes in the present Constitution. Any one, who realises what is implied in the Constituent Assembly, will admit that His Majesty's Government by their proposals have literally thrown the Depressed Classes to the wolves. It may be said that while there is the Constituent Assembly which may deny constitutional safeguards to the Depressed Classes, His Majesty's Government have been careful to include in their proposals the provisions for a treaty with the Constituent Assembly the object of which is to secure the interests of the Depressed Classes. This proposal of a treaty is evidently borrowed from the plan adopted by His Majesty's Government for the settlement of the Irish dispute. The proposal regarding the treaty does not say what are the safe-guards His Majesty's Government will decide to include in the treaty. This is an important point because there may be a difference of opinion between His Majesty's Government and the Depressed Classes on the nature, number

and method of the political safeguards that may be necessary to protect the interests of the Depressed Classes under the new Constitution. The second and equally important question about the treaty is what is going to be the sanction behind the treaty. Will the treaty be a part of the Constitution framed by the Constituent Assembly, so that any provision in the Constitution which, is repugnant with the treaty will be null and void? Or, will the treaty be just a treaty between the two governments, the Indian National Government and His Majesty's Government, as any trade treaty? If the treaty is to be of the former kind, it will be the law of the land and will have legal sanction of the Indian Government behind it. If, on the other hand, the treaty is to be of the latter kind, it is obvious it will not be the law of the land and will have no legal sanction behind it. Its sanction will be political sanction. Now a treaty cannot override the Constitution framed by the National Government for the obvious reason that such a thing, as was found in the case of Irish Free State, is incompatible with Dominion Status. The only sanction behind such a treaty will be political sanction. It is obvious that the use of such sanction must depend upon the colour of the Government and the state of public opinion. Given this fact, the questions that arise are two: (1) What are the means which His Majesty's Government will have at its disposal to enforce the treaty obligations? (2) Secondly, will His Majesty's Government be prepared to use these means to coerce the Indian National Government to abide by the terms of the treaty? With regard to the first question, it is obvious that the means for enforcing the treaty are twofold—use of force and trade war. As to the military force, the Indian army will not be available. It will be entirely transferred to the control of the new Indian National Government. His Majesty's Government will have therefore lost this means of enforcing the treaty. It is impossible to believe that His Majesty's Government will send its own army to compel the National Government to obey the treaty. A trade war is not possible. It is a suicidal policy and the experience of the Irish war with the Irish Free State for the recovery of land annuities shows that a nation of shopkeepers will not sanction it even though it may be for their interest and honour. The treaty therefore is going to be an empty formula, if not a cruel joke, upon the Depressed Classes. His Majesty's Government has sent out these proposals to be welcomed by Indians. But neither His Majesty's Government nor Sir Stafford Cripps have offered any explanation as to why they are offering to Indians the very proposals which His Majesty's Government had been condemning in scathing terms only a few months ago. A year ago, His Majesty's Government said

that they would not grant Constituent Assembly because that would be a coercion of the minorities. His Majesty's Government is now prepared to grant Constituent Assembly and to coerce the minorities. A year ago, His Majesty's Government' said that they will not allow Pakistan because that is Balkanisation of India. To-day, they are prepared to allow the partition of India. How can the Government of a Great Empire lose all sense of principle? The only explanation is that His Majesty's Government has, as a result of the course of the war, become panic-stricken. The proposals are the result of loss of nerves. How great is the panic that has overtaken His Majesty's Government can be easily seen if one compared the demands made by the Congress and the Muslim League and the concessions made to them by these proposals. The Congress demanded that the Constitution should be framed by a Constituent Assembly by a mere majority vote. On the other hand, when the Viceroy announced that the British Government will not be a party to the coercion of the minorities involved in the demand by the Congress, the Working Committee of the Congress at its meeting at Wardha held on August 22, 1940. passed the following resolution ;—

"The Committee regrets that although the Congress has never thought in terms of coercing any minority, much less of asking the British Government to do so, the demand for a settlement of a Constitution though through a Constituent Assembly of duly elected representatives has been misrepresented as coercion and the issue of minorities has been made into an insuperable barrier to Indian progress."

The Working Committee added :—

"The Congress had proposed that minority rights should be amply protected by agreement with the elected representatives of the minorities concerned."

This shows that even the Congress did not demand that the decision of minority rights should be included in the purview of the Constituent Assembly. His Majesty's Government has, however, given them the additional right to decide this minority rights issue by a bare majority vote. With regard to the question of Pakistan, the same attitude is noticeable. The Muslim League did not demand that Pakistan must be conceded immediately. All that the Muslim League had asked for was that at the next revision of the Constitution, the Mussalmans should not be prevented from raising the question of Pakistan. The present proposals have gone a step beyond and distinctly give to the Muslim League the right to create Pakistan. These are constitutional proposals. They are intended to lead India to wage a total war in which Hindus, Mussalmans,

Depressed Classes and Sikhs are called upon wholeheartedly to participate. Yet Sir Stafford Cripps, either with the consent or without the consent of His Majesty's Government, has been making discrimination between major parties and minor parties. The major parties are those whose consent is necessary. Minor parties are those with whom consultation is believed to be enough. This is new distinction. Certainly it was never made in the prior pronouncements either of His Majesty's Government or of the Viceroy. The pronouncement spoke of the "consent of the principal elements in the national life of India."

So far as the Depressed Classes are concerned, I am not aware of any pronouncement in which the Depressed Classes were placed on a lower plane than the one given to the Mussalmans. I quote the following from the speech of the Viceroy made in Bombay on January 10, 1941, from which it will be seen that the Depressed Classes were bracketed with the Mussalmans :

"There are insistent claims of the minorities. I need refer only to two of them ; the great Muslim minority and the Scheduled Classes—there are the guarantees that have been given to the minorities in the past, the fact that their position must be safeguarded and that those guarantees must be honoured."

This invidious distinction now sought to be made is a breach of faith with those minorities whose position has been lowered by this discrimination. From a constitutional point of view of total war, it is bound to cause more disaffection and disloyalty in the country. It is for the British to consider whether in this attempt to win the friendship of those who have probably already decided to choose other friends, they should lose those who are their real friends. The proposals show a sudden *volte face* on the part of His Majesty's Government. The putting forth of those proposals which were denounced by them as an invasion of minorities' rights is an indication of their complete surrender of right to win might. This is Munich Mentality the essence of which is to save oneself by sacrificing others and it is this mentality which is writ large on those proposals. My advice to the British Government is that they should withdraw these proposals. If they cannot fight for right and justice and their plighted word they should better make peace. They can thereby at least save their honour.

APPENDIX X

CORRESPONDENCE BETWEEN LORD WAVELL AND

MR. GANDHI, 1944

1. 1. *Letter from Mr. Gandhi to Viceroy on July 15th, 1944,*

"DEAR FRIEND,

You have no doubt seen the authentic copies, now published in the Indian Press, of the statements given by me to Mr. Gelder of the *News Chronicle*. As I have said to the Press, they were meant primarily to be shown to you. But Mr. Gelder, no doubt with the best of motives, gave the interview premature publicity. I am sorry. The publication will nevertheless be a blessing in disguise, if the interview enables you to grant at least one of my requests contained in my letter of June. 17, 1944.

I am yours, etc.,

(Sd.) M. K. GANDHI."

2. 2. *Viceroy's reply to Mr. Gandhi, dated 22nd July 1944.*

"DEAR MR. GANDHI,

Thank you for your letter of July 15. I have seen the statements you have made to Mr. Gelder, and your subsequent explanation of them. I do not think I can usefully comment at present, except to repeat what I have said in my last letter that if you will submit to me a definite and constructive policy, I shall be glad to consider it.

Yours sincerely,

(Sd.) WAVELL."

3. 3. *Gandhi's letter to the Viceroy, dated 27th July 1944.*

"DEAR FRIENDS,

I must admit my disappointment over your letter of 22nd instant. But I am used to work in the face of disappointment. Here is my concrete proposal.

I am prepared to advise the Working Committee to declare that in view of changed conditions, mass civil disobedience envisaged by the resolution of August 1942, cannot be offered and that full cooperation in the war effort should be given by the Congress, if a declaration of immediate Indian independence is made and a National Government responsible to the Central Assembly be formed subject to the proviso that, during the tendency of the war, the military operations should continue as at present but without involving any financial burden on India. If there is a desire on the part of the British Government for a settlement, friendly talks should take the place of correspondence. But I am in your hands. I shall continue to knock so long as there is the least hope of an honourable settlement.

After the foregoing was written, I saw Lord Munster's speech in the

House of Lords. The summary given by him in the House of Lords fairly represents my proposal. This summary may serve as a basis for mutual friendly discussion.

I am,

Yours sincerely,

(SD.) M. K. GANDHI."

4, *Viceyoy's reply to Mr. Gandhi, dated 15th August 1944.*

"DEAR MR. GANDHI,

Thank you for your letter of July 27. Your proposals are ;— (i) that you should undertake to advise the Working Committee : (a)"that in view of changed conditions mass civil disobedience envisaged by the resolution of August 1942, cannot be offered"and (b)"that full co-operation in the war effort should be given by the Congress provided (ii) that His Majesty's Government (a) declare immediate Indian independence, and (b) form a"National Government"responsible to the Central Assembly"subject to the proviso that during the pendency of the war the military operations should continue as at present but without involving any financial burden on India."

His Majesty's Government remain most anxious that a settlement of the Indian problem should be reached. But proposals such as those put forward by you are quite unacceptable to His Majesty's Government as a basis for discussion and you must realise this if • you have read Mr. Amery's statement in the House of Commons on July 28th last. They are indeed very similar to the proposals made by Maulana Abul Kalam Azad to Sir Stafford Cripps in April 1942 and His Majesty's Government's reasons for rejecting them are the same as they were then.

3. Without recapitulating all these reasons in detail, I should remind you that His Majesty's Government at that time made it clear:

- (a)(a) That their offer of unqualified freedom after the cessation of hostilities was made conditional upon the framing of a Constitution agreed by the main elements of India's national life and the negotiation of the necessary treaty arrangements with His Majesty's Government;
- (b)(b) That it is impossible during the period of hostilities to bring about any change in the Constitution by which means alone a"National Government"such as you suggest could be made responsible to the Central Assembly.

The object of these conditions was to ensure the fulfilment of their duty to safeguard the interests of the racial and religious minorities of the Depressed Classes and their treaty obligations to the Indian States.

4. It was upon the above conditions that His Majesty's Government invited Indian leaders to take part in an interim Government which would operate under the existing Constitution. I must make it quite clear that until the war is over responsibility for defence and military operations cannot be divided from the other responsibilities of Government and that until hostilities cease and the new Constitution is in operation, His Majesty's Government and the Governor-General must retain their responsibility over the entire field. So far as the question of India's share of the cost of the war is concerned, this is essentially a matter for settlement between His Majesty's Government on the one hand and the Government of India on the other, and existing financial arrangements can only be reopened at the instance of one or the other.

5. It is clear in these circumstances that no purpose will be served by discussion on the basis which you suggest. If however the leaders of the Hindus, the Muslims and the important minorities were willing to co-operate in a transitional Government established and working within the present constitution, I believe good progress might be made. For such a transitional Government to succeed, there must before it is formed, be agreement in principle between Hindus and Muslims and all important elements as to the method by which the new Constitution should be framed. This agreement is a matter for Indians themselves.

Until Indian leaders have come closer together than they are now, I doubt if I myself can do anything to help. Let me remind you too that minority problems are not easy. They are real and can be solved only by mutual compromise and tolerance. 6. The period after the termination of hostilities for which the transitional Government would last, would depend on the speed with which the new constitution could be framed. I see no reason why preliminary work on that Constitution should not begin as soon as the Indian leaders are prepared to co-operate to that end. If they can arrive at a genuine agreement as to the method of framing the Constitution, no unnecessary time need be spent after the war in reaching final conclusions and in agreeing treaty arrangements with His Majesty's Government. There again the primary responsibility rests on the Indian leaders.

Yours sincerely,
(SD.) WAVELL."

APPENDIX XI

POLITICAL DEMANDS OF SCHEDULED CASTES

Resolutions passed by the Working Committee of the All-India Scheduled Castes Federation held in Madras on the 23rd September 1944 under the Presidentship of

Rao Bahadur N .Shiva Raj, B.A., B.L., M.L.A., outlining the safeguards for the Untouchables in the new Constitution.

RESOLUTION NO. I

SUBJECT :—*Recognition of the Scheduled Castes as a separate element.*

The Working Committee of the All-India Scheduled Castes Federation has found a section of the Press in India making the allegation, that the statement made by H. E. the Viceroy in his letter to Mr. Gandhi dated the 15th August 1944 to the effect that the Scheduled Castes are one of the important and separate elements in the national life of India and requiring that the consent of the Scheduled Castes to the Constitution of India was a necessary condition precedent for transfer of power to Indians, is a departure from the position of His Majesty's Government as defined in the Cripps Proposals. The Committee cannot help expressing its indignation at this propaganda and takes this occasion to state in most emphatic and categorical terms that the Scheduled Castes are a distinct and separate element in the national life of India and that they are a religious minority in a sense far more real than the Sikhs and Muslims can be and within the meaning of the Cripps Proposals. The Working Committee desires to point out that what has been stated by Lord Wavell in his letter to Mr. Gandhi has been the position of His Majesty's Government from the very beginning and was enunciated in clear terms as early as 1917 by the authors of the Montagu-Chelmsford Report simultaneously with the enunciation by them of Responsible Government as the goal of India's political evolution and has been confirmed by subsequent action of His Majesty's Government such as the grant of separate representation to the Scheduled Castes at the Round Table Conference, Joint Parliamentary Committee and in the Government of India Act, 1935, as a recognised minority, separate from the Hindus. The Working Committee has, therefore, no hesitation in saying that it is a false and malicious propaganda to allege that this is a departure from the policy of His Majesty's Government and regards it as a manoeuvre on the part of the enemies of the Scheduled Castes to defeat their just claims for constitutional safeguards and calls upon Indian political leaders and particularly the Hindu leaders to accept this fact, in the interests of peace and good-will between the Hindus and the Scheduled Castes, and for the speedy realization of India's political goal.

RESOLUTION NO. 2

SUBJECT :—*Declaration by His Majesty's Government relating to the Scheduled Castes and the Constitution.*

The Working Committee of the All-India Scheduled Castes Federation welcomes the declaration made by His Majesty's Government and recently reiterated by His Excellency the Viceroy that His Majesty's Government regards the consent of the Scheduled Castes, among others, to the Constitution of a free India, as a matter of vital importance and as a necessary condition precedent to the transfer of power to Indian hands. At the same time, the Working Committee wishes to draw the attention of His Majesty's Government to the attitude of the Congress and other political organizations in the country which treats this declaration of His Majesty's Government as not being a *bona fide* declaration and made without any intention to honour it and as a mere matter of tactics adopted to postpone transfer of power, and which is in all probability responsible for the unwillingness of the Majority Community to seek for a settlement with the Scheduled Castes. The Working Committee regards this allegation as baseless and calls upon His Majesty's Government not to give any ground for such suspicion and make it clear that they will stand by the declaration at all times and under all circumstances.

RESOLUTION NO. 3

SUBJECT :—*Nature of Constitutional Safeguards.*

The Working Committee declares that no Constitution shall be acceptable to the Scheduled Castes unless :—

- (a) (a) it has the consent of the Scheduled Castes ;
- (b) (b) it recognises the Scheduled Castes as distinct and separate element;
- (c) (c) it contains within itself provisions for securing the following purposes:
 - (1) For earmarking a definite sum in the Budgets of the Provincial and Central Governments for the Secondary, University and Advanced Education of the Scheduled Castes.
 - (2) For reservation of Government lands for separate settlements of the Scheduled Castes through a Settlement Commission.
 - (3) For Representation of the Scheduled Castes according to their needs, numbers and importance :—
 - (i) (i) in the Legislatures,

- (ii) (ii) in the Executive,
 - (iii) (iii) in Municipalities and Local Boards,
 - (iv) (iv) in the Public Services,
 - (v) (v) on the Public Service Commissions.
- (4) For the recognition of the above provisions as fundamental rights beyond the powers of the Legislature or The Executive to amend or alter or abrogate.
- {5) For the appointment of an Officer similar in status to that of the Auditor-General appointed under Section 166 of the Government of India Act of 1935 and re-movable from office in like manner and on the like grounds as a judge of the Federal Court to report on the working of the provisions relating to Fundamental Rights.

RESOLUTION NO, 4

SUBJECT :—*Communal Settlement.*

The Working Committee of the All-India Scheduled Caste Federation, while it is most eager for a settlement of the Communal problem, wholly disapproves of the secret negotiations which are being carried on by Mr, Gandhi and Mr, Jinnah for a settlement between the Hindus and the Muslims, The Working Committee is of opinion”that Communal settlement of a sectional character is harmful in every way. It is harmful because it ignores the vital interests of other communities. It is harmful because it creates a feeling of suspicion in other communities that dishonest deal is being *made* between two communities to defeat their interests' It is also harmful to the general interests of the country, inasmuch as the singling out of one special community from others for conferring special privileges, not necessary for its protection but demanded on the basis of prestige, creates differences in status which from the point of view of maintaining equal citizenship for all, are unjustifiable and must be deplored. The Working Committee is surprised that Mr. Gandhi who has time and again proclaimed himself as an opponent of secrecy in public life should have entered into secret diplomacy to bring about Hindu-Moslem Settlement. The Committee expresses its emphatic opinion that the proper 'procedure to settle the communal question, which would give a sense of security and ensure fair and equal treatment to all is to discuss the demands put forth by each interest in public and in the presence of and with the representatives of other interests.

RESOLUTION NO. 5

SUBJECT :—*Revision of the Constitution,*

The Working Committee of the All-India Scheduled Castes Federation is of opinion that the provisions in the existing Constitution relating to minority representation are not based on any intelligible principle. The Committee finds that as the system now stands, some minorities have not received even their population ratio of representation, while other minorities have been given weightage over and above their population ratio as a concession to their claims based on historical and military importance. The Working Committee regards the recognition of such claims to be harmful to the interests of other minorities and inconsistent with the ideal of social and political democracy, which is the goal of all Indians and that they should never be tolerated. In this connection, the Committee wishes to draw attention to the fact that the principle of giving weightage to specially selected minorities has been condemned by the authors of the Montagu-Chelmsford Report and also by the Simon Commission. The Committee demands that in view of the fact that the next Constitution of India will be for India as a Dominion, the provisions of the Constitution relating to minorities should be revised and should be brought in accord with the principle of equal treatment of all minorities.

RESOLUTION NO. 6

SUBJECT :—*Representation in the Legislatures and in the Executive.*

The Working Committee of the All-India Scheduled Castes Federation desires to state in categorical and emphatic terms that the Scheduled Castes will not tolerate any discrimination between one community and another in the matter of representation and will insist upon their claim for seats in the Provincial and Central Legislatures and in the Provincial and Central Executive being adjudged in the same manner and by the same principles that may be made applicable to the claims of the Muslim Community.

RESOLUTION NO. 7

SUBJECT :—*Electorates.*

The Working Committee of the All-India Scheduled Castes Federation is of opinion that the experience of the last elections held under the Government of India Act has proved that the system of joint electorates

has deprived the Scheduled Castes of the right to send true and effective representatives to the Legislatures and has given the Hindu Majority the virtual right to nominate members of the Scheduled Castes who are prepared to be the tools of the Hindu Majority. The Working Committee of the Federation therefore demands that the system of joint electorates and reserved seats should be abolished and the system of separate electorates be introduced in place thereof.

RESOLUTION NO. 8

SUBJECT :—*Framework of Executive Government.*

The working Committee of the All-India Scheduled Castes Federation takes note of the fact that not only all wealth, property, trade and industry are in the hands of the Majority Community, but even the whole administration of the State is controlled by the Majority Community whose members have monopolized all posts in the State services both superior and inferior. The Working Committee of the All-India Scheduled Castes Federation regards this as the most dangerous situation which cannot but cause great apprehension to the minority communities since the combination of these circumstances gives the majority the fullest power to establish its stranglehold upon the minorities. This fear of a stranglehold is greatly augmented by the Constitutional provisions relating to the Executive contained in the Government of India Act of 1935 which permits the majority in the Legislature to form a Government without reference to the wishes of the minorities,

The Working Committee of the All-India Scheduled Castes Federation feels that while, in the absence of an alternative system, the Parliamentary system of Government may have to be accepted, the Committee is definitely opposed to the system of Parliamentary cabinet inasmuch as it automatically vests the Executive authority in the Majority Community and thereby strengthens the hold of the Majority Community which has entered into the steel frame of the administration and thus has become a source of great danger to the Minorities. The Working Committee has, therefore, come to the conclusion that the system of Parliamentary Cabinet is not suited to Indian conditions and that a different system under which Executive Government would be formed in consultation with the wishes of the Minorities must be designed to give them a better sense of security.

The Working Committee insists that the Executive in the Provinces as well as in the Centre should be constituted in the following manner:—

- (i) (i) The Executive should consist of a Prime Minister

and other ministers drawn from general community and from minority communities in a proportion to be specified in the Constitution.

- (ii) (ii) The Prime Minister and Ministers drawn from the general community shall be elected to the Executive by the whole house by single transferable vote.
- (iii) (iii) The Ministers representing the minority communities shall be chosen by the members representing the different communities by single transferable vote.
- (iv) (iv) The Members of the Executive shall be members of the Legislature, shall answer questions, vote and take part in debates.
- (v) (v) Any vacancy in the Executive shall be filled in accordance with rules governing the original appointments.
- (vi) (vi) The period for which the Executive shall hold office shall be co-terminus with the life of the Legislature.

RESOLUTION NO. 9

SUBJECT :—*Public Services,*

While it is desirable to plan for a Government which will be a Government of Laws and not of men, it cannot be forgotten that no matter how Government is organised, it must remain a Government of men. That being so, whether Government is good or bad as distinguished from a merely efficient Government and how far the administration of public affairs will be non-political and impartial must depend upon the spirit and outlook and sense of justice of the men who are appointed to administer the Law. The Working Committee of the All-India Scheduled Castes Federation is convinced that the Scheduled Castes can never get protection, justice or sympathy from the present administration which is controlled by men full of caste consciousness, narrow-mindedness, absence of sense of justice and having a hatred and contempt for the Scheduled Castes. The Working Committee, therefore, demands that the Constitution must recognise the right of the Scheduled Castes to reservation *in* the Public Services in the same proportion as may be applied to the claims of the Muslim Community,

RESOLUTION NO. 10

SUBJECT :—*Provision for Education.*

The Working Committee of the All-India Scheduled Castes Federation feels that unless persons belonging to the Scheduled Castes are able to

occupy posts which carry executive authority, the Scheduled Castes must continue to suffer, as they have been doing in the past all the injustices and indignities from the hands of the Government and the Public. The Working Committee, therefore, regards the spread of higher and advanced education among the Scheduled Castes as of vital importance to them. But, it cannot be denied that such advanced education is beyond the means of the Scheduled Castes. The Committee regards it as essential that a definite liability in this behalf should be imposed on the State to provide funds for that purpose and demands that the Constitution should impose an obligation upon the Provincial Governments and the Central Government to set apart adequate sums, as may be specified by the Constitution, exclusively for advanced education of the Scheduled Castes in their annual budgets and to accept such provisions as a first charge on their revenues,

RESOLUTION NO. 11

SUBJECT :—*Separate Settlements.*

The Working Committee of the All-India Scheduled Castes Federation holds;—

- (a) that so long as the Scheduled Castes continue to live on the outskirts of the Hindu village, as an alien people, with no source of livelihood and in small numbers as compared to Hindus, they will continue to remain Untouchables and subject to the tyranny and oppression of the Hindus and will not be able to enjoy free and full life, and
- (b) that for the better protection of the Scheduled Castes *from* the tyranny and oppression *of* the Caste Hindus, which may take a worse form under Swaraj, and to enable the Scheduled Castes to develop to their fullest manhood) to give them economic and social security as also to pave the way for the removal of untouchability, the Working Committee demands that the Constitution should provide-
 - (1) For the transplantation of the Scheduled Castes from their present habitations and form separate Scheduled Caste villages away from and independent of Hindu villages;
 - (2) For the settlement of the Scheduled Castes in new villages a provision shall be made by the Constitution for the establishment of a Settlement Commission;
 - (3) All Government land which is cultivable and which is not occupied and land which may be reclaimed shall be handed

Appendix XV:	(8)	Assam
Appendix XV:	(9)	Orissa

N.B.—All figures except those in column 8 are actuals. Those in column 8 are calculated as actuals are not obtainable. They are calculated on the assumption that the percentage of Scheduled Caste Voters and of Hindu Voters who went to the polls was the same. How far the assumption is justified, it is not possible to say

APPENDICES

APPENDIX XVI

THE WAVELL PLAN

(i) White Paper presented to Parliament on 14th June 1945 by the Secretary of State for India, containing His Majesty's Government's Proposal relating to the Government of India.

1. 1. During the recent visit of Field-Marshal Viscount Wavell to this country His Majesty's Government reviewed with him a number of problems and discussed particularly the present political situation in India.
2. 2. Members will be aware that since the offer by His Majesty's Government to India in March 1942 there has been no further progress towards the solution of the Indian constitutional problem.

3. 3. As was then stated, the working out of India's new constitutional system is a task which can only be carried through by the Indian peoples themselves.
4. 4. While His Majesty's Government are at all times most anxious to do their utmost to assist the Indians in the working out of a new constitutional settlement, it would be a contradiction in terms to speak of the imposition by this country of self-governing institutions upon an unwilling India. Such a thing is not; possible, nor could we accept the responsibility for enforcing such institutions at the very time when we were, by its purpose, withdrawing from all control of British Indian affairs.
5. 5. The main constitutional position remains therefore as it was. The offer of March 1942 stands in its entirety without change or qualification. His Majesty's Government still hope that the political leaders in India may be able to come to an agreement as to the procedure whereby India's permanent future form of government can be determined.
6. 6. His Majesty's Government are, however, most anxious to make any contribution that is practicable to the breaking of the political deadlock in India. While that deadlock lasts not only political but social and economic progress is being hampered.
7. 7. The Indian administration, over-burdened with the great tasks laid upon it by the war against Japan and by the planning for the post-war period, is further strained by the political tension that exists.
8. 8. All that is so urgently required to be done for agricultural and industrial development and for the peasants and workers of India cannot be carried through unless the whole-hearted co-operation of every community and section of the Indian people is forthcoming.
9. 9. His Majesty's Government have therefore considered whether there is something which they could suggest in this interim period, under the existing constitution, pending the formulation by Indians of their future constitutional arrangements, which would enable the-main communities and parties to co-operate more closely together and with the British to the benefit of the people of India as a whole.
10. 10. It is. not the intention of His Majesty's Government to introduce any change contrary to the wishes of the major Indian communities. But they are willing to make possible some step forward during the interim period if the leaders, of the principal Indian parties are prepared to agree to their suggestions and to co-operate in the successful conclusion of the war against Japan as well as in the

reconstruction in India which must follow the final victory.

11. 11. To this end they would be prepared to see an important change in the composition of the Viceroy's Executive. This is possible without making any change in the existing statute law except for one amendment to the Ninth Schedule to the Act of 1935. That Schedule contains a provision that not less than three members of the Executive must have had at least 10 years' service under the Crown in India. If the proposals I am about to lay before the House meet with acceptance in India, that clause would have to be amended to dispense with that requirement.
12. 12. It is proposed that the Executive Council should be reconstituted and that the Viceroy should in future make his selection for nomination to the Crown for appointment to his Executive from amongst leaders of Indian political life at the Centre and in the Provinces, in proportions which would give a balanced representation of the main communities, including equal proportions of Moslems and Caste Hindus.
13. 13. In order to pursue this object, the Viceroy will call into conference a number of leading Indian politicians who are the heads of the most important parties or who have had recent experience as Prime Ministers of Provinces, together with a few others of special experience and authority. The Viceroy intends to put before this conference the proposal that the Executive Council should be reconstituted as above stated and to invite from the members of the conference a list of names. Out of these he would hope to be able to choose the future members whom he would recommend for appointment by His Majesty to the Viceroy's Council although the responsibility for the recommendations must of course continue to rest with him, and his freedom of choice therefore remains unrestricted.
14. 14. The members of his Council who are chosen as a result of this arrangement would of course accept the position on the basis that they would whole-heartedly co-operate in supporting and carrying through the war against Japan to its victorious conclusion.
15. 15. The members of the Executive would be Indians with the exception of the Viceroy and the Commander-in-Chief, who would retain his position as War Member. This is essential so long as the defence of India remains a British responsibility.
16. 16. Nothing contained in any of these proposals will affect the relations of the Crown with the Indian States through the Viceroy as

Crown Representative.

17. 17. The Viceroy has been authorised by His Majesty's Government to place this proposal before the Indian Leaders. His Majesty's Government trust that the leaders of the Indian communities will respond. For the success of such a plan must depend upon its acceptance in India and the degree to which responsible Indian politicians are prepared to co-operate with the object of making it a workable interim arrangement. In the absence of such general acceptance existing arrangements must necessarily continue.
18. 18. If such co-operation can be achieved at the Centre it will no doubt be reflected in the Provinces and so enable responsible Governments to be set up once again in those Provinces where, owing to the withdrawal of the majority party from participation, it became necessary to put into force the powers of the Governors under Section 93 of the Act of 1935. It is to be hoped that in all the Provinces these Governments would be based on the participation of the main parties, thus smoothing out communal differences and allowing Ministers to concentrate upon their very heavy administrative tasks.
19. 19. There is one further change which, if these proposals are accepted, His Majesty's Government suggest should follow.
20. 20. That is, that External Affairs (other than those tribal and frontier matters which fall to be dealt with as part of the defence of India) should be placed in the charge of an Indian Member of the Viceroy's Executive so far as British India is concerned, and that fully accredited representatives shall be appointed for the representation of India abroad.
21. 21. By their acceptance of and co-operation in this scheme the Indian leaders will not only be able to make their immediate contribution to the direction of Indian affairs, but it is also to be hoped that their experience of co-operation in government will expedite agreement between them as to the method of working out the new constitutional arrangements,
22. 22. His Majesty's Government consider, after the most careful study of the question, that the plan now suggested gives the utmost progress practicable within the present constitution. None of the changes suggested will in any way prejudice or prejudge the essential form of the future permanent constitution or constitutions for India.
23. 23. His Majesty's Government feel certain that given goodwill and a genuine desire to co-operate on all sides, both British and Indian, these proposals can mark a genuine step forward in the collaboration

of the British and Indian peoples towards Indian self-government and can assert the rightful position, and strengthen the influence, of India in the counsels of the nations.

(ii) Broadcast Speech by His Excellency the Viceroy at New Delhi on 14th June 1946.

I have been authorised by His Majesty's Government to place before Indian political leaders proposals designed to ease the present political situation and to advance India towards her goal of full self-government. These proposals' are at the present moment being explained to Parliament by the Secretary of State for India. My intention in this broadcast is to explain to you the proposals, the ideas underlying them, and the method by which I hope to put them into effect.

This is not an attempt to obtain or impose a constitutional settlement. His Majesty's Government had hoped that the leaders of the Indian parties would agree amongst themselves on a settlement of the communal issue, which is the main stumbling-block; but this hope has not been fulfilled.

In the meantime, India has great opportunities to be taken and great problems to be solved, which require a common effort by the leading men of all parties. I therefore propose, with the full support of His Majesty's Government, to invite Indian leaders both of Central and Provincial politics to take counsel with me with a view to the formation of a new Executive Council more representative of organised political opinion. The proposed new Council would represent the main communities and would include equal proportions of Caste Hindus and Moslems. It would work, if formed, under the existing Constitution. But it would be an entirely Indian Council, except for the Viceroy and the Commander-in-Chief, who would retain his position as War Member. It is also proposed that the portfolio of External Affairs, which has hitherto been held by the Viceroy, should be placed in charge of an Indian Member of Council, so far as the interests of British India are concerned.

A further step proposed by His Majesty's Government is the appointment of a British High Commissioner in India, as in the Dominions to represent Great Britain's Commercial and other such interests in India.

Such a new Executive Council will, you realise, represent a definite advance on the road to self-government. It will be almost entirely Indian, and the Finance and Home Members will for the first time be Indians,

while an Indian will also be charged with the management of India's Foreign Affairs. Moreover Members will now be selected by the Governor-General after consultation with political leaders; though their appointment will of course be subject to the approval of His Majesty the King-Emperor.

The Council will work within the framework of the present constitution ; and there can be no question of the Governor-General agreeing not to exercise his constitutional power of control; but it will of course not be exercised unreasonably.

I should make it clear that the formation of this interim Government will in no way prejudice the final constitutional settlement. The main tasks for this New Executive Council would be :

First, to prosecute the war against Japan with the utmost energy till Japan is utterly defeated.

Secondly, to carry on the Government of British India, with all the manifold tasks of post-war development in front of it, until a new permanent constitution can be agreed upon and come into force.

Thirdly, to consider, when the Members of the Government think it possible, the means by which such agreement can be achieved. The third task is most important. I want to make it quite clear that neither I nor His Majesty's Government have lost sight of the need for a long-term solution, and that the present proposals are intended to make a long-term solution easier.

I have considered the best means of forming such a Council ; and have decided to invite the following to Viceregal Lodge to advise me:

Those now holding office as Premier in a Provincial Government ; or, for Provinces now under Section 93 Government, those who last held the office of Premier.

The Leader of the Congress Party and the Deputy Leader of the Muslim League in the Central Assembly; the leader of the Congress Party and the Muslim League in the Council of State; also the leaders of the Nationalist Party and the European Group in the Assembly.

Mr. Gandhi and Mr. Jinnah as the recognised leaders of the two main political parties.

Rao Bahadur N. Siva Raj to represent the Scheduled Classes. Master Tara Singh to represent the Sikhs.

Invitations to these gentlemen are being handed to them today and it is proposed to assemble the Conference on 25th June at Simla where we shall be cooler than at Delhi.

I trust that all those invited will attend the Conference and give me their

help. On me and on them will lie a heavy responsibility in this fresh attempt to make progress towards a final settlement of India's future.

If the meeting is successful, I hope that we shall be able to agree on the formation of the new Executive Council at the Centre. I also hope that it will be possible for Ministries to re-assume office and again undertake the tasks of government in the Provinces now administered under Section 93 of the Constitution Act and that these Ministries will be coalitions.

If the meeting should unfortunately fail, we must carry on as at present until the parties are ready to come together. The existing Executive Council, which has done such valuable work for India, will continue if other arrangements cannot be agreed.

But I have every hope that the meeting will succeed, if the party leaders will approach the problem with the sincere intention of working with me and with each other. I can assure them that there is behind this proposal a most genuine desire on the part of all responsible leaders in the United Kingdom and of the British people as a whole to help India towards her goal. I believe that this is more than a step towards that goal, it is a considerable stride forward, and a stride on the right path.

I should make it clear that these proposals affect British India only and do not make any alteration in the relations of the Princes with the Crown Representative.

With the approval of His Majesty's Government, and after consultation with my Council, orders have been given for the immediate release of the members of the Working Committee of Congress who are still in detention. I propose to leave the final decision about the others still under detention as the result of the 1942 disturbances to the new Central Government, if formed, and to the Provincial Governments.

The appropriate time for fresh elections for the Central and Provincial Legislatures will be discussed at the Conference.

Finally, I would ask you all to help in creating the atmosphere of goodwill and mutual confidence that is essential if we are to make progress. The destiny of this great country and of the many millions who live in it, depend on the wisdom and good understanding of the leaders, both of action and of thought, British and Indian, at this critical moment of India's history.

India's military reputation never stood higher in the world than it does at present ; thanks to the exploits of her sons drawn from all parts of the country. Her representatives at International conferences have won high regard for their statesmanlike attitude. Sympathy for India's aspirations and progress towards prosperity was never greater or more widespread.

We have thus great assets if we can use them wisely. But it will not be easy, it will not be quick; there is very much to do, there are many pitfalls and dangers. There is on all sides something to forgive and forget.

I believe in the future of India, and as far as in me lies will further her greatness. I ask you all for your co-operation and goodwill.

(iii) (i) *Mr. Gandhi's Statement.*

As soon as I read the broadcast, I sent a wire to His Excellency the Viceroy drawing his attention to the fact that I have no *focus standi* as the "recognised representative of the Congress." That function belongs to the President of the Congress or whoever is appointed to represent the Congress on a particular occasion.

For several years, I have acted unofficially as an adviser to the Congress whenever required. The public will remember that I went with the same unrepresentative character for my talks with the Qaid-e-Azam Jinnah, and I can take up no other position with the British Government, in this instance represented by the Viceroy.

There is one aspect of the Viceregal broadcast which certainly offends my ear and, I hope, will offend that of every politically-minded Hindu. I refer to the expression "caste Hindus." I claim that there is no such person, speaking politically, as a "Caste Hindu," let alone the Congress which seeks to represent the whole of India which is yearning after political independence. Does Veer Savarkar or Dr. Syama Prasad Mookerjee of the Hindu Mahasabha represent caste Hindus? Do they not represent all Hindus without distinction of caste? Do they not include the so-called untouchables? Do they themselves claim to be caste Hindus? I hope not. Of all politically-minded Hindus, I know that even the revered Pandit Malaviyaji, though he observes caste distinction, will refuse to be called a caste Hindu, as distinguished from the other Hindus. Modern tendency in Hinduism is to abolish all caste distinctions and this I maintain in spite of my knowledge of reactionary elements in Hindu society. I can only hope, therefore, that the Viceroy has allowed himself to make use of the expression in utter ignorance. I want to acquit him of knowingly wounding the susceptibilities of the Hindu society or dividing it. I would not have dwelt on this matter but for the fact that it touches the political mind of Hindus in its sensitive spot and carries with it political repercussions.

The proposed conference can do much useful work if it is put in its proper political setting and is at the very outset rendered immune from any fissiparous tendency. Undoubtedly all invitees might appear as

Indians conjointly bent on achieving India's natural goal and not as persons representing several sections of Indian society.

That is how I have viewed the Bhulabhai-Liaquat Ali understanding which I suppose laid the foundations for the forthcoming Viceregal conference, Sri Bhulabhai Desai's proposal has no such colouring as the Viceregal broadcast would seem to have. I am not ashamed of the part I have played in advising Sri Bhulabhai Desai when he consulted me about his proposal. Sri Bhulabhai Desai's proposal, as I understood it, attracted me as one interested in solving the communal tangle, and I assured him that I would use my influence with the members of the Working Committee and give reasons for acceptance of his proposal and I have no doubt that, if both parties to the proposal correctly represent their constituents and have independence of India as their common goal, things must shape well.

At this point, I must stop and the Working Committee has to take up the thread. It is for its members to declare the Congress mind on the impending questions.—*A.P.I.*

WHICH IS WORSE? SLAVERY OR UNTOUCHABILITY?

[Dr. Ambedkar has dealt with the subject of Slavery and Untouchability in chapter 3 & 8 of Vol. 5 of this series, under the caption-' Roots of the Problem ' ' Parallel cases ' .

We have however now come in possession of a booklet in which there are certain paragraphs which do not find place in Vol. No. V chapter 3 & 8.

The material reproduced here when read together, makes consistent and complete reading. We have also no reason to doubt the genuineness of the material as the publisher of the said booklet Shri Devi Dayal was associated with Dr. Ambedkar during 1943-47. The facsimile of the title at the beginning of the chapter, as printed in the booklet vouchsafe the authorship of Dr. Ambedkar. Earlier paragraphs in the booklet i. e. from page I to 11 upto * considerations of humanity ' are already printed in Vol. 5 at page nos. 80 to 88. Mr. Bhagwandas of Delhi deserves credit for publishing this article for Mr. Devi Dayal—Editor]

Slavery in India

Among the claims made by the Hindus for asserting their superiority over other nations the following two are mentioned. One is that there was no slavery in India among the Hindus and the other is that Untouchability is infinitely less harmful than slavery.

The first statement is of course untrue. Slavery is a very ancient institution of the Hindus. It is recognised by Manu, the law giver and has been elaborated and systematised by the other Smriti writers who followed Manu. Slavery among the Hindus was never merely ancient institution, which functioned, only in some hoary past. It was an institution which continued throughout all Indian history down to the year 1843 and, if it had not been abolished by the British Government bylaw in that year, it might have continued even today. While slavery lasted it applied to both the touchables as well as the untouchables.

The untouchables by reason of their poverty became subject to slavery oftener than did the touchables. So that up to 1843 the untouchables in

India had to undergo the misfortune of being held in double bondage—the bondage of slavery and the bondage of untouchability. The lighter of the bonds has been cut and the untouchable is made free from it. But because the untouchables of today are not seen wearing the chains of slavery on them, it is not to be supposed that they never did. To do so would be to tear off whole pages of history.

The first claim is not so widely made. But the second is. So great a social reformer and so great a friend of the untouchables as Lala Lajpat Rai in replying mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/62.Which is Worse_Slavery or Untouchability.htm - _msocom_1 to the indictment of the Hindu Society by Miss Mayo insisted that untouchability as an evil was nothing as compared with slavery and he fortified his conclusion by a comparison of the Negro in America with the untouchables in India and showed that his conclusion was true. Coming as it does from Lala Lajpat Rai the matter needs to be more closely examined.

Is untouchability less harmful than slavery? Was slavery less human than untouchability? Did slavery hamper the growth more than untouchability does? Apart from the controversy raised by Lala Lajpat Rai, the questions are important and their discussions will be both interesting and instructive. To understand this difference it is necessary to begin by stating the precise meaning of the term slavery. This is imperative because the term slavery is also used in a metaphorical sense to cover social relationship which is kindered to slavery but which is not slavery. Because the wife was entirely in the power of the husband, because he sometimes ill-used her and killed her, because the husband exchanged or lent his wife and because he made her work for him, the wife was sometimes spoken of as a slave. Another illustration of the metaphorical use of the term is its application to I serfs. Because a serf worked on fixed days, performed fixed I services, paid fixed sums to the lord and was fixed to the land, he j was spoken of as a slave. These are instances of curtailment of I freedom, and inasmuch as they are akin to slavery because slavery also involves loss of freedom. But this is not the sense in which the word is used in law, and to avoid arguing at cross purpose, it would be better to base the comparison on the legal meaning of the word slavery.

In layman's language, a person is said to be slave when he is the property of another. This definition is perhaps too terse for the lay reader. He may not understand the full import of it without further explanation, property means something, a term which is used to denote a bundle of rights which a person has over something which is his property, such as the right to possess, to use, to claim the benefit of, to transfer by way of

sale, mortgage or lease and destroy. Ownership therefore means complete dominion over property. To put it concretely, when it is said that the slave is the property of the master, what it means is that the master can make the slave work against his will, take the benefit of whatever the slave produces without the consent of the slave. The master can lease out, sell or mortgage his slave without consulting the wishes of the slave and the master can even kill him in the strictest legal connotation of the term. In the eye of the law the slave is just a material object with which his master may deal in any way he likes.

In the light of this legal definition, slavery does appear to be worse than untouchability. A slave can be sold, mortgaged or leased; an untouchable cannot be sold, mortgaged or leased. A slave can be killed by the master without being held guilty for murder; an untouchable cannot be. Whoever causes his death will be liable for murder. In fact, the slave could not be killed with impunity, the law did recognise his death as being culpable homicide as it did in the case of the death of a freeman. But taking the position of the slave as prescribed by laws the difference between the condition of the slave and the untouchable is undoubtedly clear-that the slave was worse off than the untouchable.

There is however another way of defining a slave which is equally legal and precise although it is not the usual way. This other way of defining a slave is this; A slave is a human being who is not a person in the eye of the law. This way of defining a slave may perhaps puzzle some. It may therefore be necessary to state that in the eye of the law the term person is identical with the term human being. In law, there may be human beings whom the law does not regard as persons. Contrariwise there are in law persons who are not human beings. This curious result arises of the meaning which the law attaches to the word person. For the purposes of law a person is defined as an entity, human or nonhuman, in whom the law recognised a capacity for acquiring rights and bearing duties, A slave is not a person in the eye of the law although he is a human being. An idol is a person in the eye of the law although an idol is an inanimate object. The reason for this difference will be obvious. A slave is not a person although he is a human being, because the law does not regard him as an entity endowed with the capacity for rights and duties. Concisely an idol is a person though not a human being because the law does-whether wisely or not is another question-recognise the capacity for rights and duties. To be recognised as a person is of course a very important fact fraught with tremendous consequences. Whether one is entitled to rights and liberties upon this issue, the rights which flow from this recognition as person are

not only as life but are as vital as life. They include right over material things, their acquisition, their enjoyment and their disposal—called right to property. There are others far more important than these rights over material things. Firstly, there is the right in respect of one's own person—a right not to be killed, maimed or injured without due process of law called a right to life, a right not to be imprisoned save in due process of law—called right to liberty. Secondly, there is a right to reputation—a right not to be ridiculed or lowered in the estimation of fellow men, the right to his good name i. e. the right to the respect so far as it is well founded which others feel for him shall not be diminished. Thirdly, there is the right to the free exercise of powers and liberties mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/62.Which is Worse_Slavery or Untouchability.htm - _msocom_2

Every person is entitled without molestation to perform all lawful acts and to enjoy all the privileges which attach to him as a person. The most specific right of this kind is to be the unmolested pursuit of the occupation by which a man chooses to gain his livelihood. Under the same head falls the right of every person to the free use of the public highways, of navigable rivers and all public utilities. It also includes the right of every person that the machinery of the law, which is established for the protection of all persons shall not be maliciously set in motion to his detriment. Thirdly, there is the right of immunity from damage by fraud or coercion—it is a right not to be induced by fraud to assent to a transaction which causes damage, and not to be coerced into acting contrary to one's desire by force. Fourthly, the rights of a person are those which are collectively called Family Rights. These family rights may be distinguished as 'marital', 'parental', 'tutelary', and 'dominical'. The marital right, the right of a husband as against the world, is that no other man shall, by force or persuasion, deprive him of his wife's society, still less be criminally intimate with her. An analogous right might conceivably be recognised as being vested in the wife and is recognised in parts of America. The parental right extends to the custody and control of children, to the produce of their labour till they arrive at the age of discretion without interference. The tutelary right is the right of the parent to act as the guardian not for the benefit of the guardian but for that of the ward..... whose want of understanding he supplements and whose affairs he manages. The dominical right is the right to use labour of the ward. The right is infringed by killing, by injuring so as to make him less valuable or by enticing him away.

Not being a person, a slave had, so far as law is concerned, none of

these rights. The untouchable is a person in the eye of the law. It cannot therefore be said that he has none of the rights which the law gives to a ' person '. He has the right to property, to life, liberty, reputation, family and to the free exercise of his liberties and his powers. Define the slave as one may, either as a piece of property or as one who is not a person, *it* appears that the slave was worse off than the untouchable.

This is so if we consider only the *de jure* position of the slave. Let us consider what was the *defacto* position of the slave in the Roman Empire and in the United States. I take the following extracts from Mr. Barrow mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/62.Which is Worse_Slavery or Untouchability.htm - _msocom_3 :

“Hitherto, it is the repulsive side of household slavery that has been sketched. There is also another aspect. The literature reveals the vast household as normal. It is, of course, the exception. Large slave staffs undoubtedly existed, and they are generally to be found in Rome. In Italy and the Provinces there was less need of display; many of the staff of the Villa were engaged in productive work connected with land and its produce. The old-fashioned relationship between foreman and slave remained there; the slave was often a fellow worker. The kindness of Pliny towards his staff is well-known. It is in no spirit of self-righteousness and in no wish to appear in a favourable light in the eyes of the future generations which he hoped would read his letters that he tells of his distress at the illness and death of his slaves. The household (of Pliny) is the slaves' republic. Pliny's account of his treatment of his slaves is sometimes regarded as so much in advance of general or even occasional practice as to be valueless as evidence. There is no reason for this attitude.

From reasons both of display and genuine literary interest, the rich families attached to their households, slaves trained in literature and art. Calvisices Sabinus is said by Seneca to have had eleven slaves taught to recite Homer, Hesiod, and nine lyric poets by heart. ' Book cases would be cheaper ', said a rude friend. ' No, what the household knows the master knows ' was the answer. But, apart from such abuses, educated slaves must have been a necessity in the absence of printing;The busy lawyer, the dilettante poet, the philosopher and educated gentlemen of literary tastes had need of copyists and readers and secretaries. Such men were naturally linguistic also; a librarius who dies at the age of twenty boasts that he was ' *litteratus Graecis at Latinis* '. *Amanuensis* were common enough; librarians are to be found in public and private libraries.... Shorthand writing was in common use under the

Empire, and slave Notary were regularly employed....

Many freemen, rhetoricians and grammarians are collected by Snetonius in a special treatise. Verrius Flaccus was tutor to Austus's grandsons, and at death was publicly honoured by a statue. Scribonius Aphrodisius was the slave and disciple of Orbilius and was afterwards freed by Scribenia. Hyginus was librarian of the Palatine Library, in which office he was followed by Jullius Modestus, his own freedman. We hear of freedmen historians of a slave philosopher who was encouraged to argue with his master's, friends' slaves and freed architects. Freemen as doctors occur frequently in the inscriptions, some of them specialists ; they had been trained in big households as slaves, as is shown by one or two examples; after Manumission they rose to eminence and became notorious for their high fees."

"The tastes of some section of society demanded that dancers, singers, musicians, montebanks, variety artists, athletic trainers and messeieurs should be forthcoming. All these are to be found in slavery, often trained by teachers who had acquired some reputation" mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/62.Which is Worse_Slavery or Untouchability.htm - _msocom_4

* * * *

"The age of Augustus was the beginning of a period of commercial and industrial expansion. . . . slaves had indeed been employed (in arts and crafts) before, but the sudden growth of trade. . . .their employment in numbers that would otherwise have been unnecessary. Romans engaged more freely and more openly in various forms of commercial and industrial venture. Yet, even so the agent became more important, for commercial activities became more widespread; and such agents were almost necessarily slaves..... (this is so) because the bonds of slavery (are elastic). They could be so relaxed as to offer an incentive (to the slave) to work by the prospect of wealth and freedom, and so tightened as to provide a guarantee to the master against loss from the misconduct of his slave. In business contracts between slave and master third person seem to have been common, and the work thus done, and no doubt, the profits were considerable. Renting of land to the slave has already been noticed. . . and in industry much the same system was used in various forms; the master might lease a bank, or a business of the use of a ship, the terms being a fixed return or the slave being paid on a commission basis mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/62.Which is Worse_Slavery or Untouchability.htm - _msocom_5".

"The earnings of the slave became in law his peculium. Once the

peculium was saved it might be used to a variety of purposes. No doubt in many cases this fund was expended in providing food or pleasure..... But peculium must not be regarded merely as petty savings, casually earned and idly spent. The slave who made his master's business yield profits, to his own profit too, very often, had a keen sense of the best use to make up his own money. Often he reinvested it in his master's business or in enterprises entirely unrelated to it. He could enter into business relations with his master, from whom he came to be regarded as entirely distinct, or he could make contracts with a third person. He could even have procurators to manage his own property and interests. And so with the peculium may be found not only land, houses, shops but rights and claims.

“The activities of slaves in commerce are innumerable; numbers of them are shopkeepers selling every variety of food, bread, meat, salt, fish, wine vegetables, beans, Alpine-seed, honey, curd, ham, ducks and fresh fish, others deal in clothing—sandals, shoes, gowns and mantles. In Rome, they plied their trade in the neighbourhood of the Circus Maximus, or the Porticus Trigeminus; or the Esquiline Market, or the Great Mart (on the Caelian Hill) or the Suburramk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/62.Which is Worse_Slavery or Untouchability.htm - _msocom_6

' The extent to which slave secretaries and agents acted for their masters is shown very clearly in the receipts found in the house of Caecilius Jucundus at Pompei mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/62.Which is Worse_Slavery or Untouchability.htm - _msocom_7.

That the State should possess slaves is not surprising; war, after all, was the affair of the State and the captive might well be State-property. What is surprising is the remarkable use made of public slaves under the Empire and the extraordinary social position occupied by them. . . .

“Public slave came to mean before the Empire a slave of the state employed in its many offices, and the term implied a given occupation and often social position. The work of slaves of the State, slaves of the townships, and slaves of Caesar comprises much of what would now fall to parts of the higher and the whole of the lower branches of the civil services and of the servants of Municipal Corporations, working both with head and hands. . . In the subordinate levels (of the Treasury) there worked numbers of clerks and financial officers, all freedmen and slaves. The business dealt with must have been of vast range. . . The Mint . . . the immediate head was a knight, in charge of the minting processes.... a freedman was placed under him, served freedmen and slaves . . . From one branch of State service, at any rate, slaves were rigorously excluded,

except on one or two occasions of exceptional stress. They were not allowed to fight in the Army because they were not thought worthy of honour. Doubtless other motives were present also; it would be dangerous experiment to train too many slaves systematically in the use of Arms. If, however, slaves served merely in the fighting line, they are regularly to be found in great numbers behind it employed as servants, and in the commissariat and transport. In the fleet slaves were common enough mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/62.Which is Worse_Slavery or Untouchability.htm - _msocom_8“

Such was the defacto position of the slave in Roman Society. Let us turn to the *defacto* position of the Negro in the United States during the period in which he was slave in the eye of the law. Here are some facts* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/62.Which is Worse_Slavery or Untouchability.htm - _msocom_9 which shed a good deal of light on his position :

“Lafayette himself had observed that white and black seamen and soldiers had fought and messed together in the Revolution without bitter difference. Down in Granville Country, North Carolina, a full blooded Negro, John Chavis, educated in Prince-ton University, was conducting a private school for white students and was a licentiate under the local Presbytery, preaching to white congregations in the State. One of his pupils became Governor of North Carolina, another the State's most prominent Whig senator. Two of his pupils were sons of the Chief Justice of North Carolina. The father of the founder of the greatest military academy of the State attended his school and boarded in his home . . .

Slave labour was used for all kinds of work and the more intelligent of the Negro slaves were trained as artisans to be used and leased. Slave artisans would bring twice as much as an ordinary field hand in the market. Master craftsmen owned their staff. Some masters, as the system became more involved, hired slaves to their slave artisans. Many slave artisans purchased their freedom by the savings allowed them above the normal labour expected.”

“The advertisements for runaways and sales are an index to this skill. They received the same or better wages than the poor white labourer and with the influence of the master got the best jobs. The Contractors for masons' and carpenters' work in Athens, Georgia in 1838 were petitioned to stop showing preference to Negro labourers.”The white man is the only real, legal, moral, and civil proprietor of this country and state. The right of his proprietorship reached from the date of the studies of those whitemen. Copernicus and Galileo, who indicated the sphericity of the earth; which sphericity hinted to another white man, Columbus, the possibility by a

westerly course of sailing, of finding land. Hence by whitemen alone was this continent discovered, the whitemen alone, aye, those to whom you decline to give money for bread or clothes for their famishing families, in the logical manner of withholding work from them defending Negroes too in the bargain." In Atlanta in 1858, a petition signed by 2 white mechanics and labourers sought protection against the black slave artisans of masters who resided in other sections. The very next year sundry white citizens were aggrieved that the City Council tolerated a Negro dentist to remain and operate in their midst. ' Injustice to ourselves and the community it ought to be abated. We, the residents of Atlanta, appeal to you for justice '. A Census of free Negroes in Richmond County, Georgia, in 1819 showed carpenters, barbers, boatcorkers, saddlers, spinners, millwrights, holsters, weavers, harness makers, sawmill attendants and steamboat pilots. A Negro shoe-maker made by hand the boots in which President Munrow was inaugurated. Harriet Martineau marvelled at the slave workmanship in the delicately tiled floors of Thomas Jefferson's home at Monticello. There still stands in the big house of the old plantation, heavy marks of the hands of these Negro craftsmen, strong mansions built of timber hewn from the original oak and pinned together by wooden pins. Negro women skilled in spinning and weaving worked in the mills. Buckingham in 1839 found them in Athens, Georgia, working alongside with white girls without apparent repugnance of objection.

Negro craftsmen in the South, slave and free fared better than their brothers in the North. In 1856 in Philadelphia, of 1637 Negro craftsmen recorded, less than two-thirds could use their trades ; ' because of hostile prejudice '. The Irish who were pouring into America from the very beginning of the nineteenth century were being used in the North on approximately the same motives of preference which governed Negro slavery. ' An Irish Catholic ', it was argued in their favour, ' seldom attempts to rise to a higher condition than that in which he is placed, while the Negro often makes the attempt with success. Had not the old Puritan Oliver Cromwell, while the traffic in black slaves was on, sold all the Irish not killed in the Drogheda Massacre into Barbados? ' Free and fugitive Negroes in New York and Pennsylvania were in constant conflict with this group and the bitter hostility showed itself most violently in the draft riots of the New York. These Hibernians controlled the load carrying and the common labour jobs, opposing every approach of the Negro as a menace to their slight hold upon America and upon a means of livelihood."

Such was the *de facto* condition of the Roman slave and the American Negro slave. Is there anything in the condition of the Untouchables of

India which is comparable with the condition of the Roman slave and the American Negro slave? It would not be unfair to take the same period of time for comparing the condition of the Untouchables with that of the slaves under the Roman Empire. But I am prepared to allow the comparison of the condition of the slaves in the Roman Empire to be made with the condition of the Untouchables of the present day. It is a comparison between the worst of one side and the best of the other, for the present times are supposed to be the golden age for the Untouchables. How does the *defacto* condition of the Untouchables compare with the *defacto* condition of the slaves? How many Untouchables are engaged as the slaves in Rome were, in professions such as those of Librarians, Amanuenses, Shorthand writers? How many Untouchables are engaged, as the slaves in Rome were, in such intellectual occupations as those of rhetoricians, grammarians, philosophers, tutors, doctors and artists? How many untouchables are engaged in trade, commerce or industry as were the slaves in Rome? Even comparing his position with that of the Negro while he was a slave it cannot be said that the condition of the Untouchable has been better. Is there any instance of untouchables having been artisans? Is there any instance of untouchable having maintained a school where Brahmin children have come to sit at his feet in search of learning? Why such a thing is unthinkable? But it has happened in the United States of America. In comparing the *defacto* condition of the Roman slave and the American Negro I have purposely taken the recent condition of the Untouchables as a basis of comparison for the simple reason that the present times are supposed to be the golden age for the untouchables. But comparing even the condition of the untouchables in modern times they are certainly a sunken community as compared with the condition of slaves in time which historians call barbarous. There can therefore, be no doubt that untouchables have been worse off than slaves. This of course means that untouchability is more harmful to the growth of man than slavery ever was. On this there is a paradox. Slaves who were worse off in law than the untouchables were in fact better off than untouchables and untouchables who were better off in law than slaves were worse off in fact than slaves. What is the explanation of this paradox? The question of all questions is this ; what is it which helped the slave to overcome the rigorous denial of freedom by law and enabled them to prosper and grow? What is it that destroyed the effect of the freedom which the law gave to the untouchables and sapped his life of all vitality and stunted his growth.

The explanation of this paradox is quite simple. It will be easily understood if one bears in mind the relation between law and public

opinion. Law and public opinion are two forces which govern the conduct of men. They act and react upon each other. At times law goes ahead of public opinion and checks it and redirects in channels which it thinks proper. At times public opinion is ahead of the law. It rectifies the rigour of the law and moderates it. There are also cases where law and public opinion are opposed to each other and public opinion being the stronger of the two forces, disregards or sets at naught what the law-prescribes. Whether through compulsion arising out of convenience of commerce and industry or out of the selfish desire to make the best and the most profitable use of the slaves or out of considerations of humanity, public opinion and law were not in accord with regard to the position of the slave either in Rome or in the United States. In both places the slave was not a legal person in the eye of the law. But in both places he remained a person in the sense of a human being in the eye of the society. To put it differently the personality which the law withheld from the slave was bestowed upon him by society. There lies a profound difference between slavery and untouchability. In the case of the untouchable just the opposite has happened. The personality which the law bestowed upon the untouchables is withheld by society. In the case of the slave the law by refusing to recognise him as a person could do him no harm because society recognised him more amply than it was called upon to do. In the case of the untouchables the law by recognising him as a person failed to do him any good because Hindu society is determined to set that recognition at naught. A slave had a personality which counted notwithstanding the command of the law. An untouchable has no personality in spite of the command of the law. This distinction is fundamental. It alone can explain the paradox—the social elevation of the slave loaded though he was with the burden of legal bondage and the social degradation of the untouchable aided as he has been with the advantages of legal freedom.

Those who have condemned slavery have no doubt forgotten to take into consideration the fact that in a sense slavery was an apprenticeship in a business, craft or art, albeit compulsory. Unmitigated slavery with nothing to compensate the loss of freedom is of course to be condemned. But to enslave a person and to train him is certainly better than a state of barbarity accompanied by freedom. Slavery did mean an exchange of semi-barbarism for civilisation, a vague enough gift but none the less real. The full opportunities for civilised life could only be fully used in freedom, no doubt, but slavery was an apprenticeship, or in the words of Prof. Myres "an initiation into a higher culture".

This view of slavery is eminently a correct view. This training, this

initiation of culture was undoubtedly a great benefit to the slave. Equally it involved considerable cost to the master to train his slave, to initiate him into culture.”There can have been little supply of slaves, educated or trained, before enslavement. The alternative was to train them when young slaves in domestic work or in skilled craft, as was indeed done to some extent before the Empire, by Cato, the Elder, for example. The training was done by his owner and his existing staff indeed the household of the rich contained special pedagogy for this purpose. Such training took many forms : industry, trade, arts and letter”.

The question is why was the slave initiated into the high culture and why did it not fall to the lot of the untouchable to be so initiated? The question is very pertinent and I have raised it because the answer to the question will further reinforce the conclusion that has been reached namely that untouchability is worse than slavery and that is because the slave had a personality and the untouchable has not.

The reason why the master took so much trouble to train the slave and to initiate him in the higher forms of labour and culture was undoubtedly the motive of gain. A skilled slave as an item was more valuable than an unskilled slave. If sold he would fetch better price, if hired out he would bring in more wages. It was therefore an Investment to the owner to train his slave. But this is not enough to account for the elevation of the slave and the degradation of the untouchable. Suppose Roman society had an objection to buy vegetables, milk, butter, water or wine from the hands of the slave? Suppose Roman society had an objection to allow slaves to touch them, to enter their houses, travel with them in cars, etc. would it have been possible for the master to train his slave, to raise him from semi-barbarism to a cultured state? Obviously not. It is because the slave was not held to be an untouchable that the master could train him and raise him. We again come back therefore, to the same conclusion-namely, that what has saved the slave is that his personality was recognised by society and what has ruined the untouchable is that Hindu society did not recognise his personality, treated him as unfit for human association and common dealing.

That the slave in Rome was no less of a man because he was a slave, that he was fit for human intercourse although he was in bondage is proved by the attitude that the Roman Religion had towards the slave. As has been observed—

"..... Roman religion was never hostile to the slave. It did not close the temple doors against him ; it did not banish him from its festivals. If slaves were excluded from certain ceremonies, the same may be said of free men

and women-being excluded from the rites of Bono Dea, Vesta and Ceres, women from those of Hercules at the Ara Maxima. In the days when the old Roman divinities counted for some-thing, the slave came to be informally included in the family, and could consider himself under the protection of the gods of the household.Augustus ordered that freed women should be eligible as priestesses of Vesta. The law insisted that a slave's grave should be regarded as sacred and for his soul Roman mythology provided no special heaven and no particular hell. Even Juvenal agrees that the slave, soul and body is made of the same stuff as his master.

SLAVE IN LAW

There was no stigma attached to his person. There was no gulf social or religious which separated the slave at any rate in Rome from the rest of the society. In outward appearance he did not differ from the free man ; neither colour nor clothing revealed his conditions; he witnessed the same games as the freemen, he shared in the life of the Municipal towns, and employed in state service, engaged himself in trade and commerce as all free men did. Often apparent equality in outward things counts far more to the individual than actual identity of rights before the law. Between the slave and the free, there seems often to have been little social barrier. Marriage between slave and freed slave was very common. The slave status carried no stigma on the man in the society. He was touchable and even respectable.

Enough has been said to show that untouchability is worse than slavery. The only thing that is comparable to it is the case of the Jews in the middle ages. The servility of the Jews does resemble to some extent the condition of the untouchables. But there is this to be said about it. Firstly the discrimination made against the Jews was made upon a basis which is perfectly understandable though not justifiable. It was based upon the Jews obstinacy in the matter of religion. He refused to accept the religion of the gentiles and it is his obstinacy which brought about those penalties. The moment he gave up his obstinacy he was free from his disabilities. This is not the case with the untouchable. His disabilities are not due to the fact that he is a protestant or nonconformist. The second thing to be said about these disabilities of the Jews is that the Jews preferred them to being completely assimilated and lost in the Gentiles. This may appear strange but there are facts to prove it. In this connection reference may be made to

two instances recorded in history which typify the attitude of the Jews. The first instance relates to the Napoleonic regime. After the National Assembly of France had agreed to the declaration of the Rights of Man to the Jews, the Jewish question was again reopened by the guild merchants and religious reactionaries of Alsace. Napoleon resolved to submit the question to the consideration of the Jews themselves.

“He convened an Assembly of Jewish Notables of France, Germany and Italy in order to ascertain whether the principles of Judaism were compatible with the requirements of citizenship as he wished to fuse the Jewish element with the dominant population. The Assembly, consisting of I II deputies, met in the Town Hall of Paris on 25th July, 1806, and was required to frame replies to twelve questions relating mainly to the possibility of Jewish patriotism, the permissibility of intermarriage between Jew and non-Jew, and the legality of usury. So pleased was Napoleon with the pronouncements of the Assembly that he summoned a Sanhedrin after the model of the ancient council of Jerusalem to convert them into the decrees of a legislative body. The Sanhedrin, comprising 71 deputies from France, Germany, Holland and Italy, met under the presidency of Rabbi Sinzheim of Strassburg on 9th February 1807, and adopted a sort of charter which exhorted the Jews to look upon France as their father land, to regard its citizens as their brethren, and to speak its language, and which also pressed toleration of marriages between Jews and Christians while declaring that they could not be sanctioned by the synagogue”. It will be noted the Jews refused to sanction intermarriages between Jews and non-Jews. They only agreed to tolerate them. The second instance related to what happened when the Batavian Republic was established in 1795. The more energetic members of the Jewish community pressed for the removal of many disabilities under which they laboured.”But the demand for the full rights of citizenship made by the progressive Jews was at first, strangely enough, opposed by the leaders of the Amsterdam community, who feared that civil equality would militate against the conservation of Judaism and declared that their co-religionists renounced their rights of citizenship in obedience to the dictates of their faith. This shows that the Jews preferred to live as strangers rather than as members of the community. It is as an 'eternal people' that they were singled out and punished. But that is not the case with the untouchables. They too are in a different sense an "eternal people" who are separate from the rest. But this separateness is not the result of their wish. They are punished not because they do not want to mix. They are punished because they want to.

Untouchability is worse than slavery because slave has personality in the

Society while the untouchable has no personality has been made abundantly clear. But this is not the only ground why untouchability is worse than slavery. There are others which are not obvious but which are real none-the-less.

Of these the least obvious may be mentioned as the first. Slavery, if it took away the freedom of the slave, it imposed upon the master the duty to maintain the slave in life and body. The slave was relieved of all responsibility in respect of his food, his clothes and his shelter. All this the master was bound to provide. This was of course no burden because the slave earned more than his keep. But a security for board and lodging is not always possible for every freeman as all wage earners now know to their cost. Work is not always available even to those who are ready to toil but a workman cannot escape the rule according to which he gets no bread if he finds no work. This rule, no work no bread, the ebbs and tides of business, the booms and depression are vicissitudes through which all free wage earners have to go. But they do not affect the slave who is free from them. He gets his bread-perhaps the same bread, but bread-whether it is boom or whether it is depression. Untouchability is worse than slavery because it carries no such security as to livelihood as the latter does. No one is responsible for the feeding, housing and clothing of the untouchable. From this point of view untouchability is not only worse than slavery but is positively cruel as compared to slavery. In slavery the master has the obligation to find work for the slave. In a system of free labour workers have to compete with workers for obtaining work. In this scramble for work what chances has the untouchable for a fair deal? To put it shortly in this competition with the scales always weighing against him by reason of his social stigma he is the last to be employed and the first to be fired. Untouchability is cruelty as compared to slavery because it throws upon the untouchables the responsibility for maintaining without any way of earning his living, From another aspect also untouchability is worse than slavery. The slave was property and that gave the slave an advantage over a free man. Being valuable, the master out of sheer self-interest, took great care of the health and well being of the slave. In Rome the slaves were never employed on marshy and malarial land. On such a land only freemen were employed. Cato advises Roman farmers never to employ slaves on marshy and malarial land. This seems stranger. But a little examination will show that this was quite natural. Slave was valuable property and as such a prudent man who knows his interest must not expose him to the ravages of malaria. The same care need not be taken in the case of free man because he is not valuable property. This

consideration resulted to the great benefit of the slave. He was cared for as no one was. This consideration is completely absent in the case of the untouchable. He is neglected and left to starve and die.

The second or rather the third difference between untouchability and slavery is that slavery was never obligatory. But untouchability is obliged. A person is "permitted" to hold another as his slave. There is no compulsion on him if he does not want to. A Hindu on the other hand is "enjoined" to hold another as untouchable. There is compulsion on the Hindu which he cannot escape whatever his personal wishes in the matter may be.

WHO WERE THE SHUDRAS?

Inscribed to the Memory of
MAHATMA JOTIBA FULÉ (1827—1890)

The Greatest Shudra of Modern India who made the lower classes of Hindus conscious of their slavery to the higher classes and who preached the gospel that for India social democracy was more vital than independence from foreign rule.

WHO WERE THE SHUDRAS?

*How they came to be the
Fourth Varna in the
Indo-Aryan Society*

By B. R. Ambedkar

CONTENTS

Preface

PART I

1. Chapter I - The Riddle of the Shudras
2. Chapter II - The Brahmanic Theory of the Origin of the Shudras
3. Chapter III - The Brahmanic Theory of the Status of the Shudras
4. Chapter IV - Shudras Versus Aryans
5. Chapter V - Aryans Against Aryans
6. Chapter VI - Shudras And Dasas

PART II

7. Chapter VII - The Shudras were Kshatriyas
8. Chapter VIII - The Number of Varnas, Three or Four?
9. Chapter IX - Brahmins Versus Shudras
10. Chapter X - The Degradation of the Shudras

11. Chapter XI - The Story of Reconciliation
12. Chapter XII - The Theory in the Crucible

APPENDICES

PREFACE

In the present stage of the literature on the subject, a book on the Shudras cannot be regarded as a superfluity. Nor can it be said to deal with a trivial problem. The general proposition that the social organization of the Indo-Aryans was based on the theory of *Chaturvarnya* and that *Chaturvarnya* means division of society into four classes—*Brahmins* (priests), *Kshatriyas* (soldiers), *Vaishyas* (traders) and *Shudras* (menials) does not convey any idea of the real nature of the problem of the Shudras nor of its magnitude. *Chaturvarnya* would have been a very innocent principle if it meant no more than mere division of society into four classes. Unfortunately, more than this is involved in the theory of *Chaturvarnya*. Besides dividing society into four orders, the theory goes further and makes the principle of graded inequality the basis for determining the terms of associated life as between the four *Varnas*. Again, the system of graded inequality is not merely notional. It is legal and penal. Under the system of *Chaturvarnya*, the *Shudra* is not only placed at the bottom of the gradation but he is subjected to innumerable ignominies and disabilities so as to prevent him from rising above the condition fixed for him by law. Indeed until the fifth *Varna* of the Untouchables came into being, the *Shudras* were in the eyes of the Hindus the lowest of the low. This shows the nature of what might be called the problem of the *Shudras*. If people have no idea of the magnitude of the problem it is because they have not cared to know what the population of the *Shudras* is. Unfortunately, the census does not show their population separately. But there is no doubt that excluding the Untouchables the *Shudras* form about 75 to 80 per cent of the population of Hindus. A treatise which deals with so vast a population cannot be considered to be dealing with a trivial problem.

The book deals with the *Shudras* in the Indo-Aryan Society. There is a view that an inquiry into these questions is of no present-day moment. It is said by no less a person than Mr. Sherring in his *Hindu Tribes and Castes**mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38A. Who were the Shudras Preface.htm - _msocom_1 that :

"Whether the Shudras were Aryans, or aboriginal inhabitants of

India, or tribes produced by the union of the one with the other, is of little practical moment. They were at an early period placed in a class by themselves, and received the fourth or last degree of rank, yet at a considerable distance from the three superior castes. Even though it be admitted that at the outset they were not Aryans, still, from their extensive intermarriages with the three Aryan Castes, they have become so far Aryanized that, in some instances as already shown, they have gained more than they have lost, and certain tribes now designated as Shudras are in reality more Brahmins and Kshatriyas than anything else. In short, they have become as much absorbed in other races the Celtic tribes of England have become absorbed in the Anglo-Saxon race; and their own separate individuality, if they ever had any, has completely vanished."

This view is based on two errors. Firstly, the present-day Shudras are a collection of castes drawn from heterogeneous stocks and are racially different from the original Shudras of the Indo-Aryan society. Secondly, in the case of Shudras the centre of interest is not the Shudras as a people but the legal system of pains and penalties to which they are subjected. The system of pains and penalties was no doubt originally devised by the Brahmins to deal with the Shudras of the Indo-Aryan society, who have ceased to exist as a distinct, separate, identifiable community. But strange as it may seem the Code intended to deal with them has remained in operation and is now applied to all low-class Hindus, who have no lock stock with the original *Shudras*. How this happened must be a matter of curiosity to all. My explanation is that the Shudras of the Indo-Aryan Society in course of time became so degraded as a consequence of the severity of the Brahmanical laws that they really came to occupy a very low state in public life. Two consequences followed from this. One consequence was a change in the connotation of the word Shudra. The word Shudra lost its original meaning of being the name of a particular community and became a general name for a low-class people without civilisation, without culture, without respect and without position. The second consequence was that the widening of the meaning of the word Shudra brought in its train the widening of the application of the Code. It is in this way that the so-called *Shudras* of the present-day have become subject to the Code, though they are *not Shudras* in the original sense of the word. Be that as it may, the fact remains that the Code intended for the original culprits has come to be applied to the innocents. If the Hindu law-givers had enough historical sense to realise that the original *Shudras* were different

from the present-day low-class people, this tragedy—this massacre of the innocents—would have been avoided. The fact, however unfortunate it may be, is that the Code is applied to the present-day *Shudras* in the same rigorous manner in which it was applied to the original *Shudras*. How such a Code came into being cannot therefore be regarded as of mere antiquarian interest to the *Shudras* of to-day.

While it may be admitted that a study of the origin of the *Shudras* is welcome, some may question my competence to handle the theme. I have already been warned that while I may have a right to speak on Indian politics, religion and religious history of India are not my field and that I must not enter it. I do not know why my critics have thought it necessary to give me this warning. If it is an antidote to any extravagant claim made by me as a thinker or a writer, then it is unnecessary. For, I am ready to admit that I am not competent to speak even on Indian politics. If the warning is for the reason that I cannot claim mastery over the Sanskrit language, I admit this deficiency. But I do not see why it should disqualify me altogether from operating in this field. There is very little of literature in the Sanskrit language which is not available in English. The want of knowledge of Sanskrit need not therefore be a bar to my handling a theme such as the present. For I venture to say that a study of the relevant literature, albeit in English translations, for 15 years ought to be enough to invest even a person endowed with such moderate intelligence like myself, with sufficient degree of competence for the task. As to the exact measure of my competence to speak on the subject, this book will furnish the best testimony. It may well turn out that this attempt of mine is only an illustration of the proverbial fool rushing in where the angels fear to tread. But I take refuge in the belief that even the fool has a duty to perform, namely, to do his bit if the angel has gone to sleep or is unwilling to proclaim the truth. This is my justification for entering the prohibited field.

What is it that is noteworthy about this book? Undoubtedly the conclusions which I have reached as a result of my investigations. Two questions are raised in this book: (1) Who were the *Shudras*? and (2) How they came to be the fourth *Varna* of the Indo-Aryan society? My answers to them are summarised below :

- (1)(1) The *Shudras* were one of the Aryan communities of the Solar race.
- (2)(2) There was a time when the Aryan society recognised only three *Varnas*, namely. *Brahmins*, *Kshatriyas* and *Vaishyas*.

- (3)(3) The *Shudras* did not form a separate *Varna*. They ranked as part of the Kshatriya *Varna* in the Indo-Aryan society.
- (4)(4) There was a continuous feud between the *Shudra* kings and the *Brahmins* in which the *Brahmins* were subjected to many tyrannies and indignities.
- (5)(5) As a result of the hatred towards the *Shudras* generated by their tyrannies and oppressions, the *Brahmins* refused to perform the *Upanayana* of the *Shudras*.
- (6)(6) Owing to the denial of *Upanayana*, the *Shudras* who were Kshatriyas became socially degraded, fell below the rank of the *Vaishyas* and thus came to form the fourth *Varna*.

I must of course await the verdict of scholars on these conclusions. That these conclusions are not merely original but they are violently opposed to those that are current is of course evident. Whether these conclusions will be accepted or not will depend upon the mentality of a person claiming to have a right to sit in judgement over the issue. Of course, if he is attached to a particular thesis he will reject mine. I would not however bother about his judgement for he would be an adversary from whom nothing can be expected except opposition. But if a person is an honest critic, howsoever cautious, however conservative he may be, provided that he has an open mind and a readiness to accept facts, I do not despair of converting him to my view. This expectation may fail to materialize, but about one thing I am quite certain. My critics will have to admit that the book is rich in fresh insights and new visions.

Apart from scholars, how the Hindu public will react may be an interesting speculation. The Hindus of to-day fall into five definite classes. There is a class of Hindus, who are known as orthodox and who will not admit that there is anything wrong with the Hindu social system. To talk of reforming it is to them rank blasphemy. There is a class of Hindus who are known as Arya Samajists. They believe in the *Vedas* and only in the *Vedas*. They differ from the orthodox inasmuch as they discard everything which is not in the *Vedas*. Their gospel is that of return to the *Vedas*. There is a class of Hindus who will admit that the Hindu social system is all wrong, but who hold that there is no necessity to attack it. Their argument is that since law does not recognize it, it is a dying, if not a dead system. There is a class of Hindus, who are politically minded. They are indifferent to such questions. To them *Swaraj* is more important than social reform. The fifth class of Hindus are those who are rationalists and who regard social reforms as of primary importance, even more important than *Swaraj*.

With the Hindus, who fall into the second category, those who are likely to regard the book as unnecessary, I cannot agree. In a way, they are right when they say that the existing laws in British India does not recognize the caste system prevalent in the Hindu society. It is true that, having regard to section II of the Civil Procedure Code, it would not be possible for a Hindu to obtain a declaration from a civil court that he belongs to a particular *Varna*. If courts in British India have to consider the question whether a person belongs to a particular *Varna*, it is only in cases of marriage, inheritance and adoption, the rules of which vary according to the *Varna* to which the party belongs. While it is true that the Law in British India does not recognize the four *Varanas* of the Hindus, one must be careful not to misunderstand what this means. To put it precisely: (1) it does not mean that the observance of the *Varna* system is a crime; (2) it does not mean that the *Varna* system has disappeared; (3) it does not mean that the *Varna* system is not given effect to in cases where the observance of its rules are necessary to acquiring civil rights; (4) it only means that the general legal sanction behind the *Varna* system has been withdrawn. New, law is not the only sanction which goes to sustain social institutions. Institutions are sustained by other sanctions also. Of these, religious sanction and social sanction are the most important. The *Varna* system has a religious sanction. Because it has a religious sanction, the *Varna* system has the fullest social sanction from the Hindu society. With no legal prohibition, this religious sanction has been more than enough to keep the *Varna* system in full bloom. The best evidence to show that the *Varna* system is alive notwithstanding there is no law to enforce it, is to be found in the fact that the status of the *Shudras* and the Untouchables in the Hindu society has remained just what it has been. It cannot therefore be said that a study such as this is unnecessary.

As to the politically-minded Hindu, he need not be taken seriously. His line of approach is generally governed by a short-term view more than by long-range considerations. He is willing to follow the line of least resistance and postpone a matter, however urgent, if it is likely to make him unpopular. It is therefore quite natural if the politically-minded Hindu regards this book as a nuisance.

The book treads heavily on the toes of the Arya Samajists. My conclusions have come in sharp conflict with their ideology at two most important points. The Arya Samajists believe that the four *Varanas* of the Indo-Aryan society have been in existence from the very beginning. The book shows that there was a time when there were only three *Varanas* in

the Indo-Aryan society. The Arya Samajists believe that the *Vedas* are eternal and sacrosanct. The book shows that portions of the *Vedas* at any rate, particularly the *Pursha Sukta*, which is the mainstay of the Arya Samajists, are fabrications by *Brahmins* intended to serve their own purposes. Both these conclusions are bound to act like atomic bombs on the dogmas of the Arya Samajists.

I am not sorry for this clash with Arya Samajists. The Arya Samajists have done great mischief in making the Hindu society a stationary society by preaching that the *Vedas* are eternal, without beginning, without end, and infallible, and that the social institutions of the Hindus being based on the *Vedas* are also eternal, without beginning, without end, infallible and therefore requiring no change. To be permeated with such a belief is the worst thing that can happen to a community. I am convinced that the Hindu society will not accept the necessity of reforming itself unless and until this Arya Samajists' ideology is completely destroyed. The book does render this service, if no other.

What the Orthodox Hindu will say about this book I can well imagine for I have been battling with him all these years. The only thing I did not know was how the meek and non-violent looking Hindu can be violent when anybody attacks his Sacred Books. I became aware of it as never before when last year I received a shower of letters from angry Hindus, who became quite unbalanced by my speech on the subject delivered in Madras. The letters were full of filthy abuse, unmentionable and unprintable, and full of dire threats to my life. Last time they treated me as a first offender and let me off with mere threats. I don't know what they will do this time. For on reading the book they are sure to find more cause for anger at what in their eyes is a repetition of the offence in an aggravated form for having brought forth chapter and verse to show that what goes by the name of Sacred Books contains fabrications which are political in their motive, partisan in their composition and fraudulent in their purpose. I do not propose to take any notice of their vilifications or their threats. For I know very well that they are a base crew who, professing to defend their religion, have made religion a matter of trade. They are more selfish than any other set of beings in the world, and are prostituting their intelligence to support the vested interests of their class. It is a matter of no small surprise that when the mad dogs of orthodoxy are let loose against a person who has the courage to raise his voice against the so-called Sacred Books of the Hindus, eminent Hindus occupying lofty places, claiming themselves to be highly educated and who could be expected to have no interest and

to have a free and open mind become partisans and join the outcry. Even Hindu Judges of High Courts and Hindu Prime Ministers of Indian States do not hesitate to join their kind. They go further. They not only lead the howl against him but even join in the hunt. What is outrageous is that they do so because they believe that their high stations in life would invest their words with an amount of terror which would be sufficient enough to cow down any and every opponent of orthodoxy. What I would like to tell these amiable gentlemen is that they will not be able to stop me by their imprecations. They do not seem to be aware of the profound and telling words of Dr. Johnson who when confronted with analogous situation said, 'I am not going to be deterred from catching a cheat by the menaces of a ruffian.' I do not wish to be rude to these high-placed critics, much less do I want to say that they are playing the part of a ruffian interested in the escape of a cheat. But I do want to tell them two things: firstly that I propose, no matter what happens, to follow the determination of Dr. Johnson in the pursuit of historical truth by the exposure of the Sacred Books so that the Hindus may know that it is the doctrines contained in their Sacred Books which are responsible for the decline and fall of their country and their society; secondly, if the Hindus of this generation do not take notice of what I have to say I am sure the future generation will. I do not despair of success. For I take consolation in the words of the poet Bhavabhuti who said, "Time is infinite and earth is vast, some day there will be born a man who will appreciate what I have said." Whatever that be the book is a challenge to orthodoxy.

The only class of Hindus, who are likely to welcome the book are those who believe in the necessity and urgency of social reform. The fact that it is a problem which will certainly take a long time to solve and will call the efforts of many generations to come, is in their opinion, no justification for postponing the study of that problem. Even an ardent Hindu politician, if he is honest, will admit that the problems arising out of the malignant form of communalism, which is inherent in the Hindu social organization and which the politically minded Hindus desire to ignore or postpone, invariably return to plague, those very politicians at every turn. These problems are not the difficulties of the moment. They are our permanent difficulties, that is to say, difficulties of every moment. I am glad to know that such a class of Hindus exists. Small though they be, they are my mainstay and it is to them that I have addressed my argument.

It will be said that I have shown no respect for the sacred literature of

the Hindus which every sacred literature deserves. If the charge be true, I can plead two circumstances in justification of myself. Firstly I claim that in my research I have been guided by the best tradition of the historian who treats all literature as vulgar—I am using the word in its original sense of belonging to the people—to be examined and tested by accepted rules of evidence without recognizing any distinction between the sacred and the profane and with the sole object of finding the truth. If in following this tradition I am found wanting in respect and reverence for the sacred literature of the Hindus my duty as a scholar must serve as my excuse. Secondly, respect and reverence for the sacred literature cannot be made to order. They are the results of social factors which make such sentiments natural in one case and quite unnatural in another. Respect and reverence for the sacred literature of the Hindus is natural to a Brahmin scholar. But it is quite unnatural in a non-Brahmin scholar. The explanation of this difference is quite simple. That a Brahmin scholar should treat this sacred literature with uncritical reverence and forbear laying on it the heavy hands which the detachment of an intellectual as distinguished from the merely educated is what is to be expected. For what is this sacred literature? It is a literature which is almost entirely the creation of the Brahmins. Secondly, its whole object is to sustain the superiority and privileges of the Brahmins as against the non-Brahmins. Why should not the Brahmins uphold the sanctity of such a literature? The very reason that leads the Brahmin to uphold it makes the non-Brahmin hate it. Knowing that what is called the sacred literature contains an abominable social philosophy which is responsible for their social degradation, the non-Brahmin reacts to it in a manner quite opposite to that of the Brahmin. That I should be wanting in respect and reverence for the sacred literature of the Hindus should not surprise any one if it is borne in mind that I am a non-Brahmin, not even a non-Brahmin but an Untouchable. My antipathy to the sacred literature could not naturally be less than that of the non-Brahmin. As Prof. Thorndyke says: that a man thinks is a biological fact what he thinks is a sociological fact.

I am aware that this difference in the attitude of a Brahmin scholar and a non-Brahmin scholar towards this sacred literature—literature which is the main source of the material for the study of the problems of the social history of the Hindus—the former with his attitude of uncritical commendation and the latter with his attitude of unsparing condemnation is most harmful to historical research.

The mischief done by the Brahmin scholars to historical research is

obvious. The *Brahmin* scholar has a two-fold interest in the maintenance of the sanctity of this literature. In the first place being the production of his forefathers his filial duty leads him to defend it even at the cost of truth. In the second place as it supports the privileges of the *Brahmins*, he is careful not to do anything which would undermine its authority. The necessity of upholding the system by which he knows he stands to profit, as well as of upholding the prestige of his forefathers as the founders of the system, acts as a silent immaculate premise which is ever present in the mind of the *Brahmin* scholar and prevents him from reaching or preaching the truth. That is why one finds so little that is original in the field of historical research by *Brahmin* scholars unless it be a matter of fixing dates or tracing genealogies. The non-Brahmin scholar has none of these limitations and is therefore free to engage himself in a relentless pursuit of truth. That such a difference exists between the two classes of students is not a mere matter of speculation. This very book is an illustration in point. It contains an exposure of the real character of the conspiracy against the *Shudras*, which no *Brahmin* scholar could have had the courage to present.

While it is true that a non-Brahmin scholar is free from the inhibitions of the Brahmin scholar he is likely to go to the other extreme and treat the whole literature as a collection of fables and fictions fit to be thrown on the dung heap not worthy of serious study. This is not the spirit of an historian. As has been well said, an historian ought to be exact, sincere, and impartial; free from passion, unbiased by interest, fear, resentment or affection; and faithful to the truth, which is the mother of history, the preserver of great actions, the enemy of oblivion, the witness of the past, the director of the future. In short he must have an open mind, though it may not be an empty mind, and readiness to examine all evidence even though it be spurious. The non-Brahmin scholar may find it difficult to remain true to this spirit of the historian. He is likely to import the spirit of non-Brahmin politics in the examination of the truth or falsity of the ancient literature which is not justifiable. I feel certain that in my research I have kept myself free from such prejudice. In writing about the *Shudras* I have had present in my mind no other consideration except that of pure history. It is well-known that there is a non-Brahmin movement in this country which is a political movement of the Shudras. It is also well-known that I have been connected with it. But I am sure that the reader will find that I have not made this book a preface to non-Brahmin politics.

I am sensible of the many faults in the presentation of the matter. The

book is loaded with quotations, too long and too many. The book is not a work of art and it is possible that readers will find it tedious to go through it. But this fault is not altogether mine. Left to myself, I would have very willingly applied the pruning knife. But the book is written for the ignorant and the uninformed *Shudras*, who do not know how they came to be what they are. They do not care how artistically the theme is handled. All they desire is a full harvest of material— the bigger the better. Those of them to whom I have shown the manuscript have insisted upon retaining the quotations. Indeed, their avidity for such material was so great that some of them went to the length of insisting that besides giving translations in English in the body of the book I should also add the original Sanskrit texts in an Appendix. While I had to deny their request for the reproduction of the original Sanskrit texts, I could not deny their request for retaining the translations on the ground that the material is not readily available to them. When one remembers that it is the *Shudras*, who have largely been instrumental in sustaining the infamous system of *Chaturvarnya*, though it has been the primary cause of their degradation and that only the *Shudras* can destroy the *Chaturvarnya*, it would be easy to realize why I allowed the necessity of educating and thereby preparing the *Shudra* fully for such a sacred task to outweigh all other considerations which favoured the deletion or if not deletion the abridgement of the quotations.

There are three persons to whom I owe my thanks. Firstly to the writer of Adhyaya LX of the Shanti Parva of the Mahabharata. Whether it is *Vyasa*, *Vaiashampayana*, *Suta*, *Lomaharshana* or *Bhrigu* it is difficult to say. But whoever he was, he has rendered great service by giving a full description of *Paijavana*. If he had not described *Paijavana* as a *Shudra*, the clue to the origin of the *Shudra* would have been completely lost. I express my gratitude to the writer for having preserved so important a piece of information for posterity. Without it, this book could not have been written. Secondly, I must thank Prof. Kangle of Ismail Yusuf College, Andheri, Bombay. He has come to my rescue and has checked the translation of Sanskrit shlokas which occur in the book. As I am not a Sanskrit scholar, his help has been to me a sort of an assurance that I have not bungled badly in dealing with the material which is in Sanskrit. The fact that he has helped me does not mean that he is responsible for such faults and errors as may be discovered by my critics. Thanks are also due to Prof. Manohar Chitnis of the Siddharth College, Bombay, who has been good enough to prepare the Index.

I am grateful to Messrs. Charles Scribner's Sons Publishers, New York

for their kind permission to reproduce the three maps from Mr. Madison Grant's *Passing of the Great Race* and which form Appendices II, III and IV of this book.

Part I

WHO WERE THE SHUDRAS?

CONTENTS

PART I

1. Chapter I - The Riddle of the Shudras
2. Chapter II - The Brahmanic Theory of the Origin of the Shudras
3. Chapter III - The Brahmanic Theory of the Status of the Shudras

CHAPTER I

THE RIDDLE OF THE SHUDRAS

EVERYBODY knows that the Shudras formed the fourth Varna of the Indo-Aryan society. But very few have cared to inquire who were these Shudras and how they came to be the fourth Varna. That such an enquiry is of first-rate importance is beyond question. For, it is worth knowing how the Shudras came to occupy the fourth place, whether it was the result of evolution or it was brought about by revolution.

Any attempt to discover who the Shudras were and how they came to be the fourth Varna must begin with the origin of the *Chaturvarnya* in the

Indo-Aryan society. A study of the *Chaturvarnya* must in its turn start with a study of the ninetyeth Hymn of the Tenth Mandala of the Rig Veda— a Hymn, which is known by the famous name of *Purusha Sukta*.

What does the Hymn say? It says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_1 :

1. 1. Purusha has a thousand heads, a thousand eyes, a thousand feet. On every side enveloping the earth he overpassed (it) by a space of ten fingers.
2. 2. Purusha himself is this whole (universe), Whatever has been and whatever shall be. He is the Lord of immortality, since (or when) by food he expands.
3. 3. Such is his greatness, and Purusha is superior to this. All existences are a quarter to him; and three-fourths of him are that which is immortal in the sky.
4. 4. With three-quarters, Purusha mounted upwards. A quarter of him was again produced here. He was then diffused everywhere over things which eat and things which do not eat.
5. 5. From him was born Viraj, and *from* Viraj, Purusha. When born, he extended beyond the earth, both behind and before.
6. 6. When the gods performed a sacrifice with Purusha as the oblation, the spring was its butter, the summer its fuel, and the autumn its (accompanying) offering.
7. 7. This victim, Purusha, born in the beginning, they immolated on the sacrificial grass. With him the gods, the *Sadhyas*, and the *rishis* sacrificed.
8. 8. From that universal sacrifice were provided curds and butter. It formed those aerial (creatures) and animals both wild and tame.
9. 9. From that universal sacrifice sprang the *rik* and *saman* verses, the metres and the *yajus*.
10. 10. From it sprang horses, and all animals with two rows of teeth; kine sprang from it; from it goats and sheep.
11. 11. When (the gods) divided Purusha, into how many parts did they cut him up? What was his mouth? What arms (had he)? What (two objects) are said (to have been) his thighs and feet?
12. 12. The Brahmana was his mouth, the Rajanya was made his arms; the being called the Vaishya, he was his thighs; the Shudra sprang from his feet.
13. 13. The moon sprang from his soul (manas), the sun from the eye,

- Indra and Agni from his mouth and Vayu from his breath.
14. 14. From his navel arose the air, from his head the sky, from his feet the earth, from his ear the (four) quarters; in this manner (the gods) formed the worlds.
 15. 15. When the gods, performing sacrifices, bound Purusha as a victim, there were seven sticks (stuck up) for it (around the fire), and thrice seven pieces of fuel were made.
 16. 16. With sacrifices the gods performed the sacrifice. These were the earliest rites. These great powers have sought the sky, where are the former *Sadhyas*, gods."

The *Purusha Sukta* is a theory of the origin of the Universe. In other words, it is a cosmogony. No nation which has reached an advanced degree of thought has failed to develop some sort of cosmogony. The Egyptians had a cosmogony somewhat analogous with that set out in the *Purusha Sukta*. According to it, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_2 it was god *Khnumu*, 'the shaper,' who shaped living things on the potter's wheel," created all that is, he formed all that exists, he is the father of fathers, the mother of mothers... he fashioned men, he made the gods, he was the father from the beginning... he is the creator of the heaven, the earth, the underworld, the water, the mountains... he formed a male and a female of all birds, fishes, wild beasts, cattle and of all worms." A very similar cosmogony is found in Chapter I of the Genesis in the Old Testament.

Cosmogonies have never been more than matters of academic interest and have served no other purpose than to satisfy the curiosity of the student and to help to amuse children. This may be true of some parts of the *Purusha Sukta*. But it certainly cannot be true of the whole of it. That is because all verse of the *Purusha Sukta* are not of the same importance and do not have the same significance. Verses 11 and 12 fall in one category and the rest of the verses fall in another category. Verses other than II and 12 may be regarded as of academic interest. Nobody relies upon them. No Hindu even remembers them. But it is quite different with regard to verses 11 and 12. *Prima facie* these verses do no more than explain how the four classes, namely. (1) Brahmins or priests, (2) Kshatriyas or soldiers, (3) Vaishyas or traders, and (4) Shudras or menials, arose from the body of the Creator. But the fact is that these verses are not understood as being merely explanatory of a cosmic phenomenon. It would be a grave mistake to suppose that they were regarded by the Indo-Aryans as an innocent

piece of a poet's idle imagination. They are treated as containing a mandatory injunction from the Creator to the effect that Society must be constituted on the basis of four classes mentioned in the *Sukta*. Such a construction of the verses in question may not be warranted by their language. But there is no doubt that according to tradition this is how the verses are construed, and it would indeed be difficult to say that this traditional construction is not in consonance with the intention of the author of the *Sukta*. Verses II and 12 of the *Purusha Sukta* are, therefore, not a mere cosmogony. They contain a divine injunction prescribing a particular form of the constitution of society.

The constitution of society prescribed by the *Purusha Sukta* is known as *Chaturvarnya*. As a divine injunction, it naturally became the ideal of the Indo-Aryan society. This ideal of *Chaturvarnya* was the mould in which the life of the Indo-Aryan community in its early or liquid state was cast. It is this mould, which gave the Indo-Aryan community its peculiar shape and structure.

This reverence, which the Indo-Aryan society had for this ideal mould of *Chaturvarnya*, is not only beyond question, but it is also beyond description. Its influence on the Indo-Aryan society has been profound and indelible. The social order prescribed by the *Purusha Sukta* has never been questioned by anyone except Buddha. Even Buddha was not able to shake it, for the simple reason that both after the fall of Buddhism and even during the period of Buddhism there were enough law-givers, who made it their business not only to defend the ideal of the *Purusha Sukta* but to propagate it and to elaborate it.

To take a few illustrations of this propaganda in support of the *Purusha Sukta*, reference may be made to the *Apastamba Dharma Sutra* and the *Vasishtha Dharma Sutra*. The *Apastamba Dharma Sutra* states:

"There are four castes—Brahmins, Kshatriyas, Vaishyas and Shudras.

Among these, each preceding (caste) is superior by birth to the one following. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_3](#) For all these excepting Shudras and those who have committed bad actions are ordained (1) the initiation (*Upanayan* or the wearing of the sacred thread), (2) the study of the Veda and (3) the kindling of the sacred fire (i.e., the right to perform sacrifice) [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_4](#)

This is repeated by *Vasishtha Dharma* Sutra which says :

"There are four castes (Vamas), Brahmins, Kshatriyas, Vaishyas and Shudras. Three castes. Brahmins, Kshatriyas and Vaishyas (are called) twice-born. Their first birth is from their mother; the second from the investiture with the sacred girdle. In that (second birth) the Savitri is the mother, but the teacher is said to be, the father.

They call the teacher father, because he gives instruction in the Veda. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_5](#) The four castes are distinguished by their origin and by particular sacraments.

There is also the following passage of the Veda : "The Brahmana was his mouth, the Kshatriya formed his arms, the Vaishya his thighs; the Shudia was born from his feet."

It has been declared in the following passage that a Shudra shall not receive the sacraments."

Many other law-givers have in parrot-like manner repeated the theme of the *Purusha Sukta* and have reiterated its sanctity. It is unnecessary to repeat their version of it. All those, who had raised any opposition to the sanctity of the ideal set out in the *Purusha Sukta*, were finally laid low by Manu, the architect of the Hindu society. For Manu did two things. In the first place, he enunciated afresh the ideal of the *Purusha Sukta* as a part of divine injunction. He said:

"For the prosperity of the worlds, he (the creator) from his mouth, arms, thighs and feet created the Brahmin, Kshatriya and Vaishya and the Shudra. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_6](#)

The Brahmin, Kshatriya (and) Vaishya (constitute) the three twice-born

castes; but the fourth the shudra has only one birth.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_7

In this he was no doubt merely following his predecessors. But he went a step further and enunciated another proposition in which he said:

"Veda is the only and ultimate sanction for

Dharma.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_8"

Bearing in mind that the *Purusha Sukta* is a part of the Veda, it cannot be difficult to realise that Manu invested the social ideal of *Chaturvarnya* contained in the *Purusha Sukta*, with a degree of divinity and infallibility which it did not have before.

II

A critical examination of the *Purusha Sukta* therefore becomes very essential.

It is claimed by the Hindus that the *Purusha Sukta* is unique. This is no doubt a tall claim for an idea which came to birth when the mind of man was primitive and was without the rich endowment of varied thought available in modern times. But there need not be much difficulty in admitting this claim provided it is understood in what respect the *Purusha Sukta* is unique.

The principal ground for regarding the *Purusha Sukta* as unique is that the ideal of social organization, namely, the ideal of *Chaturvarnya* which it upholds, is unique. Is this a sufficient ground for holding the *Purusha Sukta* as unique? The *Purusha Sukta* would really have been unique if it had preached a classless society as an ideal form of society. But what does the *Purusha Sukta* do? It preaches a class-composed society as its ideal. Can this be regarded as unique? Only a nationalist and a patriot can give an affirmative answer to this question. The existence of classes has been the *defacto* condition of every society, which is not altogether primitive. It is a normal state of society all over the world where society is in a comparatively advanced state. Looking at it from this point of view, what uniqueness can there be in the *Purusha Sukta*, when it does no more than

recognise the sort of class composition that existed in the Indo-Aryan society?

Notwithstanding this, the *Purusha Sukta* must be admitted to be unique, though for quite different reasons. The unfortunate part of the matter is that many people do not know the true reasons why the *Purusha Sukta* should be regarded as unique. But once the true reasons are known, people will not only have no hesitation in accepting that the *Purusha Sukta* is a unique production of the human intellect but will perhaps be shocked to know what an extraordinary production of human ingenuity it is.

What are the features of the social ideal of the *Purusha Sukta*, which give it the hall mark of being unique? Though the existence of classes is the *de facto* condition of every society, nevertheless no society has converted this *de facto* state of affairs into a *de jure* connotation of an ideal society. The scheme of the *Purusha Sukta* is the only instance in which the real is elevated to the dignity of an ideal. This is the first unique feature of the scheme set forth in the *Purusha Sukta*. Secondly, no community has given the *de facto* state of class composition a legal effect by accepting it as a *de jure* connotation of an ideal society. The case of the Greeks is a case in point. Class composition was put forth as an ideal social structure by no less an advocate than Plato. But the Greeks never thought of making it real by giving it the sanction of law. The *Purusha Sukta* is the only instance in which an attempt was made to give reality to the ideal by invoking the sanction of law. Thirdly, no society has accepted that the class composition is an ideal. At the most they have accepted it as being natural. The *Purusha Sukta* goes further. It not only regards class composition as natural and ideal, but also regards it as sacred and divine. Fourthly, the number of the classes has never been a matter of dogma in any society known to history. The Romans had two classes. The Egyptians thought three were enough. The Indo-Iranians also had no more than three classes:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_9 (1) The *Athravans* (priests) (2) *Rathaeshtar* (warriors) and (3) the *Vastrya-fshuyat* (peasantry). The scheme of the *Purusha Sukta* makes the division of society into four classes a matter of dogma. According to it, there can be neither more nor less. Fifthly, every society leaves a class to find its place *vis-a-vis* other classes according to its importance in society as may be determined by the forces operating from time to time. No society has an official gradation laid down, fixed and permanent, with an ascending scale of reverence and a descending scale of contempt. The scheme of the *Purusha Sukta* is unique, inasmuch as it fixes a permanent warrant of

precedence among the different classes, which neither time nor circumstances can alter. The warrant of precedence is based on the principle of graded inequality among the four classes, whereby it recognises the Brahmin to be above all, the Kshatriya below the Brahmin but above the Vaishya and the Shudra, the Vaishya below the Kshatriya but above the Shudra and the Shudra below all.

III

These are the real reasons why the *Purusha Sukta* is unique. But the *Purusha Sukta* is not merely unique, it is also extraordinary. It is extraordinary because it is so full of riddles. Few seem to be aware of these riddles. But anyone who cares to inquire will learn how real in their nature and how strange in their complexion these riddles are. The cosmogony set out in the *Purusha Sukta* is not the only cosmogony one comes across in the Rig Veda. There is another cosmogony which is expounded in the 72nd Hymn of the Tenth Mandala of the Rig Veda. It reads as follows :
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38B1. Who were the Shudras PART I.htm - _msocom_10

1. 1. Let us proclaim with a clear voice of the generation of the gods (the divine company), who, when their praises are recited, look (favourably on the worshipper) in this latter age.
2. 2. Brahmanaspati filled these (generations of the gods) with breath as a blacksmith (his bellows); in the first age of the gods the existent was born of the non-existent.
3. 3. In the first age of the gods the existent was born of the non-existent; after that the quarters (of the horizon) were born, and after them the upward-growing (trees).
4. 4. The earth was born from the upward growing (tree), the quarters were born from the earth; Daksha was born from Aditi and afterwards Aditi from Daksha.
5. 5. Aditi, who was thy daughter, Daksha, was born; after her, the gods were born, adorable, freed from the bonds of death.
6. 6. When, gods, you abode in this pool well-arranged, then a pungent dust went forth from you as if you were dancing.
7. 7. When, gods, you Filled the worlds (with your radiance) as clouds (fill the earth with rain) then you brought fourth the sun hidden in the

ocean.

8. 8. Eight sons (there were) of Aditi who were born from her body; she approached the gods with seven, she sent forth Martanda on high.
9. 9. With seven sons Aditi went to a former generation, but she bore Martanda for the birth and death (of human beings).

The two cosmologies are fundamentally different in principle as well as in detail. The former explains creation *ex nihilo* 'being was born of non-being'. The latter ascribes creation to a being which it calls *Purusha*. Why in one and the same book two such opposite cosmologies should have come to be propounded? Why did the author of the *Purusha Sukta* think it necessary to posit a *Purusha* and make all creation emanate from 'him'?

Any one who reads the *Purusha Sukta* will find that it starts with the creation of donkeys, horses, goats, etc., but does not say anything about the creation of man. At a point when it would have been natural to speak of the creation of man, it breaks off the chain and proceeds to explain the origin of the classes in the Aryan society. Indeed, the *Purusha Sukta* appears to make the explaining of the four classes of the Aryan society to be its primary concern. In doing this, the *Purusha Sukta* stands in complete contrast not only with other theologies but with the other parts of the Rig Veda also.

No theology has made it its purpose to explain the origin of classes in society. Chapter I of the Genesis in the Old Testament, which can be said to be analogous in intention and purpose to the *Purusha Sukta*, does nothing more than explain how man was created. It is not that social classes did not exist in the old Jewish society. Social classes existed in all societies. The Indo-Aryans were no exception. Nevertheless, no theology has ever thought it necessary to explain how classes arise. Why then did the *Purusha Sukta* make the explanation of the origin of the social classes its primary concern?

The *Purusha Sukta* is not the only place in the Rig Veda where a discussion of the origin of creation occurs. There are other places in the Rig Veda where the same subject is referred to. In this connection, one may refer to the following passage in the Rig Veda which reads as follows
[:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_11](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_11)

Rig Veda, i.96.2: "By the first *nivid*, by the wisdom of Ayu, he (Agni)

created these children of men; by his gleaming light the earth and the waters, the gods sustained Agni the giver of the riches."

In this, there is no reference at all to the separate creation of classes, though there is no doubt that even at the time of the *Rig Veda*, the Indo-Aryan Society had become differentiated into classes; yet the above passage in the *Rig Veda* ignores the classes and refers to the creation of men only. Why did the *Purusha Sukta* think it necessary to go further and speak of the origin of the classes?

The *Purusha Sukta* contradicts the *Rig Veda* in another respect. The *Rig Veda* propounds a secular theory regarding the origin of the Indo-Aryans as will be seen from the following texts:

- (1)(1) *Rig Veda*, i.80:16:"Prayers and hymns were formerly congregated in that Indra, in the ceremony which Atharvan, father Manu, and Dadhyanch celebrated.'mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_12
- (2)(2) *Rig Veda*, i.1 14.2 : "Whatever prosperity or succour father Manu obtained by sacrifice, may we gain all that under thy guidance, Rudra.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_13
- (3)(3) *Rig Veda*, ii.33.13 : "Those pure remedies of yours, O Maruts, those which are most auspicious, ye vigorous gods, those which are beneficent, those which our father Manu chose, those and the blessing and succour of Rudra, I desire.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_14
- (4)(4) (4) *Rig Veda*, viii.52.1 : "The ancient friend hath been equipped with the powers of the mighty (gods). Father Manu has prepared hymns to him, as portals of access to the gods.'mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_15
- (5)(5) *Rig Veda*, iii.3.6 : "Agni, together with the gods, and the children (*jantubhibh*) of Manush, celebrating a multiform sacrifice with hymns.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the

[Shudras PART I.htm - _msocom_16](#)

(6)(6) *Rig Veda*, iv. 37.1 :”Ye gods, Vajas, and Ribhukshana, come to our sacrifice by the path travelled by the gods, that ye, pleasing deities, may institute a sacrifice among these people of Manush (*Manusho vikshu*) on auspicious days.”
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_17](#)

(7)(7) *Rig Veda*, vi.14.2 :”The people of Manush praise in the sacrifice Agni the invoker.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_18](#)

From these texts it is beyond question that the rishis who were the authors of the hymns of the *Rig Veda* regarded Manu as the progenitor of the Indo-Aryans. This theory about Manu being the progenitor of the Indo-Aryans had such deep foundation that it was carried forward by the *Brahmanas* as well as the *Puranas*. It is propounded in the *Aitareya Brahmana*
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_19](#) in the *Vishnu Parana*
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_20](#) and the *Matsya Parana*
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_21](#)It is true that they have made Brahma the progenitor of *Manu*; but the *Rig Veda* theory of *Manu* being the progenitor has been accepted and maintained by them
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_22](#) Why does the *Purusha Sukta* make no mention of *Manu*? This is strange because the author of the *Purush Sukta* seems to be aware of the fact that Manu Svayambhuva is called *Viraj* and *Viraj* is called *Adi Purusha*,
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_23](#)since he too speaks of *Virajo adhi Purushah* in verse five of the *Sukta*.

There is a third point in which the *Purush Sukta* has gone beyond the *Rig Veda*. The Vedic Aryans were sufficiently advanced in their civilization to give rise to division of labour. Different persons among the Vedic Aryans followed different occupations. That they were conscious of it is evidenced by the following verse:

Rig Veda, i.113.6 :"That some may go in pursuit of power, some in pursuit of fame, some in pursuit of wealth, some in pursuit of work, Ushas has awakened people so that each may go in pursuit of his special and different way of earning his livelihood."

This is as far as the *Rig Veda* had gone. The *Purusha Sukta* goes beyond. It follows up the notion of division of labour and converts the scheme of division of work into a scheme of division of workers into fixed and permanent occupational categories. Why does the *Purusha Sukta* commit itself to such a perversity?

There is another point in which the *Purusha Sukta* departs from the *Rig Veda*. It is not that the *Rig Veda* speaks only of man. It speaks also of the Indo-Aryan nation. This nation was made up of the five tribes, which had become assimilated into one common Indo-Aryan people. The following hymns refer to these five tribes as moulded into a nation:

- (1) (1) *Rig Veda*, vi.11.4 : "Agni, whom, abounding in oblations, the five tribes, bringing offerings, honour with prostrations, as if he were a man." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_24
- (2) (2) *Rig Veda*, vii.15.2 : "The wise and youthful master of the house (Agni) who has taken up his abode among the five tribes in every house." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_25

There is some difference of opinion as to who these five tribes are. *Yaska* in his *Nirukta* says that it denotes *Gandharvas, Pitris, Devas, Asuras and Rakshasas*. *Aupamanyava* says that it denotes the four *Varnas* and the *Nishadas*. Both these explanations seem to be absurd. Firstly, because the five tribes are praised collectively as in the following hymns:

- (1) (1) *Rig Veda*, ii.2.10 : "May our glory shine aloft among the five tribes, like the heaven unsurpassable." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_26
- (2) (2) *Rig Veda*, vi.46.7 : "Indra, whatever force or vigour exists in the tribe of Nashusa or whatever glory belongs to the five races bring (for us)." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_27

Such laudatory statements could not have been made if the five tribes included the *Shudras*. Besides, the word used is not *Varnas*. The word used is *Janab*. That it refer to the five tribes and not to the four *Varnas* and

Nishadas is quite clear from the following verse of the *Rig Veda*:

Rig Veda, i. 108.8: "If, O Indra and Agni, ye are abiding among the *Yodus*, *Turvasas*, *Druhyus*, *Anus*, *Purus*, come hither, vigorous heroes from all quarters, and drink the Soma which has been poured out.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_28

That these five tribes had been moulded into one Aryan people is clear from the Atharva Veda (iii.24.2) which says : "these five regions, the five tribes springings from Manu."

A sense of unity and a consciousness of kind can alone explain why the *Rishis* of the *Rig Vedic* hymns came to refer to the five tribes in such manner. The questions are: why did the *Purusha Sukta* not recognise this unity of the five tribes and give a mythic explanation of their origin? Why instead did it recognise the communal divisions within the tribes? Why did the *Purusha Sukta* regard communalism more important than nationalism?

These are some of the riddles of the *Purush Sukta* , which come to light when one compares it with the *Rig Veda*. There are others, which emerge when one proceeds to examine the *Purusha Sukta* from a sociological point of view.

Ideals as norms are good and are necessary. Neither a society nor an individual can do without a norm. But a norm must change with changes in time and circumstances. No norm can be permanently fixed. There must always be room for revaluation of the values of our norm. The possibility of revaluing values remains open only when the institution is not invested with sacredness. Sacredness prevents revaluation of its values. Once sacred, always sacred. The *Purusha Sukta* makes the *Chaturvarnya* a sacred institution, a divine ordination. Why did the *Purusha Sukta* make a particular form of social order so sacred as to be beyond criticism and beyond change? Why did it want to make it a permanent ideal beyond change and even beyond criticism? This is the first riddle of the *Purusha Sukta* which strikes a student of sociology.

In propounding the doctrine of *Chaturvarnya*, the *Purush Sukta* plays a double game. It proceeds first to raise the real, namely, the existence of the four classes in the Indo-Aryan Society, to the status of an ideal. This is a deception because the ideal is in no way different from facts as they exist. After raising the real to the status of the ideal, it proceeds to make a show

of giving effect to what it regards as an ideal. This again is a deception because the ideal already exists in fact. This attempt of the *Purusha Sukta* to idealise the real and to realise the ideal, is a kind of political jugglery, the like of which, I am sure, is not to be found in any other book of religion. What else is it if not a fraud and a deception? To idealise the real, which more often than not is full of inequities, is a very selfish thing to do. Only when a person finds a personal advantage in things as they are that he tries to idealise the real. To proceed to make such an ideal real is nothing short of criminal. It means perpetuating inequity on the ground that whatever is once settled is settled for all times. Such a view is opposed to all morality. No society with a social conscience has ever accepted it. On the contrary, whatever progress in improving the terms of associated life between individuals and classes has been made in the course of history, is due entirely to the recognition of the ethical doctrine that what is wrongly settled is never settled and must be resettled. The principle underlying the *Purush Sukta* is, therefore, criminal in intent and anti-social in its results. For, it aims to perpetuate an illegal gain obtained by one class and an unjust wrong inflicted upon another. What can be the motive behind this jugglery of the *Purusha Sukta*? This is the second riddle.

The last and the greatest of all these riddles, which emerge out of a sociological scrutiny of the *Purusha Sukta*, is the one relating to the position of the *Shudra*. The *Purusha Sukta* concerns itself with the origin of the classes, and says they were created by God—a doctrine which no theology has thought it wise to propound. This in itself is a strange thing. But what is astonishing is the plan of equating different classes to different parts of the body of the Creator. The equation of the different classes to different parts of the body is not a matter of accident. It is deliberate. The idea behind this plan seems to be to discover a formula which will solve two problems, one of fixing the functions of the four classes and the other of fixing the gradation of the four classes after a preconceived plan. The formula of equating different classes to the different parts of the body of the Creator has this advantage. The part fixes the gradation of the class and the gradation in its turn fixes the function of the class. The *Brahmin* is equated to the mouth of the Creator. Mouth being the noblest part of the anatomy, the *Brahmin* becomes the noblest of the four classes. As he is the noblest in the scale, he is given the noblest function, that of custodian of knowledge and learning. The *Kshatriya* is equated to the arms of the Creator. Among the limbs of a person, arms are next below the mouth. Consequently, the *Kshatriya* is given an order of precedence next below the

Brahmin and is given a function which is second only to knowledge, namely, fighting. The *Vaishya* is equated to the thighs of the Creator. In the gradation of limbs the thighs are next below the arms. Consequently, the *Vaishya* is given an order of precedence next below the *Kshatriya* and is assigned a function of industry and trade which in name and fame ranks or rather did rank in ancient times below that of a warrior. The *Shudra* is equated to the feet of the Creator. The feet form the lowest and the most ignoble part of the human frame. Accordingly, the *Shudra* is placed last in the social order and is given the filthiest function, namely, to serve as a menial.

Why did the *Purusha Sukta* choose such a method of illustrating the creation of the four classes? Why did it equate the *Shudras* to the feet? Why did it not take some other illustration to show how the four classes were created. It is not that *Purusha* is the only stock simile used to explain creation. Compare the explanation of the origin of the Vedas contained in the *Chhandogya Upanishad*. It says smk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_29

"Prajapati infused warmth into the worlds, and from them so heated he drew forth their essences, *viz.*, Agni (fire) from the earth, Vayu (wind) from the air, and Surya (the sun) from the sky. He infused warmth into these three deities, and from them so heated he drew forth their essences,— from Agni the *ric* verses, from Vayu the *yajus* verses and from Surya the *saman* verses. He then infused heat into this triple science, and from it so heated he drew forth its essences—from *ric* verses the syllable *bhub*, from *yajus* verses *bhuvah*, and from *Saman* verses *svar*."

Here is an explanation of the origin of the Vedas from different deities. So far as the Indo-Aryans are concerned, there was no dearth of them. There were thirty crores of them. An explanation of the origin of the four *Varnas* from four gods would have maintained equality of dignity by birth of all the four classes. Why did the *Purusha Sukta* not adopt this line of explanation?

Again, would it not have been possible for the author of the *Purusha Sukta* to say that the different classes were born from the different mouths of the *Purusha*. Such a conception could not have been difficult because the *Purusha* of the *Purush Sukta* has one thousand heads, enough to assign one species of creation to one of his heads. Such a method of explaining creation could not have been unknown to the author of the *Purusha Sukta*.

For we find it used by the *Vishnu Purana* to explain the origin of the different *Vedas* as may be seen from the following extract:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_30

"From his eastern mouth Brahma formed the Gayatd, the *ric* verses, the trivrit, the sama-rathantara and of sacrifices, the agnistoma. From his southern mouth he created the *yajus* verses, the trishtubh metre, the panchadasa stoma, the brihatsaman, and the ukthya. From his western mouth he formed the *saman* verses, the jagati metre, the saptadasa stoma, the Vairupa, and the atiratra. From his northern mouth he formed the ekavimsa, the *atharvan*, the aptoryaman with the anushtubh and viraj metres."

The *Harivansa* has another way of explaining the origin of the Vedas. According to it:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_31

"The god fashioned the *Rig Veda* with the Yajus from his eyes, the *Sama Veda* from the tip of his tongue, and the *Atharvan* from his head."

Assuming that for some reason the author of the *Purusha Sukta* could not avoid using the body of the Creator and its different parts for explaining the origin and the relation of the four classes, the question still remains as to why he chose to equate the different parts of *the Purusha* to the different classes in the manner in which he does.

The importance of this question is considerably heightened when one realises that the *Purusha Sukta* is not the only instance in which the different parts of the body of the Creator are used as illustrations to explain the origin of the different classes in society. The same explanation is given by the sage *Vaishampayana* to explain the origin of the various classes of priests employed in the performance of sacrifices. But what a difference is there between the two! The explanation of *Vaishampayana* which is reported in the *Harivarnsa* reads as follows:
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_32

"Thus the glorious Lord Hari Narayana, covering the entire waters, slept on the world which had become one sea, in the midst of the vast expanse of fluid (*rajas*), resembling a mighty ocean, himself free from passion (*virajaskah*), with mighty arms; Brahmans know him as the

undecaying. Invested through austere fervour with the light of his own form and clothed with triple time (past, present and future) the lord then slept. *Purushotama* (Vishnu) is whatever is declared to be the highest. *Purusha* the sacrifice, and everything else which is known by the name of *Purusha*. Here how the *Brahmins* devoted to sacrifice, and called *ritvijas*, were formerly produced by him from his own body for offering sacrifices. The Lord created from his mouth the *Brahman*, who is the chief, and the *udgatri*, who chants the *Saman*, from his arms the *hotri* and the *adhvaryu*. He then... created the *prastotri*, the *maitravaruna*, and the *pratishthatri*, from his belly the *pratibarti* and the *potri*, from his thighs the *achhavaka* and the *neshtri*, from his hands the *agnidhra* and the sacrificial *brahmanya*, from his arms the *gravan* and the sacrificial *unnetri*. Thus did the divine Lord of the world create the sixteen excellent *ritvijas*, the utterers of all sacrifices. Therefore this *Purusha* is formed of sacrifice and is called the Veda; and all the Vedas with the Vedangas, Upanishads and ceremonies are formed of his essence."

There were altogether seventeen different classes of priests required for the performance of a sacrifice. It could never be possible for anyone attempting to explain the origin of each by reference to a distinct part of the body of the Creator to avoid using the feet of the *Purusha* as the origin of a class, the limbs of the *Purusha* being so few and the number of priests being so many. Yet what does *Vaishampayana* do? He does not mind using the same part of the Creator's body to explain the origin of more than one class of priests. He most studiously avoids using the feet as the origin of anyone of them.

The situation becomes completely intriguing when one compares the levity with which the *Shudras* are treated in the *Purusha Sukta* with the respect with which the *Brahmins* are treated in the Hari-varnsa in the matter of their respective origins. Is it because of malice that the *Purusha Sukta* did not hesitate to say that the *Shudra* was born from the feet of the *Purusha* and that his duty was to serve? If so what is the cause of this malice?

IV

The riddles about the *Shudras* mentioned above are those which arise out of a sociological scrutiny of the *Purusha Sukta*. There are other riddles regarding the position of the *Shudra* which arise out of later developments of the ideal of *Chaturvarnya*. To appreciate these results it is necessary first to take note of these later developments. The later developments of *Chaturvarnya* are mainly two. First is the creation of the fifth class next

below the *Shudras*. The second is the separation of the *Shudras* from the first three *Varnas*. These changes have become so integrated with the original scheme of the *Purusha Sukta* that they have given rise to peculiar terms and expressions so well-known that everybody understands what they stand for. These terms are : *Savarnas*, *Avarnas*, *Dvijas*, *non-Dvijas*, and *Traivarnikas*. They stand to indicate the sub-divisions of the original four classes and the degree of separation between them. It is necessary to take note of the relative position of these classes because they disclose a new riddle. If this riddle has not caught the eye of the people, it is because of two reasons. Firstly, because students have not cared to note that these names are not mere names but that they stand for definite rights and privileges, and secondly, because they have not cared to find out whether the groupings made under these names are logical having regard to the rights and privileges they connote.

Let us therefore see what is the *de jure* connotation of these terms. *Savarna* is generally contrasted with *Avarna*. *Savarna* means one who belongs to one of the four *Varnas*. *Avarna* means one who does not belong to any one of the four *Varnas*. The *Brahmins*, *Kshatriyas*, *Vaishyas* and *Shudras* are *Savarnas*. The Untouchables or *Ati-Shudras* are called *Avarnas*, those who have no *Varna*. Logically, the *Brahmins*, *Kshatriyas*, *Vaishyas* and *Shudras* are within the *Chaturvarnya*. Logically, the Untouchables or the *Ati-Shudras* are outside the *Chaturvarnya*. *Dvija* is generally contrasted with *non-Dvija*. *Dvija* literally means twice-born and *non-Dvija* means one who is born only once. The distinction is based on the right to have *Upanayana*. The *Upanayana* is treated as a second birth. Those who have the right to wear the sacred thread are called *Dvijas*. Those who have no right to wear it are called *non-Dvijas*. The *Brahmins*, *Kshatriyas* and *Vaishyas* have the right to wear the sacred thread. Logically, they are *Dvijas*. The *Shudras* and the *Ati-Shudras* have no right to wear the sacred thread. Logically, they are both *non-Dvijas*. The *Traivarnika* is contrasted with the *Shudra*. But there is nothing special in this contrast. It conveys the same distinction which is conveyed by the distinction between the *Dvijas* and the *non-Dvijas* except the fact that the contrast is limited to the *Shudra* and does not extend to the *Ati-Shudra*. This is probably because this terminology came into being before the rise of the *Ati-Shudras* as a separate class.

Bearing in mind that both the *Shudra* and the *Ati-Shudra* are *non-Dvijas*, why then is the *Shudra* regarded as *Savarna* and the *Ati-Shudra* as *Avarna*? Why is the former within and why is the latter outside the *Chaturvarnya*? The *Brahmins*, *Kshatriyas*, *Vaishyas* and *Shudras* are all within the four corners

of the *Chaturvarnya*. They are all *Savarnas*. Why then is the *Shudra* denied the right of the *Traivarnikas*?

Can there be a greater riddle than the riddle of the *Shudras*? Surely, it calls for investigation and explanation as to who they were and how they came to be the fourth *Varna* in the Aryan Society.

CHAPTER II

THE BRAHMANIC THEORY OF THE ORIGIN OF THE SHUDRAS

HAS the Brahmanic literature any explanation to offer which can account for the origin of the Shudras? There is no doubt that the Brahmanic literature is full of legends regarding creation which touch upon the creation of the universe, of man and of the different Varnas. Whether or not they furnish any clue to discover the origin of the Shudras, there can be no doubt that all such theories should find a place in a book which is concerned with the problem of the Shudras if for no other reason than that of assembling all material relating to the Shudras in one place and making their story complete. It would be better to take each piece of the Brahmanic literature separately, and note what contribution it has to make to the subject.

I

To begin with the *Vedas*. As to the *Rig Veda*, the legend about creation to be found in its *Sukta* known as the *Purusha Sukta* has already been set out in the previous chapter. It now remains to take note of the legends contained in the other *Vedas*.

There are two recensions of the *Yajur Veda* : (1) the White *Yajur Veda* and (2) the Black *Yajur Veda*. To take the White *Yajur Veda* first. The *Vajasaneyi Samhita* of the White *Yajur Veda* sponsors two theories. One is a mere reproduction of the *Purusha Sukta* of the *Rig Veda* with this difference that it has 22 verses, while the original as it occurs in the *Rig Veda* has only 16 verses. The six additional verses in the White *Yajur Veda* read as follows :

17. 17. Brought forth from the waters and from the essence of the earth, he was produced by Vishvakannan in the beginning. Tvashta gives

him form; that is the Universe of Purusha on all sides in the beginning.

18. 18. 1 know this great Purusha, of the colour of the sun, beyond darkness. Only by knowing him does one go beyond death; there is no other path for going.
19. 19. *Prajapati moves in the interior of the womb; though unborn, he is born in many forms. Wise men see his source; wise men desire the place of the Marichis.*
20. 20. He who shines for the gods, he who is the priest of the gods, he who was born before the gods,—salutation to that shining offspring of Brahma.
21. 21. The gods, generating the shining offspring of Brahma, said in the beginning; "That Brahmin who knows thus,— the gods will be under his control."
22. 22. *Sri and Laxmi are his wives; the day and night his sides; the Stars his ornament; the Ashwins his bright face. Grant me my desires; grant me that; grant me everything.*

The second explanation contained in the *Vajasaneyi Sambhita* is quite different from the *Purusha Sukta*. It reads as follows :

V.S., xiv,28. *mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_33" He lauded with one. Living beings were formed. He lauded with three the brahman was created; *Brahmanaspati* was the ruler. He lauded with five existing things were created; *bhutanampati* was ruler. He lauded with seven: die seven rishis were created: *Dhatri* was the ruler. He lauded with nine: the *Fathers* were created: *Aditi* was the ruler. He lauded with eleven: the seasons were created: the *Artavas* were the rulers. He lauded with thirteen: the months were created: the year was the ruler. He lauded with fifteen: the *Kshatra* (the *Kshatriya*) was created: *Indra* was the ruler. He lauded with seventeen: animals were created: *Brihaspati* was the ruler. He lauded with nineteen: the *Shudra* and the *Arya (Vaishya)* were created: day and night were the rulers. He lauded with twenty-one: animals with undivided hoofs were created: *Varuna* was the ruler. He lauded with twenty-three: small animals were created: *Pushan* was the ruler. He lauded with twenty-five: wild animals were created: *Vayu* was the ruler (compare R.V., x.90.8). He lauded with twenty-seven: heaven and earth separated: *Vasus*, *Rudras* and *Adityas* separated after them: they were the rulers. He lauded with thirty-one: living beings were created: the first and second halves of the month were the rulers. He lauded with thirty one: existing things were tranquillized: *Prajapati Parameshthin* was the ruler."

Now to turn to the Black *Yajur Veda*. The *Taittiriya Sambhita* of the Black *Yajur Veda* gives altogether five explanations. The one at iv. 3, 10 is the same as has been put forth by the *Vajasaneyi Sambhita* of the White *Yajur Veda*-t (xiv.28) and which has been reproduced earlier. Of the rest those which narrate the origin of the Shudra are set out below:

T.S., ii.4.13.1.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_34—"The gods were afraid of the *Rajanya* when he was in the womb. They bound him with bonds when he was in the womb. Consequently, this *Rajanya* is born bound. If he were born unbound he would go on slaying his enemies. In regard to whatever *Rajanya* any one desires that he should be born unbound, and should go on slaying his enemies, let him offer for him this *Aindra-Barhaspatya* oblation. A *Rajanya* has the character of *Indra*, and a Brahman is *Brihaspati*. It is through the *Brahman* that anyone releases the *Rajanya* from his bond. The golden bond, a gift, manifestly releases from the bond that fetters him."

(2) T.S., vii. 1.1.4.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_35—*Prajapad* desired, may I propagate.' He formed the Trivrit (stoma) from his mouth. After it were produced the deity Agni, the metre Gayain, the Saman (called) Rathantara, of men the Brahmin, of beasts the goats. Hence they are the chief (*mukhyah*) because they were created from the mouth (*mukhatah*). From (his) breast, from his arms,- he formed the. Panchadasa {*stoma*) After it were created the god, the indra, the Trishtubh metre, the Saman (called) Brihat, of men the *Rajanya*, of beasts the sheep. Hence they are vigorous, because they were created from vigour. From (his) middle he foamed the Saptadasa (stoma). After it were created the gods (called) the Vishvedevas, the Jagati metre, the Saman called the Vairupa of men the *Vaishya*, of beasts kine. Hence they are to be eaten, because they were created from the receptacle of food. Wherefore they *are* more numerous than others, for the most numerous deities were created after (the Saptadasa), From his foot he formed the Ekavimsa (Stoma.). After it were created the *Anushtubh metre*, the saman called *vairaja*, of men the *Shudra*, of beasts the horse. Hence these two, both the horse and the *Shudra*, are transporters of (other) creatures. Hence (too) the *Shudra is* incapacitated for sacrifice, because no deities were created after (the Ekavimsa). Hence (too) these two subsist by their feet, for they were created from the foot.

Coming to the *Atharva Veda*, there are altogether four explanations. One of these is the same as the *Purusha Sukta* of the *Rig Veda*. It occurs at xix.6. The others are as stated below :

- (1)(1) A.V.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_36 iv.6.1.—The *Brahman* was born the first with ten heads and ten faces. He first drank the soma; he made poison powerless.
- (2)(2) A.V., mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_37xv.S.I.—He (the *Vratya*) became filled with passion thence sprang the *Rajanya*.
- (3)(3) A.V., mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_38xv.9.1.—Let the king to whose house the *Vratya* who knows this, comes as a guest, cause him to be respected as superior to himself. So doing he does no injury to his royal rank, or to his realm. From him arose the *Brahman (Brahmin)* and the *Kshattra (Kshatriya)*. They said 'Into whom shall we enter,' etc.

II

To proceed to the Brahmanas. The *Satapatha Brahmana* contains six explanations. There are two which concern themselves with the creation of the *Varnas*. Of the two, the one which speaks of the origin of the *Shudras* is given below :

S.Bmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_39 xiv.4.2.23.—"Brahma (here, according to the commentator, existing in the form of Agni and representing the Brahmana caste) was formerly this (universe), one only. Being one, it did not develop. It energetically created an excellent form, the *Kshattra*, viz., those among the gods who are powers (*Kshattrani*), Indra, Varuna, Soma, Rudra, Parjanya, Yama, Mrityu, Isana, Hence nothing is superior to the *Kshattra*. Therefore, the Brahmana sits below the *Kshatriya* at the *Rajasuya* sacrifice; he confers that glory on the *Kshattra* (the royal power). This, the *Brahma*, is the source of the *Kshattra*. Hence although the king attains supremacy, he at the end resorts to the *Brahman* as his source. Whoever destroys him (the *Brahman*) destroys his own source. He becomes most miserable, as one who has injured a superior. He did not develop. He created the *Vis*, viz., those classes of gods who are designated by troops, *Vasus*, *Rudras*, *Adityas*, *Visvedevas*, *Maruts*. He did not develop. He created the *Shudra* class *Pushan*. This earth is *Pushan* ; for she nourishes

all that exists. He did not develop. He energetically created an excellent form. Justice (Dharma). This is the ruler (Kshattrā) of, the ruler (Kshattrā), namely. Justice. Hence nothing is superior to Justice. Therefore the weaker seeks (to overcome) the stronger by Justice, as by a king. This justice is truth. In consequence they say of a man who speaks truth, 'he speaks justice.' For this is both of these. This is the Brahma, Kshattrā, Vīś and Shudra. Through Agni it became Brahma among the gods, the Brahmana among men, through the (divine) Kshatriya a (human) Kshatriya, through the (divine) Vaishya a (human) Vaishya, through the (divine) Shudra a (human) Shudra. Wherefore it is in Agni among the gods and in a Brahman among men that they seek after an abode.

The *Taittiriya Brahman* is responsible for the following explanation:

T.B.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_40 i.2.6.7.—"The Brahmana caste is sprung from the gods; the Shudras from the Asuras."

(1)(1) T.B., mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_41iii. 2.3.9.—"This Shudra has sprung from non-existence."

III

Here is a complete collection of all the Brahmanic speculations on the origin of the four classes and of the Shudras. The ancient Brahmins were evidently conscious of the fact that the origin of the four classes was an unusual and uncommon social phenomenon and that the place of the Shudra in it was very unnatural and that this called for some explanation. Otherwise, it would be impossible to account for these innumerable attempts to explain the origin of the *Chaturvarnya* and of the Shudra.

But what is one to say of these explanations? The variety of them is simply bewildering. Some allege that *Purusha* was the origin of the four *Varnas*, and some attribute their origin to Brahma, some to Prajapati and some to Vratya. The same source gives differing explanations. The White *Yajur Veda* has two explanations, one in terms of *Purusha*, the other in terms of *Prajapati*. The Black *Yajur Veda* has three explanations to offer. Two are in terms of *Prajapati*, the third in terms of Brahma. The *Atharva*

Veda has four explanations, one in terms of *Purusha*, second in terms of *Brahman*, third in terms of *Vratya* and fourth quite different from the first three. Even when the theory is the same, the details are not the same. Some explanations such as those in terms of Prajapati, or Brahma are theological. Others in terms of Manu or Kasyapa are in humanistic terms. It is imagination running riot. There is in them neither history nor sense. Prof. Max Muller commenting on the *Brahmanas* has said:

"The Brahmanas represent no doubt a most interesting phase in the history of the Indian mind, but judged by themselves, as literary productions, they are most disappointing. No one would have supposed that at so early a period, and in so primitive a state of society, there could have risen up a literature which for pedantry and downright absurdity can hardly be matched anywhere. There is no lack of striking thoughts, of bold expressions, of sound reasoning, and curious traditions in these collections. But these are only like the fragments of a torso, like precious gems set in brass and lead. The general character of these works is marked by shallow and insipid grandiloquence, by priestly conceit, and antiquarian pedantry. It is most important to the historian that he should know how soon the fresh and healthy growth of a nation can be blighted by priestcraft and superstition. It is most important that we should know that nations are liable to these epidemics in their youth as well as in their dotage. These works deserve to be studied as the physician studies the twaddle of idiots, and the raving of madmen." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_42

On reading these Brahmanic speculations on the origin of the four *Varnas* and particularly of the Shudras one is very much reminded of these words of Prof. Max Muller. All these speculations are really the twaddles of idiots and ravings of madmen and as such they are of no use to the student of history who is in search of a natural explanation of a human problem.

CHAPTER III

THE BRAHMANIC THEORY OF THE STATUS OF THE SHUDRAS

So much for the Brahmanic view of the origin of the Shudra. Turning to

the Brahmanic view of the civil status of the Shudra, what strikes one is the long list of (disabilities, accompanied by a most dire system of pains and penalties to which the Shudra is subjected by the Brahmaic law-givers.

The disabilities and penalties of the Shudra found in the Samhitas and the *Brahmanas* were few, as may be seen from the following extracts:

- I. I. According to the *Kathaka Samhita* (xxx.2) and the *Maitrayani Samhita* (iv.1.3;i.8.3)
"A shudra should not be allowed to milk the cow whose milk is used for Agnihotra."
 - II. II. The *Satapatha Brahmana* (iii.1.1.10), the *Maitrayani Samita* (vii.1.1.6) and also the *Panchavirnsa Brahmana* (vi.1.11) say:
"The Shudra must not be spoken to when performing a sacrifice and a Shudra must not be present when a sacrifice is being performed."
 - III. III. The *Satapatha Brahmana* (xiv.1.31) and the *Kathaka Samhita* (xi.10) further provide that :
"The Shudra must not be admitted to Soma drink."
- The *Aitareya Brahmana* (vii.29.4) and the *Panchavirnsa Brahmana* (vi.1.11) reached the culminating point when they say:

"Shudra is a servant of another (and cannot be anything else)."

But what in the beginning was a cloud no bigger than a man's hand, seems to have developed into a storm, which has literally overwhelmed the Shudras. For, as will be seen from the extracts given from later penal legislation by the *Sutrakaras* like *Apastamba*, *Baudhayana*, etc. and the *Smritikaras* like *Manu* and others, the growth of the disabilities of the Shudras has been at a maddening speed and to an extent which is quite unthinkable.

The disabilities are so deadening that it would be impossible to believe them unless one sees them in cold print. They are, however, so numerous that it is impossible to present them in their fullness. To enable those, who do not know them, to have some idea of these disabilities, I have assembled below in one place illustrative statements by the different *Sutrakaras* and *Smritikaras* relating to the disabilities of the Shudras scattered in their Law Books.

II

(i)

(A) *The Apastamba Dharma Sutra* says :

"There *are* four castes—Brahmanas, Kshatriyas, Vaishyas and Shudras. amongst these, each preceding (caste) is superior by birth to the *one* following*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_43 :

For all these, excepting Shudras and those who have committed bad actions are ordained. (1) the initiation (Upanayaaa or the wearing of the sacred thread), (2) the study of the Veda and (3) the kindling of the sacred fire (i.e., the right to perform sacrifices).mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_44"

(B) This is what the *Vasishtha Dharma Sutra* says:

"There are four castes (Varna) Brahmanas, Kshatriyas, Vaishyas and Shudras.

Three castes, Brahmanas, Kshatriyas and Vaishyas (are called) twice-born.

Their first-birth is from the mother; the second from the investiture with the sacred girdle. In that (second birth) the Savitri is the mother, but the teacher is said to be the father.

They call the teacher father, because he gives instruction in the Veda.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_45

The four castes are distinguished by their origin and by particular sacraments.

There is also the following passage of the Veda: 'The Brahmana was his mouth, the Kshatriya formed his arms: the Vaishya his thighs; the Shudra was born from his feet.'

It has been declared in the following passage of the Veda that a Shudra shall not receive the sacraments. 'He created the Brahmana with the

Gayatri (metre), the Kshatriya with the Trishtubh, the Vaishya with the Jagati, the Shudra without any metre." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_46

(C) The *Manu Smriti* propounds the following view on the subject:

"For the prosperity of the worlds, he (the creator) from his mouth, arms, thighs and feet created the Brahmana, Kshatriya, Vaishya and Shudra." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_47

The Brahmans, Kshatriya (and) Vaishya constitute the three twice-born castes, but the fourth, the Shudra has only one birth." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_48

(ii)

(A) The *Apastamba Dharma Sutra* says :

"(A Traivarnika) shall never study (the Veda) in a burial ground nor anywhere near it within the throw of a Sarnya.

If a village has been built over a burial ground or its surface has been cultivated as a field, the recitation of the Veda in such a place is not prohibited.

But if that place is known to have been a burial ground, he shall not study (there).

A Shudra and an outcaste are (included by the term) burial-ground, (and the rule given, Sutra 6 applies to them).

Some declare, that (one ought to avoid only to study) in the same house (where they dwell).

But if (a student and) a Shudra woman merely look at each other, the recitation of the Veda must be interrupted." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_49

Food touched by a (Brahmana or other high-caste person) who is impure, becomes impure but not unfit for eating.

But what has been brought (be it touched or not) by an impure Shudra must not be eaten. A Shudra touches him, (then he shall leave

off eating)." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_50

(B) The *Vishnu Smriti* says :

"He must not cause a member of a twice born caste to be carried out by a Shudra (even though he be a kinsman of the deceased). Nor a Shudra by a member of a twice-born caste.

A father and a mother shall be carried out by their sons; (who are equal in caste to their parents).

But Shudras must never carry out a member of a twice-born caste, even though he be their father." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_51

(C) The *Vasishtha Dharma Sutra* prescribes :

"Now therefore, we will declare what may be eaten and what may not be eaten.

Food given by a physician, a hunter, a woman of bad character, a mace-bearer, a thief, an Abhisasta, and eunuch, (or) an outcaste must not be eaten.

Nor that given by a miser, one who has performed the initiatory ceremony of a Srauta-sacrifice, a prisoner, a sick person, a seller of the Soma plant, a carpenter, a washerman, a dealer in spirituous liquor, a spy, an usurer, (or) a cobbler.

Nor that given by a Shudra." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_52

Some call that Shudra race a burial-ground.

Therefore the Veda must not be recited in the presence of a Shudra."

Now they quote also the (following) verses which Yama proclaimed :

The wicked Shudra-race is manifestly a burial-ground. Therefore (the Veda) must never be recited in the presence of a Shudra." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_53

Some become worthy receptacles of gifts through sacred learning, and some through the practice of austerities. But that Brahmana whose stomach does not contain the food of a Shudra, is even the worthiest receptacle of all.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_54

If a Brahmana dies with the food of a Shudra in his stomach, he will become a village pig (in his next life) or be born in the family of that Shudra.

For though a (Brahmana) whose body is nourished by the essence of a Shudra's food may daily recite the Veda, though he may offer (an Agnihotra) or mutter (prayers, nevertheless) he will not find the path that leads upwards.

But if, after eating the food of a Shudra, he has conjugal intercourse, (even) his sons (begotten on a wife of his own caste) will belong to the giver of the food (i.e., to the Shudra) and he shall not ascend to heaven.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_55

(D) *TheManuSmriti* says:

"He (Brahmin) may not dwell in the kingdom of a Shudra nor in one full of unrighteous people, nor in one invaded by hosts of heretics nor in one possessed by low-born men.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_56

A Brahmin who performs a sacrifice for a Shudra should not be invited to dine with other Brahmins at a Shraddha ceremony. His company will destroy all merit that which may otherwise be obtained from such a dinner.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_57

One should carry out by the southern town-gate a dead Shudra, but the twice-born by the western, northern and eastern (gates) respectively.

(iii)

(A) (A) *The Apastamba Dharma Sutra* says :

"A Brahmana shall salute stretching forward his right arm on a level with his ear, a Kshatriya holding it on a level with the breast, a Vaishya holding it on a level with the waist, a Shudra holding it low (and) stretching forward the joined hands." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_58

And when returning the salute of (a man belonging) to the first (three) castes, the last syllable of the name of the person addressed is produced to the length of three moras." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_59

If a Shudra comes as a guest (to a Brahmana) he shall give him some work to do. He may feed him, after (that has been performed. To feed him without asking him first to do some work is to do him honour.)

Or the slaves (of the Brahmana householder) shall fetch (rice) from the royal stores, and honour the Shudra as a guest." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_60

(B) The *Vishnu Smriti* prescribes :

"The same punishment (payment of hundred Panas) is also ordained for hospitably entertaining a Shudra or religious ascetic at an oblation to the gods or to the manes." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_61

(C) The *Manu Smriti* enjoins that :

One should consider a Brahmana ten years old and a Kshatriya a hundred years old as father and son; but of them the Brahman (is) the father.

Wealth, kindred, age, sects (and) knowledge as the fifth; those are the causes of respect, the most important (is) the last (mentioned).

In whom among the three (higher) castes the most and the best of (those) five may be he is here worthy of respect; a Shudra (is not worthy of respect on the ground of his wealth or knowledge no matter how high they are. It is only on the ground of his age and that too only if) he has attained the tenth (decade of his life that he becomes worthy of respect and not before.) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_61

[the Shudras PART I.htm - _msocom_62](#)

For not by years, nor by grey hair, not by wealth, nor kindred (is superiority); the seers made the rule—Who knows the Veda completely, he is great among us.

Of Brahmins, superiority (is) by knowledge, but of Kshatriyas by valour, of Vaishyas by reason of property (and) wealth, and of Shudras by age.

One is not, therefore, aged because his head is grey; whoever, although a youth, has perused (the Vedas), him the gods consider an elder.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_63](#)

Now a Kshatriya is not called a guest in a Brahmin's house, nor a Vaishya nor a Shudra; neither is a friend, the kinsman, nor a Guru (of the householder). (That is, a Brahmin has alone the right to have the honour of being treated as a guest in a Brahmin's house).

But if a Kshatriya come as a guest to the house after the said Brahmins have eaten one should give him food (if) he wishes.

If a Vaishya (or) Shudra come to the house as guests, the Brahmin should give them food but with the servants, using kindness."[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_64](#)

(iv)

(A) According to the *Apastamba Dharma Sutra* :

He who has killed a Kshatriya shall give a thousand cows (to Brahmins for the expiation of the act).

He shall give, a hundred cows for the killing of a Vaishya, (only) ten for a Shudra.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_65](#)

(B) According to the *Gautama Dharma Sutra* :

"A Kshatriya (shall be fined) one hundred (Karshapanas) if he abuses a Brahmana. In case of an assault (on a Brahmana) twice as much.

A Vaishya (who abuses a Brahmana, shall pay) one and a half (times as

much as a Kshatriya).

But a Brahmana (who abuses) a Kshatriya (shall pay) fifty (Karshapanas).

One half of that amount (if he abuses) a Vaishya. And if he abuses a Shudra nothing." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_66

(C) According to *Brihaspati's Dharma Shastra* :

"For a Brahmin abusing a Kshatriya, the fine shall be half of a hundred (fifty) Panas; for abusing a Vaishya, half of fifty (twenty-five) Panas, for abusing a Shudra twelve and a half.

This punishment has been declared for abusing a virtuous Shudra (i.e., a Shudra who accepts his low status and does willingly the duties attached to that status) who has committed no wrong; no offence is imputable to a Brahmin for abusing a Shudra devoid of virtue.

A Vaishya shall be fined a hundred (Panas) for reviling a Kshatriya; a Kshatriya reviling a Vaishya shall have to pay half of that amount as a fine.

In the case of a Kshatriya reviling a Shudra the fine shall be twenty Panas; in the case of a Vaishya, the double amount is declared to be the proper fine by persons learned in law.

A Shudra shall be compelled to pay the first fine for abusing a Vaishya; the middling fine for abusing a Kshatriya; and the highest fine for abusing a Brahmin." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_67

(D) According to the *Manu Smruti*:

"A Kshatriya who reviles a Brahmin ought to be fined one hundred (Panas); a Vaishya one hundred and fifty or two hundred, but a Shudra ought to receive corporal punishment.

A Brahmin should be fined fifty if he has thrown insult on a Kshatriya, but the fine shall be a half of fifty if on a Vaishya and twelve if on a Shudra." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_68

In the murder of a Kshatriya, one fourth (part) of the penance for slaying a Brahman is declared to be the proper penance; an eighth part in the case of a Vaishya; and in (the case of) a Shudra (who) lives virtuously, one sixteenth part must be admitted (as the proper penance).

But if one of the highest of the twice-born (a Brahmin) slay a Kshatriya involuntarily he may, in order to cleanse himself give a thousand cows and a bull.

Or let him for three years (with senses) subdued and locks braided, follow the observances of one who has slain a Brahmin, living in a place rather far from the town, his dwelling place the foot of a tree.

The highest of a twice-born (the Brahmin) should practise just this expiation for a year on having slain a Vaishya who lives virtuously and give one hundred and one (heads) of cattle.

The slayer of a Shudra should practise exactly all these observances for six months; or he may give to a priest ten white cows and a bull.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_69

(E) According to the *Vishnu Smriti*:

"With whatever limb an inferior insults or hurts his superior in caste, of that limb the king shall cause him to be deprived.

If he places himself on the same seat with his superior, he shall be banished with a mark on his buttocks. If he spits on him he shall lose both lips. If he breaks wind against him, he shall lose his hind parts. If he uses abusive language, his tongue.

If a low-born man through pride give instruction (to a member of the highest caste) concerning his duty, let the king order hot oil to be dropped into his mouth.

If a Shudra man mentions the name or caste of a superior revealingly, an iron pin ten inches long shall be thrust into his mouth (red hot)."
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_70

(V)

(A) According to the *Brihaspati Smriti* :

"A Shudra teaching the precepts of religion or uttering the words of the Veda, or insulting a Brahmin shall be punished by cutting out his tongue." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_71

(B) According to the *Gautama Dharma Sutra* :

"Now if he listens intentionally to (a recitation of) the Veda, his ears shall be filled with (molten) tin or lac.

If he recites (Vedic texts), his tongue shall be cut out.

If he remembers them, his body shall be split in twain." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_72

(C) According to the *Manu Smriti*:

One who teaches for hire, also one who learns by paying hire (a Shudra) teacher and one who learns from him are unfit for being invited at the performance in honour of the Devas and Pitris. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_73

One may not give advice to a Shudra, nor (give him) the remains (of food) or of butter that has been offered.

And one may not teach him the law or enjoin upon him religious observances.

For he who tells him the law and he who enjoins upon him (religious) observances, he indeed together with that (Shudra) sinks into the darkness of the hell called Asamvrita. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_74

One should never recite (the Vedas) indistinctly or in the presence of a Shudra; nor having recited the Veda at the end of the night, (though) fatigued may one sleep again." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_75

(vi)

This is what the *Manu Smriti* says :

"A Brahmin may take possession of the goods of a Shudra with perfect peace of mind, for, since nothing at all belongs to this Shudra as his own, he is one whose property may be taken away by his master." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_76

Indeed, an accumulation of wealth should not be made by a Shudra even if he is able to do so, for the sight of mere possession of wealth by a Shudra injures the Brahmin." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_77

(vii)

Here is the advice of the *Manu Smriti* to the king :

"He who can claim to be a Brahmin merely on account of his birth, or he who only calls himself a Brahmin, may be, if desired, the declarer of law for the king, but a Shudra never.

If a king looks on while a Shudra gives a judicial decision, his realm sinks into misfortune, like a cow in a quagmire.

A realm which consists chiefly of Shudras and is overrun by unbelievers and destitute of twice-born men is soon totally destroyed, oppressed by famine and disease." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_78

(viii)

(A) (A) The *Apastamba Dharma Sutra* says:

"And those who perform austerities, being intent on fulfilling the sacred laws. And a Shudra who lives by washing the feet (of the Brahmin).

Also blind, dumb, deaf and diseased persons (as long as their infirmities last) are exempt from taxes." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_79

To serve the other three castes is ordained for the Shudra. The higher the caste which he serves the greater is the merit.”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_80(B) The Manu Smriti has the following:

"Now, for the sake of preserving all this creation, the most glorious (being) ordained separate duties for those who sprang from (his) mouth, arm, thigh and feet.

For Brahmins he ordered teaching, study, sacrifices and sacrificing (as priests) for others, also giving and receiving gifts.

Defence of the people, giving (alms), sacrifice, also study, and absence of attachment to objects of sense, in short for a Kshatriya.

Tending of cattle, giving (alms), sacrifice, study, trade, usury, and also agriculture for a Vaishya.

One duty the Lord assigned to a Shudra—service to those (before-mentioned) classes without grudging.”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_81

(ix)

(A) The Apastamba Dharma Sutra says :

"A man of one of the first three castes (who commits adultery) with a woman of the Shudra caste shall be banished.

A Shudra (who commits adultery) with a woman of one of the first three castes shall suffer capital, punishment.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_82

(B) The *Gautama Dharma Sutra* says:

If (the Shudra) has criminal intercourse with an Aryan woman, his organ shall be cut off and all his property be confiscated.

If (the woman had) a protector (i.e., she was under the guardian-ship of some person) he (the Shudra) shall be executed after having undergone the punishments prescribed above: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_83

(C) The *Manu Smriti* says:

If a man (of the Shudra caste) makes love to a girl of the highest caste he deserves corporal punishment.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_84

A Shudra cohabiting with a woman of twice-born castes, whether she be guarded or not guarded, is (to be) deprived of his member and of all his property if she be not guarded and of everything if she is guarded.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_85

For twice-born men, at first, a woman of the same caste is approved for marrying; but of those who act from lust, those of lower caste may in order (be wives).

A Shudra woman alone (is) a wife for a Shudra; both she and a woman of his own caste (are) legally (wives) of a Vaishya; they two and also a woman of his own caste (are wives) of a Kshatriya, both they and a woman of his own caste (are wives) of a Brahmin.

A Shudra wife is not indicated in any history for a Brahmin and Kshatriya, even though they be in distress.

Twice-born men marrying a (Shudra) woman out of infatuation will surely bring quickly (their) families and descendants to the condition of Shudras.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_86

A Brahmin having taken a Shudra woman to his bed goes the lower course; having begotten on her a son, he is surely deprived of his Brahminhood.

Now of (a man) whose offerings towards gods, manes, and guests depend on her, the manes and gods eat not that offering nor does he go to heaven.

An expiation is not prescribed for him who has drunk the moisture on a Shudra woman's lips, who has been reached by her breath, and who has also begotten a son on her.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_87

(A) The *Vasishtha Dharma Sutra* says :

"One may know that bearing grudges, envy, speaking untruths, speaking evil of Brahmins, backbiting and cruelty are the characteristics of a Shudra." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_88

(B)(B) The Vishnu Smriti prescribes that :

(The name to be chosen should be) auspicious in the case of a Brahmin. Indicating power in the case of a Kshatriya. Indicating wealth in the case of a Vaishya. And indicating contempt in the case of a Shudra. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_89

(C)(C) The *Gautama Dharma Sutra* says :

"The Shudra belongs to the fourth caste, which has one birth (only).

And serves the higher (castes). From them he shall seek to obtain his livelihood. He shall use their cast-off shoes. And eat the remnants of their food.

A Shudra who intentionally reviles twice-born men by Criminal abuse, or criminally assaults them with blows, shall be deprived of the limb with which he offends.

If he assumes a position equal to that of twice-born men in sitting, in lying down, in conversation or on the road, he shall undergo (corporal punishment)" mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_90

(D) The Manu Smrid follows suit and says :

"But if a Brahmin through avarice, and because he possesses the power, compel twice-born men, who have received the initiation (into the caste order), to do the work of a slave when they do not wish it, he shall be fined six hundred panas by the king.

But a Shudra, whether bought or not bought (by the Brahmin) may be compelled to practise servitude, for that Shudra was created by the self-existent merely for the service of the Brahmin.

Even if freed by his master, the Shudra is not released from servitude; for this (servitude) is innate in him; who then can take it from him.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_91

Just in proportion as one pursues without complaining the mode of life (practised) by the good, so free from blame, he gains both this and the other world.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_92

NOW the supreme duty of a Shudra and that which ensures his bliss is merely obedience toward celebrated priests who understand the Veda and live as householders.

If he be pure, obedient to the higher (castes), mild in speech, without conceit, and always submissive to the Brahmin, he attains (in the next transmigration) a high birth.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_93

Now a Shudra desiring some means of subsistence may serve a Kshatriya, so (is the rule); or the Shudra (if) anxious to support life, (may do so by) serving a wealthy Vaishya.

But he should serve the Brahmins for the sake of heaven, or for the sake of both (heaven and livelihood); for by him (for whom) the word Brahmin (is always) uttered is thus attained the state of completing all he ought to do.

Merely to serve the Brahmins is declared to be the most excellent occupation of a Shudra; for if he does anything other than this it profits him nothing.

His means of life should be arranged by those Brahmins out of their own household (goods) in accordance with what is fitting after examining his ability, cleverness, and (the amount) the dependants embrace.

The leaving of food should be given (to him) and the old clothes, so too the blighted part of the grain, so too the old furniture.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_94

Let a Brahmin's name be auspicious, a Kshatriya's full of power, let a

Vaishya's mean wealth, a Shudra's however be contemptible.

Let a Brahmin's (distinctive title) imply prosperity, a Kshatriya's safeguard, a Vaishya's wealth, a Shudra's service.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_95

If (a man) of one birth assault one of the twice-born castes with virulent words, he ought to have his tongue cut, for he is of the lowest origin.

If he makes mention in an insulting manner of their name and caste, a red-hot iron rod, ten fingers long, should be thrust into his mouth.

If this man through insolence gives instruction to the priests in regard to their duty, the king should cause boiling hot oil to be poured into his mouth and ear.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_96

If a man of the lowest birth should with any member injure one of the highest station, even that member of this man shall be cut (off); this is an ordinance of Manu.

If he lift up his hand or his staff (against him), he ought to have his hand cut off; and if he smites him with his feet in anger, he ought to have his feet cut off.

If a low-born man endeavours to sit down by the side of a high-born man, he should be banished after being branded on the hip, or (the king) may cause his backside to be cut off.

If through insolence he spit upon him, the king should cause his two lips to be cut off; and if he makes water upon him, his penis, and if he breaks wind upon him, his anus.

If he seize him by the locks, let the king without hesitation cause both his hands to be cut off, (also if he seize him) by the feet, the beard, the neck or the testicles.

A man who tears (another's) skin and one who causes blood to be seen ought to be fined five hundred (Panas), if he tears the flesh (he should be fined) six niskas, but if he breaks a bone he should be banished.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_97

(D) The *Narada Smriti* says:

Men of the Shudra caste, who prefer a false accusation against a member of a twice-born Aryan caste, shall have their tongue split by the officers of the king, and he shall cause them to be put on stakes.

A once-born man (or Shudra) who insults members of a twice-born caste with gross invectives, shall have his tongue cut off; for he is of low origin.

If he refers to their name or caste in terms indicating contempt, an iron-rod, ten angulas long, shall be thrust red-hot into his mouth.

If he is insolent enough to give lessons regarding their duty to Brahmins, the king shall order hot oil to be poured into his mouth and ears.

With whatever limb a man of low caste offends against a Brahmin, that very limb of him shall be cut off, such shall be the atonement for his crime.

A low-born man, who tries to place himself on the same seat with his superior in caste, shall be branded on his hip and banished, or (the king) shall cause his backside to be gashed.

If through arrogance he spits on a superior, the king shall cause both his lips to be cut off; if he makes water on him, the penis; if he breaks wind against him, the buttocks." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_98

III

Such were the laws made against the Shudras by the Brahmanic lawgivers. The gist of them may be summarised under the following heads:

- (1)(1) That the Shudra was to take the last place in the social order.
- (2)(2) That the Shudra was impure and therefore no sacred act should be done within his sight and within his hearing.
- (3)(3) That the Shudra is not to be respected in the same way as the other classes.
- (4)(4) *That the life of a Shudra is of no value and anybody may kill him without having to pay compensation and if at all of small value as compared with that of the Brahmana, Kshatriya and Vaishya.*

- (5) That the Shudra must not acquire knowledge and it is a sin and a crime to give him education.
- (6) That a Shudra must not acquire property. A Brahmin can take his property at his pleasure.
- (7) That a Shudra cannot hold office under the State.
- (8) That the duty and salvation of the Shudra lies in his serving the higher classes.
- (9) That the higher Classes must not inter-marry with the Shudra. They can however keep a Shudra woman as a concubine But if the Shudra touches a woman of the higher classes he will be liable to dire punishment.
- (10) That the Shudra is born in servility and must be kept in servility for ever.

Anyone who reads this summary will be struck by two considerations. He will be struck by the consideration that Shudra alone has been selected by the Brahmanic law-givers as a victim for their law-making authority. The wonder must be all the greater when it is recalled that in the ancient Brahmanic literature the oppressed class in the ancient Indo-Aryan society was the Vaishya and not the Shudra. In this connection a reference may be made to the *Aitareya Brahmana*. The *Aitareya Brahmana* in telling the story of King Vishvantara and the Shyapama Brahmanas refers to the sacrificial drink to which the different classes are entitled. In the course of the story, it speaks of the Vaishya in the following terms :

"Next, if (the priest brings) curds, that is the Vaishya's draught with it thou shall satisfy the Vaishyas. One like a Vaishya shall be born in thy line, one who is tributary to another, who is to be used- (lit eaten) by another, and who may be oppressed at will.
[will.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm](http://www.msocom.com/MSITStore/C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm)
 _msocom_99

The question is: why was the Vaishya let off and why the fury directed towards the Shudras?

He will also be struck by the close connection of the disabilities of the Shudra with the privileges of the Brahmin. The Shudra is below the Traivarnikas and is contrasted with the Traivarnikas. That being so, one would expect all the Traivarnikas to have the same rights against the Shudras. But what are the facts? The facts are that the Kshatriyas and Vaishyas have no rights worth speaking of against the

Shudras. The only Traivarnika who has special rights and privileges is the Brahmin. For instance, if the Shudra is guilty of an offence against the Brahmin, the Brahmin has the privilege of demanding a higher punishment than what a Kshatriya or a Vaishya could. A Brahmin could take the property of the Shudra without being guilty of an offence if he needed it for the purpose of performing a sacrifice. A Shudra should not accumulate property because he thereby hurts the Brahmin. A Brahmin should not live in a country where the king is a Shudra. Why is this so? Had the Brahmin any cause to regard the Shudra as his special enemy?.

There is one other consideration more important than these. It is, what does the average Brahmin think of these disabilities of the Shudras? That they are extraordinary in their conception and shameful in their nature will be admitted by all. Will the Brahmin admit it? It would not be unnatural if this catalogue of disabilities may not make any impression upon him. In the first place, by long habit and usage his moral sense has become so dulled that he has ceased to bother about the how and why of these disabilities of the Shudras. In the second place, those of them who are conscious of them feel that similar disabilities have been imposed on particular classes in other countries and there is therefore nothing extraordinary nor shameful in the disabilities of the Shudras. It is the second attitude that needs to be exposed.

This attitude is a very facile one and is cherished because it helps to save reputation and slave conscience. It is, however, no use leaving things as they are. It is absolutely essential to show that these disabilities have no parallel anywhere in the world. It is impossible to compare the Brahmanic Law with every other legal system on the point of rights and disabilities. A comparison of the Brahmanic Law with the Roman Law ought to suffice.

IV

It will be well to begin this comparison by noting the classes which under the Roman Law had rights and those which suffered from disabilities. The Roman jurists divided men into five categories: (1) Patricians and Plebians; (2) Freeman and Slaves; (3) Citizens and Foreigners; (4) Persons who were *sui juris* and persons who were *alieni juris* and (5) Christians and Pagans.

Under the Roman Law; persons who were privileged were: (1) Patricians; (2) Freeman; (3) Citizens; (4) *Sui juris* and (5) Christians. As compared to these, persons who suffered disabilities under the Roman Law were: (1) the Plebians; (2) Slaves; (3) Foreigners; (4) Persons who were *alieni juris* and (5) Pagans.

A Freeman, who was a citizen under the Roman Law, possessed civil rights as well as political rights. The civil rights of a citizen comprised rights of *connubium* and *commercium*. In virtue of the *connubium*, the citizen could contract a valid marriage according to *the jus civile*, and acquire the rights resulting from it, and particularly the paternal power and the civil relationship called agnation, which was absolutely necessary to enable him in law to succeed to the property of persons who died intestate. In virtue of the *commercium* he could acquire and dispose of property of all kinds, according to the forms and with the peculiar privileges of the Roman Law. The political rights of the Roman citizen included *jus suffragii* and *jus honorum*, the right to vote in public elections and the right to hold office.

The slave differed from the Freeman in as much as he was owned by the master and as such had no capacity to acquire rights.

Foreigners, who were called *Peregrine*, were not citizens and had none of the political or civil rights which went with citizenship. A Foreigner could obtain no protection unless he was under the protection of a citizen.

The *alieni juris* differed from *sui juris* in as much as the former were subject to the authority of another person, while the latter were free from it. This authority was variously called (1) *Potestas*, (2) *Manus* and (3) *Mancipium*, though they had the same effect. *Potestas* under the Roman Law fell into two classes. Persons subject to *Potestas* were (1) slaves, (2) children, (3) wife in *Manus*, (4) debtor assigned to the creditor by the Court and (5) a hired gladiator. *Potestas* gave to one in whom it was vested rights to exclusive possession of those to whom it extended and to vindicate any wrong done to them by anyone else.

The correlative disabilities which persons *alieni juris* suffered as a result of being subject to *Potestas* were: (1) they were not free, (2) they could not acquire property and (3) they could not directly vindicate any wrong or injury done to them.

The disabilities of the Pagans began with the advent of Christianity. Originally, when all the Romans followed the same Pagan worship, religion

could occasion no difference in the enjoyment of civil rights. Under the Christian Emperors, heretics and apostates as well as Pagans and Jews, were subjected to vexatious restrictions, particularly as regards their capacity to succeed to property and to act as witnesses. Only orthodox Christians who recognised the decisions of the four oecumenical councils had the full enjoyment of civil rights.

This survey of rights and disabilities of the Roman Law may well give comfort to Hindus that the Brahmanic Law was not the only law which was guilty of putting certain classes under disabilities, although the disabilities imposed by the Roman Law have nothing of the cruelty which characterises the disabilities imposed by the Brahmanic Law. But when one compares the principles of the Roman Law with those of the Brahmanic Law underlying these disabilities, the baseness of the Brahmanic Law becomes apparent.

Let us first ask: What was the basis of rights and disabilities under the Roman Law. Even a superficial student of Roman Law knows that they were based upon (1) *Caput* and (2) *Existimatio*.

Caput meant the civil status of a person. Civil status among the Romans had reference chiefly to three things; liberty, citizenship and family. The status *libertatis* consisted of being a freeman and not a slave. If a freeman was also a Roman citizen, he enjoyed the *status civitatis*. Upon this quality depended not only the enjoyment of political rights, but the capacity of participating in the *jus civile*. Finally, the *status familice* consisted in a citizen belonging to a particular family, and being capable of enjoying certain rights in which the members of that family, in their quality of agnates, could alone take part.

If an existing status came to be lost or changed, the person suffered what was called a *capitis diminutio*, which extinguished either entirely or to some extent his former legal capacity. There were three changes of state or condition attended with different consequences, called *maxima*, *media*, and *minima*. The greatest involves the loss of liberty, citizenship, and family; and this happened when a Roman citizen was taken prisoner in war, or condemned to slavery for his crimes. But a citizen who was captured by the enemy, on returning from captivity, was restored to all his civil rights *jure postliminii*.

The next change of status consisted of the loss of citizenship and family rights, without any forfeiture of personal liberty; and this occurred when a

citizen became a member of another state. He was then forbidden the use of fire and water, so as to be forced to quit the Roman territory, or was sentenced to deportation under the empire.

Finally, when a person ceased to belong to a particular family, without losing his liberty or citizenship, he was said to suffer the least change of state, as for instance, where one *sui juris* came under the power of another by arrogation, or a son who had been under the *patria potestas* was legally emancipated by his father.

Citizenship was acquired first by birth. In a lawful marriage the child followed the condition of the father, and became a citizen, if the father was so at the time of conception. If the child was not the issue of *justoe nuptioe*, it followed the condition of the mother at the time of its birth. Secondly, by manumission, according to the formalities prescribed by law, the slave of a Roman citizen became a citizen. This rule was modified by the laws. Aelia Sentia and Junia Norbana, according to which, in certain cases, the freedman acquired only the status of a foreigner, *peregrinus dedititius* or of a Latin, *Latinus Junianus*, Justinian restored the ancient principle, according to which every slave, regularly enfranchised, became in full right a Roman citizen. Thirdly, the right of citizenship was often granted as a favour, either to a whole community or to an individual, by the people or the senate during the republic, and by the reigning prince during the empire; and this was equivalent to what the moderns call naturalisation.

Citizenship was lost—Firstly, by the loss of liberty—as, for instance, when a Roman became a prisoner of war, secondly, by renouncing the character of Roman citizen, which took place when anyone was admitted a citizen of another state; thirdly, by a sentence of deportation or exile, as a punishment for crime.

The civil status of a person under the Roman Law may or may not be *civis optimo jure*. *Civis optima jure* included not only capacity for civil rights but also capacity for political rights such as *jus suffragii et honorum*, i.e., the right to vote and the capacity to hold a public office. Capacity for political rights depended upon *existimatio*. *Existimatio* means reputation in the eye of the law. A Roman citizen may have *caput* as well as *existimatio*. On the other hand, a Roman may have *caput* but may not have *existimatio*. Whoever had *caput* as well as *existimatio* had civil rights as well as political rights. Whoever had *caput* but had no *existimatio* could claim civil rights only. He could not claim political rights.

A person's *existimatio* was lost in two ways. It was lost by loss of freedom or by conviction for an offence. If a person lost his freedom his *existimatio* was completely extinguished. Loss of *existimatio* by conviction for offence varied according to the gravity of the offence.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_100 If the offence was serious the diminution of his *existimatio* was called *infamia*. If the offence was less grave it was called *turpitude*, *Infamia* resulted in the extinguishment of *existimatio*. Under the Roman Law a defendant, in addition to ordinary damages, was subjected to *infamia*. Condemnation for theft, robbery, *injuria* or fraud, entailed infamy. So a partner, a *mandatarius*, a *depositarins*, *tutor*, a mortgagee (in *contractus fidudoe*) if condemned for wilful breach of duty, was held to be infamous.

The consequence of *infamia* was exclusion from political rights' mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_101 not merely from office (honours), but even from the right to vote in elections (*suffragium*).

From this brief survey of the basis of rights and disabilities in Roman Law, it will be clear that the basis was the same for all. They did not differ from community to community. Rights and disabilities according to Roman Law were regulated by general considerations, such as *caput* and *existimatio*. Whoever had *caput* and *existimatio* had rights. Whoever lost his *caput* and his *existimatio* suffered disabilities. What is the position under the Brahmanic Law? There again, it is quite clear that rights and disabilities were not based on general uniform considerations. They were based on communal considerations. All rights for the first three *Varnas* and all disabilities for the Shudras was the principle on which the Brahmanic Law was based.

The protagonists of Brahmanic Laws may urge that this comparison is too favourable to Roman Law and that the statement that Roman Law did not distribute rights and liabilities on communal basis is not true. This may be conceded. For so far as the relation between the Patricians and Plebians was concerned the distribution of rights and liabilities was communal. But in this connection the following facts must be noted.

In the first place, it must be noted that Plebians were not slaves. They were freemen in as much as they enjoyed *jus commercii* or the right to acquire, hold and transfer property. Their disabilities consisted in the denial of political and social rights. In the second place, it must be noted that their disabilities were not permanent. There were two social disabilities from

which they suffered. One arose from the interdict on intermarriage between them and the Patricians imposed by the Twelve Tables. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_102 This disability was removed in B.C. 445 by the passing of the Canulian Law which legalized intermarriage between Patricians and Plebians. The other disability was their ineligibility to hold the office of Pontiffs and Augurs in the Public Temples of Rome. This disability was removed by the Ogulnian Law passed in B.C. 300.

As to the political disabilities of the Plebians they had secured the right to vote in popular assemblies (*jus suffragii*) under the Constitution of Servius Tullius the Sixth King of Rome. The political disabilities which had remained unredressed were those which related to the holding of office. This too was removed in course of time after the Republic was established in B.C. 509. The first step taken in this direction was the appointment of Plebian Tribunes in B.C. 494; the Questorship was opened to them, formally in B.C. 421; actually in B.C. 409; the Consulship in B.C. 367; the curule-aedileship in B.C. 366; the dictatorship in B.C. 356; the Censorship in B.C. 351; and the Praetorship in B.C. 336. The Hortensian Law enacted in B.C. 287 marked a complete triumph for the Plebians. By that law the resolutions of the Assembly of the tribes were to be directly and without modification, control or delay, binding upon the whole of the Roman people.

This marks a complete political fusion of Patricians and Plebians on terms of equality.

Not only were the Plebians placed on the same footing as to political capacity and social status with the Patricians but the road to nobility was also thrown open to them. In Roman society, birth and fortune were the two great sources of rank and personal distinction. But in addition to this, the office of Curule Magistracy was also a source of ennoblement to the holder thereof. Every citizen, whether Patrician or Plebian, who won his way to a Curule Magistracy, from that AEdile upwards, acquired personal distinction, which was transmitted to his descendants, who formed a class called *Nobiles*, or men known, to distinguish them from the *ignobiles*, or people who were not known. As the office was thrown open to the Plebians, many Plebians mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B1. Who were the Shudras PART I.htm - _msocom_103 had become nobles and had even surpassed the Patricians in point of nobility.

It may be that the Roman Law did recognise communal distinction in distributing rights and disabilities. The point is that the disabilities of the Plebians were not regarded as permanent. Although they existed they were in course of time removed. That being so, the protagonists of Brahmanic Law cannot merely take solace in having found a parallel in the Roman Law but have to answer why the Brahmanic Law did not abolish the distinction between the Traivarnikas and the Shudras as the Roman Law did by equating the Plebians with the Patricians? One can therefore contend that the Roman Law of rights and disabilities was not communal while the Brahmanic Law was.

This is not the only difference between the Roman Law and the Brahmanic Law. There are two others. One is equality before law in criminal matters. The Roman Law may not have recognised equality in matters of civil and political rights. But in matters of criminal law it made no distinction between one citizen and another, not even between Patrician and Plebian. The same offence the same punishment, no matter who the complainant and who the accused was. Once an offence was proved, the punishment was the same. What do the *Dharma Sutras* and the *Smritis* do? They follow an entirely different principle. For the same offence the punishment varies according to the community of the accused and the community of the complainant. If the complainant is a Shudra and the accused belonged to any one of the three classes the punishment is less than what it would be if the relations were reversed. On the other hand, if the complainant was Traivarnika and the accused a Shudra, the punishment is far heavier than in the first case. This is another barbarity which distinguishes the Brahmanic Law from the Roman Law.

The next feature of the Roman Law which distinguishes it from the Brahmanic Law is most noteworthy. It relates to the extinction of disabilities. Two points need be borne in mind. First is that the disabilities under the Roman Law were only contingent. So long as certain conditions lasted, they gave rise to certain disabilities. The moment the conditions changed, the disabilities vanished and a step in the direction of equality before law was taken. The second point is that the Roman Law never attempted to fix the conditions for ever and thereby perpetuate the disabilities. On the other hand, it was always ready to remove the conditions to which these disabilities were attached as is evident in the case of the Plebians, the Slaves, the Foreigners and the Pagans.

If these two points about the disabilities under the Roman Law are borne in mind, one can at once see what mischief the *Dharma Sutras* and the *Smritis* have done in imposing the disabilities upon the Shudras. The imposition of disabilities would not have been so atrocious if the disabilities were dependent upon conditions and if the disabled had the freedom to outgrow those conditions. But what the Brahmanic Law does is not merely to impose disabilities but it tries to fix the conditions by making an act which amounts to a breach of those conditions to be a crime involving dire punishment. Thus, the Brahmanic Law not only seeks to impose disabilities but it endeavours to make them permanent. One illustration will suffice. A Shudra is not entitled to perform Vedic sacrifices as he is not able to repeat the Vedic *Mantras*. Nobody would quarrel with such a disability. But the Dharma Sutras do not stop here. They go further and say that it will be a crime for a Shudra to study the Vedas or hear it being pronounced and if he does commit such a crime his tongue should be cut or molten lead should be poured into his ear. Can anything be more barbarous than preventing a man to grow out of his disability? What is the explanation of these disabilities? Why did the Brahmanic Law-givers take such a cruel attitude towards the Shudras? The Brahmanic Law books merely state the disabilities. They say that the Shudras have no right to *Upanayana*. They say that the Shudras shall hold no office. They say that the Shudras shall not have property. But they do not say why. The whole thing is arbitrary. The disabilities of the Shudra have no relation to his personal conduct. It is not the result of infamy. The Shudra is punished just because he was a Shudra. This is a mystery which requires to be solved. As the Brahmanic Law books do not help us to solve it, it is necessary to look for explanation elsewhere.

WHO WERE THE SHUDRAS?

CHAPTER IV

SHUDRAS VERSUS ARYANS

FROM what has been said before, it is clear that the Brahmanic writers do not give us any clue as to who the Shudras were and how they came to be the fourth *Varna*. It is, therefore, necessary to turn to the Western writers and to see what they have to say about the subject. The Western writers have a definite theory about the origin of the Shudras. Though all of them are not agreed upon every aspect of the theory, there are points on which there seems to be a certain amount of unity among them. They comprise the following :

1. 1. The people who created the Vedic literature belonged to the Aryan race.
2. 2. This Aryan race came from outside India and invaded India.
3. 3. The natives of India were known as Dasas and Dasyus who
4. 4. were racially different from the Aryans. (4) The Aryans were a white race. The Dasas and Dasyus were a dark race.
5. 5. The Aryans conquered the Dasas and Dasyus.
6. 6. The Dasas and Dasyus after they were conquered and enslaved were called Shudras.
7. 7. The Aryans cherished colour prejudice and therefore formed the *Chaturvarnya* whereby they separated the white race from the black race such as the Dasas and the Dasyus.

These are the principal elements in the Western theory about the origin and position of the Shudras in the Indo-Aryan society. Whether it is valid or not is another matter. But this much must certainly be said about it that after reading the Brahmanic theories with their long and tedious explanations attempting to treat a social fact as a divine dispensation, one cannot but feel a certain amount of relief in having before oneself a theory, which proceeds to give a natural explanation of a social fact. One can do nothing with the Brahmanic theories except to call them senseless ebullitions of a silly mind. They leave the problem as it is. With the modern theory, one is at least on the road to recover one's way.

To test the validity of the theory, the best thing to do is to examine it piece by piece and see how far each is supported by evidence.

The foundation on which the whole fabric of the theory rests is the proposition that there lived a people who were Aryan by race. It is in the fitness of things therefore to grapple with this question first. What is this Aryan race? Before we consider the question of Aryan race we must be sure as to what we mean by the word "race". It is necessary to raise this question because it is not impossible to mistake a people for a race. The best illustration of such a mistake is the Jews. Most people believe that the Jews are a race. To the naked eye, they appear to be so. But what is the verdict of the experts? This is what Prof. Ripley* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_1 has to say about the Jews :

"Our final conclusion, then, is this: This is paradoxical yet true, we affirm. The Jews are not a race, but only a people after all. In their faces we read its confirmation; while in respect of their other traits, we are convinced that such individuality as they possess—by no means inconsiderable—is of their own making from one generation to the next, rather than a product of an unprecedented purity of physical descent."

What is a race? A race may be defined as a body of people possessing certain typical traits which are hereditary. There was a time when it was believed that the traits which constitute a race are: (1) the form of the head, (2) the colour of the hair and eyes, (3) the colour of the skin, and (4) the stature. To-day the general view is that pigmentation and stature are traits, which vary according to climate and habitat, and consequently they must be ruled out as tests for determining the race of the people. The only stable trait is the shape of the human head—by which is meant the general proportions of length, breadth and height and that is why anthropologists and ethnologists regard it as the best available test of race.

The use of head-forms for determining the race to which an individual belongs has been developed by anthropologists into an exact science. It is called anthropometry. This science of anthropometry has devised two ways of measuring the headform: (1) cephalic index, and (2) facial index. The index is the mark of the race.

Cephalic index is the breadth of the head above the ears expressed in percentage of its length from forehead to back. Assuming that this length is 100, the width is expressed as a fraction of it. As the head becomes proportionately broader—that is more fully rounded, viewed from the top down—this cephalic index increases. When it rises above 80, the head is

called brachycephalic. When it falls below 75, the term dolichocephalic is applied to it. Indexes between 75 and 80 are characterised as mesocephalic. These are technical terms. They constantly crop up in literature dealing with questions of race and if one does not know what they denote it obviously becomes very difficult to follow the discussion intelligently. It would not therefore be without advantage if I were to stop to give their popular equivalents. The popular equivalent of mesocephalic is medium-headed, having a medium cephalic Index, the breadth of the cranium being between three-fourths and four-fifths of the length. Dolichocephalic means long-headed, having a low cephalic index, the breadth of the cranium being below four-fifths of the length.

Facial index is the correlation between the proportions of the head and the form of the face. In the majority of cases, it has been found that a relatively broad head is accompanied by a rounded face, in which the breadth back of the cheek bones is considerable as compared with the height from forehead to chin. Lack of uniformity in the mode of taking measurements has so far prevented extended observations fit for exact comparison. All the same, it has been found safe to adopt the rule, long head, oval face: short-head and round face.

Applying these measures of anthropometry, Prof. Ripley, an authority on the question of race, has come to the conclusion that the European people belong to three different races in terms of cephalic and facial index. His conclusions are summarised in the table on the next page.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_2

Is there an Aryan race in the physical sense of the term? There seem to be two views on the subject. One view is in favour of the existence of the Aryan race. According to it
[:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_3](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_3)

The Aryan type.. is marked by a relatively long (dolichocephalic) head; a straight finely-cut (leptorrhine) nose; a long symmetrically narrow face; well developed regular features and a high facial angle. The stature is fairly high—and the general build of the figure well-proportioned and slender rather than massive.

EUROPEAN RACIAL TYPES

	<i>Head</i>	<i>Face</i>	<i>Hair</i>	<i>Eyes</i>	* <i>Stature</i>	<i>Nose</i>
1. Teutonic	Long	Long	Very	Blue	Tall	Narrow
			light			aquiline
2. Alpine (Celtic)	Roun d	Broad	Light	Hazel	Medium	Variable:
			Chestnu t	Grey	stocky	rather
						broad
						heavy
3. Mediterranean	Long	Long	Dark	Dark	Medium	Rather
			brown		slender	broad
			or black			

The other view is that of Prof. Max Muller. According to him, the word is used in three different senses. This is what he, in his lectures on the *Science of Language*, says :

In *ar* or *ara*, I recognise one of the oldest names of the earth, as the ploughed land, lost in Sanskrit but preserved in Greek as (era) so that Arya would have conveyed originally the meaning of landholder, cultivator of the land, while Vaishya from Vis meant householder, *Ida* the daughter of Manu is another name of the cultivated earth and probably a modification of *Ara*.

The second sense in which it was used was to convey the idea of ploughing or tilling the soil. As to this. Prof. Max Muller makes the following observations;

I can only state that the etymological signification of Arya seems to be: One who ploughs or tills. The Aryans would seem to have chosen this name for themselves as opposed to the nomadic races, the *Turanians*,

whose original name *Tura* implies the swiftness of the horsemen.

In the third sense, the word was used as a general name for the Vaishyas, i.e., the general body of the people, who formed the whole mass of the people. For this, Prof. Max Muller relies on Panini (iii.1,103) for his authority. Then, there is the fourth sense, which the word got only towards the later period, in which sense it means 'of noble origin'.

What is however of particular importance is the opinion of Prof. Max Muller on the question of the Aryan race. This is what he says on the subject:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_4

There is no Aryan race in blood; Aryan, in scientific language is utterly inapplicable to race. It means language and nothing but language; and if we speak of Aryan race at all, we should know that it means no more than... Aryan speech.

I have declared again and again that if I say Aryas, I mean neither blood nor bones, nor hair nor skull; I mean simply those who speak an Aryan language. The same applies to Hindus, Greeks, Romans, Germans, Celts, and Slavs. When I speak of them I commit myself to no anatomical characteristics. The blue-eyed and fair-haired Scandinavians may have been conquerors or conquered, they may have adopted the language of their darker lords or their subjects, or *vice versa*. I assert nothing beyond their language, when I call them Hindus, Greeks, Romans, Germans, Celts and Slavs; and in that sense, and in that sense only, do I say that even the blackest Hindus represent an earlier stage of Aryan speech and thought than the fairest Scandinavians. This may seem strong language, but in matters of such importance we cannot be too decided in our language. To me, an ethnologist who speaks of Aryan race, Aryan blood, Aryan eyes and hair, is as great a sinner as linguist who speaks of a dolichocephalic dictionary or a brachycephalic grammar. It is worse than a Babylonian confusion of tongues—it is down-right theft. We have made our own terminology for the classification of language; let ethnologists make their own for the classification of skulls, and hair and blood.

The value of this view of Prof. Max Muller will be appreciated by those who know that he was at one time a believer in the theory of Aryan race

and was largely responsible for the propagation of it.

The two views are obviously not in harmony. According to one view, the Aryan race existed in a physiological sense with typical hereditary traits with a fixed cephalic and facial index. According to Prof. Max Muller, the Aryan race existed in a philological sense, as a people speaking a common language.

In this conflict of views one may well ask: what is the testimony of the Vedic literature? As examination of the Vedic literature shows that there occur two words in the Rig Veda—one is Arya with a short 'a' and the other is Arya with a long 'a'. The word Arya with a short 'a' is used in the Rig Veda mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_5 in 88 places. In what sense is it used? The word mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_6 is used in four different senses; as (1) enemy, (2) respectable person, (3) name for India, and (4) owner, Vaishya or citizen.

The word Arya with a long 'a' is used in the Rig Veda in 31 places mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_7 But in none of these is the word used in the sense of race.

From the foregoing discussion, the one indisputable conclusion which follows is that the terms 'Arya' and 'Arya' which occur in the Vedas have not been used in the racial sense at all.

One may also ask: what is the evidence of anthropometry? the Aryan race is described as long-headed. This description is not enough. For as will be seen from the table given by Prof. Ripley, there are two races which are long-headed. The question which of the two is the Aryan race still remains open.

II

Let us take the next premise—namely, that the Aryans came from outside India, invaded India, and conquered the native tribes. It would be better to take these questions separately.

From where did the Aryan race come into India? On the question of locating the original home of the Aryan race, there is a bewildering variety of views and options. According to Benfey, the original home of the Aryan race must be determined by reference to the common vocabulary. His views on the subject have been well summarised by Prof. Isaac Taylor mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras

[PART I.htm - _msocom_8](#) in the following words :

"The investigation of the vocabulary common to the whole of the Aryan languages might yield a clue to the region inhabited by the Aryans before the linguistic separation. He contended that certain animals, such as the bear and the wolf, and certain trees, such as the beech and the birch with which the primitive Aryans must have been acquainted, are all indigenous to the temperate zone, and above all, to Europe, whereas the characteristic animals and trees of Southern Asia, such as the lion, the tiger and the palm were known only to the Indians and the Iranians. He urged that the absence from the primitive Aryan vocabulary of common names for the two great Asiatic beasts of prey, the lion and the tiger, or for the chief Asiatic beast of transport, the camel, is difficult to explain on the theory of the migration of the Aryans from the region eastward of the Caspian. That the Greeks called the lion by its Semitic name, and the Indians by a name which cannot be referred to any Aryan root, argues that the lion was unknown in the common home of Greeks and Indians.

Benfey's declaration speedily bore fruit, and Geiger forthwith ranged himself in the same camp, but placing the cradle of the Aryans, not as Benfey had done in the region to the North of the Black Sea, but more to the north-west, in Central and Western Germany. Geiger's contribution to the argument was not without its value. He bases his conclusions largely on the tree names which belong to the primitive Aryan vocabulary. In addition to the fir, the willow, the ash, the alder, and the hazel, he thinks the names of the birch, the beech and the oak are specially decisive. Since the Greek (*phegos*) which denotes the oak is the linguistic equivalent of the Teutonic *beech* and of the Latin *fagus* he draws, the conclusion that the Greeks migrated from a land of beeches to a land of oaks, transferring the name which denoted the tree with 'edible' fruit from the one tree to the other."

Another school holds that the original home of the Aryan race was in Caucasia, because the Caucasians like the Aryans are blonds, have a straight, a sharp nose and a handsome face. On this point, the view of Prof. Ripley is worth quoting. This is what Prof. Ripley [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_9](#) has to say on the subject:

The utter absurdity of the misnomer Caucasian, as applied to the blue-

eyed and fair-headed 'Aryan' (?) race of Western Europe, is revealed by two indisputable facts. In the first place, this ideal blond type does not occur within many hundred miles of Caucasia; and, secondly, nowhere along the great Caucasian chain is there a single native tribe making use of a purely inflectional or Aryan language.

Even the Ossetes, whose language alone is possibly inflectional, have not had their claims to the honour of Aryan made positively clear as yet. And even if Ossetian be Aryan, there is every reason to regard the people as immigrants from the direction of Iran, not indigenous Caucasians at all. Their head form, together with their occupation of territory along the only highway—the Pass of Darriel—across the chain from the South, give tenability to the hypothesis. At all events, whether the Ossetes be Aryan or not, they little deserve pre-eminence among the other peoples about them. They are lacking both in the physical beauty for which this region is justly famous, and in courage as well, if we may judge by their reputation in yielding abjectly and without shadow of resistance to the Russians.

It is not true that any of these Caucasians are even 'somewhat typical'. As a matter of fact they could never be typical of anything. The name covers nearly every physical type and family of language of the Eur-Asian continent except, as we have said, that blond, tall, 'Aryan' speaking one to which the name has been specifically applied. It is all false; not only improbable but absurd. The Caucasus is not a cradle—it is rather a grave—of peoples, of languages, of customs and of physical types. Let us be assured of that point at the outset. Nowhere else in the world probably is so heterogeneous a lot of people, languages and religions gathered together in one place as along the chain of the Caucasus mountains."

Mr. Tilak has suggested that the original home of the Aryan race was in the Arctic region. His theory may be summarised in his own words. He begins by taking note of the astronomical and climatic phenomenon in the region round about the North Pole. He finds [smk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_10](http://msitstore.c:\important\writing_of_babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_10) that there are:

"Two sets of characteristics, or *differentice*; one for an observer stationed exactly at the terrestrial North Pole, and the other for an observer located in the Circum-Polar regions, or tracts of land between the North Pole and the Arctic circle."

Mr. Tilak calls these two sets of *differentice*; as Polar and Circum-Polar, and sums them up as follows :

I. The Polar Characteristics

- (1)(1) The sun rises in the south.
- (2)(2) The stars do not rise and set; but *revolve* or spin round and round, in horizontal planes, completing one round in 24 hours. The northern celestial hemisphere is alone overhead and visible during the whole year; and the southern or lower celestial world is always invisible.
- (3)(3) The year consists only of one long day and one long night of six months each.
- (4)(4) There is only one morning and one evening, or the sun rises and sets only once a year. But the *twilight*, whether of the morning or of the evening, lasts continuously for about *two months*, or 60 periods of 24 hours each. The ruddy light of the morn, or the evening twilight, is not again confined to a particular part of the horizon (eastern or western) as with us; but moves, like the stars at the place, round and round along the horizon, like a potter's wheel, completing one round in every 24 hours. These rounds of the morning light continue to take place, until the orb of the sun comes above the horizon; and then the sun follows the same course for six months, that is, moves, without setting, round and round the observer, completing one round every 24 hours.

II. The Circum-Polar Characteristics

- (1)(1) The sun will always be to the south of the zenith of the observer, but as this happens even in the case of an observer stationed in the temperate zone, it cannot be regarded as a special characteristic.
- (2)(2) A large number of stars are *circum-polar*, that is, they are above the horizon during the entire period of their revolution and hence always visible. The remaining stars rise and set as in the temperate zone, but revolve in more oblique circles.
- (3)(3) The year is made up of three parts: (i) one long continuous night, occurring at the time of the winter solstice, and lasting for a period, greater than 24 hours and less than six months, according to the latitude of the place; (ii) one long continuous day to match, occurring at the time of the summer solstice; and (iii) a succession of ordinary days and nights during the rest of the year, a *nycthemeron*, or a day and a night together, never exceeding a period of 24 hours. The day, after the long continuous night, is at first shorter than the night, but

goes on increasing until it develops into the long continuous day. At the end of the long day, the night is, at first, shorter than the day, but, in its turn, it begins to gain over the day, until the commencement of the long continuous night, with which the year ends.

- (4) The dawn, at the close of the long continuous night, lasts for several days, but its duration and magnificence is proportionally less than at the North Pole, according to the latitude of the place. For places, within a few degrees of the North Pole, the phenomenon of revolving morning light will still be observable during the greater part of the duration of the dawn. The other dawns viz., those between ordinary days and nights, will, like the dawns in the temperate zone, only last for a few hours. The sun, when he is above the horizon during the continuous day, will be seen revolving, without setting, round the observer, as at the Pole, but in oblique and not horizontal circles, and during the long night he will be entirely below the horizon, while during the rest of the year he will rise and set, remaining above the horizon for a part of 24 hours, varying according to the position of the sun in the ecliptic.

Summing up the position as analysed by him, Mr. Tilak concludes by saying:

"Here we have two distinct sets of *differentice* or special characteristics of the Polar and *Circum-Polar* regions—characteristics which are not found anywhere else on the surface of the globe. Again as the Poles of the earth are the same to-day as they were millions of years ago, the above astronomical characteristics will hold good for all times, though the Polar climate may have undergone violent changes in the Pleistocene period."

Having noted the phenomenon in the Arctic region, Mr. Tilak proceeds to argue that :

"If a Vedic description or tradition discloses any of the characteristics mentioned above, we may safely infer that the tradition is Polar or Circum-Polar in origin, and the phenomenon, if not actually witnessed by the poet, was at least known to him by tradition faithfully handed down from generation to generation. Fortunately there are many such passages or references in the Vedic literature, and, for convenience, these may be divided into two parts; the first comprising those passages which directly describe or refer to the long night, or the long dawn; and the second consisting of myths and legends which corroborate and indirectly support the First."

Mr. Tilak is satisfied that the description of natural phenomenon and the myths and legends contained in the Vedas tally with the natural phenomenon as it exists near the North Pole and concludes that the Vedic poets i.e., the Vedic Aryans must have had the Arctic region as their home.

This is of course a very original theory. There is only one point which seems to have been overlooked. The horse is a favourite animal of the Vedic Aryans. It was most intimately connected with their life and their religion. That the queens vied with one another to copulate with the horse in the *Ashvamedha Yajna* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_11 shows what place the horse had acquired in the life of the Vedic Aryans. Question is : was the horse to be found in the Arctic region? If the answer is in the negative, the Arctic home theory becomes very precarious.

III

What evidence is there of the invasion of India by the Aryan race and the subjugation by it of the native tribes? So far as the *Rig Veda* is concerned, there is not a particle of evidence suggesting the invasion of India by the Aryans from outside India. As Mr. P. T. Srinivasa Iyengar mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_12 points out:

"A careful examination of the *Mantras* where the words *Arya*, *Dasa* and *Dasyu* occur, indicates that they refer not to race but to cult. These words occur mostly in *Rig Veda Samhita* where *Arya* occurs about 33 times in *mantras* which contain 153,972 words on the whole. The rare occurrence is itself a proof that the tribes that called themselves *Aryas* were not invaders that conquered the country and exterminated the people. For an invading tribe would naturally boast of its achievements constantly."

So far the testimony of the Vedic literature is concerned, it is against the theory that the original home of the Aryans was outside India. The language in which reference to the seven rivers is made in the *Rig Veda* (X.75.5) is very significant. As Prof. D. S. Trivedi says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_13—the rivers are addressed as 'my Ganges, my Yamuna, my Saraswati' and so on. No foreigner would ever address a river in such familiar and endearing terms unless by long association he had developed an emotion about it.

As to the question of conquest and subjugation, references can undoubtedly be found in the *Rig Veda* where Dasas and Dasyus are described as enemies of the Aryas and there are many hymns in which the Vedic *rishis* have invited their gods to kill and annihilate them. But before drawing any conclusion from it in favour of conquest and subjugation by the Aryans, the following points must be taken into consideration.

First is the paucity of references in the *Rig Veda* to wars between the Aryans on the one hand and the Dasas or Dasyus on the other. Out of the 33 places in which the word occurs in the *Rig Veda* only in 8 places is it used in opposition to Dasas and only in 7 places is it used in opposition to the word Dasyus. This may show the occurrence of sporadic riots between the two. It is certainly not evidence of a conquest or subjugation.

The second point about the Dasas is that whatever conflict there was between them and the Aryans, the two seem to have arrived at a mutual settlement, based on peace with honour. This is borne out by references in the *Rig Veda* showing how the Dasas and Aryans have stood as one united people against a common enemy. Note the following verses from the *Rig Veda* :

Rig Veda - vi. 33.3;

vii. 83.1;

viii 51.9;

x 102.3.

The third point to note is that whatever the degree of conflict, it was not a conflict of race. It was a conflict which had arisen on account of difference of religions. That this conflict was religious and not racial is evidenced by the *Rig Veda* itself. Speaking of the Dasyus, it mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_14 says :

"They are *avrata*, without (the Arya) rites (R.V., i. 51.8, 9; i.132.4; iv.41. 2; vi. 14, 3); *apavrata* (R.V., v.42,2), *anyavrata* of different rites (R.V., viii.59, II; x.22, 8), *Anagnitra* fireless (R.V., v.189, 3), *ayajyu*, *ayajvan*, non-sacrifices (R.V., i.131, 44; i.33, 4; viii.59, II), *abrambha*, without prayers (or also not having Brahmana priest (R.V., iv.15,9; x.105,8). *anrichab*, without Riks

(R.V., x.105, 8), *Brahmadvisha*, haters of prayer (or Brahmans) R.V., v.42,9), and *anindra*, without Indra, despisers of Indra, (R.V., i.133, 1: v.2, 3; vii 18; 6; x 27, 6; x.48, 7). 'They pour no milky draughts they heat no cauldron' (R.V., iii.53, 4). They give no gifts to the Brahmana (R.V., v.7, 10)."

Attention may also be drawn to the Rig Veda X.22.8 which says :

"We live in the midst of the Dasyu tribes, who do not perform sacrifices, nor believe in anything. They have their own rites and are not entitled to be called men. O! thou, destroyer of enemies, annihilate them and injure the Dasas."

In the face of these statements from the *Rig Veda*, there is obviously no room for a theory of a military conquest by the Aryan race of the non-Aryan races of Dasas and Dasyus.

IV

So much about the Aryans, their invasion of India and their subjugation of the Dasas and Dasyus. The consideration so far bestowed upon the question has been from the Aryan side of the issue. It might be useful to discuss it from the side of the Dasas and the Dasyus. In what sense are the names Dasa and Dasyu used? Are they used in a racial sense?

Those who hold that the terms Dasa and Dasyu are used in the racial sense rely upon the following circumstances: (1) The use in the *Rig Veda* of the terms *Mridhravak* and *Anasa* as epithets of Dasyus. (2) The description in the *Rig Veda* of the Dasas as being of Krishna Varna

The term *Mridhravak* occurs in the following places in the *Rig Veda* :

- (1) *Rig Veda*, i. 174. 2;
- (2) *Rig Veda*, v. 32.8;
- (3) *Rig Veda*, vii. 6. 3;
- (4) *Rig Veda*, vii. 18. 3.

What does the adjective *Mridhravak* mean? *Mridhravak* means one who speaks crude, unpolished language. Can crude unpolished language be regarded as evidence of difference of race? It would be childish to rely upon this as a basis of consciousness of race difference.

The term *Anasa* occurs in *Rig Veda* V.29.10. What does the word mean?

There are two interpretations. One is by Prof. Max Muller. The other is by Sayanacharya. According to Prof. Max Muller, it means 'one without nose' or 'one with a flat nose' and has as such been relied upon as a piece of evidence in support of the view that the Aryans were a separate race from the Dasyus. Sayanacharya says that it means 'mouthless,' i.e., devoid of good speech. This difference of meaning is due to difference in the correct reading of the word *Anasa*. Sayanacharya reads it as *an-asa* while Prof. Max Muller reads it as *a-nasa*. As read by Prof. Max Muller, it means without nose. Question is : which of the two readings is the correct one? There is no reason to hold that Sayana's reading is wrong. On the other hand there is everything to suggest that it is right. In the first place, it does not make non-sense of the word. Secondly, as there is no other place where the Dasyus are described as noseless, there is no reason why the word should be read in such a manner as to give it an altogether new sense. It is only fair to read it as a synonym of *Mridhravak*. There is therefore no evidence in support of the conclusion that the Dasyus belonged to a different race.

Turning to Dasas, it is true that they are described as *Krishna Yoni*, in Rig Veda vi.47.21. But there are various points to be considered before one can accept the inference which is sought to be drawn from it. First is that this is the only place in the Rig Veda where the phrase *Krishna Yoni* is applied to the Dasas. Secondly, there is no certainty as to whether the phrase is used in the literal sense or in a figurative sense. Thirdly, we do not know whether it is a statement of fact or a word of abuse. Unless these points are clarified, it is not possible to accept the view that because the Dasas are spoken of as *Krishna Yoni*, they therefore, belonged to a dark race.

In this connection, attention may be drawn to the following verses from the Rig Veda:

1. 1. Rig Veda, vi.22.10.—"Oh, Vajri, thou hast made Aryas of Dasas, good men out of bad by your power. Give us the same power so that with it we may overcome our enemies."
2. 2. Rig Veda, x.49.3, (says Indra).—"I have deprived the Dasyus of the title of Aryas."
3. 3. Rig Veda, i. 151.8—"Oh, Indra, find out who is an Arya and who is a Dasyu and separate them."

What do these verses indicate? They indicate that the distinction between the Aryans on the one hand and the Dasas and Dasyus on the other was not a racial distinction of colour or physiognomy. That is why a Dasa or Dasyu could become an Arya. That is why Indra was given the task to

separate them from the Arya.

V

That the theory of the Aryan race set up by Western writers falls to the ground at every point, goes without saying. This is somewhat surprising since Western scholarship is usually associated with thorough research and careful analysis. Why has the theory failed? it is important to know the reasons why it has failed. Anyone who cares to scrutinise the theory will find that it suffers from a double infection. In the first place, the theory is based on nothing but pleasing assumptions and inferences based on such assumptions. In the second place, the theory is a perversion of scientific investigation. It is not allowed to evolve out of facts. On the contrary the theory is preconceived and facts are selected to prove it.

The theory of the Aryan race is just an assumption and no more. It is based on a philological proposition put forth by Dr. Bopp in his epoch-making book called *Comparative Grammar* which appeared in 1835. In this book. Dr. Bopp demonstrated that a greater number of languages of Europe and some languages of Asia must be referred to a common ancestral speech. The European languages and Asiatic languages to which Bopp's proposition applied are called Indo-Germanic. Collectively, they have come to be called the Aryan languages largely because Vedic language refer to the Aryas and is also of the same family as the Indo-Germanic. This assumption is the major premise on which the theory of the Aryan race is based.

From this assumption are drawn two inferences: (1) unity of race, and (2) that race being the Aryan race. The argument is that if the languages are descended from a common ancestral speech then there must have existed a race whose mother tongue it was and since the mother tongue was known as the Aryan tongue the race who spoke it was the Aryan race. The existence of a separate and a distinct Aryan race is thus an inference only. From this inference, is drawn another inference which is that of a common original habitat. It is argued that there could be no community of language unless people had a common habitat permitting close communion. Common original habitat is thus an inference from an inference.

The theory of invasion is an invention. This invention is necessary because of a gratuitous assumption which underlies the Western theory. The assumption is that the Indo-Germanic people are the purest of the modern representatives of the original Aryan race. Its first home is assumed to have been somewhere in Europe. These assumptions raise a question: How

could the Aryan speech have come to India: This question can be answered only by the supposition that the Aryans must have come into India from outside. Hence the necessity for inventing the theory of invasion.

The third assumption is that the Aryans were a superior race. This theory has its origin in the belief that the Aryans are a European race and as a European race it is presumed to be superior to the Asiatic races. Having assumed its superiority, the next logical step one is driven to take is to establish the fact of superiority. Knowing that nothing can prove the superiority of the Aryan race better than invasion and conquest of native races, the Western writers have proceeded to invent the story of the invasion of India by the Aryans and the conquest by them of the Dasas and Dasyus.

The fourth assumption is that the European races were white and had a colour prejudice against the dark races. The Aryans being a European race, it is assumed that it must have had colour prejudice. The theory proceeds to find evidence for colour prejudice in the Aryans who came into India. This it finds in the *Chaturvarnya*— an institution by the established Indo-Aryans after they came to India and which according to these scholars is based upon *Varna* which is taken by them to mean colour.

Not one of these assumptions is borne out by facts. Take the premise about the Aryan race. The theory does not take account of the possibility that the Aryan race in the physiological sense is one thing and an Aryan race in the philological sense quite different, and that it is perfectly possible that the Aryan race, if there is one, in the physiological sense may have its habitat in one place and that the Aryan race, in the philological sense, in quite a different place. The theory of the Aryan race is based on the premise of a common language and it is supposed to be common because it has a structural affinity. The assertion that the Aryans came from outside and invaded India is not proved and the premise that the Dasas and Dasyus are aboriginal tribes of India is demonstrably false.

Again to say that the institution of *Chaturvarnya* is a reflection of the innate colour prejudice of the Aryans is really to assert too much. If colour is the origin of class distinction, there must be four different colours to account for the different classes which comprise *Chaturvarnya*. Nobody has

said what those four colours are and who were the four coloured races who were welded together in *Chaturvarnya*. As it is, the theory starts with only two opposing people, Aryas and Dasas—one assumed to be white and the other assumed to be dark.

The originators of the Aryan race theory are so eager to establish their case that they have no patience to see what absurdities they land themselves in. They start on a mission to prove what they want to prove and do not hesitate to pick such evidence from the Vedas as they think is good for them.

Prof. Michael Foster has somewhere said that 'hypothesis is the salt of science.' Without hypothesis there is no possibility of fruitful investigation. But it is equally true that where the desire to prove a particular hypothesis is dominant, hypothesis becomes the poison of science. The Aryan race theory of Western scholars is as good an illustration of how hypothesis can be the poison of science as one can think of.

The Aryan race theory is so absurd that it ought to have been dead long ago. But far from being dead, the theory has a considerable hold upon the people. There are two explanations which account for this phenomenon. The first explanation is to be found in the support which the theory receives from Brahmin scholars. This is a very strange phenomenon. As Hindus, they should ordinarily show a dislike for the Aryan theory with its express avowal of the superiority of the European races over the Asiatic races. But the Brahmin scholar has not only no such aversion but he most willingly hails it. The reasons are obvious. The Brahmin believes in the two-nation theory. He claims to be the representative of the Aryan race and he regards the rest of the Hindus as descendants of the non-Aryans. The theory helps him to establish his kinship with the European races and share their arrogance and their superiority. He likes particularly that part of the theory which makes the Aryan an invader and a conqueror of the non-Aryan native races. For it helps him to maintain and justify his overlordship over the non-Brahmins.

The second explanation why the Aryan race theory is not dead is because of the general insistence by European scholars that the word *Varna* means *colour* and the acceptance of that view by a majority of the Brahmin scholars. Indeed, this is the mainstay of the Aryan theory. There is no doubt that as long as this interpretation of the *Varna* continues to be accepted, the Aryan theory will continue to live. This part of the Aryan theory is therefore very important and calls for fuller examination. It needs

to be examined *from* three different points of view: (1) Were the European races fair or dark? (2) Were the Indo-Aryans fair? and (3) What is the original meaning of the word *Varna*?

On the question of the colour of the earliest Europeans Prof. Ripley is quite definite that they were of dark complexion. Prof. Ripley goes on to say: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_17

"We are strengthened in this assumption that the earliest Europeans were not only long-headed but also dark complexioned, by various points in our Enquiry thus far. We have proved the prehistoric antiquity of the living Cro-Magnon type in Southern France; and we saw that among these peasants, the prevalence of black hair and eyes is very striking. And comparing types in the British Isles we saw that everything tended to show that the Brunet populations of Wales, Ireland and Scotland constituted the most primitive stratum of population in Britain. Furthermore, in that curious spot in Garfagnana, where a survival of the ancient Ligurian population of Northern Italy is indicated, there also are the people characteristically dark. Judged, therefore, either in the light of general principles or of local details, it would seem as if this earliest race in Europe must have been very dark.... It was Mediterranean in its pigmental affinities, and not Scandinavian."

Turning to the Vedas for any indication whether the Aryans had any colour prejudice, reference may be made to the following passages in the Rig Veda :

In Rig Veda, i. 117.8, there is a reference to *Ashvins* having brought about the marriage between *Shyavya* and *Rushati*. *Shyavya* is black and *Rushati* is fair.

In Rig Veda, i. 117.5, there is a prayer addressed to *Ashvins* for having saved Vandana who is spoken as of golden colour.

In Rig Veda, ii.3.9, there is a prayer by an Aryan invoking the Devas to bless him with a son with certain virtues but of (*pishanga*) tawny (reddish brown) complexion.

These instances show that the Vedic Aryans had no colour prejudice. How could they have? The Vedic Aryans were not of one colour. Their complexion varied; some were of copper complexion, some white, and some black. Rama the son of Dasharatha has been described as *Shyama* i.e., dark in complexion, so is Krishna the descendant of the Yadus, another

Aryan clan. The Rishi Dirghatamas, who is the author of many *mantras* of the Rig Veda must have been of dark colour if his name was given to him after his complexion. Kanva is an Aryan rishi of great repute. But according to the description given in Rig Veda—X.31.11—he was of dark colour.

To take up the third and the last point, namely, the meaning of the word *Varna*. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_18](#) Let us first see in what sense it is used in the Rig Veda. The word *Varna* is used [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_19](#) in the Rig Veda in 22 places. Of these, in about 17 places the word is used in reference to deities such as Ushas, Agni, Soma, etc., and means lustre, features or colour. Being used in connection with deities, it would be unsafe to use them for ascertaining what meaning the word *Varna* had in the Rig Veda when applied to human beings. There are four and at the most five places in the Rig Veda where the word is used in reference to human beings. They are:

- 1) i.104.2;
- 2) i. 179.6;
- 3) ii.12.4;
- 4) iii.34.5;
- 5) ix.71.2.

Do these references prove that the word *Varna* is used in the Rig Veda in the sense of colour and complexion?

Rig veda, iii.34.5 seems to be of doubtful import. The expression 'caused Shukia Varna to increase' is capable of double interpretation. It may mean Indra made Ushas throw her light and thereby increase the white colour, or it may mean that the hymn-maker being of white complexion, people of his i.e., of white colour increased. The second meaning would be quite far-fetched for the simple reason that the expansion of the white colour is the effect and lightening of Ushas is the cause.

Rig Veda, ix.71.2 the expression 'abandons Asura Varna' is not clear, reading it in the light of the other stanzas in the *Sukta*. The *Sukta* belongs to Soma Pavamana. Bearing this in mind, the expression 'abandons Asura Varna' must be regarded as a description of Soma. The word Varna as used

here is indicative of *roopa*. The second half of the stanza says: 'he throws away his black or dark covering and takes on lustrous covering.' From this it is clear that the word Varna is used as indicative of darkness.

Rig Veda, i. 179.6 is very helpful. The stanza explains that Rishi Agastya cohabitated with Lopamudra in order to obtain *praja*, children and strength and says that as a result two Varnas prospered. It is not clear from the stanza, which are the two Varnas referred to in the stanzas, although the intention is to refer to Aryas and Dasas.

Be that as it may, there is no doubt that the Varna in the stanza means class and not colour.

In Rig Veda, i. 104.2 and Rig Veda, ii.12.4 are the two stanzas in which the word Varna is applied to Dasa. The question is: What does the word Varna mean when applied to Dasa? Does it refer to the colour and complexion of the Dasa, or does it indicate that Dasas formed a separate class? There is no way of arriving at a positive conclusion as to which of the two meanings is correct.

The evidence of the Rig Veda is quite inconclusive. In this connection, it will be of great help to know if the word occurs in the literature of the Indo-Iranians and if so, in what sense.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_20

Fortunately, the word Varna does occur in the Zend Avesta. It takes the form of *Varana* or *Varena*. It is used specifically in the sense of "Faith, Religious doctrine. Choice of creed or belief." It is derived from the root *Var* which means to put faith in, to believe in. One comes across the word *Varana* or *Varena* in the Gathas about six times used in the sense of faith, doctrine, creed or belief.

It occurs in Gatha Ahunavaiti—Yasna Ha 30 Stanza 2 which when translated in English reads as follows :

"Give heed with your ears and contemplate the highest Truth I proclaim; with your illumined mind introspect. Each man for himself must determine his (Avarenao) faith. Before the Great Event, let each individually be awake to the Truth we teach."

This is one of the most famous strophes of the Gatha where Zarathushtra exhorts each one individually to use reasoning faculty and freedom of choice in the selection of his or her faith. The words occurring

here are '*Avarenao vichithabhya*,' *Avarenao* meaning faith, belief and *vichi- thabhya* meaning 'of discriminating, of selecting of determining'.

It occurs in Gatha Ahunavati—Yasna Ha 31 Stanza II. The word used is *Vareneng* accusative plural of *Varena* meaning 'belief, faith.' In this stanza, Zarathushtra propounds the theory of the creation of man. After speaking about man's creation being completed, in the last half line Zarathushtra says "voluntary beliefs are given (to man)".

It occurs in Gatha Ushtavaiti— Yasna Ha 45 Stanza I in the form of *Varena*. In the last line of this strophe, Zarathushtra says 'owing to sinful belief (or evil faith) the wicked is of evil tongue (or invested tongue)'.

It occurs in Gatha Ushtavaid—Yasna Ha 45 Stanza 2 in the same form as above *Varena* in the clear sense of faith, religion, belief, etc. In this stanza, Zarathushtra is propounding his philosophy of good and evil and speaking of dual aspects of human mind. In this stanza, the two mentalities—the good mentality and the evil mentality—are speaking to each other saying "Neither in thought, word, intelligence, faith (or religion or creed) utterance, deed, conscience nor soul do we agree."

It occurs in Gatha Spenta Mainyu,—Yasna Ha 48 Stanza 4 in the form of *Vareneng* meaning religion, faith (root *Vere* Persian *gervidan* = to have faith in). In this stanza Zarathushtra says that "Whosoever will make his mind pure and holy and thus keep his conscience pure by deed and word, such man's desire is in accordance with his faith (religion, belief)."

It occurs in Gatha Spenta Mainyu,—Yasna Ha 49 Stanza 3 as *Varenai* in dative case meaning 'religion'. In the same stanza occurs the word *Thaeshai* which also means religion, creed, religious law. These two words *Varenai* and *Tkaesha* occurring in the same stanza strengthens our argument, as the word *Tkaesha* clearly means religion as is found in the compound *Aburatkaesha* meaning 'The Ahurian religion'. This word *Tkaesha* is translated in Pahlavi as *Kish* which means religion.

In Vendidad (a book of Zarathushtrian sanitary law written in Avesta language) we come across a word *Anyo Varena*. Here *Anyo* mean other and *Varena* means religion, thus a man of different religion, faith, belief is spoken of as *Anyo-Varena*. Similarly, we come across in Vendidad the word *Anyo-Tkaosha* also meaning a man of different religion.

We come across many verbal forms in the Gatha derived from this root, e.g., Ahunavaiti Gatha Yasna Ha, 31, Stanza 3. Zarathushtra declares *Ya*

javanto vispeng vauraya; here the verb *vauraya* means I may cause to induce belief, faith (in God) (in all the living ones). In Yasna Ha, 28: Stanza 5, we come across the verb *vauroimaidi*, 'We may give faith to.' We come across another interesting form of this word in Gatha Vahishtaish, Yasna Ha, 53, Stanza 9 *Duz-Varenaish*. It is instrumental plural. The first part *Duz* means wicked, false and *Varenai* means believer. Thus the word means "A man belonging to false or wicked religion or a false or wicket believer."

In the Zarathushtrian Confession of Faith, which forms Yasna Ha, 12, we come across the word *Fravarane* meaning I confess my faith, my belief in *Mazdayasno Zarathushtrish* 'Mazda worshipping Zaratrustrian Religion'. This phrase occurs in almost all the Zaratrustrian prayers. There is yet another form in the Zarathushtrian Confession Yasna, 12, *Ya-Varena*. Here *Ya* is relative pronoun meaning which and *Varena*—faith, religion. Thus, the word means 'the religion to which'. This form *Ya Varena* is used nine times in Yasna 12, and it is used in the clear sense of faith or religion. Here again the word *Varena* is placed along with the word *Tkaesha* which means religion.

A very interesting reference is found in Yasna 16 *Zarathushtrabe varenercha tkaeshemcha yazamaide*. Here the *Varena* and *Tkaesha* of Zaratrustria is worshipped. It is quite clear from the use of these corresponding and correlative words that the faith and religion of Zaratrustria is meant. The translation of the above line is "We worship the faith and religion of Zaratrustria."

This evidence from the Zenda Avesta as to the meaning of the word Varna leaves no doubt that it originally meant a class holding to a particular faith and it had nothing to do with colour or complexion.

The conclusions that follow from the examination of the Western theory may now be summarised. They are:

- (1)(1) The Vedas do not know any such race as the Aryan race.
- (2)(2) There is no evidence in the Vedas of any invasion of India by the Aryan race and its having conquered the Dasas and Dasyus supposed to be natives of India.
- (3)(3) There is no evidence to show that the distinction between Aryans, Dasas and Dasyus was a racial distinction.
- (4)(4) The Vedas do not support the contention that the Aryas were different in colour from the Dasas and Dasyus.

CHAPTER V

ARYAS AGAINST ARYAS

ENOUGH has been said to show how leaky is the Aryan theory expounded by Western scholars and glibly accepted by their Brahmin fellows. Yet, the theory has such a hold on the generality of people that what has been said against it may mean no more than scotching it. Like the snake it must be killed. It is therefore necessary to pursue the examination of the theory further with a view to expose its hollowness completely.

Those who uphold the theory of an Aryan race invading India and conquering the Dasas and Dasyus fail to take note of certain verses in the Rig Veda. These verses are of crucial importance. To build up a theory of an Aryan race marching into India from outside and conquering the non-Aryan native tribes without reference to these verses is an utter futility. I reproduce below the verses I have in mind:

- (1)(1) *Rig Veda*, vi. 33.3.—"Oh, Indra, Thou has killed both of our Opponents, the Dasas and the Aryas."
- (2)(2) *Rig Veda*, vi.60.3—"Indra and Agni—these protectors of the good and righteous suppress the Dasas and Aryas who hurt us."
- (3)(3) *Rig Veda*, vii.81.1.—"Indra and Varuna killed the Dasas and Aryas who were the enemies of Sudas and thus protected Sudas from them."
- (4)(4) *Rig Veda*, viii.24.27.—"Oh you, Indra, who saved us from the hands of the cruel Rakshasas and from the Aryas living on the banks of the Indus, do thou deprive the Dasas of their weapons."
- (5)(5) *Rig Veda*, X.38.3.—"Oh you much revered Indra, those Dasas and Aryas who *axe* irreligious and who are our enemies, make it easy for us with your blessings to subdue them. With your help we shall kill them."
- (6)(6) *Rig Veda*, X.86.19.—Oh, You Mameyu, you give him all powers who plays you. With your help we will destroy our Arya and our Dasyu enemies.

Anyone who reads these verses, notes what they say calmly and coolly and considers them against the postulates of the Western theory will be taken aback by them. If the authors of these verses of the Rig Veda were Aryas then the idea which these verses convey is that there were two different communities of Aryas who were not only different but oppose and inimical to each other. The existence of two Aryas is not a mere matter of conjecture or interpretation. It is a fact in support of which there is abundant evidence.

II

The first piece of such evidence, to which attention may be invited, is the

discrimination which existed for a long time in the matter of the recognition of the sacred character of the different Vedas. All students of the Vedas know that there are really two Vedas: (1) the Rig Veda and (2) the Atharva Veda. The Sama Veda and the Yajur Veda are merely different forms of the Rig Veda. All students of the Vedas know that the Atharva Veda was not recognised by the Brahmins as sacred as the Rig Veda for a long time. Why was such a distinction made? Why was the Rig Veda regarded as sacred? Why was the Atharva Veda treated as vulgar? The answer, I like to suggest, is that the two belonged to two different races of Aryans and it is only when they had become one that the Atharva Veda came to be regarded on a par with the Rig Veda.

Besides this, there is enough evidence, scattered through the whole of the Brahmanic literature, of the existence of two different ideologies, particularly relating to creation, which again points to the existence of two different Aryan races. Reference to one of these has already been made in Chapter 2. It remains to draw attention to the second type of ideology.

To begin with the Vedas. The following ideology is to be found in the Taittiriya Samhita:

T.S.,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_21 vi.5.6.1.—"Aditi, desirous of sons, cooked, a Brahmaudana oblation for the gods, the Sadhyas. They gave her the remnant of it This she ate. She conceived seed. Four Adityas were born to her. She cooked a second (oblation). She reflected, 'from the remains of the oblation these sons have been born to me. If I shall eat (the oblation) first, more brilliant (sons) will be born to me.' She ate it first; she conceived seed; an imperfect egg was produced from her. She cooked a third (oblation) for the Adityas, repeating the formula 'may this religious toil have been undergone for my enjoyment.' The Adityas said, Let us choose a boon; let anyone who is produced from this be ours only; let anyone of his progeny who is prosperous be for us a source of enjoyment' In consequence the Aditya Vivasvat was born. This is his progeny, namely, men. Among them he alone who sacrifices is prosperous, and becomes a cause of enjoyment to the gods."

Turning to the Brahmanas. The stories of creation contained in the Satapatha Brahmanas are set out below :

S.B.,1 i.8.1.1—In the morning they brought to Manu water for washing, as men are in the habit of bringing it to wash with the hands. As he was thus washing, a fish came into his hands (which spoke to him) 'preserve

me: I shall save thee.' (Manu enquired) From what will thou save me?' (The fish replied) 'A flood shall sweep away all these creatures; from it will I rescue thee.' (Manu

asked) 'How (shall) thy preservation (be effected)?' The fish said : 'So long as we are small, we are in great peril, for fish devours fish; thou shall preserve me first in a jar. When I grow too large for the jar, then thou shall dig a trench, and preserve me in that. When I grow too large for the trench, then thou shall carry me away to the ocean. I shall then be beyond the reach of danger. Straight, away he became a large fish; for he waxes to the utmost. (He said) Now in such and such a year, then the flood will come; thou shall embark in the ship when the flood rises, and I shall deliver thee from it.' Having thus preserved the fish, Manu carried him away to the sea. Then in the same year which the fish had enjoined, he constructed a ship and resorted to him. When the flood rose, Manu embarked in the ship. The fish swam towards him. He fastened the cable of the ship to the fish's horn. By this means he passed over this northern mountain. The fish said, I have delivered thee; fasten the ship to a tree. But lest the water should cut thee off whilst thou art on the mountain, as much as the water subsides so much shall thou descend after it.' He accordingly descended after it as much (as it subsided). Wherefore also this, viz., 'Manu's descent' is (the name) of the northern mountain. Now the flood had swept away all these creatures, so Manu alone was left here. Desirous of offspring, he lived worshipping and toiling in arduous religious rites. Among these he also sacrificed with the *paka* offering. He cast clarified butter, thickened milk, whey and curds as an oblation into the waters. Thence in a year a woman was produced. She rose up as it were unctuous. Clarified butter adheres to her steps. Mitra and Varuna met her. They said to her 'who art thou?' 'Manu's daughter' (she replied). Say (thou art) ours' (they rejoined). 'No', she said, I am his who begot me.' They desired a share in her. She promised that, or she did not promise that; but passed onward. She came to Manu. Manu said to her, 'who art thou?' 'Thy daughter' she replied. 'How, glorious one' asked Manu, 'art thou) my daughter?' 'Thou has generated me,' she said, 'from those oblations, butter, thick milk, whey and curds, which thou didst cast into the waters. I am a benediction. Apply me in the sacrifice. If thou wilt employ me in the sacrifice, thou shall abound in offspring and cattle. Whatever benediction thou will ask through me, shall accrue to thee.' He (accordingly) introduced her (as) that (which comes in) the middle of the sacrifice; for that is the middle of the sacrifice which (comes) between the

introductory and concluding forms. With her he lived worshipping and toiling in arduous religious rites, desirous of offspring. With her he begot this offspring which is this offspring of Manu. Whatever benediction he asked with her, was all vouchsafed to him. This is essentially that which is Ida. Whosoever, knowing this, lives with Ida, begets this offspring which Maim begot. Whatever benediction he asks with her, is all vouchsafed to him."

(2) S.B., mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_22 vi.1.2.11.—"Wherefore they say,"Prajapati having created those worlds was supported upon the earth. For him these herbs were cooked as food. That (food) he ate. He became pregnant. He created the gods from his upper vital airs, and mortal offspring from his lower vital airs. In whatever way he created, so he created. But Prajapati created all this, whatever exists."

(3) S.B. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_23vii.5.2.6.— Prajapati was formerly this (universe),one only. He desired.' Let me create food, and be propagated.' He formed animals from his breath, a man from his soul, a horse from his eye, a bull from his breath, a sheep from his ear, a goat from his voice. Since he formed animals from his breaths, therefore men say, ' the breaths are animals.' The soul is the first of the breaths. Since he formed a man from his 'soul' therefore they say 'man is the first of the animals, and the strongest.' The soul is all the breaths; for all the breaths depend upon the soul. Since he formed man from his soul, therefore they say,' man is all the animals;' for all these are man's."

(4) S.B., mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_24x. 1.3.1.—"Prajapati created living beings. From his upper vital airs he created the gods: from his lower vital airs mortal creatures. Afterwards he created death a devourer of creatures."

(5) S.B., mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_25xiv.4.2.1.—"This universe was formerly soul only, in the form of Purusha. Looking closely, he saw nothing but himself (or soul). He first said,' This is 1.' Then he became one having the name of 1. Hence even now a man, when called, first says/this is I, 'and then declares the other name when he has. In as much as he, before (*purvah*) all this, burnt up (*ausbat*) all sins, he (is called), *purusha*. The man who knows this burns up the person who wishes to be before him. He was afraid. Hence a man when alone is afraid. This (being) considered that ' there is no other thing but myself; of what am I afraid?' Then his fear departed. For why should he have feared? It is of a second person that people are

afraid. He did not enjoy happiness. Hence a person when alone does not enjoy happiness. He desired a second. He was so much as a man and a woman when locked in embrace. He caused this same self to fall as under into two parts. Thence arose a husband and wife. Hence Yajnavalkya has said that 'this one's self is like the half of a split pea.' Hence the void is filled up by woman. He cohabited with her. From them Men were born. She reflected how does he, after having produced me from himself, cohabit with me? Ah! let me disappear'; she became a cow, and the other a bull; and he cohabited with her. From them kine were produced. The one became a mare, the other a stallion, the one a she-ass, the other a male-ass. He cohabited with her. From them the class of animals with undivided hoofs were produced. The one became a she-goat, the other a he-goat, the one a ewe, the other a ram. He cohabited with her. From them goats and sheep were produced. In this manner pairs of all creatures whatsoever down to ants, were produced.

The Taitritriya Brahmana has the following :

T.B.1 ii.2.9.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_26.—"At first this (universe) was not anything. There was neither sky, nor earth, nor air. Being non-existent, it resolved let me be.' It became fervent. From that fervour smoke was produced. It again became fervent. From that fervour fire was produced. It again became fervent. From that fervour light was produced. It again became fervent. From that fervour flame was produced. It again became fervent. From that fervour rays were produced. It again became fervent. From that fervour blazes were produced. It again became fervent. It became condensed like a cloud. It clove its bladder. That became the sea. Hence men do not drink of the sea. For they regard it as like the place of generation. Hence water issues forth before an animal when it is being born. After that the Dasahotri (a particular formula) was created. Prajapati is the Dasahotri. That man succeeds, who thus knowing the power of austere abstraction (or fervour) practises it. This was then water, fluid. Prajapati wept (exclaiming). ' For what purpose have I been born, if (I have been born) from this which forms no support.' That which fell into the waters became the earth. That which he wiped away, became the air. That which he wiped away, upward, became the sky. From the circumstance that he wept (*arodit*), these two regions have the name of *rodasi*, (words). They do not weep in the house of the man who knows this. This was the birth of these worlds. He who thus knows the birth of these worlds, incurs no suffering in these worlds. He obtained this (earth

as a) basis. Having obtained (this earth as a) basis, he desired. ' May I be propagated.' He practised austere fervour. He became pregnant He created Asuras from his abdomen. To them he milked out food in an earthen dish. He cast off that body of his. It became darkness. He desired ' May I be propagated.' He practised austere fervour. He became pregnant. He created living beings (*prajah*) from his organ of generation. Hence they are the most numerous because he created them from -his generative organ. To them he milked out milk in a wooden dish. He cast off that body of his. It became moonlight He desired 'May I be propagated.' He practised austere fervour. He became pregnant. He created the seasons from his armpits. To them he milked out butter in a silver dish. He cast off that body of his. It became the period which connects day and night He desired ' May I be propagated.' He practised austere fervour. He became pregnant. He created the gods from his mouth. To them he milked out Soma in a golden dish. He cast off that body of his. It became day. These are Prajapati's milkings. He who thus knows, milks out offspring. ' Day (*diva*) has come to us:' this (exclamation expre-sses) the godhead of the gods. He who thus knows the godhead of the gods, obtains the gods. This is the birth of days and nights. He who thus knows the birth of days and nights, incurs no suffering in the days and nights. Mind (or soul, *manas*) was created from the non-existent. Mind created Prajapati. Prajapati created offspring. All this, whatever exists, rests absolutely on mind. This is that Brahma called Svovasyasa. For the man who thus knows, (*Ushas*), dawning, dawns more and more bright; he becomes prolific in offspring, and (rich) in cattle; he obtains the rank of Parameshthin."

(3) T.B.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_27 ii.3.8.1.—"Prajapati desired, ' May I propagate.' He practised austerity. He became pregnant. He became yellow brown. Hence a woman when pregnant, being yellow, becomes brown. Being pregnant with a foetus, he became exhausted. Being exhausted he became blackish-brown. Hence an exhausted person becomes blackish-brown. His breath became alive. With that breath (*asu*) he created Asuras. Therein consists the Asura-nature of Asuras. He who thus knows this Asura-nature of Asuras becomes a man possessing breath. Breath does not forsake him. Having created the Asuras he regarded himself as a father. After that he created the Fathers (*Pitris*). That constitutes the fatherhood of the Fathers. He who thus knows the fatherhood of the Fathers, becomes as a father of his own; the Fathers resort to his oblation. Having created the Fathers, he reflected. After that he created men. That

constitutes the manhood of men. He who knows the manhood of men, becomes intelligent. Mind does not forsake him. To him, when he was creating men, day appeared in the heaven. After that he created the gods. This constitutes the godhead of the gods. To him who thus knows the godhead of the gods, day appears in the heavens. These are the four streams, viz; gods, men, fathers and Asuras. In all of these water is like the air."

(4) T.B.,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_28 iii.2.3.9.—"This Shudra has sprung from non-existence."

The following explanation of the origin of creation is given by the Taittiriya Aranyaka:

T.A., mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_29i.l2.3.1.—"This is water, fluid. Prajapati alone was produced on a lotus leaf. Within, in his mind, desire arose, 'Let me create this.' Hence whatever a man aims at in his mind, he declares by speech, and performs by act. Hence this verse has been uttered, 'Desire formerly arose in it, which was the primal germ of mind, (and which) sages, searching with their intellect, have discovered in the heart as the bond between the existent and the non-existent' (Rig Veda X.129.4). That of which he is desirous comes to the man who thus knows. He practised austere fervour. Having practised austere fervour, he shook his body. From its flesh the rishis (called) Arunas, Ketus and Vatarasanas arose. His nails became the Vaikhanasas, his hairs the Valakhilyas. The fluid (of his body became) a tortoise moving amid the waters. He said to him 'Thou hast sprung from my skin and flesh.' 'No,' replied the tortoise, 'I was here before.' In that (in his having been 'before' *purvam*) consists the manhood of a man (*purusha*). Becoming a man *Purusha* with a thousand heads, a thousand eyes, a thousand feet (R.V.X.90.1) he arose. Prajapati said to him, 'thou wert produced before me; do thou first make this.' He took water from this in the cavity of his two hands and placed it on the east, repeating the text, 'so be it, 0 Sun.' From thence the sun arose. That was the eastern quarter. Then Aruna Ketu placed (the water) to the south, saying 'so be it, 0 Agni.' Thence Agni arose. That was the southern quarter. Then Aruna Ketu placed (the water) to the west, saying 'so be it, 0 Vayu.' Thence arose Vayu. That was the western quarter. Then Aruna Ketu placed (the water) to the north, saying 'so be it, 0 Indra.' Then arose Indra. That is the northern quarter. Then Aruna Ketu placed (the water) in the centre, saying 'so be it, 0 Pushan.' Thence arose Pushan. That is this quarter. The Aruna Ketu placed (the water) above saying 'so be it, gods.'

Thence arose gods, men, Fathers, Gandharvas and Apsarasa. That is the *upper* quarter. From the drops which fell apart arose the Asuras, Rakshasas, and Pisachas. Therefore they perished, because they were produced from drops. Hence this text has been uttered; 'when the great waters became pregnant, containing wisdom, and generating Svayambhu, from them were created these creations. All this was produced from the waters. Therefore all this is Brahma Svayambhu.' Hence all this was as it were loose, as it were unsteady. Prajapati was that. Having made himself through himself, he entered into that. Wherefore this verse has been uttered; ' Having formed the world, having formed existing things and all intermediate quarters, Prajapati the first born of the ceremonial entered into himself with himself.'"

VI

The Mahabharata has its own contribution to make to the subject. It propounds the theory of creation by Manu.

The Vanaparvan mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_30 says:

"There was a great rishi, Manu, son of Vivasvat, majestic, in lustre equal to Prajapati. In energy, fiery vigour, prosperity and austere fervour he surpassed both his father and his grand father. Standing with uplifted arm, on one foot, on the spacious Badari, he practised intense austere fervour. This direful exercise he performed with his head downwards, and with unwinking eyes, for 10,000 years. Once, when, clad in dripping rags, with matted hair, he was so engaged, a fish came to him (MI the banks of the Chirini, and spake: ' Lord, I am a small fish; I dread the stronger ones, and from them you must save me. For the stronger fish devour the weaker; this has been immemorially ordained as our means of subsistence. Deliver me from this flood of apprehension in which I am sinking, and I will requite the deed.' Hearing this, Manu filled with compassion, took the fish in his hand, and bringing him to the water threw him into a jar bright as a moonbeam. In it the fish, being excellently tended, grew; for Manu treated him like a son. After a long time he became very large and could not be contained in the jar. Then, seeing Manu he said again: ' In order that I may thrive, remove me elsewhere.' Manu then took him out of the jar, brought him to a large pond, and threw him in. There he continued to grow for very many years. Although the pond was two *yojanas* long and *oneyojana* broad, the lotus-eyed fish found in it no room to move; and again said to Manu. ' Take me to Ganga, the dear queen of the ocean-

monarch; in her I shall dwell; or do as thou thinkest best, for I must contentedly submit to thy authority, as through thee I have exceedingly increased.' Manu accordingly took the fish and threw him into the river Ganga. There he waxed for some time, when he again said to Manu, 'From my great bulk I cannot move in the Ganga; be gracious and remove me quickly to the ocean.' Manu took him out of the Ganga; and cast him into the sea. Although so huge, the fish was easily borne, and pleasant to touch and smell, as Manu carried him. When he had been thrown into the ocean he said to Manu: 'Great Lord, thou hast in every way preserved me; now hear from me what thou must do when the time arrives. *Soon* shall all these terrestrial objects, both fixed and moving, be dissolved. The time for the purification of the worlds has now arrived. I therefore inform thee what is for thy greatest good. The period dreadful for the universe, moving and fixed, has come. Make for thyself a strong ship, with a cable attached; embark in it with the seven rishis and stow in it, carefully preserved and assorted, all the seeds which have been described of old by Brahmins. When embarked in the ship, look out for me. I shall come recognizable by my horn. So shall thou do; I greet thee and depart. These great waters cannot be crossed over without me. Distrust not my word.' Manu replied, 'I shall do as thou hast said.' After taking mutual leave they departed each on his own way. Manu then, as enjoined, taking with him the seeds 'floated on the billowy ocean in the beautiful ship. He then thought on the fish, which knowing his desire, arrived with all speed, distinguished by a horn. When Manu saw the homed leviathan, lofty as a mountain, he fastened the ship's cable to the horn. Being thus attached the fish dragged the ship with great rapidity, transporting it across the briny ocean which seemed to dance with its waves and thunder with its waters. Tossed by the tempests, the ship whirled like a reeling and intoxicated woman. Neither the earth nor the quarter of the world appeared; there was nothing but water, air, and sky. In the world thus confounded, the seven rishis, Manu and the fish were beheld. So, for *very* many years, the fish, unwearied, drew the ship over the waters; and brought it at length to the highest peak of Himavat. He then, smiling gently, said to the rishis, 'Bind the ship without delay to this peak.' They did so accordingly. And that highest peak of Himavat is still known by the name of Naubandhana ('the Binding of the Ship'.) The friendly fish (or god, *animisha*) then said to the rishis, 'I am the Prajapati Brahma, than whom nothing higher can be reached. In the form of a fish I have delivered you from this great danger. Manu shall create all living beings, gods, asuras, men, with all worlds, and all things moving and fixed. By my

favour and through severe austere fervour he shall attain perfect insight into his creative work, and shall not become bewildered.' Having thus spoken, the fish in an instant disappeared. Manu, desirous to call creatures into existence and bewildered in his work, performed a great act of austere fervour; and then began visibly to create all living beings."

The Adi Parvan of the Mahabharata gives a some what different version of the story of creation:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2.

[Who were the Shudras PART I.htm - _msocom_31](#)

"Vaisahmpayari said : I shall, after making obeisance to Svayambhu relate to thee exactly the production and destruction of the gods and other beings. Six great rishis are known as. the mind-born sons of Brahma, viz., Marichi, Atri, Angiras, Pulastya, Pulaha and Kratu. Kasyapa was the son of Marichi: and from Kasyapa sprang these creatures. There were born to Daksha thirteen daughters of eminent rank, Aditi, Dili, Danu, Kala, Danayu, Sirnuka, Krodha, Pradha, Visva, Vinata, Kapila and Muni. Kadni also was of the number. These daughters had valorous sons and grandsons innumerable.

Daksha, the glorious rishi, tranquil in spirit, and great in austere fervour, sprang from the right thumb of Brahma. From the left thumb sprang that great Muni's wife on whom he begot fifty daughters. Of these he gave ten to Dharma, twentyseven to Indu (Soma), and according to the celestial system, thirteen to Kasyapa. Pitamaha's descendant Manu, the god and the lord of creatures, was his (it does not clearly appear whose) son. The eight Vasus, whom I shall detail, were his sons. Dividing the right breast of Brahma, the glorious Dharma (Righteousness), issued in a human form, bringing happiness to all people. He had three eminent sons, Sama, Kama, and Harsha (Tranquillity, Love, and Joy), who are the delight of all creatures, and by their might support the world Arushi, the daughter of Manu, was the wife of that sage (Chyavana, son of Bhrigu)... There are two other sons of Brahma, whose mark remains in the world, Dhatri, and Vidhatri, who remained with Manu. Their sister was the beautiful goddess Lakshmi, whose home is the lotus. Her mind-born sons are the steeds who move in the sky... When the creatures who were desirous of food, had devoured one another, Adharma (Uprighteousness) was produced, the destroyer of all beings. His wife was Nirriti, and hence the Rakshasas are called Nairritas, or the offspring of Nirriti. She had three dreadful sons, continually addicted to evil deeds, Bhaya, Mahabhaya (Fear and Terror) and Mrityu (Death) the ender of beings. He has neither wife, nor any son, for he is the ender."

"Born all with splendour, like that of great rishis, the ten sons of Prachetas are reputed to have been virtuous and holy; and by them the glorious beings were formerly

burnt up by the fire springing from their mouths. From them was born Daksha Prachetasa; and from Daksha, the Parent of the world (were produced) these creatures. Cohabiting with Virini, the Muni Daksha begot a thousand sons like himself, famous for their religious observances, to whom Narada taught the doctrine of final liberation, the unequalled knowledge of the Sankhya. Desirous of creating offspring, the Prajapati Daksha next formed fifty daughters, of whom he gave ten to Dharma, thirteen to Kasyapa, and twenty-seven devoted to the regulation of time to Indu (Soma)... On Dakshayani, the most excellent of his thirteen wives, Kasyapa, the son of Marichi, begot the Adityas, headed by Indra and distinguished by their energy, and also Vivasvat. To Vivasvat was born a son, the mighty Yama Vaivasvata. To Martanda (i.e., Vivasvat, the Sun) was born the wise and mighty Manu, and also the renowned Yama, his (Manu's) younger brother. Righteous was this wise Manu, on whom a race was founded. Hence this (family) of men became known as the race of Manu. Brahmins, Kshatriyas, and other men sprang from this Manu. From him, O king, came the Brahmin conjoined with the Kshatriya. Among them the Brahmins, children of Manu, held the Veda with the Vedangas. The children of Manu are said to have been Vena, Dhruvnu, Narishyanta, Nabhaga, Ikshvaku, Karusha, Saryati, Ila the eighth, Prishadra the ninth, who was addicted to the duties of a Kshatriya, and Nabhagarishta, the tenth. Manu had also fifty other sons; but they all, as we have heard, perished in consequence of mutual dissensions. Subsequently, the wise Pururavas was born of Ila, who, we heard, was both his mother and his father."

VII

The Ramayana also deals with the subject of creation. One account of it will be found in the second Kanda.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_32 It says :

"Perceiving Rama to be incensed, Vasishtha replied.' Jabali also knows the destruction and renovation of this world. But he spoke as he did from a desire to induce you to return. Learn from me, lord of the earth, this (account of) the origin of the world. The universe was nothing but water. In it the earth was fashioned. Then Brahma Svayambhu came into existence, with the deities. He next, becoming a boar, raised up the earth, and created the entire world, with the saints, his sons, Brahma, the eternal, unchanging, and undecaying, was produced from the ether (akasa). From him sprang Marichi, of whom Kasyapa was the son. From Kasyapa sprang Vivasvat: and from him was descended Manu, who was formerly the lord of creatures (Prajapati). Ikshvaku was the son of Manu, and to him this prosperous earth was formerly given by his father. Know that this Ikshvaku was the former king in Ayodhya."

There is besides this another story of creation. It occurs in the third Kanda and is in the following terms:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_33

"Having heard the words of Rama, the bird (Jatayu) made known to him his own race, and himself, and the origin of all beings." Listen while I declare to you from the commencement all the Prajapatis (lords of creatures) who came into existence in the earliest time. Kardama was the first, then Vikrita, Sesha, Samsraya, the energetic Bahuputra, Sthanu, Marichi, Atri, the strong Kratu, Pulastya, Angiras, Prachetas, Pulaha, Daksha, then Vivasvat, Arishtanemi, and the glorious Kasyapa, who was the last. The Prajapati Daksha is famed to have had sixty daughters. Of these Kasyapa took in marriage eight elegant maidens, Aditi, Diti, Danu, Kalaka, Tamra, Krodhava, Manu and Anala. Kasyapa, pleased, then, said to these maids: 'ye shall bring forth sons like me, preservers of the three worlds.' Aditi, Diti, Danu and Kalaka assented; but the others did not agree. Thirty-three gods were borne by Aditi, the Adityas, Vasus, Rudras, and the two Asvins. 'Manu, (wife) of Kasyapa, produced men. Brahmins, Kshatriyas, Vaishyas, and Shudras. 'Brahmins were born from the mouth, Kshatriyas from the breast, Vaishyas from the thighs, and Shudras from the feet' so says the Veda. Anala gave birth to all trees with pure fruits."

VIII

As an illustration of what the Puranas have to say, I extract the following passages from the Vishnu Purana [:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_34](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_34)

"Before the mundane egg existed the divine Brahma Hiranyagarbha the eternal originator of all worlds, who was the form and essence of Brahma, who consists of the divine Vishnu, who again is identical with the Rik, Yajus, Saman and Atharva-Vedas. From Brahma's right thumb was born the Prajapati Daksha; Daksha had a daughter Aditi; from her was born Vivasvat; and from him sprang Manu. Manu had sons called Ikshvaku, Nriga, Dhrishta, Saryati, Narishyanta, Pramsu, Nabhaganedishta, Karusha, and Prishadhra. Desirous of a son, Manu sacrificed to Mitra and Varuna. but in consequence of a wrong invocation through an irregularity of the hotri-priest's daughter called Ila was born. Then through the favour of Mitra and Varuna she became to Manu a son called Sudyunma. But being again changed into a female through the wrath of Isvara (Mahadeva) she wandered near the hermitage of Budha the son of Soma (the Moon); who becoming enamoured of her had by her a son called Pururavas. After his birth, the god who is formed of sacrifice, of the Rik, Yajus, Saman, and Atharva Vedas, of all things, of mind, of nothing, he who is in the form of the sacrificial Male, was worshipped by the rishis of infinite splendour who desired that

Sudyumna should recover his manhood. 'Through the favour of this god Ila became again Sudyumna."

The Vishnu Purana then proceeds to give the following particulars regarding the sons of Manu :

- (i) (i) Prishadhra became a Shudra in consequence of his having killed his religious preceptor's cow.
- (ii) (ii) From Karusha the Karushas, Kshatriyas of great power were descended.
- (iii) (iii) Nabhaga, the son of Nedishta became a Vaishya."

The above is the story of the Solar race. The Vishnu Puranam: [@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_35](#) has also a parallel story relating to the Lunar race which according to it sprang from Atri just as the Solar race from Manu :

"Atri was the son of Brahma, and the father of Soma (the moon), whom Brahma installed as the sovereign of plants, Brahmins and stars. After celebrating the *rajasuya* sacrifice, Soma became intoxicated with pride, and carried off Tara (Sitar), the wife of Brihaspati, the preceptor of the gods, whom, although admonished and entreated by Brahma, the gods, and rishis, Soma refused to restore. Soma's part was taken by Usanas; and Rudra, who had studied under Angiras, aided Brihaspati. A fierce conflict ensued between the two sides supported respectively by the gods and the Daityas, etc., Brahma interposed, and compelled Soma to restore Tara to her husband. She had, however, in the meantime become pregnant, and bore a son Budha (the planet Mercury), of whom when strongly urged, she acknowledged Soma to be the father. Pururavas [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_36](#) was the son of this Budha by Ila, the daughter of Manu. Pururavas [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_37](#) had six sons, of whom the eldest was Ayus. Ayus had five sons; Nahusha, Kshattravridha, Rambha, Raji and Anenas.

Kshattravridha had a son Sunahotra who had three sons, Kasa, Lesa and Gritsamada. From the last sprang Saunaka, who originated the system of four castes. Kasa had a son, Kasiraja, of whom again Dirghatamas was the son, as Dhanvantari was of Dirghatamas."

Compare these ideologies of creation with those set out in Chapter 2 and what do we find? I think the result of comparison may be set down in the following propositions: (1) one is sacerdotal in colour and character, the other is secular; (2) one refers to a human being Manu as the progenitor, the other refers to God Brahma or Prajapati as the originator; (3) one is

historical in its drift, the other is supernatural; (4) one speaks of the deluge, the other is completely silent about it; (5) one aims at explaining the four *Varnas*, the other aims at explaining the origin of society only.

These differences are many and fundamental. Particularly fundamental seems to be the difference in regard to *Chaturvarnya*. The sacerdotal ideology recognizes it, but the secular ideology does not. It is true that an attempt is made to combine the two by explaining, as is done in the Ramayana and the Puranas, how Manu's progeny developed into four *Varnas*. But obviously this is an attempt to mould the two ideologies into one. This attempt is deliberate and calculated. But the difference between the two ideologies is so fundamental that inspite of this attempt they persist as two separate ideologies. All that has happened is that instead of one we have two explanations of *Chaturvarnya*, supernatural *Chaturvarnya* produced by Purusha, and natural *Chaturvarnya* as developed among Manu's sons. That the result should be so clumsy shows that the two ideologies are fundamentally different and irreconcilable.. It is a pity that the existence of two such ideologies recorded in the Brahmanic literature has not been noticed by scholars who have dealt with the subject. But the fact of their existence and their significance cannot be ignored. What is the significance of the existence of two such ideologies fundamentally different and irreconcilable? To me, it seems that they are the ideologies of two different Aryan races— one believing in *Chaturvarnya* and the other not believing in *Chaturvarnya*— who at a later stage became merged into one. If this reasoning is well-founded then this difference in ideologies disclosed by the Brahmanic literature furnishes further evidence in support of the new theory.

IX

The third and the most unimpeachable evidence in support of my view comes from the anthropometrical survey of the Indian people. Such a survey was first made by Sir Herbert Risley in 1901. On the basis of cephalic index, he came to the conclusion that the people of India were a mixture of four different races: (1) Aryan, (2) Dravidian, (3) Mongolian, and (4) Scythian. He even went to the length of defining the areas where they were massed. The survey was a very rough one. His conclusions have been tested by Dr. Guha in 1936. His Report on the subject forms a very valuable document in the field of Indian anthropology. The

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART

[l.htm - _msocom_38](#) prepared by Dr. Guha on which he has plotted so to say the distribution of the Indian people according to their head measurements throws a flood of light on the racial composition of the people of India. Dr. Guha's conclusion is that the Indian people are composed of two racial stocks: (1) long headed, and short-headed, and that the long-headed are in the interior of India and the short-headed are on the outskirts.

The evidence of skulls found in different parts of India also goes to confirm this. This is how Dr. Guha sums up the evidence on this point:

"The accounts of the human remains from prehistoric sites given above, though extremely meagre, with the exception of those of the Indus Valley, enable us nevertheless to visualise the broad outlines of the racial history of India in these times. From the beginning of the 4th Millennium B.C. Northwestern India seems to have been in the occupation of a long-headed race with a narrow prominent nose. Side by side with them we find the existence of another very powerfully built race also long-headed, but with lower cranial vault, and equally long-faced and narrow nose, though the latter was not so high pitched as that of the former.

A third type with broader head and apparently Armenoid affinities also existed, but its advent occurred probably somewhat later judged by the age of the site as Harappa from which most of these latter type of skulls came."

Speaking in terms of the Alpine and the Mediterranean race, one can say that the Indian people are composed of two stocks: (1) The Mediterranean or the long-headed race, and (2) the Alpine or the short-headed race.

About the Mediterranean race, certain facts are admitted. It is admitted that it is a race which spoke the Aryan language. It is admitted that its home was in Europe round about the Mediterranean basin and from thence it migrated to India. From its localisation, it is clear that it must have come to India before the entry of the Alpine race.

Similar facts about the Alpine race remain to be ascertained. First is about the home of the Alpine race and second is about its native speech. According to Prof. Ripley, the home of the Alpine race was in Asia somewhere in the Himalayas. His reasons may be given in his own words. Says Prof. Ripley :[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38B2. Who were the Shudras PART I.htm - _msocom_39](#)

"What right have we for the assertion that this infiltration of population from the East- it was not a conquest, everything points to it as a gradual peaceful immigration, often merely the settlement of unoccupied territory—marks the advent of an overflow from the direction of Asia? The proof of this rests largely upon our knowledge of the people of that continent, especially of the Pamir region, the Western Himalayan highlands. Just here on the ' roof of the world,' where Max

Muller and the early philologists placed the primitive home of Aryan civilisation, a human type prevails which tallies almost exactly with our ideal Alpine or Celtic European race. The researches of De Ujfaivy, Topinard, and others localise its peculiar traits over a vast territory hereabouts. The Galchas, mountain Tadjiks, and their fellows are grey-eyed, dark-haired, stocky in build, with cephalic indexes ranging above 86 for the most part. From this region a long chain of peoples of a similar physical type extends uninterruptedly westward over Asia Minor and into Europe. The only point which the discovery of a broad area in Western Asia occupied by an ideal Alpine type settles, is that it emphasises the affinities of this peculiar race. It is no proof of direct immigration from Asia at all, as Tappeiner observes. It does, however, lead us to turn our eyes eastward when we seek for the origin of the broad-headed type. Things vaguely point to an original ethnic base of supplies somewhere in this direction. It could not lie westward, for everywhere along the Atlantic the race slowly disappears, so to speak. That the Alpine type approaches all the other human millions on the Asiatic continent, in the head form especially, but in hair, colour and stature as well, also prejudices us in the matter; just as the increasing long-headedness and extreme brunetness of our Mediterranean race led us previously to derive it from some type parent to that of the African Negro. These points are then fixed; the roots of the Alpine race run eastward; those of the Mediterranean type towards the south."

On the question of its language there is a certain amount of dispute mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_40 as to who introduced the Aryan language in Europe, whether the Nordics (the purest of the Indo-Germans) or the Alpines. But there is no dispute that the language of the Alpine race was Aryan and therefore it is entitled to be called Aryan race in philological sense.

X

From the foregoing statement of facts, it will be seen that there is a solid foundation in anthropometry and history, in support of the Rig Veda that there were in India two Aryan races and not one. Having regard to this, one cannot refuse to admit that here there is a direct conflict between the Western theory and the testimony of the Rig Veda. Whereas the Western theory speaks of one Aryan race, the Rig Veda speaks of two Aryan races. The Western theory is thus in conflict with the Rig Veda on a major issue. The Rig Veda being the best evidence on the subject the theory which is in conflict with it must be rejected. There is no escape.

This conflict on the major issue also creates a conflict on the issue of invasion and conquest. We do not know which of the two Aryan races came to India first. But if they belonged to the Alpine race then its home being near the Himalayas, there is no room for the theory of invasion from outside. As to the conquest of the native tribes, assuming it to be a fact, the

matter is not quite so simple as Western writers have supposed. On the footing that the Dasas and Dasyus were racially different from the Aryans, the theory of conquest must take account not merely of a possible conquest of Dasas and Dasyus by Aryans but also of a possible conquest of Aryans by Aryans. It must also explain which of the two Aryans conquered the Dasas and Dasyus if they conquered them at all.

The Western theory, it is clear, is only a hurried conclusion drawn from insufficient examination of facts and believed to be correct because it tallied with certain pre-conceived notions about the mentality of the ancient Aryans which they were supposed to have possessed on no other grounds except that their alleged modern descendants, namely, the Indo Germanic races are known to possess. It is built on certain selected facts which are assumed to be the only facts. It is extraordinary that a theory with such a slender and insecure foundation in fact should have been propounded by Western scholars for serious scholars and should have held the field for such a long time. In the face of the discovery of new facts set out in this Chapter the theory can no longer stand and must be thrown on the scrap heap.

CHAPTER VI SHUDRAS AND DASAS

It has been shown how untenable the Western theory is. The only part of the theory that remains to be considered is : who are the Shudras? Mr. A. C. Das mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_41 says :

"The Dasas and the Dasyus were either savages or non-Vedic Aryan tribes. Those of them that were captured in war were probably made slaves and formed the Shudra caste."

Mr. Kanem mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_42 another Vedic scholar and upholder of the Western theory, holds the view that :

"The word 'Dasa' in later literature means a 'scrf or a slave'. It follows that the Dasa tribes that we see opposed to the Aryas in the Rig Veda were gradually vanquished and were then made to serve the Aryas. In the Manusmriti (VIII, 413) the Shudra is said to have been created by God for service (*dasya*) of the Brahmana. We find in the Tai. Samhita, the Tai. Brahmana and other Brahmana works that the Shudra occupied the same position that he does in the Smritis. Therefore it is reasonable to infer

that the *Dasas* or *Dasyus* conquered by the Aryans were gradually transformed into the Shudras."

According to this view the Shudras are the same as Dasas and Dasyus and further the Shudras were the non-Aryan original inhabitants of India and were in a primitive and a savage state of civilisation. It is these propositions which we must now proceed to examine.

To begin with the first proposition. It is not one proposition but is really two propositions rolled in one. One is that the Dasas and Dasyus are one and the same people. The other is that they and the Shudras are one and the same people.

That the *Dasas* and *Dasyus* are one and the same people is a proposition of doubtful validity. Such references to them as are to be found in the Rig Veda are not decisive. In some places the terms *Dasa* and *Dasyu* are used in a way as though there was no difference between the two. Shambara, Shushna, Vritra and Pipru are described both as Dasas and Dasyus. Both Dasas and Dasyus are described as the enemies of Indra and Devas and specially the Ashvins. The cities of both Dasas as well as of the Dasyus are described to have been levelled down by Indra and Devas. The defeat of both Dasas as well as Dasyus is described as producing the same effect, namely, release of water and the emergence of light. In describing the release of Dabhiti both are referred to, at one place he is said to have been released from the Dasas and at another place he is said to have been released from the Dasyus.

While these references suggest that the Dasas and Dasyus were the same, there are other references which suggest that they were different. This is clear from the fact that the Dasas are referred to separately in 54 places and Dasyus are referred to separately in 78 places. Why should there be so many separate references if they did not form two distinct entities? The probability is that they refer to two different communities.

About the second proposition that the Shudras are the same as the Dasas and Dasyus, one can definitely say that it is without any foundation whatsoever.

To make out a case that the Shudras are the same as the Dasas and Dasyus an attempt is made to treat the word Shudra as a derivative word. The word is said to be derived from *Shuc* (sorrow) and *dm* (overcome) and means one overcome by sorrow. In this connection reliance is placed on the story told in the Vedanta Sutra (i.3.34) of *Janasruti* who is said to have

been overcome by sorrow on hearing the contemptuous talk of the flamingoes about himself. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_43 The same derivation is given by the Vishnu Purana. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_44

How far are these statements well-founded? To say that Shudra is not a proper name but is a derivative word is too silly for words. The Brahmanic writers excel everybody in the art of inventing false etymologies. There is no word for which they will not design some sort of etymology. Speaking of the different etymologies of the word Upanishad given by Brahmanic writers, Prof. Max Muller mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_45 said :

"These explanations seem so wilfully perverse that it is difficult to understand the unanimity of native scholars. We ought to take into account, however, that very general tendency among half-educated people, to acquiesce in any etymology which accounts for the most prevalent meaning of a word. The Aranyakas abound in such etymologies, which probably were never intended as real etymologies, in our sense of the word, but simply as plays on words, helping to account somehow for their meaning."

This warning equally well applies to the attempt of the Vedanta Sutra and of the Vayu Purana to make the word Shudra a derivative word suggesting that it meant a 'sorrowful people' and we must therefore reject it as being absurd and senseless.

We have, however, direct evidence in support of the proposition that Shudra is a proper name of a tribe or a clan and is not a derivative word as is sought to be made out.

Various pieces of evidence can be adduced in favour of this proposition. The historians of Alexander's invasion of India have described a number of republics as free, independent and autonomous whom Alexander encountered. These are, no doubt, formed of different tribes and were known by the name borne by those tribes. Among these is mentioned a people called *Sodari*. They were a fairly important tribe, being one of those which fought Alexander though it suffered a defeat at his hands. Lassen identified them with the ancient *Shudras*. Patanjali at 1.2.3 of his Mahabhasya mentions Shudras and associates them with the Abhiras. The Mahabharata in Chapter XXXII of the Sabha parvan speaks of the republic

of the Shudras. The Vishnu Purana as well as the Markandeya Purana and the Brahma Purana refer to the Shudras as a separate tribe among many other tribes and fix their location in the Western part of the country above the Vindhyas.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_46

II

Let us now turn to the second proposition and examine the various elements of which it is composed. There are two elements in the proposition. First is : Are the words *Dasyus* and *Dasas* used in the racial sense indicative of their being non-Aryan tribes? The second element is that assuming they were, is there anything to indicate that they were the native tribes of India? Unless and until these two questions are answered in the affirmative, there is no possibility of identifying the *Dasyus* and *Dasas* with the Shudras.

About the *Dasyus*, there is no evidence to show that the term is used in a racial sense indicative of a non-Aryan people. On the other hand, there is positive evidence in support of the conclusion that it was used to denote persons who did not observe the Aryan form of religion. In this connection, reference may be made to Verse 23 of Adhyaya 65 of the *Shantiparvan* of the *Mahabharata*. It reads as follows:

Driushyante manushe leeke sarvavarneshu dasyavah !

Lingantharey varthamana ashrameshuchathushrvapi !!

The verse says :”In all the *Vamas* and in all the *Ashramas*, one finds the existence of *Dasyus*.”

What is the origin of the word *Dasyu* it is difficult to say. But a suggestionmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_47 has been put forth that it was the word of abuse used by the Indo-Aryans to the Indo-Iranians. There is nothing unnatural or far-fetched in this suggestion. That the two had come into conflict is borne out by history. It is therefore quite possible for the Indo-Aryans to have coined such a contemptuous name for their enemies. If this is true, then *Dasyus* cannot be regarded as the natives of India.

Regarding the *Dasas*, the question is whether there is any connection between them and the *Azhi-Dahaka* of the *Zend Avesta*. The name *Azhi-Dahaka* is a compound name which consists of two parts. *Azhi* means

serpent, dragon and *Dahaka* comes from root *Dah* meaning 'to sting, to do harm'. Thus *Azhi-Dahaka* meaning a stinging dragon. It is a proper name of a person commonly known in Indo-Iranian traditions as *Zohak*. He is mentioned in Yasht literature many a times. He is credited to have lived in Babylon where he had built a palace. He is also credited to have built a great observatory in Babylon. This mighty devil Azhi-Dahaka was created by the Archdemon Angra Mainyu in order to destroy the kingdom of holiness of the corporeal world. This Azhi-Dahaka went to war against Yima the renowned king of the Indo-Iranians and not only vanquished him, but killed him in battle.

Yima is always spoken of in Avesta as *Kshaeta* meaning shining or ruling. Root *Kshi* has two meanings, to shine or to rule. There is another epithet commonly used for Yima and that is *Hvanthwa* meaning 'possessing good flock'. This Avesta Yima Khshaita became in later Persian language *Jamshid*. According to traditions, king Jamshid son of Vivanghvant was the great hero of the Iranian history, the founder of a great Persian civilization. He was a king of the Peshdiadyan dynasty. In Yasna 9 and 5 (Koema Yashi) it is stated that 'Vivanshas' was the first man who unceremoniously pounded Hasma (Sk. Sasma) in this corporeal world and the boon he received was: to him was born a son nobly who was Yima the shining and of good flock, who was most glorious amongst the living ones, who was like a glowing sun amongst mankind, during whose kingship he made noblemen and cattle (animals) immortal, made waters and trees undrying. He possessed undiminishing (ever fresh) divine glory. During the kingship of famous Yima there was neither extreme cold nor extreme heat, there was no old age, death and envy.

Is Dahaka of the Zenda Aveshta the same as Dasa of the Rig Veda? If similarity in name can be relied upon as evidence, then obviously it points to their being the names of one and the same person. Dasa in Sanskrit can easily be Daha in Aveshta since *sa* in the former is natural conversion to *ha* in the latter. If this were the only evidence the suggestion that Dasa of the Rig Veda and Dahaka of the Zenda Avesta are the same could have been no better than a conjecture. But there is other and more cogent evidence which leaves no doubt about their identity. In Yasna Ha 9 (which is the same as Horn Yashe) Azhi-Dahaka is spoken of as 'three mouthed, three-headed and six-eyed'. What is striking is that this physical description of Dahaka in Aveshta is exactly similar to the description of Dasa in Rig Veda (x.99.6) where he is also described as having three heads and six eyes

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm -

[_msocom_48](#) If the suggestion that the Dasa in the Rig Veda is the same as Dahaka in the Aveshta, is accepted, then obviously the Dasas were not native tribes aboriginal to India.

III

Were they savages? The Dasas and Dasyus were not a primitive people. They were as civilised as the Aryans and in fact more powerful than the Aryans. Such is the testimony of the Rig Veda. It is well epitomised by Mr. Iyengar when he says that :

"The Dasyus lived in cities (R.V., i.53.8; i. 103.3) and under kings the names of many of whom are mentioned. They possessed 'accumulated wealth' (R.V., viii.40.6) in the form of cows, horses and chariots (R.V., ii. 15.4) which though kept in 'hundred-gated cities' (R.V., X.99.3), Indra seized and gave away to his worshippers, the Aryas (R.V., i.176.4). The Dasyus were wealthy (R.V., i.33.4) and owned property 'in the plains and on the hills' (R.V., x.69.6). They were 'adorned with their array of gold and jewels' (R.V., i.33.8). They owned many castles (R.V., i.33.13; viii.17.14). The Dasyu demons and the Arya gods alike lived in gold, silver and iron castles (SS.S., vi.23; A.V., v.28.9; R.V., ii.20.8). Indra overthrew for his worshipper, Divodasa, frequently mentioned in the hymns, a 'hundred stone castles' (R.V., iv.30.20) of the Dasyus. Agni, worshipped by the Arya, gleaming in behalf of him, tore and burnt the cities of the fireless Dasyus. (R.V., vii.5.3). Brihaspati broke the stone prisons in which they kept the cattle raided from the Aryas (R.V., iv.67.3). The Dasyus owned chariots and used them in war like the Aryas and had the same weapons as the Aryas (R.V., viii.24.27; iii.30.5; ii.15.4)"

That the Dasas and Dasyus were the same as the Shudras is a pure figment of imagination. It is only a wild guess. It is tolerated because persons who make it are respectable scholars. So far as evidence is concerned, there is no particle of it, which can be cited in support of it. As has been said before, the word Dasa occurs in the Rig Veda 54 times and Dasyu 78 times. The Dasas and the Dasyus are sometimes spoken together. The word Shudra occurs only once and that too in a context in which the Dasas and Dasyus have no place. In the light of these considerations, it is difficult to say how anyone in his senses can say that Shudras are the same as the Dasas and Dasyus. Another fact which is to be noted is that the

names Dasas and Dasyus completely disappear from the later Vedic literature. It means they were completely absorbed by the Vedic Aryans. But it is quite different with the Shudras. The early Vedic literature is very silent about them. But the later Vedic literature is full of them. This shows that the Shudras were different from the Dasas and Dasyus.

IV

Were the Shudras non-Aryans? Mr. Kane
 says: smk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_49

"A clear line of demarcation was kept between the Arya and the Shudra in the times of the Brahmana works and even in the Dharmasutras. The Tandy Brahmana speaks of a mock fight : 'the Shudra and Arya fight on a hide; out of the two they so arrange that the Arya colour becomes the victor.' The Ap. Dh. S. (I, i.3.40-41) says that a *brahmachari* if he cannot himself eat all the food he has brought by begging, may keep it near an Arya (for his use) or he may give it to a Shudra who is a Dasa (of his teacher). Similarly, Gautama x.69 used the word 'anarya' for Shudra."

On the question of the line of demarcation; between the Shudras and Aryans, the matter needs to be carefully examined.

The strength of the argument that the Shudras were non-Aryans is to be found in the following statements :

A.V., iv.20.4. —"The thousand-eyed god shall put this plant into my right hand; with that do I see everyone, the Shudra as well as the Arya."

Kathaka Samhita, xxxiv.5—"The Shudra and the Arya quarrel about the skin. The gods and the demons quarrelled about the sun; the gods won it (the sun). (By this act of quarrelling with Shudras) the Arya makes the Arya Varna win, makes himself successful. The Arya shall be inside the altar, the Shudra outside the altar. The skin shall be white, circular- the form of the sun."

Vajasaneyi Samhita, xxiii.30 -31—"When a deer eats the barley in the field, the (owner of the field) is not pleased with the nourished animal; when a Shudra woman has an Arya as a lover, (the husband) does not long for (the consequent) prosperity."

When a deer eats barley, the (owner of the field) does not approve

of the nourished animal. When a Shudra is the lover of an Arya woman, the (husband) does not consent to the prosperity.

These stanzas, which speak of the Shudra and the Arya as separate and opposed form the foundation of the theory that the Shudras are non-Aryans. To say the least, such a conclusion would be a very hasty one. Two considerations must be borne in mind before any conclusion is drawn from the aforementioned statements. In the first place, it must be borne in mind that according to what has been said before and according to the evidence of the Rig Veda, there are two categories of Aryans, the Vedic and the non-Vedic. Given this fact, it would be quite easy for an Arya of one class to speak of an Arya of another class, as though the two were separate and opposed. Interpreted in this way, the above statements, in which Shudras are set against the Aryans, do not mean that they were not Aryans. They were Aryans of a different sect or class.

That this is possible can be seen from the following statements in the sacred literature of the Hindus:

- (1)(1) A.V., xix.32.8.—"Make me. Oh, Darbha (grass), dear to the Brahmin, and the Rajanya (i.e., Kshatriya), to the Shudra and to the Arya and to him whom we love and to everyone who is able to see."
- (2)(2) A.V., xix.62.1.—"Make me beloved among the gods, make me beloved among the princes; make me dear to everyone who sees, to the Shudra and to the Arya."
- (3)(3) *Vajasaneyi Samhita*, xviii.48.—"(Oh, Agni), give to us lustre among Brahmins, give us lustre among kings; lustre among Vaishyas and among Shudras; give to me lustre added to lustre."
- (4)(4) *Vajasaneyi Samhita*, xx.17.—"Whatever sin we have committed in the village, in the forest, in the assembly, with our senses, against the Shudra or against the Arya, whatever sin one of us (two, the sacrificer and his wife) has committed in the matter of his duty (towards the other),— of that sin, you are the destroyer."
- (5)(5) *Vajasaneyi Samhita*, xviii.48.—"As I speak these auspicious words to the people, to the Brahmin and the Rajanya, to the Shudra and to the Arya and to my own enemy, may I be dear to the gods and to the giver of *dakshinas* here in this world. May this desire of mine be granted. May that (enemy of mine) be subjected to me."

What do these statements show? The first one makes a distinction between the Brahmins and the Aryans. Can it be said that the Brahmins were non-Aryans? The other statements pray for the love and goodwill of the Shudras. If the Shudra was a primitive aboriginal non-Aryan, is such a

prayer conceivable? The statements on which reliance is placed do not prove that the Shudras were non-Aryans.

That the Dharma Sutras call the Shudra Anarya and the statements in the Vajasaneyi Samhita pouring scorn on the Shudra woman, do not mean anything. There are two arguments against accepting the testimony of the Dharma Sutra. In the first place, as will be shown later, the Dharma Sutras and other treatises are books written by the enemies of the Shudra. As such, they have no evidentiary value. It is also doubtful whether such anti-Shudra statements are mere imprecations or statements of facts as they existed. They seem to contradict facts reported in other works.

The Dharma Sutras say that a Shudra is not entitled to the Upanayana ceremony and the wearing of the sacred thread. But in Samskara Ganapati there is an express provision declaring the Shudra to be eligible for Upanayana.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_50

The Dharma Sutras say that a Shudra has no right to study the Vedas. But the Chhandogya Upanishad (iv:l-2) relates the story of one Janasruti to whom Veda Vidya was taught by the preceptor Raikva. This Janasruti was a Shudra. What is more is that Kavasha Ailusha,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_51 was a Shudra. He was a Rishi and the author of several hymns of the Tenth Book of the Rig Veda.

The Dharma Sutras say that a Shudra has no right to perform Vedic ceremonies and sacrifices. But Jaimini, the author of the Purva Mimarnsamk:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_52 mentions an ancient teacher by name Badari— whose work is lost— as an exponent of the contrary view that even *Shudras* could perform Vedic sacrifices. The Bharadvaja Srauta Sutra (v.28) admits that there exists another school of thought which holds that a Shudra can consecrate the three sacred fires necessary for the performance of a Vedic sacrifice. Similarly, the commentator of the Katyayana Srauta Sutra (1.4.16) admits that there are certain Vedic texts which lead to the inference that the Shudra was eligible to perform Vedic rites.

The Dharma Sutras say that a Shudra is not entitled to the sacred drink of Soma. But in the story of the Ashvins, there is definite evidence that the Shudra had a right to the divine drink of Soma. The Ashvins, as the story goes, once happened to behold Sukanya when she had just bathed and

when *her* person was bare. She was a young girl married to a Rishi by name Chyavana who at the time of marriage was so old as to be dying almost any day. The Ashvins were captivated by the beauty of Sukanya and said "Accept one of us for your husband. It behoveth thee not to spend thy youth fruitlessly." She refused, saying "I am devoted to my husband." They again spoke to her and this time proposed a bargain: "We two are the celestial physicians of note. We will make thy husband young and graceful. Do thou then select one of us as thy husband." She went to her husband and communicated to him the terms of the bargain. Chyavana said to Sukanya "Do thou so"; and the bargain was carried out and Chyavana was made a young man by the Ashvins. Subsequently, a question arose whether the Ashvins were entitled to Soma, which was the drink of the Gods. Indra objected saying that the Ashvins were Shudras and therefore not entitled to Soma. Chyavana, who had received perpetual youth from the Ashvins, set aside the contention and compelled Indra to give them Soma.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_53

There is another reason why the evidence of the Dharma Sutras that the Shudras are non-Aryans should not be accepted. In the first place, it is contrary to the view taken by Manu. In the decision of the issue whether the Shudra was an Aryan or a non-Aryan, the following verses from Manu require to be carefully considered :

"If a female of the caste sprung from a Brahmana and a Shudra female, bear (children) to one of the highest castes, the inferior (tribe) attains the highest caste within the seventh generation."

"(Thus) a Shudra attains the rank of a Brahmana and (in a similar manner) a Brahmana sinks to the level of a Shudra; but know that it is the same with the offspring of a Kshatriya or of a Vaishya."

"If (a doubt) should arise, with whom the pre-eminence (is, whether) with him whom an Aryan by chance begot on a non-Aryan female, or (with the son) of a Brahmana woman by a non-Aryan;"

The decision is as follows : 'He who was begotten by an Aryan on a non-Aryan female, may become (like to) an Aryan by his virtues; he whom an Aryan (mother) bore to a non Aryan father (is and remains) unlike to an Aryan.'
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_54

Verse 64 from Manu is also to be found in Gautama Dharma Sutra (uv.22). There seems to be some controversy as to the correct interpretation of this verse. In summing up the different interpretations, Buhler says:

"According to Medh., Gov., Kull., and Ragh., the meaning is that, if the daughter of a Brahmana and of a Shudra female and her descendants all marry Brahmanas, the offspring of the sixth female descendant of the original couple will be a Brahmana. While this explanation agrees with Haradatta's comment on the parallel passage of Gautama, Nar. and Nan. take the verse very differently. They say that if a Parasava, the son of a Brahmana and of a Shudra female, marries a most excellent Parasava female, who possesses a good moral character and other virtues, and if his descendants do the same, the child born in the sixth generation will be a Brahmana. Nandana quotes in support of his view, Baudhayana i. 16.13-14 (left out in my translation of the Sacred Books of the East, ii, p. 197)... '(offspring) begotten by a Nishada on a Nishadi, removes within five generations the Shudrahood; one may initiate him (the fifth descendant); one may sacrifice for the sixth.' This passage of Baudhayana the reading of which is supported by a new MS from Madras clearly shows that Baudhayana allowed the male offspring of Brahmanas and Shudra females to be raised to the level of Aryans. It is also not impossible that the meaning of Manu's verse may be the same, and that the translation should be, 'if the offspring of a Brahmana and of a Shudra female begets children with a most excellent (male of the Brahmana caste or female of the Parasava tribe), the inferior (tribe) attains the highest caste in the seventh generation."

Whatever be the interpretation, the fact remains that in the seventh generation mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_55a Shudra under certain circumstances could become a Brahmin. Such a conception would have been impossible if the Shudra was not an Aryan.

That the Shudra is a non-Aryan is contrary to the view taken by the school of Arthashastra. As a representative of that school, the opinion of Kautilya on that question is of great value. In laying down the law of slavery, Kautilya says: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_56

The selling or mortgaging by kinsmen of the life of a Shudra who is not a born slave, and has not attained majority, but is Arya in birth

shall be punished with a fine of 12 panas.

Deceiving a slave of his money or depriving him of the privileges he can exercise as an Arya (*Aryabhava*) shall be punished with half the fine (levied for enslaving the life of an Arya).

Failure to set a slave at liberty on the receipt of a required amount of ransom shall be punished with a fine of 12 panas; putting a slave under confinement for no reason (*samrodhaschakaranat*) shall likewise be punished.

The offspring of a man who has sold himself off as a slave shall be an Arya. A slave shall be entitled not only to what he has earned himself without prejudice to his masters work but also to the inheritance he has received from his father.

Here is Kautilya, who calls the Shudra an Aryan in the most emphatic and express terms possible.

V

Coming to the question of Shudras having been made slaves, it is nonsense, if not mendacious. It is founded on two assumptions. First is that the Dasas are described as slaves in the Rig Veda. The second is that the Dasas are the same as Shudras.

It is true that the word Dasa is used in the Rig Veda in the sense of slave or servant. But the word in this sense occurs in only 5 places and no more. But even if it did occur more than five times, would it prove that the Shudras were made slaves? Unless and until it is proved that the two were the same people, the suggestion is absurd. It is contrary to known facts.

Shudras participated in the coronation of kings. In the post-vedic or the period of the Brahmanas, the coronation of a king was in reality an offer of sovereignty by the people to the king. This was done by the representatives of the people called Ratnis who played a very important part in the investiture of the king. The Ratnis were so-called because they held the Ratna (jewel), which was a symbol of sovereignty. The king received his sovereignty only when the Ratnis handed over to him the jewel of sovereignty, and on receiving his sovereignty the king went to the house of each of the Ratnis and made an offering to him. It is a significant fact that one of the Ratnis was always a

Shudra.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_57

Nilakantha, the author of *Nitimayukha*, describes the coronation ceremony of a later time. According to him, the four chief ministers, Brahmin, Kshatriya, Vaishya and Shudra, consecrated the new king. Then the leaders of each Varna and of the castes lower still, consecrated him with holy water. Then followed acclamation by the twice-born.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_58

That the Shudras were invited to be present at the coronation of the king along with Brahmins is evidenced by the description of the coronation of Yudhishtira, the eldest brother of the Pandavas, which is given in the Mahabharata.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_59

Shudras were members of the two political assemblies of ancient times, namely, the Janapada and Paura and as a member of these the Shudra was entitled to special respect even from a Brahmin.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_60

This was so even according to the Manusmriti (vi.61) as well as to the Vishnu Smriti (xxi.64). Otherwise there is no meaning in Manu saying that a Brahmin should not live in a country where the king is a Shudra. That means Shudras were kings.

In the Shanti Parvan of the Mahabharata.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_61 Bhishma in his lessons on Politics to Yudhishtira says :

"I shall, however, tell thee what kinds of ministers should be appointed by thee. Four Brahmins learned in the Vedas, possessed of a sense of dignity, belonging to the *Snataka* order, and of pure behaviour, and eight Kshatriyas, all of whom should be possessed of physical strength and capable of wielding weapons, and one and twenty Vaishyas, all of whom should be possessed of wealth, and three Shudras, everyone of whom should be humble and of pure conduct and devoted to his daily duties, and one man of the Suta caste, possessed of a knowledge of the Puranas and the eight cardinal virtues should be thy ministers."

This proves that the Shudras were ministers and that they were almost equal to the Brahmins in number.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_62

The Shudras were not poor and lowly. They were rich. This fact is testified by the Maitrayani Samhita (iv.2.7.10) and the Panchavirnsa Brahmana (vi.1.11).
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38B2. Who were the Shudras PART I.htm - _msocom_63

There are two other aspects to this question. What significance can there be to the enslavement of the Shudras, assuming it was a fact? There would be some significance if the Aryans did not know slavery or were not prepared to turn the Aryans into slaves. But the fact is that the Aryans knew slavery and permitted the Aryans to be made slaves. This is clear from Rig Veda, (vii.86.7;viii. 19.36 and viii.56.3).

That being so, why should they particularly want to make slaves of the Shudras? What is more important is why should they make different laws for the Shudra slaves?

In short, the Western theory does not help us to answer our questions, who were the Shudras and how did they become the fourth Varna?

Part II

WHO WERE THE SHUDRAS?

CONTENTS

PART II

7. Chapter VII - The Shudras were Kshatriyas
8. Chapter VIII - The Number of Varnas, Three or Four?
9. Chapter IX - Brahmins Versus Shudras

CHAPTER VII

WHO WERE THE SHUDRAS?

SHUDRAS WERE KSHATRIYAS

WHO were the Shudras if they were not a non-Aryan aboriginal race? This question must now be faced. The theory I venture to advance may be stated in the following three propositions:

- (1)(1) The Shudras were Aryans.
- (2)(2) The Shudras belonged to the Kshatriya class.
- (3)(3) The Shudras were so important a class of Kshatriyas that some of the most eminent and powerful kings of the ancient Aryan communities were Shudras.

This thesis regarding the origin of the Shudras is a startling if not a revolutionary thesis. So startling it is that not many people will be ready to accept it, even though there may be enough evidence to support it. My obligation is to produce the evidence, leaving the people to judge its worth.

The primary piece of evidence on which this thesis rests is a passage which occurs in Verses 38-40 of Chapter 60 of the Shanti Parvan of the Mahabharata. It reads as follows :

"It has been heard by us that in the days of old a Shudra of the name of Paijavana gave a Dakshina (in his own sacrifice) consisting of a hundred thousand Purnapatras according to the ordinance called Aindragni."

The important statements contained in this passage are three : (1) that Paijavana was a Shudra, (2) that this Shudra Paijavana performed sacrifices, and (3) the Brahmins performed sacrifices for him and accepted Dakshina from him.

The passage quoted above is taken from Mr. Roy's edition of the Mahabharata. The first thing is to ascertain whether the text is accurate or whether there are any variant readings. As regards the authenticity of his text, this is what Mr. Roy mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_1says :

"As far as my edition is concerned it is substantially based on that of Royal Asiatic Society of Bengal, published about forty-five years ago under the superintendence of a few learned Pandits of Bengal aided, as I believe, by an English Orientalist of repute. Manuscripts had been procured from all parts of India (the South unexcepted) and these were

carefully collated. Although edited with such care, I have not, however, slavishly followed the Society's edition. I have compared it carefully with the Maharajah of Burdwan's text in the Bengalee character which was edited with still greater care. About 18 manuscripts procured from different parts of India (the South not excepted) were carefully collated by the Burdwan Pandits before they admitted a single *sloka* as genuine."

Prof. Sukthankar, the erudite editor of the critical edition of the Mahabharata, after examining many editions of the Mahabharata, concluded by saying that

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_2

"The *editio princeps* (Calcutta—1856) remains the best edition of the Vulgate, after the lapse of nearly a century."

Although the authenticity of Mr. Roy's edition of the Mahabharata cannot be doubted, it would not be unreasonable if critics were to say that they would like to know what other manuscript support there is behind this text, which is made the basis of this new theory of the origin of the Shudras. In undertaking such an inquiry it is necessary to point to two considerations. Onemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_3 is that there is no such thing as a Mahabharata manuscript in the sense of complete sets of manuscripts covering all the eighteen Parvans. Each Parvan is treated as a separate unit with the result that the number of copies of the different Parvans to be found differ by a vast margin. Consequently, the number of manuscripts to be taken as a basis for deciding which is the correct text must vary with each Parvan.

The secondmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_4 consideration to which attention must be drawn is the fact that the text of the Mahabharata has been handed down in two divergent forms; a Northern and a Southern recension, texts, typical of the Aryavrata and the Dakshinapatha.

It is obvious that an examination of manuscript support must be based upon collation from a fair number of manuscripts and a fair distribution of the manuscripts between the Northern and the Southern recensions. Bearing these considerations in mind, the results of the

collationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_5 of the text of *Shloka* 38 of the 60th chapter of the Shanti Parvan of the Mahabharata with which we are primarily concerned from different manuscripts is presented below :

1. Shudrah Paijavano nama (K) S
2. Shudrah Pailavano nama (M/1: M/2) S
3. Shudrah Yailanano nama (M/3 : M/4) S
4. Shudmh Yaijanano nama (F)
5. Shudropi Yajane nama (L)
6. Shudrah Paunjalka nama (TC) S
7. Shuddho Vaibhavano nama (G) N
8. Pura Vaijavano nama (A, D/2)
9. Pura Vaijanano nama (M) N

Here is the result of the collation of nine manuscripts. Are nine manuscripts enough for constituting a text which has a number of variant readings? It is true that the number of manuscripts taken for the critical edition of the different Parvans of the Mahabharata exceeds nine. For the entire Mahabharata the minimum number of manuscripts taken for constituting the text is only ten.
 ten.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_6 It cannot therefore be contended that nine is an insufficient number. The nine manuscripts fall into two geographical divisions. Northern and Southern. MI, M2, M3, M4 and TC belong to the Southern recession. A, M, G, D2 belong to the Northern recession. The selections of the manuscripts therefore satisfy the two tests which experts have laid down.

I am grateful to the Bhandarkar Oriental Research Institute for allowing me to use their collation sheet. Letters in brackets indicate the index number given by the Institute to the manuscript. N or S

indicate whether the manuscript comes from the North or South. K is Kumbhakonam.

A scrutiny of the readings shows that :

- (1) (1) there is a variation in the description of Paijavana;
- (2) (2) there is a variation in the name of Paijavana;
- (3) (3) of the nine texts, six agree in describing him as a Shudra. One describes him as Shuddha and two instead of speaking of the class to which he belonged refer to the time when he lived and use the word 'Pura';
- (4) (4) with regard to the name, there is no agreement between any two of the nine manuscripts. Each gives a different reading.

Given this result, the question is what is the real text? Taking first the texts relating to the name, it is obvious that this is not a matter in which the question of meaning is involved. It does not raise any questions such as interpretation *versus* emendation or of giving preference to a reading which suggests how other readings might have arisen. The question is which is the correct name and which readings are scriptural blunders committed by the scribes. There seems to be no doubt that the correct text is Paijavana. It is supported by both the recessions, Southern as well as Northern. For Vaijavano in No.S is the same as Paijavano. All the rest are variations which are due to the ignorance of the scribes in not being able to read the original copy correctly and then trying to constitute the text in their own way.

Turning to the description of Paijavana, the change from *Shudrah* to *Pura*, it must be granted, is not accidental. It appears to be deliberate. Why this change has occurred it is difficult to say categorically. Two things appear to be quite clear. In the first place, the change appears to be quite natural. In the second place, the change does not militate against the conclusion that Paijavana was a Shudra. The above conclusion will be obvious if the context, in which verses 38-40 occur, is borne in mind. The context will be clear from the following verses which precede them:

"The Shudra should never abandon his master whatever the nature or degree of the distress into which the latter may fall. If the master loses his wealth, he should with excessive zeal be supported by the Shudra servant. A Shudra cannot have any wealth that is his own. Whatever he possesses belongs to his master. Sacrifice has been laid down as a duty of the three other orders. It has been ordained for the Shudra also, O! Bharata. A Shudra however is not competent to utter *swaha* and *svadha*

or any other *mantra*. For this reason, the Shudra, without observing the vows laid down in the Vedas, should worship the gods in minor sacrifices called *Pakayajnas*. The gift called Pumapatra is declared to be the Dakshina of such sacrifices."

Taking the verses 38 to 40 in the context of these verses preceding them, it becomes clear that the whole passage deals with the Shudra. The story of Paijavana is a mere illustration. Against this background, it is unnecessary to repeat the word 'Shudra' before Paijavana. This explains why the word Shudra does not occur before Paijavana in the two manuscripts. As to the reason for the use of the word *pura* in place of Shudra it must be remembered that the case of Paijavana had occurred in very ancient times. It was therefore quite natural for the scribe to feel that it was desirable to put this fact in express terms. The writer being aware that there was no necessity for describing Paijavana as Shudra since that was made clear from the context, it was not necessary to emphasise it. On the other hand, knowing that Paijavana had lived in very ancient times and that that fact was not made very clear from the context, the writer thought it more appropriate to add the word *Pura* which was necessary and omit the word *Shudrah* which having regard to the context was unnecessary.

If this explanation is well-founded, we may take it as well established that the person referred to in the passage in the Shanti Parvan of the Mahabharata is Paijavana and that this Paijavana was a Shudra.

II

The next question that falls due for consideration is the identification of Paijavana. Who is this Paijavana?

Yaska's Nirukta seems to give us a clue. In Nirukta ii.24 mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_7 Yaska Says:

"The seer Vishvamitra was the purohita of Sudas, the son of Pijavana, Vishvamitra, friend of all. All, moving together. Sudas a bountiful giver. *Paijavana*, son of Pijavana. Again *Pi-javana* one whose speed is enviable or whose gait is inimitable."

From Yaska's Nirukta we get two very important facts : (1) Paijavana means son of Pijavana, and (2) the person who is the son of Paijavana is Sudas. With the help of Yaska, we are able to answer the question: who is

Paijavana referred to in the passage in the Shanti Parvan of the Mahabharata? The answer is that Paijavana is simply another name for Sudas.

The next question is who is this Sudas and what do we know about him? A search in the Brahmanic literature discloses three persons with the name Sudas. One Sudas is mentioned in the Rig Veda. His family particulars are given in the following stanzas of the Rig Veda :mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_8

1. 1. *Rig Veda*, vii.18.21.—"Parashara, the destroyer of hundreds (of Rakshasas), and Vasishtha, they who, devoted to thee, have glorified thee in every dwelling, neglect not the friendship of thee (their) benefactor; therefore prosperous days dawn upon the pious."
2. 2. *Rig Veda*, vii. 18.22.—"Praising the liberality of Sudas, the grandson of Devavata, the son of Paijavana, the donor of two hundred cows, and of two chariots with two wives, I, worthy (of the gift), circumambulate thee, Agni, like the ministrant priest in the chamber (of sacrifice)"
3. 3. *Rig Veda*, vii.18.23.—"Four (horses), having golden trappings, going steadily on a difficult road, celebrated on the earth, the excellent and acceptable gifts (made) to me by Sudas, the son of Pijavana; bear me as a son (to obtain) food and progeny."
4. 4. *Rig Veda*, vii. 18.24.—"The seven worlds praise (Sudas) as if he were Indra; him whose fame (spreads) through the spacious heaven and earth; who, munificent, has distributed (wealth) on every eminent person, and (for whom) the flowing (rivers) have destroyed Yudhyamadhi in war."
5. 5. *Rig Veda*, vii.18.25.—"*Maruts*, leaders (of rites), attend upon this (prince) as you did upon Divodasa, the father of Sudas: favour the prayers of the devout son of Pijavana, and may his strength be unimpaired, undecaying."

The two others are mentioned by the Vishnu Purana. One Sudas is mentioned in Chapter IV as the descendant of Sagara. The genealogical tree connecting this Sudas with Sagara is as follows:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_9

"Sumati, the daughter of Kasyapa and Kesini, the daughter of Raja Vidarbha, were the two wives of Sagara. Being without progeny, the king solicited the aid of the sage Aurva with great earnestness, and the Muni

pronounced this boon, that one wife should bear one son, the upholder of his race, and the other should give birth to sixty thousand sons; and he left it to them to make their election. Kesini chose to have the single son; Sumati the multitude; and it came to pass in a short time that the former bore Asamanjas, a prince through whom the dynasty continued; and the daughter of Vinata (Sumati) had sixty thousand sons. The son of Asamanjas was Ansumat.

The son of Ansumat was Dilipa; his son was Bhagiratha, who brought Ganga down to earth, whence she is called Bhagirathi. The son of Bhagiratha was Sruta; his son was Nabhaga; his son was Ambarisha; his son was Sindhuvipa; his son was Ayutashva; his son was Ritupama, the friend of Nala, skilled profoundly in dice. The son of Ritupama was Sarvakama; his son was Sudasa; his son was Saudasa, named also Mitrasaha."

Another Sudas is mentioned in Chapter XIX as a descendant of Puru. The genealogical tree connecting this Sudas with Puru is as follows :
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_10

"The son of Puru was Janamejaya; his son was Prechinvat; his son was Pravira, his son was Manasyu; his son was Bhayada; his son was Sudhumna; his son was Bahugava; his son was Samyati; his son was Bhamyati; his son was Raudrashva, who had ten sons, Riteyu, Kaksheyu, Stnandileyu, Ghriteyu, Jaleyu, Sthaleyu, Dhaneyu, Vaneyu, and Vrateyu. The son of Riteyu was Rantinara whose sons were Tansu, Aprtiratha, and Dhruva. The son of the second of these was Kanva, and his son was Medhatithi, from whom the Kanvayana Brahmans are descended. Anila was the son of Tansu, and he had four sons, of whom Dushyanta was the elder. The son of Dushyanta was the emperor Bharata;...

Bharata had by different wives nine sons, but they were put to death by their own mothers, because Bharata remarked that they bore no resemblance to him, and the women were afraid that he would therefore desert them. The birth of his sons being thus unavailing, Bharata, sacrificed to the Maruts, and they gave him Bharadvaja, the son of Brihaspati by Mamata the wife of Utathya.

He was also termed Vitatha, in allusion to the unprofitable (*vitatha*)

birth of the sons of Bharata. The son of Vitatha was Bhavanmanyu: his sons were many, and amongst them the chief were Brihatkshatra, Mahavirya, Nara and Garga. The *son* of Nara was Sankriti; his sons were Ruchiradhi and Rantideva. The son of Garga was Sini; and their descendants called Gargyas and Sainyas, although Kshatriyas by birth, became Brahmins. The son of Mahavirya was Urukshaya, who had three sons, Trayyaruna, Pushkarin and Kapi, the last of whom became a Brahmin. The son of Brihatkshatra was Suhotra, whose son was Hastin, who founded the city of Hastinapur. The sons of Hastin were Ajamidha, Dvimidha and Purumidha. One son of Ajamidha was Kanva, whose son was Medhatithi, his other son was Brihadshu, whose son *was* Brinadvasu; his son was Brihatkarman: his son was Jayadratha, his 'son was Vishvajit, his son was Senajit, whose sons were Ruchirashva, Kasya, Dridhadhanush, and Vasahanu. The son of Ruchiraswa was Prithusena: his son was Para; his son was Nipa; he had a hundred sons, of whom Samara, the principal, was the ruler of Kampilya. Samara had three sons, Para, Sampara, Sadashva. The son of Para was Prithu; his son was Sukriti; his son was Vibhratra; his son was Anuha, who married Kritvi, the daughter of Shuka (the son of Vyasa), and had by her Brahmadata; his son was Vishvaksena; his son was Udaksena; and his son was Bhallata. The son of Dvimidha was Yavinara; his son was Dhritimat; his son was Satyadhriti; his son was Dridhanemi; his son was Suparshva,' his son was Sumati; his son was Sannatimat; his son was Krita, to whom Hiranyanabha taught the philosophy of the Yoga, and he compiled twenty-four Sanhitas (or compendia) for the use of the eastern Brahmins, who study the Sama-Veda. The son of Krita was Ugrayudha, by whose prowess the Nipa race of Kshatriyas was destroyed; his son was Kshemya; his son was Suvira; his son was Nrivanjaya; his son was Bahuratha. These were all called Pauravas.

Ajamidha had a wife called Nilini, and by her he had a son named Nila: his son was Santi; his son was Susanti; his son was Purujanu; his son was Chakshu; his son was Haryashva, who had five sons. Mudgala, Srinjaya, Brihadishu. Pravira, and Kampilya. Their father said, "These my five (pancha) sons are able (alam) to protect the countries'; and hence they were termed the Panchalas. From Mudgala descended the Maudgalya Brahmins; he had also a son named Bahvashva, who had two children, twins, a son and daughter, Divodasa and Ahalya.

The son of Divodasa was Mitrayu; his son was Chyavana; his son was Sudasa; his son was Saudasa, also called Sahadeva; his son was Somaka; he had a hundred sons, of whom Jantu was the eldest, and Prishata the youngest. The son of Prishata was Drupada; his son was Dhrishtadyumna; his son was Drishtaketu.

Another son of Ajamidha was named Riksha; his son was Samvarana; his son was Kuru, who gave his name to the holy district Kurukshetra; his sons were Sudhanush, Parikshit, and many others. The son of Sudhanush was Suhotra; his son was Chyavana; his son was Kritaka; his son was Uparichara the Vasu, who had seven children Brihadratha, Pratyagra, Kushamba, Mavella, Matsya, and others. The son of Brihadratha was Kusagra; his son was Rishabha; his son was Pushpavat; his son was Satyadhrita; his son was Sudhanvan; and his son was Jantu. Brihadratha had another son, who being born in two parts, which were put together (*sandhita*) by a female fiend named Jara, he was denominated Jarasandha; his son was Sahadeva; his son was Somapi; his son was Srutasravas, These were kings of Magadha."

The immediate ancestry of the three Sudasas is put below in parallel columns to facilitate the settlement of the question whether they are one or three different persons:

	Status in Rig	Veda		Sudas in Vishnu Purana
VII, 18:22	VII, 18:23	VII 18:25	In the Sagar Family	In the Puru Family
Devavata Pijavana	Pijavana Sudas	Divodasa = Pijavana	Rituparna	Bahvashva
			Sarvakama	Divodasa
Sudas		Sudas		Mitrayu
			Sudas	Chyavana
			Saudasa =	Sudas

			Mitrasaha	Saudasa
				Somaka

From the table two things are as clear as day-light. First is that neither Sudas mentioned in the Vishnu Purana has anything to do with the Sudas mentioned in the Rig Veda. The second point which is clear is that if the Paijavana mentioned in the Mahabharata can be identified with anybody who lived in ancient times it can only be with Sudas mentioned in Rig Veda who was called Paijavana because he was the son of Pijavana which was another name of Divodasa.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_11

Fortunately, for me my conclusion is the same as that of Prof.Weber. In commenting upon the passage in the Shanti Parvan of the Mahabharata on which my thesis is based Prof.Weber
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_12 says :

"Here the remarkable tradition is recorded that Paijavana, i.e., Sudas who was so famous for his sacrifices and who is celebrated in the Rig Veda as the patron of Vishvamitra and enemy of Vasishtha, was a Shudra."

Prof.Weber unfortunately did not realize the full significance of this passage. This is another matter. It is enough for my purpose to find that he too thinks that the Paijavana of the Mahabharata is no other than Sudas of the Rig Veda.

III

What do we know about Sudas, the Paijavana?

The following particulars are available about him:

1. Sudas was neither Dasa nor Arya. Both the Dasas as well as the Aryas were his enemies.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_13 This means that he was a Vedic Aryan.
2. The father of Sudas was Divodasa. He seems to be the adopted son of Vadhryashva.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_14 Divodasa was a king. He fought

many battles against Turvasas and Yadus,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_15 Shambara,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_16 Parava, and Karanja mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_17 and Gungu.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_18 There was a war between Turyavana and Divodasa and his allies Ayu and Kutsa. The victory went to Turyavana.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_19

It seems that at one time Indra was against him particularly in the battle of Turyavana. His purohita was Bharadvaja,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_20 to whom Divodasa gave many gifts. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_21 Bharadvaja seems to have played the part of a traitor by joining Turyavana against Divodasa.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_22

There is no reference to the mother of Sudas. But there is a reference to the wife of Sudas. His wife's name is given as Sudevi. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_23 It is said that the Ashvins procured her for Sudas.

3. 3. *Sudas was a king and his coronation ceremony was performed by the Brahma-rishi, Vasistha. The Aitarreya Brahmana gives the following list of the kings who had the Mahabhisheka ceremony performed and the name of the Purohita who officiated at* [it.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_24](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_24)

"With this ceremony Sharyata, the son of Manu, was inaugurated by Chyavana, the son of Bhrigu. Thence Sharyata went conquering all over the earth, and sacrificed the sacrificial horse, and was even at the sacrificial session held by the gods, the house-father."

"With this ceremony Samasushama, the son of Vajaratna, inaugurated Shatanika, the son of Satrajit. Thence Shatanika went conquering everywhere over the whole earth up to its ends, and sacrificed the sacrificial horse."

"With this ceremony Parvata and Narada inaugurated Ambashthya. Thence Ambashthya went conquering everywhere over the whole earth up to its ends, and sacrificed the sacrificial horse."

"With this ceremony Parvata and Narada inaugurated Yudhamasraushti, the son of Ugrasena. Thence Yudhamasraushti went conquering everywhere over the whole earth up to its ends, and sacrificed the sacrificial horse."

"With this inauguration ceremony Kashyapa inaugurated Vishvakarma, the son of Bhuvana. Thence Vishvakarma went conquering everywhere over the whole earth up to its ends, and sacrificed the sacrificial horse." "They say that the earth sang to Vishvakarma the following stanza: "No mortal is allowed to give me away (as donation)."
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_250, Vishva-karma, thou hast given me, (therefore) I shall plunge into the midst of the sea. In vain was thy promise made to Kashyapa."

"With this ceremony Vasishtha inaugurated Sudas, the son of Pijavana. Thence Sudas went conquering everywhere over the whole earth up to its ends, and sacrificed the sacrificial horse."

"With this inauguration ceremony Samvarta, the son of Angiras, inaugurated Maruta, the son of Avikshit Thence Maruta went conquering everywhere over the whole earth up to *its* ends, and sacrificed the sacrificial horse."

In this list there is a specific mention of Sudas and of his coronation having been performed by Vasishtha.

Sudas was the heroin the famous Dasharajna Yuddha or the battle of the ten kings described in the *Rig Veda*. References to this famous battle occur in the various Suktas of the Seventh Mandala of the Rig Veda.

Sukta 83 says:

4."Indra and Varuna, you protected Sudas, overwhelming the yet unassailed Bheda with your fatal weapons; hear the prayers of these Tritsus in time of battle, so that my ministrations may have borne them fruit."

6."Both (Sudas and the Tritsus) call upon you two, (Indra and Varuna), in combats for the acquirement of wealth, when you defend Sudas,

together with the Tritsus, when attacked by the ten Rajas."

7."The ten confederated irreligious Rajas did not prevail, Indra and Varuna, against Sudas; the praise of the leaders (of rites), the offerers of sacrificial food, was fruitful; the gods were present at their sacrifices."

9."One of you destroys enemies in battle, the other ever protects religious observances; we invoke you. showerers (of benefits), with praises; bestow upon us, Indra and Varuna, felicity."

Sukta 33 says:

2."Disgracing (Pashadyumna), they brought from afar the fierce Indra, when drinking the ladle of Soma at his sacrifice, to (receive) the libation (of Sudas); Indra hastened from the effused Soma of Pashadyumna, the son of Vayata, to the Vasishthas."

3."In the same manner was he, (Sudas), enabled by them easily to cross the Sindhu river; in the same manner, through them he easily slew his foes; so in like manner, Vasishthas, through your prayers, did Indra defend Sudas in the war with the ten kings."

"Suffering from thirst, soliciting (rain), supported (by the Tritsus) in the war with the ten Rajas, (the Vasishthas) made Indra radiant as the sun; Indra heard (the praises) of Vasishtha glorifying him, and bestowed a spacious region on the Tritsus."

Sukta 19 says:

3."Undaunted (Indra), thou hast protected with all thy protecti- ons Sudas, the offerer of oblations; thou hast protected, in battles with enemies for the possession of the earth, TRASADASYU, the son of PURUKUTSA. and PURU."

6."Thy favours, Indra, to Sudas, the donor (of offerings), the presenter of oblations, are infinite;showerer (of benefits)I yoke for thee (thy vigorous) steeds; may our prayers, reach thee who art mighty, to whom many rites are addressed."

Sukta 18 of the Seventh Mandala says :

5."The adorable Indra made the well-known deep waters (of the Parushni) fordable for Sudas, and converted the vehement awakening imprecation of the sacrificer into the calumination of the rivers."

6."TURVASHA, who was preceding (at solen rites), diligent in sacrifice, (went to Sudas) for wealth; but like fishes restricted (to the element of water), the Bhrigus and Druhyus quickly assailed them; of these two everywhere going, the friend (of Sudas, Indra) rescued his friend."

7."Those who dress the oblation, those who pronounce auspicious words, those who abstain from penance, those who bear horns (in their hands), those who bestow happiness (on the world by sacrifice), glorify that Indra, who recovered the cattle of the Arya from the plunderers, who slew the enemies in battle."

8."The evil-disposed and stupid (enemies of Sudas), crossing the humble Parushni river, have broken down its banks;but he by his greatness pervades the earth, and KAVI. the son of CHAYAMANA, like a falling victim, sleeps (in death)."

9."The waters followed their regular course to the Parushni, nor (wandered) beyond it; the quick course (of the king) came to the accessible places, and INDRA made the idly-talking enemies, with their numerous progeny, subject among them (to Sudas)."

10."They who ride on parti-coloured cattle, (the Maruts), despatched by PRISHNI, and recalling the engagement made by them with their friend (Indra), came like cattle from the pasturage, when left without a herdsman; the exulting Niyut steeds brought them quickly (against the foe)."

11."The hero INDRA created the Maruts (for the assistance of the Raja), who, ambitious of fame, slew one and twenty of the men on the two banks (of the Parushni), as a well looking priest lops the sacred grass in the chamber of sacrifice."

12."Thou, the bearer of the thunderbolt, didst drown SHRUTA, KAVASHA, VRIDDHA, and afterwards DRUHYU in the waters; for they, Indra, who are devoted to thee, and glorify thee, preferring thy friendship, enjoy it."

13."Indra, in his might, quickly demolished all their strongholds, and their seven (kinds of) cities; he has given the dwelling of the son of ANU to TRITSU; may we, (by propitiating), (Indra) conquer in battle the ill-speaking man."

14."The warriors of the ANUS and DRUHYUS. intending (to carry off the) cattle, (hostile) to the pious (SUDAS), perished to the number of sixty-six thousand six hundred and sixty; such are all the glorious acts of INDRA."

15."These hostile Tritsus, ignorantly contending with INDRA, fled, routed as rapidly as rivers on a downward course, and being discomfited abandoned all their possessions to SUDAS."

16."INDRA has scattered over the earth the hostile rival of the hero (SUDAS), the senior of INDRA, the appropriator of the oblation; INDRA has baffled the wrath of the wrathful enemy, and the (foe) advancing on the way (against SUDAS) has taken the path of flight."

17."INDRA has effected a valuable (donation) by a pauper; he has slain an old lion by a goat; he has cut the angles of the sacrificial post with a needle; he has, given all the spoils (of the enemy) to SUDAS."

18."Thy numerous enemies, INDRA, have been reduced to subjugation,' effect at some time or other the subjugation of the turbulent BHEDA.who holds men praising thee as guilty of wickedness; hurl, INDRA, thy sharp thunderbolt against him."

19."The dwellers on the Yamuna and Tritsus glorified INDRA when he killed BHEDA in battle; the Ajas, the Shigrus, the Yakshas, offered to him as a sacrifice the heads of the horses killed in the combat"

20."Thy favours, INDRA, and thy bounties, whether old or new, cannot be counted like the (recurring) dawns; thou hast slain DEVAKA, the son of MANYAMANA and of thine own will hast cast down SHAMBARA from the vast (mountain)."

In this battle the kings who fought against Sudas were: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_26(1) Shinyu, (2) Turvasha, (3) Druhyu, (4) Kavasha, (5) Puru, (6) Anu, (7) Bheda, (8) Shambara, (9) Vaikama, (10) another Vaikama, (II) Yadu, (12) Matsya, (13) Paktha, (14) Bhalanas, (15) Aleena, (16) Vishanin, (17) Aja, (18) Shiva, (19) Shigru, (20) Yakshu, (21) Yudhyamadhi, (22) Yadva, (23) Devaka Manyamana, (24) Chayamana Kavi, (25) Sutuka, (26) Uchatha, (27) Shruta, (28) Vriddha, (29) Manyu, and (30) Prithu.

Obviously, the war was a much bigger war than its name indicates. The

war must have been a very great event in the history of the Indo-Aryans. No wonder the victorious Sudas became a great hero of his time. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_27 We do not know what exactly led to this war. Some indication is given by Rig Veda, vii.83.7, where the kings arrayed against Sudas are described as irreligious which suggests that it was probably a religious war.

4. 4. Sayanacharya, as well as tradition, declare the following hymns of the Rig Veda to have had the under-mentioned kings for their rishis :

"Vitahavya (or Bharadva)a x.9, Sindhudvipa, son of Ambarisha (or Trisiras, son of Tvashtri) x.75, Sindhukshit, son of Priyamedha; x.133, Sudas, son of Pijavana; x.134, Mandhatri, son of Yuvanasa; x.179, Sibi, son of Usinara, Pratardana, son of Divodasa and king of Kasi, and Vasumanas, son of Rohidasva; and x.148 is declared to have had Prithi Vainya."

It will be noticed that in this list there occurs the name of Sudas as a composer of Vedic hymns.

5. 5. Sudas performed Ashvamedha Yajna. There is reference to this in Rig Veda, iii.53.

9."The great *RISHI*, the generator of the gods, attracted by the deities, the overlooker of the leaders (at holy rites), *VISHVA-MITRA* arrested the watery stream when he sacrificed for *SUDAS*; *INDRA* with the *Kushikas*, was pleased."

11."Approach, *Kushikas*, the steed of *SUDAS*; animate (him), and let him loose to (win) riches (for the raja); for the king (of the gods), has slain *VRITRA* in the East, in the West, in the North, therefore let (*SUDAS*) worship him in the best (regions) of the earth."

6. 6. *Sudas was known for charity to the Brahmins who called him Atithigva (the doyen) of Philanthrophists. How the Brahmins have praised him for his philanthropy appears from the following references in the Rig Veda:*

i.47.6."0, impetuous Ashvins, possessing wealth in your car, bring sustenance to Sudas. Send to us from the (aerial) ocean, or the sky, the riches which are much coveted."

i.63.7."Thou didst then, 0,thundering Indra, war against, and shatter, the seven cities for Purukutsa, when thou, 0 king, didst without effort

hurl away distress from Sudas like a bunch of grass, and bestow wealth on Puru."

i. 112.19."Come, 0 Ashvins, with those succours whereby ye brought glorious power to Sudas."

vii. 19.3."Though, 0 fierce Indra, hast impetuously protected Sudas, who offered oblations, with every kind of succour. Thou hast preserved Trasadasyu the son of Purukutsa, and Puru in his conquest of land and in his slaughter of enemies."

vii.20.2"Indra growing in force slays Vritra; the hero protects him who praises him; he makes room for Sudas (or the liberal sacrificer- Sayana); he gives riches repeatedly to his worshippers."

vii.25.3."Let a hundred succours come to Sudas, a thousand desirable (gifts) and prosperity. Destroy the weapon of the murderous. Confer renown and wealth on us."

vii.32.10."No one can oppose or stop the chariot of Sudas. He whom Indra, whom the Marutas, protect, walks in a pasture filled with cattle."

vii.53.3."And ye, 0, Heaven and Earth, have many gifts of wealth for Sudas."

vii.60.8."Since Aditi, Mitra, and Varuna, afford secure protection to Sudas (or the liberal man), bestowing on him offspring—may we not, 0 mighty deities, commit any offence against the gods ... May Aryaman rid us of our enemies. (Grant) ye vigorous gods, a wide space to Sudas."

These are the biographical bits regarding Paijavana referred to in the Shanti Parvan of the Mahabharata gleaned from the most authentic source, namely, the Rig Veda. From the Rig Veda, we know that his real name was Sudas, that he was a Kshatriya. He was more than a Kshatriya. He was a king and a mighty king. To this, the Mahabharata adds a fresh and a new detail, namely that he was a Shudra. A Shudra to be an Aryan, a Shudra to be a Kshatriya and a Shudra to be a king!! Can there be a greater revelation? Can there be anything more revolutionary?

This search for biographical details may be closed with a discussion of three important questions: .Was Sudas an Aryan? If Sudas is,an Aryan what is the tribe to which he belonged? If Sudas is a Shudra, what does Shudra signify?

It might be well to begin with the second. For the determination of this question it is possible to derive some assistance from certain reference in the Rig Veda. The Rig Veda mentions many tribes, most important of which are Tritsus, Bharatas, Turvasas, Durhyus, Yadus, Purus and Anus. But according to the references in the Rig Veda there are only three with whom Sudas was connected. They are Purus, Tritsus and the Bharatas. It is enough to confine ourselves to these three and to find out if possible to which of these tribes he belonged. The most important stanzas bearing on the relation between Tritsus and Sudas are the Rig Veda, i.63.7; i.130.7; vii.18.15; vii.33.5; vii.33.6; vii.83:4,6.

In i.63,7, Divodasa is spoken of as the king of the Purus and in i.130.7, Divodasa is spoken of as Paurve, i.e., belonging to the Purus.

Rig Veda, vii.18.15 and vii.83.6, suggest that Sudas was not a Tritsu. The first suggests that Sudas raided the camp of Tritsus who ran away and Sudas took possession of their wealth. The second suggests that Tritsus and Sudas were on one side in the war against the ten kings, but they are shown as separate. But in vii.35.5 and in vii.83.4, Sudas becomes fully identified with Tritsus; indeed, in the former Sudas becomes a king of the Tritsus.

On this question of the relation between the Tritsus and the Bharatas and between them and Sudas, we have as our evidence Rig Veda, vii.33.6 and v. 16.4, 6, 19. According to the first, Tritsus are the same as the Bharatas. According to the second, Divodasa the father of Sudas is spoken of as belonging to the Bharatas.

From these references one thing is certain that the Purus, Tritsus and Bharatas were either different branches of one and the same folk or that they were different tribes, who in the course of time became one people, folk. This is not impossible. The only question is: assuming they were different, to whom did Sudas originally belong? To the Purus, the Tritsus or to the Bharatas? Having regard to the connection of the Purus and the Bharatas with Divodasa, his father, it seems natural to suppose that Sudas originally belonged either to the Purus or to the, Bharatas—which, is difficult to say.

Whether he belonged to the Purus or not, there is no doubt that Sudas belonged to the Bharatas if regard is had to the fact that his father Divodasa is spoken of as belonging to the Bharatas. The next question is: who were these Bharatas and whether they are the people after whom

India got the name Bharata Bhumi or the land of the Bharatas. This question is important because most people are not aware of the true facts. When Hindus talk of the Bharatas they have in mind the Daushyanti Bharatas, Bharatas descended from Dushyanta and Shakuntala and who fought the war which is described in the Mahabharata. Not only are they not aware of any other Bharatas but they believe that the name Bharata Bhumi which was given to India was given after the Daushyanti Bharatas.

There are two Bharatas quite distinct from each other. One tribe of the Bharatas are the Bharatas of the Rig Veda, who were descended from Manu and to whom Sudas belonged. The other tribe of Bharatas are the Daushyanti Bharatas. What is more important is that if India has been named Bharata Bhumi it is after the Bharatas of the Rig Veda and not after the Daushyanti Bharatas. This is made clear by the following stanzas from the Bhagavata

Purana:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_28

Priyamvadhō nama sutho manoh swayambhuvasya ha !

Thasyagnigrasthatho nabhitrishbhashcha suthasthathah !!

Avatheerana puthrashatham thasyasidrahaychaparagham !

Vikyatham varshamethaghyannaamnaa bharathamuthapram !!

"Manu, the son of Syavambhu, had a son named Priyamvada; his son was Agnidhra: his son was Nabhi: he had a son Rishabha. He had a hundred sons born to him, all learned in the Veda; of them, Bharata was the eldest, devoted to Narayana, by whose name this excellent land is known as Bharata."

This shows to what illustrious line of kings this Shudra Sudas belonged.

The next thing to find out is whether Sudas was an Aryan. The Bharatas were of course Aryans and therefore Sudas must have been an Aryan. If reference is had to Rig Veda, vii. 18.7, this connection with the Tritus to the Aryans seems to throw some doubt on his Aryan origin. This stanza says that Indra rescued the cows of the Aryas from the Tritus and killed the Tritus, thereby suggesting that the Tritus were the enemies of the Aryas. Griffiths is very much perturbed by the Tritus being shown as non-Aryans which is the result of a literal translation of the stanza, and to

avoid it he understands cows to mean comrade.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C1. Who were the Shudras PART II.htm - _msocom_29 This of course is unnecessary if one bears in mind that the Rig Veda contains the story of two sorts of Aryas, whether differing in race or religion, it is difficult to say. Interpreted in the light of this fact, all that the stanza means is that at the time when it was written the Tritsus had not become Aryans by religion. It does not mean that they were not Aryans by race. It is therefore indisputable that Sudas, whether taken as a Bharata or as a Tritsu was an Aryan.

And now to the last question, though it is by no means the least. What does Shudra signify? In the light of this new discovery that Sudas was a Shudra, the word now stands in a totally different light. To old scholars to whom the word was just the name of a servile and aboriginal class this new discovery must come as a surprise for which their past researches cannot possibly furnish an answer. As for myself, I am in no better position. The reason is that the social organisation of the Vedic Aryans has-yet to be studied. We know from the study of primitive societies that they are organised in groups and they act as groups. The groups are of various sons. There are clans, phratries, moieties and tribes. In some cases, the tribe is the primary unit, in others it is the clan, in others the phratry. In some cases tribes are sub-divided into clans. In other cases there are no clans. It is a single clanless tribe.

The clan embraces the descendants of a single ancestor held together by a sense of common descent. Clans often become associated through common social and ceremonial interests into major units, called phratries or brotherhoods of clans. The bond within the phratry may be relatively loose, that is, the association may not imply more than an informal feeling of preferential friendship. The phratry may become a moiety in which each clan is recognised as part of one of two major units. But moieties may occur without any sub-division, that is, the entire clan may consist of two clans. All these organisations whether it is a clan, a phratry, a moiety or a tribe, are all based on the tie of kinship.

The Vedic Aryans had no doubt some such forms of social organisation. That is clear from the nomenclature. As pointed out by Prof. Senart [:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C1. Who were the Shudras PART II.htm - _msocom_30](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C1. Who were the Shudras PART II.htm - _msocom_30)

"The Vedic hymns are all too indefinite concerning the details of external and social life. We at least see from them that the Aryan

population was divided into a number of tribes or small peoples (*janas*), subdivided into clans united by the ties of kinship (*visas*), which in their turn were split up into families. The terminology of the Rig Veda, is in this respect somewhat indecisive, but the general fact is clear. *Sajata*, that is to say, kinsman' or 'fellow in *Jati*,' of race, seems in the Atharva-Veda to denote fellow in clan (*vis*). *Jana*, which assumes a wider significance, recalls the Avestic equivalent of the clan, the *zantu*, and the *jati* or caste. A series of terms, *vra*, *vrijana*, *vraja*, *vrata*, appear to be synonyms or subdivisions either of the clan or of the tribes. The Aryan population then lived, at the epoch to which the hymns refer, under the rule of an organisation dominated by the traditions of the tribe and the lower or similar groupings. The very variety of names indicates that -this organisation was somewhat unsettled."

We have, however, no information to determine which of these corresponds to the clan, which to the phratry and which to the tribe. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_31 That being so, it is difficult to say whether Shudra was the name of a clan, a phratry or a tribe. It is, however, interesting to refer to the view of Prof. Weber when he comments on the passage from the Satapatha Brahmana (i.1.4.12) where it says that different modes of address should be adopted inviting the sacrificer to proceed with the sacrifice, addressing him as 'come' if he is a Brahmin, 'hasten hither' if he is a Kshatriya, 'hasten hither' if he is a Vaishya and 'run hither' if he is a Shudra. Prof. Weber says [:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_32](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_32)

"The entire passage is of great importance, as it shows (in opposition to what Roth says in the first Volume of this Journal, p. 83) that the Shudras were then admitted to the holy sacrifices of the Aryans, and understood their speech, even if they did not speak it. The latter point cannot certainly be assumed as a necessary consequence, but it is highly probable and I consequently incline to the view of those who regard the Shudras as an Aryan tribe which immigrated into India before the others."

His conclusion that the Shudras were Aryans hits the nail squarely on the head. The only point of doubt is whether the Shudras were a tribe. That they were Aryans and Kshatriyas is beyond doubt.

CHAPTER VIII

THE NUMBER OF VARNAS, THREE OR FOUR?

THAT there were from the very beginning four *Varnas* in the Indo-Aryan society is a view which is universally accepted by all classes of Hindus, and also by European scholars. If the thesis advanced in the last chapter, namely, that the Shudras were Kshatriyas is accepted, then it follows that this theory is wrong and that there was a time when there were only three *Varnas* in the Indo-Aryan society, viz.. Brahmins, Kshatriyas and Vaishyas. Thus, the thesis, while it solves one problem, at the same time creates another. Whether anybody else sees the importance of this problem or not, I do. Indeed, I am aware of the fact that unless I succeed in proving that there were originally only three *Varnas*, my thesis that the Shudras were Kshatriyas may not be said to be proved beyond the shadow of a doubt.

While it is unfortunate that I should have landed on a thesis, which, while holding out a promise of solving the problem, creates another, I feel fortunate in having strong and cogent evidence to show that there were originally only three *Varnas* among the Indo-Aryans.

The first piece of evidence I rely upon is that of the Rig Veda itself. There are some scholars who maintain that the Varna system did not exist in the age of the Rig Veda. This statement is based on the view that the Purusha Sukta is an interpolation which has taken place long after the Rig Veda was closed. Even accepting that the Purusha Sukta is a later interpolation, it is not possible to accept the statement that the Varna system did not exist in the time of the Rig Veda. Such a system is in open conflict with the text of the Rig Veda. For, the Rig Veda, apart from the Purusha Sukta, does mention Brahmins, Kshatriyas and Vaishyas not once but many times. The Brahmins are mentioned as a separate *Varna* fifteen times, Kshatriyas nine times. What is important is that the Rig Veda does not mention Shudra as a separate Varna. If Shudras were a separate *Varna* there is no reason why the Rig Veda should not have mentioned them. The true conclusion to be drawn from the Rig Veda is not that the Varna system did not exist, but that there were only three *Varnas* and that Shudras were not regarded as a fourth and a separate *Varna*.

The second piece of evidence I rely on is the testimony of the two Brahmanas, the Satapatha and the Taittiriya. Both speak of the creation of

three *Varnas* only. They do not speak of the creation of the Shudras as a separate.

The Satapatha Brahmana says
 :*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_33

11.1.4.11.—”(Uttering), 'butgh', Prajapati generated this earth. (Uttering) 'bhuvah' he generated the air, and (Utering) 'svah' he generated the sky. This universe is co-extensive with these worlds. (The fire) is placed with the whole. Saying 'bhuh', Prajapali generated the Brahman; saying 'bhuvah', he generated the Kshattra; (and saying) 'svah', he generated the Vis. The fire is placed with the whole. (Saying) 'bhuh', Prajapati generated himself; (saying) bhuvah', he generated offspring : saying 'svah', he generated animals. This world is so much as self, offspring, and animals. (The fire) is placed with the whole."

The Taittiriya Brahmana says

•mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_34

111.12.9.2.—”This entire (universe) has been created by Brahma. Men say that the Vaishya class was produced from *ric* verses. They say that the Yajur Veda is the womb from which the Kshattriya was born. The Sama Veda is the source from which the Brahmins sprang. This word the ancients declared to the ancients."

Here is my evidence. It consists of an inference from the Rig Veda and two statements from two Brahmanas which in point of authority are co-equal with the Vedas. For both are Shruti both say in definite and precise terms that there were only three *Varnas*. Both agree that the Shudras did not form a separate and a distinct *Varna*, much less the fourth *Varna*. There cannot, therefore, be better evidence in support of my contention that there were originally only three *Varnas* that the Shudras were only a part of the second *Varna*.

II

Such is my evidence. On the other side, there is, of course, the evidence contained in the Purusha Sukta of the Rig Veda, which maintains that

there were four *Varnas* from the very beginning. The question now is : which of the two should be accepted as the correct? How is this question to be decided? It cannot be decided by applying the rules of Mimamsa. If we did apply it, we will have to admit that both the statements, one in the Purusha Sukta that there were four *Varnas* and the statement in the two Brahmanas that there were three *Varnas*, are true. This is an absurd position. We must decide this matter in the light of the canons of historical criticism, such as sequence of time and intrinsic criticism, etc. The main question is whether the Purusha Sukta is a later composition added to the original Rig Veda. The question has been dealt with on the basis of the language of the Sukta as compared with the language of the rest of the Rig Veda. That it is a late production is the opinion of all scholars. This is what Colebrooke says

[:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C1. Who were the Shudras PART II.htm - _msocom_35](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C1. Who were the Shudras PART II.htm - _msocom_35)

"That remarkable hymn (the Purusha Sukta) is in language, metre, and style, very different from the rest of the prayers with which it is associated. It has a decidedly more modern tone; and must have been composed after the Sanskrit language had been refined, and its grammar and rhythm perfected. The internal evidence which it furnishes serves to demonstrate the important fact that the compilation of the Vedas, in their present arrangement, took place after the Sanskrit tongue had advanced from the rustic and irregular dialect in which the multitude of hymns and prayers of the Veda was composed, to the polished and sonorous language in which the mythological poems, sacred and profane (puranas and kavyas), have been written."

In the opinion of Prof. Max Muller

[:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C1. Who were the Shudras PART II.htm - _msocom_36](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C1. Who were the Shudras PART II.htm - _msocom_36)

"There can be little doubt, for instance, that the 90th hymn of the 10th book... is modern both in its character and in its diction. It is full of allusions to the sacrificial ceremonies, it uses technically philosophical terms, it mentions the three seasons in the order of Vasanta, spring, Grishma, summer and Sharad, autumn; it contains the only passage in the Rig Veda where the four castes are enumerated. The evidence of language for the modern date of this composition is equally strong. Grishma, for instance, the name for

the hot season, does not occur in any other hymn of the Rig Veda; and Vasanta also, the name of spring does not belong to the earliest vocabulary of the Vedic poets. It occurs but once more in the Rig Veda (x. 161.4), in a passage where the three seasons are mentioned in the order of Sharad, autumn; Hemanta, winter; and Vasanta, spring."

Prof. Weber observes

:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_37

"That the Purusha Sukta, considered as a hymn of the Rig Veda, is among the latest portions of that collection, is clearly perceptible from its contents. The fact that the Sama Samhita has not adopted any verse from it, is not without importance (compare what I have remarked in my Academical Prelections). The Naigeya school, indeed, appears (although it is not quite certain) to have extracted the first five verses in the seventh prapathaka of the first Archika, which is peculiar to it."

III

This is one line of argument. There is also another line of argument which also helps us to determine whether the Purusha Sukta is an earlier or later production. For this it is necessary to find out how many Samhitas of the Vedas have adopted the Purusha Sukta. Examining the different Vedas and the Samhitas, the position is as follows:

The Sama Veda produces only 5 verses from the Purusha Sukta. As to the White Yajur Veda, the Vajasaneyi Samhita includes it but the difference between the two is great. The Purusha Sukta, as it stands, in the Rig Veda, has only 16 verses. But the Purusha Sukta in the Vajasaneyi Samhita has 22 verses. Of the Black Yajur Veda there are three Samhitas available at present. But none of the three Samhitas, the Taittiriya, the Katha and the Maitrayani, gives any place to the Purusha Sukta. The Atharva Veda is the only Veda which contains a more or less exact reproduction of the Purusha Sukta of the Rig Veda.

The text of the Purusha Sukta, as it occurs in the different Vedas, is not

uniform. The six additional verses of the Vajasaneyi Samhita are special to it and are not to be found in the text as it occurs in the Rig Veda, the Sama Veda or the Atharva Veda. There is another difference which relates to verse 16. The 16th verse of the Rig Veda is to be found neither in the Atharva Veda nor in the Sama Veda nor in the Yajur Veda. Similarly, the 16th verse of the Atharva Veda is to be found neither in the Rig Veda nor in the Yajur Veda. Of the fifteen verses, which are common to the three Vedas, their texts are not identical. Nor is the order in which the verses stand in the three Vedas the same as may be seen from the following table :

<i>Yajur Veda</i>	<i>Rig Veda</i>	<i>Sama Veda</i>	<i>Atharva Veda</i>
1	1	3	1
2	2	5	4
3	3	6	3
4	4	4	2

* Means that these Verses are not to be found.

The point is that if the Purusha Sukta had been an old, hoary text, sanctified by ancient tradition, could the other Vedas have taken such a liberty with it? Could they have changed it and chopped it as they have done?

The place of the Purusha Sukta in the hymns of the different Vedas is also very significant. In the Rig Veda it occurs in the miscellaneous part and in the Atharva Veda it occurs in what is known as the supplementary part. If it was the earliest composition of the Rig Veda, why should it have been placed in such inconsequential collection? What do these points suggest? They suggest that :

- (1)(1) If the Purusha Sukta was not incorporated in the Taittiriya, Kathaka and Maitrayani Samhitas of the Black Yajur Veda, it

follows, that the Purusha Sukta was added to the Rig Veda after the Taittiriya Samhita, the Kathaka Samhita, the Maitrayana Samhita of the Black Yajur Veda.

- (2) (2) That it had to be put in the miscellaneous and supplementary portions of the Vedas shows that it was composed at a later stage.
- (3) (3) That the freedom which the authors of the different Samhitas took in adding, omitting and recording the verses shows that they did not regard it as an ancient hymn, which they were bound to reproduce in its exact original form.

These points go a long way in furnishing corroborative evidence in support of the views held by Prof. Max Muller and others that the Purusha Sukta is a later interpolation.

IV

The difference in the form of the stanzas in the Purusha Sukta is also very noteworthy. Anyone who reads the Purusha Sukta will find that except for these two verses, viz., 11 and 12, the whole of it is in the narrative form. But the two verses, which explain the origin of the four Varnas, are in the form of question and answer. The point is : Why should these verses be introduced in a question form breaking the narrative form? The only explanation is that the writer wanted to introduce a new matter and in a pointed manner. This means that not only the Purusha Sukta is a later addition to the Rig Veda, but these particular verses are much later than even the Purusha Sukta.

Some critics have gone to the length of saying that the Purusha Sukta is a forgery by the Brahmins to bolster up their claim to superiority. Priests are known to have committed many forgeries. The Donations of Constantine and Pseudo-Isidore Decretals are well known forgeries in the history of the Papacy. The Brahmins of India were not free from such machinations. How they changed the original word 'Agre' into 'Agne' to make Rig Veda give support to the burning of widows has been pointed out by no less an authority than Prof. Max, Muller. It is well-known how in the time of the East India Company a whole Smriti was fabricated to support the case of a plaintiff. There is, therefore, nothing surprising if the Brahmins did forge the Purusha Sukta, if not the whole, at least the two versus II and 12, at some later stage, long after the fourth *Varna* had come into being, with a view to give the system of *Chaturvarnya* the sanction of the Veda.

V

Is the Purusha Sukta earlier than the Brahmanas? This question is distinct and separate from the first. It may be that the Purusha Sukta belongs to the later part of the Rig Veda. Yet, if the Rig Veda as a whole is earlier than the Brahmanas, the Purusha Sukta would still be earlier than the Brahmanas. The question, therefore, needs to be separately considered.

It is Prof. Max Muller's view that in the growth of the Vedic literature the order was Vedas, then Brahmanas and thereafter the Sutras. If this proposition was adopted, it would mean that the Purusha Sukta must be earlier than the Brahmanas. Question is : Can Prof. Max Muller's proposition be accepted as absolute? If it was accepted as absolute, the proposition would lead to two conclusions:

- (1)(1) That in the time of the Rig Veda there were four *Varnas* and at the time of the Satapatha Brahmana they became three; or
- (2)(2) that the tradition is not completely recorded in the Satapatha Brahmana.

It is obvious that both these conclusions are absurd and must be rejected. The first is absurd on the face of it. The second is untenable because the theory of the evolution of *Varnas* by the two Brahmanas is different from that set out in the Purusha Sukta and is complete in itself. The absurdity of the result is inevitable if one were to take Max Muller's proposition as absolute. The proposition cannot be taken as absolute to mean that no Brahmana was composed until all the Samhitas had come into being. On the other hand, it is quite possible as pointed out by Professors Belvalkar and Ranade that most of these compositions are composite and synchronous and, therefore, one part of the Vedas can be earlier than another part and that a part of the Brahmanas can be earlier than parts of the Vedas. If this is a correct view then there is nothing inherently improbable in holding that the parts of the Satapatha Brahmana and of the Taittiriya Brahmana, which record the legend that there were at one time only three *Varnas*, are earlier than the Purusha Sukta of the Rig Veda.

What is the conclusion which follows from this examination of the Purusha Sukta? There is only one conclusion, that the Sukta is an addition to the Rig Veda made at a later stage and is, therefore, no argument that

there were four Varnas from the very beginning of the Aryan Society.

For the reasons given above, it will be seen that my thesis about the origin of the Shudras' creates no problem such as the one mentioned in the beginning of this Chapter. If it did appear to create a problem, it was because of the assumption that the Purusha Sukta was an authentic and genuine record of what it purports to say. That assumption has now been shown to be quite baseless. I, therefore, see no difficulty in concluding that there was a time when the Aryan Society had only three *Varnas* and the Shudras belonged to the second or the Kshatriya *Varna*.

CHAPTER IX

BRAHMINS *VERSUS* SHUDRAS

THE thesis that the Shudras were Kshatriyas and that if they became the fourth *Varna* it was because they were degraded to that position does not wholly solve the problem. It only raises another problem. This problem is why were the Shudras degraded?

The problem is new. It has never been raised before. The existing literature on the subject cannot, therefore, be expected to contain an answer. The question is raised by me for the first time. As it is a question on which my theory of the Shudras rests, the burden of giving a satisfactory answer must rest on me. I believe, I can give a satisfactory answer to this question. My answer is that the degradation of the Shudras is the result of a violent conflict between the Shudras and the Brahmins. Fortunately for me, there is abundant evidence of it.

I

There is direct evidence of a violent conflict between the Shudra king, Sudas and Vasishtha, the Brahmin rishi. The facts relating to this conflict however are stated in a very confused manner. In the narration which follows, I have made an attempt to state them in a neat and an orderly fashion.

To understand the nature of the conflict, it is necessary first to understand the relations between Vasishtha and Vishvamitra.

Vasishtha and Vishvamitra were enemies and were enemies first and enemies last. There was no incident to which one of them was a party in

which the other did not know himself as an opponent. As evidence of their enmity, I will refer to some of the episodes. The first one is that of Satyavrata otherwise called Trishanku. The story as told in the Harivamsha* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_40 is as follows:

"Meanwhile Vasishtha, from the relation subsisting between the king (Satyavrata's father) and himself, as disciple and spiritual preceptor, governed the city of Ayodhya, the country, and the interior apartments of the royal palace. But Satyavrata, whether thorough folly or the force of destiny, cherished constantly an increased indignation against Vasishtha, who for a (proper) reason had not interposed to prevent his exclusion from the royal power by his father." "The formulae of the marriage ceremonial are only binding,' said Satyavrata, 'when the seventh step has been taken, and this had not been done when I seized the damsel; still Vasishtha, who knows the precepts of the law, does not come to my aid.' Thus Satyavrata was incensed in his mind against Vasishtha, who, however had acted from a sense of what was right. Nor did Satyavrata understand (the propriety of) that silent penance imposed upon him by his father... When he had supported this arduous rite, (he supposed that) he had redeemed his family position. The venerable muni Vasishtha did not, however, (as has been said), prevent his father from setting him aside, but resolved to install his son as king. When the powerful prince Satyavrata had endured the penance for twelve years, he beheld, when he was without flesh to eat, the milch cow of Vasishtha which yielded all objects of desire, and under the influence of anger, delusion, and exhaustion, distressed by hunger, and failing in the ten duties he slew... and both partook of her flesh himself, and gave it to Vishvamitra's sons to eat. Vasishtha hearing of this, became incensed against him and imposed on him the name of Trishanku as he had committed three sins. On his return home, Vishvamitra was gratified mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_41 by the support which his wife had received, and offered Trishanku the choice of a boon. When this proposal was made, Trishanku chose his boon of ascending bodily to heaven. All apprehension from the twelve years' drought being now at an end, the muni (Vishvamitra) installed Trishanku in his father's kingdom and offered sacrifice on his behalf. The mighty Kaushika then, in spite of the resistance of the gods and of Vasishtha exalted the king alive to heaven."

The next episode in which they appear on opposite sides is that of

Harishchandra, the son of Trishanku. The story is told in the Vishnu Purana and in the Markandeya Purana. The following account is given mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_42 The story runs :

“On one occasion, when hunting, the king heard a sound of female lamentation which proceeded, it appears, from the sciences who were becoming mastered by the austere fervid sage Vishvamitra, in a way they had never been before by anyone else; and were consequently crying out in alarm at his superiority. For the fulfilment of his duty as a Kshatriya to defend the weak, and inspired by the god Ganesha, who had entered into him, Harishchandra exclaimed”What sinner is this who is binding fire in the hem of his garment, while I, his lord, am present, resplendent with force and fiery vigour? He shall to-day enter on his long sleep, pierced in all his limbs by arrows, which, by their discharge from my bow, illuminate all the quarters of the firmament.’ Vishvamitra was provoked by this address. In consequence of his wrath the Sciences instantly perished, and Harishchandra, trembling like the leaf of an ashvattha tree, submissively represented that he had merely done his duty as a king, which he defined as consisting in the bestowal of gifts on eminent Brahmins and other persons of slender means, the protection of the timid, and war against enemies. Vishvamitra hereupon demands a gift as a Brahmin intent upon receiving one. The king offers him whatsoever he may ask: Gold, his own son, wife, body, life, kingdom, good fortune. The saint first requires the present for the Rajasuya sacrifice. On this being promised, and still more offered, he asks for the empire of the whole earth, including everything but Harishchandra himself, his wife, and son, and his virtue which follows its possessor wherever he goes. Harishchandra joyfully agrees. Vishvamitra then requires him to strip off all his ornaments, to clothe himself in the bark of trees, and to quit the kingdom with his wife Shaivya and his son. When he is departing, the sage stops him and demands payment of his yet unpaid sacrificial fee. The king replies that he has only the persons of his wife, his son and himself left. Vishvamitra insists that he must nevertheless pay, and that unfulfilled promises of gifts to Brahmins bring destruction. The unfortunate prince, after being threatened with a curse, engages to make the payment in a month; and commences his journey with a wife unused to such fatigues, amid the universal lamentations of his subjects. While he lingers, listening to their affectionate remonstrances against his desertion of his kingdom,

Vishvamitra comes up, and being incensed at the delay and the king's apparent hesitation, strikes the queen with his staff, as she is dragged on by her husband. Harishchandra then proceeded with his wife *and* little son to Benares, imagining that the divine city, as the special property of Siva, could not be possessed by any mortal. Here he found the relentless Vishvamitra waiting for him, and ready to press his demand for the payment of his sacrificial gift, even before the expiration of the full period of grace. In this extremity, Shaivya the queen suggests with a sobbing voice that her husband should sell her. On hearing this proposal Harishchandra swoons, then recovers, utters lamentations and swoons again, and his wife seeing his sad condition, swoons also. While they are in a state of unconsciousness their famished child exclaims in distress. 'O, father, give me bread; O, mother, mother, give me food; hunger overpowers me and my tongue is parched.' At this moment Vishvamitra returns, and after recalling Harishchandra to consciousness by sprinkling water over him, again urges payment of the present. The king again swoons, and is again restored. The sage threatens to curse him if his engagement is not fulfilled by sunset. Being now pressed by his wife, the king agrees to sell her, adding, however. 'If my voice can utter such a wicked word, I do what the most inhuman wretches cannot perpetrate.' He then goes into the city, and in self-accusing language offers his queen for sale as a slave. A rich old Brahmin offers to buy her at a price corresponding to her value, to do his household work. Seeing his mother dragged away the child ran after her, his eyes dimmed with tears, and crying 'mother.' The Brahmin purchaser kicked him when he came up; but he would not let his mother go, and continued crying 'mother, mother.' The queen then said to the Brahmin, 'Be so kind, my master, as to buy also this child, as without him I shall prove to thee but a useless purchase. Be thus merciful to me in my wretchedness, unite me with my son, like a cow to her calf.' The Brahmin agrees : 'Take this money and give me the boy.' After the Brahmin had gone out of sight with his purchases. Vishvamitra again appeared and renewed his demands : and when the afflicted Harishchandra offered him the small sum he had obtained by the sale of his wife and son, he angrily replied. 'If, miserable Kshatriya, thou thinkest this a sacrificial gift befitting my deserts, thou shall soon behold the transcendent power of my ardent austere-fervour of my terrible majesty, and of my holy study,' Harishchandra promises an additional gift, and Vishvamitra allows him the remaining quarter of the day for its liquidation. On the terrified and afflicted prince offering himself for sale, in order to gain the means of

meeting this cruel demand, Dharma (Righteousness) appears in the form of a hideous and offensive chandala, and agrees to buy him at his own price, large or small. Harishchandra declines such a degrading servitude, and declares that he would rather be consumed by the fire of his persecutor's curse than submit to such a fate. Vishvamitra, however, again comes on the scene, asks why he does not accept the large sum offered by the Chandala, and when he pleads in excuse his descent 'from the solar race, threatens to fulminate a curse against him if he does not accept that method of meeting his liability. Harishchandra implores that he may be spared this extreme of degradation, and offers to become Vishvamitra's slave in payment of the residue of his debt; whereupon the sage rejoins, if thou art my slave, then I sell thee as such to the Chandala for a hundred millions of money.' The Chandala, delighted pays down the money, and carries off Harishchandra bound, beaten, confused, and afflicted, to his own place of abode. Harishchandra is sent by the Chandala to steal grave clothes in a cemetery and is told that he will receive two-sixths of the value for his hire; three-sixths going to his master, and one-sixth to the king. In this horrid spot, and in this degrading occupation he spent in great misery twelve months, which seemed to him like a hundred years. He then falls asleep and has a series of dreams suggested by the life he had been leading. After he awoke, his wife came to the cemetery to perform the obsequies of their son, who had died from the bite of a serpent. At first, the husband and wife did not recognise each other, from the change in appearance which had been wrought upon them both by their miseries. Harishchandra, however, soon discovered from the tenor of her lamentations that it is his wife, and falls into a swoon; as the queen does also when she recognises her husband. When consciousness returns they both break out into lamentations, the father bewailing in a touching strain the loss of his son, and the wife, the degradation of the king. She then falls on his neck, embraces him and asks 'whether all this is a dream, or a reality, as she is utterly bewildered'; and adds, that "if it be a reality, then righteousness is unavailing to those who practise it." After hesitating to devote himself to death on his son's funeral pyre without receiving his master's leave. Harishchandra resolves to do so, braving all the consequences and consoling himself with the hopeful anticipation. If I have given gifts and offered sacrifices and gratified my religious teachers, then may I be reunited with my son and with thee (my wife) in another world.' The queen determines to die in the same manner. When Harishchandra, after placing his son's body on the funeral pyre, is

meditating on the Lord Hari Narayana Krishna, the supreme spirit, all the gods arrive, headed by Dharma (Righteousness), and accompanied by Vishvamitra. Dharma entreats the king to desist from his rash intention; and Indra announces to him that, he, his wife, and son have conquered heaven by their good works. Ambrosia, the antidote of death, and flowers are rained by the gods from the sky; and the king's son is restored to life and the bloom of youth. The king adorned with celestial clothing and garlands, and the queen, embrace their son. Harishchandra, however, declares that he cannot go to heaven till he has received his master the Chandala's permission, and has paid him a ransom. Dharma then reveals to the king that it was he himself who had miraculously assumed the form of a Chandala. The king next objects that he cannot depart unless his faithful subjects, who are sharers in his merits, are allowed to accompany him to heaven, at least for one day. This request is granted by Indra; and after Vishvamitra has inaugurated Rohitashva the king's son to be his successor. Harishchandra, his friends and followers, all ascend in company to heaven. Even after this great consummation, however, Vasishtha, the family priest of Harishchandra, hearing, at the end of a twelve years' abode in the waters of the Ganges, an account of all that has occurred, becomes vehemently incensed at the humiliation inflicted on the excellent monarch, whose virtues and devotion to the gods and Brahmins he celebrates, declares that his indignation had not been so greatly roused even when his own hundred sons had been slain by Vishvamitra, and in the following words dooms the latter to be transformed into a crane : 'Wherefore that wicked man, enemy of the Brahmins, smitten by my curse, shall be expelled from the society of intelligent beings, and losing his understanding shall be transformed into a Baka.' Vishvamitra reciprocates the curse, and changes Vasishtha into a bird of the species called Ari. In their new shapes the two have a furious fight, the Ari being of the portentous height of two thousand yojanas= 18,000 miles, and the Baka of 3090 yojanas. They first assail each other with their wings; then the Baka smites his antagonist in the same manner, while the Ari strikes with his talons. Falling mountains, overturned by the blasts of wind raised by the flapping of their wings, shake the whole earth, the waters of the ocean overflow, the earth itself, thrown off its perpendicular slopes downwards to Patala, the lower regions. Many creatures perished by these various convulsions. Attracted by the dire disorder, Brahma arrives, attended by all the gods, on the spot, and commands the combatants to desist from their fray. They were too fiercely infuriated to

regard this injunction; but Brahma put an end to the conflict by restoring them to their natural forms and counselling them to be reconciled."

The next episode in which they came in as opponents is connected with Ambarisha, king of Ayodhya :

"The story mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C1. Who were the Shudras PART II.htm - _msocom_43 relates that Ambarisha was engaged in performing a sacrifice, when Indra carried away the victim. The priest said that this ill-omened event had occurred owing to the king's bad administration; and would call for a great expiation, unless a human victim could be produced. After a long search the royal-rishi (Ambarisha) came upon the Brahmin rishi, Richika, a descendant of Bhrigu, and asked him to sell one of his sons for a victim, at the price of a hundred thousand cows. Richika answered that he would not sell his eldest son and his wife added that she would not sell the youngest; 'youngest sons' she observed, 'being generally the favourites of their mothers.' The second son, Shunasshepa, then said that in that case he regarded himself as the one who was to be sold, and desired the king to remove him. The hundred thousand cows, with ten millions of gold pieces and heaps of jewels, were paid down and Shunasshepa carried away. As they were passing through Pushkara, Shunasshepa beheld his maternal uncle Vishvamitra who was engaged in austerities there with other rishis, threw himself into his arms, and implored his assistance, urging his orphan, friendless and helpless state, as claims on the sage's benevolence. Vishvamitra soothed him; and pressed his own sons to offer themselves as victims in the room of Shunasshepa. This proposition met with no favour from Madhushyanda and the other sons of the royal hermit, who answered with haughtiness and derision: 'How is it that thou sacrificest thine own sons and seekest to rescue those of others? We look upon this as wrong, and like the eating of one's own flesh. 'The sage was exceedingly wroth at this disregard of his injunction, and doomed his sons to be born in the most degraded classes, like Vasishtha's sons, and to eat dog's flesh, for a thousand years. He then said to Shunasshepa: 'When thou art bound with hallowed cords, decked with a red arland, and anointed with unguents and fastened to the sacrificial post of Vishnu, then address thyself to Agni, and sing these two divine verses (gathas), at the sacrifice of Ambarisha: then shall thou attain the fulfilment (of thy desire)'. Being furnished with the two gathas, Shunasshepa proposed at once to king Ambarisha that they should set out for their destination.

When bound at the stake to be immolated, dressed in a red garment, he celebrated the two gods, Indra and his younger brother (Vishnu), with the excellent verses. The thousand-eyed (Indra) was pleased with the secret hymn; and bestowed long life on Shunasshepa."

The last episode recorded in which the two had ranged themselves on opposite sides is connected with king Kalmashapada. The episode is recorded in the Adi Parvan of the Mahabharata:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_44

"Kalmashapada was a king of the race of Ikshvaku. Vishvamitra wished to be employed by him as his officiating priest; but the king preferred Vasishtha. It happened however that the king went out to hunt, and after having killed a large quantity of games, he became very much fatigued, as well as hungry and thirsty. Meeting Shakti, the eldest of Vasishtha's hundred sons, on the road, he ordered him to get out of his way. The priest civilly replied: 'The path is mine, O king; this is the immemorial law; in all observations the king must cede the way to the Brahmin.' Neither party would yield, and the dispute waxing warmer, the king struck the muni with his whip. The muni, resorting to the usual expedient of offended sages, by a curse doomed the king to become a man-eater. It happened that at that time enmity existed between Vishvamitra and Vasishtha on account of their respective claims to be priest to Kalmashapada. Vishvamitra had followed the king; and approached while he was disputing with Shakti. Perceiving, however, the son of his rival Vasishtha, Vishvamitra made himself invisible, and passed them, catching this opportunity. The king began to implore Shakti's clemency; but Vishvamitra wishing to prevent their reconciliation, commanded a Rakshasa (a man-devouring demon) to enter into the king. Owing to the conjoint influence of the Brahman-rishi's curse, and Vishvamitra's command, the demon obeyed the injunction. Perceiving that his object was gained, Vishvamitra left things to take their course, and absented himself from the country. The king having happened to meet a hungry Brahmin, and sent him, by the hand of his cook (who could procure nothing else), some human flesh to eat, was cursed by him also to the same effect as by Shakti. The curse, being now augmented in force, took effect, and Shakti himself was the first victim, being eaten up by the king. The same fate befell all the other sons of Vasishtha at the instigation of Vishvamitra. Perceiving Shakti to be dead, Vishvamitra again and again incited the Rakshasa against the

sons of Vasishtha and accordingly the furious demon devoured those of his sons who were younger than Shakti as a lion eats up the small beasts of the forest. On hearing the destruction of his sons by Vishvamitra, Vasishtha supported his affliction as the great mountain sustains the earth. He meditated his own destruction, but never thought of exterminating the Kaushikas. This divine sage hurled himself from the summit of Meru, but fell upon the rocks as if on a heap of cotton. Escaping alive from his fall, he entered a glowing fire in the forest; but the fire, though fiercely blazing, not only failed to bum him, but seemed perfectly cool. He next threw himself into the sea with a heavy stone attached to his neck; but was cast up by the waves on the dry land. He then went home to his hermitage; but seeing it empty and desolate, he was again overcome by grief and sent out and seeing the river Vipasa which was swollen by the recent rains, and sweeping along many trees torn from its banks, he conceived the design of drowning himself into its waters; he accordingly tied himself firmly with cords, and threw himself in; but the river severing his bonds, deposited him unbound (Vipasa) on dry land ; whence the name of the stream, as imposed by the sage. He afterwards saw and threw himself into the dreadful Satadru (Sutlej), which was full of alligators, etc., and derived its name rushing away in a hundred directions on seeing the Brahmin brilliant as fire. In consequence of this, he was once more stranded; and seeing that he could not kill himself, he went back to his hermitage."

There are particular instances in which Vasishtha and Vishvamitra had come into conflict with each other. But there was more than these occasional conflicts between the two. There was general enmity between them. This general enmity was of a mortal kind so much so that Vishvamitra wanted even to murder Vasishtha as will be seen from the Shalyaparvan of the Mahabharata. Says the author of the Mahabharata :mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_45

"There existed a great enmity, arising from rivalry in their austerities, between Vishvamitra and the Brahmin rishi Vasishtha. Vasishtha had an extensive hermitage in Sthanutirtha, to the east of which was Vishvamitra's. These two great ascetis were every day exhibiting intense emulation in regard to their respective austerities. But Vishvamitra beholding the might of Vasishtha was the most chagrined; and fell into deep thought. The idea of this sage, constant in duty, was the following : This river Sarasvati will speedily bring to me on her current the austere

Vasishtha, the most eminent of all utterers of prayers. When that most excellent Brahmin has come, I shall most assuredly kill him.' Having thus determined, the divine sage Vishvamitra, his eyes reddened by anger, called to mind the chief of rivers. She being thus the subject of his thoughts became very anxious, as she knew him to be *very* powerful and very irascible. Then trembling, pallid and with joined hands, the Saraswati stood before the chief of munis like a woman whose husband has been slain; she was greatly distressed, and said to him 'what shall I do?' The incensed muni replied, 'Bring Vasishtha hither speedily, that I may slay him.' The lotus-eyed goddess, joining her hands trembled in great fear, like a creeping plant agitated by the wind. Vishvamitra, however, although he saw her condition, repeated his command. The Saraswati, who knew how sinful was his design, and that the might of Vasishtha was unequalled, went trembling and in great dread of being cursed by both the sages, to Vasishtha and told him what his rival had said. Vasishtha seeing her emaciated, pale and anxious, spoke thus. Deliver thyself, o chief of rivers; carry me unhesitatingly to Vishvamitra, lest he curse thee.' Hearing these words of the merciful sage, the Saraswati considered how she could act most wisely. She reflected, 'Vasishtha has always shown me great kindness, I must seek his welfare.' Then observing the Kaushika sage praying and sacrificing on her brink, she regarded that as a good opportunity, *and* swept away the bank by the force of her current. In this way the son of Mitra and Varuna (Vasishtha) was carried down; and while he was being borne along, he thus celebrated the river. Thou, o Saraswati, issued from the lake of Brahma, and pervadest the whole world with thy excellent streams. Residing in the sky, thou dischargest water into the clouds. Thou alone art all waters. By thee we study.' Thou art nourishment, radiance, fame, perfection, intellect, light. Thou art speech, thou art svaha; this world is subject to thee. Thou, in fourfold form, dwellest in all creatures.' Beholding Vasishtha brought near by the Saraswati, Vishvamitra searched for a weapon with which to make an end of him. Perceiving his anger, and dreading lest Brahmanicide should ensue, the river promptly carried away, Vasishtha in an easterly direction thus fulfilling the commands of both sages, but eluding Vishvamitra. Seeing Vasishtha so carried away. Vishvamitra, impatient and enraged by vexation, said to her, 'Since thou, o chief of rivers, has eluded me, and hast receded, roll in waves of blood acceptable to the chief of demons' (which are fabled to gloat on blood). The Saraswati being thus cursed, flowed for a year in a stream mingled with blood. Rakshasas came to the place of pilgrimage

where Vasishtha had been swept away, and revelled in drinking to satiety the bloody stream in security, dancing and laughing, as if they had conquered heaven. Some rishis who arrived at the spot some time after were horrified to see the blood-stained water, and the Rakshasas quaffing it, and made the most strenuous efforts to rescue the Sarasvati."

The enmity between Vasishtha and Vishvamitra was not an enmity between two priests. It was an enmity between a Brahmin priest and a Kshatriya priest. Vasishtha was a Brahmin. Vishvamitra was a Kshatriya. He was a Kshatriya of royal lineage. In the Rig Veda (iii.33.11) Vishvamitra is spoken of as the son of Klishika. The Vishnu Puranam mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_46 gives further details about Vishvamitra. It says that Vishvamitra was the son of Gadhi who was descended from king Pururavas. This is confirmed by the Harivamsha. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_47 From the Rig Veda (iii : 1 : 21) we know that the family of Vishvamitra has been keeping 'fire' kindled in every generation. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_48 We also know from the Rig Veda that Vishvamitra was the author of many hymns of that Veda and was admitted to be a Rajarishi. He was the author of the hymn which is held to be the holiest in the whole of the Vedas namely the Gayatri hymn in the Rig Veda (iii.62.10). Another important fact we know about him is that he was a Kshatriya and his family belonged to the clan of the Bharatas. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_49

It seems that about this time a dispute was going on between Brahmins and Kshatriyas on the following points :

- (1) (1) The right to receive gifts. Gift means payment made without work. The contention of the Brahmins was that nobody could receive gifts. To receive gifts was the right of the Brahmins *only*. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_50
- (2) (2) The right to teach the Vedas. The Brahmins' contention was that the Kshatriya had only the right to study the Vedas. He had no right to teach the Vedas. It was the privilege of the Brahmins only.
- (3) (3) The right to officiate at a sacrifice. On this point the Brahmins'

contention was that Kshatriya had the right to perform sacrifices, but he had no right to officiate as a purohit (priest) at a sacrifice. That was the privilege of the Brahmins.

What is important to note is that even in disputes on these points and particularly on the third point they did not fail to play their part as the opponents of each other. This is confirmed by the story of Trishanku narrated in the Ramayanamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_51 and which runs as follows:

"King Trishanku, one of Ikshvaku's descendants, had conceived the design of celebrating a sacrifice by virtue of which he should ascend bodily to heaven. As Vasishtha on being summoned, declared that the thing was impossible (*asakya*), Trishanku travelled to the south, where the sage's hundred sons were engaged in austerities, and applied to them to do what their father had declined. Though he addressed them with the greatest reverence and humility, and added that the Ikshvakus regarded their family-priests as their highest resource in difficulties, and that, after their father, he himself looked to them as his tutelary deities,' he received from the haughty priests the following rebuke for his presumption : "Fool, thou hast been refused by the truth-speaking preceptor. How is it that, disregarding his authority thou hast resorted to another school (shakha)? The family-priest is the highest oracle of all the Ikshvakus; and the command of that veracious personage cannot be transgressed. Vasishtha, the divine rishi, has declared that 'the thing cannot be : ' how can we undertake the sacrifice? Thou art foolish, king; return to thy capital. The divine (Vasishtha) is competent to act as priest of the three works; how can we shew him disrespect?"

Trishanku then gave them to understand, that as his preceptor and "his preceptor's sons had declined compliance with his requests, he should think of some other expedient" In consequence of his venturing to express this presumptuous intention, they condemned him by their imprecation to become a Chandala. As this curse soon took effect, and the unhappy king's form was changed into that of a degraded outcast, he resorted to Vishvamitra (who, as we have seen, was also dwelling at this period in the south), enlarging on his own virtues and piety, and bewailing his fate. Vishvamitra commiserated his condition and promised to sacrifice on his behalf, and exalt him to heaven in the same Chandala form to which he had been condemned by his preceptor's curse." Heaven is now as good as in the possession, since thou hast resorted to the son of Kushika." "He then directed that preparations should be made for the

sacrifice, and that all the rishis, including the family of Vasishtha, should be invited to the ceremony.

The disciples of Vishvamitra who had conveyed his message, reported the result on their return in these words: "Having heard your message, all the Brahmins are assembling in all the countries, and have arrived, excepting Mahodaya (Vasishtha). Hear what dreadful words those hundred Vasishthas, their voices quivering with rage, have uttered: 'How can the gods and rishis consume the oblation at the sacrifice of that man, especially if he be a Chandala, for whom a Kshatriya is officiating priest? How can illustrious Brahmins ascended to heaven, after eating the food of a Chandala, and being entertained by Vishvamitra?' "These ruthless words all the Vasishthas, together with Mahodaya, uttered, their eyes inflamed with anger." Vishvamitra who was greatly incensed on receiving this message, by a curse doomed the sons of Vasishtha to be reduced to ashes, and reborn as degraded outcasts (*mritapah*), for seven hundred births, and Mahodaya to become a Nishada.

Knowing that this curse had taken effect Vishvamitra then, after eulogizing Trishanku, proposed to the assembled rishis that the sacrifice should be celebrated. To this they assented, being actuated by fear of the terrible sage's wrath, Vishvamitra himself officiated at the sacrifice as Yajaka; and the other rishis as priests (*ritvijah*) (with other functions) performed all the ceremonies."

In this dispute between Vasishtha and Vishvamitra, Sudas seems to have played an important part. Vasishtha was the family priest of Sudas. It was Vasishtha who performed his coronation ceremony. It was Vasishtha who helped him to win the battle against the ten kings. Notwithstanding this, Sudas removed Vasishtha from office. In his place he appointed Vishvamitra as his purohita mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_52 who performed yajna for Sudas. This is the first deed of Sudas which created enmity between Sudas and Vasishtha. There was another deed which Sudas committed which widened and intensified the enmity. He threw into fire Shakti the son of Vasishtha and burned him alive. The story is reported in the Satyayana Brahmana. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_53 The Satyayana Brahmana does not give the reason for such an atrocious act. Some light is thrown on it by Shadgurushishya mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_54 in his Commentary on Katyayana's Anukramanika to the Rig Veda. According to Shadgurushishya, a sacrifice

was performed by Sudas at which there was a sort of public debate between Vishvamitra and Shakti, the son of Vasishtha and in this debate, to use the words of Shadgurushishya:

"The power and speech of Vishvamitra were completely vanquished by Shakti, son of Vasishtha; and the son of Gadhi (Vishvamitra) being so overcome, became dejected."

Here is the reason why Sudas threw Shakti into fire. Obviously, Sudas did it to avenge the dishonour and disgrace caused to Vishvamitra. Nothing could avert a deadly enmity growing up between Sudas and Vasishtha.

This enmity does not seem to have ended with Sudas and Vasishtha. It appears to have spread to their sons. This is supported by the Taittiriya Samhita which says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_55

"Vasishtha, when his son had been slain, desired, 'May I obtain offspring; may I overcome the Saudasas.' He beheld this *ekasmannapanchasa*, he took it and sacrificed with it. In consequence he obtained offspring, and overcame the Saudasas."

This is confirmed by the Kaushitaki Brahmanam mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_56 which says :

"Vasishtha, when his son had been slain, desired, 'May I be fruitful in offspring and cattle and overcome the Saudasas. He beheld this form of offering, the Vasishtha-sacrifice; and having performed it, he overcame the Saudasas. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_57"

II

The conflict between Sudas and Vasishtha is not the only conflict between kings and the Brahmins. The Puranas record other conflicts also between kings and Brahmins. It is desirable to assemble them here. The first relates to king Vena. The story of his conflict with Brahmins has been told by various authorities. The following account mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_58 is taken from the Harivamsa :

"There was formerly a Prajapati (Lord of creatures), a protector of righteousness called Anga, of the race of Atri, and resembling him in power. His son was the Prajapati Vena who was but indifferently skilled in duty, and was born of Sunita, the daughter of Mrityu. This son of the daughter of Kala (Death), owing to the taint derived from his maternal grandfather, threw his duties behind his back, and lived in covetousness under the influence of desire. This king established an irreligious system of conduct; transgressing the ordinances of the Veda, he was devoted to lawlessness. In his reign men lived without study of the sacred books and without the Vashatkara, and the gods had no Soma libations to drink at sacrifices. 'No sacrifice or oblation shall be offered'— such was the ruthless determination of that Prajapati, as the time of his destruction approached. I,' he declared, ' am the object, and the performer of sacrifice, and the sacrifice itself; it is to me that sacrifice should be presented, and oblations offered.' This transgressor of the rules of duty, who arrogated to himself what was not his due, was then addressed by all the great rishis headed by Marichi: 'We are about to consecrate ourselves for a ceremony which shall last for many years; *practise* not unrighteousness, Vena; this is not the eternal rule of duty. Thou art in very deed a Prajapati of Atri's race, and thou hast engaged to protect thy subjects.' The foolish Vena, ignorant of what was right, laughingly answered those great rishis, who had so addressed him; 'who but myself is the ordainer of duty? or whom ought I to obey? Who on earth equals me in sacred knowledge, in prowess, in austere fervour, in truth? Ye, who are deluded and senseless, know not that I am the source of all beings and duties. Hesitate not to believe that I, if I willed, could burn up the earth, or deluge it with water, or close up heaven and earth.' When owing to his delusion and arrogance Vena could not be governed, then the mighty rishis becoming incensed, seized the vigorous and struggling king, and rubbed his left thigh. From this thigh, so rubbed, was produced a black man, very short in stature, who, being alarmed, stood with joined hands. Seeing that he was agitated, Atri said to him 'Sit down' (*nishida*). He became the founder of the race of the Nishadas, and also progenitor of the Dhivaras (fisherman), who sprang from the corruption of Vena."

The next king who came in conflict with the Brahmins was Pururavas. This Pururavas is the son of Ila and grandson of Manu Vaivastava. The details of his conflict with the Brahmins are given in the Adi Parvan of the Mahabharata :mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C1. [Who were the Shudras PART II.htm - _msocom_59](#)

"Subsequently, the wise Pururavas was born of Ila, who, as we have heard, was both his father and his mother. Ruling over the thirteen islands of the ocean, and surrounded by beings who were all superhuman, himself a man of great renown, Pururavas, intoxicated by his prowess, engaged in a conflict with the Brahmins, and robbed them of their jewels, although they loudly remonstrated. Sanatkumara came from Brahma's heaven, and addressed to him an admonition, which, however, he did not regard. Being then straightaway cursed by the incensed rishis, he perished, this covetous monarch, who, through pride of power, had lost his understanding."

The third king in this series is Nahusha. This Nahusha is the grandson of Pururavas, the account of whose conflict with the Brahmins has been recounted above. The story of Nahusha and his conflict with the Brahmins has been told in two places in the Mahabharata, once in the Vanaparvan and again in the Udyogaparvan. The account, which follows, is taken from the Udyogaparvan.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_60It says:

After his slaughter of the demon Vritra, Indra became alarmed at the idea of having taken the life of a Brahmin (for Vritra was regarded as such), and hid himself in the waters. In consequence of the disappearance of the king of the gods, all affairs, celestial as well as terrestrial, fell into confusion. The rishis and gods then applied to Nahusha to be their king. After first excusing himself on the plea of want of power, Nahusha at length, in compliance with their solicitations, accepted the high function. Up to the period of his elevation he had led a virtuous life, but he now became addicted to amusement and sensual pleasure; and even aspired to the possession of Indrani, Indra's wife, whom he had happened to see. The queen resorted to the Angiras Brihaspati, the preceptor of the gods who engaged to protect her. Nahusha was greatly incensed on hearing of this interference; but the gods endeavoured to pacify him, and pointed out the immorality of appropriating another person's wife. Nahusha, however, would listen to no remonstrance, and insisted that in his adulterous designs he was no worse than Indra himself. The renowned Ahalya, a rish's wife, was formerly corrupted by Indra in her husband's lifetime. Why was he not prevented by you? And many barbarous acts, and unrighteous deeds, and frauds were perpetrated of old by Indra; why was he not prevented by you?' The gods, urged by Nahusha, went to bring Indram; but Brihaspati would not give her up. At his

recommendation, however, she solicited Nahusha for some delay, till she should ascertain what had become of her husband. This request was granted. Indrani now went in search of her husband; and by the help of Upashruti (the goddess of night and revealer of secrets) discovered him existing in a very subtle form in the stem of a lotus growing in a lake situated in a continent within an ocean north of the Himalayas. She made known to him the wicked intentions of Nahusha, and entreated him to exert his power, rescue her from danger and resume his dominion. Indra declined any immediate interposition on the plea of Nahusha's superior strength; but suggested to his wife a device by which the usurper might be hurled from his position. She was recommended to say to Nahusha that if he would visit her on a celestial vehicle borne by rishis, she would with pleasure submit herself to him.'

The queen of the gods accordingly made this proposal: 'I desire for thee, king of the gods, a vehicle hitherto unknown, such as neither Vishnu nor Rudra, nor the Asuras, nor the Rakshasas employ. Let the eminent rishis, all united, bear thee, lord, in a car; this idea pleases me'. Nahusha receives favourably this appeal to his vanity, and in the course of his reply thus gives utterance to his self-congratulation; 'He is a personage of no mean prowess who makes the munis his bearers. I am a fervid devotee of great might. Lord of the past, the future, and the present. If I were angry, the world would no longer stand; on me everything depends. Wherefore, goddess, I shall, without doubt, carry out what you propose. The seven rishis and all the Brahmin rishis, shall carry me. Behold, beautiful goddess, my majesty and my prosperity.'

The narrative goes on :

Accordingly this wicked being, irreligious, violent, intoxicated by the force of conceit, and arbitrary in his conduct, attached to his car the rishis, who submitted to his commands, and compelled them to bear him. Indrani then again resorts to Brihaspati who assures her that vengeance will soon overtake Nahusha for his presumption; and promises that he will himself perform a sacrifice with a view to the destruction of the oppressor, and the discovery of Indra's lurking place. Agni is then sent to discover and bring Indra to Brihaspati and the latter, on Indra's arrival, informs him of all that had occurred during his absence. While Indra, with Kubera, Yama, Soma and Varuna was devising means for the destruction of Nahusha, the sage Agastya came up, congratulated Indra on the fall of his rival, and proceeded to relate how it had occurred.

Wearied with carrying the sinner, Nahusha, the eminent divine-rishis,

and the spotless Brahmin-rishis, asked that divine personage, Nahusha (to solve) a difficulty; 'Dost thou, O Vasava, most excellent of conquerors, regard as authoritative or not those Brahmana texts which are recited at the immolation of king?' 'No', replied Nahusha, whose understanding was enveloped in darkness. The rishis rejoined; Engaged in unrighteousness, thou attainest not unto righteousness; these tests, which were formerly uttered by great rishis, are regarded by us as authoritative.' Then (proceeds Agastya) disputing with the munis, Nahusha impelled by unrighteousness touched me on the head with his foot. In consequence of this, the king's glory was smitten and his prosperity departed. When he had instantly become agitated and oppressed with fear, I said to him, 'Since thou, a fool, condemnest that sacred text, always held in honour, which has been composed by former sages, and employed by Brahmin-rishis and hast touched my head with thy foot, and employest the Brahma-like and irresistible rishis as bearers to carry thee, therefore, shorn of thy lustre and all thy merit exhausted, sink down, sinner, degraded from heaven to earth. For ten thousand years thou shalt crawl in the form of a huge serpent. When that period is completed, thou shalt again ascend to heaven.' So fell that wicked wretch from the sovereignty of the gods. Happily, O Indra, we shall now prosper, for the enemy of the Brahmins has been smitten. Take possession of the three worlds, and protect their inhabitants, O husband of Shachi (Indrani), subduing the senses, overcoming thine enemies, and celebrated by the great rishis."

The fourth king to come into conflict with the Brahmins was Nimi. The details of the story are related in the Vishnu Puranamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. [Who were the Shudras PART II.htm - _msocom_61](#) which says:

"Nimi had requested the Brahmin-rishi, Vasishtha to officiate at a sacrifice, which was to last a thousand years. Vasishtha in reply pleaded a pre-engagement to Indra for five hundred years, but promised to return at the end of that period. The king made no remark, and Vasishtha went away, supposing that he had assented to his arrangement. On his return, however, the priest discovered that Nimi had retained Gautma (who was, euqally with Vasishtha a Brahmin-rishi) and others to perform the sacrifice; and being incensed, he cursed the King, who was then asleep, to lose his corporeal form. When Nimi awoke and learnt that he had been cursed without any previous warning, he retorted by utering a similar curse on Vasishtha, and then died. Nimi's body was embalmed. At the close of the sacrifice which he had begun, the gods were willing, on the

intercession of the priests, to restore him to life; but he declined the offer; and was placed by the deities, according to his desire, in the eyes of all living creatures. It is in consequence of this that they are always opening and shutting (Nimisha means 'the twinkling of the eye').

These foregoing cases of conflict have been referred to by Manu in

his Smriti:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C1. Who were the Shudras PART II.htm - _msocom_62

"Through a want of modesty many kings have perished, together with their belongings; through modesty even hermits in the forest have gained kingdoms.

Through a want of humility Vena perished, likewise king Nahusha, Sudas, the son of Pijavana, Surnukha, and Nimi."

Unfortunately, the bearing of these cases on the position of the Shudra has not been realised as fully as it should have been. The reason is that nobody has realised that this conflict was a conflict between Brahmins and Shudras. Sudas definitely was a Shudra. The others although they have not been described as Shudras are described as having been descended from Ikshvaku. Sudas is also described as a descendant of Ikshvaku. There is nothing far-fetched in saying that they were all Shudras. Even Manu had no idea of this. He represents these cases as cases of conflict between Brahmins and Kshatriyas. Dr. Muir has failed to realise that Sudas was a Shudra and has in recounting these stories represented that the parties to these conflicts were Brahmins on the one hand and the Kshatriyas on the other. In a sense, it is true that the conflict was between Brahmins and Kshatriyas because the Shudras were also a branch of the Kshatriyas. It would, however, have been far more illuminating if they had been described in more precise terms as conflicts between Brahmins and Shudras. The misunderstanding having been caused, it has remained and has continued to conceal the real nature of so important a part of the history of the Indo-Aryan society. It is to clear this misunderstanding that the hearing given to this Chapter is 'Brahmins *versus* Shudras' and not 'Brahmins *versus* Kshatriyas'. Understood as a history of conflict between Brahmins and Shudras, it helps one to understand how the Shudras came to be degraded from the second to the fourth Varna.

WHO WERE THE SHUDRAS?

CHAPTER X

THE DEGRADATION OF THE SHUDRAS

WHAT is the technique which the Brahmins employed to bring about the degradation of the Shudras from the rank of the second to the rank of the fourth Varna?

The discussion has so far centred round two questions as to whether or not the Shudras were originally a part of the second or Kshatriya Varna and whether or not the Brahmins had not received sufficient provocation to degrade the Shudras. It is now necessary to deal with the question, which is logically next in order of sequence. What is the technique of degradation employed by the Brahmins?

My answer to the question is that the technique employed by the Brahmins for this purpose was to refuse to perform the Upanayana of the Shudras. I have no doubt that it is by this technique that the Brahmins accomplished their end and thereby wreaked their vengeance upon the Shudras.

It is perhaps necessary to explain what Upanayana means and what importance it had in the Indo-Aryan Society. The best way to give an idea of Upanayana is to give a description of the ceremony.

As a rite *Upanayana* was originally a very simple ceremony. The boy came to the teacher with a *samidh* (a grass blade) in his hand and told the teacher that he desired to become a Brahmachari (i.e a student) and begged the teacher to allow him to stay with him for purposes of study. At a later date it became a very elaborate ceremony. How elaborate it had become may be realised from the following description of *Upanayana* in

the Ashvalayana Grihya sutra
 :*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART
 II.htm - _msocom_1

Let him initiate the boy who is decked, whose hair (on the head) is shaved (and arranged), who wears a new garment or an antelope skin if a Brahmana, ruru skin if a Kshatriya, a goat's skin if a Vaishya; if they put on garments they should put on dyed ones, reddish-yellow, red and yellow (for a Brahmana, Kshatriya, Vaishya respectively); they should have girdles and staffs (as described above). While the boy takes hold of (the hand of) his teacher, the latter offers (a homa of clarified butter oblations) in the fire (as described above), and seats himself to the north of the fire with his face turned to the east, while the other one (the boy) stations himself in front (of the teacher) with his face turned to the west The teacher then fills the folded hands of both himself and of the boy with water and with the verse 'we choose that of Savitri' (Rg.V. 82.1) the teacher drops down the water in his own folded hands on to the water in the folded hands of the boy; having thus poured the water, he should seize with his own hand the boy's hand together with the thumb (of the boy) with the formula' by the urge (or order) of the god Savitri, with the arms of the two Ashvins, with the hands of Pushan, I seize thy hand, oh so, and so,' with the words 'Savitri has seized thy hand, oh so and so' a second time (the teacher seizes the boy's hand) with the words 'Agri is thy teacher oh so and so' a third time. The teacher should cause (the boy, to look at the sun, while the teacher repeats 'God Savitri, this is thy brahmachari protect him, may he not die' and (the teacher should further) say Whose brahmachari art thou? thou art the brahmachari of Prana. Who does initiate thee and whom (does he initiate)? I give thee to Ka (to Prajapati).' With the half verse (Rg. 111.8.4) 'the young man well attired and dressed, come hither' he (the teacher) should cause him to turn round to the right and with his two hands placed over (the boy's) shoulders he should touch the place of the boy's heart repeating the latter half (of Rg. III. 8.4). Having wiped the ground round the fire, the brahmachari should put (on the fire) a fuel stick

silently, since it is known (from sruti) 'what belongs to Prajapati is silently done,' and the brahmachari belongs to Prajapati. Some do this (offering of a fuel stick) with a mantra to Agni : I Have brought a fuel stick, to *the* great Jatavedas; by the fuel stick mayst thou increase. Oh agni and may we (increase) through *brahman'* (prayer or spiritual lore), svaha.' Having put the fuel stick (on the fire) and having touched the fire, he (the student) thrice wipes off his face with the words I anoint myself with lustre,' it is known (from sruti) for he does anoint himself with lustre. 'May Agni bestow on me, insight, offspring and lustre: on me may Indra bestow insight, offspring and vigour (Indriya) ;on me may the sun bestow insight, offspring and radiance; what thy lustre is. Oh Agni, may I thereby become lustrous; what the strength is, Agni, may I thereby become strong; what thy consuming power is, Agni, may I thereby acquire consuming power.' Having waited upon (worshipped) Agni with these formulae, (the student) should bend his knees, embrace (the teachers feet) and say to him 'recite. Sir, recite. Sir, the Savitri.' Seizing the student's hands with the upper garment (of the student) and his own hands, the teacher recites the Savitri first pada by pada, then hemistich by hemistich (and lastly) the whole verse. He (the teacher) should make him (the student) recite (the Savitiri) as much as *he* is able. On the place of the student's heart the teacher lays his hand with the fingers upturned with the formula mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_2 place thy heart unto duty to me, may thy mind follow my mind; may you attend on my words single-minded; may Brihaspati appoint thee unto me.' Having tied the girdle round him (the boy) and having given him the staff, the teacher should instruct him in the observances of a brahmachari with the words 'a brahmachari art thou, sip water, do service, *do* not sleep by day, depending (completely) on the teacher learn the Veda.' He (the student) should beg (food) in the evening and the morning; he should put a fuel stick (on fire) in the evening and morning. That (which he has received by begging) he should announce to the teacher; he should not sit down (but should be standing) the rest of

the day.

The Upanayana ends with the teaching by the Acharya to the boy of the Vedic Mantra known as the Gayatri Mantra. Why the Gayatri Mantra is regarded as so essential as to require the ceremony of Upanayana before it is taught it is difficult to say.

From this description of the Upanayana ceremony two things are clear. First is that the purpose of Upanayana was to initiate a person in the study of the Vedas which commenced with the teaching of Gayatri Mantra by the Acharya to the Brahmachari. The second thing that is clear is that certain articles were regarded as very essential for the Upanayana ceremony. They are (1) two garments one for the lower part of the body technically called *Vasa* and the other for the upper part of the body called *Uttariya*, (2) Danda or wooden staff, (3) Mekhala or a girdle of grass tied across the waist.

Any one who compares this description of Upanayana as it was performed in ancient times with the details of the ceremony as performed in later days is bound to be surprised at the absence of any mention of thread called *Yajnopavita* to be worn by the Brahmachari as a part of his Upanayana. The centre of the modern ceremony of Upanayana is the wearing of this thread and the whole purpose of the Upanayana has come to be the wearing of this *Yajnopavita*. So important a part this *Yajnopavita* has come to play that most elaborate rules have come to be framed about its manufacture and its use.

The *Yajnopavita* should have three threads, each thread to be of nine strands well twisted. One *tantu* (strand) stands for one devata (deity).

The *Yajnopavita* should reach as far as the navel, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_3 should not reach beyond the navel, nor should it be above the chest.

A person could wear more than one *Yajnopavita*.

A man must always wear *Yajnopavita*. If he took his meals without wearing the *Yajnopavita*, or answers the call of nature without having the *Yajnopavita* placed on the right ear, he had to undergo prayascitta, viz., to bathe, to mutter prayers and fast.

Wearing of another's *Yajnopavita* along with several other things (such as shoes, ornament, garland and kamandalu) is

forbidden.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_4

Three ways of wearing the *Yajnopavita* are recognised: (1) *nivita*, (2) *pracinavita* and (3) *upavita*. When the cord is carried over the neck, both shoulders and the chest and is held with both the thumbs (of the two hands) lower than the region of the heart and above the navel, it is called *nivita*. Suspending the cord over the left shoulder in such a way that it hangs down on his right side, it becomes *upavita*. Suspending it on his right shoulder in such a way that it hangs down on his left side, it becomes *pracinavita*.

How did this *Yajnopavita* come in? Mr. Tilak offers an explanationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_5 which is worth quoting. Mr. Tilak says :

"Orion or Mrigashiras is called Prajapati in the Vedic works, otherwise called Yajna. A belt or girdle of cloth round the waist of Orion or Yajna will therefore be naturally named after him as *Yajnopavita*, the *upavita* or the cloth of *yajna*

The term, however, now denotes the sacred thread of the Brahmins, and it may naturally be asked whether it owes its character, if not the origin, to the belt of Orion. I think it does on the following grounds :

The word *yajnopavita* is derived by all native scholars from *Yajna* + *Upavita*; but there is a difference of opinion as to whether we should understand the compound to mean an *upavita* for *yajna* i.e for sacrificial purposes, or, whether it is the 'upavita of Yajnas.' The former is not incorrect, but authority is in favour of the latter. Thus the Prayoga-writers quote a *smriti* to the effect that 'the High Soul is termed *Yajna* by the hotris, this is his *upavita*; therefore it is *yajna-upavita*. ' A mantra, which is recited on the occasion of wearing the sacred thread means, 'I bind you with the *upavita* of *yajna*', while the first half of the general formula with which a Brahmin always puts on his sacred thread is as follows :

**Yagnyopaveetham
paramapavithram
prajhatheryathsahajam purasthaath**

The Mantra is not to be found in any of the existing Samhitas, but is given in the Brahmopanishad and by Baudhayana. This verse is strikingly similar to the verse quoted above from the Haoma Yesht. It says, 'yajnopavita is high and sacred; it was born with Prajapati, of old.' The word *purastat* corresponds with *paurvanim* in the Avesta verse and thus decides the question raised by Dr. Haug, while *sabhaja*, born with the limbs of Prajapati, conveys the same meaning as *mainyutastem*. The coincidence between these verses cannot be accidental, and it appears to me that the sacred thread must be derived from the belt of Orion. Upavita, from *ve* to weave, literally means a piece of cloth and not a thread. It appears, therefore, that a cloth worn round the waist was the primitive form of *yajnopavita*, and that the idea of sacredness was introduced by the theory that it was to be a symbolic representation of Prajapati's waistcloth or belt."

This explanation by Mr. Tilak is no doubt very interesting. But it does not help to explain some of the difficulties. It does not explain the relation of the *Yajnopavita* to the two garments the *Uttariya*, and the *vasa*, which are necessary for a person to wear while undergoing *Upanayana*. Was the *Yajnopavita* in addition to the two garments? If so, how is it that there is no mention of it in the early description of the ceremony of the *Upanayana*? It does not explain another difficulty. If that thread is a substitute for the cloth, how is it that the wearing of the cloth is retained in the *Upanayana*?

There seems to be another explanation. I offer it for what it is worth. According to it, the wearing of the thread had to do with the adoption of the *gotra*. Its object was to tie oneself to a particular *gotra*. It had nothing to do with the *Upanayana* as such, the object of which was to initiate a person in the study of the Vedas. It is not sufficiently realized that under the Ancient Aryan Law, a son did not naturally inherit the *gotra* of his father. The father had to perform a special ceremony to give his *gotra* to his son. It is only when this ceremony was performed that the son became the same *gotra* as the father. In this connection, reference may be made to two rules observed by the Indo-Aryan Society. One is the rule of impurities. The other is the rule of adoption. With regard to the rule of impurity, brought about by death, the days of impurity vary with the

kinship with the dead. If the kinship is very close, the days of impurity are greater than those in the case where the kinship is less close. The impurities attached to the death of a boy who has not been invested with the thread are very meagre, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_6 not extending for more than a few days. With regard to the rule of adoption, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_7 it lays down that a boy who was invested with the thread was not eligible for adoption. What is the idea behind these rules? The idea seems to be quite clear. The impurities are nominal because there being no thread, the boy had not formally entered into the *gotra* of his father. Adoption means entering into the *gotra* of the adoptive father. Once the thread ceremony had taken place the boy had already and irrevocably entered another *gotra*.

There was no room for adoption left. Both these rules show that the thread ceremony was connected with *gotra* and not with *Upanayana*.

The view that the thread has connection with *gotra* seems to receive support from Jain literature. Shloka 87 of the fourth Parvan of the Padmapurana by Acharya Ravishena reads as follows [:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_8](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_8)

"Bhagwan ! you have told us, the origin of Kshatriya, Vaishya and Shudra. I am anxious to know the origin of those who wear the thread in their neck."

The words 'those who wear the thread in the neck' are very important. There is no doubt that it is a description of the Brahmins. From this it is clear that there was a time when the Brahmins alone wore the thread and no other class did. Read with the fact that the *gotra* relationship was confined only to the Brahmins, it is clear that the thread ceremony was connected with bringing the boy into— actually tying him up to the *gotra*— of his father, and had nothing to do with *Upanayana* which was connected with the initiation in the teaching of the Vedas.

If this is true, then the thread ceremony and the *Upanayana* ceremony had different purposes to serve. At some later date the two merged into one. The reason for this merger appears to be very natural. The *Upanayana* without the thread ceremony involved the danger of the Acharya taking the boy in his *gotra*. It was to avoid the danger that the

father of the boy performed the thread ceremony before handing him over to the Acharya. This is the probable reason why the two ceremonies came to be performed simultaneously.

Be that as it may, *Upanayana* means the teaching of the Veda by the Vedic Brahmin.

III

While I am convinced that my thesis is sound, it would be over confident to think that there will not be found persons who will not raise objections to it. I anticipate the following :

- (1) (1) Is absence of *Upanayana* the test of Shudradom;
- (2) (2) Did the Shudra ever have the right to *Upanayana*?
- (3) (3) How can the loss of *Upanayana* result in the general degradation of Shudras?
- (4) (4) What power did the Brahmins have to deny *Upanayana* to the Shudras?

Having stated the possible objections to my thesis, I like to give my reply to them.

IV

To begin with the first. The best way to deal with this objection is to refer to the judicial decisions in order to find out what the Courts in India have regarded as the surest criterion for determining who is a Shudra.

The first case to which reference may be made is to be found in 7, M.I.A.18.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_9 It was decided by the Privy Council in 1837. The question at issue was whether at the relevant time there were in India any Kshatriyas. The contention of one side was that there were. The contention on the other side was that there were none. The latter contention was based upon the theory propagated by the Brahmins that the Brahmin Parashurama had killed all the Kshatriyas and that if any were left they were all exterminated by the Shudra king Mahapadma Nanda, so that thereafter there were no Kshatriyas left and that there were only Brahmins and Shudras. The Privy Council did not accept this theory which they regarded as false and concocted by the Brahmins and held that the Kshatriyas still existed in India. The Privy Council did not

however lay down any test by which a Kshatriya could be distinguished from a Shudra. In their view, the question must be determined in each case on its own facts.

The second case on the subject is to be found in I.L.R.10 Cal. 688. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_10 The question raised in the case was whether the Kayasthas of Bihar were Kshatriyas or Shudras. The High Court decided that they were Shudras. The partisans of the Kayasthas took the position that the Kayasthas of Bihar were different from the Kayasthas of Bengal, the Upper Provinces and Benares and that while those in the Upper Provinces and Benares were Shudras, the Kayasthas of Bihar were Kshatriyas. The court refused to make this distinction and held that the Kayasthas of Bihar were also Shudras.

The validity of this judgement was not accepted by the Allahabad High Court. In I.L.R.12 All. 328. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_11 Justice Mahamood at page 334 observed as follows:

"I entertain considerable doubts as to the soundness of the view which seems to have been adopted by both the Courts below, that the literary caste of *Kayasthas* in this part of the country, to which the parties belong, falls under the category of *Shudras*, as under-stood in the division of mankind in (he Institute of Manu or elsewhere in authoritative texts of the Hindu Law. The question is one of considerable difficulty not only ethnologically, but also from a legal point of view, so far as the administration of the Hindu Law to this important section of the population is concerned. I do not take the question to be settled by any adjudication of the Lords of the Privy Council either in *Sri Narayan Mitter vs. Sree Mutty Kishen Soondoory Dassee*, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_12 or in *Mahashova Shosinath Ghose vs. Srimati Krishna Soondari Das* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_13 in both of which the cases referred to adoption by Kayasthas of Lower Bengal, who may be distinguishable from the twelve castes of Kayasthas in Upper India, such as the North-western Provinces and Oudh. Nor do I think that the unreported decision of the learned Chief Justice and my brother Tyrell in *Chaudhari Hazari Lal versus Bishnu Dial* (First Appeal No. 113 of 1886, decided on the 15th June 1887), which was also an adoption case, settles the question. But I need not pursue the subject any further...."

The third case is reported in (1916) 20 Cal. W.N.901. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_14 Here the question raised was whether Kayasthas of Bengal were Kshatriyas or Shudras. The High Court of Calcutta held that they were Shudras. The case was taken to the Privy Council by way of appeal against the decision of the Calcutta High Court. The decision of the Privy Council is reported in (1926) 47 I.A. 140. The question whether the Bengali Kayasthas are Shudras or Kshatriyas was not decided upon by the Privy Council but was left open. In between 1916 and 1926 the Calcutta High Court gave two decisions which held that intermarriages between Kayasthas of Bengal and *Tantis* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_15 and *Domes* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_16 two of the low castes, were legal on the ground that both of them were sub-castes of Shudras.

These decisions which caused further deterioration in the position of the Kayasthas were followed by another which is reported in I.L.R. 6 Patna 506. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_17 In a most elaborate judgement extending over 47 pages Mr. Justice Jwala Prasad went into every Purana and every Smriti in which there was a reference to the Kayasthas. He differed from the Calcutta High Court and held that the Kayasthas of Bihar were Kshatriyas.

Next come cases in which the question at issue was whether the Maharattas are Kshatriyas or Shudras. The first case in which this issue was raised is reported in 48 Mad. 1. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_18 This was an interpleader suit filed by the Receiver of the estate of Raja of Tanjore in which all the descendants as well as the distant agnates and cognates of the Raja were made defendants in the suit. The kingdom of Tanjore was founded by Venkoji, otherwise called Ekoji, who was a Mahratta and the brother of Shivaji the founder of the Mahratta Empire. The judgement in the case covers 229 pages and the question whether the Mahrattas were Kshatriyas was dealt with in a most exhaustive manner. The decision of the Madras High Court was that the Mahrattas were Shudras and not Kshatriyas as was contended by the defendants.

The next case which also relates to the Mahrattas is reported in I.L.R. (1928) 52 Bom.497. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_19](#) The Court decided that :

"There are three classes among the Mahrattas in the Bombay Presidency: (1) the five families; (2) the ninety-six families; (3) *the rest*. Of these, the first two classes are legally Kshatriyas."

The last case to which reference may be made is reported in I.L.R. (1927) 52 Mad. 1. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_20](#) The issue was whether the Yadavas of Madura were Kshatriyas. The Yadavas claimed themselves to be Kshatriyas. But the Madras High Court negated the claim and held that they were Shudras.

Such is the course of judicial pronouncements on the issue as to how to determine who is a Kshatriya and who is a Shudra. It is a most confusing medley of opinion which settles little and unsettles much. The Kayasthas of Bihar, of the Upper Provinces (now U.P) and Benares are Kshatriyas, while the Kayasthas of Bengal are Shudras!! According to the Madras High Court all Mahrattas are Shudras. But according to the Bombay High Court, Mahrattas belonging to five families and 96 families are Kshatriyas and the rest are Shudras!! The Yadava community to which Krishna belonged is popularly believed to be Kshatriyas. But according to the Madras High Court, the Yadavas are Shudras!!

More important for our purpose are the criteria which the courts have adopted in coming to their decisions than the particular decisions in the cases referred to. Among the criteria which the courts have laid down, the following may be noted:

- (1) (1) In I.L.R. 10 Cal. 688, the criteria adopted were (i) use of Das as surname, (ii) wearing the sacred thread, (iii) ability to perform the *homa*, (iv) the period of impurity, (v) competence or incompetence of illegitimate sons to succeed.
- (2) (2) In I.L.R. 6 Patna 606, the criterion seems to be general repute. If a community is Kshatriya by general repute it is to be treated as a Kshatriya community.
- (3) (3) In 48 Madras I, a variety of criteria were adopted. One was the consciousness of the community. The second was undergoing the ceremony of *Upanayana* as distinguished from wearing the sacred thread. The third criterion was that all non-Brahmins are Shudras unless they prove that they are Kshatriyas or Vaishyas.

(4) (4) In I.L.R. Bom. 497, the tests adopted were (i) the consciousness of the caste (ii) its custom, and (iii) the acceptance of that consciousness by other castes.

No one who knows anything about the subject can say that the criteria adopted by the various courts are the right ones. A criterion such as the period of impurity is irrelevant and of no value for determining the question. A criterion such as the capacity for performing *boma* is relevant but not valid. It mistakes effect for a cause. The criterion of consciousness is hardly a fair criterion. A community may have lost its consciousness by long disuse of necessary religious observances due to causes over which it has no control. The criterion of *Upanayana* stands on a different footing. The courts have not put it properly. But there is no doubt that rightly understood and properly put the criterion of *Upanayana* is sound. The Courts have not made any distinction between the *de facto* position of the community and its position *de jure* in regard to *Upanayana*, and have proceeded on the assumption that what is true *de facto* must also be true *de jure*. It is this fault in the application of the criterion of *Upanayana* which has produced anomalies and absurdities, such as one community having one status in one area and quite a different status in a different area— or allowing any pretender community to wear the thread .and by continuing its pretence for a period to acquire a vested right or contrariwise punishing a community by declaring that it had no *de jure* right to wear the thread merely because it has not been wearing it *defacto*. The real criterion is not the wearing of the sacred thread but the right to wear the sacred thread. Understood in its proper sense, it may be said without fear of contradiction that the right to *Upanayana* is the real and the only test of judging the status of a person whether he is a Shudra or a Kshatriya.

V

The second objection is quite untenable. To assume, as the objection does, that from the very beginning the Aryan Society treated its different classes differently in the matter of *Upanayana* is to my mind a very unnatural supposition. Primitive society does not begin with differentiation. It begins with uniformity and ends in diversity. The natural thing would be to suppose that in the matter of the *Upanayana* the ancient Aryan society treated all its classes on the same footing. It may however be argued, on the other side, that such an original tendency in favour of uniformity need not be accepted as being universal, that it may well be that in the ancient Aryan society the Shudras and the women were

excluded from *Upanayana*. Fortunately for me, it is not necessary for me to rely on logic alone though I contend that *logic* is on my side. For there is ample evidence both circumstantial as well as direct to show that both Shudras as well as women had at one time the right to wear the sacred thread.

That the ancient Aryan society regarded *Upanayana* as essential for all will be evident if the following facts are borne in mind.

Upanayana was allowed for the deaf, the dumb, the idiot and even the impotent. A special procedure was prescribed for the *Upanayana* of the deaf and dumb and idiots. The principal points in which their *Upanayana* differs from that of others are that the offering of *Samidh*, treading on a stone, putting on a garment, the tying of *mekhala*, the giving of deer skin and staff are done silently, that the boy does not mention his name, it is the *acharya* a himself who makes offering of cooked food or of clarified butter, all the *mantras* are muttered softly by the *acharya* a himself. The same procedure is followed as to other persons who are impotent, blind, lunatic, suffering from such diseases as epilepsy, white leprosy or black leprosy, etc.

The six *anuloma* castes were also eligible for *Upanayana*; this is clear from the rules mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_21 for the *Upanayana* of Kshatriyas, Vaishyas and of mixed castes like Rathakara, Ambashtha, etc,

Upanayana was permitted to *Patitasavitrikas*. The proper age for the *Upanayana* of a Brahman boy was 8th year from birth, of a Kshatriya 11th year and of a Vaishya 12th year. But a certain latitude was allowed so that the time for *Upanayana* was not deemed to have passed upon the 16th, the 22nd and the 24th year in the case of Brahmins, Kshatriyas and Vaishyas respectively. After these years are passed without *Upanayana* taking place, a person was held to have become incompetent thereafter for learning the Savitri (the sacred Gayatri verse). Such persons were then called *Patitasavitrika* or *savitripatita*. According to the strict interpretation of rules, no *Upanayana* is to be thereafter performed for them, they are not to be taught the Veda, nor is anyone to officiate at their sacrifices and there is to be no social intercourse with them (i.e., no marriage takes place with them). But even in their case, there was readiness to relax the rules mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_22 subject to certain penances.

Upanayana was permitted in the case of Brahmagnas. A Brahmagna is a person whose father or grandfather had failed to perform *Upanayana*. The original rule mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_23 was that if a person's father and grandfather also had not the *Upanayana* performed for them then they (i.e., the three generations) are called slayers of *brahma* (holy prayers or lore); people should have no intercourse with them, should not take their food nor should enter into marriage alliance with them. But even in their case the rule was relaxed and they were allowed *Upanayana* if they desired, provided they performed the prescribed penance.

A further relaxation was made in the case of a person whose generation beginning with the great grandfather had not the *Upanayana* performed on them. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_24 Even they were allowed to have their *Upanayana* performed if they desired, provided they performed penance which included studenthood for twelve years and bath with the Pavamani, and other verses. On his *Upanayana*, instruction in the duties of the householder was imparted to him, and though he himself could not be taught the Veda, his son may have the *samskara* performed as in the case of one who is himself a *patitasavitrika* so that his son will be 'one like other Arya'.

Upanayana was permitted to the Vratyas. It is difficult to state exactly who the Vratyas were, whether they were Aryans who had for more than three generations failed to perform the *Upanayana* or whether they were non-Aryans who were never within the Aryan fold and whom the Brahmins wanted to convert to the Aryan faith. It is possible that it included both. Be that as it may, there is no doubt that *Upanayana* was open to the Vratyas provided they performed *Vratyastomas*. Vratyas were those who lead the Vratya life, were base and were reduced to a baser state since they did not observe studenthood (*brahmacharya*) nor did they till the soil nor engage in trade. There were four *Vratyastomas*, the first of which is meant for all Vratyas, the second is meant for those who are *Abhishasta* who are wicked or guilty of heavy sins and are censured and lead a Vratya life, the third for those who are the youngest and lead a Vratya life and the fourth for those who are very old and yet lead a Vratya life. In each of the four *Vratyastomas*, *Sodasastoma* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_25 is always performed. It is by the *Sodasastoma* that they can attain this (superior status). The *Sodasastoma* was supposed

to have the power to remove the guilt of these. By performing the Vratyastoma sacrifice, they should cease to be Vratyas and become eligible for social intercourse with the Orthodox Aryas, to have the sacrament (*samskara* of Upanayana) performed of them and then be eligible to study the Veda.

In the Vratyata-shuddisamgrahamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_26 provision is made for the purification of Vratyas even after twelve generations subject to appropriate penances.

Upanayana was so highly thought of that Baudhayana (ii.10) allowed Upanayana for the Asvattha tree.

Given these facts, it is difficult to believe that the women and Shudras were excluded from the Upanayana by the Aryan society from the very beginning. In this connection, attention may be drawn to custom prevalent among the Indo-Iranians who were very closely related to the Indo-Aryans in their culture and religion. Among the Indo-Iranians, not only both men and women but men and women of all classes are invested with the sacred thread. It is for the opponents to prove why the system was different among the Indo-Aryans.

It is, however, not quite necessary to depend upon circumstantial evidence. There is enough direct evidence to show that there was a time when both women and Shudras had the right to Upanayana and did have it performed.

As to the Upanayana of women the statementsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_27 contained in the Hindu religious books are quite explicit. Anyone who examines them will find that Upanayana was open to women. Women not only learned the Vedas but they used to run schools for teaching the Vedas, are even known to have written commentaries on the Women Purva Mimamsa.

As to the Shudras, the evidence is equally positive. If Sudas was a king, if Sudas was a Shudra, if his coronation ceremony was performed by Vasishtha and he performed the Rajasuya Yaga, then there can be no doubt that the Shudras did at one time wear the sacred thread. In addition to circumstantial evidence and the evidence of the authors mentioned before, the Sanskara Ganapati cited by Max

Mullermk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_28 contains an express provision declaring the Shudra to be eligible for Upanayana.

The only difference between the women and the Shudras is that in the case of women there is some plausible explanation given as to why the Upanayana of women was stopped, while there is no such explanation for stopping the Upanayana of the Shudras. It is argued that the Upanayana of women continued as long as the age of Upanayana and the age of marriage continued to be different. It is said that in ancient times the age of Upanayana was 8 and the age for marriage was considerably later. But at a later stage, the age of marriage was brought down to 8, with the result that the Upanayana as an independent ceremony ceased to exist and became merged in marriage. Whether this explanation is right or wrong is another matter. The point is that in the case of the Shudra, the Upanayana was at one time open to him, that it was closed to him at a later stage and that there is no explanation for this change.

Those who, in spite of the evidence to which I have referred, think that they must insist upon their objection should remember the weakness of their side. Assuming that the Shudras had never had the benefit of Upanayana, the question they have to face is why were the Shudras not allowed the benefit of the Upanayana. The orthodox theory merely states the fact that there is no Upanayana for a Shudra. But it does not say why the Shudra is not to have his Upanayana performed. The explanation that there was no Upanayana of the Shudra because he was a non-Aryan is a modern invention which has been shown to be completely baseless. Either there was once an Upanayana and it was stopped or the Upanayana was from the very beginning withheld. Either may be true. But before one or the other is accepted to be true, it must be accompanied by reasons. There being no reason why the benefit of the Upanayana was withheld from the Shudra, the presumption must be in favour of my thesis which states that they had the right to Upanayana, that they were deprived of it and gives reasons why they were deprived of its validity.

VI

The third objection is no objection at all. Only a person who does not

know fully all the incidents of Upanayana can persist in upholding its validity.

The Aryan society regarded certain ceremonies as Samskaras. The Gautama Dharma Sutra (VIII. 14-24) gives the number of Samskaras as forty. They are :

Garbhadhana Pumsavana, Simantonnayana, Jatakarma, namakarana, annaprasana, caula, Upanayana, the four vratas of the Veda, Snana (or Samavartana), vivaha, five daily mahayajnas (for deva, pitri, manushya, bhuta, and Brahma); seven pakayajnas (viz., astaka, parvanasthalipaka, sraddha sravani, agrahayani, caitri, asvayuji); seven haviryajnas (in which there is burnt offering but no Soma, viz., Agnyadheya, Agnihotra, Darsapuramasa, Agrayana, Caturmasyas, Nirudhapasubandha and Sautramani); seven soma sacrifices (Agnistoma, Atyagnistoma, Ukthya, Sodasin, Vajapeya, Atiratra, Aptoryama).

At a late stage a distinction appears to have been drawn between Samskaras in the narrower sense and Samskaras in the wider sense. Samskaras in the wider sense were really sacrifices and were therefore not included in the Samskaras in the proper sense, which were reduced to sixteen.

At a late stage a distinction appears to have been drawn between Samskaras in the narrower sense and Samskaras in the wider sense. Samskaras in the wider sense were really sacrifices and were therefore not included in the Samskaras in the proper sense, which were reduced to sixteen.

There is nothing strange about the Samskaras. Every society recognises them. For instance, the Christians regard Baptism, Confirmation, Matrimony, Extreme Unction, Eucharist, the Lord's Supper and the Holy Communion as sacraments. There however seems to be a difference between the notions of the Indo-Aryans and say the Christians about the Samskaras. According to Christian notions, the Samskara or Sacrament is a purely spiritual matter—drawing in of God's grace by particular rites. It had no social significance. Among the Indo-Aryans the Samskaras had originally a purely spiritual significance. This is clear from what Jaimini the author of the *Purva Mimamsa* has to say about the Samskaras. According to Jaimini the general theory is that Samskaras impart fitness.

They act in two ways. They remove taints and they generate fresh qualities. Without such Samskaras, a person may not get the reward of his sacrifice on the ground that he is not fit to perform it. Upanayana was one of the Samskaras and like other Samskaras, its significance was just spiritual. The denial of the Upanayana to the Shudras necessarily brought about a change in its significance. In addition to its spiritual significance it acquired a social significance which it did not have before.

When Upanayana was open to everyone, Aryan or non-Aryan, it was not a matter of social significance. It was a common right of all. It was not a privilege of the few. Once it was denied to the Shudras, its possession became a matter of honour and its denial a badge of servility. The denial of Upanayana to the Shudras introduced a new factor in the Indo Aryan society. It made the Shudras look up to the higher classes as their superiors and enabled the three higher classes to look down upon the Shudras as their inferiors. This is one way in which the loss of Upanayana brought about the degradation of the Shudras.

There are other incidents of Upanayana. Since idea of these can be had if one refers to the rules laid down in the *Purva Mimamsa*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. [Who were the Shudras PART II.htm - _msocom_29](#) One of these rules is that all property is meant primarily for the purpose of providing a person with the means of performing a sacrifice. The right to property is dependent upon capacity to sacrificemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. [Who were the Shudras PART II.htm - _msocom_30](#) In other words, anyone who suffers from an incapacity to perform a sacrifice has no right to property. Capacity to sacrifice depends upon Upanayana. This means that only those who are entitled to Upanayana have a right to own property.

The second rule of the *Purva Mimamsa* is that a sacrifice must be accompanied by Veda mantras. This means that the sacrificer must have undergone a course in the study of the Veda. A person who has not studied the Vedas is not competent to perform the sacrifices. The study of the Veda is open only to those persons who have undergone the Upanayana ceremony. In other words, capacity to acquire knowledge and learning—which is what the study of Veda means—is dependant upon Upanayana. If there is no Upanayana the road to knowledge is closed. Upanayana is no empty ceremony. Right to property and right to knowledge are the two most important incidents of Upanayana.

Those who cannot realise how loss of Upanayana can bring about the

degradation of the Shudras should have no difficulty in understanding the matter if they will bear in mind the rules of the Purva Mimamsa referred to above. Once the relation of Upanayana to education and property is grasped, all difficulty in accepting the thesis that the degradation of the Shudra was entirely due to loss of Upanayana must vanish.

It will be seen, from what has been said above, how the sacrament of Upanayana was in the ancient Aryan society fundamental and how the social status and personal rights of persons depended upon it. Without Upanayana, a person was doomed to social degradation, to ignorance and to poverty. The stoppage of Upanayana was a most deadly weapon-discovered by the Brahmins to avenge themselves against the Shudras. It had the effect of an atomic bomb. It did make the Shudra, to use the language of the Brahmins, a graveyard.

VII

That the Brahmins possessed the power to deny Upanayana is beyond question. The doubt probably arises from the fact that there is nowhere an express statement showing the conferment of such a power upon the Brahmins. All the same, whatever doubt there may be lurking in the minds of persons who are not aware of the operative parts of the religious system of the Indo-Aryans must vanish if account is taken of two things: (1) the exclusive right of the Brahmin to officiate at the Upanayana and (2) the penalties imposed upon the Brahmin for performing unauthorised Upanayana.

It is probable that in most ancient times it was the father who taught his son the *Gayatri*, with which the study of the Veda begins and for which the ceremony of Upanayana was devised at a later stage. But it is beyond question that from a very early time the function of performing Upanayana had been assigned to a guru or a teacher called the Acharya and the boy went and stayed in the Acharya's house.

The questions as to who should be the Acharya and what should be his qualification have been the subject of discussions from very ancient times.

The Acharya must be a man learned in the Vedas. A Brahmana text mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_31 says, "he, whom a teacher devoid of learning initiates, enters from darkness into darkness and he also (i.e. an acharya) who is

himself unlearned (enters into darkness)."

The Ap. Dh. S. (1.1.1.12—13), lays down that an Acharya selected for performing one's Upanayana should be endowed with learning and should be one whose family is hereditarily learned and who is serene in mind, and that one should study Vedic lore under him up to the end (of brahmacharya) as long as the teacher does not fall off from the path of Dharma.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_32

But the first and foremost qualification of an Acharya is that he must be a Brahmana: It was only in times of difficulty (i.e., when a Brahmana is not available) that a person was allowed to have a Kshatriya or a Vaishya teacher.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_33. This exception was permitted only during the period when the distinction between the right to learn the Vedas and the right to teach the Vedas had not been made. But when that distinction came to be made—and it was made in very early times—in fact the conflict between Vasishtha and Vishvamitra was just on this very point—the Brahmin alone came to possess the right to be an Acharya fit to officiate at an Upanayana.

One thing therefore must be taken as well-established, namely that none but a Brahmin could perform the Upanayana ceremony. Upanayana performed by anybody else is not a valid Upanayana.

The other operative part of the Indo-Aryan religious system is the obligation imposed upon the Brahmin not to do any unauthorised act of a religious character. A Brahmin guilty of any such conduct was liable to punishment or penance. Many such penalties are to be found in the ancient Law Books. I refer to Manu and Parashara.

Manu (III.150ff.), lays down what class of Brahmins are to be deemed unworthy (to partake) of oblations to the gods and manes. In this list he includes :

III. 156.—"He who teaches for a stipulated fee and he who is taught on that condition, he who instructs Shudra pupils and he whose teacher is a Shudra, he who speaks rudely, the son of an adultress, and the son of a widow."

Parashara says :mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_34

"That Brahmana, who for the sake of dakshina (gift of money or fee) offers oblation into fire on behalf of a Shudra, would become a Shudra, while the Shudra (for whom he offers) would become a Brahman;"that, according to Madhava, propounds that the merit of the rite" goes to the Shudra and the Brahmana. incurs sin."

Those who may ask what powers the Brahmins had to deprive the Shudra of his right to Upanayana may consider the combined effect of these two facts : (1) the Brahmin's exclusive right to officiate at an Upanayana, and (2) the penalties to which he is made liable for performing an unauthorized Upanayana. If they do, they will have no doubt that the combined effect of these two factors was to vest in the Brahmin the power of performing as well as of denying Upanayana. It is true that such a power has not been expressly vested in the Brahmin. That was because it was unnecessary to do by express terms what was in fact done by indirect but more effectual means. That the Brahmins are conscious of the possession of this power to deny Upanayana? is also beyond doubt. So far as the records go, there are 16 reported cases in which they have threatened various communities by putting it into operation against them. In nine cases, they challenged the Kayasthas, in four they challenged the Panchalas, in one they challenged the Palshes. What is important is that they challenged even two Maratha Kings. These instances have occurred between 556 to 1904 A.D. It is true that they do not belong to ancient times. It must however be remembered that these instances are mere evidences of the exercise by the Brahmins of their power to deny Upanayana. The power itself must have been acquired in much more ancient times. That they have acquired it earlier is not an empty assertion without support. Satyakama Jabali's instance which is very ancient is cited generally to prove that the Varna of a man was determined by his *guna* (mental and moral qualities) and not by his birth. While this is true, it is equally true that Jabali's case proves that even in ancient times the Brahmins had acquired the right to refuse to perform Upanayana.

The enumeration of these cases has very little value for the purpose in hand unless we know the deductions that could be drawn from the decisions arrived at in them. To be able to do this, we must know the details of each case. Unfortunately, in most of them beyond the decision other details are not sufficiently full for the purpose. There is only one case that of the Brahmins *versus* Shivaji in respect of which the details are

full and well-known. The case is sufficiently important and it is therefore well worth detailed examination. The deductions deducible from it are not only interesting and instructive but they throw a flood of light on the point under discussion.

VIII

As is well known, Shivaji after having established a Hindu independent kingdom in the western part of Maharashtra thought of proclaiming himself a king by having his coronation performed. It was felt by Shivaji and his friends that the coronation ceremony if it was at all to be of any value must be performed according to Vedic rites. But in carrying out his wishes Shivaji found himself faced with many difficulties. He found that whether his coronation could be performed with Vedic rites dependent entirely upon the Brahmins. Nobody was from religious point of view qualified to perform the ceremony except a Brahmin. Secondly, he found that no such ceremony could be performed unless it was proved that he was a Kshatriya. There was a third difficulty, namely, that even if he was found to be a Kshatriya, he was past the age of Upanayana and without Upanayana there could be no coronation. The third difficulty was a minor one for it could be got over by the performance of the Vratya Stoma ceremony. The first difficulty was the greatest stumbling block. It related to Shivaji's status. The question was, was he a Kshatriya? If that could be got over, the rest was easy. Shivaji's claim that he was Kshatriya was opposed by many. His principal opponents were Brahmins who were led by his own Prime Minister Moro Pant Pingle. Unfortunately for Shivaji even his Maratha Sardars had refused to give him social precedence mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_35 and had ranged themselves against him. In their view, he was a Shudra. Shivaji's claim was also in direct conflict with the well established thesis long insisted upon by the Brahmins that there were no Kshatriyas in the Kali age. Shivaji was living in the Kali age. Obviously he could not be a Kshatriya. This objection to his claim for the status of Kshatriya was further strengthened by the non-performance of the ceremony of Upanayana or the investiture of the sacred thread at the proper time, which was fixed by the Sastras to be the eleventh year in the case of the Kshatriyas. This was taken to be evidence of his being a Shudra. He was however fortunate in securing the services of one Gagabhat, a renowned Brahmin, resident of Benares, learned both in the

Vedas and Sastras. Gagabhat solved all difficulties and performed Shivaji's coronation# on 6th June 1674 at Raigad first after performing the Vratya Stoma and then the Upanayana.

#It seems that some Brahmins were preprepared to perform Shivaji's coronation but with non-Vedic, i.e., with Pauranic rites as is done in the case of Shudras. They predicted all sorts of evils to happen if Shivaji had his coronation performed with Vedic rites. Unfortunately these evils did take place and Shivaji who undoubtedly was superstitious had another coronation performed according to non-Vedic rites. The following account of this second coronation taken from Mr. C. V. Vaidya makes interesting reading: Obstnictive and dissatisfied Brahmins there were even then as always. They did not deem the ceremony satisfactory, though it was acclaimed by the whole of Maharashtra. A poem named *Rajyabhisheka Kalpataru*, a copy of which is in the Library of the Bengal Royal Asiatic Society and which has been published from it *by* Itihas S. Mandal of Poona (Quarterly, Vol. X-I), embodies some objections raised against the coronation ceremony gone through. This poem is not quite contemporary, as it mentions the later idea that Shivaji was an incarnation of Siva (not of Vishnu as represented by the earlier Shivabharata) though it is of the time of Rajaram. It gives an imaginary conversation between Nischalpuri, a learned Brahmin ascetic of Benares who was an opponent of Gagabhat, and Govindbhat Barve as taking place in Konkan. It recounts the ill omens which preceded and followed the coronation, such as the death of Prataprao Gujar, the death of Kashibai, wife of Shivaji, etc., and *the* wound caused to Gagabhat himself on the nose by the falling of a rafter. The poem expressly says that Gagabhat engaged for the ceremony those Brahmins only who were his followers and refused to employ those recommended by Nis'chalpuri. Many defects in the ceremony itself, are next mentioned. Thus when Shivaji was getting into the chariot after the ceremony of ascending the throne Gagabhat himself first sat in the chariot and then Shivaji. After seeing the whole ceremony through Nis'chalpuri left the fort but told Shivaji that bad events would happen *on* the 13th, 22nd and 55th days. On the 13th day accordingly, Shivaji's mother died. Next a horse-shed was burnt at Pratapgad with good many horses in it and an elephant died on Sinhgad. These incidents induced Shivaji to call Nis'chalpuri back and through him and his Brahmins Shivaji performed afresh the ceremony of ascending the throne, not with

Vedic rites, but Tantrik or magical. This ceremony is also described in detail. There are mentioned some Vedic mantras from Sama Veda as recited; but the ceremony was not Vedic. It was performed on Ashvin Suddha 5 (Lalita Panchami day S. 1596), as is stated at the end of the poem. This ceremony is also mentioned by J and Nis'chapuri is also spoken of in a Mahomedan record.'—*Shivaji the Founder of Maratha Swaraj*, pp. 252-253.

Shivaji's case is important for several reasons. It is important because it proves that nobody except a Brahmin has the right to perform the Upanayana and that nobody can compel a Brahmin to perform it if he is not prepared to do so. Shivaji was the ruler of an independent kingdom and had already started styling himself Maharaja and Chhatrapati. There were many Brahmins who were his subjects. Yet, Shivaji could not compel anyone of them to perform his coronation.

It is important because it proves that the ceremony to be valid must be performed by a Brahmin. A ceremony performed by a non-Brahmin would be infructuous. It was open to Shivaji to have his coronation performed by a non-Brahmin. But he did not daremk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_36 to do it. For he knew it would be without any social or spiritual efficacy.

In the third place, it is important because it proves that the power of determining the status of a Hindu depends entirely upon the will of the Brahmins. The decision in favour of Shivaji is sought to be justified by the geneology which was brought from Mewar by Shivaji's friend, Balaji Avaji, and which connected Shivaji with the Sisodiyas of Mewar who were reckoned as Kshatriyas. It has been alleged that the geneology was a fabrication got up for the occasion.

Assuming it was not a fabrication,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_37 how can it justify the recognition of Shivaji's claim to be a Kshatriya? Far from establishing that Shivaji was a Kshatriya, the geneology could do no more than raise another question, namely, whether the Sisodiyas were Kshatriyas. The Sisodiyas were Rajputs. There is considerable doubt as to whether the Rajputs are the descendants of the original Kshatriyas who formed the second Varna of the ancient Indo-Aryan community. One view is that they are foreigners,

remnants of the Huns who invaded India and established themselves in Rajputana and whom the Brahmins raised to the status of Kshatriyas with the object of using them as means to suppress Buddhism in Central India by a special ceremony before the sacred fire and who were therefore known as the Agnikul Kshatriyas. This view has the support of many erudite scholars who are entitled to speak on the subject. Vincent Smith says :mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_38

In this place I want to draw attention to the fact, long suspected and now established by good evidence that the foreign immigrants into Rajputana and the upper Gangetic valley were not utterly destroyed in the course of their wars with the native princes. Many of course perished but many survived and were mixed in the general population of which no inconsiderable part is formed by their descendants. These foreigners like their fore-runners the Sakas and the Yue-chi universally yielded to the wonderful assimilative power of Hinduism and rapidly became Hinduised. Clans or families which succeeded in winning chieftainships were admitted readily into the frame of Hindu polity as Kshatriyas or Rajputs and there is no doubt that the Parihars and many other famous Rajput clans of the north were developed out of the barbarian hordes which poured into India during the fifth and sixth centuries. The rank and file of the strangers became Gujars and the castes ranking lower than Rajputs in their precedence. Further to the south, various indigenous or aboriginal tribes and clans underwent the same process of Hinduised social promotion in virtue of which Gonds, Bhars, Kharwas and so forth emerged as Chandels, Rathors, Gaharwars and other well-known Rajput clans duly equipped with pedigree reaching back to the sun AND the moon.

William Crookemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_39 says:

Recent research has thrown much light on the origin of Rajputs. A wide gulf lies between the Vedic Kshatriyas and the Rajputs of mediaeval times which it is now impossible to bridge. It is now certain that the origin of many clans dates from the Saka or Kushan invasions of more certainly from that of the White Huns who destroyed the Gupta empire about 480 A.D. The Gujar tribe connected with the latter people adopted Hinduism and their leaders formed the main stock from which the higher Rajput

families sprang. When these new claimants to princely honour accepted the faith and the institution of Brahmanism the attempt would naturally be made to connect them with the heroes of the Mahabharata and the Ramayana. Hence arose the body of legend recorded in these annals by which a fabulous origin from the sun and the moon was ascribed to these Rajput families ... The group denoted by the name Kshatriya or Rajput depended on status rather than on descent and it was therefore possible for foreigners to be introduced into these tribes without any violation of the prejudices of caste, which was then only partially developed. But it was necessary to disguise this admission of foreigners under a convenient fiction. Hence arose the legend how by a solemn act of purification or initiation under the superintendence of the ancient Vedic Rishis, *fire-born* septs were created to help the Brahmins in repressing Buddhism and other heresies. This privilege was confined to four septs known as Agnikula or fire-born-viz., the Parmar, Parihar, Chalukya and Chauhan.

Dr. D. R. Bhandarkar mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_40 also holds the same view. According to him, the Rajputs are the descendents of Gujars, the Gujars were foreigners and that the Rajputs are therefore the descendants of foreigners.

The Brahmins engaged for the coronation could not have been ignorant of the origin of the Rajputs, and their claim to be descended from the Kshatriyas. But assuming that they did not know this fact they knew that there was already a previous decision of the Brahmins, namely, that there were no Kshatriyas in the Kali age. This was an old, long-standing decision. And if the Brahmins had respect for precedent, they were bound to throw out the claim of Sisodiyas as well as of Shivaji. Nobody would have blamed them, if they had done so. But the Brahmins had never accepted the law of precedent as binding upon them. With them there was no such thing as *stare decisis*.

Fourthly, it is important because it shows that the decisions of the Brahmins on matters of status were open to sale like the indulgences of the Catholic clergy. That the decision of Gagabhat was not an honest decision is obvious from the amount of money which Gagabhat and other Brahmins received as officiating priests. The amount of money

spent on the coronation by Shivaji and how much of it went to Gagabhat and the Brahmins will be seen from the following details collected by Mr. Vaidya.:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_41

"These ministers were presented each with *one* lakh of hon, one elephant, one horse, garments and ornaments. Gagabhat was given one lakh of rupees for seeing the whole ceremony through. The Dakshinas granted by Shivaji on the several occasions of the coronation ceremony were very large, as was suited to the occasion. Sabhasad reports that the whole expenditure amounted to one crore and forty-two lakhs of hon or 426 lakhs of rupees.

Sabhasad relates that 50,000 Vaidika Brahmins had collected on the occasion of Shivaji's coronation. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_42 Besides these there were Jogis, Sanyasis, etc., by thousands. These were fed *or* given com below the fort It is related in contemporary papers that Shivaji, before coronation, was weighed against gold and almost every other metal as well as auspicious thing. Dutch record describing the ceremony in detail *on* 3rd October PS. 1684 states that Shivaji weighed 17,000 hon or 160 Ibs. and he was also weighed against silver, copper, iron, etc., and against camphor, salt, sugar, butter, various kinds of fruit, betel-nuts, etc., and the value of the whole was distributed amongst Brahmins. On the 7th June, the day after the coronation, Dakshina was given in general and every Brahmin got three to five rupees and everyone else, whether woman or child two rupees and one rupee. In all, the Dakshina amounted to one and a half lakhs of honmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_43 in value.

Oxenden also states in his diary from 18th *May* to 13th June that Shivaji was weighed against gold and the weight 16,000 hon, together with one lakh of hon in addition were distributed as Dakshinas among Brahmins.

The above noted Dutch record further states that for the Vratya ceremony 7,000 hon were given to Gagabhat and 17,000 to other Brahmins. On the 5th of June Shivaji bathed in holy Ganges water and every Brahmin present was given 100 hon."

Can the amount paid to Gagabhat be taken as representing nothing more than a *fee*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the

[Shudras PART II.htm - _msocom_44](#) properly payable to a priest? There is one circumstance which may be depended upon to show that Gagabhat was not even paid enough. It is that what Gagabhat got was comparatively much less than what the Ministers of Shivaji got. Two facts must however be noted as telling on the other side before any conclusion is drawn from this fact. They completely nullify the argument. The first is that the ministers themselves had made large presents [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_45](#) to Shivaji on his coronation. Moropant Pingle the Peshwa or Prime Minister of Shivaji, the Mujamdar had paid 7,000 hors and the other two ministers 5,000 hors each. Deducting these, the presents given to them by Shivaji must be said to be much smaller than they appear to be.

The second fact is that these ministers of Shivaji were the greatest opponents of Shivaji in this project of coronation. They were staunch in their view that he was a Shudra and that he was not entitled to have his coronation performed as it was a right which belonged to the Kshatriya only. It is therefore, no surprise if Shivaji gave them large presents with a view to silence them and win them over permanently to his side. The amount of money paid to the ministers by Shivaji is therefore no criterion to determine whether the amount paid to Gagabhat was no more than a fair fee for officiation. Indeed there are so many twists and turns taken by Gagabhat that one is forced to the conclusion that it was more than fair fee and that it included some part as illegal gratification to keep him straight.

In this business of coronation the man who took the most leading part in bringing it about was a Kayastha from Maharashtra by name Balaji Avaji who was the Personal Secretary to Shivaji. The first step Balaji took was to send three Brahmins [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_46](#) as messengers from Shivaji to fetch Gagabhat from Benares with full information as to the status and purpose of Shivaji. What did Gagabhat do? He sent back the three messengers with a letter refusing to accept the invitation on the ground that in his view Shivaji was a Shudra and was therefore not fit for coronation. The next step Balaji took was to collect evidence in support of Shivaji's claim to the status of a Kshatriya. He succeeded in obtaining a genealogy which showed that Shivaji was a Kshatriya descended from the Sisodyas who were Rajputs and rulers of Mewad. This evidence he sent with another

messenger,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_47 to Gagabhat. Gagabhat seemed to have been impressed by the evidence for he agreed to come to Raigad to perform the coronation ceremony. What did Gagabhat do on his arrival? He said that he had re-examined the evidence and had come to the conclusion that Shivaji was a Shudra and was therefore unfit *for* coronation.

This is not the only somersault which Gagabhat took in this business. He took another and a very queer turn and declared that he was prepared to perform the coronation of Balaji Avaji for he was a Kayastha and therefore a Kshatriya but not of Shivaji who was Shudra. Gagabhat did not stop there. He again turned round and gave his opinion that Shivaji was a Kshatriya and that he was prepared to perform his coronation and even went so far as to write a treatise known as Gagabhatti in which he sought to prove that the Kayasthas were bastards.

What do these twists and turns show? Do they not show he was a most unwilling priest and that his willingness has had to be bought by cash? If this argument is sound then there is no doubt that his decision that Shivaji was Kshatriya was sold by him for illegal gratification.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_48

Lastly Shivaji's case is important because it shows that the Brahmins in the matter of status did not recognise as being bound by the principle of *res judicata*. They regard themselves as free to reopen a case already decided by them. For how long did the Brahmins respect their decision that Shivaji was a Kshatriya?

Shivaji started a new era from the day of his coronation, namely, 6th June 1674 which he called the Rajyabhisheka Era. How long did it remain in vogue? Only so long as Shivaji and his descendants remained as active rulers on the throne. The moment effective sovereignty passed into the hands of the Brahmin Peshwas, they issued an ordermk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_49 to discontinue it. Not only did they stop the use of the Era, they began using the style of the Muslim Emperors, namely, the Fasli year. The Brahmins did not stop there. They went further and began to question the very status of Shivaji's descendants as Kshatriyas.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_50 They could do nothing to the two sons of Shivaji, Sambhaji and Rajaram. Shivaji had their Upanayana performed in

his life-time by Brahmins with Vedic rites. They could do nothing to his grandson, Shahu because the Brahmins had no ruling power in their hands. The moment Shahu transferred his sovereign powers to his Brahmin Peshwa their road to repudiation became clear. There is no evidence whether Ramjee Raje the successor and adopted son of Shahu, who was minor and whose guardians were the Peshwas, had his Upanayana performed and if so, whether it was performed with Vedic rites. But there is definite evidence that the Upanayana ceremony of his successors, Shahu II, who was adopted in 1777 had been performed with *Pauranic* rites and by the direction of the Peshwas mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_51 The performance of Upanayana of Shahu II with *Pauranic* rites was tantamount to his being regarded by the Peshwas as a Shudra. For it is only in the case of a Shudra that the ceremonies are performed with *Pauranic* rites. What happened to Maharaja Pratapsingh who succeeded Shahu II in 1808 whether or not his Upanayana was performed and if performed whether it was performed with Vedic rites or *Pauranic* rites it is not possible to be definite. One thing, however, is definitely known that in about 1827 the Shankarcharya of Karvir in his judgement about the status of the Kayasthas of Sangli stated mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_52 "that there were no Kshatriyas in the Kali age and that documents showing that neither Shivaji, nor Sambhaji nor Shahu were Kshatriyas exist in his Daftar". It is alleged that this statement is not to be found in the original judgement but was interpolated by the Brahmin Raja of Sangli. Be that as it may, it was a direct challenge to the status of Pratapsinha as a descent of Shivaji. Pratapsinha had to put the issue to a conference of Brahmins which was held in Satara in 1830. The majority gave a decision in favour and saved Pratapsinha from being degraded to the status of a Shudra.

Foiled in their attempt to level down one line of Shivaji to the status of a Shudra, the Brahmins began their attack on the status of the second line of Shivaji which had established itself at Kolhapur. In the reign of one of the rulers of Kolhapur by name Babasaheb Maharaj, the Palace Priest by name Raghunath Sastri Parvate took into his head to perform all ceremonies in the Palace with *Pauranic* rites. It is said that he was stopped from continuing the practice. Babasaheb died in 1886. From 1886 to 1894, all rulers were minors and the administration was in the hands of the British. There is no direct evidence as to the exact manner and mode

of ceremonial performances adopted by the Palace priest. In 1902, the late Shahu Maharaj issued order to the Palace priest to perform all ceremonies in the Vedic manner. The priest refused and insisted on performing it in the *Pauranic* manner suggesting thereby that the rulers of Kolhapur were Shudras and not Kshatriyas. The part played by Sankaracharya of Karvir Math in this affair is very noteworthy. At the time of the controversy the head of the Math called Guru, had adopted a disciple (Sishya) by name Brahmanalkar and had given him all the rights of the head of the Math. At first both the Guru and the Sishya were on the side of the Palace Priest and against the Maharaja. Later on, the disciple took the side of the Maharaja and accepted his status as a Kshatriya. The Guru who remained on the side of the Priest excommunicated the Sishya. The Maharaja later on tried to create his own Sankaracharyamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_53 but he too proved false to the Maharaja.

Shivaji was recognised as a Kshatriya. Obviously, that status was not a personal honour conferred on him. It was a status in tail and belonged to his family as well as to his descendants. Nobody could question it. It could be lost by a particular descendant by doing some act which was inconsistent with it. It could not be lost generally. No act inconsistent with the Kshatriya status was attributed to any of the descendants of Shivaji. Yet the Brahmins came forward to repudiate the decision on their status.

This could happen only because the Brahmins claimed the power to do and undo the status of any Hindu at any time. They can raise a Shudra to the status of a Kshatriya. They can degrade the Kshatriya to the status of a Shudra. Shivaji's case proves that their sovereignty in this matter is without limit and without challenge.

These instancesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_54 are no doubt drawn from the Bombay Presidency only. But the principles from them are clear and general in their application. They are:

- (1) (1) That the Brahmins have the exclusive right to perform the Upanayana. Neither Shivaji, nor Pratap Sinha nor the Kayasthas, Panchals or Palashes wanted the Upanayana to be performed by a non-Brahmin. It is only once that the Kayasthas resolved to have their ceremonies performed by Kayasthas. But it was only a paper resolution.

- (2) (2) The Brahmin has the right to say whose Upanayana he will perform and whose he will not perform. In other words, the Brahmin is the sole judge of deciding whether a given community is entitled to Upanayana.
- (3) (3) The support of the Brahmins for the performance of Upanayana need not be based on honest grounds. It could be purchased by money. Shivaji got the support of the Brahmin Gagabhat on payment of money.
- (4) (4) The denial of Upanayana by the Brahmins need not be on legal or religious ground. It is possible for the denial to be based on purely political grounds. The refusal by the Brahmins of Upanayana to Kayasthas was entirely due to political rivalry between the two.
- (5) (5) The right of appeal against the denial of an Upanayana by a Brahmin is only to a Vidvat-Parishad and the Vidvat-Parishad is an assembly for which a Brahmin alone is eligible to be a member.

From the foregoing discussion. It must be clear to all that the Brahmins did possess the power to deny Upanayana. Given the powers and the motive, there is nothing strange if they used it against the Shudras.

CHAPTER XI

THE STORY OF RECONCILIATION

So far I have attempted to establish the following propositions :

- (1) (1) That it is the Brahmins who brought about the fall of the Shudras from the second to the fourth Varna in the Indo-Aryan Society;
- (2) (2) That the technique adopted by the Brahmins to degrade the Shudras was to deny them the benefit of the Upanayana;
- (3) (3) That this act of degradation was born out of the spirit of revenge on the part of the Brahmins who were groaning under the tyrannies and oppressions and indignities to which they were subjected by the Shudra kings.

While all this is crystal clear, there may be some who may yet have some such questions to ask, namely :

- (i) (i) Why should a quarrel with a few kings make the Brahmins the enemies of the whole Shudra community?

(ii) (ii) Was the provocation so great as to create a feeling of hatred and desire to seek vengeance?

(iii) (iii) Were not the parties reconciled? If they were, then their was no occasion for the Brahmins to degrade the Shudras.

(iv) (iv) How did the Shudras suffer this degradation?

These questions I admit have in them enough force and substance to call for serious consideration. It is only proper that they should be answered.

I

The question why the Brahmins, because of their quarrels with a few kings, should proceed to degrade the whole community of Shudras is not only relevant but is also very pertinent. There would, however, be no difficulty to answer this question if two things are borne in mind.

In the first place, the conflicts described in Chapter 9 between the Brahmins and the Shudra kings were not individual conflicts though they appear to be so. On the side of the Brahmins there is no doubt that the whole class was involved. Barring the episode relating to Vasishtha, all other episodes relate to Brahmins in general. On the side of the kings, it is true that the episodes mention individual kings as being involved in this conflict with the Brahmins. But it must not be forgotten that they all belonged to the same line to which Sudas belonged.

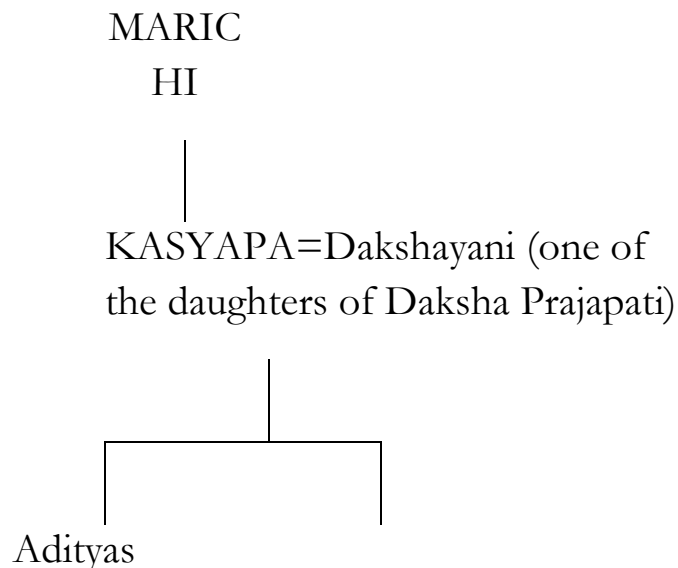

In so far as Sudas is concerned, the conflict was between the Brahmins and the Shudra clan of Kshatriyas. Of this, there can be no doubt. We have no direct evidence to say that the other offending kings also belonged to the Shudra clan of Kshatriyas. But we have other evidence which leads to the conclusion that they belonged to the same line of descent as Sudas.

Attention is invited to the following genealogical tree appearing overleaf which is taken from the Adi Parvan of the Mahabharata.*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_55

The inter-relationship of the Kshatriya kings who came in conflict with the Brahmins throws some interesting light On the subject, [Pururavasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_56](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_56) is the son of Ila and the grandson of Manu Vaivasvata. [Nabushasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who)

were the Shudras PART II.htm - [_msocom_57](#) is the grandson of Pururavas. *Nimi* [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2](#). Who were the Shudras PART II.htm - [_msocom_58](#) is one of the sons of Ikshvaku, who is the son of Manu Vivasvat. *Trishanku* [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2](#). Who were the Shudras PART II.htm - [_msocom_59](#) is 28th in descent from Ikshvaku. *Sudas* [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2](#). Who were the Shudras PART II.htm - [_msocom_60](#) is descended from Ikshvaku and is 50th in descent from him. *Vena* [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2](#). Who were the Shudras PART II.htm - [_msocom_61](#) is the son of Manu Vaivasvata. All of them claimed descent from Manu, some from him and some from Ikshvaku. Being descendants of Manu and Ikshvaku, it is possible to argue that they were all kindred of Sudas. Given the fact that Sudas is a Shudra, it follows logically that all these kings belonged to the Shudra group.

We have no direct evidence, but there would be nothing unnatural in supposing that in these conflicts with the Brahmins, the whole Shudra community, not merely a few Shudra kings, was involved. This conflict, it must be remembered, has taken place in the ancient past when life was tribal in thought and in action, and when the rule was that what was done by one individual belonging to the tribe was deemed to be done by the whole tribe. In all ancient societies the unit was the tribe or the community and not the individual, with the result that the guilt of the individual was the guilt of the community and the guilt of the community was the guilt of every individual belonging to it. If this fact is borne in mind, then it would be quite natural to say that the Brahmins did not confine their hatred to the offending kings, but extended it to the whole of the Shudra community and applied the ban against Upanayana to all the Shudras.

- (iii) (iii) The Brahmana is not subject to the authority of the king. The king was the ruler of all except the Brahmana;
- (iv) (iv) The Brahmana is exempt from (1) whipping; (2) fetters being put on him; (3) the imposition of fines; (4) exile; (5) censure and (6) abandonment.
- (v) (v) A Shrotriya (a Brahmana learned in Vedas) is free from taxes.
- (vi) (vi) A Brahmana is entitled to claim the whole of the treasure trove if he found it. If the king found it he must give half to the Brahmana.
- (vii) (vii) The property of a Brahmana dying without an heir shall not go to the king, but shall be distributed among Shrotriyas or Brahmanas.
- (viii) (viii) The king meeting a Shrotriya or a Brahmana on the road must give way to the Brahmana.
- (ix) (ix) The Brahmana must be saluted first
- (x) (x) The person of a Brahmana is sacred. No death sentence could be passed against a Brahmana even if he is guilty of murder.
- (xi) (xi) Threatening a Brahmana with assault, or striking him or drawing blood from his body is an offence.
- (xii) (xii) For certain offences the Brahmana must receive a lesser punishment than members of other classes.
- (xiii) (xiii) The king should not summon a Brahmana as a witness where the litigant is not a Brahmana.
- (xiv) (xiv) Even when a woman has had ten former husbands who are not Brahmanas, if a Brahmana marries such a woman, it is he alone who is her husband and not a Rajanya or a Vaishyamk:MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_63 to whom she may have been married.

After discussing these pretensions and privileges claimed by the Brahmanas, Mr. Kane says
[:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_64](mailto:MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_64)

"Further privileges assigned to Brahmanas are : free access to the houses of other people for the purpose of begging alms; the right to collect fuel, flowers, water and the like without its being regarded as a theft, and to converse with other men's wives without being restrained (in such conversation) by others; and the right to cross rivers without paying any fare for the ferry-boat and to be conveyed (to the other bank) before other people. When engaged in trading and using a ferry boat, they shall have to pay no toll. A Brahmana

who is engaged in travelling, who is tired and has nothing to eat, commits no wrong by taking two canes of sugar or two esculent roots."

These privileges have no doubt grown in course of time and it is difficult to say which of them had become vested rights when these conflicts were raging. But there is no doubt that some of the most annoying ones such as (i), (ii), (iii), (viii) and (xiv) had then come into existence. These were enough to infuriate any decent and self-respecting body of men.

On the side of the Kshatriya kings they could not be supposed to be willing to take things lying low. How could they? It must not be forgotten that most of the Kshatriya kings who came into conflict with the Brahmins, belonged to the solar line mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_65. They differed from the Kshatriyas of the lunar line in learning, in pride and in martial spirit. The Kshatriyas who belonged to the solar line were a virile people, while those who belonged to the lunar line were an imbecile lot without any self-respect. The former challenged the Brahmins. The latter succumbed to them and became their slaves. This was as it should be. For while the Kshatriyas of the lunar line were devoid of any learning, those belonging to the solar line were not merely the equals of Brahmins in the matter of learning, they were their superiors. Several of them were the authors of the Vedic hymns and were known as Rajarishis. This was particularly true of those who came into conflict with the Brahmins.

According to the Anukramanika to the Rig Veda as well as according to tradition the following hymns are said to have been composed by the under mentioned kings: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_66

"vi.15: Vitahavya (or Bharadvaja); x.9: Sindhuvipa, son of Ambarisha (or Trisiras, son of Tvashtri); x.75: Sindhukshit, son of Priyamedha; x. 133, *Sudas* son of Pijavana; x. 134, Mandhatri, son of Yuvanasha; x. 179, Sibi, son of Usinara, Pratardana, son of Divodasa and king of Kasi, and Vasumanas, son of Rohidasva; and x. 148 is declared to have had *Prithi Vainya*."

The Matsya Purana also gives the lists mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART

[II.htm - _msocom_67](#) of those who composed the hymns of the Rig Veda in a passage which says :

"Bhrigu, Kashya, Prachetas, Dadhicha, Atmavat, Aurva, Jamadagni, Kripa, Sharadvata, Arshtishena, Yudhajit, Vitahavya, Suvarchas, *Vaina*, *Prithu*, *Divodasa*, Brahasva, Gritsa, Saunaka—these are the nineteen Bhrigus, composers of hymns. Angiras, Vedhasa, Bharadvaja, Bhalandana, Ritabadha, Garga, Siti, Sankriti, Gurudhira, Mandhatri, Ambarisha, Yuvanasva, Purukutsa, Pradyumna, Shravanasya, Ajamidha, Haryashva, Takshapa, Kavi, Prishadashva, Virupa, Kanva, Mudgala, Utathya, Sharadvat, Vajasravas, Apasya, Suvitta, Vamadeva, Ajita, Brihaduktha, Dirghatamas, Kakshivat, are recorded as thirty-three eminent Angirases. These were all composers of hymns. Now learn the Kasyapas... *Vishvamisra*, son of Gadhi, Devaraja, Bala the wise Madhuchhandas, Rishabha, Aghamarshana, Ashtaka, Lohita, Bhritakila, Vedasravas, Devarata, Puranashva, Dhananjaya, the glorious Mithila, Salankayana,—these are to be known as the thirteen devout and eminent Kusikas. Manu Vaivasvata, Ida, king *Pururavas*, these are to be known as the eminent utterers of hymns among the Kshatriyas. Bhalanda, Vandya, and Sanskriti these are always to be known as the three eminent persons among the Vaishyas who were composers of hymns. Thus ninety-one persons have been declared by whom hymns have been given birth to, Brahmanas, Kshatriyas and Vaishyas.

In the list of the authors of the Vedic hymns there are not only names of many Kshatriyas, there are names of many of the Kshatriyas who had come into conflict with the Brahmins. The Kshatriyas were the leaders among the Vedic hymn makers. The most famous Vedic hymn namely the Gayatri mantra is the production of Vishvamisra who was a Kshatriya. It was impossible for the Kshatriyas of this calibre not to take up this challenge of the Brahmins.

Their pride which was born out of their prowess and their learning must have been so greatly wounded by the pretensions of the Brahmins that when they did take up the challenge of the Brahmins they did it in a ruthless spirit. They hit the Brahmins hip and thigh. Vena forced them to worship him and no other god; Pururavas looted their wealth. Nahusha yoked them to his chariot and made them drag it through the city. Nimi flouted the exclusive and hereditary right of a family priest to perform all the ceremonies in the family and Sudas went to the length of burning alive the son of Vasishtha who was once his family priest. Surely, there cannot be greater cause to provoke the Brahmins to seek their vengeance

upon the Shudras.

III

On the point of possible reconciliation between the Brahmins and the Shudras, there is no doubt some evidence on which some people might rely. Before stating my views upon the worth of this evidence, it is desirable to draw attention to it. The evidence consists of stories of reconciliation which are scattered throughout the Mahabharata and the Puranas.

The first story of reconciliation concerns the two tribes, the Bharatas to whom Vishvamitra belonged and the Tritsus to whom Vasishtha belonged. That the Bharatas were enemies of Vasishtha or Tritsus is clear from the Rig Veda itself which says
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_68

III. 53.24.—"These sons of Bharnta, O Indra, desire to avoid (the Vasishthas), not to approach them."

The story of their reconciliation is told in the Adi Parvan of the Mahabharata mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_69 and runs as follows :

"And the hosts of their enemies also smote the Bharatas. Shaking the earth with an army of four kinds of forces, the Panchalya chief assailed him having rapidly conquered the earth and vanquished him with ten complete hosts. Then the king Samvarana with his wives, ministers, sons and friends fled from that great cause of alarm and dwelt in the thickets of the great river Sindhu (Indus) in the country bordering on the stream, and near a mountain. There the Bharatas abode for a long time, taking refuge in a fortress. As they were dwelling there, for a thousand years, the venerable rishi Vasishtha came to them. Going out to meet him on his arrival, and making obeisance, the Bharatas all presented him with the *arghya*, offering, showing every honour to the glorious rishi. When he was seated, the king himself solicited him: 'Be thou our priest; let us strive to regain my kingdom.' Vasishtha consented to attach

himself to the Bharatas, and as we have heard, invested the descendant of Puru with the sovereignty of the entire Kshatriya race, to be a horn (to have a mastery) over the whole earth. He occupied the splendid city formerly inhabited' by Bharata, and made all kings again tributary to himself."

The second story relates to the conflict between the Bhrigus and the Kshatriya king Kritavirya and their subsequent reconciliation. It occurs in the Adi Parvan of the Mahabharata
[:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C2. Who were the Shudras PART II.htm - _msocom_70](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C2. Who were the Shudras PART II.htm - _msocom_70)

"There was a king named Kritavirya, by whose liberality the Bhrigus, learned in the Vedas, who officiated as his priests, had been greatly enriched with cows and money. After he had gone to heaven, his descendants were in want of money, and came to beg for a supply from the Bhrigus, of whose wealth they were aware. Some of the latter hid their money underground, others bestowed it on Brahmins, being afraid of the Kshatriyas, while others again gave these last what they wanted. It happened, however, that a Kshatriya while digging the ground, discovered some money buried in the house of a Bhrigu. The Kshatriyas then assembled and saw this treasure, and, being incensed, slew in consequence all the Bhrigus, whom they regarded with contempt, down to the children in the womb. The widows, however, fled to the Himalaya mountains. One of them concealed her unborn child in her thigh. The Kshatriyas, hearing of its existence from a Brahmani informant sought to kill it, but it issued forth from his mother's thigh with lustre, and blinded the persecutors. After wandering about bewildered among the mountains for a time, they humbly supplicated the mother of the child for the restoration of their sight; but she referred them to her wonderful infant Aurva, into whom the whole Veda, with its six Vedangas, had entered, as the person who (in retaliation of the slaughter of his relatives) had robbed them of their eye-sight, and who alone could restore it. They accordingly had recourse to him, and their eye-sight was restored. Aurva, however, mediated the destruction of all living creatures, in revenge for the slaughter of the Bhrigus, and entered on a course of austerities which alarmed both gods, asuras and men; but his progenitors (Pitris), themselves appeared, and sought to turn him from his purpose by saying that they had no desire to be revenged on the Kshatriyas. It was *not* from weakness that the devout Bhrigus overlooked the massacre perpetrated by the

murderous Kshatriyas. 'When we became distressed by old age, we ourselves desired to be slaughtered by them. The money which was buried by some one in a Bhrigu's house was placed there for the purpose of exciting hatred, by those who wished to provoke the Kshatriyas. For what had we who were desiring heaven, to do with money?' They added that they hit upon this device because they did not wish to be guilty of suicide, and concluded by calling upon Aurva to restrain his wrath, and abstain from the sin he was meditating: 'Destroy not the Kshatriyas, o son, nor the seven worlds. Suppress thy kindled anger which nullifies the power of austere fervour.' Aurva, however, replies that he cannot allow his threat to remain unexecuted. His anger, unless wreaked upon some other object, will, he says, consume himself, and he argues, on grounds of justice, expediency and duty, against the clemency which his progenitors recommended. He is, however, persuaded by the Pitris to throw the fire of his anger into the sea, where they say it will find exercise in assailing the watery element, and in this way his threat will be fulfilled. It accordingly became the great Hayasiras, known to those who are acquainted with the Veda, which vomits forth that fire and drinks up the waters."

The third story concerns the conflict between Aijuna, son of Kritavirya, the king of the Haihayas and Parashurama and the subsequent reconciliation between them. It occurs in the Vanaparvan of the Mahabharata and runs as follows
[:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_71](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_71)

"Arjuna, son of Kritavirya and king of the Haihayas, had, we are told, a thousand arms. He obtained from Dattatreya an aerial car of gold, the march of which was irresistible. He thus trod down gods, Yakshas, rishis, and oppressed all creatures. The gods and rishis applied to Vishnu and he along with Indra, who had been insulted by Arjuna, devised the means of destroying the latter. At this time, the story goes on, there lived a king of Kanyakubja, called Gadhi, who had a daughter named Satyavati. The marriage of this princess to the rishi Richika and the birth of Jamadagni, are then told in nearly the same way as above narrated. Jamadagni and Satyavati had five sons, the youngest of whom was the redoubtable Parashurama. By his father's command he kills his mother (who, by

the indulgence of impure desire, had fallen from her previous sanctity), after the four elder sons had refused this matricidal office, and had in consequence been deprived of reason by their father's curse. At Parashurama's desire, however, his mother is restored by his father to life, and his brothers to reason; and he himself is absolved from all the guilt of murder; and obtains the boon of invincibility and long life from his father. His history now begins to be connected with that of king Arjuna (or Kritavirya). The latter had come to Jamadagni's hermitage, and had been respectfully received by his wife; but he had requitted this honour by carrying away by force the calf of the sage's sacrificial cow, and breaking down his lofty trees. On being informed of this violence, Parashurama was filled with indignation, attacked Arjuna, cut off his thousand arms, and slew him. Arjuna's son, in return slew the peaceful sage Jamadagni, in the absence of Parashurama. Parashurama incensed at the slaughter of his father, having vowed in consequence to sweep away all Kshatriyas from the earth, seized his weapons and slaying all the sons and grandsons of Arjuna, with thousands of the Haihayas, he turned the earth into a mass of ensanguined mud. Having thus cleared the earth of Kshatriyas he became penetrated by deep compassion and retired to the forest. After some thousands of years had elapsed, the hero, naturally irascible, was taunted by Paravasu, the son of Raibhaya and grandson of Vishvamitra, in a public assembly in these words : 'Are not these virtuous men, Pratardana and the others, who are assembled at the sacrifice in the city of Yayati—are they not Kshatriyas? Thou hast failed to execute thy threat, and vainly boastest in the assembly. Thou hast withdrawn to the mountain from the fear of those valiant Kshatriyas, while the earth has again become overturn by hundreds of their race,' Hearing these words, Rama seized the weapons. The hundreds of Kshatriyas who had before been spared had now grown powerful kings. Those, however, Parashurama, now slew with their children, and all the numerous infants then unborn as they came into the world. Some, however, were preserved by their mothers. Having twenty-one times cleared the earth of the Kshatriyas, Rama gave her as a sacrificial fee to Kasyapa at the conclusion of an

Ashvamedha."

After telling the story of the conflict the author of the Mahabharata proceeds to narrate the story of reconciliation in the following terms
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_72

"Having one and twenty times swept away all the Kshatriyas from the earth, the son of Jamadagni engaged in austerities on Mahendra, the most excellent of mountains. After he had cleared the world of Kshatriyas, their widows came to the Brahmins, praying for offspring. The religious Brahmins, free from any impulse of lust, cohabited at the proper seasons with these women, who in consequence became pregnant, and brought forth valiant Kshatriya boys and girls, to continue the Kshatriya stock. Thus was the Kshatriya race virtuously begotten by Brahmins on Kshatriya women and became multiplied and long-lived. Thence there arose four castes inferior to the Brahmins."

The above instances of conflicts and conciliations between Brahmins and Kshatriyas do not relate to those Kshatriya kings who have figured in history as having declared war on the Brahmins. To turn to instances of their
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_73 stories of reconciliation with the Brahmins the first is that of Kalmashapada. He is said to be the son of Sudas.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_74 The story is given in the Adiparvan of the Mahabharata.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_75 That part of the story which narrates the enmity between Kalmashapada and Vasishtha has already been recounted.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_76 The part of the story which deals with reconciliation runs as follows :

"After roaming about over many mountains and countries, he (Vasishtha) was followed home by his daughter-in-law Adrisyanti, Shaktri's
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_77 widow, from whose womb he heard a sound of the recitation of the Vedas, as she was pregnant with a child, which, when born, received the name of Parasara. Learning

from her that there was thus a hope of his line being continued, he abstained from further attempts on his own life. King Kalmashapada, however, whom they encountered in the forest, was about to devour them both when Vasishtha stopped him by a blast from his mouth, and sprinkling him with water consecrated by a holy text, he delivered him from the curse by which he had been affected for twelve years. The king then addressed Vasishtha thus : 'Most excellent sage, I am Saudasa, whose priest thou art, what can I do that would be pleasing to thee?' Vasishtha answered : 'This which has happened has been owing to the force of destiny; go, and rule thy kingdom; but, o monarch, never condemn the Brahmins.' The king replied, 'Never shall I despise the most excellent Brahmins; but submitting to thy commands I shall pay thee all honour. And I must obtain from thee the means of discharging my debt to the Ikshvakus. Thou must give me the offspring which I desire.' Vasishtha promised to comply with his request. They then returned to Ayodhya. And Vasishtha having been solicited by the king to beget an heir to the throne, the queen mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_78 became pregnant by him, and brought forth a son at the end of twelve years."

The second instance occurs in the Anushasanaparvan of the Mahabharata : mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_79

"At the time the eloquent king Saudasa sprung from the race of Ikshvaku proceeded, after salutation, to make an enquiry of his family priest Vasishtha, the eternal saint, the most excellent of rishis, who was able to traverse all the world, and was a treasure of sacred knowledge : 'What, o, venerable and sinless man, is declared to be the purest thing in the three worlds, by constantly celebrating which one may acquire the highest merit?' Vasishtha in reply expatiates at great length on the merit resulting from bestowing cows, and ascribes to these animals some wonderful properties so that they are the 'support of all beings,' the present and the future, and describes the cow as 'pervading the universe, mother of the

past and the future'. The great self-subduing king, considering that these words of the rishi were most excellent, lavished on the Brahmins very great wealth in the shape of cows and obtained the worlds. So here we find the son of Saudasa extolled as a saint."

The third instance relates to the reconciliation in which there is reference to Sudasa's descendants. It occurs in the Shanti Parvan of the Mahabharata :mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_80

"Having received the dominion over the earth, Kasyapa made it an abode of Brahmins, and himself withdrew to the forest. Shudras and Vaishyas then began to act lawlessly towards the wives of the Brahmins, and in consequence of there being no government, the weak were oppressed by the strong, and no one was master of any property. The earth being distressed by the wicked, in consequence of that disorder, and unprotected according to rule by the Kshatriyas, the guardians of justice, descended to the lower regions. Perceiving her moving from place to place in terror, Kasyapa upheld her with his thigh (*uru*). From this circumstance she derives her name of *urvi*. The goddess Earth then propitiated Kasyapa and supplicated him for protection, and for a king. 'I have,' she said, 'preserved among females many Kshatriyas who have been born in the race of Haihayas; let them be my protectors. There is the heir of Pauravas, the son of Viduratha, who has been brought up by bears on the mountain Rikshavat; let him protect me. So, too, the heir of Saudasa, has been preserved by the tender-hearted and glorious priest. Parasara who had performed, though a Brahmin, all menial offices for him like a Shudra whence the prince's name Sarvakarman. 'After enumerating other kings who had been rescued, the Earth proceeds: 'All these Kshatriya descendants have been preserved in different places, abiding continually among the classes of dyokaras and goldsmiths. If they protect me, I shall continue unshaken. Their fathers and grandfathers were slain on my account by Rama, energetic in action. It is incumbent on me to avenge their cause. For I do not desire to be always protected by an extraordinary person (such as Kasyapa); but I will be content with

an ordinary ruler. Let this be speedily fulfilled.' Kasyapa then sent for these Kshatriyas who had been pointed out by the Earth, and installed them in the kingly office."

Such is the evidence. Can anybody accept it as reliable? In my opinion, far from accepting it, one should beware of such evidence.

In the first place, all these stories of reconciliation end, for the Kshatriyas, in peace without honour. In every case, the Kshatriyas are shown to have undergone an abject surrender. The Bharatas are the enemies of Vasishtha. Suddenly there is a famine in their country. They leave the country and lose their kingdom. They implore Vasishtha their age-old enemy and pray that he become their priest and save them from the calamity. In the story of the Bhrigus and the Kshatriyas, the credit is given to the Brahmins as being too proud to fight. In the story of the Haihaya Kshatriyas and the Saudasa such as Kalmashpada, the surrender of the Kshatriyas was so to say purchased by them by offering their women to the victorious Brahmins. The stories are all doctored with a view to glorify the Brahmins and humiliate the Kshatriyas. Who can take such dirty, filthy, abominable and vainglorious stories of reconciliation as true historical facts? Only a supporter of Brahminism can do so.

Such is the general character of the evidence on the question of reconciliation. Coming to the particular case of reconciliation between the Brahmins and the Shudras, the descendants of Sudas, there is ample evidence to show that no such reconciliation had taken place. In the first place, it cannot be gainsaid that Parasara, the son of Shakti or Shaktri, the son of Vasishtha, when he heard of the way in which his father had met his death—namely, that he was burnt alive by Sudas, the Shudra king,—determined to execute a general slaughter of all creatures. The general slaughters is, of course, a figurative term. What is meant is that Vasishtha took a vow of general vengeance against the descendants of Sudas, namely, the Shudras. It is no doubt said in the Mahabharata that Vasishtha restrained Parasara and persuaded him not to carry out his threat of vengeance by telling him how the Bhrigus and the Kshatriyas had come into conflict and how the former won against the latter by adopting non-violence. But this story cannot be true; for, like other stories it is doctored with a view to bring glory to the Brahmins.

In the second place, the strongest proof in support of the contention that there was no reconciliation between the Brahmins and the Shudras comes from the legislation enacted by the Brahmins against the Shudras.

The laws against the Shudras have already been referred to. Their growth and their extraordinary character have been pointed out. All that remains to do is to say that against this background of black laws any suggestion regarding reconciliation must appear to be wholly untenable. The Brahmins not only did not forgive the Shudras, they pursued even the progeny of the Shudras-with the same spirit of relentless revenge. As many people do not seem to have any idea of this, it may be desirable to state a few facts regarding the Chandala and the Nishada.

The Chandala and Nishada are the issues of mixed marriages. Nishada is an anuloma while the Chandala is a Pratiloma. The anulomas# are held to be eligible for Upanayana. But curiously enough an exception is made to this rule. Nishada who is the son of Brahman from a Shudra woman, though an anuloma, is held not to be eligible for Upanayana. It is interesting to know why this exception was made. The only answer seems to be that this arbitrary act is an act of revenge against the children of one's enemy.

There are six anulomas as shown in the following table :

<i>Father</i>	<i>Mother</i>	<i>Name of the progeny</i>
Brahmin	Kshatriya	Murdhavasikta
Brahmin	Vaishya	Ambashtha
Brahmin	Shudra	Nishada
Kshatriya	Vaishya	Mahishya
Kshatriya	Shudra	Urga
Vaishya	Shudra	Karana

Turning to the Pratilomas##, Manu no doubt calls, all of them as the best of men.

##Gaut, Dh, S., IV. 21, quoted by Kane, II, Part I, p. 229.

<i>Father</i>	<i>Mother</i>	<i>Name of the caste</i>
<i>Shudra</i>	<i>Brahmin</i>	<i>Chandala</i>
<i>Shudra</i>	<i>Kshatriya</i>	<i>Kshattar</i>

<i>Shudra</i>	<i>Vaishya</i>	<i>Ayogava</i>
<i>Vaishya</i>	<i>Brahmin</i>	<i>Suta</i>
<i>Vaishya</i>	<i>Kshatriya</i>	<i>Vaidehaka</i>
<i>Kshatriya</i>	<i>Brahmin</i>	<i>Magadha</i>

At the same time, the stigma on the Pratilomas is not evenly distributed among all of them. In the matter of rights and privileges, the Ayogava and the Kshattar are treated with incredible consideration, while the Chandala is subjected to unspeakable condemnation. As an illustration of this discrimination one can cite the following provisions in the *Manu Smriti* :

As to the Ayogava, the *Manu Smriti* merely says :

Carpentering (shall be the occupation) of an Ayogava.—x.46. As to the Kshattar the *Manu Smriti* says :

..... catching and killing animals that live in holes (is the occupation) of Kshattar.—x.49.

They are only assigned low occupations.

Compare with this what the *Manu Smriti* has to say about the Chandala:

"A Chandala and a boar, a cock and also a dog, and a woman in her courses and an eunuch, may not see the Brahmins eating."— iii. 239.

One may not abide with outcasts, nor Chandalas, nor Pukkakas, nor idiots, nor proud (people), nor with the low-born (people) nor with Antyavasayins.—iv.79.

One becomes pure by bathing if one has touched a Chandala, or a woman in her courses, an outcaste, also a woman lying-in, a corpse or one who has touched it.—v.85.

Manu declared the flesh of (a beast) killed by dogs (to be pure); also the flesh of an animal killed by other carnivorous (animals) (or) by Chandala (and) other Dasyus.— v.131.

Two-fold should be the fine of a criminal sentenced within a year, and just as much if one cohabit with a -Vratya woman or a Chandala woman.— viii.373.

The man, however, who foolishly allows this to be done by any other (wife) than the one of his own caste when the latter is at hand, has been, of old, looked upon as (no whit better than) a Chandala.—ix.87.

The dwelling of Chandalas and Svapacas (should be) outside the village; they should be deprived of dishes (apapatra); their property (consists of) dogs and asses.—x.51.

Moreover, Vishvamitra, well knowing right and wrong, being oppressed by hunger proceeded to eat the ramp of a dog, having it from the hand of a Chandala.—x. 108.

At no time should a Brahmin beg property from a Shudra for the sake of sacrifice, for on offering sacrifice after begging (from a Shudra) he is born after death as a Chandala.—vi.24.

On having (carnal) intercourse with Chandala women (or low born woman), on eating their food or receiving (presents) from them, a Brahmin (if he has done so) unwittingly, falls; but (if he has done so) wittingly, he comes to an equality (with them).— xi.175.

The slayer of a Brahmin enters the womb of dogs, boars, asses, camels, cows, goats, sheep, (forest) animals, birds, Chandalas and Pukkakas— xi.55.

How different is the treatment accorded to the Chandala as compared to the treatment accorded to the Ayogava and the Kshattar when all of them are Pratilomas? Why should the Chandala be singled out as the most infamous of the Pratilomas? Only because he is the progeny of the hated Shudra. It is just an act of revenge against the children of one's enemy.

All this leaves no doubt that there was no reconciliation between the Brahmins and the Shudras.

IV

Coming to the last objection, it appears that behind it there is a feeling that the Shudras must have been a very large part of the Indo-Aryan society. With such a feeling it does appear rather strange that the Shudras should have suffered silently the perpetration of such an act as the denial of the Upanayana. Because the Shudras in the Hindu Society form such a vast proportion of the population, so the Shudras of the Indo-Aryan Society must also have formed a very large proportion of the population, can be the only basis for such a feeling. Such an inference is without any foundation, for the Shudras of the Indo-Aryan Society are absolutely

different in race from the Shudras of the Hindu Society. The Shudras of the Hindu Society are not the racial descendants of the Shudras of the Indo-Aryan Society.

This confusion has arisen because of the failure to realise that the meaning of the word 'Shudras' in the Indo-Aryan society is quite different from the meaning it has in the Hindu society. In the Indo-Aryans the word Shudra was proper name of one single people. It was the name of a people who belonged to a particular race. The word Shudra, as used in the Hindu society, is not a proper name at all. It is an epithet for a low uncultured class of people. It is a general cognomen of a miscellaneous and heterogeneous collection of tribes and groups, who have nothing in common except that they happen to be on a lower plane of culture. It is wrong to call them by the name Shudras. They have very little to do with their namesakes of the Aryan society, who had offended the Brahmins. It is a pity that these innocent and backward people of later days have been rolled up with the original Shudras and subjected to the same penalties for which they had given no cause.

That the Shudras of the Indo-Aryan and the Shudras of the Hindu Society are different and distinct is a fact which was present at one time to the minds of the Dharma Sutrakaras is quite clear. This is evident from the distinction they made between *Sacchudra* and *Asac-chudra* and between *Aniravasita* Shudras and *Niravasita* Shudras. *Sacchudra* means a cultured Shudra and *asac-chudra* means an uncultured Shudra. *Niravasita* Shudra means a Shudra living in the village community. *Aniravasita* Shudra means a Shudra living outside the village community. It is quite wrong to say as [sOMEMK:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_81](#) do that this division indicates that the condition of Shudras in the eyes of the lawgivers was improving, in that some were admitted to social intercourse when formerly none was. The correct interpretation is the *Sacchudra* and *Niravasita* Shudra refer to the Shudras of the Aryan society and the *osac-chudra* and the *Aniravasita* Shudra refer to the Shudras by epithet who had begun to form part of the Hindu society. We are concerned with the Shudra of the Aryan society. They have no connection with the later-day Shudras of the Hindu society. That being so, the fact that the Shudras of the Hindu society form such a large number cannot be made the basis for an argument that the Shudras of the Indo-Aryans must have also been a very large body of people. We do not know exactly whether the Shudras were a tribe, a clan or a moiety or a group of families. But even if they were as big as a tribe, they could not

have been larger than a few thousand. The Bharatas are being expressly spoken of in the Rig Veda, vii.33.6, as being small in number. The Satapatha Brahmana referring to a horse sacrifice performed by the Panchala king Son Satrasaha mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_82 says:

"When Satrasaha makes the Ashvamedha offering the Taurvasas arise, six thousand and six and thirty, clad in mail."

If it is any indication that the tribe of Taurvasas numbered six thousand, the Shudras could not be very many.

Apart from the question of numbers, what could the Shudras have done to prevent the calamity? If some Brahmins whom they had offended refused to perform their Upanayana, could they have got the services of other Brahmins whom they had not offended? Such a possibility would of course depend upon various circumstances. In the first place, we do not know whether all the Brahmins had formed a common front and whether it was possible to break up that front. We do not know that at the time when the issue was a burning issue the Brahmins had become a caste. But it is clear mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_83 that even in the times of the Rig Veda, Brahmins were a class by themselves, had developed class consciousness and were keen on maintaining class interests. In that event it would have been difficult for the Shudras to break up the conspiracy of the Brahmins. Secondly, it might also be that the performance of Upanayana had become the exclusive right of the family priest. The story of king Nimi mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/38C2. Who were the Shudras PART II.htm - _msocom_84 shows that the performance of sacrifices had become the exclusive right of the family priest. If there is substance in these suggestions, then obviously the Shudras could not have done much to prevent the common front of the Brahmins operating against them.

Another possibility was the forging of a common front among all the Kshatriyas which might have had the effect of weighing down the opposition of the Brahmins. Whether such a thing was possible can only be a matter of speculation. In the first place, did the Shudras realise what the effect of the loss of Upanayana was going to be on their future status? I am sure they did not. Secondly, were the Kshatriyas a united body of people? I doubt if they were. Thirdly, had the other Kshatriya kings any sympathy for the Shudras? If the story of the Dasharajna Yuddha told in

the Rig Veda is true, it is quite obvious that there was not much love lost between the Shudras and the other non-Shudra Kshatriyas.

Taking all these circumstances into consideration, there is nothing strange if the Shudras suffered the denial of the Upanayana by the Brahmins to be a fact.

CHAPTER XII

THE THEORY IN THE CRUCIBLE

THE object of this essay was to trace the origin of the Shudras and discover the causes of their degradation. After an examination of historical material and of theories suggested by various writers—orthodox as well as modern—I have put forth a new thesis. In the preceding chapters, it has been presented in parts for the facility of laying the foundation of each part separately. It is time these parts were assembled together for a full and complete understanding of what the thesis is. It may be summarized as follows :

- (1)(1) The Shudras were one of the Aryan communities of the Solar race.
- (2)(2) The Shudras ranked as the Kshatriya Varna in the Indo-Aryan Society.
- (3)(3) There was a time when the Aryan Society recognized only three Varnas, namely. Brahmins, Kshatriyas and Vaishyas. The Shudras were not a separate Varna but a part of the Kshatriya Varna.
- (4)(4) There was a continuous feud between the Shudra kings and the Brahmins, in which the Brahmins were subjected to many tyrannies and indignities.
- (5)(5) As a result of the hatred towards the Shudras due to their tyrannies and oppressions, the Brahmins refused to invest the Shudras with the sacred thread.
- (6)(6) Owing to the loss of the sacred thread the Shudras became socially degraded, fell below the rank of the Vaishyas and came to form the fourth Varna.

It now remains to assess the validity of this thesis. It is usual for the

author to leave this to others to do it. I propose to make a departure and myself enter upon the task of putting my thesis to test. I do so because it gives me an opportunity of vindicating my thesis.

II

I can well imagine my critics to allege that my thesis rests upon a single statement from the Mahabharata in which Paijavana is described as a Shudra; that identification of Paijavana with Sudas is not proved beyond the shadow of doubt; that the description of Paijavana as a Shudra does not occur in any other place except in a single place in the Mahabharata. How can a theory built on such weak foundations be acceptable? They are bound to invoke the usual agreement that a chain is not stronger than its weakest link. I am sure that my thesis cannot be discredited and demolished in such an easy manner.

In the first place, I do not admit that a thesis cannot be built up on a single piece of evidence. It is a well-known principle of the law of evidence that witness must be weighed and not numbered. The number of witnesses is a less important consideration than the weight to be attached to the individual testimony of each or to the sum of the testimonies of all taken together. There is no reason to doubt the truth of the statement that Paijavana was a Shudra. The author of the Mahabharata has no reason to give a false description. Writing after such a long time, no motive, no partiality could be attributed to him. The only conclusion one can draw is that the author was recording a true tradition.

The fact that Paijavana is not described as a Shudra in the Rig Veda does not militate against the truth of the statement which occurs in the Mahabharata. Many explanations can be given for the absence of the word Shudra from the description of Paijavana in the Rig Veda. The first explanation is that it is wrong to expect such a description in the Rig Veda. The Rig Veda is a book of religion. A description such as Shudra could not be expected in a book of religion. It would be irrelevant. But such a description may well be expected to occur in a book of history such as the Mahabharata wherein as a matter of fact it does.

The other explanation for the infrequent mention of the word Shudra in connection with Sudas which I can think of is that it was unnecessary. Descriptions in terms of kula, gotra, tribe, etc., are really speaking marks of identification. Marks of identification are necessary in the case of lesser people. They are unnecessary in the case of famous men. There is no

doubt that Sudas was the most famous man of his time. It was unnecessary to describe him as Shudra for the purpose of identifying him to the people. This is not altogether a mere matter of speculation. One can cite historical instances. Take the case of Bimbisara and Pasenadi, two kings who lived in the time of Buddha. All other kings who were their contemporaries are described in the literature of the time by their *gotra* name. But these two are just spoken of by their personal names. Prof. Oldenberg*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/38C2. [Who were the Shudras PART II.htm - _msocom_85](#) who noticed this fact explains this on the ground that they were well-known and did not stand in need for being described by their *gotra* names.

III

But it is really wrong to suppose that my theory is based on the solitary passage in the Mahabharata or on the identification of Paijavana with Sudas. Nothing of the kind. The thesis is not supported by a single chain and therefore the argument that a chain is not stronger than its weakest link does not apply to it. The case is supported by several parallel chains. The weakness of a link in one of them cannot be said to weaken the support. The weakness of one link in one chain throws the whole weight on other chains. Consequently, before concluding that the theory has broken down, it is necessary to prove that the other chains are not able to sustain the weight.

The description of Paijavana as Shudra and the identification of Paijavana with Sudas of the Rig Veda is not the only chain which supports the thesis. There are other chains. One of these is the admission in the Satapatha and Taittiriya Brahmanas that there were only three Vamas and the Shudras did not form a separate Varna. The second consists of evidence that Shudras were kings and ministers of State. The third consists of evidence that the Shudras were at one time entitled to Upanayana. All these are strong chains quite capable of taking all extra weight arising out of a possible breakdown of the first chain.

As far as evidence is concerned, absolute certainty amounting to demonstration is seldom to be had and I do not claim absolute certainty for my thesis. But I do claim that the evidence in support of the theory is both direct as well as circumstantial, and where it is conflicting it is supported by strong probabilities in favour of it.

IV

I have shown what strength there is in the thesis I have presented. I will now proceed to show that the thesis is a valid one. There is one test which I think is generally accepted as the right one by which to appraise the validity of a thesis. It is that a thesis which demands acceptance must not only suggest a solution, but must also show that the solution it proposes answers the riddles which surround the problem which it claims to have solved. It is this test that I propose to apply to my thesis.

Let me begin by listing in one place the riddles of the Shudra. The following include the most important of them :

- (1)(1) The Shudras are alleged to be non-Aryans, hostile to the Aryans, whom the Aryans are said to have conquered and made slaves. How is it then that the rishis of the Yajur Veda and the Atharva Veda should wish glory to the Shudras and express a desire to be in favour of the Shudras?
- (2)(2) The Shudras are said not to have the right to study the Vedas. How is it then that Sudas, a Shudra, was the composer of the hymns of the Rig Veda?
- (3)(3) The Shudras are said to have no right to perform sacrifices. How is it that Sudas performed the Ashva-Medha sacrifice? Why does the Satapatha Brahmana treat the Shudra as a sacrificer and give the formula of addressing him?
- (4)(4) The Shudras are said not to have the right to Upanayana. If this was so from the very beginning, why should there be a controversy about it? Why should Badari and the Samskara Ganapati say that he has a right to Upanayana?
- (5)(5) The Shudra is not permitted to accumulate property. How is it that the Maitrayani and Kathaka Samhitas speak of the Shudras being rich and wealthy?
- (6)(6) The Shudra is said to be unfit to become an officer of the State. How is it then that the Mahabharata speaks of Shudras being ministers to kings?
- (7)(7) It is said that the duty of the Shudra is to serve, in the capacity of a menial, the three Vamas. How is it then that there were kings among the Shudras as testified by the case of Sudas and other cases mentioned by Sayana?
- (8)(8) If the Shudra had no right to study the Vedas, if he had no right

to Upanayana, if he had no right to sacrifice, why was he not given the right to have his Upanayana, to read the Vedas and to perform sacrifice?

(9) (9) The performance of Upanayana of the Shudra, his learning to read the Vedas, his performing the sacrifices, whether they were of any value to the Shudra or not, were certainly occasions of benefit to the Brahmins in as much as it is the Brahmins, who had the monopoly of officiating at ceremonies and of teaching the Vedas. It is the Brahmins who stood to earn large fees by allowing the Shudra the right to Upanayana, the performance of sacrifices and the reading of the Vedas. Why were the Brahmins so determined to deny these concessions to the Shudras, when granting them would have done no harm and would have increased their own earnings?

(10) (10) Even if the Shudra had no right to Upanayana, sacrifices and Vedas, it was open to the Brahmins to concede him these rights. Why were these questions not left to the free will of the individual Brahmins? Why were penalties imposed upon a Brahmin if he did any of these prohibited acts?

How can these riddles be explained? Neither the orthodox Hindu nor the modern scholar has attempted to explain them. Indeed they do not seem to be aware of the fact that such riddles exist. The orthodox Hindu does not bother about them. He is content with the divine explanation contained in the *Purusha Sukta* that the Shudra was born from the feet of the Purusha. The modern scholar is content with the assumption that the Shudra in his origin is a non-Aryan aboriginal, for whom the Aryan quite naturally prescribed a different code of laws. It is a pity that none of these classes of people have cared to acquaint themselves with the riddles which surround the problem of the Shudra, much less have they thought of suggesting a theory of the origin of the position of the Shudra capable of solving them.

With regard to my thesis it will be seen that it can explain everyone of these riddles. Postulates (1) to (4) explain how the Shudras could be kings and ministers and why the rishis should praise them and desire to be in their good books. Postulates (5) and (6) explain why there was a controversy over the Upanayana of the Shudra, also why the law not only denied the right to the Shudra but imposed penalties upon a Brahmin, helping to make it effective. Indeed there is no riddle which the thesis does not solve. The thesis, if I may say so, is a close and a perfect fit. Few theses can therefore have a better title deed than this.

WITH THE HINDUS

[Reproduced from the handwritten Ms—Ed]

It is impossible to believe that Hindus will ever be able to absorb the Untouchables in their society. Their Caste System and the Religion completely negative any hope being entertained in this behalf. Yet there are incorrigible optimists more among the Hindus than among the Untouchables, who believe in the possibility of the Hindus assimilating the Untouchables. Whether these incorrigible optimists are honest or dishonest in their opinion is a question which cannot be overlooked. Within what time this assimilation will take place, they are unable to define. Assuming that the optimists are honest, there can be no question that this process of assimilation is going to be a long drawn process extending over many centuries. In the meantime the Untouchables will have to live under the Social and political sway of the Hindus, and continue to suffer all the tyrannies and oppressions to which they have been subjected in the past. Obviously no sane man will think of leaving them to the will and the pleasure of the Hindus in the hope that some day in the unpredictable future they will be assimilated by the Hindus. Long or short, there will be a period of transition and some provision must be made against the tyranny and oppression by the Hindus. What provisions should be made in this behalf? If the question is left to the Untouchables they will ask for two provisions being made : one for Constitutional Safeguards and two for Separate Settlements.

I

The nature of Constitutional Safeguards for the protection of the Untouchables have been defined by the All-India Scheduled Caste Federation, a political organisation of the Untouchables of India in the form of resolutions. Resolution Nos. 3 and 7 in which they are defined are set out below :

Resolution No. 3

[Quote p. 359]
(Not written in the Ms—ed.)

Resolution No. 7

[Quote p. 361]

(Not written in the Ms—ed.)

The Hindus are very reluctant to allow the Untouchables these safeguards. The objection is general. There is also objection to particular safeguards. The general objection that the Untouchables are not a minority and therefore they are not entitled to safeguards which may be allowed to other minorities. The argument proceeds that the basis of a community to be called a minority is Religion if one is entitled to be recognised as a minority. The Untouchables are not separate from the Hindus in the matter of the religion. Consequently they are not a minority. That this definition of a minority is childish will be obvious to all those who have studied the question.
