"Bramha was produced the first among the gods, maker of the universe, the preserver of the world. He revealed to his eldest son Atharva, the science of Brahma the basis of all knowledge. (2) Atharvan of old declared to Angis this science, which Brahma had unfolded to him; and Angis, in turn, explained it to Satyavaha, descendant of Bharadvaja, who delivered this traditional lore, in succession, to Angiras. (3) Mahasala Saunaka, approaching Angiras with the proper formalities,

inquired, 'What is that, O venerable sage, through the knowledge of which all this (universe) becomes known?' (4) (Angiras) answered, 'Two sciences are to be known— this is what the sages versed in sacred knowledge declare—the superior and the inferior. (5) The inferior (consists of) the Rig Veda, the Yajur-Veda, the Sama-Veda, the Atharva-Veda, accentuation, ritual grammar, commentary, prosody and astronomy. The superior science is that by which the imperishable is apprehended.' by which of course he means the Upanishads.

The Chhandogya Upanishad says:

"(1) Narada approached Sanatkumara, saying, 'Instruct me, venerable sage. He received for answer ' Approach me with (tell me) that which thou knowest; and I will declare to thee whatever more is to be learnt.' (2) Narada replied, 'I am instructed, venerable sage, in the Rig-veda, the Sama-veda, the Yajur-veda, the Atharvana (which is) the fourth, the Itihasas and Purana (which are) the fifth Veda of the Vedas, the rites of the pitris, arithmetic, the knowledge of portents and of great periods, the art of reasoning, ethics, the science of the gods, the knowledge of Scripture, demonology, the science of war, the knowledge of the stars, the sciences of serpents and deities: this is what I have studied. (3) I, venerable man, know only the hymns (mantras); while I am ignorant of soul. But I have heard from reverend sages like thyself that 'the man who is acquainted with soul overpasses grief '. Now I, venerable man, am afflicted; but do thou transport me over my grief. Sanatkumara answered, ' That which thou hast studied is nothing but name. (4) The Rig-veda is name: and so are the Yajur-veda, the Sama-veda, the Atharvana, which is the fourth, and the Itihasas and Puranas, the fifth Veda of the Vedas, etc., (all the other branches of knowledge are here enumerated just as above),—all these are but names: worship name. (5) He who worships name (with the persuasion that it is) Brahma, ranges as it were at will over all which that name comprehends: such is the prerogative of him who worships name (with the persuasion that it is) Brahma, ' Is there anything, venerable man' asked Narada, 'which is more than name?' 'There is,' replied, 'something which is more than name'. 'Tell it to me', rejoined Narada."

The Brahadaranyaka Upanishad says:

"In that (condition of profound slumber) a father is no father, a mother is no mother, the worlds are no worlds, the gods are no gods, and the Vedas are no Vedas, sacrifices are no sacrifices. In that condition a thief is no thief, a murderer of embryos is no murderer of embryos, a Pulkasa no Paulakasa, a Chandala no Chandala, a Sramana

no Sramana, a devotee no devotee; the saint has then no relation, either of advantage or disadvantage, to merit or to sin; for he then crosses over all griefs of the heart."

This is what the Katha Upanishad has to say:

"This soul is not to be attained by instruction, nor by understanding, nor by much scripture. He is attainable by him whom he chooses. The soul chooses that man's body as his own abode".

"Although this soul is difficult to know, still it may easily be known by the use of proper means. This is what (the author) proceeds to say. This soul is not to be attained, known, by instruction, by the acknowledgement of many Vedas; nor by understanding, by the power of recollecting the contents of books; nor by much scripture alone. By what, then, is it to be attained? This he declares".

How great was the repugnance to the Vpanishads and the philosophy contained in them will be realized if one takes note of the origin of the words Anuloma and Pratiloma which are usually applied to the marriage tie among the Hindus. Speaking of their origin Mr. Kane, points out that mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_35:

"These two words Anuloma and Pratiloma (as applied to marriage or progeny) hardly ever occur in the Vedic literature. In the Br. Up. (II. 1.5) and Kausitaki Br. Up. IV. 8. the word ' Pratiloma ' is applied to the procedure adopted by a Brahmana of going to a Kshatriya for knowledge about ' *Brahman* '. Anuloma means according to the heir that is in the natural order of things, Pratiloma means against the heir that is contrary to the natural order. Reading the observations of Mr. Kane in the light of the definition of the word Pratiloma it is obvious that the Upanishads far from being acknowledged as part of the Vedic literature were if not despised, held in low esteem by the Vedic Brahmins. This is an additional piece of evidence which shows that there was a time when the relation between the Vedas and the Upanishads was of antagonism.

Another illustration of the attitude of the Vaidik Brahmins towards Brahmins who had studied the Upanishads may be given. It is to be found in the texts of the Dharma Sūtras of Baudhayana. Baudhayana in his Dharma Sūtras (ii. 8.3) says that at a Shradha ceremony a Rahasyavid is to be invited only if other Brahmins are not available. A Rahasyavid of course means a Brahmin versed in the Upanishads. The belief that the Vedas and the Upanishads are complimentary came into being is really a riddle.

RIDDLE NO. 9
HOW THE UPANISHADS CAME TO BE MADE
SUBORDINATE TO THE VEDAS?

In the preceding chapter it was shown that originally the Upanishads were not a part of the Vedas and that the two in the matter of doctrine were opposed to each other. It is instructive to compare the later relations between the Vedas and the Upanishads. The later relations between them are best illustrated by the controversy between two philosophers, Jaimini and Badarayana.

Jaimini is the author of a work called the Mimamsa Sutras while Badarayana is the author of Brahma Sutras. Jaimini is an upholder of the Vedas and Badarayana is an upholder of the Upanishads.

The point of dispute was—Is it necessary to perform sacrifices? The Vedas say 'yes' and the Upanishads say 'no'.

The position of Jaimini is stated by Badarayana in his Sutras 2-7, and explained by Shankaracharya in his commentary. Jaimini contends that mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_36:

“No one undertakes a sacrificial act unless he is conscious of the fact that he is different from the body and that after death he will go to heaven, where he will enjoy the result of his sacrifices. The Texts dealing with self-knowledge serve merely to enlighten the agent and so are subordinate to sacrificial acts.”

In short Jaimini says that all that Vedanta teaches is that self is different from the body and outlive the body. Such a knowledge is not enough. The self must have the aspiration to go to heaven. But it can't go to heaven unless it performs Vedic sacrifices which is what his Karmakand teaches. Therefore his Karmakand is the only Salvation and that the Jnankand from that point of view is quite useless. For this Jaimini relies on the conduct of men who have believed in Vedantamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_37:

'Jaimini versus Badarayana' was the title given to this chapter which was later scored out. This is a 9-page typed MS with modifications in the first two pages by the author.—Ed.

"Janaka, emperor of Videha performed a sacrifice in which gifts were freely distributed (Brih. 3.1.1). I am going to perform a sacrifice sirs (Chh. 5.11.5). Now both Janaka and Asvapati were knowers of the Self.

If by this knowledge of the Self they had attained Liberation, there was no need for them to perform sacrifices. But the two texts quoted show that they did perform sacrifices. This proves that it is through sacrificial acts alone that one attains Liberation and not through the knowledge of the Self as the Vedantins hold."

Jaimini makes a positive assertion that the scriptures unmistakably declare [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_38](#) "that knowledge of the Self stands in a subordinate relation to sacrificial acts". Jaimini justifies it because he says [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_39](#) "the two (knowledge and work) go together (with the departing soul to produce the results)." Jaimini refuses to give an independent position to Badarayana's *Jnanakanda*. He takes his stand on two grounds.

First [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_40](#): "Knowledge of the Self does not independently produce any result."

Second [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_41](#): According to the authority of the Vedas "Knowledge (of Self) stands in a subordinate relation to work." This is the position of Jaimini towards Badarayana's *Jnanakanda*.

What is the position of Badarayana towards Jaimini and his *Karma Kanda*? This is explained by Badarayana in Sutras 8 to 17.

The first position [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_42](#) taken up by Badarayana is that the Self spoken of by Jaimini is the limited self i.e., the soul is to be distinguished from the Supreme soul and that the Supreme soul is recognized by the Scriptures.

The second [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_43](#) position taken up by Badarayana is that the Vedas support both knowledge of Self as well as sacrifices.

The third [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_44](#) position taken up by Badarayana is that only those who believe in the Vedas are required to perform sacrifices. But those who follow the Upanishads are not bound by that injunction. As Shankaracharya explains:

"Those who have read the Vedas and known about the sacrifices are entitled to perform work (sacrifices). No work (sacrifice) is prescribed for those who have knowledge of the Self from the Upanishads. Such a knowledge is incompatible with work."

The fourth position taken up by Badarayana is that *Karmakanda* is optional to those who have attained Bramhanand. As Shankaracharya explains:

"That some have of their own accord given up all work. The point is that after knowledge some may choose to work to set an example to others, while others may give up all work. There is no binding on the knowers of the Self as regards work." His last and final position is that:

"Knowledge of the Self is antagonistic to all work and so cannot possibly be subsidiary to work"

And as evidence in support of it he relies on the scriptures which recognizes Sannyas as the fourth Ashram and relieves the Sannyasi from performing sacrifices prescribed by the *Karmakanda*.

Many such Sutras can be found in Badarayana indicating the attitude of the two scholars of thought towards each other. But the one given above is enough as it is so very typical. If one stops to consider the matter the position wears a strange appearance. Jaimini denounces Vedanta as a false Shastra, a snare and a delusion, something superficial, unnecessary and unsubstantial. What does Badarayana do in the face of this attack? Does he denounce the *Karmakanda* of Jaimini as a false Shastra, a snare and a delusion, something superficial, unnecessary and unsubstantial as the Upanishads themselves did? No. He only defends his own Vedanta Shastra. But one would expect him to do more. One would expect from Badarayana a denunciation of the *Karmakanda* of Jaimini as a false religion. Badarayana shows no courage. On the contrary he is very apologetic. He concedes that Jaimini's *Karmakanda* is based on the scriptures and the scriptures have authority and sanctity which cannot be repudiated. All that he insists on is that his Vedanta doctrine is also true because it has also the support of the scriptures.

This is not all. What Badarayana does is to use the term Vedanta to cover two senses. He uses it so as to emphasize that the Upanishads do form a part of the Vedic literature. He uses it also to emphasize that Vedanta or the *Jnyanakanda* of the Upanishads is not opposed to the *Karmakanda* of the Vedas that the two are complimentary. Indeed this is the foundation on which Badarayana has raised the whole structure of his Vedanta Sutras.

This thesis of Badarayana—which underlies his Vedanta Sutras and according to which the Upanishads are a part of the Veda and there is no antagonism between the Vedas and Upanishads—is quite contrary to the tenor of the Upanishads and their relation to the Vedas. Badarayana's attitude is not easy to understand. But it is quite obvious that Badarayana's is a queer and a pathetic case of an opponent who begins his battle by admitting the validity of the premises of his adversary. Why did Badarayana concede to Jaimini on the question of infallibility of the Vedas which were opposed to the Upanishads? Why did he not stand for truth, the whole truth and nothing but the truth as expounded by the Upanishads? The Badarayana has in his Vedanta Sutras betrayed the Upanishads. Why did he do so?

RIDDLE NO. 10

WHY DID THE BRAHMINS MAKE THE HINDU GODS FIGHT AGAINST ONE ANOTHER?

The Hindu theology regarding the world is based upon the doctrine of Trimurti. According to this doctrine the world undergoes three stages. It is created, preserved and destroyed. It is endless series of cycles which goes on without stoppage. The three functions which comprise the cycle are discharged by three Gods, Brahma, Vishnu and Mahesh. Brahma creates the world, Vishnu -preserves and Mahesh destroys it for the purpose of creation. These gods are spoken of as forming what is called Trimurti. The doctrine of Trimurti postulates that three gods are co-equal in status and are engaged in functions which are contemporary and not competitive. They are friends and not rivals. They are allies of one another and not enemies.

When, however, one studies the literature which depicts the deeds of these three gods one finds a complete difference between the theory and the practice. The Gods far from being friends appear to be worse enemies of one another, competing for supremacy and sovereignty among themselves. A few illustrations from the Puranas will make the matter clear.

At one time Brahma appears to be the most supreme god as compared to Shiva and Vishnu. Brahma is said to be the creator of the universe—the first Prajapati. He is the progenitor of Shiva,* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_48 and the master of Vishnu because if Vishnu became the preserver of the universe it was because Brahma commanded him to

do it. So supreme was Brahma that he was the arbitrator in the conflicts that took place between Rudra and Narayan and between Krishna and Shiva.

Equally certain is the fact that at a subsequent stage Brahma came into conflict with Shiva and Vishnu and strangely enough lost his position and supremacy to his rivals. Two illustrations of his conflict with Vishnu may be given

The original title was ' Gods at War '. This is a 25-page typed and corrected MS which includes three concluding pages handwritten by the author.—Ed.

The first may well be the story of the Avatars. On the issue of the Avatars there is a rivalry between Brahma and Vishnu. The theory of Avatars or incarnation assumed by God to save humanity from a calamity began with Brahma. He was said to have assumed two Avatars (1) Boar and (2) Fish. But the followers of Vishnu refused to allow this. They asserted that these Avatars were not the Avatars of Brahma but that they were the Avatars of Vishnu. Not only did they appropriate these Avatars of Vishnu they gave to Vishnu many more Avatars.

The Puranas have run riot with the *Avatars* of Vishnu and different Puranas have given different lists of Avatars as will be seen from the following:

AVATARS OF VISHNU

Sr. According No. to Hari Vamsa	According to Narayani Akhyan	According to Varaha Purana	According to Vayu Purana	According to Bhagwat Purana
1. Varaha	Hansa	Kurma	Narasinha	Sanatku mar
2. Narasinha	Kurma	Matsya	Vaman	Boar
3. Vaman	Matsya	Varaha	Varaha	

4. Parshuram	Varaha	Narasinha	Kurma	Nara-Narayan
5. Rama	Narasinha	Vaman	Sangram	Kapila
6. Krishna	Vaman	Parshuram	Adivaka	Datlatraya
7.	Parshuram	Rama	Tripurari	Jadna
8.	Rama	Krishna	Andhakarha	Rashabha
9.	Krishna	Buddha	Dhvaja	Prithi
10.	Kalkin	Kalkin	Varta	Matsya
11.			Halahal	Kurma
12.			Kolhal	Dhanwantari
13.				Mohini
14.				Narasinha
15.				Vaman
16.				Parshuram
17.				Ved Vyas
18.				Naradeo
19.				Rama
20.				Krishna
21.				Buddha
22.				Kalkin

The second story may well be the issue of the first born. It is related in the Skanda Purana. The story says that at one time Vishnu lay asleep on the bosom of Devi, a lotus arose from his navel, and its ascending flower soon reached the surface of the flood. Brahma sprang from flower, and looking round without any creature on the boundless expanse, imagined himself to be first born, and entitled to rank above all future beings; yet resolved to investigate deep and to ascertain whether

any being existed in its universe who could controvert his preeminence, he glided down the stock of the lotus and finding Vishnu asleep, asked loudly who he was 'I am the first born' answered Vishnu; and when Brahma denied his preprogeniture, they engaged in battle, till Mahadeo pressed between them in great wrath, saying ' It is I who am truly the first born '. But I will resign my place to either of you, who shall be able to reach and behind the summit of my head, or the soles of my foot. Brahma instantly ascended but having fatigued himself to no purpose in the regions of immensity yet loath to abandon his claim, returned to Mahadeo declaring that he had attained and seen the crown of his head, and called as his witness the first born cow. For this union of pride and falsehood, the angry God Shiva ordained that no sacred rites should be performed to Brahma and that the mouth of cow should be defiled. When Vishnu returned, he acknowledged that he had not been able to see the feet of Mahadeo who then told him that he was the first born among the Gods, and should be raised above all. It was after this Mahadeo cut off the fifth head of Brahma who thus suffered the loss of his pride, his power and his influence.

According to this story Brahma's claim to be the first born was false. He was punished by Shiva for making it. Vishnu gets the right to call himself the first born. But that is allowed to him by the grace of Shiva. The followers of Brahma had their revenge on Vishnu for stealing what rightfully belonged to him with the help of Shiva. So they manufactured another legend according to which Vishnu emanated from Brahma's nostrils in the shape of a pig and grew naturally into a boar—a very mean explanation of Vishnu's Avatar as a boar.

After this Brahma tried to create enmity between Shiva and Vishnu evidently to better his own position. This story is told in the Ramayana. It says: "When King Dasaratha was returning to his capital, after taking leave of Janaka, the king of Mithila, whose daughter Sita had just been married to Rama, he was alarmed by the ill-omened sounds uttered by certain birds, which however were counteracted, as the sage Vasishtha assured the king, by the auspicious sign of his being perambulated by the wild animals of the forest. The alarming event indicated was the arrival of Parasurama, preceded by a hurricane which shook the earth and prostrated the trees, and by thick darkness which veiled the sun. He was fearful to behold, brilliant as fire, and bore the axe and a bow on his shoulder. Being received with honour, which he accepted, he proceeded to say to Rama, the son of Dasaratha that he had heard of his prowess in breaking the bow produced by Janaka and had brought another which

he asked Rama to bend, and to fit an arrow on the string; and if he succeeded in doing so, he (Parasurama) would offer to engage with him in single combat. Dasaratha is rendered anxious by this speech, and adopts a suppliant tone towards Parasurama, but the latter again addresses Rama, and says that the bow he had broken was Siva's, but the one he himself had now brought was Vishnu's. Two celestial bows, he proceeds, were made by Visvakarma of which one was given by the gods to Mahadeva, the other to Vishnu". The narrative then proceeds:

"The gods then all made a request to Brahma desiring to find out the strength and weakness of Sitikantha (Mahadeva) and Vishnu. Brahma, most excellent of the three learning the purpose of the gods, created enmity between the two. In this state of enmity a great and terrible fight ensued between Sitikantha and Vishnu each of whom was eager to conquer the other. Siva's bow of dreadful power was then relaxed and the three-eyed Mahadeva was arrested by a muttering. These two eminent deities being entreated by the assembled gods, rishis, and Charanas then became pacified. Seeing that the bow of Siva had been relaxed by the prowess of Vishnu, the gods and rishis esteemed Vishnu to be superior." Thus Brahma managed to avenge the wrong done to him by

Mahadeo.

Even this stratagem did not avail Brahma to maintain his position against Vishnu. Brahma lost his position so completely to Vishnu that Vishnu who at one time was at the command of Brahma became the creator Of Brahma.

In his contest with Shiva for supremacy Brahma suffered equal defeat. Here again, the position became completely inverted. Instead of being created by Brahma, Shiva became the creator of Brahma. Brahma lost the power of giving salvation. The god who could give salvation was Shiva and Brahma became no more than a common devotee worshipping Shiva and his Linga in the hope of getting salvation. He was reduced to the position of a servant of Shiva doing the work of charioteer of Shiva.

Ultimately Brahma was knocked out of the field of worship on a charge of having committed adultery with his own daughter. The charge is set out in the Bhagwat Purana in the following terms:

"We have heard, O Kshatriya, that Swayambhu (Brahma) had a

passion for Vach, his slender and enchanting daughter, who had no passion for him. The Munis, his sons, headed by Marichi, seeing their father bent upon wickedness, admonished him with affection; "This is such a thing as has not been done by those before you, nor will those after you do it,— that you, being the lord, should sexually approach your daughter, not restraining your passion. This, O preceptor of the world, is not a laudable deed even in glorious personages, through limitation of whose actions men attain felicity. Glory to that divine being (Vishnu) who by his own lustre revealed this (universe) which abides in himself, he must maintain 'righteousness'. Seeing his sons, the Prajapatis, thus speaking before him the lord of the Prajapatis (Brahma) was ashamed, and abandoned his body. This dreadful body the regions received and it is known as foggy darkness."

The result of this degrading and defamatory attacks on Brahma was to damn him completely. No wonder that his cult disappeared from the face of India leaving him a nominal and theoretical member of the Trimurti.

After Brahma was driven out of the field there remained in the field Shiva and Vishnu. The two however were never at peace. The rivalry and antagonism between the two is continuous.

The Puranas are full of propaganda and counter-propaganda carried on by the Brahmins, protagonists of Shiva and Vishnu. How well matched the propaganda and counter-propaganda was, can be seen from the following few illustrations:

Vishnu is connected with the Vedic God Sun. The worshippers of Shiva connect him with Agni. The motive was that if Vishnu has a Vedic origin Shiva must also have Vedic origin as well. One cannot be inferior to the other in the matter of nobility of origin.

Shiva must be greater than Vishnu and Vishnu must not be less than Shiva. Vishnu has thousand names. So Shiva must have thousand names and he has them.

Vishnu has his emblems. They are four. So Shiva must have them and he has them. They are (1) flowing gauges, (2) Chandra (moon), (3) Shesh (snake) and (4) *Jata* (walled hair). The only point on which Shiva did not compete with Vishnu was the matter of *Avatars*. The reason is not that

there was no desire to compete but that philosophically there was an impediment in the way of Shiva taking Avatars. The Saivas and Vaisnavas differed fundamentally in their conceptions of immortal bliss. As has been pointed out by Mr. Ayyer:

"To the Saiva the goal to be reached was final liberation from all fetters, bodily and mental, by their total annihilation. Hence he conceived of Rudra as the inextinguishable, one who could never be destroyed, but who extinguished or destroyed everything else. That was why Rudra came to be called the Destroyer. In the final stage of the spiritual development of an individual, there ought to be no separateness at all from the supreme Shiva. He ought to transcend his body and mind, pleasure and pain, and all opposites or dualities. He should attain union or Sayujya with Shiva in which condition he would not be able to regard himself as separate from Shiva. Till he reached that stage, he was imperfect, however pure he might be, however eligible he might be, for the highest state of Sayujya: for, those who were eligible had attained only the subordinate stages of Salokya, Samipya and Sarupya. That was also the reason why the doctrine of Avatars did not appeal to the Saiva. God as an Avatar was only a limited being, one who had the capacity perhaps, of releasing himself from his fetters but not one without letters. The Vaisnava believed differently. He had also an equally clear conception of the highest state that could be reached, and that ought to be reached. But there was, according to him, nothing appealing in the idea of losing one's own individuality totally. One should be united with the supreme, and yet be conscious of the union. He should be united with the universe which again should be regarded as the other aspect of the supreme imperishable being. He was not, in other words, for the extinction of the universe as if it were something separate and distinct from the Supreme Purusha. He was rather in favour of the preservation of the universe which was neither more nor less than the manifestation of the Purusha so manifested. That was the reason why Vishnu was given the name of the Preserver. After all, it is but a difference in the way in which the truth is perceived or viewed. The Saiva viewed the universe as an object of pain and misery—as *Pasha* or fetters (and one bound by it to be *Pasu*) which had to be broken and destroyed. The Vaisnava regarded it as evidencing the greatness of the Purusa and so to be preserved. The Saiva, with his superior pessimism (if it could be so called) was not likely to respect the. Dharma Shastras, the Artha Shastras and other scriptures all of which were framed with the purpose of establishing orderliness in the world, inevitable for its

welfare. He was bound to be a non-conformist, disdaining rules and conventions. Ideas of caste rigidity would be repugnant to the highly-evolved Saiva who would at best tolerate such

notions in others who had not reached his own stage of development. He would pay respect to and cultivate the society of only such people, to whatever caste they might belong, as were eligible for Samipya, Salokya, Sarupya and Sayujya, with Siva. The Vaisnava, on the other hand, was more concerned with the preservation of all rules and regulations which would have the effect of promoting peace and happiness in the world. If 'Dharma' perished, the world would perish too, and since the world ought not to perish, for it was a manifestation of the glory of the cosmic Purusa, his duty consisted in doing everything he could for preserving the Dharma. If things went beyond his control he was sure Vishnu would take the matter up himself; for he would come into the world as an Avatar. But when Vishnu did come upon the earth, it would be to destroy the wicked, that is, all those who were instrumental in upsetting the Dharma, and so it was necessary that one should be careful not to deserve that terrible punishment from Vishnu. Hence, the Agamas or rules laid down for the guidance of Siva bhaktas did not emphasise caste, and were concerned only with the duties of *bhaktas* in general, the proper fulfilment of which would render them fit to gain God vision, and ultimately union with Siva. These were regarded as impure by the others because they were subversive of caste ideas, and as stated before, they were not alluded to in the orthodox scriptures."

In the performance of deeds of glory the propaganda in favour of Shiva is fully, matched by counter-propaganda in favour of Vishnu. One illustration of this is the story regarding the origin of the holy river Ganges. [Ganges.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/21A1.Riddles in Hinduism PART I.htm - _msocom_54](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/21A1.Riddles_in_Hinduism_PART_I.htm_-_msocom_54) The devotees of Shiva attribute its origin to Shiva. They take its origin from Shiva's hair. But the Vaishnavas will not allow it. They have manufactured another legend. According to the Vaishnavite legend the blessed and the blessing river flowed originally out of Vaikunth (the abode of Vishnu) from the foot of Vishnu, and descending upon Kailasa fell on the head of Shiva. There is a two-fold suggestion in the legend. In the first place Shiva is not the source of the Ganges. In the second place Shiva is lower than Vishnu and receives on his head water which flows from the foot of Vishnu.

Another illustration is furnished by the story which relates to the churning of the oceans by the Devas and the Asuras. They used the Mandara mountain as the churning rod and mighty serpent Shesha as a

rope to whirl the mountain. The earth began to shake and people became afraid that the world was coming to an end. Vishnu took the Avatar of Kurma (Tortoise) and held the earth on his back and prevented the earth from shaking while the churning was going on.

This story is told in glorification of Vishnu. To this the Shaivites add a supplement. According to this supplement the churning brought out fourteen articles from the depth of the ocean which are called fourteen jewels. Among these fourteen a deadly poison was one. This deadly poison would have destroyed the earth unless somebody was prepared to drink it. Shiva was the only person who came forward to drink it. The suggestion is that Vishnu's act was foolish in allowing the rivals—the Gods and Demons—to bring out this deadly poison. Glory to Shiva for he drank it and saved the world from the evil consequences of the folly of Vishnu.

Third illustration is an attempt to show that Vishnu is a fool and that it is Shiva who with his greater wisdom and greater power saves Vishnu from his folly. It is the story of [Akrurasuramk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_55](http://Akrurasuramk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles%20in%20Hinduism%20PART%20I.htm_-_msocom_55). Akrur was a demon with the face of a bear, who, nevertheless, was continuously reading the Vedas and performing acts of devotion. Vishnu was greatly pleased and promised him any boon that he would care to ask. Akrurasura requested that no creature, then existing in three worlds, might have power to deprive him of life, and Vishnu complied with his request; but the demon became so insolent that the Devatas, whom he oppressed, were obliged to conceal themselves, and he assumed the dominion of the world ; Vishnu was then sitting on a bank of the Kali, greatly disquieted by the malignant ingratitude of the demon; and his wrath being kindled, a shape, which never before had existed, sprang from his eyes. It was Mahadeva, in his destructive character, who dispelled in a moment the anxiety of the Vishnu.

This is countered by the story of Bhasmasura intended to show that Shiva was a fool and Vishnu saved him from his folly. Bhasmasura having propitiated Shiva asked for a boon. The boon was to be the power to burn any one on whose head Bhasmasura laid his hands. Shiva granted the boon. Bhasmasura tried to use his boon power against Shiva himself. Shiva became terrified and ran to Vishnu for help. Vishnu promised to help him. Vishnu took the form of a beautiful woman and went to Bhasmasura who became completely enamoured of her. Vishnu asked Bhasmasura to agree to obey him in everything as a condition of

surrender. Bhasmasura agreed. Vishnu then asked him to place his hands on his own head which Bhasmasura did with the result that Bhasmasura died and Vishnu got the credit of saving Shiva from the consequences of his folly.

"Is Isa (Mahadeva) the Cause of causes for any other reasons? We have not heard that the linga (male organ) of any other person is worshipped by the gods. Declare, if thou hast heard, what other being's linga except that of Mahesvara is now worshipped, or has formerly been worshipped, by the gods? He whose linga Brahma and Vishnu, and thou (Indra), with the deities, continually worship, is therefore then most eminent. Since children bear neither the mark of the lotus (Brahma's), nor of the discus (Vishnu's), nor of the thunderbolt (Indra's), but are marked with the male and the female organs,—therefore offspring is derived from Mahesvara. All women produced from the nature of Devi as their cause, are marked with the female organ, and all males are manifestly marked with the linga of Hara. He who asserts any other cause than Isvara (Mahadeva) or (affirms) that there is any (female) not marked by Devi in the three worlds, including all things movable or immovable, let that fool be thrust out. Know everything which is male to be Isara. and all that is female *to* be Uma: for this whole world, movable and immovable, is pervaded by (these) two bodies."

The Greek Philosopher Zenophanes insists that polytheism or plurality of Gods is inconceivable and contradictory. That the only true doctrine was monotheism. Considered from a philosophical point of view, Zenophanes might be right. But from the historical point of view both are natural. Monotheism is natural where society is a single community. Where society is a federation of many communities polytheism is both natural and inevitable. Because every ancient community consisted not merely of men but of men and its Gods it was impossible for the various communities to merge and coalesce except on one condition that its God is also accepted by the rest. This is how polytheism has grown.

Consequently the existence of many Gods among the Hindus is quite understandable because the Hindu Society has been formed by the conglomeration of many tribes and many communities each of whom had their own separate Gods. What strikes one as a strange phenomenon is the sight of the Hindu Gods. struggling one against the other, their combats and feuds and the ascriptions by one God *to* the other, all things that are a shame and disgrace to common mortals. This is what requires explanation.

RIDDLE NO. 11
WHY DID THE BRAHMINS MAKE THE HINDU GODS
SUFFER TO RISE AND FALL?

The Hindus are accused of idolatry. But there is nothing wrong in idolatry. Making an idol is nothing more than having a photograph of the deity and if there can be no objection to keeping a photograph what objection can there be to having an image. Real objection to Hindu idolatry is that it is not mere photography, not mere production of an image. It is more than that. The Hindu idol is a living being and is endowed with all the functions of a human being. A Hindu idol is given life by means of a ceremony called Pranapratishta. The Buddhists also are idolatrous in as much as they too worship Buddha's idol. But the idol they worship is only a photograph, a mere image. There is no soul in it. Why the Brahmins endowed the Hindu Gods with souls and made them living beings opens out an inquiry which is bound to be revealing. But this inquiry is outside the scope of this Chapter.

The second charge generally levelled against the Hindus is that they are polytheists i.e., they worship many Gods. Here again the Hindus are not the only people who are guilty of the practice of Polytheism. Other communities have also been known to have practised polytheism. To mention only two. The Romans and the Greeks were essentially polytheists. They too worshipped many Gods. There is therefore no force in this charge.

The real charge which can be levelled against the Hindus most people seem to have missed. That charge is that the Hindus are never steadfast in their devotion to their Gods. There is no such thing as

This is a 43-page typed MS having corrections and modifications in the handwriting of the author. The concluding para, however, is written in pen by the author himself. The original title on the Chapter was ' The Rise and Fall of the Gods '. This title was scored out in blue pencil, which was normally used by the author for scoring out the matter.—Ed.

loyalty or attachment or faith in one God. In the history of Hindu Gods one finds it a very common experience that some Gods have been worshipped for a time and subsequently their worship has been abandoned and the Gods themselves have been thrown on the scrap-heap. Quite new Gods are adopted and their worship goes with an

intensity of devotion which is full and overflowing. Again the new Gods are abandoned and are replaced by a fresh crop of new Gods. So the cycle goes on. In this way the Hindu Gods are always undergoing rise and fall—a phenomenon which is unknown in the history of any other community in the world.

The statement that the Hindus treat their Gods with such levity may not be accepted without demur. Some evidence on this point is therefore necessary. Fortunately there is abundance of it. At present the Hindus worship four Gods (1) Shiva, (2) Vishnu, (3) Rama and (4) Krishna. The question that one has to consider is: are these the only Gods the Hindus have worshipped from the beginning?

The Hindu Pantheon has the largest number of inmates. The Pantheon of no religion can rival it in point of population. At the time of the Rig-Veda the number of its inmates was colossal. At two places the Rig-Vedamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_56 speaks of three thousand three hundred and nine Gods. For some reasons, which it is not possible for us now to know, this number came to be reduced to thirty-threemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_57. This is a considerable reduction. Nevertheless with thirty three, the Hindu Pantheon remains the largest.

The composition of this group of thirty-three Gods is explained by the Satapatha

Brahmanamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_58 as made up of 8 Vasus, 11 Rudras and 12 Adityas, together with Dyasus and Prithvi (heaven and earth).

Of greater importance than the question of numbers is the question of their relative rank. Was there any distinction between the 33 Gods in point of their rank? There is a verse in the Rig-Veda which seems to suggest that these thirty-three Gods were divided for purposes of honours and precedence into two classes, one being great and small and the other being young and old. This view seems to be against an earlier view also contained in the Rig-Veda. The old rule says: "None of you O! Gods! is small or young: You are all great". This is also the conclusion of Prof. Max Muller:

"When these individual gods are invoked, they are not conceived as limited by the power of others, as superior or inferior in rank. Each god is to the mind of the supplicants as good as all the gods. He is felt, at the time, as a real divinity, as supreme and absolute, in spite of the necessary limitations which, to our mind, a plurality of gods must entail on every

single god. All the rest disappear for a moment from the vision of the poet, and he only, who is to fulfil their desires stands in full light before the eyes of the worshippers” "Nowhere is any of the Gods represented as the slave of others".

This is of course true only for a time. A change seems to have come in the old angle of vision towards the Gods. For one finds numerous hymns of the Veda in which some gods are represented as supreme and absolute.

In the first hymn of the second Mandala, Agni is called the ruler of the Universe, the Lord of men, the wise king, the father, the brother, the son, the friend of men; nay, all the powers and names of the others are distinctly ascribed to Agni.

Then a second god came to be elevated above Agni. He is Indra. Indra is spoken of as the strongest god in the hymns as well as in the Brahmanas, and the burden of one of the songs of the Tenth Book is: *Visvasmad Indra Uttarab* 'Indra is greater than all'.

Then a third god is raised to the highest level. He is Soma. Of Soma, it is said that he was born great and that he conquers every one. He is called the king of the world, he has the power to prolong the life of men, and in one verse he is called the maker of heaven, and earth, of Agni, of Surya, of Indra and of Vishnu. Then Soma was forgotten and a fourth God was elevated. He is Varuna. Varuna was made the highest of all Gods. For what more could human language do than to express the idea of a divine and supreme power, than what the Vedic poet says of Varuna; 'Thou art Lord of all, of heaven, and earth' or, as is said in another hymn (ii. 27, 10), "Thou art the king of all; of those who are gods, and of those who are men."

From this evidence it is clear that out of the 33 Vedic Gods four Gods, Agni, Indra, Soma and Varuna had emerged as the principal Gods. Not that other gods had ceased to be gods. But these four had become elevated above the rest. At a later stage a change seems to have taken place at the time of the Satapatha Brahmana in the relative position of the different gods. Soma and Varuna had lost their places as the principal gods while Agni and Indra had retained their positions. A new god has emerged. He is Surya. The result is that instead of Agni, Indra, Soma and Varuna; Agni, Indra and Surya became the principal gods. This is evident from the Satapatha Brahmana which says:

"Originally the gods were all alike, all pure. Of them being all alike, all pure, three desired, 'May we become superior' viz., Agni, Indra and Surya (the sun)."2.

"3. Originally there was not in Agni the same flame, as this flame which is (now) in him. He desired : ' May this flame be in me '.He saw this grahs, he took it: and hence there became this flame in him.

4. Originally there was not in Indra the same vigour, etc. (as in para 3).

5. Originally there was not in Surya the same lustre etc."For how long these three Gods continued to hold their places of superiority over the rest it is difficult to say. But that at a later stage a change in the scene has taken place is beyond doubt. This is evident by a reference to the Chula-Niddessa. The Chula Niddessa is a treatise which belongs to the Buddhist literature. Its approximate date is.... *{left incomplete}*.

The Chula-Niddessa gives a list of sects which were then prevalent in India. Classified on the basis of creeds and cults. They may be listed as follows: 1. CREEDS

Comparing the position as it stood at the time of the Satapatha

Brahmana with that arising from the Chula-Niddessa the following propositions may be said to be well-established: (1) Firstly, that the worship of Agni, Surya and Indra continued up to the time of the Chula Niddessa. (2) Secondly, the Cults of Agni, Surya and Indra although they had not ceased, had lost their places of supremacy. Others and quite a number of cults had come into being as rivals and had won the affection of the people. (3) Thirdly, of the new cults there are two which later on became very prominent. They are the cults of Vasudeo (i.e. Krishna) and Brahma and (4) Fourthly the cults of Vishnu, Shiva and Rama had not come into being.

What is the present position as compared with that found in the Chula-Niddessa? Here again, three propositions are well-established. *First* : the cults of Agni, Indra, Brahma and Surya have disappeared. *Second*: Krishna has retained his position. *Three*: The cults of Vishnu, Shiva and Rama are new cults which have come into existence since the time of the Chula-Niddessa. Given this situation it raises three questions for considerations: *One* is why have the old cults of Agni, Indra, Brahma and Surya disappeared? Why was the worship of these Gods abandoned? *Second* is what are the circumstances that gave rise to the new cults of Krishna, Rama, Shiva and Vishnu. Third what is the relative position of these new Gods, Krishna, Rama, Shiva and Vishnu?

For the first question we can find no answer. The Brahmanic literature gives us no clue whatsoever as to why the Brahmins abandoned the worship of Agni, Indra, Surya and Brahma. There is some explanation as to why the cult of Brahma disappeared. It rests in a charge which is found to be levelled in the Brahmanic literature against Brahma. The charge is that he committed rape on his own daughter and hereby made himself unworthy of worship and devotion. Whatever be the truth in the charge it could not be regarded as sufficient to account for the abandonment of Brahma and for two reasons. In the first place, in that age such conduct was not unusual. In the second place, Krishna was guilty of greater immoralities than were charged to Brahma and yet they continued to worship him.

While there is something to speculate about the abandonment of Brahma there is nothing to account for the abandonment of the others. The disappearance of Agni, Indra, Surya and Brahma is thus a mystery. This is no place to solve this mystery. It is enough to say that the *Gods* of the Hindus had ceased to be Gods—a terrible thing.

The second question is also enveloped in mystery. Brahmanic literature, to account for the importance of the cults of these new Gods,

Krishna, Vishnu, Shiva and Rama, is full and overflowing. But there is nothing in the Brahmanic literature to account for the rise of these new Gods. Why these new Gods were brought into action is thus a mystery. The mystery however deepens when one finds that some of the new Gods were definitely anti-Vedic. Let us take the case of Shiva. That Shiva was originally an Anti-Vedic God is abundantly clear. The following two incidents recorded in the Bhagvata Purana (and also in the Mahabharata) throw a flood of light on the subject. The first incident shows how enmity arose between Shiva and his father-in-law Daksha. It appears that the Gods and Rishis were assembled at a sacrifice celebrated by the Prajapatis. On the entrance of Daksha, all the personages who were present, rose to salute him, except Brahma and Shiva. Daksha, after making his obeisance to Brahma, sat down by his command; but was offended at the treatment he received from Shiva. This is how he addressed Shivamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_70:

“Beholding Mrida (Shiva) previously seated, Daksha did not brook his want of respect; and looking at him obliquely with his eyes, as if consuming him, thus spake: ' Hear me, ye Brahman rishis, with the Gods and the Agnis, While I, neither from ignorance nor from passion, describe what is the practice of virtuous persons. But this shameless being (Siva) detracts from the reputation of the guardians of the world, he by whom, stubborn as he is, the course pursued by the good is transgressed. He assumed the position of my disciple, inasmuch as, like a virtuous person, in the face of Brahmans and of fire, he took the hand of my daughter, who resembled Savitri. This monkey-eyed (god), after having taken of (my) fawn-eyed (daughter), has not even by word shown suitable respect to me whom he ought to have risen and saluted. Though unwilling, I yet gave my daughter to this impure and proud abolisher of rites and demolisher of barriers, like the word of the Veda to a Sudra. He roams about in dreadful cemeteries, attended by hosts of ghosts and spirits, like a madman, naked, with dishevelled hair, laughing, weeping, bathed in the ashes of funeral piles, wearing a garland of dead men's (skulls), and ornaments of human bones, pretending to be Siva (auspicious) but in reality Asiva (in-auspicious), insane, beloved by the insane the lord of Pramathas and Bhutas (spirits), beings whose nature is essentially darkness. To this wicked-hearted lord of the infuriate, whose purity has perished. I have, alas ! given my virtuous daughter, at the instigation of Brahma'. Having thus reviled Girisa (Siva), who did not oppose him, Daksha having then touched water, incensed, began to

curse him (thus): 'Let this Bhava (Siva), lowest of the gods, never, at the worship of the gods, receive any portion along with the gods Indra, Upendra (Vishnu), and others.' Having delivered his malediction, Daksha departed." The enmity between the father-in-law and son-in-law continues. Daksha being elevated by Brahma to the rank of the Chief of the Prajapatis decided to perform a great Sacrifice called Vrihaspatisava. Seeing the other Gods with their wives going to this Sacrifice, Parvati pressed her husband, Shiva, to accompany her thither. He refers to the insults which he had received from her father, and advises her not to go. She, however (sect. 4), being anxious to see her relatives, disregards his warning and goes: but being sighted by her father, Daksha, she reproaches him for his hostility to her husband, and threatens to abandon the corporeal frame by which she was connected with her parent. She then voluntarily gives up the ghost. Seeing this, Shiva's attendants, who had followed her, rush on Daksha to kill him. Bhrigu, however, throws an oblation into the southern fire, pronouncing a Yajus text suited to destroy the destroyers of sacrifice (*yajna-gbhena yajusha dakshinagnau jubavaha*). A troop of Ribhus in consequence spring up, who put Shiva's followers to flight. Shiva is filled with wrath when he hears of the death of Sati (sect. 5). From a lock of his hair, which he tore out, a gigantic demon arose, whom he commended to destroy Daksha and his sacrifice. This demon proceeds with a troop of Shiva's followers, and they all execute the mandate. How they executed the mandate is described in the Bhagvat

Puranamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_71 in the following terms:

" Some broke the sacrificial vessels, others destroyed the fires, others made water in the ponds, others cut the boundary-cords of the sacrificial ground: others assaulted the Munis, others reviled their wives: others seized the gods who were near, and those who had fled. . . . 19. The divine Bhava (Siva) plucked out the beard of Bhrigu, who was offering oblations with a ladle in his hand. and who had laughed in the assembly, showing his beard. He also tore out the eyes of Bhaga, whom in his wrath he had felled to the ground, and who, when in the assembly, had made a sign to (Daksha when) cursing (Siva) He moreover knocked out the teeth of Pushan (as Bala did the king of Kalinga's). who (Pushan) had laughed, showing his teeth, when the great god was being cursed. Tryambaka (Siva, or Virabhadra, according to the commentator) then cuts off the head of Daksha, but not without some difficulty. The gods report all that had passed to Svayambhu (Brahma), who, with Vishnu,

had not been present (sect. 6). Brahma advises the gods to propitiate Siva, whom they had wrongfully excluded from a share in the sacrifice. The deities, headed by Aja (Brahma), accordingly proceed to Kailasa. when they see Siva "bearing the linga desired by devotees, ashes a staff, a tuft of hair. an antelope's skin. and a digit of the moon, his body shining like an evening cloud". Brahma addresses Mahadeva "as the eternal Brahma, the lord of Sakti and Siva, who are respectively the womb and the seed of the universe, who. in sport, like a spider, forms all things from Sakti and Siva, who are consubstantial with himself, and preserves and reabsorbs them" (A similar supremacy is ascribed to Vishnu in section 7). Brahma adds that it was this great being who had instituted sacrifice, and all the regulations which Brahmans devoutly observe and entreat him. who is beyond all illusion, to have mercy on those who, overcome by its influence, had wrongly attached importance to ceremonial works, and to restore the sacrifice of Daksha, at which a share had been refused to him by evil priests. Mahadeva partly relents (sect. 7)"

There can be no better evidence to prove that Shiva was an anti-vedic God than his destruction of Daksha's Yajna.

Now let us take Krishna.

There are four persons who go by the name *Krishna*. One Krishna is the son of Satyavati and father of Dhrtarashtra, Pandu and Vidur. Second Krishna is the brother of Subhadra and friend of Arjuna. Third Krishna is the son of Vasudeva and Devaki and was resident of Mathura. Fourth Krishna is the one brought up by Nanda and Yeshoda at Gokul and it was he who killed Shishupal. If the Krishna of the Krishna cult is the same as the Krishna son of Devaki there can be no doubt that Krishna originally also was anti-Vedic. From the Chhandogya Upanishad it appears that he was a pupil of Ghora Angiras. What did Ghora Angiras teach him? This is what the Chhandogya Upanishad says on the subject:

"Ghora, the descendant of Angiras, having declared this (the preceding mystical lore) to Krishna the son of Devaki, said to him that (which, when he heard) he became free from thirst (i.e. desire), viz., 'let a man at the time of his death have recourse to these three texts, 'Thou art the undecaying, thou art the imperishable, thou art the subtle principle of breath'. The commentator on this text of the Upanishad explains:

"A person, Ghora by name, and an Angirasa by family, having declared this doctrine of sacrifice to Krishna the son of Devaki, his pupil, then said etc. The connexion of the last word 'said', is with the words which

occur some way below, 'these three etc.. And having heard this doctrine he became free from desire for any" kinds of knowledge. In this manner he praises this knowledge of the Purusha-sacrifice by saying that it was so distinguished that it destroyed all thirst in Krishna, the son of Devaki, for any other knowledge. He now tells us that Ghora Angirasa said after declaring this knowledge to Krishna. It was this: 'Let him who knows the aforesaid sacrifice, at the time of his death have recourse to, mutter, these three texts, *pranasamsitam* means, 'thou art the very minute, and subtle principle of breath."

Obviously the doctrine taught by Ghora Angiras to Krishna was opposed to the Vedas and the Vedic sacrifices as a means of spiritual salvation. On the contrary Vishnu is a Vedic God. Yet his cult is established much later than that of Shiva. Why there has been so much neglect of Vishnu it is difficult to understand.

Similarly Rama though not anti-vedic is unknown to the Vedas. What was the necessity of starting his cult and that too at so late a stage in the history of the country?

We may now take up the third question—namely what is the relative position of these new Gods to the old Pauranic Gods.

The rise and fall of Bramha, Vishnu and Shiva has already been told in a previous chapter called *Gods at War*. Whatever happened, the struggle for place and power was confined to these three Gods. They were not dragged below any other. But a time came when they were placed below the Devi by name Shri. How this happened is told in the Devi Bhagwatmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_72. The Devi Bhagwat says that a Devi by name *Shri* created the whole world and that it is this Goddess who created Bramha, Vishnu and Shiva! The Devi Bhagwat goes on to state that the Devi desired to rub her palms. The rubbing of palms produced a blister. Out of this blister was born Bramha. When Bramha was born the Devi asked him to marry her. Bramha refused saying she was his mother. The Devi got angry and burned Bramha alive by her wrath and Bramha was reduced to ashes then and there. Devi rubbed her palms a second time and had a second blister. Out of this second blister a second son was born. This was Vishnu. The Devi asked Vishnu to marry her. Vishnu declined saying that she was his mother. Devi got angry and burned down Vishnu to ashes. Devi rubbed her palms a third time and had a third blister. Out of this third blister was born a third son. He was Shiva. The Devi asked Shiva to marry her. Shiva replied: ' I will, provided you assume another body '. Devi agreed. Just then Shiva's eyes fell on the

two piles of ashes. Devi replied ' they are the ashes of his two brothers and that she burnt them because they refused to marry her. ' On this Shiva said, ' How can I alone marry? You create two other women so that we all three can marry '. The devi did as she was told and the three Gods were married to the Devi and her female creations. There are two points in the story. One is that even in doing evil Shiva did not wish to appear more sinning than Bramha and Vishnu for fear that he may appear more degraded than his other two competitors. The more important point however is that Bramha, Vishnu and Shiva had fallen in rank and had become the creatures of the Devi.

Having dealt with the rise and fall of Bramha, Vishnu and Shiva, there remains the vicissitudes in the cults of the two new Gods, Krishna and Rama.

Obviously there is a certain amount of artificiality in the cult of Krishna as compared with the cult of Brahma, Vishnu and Shiva. Bramha, Vishnu and Mahesh were born gods. Krishna was a man who was raised to godhood. It is probably to confer godhood on him that the theory was invented that he was the incarnation of Vishnu. But even then his godhood remained imperfect because he was regarded to be only a partial [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART 1.htm - _msocom_73](mailto:mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles_in_Hinduism_PART_1.htm_-_msocom_73) avatar of Vishnu largely because of his debaucheries with the *gopis* which would have been inexcusable if he had been a full and perfect *avatar* of Vishnu.

Notwithstanding this humble beginning Krishna became elevated to the position of a supreme God above all others. How great a God he became can be seen by a reference to Chapter X and XIV of the Bhagvat Geeta. In these Chapters Krishna says:

"Well then, O best of the Kauravas I will state to you my own divine emanations; but (only) the chief (ones) for there is no end to the extent of my (emanations). I am the self. O Gudakesa seated in the hearts of all beings; I am the beginning and the middle and the end also of all beings. I am Vishnu among the Adityas, the beaming Sun among the shining (bodies); I am Marichi among the Maruts, and the Moon among the lunar mansions. Among the Vedas, I am the Sama-veda. I am Indra among the Gods. And I am mind among the senses. I am consciousness in (living) beings. And I am Shankara among the Rudras, the Lord of Wealth among Yakshas and Rakshasas. And I am *fire* among the Vasus, and Meru among the high-topped (mountains). And know me, O Arjuna to be Brihaspati, the chief among domestic priests. I am Skanda among generals. I am the ocean among reservoirs of water. I am Bhrigu

among the great sages. I am the Single syllable (Om) among words. Among sacrifices I am the *Gapa* sacrifice; the Himalaya among the firmly fixed (mountains); the Asvattha among all trees, and Narada among divine sages; Chitraratha among the heavenly *choristers*, the sage Kapila among the Siddhas. Among horses know me to be Uchhaisravas, brought forth by (the labour for) the nectar; and Airavata among the great elephants, and the ruler of men among men. I am the thunderbolt among weapons, the wish-giving (cow) among cows. And I am love which generates. Among serpents I am Vasuki. Among Naga snakes I am Ananta; I am Varuna among aquatic beings. And I am Aryaman among the manes, and Yama among rulers. Among demons, too, I am Pralhada. I am the king of death (kala, time) among those that count.

"Among beasts I am the lord of beasts, and the son of Vinata among birds. I am the wind among those that blow. I am Rama among those that wield weapons. Among fishes I am Makara, and among streams the Janhavi. Of created things I am the beginning and the end and the middle also. O Arjuna, among sciences, I am the science of the Adhyatma, and I am the argument of controversialists. Among letters I am the letter A, and among the group of compounds the copulative compound. I myself am time inexhaustible and I the creator whose faces are in all directions. I am death who seizes all, and the source of what is to be. And among females, fame, fortune, speech, memory, intellect, courage, forgiveness. Likewise among Saman hymns, I am the Brihat-saman, and I the Gayatri among metres. I am Margasirsha among the months, the spring among the seasons, of cheats, I am the game of dice; I am the glory of the glorious; I am victory. I am industry, I am the goodness of the good. I am Vasudeva among the descendants of Vrishni and Arjuna among the Pandvas. Among sages also, I am Vyasa; and among the discerning ones, I am the discerning Usanas. I am the rod of those that restrain, and the policy of those that desire victory. I am silence respecting secrets. I am the knowledge of those that have knowledge. And O Arjuna! I am also that which is the seed of all things. There is nothing movable or immovable which can exist without me."

"Know that glory (to be) mine which, dwelling in the Sun, lights up the whole world, or in the moon or fire. Entering the earth, I by my power support all things; and becoming the juicy moon, I nourish all herbs. I becoming the fire, and dwelling in the bodies of (all) creatures, and united with the upward and downward life-breaths cause digestion of the four-fold food. And I am placed in the heart of all."

“From me (come) memory, knowledge, and their removal; I alone am to be learnt from all the Vedas; I am the author of the Vedantas; and I alone know the Vedas. There are these two beings in the world, the destructible and the indestructible. The destructible (includes) all things. The unconcerned one is (what is) called the indestructible. But the being supreme is yet another, called the highest self, who as the inexhaustible lord, pervading the three worlds, supports (them). And since I transcend the destructible, and since I am higher also than the indestructible therefore am I celebrated in the world and in the Vedas as the best of things.” It is therefore clear that so far as the Gita is concerned there is no God greater than Krishna. He is, Alla ho Akbar. He is greater than all other Gods.

Let us now turn to the Mahabharata. What do we find? We find a change in the position of Krishna. There is a rise and fall in his position. In the first place we find Krishna elevated above Shiva. Not only that, Shiva is made to admit and acknowledge the greatness of Krishna. Along with this we also find Krishna degraded to a rank below that of Shiva and is made to acknowledge the greatness of Shiva.

As a piece of evidence in support of the elevation of Krishna above Shiva the following passage from the *Anusasana-Parvan* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/21A1.Riddles in Hinduism PART I.htm - _msocom_74 is very illuminating:

"Superior even to Pitamaha (Bramha) is Hari, the eternal Purusha, Krishna, brilliant as gold, like the sun risen in a cloudless sky, ten-armed, of mighty force, slayer of the foes of the gods, marked with the *srivatsa*, Hrishikesa, adored by all the gods. Bramha is sprung from his belly and I (Mahadeva) from his head, the luminaries from the hair of his head, the gods, and Asuras from the hairs of his body, and the rishis as well as everlasting worlds, have been produced from his body. He is the manifest abode of Pitamaha, and of all the deities. He is the creator of this entire earth, the lord of the three worlds, and the destroyer of creatures, of the stationary and the moveable. He is manifestly the most eminent of the gods, the lord of the deities, the vexer of his foes. He is omniscient, intimately united (with all things), omnipresent facing in every direction, the supreme spirit, Hrishikesa all-pervading, the mighty Lord. There is none superior to him in the three worlds. The slayer of Madhu is eternal, renowned as Govinda. He, the conferrer of honour, born to fulfil the purposes of the gods, and assuming a human body, will slay all the kings in battle. For all the hosts of the gods, destitute of Trivikrama (the god who strode thrice), are unable to effect the

purposes of the gods, devoid of a leader. He is the leader of all creatures, and worshipped by all creatures.

“Of this lord of the gods, devoted to the purposes of the gods, who is Brahma, and is the constant refuge of gods and rishis, Brahma dwells within the body, abiding in his face, and all the gods are easily sheltered in his body. This god is lotus-eyed, the producer of Sri, dwelling together with Sri . . . For the welfare of the gods, Govinda shall arise in the family of the great Manu, possessed of eminent intelligence and (walking) in the excellent path of the Prajapati Manu, characterized by righteousness (Govinda's ancestors are then detailed). In this family, esteemed by Brahmans, of men renowned for valour, distinguished by good conduct and excellent qualities, priests, most pure, this sura, the most eminent of Kshatriya heroic, renewed, conferring honour, shall beget a son Anakadundubhi, the proloner of his race, known as Vasudev to him shall be born a four-armed son, Vasudeva, liberal, a benefactor of Brahmans, one with' 'Brahma, a lover of Brahmans.”

“You the gods, should, as is fit, worship this deity, like the eternal Brahma, approaching him with reverential and excellent garlands of praise. For the divine and glorious Vasudev should be beheld by him who desires to see me and Brahma and Parent. In regard to this, I have no hesitation, that when he is seen I am seen, or the Parent (Brahma), the lord of the gods: know this ye whose wealth is austerity.”

We shall now see how Krishna after having been elevated to the position being highest among the Gods is being degraded.

The Mahabharata is so full of incidents and occasions which demonstrate Krishna's inferiority to Shiva that it is difficult to recite the whole of them. One must be content with a few.

The first incident relates to the view taken by Arjuna to slay Jayadratha on the following day. After the vow, Arjuna became very dejected thinking that Jayadratha's friends would do their utmost to save him and that unless he had sure weapons he would not be able to fulfil his vow. Arjuna goes to Krishna for advice. Krishna suggests to Arjuna that he should supplicate to Mahadeva for the Pasupata weapon with which Mahadev himself had formerly destroyed all the Daityas and which, if he obtained it, he would be

sure to kill Jayadrath. The Drone-Parvan which relates the story proceeds to say:

"The righteous Vasudeva (Krishna) then, together with the son of Pritha (Arjuna), reciting the eternal Veda, bowed his head to the ground, beholding him the source of the worlds, the maker of the universe, the

unborn, the imperishable lord, the supreme source of mind, the sky, the wind, the abode of the luminaries, the creator of the oceans, the supreme substance of the earth, the framer of gods, Danavas, Yakshas and men, the supreme Brahma of meditative systems, the satisfied, the treasure of those who know Brahma, the creator of the world and also its destroyer, the great impersonated destructive Wrath, the original of the attributes of Indra and Surya. Krishna then revered him with voice, mind, understanding and act. Those two (heroes) had recourse to Bhava (Mahadeva) as their refuge,—to him whom the wise, desiring the subtle spiritual abode, attain,—to him the unborn cause. Arjuna, too, again and again revered that deity, knowing him to be the beginning of all beings, the source of the past, the future, and the present. Beholding those two, Nara and Narayana, arrived Sarva (Mahadeva), then greatly gratified, said, as if smiling: 'Welcome, most eminent of men, rise up freed from fatigue, and tell me quickly, heroes, what your mind desires. Shall I accomplish for you the object for which you have come? Choose what is most for your welfare. I will give you all.' Krishna and Arjuna then recite a hymn in honour of Mahadeva, in the course of which he is designated as the soul of all things, the creator of all things, and the pervader of all things. Arjuna now, after reverencing both Krishna and Mahadeva, asks the latter for the celestial weapon. They are thereupon sent by Mahadeva to a lake where he says he had formerly deposited his bow and arrows. They there saw two serpents, one of which was vomiting flames, and approached them, bowing to Mahadeva and uttering Satarudriya. Through the power of Mahadeva, the serpents change their shape and become a bow and arrow, which Krishna and Arjuna bring to Mahadeva. Eventually Arjuna receives as a boon from Mahadeva the Pasupata weapon, with the power of fulfilling his engagement to slay Jayadratha after which they both return to their camp."The Anusasana-Parvan of the Mahabharata contains a dialogue between Yudhishtira and Bhishma. Yudhishtira asks Bhishma to tell him the attributes of Mahadeva. This is what Bhishma says in reply:

"I am unable to declare the attributes of the wise Mahadeva, who is an all-pervading god, yet is nowhere seen, who is the creator and the lord of Brahma, Vishnu and Indra, whom the gods, from Brahma to the Pisachas, worship, who transcends material natures as well as spirit (Purusha), who is meditated upon by rishis versed in contemplation (yoga), and possessing an insight into truth, who is the supreme, imperishable Brahma, that which is both non-existent, and at once

existent and non-existent. Having agitated matter and spirit by his power, this god of gods and lord of creatures (Prajapati) thence created Bramha. What human being like me, who has been subject to gestation in the womb, and to birth, and is liable to decay and death, can declare the attributes of Bhava, the supreme lord— (who can do this) except Narayana, the bearer of the shell, the discus, and the cub? This Vishnu, wise, eminent, in qualities, very hard to overcome, with divine insight, of mighty power, beholds (him) with the eye of contemplation. Through his devotion to Rudra, the world is pervaded by the mighty Krishna. Having then propitiated that deity (Mahadeva) at Badari, he (Krishna) obtained from the golden-eyed Mahesvara the quality of being in all worlds more dear than wealth. This Madhava (Krishna) performed austerity for a full thousand years, propitiating Siva, the god who bestows boons, and the preceptor of the world. But in every mundane period (yuga) Mahesvara has been propitiated by Krishna and has been gratified by the eminent devotion Of that great personage. This unshaken Hari (Krishna) when seeking, for offspring, has beheld distinctly of what character is the glory of that great parent of the world. Than him I behold none higher. This large-armed (Krishna) is able to recount fully the names of the god of gods, to describe the qualities of the divine (being) and the real might of Mahesvara in all its extent".

This dialogue between Yudhishtira and Bhishma took place in the presence of Krishna. For immediately after his reply Bhishma calls upon Krishna to celebrate the greatness of Mahadeva. And this supreme Clod Krishna proceeds to do so without feeling any offence and says:

"The course of the deeds of. Isa (Mahadeva) cannot he really known. He whose essence neither the gods headed by Hiranyagarhha. nor the great rishis with Indra, nor the Adityas. the perceivers of the minutest objects, understand,—how can he. the refuge of saints he known by any mere man? I shall declare to you exactly some of the attributes of that divine slayer of the Asuras of the lord of religious ceremonies."

Here not only do we find that Krishna acknowledges his inferiority to Shiva but we also find Shiva conscious of the fact that Krishna has been beaten down and is no longer his superior, indeed is not even his equal. This is evident from Sautika-parvan where Mahadeva says to Asvathaman ^{*}mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_75:

"I have been duly worshipped by Krishna, the energetic in action. with truth, purity, honesty, liberality, austerity, ceremonies. patience, wisdom, self-control, understanding and words: Wherefore no one is dearer to

me than Krishna". Krishna from being above Shiva, above every God. indeed a Parmeshwar is reduced to the position of being a mere follower of Shiva begging for petty boons.

This does not complete the story of the degradation of Krishna. He is made to undergo further humiliation. Krishna not only accepted a position of inferiority vis-a-vis Shiva but he is sunk so low that he became a disciple of Upamanyu who was a great devotee of Shiva and took Diksha from him in Shaivism. Krishna himself says:

"On the 8th day I was Initiated by that Brahamana (Upamanyu) according to the Shastras. Having shaved my entire head, anointing myself with ghee, and taking the staff and kusa grass in my arms I dressed myself in bark fastened with the mekhala (the waist string)." Krishna then performs penance and has a sight, of Mahadeo. Can there be a more glaring instance of so great a rise and so much of a fall in the status of a God? Krishna who was a Parmeshwar as compared to Shiva who was only an Ishwar does not even remain an Ishwar. He actually becomes a devotee of Shiva and seeks initiation in the Shaiva Shastras from a common Brahmin like Upamanyu.

The case of Rama as a God is much more artificial than that of Krishna. Rama himself was unaware of the fact that he was a God. After recovering Sita on the defeat and death of Ravana, Sita was suspected of unchastity, Rama felt very dejected on hearing the words of those who thus spoke about Sita. The Ramayana says:

"Then King Kuvera, and Yama with the Pitris and Indra. Lord of the gods, and Varuna, lord of the waters, and the glorious three-eyed Mahadeva, whose ensign is a bull, and Brahma, the creator of the whole world, the most eminent of the knowers of the Veda: (and that King Dasaratha, moving in the air on a celestial car, arrived in that region, equal in lustre to the king of the gods); these all having come on cars brilliant as the Sun, and arrived in the city of Lanka, came near to Raghava (Rama). Then these most eminent gods, holding the large arms of Rama, adorned with armlets, addressed him as he stood with joined hands: How dost thou, the maker of the whole Universe, the most eminent of the wise, the pervading, disregard Sita's throwing herself into the fire? How dost thou not perceive thyself to be the chief of the host of the gods? (Thou wast) formerly the Vasu Ritadhama, and the Prajapati of the Vasus. Thou art the primal maker of the three worlds, the self dependent lord, the eighth Rudra of the Rudras, and the fifth of the Sadhyas. The Asvins are thine ears, the Moon and Sun thine eyes."

"Thou, vexer of thy foes, art seen in the end and at the beginning of

created beings. And yet thou disregardedst Sita like a common man”.

On being thus addressed by these Gods, Rama became surprized and replied:

"I regard myself as a man, Rama, son of Dasharath; do you, divine being tell me who and whence I am". On this, Brahma replying to Rama said:

"Hear my true word, O being of genuine power. Thou art the god, the glorious lord, Narayana, armed with the discus. Thou art the one-horned boar, the conqueror of thy foes, past and future, the true, imperishable Brahma, both in the middle and end. Thou art the supreme righteousness of the worlds, Vishvaksena, the four-armed ; the bearer of the bow, Saranga, Hrishikesa (lord of the senses). Purusha (the male), the highest of Purushas, the unconquered, sword-wielding, Vishnu, and Krishna of mighty force, the general, the leader the true. Thou art intelligence, thou art patience, and self-restraint. Thou art the source of being and cause of destruction, Upendra (the younger Indra), the Madhusudana. Thou art Mahendra (the elder Indra) fulfilling the function of Indra, he from whose navel springs a lotus, the ender of battles. The great divine rishis call thee the refuge, the resort of suppliants. Thou art the hundred-horned, composed of the Veda, the thousand-headed the mighty. Thou art the primal maker of the three worlds, the self-dependent lord, and the refuge of the Siddhas and Sahyas, O thou primevally born. Thou art sacrifice, thou art the vashatkara, and the omkara, higher than the highest. Men know not who thou art, the source of being, or the destroyer. Thou art seen in all creatures, in Brahmans and in cows, in all the regions, in the mountains and rivers, thousand-footed, glorious, hundred-headed, thousand-eyed. Thou sustainest creatures, and the earth with its mountains; thou art seen Rama. at the extremity of the earth, in the waters, a mighty serpent supporting the three worlds, gods, Gandharvas, and Danavas. I am thy heart, Rama, the goddess Sarasvati is thy tongue. The gods have been made by Brahma the hairs on thy limbs. The night is called the closing, and the day the opening, of thine eyes. The Vedas are thy thoughts. This (universe) exists not without thee. The whole world is thy body; the earth is thy stability. Agni is thine anger, Soma is thy pleasure, O thou whose mark is the Srivatsa. By thee the three worlds were traversed of yore with thy three paces. and Mahendra was made king after thou hadst bound the terrible Bali. That which is known as the chiefest light, that which is known as the chiefest darkness, that which is the higher than the highest-thou art called the highest Soul. It is thou who art hymned

as that which is called the highest, and is the highest. Men call thee the highest source of continuance, production and destruction." Obviously, there is the same degree of artificiality in the cult of Rama. Like Krishna he was a man who was made God. Unlike Brahma, Vishnu and Mahesh, he was not one who was born God. It is probably to make his Godhood perfect that the theory was invented that he was the incarnation of Vishnu and that Sita his wife was the incarnation of Lakshmi the wife of Vishnu.

In another respect, Rama was fortunate. He did not have to suffer degradation to other Gods as did Brahma, Vishnu and Krishna. There was however an attempt to degrade him below Parasurama the hero of the Brahmins. The story is told in the Ramayana which says:

"When King Dasaratha was returning to his capital, after taking leave of Janaka, the King of Mithila, whose daughter Sita had just been married to Rama he was alarmed by the ill-omened sounds by certain birds, which however were counteracted, as the sage Vasishtha assured the king by the auspicious sign of his being perambulated by the wild animals of the forest. The alarming event indicated was the arrival of Parasurama, preceded by hurricane which shook the earth and prostrated the trees, and by thick darkness which veiled the Sun. He was fearful to behold," brilliant as fire, and bore his axe and a bow on his shoulder. Being received with honour, which he accepted, he proceeded to say to Rama, the son of Dasaratha that he has heard of his prowess in breaking the bow produced by Janak and had brought another which he asked Rama to bend, and to fit an arrow on the string; and if he succeeded in doing so, he (Parasurama) would offer to engage with him in single combat."

"Rama replied that though his warlike qualities are condemned by his rival, he will give him a proof of his powers. He then snatches, in anger, the bow from the hand of Parasurama, bends it, fits an arrow on the string; and tells his challenger that he will not shoot at him because he is a Brahman, and for the sake of his kinsman Visvamitra; but will either destroy his superhuman capacity of movement, or deprive him of the blessed abodes he has acquired by austerity. The gods now arrive to be witnesses of the scene. Parasurama becomes disheartened and powerless and humbly entreats that he may not be deprived of his faculty of movement lest he should be incapacitated from fulfilling his promise to Kasyappa ' to leave the earth every night but consents that his blissful abodes may be destroyed."

With this exception Rama had no rivalry with any of the other Gods.

He managed to be where he was. With regards to other Gods there is a different story to tell. Poor creatures they became nothing more than mere toys in the hands of the Brahmins. Why did the Brahmins treat the Gods with so scant a respect?

RIDDLE NO. 12
WHY DID THE BRAHMINS DETHRONE THE GODS AND
ENTHRONE THE GODDESSES?

The worship of Gods is a thing common to all. But the worship of Goddesses is quite uncommon. The reason is that Gods are generally unmarried and have no wives who can be elevated to the position of Goddesses. How repugnant is the idea of a God being married is well illustrated by the difficulties which early Christians had in persuading the Jews to accept Jesus as the son of God. The Jews retorted saying God is not married and how can Jesus be the son of God.

With the Hindus the position is quite otherwise. They not only worship Gods they also worship Goddesses. This is so from the very beginning.

In the Rig-Veda several Goddesses are mentioned such as *Prithvi*, *Aditi*, *Diti*, *Nishtigri*, *Indrani*, *Prisni*, *Usha*, *Surya*, *Agnayi*, *Varunani*, *Rodasi*, *Raka*, *Sinivali*, *Sradha*, *Aramati*, *Apsaras* and *Sarasvati*.

Prithvi is a very ancient Aryan Goddess. She is represented either as wife of *Dyaus* heaven or of *Parjanya*. *Prithvi* is an important Goddess because she is said to be the mother of many Gods.

Aditi is chronologically one of the older Vedic Goddesses. She is described as the mighty mother of the Gods. The Gods, *Mitra*, *Aryaman* and *Varuna* are her sons. To whom *Aditi* was married does not appear from the Rig-Veda. We do not know much about *Diti* except that she is mentioned as a goddess along with and in contrast to *Aditi* and that the *Daityas* who were regarded in later Indian mythology as the enemies of the *Devas* were her sons.

The original title of the Chapter was ' Vedic and non- Vedic Goddesses '. From the subject dealt with in this chapter and from the concluding para, we have placed this at Riddle No. 12 in accordance with the subject mentioned in the Table of Contents. This is a 21-page typed copy having some modifications and also concluding para in the handwriting of the author.—Ed.

The goddess *Nishtigri* is the mother of Indra and the goddess *Indrani*

is the wife of Indra. Prisni is the mother of Maruts. *Usha* is described as the daughter of the sky, the sister of *Bhaga* and the kinswoman of *Varuna* and the wife of *Surya*. The goddess *Surya* is the daughter of *Surya* and the wife of the Gods *Asvins* or *Soma*.

The goddesses *Agnayi*, *Varunani* and *Rodasi* are the wives of *Agni*, *Varuna* and *Rudra* respectively. Of the rest of the goddesses are mere personifications of rivers or are mentioned without any details.

From this survey two things are clear. One is that a Hindu God can enter a married state and neither the God nor his worshipper need feel any embarrassment on account of the God acting as though he was no better than a common man. The second is that the God's wife automatically becomes a goddess worthy of worship by the followers of the God.

Leaving the Vedic times and coming to the Pauranic times we come across the names of various Goddesses such as *Devi*, *Uma*, *Sati*, *Ambika*, *Parvati*, *Haimavati*, *Gauri*, *Kali*, *Nirriti*, *Chandi* and *Katyayini*, *Durga*, *Dassbhuj*, *Singhavahini*, *Mahishasuramardini*, *Jagaddhatri*, *Muktakesi*, *Tara*, *Chinnamustaka*, *Jagadgauri*, *Pratyangira*, *Annapurna*, *Ganeshjanani*, *Krishnakrora* and *Lakshmi*. It is very difficult to construct a who is who of these Goddesses. In the first place it is difficult to say whether each name stands for a distinct and separate Goddess or they are the names of one Goddess. It is equally difficult to be sure of their parentage. Nor can any one say with certainty as to who their husbands are.

According to one account *Vma*, *Devi*, *Sati*, *Parvati*, *Gauri* and *Ambika* are different names of the same Goddess. On the other hand *Devi* is said by some to be the daughter of *Daksha*, *Ambika* to be the sister of *Rudra*. Regarding *Parvati* the *Varaha Purana* in describing her. origin saysmk:@MSITStore\C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_76:

"Brahma when on a visit to Siva on Mount Kailasa is thus addressed by him:"Say, quickly, O, Brahma, what has induced you to come to me?' Brahma replies, 'There is a mighty Asura named Andhaka (Darkness), by whom all the gods, having been distressed, came for protection, and I have hastened to inform you of their complaints'. Brahma then looked intently at Siva, who bythought summoned Vishnu into their presence. As the three deities looked at each other, 'from their three refulgent glances sprang into being a virgin of celestial loveliness, of hue cerulean, like the petals of a blue lotus, and adorned with gems, who hashfully bowed before Brahma, Vishnu and Siva. On their asking her who she was, and why she was distinguished by the three colours black, white

and red, she said, ' From your glances was I produced: do you not know your own omnipotent energies?' Brahma then praising her said, "Thou shalt be named the goddess of three times (past, present and future), the preserver of the universe, and under various appellations shalt thou be worshipped, as thou shalt be the cause of accomplishing the desires of thy votaries. But, O goddess, divide thyself into three forms, according to the colours by which thou art distinguished. She then, as Brahma had requested, divided herself into three parts: one white, one red, and one black. The white was ' Saraswati of a lovely, felicitous form, and the co-operator with Brahma in creation: the red was Lakshmi, the beloved of Vishnu, who with him preserves the universe; the black was Parvati endowed with many qualities and energy of Siva."

Here is an attempt to suggest that *Saraswati*, *Lakshmi* and *Parvati* are different forms of one and the same divinity. When one remembers that *Saraswati* is the wife of Brahma, Lakshmi is the wife of Vishnu and Parvati is the wife of Shiva, and also that Brahma, Vishnu and Shiva were at war, this explanation given by the Varah Puran seems very odd.

Who is Gauri? The Purana says that Gauri is another name for Parvati. The reason how Parvati was called Gauri is that when Shiva and Parvati lived on mount Kailasa, occasionally there were quarrels between them, and on one occasion Shiva reproached her for the blackness of her skin. This taunt so grieved her that she left him for a time. and, repairing to a deep forest, performed a most severe course of austerities, until Brahma granted her as a boon that her complexion should be golden and for this circumstance she is known as Gauri.

Taking the other Goddesses it is not quite certain whether they are different names for one and the same Goddess or whether they are different Goddesses. In the Mahabharata there is a hymn sung by Arjuna to Durga in which he says

"Reverence be to thee, Siddha-Senani (general-ess of the Siddhas), the noble, the dweller on Mandara, Kumari (Princess), Kali, Kapali, Kapila, Krishna-pingala. Reverence to thee, Bhadrakali; reverence to thee, Maha Kali, Chandi, Chanda, Tarini (deliveress), Varavarini (beautiful-coloured). O fortunate Kalyani, O Karali, O Vijaya, O Jaya (victory) younger sister of the chief of cowherds (Krishna), delighting always in Mahisha's blood'. O Uma, Sakambhari, thou white one, thou black one,

0 destroyer of Kaithabha! Of science, thou art the science of Brahma (or of the Vedas), the great sleep of embodied beings. 0 mother of Skanda (Kartikeya), divine Durga, dweller in wildernesses'. Thou, great goddess, art praised with a pure heart. By thy favour let me ever be victorious in battle."

From this hymn it does appear that some of the Goddesses listed above are simply different names of Durga. Similarly, Dasabhuja, Singhavahini, Mahishamardini, Jagaddhatri, Chinnamustaka, Jagadgauri, Pratyangiri, Annapurna are the same as Durga or different forms of *Durga*.

There are thus two principal Goddesses. One is *Parvati* and the other is *Durga*. The rest are mere names. Parvati is the daughter of Daksha Prajapati and the wife of Shiva and Durga is the sister of Krishna and the wife of Shiva. The relationship of *Durga* and *Kali* is not quite clear. According to the hymn sung by Arjuna, Durga and Kali would appear to be one and the same. But the Linga Purana seems to suggest a different view.

According to itmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_79. Kali is distinct from Durga.

A comparison between the Vedic Goddesses and the Puranic Goddesses cannot be avoided by a student whose business it is not merely to write history but to interpret history. On one point there is a striking contrast, between the two. The worship of the Vedic Goddesses was worship by *courtesy*. They were worshipped only because they were the wives of Gods. The worship of the Puranic Goddesses stand on a different footing. They claim worship in their own right and not because they are wives of Gods. This difference arises because the Vedic Goddesses never went to the battle-field and never performed any heroic deed. The Puranic Goddesses on the other hand went to the battlefield and performed great heroic deeds. Their worship was not by courtesy. It was based upon their heroic and thundering deeds.

There was a great battle, it is said, between Durga and the two *asuras* which brought renown to Durga. The story is told in the Markandeya Purana in full details. It says*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_80

At the close of the Treta Age, two giants, named Sumbha and Nishumbha performed religious austerities for 10,000 years, the merit of which brought Shiva from heaven, who discovered that by this extraordinary devotion, they sought to obtain the blessing of

immortality. He reasoned long with them, and vainly endeavoured to persuade them to ask for any other gift. Being denied what they specially wanted, they entered upon still more severe austerities for another thousand years, when Shiva again appeared, but still refused to grant what they asked. They now suspended themselves with their heads downwards over a slow fire, till the blood streamed from their necks; they continued thus for 800 years. The Gods began to tremble, lest, by performing such rigid act of holiness, these demons should supplant them on their thrones. The king of the Gods thereupon called a council, and imparted to them his fears. They admitted that there was ground for anxiety, but asked what was the remedy.

Acting upon the advice of Indra, Kandarpa (the God of love), with Rambha and Tilotama, the most beautiful of the celestial nymphs, were sent to fill the minds of the giants with sensual desires. Kandarpa with his arrow wounded both; upon which, awaking from their absorption, and seeing two beautiful women, they were taken in the snare, and abandoned their devotions. With these women they lived for 5000 years; after which they saw the folly of renouncing their hopes of immortality for the sake of sensual gratifications. They suspected this snare must have been a contrivance of Indra; so, driving back the nymphs to heaven, they renewed their devotions, cutting the flesh off their bones, and making burnt offerings of it to Shiva. They continued in this way for 1000 years till at last they became mere skeletons; Shiva again appeared and bestowed upon them his blessing—that in riches and strength they should excel the Gods.

Being exalted above the Gods, they began to make war upon them. After various successes on both sides, the giants became everywhere victorious; when Indra and the Gods, reduced to a most deplorable state of wretchedness, solicited the interference of Brahma and Vishnu. They referred them to Shiva, who declared that he could do nothing for them. When, however, they reminded him that it was through his blessing they had been ruined, he advised them to perform religious austerities to Durga. They did so: and after some time the goddess; appeared, and gave them her blessing; then disguising herself as a common female carrying a pitcher of water, she passed through the assembly of the gods. She, then assumed her proper form, and said, 'They are celebrating my praise'.

'This new goddess now ascended Mount Himalaya where Chanda and Manda, two of Sumbha and Nisumbha's messengers resided. As these demons wandered over the mountain, they saw the goddess; and being

exceedingly struck with her charms, which they described to their masters, advised them to engage her affections, even if they gave her all the glorious things which they had obtained in plundering the heavens of the gods.

Sumbha sent Sugriva as messenger to the goddess, to inform her that the riches of the three worlds were in his palace; that all the offerings which used to be presented to the gods were now offered to him; and that all these offerings, riches, etc., would be hers, if she would come to him. The goddess replied that the offer was very liberal, but that she had resolved that the person she married must first conquer her in war, and destroy her pride. Sugriva, unwilling, to return unsuccessful, pressed for a favourable answer, promising that he would conquer her in war, and subdue her pride; and asked in an authoritative strain; ' Did she know his master, before whom none of the inhabitants of the worlds had been able to stand, whether gods, demons, or men? How then could she, a female think of resisting his offers? If his master had ordered him, he would have compelled her to go into his presence immediately. She agreed that this was very correct, but that she had taken her resolution, and exhorted him, therefore to persuade his master to come and try his strength with her.

The messenger went and related what he had heard. On hearing his account, Sumbha was filled with rage, and, without making any reply, called for Dhumlochana his commander-in-chief and gave him orders to go to Himalaya and seize the goddess and bring her to him. and, if any attempted a rescue, utterly to destroy them.

The commander went to Himalaya, and acquainted the goddess with his master's orders. She, smiling, invited him to execute them. On the approach of this hero, she set up a dreadful roar, by which he was reduced to ashes. After which she destroyed the army of the giant leaving only a few fugitives to communicate the tidings. Sumbha and Nisumbha, infuriated, sent Chanda and Manda, who on ascending the mountain, perceived a female sitting on an ass, laughing. On seeing them she became enraged, and drew to her ten, twenty, or thirty of their army at a time, devouring them like fruit. She next seized Manda by the hair, cut off his head and holding it over her mouth, drank the blood. Chanda, on seeing the other commander slain in this manner, himself came to close quarters with the goddess. But she, mounted on a lion, sprang on him, and, despatching him as she had done Manda, devoured part of his army, and drank the blood of the slain.

The giants no sooner heard this alarming news than they resolved to

go themselves, and collecting their forces, an infinite number of giants, marched to Himalaya. The gods looked down with astonishment on this vast army, and the goddesses descended to help Maharnaya (Durga), who, however, soon destroyed her foes, Raktavija, the principal commander under Sumbha and Nishumbha, seeing all his men destroyed encountered the goddess in person. But though she covered him with wounds, from every drop of blood which fell to the ground a thousand giants, arose equal in strength to Raktavija himself. Hence innumerable enemies surrounded Durga, and the gods were filled with alarm at the amazing sight. At length Chandi, a goddess, who had assisted Kali (Durga) in the engagement, promised that if she would drink the giant's blood before it fell to the ground, she (Chandi) would engage him and destroy the whole of his strangely formed offspring. Kali consented, and the commander and his army were soon despatched.

Sumbha and Nishumbha, in a state of desperation, next engaged the goddess in single combat, Sumbha making the first onset. The battle was inconceivably dreadful on both sides, till at last both the giants were slain, and Kali sat down to feed on the carnage she had made. The gods and the goddesses chanted the praises of the celestial heroine, who in return bestowed a blessing on each.”The Markandeya Purana also gives a short account of the valorous deeds of Durga done in the various forms it took. It says:

“As Durga she received the message of the giants; As Dasabhuja (the ten-armed) she slew part of their army; As Singhavahini (seated on a lion) she fought with Raktavija; As Mahishamardini (destroyer of a buffalo) she slew Sumbha in the form of a buffalo; As Jagaddhatri (the mother of the world) she overcame the army of the giants; As Kali (the black woman) she slew Raktavija; As Muktakesi (with flowing hair) she overcame another of the armies of the giants; As Tara (the saviour) she slew Sumbha in his own proper shape; As Chinnamastaka (the headless) she killed Nisumbha; As Jagadgauri (the golden-coloured lady renowned through the world) she received the praises and thanks of the gods.”A comparison between the Vedic and Puranic Goddesses raises some interesting questions. One of them is quite obvious. Vedic literature is full of references to wars against the Asuras. The literature known as Brahmanas replete with them. But all these wars against the Asuras are fought by the Vedic Gods. The Vedic Goddesses never took part in them. With the Puranic Goddesses the situation has undergone a complete change. In the Puranic times there are wars with the Asuras as

there were in the Vedic times. The difference is that while in the Vedic times the wars with the Asuras are left to be fought by the Gods in the Puranic times they are left to be fought by the Goddess. Why is

that Puranic Goddesses had to do what the Gods in Vedic times did? It cannot be that there were no Gods in Puranic times. There were Brahma, Vishnu and Shiva gods who ruled in the Puranic times. When they were there to fight the Asuras why were the Goddesses enrolled for this purpose. This is a riddle which requires explanation.

The second question is what is the source of this power which the Puranic Goddesses possessed and which the Vedic Goddesses never had? The answer given by the Puranic writers is that this power was the power of the Gods which dwelt in the Goddesses. The general theory was that every God had energy or power which was technically called *Sakti* and that the *Sakti* of every God resided in his wife the Goddess. This had become such an accepted doctrine that every goddess is called a *Sakti* and those who worship the Goddess only are called *Saktas*.

With regard to this doctrine there are one or two questions that call for a reply.

First is this. We may now take it that notwithstanding the many names of the Goddesses as we find in the Puranas we have really five Puranic Goddesses before us—namely, *Sarasvati*, *Lakshmi*, *Parvati*, *Durga* and *Kali*. *Sarasvati* and *Lakshmi* are the wives of Brahma and Vishnu who along with Shiva are recognized as the Puranic Gods. *Parvati*, *Durga* and *Kali* are the wives of Shiva. Now *Sarasvati* and *Lakshmi* have killed no Asura and have in fact done no deed of valour. Question is why? Brahma and Vishnu had *Sakti* which in conformity with the theory must have dwelt in their wives. Why then did *Sarasvati* and *Lakshmi* not take part in the battle with the Asuras? This part is only reserved for the wives of Shiva. Even here *Parvati*'s role is quite different from that of *Durga*. *Parvati* is represented as a simple woman. She has no heroic deeds to her credit like the ones claimed for *Durga*. Like *Durga*, *Parvati* is also the *Sakti* of Shiva. Why was Shiva's *Sakti* dwelling in *Parvati* so dull, so dormant, and so inactive as to be non-existent?

The second point is that though this doctrine may be a good justification for starting the worship of Goddesses independently of Gods, it is difficult to accept either the logical or historical basis of the doctrine. Looking at it purely from the point of view of logic if every God has *Sakti* then even the Vedic Gods must have had it. Why then was this doctrine not applied to the wives of the Vedic Gods? Looking at it from the point of view of history, there is no justification for saying

that the Puranic Gods had *Sakti* in them.

Further the Brahmins do not seem to have realized that by making Durga the heroine who alone was capable of destroying the Asuras,

they were making their own Gods a set of miserable cowards. It seems that the Gods could not defend themselves against the Asuras and had to beg of their wives to come to their rescue. One illustration from the Markandeya Purana is enough to prove how imbecile the Puranic Gods were shown by the Brahmins against the Asuras. Says the Markandeya Purana.:

"Mahisha, king of the giants at one time overcame the gods in war. and reduced them to such a state of want that they wandered through the earth as beggars. Indra first conducted them to Brahma, and then to Siva; but as these gods could render no assistance, they turned to Vishnu, who was so grieved at the sight of their wretchedness, that streams of glory issued from his face. whence came a female figure named Mahamaya (another name of Durga). Streams of glory issued from the faces of the other gods also. which in like manner entered Mahamaya: in consequence of which she became a body of glory, like a mountain of fire. The gods then handed their weapons to this dreadful being, who with a frightful scream ascended into the air, slew the giant and gave redress to the gods."

How can such cowardly Gods have any prowess? If they had none, how can they give it to their wives. To say that Goddesses must be worshipped because they have *Sakti* is not merely a riddle but an absurdity. It requires explanation why this doctrine of Sakti was invented. Was it to put it a new commodity on the market that the Brahmins started the worship of the Goddesses and degraded the Gods?.

RIDDLE NO. 13

THE RIDDLE OF THE AHIMSA

Any one who compares the habits and social practices of the latter-day Hindus with those of the Ancient Aryans he will find a tremendous change almost amounting to a social revolution.

The Aryans were a race of gamblers. Gambling was developed to science in very early days of the Aryan Civilization so much so that they had even devised certain technical terms. The Hindus used the words

Krita, Treta, Dwapara and Kali as the names of the four Yugas or periods into which historical times are divided. As a matter of fact originally these are the names of the dices used by the Aryans at gambling. The luckiest dice was called Krita and the unluckiest was called Kali. Treta and Dwapara were intermediate between them. Not only was gambling well developed among the ancient Aryans but the stakes were very high. Gambling with high money stakes have been known elsewhere. But they are nothing as compared with those which are known to have been offered by the Aryans. Kingdoms and even their wives were offered by them as stakes at gambling. King Nala staked his kingdom and lost it. The Pandavas went much beyond. They not only staked their kingdom they also staked their wife Draupadi and lost both. Among the Aryans gambling was not the game of the rich. It was a vice of the many. So widespread was gambling among the Ancient Aryans that the burden of all the writers of the Dharma Sutras (Shastras?) was to impress upon the King the urgency of controlling it by State Authorities under stringent laws.

The original Table of Contents shows Riddle No. 13 as 'How the Brahmins who were once cow-killers became the worshippers of the Cow?' This chapter is not found in the papers. However, few pages entitled 'Riddle of Ahimsa' have been found. The Riddle has been placed here as it seems to deal with the same topic. This chapter consisting of 10 typed pages is obviously incomplete as the remaining text is missing. Ed.

The relation of the sexes among the Aryans were of a loose sort. There was a time when they did not know marriage as a permanent tie between a man and a woman. This is evident from the Mahabharata where Kunti the wife of Pandu refers to this in her reply to Pandu's exhortation to go to produce children from some one else. There was a time when the Aryans did not observe the rule of prohibited degrees in their sex relations. There are cases among them of brother cohabiting with sister, son with mother, father with daughter and grand-father with grand-daughter. There was a communism in women. It was a simple communism where many men shared a woman and no one had a private property in or exclusive right over a woman. In such a communism the woman was called Ganika, belonging to many. There was also a regulated form of communism in women among the Aryans. In this the woman was shared among a group of men but the day of each was fixed and the woman was called *Warangana* one whose days are fixed. Prostitution flourished and has taken the worst form. Nowhere

else have prostitutes consented to submit to sexual intercourse in public. But the practice existed among the Ancient Aryans. Bestiality also prevailed among the Ancient Aryans and among those who were guilty of it are to be reckoned some of the most reverend Rishis.

The Ancient Aryans were also a race of drunkards. Wine formed a most essential part of their religion. The Vedic Gods drank wine. The divine wine was called Soma. Since the Gods of the Aryans drank wine the Aryans had no scruples in the matter of drinking. Indeed to drink it was a part of an Aryan's religious duty. There were so many Soma sacrifices among the Ancient Aryans that there were hardly any days when Soma was not drunk. Soma was restricted to only the three upper classes, namely the Brahmins, the Kshatriyas and the Vaishyas. That does not mean the Shudras were abstainers. Who were denied Soma drank Sura which was ordinary, unconsecrated wine sold in the market. Not only the male Aryans were addicted to drinking but the females also indulged in drinking. The Kaushitaki Grihya Sutra I. 11-12 advises that four or eight women who are not widowed after having been regaled with wine and food should be called to dance for four times on the night previous to the wedding ceremony. This habit of drinking intoxicating liquor was not confined to the Non-Brahmin women. Even Brahmin women were addicted to it. That drinking was not regarded as a sin; it was not even a vice, it was quite a respectable practice. The Rig-Veda says: "Worshipping the sun before drinking madira (wine)".

The Yajur-Veda says:

"Oh, Deva Soma! being strengthened and invigorated by Sura (wine), by thy pure spirit, please the Devas; give juicy food to the sacrificer and vigour to Brahmanas and Kshatriyas." The Mantra Brahmana says:

"By which women have been made enjoyable by men, and by which water has been transformed into wine (for the enjoyment of men)," etc. That Rama and Sita both drank wine is admitted by the Ramayana. Uttar Khand says:

"Like Indra in the case (of his wife) Shachi, Ramachandra saw that Sita drank purified honey called wine. Servants brought for Ramachandra meat and sweet fruit

So did Krishna and Arjuna. The Udyoga Parva of the Mahabharata says:

"Arjuna and Shrikrishna drinking wine made from honey and being sweet-scented and garlanded, wearing splendid clothes and ornaments, sat on a golden throne studded with various jewels. I saw Shrikrishna's feet on Arjuna's lap, and Arjuna's feet on Draupadi and Satyabhama's

lap."

The greatest change that has taken place is in the diet. The present day Hindus are very particular about their diet. There are twofold limitations on commensality. A Hindu will not eat food cooked by a Non-Hindu. A Hindu will not eat food cooked even by a Hindu unless he is a Brahmin or a man of his caste. The Hindu is not only particular on the question of whose food he should eat, he is also particular to what he should eat. From the point of view of diet Hindus may be divided into two main classes.

(1) Those who are vegetarians.

(2) Those who are non-vegetarians. The non-vegetarians again fall into several sub-divisions: Those who will eat all kinds of flesh and fish. Those who will eat only fish.

Those who will eat flesh are sub-divided into following categories:

(i) Those who will eat the flesh of any animal except the cow.

(ii) Those who will eat the flesh of any animal including that of the cow.

(iii) Those who will eat flesh but not of a cow (whether dead or slaughtered) nor of chicken.

Classifying the Hindu Population from the point of view of its diet the Brahmins are divided into two classes (1) Pancha Gauda and (2) Panch Dravida.

Of these Panch Dravida are completely vegetarian. The Panch Gauda's with the exception of one section namely Gauda Saraswatas are also completely vegetarian. The Untouchables who are at the other end of the Hindu Society are non-vegetarian. They eat meat, not merely of goats and fowls but also of the cow irrespective whether it is dead or slaughtered. The Non-Brahmins who are midway between the Brahmins and the Untouchables have different ways. Some like the Brahmins are Vegetarians. The rest unlike the Brahmins are non-vegetarians. All of them are alike in one thing namely that all of them are opposed to eating the cow's flesh.

There is one other aspect of the question which needs to be mentioned. It is the question of killing an animal for purposes of food. On this the Hindu mind is more or less united. No Hindu will kill an animal not even for food. Except for a small caste known as Khatiks there are no butchers among the Hindus. Even the Untouchables will not kill. He eats the flesh of a dead cow. But he will not kill a cow. In India today the butcher is a Musalman and any Hindu who wants to kill an animal for his food has to seek the services of a Musalman. Every

Hindu believes in Ahimsa.

Since when did vegetarianism come into India? When did Ahimsa become an established belief? There are Hindus who do not understand the propriety of this question. They hold that vegetarianism and Ahimsa are not new things in India.

The evidence in support of the contention that the ancient Aryans the ancestors of present-day Hindus were not only meat-eaters but beef-eaters is really overwhelming. As evidences in support of this view it is enough to draw attention to the following facts: They are quite indisputable. Take the case of Madhuparka.

Among the ancient Aryans there was well established procedure of reception to be given to a guest which is known as Madhuparka the detailed descriptions regarding which will be found in the various Grihya Sutras. According to most of the Grihya Sutras there are six persons who deserve Madhuparka. Namely (1) Ritvij or the Brahmin called to perform a sacrifice, (2) Acharya, the teacher, (3) the Bridegroom, (4) The King, (5) The Snatak, the student who has just finished his studies at the Gurukul and (6) Any person who is dear to the host. Some add Atithi to this list. Except in the case of the Ritvij, King and Acharya, Madhuparka is to be offered to the rest once in a year. To the Ritvij, King and Acharya it is to be offered each time they come. The procedure consisted first in washing by the host the feet of his guest, then the offer of the Madhuparka and the drinking of it by the quest accompanied by certain Mantras.

What were the components of the Madhuparka? Madhuparka literally means a ceremony in which honey is shed or poured on the hand of a person. This is what Madhuparka was in its beginning. But in course its ingredients grew and included much more than honey. At one time it included three ingredients—curds, honey, and butter. There was a time when it was made of five things, curds, honey, ghee, yava and barley. Then it came to be a mixture of nine items. The Kausika Sutra speaks of nine kinds of mixtures, viz. *Brahma* (honey and curds), *Aindra* (of *payasa*), *Saumya* (curds and ghee), *Mausala* (saine and ghee, this being used only in *Sautramani* and *Rajasuya* sacrifices), *Varuna* (water and ghee), *Sravana* (sesame oil and ghee), *Parivrajaka* (sesame oil and oil cake). Then we come to the time of the Manava Grahya Sutra which says that the Veda declares that the Madhuparka must not be without flesh and so it recommends that if the cow is let loose, goat's meat or *payasa* (rice cooked in milk) may be offered ; The *Hir* gr. i. 13.14 says that other meat should be offered : *Baud.* gr. says (1.2.51-54) that when the cow is

let off, the flesh of a goat or ram may be offered or some forest flesh (of a deer & c.) may be offered, as there can be. no Madhuparka without flesh or if one is unable to offer flesh one may cook ground grains. But in the final stage flesh became the most essential part of Madhuparka. In fact some of the Grihya Sutras go to the length of saying that there can be no Madhuparka without flesh. This they base upon an express injunction contained in the Rig-Veda (VIII. 101.5) which says "Let the Madhuparka not be without flesh".

Flesh eating was thus quite common. From the Brahmins to the Shudras everybody ate meat. In the Dharmasutras numerous rules are given about the flesh of beasts and birds and about fishes. Gaut. 17.27-31, Ap.Dh.S. 1.5.17.35 Vas.Dh.S. 14.39-40. Yaj. 1. 177, Vishnu Dh.S. 51.6, Sankha (quoted by Apararka p. 1167), Ramayana (Kiskindha 17.39), Markendey Purana (35.2-4) prescribe that one should avoid the flesh of all live-nailed animals except of porcupine, hare, svavidh (a boar of hedgehog), iguana, rhinoceros and tortoise (some of these works omit the rhinoceros). Gautama adds that one should also avoid the flesh of all animals with two rows of teeth in the two jaws, of hairy animals, of hairless animals (like snakes), of village cocks and hogs and of cows and bulls. Ap. Dh. S. 1.5.17. 29-31 first forbids the flesh of animals with one hoof only, of camels, of gavaya (Gayal), of the village hog, of the sarabha and of cows, but adds the exception that the flesh of milch cows and of bulls may be eaten as the Vajasaneyaka declares the flesh of these to be pure. Ap. Dh. S. (11.2.5.15) forbids the use of flesh to a teacher of the Veda in the (INCOMPLETE. FURTHER TEXT MISSING)

RIDDLE NO. 14

FROM AHIMSA BACK TO HIMSA

"From Himsa to Ahimsa" is only a part of the story of Ahimsa. There is another part of the story which can only be described, under the heading "From Ahimsa back to Himsa". The second part of the story will be clear if only one were to note the religious practices of the Tantras and Tantraism to which a reference has already been made.

The essentials of Tantrik worship are the five Makars. These five Makars consists of:

1. The drinking of wine and liquors of various kinds . . . (Madya):

2. The eating of meat (Mansa);
 3. The eating of fish (Matsya);
 4. The eating of parched or fried grain (Mudra);
 5. The sexual union (Maithuna). It is unnecessary to say at this stage anything about Maithuna or Sexual intercourse having been made an element of religious worship. It is sufficient to take note of Madya and Mansa.

With regard to the first four of these acts the Tantras prescribe twelve sorts of liquors, three sorts of wine, and three sorts of meat. Pulastya, one of the ancient sages who is the supposed author of certain law-books, also enumerates twelve kinds of liquors, as follows:"

1. Liquor extracted from the bread fruit (panasa), called Jack-liquor;
2. From grapes (draksha);
3. From date-palm (kharjuri);
4. From common palm (tali), or toddy;
5. From coconut (narikela);
6. From sugarcane (ikshu);
7. From Madhavika plant;

The chapter seems to be a continuation of the previous chapter on ' Abimsa '. There are six typed pages with few corrections and having the title written by the author himself.—Ed.

8. Long-pepper liquor (saira);
9. Soap-berry liquor (arishta);
10. Honey-liquor (madhuka);
11. A kind of rum or liquor prepared from molasses, etc. (called Gaudi, or sometimes Maireya);
12. Arrack, or liquor prepared from rice and other grain (sura or Varuni, or paishti).

Besides the above twelve kinds of spirituous drink others are frequently mentioned, for example, *Tanka*, made from wood-apple, *Koli*, made from the jujbe; and *Kadambari*; the last being the favourite beverage of Bala-Rama.

The meat may be that of birds, beasts, or fish. The parched grain is eaten, like dry biscuit, as a relish with the wine and spirituous liquors. The drinking of each kind of drink is supposed to be attended with its own peculiar merit and advantage. Thus one liquor gives salvation, another learning, another power, another wealth, another destroys enemies, another cures diseases, another removes sin, another purifies the soul."

The Tantrik worship had gone deep into Bengal. Referring to his own

experience Rajendra Lal Mitra
 saysmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART
 I.htm - _msocom_81:

"I knew a highly respectable widow lady, connected with one of the most distinguished families in Calcutta, who belonged to the Kaula sect, and had survived the 75th birthday, who never said her prayers (and she did so regularly every morning and evening) without touching the point of her tongue with a tooth-pick dipped in a phial of arrack, and sprinkling a few drops of the liquor on the flowers which she offered to her god. I doubt very much if she had ever drunk a wine-glassful of arrack at once in all her life, and certain it is that she never had any idea of the pleasures of drinking: but, as a faithful Kaula, she felt herself in duty-bound to observe the mandates of her religion with the greatest scrupulousness. That thousands of others do so, I have every reason to believe. In some parts of Bengal, where arrack is not easily accessible, such female votaries prepare a substitute by dropping the milk of a coconut in a bell-metal pot, or milk in a copper vessel, and drink a few drops of the same. Men are, however, not so abstemious, and the Tantras ordain a daily allowance of five cupsful, the cup being so made as to contain five tolas, or two ounces, i.e. they are permitted to take ten ounces or about a pint of arrack daily". This Tantrik worship was not confined to the small corner of Bengal. As is pointed out by Mahamahopadhyaya Jadaveshwara

Tarkaratnamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in
 Hinduism PART I.htm - _msocom_82:

"Just as the Bengalis of the higher castes are divided into Shaktas, Vaishnavas, and Shaivas. so it is with the peoples of Kamarupa, Mithila, Utkala, and Kalinga, and the Kashmirian pandits. The Shakti Mantra, Shiva Mantra. and Vishnu Mantra. are each Tantrik. Amongst Dakshinatyas, Mahamahopadhyaya Subramanya Shastri, and many others, are Shaktas. The late Mahamahopadhyaya Rama Mishra Shastri. Bhagavatacharya. and many others, were and are Vaishnavas. Mahamahopadhyaya Shivakumara Shastri, and a number of others are Shaivas. In Vrindavana there are many Shaktas as well as Vaishnava Brahmanas. though amongst the higher castes in Maharashtra and other Southern Indian countries. Shaivas and Vaishnavas are more numerous than Shaktas. Followers of the Pashupata and Jangama cults are Shaivas whereas those of Madhavacharya and Ramanujacharya are Vaishnavas. Many in the North-West are initiated in the Rama-Mantra. which is to be found only in the Tantra. It is still more remarkable that. according to

this author, the pandas of Shri Purushottama are all Shaktas, and the priests of Kamakhya Devi are all Vaishnavas."

Although it is not possible to give the exact date when the Tantras and Tantra worship came into existence there is no doubt that their date is after Manu. This fact makes the rise of the Tantra worship a matter of great surprize. The Tantras not only lifted the prohibition enacted by Manu against wine and flesh but they made drinking and flesh eating articles of faith.

The surprising thing is the part that the Brahmins have played in furthering the Tantra and Tantra worship. The Tantras had no respect for the Vedas. The Tantrikas said that the Vedas were like a common woman open to all but that the Tantra was like a high-born woman kept secluded. The Tantra was never repudiated by the Brahmins. On the other hand they recognized it as a fifth Veda. So orthodox a Brahmin as Kulluka-Bhatt the celebrated Commentator on Manu Smriti says that Shrutis are of two kinds, Vaidik and Tantrik. Not only did the Brahmins not repudiate the Tantras but actually promoted the Tantrik worship. The Matrika Bheda Tantra makes Shiva address his wife Parvati as follows* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/21A1.Riddles in Hinduism PART I.htm - _msocom_83:

"O sweet speaking goddess, the salvation of Brahmanas depends on drinking wine. I impart to you a great truth, O mountain born, when I say that the Brahman who devotes himself to drinking and its accompaniments, forthwith becomes a Siva. Even as water mixes with water, and metal blends with metal ; even as the confined space in a pitcher merges into the great body of the confining vessel, and air mingles with air, so does a Brahman melt into Brahma, the universal soul".

"There is not the least doubt about this. Likeness to the divinity and other forms of beatitude are designed for Kshatriyas and others; but true knowledge can never be acquired without drinking spirituous liquor; therefore should Brahmanas always drink. No one becomes a Brahman by repeating the Gayatri, the mother of the Vedas: he is called a Brahman only when he has knowledge of Brahma. The ambrosia of the gods is their Brahma, and on earth it is arrack (or liquor distilled from rice); and because one attains through it the condition of a god (suratva), therefore is that liquor called sura."

Why did the Brahmins repudiate father Manu and start again drinking liquor and flesh eating which Manu had stopped? This is a riddle.

RIDDLE NO. 15

HOW DID THE BRAHMINS WED AN AHIMSAK GOD TO A BLOODTHIRSTY GODDESS?

Having started drinking and flesh eating the Brahmins did not hesitate to write puranas advocating animal sacrifices. One such Purana requires a special mention. It is called the Kali Purana. This Purana is written with the express purpose of propagating the worship of the goddess Kali. In this Purana there is an adhyaya called Rudhir Adhyaya which means the bloody chapter.

I give below a summary of the Rudhir Adhyaya. In this chapter*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART I.htm - _msocom_84 the God Shiva addresses his three sons Betal, Bhairavar, and Bhairava in the following terms:

"I will relate you, my sons, the ceremonies and rules to be observed in sacrifices which being duly attended to are productive of the divine favour.

"The forms laid down in the Vaishnavi Tantra, are to be followed on all occasions and may be observed by sacrifices to all Deities."

"Birds, tortoise, alligators, fish, nine species of wild animals, buffaloes, bulls, he-goats, ichneumons, wild boars, rhinoceroses, antelopes, guanas, reindeer, lions, tigers, men and blood drawn from the offerer's own body, are looked upon as proper oblations to the Goddess Chandica, the Bhairavas &c."

"It is through sacrifices that princes obtain bliss, heaven, and victory over their enemies."

"The pleasure which the Goddess receives from an oblation of the fish and tortoises is of one month's duration, and three from that of a crocodile. By the blood of the nine species of wild animals the Goddess is satisfied nine months, and for that space of time

This is a 16-page typed MS having modifications by the author himself. All the pages are numbered serially and the treatment of the subject seems complete.—Ed.

continues propitious to the offerer's welfare. The blood of the wild bull and Guana give pleasure for one year, and that of the antelope and wild boar for twelve years. The Sarabhas blood satisfies the Goddess for twenty-five years, and buffalo's and rhinoceros's blood for a hundred,

and that of the tiger an equal number. That of the lion, reindeer, and the human species produces pleasure, which lasts a thousand years. The flesh of these, severally, gives the pleasure for the same duration of time as their blood. Now attend to the different fruits attending an offering of the flesh of a rhinoceros or antelope, as also of the fish called Rohita."

"The flesh of the antelope and rhinoceros pleases the Goddess five hundred years and the Rohita fish and *Bardhrinasa* give my beloved (i.e. the Goddess Cali) delight for three hundred years."

"A spotless goat, who drinks only twice in twenty-four hours, whose limbs are slender, and who is the prime among a herd, is called *Bardhrinasa*, and is reckoned as the best of Havyas (i.e. offerings to the Deities) and Cavyas, (i.e. offerings to the deceased progenitors)."

"The bird whose throat is blue and head red and legs black with white feathers, is called also *Barshrinasa*, and is king of the birds, and the favourite of me and Vishnu."

"By a human sacrifice attended by the forms laid down, Devi is pleased one thousand years and by sacrifice of three men, one hundred thousand years. By human flesh, Camachya, Chandica, and Bhairava who assumes my shape, are pleased one thousand years. An oblation of blood which has been rendered pure by holy texts, is equal to ambrosia; the head also afford much delight to the Goddess Chandica. Let therefore the learned when paying adoration to the Goddess, offer blood and the head, and when performing the sacrifices to fire, make oblations of flesh."

"Let the performer of the sacrifice be cautious never to offer bad flesh, as the head and blood are looked upon by themselves equal to ambrosia."

"The gourd, sugar cane, spirituous liquors, and fermented liquors are looked upon as equivalent to other offerings, and please the Goddess for the same duration of time as the sacrifice of a goat." "The performance of the sacrifice, with a Chandrahasa, or Gatri, (two weapons of the king) is reckoned the best mode, and with a hetcher or knife, or a sangeul, the second best, and the beheadings with a hoe a Bhallac (an instrument of the spade kind) the inferior mode."

"Exclusive of these weapons no others of the spear or arrow kind ought ever to be used in performing a sacrifice, as the offering is not accepted by the Goddess, and the giver of it dies. He who, with his hands, tears off the head of the consecrated animal or bird, shall be considered equally guilty with him who has slain a Brahman, and shall

undergo great sufferings.

“Let not the learned use the axe, before they have invoked it by holy texts, which have been mentioned heretofore, and framed by the learned for the occasion; let those I now tell you, be joined to them and the axe invoked, and particularly so, where the sacrifice is to be made to the Goddesses Durga and Camachya.”

“Let the sacrificer repeat the word Kali twice, then the words '*Devi Bajreswari, the Lawha Dandayai, Namah !*' which words may be rendered '*Hail! Cali, Cali! Hail! Devi! goddess of thunder, Hail Iron sceptered Goddess !*' Let him then take the axe in his hand, and again invoke the flame by the Calratriya text as follows:

“Let the sacrificer say: '*Hrang Hring. Cali, Cali.*' O horrid toothed Goddess: eat, cut, destroy all the malignant, cut with this axe, bind; seize, seize: drink blood; *spheng* secure, secure. Salutations to Cali.” Thus ends the Calratriya Mantra.”

“The Charge (the axe) being invoked by this text called the Calratriya Mantra, Calratri (the Goddess of darkness) herself presides over the axe uplifted for the destruction of the sacrificer's enemies.”

“The sacrificers must make use of all the texts directed previous to the sacrifice, and also of the following, addressing himself to the victim.”

“Beasts were created by the self existing, himself to be immolated at sacrifices. I therefore immolate thee, without incurring any sin in depriving thee of life.”

“Let the sacrificer then name the Deity to whom the sacrifice is made, and the purpose for which it is performed; and by the above text immolate the victim, whose face is to be towards the north, or else let the sacrificer turn his own face to the north, and the victim's to the east: Having immolated the victim, let him without fail mix salt &c., as before mentioned with the blood.”

“The vessel in which the blood is to be presented, is to be according to the circumstances of the offerer, of gold, silver, copper, brass, or leaves sewed together, or of earth, or of *tutenague*, or of any of the species of wood used in sacrifices.”

“Let it not be presented in an iron vessel, nor in one made of the hide of an animal, or the bark of tree; nor in a pewter, tin, or leaden vessel. Let not the blood be represented in the holy vessel named Srub and Sruch, nor on the ground. Let it not be presented in the Ghata (i.e. an earthen-jar always used in other religious ceremonies). Let it not be presented by pouring it on the ground, or into any of the vessels used

at other times for offering food to the Deity, Let not the good man who wishes for prosperity, offer the blood in any of these vessels. Human blood must always be presented in a metallic or earthen vessel; and never on any account in a vessel made of leaves, or similar substance.

"The offering of a horse, except at the Aswamedha sacrifice, is wrong, as also offering an elephant, except at the Gaja Medha; Let therefore the ruler of men observe never to offer them except on those occasions. And on no account whatsoever let him offer them to the Goddess Devi, using the wild bull called Chanrara as a substitute for the horse, when the occasion required one."

"Let not the Brahman ever offer a lion or a tiger, or his own blood, or spirituous liquors to the Goddess Devi. If a Brahman sacrifices either a lion, a tiger, or a man, he goes to hell, and passes but a short time in this world attended with misery and misfortune."

"If a Brahman offers his own blood, his guilt is equal to that of the slayers of a Brahman; and if he offers spirituous liquors he is no longer a Brahman."

"Let not a Cshectree offer an entelope; if he does, he incurs the guilt of a Brahmin slayer where the sacrifice of lions, or tigers, or of the human species is required, let the three first classes act thus; having formed the image of the lion, tiger, or human shape with butter, paste, or barley meal, let them sacrifice the same as if a living victim, the axe being first invoked by the text Nomo, &c.

"Where the sacrifice of a number of animals is to take place it is sufficient to bring and present two or three to the Deity, which serves as a consecration of the whole. I have now related to you, O Bhairava, in general terms, the ceremonies and forms of sacrifices attend now to the different texts to be used on the several different occasions."

"When a buffalo is presented to Devi, Bhairavee, or Bhairava let the sacrificer use the following Mantra in invoking the victim." "In the manner that thou destroyest. Horses, in the manner that thou carriest Chandica, destroy my enemies, and bear prosperity to me, O Buffalo!"

"O steed of death, of exquisite and unperishable form, produce me long life and fame. Salutation to thee, o buffalo!"

"Now attend to the particulars relative to the offering of human blood."

"Let a human victim be sacrificed at a place of holy worship, or at a cemetery where dead bodies are burried. Let the oblation be performed in the part of the cemetery called Heruca, which has been already

described, or at a temple of Camachya, or on a mountain. Now attend to the mode."

"The cemetery represents me, and is called Bhairava, it has also a part called Tantarange; the cemetery must be divided into these two division, and a third called Heruca."

"The human victim is to be immolated in the east division which is sacred to Bhairava, the head is to be presented in the south division, which is looked upon as the place sculls sacred to Bhairavi, and the blood is to be presented in the west division, which is denominated Heruca."

"Having immolated a human victim, with all the requisite ceremonies at a cemetery or holy place, let the sacrificer be cautious not to cast eyes upon the victim."

"On other occasion also, let not the sacrificer, cast eyes upon the victim immolated, but present the head with eyes averted."

"The victim must be a person of good appearance, and be prepared by ablutions, and requisite ceremonies, such as eating consecrated food the day before, and by abstinence from flesh and venery: and must be adorned with chaplets of flowers and besmeared with sandal wood."

"Then causing the victim to face the north, let the sacrificer worship the several deities presiding over the different parts of the victims body: let the worship be then paid to the victim himself by his name."

"Thus let the sacrificer worship the victim, adding whatever other texts are applicable to the occasion, and have been before mentioned."

"Let not the female, whether quadruped or bird, or a woman be ever sacrificed; the sacrificer of either will indubitably fall into hell, where the victim of either the beasts or birds creation, are very numerous, the immolation of a female is excusable; but this rule does not hold good, as to the human species."

"Let not a Brahman or a Chandala be sacrificed; nor a prince; nor that which has already been presented to a Brahmen, or a deity; nor the offspring of a prince, nor who has conquered in battle; nor the offspring of a Brahman, or of a Cshettree; nor a childless brother, nor a father, nor a learned person, nor one who is unwilling, nor the maternal uncle of the sacrificer. Those not here named, and animals, and birds of unknown species are unfit. If these named are not forth coming, let their place be supplied by a male ass or camel. If other animals are forth coming, the sacrifice of a tiger, camel, or ass must be avoided."

"Having first worshipped the victim, whether human, beast, or bird,

as directed, let the sacrificer, immolate him uttering the Mantra directed for the occasion, and address the deity with the text laid down before."

"Let the head and blood of a human victim be presented on the right side of Devi, and the sacrificer address her standing in front. Let the head and blood of birds be presented on the left and the blood of a person's own body in front. Let the ambrosia proceeding from the heads of carnivorous animals and birds be presented on the left hand. as also the blood of all aquatic animals."

"Let the antelope's head and blood, and that of the tortoise, rhinoceros and hare and crocodile, and fish be presented in front." "Let a lion's head and blood, be presented on the right hand, and the rhinoceros's also: let not, on any account, the head or blood of a victim ever be presented behind the Deity, but on the right, left and in front."

"Let the consecrated lamp, be placed either on the right hand, or in front but on no account, on the left. Let incense be burnt on the left, and in front, but not on the right hand. Let perfumes, flowers and ornaments, be presented in front; with respect to the different parts of the circle, where to present the offerings, the mode already laid down may be observed. Let Madira (spirituous liquor) be presented behind other liquids on the left."

"Where it is absolutely necessary to offer spirits, let the three first classes of men supply their place, by coconut juice in a brass vessel, or honey in a copper one. Even in a time of calamity, let not a man of the three first classes, offer spirituous liquor, except that made from flowers, or stewed dishes. Let princes, ministers of state, counsellors, and vendors of spirituous liquors, make human sacrifices, for the purpose of attaining prosperity and wealth."

"If a human sacrifice is performed, without the consent of the prince, the performer incurs sin. In cases of imminent danger or war, sacrifices may be performed at pleasure, by princes themselves and their ministers, but by none else."

"The day previous to a human sacrifice, let the victim be prepared by the text Manastac, and three Devi Gandha Sucthas, and the texts Wadrang; and by touching his head with the axe, and besmearing the axe with sandal &c., perfumes, and then taking some of the sandal, &c., from off the axe, and besmearing the victim's neck therewith."

"Then let the text Ambe Ambica, &c., and the Towdra and Bhairava texts be used, and Devi herself will guard the victim who, when thus purified, malady does not approach him, nor does his mind suffer any

derangement from grief and similar causes, nor does the death or birth of a kinsman render him impure."

* * * * *

"Having secured the victim with cords, and also with (Mantras) let him strike off the head, and present it to Devi, with due care. Let him make these sacrifices in proportion to the increase or decrease of his enemies, chopping off the heads of victims for the purpose of bringing destruction on his foes, infusing, by holy texts, the soul of the enemy into the body of the victim, which will when immolated, deprive the foe of life also."

"The blood must be drawn for the express purpose of an oblation, and from a man pure in body and mind, and free from fear; it must be caught in the petal of lotus and presented. It may be presented in a gold, silver, brass or iron vessel, with the due form, the texts recited."

"The blood, if drawn by incision made with a knife, axe or sangeul, gives pleasure, in proportion to the size of the weapon."

"The sacrificer may present one fourth of the quantity which a lotus petal will contain, but he must not give more on any account; nor cut his body more than is necessary. He who willingly offers the blood of his body and his own flesh, the size of a grain of linseed, Masha, tila, or mudya, with zeal and fervency, obtains what he desires in the course of six months."

He who performs sacrifices according to these rules, obtains, his wishes to the utmost extent."

* * * * *

This is the Dharma which the Kali Purana preaches. After centuries of Ahimsa ordained by Manu here is Himsa in full blast sanctioned by the Tantras in its worst and all inclusive form— animal and human Himsa. These Himsa practices preached in the sanguinary chapter of Kali Purana had become quite widespread. As to the revival of animal sacrifice what happens at the Kali Temple in Calcutta furnishes unmistakable proof. That this temple should have become a perfect slaughter house where daily hundreds of goats are sacrificed to appease the Goddess Kali can only be explained by the teachings of the Kali Purana. Today human beings are not sacrificed to the Goddess Kali. But it does not mean that it never happened. On the contrary there is abundant evidence to show that human sacrifice like animal sacrifice was practised as taught by the Kali Purana. Dr. Rajendralal Mitra saysmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART

[l.htm - _msocom_85:](#)

“The fact is well known that for a long time the rite (of Human Sacrifice) was common all over Hindustan; and persons are not wanting who suspect that there are still nooks and corners in India, where human victims are occasionally slaughtered for the gratification of the Devi. In old families which belong to the sect of the Vamacharis, and whose ancestors formerly offered human victims at the Durga and the Kali Pujas, a practice still obtains of sacrificing an effigy, in lieu of a living man. The effigy, a foot long, is made of dried milk (khira), and sacrificed according to the formula laid down in the Kalika Purana the only addition being a few mantras designed typically to vivify the image. A friend of mine, Babu Hemachandra Ker, Deputy Magistrate of twenty four Pergunnahs and author of an excellent work on the culture of Jute in Bengal informs me that in the eastern districts of Bengal this sacrifice is frequently performed; but the image instead of being slaughtered by a single individual, is cut up simultaneously by all the grown up members of the family, either with separate knives, or with a single knife held jointly by all. This is known by the name of Satrubali or”sacrifice of any enemy”. The sacrifice, both in the case of Nara Bali and the Satru Bali is performed secretly, generally at midnight. The Satrubali, however, is a distinct rite, apart from the Narabali of the Kalika Purana, and authority for it occurs in the *Vrihannila Tantra*, in which it is said, after performing certain other rites therein described,”a king should sacrifice his enemy (in an effigy) made with dried milk (khira). He should slaughter it himself, looking at it with a fiery glance, striking deep, and dividing it into two with a single stroke. This should be done after infusing life into it by the rite of Prana Pratishta, and repeating the name of the person to be destroyed. O consort of Mahesa, he doubtless destroys thereby his enemies.”

Now the important point to note in this connection is that Kali is the wife of Shiva. The question that arises is does Shiva accept animal sacrifice? The answer to this question is that at one time Shiva did live on animal sacrifice. This statement may come as a surprise to the present day worshippers of Shiva. But it is a fact and those who need any evidence in support of it, have only to refer to the Ashvalayan Grihya-Sutra which gives a most elaborate description of a bull-sacrifice for the appeasement of Shiva. I give below the actual text from the Ashavalayan

Grihya

Sutramk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A1.Riddles in Hinduism PART
[l.htm - _msocom_86.](#) This is what it says:

1. Now the spit-ox (sacrificed to Rudra).
2. In autumn or in spring, under the (Nakshatra) Ardra.
3. The vest of his herd.
4. (An ox) which is neither leprous nor speckled.
5. One with black spots, according to some.
6. If he likes, a black one, if its colour incline to copper-colour.
7. He sprinkles it with water, into which he has thrown rice and barley.
8. From head to tail.
9. With (the formula), "Grow up, agreeable to Rudra the great god'.
10. He should let it grow up. When it has cut its teeth, or when it has become a bull.
11. To a quarter (of the horizon) which is sacrificially pure.
12. At a place which cannot be seen from the village.
13. After midnight.
14. According to some, after sunrise.
15. Having caused a Brahman who is versed in learning and knows the practice (of this sacrifice), to sit down, having driven a fresh branch with leaves into the ground as a sacrificial post, (having taken) two creeping plants or two kusa ropes as two girdles, and having wound the one round the sacrificial post, and tied the other round the middle of the animal's head, he binds it to the sacrificial post or to the girdle (which he had tied to that post) with (the formula), ' Agreeable to him to whom adoration (is brought), I bind thee '.
16. The sprinkling with water and what follows is the same as at the animal sacrifice.
17. We shall state what is different.
18. Let him sacrifice the omentum with the Patri or with a leaf- thus it is understood (in the Sruti).
19. With (the formula), ' To Hara, Mrida, Sarva, Siva, Bhava, Mahadcvā, Ugra, Bhima, Pasu-pati, Rudra, Sankara, Isanasvaha'!
20. Or with the last six (parts of that formula).
21. Or with (the formula). "To Rudra svaha'!
22. Let him make Bali offerings towards the four quarters (of the horizon, to each on four rings of Kusa net-work, with the formulas), "The hosts, Rudra, which thou hast towards the eastern direction, to them this (offering is brought). Adoration to thee! Do no harm to me !' In this way the assigning (of the

- offerings is performed) according to the different quarters (of the horizon).
23. With the following four hymns he should worship the four quarters, viz., 'what shall we do Rudra,'"These prayers to Rudra,' 'To thee, O father,'"These songs to Rudra with the strong bow. '(Rig-Veda 1, 43, 1 14; II,;33; VII, 46).
 24. (This) worship to the quarters (of the horizon (is performed) at all sacrifices to Rudra.
 25. The husks and chaff (of the rice), the tail, the skin, the head, the feet (of the sacrificial animal) he should throw into the fire.
 26. He should turn the skin to some use according to Samvatya.
 27. To the north of the fire, on rows of Darbha grass, or on rings of Kusa network, he should pour out the blood (of the sacrificial animal) with (the formula) 'Hissing ones! Noisy ones! Searching ones ! Seizing ones ! Serpents ! What here belongs to you, take that.'
 28. Then, turning to the north (he assigns it) to the serpents (in the words) 'Hissing ones! What here belongs to you take that'.
- Then the serpents take whatever has flowed down there of blood or of the contents of Stomach and entrails.
29. All names, all hosts, all exaltations belong to him—to a sacrificer who knows that, he gives joy.
 30. Even to a man who only with words sets forth (some part) of that (ceremony), he will do no harm: thus it is understood (in the Sruti).
 31. He should not partake of that (sacrifice).
 32. They should not take anything belonging to it into the village. For this God will do harm to (human) creatures.
 33. He should keep away his people from the vicinity (of the place where he has sacrificed).
 34. On an express injunction, however, he should partake (of that sacrificial food) for it will bring luck.
 35. This split-ox sacrifice procures wealth, (open) space, purity, sons, cattle, long life, splendour. 36. After he has sacrificed, he should let loose another (animal).
 37. He should not be without such an animal.
 38. Then he will not be without cattle—thus it is understood (in the Sruti).
 39. Muttering the Santatiya hymn, he should go to his house.
 40. If disease befalls his cattle, he should sacrifice to that same

God in the midst of his cow-stable.

41. A mess of cooked food, which he sacrificed in its entirety.
42. Having thrown the sacrificial grass and the Agya into the fire, he should lead his cows through the smoke.
43. Murmuring the Santatiya hymn, he should go in the midst of his cattle.
44. Adoration to Saunaka ; Adoration to Saunaka!"Today Shiva does not accept animal sacrifice. This change in the form of worship of Shiva is the result of the acceptance by the principle of Ahimsa. Having changed from *hirnsa* to *Abimsathe* Brahmans changed Shiva from a *Himsak* God to an *Abimsak* God. The cult of Kali has come into being long after Shiva had become an Ahimsak God. Never the less Kali his wife was made an himsak Goddess. The result is that we have a cruel contrast of a bloodless god having a blood-thirsty Goddess as his wife. Isn't it a riddle? Why did the Brahmins do such a thing?

APPENDIX I

THE RIDDLE OF THE VEDAS

The Vedas are the sacred Books of the Hindus. There are several questions that arise in connection with them. What is their origin, who is

their author, what is their authority, these are some of them (questions).

To begin with the first. According to the Hindus they are Sanatana which means that they are "eternally pre-existing". There is no justification for this view unless it be based upon a statement which occurs in the Atharva-Veda. It says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_1:

"From Time the Rig verses sprang; the Yajus sprang from Time". But there are other views quite opposed to this. Starting from the Atharva-Veda it must be noted that besides this view there are two other views propounded in that Veda. The first of these is not very intelligent and may be given in its own language which runs as follows mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_2:

"Declare who that Skambha (supporting principle) is in whom the primeval rishis, the rich, saman, and yajush, the earth, and the one rishi, are sustained. . . . 20. Declare who is that Skambha from whom they cut off the rich verses, from whom they scraped off the yajush, of whom the saman verses are the hairs and the verses of Atharvan and Angiras the mouth".

The second explanation given in the Atharva-Veda is that the Vedas sprang from Indra mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_3.

Explanation of the Rig-Veda is to be found in the Purusha-Sukta. According to it there was a universal sacrifice in which the victim was the mystical being called Purusha and it is out of the sacrifice of this

This is a consolidated chapter on the Riddle of the Vedas dealing with most of the subjects discussed by the author in the earlier chapter Nos. 2 to 6 of this book. In all there are 61 typed pages bearing no corrections at all. This copy is a typed carbon copy.—Ed.

Purusha that the three Vedas namely Rig, Saman and Yajur came into being.

The Sam-Veda and the Yajur-Veda make no reference to the origin of the Vedas.

Proceeding to the writings called Brahmanas we find attempts to explain the origin of the Vedas in the Satapatha Brahmana, the Taitteriya Brahmana, Aitareya Brahmana and Kaushitaki Brahmana.

The Satapatha Brahmana has a variety of explanations. It attributes the

origin of the Vedas to Prajapati. According to it Prajapati by his austerity created three worlds—Earth, Air and Sky. He infused warmth into these three worlds. From them, thus heated, three lights were produced,—Agni (Fire), Vayu (wind) and Surya (the sun). From them so heated the three Vedas were produced,—the Rig-Veda from Agni, the Yajur-Veda from Vayu and Sam-Veda from the Sun.

This is also the explanation given by the Aitereya and the Kaushitaki Brahmana.

The Satapatha Brahmana gives another variant mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_4 of this explanation of the origin of the Veda from Prajapati. The explanation is that Prajapati created the Vedas from waters. Says the Satapatha Brahmana—

"This Male Prajapati, desired, 'May I multiply, may I be propagated'. He toiled in devotion he practised austere-fervour. Having done so he first of all created sacred knowledge, the triple Vedic science. This became a basis for him. Wherefore men say, 'sacred knowledge is the basis of this universe.' Hence after studying the Veda a man has a standing ground; for sacred knowledge is his foundation. Resting on this basis he (Prajapati) practised austere fervour. 9. He created the waters from Vach (speech), as their world. Vach was his; she was created. She pervaded all this whatever exists. As she pervaded (apnot), waters were called 'apah'. As she covered (avrinot) all, water was called 'var'. 10. He desired, 'May I be propagated from these waters.'" Along with this triple Vedic science he entered the waters. Thence sprang an egg. He gave it an impulse: and said, let there be, let there be, let there be again'. Thence was first created sacred knowledge, the triple Vedic science. Wherefore men say, 'Sacred knowledge is the first-born thing in this universe. Moreover, it was sacred knowledge which was created from that Male in front, wherefore it was created as his mouth. Hence they say of a man learned in the Veda, 'He is like Agni; for the sacred knowledge is Agni's mouth?'"

"As from a fire made of moist wood various modifications of smoke proceed, so is the breathing of this great being; the Rig-Veda, the Yajur-veda, the Sama-veda, the Atharv-angirases, the Itihasas, Puranas, science, the Upanishads, verses (slokas), aphorisms, comments of different kings—all these are his breathings". There is a third explanation mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_5 given in the Satapatha Brahmana:

"I settle thee in the ocean as they seat" Mind is the ocean. From the

mind-ocean with speech for a shovel the gods dug out the triple Vedic science. Hence this verse has been uttered: ' May the brilliant deity today know where they placed that offering which the gods dug out with sharp shovels. Mind is the ocean; speech is the sharp shovel; the triple Vedic science is the offering. In reference to this the verse has been uttered. He settles it in Mind". The Taittiriya-Brahmana has three explanations to offer. It speaks of the Vedas as being derived from Prajapati. It also says Prajapati created King Soma and after him the three Vedas were created. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_6. This Brahmana has another explanation mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_7 quite unconnected with Prajapati. According to it:

"Vach (speech) is an imperishable thing, and the first-born of the ceremonial, the mother of the Vedas, and the centre-point of immortality. Delighting in us, she came to the sacrifice. May the protecting goddess be ready to listen to my invocation, she whom the wise rishis, the composers of hymns, the gods, sought by austere-fervour, and by laborious devotion."

To crown all this the Taittiriya Brahmana offers a third explanation. It says that the Vedas came from the beard of Prajapati.

Legends regarding the origin of the Vedas are also to be found in the Upanishads.

The legend recorded in the Chhandogya Upanishad is the same as that found in the Satapatha Brahmana—namely that the Rig-Veda originated from Agni, Yajus from Vayu and Sam from the Sun.

The Brahad Aranyaka Upanishad which is a part of the Satapatha Brahmana, records quite a different legend. It says:

"Prajapati (identified with Death, or the Devourer) is said to have produced Vach (speech), and through her, together with soul, to have created all things, including the Vedas."

"By that speech and that soul he created all things whatsoever, rich, yajush, and saman texts, metres, sacrifices, creatures, and animals. The three Vedas are (identifiable with) these three things (speech, mind and breath). Speech is the Rig-veda, mind the Yajur-veda, and breath the Sama-veda." Coming to the Smritis there are two theories as to the origin of the

Vedas to be found in the Manu Smriti. In one place it is said that the Vedas were created by Brahma:

“He (Brahma) in the beginning fashioned from the worlds of the Veda the several names, functions and separate conditions of all (creatures). That Lord also created the subtle host of active and living deities, and of Sadhyas, and eternal sacrifice, he drew forth from Agni, from Vayu, and from Surya, the triple eternal Veda, distinguished as Rich, Yajush, and Saman.” In another place he seems to accept the story of Prajapati being the originator of the Vedas as would be evident from the following’:

“Prajapati also milked out of the three Vedas the letters a, u and m, together with -the words bhuh, bhuvah and svar. The same supreme Prajapati also milked from each of the three Vedas one of the (three) portions of the text called savitri (or gayatri), beginning with the word tat..... The three great imperishable particles (bhuh, bhuvah, svar) preceded by om, and the gayatri of three lines, are to be regarded as the mouth of Brahma”. It is also interesting to note what the Puranas have to say about the origin of the Vedas. The Vishnu Purana says:

“From his eastern mouth Brahma formed the gayatri, the rich verses, the trivrit, the samarathantara, and of sacrifices, the agnishtoma. From his southern mouth he created the yajush verses the trishtubh metre, the panchadasa stome, the vrihat-saman and the ukthya. From his western mouth he formed the saman verses, the jagati metre, the saptadasa-stome, the vairupa, and the atiratra. From his northern mouth he framed the ekavinsa, the atharvan, the aptoryaman, with the annushtubh and biraj metres”

The Bhagvat Purana says:

"Once the Vedas sprang from the four-faced creator, as he was meditating ' how shall I create the aggregate world as before?'. He formed from his eastern and other mouths the Vedas called rich, yajush, saman, and atharvan, together with praise, sacrifice, hymns, and expiration”.

The Markandeya Purana says:

“From the eastern mouth of Brahma, who sprang by an imperceptible birth from that divided egg, there suddenly issued first of all the Rich verses, 2. resembling China roses, brilliant in appearance, internally united, though separated from each other, and characterized by the quality of passion (rajas). 3. From his southern mouth came, unrestrained, the Yajush verses of the colour of gold, and disunited. 4. From the western mouth of the supreme

Brahma appeared the Saman verses and the metres. 5 and 6. From the northern mouth of the Vedas (Brahma) was manifested the entire Atharvana of the colour of black bees and collyrium, having a character

at once terrible and not terrible, capable of neutralising the arts of enchanter pleasant, characterized by the qualities both of purity and darkness, and both beautiful and the contrary. 7. The verses of the Rich are distinguished by the quality of passion (rajas), those of the Yajush by purity (satva), those of the Saman by darkness (tamas), and those of the Atharvan by both darkness and purity."

The Harivamsa supports both theories that of Brahma and Prajapati:

"For the emancipation of the world, Brahma, sunk in contemplation, issuing in a luminous form from the region of the moon, penetrated into the heart of Gayatri, entering between her eyes. From her there was then produced a quadruple being in the form of a Male, lustrous as Brahma, undefined, eternal, undecaying devoid of bodily senses or qualities, distinguished by the attribute of brilliancy, pure as the rays of the moon, radiant, and embodied in letters. The god fashioned the Rigveda, with the Yajush from his eyes, the Sama-veda from the tip of his tongue, and the Atharvan from his head. These Vedas, as soon as they are born, find a body (kshetra). Hence they obtain their character of Vedas, because they find (vindanti) that abode. These Vedas then create the pre-existent eternal brahma (sacred science), a Male of celestial form, with their own mind-born qualities".

It also accepts Prajapati as the origin. It says that when the Supreme being was intent on creating the Universe, Hiranyagarbha, or Prajapati, issued from his mouth, and was desired to divide himself—a process which he was in great doubt how he should effect; the Harivarnsa proceeds:

"While he was thus reflecting, the sound ' om ' issued from him, and resounded through the earth, air, and sky. While the god of gods was again and again repeating this, the essence of mind, the vashatkara proceeded from his heart. Next, the sacred and transcendent vyahritis, (bhuh, bhuvah, svar), formed of the great smiriti, in the form of sound, were produced from earth, air, and sky. Then appeared the goddess, the most excellent of metres, with twenty-four syllables (the gayatri). Reflecting on the divine text (beginning with)"tat", the Lord formed the savitri. He then produced all the Vedas, the Rich, Saman, Atharvan, and Yajush, with their prayers and rites."

Here we have eleven different explanations regarding the origin of the Vedas—(1) as originating from the mystical sacrifice of Purusha, (2) as resting on Skambha (3) as cut of scrapped off from him, as being his hair, and his mouth, (4) as springing from Indra, (5) as produced from Time, (6) as produced from Agni, Vayu and Surya, (7) as springing from

Prajapati, and the Waters, (8) as being the breath of Brahma, (9) as being dug by the Gods out of the mind-ocean, (10) as being the hair of Prajapati's beard and (II) as being the Offspring of Vach.

This bewildering multiplicity of answers to a simple question is a riddle. The writers who have come forward to furnish these answers are all Brahmins. They belong to the same Vaidic School of thought. They alone were the guardians of the ancient religious lore. Why should such a coherent body of scholars should have given such incoherent and chaotic answers to a very simple question?

II

Who is the author of the Vedas? The belief of the Hindus is that the Vedas are supernatural productions. To use the technical term the Vedas are Apaurusheya i.e. made by a non-human agency.

What is the evidence in support of this dogma? Among the Ancient Sanskrit literature there is a class of works called Anukramanis. They are systematic indices to various portions of the Ancient Vedic literature. Every Veda has an Anukramani, sometimes more than one Anukramani. Seven Anukramanis for the Rig-Veda are known to be in existence, five by Shaunaka, one by Katyayana and one by an unknown author. For the Yajur-Veda there exist three Anukramanis, one for each of the three Shakhas, Atreyi, Charayaniyas, and Madhyandina. For the Sam-Veda there are two Anukramanis, one is called Arsheya-Brahmana and the other is known by the name Parishistas. One Anukramani to the Atharva-Veda is known to exist. Its title is Brihat-Sarvanukramani.

The most perfect Anukramani according to Prof. Max-Muller is Katyayana's Sarvanukramani to the Rig-Veda. Its importance lies in the fact that it gives (1) the first words of each hymn, (2) the number of verses, (3) the name and the family of the Rishi who composed it, (4) the names of the deities and (5) the metres of every verse. What emerges from a reference to the Sarvanukramani is that the Rishis are the Authors of the hymns which make up the Rig-Veda. The Rig-Veda therefore on the evidence of the Anukramani cannot but be regarded as a man-made work. The same must be the conclusion regarding the other Vedas.

That the Anukramanis are realistic is proved by many passages in the Rig-Veda in which the Rishis describe themselves as the composers of the hymns.

Below are given a few of such passages:

"The Kanvas make a prayer to you; hear well their invocations." Thus, O Indra, yoker of steeds, have the Gotamas made hymns for thee

efficaciously."

"This hymn has efficaciously been made to you, 0 opulent Asvins, by the Manas."

"These magnifying prayers, (this) hymn, 0 Asvins, the Gritsamadas have made for you."

"Aspiring to heaven, the sage Kusikas have made a hymn with praises to thee, 0 Indra."

"Nodhas, descendant of Gotama, fashioned this new hymn for (thee), Indra, who art of old, and who yokest thy steeds."

"Thus, 0 hero, have the Gritsamadas, desiring succour, fashioned for thee a hymn, as men make works."

"The sages generated an efficacious production and a prayer of Indra."

"These hymns, Agni, generated for thee, celebrate thy bounty in cows and horses."

"Our father hath discovered (or invented) this great, seven-headed hymn, born of sacred truth; Ayasya, friend of all men, celebrating Indra, has generated the fourth song of praise."

"We, the Rahuganas, have uttered to Agni honied speech; we incessantly laud him with eulogies."

"Thus, all ye Adityas, Aditi, and ye ruling powers, has the wise son of Plati magnified you. The celestial race has been lauded by the immortal Gaya."

"He it is whom they call a rishi, a priest, a pious sacrificer, a chaunter of prayers, a reciter of hymns; he it is who knows the three bodies of the brilliant (Agni),—the man who is most prominent in bestowing gifts."

Apart from the evidence of the Anukramanis there is another sort of evidence which mistakes against the theory of the Vedas being Apaurushya. The Rishis themselves have treated the Vedas as a human and as a historical product. The hymns of Rig-Veda distinguish between ancient and modern Rishis. Here are a few of them:

"Agni, who is worthy to be celebrated by former, as well as modern rishis, will bring the gods hither." "The former rishis who invoked thee for succour." "Hear the hymn of me this modern sage, of this modern (sage)."

"Indra, as thou hast been like a joy to former worshippers who praised thee, like waters to the thirsty, I invoke thee again and again with this hymn."

"The ancient rishis, resplendent and sage, have placed in front of them (Brihaspati) with gladdening tongue".

"Neither the ancients nor later men, nor any modern man, has attained

to (conceive) thy prowess, O Madhavan."

"As (Indra's) former worshippers were (may we be) blameless, irreproachable, and unharmed."

"For now, O energetic god, men are thy worshippers, as the ancients born of old and the men of the middle and later ages have been thy friends. And, O much-invoked, think of the most recent of all".

"to Him (Indra) our ancient fathers, the seven Navagva sages, desiring food, (resorted) with their hymns."

"Glorified by our newest hymn, do thou bring to us wealth and food with progeny"

A close study of the Rig-Veda will show that the Rig-Veda itself makes a distinction between old hymns and new hymns. Some of them are given below:

"Glorified by our newest hymn, do thou bring to us wealth and food with progeny."

"Agni, thou hast announced (or do thou announce) among the gods this our offering, our newest hymn".

"Through our new hymns, do thou, vigorous in action, destroyer of cities, sustain us with invigorating blessings."

"I bring to Agni, the son of strength, a new and energetic hymn, a production of thought uttered by the voice (vachah)".

"I present to the mighty protector a mental production, a new utterance (now) springing up".

"May the new prayer impel thee, the heroic, well-accounted, the loud-thundering to succour us."

"I seek life, the ancients, to stimulate thee the ancients, with a new hymn."

"May the new hymns made to praise you, may these prayers gratify you."

"Sing, O Sobhari, with a new hymn to these youthful, vigorous, and brilliant (gods)."

"Indra, slayer of Vrittra, thunderer, invoked of many, we (thy) numerous (worshippers) bring to thee, as thy hire, hymns which never before existed."

"I will address to this ancient (deity) my new praised, which he desires; may he listen to us."

"Desiring horses, cattle and wealth, we invoke thee to approach us."

Given this abundance of evidence to prove the human origin of the Vedas it is a riddle to find that the Brahmins should so strenuously

propagate so extravagant view that the Vedas are of supernatural origin. What made the Brahmins propagate such a view?

III

What is the authority of the Vedas? With regard to this there prevail two distinct dogmas amongst the Hindus. The first is that the Vedas are eternal. Stopping to examine this dogma the question is what justification is there for such a view? If the Hindus believed that the Vedas were the most ancient works in the world no one can have any quarrel with them. But there is nothing to justify the extraordinary proposition that they are eternal in the sense that they had no beginning in time. Once it is established that the Rishis are the makers of the Vedas it needs no additional proof to establish that the Vedas have a beginning in time which must coincide with the existence of the Rishis. Given that the Rishis are the authors of the Vedas the dogma as to their eternal character is an absurdity.

The dogma is sought to be sustained by a series of reasoning which is no less absurd.

In the first place let it be noted that this dogma does not rest on the ground that the Vedas are created by God. That was the view of one school of philosophers called Naiyayiks. But strange as it may appear Jaimini the author of the Purva Mimansa whose views on this subject have become the dogmas of the Hindus was not prepared to accept this ground. The following quotation from the Mimansakas is worthy of note:

"But (asks the Mimansaka) how can the Veda have been uttered by the incorporeal Paramesvara (God), who has no palate or other organs of speech, and therefore cannot be conceived to have pronounced the letters (of which it is composed)? This object (answers the Naiyayika) is not happy, because, though Paramesvara is by nature incorporeal, he can yet, by way of sport, assume a body, in order to show kindness to his devoted worshippers. Consequently the arguments in favour of the doctrine that the Veda had no personal author are inconducive.

"I shall now (says the Mimansaka) clear up all these difficulties. What is meant by this Paurusheyatva ('derivation from a personal author') which it is sought to prove? Is it (1) mere procession from a person (purusha) like the procession of the Veda from persons such as ourselves, when we daily utter it? or (2) is it the arrangement—with a view to its manifestation—of knowledge acquired by other modes of proof, in the sense in which persons like ourselves compose a treatise? If the first meaning be intended, there will be no dispute. If the second

sense be meant, I ask whether the Veda is proved (to be authoritative) in virtue (a) of its being founded on inference, or (b) of its being founded on supernatural information? The former alternative (a) (i.e. That the Veda derives its authority from being founded on inference) cannot be correct, since this theory breaks down, if it be applied to the sentences of the Malati Madhava or any other secular poem (which may contain inferences destitute of authority). If, on the other hand, you say (b) that the contents of the Veda are distinguished from those of other books having authority, this explanation also will fail to satisfy a philosopher. For the word of the Veda is (defined to be) a word which proves things that are not provable by any other evidence. Now if it could be established that this Vedic word did nothing more than prove things that are provable by other evidence, we should be involved in the same sort of contradiction as if a man were to say that his mother was a barren woman. And even if a man were conceded that (in that case) he should perceive things beyond the reach of the senses, from the want of any means of apprehending objects removed from him in place, in time, and in nature. Nor is it to be thought that his eyes and other senses alone would have the power of producing such knowledge since men can only attain to conceptions, corresponding with what they have perceived. This is what has been said by the Guru (Prabhakara) when he refutes (this supposition of) an omniscient author: 'Whenever any object is perceived (by the organ of sight) in its most perfect exercise, such perception can only have reference to the vision of something very distant or very minute, since no organ can go beyond its own proper objects, as e.g. the ear can never become cognizant of form. Hence the authority of the Veda does not arise in virtue of any supernatural information (acquired by the Deity) in a corporeal shape.'

What is then the reasoning on which this dogma of the eternity of the Veda is founded? The reasoning can be best appreciated if I give it in the very words of Jaimini's Purva Mimansa.

“In the preceding aphorism it was declared that the connection of words and their meanings is eternal. Desiring now to prove that this (eternity of connection) is dependent on the eternity of words (or sound), he begins by setting forth the first side of the question, viz., the doctrine of those who maintain that sound is not eternal.”

“Some, i.e. the followers of the Nyaya philosophy, say that sound is a product, because we see that it is the result of effort, which it would not be if it were eternal.”

"That it is not eternal, on account of its transitoriness, i.e. because after

a moment it ceases to be perceived."

"Because, we employ in reference to it the expression 'making', i.e. we speak of 'making' a sound".

"Because it is perceived by different persons at once, and is consequently in immediate contact with the organs of sense of those both far and near, which it could not be if it were one and eternal".

"Because sounds have both an original and a modified form; as e.g. in the case of dadhi atra, which is changed into dadhya atra, the original letter being altered into by the rules of permutation. Now, no substance which undergoes a change is eternal. Because sound is augmented by the number of those who make it. Consequently the opinion of the Mimansaka, who say that sound is merely manifested, and not created, by human effort, is wrong, since even a thousand manifesters do not increase the object which they manifest, as a jar is not made larger by a thousand lamps." These objections against the Mimansaka theory that sound is manifested, and not created, by those who utter it, are answered in the following Sutras:

"But, according to both schools, viz., that which holds sound to be created, and that which regards it as merely manifested, the perception of it is alike momentary. But of these two views, the theory of manifestation is shown in the next aphorism to be the correct one." The non-perception at any particular time, of sound, which, in reality, perpetually exists, arises from the fact that the utterer of sound has not come into contact with his object, i.e. sound. Sound is eternal, because we recognise the letter k, for instance, to be the same sound which we have always heard, and because it is the simplest method of accounting for the phenomenon to suppose that it is the same. The still atmosphere which interferes with the perception of sound, is removed by the conjunctions and disjunctions of air issuing from a speaker's mouth, and thus sound (which always exists though unperceived) becomes perceptible. This is the reply to the objection of its 'transitoriness'."

"The word 'making' sounds, merely means implying or uttering them".

"One sound is simultaneously heard by different persons, just as one Sun is seen by them at one and the same time. Sound, like the Sun, is a vast, and not a minute object, and thus may be perceptible by different persons, though remote from one another."

"The letter y, which is substituted for i in the instance referred to under Sutra 10, is not a modification of i, but a distinct letter. Consequently sound is not modified."

“It is an increase of ' noise ', not of sound, that is occasioned by a multitude of speakers. The word ' noise ' refers to the ' conjunctions ' and 'disjunctions' of the air which enter simultaneously into the hearer's ear from different quarters; and it is of these that an increase takes place”.

“Sound must be eternal, because its utterance is fitted to convey a meaning to other persons. If it were not eternal (or abiding), it would not continue till the hearer had learned its sense, and thus he would not learn the sense, because the cause had ceased to exist.”

"Sound is eternal, because it is in every case correctly and uniformly recognized by many persons simultaneously; and it is inconceivable that they should all at once fall into a mistake”.

"When the word go (cow) has been repeated ten times, the hearers will say that the word Go has been ten times pronounced, not that ten words having the sound of Go have been uttered; and this fact also is adduced as a proof of the eternity of sound in Sutra 20”.

"Because each sound is not numerically different from itself repeated.”

“Sound is eternal, because we have no ground for anticipating its destruction.”

“But it may be urged that sound is a modification of air, since it arises from its conjunctions, and because the Siksha (or Vedanga treating of pronunciation) says that 'air arrives at the condition of sound ' and as it is thus produced from air, it cannot be eternal”. A reply to this difficulty is given in Sutra 22—

"Sound is not a modification of air, because, if it were, the organ of hearing would have no appropriate object which it could perceive. No modification of air (held by the Naiyayikas to be tangible) could be perceived by the organ of hearing, which deals only with intangible sound”.

"And the eternity of sound is established by the argument discoverable in the vedic text, 'with an eternal voice, O Virupa'.

Now, though this sentence had another object in view, it, nevertheless, declares the eternity of language, and hence sound is eternal”.

Reduced to simple syllogism the sound is eternal, the words of the Vedas are sound, therefore words of the Vedas are eternal. Absurdity in reasoning cannot go further. The riddle is why did the Brahmins propound this doctrine of the eternity of the Vedas? Why did the Brahmins adopt such an absurd reasoning in support of their doctrine? Why did the Brahmins refuse to accept the view that the Vedas were the word of God?

The second dogma relating to the authority of the Vedas is that they are not only sacred but they are also infallible.

It is difficult to understand why the Brahmins endeavoured to invest the Vedas with infallibility?

There is no law in the Vedas in the strict sense of the term law. The Vedas do not preach Dharma in the sense of morality. The three following extracts from the Vedas can hardly be said to be consonant with morality.

"(Yami speaks). I invite my friend to friendship, having come o'er the vast and desert ocean, may Vedhas, after reflecting, place in the earth the offspring (of thee) the father, endowed with excellent qualities".

"(Yama speaks). Thy friend desires not this friendship, for although of one origin, she is of a different form; the hero sons of the great Asura (are) the upholders of heaven enjoying vast renown."

"(Yami speaks). The immortals take pleasure in (a union) like this which is forbidden to every mortal; let thy mind then concur with mine, and as the progenitor (of all) was the husband (of his daughter), do thou enjoy my person"

"(Yama-speaks). We have not done what was done formerly; for how can we who speak truth, utter now that which is untrue? Gandharva (the Sun) was in the watery (firmament), and the water was his bride. She is our common parent, hence our near affinity."

"(Yami speaks). The divine omniform generator Twashtri, the progenitor, made us two, husband and wife, even in the womb; none frustrate his undertaking; earth and heaven are conscious of this our (union)."

"(Yama speaks). Who knows anything of this (his) first day (of existence)? Who has beheld it? Who has here revealed it? The dwelling of Mitra and of Varuna is vast. What sayest thou, who punishest men with hell?"

"(Yami speaks). The desire of Yama hath approached me Yami, to lie with him in the same bed; I will abandon my person as a wife to her husband; let us exert ourselves in union like the two wheels of a waggon."

"(Yama speaks). The spies of the Gods, which wander upon earth, never stop, never close their eyes. Associate quickly, destructress, with some other than with me, and exert yourselves in union, like the two wheels of a waggon.'

"(Yami speaks). To him (Yama) let every worshipper sacrifice both day and night, on him let the eye of the Sun repeatedly rise; (for him may)

the kindred pair (day and night unite) with heaven and earth. Yami will adhere to the non-affinity of Yama".

"(Yama speaks). The subsequent ages will come, when sisters will choose one who is not a brother (as a husband); therefore, auspicious one, choose another husband than me, and make thine arm a pillow for thy mate."

"(Yami speaks). Is he a brother whose sister has no lord? Is she a sister (whose brother) misfortune approaches? Overcome by desire, I strongly urge this one request; unite thy person with mine."

"(Yama speaks). I will not unite my person with thine; they call him who approaches a sister, a sinner. Enjoy pleasure with some other than me; thy brother, auspicious one, has no such desire."

"(Yami speaks). Alas, Yama, thou art feeble; we understand not thy mind or thy heart. Some other female embraces thee as a girth a horse, or as a creeper a tree."

"(Yama speaks). Do thou, Yami, embrace another; and let another embrace thee as a creeper a tree; seek his affection, let him seek thine; and make a happy union".

"May Agni, the destroyer of the Rakshasas consenting to our prayer, drive hence (the evil spirit) who (in the form of) sickness assails thine embryo, who, as the disease durnaman, assails thy womb."

"May Agni, concurring in our prayer, destroy the cannibal who is sickness, assails thine embryo, who as the disease durnaman, assails thy womb."

"May we exterminate from hence (the evil spirit) who destroys the impregnating energy, the germ as it settles, the moving embryo, who seeks to destroy (the babe) when born."

"May we exterminate from hence (the evil spirit) who separate thy thighs, who lies between husband and wife, who, entering thy. womb, devours (the seed)."

"May we exterminate from hence (the evil spirit), who in the form of brother, husband, or paramour, approaches thee, and seeks to destroy thy offspring."

"May we exterminate from hence (the evil spirit) who, having beguiled thee by sleep or darkness, approaches thee, and seeks to destroy thy offspring."

The Vedas contain two things. In the first place they contain the hopes and wishes of the Aryans as expressed by the Rishis. As observed by Mr. Muir:

"The whole character of these compositions, and the circumstances

under which, from internal evidence, they appear to have arisen, are in harmony with the supposition that they were nothing more than the natural expression of the personal hopes and feelings of those ancient bards by whom they were first recited. In these songs the Aryan sages celebrated the praises of their ancestral gods (while at the same time they sought to conciliate their goodwill by a variety of oblations supposed to be acceptable to them), and besought of them all the blessings which men in general desire— health, wealth, long life, cattle, offspring, victory over their enemies, forgiveness of sin, and in some cases also celestial felicity.” This is also the view of Yaska the author of Nirukta who says:

(Of the four kinds of verses specified in the preceding section) (a) those which address a god as absent, (b) those which address him as present, and (c) those which address the worshippers as present and the god as absent, are the most numerous, while those (d) which refer to the speaker himself are rare. It happens also that a god is praised without any blessing being invoked, as in the hymn (R. V. i. 32). ' I declare the heroic deeds of Indra ', etc. Again blessings are invoked without any praise being offered, as in the words, 'May I see well with my eyes, be resplendent in my face, and hear well with my ears '. This frequently occurs in the Adhvaryava (Yajur), and in the sacrificial formula. Then again we find oaths and curses as in the words (R. V. vii. 104, 15), 'May I die to-day, if I am a Yatudhana,' etc. Further, we observe the desire to describe some particular state of things, as in the verse (R. V. x. 129, 2), ' Death was not then, nor immortality,' etc. Then there is lamentation, arising out of a certain state of things, as in the verse (R. V. x. 95, 14), 'The beautiful god will disappear and never return, ' etc. Again, we have blame and praise, as in the words (R. V. x. 117,6), 'The man who eats alone, sins alone, etc. So, too, in the hymn to dice (R. V. x. 34, 13) there is a censure upon dice, and a commendation of agriculture. Thus the objects for which the hymns were seen by the rishis were very various."

The deity is the cure of Phthisis; the Rishi is Vivrihan, the son of Kasyapa; the metre is Anushtubh.

1. I banish disease from thine eyes, from thy head, from thy nose, from thy ears, from thy chin, from thy brain, from thy tongue.

2. I banish disease from thy neck, from thy sinews, from thy bones, from thy joints, from thy upper arms, from thy shoulders, and from thy fore-arms.

3. I banish disease from thine entrails, from thy anus, from thine abdomen, and from thy heart, from thy kidneys, from thy liver, from thy

(other viscera).

4. I banish disease from thy thighs, from thy knees, from thy heels, from thy toes, from thy loins, from thy buttocks, from thy private parts.

5. I banish disease from -thy urethra, from thy bladder, from thy hair, from thy nails, from thy whole person.

6. I banish disease from each limb, from each hair, from each joint where it is generated, from thy whole person.

As Prof. Wilson observes there is in the Rig-Veda (which is the stock Veda) scarcely any indication of doctrinal or philosophical speculation, no allusion to the later notions of the several schools, nor is there any hint of metempsychosis, or of the doctrine intimately allied to it, of the repeated renovation of the world. The Vedas may be useful as a source of information regarding the social life of the Aryans. As a picture of primitive life it is full of curiosity but there is nothing elevating. There are more vices and a few virtues.

Given the nature and substance of the contents of the Vedas it is a riddle why the Brahmins claimed infallibility for such superstitious writings as the Vedas.

There would have been some justification for this doctrine of infallibility if the Rishis who made the hymns had claimed it for themselves. But it is quite clear that the Rishis have made no such pretentious. On the contrary they have occasionally confessed their ignorance of matters in which they had interest and curiosity. Compare the following utterances of the Rishis as given in the Rig-Veda:

“Ignorant, not knowing in my mind, I enquire after these hidden abodes of the gods; the sages have stretched out seven threads for a hoof over the yearling calf (or over the sun, the abode of all things). 6. Not comprehending, I ask those sages who comprehend this matter; unknowing (I ask) that I may know; what is the one thing, in the form of the uncreated one, who has upheld these six worlds?

37. I do not recognize if I am like this; I go on perplexed and bound in mind. When the first born sons of sacrifice (or truth) come to me, then I enjoy a share of that word."

“What was the forest, what the tree, out of which they fashioned heaven and earth, which continue to exist undecaying, whilst days, and many dawns have passed away?

“Which of these two (Heaven and Earth) is the first? Which is the last? How were they produced? Who, o sages, knows?"

“How many fires are there? How many suns? how many dawns? How

many waters? I do not, fathers, say this to you in jest; I really ask you, sages, in order that I may know”⁵.”There ray (or cord), obliquely extended, was it below, or was it above? There were generative sources, and there were great powers, svadha (a self-supporting principle) below, and effort above. 6. Who knows, who hath here declared, whence this creation was produced, whence (it came)? The gods were subsequent to the creation of this universe; who then knows whence it sprang. 7. When this creation sprang, whether any one formed it or not, he who, in the highest heavens, is the overseer of this universe,— he indeed knows or he does not know.”

There are other points with regard to this dogma of infallibility which are noteworthy.

IV

The first point is, is this dogma original or is this a new contention raised at sometime later in the history of India. The general view is that it is the original doctrine. A reference to the Dharma Sutras which are the earliest law books which deal with this subject go to show that this is not a correct view. The Gautama Dharma Sutra lays down the following rule on the question of the infallibility of the vedas. “The Veda is the source of the sacred law”. I.I.

“And the tradition and practice of those who know the (Veda)”— 1.2.

“If (authorities) of equal force are conflicting (either may be followed at) pleasure”^{1.4}. The Vashishta Dharma Surta propounds the following view:

“The Sacred law has been settled by the revealed texts and by the tradition of the sages”^{1.4}.”On the failure of (rules given in) these (two sources) the practice of Shistas has authority.”I.s.

“He whose heart is free from desire (is called) a shista”^{1.6}. The views of Baudhayana are given below:

Prasna 1, Adhyaya 1, Kandika 1.

1. The sacred law is taught in each Veda.
2. We will explain (it) in accordance with that.
3. (The sacred law), taught in the Tradition (Smriti, stands) second.
4. The practice of the Sishtas (stands) third.
5. Sishtas, forsooth, (are those) who are free from envy, free from pride, contented with a store of grain sufficient for ten days, free from covetousness, and free from hypocrisy, arrogance, greed, perplexity, and anger.

6. ' (Those are called) Sishtas who, in accordance with the sacred law, have studied the Veda together with its appendages, know how to draw

references from that, (and) are above to adduce proofs perceptible by the senses from the revealed texts'.

7. On failure of them, an assembly consisting at least of ten members (shall decide disputed points of law).

8. Now they quote also (the following verses): ' Four men, who each know one of the four Vedas, a Mimansaka, one who knows the Angas, one who recites (the works on) the sacred law, and three brahmanas belonging to (three different) order, (constitute) an assembly consisting, at least of ten members'.

9. ' There may be five, or there may be three, or there may be one blameless man, who decides (questions regarding) the sacred law. But a thousand fools (can) not (do it). '

10. 'As an elephant made of wood, as an antelope made of leather, such an unlearned Brahmana; those three having nothing but the name (of their kind)'.

The view taken by the Apastamba Dharma Sutra is clear from the following extract from that Sutra:

"Now, therefore, we will declare the acts productive of merit which form part of the customs of daily life"1. 1."The authority (for these duties) is the agreement (samaya) of these who know the law". 1. 2.

"And (the authorities for the latter are) the Vedas alone". 1. 3. A review of the Dharma Sutras show how this dogma of the infallibility of the Veda is a historical product. It shows that the (1) Veda, (2) Tradition (Smriti), (3) Practice of Sishta and (4) Agreement in an Assembly were the four different authorities about which the controversy as to which of these should be regarded as infallible. It also shows that there was a time when the Vedas were not the sole infallible authorities. That was the time represented by the Dharma Sutras of Vasistha and Baudhayana. It is only in the time of Gautama

that the Vedas came to be regarded as the only authority. There was a time when an agreed decision of the Assembly was admitted as one source of authority. That is the period represented by Baudhayana. Lastly the review shows that there was a time when the Veda was not at all regarded as a book of authority and when the only recognized source of authority was an agreement arrived at in an assembly of the learned. That is the period when

Apastambamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_8 wrote his Dharma Sutras i.e. somewhere between 600 and 200 B.C.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm -

[_msocom_9](#)

It is thus obvious that there was a deliberate attempt to invest the Vedas with an infallible authority which they did not at one time possess and the question is what were the circumstances and the motives which led the Brahmins to propagate the sole and final authority of the Vedas.

The second point connected with this subject of infallibility of the Vedas relates to the discrimination made by the Brahmins in limiting the virtue of infallibility to certain Vedic writings only and not extending it to the whole range of them. To understand this point it is necessary to know what is meant by the phrase Vedic literature.

The phrase Vedic literature can be used in two senses. In its limited sense it includes (1) The Samhita, (2) The Brahmanas, (3) Aranyakas, (4) Upanishads and (5) Sutras. When used in an extended sense it includes two other heads (6) Itihasas and (7) Puranas.

The first thing to note is that there was a time when all these writings were classed in the same category, and no distinction was made between them on the basis of revealed and profane or on the basis of supernatural and human or on the basis of authoritative and non-authoritative. This is clear from the view expressed in the Satapatha Brahmana which says:

"This Male, Prajapati, desired, 'May I multiply, may I be propagated.' He toiled in devotion; he practised austere-fervour. Having done so he first of all created sacred knowledge the triple Vedic science. This became a basis for him. Wherefore men say, sacred knowledge is the basis of this universe.' Hence after studying the veda a man has a standing ground; for sacred knowledge is his foundation. Resting on this basis he (Prajapati) practised austere-fervour. (9) He created the waters from Vach (speech) as their world. Vach was his: She was created. She pervaded all this whatever exists. As she pervaded (apnot) waters were called 'apah'. As she covered (avrinot) all, water was called 'var'. (10) He desired, May I be propagated from these waters. Along with this triple Vedic science he entered the waters. Thence sprang an egg. He gave it an impulse; and said, 'Let there be, let there be, let there be again.' Thence was first created sacred knowledge, the triple Vedic science. Wherefore men, say, 'Sacred knowledge is the first-born thing in this universe. Moreover, it was sacred knowledge which was created from that Male in front, wherefore it was created as his mouth. Hence they say of a man learned in the Veda, 'He is like Agni; for sacred knowledge is Agni's Mouth'."

“As from a fire made of moist wood various modifications of smoke

proceed, so is the breathing of this great being. The Rig-Veda, the Yajur-veda, the Sama-veda, the Atharvan-girases, the Itihasas, Puranas, science, the Upanishads, verses (slokas), aphorims, comments of different kinds—all these are his breathings."

But when the Brahmans sought to establish their dogma of infallibility they made a distinction and divided the Vedic writings in two classes (1) Shruti and (2) Non-Shruti. In the first division they placed only two of them (1) Sanhitas and (2) the Brahmanas and invested them with infallibility. The rest they declared as non-Shruti therefore of no authority. When this distinction, was first made it is not possible to say. One can well understand why the last two categories were excluded from the Shruti part division of the Vedic literature. They were too elementary and too undeveloped and in all probability included in the Brahmanas.

One can well understand why the Aranyakas are not specifically mentioned as a part of the Shruti. They are part of the Shruti and must be for the simple reason that they are a part of the Brahmanas. The position of the Upanishads is not clear. But if they are not included in the Shruti one can well understand why they were excluded. But the case of the Sutras stands on a different footing. They are definitely excluded from the category of Shruti and for reasons which it is not possible to comprehend. If there were good reasons for including the Brahmanas in the category of Shruti the same reasons could not fail to justify the inclusion of the Sutras. As Prof. Max Muller observes:

"We can understand how a nation might be led to ascribe a superhuman origin to their ancient national poetry, particularly if that poetry consisted chiefly of prayers and hymns addressed to their gods. But it is different with the prose compositions of the Brahmanas. The reason why the Brahmanas, which are evidently so much more modern than the Mantras, were allowed to participate in the name of Sruti, could only have been because it was from these theological compositions, and not from the simple old poetry of the hymns, that a supposed divine authority could be derived for the greater number of the ambitious claims of the Brahmans. But, although we need not ascribe any weight to the arguments by which the Brahmans endeavoured to establish the contemporaneous origin of the Mantras and Brahmanas there seems to be no reason why we should reject as equally worthless the general opinion with regard to the more ancient date of both the Brahmanas and Mantras, if contrasted with the Sutras and the profane literature of India. It may easily happen, where there is a cannon of sacred books,

that later compositions become incorporated together with more ancient works, as was the case with the Brahmanas. But we can hardly imagine that old and genuine parts should ever have been excluded from a body of sacred writings, and a more modern date ascribed to them, unless it be in the interest of a party to deny the authority of certain doctrines contained in these rejected documents. There is nothing in the later literature of the Sutras to warrant a supposition of this kind. We can find no reason why the Sutras should not have been ranked as Sruti, except the lateness of their date, if compared with the Brahmanas, and still more with the Mantras. Whether the Brahmanas themselves were aware that ages must have elapsed between the period during which most of the poems of their rishis were composed, and the times which gave rise to the Brahmanas, is a question which we need hardly hesitate to answer in the affirmative. But the recklessness with which Indian theologians claim for these Brahmanas the same title and the same age as for the Mantras, shows that the reasons must have been peculiarly strong which deterred them from claiming the same divine authority for the Sutras."

The third point relates to the changes that took place in the scope of the term Shruti and in their infallibility. Manu excludes mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_10 the "Brahmanas" from the category of Shruti as may be seen from the following extract from his Smriti:

"By Sruti is meant the Veda, and by Smriti the institutes of law; the contents of these are not to be questioned by reason, since from them (a knowledge of) duty has shown forth. The Brahman who, relying on rationalistic treatises, shall contemn these two primary sources of knowledge must be excommunicated by the virtuous as a sceptic and reviler of the Vedas. . . . 13. To those who are seeking a knowledge of duty, the Sruti is the supreme authority." The fourth point relates to the claim put forth in the Puranas for precedence over the Vedas in the order of creation. The Vayu Purana says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_11:

"First of all the Shastras, the Purana was uttered by Brahma. Subsequently the vedas issued from his mouth". The Matsya Purana not only claims priority of creation for the Puranas as against the Vedas, but also the qualities of eternity and identity with sound, which was once predicated of the Vedas alone. It says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART

[l.htm - _msocom_12:](#)

“Pitamaha (Brahma), first of all the immortals, took shape; then the Vedas with their Angas and Upangas (appendages and minor appendages), and the various modes of their textual arrangement, were manifested. (3) The Purana, eternal, formed of sound, pure, extending to the length of a hundred crores of verses, was the first of the Sastras which Brahma uttered; and afterwards the Vedas, issued from his mouth; and also the Mimansa and the Nyaya with its eightfold system of proofs. (5) From him (Brahma), who was devoted to the study of the Vedas, and desirous of offspring, sprang mind-born sons, so called because they were at first created by his mind.”

The Bhagwat Purana claims equality of authority with the Vedas. It says:

“(Bramharatra) declared the Purana called the Bhagavata, which stands on an equality with the Veda.”

The Brahma-Vaivartta Purana has the audacity to claim superiority over the Vedas. It says:

"That about which venerable sage, you have inquired, and which you desire, is all known to me, the essence of the Puranas, the preeminent Brahma-Vaivarta, which refutes the errors of the Puranas and Upapuranas, and the Vedas."

This survey discloses a number of riddles in regard to the Vedas. In addition to the three riddles namely why did the Brahmins insist that the Vedas were eternally pre-existing, that they were non-man, non-God made, that they were infallible. There are other riddles regarding the Vedas which are equally puzzling—The Vedas at one time did not have any precedence or infallibility. Why did the Brahmins feel it necessary to give the Vedas this infallibility, why did the Brahmins exclude the Sutras from the term Sruti and why did the Brahmins give up the infallibility of the Vedas and sought to give infallibility to the Puranas?

APPENDIX II

THE RIDDLE OF THE VEDANTA

Of the six schools of philosophy which were expounded by the ancient philosophers of India the most famous is of course the Vedanta philosophy. Not only has it the name but it has also a hold on the Hindus which none of its rivals has ever had. Every follower of the

Vedas is proud of the Vedanta. He not only owns it but regards it as the most valuable contribution which India has made to the philosophic thought of the world. He regards Vedanta philosophy as embodying the end or aim of the teachings of the Vedas, a sort of culmination or flowering of the teachings of the Veda. He never suspects that there was any time in the history of India when the Vedanta Philosophy was regarded as repugnant and hostile to the Vedas. He would never believe that there was a time when the word Vedanta had a totally different meaning than the meaning which is now current and according to which the word Vedanta far from being used in the sense of culmination of Vedic thought was used to designate a body of thought contained in a body which was outside the range of the canonical part of the Vedic literature. Yet that was in fact the case.

It is true that this repugnance between the Vedas and the Vedanta does not become manifest from the word Upanishad which is the generic name of the literature on which the Vedanta philosophy came to be built up and about the etymology of which there is a considerable difference of opinion.

Most European scholars are agreed in deriving Upanishad from the root sad, to sit down, preceded by the two prepositions ni, down, and upa, near, so that it would express the idea of session, or assembly of public sitting down near a person. As Prof. Max Muller points out there are two objections to the acceptance of this derivation. Firstly such a word, it would seem, would have been applicable to any other

This is a 21-page typed first copy entitled 'The Riddle of the Vedanta : The chapter seems complete and does not contain any modifications by the author.—Ed.

portion of the Veda as well as to the chapters called Upanishad, and it has never been explained how its meaning came thus to be restricted. Secondly the word Upanishad, in the sense of session or assembly has never been met with. Whenever the word occurs, it has the meaning of doctrine, secret doctrine, or is simply used as the title of the philosophic treatises which contains the secret doctrine. There is a third explanation noted by Prof. Max Muller proposed by Sankara in his commentary on the Taittiriya-Upanishad II, 9, is that the highest bliss is contained in the Upanishad (param sreyo'syam nishannam). Regarding this Prof. Max-Muller says:

"The Aranyakas abound in such etymologies, which probably were never intended as real as plays on words, helping to account somehow for their meaning."

Prof. Max Muller however favours a derivation of the word Upanishad from the root sad to destroy and meant knowledge which destroys ignorance, the cause of Samsara, by revealing the knowledge of Brahma as a means of salvation. Prof. Max Muller points out that this is the meaning which the native scholars have unanimously given to the word Upanishad.

If it be granted that this is the true derivation of the word Upanishad it would be one piece of evidence in support of the thesis that there was a time in the history of India when Vedanta was regarded as a system of thought which was repugnant to the Vedas. But it is not necessary to depend upon the help of etymology to support the thesis. There are other evidences better and more direct. In the first place the word Vedanta was never used to denote "the last books of the Vedas" which they are. As observed by Prof. Max Muller [mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_13](mailto:MSITStore:C:\important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_13):

"Vedanta as a technical term, did not mean originally the last portions of the Veda, or chapters placed, as it were, at the end of a volume of Vedic literature, but the end, i.e. the object, the highest purpose of the Veda. There are, of course, passages, like the one in the Taittiriya-Aranyaka (ed. Rajendra Mitra p. 820), which have been misunderstood both by native and European scholars, and where Vedanta means simply the end of the Veda: yo vedadu svarah prokto vedante ka pratishtitah, ' the Om which is pronounced at the beginning of the Veda, and has its place also at the end of the Veda". Here Vedanta stands simply in opposition to Vadadu, it is impossible to translate it, as Sayana does, by Vedanta or Upanishad. Vedanta, in the sense of philosophy, occurs in the Taittiriya-Aranyaka (p. 817), in a verse of the Narayana-Upanishad, repeated in the Mundak-Upanishad III, 2, 6 and elsewhere Vedantavignansuniskitarhah, 'those who have well understood the object of the knowledge arising from the Vedanta, ', not 'from the last books of the Veda', and Svetasvatara-up. VI, 22, vedante paramam guhyam, ' the highest mystery in the Vedanta '. Afterwards it is used in the plural also, e.g. Kshurikopanishad, 10 (bibl. Ind. p. 210) pundariketi vedanteshu nigadyate, 'it is called pundarika in the Vedantas ', i.e. in (he Khandogya and other Upanishads, as the commentator says, but not in the last books of each Veda."

More direct evidence on the point is that which is contained in the Gautama Dharma Sutras. In Chapter XIX verse 12 speaks of purification and

saysmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_14:

"The purificatory (texts are), the Upanishads, the Vedantas, the Samhita text of all the Vedas"and so on.

From this it is clear that at the date of Gautama the Upanishads were distinguished from Vedantas and were not acknowledged as a part of the Vedic literature. Hardatta in his commentaries says"those parts of the Aranyakas which are not (Upanishads) are called Vedantas". This is unimpeachable proof that the Upanishads did not come within the range of the Vedic literature and were outside the cannon.

This view is also supported by the use of the Veda in the Bhagwat Gita. The word Veda is used in the Bhagwat Gita at several places. And according to Mr. Bhat² the word is used in a sense which shows that the author did not include the Upanishads in the term.

That the Upanishads were excluded from the canonical literature of the Vedas is provided by the opposition of the Upanishads to the views preached in the Vedas that the religious observances and sacrifices were the only means of salvation. A few citation from some of the Upanishadas will suffice to show their opposition to the Vedas. The Mundaka Upanishad says:

"Brahma was produced the first among the gods, maker of the universe, the preserver of the world. He revealed to his eldest son Atharva, the science of Brahma, the basis of all knowledge. (2) Atharvan of old declared to Angis this science, which Brahma had unfolded to him; and Angis, in turn, explained it to Satyavaha, descendent of Bharadvaja, who delivered this traditional lore, in succession, to Angiras. (3) Mahasala Saunaka, approaching Angiras with the proper formalities, inquired, 'What is that, O venerable sage, through the knowledge of which all this (universe) becomes known?' (4) (Angiras) answered, 'Two sciences are to be known— this is what the sages versed in sacred knowledge declared—the superior and the inferior. (5) The inferior (consists of) the Rig-veda the Yajur-veda, the Sama-veda, the Atharva-veda, accentuation, ritual, grammar, commentary, prosody, and astronomy. The superior science is that by which the imperishable is apprehended.'"The Chhandoyaga Upanishad says:

"(1) Narada approached Sanatkumara, saying, 'Instruct me, venerable sage'. He received for answer, 'Approach me with (tell me) that which thou knowest; and I will declare to thee whatever more is to be learnt.' (2) Narada replied, ' I am instructed, venerable sage, in the Rig-veda, the Sama-Veda, the Yajur-veda, the Atharva-veda (which is) the fourth, the

Itihasas and Puranas (which are) the fifth Veda of the Vedas, the rites of the pitris, arithmetic, the knowledge of portents, and of great periods, the art of reasoning, ethics, the science of the gods, the knowledge of scripture, demonology, the science of war, the knowledge of the stars, the science of serpents and deities; this is what I have studied. (3) I, venerable man, know only the hymns (mantras), while I am ignorant of soul. But I have heard from reverend sages like thyself that 'the man who is acquainted with soul overpasses grief. Now, I venerable man, am afflicted; but do thou transport me over my grief. Sanatkumara answered, 'That which thou hast studied is nothing but name. (4) 'The Rig-veda is name; and so are the Yajur-veda, the Sama-veda, the Atharvana, which is the fourth and the Itihasas and Puranas, the fifth Veda of the Vedas, etc. (all the other branches of knowledge are here enumerated just as above), all these are but names; worship name. (5) He who worships name (with the persuasion that it is) Brahma, ranges as it were at will over all which that name comprehends;—such is the prerogative of him who worships name (with the persuasion that it is) Brahma, Is there anything venerable man' asked Narada, 'Which is more than name?', 'There is,' replied (Sanatkumara), 'something which is more than name'. 'Tell it to me', rejoined Narada."

The Brahadarnyaka Upanishad says:

"In that (condition of profound slumber,) a father is no father, a mother is no mother, the words are no words, the gods are no gods, and the Vedas are no Vedas, sacrifices are no sacrifices. In that condition a thief is no thief, a murderer of embryos is no murderer of embryos, a Paulakasa no Paulakasa, a Chandala no Chandala, a Sramana no Sramana, a devotee no devotee; the saint has then no relation, either of advantage or disadvantage, to merit or to sin; for he then crosses over all griefs of the heart."

This is what the Katha Upanishad has to say:

"This soul is not to be attained by instruction, nor by understanding, nor by much scripture. He is attainable by him whom he chooses. The soul chooses that man's body as his own abode".

"Although this soul is difficult to know, still it may easily be known by the use of proper means. This is what (the author) proceeds to say. This soul is not to be attained, known by instruction, by the acknowledgement of many Vedas; nor by understanding, by the power of recollecting the contents of books; nor by much scripture alone. By what, then, is it to be attained? This he declares".

How great was the repugnance to the Upanishadas and the philosophy contained in them will be realized if one takes note of the origin of the words Anuloma and Pratiloma which are usually applied to the marriage tie among the Hindus. Speaking of their origin Mr. Kane points out that mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_15:

"These two words Anuloma and Pratiloma (as applied to marriage or progeny) hardly ever occur in the Vedic literature. In the Br. Up. (II. 1.15) and Kausitaki Br. Up. IV. 18 the word ' Pratiloma ' is applied to the procedure adopted by a Brahmana of going to a Kshatriya for knowledge about "Brahman". Anuloma means according to the heir that is in the natural order of things. Pratiloma means against the heir that is contrary to the natural order. Reading the observations of Mr. Kane in the light of the definition of the word Pratiloma it is obvious that the Upanishads far from being acknowledged as part of the Vedic literature were if not despised, held in low esteem by the Vedic Brahmins. It is a riddle to find that the Brahmins who were opponents of the Vedanta should become subsequently the supporters and upholders of the Vedanta.

II

This is one riddle of the Vedanta. There is another. The Vedantists were not the only opponents of the Vedas and its doctrine of ritualism as a means of salvations. Madhava Acharya the author of the Sarva Darshana Sangraha mentions two other opponents of the Vaidikas, Charvaka and Brahaspati. Their attack on the Vaidikas was quite formidable in its logic and its....

The opposition of Charvaka can be seen from the following quotation which reproduces his line of argument against the Vaidikas mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_16 : "If you object that, if there be no such thing as happiness in a future world, then how should men of experienced wisdom engage in the agnihotra and other sacrifices, which can only be performed with great expenditure of money and bodily fatigue. Your objection cannot be accepted as any proof to the contrary, since the agnihotra, &c., are only useful as means of livelihood, for the Veda is tainted by three faults of un-truth, self-contradiction, and tautology; then again the impostors who call themselves Vedic pundits are mutually destructive as the authority of the Jnan-kanda is overthrown by those who maintain authority of the Jnan-kanda reject that of the Karmakanda; and lastly, the three Vedas themselves are only the

incoherent rhapsodes of knaves, and to this effect runs the popular saying: 'The Agnihotra, the three Vedas, the ascetic's three staves, and smearing oneself with ashes, Brihaspati says, these are but means of livelihood for those who have no manliness nor sense'. rahaspati was far more bold and militant in his opposition to Vaidism. As reported by Madhava Acharya Brihaspati

arguedmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_17 :”There is no heaven, no final liberation, nor any soul in another world, Nor do the actions of the four castes, orders &c,, produce any real effect. The Agnihotra, the three Vedas, the ascetic's three staves and smearing one self with ashes, Were made by Nature as the livelihood of those destitute of knowledge and manliness. If a beast slain in the Jyotishtoma rite will itself go to heaven,

Why then does not the sacrificer forthwith offer his own father? If the Sraddha produces gratification to beings who are dead, Then here, too, in the case of travellers when they start, it is needless to give provisions for the journey. While life remains let a man live happily, let him feed on ghee even though he runs in debt. When once the body becomes ashes, how can it ever return again? If he who departs from the body goes to another world, How is that he comes not back again, restless for love of his kindred? Hence it is only as a means of livelihood that Brahmans

Established here.All these ceremonies for the dead , There is no other fruit anywhere. The three authors of veda were buffoons, knaves and demons.

All these ceremonies for the dead,—there is no other fruit anywhere. The three Authors of the Vedas were buffoons, knaves.

All the well-known formulas of the Pandits, jarphari, turphari, And all the obscene rites for the queen commanded in the Aswamedha.

These were invented by buffoons, and so all the various kinds of presents to the priests, While the eating of flesh was similarly commended by night prowling demons."

Why did the Vedic Brahmans compromise with the Vedantists but did not compromise with Charvak and Brihaspati. It is a riddle that awaits explanation.

III

A third riddle remains to be mentioned. This is its most appropriate place for it has reference to the Vedas and Vedantas, not in their crude form but in the philosophical garb which was given to them by two masters of the art of systematization whose names are quite well known in the history of Sanskrit Literature namely Jaimini and Badarayana, the

former as the author of Mimansa and the latter as the author of Brahma Sutras. To them and to their work a reference has already been made in the earlier pages and some idea has been given of their place in the formulation of the Vedik beliefs and Vedantik speculations. What remains to be done is to compare and contrast the attitude which one has-towards the philosophy of the other.

Starting on this inquiry one is struck by the parallelism between Jaimini and Badarayana in the presentation of the subject matter. As Prof. Belvalkar points out the Vedant Sutras are very closely modelled upon the Karma Sutras. In the matter of methodology and terminology Badarayana very carefully follows Jaimini. He accepts Jaimini rules of interpreting the text of the Shruti. He uses Jaimini's technical terms in the sense in which they have been used by Jaimini. He uses the very illustrations which are employed by Jaimini.

The parallelism shows that Badarayana must have felt that he was the exponent of a rival philosophy which was being attacked by Jaimini and that in replying to the attack he must follow Jaimini's technique.

Question is did Badarayana take the stand of an opponent of Jaimini? .

That Jaimini was his opponent Badarayana himself admits, the attitude of Jaimini towards Vedanta. It is stated by Badarayana in his Sutras 2-7 and explained by Shankaracharya in his commentary. Jaimini contends that:

“No one undertakes a sacrificial act unless he is conscious of the fact that he is different from the body and that after death he will go to heaven, where he will enjoy the results of his sacrifices. The Texts dealing with self-knowledge serve merely to enlighten the agent and so are subordinate to sacrificial acts.”

In short Jaimini says that all that Vedanta teaches is that self is different from the body and outlives the body. Such a knowledge is not enough. The Self must have the aspiration to go to Heaven. But it can't go to heaven unless it performs Vedic sacrifices which is what his Karmakand teaches. Therefore his Karmakand is the only way of Salvation and that the Jnankand from that point of view is quite useless. For this Jaimini relies on the conduct of men who have believed in Vedanta mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_18 :

“Janaka, emperor of Videha performed a sacrifice in which gifts were freely distributed”(Brih. 3.1.1);”I am going to perform a sacrifice, sirs”(Ch. 5.11.5). Now both Janaka and Asvapati were knowers of the Self. If by this knowledge of the Self they had attained Liberation, there

was no need for them to perform sacrifices. But the two texts quoted show that they did perform sacrifices. This proves that it is through sacrificial acts alone that one attains Liberation, and not through the knowledge of the Self as the Vedantins hold."

Jaimini makes a positive assertion that the scriptures unmistakably declare [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_19](#) "that knowledge of the Self stands in a subordinate relation to sacrificial acts." Jaimini justifies it because he says [*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_20](#) "the two (knowledge and work) go together (with the departing soul to produce the results.)"

Jaimini refuses to give an independent position to Badarayana's Jnana kanda. He takes his stands on two grounds.

First [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_21](#) "Knowledge of the Self does not independently produce any result."

Second [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_22](#) according to the authority of the Vedas "Knowledge (of Self) stands in a subordinate relation to work." This is the position of Jaimini towards Badaryana's Jnanakanda. What is the position of Badarayana towards Jaimini and his Karma Kanda? This is explained by Badarayana in Sutras 8 to 17.

The first position [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_23](#) taken up by Badarayana is that the Self spoken of by Jaimini is the limited self i.e. the soul and is to be distinguished from the supreme soul and that the supreme soul is recognized by the Scriptures.

The second [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_24](#) position taken by Badarayana is that the Vedas support both knowledge of Self as well as Sacrifices.

The third [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_25](#) position taken up by Badarayana is that only those who believe in the Vedas are required to perform Sacrifices. But those who follow the Upanishadas are not bound by that injunction. As Shankaracharya explains:

"Those who have read the Vedas and known about the sacrifices are entitled to perform work (sacrifice). No work (sacrifice) is prescribed for those who have knowledge of the Self from the Upanishadas. Such a knowledge is incompatible with work." The fourth [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism](#)

PART I.htm - [_msocom_26](#) position taken up by Badarayana is that Karmakanda is optional to those who have attained Bramhadnan. As Shankaracharya explains:

"That some have of their own accord given up all work. The point is that after knowledge some may choose to work to set an example to others, while others may give up all work. There is no binding on the knowers of the Self as regards work". His last and final [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/21A2.Riddles in Hinduism PART I.htm - msocom_27](#) position is that:

"Knowledge of the Self is antagonistic to all work and so cannot possibly be subsidiary to work."

And as evidence in support of it he relies [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/21A2.Riddles in Hinduism PART I.htm - msocom_28](#) on the scriptures which recognizes Sannyasa the fourth Ashram and relieves the Sannyasi from performing sacrifices prescribed by the Karma Kand.

Many such Sutras can be found in Badarayana indicating the attitude of the two schools of thought towards each other. But the one given above is enough as it is so very typical. If one stops to consider the matter the position wears a strange appearance. Jaimini denounces Vedanta as a false Shastra, a snare and a delusion, something superficial, unnecessary and unsubstantial. What does Badarayana do in the face of this attack? Does he denounce the Karmakanda of Jaimini as a false Shastra, a snare and a delusion, something superficial unnecessary and insubstantial? No. He only defends his own Vedanta Shastra. But one would expect him to do more. One would expect from Badarayana a denunciation of the Karmakanda of Jaimini as a false religion. Badarayana shows no such courage. On the contrary he is very apologetic. He concedes that Jaimini's Karmakanda based on the scriptures and the scriptures have authority and sanctity which cannot be repudiated. All that he insists on is that his Vedanta doctrine is also true because it has also the support of the scriptures.

This is not all. What Badarayana does is to use the term Vedanta to cover these senses. He uses it so as to emphasize that the Upanishads do form a part of the Vedic literature. He used it also to emphasize what Vedanta or the Dnyanakanda of the Upanishads is not opposed to the Karmakanda of the Vedas that the two are complimentary. Indeed this is the foundation on which Badarayana has raised the whole structure of his Vedanta Sutras.

This thesis of Badarayana—which underlies his Vedanta Sutras and

according to which the Upanishadas are a part of the Veda and there is no antagonism between the Vedas and Upanishads—is quite contrary to the tenor of the Upanishads and their relation to the Vedas. Badarayana's attitude is not easy to understand. But it is quite obvious that Badarayana's is a queer and a pathetic case of an opponent who begins his battle by admitting the validity of the premises of his adversary. Why did Badarayana concede to Jaimini on the question of infallibility of the Vedas which were opposed to the Upanishads? Why did he not stand for truth the whole truth and nothing but the truth. This is a riddle that requires explanation.

APPENDIX III THE RIDDLE OF THE TRIMURTI

To say that Hindu Religion is made up of sects is no less true than to say that Hindu Society is made up of castes. But not half the attention paid to the study of castes has been paid to the study of sects. This is as unfortunate as it is strange. Sects have played as great a part in India's history as castes have done. Indeed some sects just as some castes have made the history of India what it is.

The sects which make up the Hindu Religion are of course legion. It is impossible to explore the origin of all and compare and contrast their cults within the compass of a chapter. All that can be done is to take the most important ones and to present some of problems connected with them. The most important of these sects in the history of India have been three, one believing in the cult of God Brahma, second believing in the cult of Vishnu and the third believing in the cult of Shiva or Mahesha. The following are some of the questions, which cannot but puzzle the student who has studied the origin and history of these cults.

The Chula-Niddessa a Buddhist treatise refers to various sects which were at one time prevalent in India. Classified on the basis of creeds and cults they may be listed as follows:

I CREEDS

Serial	Name of the Sect.	Essence of the creed No.
1	Ajivika

Comparing the cults of the three Gods with the cults of the various Gods mentioned in the list, two conclusions are obvious. One conclusion is that the cults of Vishnu and Mahesha are new fabrications, later in origin than those mentioned in the Chula Niddessa. The second conclusion is that all the old cults have disappeared. Searching for the causes of this strange phenomenon it is quite clear that New Cults could not have come into being unless the Brahmins had taken up the cause of propagating these new cults. Similarly old cults could not have disappeared if the Brahmins had not ceased to propagate them. The

question that puzzles the student of history is why did the Brahmins fabricate these new cults? Why did they give up the old cults? The question not only puzzles but staggers the student when the God that has vanished in this revolution is no other than Indra. Indra is a Vedic God. He is the greatest of the Vedic Gods. The Brahmins worshipped Indra and praised him as the supreme God for hundreds if not thousands of years. What made the Brahmins give up Indra and become the devotees of Brahma, Vishnu and Mahesh? Were the reasons for transfer of loyalties by the Brahmins spiritual or commercial?

Who is this Shiva whom the Brahmins adopted as their God in preference to Indra? The story of Daksha Prajapati's Yajna and the part played by Shiva throws great light on Shiva. The story is that somewhere in the Himalayas king Daksha was performing an Yajna. This Yajna was attended by all Devas, Danavas, Pishachas, Nagas, Rakshasas and Rishis. But Shiva absented as Daksha did not give him invitations. Dadhichi one of the Rishis scolded Daksha for his failure to invite Shiva and to perform his puja. Daksha refused to call Shiva and said "I have seen many of your Rudras. Go away, I don't recognize your Shiva." Dadhichi replied "You have all conspired against Shiva, take care, your Yajna will never reach a successful finish." Mahadeo coming to know of this created a Rakshas from his mouth and this Rakshas destroyed the Yajna started by Daksha. This shows that there was a time when Brahmins refused to recognize Shiva as the God to be worshipped or it shows that Shiva was against the Yajna system of the Brahmanas.

The difference between the Aryans and the Non-Aryans was cultural and not racial. The cultural difference centred round two points. The Aryans believed in Chaturvarna. The Non-Aryans were opposed to it. The Aryans believed in the performance of Yajna as the essence of their religion. The Non-Aryans were opposed to Yajna. Examining the story of Daksha's Yajna in the light of these facts it is quite obvious that Shiva was a Non-Vedic and a Non-Aryan God. The question is why did the Brahmins, the pillars of Vedic culture, adopt Shiva as their God?

The third question that puzzles the student is the reformation and transformation which the Brahmins have made in the original format of Shiva and Vishnu.

The Hindus are not aware that Shiva is a non-Vedic, non-Aryan God. They identify him with God Rudra mentioned in the Vedas. So that to the Hindus Rudra is the same as Shiva. Now in the Taiteriyā Samhita of the Yajur-Veda there is a hymn in praise of Rudra. In this hymn Rudra i.e. Shiva is described as the lord of thieves, robbers, dacoits, as the King

of the degraded, of potters and blacksmiths. The question is how did the Brahmins venture to accept this king of thieves and robbers as their supreme God?

There is another reformation in the character of Rudra which the Brahmins have made while accepting him as their God Shiva. In the Ashvalayan Grihya Sutra the proper way of worshipping Rudra is prescribed. According to it the worship of Rudra was to be the sacrifice of a bull. The Sutra gives details of the season, and the Nakshatra for performing this sacrifice. It tells the householder to select the best bull from the stable. It prescribes its colour. It recommends that it should be fat. It should be consecrated with rice water or barley water. Then it should be slaughtered and offered to the Rudra addressing him by all his names and his tail, hide, head and feet should be thrown into the fire. Evidently Rudra was a 'himsak' God to whom animal sacrifice was necessary. Shiva on the other hand has been an Ahimsaka God. He is not offered animal sacrifice. Question is what compelled the Brahmins to make Shiva give up his meat diet and be a vegetarian.

Hindus all over India accept without shame or remorse the virtue of Linga Puja—Phallus worship. This phallus worship is associated with Shiva and it is commonly held that the true way of worshipping Shiva is to worship the Shiva Linga. Was Linga puja always associated with Shiva? Some very interesting facts are brought to light by Prof. Dandekar in his essay on "Vishnu in the Veda". Says Prof. Dandekar:

"The most significant word in this connection is Sipivista, which is exclusively employed in the Veda with reference to Vishnu. The passages where the word occurs in RV (VII. 99.7; VII. 100. 5-6) seems to have been kept obscure with a purpose. The Vedic poets evidently sought to make a guarded and casual reference to that aspect of Vishnu's personality which was indicated by the word, Sipivista. Many attempts have been made to explain the word, but few satisfy the requirements of philosophy and none brings out the true nature of Vishnu. It is not possible to separate philologically the word Sepa (Penis) from sipi. Other similar idg. forms are Sipa (a root pkt. chepa, lat. oippus, seipio (staff) etc. Even Nirukta (V. 7) seems to be vaguely supporting this view though its further explanation is not clear. Added to that word is a form from the root viz., thus making the whole word mean 'the changing phallus; the swelling and diminishing penis'. We may now easily understand why the Vedic poets speak in such guarded and obscure way about this form of Vishnu. In this connection it is very significant to note what Nirukta (V. 8-9) says of this name of Vishnu:

The word sipivista has thus unmistakably preserved Vishnu's ancient phallic nature. There are also many other incidental references to Vishnu in the Vedic hymns and ritual, which clearly associate him with the notion of fertility, productivity and self life."

"One of the obscure features of the Vedic Shraddha-ritual is that the Angustha, without nail, is to be dipped into the offering intended for the pitars. This action is accompanied by an invocation to Vishnu. The Angustha is undoubtedly a symbol of the phallus. Vishnu is, in this rite, clearly connected with the phallic aspect of the Vedic ritual. In later literature we find Vishnu actually identified with the thumb. In the I. S. passage (VI. 2.4.2) we find another piece of evidence in this regard. Vishnu's entering into the mother earth is a symbolical description of a fertility rite. The words, Tanvardhanah, used with reference to Vishnu's (VII. 99.1; VIII. 100.2) may further be understood to be, indicative, of his phallic nature. Vishnu is significantly identified, in later literature, with Hiranyagarbha, and Narayana. Vishnu's close connection with Sinivali (AV. VII. 46.3), the 'broad-hipped' divinity protecting the feminine sex-functions, throws considerable light on this aspect of Vishnu's personality. According to the Sankhyana-grahyasutra (I 22.13), the Mantra (X. 184.1) accompanies the garbha-ceremony, thus suggesting that Vishnu is the efficacious protector of the embryos. In AV (VII. 17.4), Vishnu is clearly connected with sex-functions. The two epithets of Vishnu Nisiktapa (VII. 36.9) 'protector of the semen', and Sumajjani (I. 156.2) 'facilitating easy birth' speak for themselves. The word, Paumsya 'manly vigour' is significantly used with reference to Vishnu in RV (E. 155.3-4). In the Vrsakapi-hymn (X. 86), Indra is said to have been exhausted, when a bold, lascivious monkey administered to him some medicine, through which Indra regained his manly power. This Vrsakapi is identified, in later literature, with Vishnu, the word being also mentioned as one of his names in the Visnusahasranama."

On the evidence produced by Prof. Dandekar phallus worship was in its origin connected with Vishnu. In the Puranas we do not find the Phallus worship associated with Vishnu. In the Puranas it is associated with Shiva. This is a most astounding transformation. Vishnu who was from the beginning associated with the Linga worship was dissociated from it and Shiva who had no association with the Linga worship has come to be identified with it. Question is what made the Brahmins dissociate Vishnu from Linga worship and fasten it on to Shiva?

There remains the last and the important question. It relates to the inter-relations of Brahma, Vishnu and Mahesha.

Nothing probably sums up so well the inter-relations between Brahma, Vishnu and Mahesha as does the story of the birth of the God Dattatraya. Briefly the story is that one afternoon when Sarasvati, Laxmi and Parvati, the wives of the three Gods were sitting together chit-chatting, Narada, the sage on eternal tour, came to visit them. In the course of the conversation a question arose as who was the most chaste woman in the land. Narada held out that Anusuya the wife of Rishi by name Atri—as the purest and most chaste woman. This was violently disputed by the three, each one of whom claimed to have that title. Narada disproved their claim by recounting the many acts of adultery which one of them was guilty of. They were silenced but they became very angry. They wanted to retrieve their position vis-a-vis Anusuya. In their wisdom they decided that the only way by which this could be done was to have Anusuya seduced to illicit intercourse. Having decided upon their plan of action the three women told to their husbands when they returned in the evening what Narada said about them in the afternoon and scolded them by saying that they were the cause of their wives humiliation. For if they had committed adultery with Anusuya she and they would have been on the same level and Narada would not have found cause to humiliate them. They asked their husbands whether they cared for their wives and if they did were they not in duty bound to proceed forthwith to invade the chastity of Anusuya and to pull her down from the high pedestal of purity and chastity on which Narada had placed her. The Gods were convinced that what was suggested by their wives was their duty and that they could not shirk the task.

The three Gods started on an expedition to rob Anusuya of her honour and marched on to the hutment of Atri. The three Gods disguised themselves as three Brahmin Mendicants. When they arrived Atri was away. But Anusuya welcomed them and prepared food for them. When the meal was ready she asked them to sit and partake of the meal. The three Gods replied that they would take food at her house only if she agreed to serve them food in a naked condition. The rule of hospitality in ancient India was that Brahmin guest must not depart dissatisfied. Everything he asked must be given to him. In obedience to this rule Anusuya agreed to serve them naked. While she was serving food to them in this naked condition Atri arrived. On seeing Atri the three Gods who were taking food with Anusuya standing naked took the form of new born babes. The three Gods in the form of babes were placed by Atri in a cradle. In the cradle their bodies having become integrated into one and their heads having remained separate there arose

the God Dattatraya who has one body and three heads representing the three Gods, Brahma, Vishnu and Mahesha.

The story has a stink of immorality in it and the close of it may have been deliberately designed so as to cover up the actual fact of Brahma, Vishnu and Mahesha having outraged Anusuya to lower her down to the level of their wives. Be that as it may the story illustrates the view once prevalent among the Hindus that three Gods Brahma, Vishnu and Mahesha were co-equal in status and their functions are complimentary and not competitive. They were spoken of as forming Trimurti—three in one and one in three, all sustaining the world, Brahma by creating it, Vishnu by preserving it and Shiva by destroying it.

This state of harmony did not last long. The Brahmins who were the propagandists of these three Gods divided themselves into three camps each becoming devoted to one to the exclusion of the other two. The result of this was a systematic campaign of villification and degradation by the Brahmins devoted to one God of the other Gods.

It is interesting as well as instructive to note what the Brahmins have done to Brahma. There was a time when the Brahmins raised Brahma to the highest pinnacle of power and glory. They presented him as the creator of the Universe—the first Prajapati. He was their sole supreme God. The Brahmins had developed the theory of Avatar which holds that God when necessary incarnates into different forms, human or animal. This they use for twofold purpose, firstly to elevate the supremacy of a God in whom they are interested and secondly to reconcile the conflict between Gods as different personalities.

The Brahmins have run riot with this theory of Avatar and different Puranas have given different lists of Avatars as will be seen from the following:

	Accordin g to Hari Vamsha	Accordi ng to Narayani Akhyan	Acco rding to Varah a Puran a	Accor ding to Vayu Puran a	Accordi ng to Bhagwa t Purana
1	Varaha	Hansa	Kur ma	Naras inha	Sanatku mar
2	Narasinh a	Kurma	Mats ya	Vama n	Boar

3	Vaman	Matsya	Varaha	Varaha	
4	Parshuram	Varaha	Narasinha	Kurma	Nara-Narayan
5	Rama	Narasinha	Vaman	Sangram	Kapila
6	Krishna	Vaman	Parshuram	Adivaka	Dattatraya
7		Parshuram	Rama	Tripurari	Jadna
8		Rama	Krishna	Andhakarh	Rashabha
9		Krishna	Buddha	Dhvaja	Prithi
10		Kalkin	Kalkin	Varta	Matsya
11				Halahal	Kurma
12				Kolhal	Dhanwantri
13					Mohini
14					Narasinha
15					Vaman
16					Parshuram
17					Ved Vyas
18					Naradeo
19					Rama
20					Krishna
21					Buddha
22					Kalkin

2

These Avatars are all said by these Puranas to be the Avatars of Vishnu. But to begin, with when the Avatars had begun to be coined the story of the two Avatars—of the Boarmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_40 and the Fishmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_41—which in later times given to Vishnu was given by the Brahmins to Brahma. Again even when the Brahmins admitted Shiva and Vishnu as co-equal with Brahma they maintained the supremacy of Brahma over Shiva and Vishnu. The Brahmins made him the progenitor of Shivamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_42 and propagated the view that if Vishnumk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_43 became the preserver of the world it was because of the command of the Brahma. With the plurality of Gods, conflicts between them were always present and some God to act as Arbitrator and settler of disputes was necessary.

Puranas are full of such conflicts, even wars among Gods. There were conflicts between Rudra and Narayanamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_44, between Krishna and Shivamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_45. In these conflicts the Brahmins have made Brahma the Arbitrator.

The same Brahmins who elevated Brahma to such pre-eminence turned against him, started degrading him and mud-slinging him. They started propagating the view that Brahma was really inferior to Vishnu and Shiva. Contrary to their previous utterances the Brahmins said that Brahma was born from Shivamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_46 and some said that he was born from Vishnumk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_47

The Brahmins completely inverted the relation between Shiva and Brahma. Brahma was no longer the God who could give salvation. The God who could give salvation was Shiva and they reduced Brahma to the position of a common devotee worshipping Shiva and Linga in the hope of getting salvationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism

PART I.htm - [_msocom_48](#). They reduced him to the position of servant of Shiva by making him the charioteer of Shiva [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_49](#).

The Brahmins did not stop with degrading Brahma. They villified him in the worst manner possible. They broadcast the story of his having committed rape on his own daughter Sarasvati which is repeated in the Bhagwat Puranam [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_50](#):

"We have heard, O Kshatriya, that Svayambhu (Brahma) had a passion for Vach, his slender and enchanting daughter, who had no passion for him. The Munis, his sons, headed by Marichi, seeing their father bent upon wickedness, admonished him with affection: "This is such a thing as has never been done by those before you, nor will those after you do it,- that you, being the lord, should sexually approach your daughter, not restraining your passion. This, O preceptor of the world, is not a laudable deed even in glorious personages, through imitation of whose actions men attain felicity. Glory to that divine being (Vishnu) who by his own lustre revealed this (universe) which abides in himself,—he must maintain righteousness '. Seeing his sons, the Prajapatis, thus speaking before him, the lord of the Prajapatis (Brahma) was ashamed, and abandoned his body. This dreadful body the regions received, and it is known as foggy darkness."

The result of this degrading and defamatory attacks on Brahma was to damn him completely. No wonder that his cult disappeared from the face of India leaving him a nominal and theoretical member of the Trimurti.

After Brahma was driven out of the field there remained two parties of Brahmanas, one engaged in favour of Shiva and the other engaged in favour of Vishnu. Let us see what they did as protagonists of their rival deities. Neither party succeeded in driving out the cult of its rival God. The cult of Shiva and the cult of Vishnu have continued to exist and flourish. Notwithstanding the many cults that have subsequently come into existence they have not been eclipsed. This is largely due to the propaganda and counter-propaganda carried on by the Brahmin protagonists of Shiva and Vishnu. How well matched the propaganda and counter propaganda was, can be seen from the following few illustrations.

Vishnu is connected with the Vedic God Sun. The worshippers of Shiva connect him with Agni. If one has Vedic origin the other must

have Vedic origin as well. One cannot be inferior to the other in the matter of nobility of origin.

Shiva must be greater than Vishnu and Vishna must not be less than Shiva. Vishnu has thousand

names mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_51. So Shiva must have thousand names and he has them mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_52. Vishnu has his

emblems mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_53. So must have Shiva and he has them mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_54.

In the performance of deeds of glory the propaganda in favour of one is fully matched by counter-propaganda in favour of the other. One illustration of this is the story regarding the origin of the holy river Ganges mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_55. The devotees of Shiva attribute its origin to Shiva. They make it take its origin from Shiva's hair. But the Vaishnavas will not allow it. They have manufactured another legend. According to the Vaishnavite legend the blessed and the blessing river flowed originally out of Vaikunth (the abode of Vishnu) from the foot of Vishnu, and descending upon Kailasa fell on the head of Shiva. There is a two-fold suggestion in the legend. In the first place Shiva is not the source of the Ganges. In the second place Shiva is lower than Vishnu and receives on his head water which flows from the foot of Vishnu.

Another illustration is furnished by the story which relates to the churning of the oceans by the Devas and the Asuras. They used the Mandara mountain as the churning rod and huge serpent Shesha as a rope to whirl the mountain. The earth began to shake and people became afraid that the world was coming to an end. Vishnu took the Avatar of Kurma (tortoise) and held the earth on his back and prevented the earth from shaking while the churning was going on.

This story is told in glorification of Vishnu. To this the Shaivites add a supplement. According to this supplement the churning brought out fourteen articles from the depth of the ocean which are called fourteen jewels. Among these fourteen a deadly poison was one. This deadly poison would have destroyed the earth unless somebody drank it. Shiva was the only person who came to drink it. The suggestion is that Vishnu's act was foolish in allowing the rivals the Gods and Demons to bring out this deadly poison. Glory to Shiva for he drank it and saved

the world from the evil consequences of the folly of Vishnu.

Third illustration is an attempt to show that Vishnu is a fool and that it is Shiva who with his greater wisdom and greater power saves Vishnu from his folly. It is the story of Akrurasura mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_56. Akrur was a demon with the face of a bear, who, nevertheless, was continuously reading the Vedas and performing acts of devotion. Vishnu was greatly pleased and promised him any boon that he would care to ask. Akrurasura requested that no creature; then existing in the three worlds, might have power to deprive him of life, and Vishnu complied with his request; but the demon became so insolent that the Devatas, whom he oppressed, were obliged to conceal themselves, and he assumed the dominion of the world ; Vishnu was then sitting on a bank of the Kali, greatly disquieted by the malignant ingratitude of the demon; and his wrath being kindled, a shape, which never before had existed, sprang from his eyes. It was Mahadeva, in his destructive character, who dispelled in a moment the anxiety of the Vishnu.

This is countered by the story of Bhasmasura intended to show that Shiva was a fool and Vishnu saved him from his folly. Bhasmasura having propitiated Shiva asked for a boon. The boon was to be the power to burn any one on whose head Bhasmasura laid his hands. Shiva granted the boon. Bhasmasura tried to use his boon power against Shiva himself. Shiva became terrified and ran to Vishnu for help. Vishnu promised to help him. Vishnu took the form of a beautiful woman and went to Bhasmasura who became completely enamoured of her. Vishnu asked Bhasmasura to agree to obey him in everything as a condition of surrender. Bhasmasura agreed. Vishnu then asked him to place his hands on his own head which Bhasmasura did with the result that Bhasmasura died and Vishnu got the credit of saving Shiva from the consequences of his folly.

The rivalry and the consequent enmity among these Gods is best illustrated by the legend as to which of them is the first born. The story as related in the Skand Puranam mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_57 says that one time Vishnu lay extended asleep on the bosom of Devi, a lotus arose from his navel, and its ascending flower soon reached the surface of the flood, Brahma sprang from that flower, and looking round without any creature on the boundless expanse, imagined himself to be the first born, and entitled to rank above all

future beings; yet, resolved to investigate deep and to ascertain whether any being existed in its universe who could controvert his pre-eminence, he glided down the stock of the lotus and finding Vishnu asleep, asked loudly who he was? ' I am the first born ' answered Vishnu; and when Brahma denied his primogeniture, they had an obstinate battle, till Mahadeo pressed between them in great wrath, saying It is I who am truly the first born. But I will resign my place to either of you, who shall be able to reach behind the summit of my head, or the soles of my foot. Brahma instantly ascended; but having fatigued himself to no purpose in the regions of immensity, yet loath to abandon his claim, returned to Mahadeo, declaring that he had attained and seen the crown of his head, and called as his witness the first born cow. For this union of pride and falsehood, the angry God ordained, that no sacred Shiva rites should be performed to Brahma and that the mouth of cow should be defiled. When Vishnu returned, he acknowledged that he had not been able to see the feet of Mahadeo, who then told him that he was the first born among the Gods, and should be raised above all. It was after this Mahadeo cut off the fifth head of Brahma who thus suffered the loss of his pride, his power and his influence.

According to this story Brahma's claim to be the first born was false. He was punished by Shiva for making it. Vishnu gets the right to call himself the first born. But that is allowed to him by the grace of Shiva. The followers of Brahma had their revenge on Vishnu for stealing what rightfully belonged to him with the help of Shiva. So they manufactured another legend mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_58 according to which Vishnu emanated from Brahma's nostrils in the shape of a pig and grew naturally into a boar—a very mean explanation of Vishnu's avatar as a boar.

The rivalry among these Gods had taken the shape of rivalry among traders and results in indecent abuse of Shiva by Vishnu and of Vishnu by Shiva.

Such are the facts about the Trinity and its subsequent history. There is nothing new in the conception of Trinity. The conception of Trinity is an old one, older than Yaska. To reduce the chaos of innumerable Gods the early Brahmins were engaged to select some Gods and to make them pre-eminent over the rest. The number of such pre-eminent Gods was fixed at three. Of these Agni and Surya were two. For the third place there was rivalry between Vayu and Indra. Consequently one finds the Trinity of Agni, Indra and Surya or Agni, Vayu and Surya. The new trinity is identical in its conception with the old though different in its

personnel. Every member of this Trinity is new. It seems alter the first Trinity was dissolved no new Trinity existed for a considerable time. In the Chulla Nidessa there is mention only of Brahma Vratikas. There is no mention of Vishnu Vratikas or Shiva Vratikas. This means that at the time of the Chula Nidessa the cult of Vishnu and the cult of Shiva had not come into being. They were later on added to the cult of Brahma and constituted into a Trinity. Several questions rise in one's mind when one considers the part played by the Brahmins in the evolution and confounding of the Trinity.

The first that arises is the faithlessness of the Brahamins to their Gods. the easy manner in which they abandon one set of Gods for another. In this connection one is reminded of the Jewish priests and Nebuchad-Nez-Zar.

"Neb-U-Chad-Nez-

Zar
mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_59 the king made an image of gold, whose height was three score cubits, and the breadth thereof six cubits he set it up in the plain of Du-ra, in the province of Bab-y-lon.

"2. Then Neb-u-chad-nez-zar the king sent to gather together the princes (satraps), the governors (deputies), and the captains (governors), the judges, the treasurers, the counsellors, the sheriffs, and all the rulers of the provinces, to come to the dedication of the image which Neb-u-chad-nez-zar the king had set up.

"3. Then the princes, the governors, and the captains, the judges, the treasurers, the counsellors, the sheriffs, and all the rulers of the provinces, were gathered together unto the dedication of the image that Neb-u-chad-nez-zar the king had set up: and they stood before the image that Neb-u-chad-nez-zar had set up.

4."Then an herald cried aloud. To you it is commanded, O people, nations, and languages.

5. That at what time ye hear the sound of the cornet, flute, harp, sackbut, psaltery, dulcimer, and all kinds of musick, ye fall down and worship the golden image that Neb-u-chad-nez-zar the king hath set up;

6. And whoso falleth not down and worshipping shall the same hour be cast into the midst of a burning fiery furnace.

7. Therefore at that time, when all the people heard, the sound of the cornet, flute, harp, sackbut, psaltery, and all kinds of musick, all the people, the nations, and the languages, fell down and worshipped the golden image that Neb-u-chad-nez-zar the king had set up."

8. Wherefore at that time certain Chal-de-ans came near, and accused

the Jews.

9. They spake and said to the king Neb-u-chad-nez-zar,"O King, live for ever."

10."Thou, O King, hast made a decree, that every man that shall hear the sound of the cornet, flute, harp, sackbut, psaltery, and dulcimer, and all kinds of musick, shall fall down and worship the golden image."

11."And whoso falleth not down and worshipping, that he should be cast into the midst of a burning fiery furnace."

12."There are certain Jews whom thou hast set over the affairs of the province of Bab-y-lon, Sha-drach, Me-shach and A-bed-ne-go; these men, O king, have not regarded thee: they serve not thy gods, nor worship the golden image which thou hast set up."

13."Then Neb-u-chad-nez-zar in his rage and fury commanded to bring Sha-drach, Me-shach, and A-bed-ne-go. Then they brought these men before the king.

14. Neb-u-chad-nez-zar spake and said unto them,"Is it true, O Sha-drach, Me-shach, and A-bed-ne-go, do not ye serve my gods, nor worship the golden image which I have set up?"

15."Now if ye be ready that at what time ye hear the sound of the cornet, flute, harp, sackbut, psaltery, and dulcimer, and all kinds of musick, ye fall down and worship the image which I have made; well; but if ye worship not, ye shall be cast the same hour into the midst of a burning fiery furnace; and who is that God that shall deliver you out of my hands?"

16. Sha-drach, Me-shach, and A-bed-ne-go, answered and said to the king,"O Neb-u-chad-nez-zar, we are not careful to answer thee in this matter."

17."If it be so, our God whom we serve is able to deliver us from the burning fiery furnace, and he will deliver us out of thine hand, O king."

18."But if not, be it known unto thee, O king, that we will not serve thy gods, nor worship the golden image which thou hast set up."

19."Then was Neb-u-chad-nez-zar full of fury, and the form of his visage was changed against Sha-drach, Me-shach and A-bed-ne-go ; therefore he spake, and commanded that they should heat the furnace one seven times more than it was wont to be heated.

20. And he commanded the most mighty men that were in his army to bind Sha-drach, Me-shach, and A-bed-ne-go and to cast them into the burning fiery furnace.

21. Then these men were bound in their coats, their hosen, and their

hats, and their other garments, and were cast into the midst of the burning fiery furnace.

22. Therefore because the king's commandment was urgent, and the furnace exceeding hot, the flame of the fire slew those men that took up Sha-drach, Me-shach, and A-bed-ne-go.

23. And these three men, Sha-drach, Me-shach, and A-bed-ne-go, fell bound into the midst of the burning fiery furnace."Why did the Brahmins give up the first Trinity? There is no indication that they were compelled to foreswear those Gods. Was it love of gain or lucre?

The second question is why did the Brahmins who became the votaries of the three Gods follow the principle of live and let live? Why was one sect bent on destroying the other. There was no doctrinal difference between these sects worth the name. Their theology, cosmology and philosophy were all one and the same. The riddle becomes all the great. Was this sectarian quarrel political? Did the Brahmins make religion a matter of politics? Otherwise what is the explanation of this quarrel?

APPENDIX IV II SMARTH DHARMA

The Sacred literature of Smarth Dharma consists of the *Smritis* or the Law Books. These law books contain what may be called the Canon Law. This Canon Law as will be seen later on is vast in its compass and treats of such subjects as law, government, civic rights and duties of the different classes in society, penances for sins and punishments for offences. The purely secular part of this Dharma is not relevant for the purpose in hand. What is relevant is that part of it which is accepted as belonging strictly to religion.

The Smarth Dharma i.e. Dharma based on Smritis is based on five dogmas. The first dogma of Smarth Dharma is the belief in Trinity of Gods, composed of three Gods: Brahma, Vishnu and Mahesh or Shiva. In this Trinity, Brahma is the creator of the world, Vishnu is the preserver and Shiva is the destroyer. Instead of the thirty-three Gods of the Srauta Dharma, Smarth Dharma limits the pantheon to only three.

The second dogma of the Smarth Dharma is the recognition of the purificatory ceremonies which are called Sanskaras or sacraments. According to the Smarth Dharma every householder must perform certain ceremonies. If he does not he becomes a *patit* i.e. one who is fallen from grace and therefore.....

(The above text is on a typed Page No. 21. Further pages of this chapter are missing. The following text is from the loose sheets enumerated in blue pencil from page No. 55 to 65 only, except page No. 56. All these pages have corrections and instructions in the handwriting of the author.)—Ed.

There are few loose pages on ' Smarth Dharma and Tantrik Dharma '. Smarth Dharma is numbered as Part II while Tantrik Dharma is numbered as Part II 1. It seems that Part I consisted of Srauta Dharma. There is only one page of Smarth Dharma numbered as 21. The Tantrik Dharma starts from page 55 and ends at page 65 except page No. 56 with three more handwritten pages added by the author.—Ed.

Punishments and Penances occupy very prominent place in Pauranik Dharma. In the Srauta Dharma Yama has nothing to do with the future punishment of the wicked. The idea of penal retribution after death for sins committed during life is unknown. But the Puranas have considerably enlarged the Powers of Yama in this respect.

“Yama fulfils the office of judge of the dead, as well as sovereign of the damned; all that die appearing before him, and being confronted with Chitragupta, the recorder, by whom their actions have been registered. The virtuous are thence conveyed to Swarga, or Elysium, whilst the wicked are driven to the different regions of Naraka, or Tartarus”.

“The dreadful Chitragupta with a voice like that issuing from the clouds at the mundane dissolution, gleaming like a mountain of collyrium, terrible with lightning like weapons, having thirty-two arms, as big as three yojans, red-eyed, long-nosed, his face furnished with grinders and projecting teeth, his eyes resembling oblong ponds, bearing death and diseases.”

Sin will be punished after death. So also there is expiation for sin if the sinner wishes by performing certain penances for removing sin.

But what is sin? According to the Pauranik Dharma it does not mean the commission of a moral wrong. It means the non-performance of the observances prescribed by the Puranas. Such is Pauranik Dharma.

III TANTRIK DHARMA

What is known as the Tantrik Dharma centres round the worship of *Shakti*. Shakti literally means power or energy. But in Tantrism it means the female partner of a male God. The literature of the Tantrik Dharma is quite vast and forms quite a separate branch of the Hindu Religious literature. It is necessary to observe that the Shakta form of Hinduism is

equipped with a vast mythological personnel of its own, an immense array of female personalities, constituting a distinct division of the Hindu Pantheon.

In its origin the Tantrik Dharma is only an extension of the Pauranik Dharma. It is the Puranas which first began with the recognition of the female unmarried goddesses or as objects of worship. This was followed by the recognition of married females who were the wives of the Gods. It is in support of their recognition of the right of the wives of the Gods to be worshipped as goddesses that the Puranas set out the principle of Shaktism. According to the Puranas a deity though single has a dual character. In one it is quiescent, in the other active. The active nature of the deity is called his Shakti (i.e. his power). This *Shakti* of the deity is personified by the Puranas as the wife of the deity. This is the foundation of what is called Shaktism or the worship of the wife of certain deities.

The essence of Shaktism lies in the exclusive worship of the female deity in her most comprehensive character as the great power (Sakti) of Nature, the one mother of the Universe (Jagan-Mata, Jagad-Amba)—the mighty mysterious Force whose function is to direct and control two quite distinct operations; namely, first, the working of the natural appetites and passions, whether for the support of the body by eating and drinking, or for the propagation of living organisms through sexual cohabitation; secondly, the acquisition of supernatural faculties and magical powers (siddhi), whether for a man's own individual exaltation or for the annihilation of his opponents.

And here it is necessary to observe that the Sakta form of Hinduism is equipped with a vast mythological Personnel of its own—an immense array of female personalities, constituting a distinct division of the Hindu Pantheon.

Yet the whole array of the Tantrik female Pantheon spreading out as it does into countless ramifications, Shaktism has its root in the wife of Shiva. By common consent she is held to be the source or first point of departure of the entire female mythological system. She also stands at its head; and it is remarkable that in every one of the male God Shiva's characteristics, his consort is not only his counterpart, but a representation of all his attributes intensified. We have already pointed out how it came to pass that the male God gradually gathered under his own personality the attributes and functions of all other divinities, and thus became to his own special worshippers the great God (Mahadevah) of Hinduism. Similarly and in a much greater degree did his female

counterpart become the one great goddess (Maha-devi) of the Sakta hierarchy: representing in her own person all other female manifestations of Brahma, Vishnu and Shiva, and absorbing all their functions. For this reason even the wives of Brahma and Vishnu were said to be her daughters. As to the opposite and contradictory qualities attributed to her, these are no source of difficulty to a Hindu mind. She is simply in all respects a duplicate of her husband but a duplicate painted in deeper or more vivid colours.

And just as Shiva is at one time white (Sveta, Sukla) both in complexion and character, at another black (Kala); so his female nature also became one half white (whence one of her names Gauri) and the other half black (whence her name Kali).

Then, again, each of these opposite characters became variously modified and endlessly multiplied. The white or mild nature ramified into the Saktis called Uma, Gauri, Lakshmi, Sarasvati, etc., the black or fierce nature into those called Kali, Durga, Candi, Camunda, etc. And just as Shiva has 1008 names or epithets, so his wife possesses a feminine duplicate of nearly everyone of his designations. At least one thousand distinct appellations are assigned to her, some expressive of her benignant, some of her ferocious character. Notably it is declared in the Tantras that if any one repeats eight of her names containing the letter *m*, kings will become his servants, all men will love him, and all his difficulties come to a happy termination.

In short, all the other Saktis came to be included by the Saktas under the *Sakti* or female energy of Shiva, which eventually developed into innumerable separate manifestations and personifications.

But it began in a rather modest way by starting the worship of the Durga along with Shiva, Laxmi along with Vishnu, Radha along with Krishna and Sita along with Rama. The number of Shaktis was not defined.

Sometimes only eight Saktis are enumerated and sometimes nine, viz, Vaishnavi, Brahmani, Raudri, Mahesvari, Narasimhi, Varahi, Indrani, Karttiki, and Pradhana. Others reckon fifty forms of the Sakti of Vishnu, besides Laxmi; and fifty of Siva or Rudra, besides Durga or Gauri. Sarasvati is named as a Sakti of Vishnu and Rudra, as well as Brahma. According to the Vayu-purana, the female nature of Rudra (Siva) became two-fold, one half Asita or white, and the other half Sita or black, each of these again becoming manifold. The white or mild nature includes the Saktis Uma, Gauri, Laxmi, Sarasvati, &c., the black or fierce nature includes Durga, Kali, Candi, Camunda, &c.

Soon however all the Shaktis were universalized under the Shakti or female energy which eventually developed into innumerable separate manifestations and personifications.

These personifications, following the analogy of some of Vishnu's incarnations, are sometimes grouped according to a supposed difference of participation in the divine energy, such for example as the full energy (*purna sakti*), the partial (*ansarupini*) the still more partial (*kala-rupini*), and the partial of the partial (*kalansa-rupini*), this last including mortal women in various degrees, from Brahman women downwards, who are all worshipped as forms of the divine mother manifesting herself upon earth; for it must not be forgotten that in the Sakta creed every female is a present divinity.

The more usual classification, however, begins with the Mahavidyas. These are held to be ten in number, that number being probably selected to match the ten chief incarnations of Vishnu. They are called Mahavidyas as sources of the goddess' highest knowledge; that is to say, of the knowledge which confers preternatural powers. They have all different attributes, and are thus designated: (1) Kali (sometimes called Syama), black in colour, fierce and irascible in character. (2) Tara, a more benign manifestation, worshipped especially in Kashmir. (3) Shodasi, a beautiful girl of sixteen (also called Tripura worshipped in Malabar). (4) Bhuvanesvari. (5) Bhairavi. (6) Chinna-mastaka, a naked goddess holding in one hand a blood-stained scimitar and in the other her own severed head, which drinks the warm blood gushing from her headless trunk. (7) Dhumavati, in the form of smoke. (8) Vagala or Bagala, having the face of crane. (9) Matangi, a woman of the Bhangi caste. (10) Kamalatmika. Of these the first two are especially Mahavidyas, the next five vidyas, and the last three Siddhavidyas.

The next class of personifications or manifestations of the goddess are the Matris or Matrika (or Maha-matris), the great mothers of the Universe. These are more important than the Mahavidyas in their connexion with the prevalence of Mother-worship, a form of religion which, among the peasantry of India, often takes the place of every other creed. This will be more fully explained in the chapter on tutelary deities.

The Matris or Mothers are: 1. Vaishnavi, 2. Brahmi or Brahmani, often represented with four faces or heads like the God Brahma, 3. Karttikeyi, sometimes called Mayuri, 4. Indrani, 5. Yami, 6. Varahi, connected with the boar incarnation of Vishnu, 7. Devi or Isani, represented with a trident in one hand as wife of Shiva, 8. Laxmi. Each of these divine

Mothers is represented with a child in her lap. Closely related to the Mothers is a class of female personifications called the eight Nayikas or mistresses. These, of course, are not necessarily mothers. In fact no other idea is connected with them than that of illegitimate sexual love. They are called Balini, Kamesvari, Vimala, Aruna, Medini, Jayini, Sarvesvari and Kaulesi. Another class of manifestations is that of the Yoginis. These are sometimes represented as eight fairies or sorceresses created by and attendant on Durga, sometimes as mere forms of that goddess, sixty or sixty-five in number, and capable of being multiplied to the number of ten millions.

Other classes not worth enumerating are the Dakinis and Sakinis. These are simply female friends or ogresses of most repulsive habits, and are not so much manifestations of the goddess as impish servants always attendant on her.

But it is in the form Kali—the form under which the goddess is worshiped at Calcutta—that she is most terrible. The following is a free translation of two passages in the Tantras descriptive of Kali's appearance:

“One should adore with liquors and oblations that Kali who has a terrible gaping mouth and uncombed hair; who has four hands and a splendid garland formed of the heads of the giants she has slain and whose blood she has drunk; who holds a sword in her lotus-like hands; who is fearless and awards blessings; who is as black as the large clouds and has the whole sky for her clothes; who has string of skulls round her neck and a throat besmeared with blood; who wears ear-rings (consisting of two dead bodies): who carries two dead bodies in her hands; who has terrible teeth and smiling face; whose form is awful and who dwells in burning-grounds (for consuming corpses); who stands on the breast of her husband Maha-deva.”

(Page Nos. 63-64 are missing. The script of Page No. 65 only is given below along with the concluding para written in the handwriting of the author.)

The Tantrik worship is altogether different from Srouta or Pauranik worship. It is in keeping with its central philosophy namely the best form of worship is the fullest satisfaction of the carnal desires of man. The Tantrik worship is summed up in what are called five *Makaras*. The five Makaras are: (i) The drinking of *Madya* (i.e. wine and liquors of various kinds).

(ii) The eating of *Mama* (meat). (iii) The eating of *Malsya* (fish). (iv) The eating of *Mudra* (parched or fried grain). (v) The performance of *Maithun* (sexual intercourse with a woman).

The Tantrik Puja consists in the performance of these acts. It is not necessary to draw attention to the fact that whatever is declared as *nishidha* (prohibited) is allowed in the Tantrik worship even sexual intercourse with a woman being prescribed as part of the Puja. Such is the growth of the Hindu Religion. On reading this history a student of true religion is forced to ask: Where is the place of morality in the Hindu Religion?

Religion no doubt started its career by asking many questions: "What am I?" "Who made the Universe?" "If God made it what is the relation of Ego to God?" "What is the right way to propitiate God?" "What is the relation between I and the Non-I i.e. between man and universe?" "What constitutes good life or that will please God?" etc.

Most of these questions have been taken over by theology, metaphysics, philosophy and ethics, into which religion has become split. But there is one question that remains with religion to preach and propagate namely what constitutes good life. A religion which does not do so is no religion at all.

Why have the Brahmins made the Hindu religion so nude; so devoid of morality? The Hindu religion is nothing but worshipping so many Gods and Goddesses, worshipping so many trees, visiting so many places of pilgrimage and making offerings to the Brahmins. Was the religion formulating for enabling the Brahmins to earn their living? Did they ever think that morality is the foundation of society and that unless morality is imbedded in religion it (has no driving)*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_60 force. These are questions which the Brahmins must answer.

APPENDIX V

THE INFALLIBILITY OF THE VEDAS

The Hindus are enjoined to study the Vedas every day. the Satapatha Brahmana explains the reasons for it. It says:

"There are only five great sacrifices, which are the great ceremonies, viz., the offering to living creatures,*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_61 the offering to men, the offering to the fathers, the offering to the gods, and the Veda-offering (Brahma-yajna). 2. Let an oblation be daily presented to living creatures. Thus the

offering to them is fulfilled. Let (hospitality) be daily bestowed even down to the bowl of water. Thus is the offering to men fulfilled. Let the oblation to the gods be daily presented mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_62 as far as the faggot of wood. Thus is the offering to the gods fulfilled. 3. Next is the Veda-offering. This means private study mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_63 (of the sacred books). In this Veda-sacrifice speech is the juhu, the soul the upabhrit, the eye the dhruva, intelligence the sruva, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_64 truth the ablution, and paradise the conclusion. He who, knowing this, daily studies the Veda, conquers an undecaying world more than thrice as great as that which he acquires who bestows this whole earth filled with riches. Wherefore the Veda should be studied. 4. Verses of the Rig-veda are milk-oblations to the Gods. He who, knowing this, daily reads these verses satisfies the gods with milk-oblations; and they being satisfied, satisfy him with property, with breath, with generative power, with complete bodily soundness, with all excellent blessings. Streams of butter, streams of honey flow as svadha-oblations to the fathers. 5. Yajush-verses are offerings of butter to the gods.

(This is a six-page typed copy on 'The Infallibility of the Vedas' having no corrections or instructions by the author. The latter portion of this chapter is not available.—Ed.)

He who, knowing this, daily reads these verses, satisfies the gods with offerings of butter; and they, being satisfied, satisfy him, etc. (as in the preceding paragraph). 6. Saman-verses are soma-libations to the gods. He who, knowing this, daily reads these verses, satisfies the gods with soma-libations; and they being satisfied, satisfy him, etc. (as above). 7. Verses of Atharvan and Angiras (mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_65) are oblations of fat to the gods. He who, knowing this, daily reads these verses, satisfies the gods with oblations of fat; and they etc. (as above). 8. Prescriptive and scientific treatises, dialogues, traditions, tales, verses and eulogistic texts are oblations of honey to the gods. He who, knowing this, daily reads these, satisfies the gods with oblations of honey; and they etc. (as above). 9. Of this Veda-sacrifice there are four Vashatkaras when the wind blows, when it lightens, when it thunders, when it crashes; wherefore when it blows, lightens, thunders, or crashes, let the man, who knows this, read, in

order that these Vashatkaras may not be interrupted mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_66. He who does so is freed from dying a second time, and attains to an union with Brahma. Even if he cannot read vigorously, let him read one text relating to the gods. Thus he is not deprived of his living creatures."

xi. 5, 7, 1 : "Now comes an encomium upon Vedic study. Study and teaching are loved. He (who practises them) becomes composed in mind. Independent of others, he daily attains his objects, sleeps pleasantly, becomes his own best physician. Control of his senses, concentration of mind, increase of intelligence, renown, capacity to educate mankind [are the results of study]. Increasing intelligence secures for the Brahman the four attributes of saintliness, suitable conduct, renown, and capacity for educating mankind. When so educated, men guarantee to the Brahman the enjoyment of the four prerogatives which are his due, reverence, the receipt of gifts, freedom from oppression, and from death by violence. 2. Of all the modes of exertion, which are known between heaven and earth, study of the Veda occupies the highest rank, (in the case of him) who, knowing this studies it. Wherefore this study is to be practised. 3. On every occasion when a man studies the Vedic hymns he (in fact) performs a complete ceremonial of sacrifice, i.e. whosoever, knowing this, so studies. Wherefore this study, etc., etc. 4. And even when a man perfumed with unguents adorned with jewels, satiated with food. and reposing on a comfortable couch, studies the Veda he (has all the merit of one who) performs penance (left) to the very tips of his nails mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21A2.Riddles in Hinduism PART I.htm - _msocom_67: (such is the case with him) who, knowing this, studies. Wherefore etc. 5. Rig-veda-verses are honey, Sama-verses butter, Yajus-verses nectar (amrita). When a man reads dialogues (vakovakya) and legends these two sorts of composition are respectively oblations of cooked milk and cooked flesh. 6. He who, knowing this, daily reads Rig-veda verses, satisfies the gods with honey; and they, when satisfied, satisfy him with all objects of desire, and with all enjoyments. 7. He who, knowing this, daily reads Sama-verses, satisfies the gods with butter; and they, when satisfied, etc. (as before). 8. He who, knowing this, daily reads Yajus-verses, satisfies the gods with nectar; and they, etc. (as before). 9. He who, knowing this, daily studies dialogues and the different classes of ancient stories, satisfies the gods with milk—and flesh-oblations; and they, etc. (as before). 10. The waters move. The Sun

moves. The Moon moves. The constellations move. The Brahman who on any day does not study the Veda, is on that day like what these moving bodies would be if they ceased to move or act. Wherefore such study is to be practised. Let a man therefore present as his offering a verse of the Rig-veda, or the Saman, or the Yajush, or a Gatha, or a Kumvya, in order that the course of his observances may not be interrupted."Manu also supports the Satapatha Brahmana. He says:

"The Veda is the eternal eye of the fathers, of Gods, and of men; it is beyond human power and comprehension; this is a certain conclusion. Whatever traditions are apart from the Veda, and all heretical views, are fruitless in the next world, for they are declared to be founded on darkness. All other (books) external to the Veda, which arise and pass away, are worthless and false from their recentness of date. The system of the four castes, the three worlds, the four states of life, all that has been, now is, or shall be, is made manifest by the Veda. The objects of touch and taste, sound, form, and odour, as the fifth, are made known by the Veda, together with their products, qualities, and the character of their action. The eternal Veda supports all beings; hence I regard it as the principle instrument of well-being to this creature, man. Command of armies, royal authority, the administration of criminal justice, and the sovereignty of all worlds, he alone deserves who knows the Veda. As fire, when it has acquired force, burns up even green trees, so he who knows the Veda consumes the taint of his soul which has been contracted from works. He who comprehends the essential meaning of the Veda, in whatever order of life he may be, is prepared for absorption into Brahma, even while abiding in this lower world."

Manu however is not satisfied with this. He goes much beyond and enunciates the following new doctrine—

"By Sruti is meant the Veda, and by Smriti the institutes of law: the contents of these are not to be questioned by reason, since from them (a knowledge of) duty has shone forth. The Brahman who, relying on rationalistic

treatisesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/21A2.Riddles in Hinduism PART I.htm - _msocom_68, shall contemn these two primary sources of knowledge, must be excommunicated by the virtuous as a sceptic and reviler of the Vedas. . . . 13. To those who are seeking a knowledge of duty, the sruti is the supreme authority."

Riddle no. 16 : The four varnas—are the brahmins sure of their origin?

Riddle no. 17 : The four ashramas—the why and how about them

Riddle no.18 : Manu's madness or the brahmanic explanation of the origin of the mixed castes

Riddle no. 19 : The change from paternity to maternity. What did the brahmins wish to gain by it?

Riddle no. 20 : Kali varjya or the brahmanic art of suspending the operation of sin without calling it sin

Appendix I : The riddle of the varnashram dharma

Appendix II : Compulsory matrimony

PART II SOCIAL

According to the original Table of Contents by the author Part I and Part III are classified as Religious and Political respectively while Part II is not given any classification. However, this part is classified as 'Social on one of the pages from Riddle No. 21. This Part contained six riddles including 'The Riddle of Women' entitled 'Why did the Brahmins degrade the Indian Women?'. This chapter has already been included in Vol. No. 3 of this series under the title 'Revolution and Counter-Revolution' vide Ch. 17. Hence it is excluded from this volume.

RIDDLE NO. 16

THE FOUR VARNAS-ARE THE BRAHMIN'S SURE OF THEIR ORIGIN?

It is the cardinal faith of every Hindu that the Hindu Social Order is a Divine Order. The prescriptions of this Divine Order are three. *First* Society is permanently divided into four classes namely (1) Brahmins, (2) Kshatriyas, (3) Vaishyas and (4) Shudras. *Second* the four classes in point of

their mutual status are linked together in an order of graded inequality. The Brahmins are at the head and above all others. The Kshatriyas below the Brahmins but above the Vaishyas and the Shudras. The Vaishyas below the Brahmins and the Kshatriyas but above the Shudras and the Shudras below all. *Third* the occupations of the four classes are fixed. The occupation of the Brahmins is to acquire learning and to teach. The occupation of the Kshatriyas is to fight, that of the Vaishyas to trade and that of the Shudras to serve as menials to the other three classes above him. This is called by the Hindus the Varna Vevastha. It is the very soul of Hinduism. Without Varna Vevastha there is nothing else in Hinduism to distinguish it from other religions. That being so it is only proper that an enquiry should be made into the origin of this Varna system.

For an explanation of its origin we must have recourse to what the ancient Hindu literature has to say on the subject.

It would be better to collect together in the first place the views expressed in the Vedas.

This is a 33-page typed script having all necessary corrections and additions incorporated by the author. There are two concluding pages written by the author himself. All the pages of the chapter are loose sheets tagged together with a title page in the handwriting of the author.—Ed.

The subject is referred to in the Rig-Veda in the 90th Hymn of the 10th Book. It runs as follows:

“1. Purusha has a thousand heads, a thousand eyes, a thousand feet. On every side enveloping the earth, he overpassed (it) by a space of ten fingers. 2. Purusha himself is this whole (universe), whatever has been and whatever shall be. He is also the lord of immortality since (or, when) by food he expands. 3. Such is his greatness, and Purusha is superior to this. All existences are a quarter of him; and three-fourths of him are that which is immortal in the sky. 4. With three quarters Purusha mounted upwards. A quarter of him was again produced here. He was then diffused everywhere over things which eat and things which do not eat. 5. From him was born Viraj, and from Viraj, Purusha. When born, he extended beyond the earth, both behind and before. 6. When the Gods performed a sacrifice with Purusha as the oblation, the spring was its butter, the summer its fuel, and the autumn its (accompanying) offering. 7. This victim Purusha, born in the beginning, they immolated on the sacrificial grass. With him the gods, the Sadhyas, and the rishis sacrificed. 8. From that universal sacrifice were provided curds and butter. It formed those aerial (creatures) and animals both wild and tame. 9: From the

universal sacrifice sprang the *rich* and *saman* verses, the *metres* and the *yajush*. 10. From it sprang horses, and all animals with two rows of teeth; kine sprang from it; from it goats and sheep. 11. When (the gods) divided Purusha, into how many parts did they cut him up? What was his mouth? What arms (had he)? What (two objects) are said (to have been) his thighs and feet? 12. The Brahman was his mouth; the Rajanya was made his arms; the being (called) the Vaisya, he was his thighs; the Sudra sprang from his feet. 13. The moon sprang from his soul (manas), the sun from his eye, Indra and Agni from his mouth, and Vayu from his breath. 14. From his navel arose the air, from his head the sky, from his feet the earth, from his ear the (four) quarters; in this manner (the gods) formed the worlds. 15. When the gods, performing sacrifice, bound Purusha as a victim, there were seven sticks (struck up) for it (around the fire), and thrice seven pieces of fuel were made. 16. With sacrifice the gods performed the sacrifice. These were the earliest rites. These great powers have sought the sky, where are the former Sadhyas, gods.”

This hymn is known by its general name Purusha Sukta and is supposed to embody the official doctrine of Varna.

How far do the other Vedas support this theory?

The Sama-Veda has not incorporated the Purusha Sukta among its hymns. Nor does it give any other explanation of the Varna.

The Yajur-Veda has two branches—the *White Yajur-Veda* and the *Black Yajur-Veda*.

The Black Yajur-Veda is known to have three Sanhitas or collection of Mantras, the *Kathaka Sanhita*, the *Maitriyani Sanhita* and *Taitterriya Sanhita*.

The White Yajur-Veda has only one Sanhita which is known as *Vajasaneya Sanhita*. The *Maitriyani Sanhita* and the *Kathak Sanhita* of the Black Yajur-Veda do not make any reference to the Purusha Sukta of the Rig-Veda; nor do they attempt to give any other explanation of the origin of the Varna system.

It is only *Taitterriya Sanhita* of the Black Yajur-Veda and the *Vajasaneya Sanhita* of the White Yajur-Veda that have spoken something relating to the Varna system.

The *Vajasaneya Sanhita* contains one explanation of the origin of the Varna System. The *Taitterriya Sanhita* on the other hand contains two explanations. There are two things to be noted about these two explanations contained in the *Taitterriya Sanhita*. The first is that these two do not agree with each other in the least; they are quite different. The second is that one of them agrees completely with that contained in the *Vajasaneya Sanhita* of the White Yajur-Veda. The following is the text of

the Taitterriya Sanhita which may be taken as an independent explanation:

“He (the Vratya) became filled with passions thence sprang the Rajanya”.

“Let the king to whose house the Vratya who knows this, comes as a guest, cause him to be respected as superior to himself. So doing he does no injury to his royal rank, or to his realm. From him arose the Brahman (Brahman) and the Kshattra (Kshatriya)., They said, 'Into whom shall we enter, etc.'”

The explanation contained in the Vajasaneya Sanhita which tallies with the second mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_1 explanation given by the Taitterriya Sanhita reads as follows:

"He lauded with one. Living beings were formed. Prajapati was the ruler. He lauded with three: the Brahman was created: : Brahmanaspati was the ruler?. He lauded with five; existing things were created : Brahmanaspati was the ruler. He lauded with seven; the seven rishis were created; Dhatri was the ruler. He lauded with nine; the Fathers were created: Aditi was the ruler. He lauded with eleven: the seasons were created: the Artavas were the rulers. He lauded with thirteen: the months were created: the year was the ruler. He lauded with fifteen: the Kshattra (the Kshatriya) was created: Indra was the ruler. He lauded with seventeen: animals were created: Brihaspati was the ruler. He lauded with nineteen; the Sudra and the Arya (Vaisya) were created: day and night were the rulers. He lauded with twenty-one : animals with undivided hoofs were created: Varuna was the ruler. He lauded with twenty-three: small animals were created: Pushan was the ruler. He lauded with twenty-five; wild animals were created: Vayu was the ruler (compare R.V.x. 90, 8). He lauded with twenty-seven: heaven and earth separated: Vasus, Rudras, and Adityas separated after them: they were the rulers. He lauded with twenty-nine: trees were created: Soma was the ruler. He lauded with thirty-one: living beings were created: The first and second halves of the month were the rulers. He lauded with thirty-one; existing things were tranquilized; Prajapati Parameshthin was the ruler."

Here it should be noted that not only there is no unanimity between the Rig-Veda and the Yajur-Veda but there is no agreement between the two Samhitas of the Yajur-Veda on so important a subject as the origin of the Varnas.

Let us turn to the Atharva-Veda. The Atharva-Veda has also two explanations to give. It incorporates the Purusha Sukta though the order of the verses varies from the order in which they stand in the Rig-Veda. What is however important to note is that the Atharva-Veda is not content with the Purusha Sukta. It offers other explanations also. One such explanation

reads as follows mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_2:

"The Brahman was born the first, with ten heads and ten faces. He first drank the *soma*; he made poison powerless".

"The Gods were afraid of the Rajanya when he was in the womb. They bound him with bonds when h.e was in the womb. Consequently this Rajanya is born bound. If he were unborn unbound he would go on slaying his enemies. In regard to whatever Rajanya any one desires that he should born unbound, and should go on slaying his enemies, let him offer for him this Aindra-Birhaspatya oblation. A Rajanya has the character of Indra, and a Brahman is Brihaspati. It is through the Brahman that any one releases the Rajanya from his bond. The golden bond, a gift, manifestly releases from the bond that fetters him."

The other explanation speaks of people being descended from Manu and is to be found referred to in the following passages mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_3:

"Prayers and hymns were formerly congregated in the Indra, in the ceremony which Atharvan, father Manu, and Dadhyanch celebrated". "Whatever prosperity or succour father Manu obtained by sacrifices, may we gain all that under thy guidance, 0 Rudra."

"Those pure remedies of yours, 0 Maruts, those which are most auspicious, ye vigorous gods, those which are beneficent, those which our father Manu chose, those, and the blessing and succour of Rudra, I desire."

"That ancient friend hath been equipped with the powers of the mighty (gods). Father Manu has prepared hymns to him, as portals of success to the gods." "Sacrifice is Manu, our protecting father." "Do ye (gods) deliver, protect, and intercede for us; do not lead us far away from the paternal path of Manu."

"He (Agni) who abides among the offspring of Manu as the invoker (of the gods), is even the lord of these riches." -

"Agni, together with the gods, and the children of Manush, celebrating a multiform sacrifice with hymns, etc." "Ye gods, Vajas, and Ribhukshans, come to our sacrifice by the path travelled by the gods, that ye, pleasing deities, may institute a sacrifice among these people of Manush on auspicious days".

"The people of Manush praise in the sacrifices Agni- the invoker."

"Whenever Agni, lord of the people, kindled, abides gratified among the people of Manush, he repels all Rakshasas." Stopping for a moment to take stock so to say of the position it is quite clear that there is no unanimity

among the Vedas on the origin of the four Varnas. None of the other Vedas agree with the Rig-Veda that the Brahmin was created from the mouth of the Prajapati, the Kshatriyas from his arms, the Vaishyas from his thighs and the Shudras from his feet.

II

Let us now turn to the writings called the Brahmanas and see what they have to say on this question. The explanation given by the Sathpatha Brahmana is as follows mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_4:

"(Uttering) '*bhub*', Prajapati generated this earth. (Uttering) '*bhuvab*' he generated the air, and (uttering) '*svab*', he generated the sky. This universe is co-extensive with these worlds. (The fire) is placed with the whole. Saying '*bhub*', Prajapati generated the Brahman; (saying) '*bhuvab*' he generated the Kshattra; (and saying) '*svab*', he generated the Vis. The fire is placed with the whole, (saying) '*bhub*', Prajapati generated himself; (saying) '*bhuvab*' he generated offspring; (saying) '*svab*', he generated animals. This world is so much as self, offspring, and animals. (The fire) is placed with the whole."

The Sathpatha Brahmana also gives another explanation. It reads as follows mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_5:

"Brahma (here, according to the Commentator, existing in the form of Agni, and representing the Brahman caste) was formerly this (universe), one only. Being one, it did not develop. It energetically created an excellent form, the Kshattra, viz., those among the gods who are powers (kshattrani), Indra, Varuna, Soma Rudra, Parjanya, Yama, Mrityu, Isana. Hence nothing is superior to the Kshattra. Therefore the Brahman sits below the Kshattriya at the Rajasuya-sacrifice; he confers that glory on the Kshattra (the royal power). This, the Brahma, is the source of the Kshattra; hence, although the king attains supremacy, he at the end resorts to the Brahma as his source. Whoever destroys him (the Brahman) destroys his own source. He becomes most miserable, as one who has injured a superior. 24. He did not develop. He created the Vis those classes of gods who are designated by troops, Vasus, Rudras, Adityas, Visvadevas, Maruts, 25. He did not develop. He created the Sudra class, Pushan. This earth is Pushan; for she nourishes all that exists. 26. He did not develop. He energetically created an excellent form. Justice (Dharma). This is the ruler (kshattra) of the ruler (kshattra), namely justice. Hence nothing is superior to justice. Therefore the weaker seeks (to overcome) the stronger by

justice, as by a king. This justice is truth. In consequence they say of a man who speaks truth, 'he speaks justice;' or of a man who is uttering justice, 'he speaks truth.' For this is both of these. 27. This is the Brahma, Kshattra, Vis, and Sudra. Through Agni it became Brahma among the gods, the Brahman among men, through the (divine) Kshatriya a (human) Kshatriya, through the (divine) Vaisya a (human) Vaisya, through the (divine) Sudra a (human) Sudra. Wherefore it is in Agni among the gods and in a Brahman among men, that they seek after an abode."The Taittiriya Brahmana offers three explanations. First is in the following termsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_6:

"This entire (universe) has been created by Brahma. Men say that the Vaisya class was produced from Rick-verses. They say that the Yajur-Veda is the womb from which the Kshatriya was born. The Sama-Veda is the source from which the Brahmans sprang. This word the ancients declared to the ancients."The second saysmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_7:"The Brahman caste is sprung from the gods; the Sudra from the Asuras". The third is as followsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_8:

"Let him at his will milk out with a wooden dish. But let not a Sudra milk it out. For this Sudra has sprung from non-existence. They say that which a Sudra milks out is no oblation. Let not a Sudra milk out the Agnihotra. For they do not purify that. When that passes beyond the filter, then it is an oblation". Ag^in looking at the testimony of the Brahmanas how far do they support the Purusha Sukta? Not one of them do.

III

The next thing would be to see what the Smritis have to offer some explanation of the origin of the Varna system. It is worthwhile taking note of them. This is What Manu has to say on the subjectmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_9.

"He (the self-existent) having felt desire, and willing to create various living beings from his own body, first created the waters, and threw into them a seed. 9. That seed became a golden egg, of lustre equal to the Sun; in it he himself was born as a Brahma, the parent of all the worlds. 10. The waters are called *narab*, for they are sprung from Nara; and as they were his first sphere of motion he is therefore called Narayana. 11. Produced from the imperceptible eternal, existent and non-existent, cause, the male

(Purusha) is celebrated in the world as Brahma. 12. After dwelling for a year in the egg, the glorious being, himself, by his own contemplation, split it in twain.””That the worlds might be peopled, he caused the Brahman, the Kshattriya, the Vaisya, and the Sudra to issue from his mouth, his arms, his thighs, and his feet. 32. Having divided his own body into two parts, the lord (Brahma became), with the half of male (purusha), and with the half, a female; and in her he created Viraj. 33. Know, O most excellent twice-born men, that I, whom that male, (Purusha) Viraj, himself am the creator of all this world.

34. Desiring to produce living creatures, I performed very arduous devotion and first created ten Maharshis, Great rishis, lords of living beings, 35. viz., Marichi, Atri, Angiras, Pulastya, Pulaha, Kratu, Prachetas, Vasishtha, Bhrigu, and Narada. 36. They, endowed with great energy, created other seven Manus, gods, and abodes of gods, and Maharshis of boundless might; 37. Yakshas, Rakshases, Pisachas, Gandharvas, Apsaras, Asuras, Nagas, Serpents, great birds, and the different classes of pitris; 38. Lightnings, thunderbolts, clouds, portentous atmospheric sounds, comets, and various luminaries; 39. Kinnars, apes, fishes, different sorts of birds, cattle, deer, men, beasts with two rows of teeth; 40. small and large reptiles mouths; lice, flies, fleas, all gadflies, and gnats, and motionless things of different sorts. 41. Thus by my appointment, and by the force of devotion, was all this World both motionless and moving, created by those great beings, according to the (previous) actions of each creature.””There is also another view expressed by Manu in his Smriti as to the basic reasons for dividing men into four classesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_10:”I shall now declare succinctly in order the states which the soul reaches by means of each of these qualities. 40. Souls endowed with the *Sattva* quality attain to godhead; those having the *rajas* quality become men; whilst those characterized by *tamas* always become beasts—such is the threefold destination..... 43. Elephants, horses, Sudras and contemptible Mlenchhas, lions, tigers, and boars form the middle dark condition..... 46. Kings, Kshattriyas, a King's priests (*purohitah*), and men whose chief occupation is the war of words, compose the middle condition of passion.... 48. Devotees, ascetics, Brahmans, the deities borne on aerial cars, constellations, and *Daiyyas*, constitute the lowest condition of goodness. 49. Sacrificing priests, rishis, Gods, the Vedas, the celestial luminaries, years, the fathers, the *Sadhyas*, form the second condition of goodness. 50. Brahma, the creators, righteousness, the Great one (*mahat*) the Unapparent One (*anyakta*) compose the highest condition of

goodness.”Manu of course agrees with the Rig-Veda. But his view is of no use for comparison. It is not original. He is merely repeating the Rig-Veda.

IV

It will be interesting to compare with these views those contained in the Ramayana and the Mahabharata.

The Ramayana says that the four Varnas are the offspring of Manu, the daughter of Daksha and the wife of Kasyapa. [Kasyapa](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/21B.Riddles in Hinduism PART II.htm - _msocom_11) [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/21B.Riddles in Hinduism PART II.htm - _msocom_11](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/21B.Riddles in Hinduism PART II.htm - _msocom_11).

“Listen while I declare to you from the commencement all the Prajapatis (lord of creatures) who came into existence in the earliest time. Kardama was the first, then Vokrita, Sesha, Samsraya, the energetic Bahuputra, Sthanu, Marichi, Atri, the strong Kratu, Pulastya, Angiras, Prachetas, Pulaha, Daksha, then Vivasvat, Arishtanemi, and the glorious Kasyapa, who was the last. The Prajapati Daksha is famed to have had sixty daughters. Of these Kasyapa took in marriage eight elegant maidens, Aditi, Diti, Danu, Kalaka, Tamra, Krodhava, Manu and Anala. Kasyapa pleased, then said to these maids, 'ye shall bring forth sons like me, preservers of the three worlds. Aditi, Diti, Danu and Kalaka assented; but the others did not agree. Thirty-three gods were born by Aditi, the Adityas, Vasus, Rudras, and the two Asvins. Manu (wife) of Kasyapa, produced men—Brahmans, Kshatriyas, Vaisyas, and Sudras. 'Brahmans were born from the mouth, Kshatriyas from the breast, Vaisyas from the thighs, and Sudras from the feet, ' So says the Veda. Anala gave birth to all trees with pure fruits.”Strange, very strange that Valmiki should have credited the creation of the four Varnas to Kasyapa instead of to Prajapati. His knowledge was evidently based only on hearsay. It is clear he did not know what the Vedas had said.

Now the Mahabharata gives four different explanations in four different places. The first runs as follows:

“Born all with splendour, like that of great rishis, the ten sons of Prachetas, reputed to have been virtuous and holy ; and by them the glorious beings were formerly burnt up by fire springing from their mouths. From them was born Daksha Prachetas, and from Daksha, the parent, of the world (were produced), these creatures. Cohabiting with Virini, the Muni Daksha begot a thousand sons like himself, famous for their religious observances, to whom Narada taught the doctrine of final liberation, the unequalled knowledge of the Sankhya. Desirous of creating offspring, the Prajapati Daksha next formed fifty daughters of whom he gave ten to Dharma, thirteen to Kasyapa, and twenty-seven, devoted to

the regulation of time, to Indu (Soma). . . . on Dakshayani, the most excellent of his thirteen wives, Kasyapa, the son of Marichi, begot the Adityas, headed by Indra and distinguished by their energy, and also Vivasvat. To Vivasvat was born a son, the mighty Yama Vaivasvata. To Martanda (i.e. Vivasvat, the Sun) was born the wise and mighty Manu, and also the renowned Yama, his (Manu's) younger brother. Righteous was this wise Manu, on whom a race was founded. Hence this (family) of men became known as the race of Manu. Brahmans, Kshatriyas, and other men sprang from this Manu. From him 0 King, came the Brahman conjoined with the Kshatriya.”

The theory propounded here is very much the same as that contained in the Ramayana with this difference, namely, the Mahabharata makes Manu, the progenitor of the four Varnas and secondly it does not say that the four Varnas were born from the different parts of Manu.

The second
 explanation mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_12 given by the Mahabharata follows what is given in the Purusha Sukta of the Rig-Veda. It reads thus:

“The King should appoint to be his royal priest a man who will protect the good, and restrain the wicked. On this subject they relate this following ancient story of a conversation between Pururavas the son of Ila and Matarisvan (Vayu, the windgod). Pururavas said:”You must explain to me whence the Brahman, and whence the (other) three castes were produced, and whence the superiority (of the first) arises.”Matarisvan answered:”The Brahman was created from Brahma's mouth, the Kshatriya from his arms, the Vaisya from his thighs, while for the purpose of serving these three castes was produced the fourth class, the Sudra, fashioned from his feet. The Brahman, as soon as born, becomes the lord of all beings upon the earth, for the purpose of protecting the treasure of righteousness. Then (the creator) constituted the Kshatriya the controller of the earth, a second Yama to bear the rod, for the satisfaction of the people. And it was Brahma's ordinance that the Vaisya should sustain these three classes with money and grain, and that the Sudra should serve them.”The son of Ila then enquired:”Tell me, Vayu to whom the earth, with its wealth rightfully belongs, to the Brahman or the Kshatriya?”Vayu replied:”All this, whatever exists in the world is the Brahman's property by right of primogeniture; this is known to those who are skilled in the laws of duty. It is his own which the Brahman eats, puts on, and bestows. He is the chief of all the castes, the first-born and the most excellent. Just as a woman when she has lost her

(first) husband, takes her brother in law for a second; so the Brahman is thy first resource in calamity; afterwards another may arise". The third view is expounded in the Shantiparva of the Mahabharatamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_13:

Bhrigu replied: ' Brahma thus formerly created the Prajapatis, penetrated by his own energy, and in splendour equalling the sun and fire. The lord then formed truth, righteousness austere fervour, and the eternal Veda (or sacred science), virtuous practice, and purity for (the attainment of) heaven. He also formed the Gods, Danavas, Gandharvas, Daityas, Asuras, Maharagas, Yakshas, Rakshasas, Nagas, Pisachas, and men, Brahmans, Kshatriyas, Vaisyas, and Sudras, as well as all other classes (varna) of beings. The colour (varna) of the Brahmans was white; that of the Kshatriyas red; that of the Vaishyas yellow, and that of the Sudras black. ' Bharadvaja here rejoins: ' If the caste (varna) of the four classes is distinguished by their colour (varna), then a confusion of all the castes is observable. Desire, anger, fear, cupidity, grief, apprehension, hunger, fatigue, prevail over us all, by what then, is caste discriminated? Sweat, urine, excrement, phlegm, bile and blood (are common to all) the bodies of all decay; by what then is caste discriminated? There are innumerable kinds of things moving and stationary how is the class (varna) of these various objects to be determined?' Bhrigu replies:"There is no difference of castes":'

The fourth explanation is also contained in the same Shantiparva. It says:

"Bharadvaja again enquires: ' What is that in virtue of which a man is a Brahman, a Kshatriya, a Vaisya, or a Sudra; tell me, O most eloquent Brahman rishi '. Bhrigu replies: ' He who is pure, consecrated by the natal and other ceremonies, who has completely studied the Veda, lives in the practice of the six ceremonies, performs perfectly the rites of purification, who eats the remains of oblations, is attached to his religious teacher, is constant in religious observances, and devoted to truth. — is called a Brahman. He in whom are seen truth, liberality inoffensiveness, harmlessness, modesty, compassion, and austere fervour—is declared to be a Brahman. He who practises the duty arising out of the kingly office, who is addicted to the study of the Veda, and who delights in giving and receiving, is called a Kshatriya. He who readily occupies himself with cattle, who is devoted to agriculture and acquisition, who is pure, and is perfect in the study of the Veda,—is denominated a Vaisya. He who is habitually addicted to all kinds of food, performs all kinds of work, who is unclean, who has abandoned the Veda, and does not practise pure

observances,—is traditionally called a Sudra. And this (which I have stated) is the mark of a Sudra, and it is not found in a Brahman: (such) a Sudra will remain a Sudra, while the Brahman (who so acts) will be no Brahman.”

Except in one place the Mahabharata gives no support to the Rig-Vedic origin of the Varna System.

V

Let us inquire what the Puranas have to say on the origin of the Varna System.

To begin with the Vishnu Purana. There are three theories propounded in the Vishnu Purana on the origin of the Chaturvarna. According to one the origin is to be ascribed to Manu. Says the Vishnu Puranamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_14:

"Before the mundane egg existed the divine Brahma Hiranyagarbha, the eternal originator of all worlds, who was the form of essence of Brahma, who consists of the divine Vishnu, who again is identical with Rik, Yajush, Saman and Atharva Vedas. From Brahma's right thumb was born the Prajapati Daksha; Daksha had a daughter Aditi; from her was born Vivasvat; and from him sprang Manu. Manu had sons called Ikshvaku, Nriga, Dhrishta, Saryati, Narishanta, Pramsu, Nabhagandishta, Karusha and Prishadhra. From Karusha the Karushas, Kshatriyas of great power, were descended. Nabhaga, the son of Nedishta, became a Vaisya.”

This explanation is incomplete. It only explains the origin of Kshatriyas and Vaishyas. It does not explain the origin of Brahmanas and Sudras. There is also another and a different version in the Vishnu Purana. It says:

“Desirous of a son, Manu sacrificed to Mitra and Varuna; but in consequence of a wrong invocation through an irregularity of the hotri (priest) a daughter called Illa was born. Then through the favour of Mitra and Varuna she bore to Manu a son called Sudyumna. But being again changed into a female through the wrath of Isvara (Mahadeva) she wandered near the hermitage of Budha the son of Soma (the Moon); who becoming enamoured of her had by her a son called Pururavas. After his birth, the God who is formed of sacrifice of the Rik, Yajush, Saman, and Atharva Vedas, of all things, of mind, of nothing, he who is in the form of the sacrificial Male, was worshipped by the rishis of infinite splendour who desired that Sudyumna should recover his manhood. Through the fervour of this God Illa became again Sudhumna.”“According to the Vishnu Purana, Atri was the son Of Brahma, and the father of Soma (the Moon), whom Brahma installed as the sovereign of plants, Brahmans and

stars. After celebrating the Rajasuya sacrifice, Soma became intoxicated with pride, and carried up Tara (Star), the wife of Brihaspati, the preceptor of the gods, whom, although admonished and entreated by Brahma, the gods, and rishis, he refused to restore. Soma's part was taken by Usanas; and Rudra, who had studied under Angiras, aided Brihaspati. A fiery conflict ensued between the two sides, supported respectively by the gods and the Daityas, etc. Brahma interposed, and compelled Soma to restore Tara to her husband. She had, however, in the meantime become pregnant and bore a son Budha (the planet Mercury), of whom, when strongly urged, she acknowledged Soma to be the father. Pururavas, as has been already mentioned, was the son of this Budha by Illa, the daughter of Manu.

"Pururavas had six sons, of whom the eldest was Ayus. Ayus had five sons: Nahusha, Kshattra-vriddha, Rambha; Raji, and Anenas."

"Kshattravridha had a son Sunahotra, who had three sons, Kasa, Lesa, and Gritsamada. From the last sprang Saunaka, *who originated the system of four castes*. Kasa had a son Kasiraia, of whom again Dirghatamas was the son as Dhanvantari was Dirghatamas."The third version ascribesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_15 the origin to Brahma. It says:

"Maitreyamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_16 says: 'You have described to me the Arvaksrotas, or human creation; declare to me, O Brahman, in detail the manner in which Brahma formed it. Tell me how and with what qualities, he created the castes, and what are traditionally reputed to be the functions of the Brahmans and others '. Parasara replies: 3. When, true to his design, Brahma became desirous to create the world, creatures in whom goodness (*sattva*) prevailed sprang from his mouth: 4. Others in whom passion (*rajas*) predominated came from his breast; other in whom both passion and darkness (*tamas*) were strong, proceeded from his thigh; 5. Others he created from his feet, whose chief characteristic was darkness. Of these was composed the system of four castes, Brahmans, Kshatriyas, Vaisyas, and Sudras, who had respectively issued from his mouth, breast, thighs, and feet."Herein the Vishnu Purana has given the Rig-Vedic theory supported by the Sankhya Philosophy. In the Harivamsa are to be found two theories.

Onemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_17 upholds the theory of the origin of the Varnas as being born from one of the descendents of Manu as the stock of descent than the one mentioned by the Vishnu Purana:

“The son of Gritsamada was Sunaka, from whom sprang the Saunakas, Brahmanas, Kshatriyas, Vaisyas, and Sudras.”

"Vitatha was the father of five sons, Suhotra, Suhotri, Gaya, Garga, and the great Kapila. Suhotra had two sons, the exalted Kasaka, and King Gritsamati. The sons of the latter were Brahmans, Kshatriyas and Vaisyas."

The other version speaks of their being formed by Vishnu who sprang from Brahma and had become Prajapati Daksha and is as follows mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_18:

"Janmejaya mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_19 says: 'I have heard, O Brahman the (description of the) Brahma Yuga, the first of the ages. I desire also to be accurately informed both summarily, and in detail, about the age of the Kshatriyas, with its numerous observances, illustrated as it was by sacrifice, and described, as it has been by men skilled in the art of narration.' Vaisamapayana replied. I shall describe to you that age revered for its sacrifices and distinguished for its various works of liberality, as well as for its people. Emancipation, practising unobstructed ceremonies, both in action and in abstinence from action constantly intent upon Brahma, united to Brahman as the highest object,—Brahmans glorious and sanctified in their conduct, leading a life of continence, disciplined by the knowledge of Brahman,—Brahmans complete in their observances, perfect in knowledge, and contemplative,—when at the end of a thousand yugas, their majesty was full, these Munis became involved in the dissolution of the world. Then Vishnu, sprung from Brahma, removed beyond the sphere of sense, absorbed in contemplation, became the Prajapati Daksha, and formed numerous creatures. The Brahmans, beautiful (or, dear to Soma), were formed from an imperishable (*akshara*), the Kshatriyas from a perishable (*kshara*), element, the Vaisyas from alteration, the Sudras from a modification of smoke. While Vishnu was thinking upon the castes (*vaman*) Brahmans were formed with white, red, yellow, and blue colour (*varnaih*). Hence in the world men have become divided into castes, being of four descriptions, Brahmans, Kshatriyas, Vaisyas, and Sudras, one in form, distinct in their duties, two-footed, very wonderful, full of energy(?), skilled in expedients in all their occupations. Rites are declared to be prescribed by the Vedas for the three (highest) castes. By that contemplation practised by the being sprung from Brahma—by that practised in his character as Vishnu—the Lord Prachetasa (Daksha), i.e. Vishnu the great contemplator (Yogin), passed

through his wisdom and energy from that state of meditation into the sphere of works. Next the Sudras, produced from extinction, are destitute of rites. Hence they are not entitled to be admitted to the purificatory ceremonies, nor does sacred science belong to them. Just as the cloud of smoke which rises from the fire on the friction of the fuel, and is dissipated, is of no service in the sacrificial rite, so too the Sudras wandering over the earth, are altogether (useless for purposes of sacrifice) owing to their birth, their mode of life devoid of purity and their want of the observances prescribed in the Veda.”

The Bhagwatmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_20 Purana has also an explanation as to the origin of the Varnas, It says:

“At the end of many thousand years the living soul which resides in time, action, and natural quality gave life to that lifeless egg floating on the water. Purusha then having burst the egg, issued from it was a thousand thighs, feet, arms, eyes, faces and heads. With his members the sages fashioned the worlds, the seven lower worlds with his loins etc., and the seven upper worlds with his groin, etc. The Brahman was the mouth of Purusha, the Kshatriya his arms, the Vaishya was born from the thighs, the Sudra from the feet of the divine being. The earth was formed from his feet, the air from his navel; the heaven by the heart, and the mahaloka by the breast of the mighty one.”

Lastly the Vayu Purana. What does it say? It takes up the theory of Manu as the originator of the Varna System.

“The son of Gritsamada was Sunaka, from whom sprang Saunaka. In his family were born Brahmanas, Kshatriyas, Vaisya, and Sudras, twice-born men with various functions.”

VI

What a chaos? Why could the Brahmins not give a uniform, and consistent explanation of the origin of the four Varnas?

On the issue of who created them, there is no uniformity. The Rig-Veda says the four Varnas were created by Prajapati. It does not mention which Prajapati. One would like to know which Prajapati it was who created the four Varnas. For there are so many Prajapatis. But even on the point of creation by Prajapati there is no agreement. One says they were created by Brahman. Another says they were created by Kasyapa. The third says they were created by Manu.

On the issue how many Varnas, the creator—whoever he was— created, again there is no uniformity. The Rig-Veda says four Varnas were created. But other authorities say only two Varnas were created, some say

Brahmans and Kshatriyas and some say Brahmana and Shudras.

On the issue the relations intended by the creator for binding together the four Varnas the Rig-Veda lays down the rule of graded inequality based on the importance of the part of the creation from which the particular Varna was born. But the white Yajur-Veda denies this theory of the Rig-Veda. So also the Upanishad, Ramayana, Mahabharata, and Puranas. Indeed the Hari Vansha goes to the length of saying that the Shudras are twice born.

This chaos seems to be the result of concoction of the theory of Chaturvarna which the Brahmins quietly singled into the Rig-Veda contrary to established traditions?

What was the purpose, what was the motive of the Brahmins who concocted this theory?

RIDDLE NO. 17

THE FOUR ASHRAMAS—THE WHY AND HOW ABOUT THEM

The division of society into four orders called Varnas is not the only peculiar feature of Hindu Society. What is called Ashram Dharma is another. There is however one point of difference between the two. The Varna Dharma is a theory of the organization of society. The Ashram Dharma on the other hand is a theory of regulating the life of an individual.

The Ashram Dharma divides the life of an individual into four stages (1) Brahmacharya, (2) Grahasthashram, (3) Vanaprastha and (4) Sannyas. The state of Brahmacharya has both de jure and de facto connotation in that it means an unmarried state of life. Its de jure connotation means the stage of study under a teacher. Grahasthashram is the stage of a householder, a stage of a married family life. The stage of Sannyas is a stage of renunciation of civic rights and responsibilities. It is a stage of civic death. The stage of Vanaprastha is in between Grahasthashram and Sannyas. It is a stage in which one belongs to society but is bound to live away from society. As the name implies it prescribes dwelling in forest.

The Hindus believe that this institution of Ashram Dharma is as vital as that of the Varna Dharma for the well-being society. They call the two by a joint name of Varnashram Dharma as though they were one and integral. The two together form the steel-frame of the Hindu Society.

To begin with it would be better to have a full understanding of the Ashram Dharma before inquiring into its origin and its purpose and its peculiarities. The best source for an exposition of the Ashram system is the Manu Smriti from which the following relevant extracts are reproduced:

This is an 18-page Manuscript. This is the typed first copy with a title written in the author's handwriting.—Ed.

"In the eighth year after conception, one should perform the initiation (upanayana) of a Brahmana, in the eleventh after conception (that) of a Kshatriya, but in the twelfth that of a Vaisya
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_21."

"A twice-born man who, not having studied the Veda, applies himself to other (and worldly study), soon falls, even while living, to the condition of a Sudra and his descendants (after him)."
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_22

"The vow of the three Vedas under a teacher must be kept for thirty-six years or for half that time, or for a quarter, or until the (student) has perfectly learnt them."

"Who has studied in due order the three Vedas, or two, or even one only, without breaking the (rule of) studentship, shall enter the order of householder."
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_23

"The student, the householder, the hermit, and the ascetic, these (constitute) four separate orders, which all spring from (the order of) householders."

"But all (or) even (any of) these orders, assumed successively in accordance with the Institutes (of the sacred law), lead the Brahmana who acts by the preceding (rules) to the highest state."

"And in accordance with the precepts of the Veda and of the Smriti, the housekeeper is declared to be superior to all of them; for he supports the other three
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_24."

"A Twice-born Snataka, who has thus lived according to the law in the order of householders, may, taking a firm resolution and keeping his organs in subjection, dwell in the forest, duly (observing the rules given below):

"When a householder sees his (skin) wrinkled and (his hair) white, and the sons of his sons, then he may resort to the forest
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_25."

"But having thus passed the third part of (a man's natural term of) life in the forest, he may live as an ascetic during the fourth part of his existence, after abandoning all attachment to worldly objects."

"He who after passing from order to order, after offering sacrifices and subduing his senses, becomes tired with (giving alms and offerings of food), as ascetic, gains bliss after death." "When he has paid the three debts, let him apply his mind to (the attainment of) final liberation; he who seeks it without having paid (his debts) sinks downwards."

"Having studied the Vedas in accordance with the rule, having begot sons according to the sacred law, and having offered sacrifices according to his ability, he may direct his mind to (the attainment of) final liberation." "A twice-born man who seeks final liberation, without having studied the Vedas, without having begotten sons, and without having offered sacrifices, sinks downwards'mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_26." From these rules it is clear that according to Manu there are three features of the Ashram Dharma. First is that it is not open to Shudras and women. The second is Brahmacharya which is compulsory, so is Grahasthashram. Vanaprastha and Sannyas are not compulsory. The third is that one must pass from one stage to another in the order in which they stand namely first Brahmacharya, then Grahasthashram, then Vanaprastha and lastly Sannyas. No one can omit one and enter the next stage.

A cursory reflection on this system of stages which may well be called a system of planned economy of the life of the individual raises many questions. First is what forced Manu to have such a system of planned economy. Referring to the Vedas, the theory of stages in life is quite unknown. The Vedas speak of Brahmachari. But there is nothing to show that Brahmacharya was regarded as the first and inescapable stage in life. Why did the Brahmins make Brahmacharya as the compulsory stage in the life of an individual? This is the first riddle about the Ashram Dharma.

The second question is why Manu made it obligatory to observe the order of sequence in the following of the different stages of life by the individual. Now there is no doubt that there was a time when it was open to a Brahmachari to enter any of the three Ashrams! He may become a Grahasthashrami or he may at once become a Sannyasi without becoming a Grahasthashrami. Compare what the authors of the Dharma Sutras have to say on the point. Vasistha Dharma Sutramk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_27 says:"There are four orders viz. (that of) the student, (that of) the householder, (that of) the hermit, and (that of) the ascetic".

"A man who has studied one, two or three Vedas without violating the rules of studentship, may enter any of these (orders) whichever he

pleases.”Gautama Dharma
 Sutramk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_28 says:”Some (declare, that) he (who has studied the Veda) may make his choice (which) among the orders (he is going to enter.)”

The four orders are, (that of) the student (that of) the householder, (that of) the ascetic (bhikshu) (and that of) the hermit in the woods (Vaikhanasa).

It is obvious from the views expressed by the Dharma Shastras that there was a time when the married state was an optional state. After Brahmacharya one would straight enter the stage of Vanaprastha or Sannyasa. Why did Manu remove the option and make the married state an obligatory state, why did he make the married state a condition precedent to the stage of hermit and the stage of hermit a condition precedent to the stage of a Sannyas?

After Grahasthasram there remain two stages to complete the round of life—Vanaprastha and Sannyas. The question is why Manu felt the necessity of life of the individual after Grahasthsram into two stages. Why was one stage of Sannyas not enough? The rules of regulating the life of the Vanaprastha and the Sannyasi as laid down in Manu are so alike that they give some point to the question.

In the following table a comparative study is made of the Codes for the Vanaprastha and the Sannyasa as prescribed by Manu:

The Code for Vanaprastha	The Code for Sannyasi
"Abandoning all food raised by cultivation and all his belongings, he may depart into the forest, either committing his wife to his sons, or accompanied by her."Ch. VI-3.	"Having performed the Ishti, sacred to the Lord of creatures(Prajapati) where (he gives) all his property as the sacrificial fee, having repositied the sacred fires in himself, a Brahmana may depart from his house, (as an ascetic)."Ch. VI-38.
"Taking with him the sacred fire and the implements required for domestic (sacrifices) he may go forth from the village into the forest and reside there, duly controlling his senses."Ch. VI-4	"Worlds, radiant in brilliancy, become (the portion) of him who recites (the texts) regarding Brahman and departs from his house (as an ascetic), after giving a promise of safety to all created beings."Ch. VI-39.
"Let him offer those five great sacrifices according to the rule,	"For that twice-born man, by whom not the smallest danger

with various kinds of pure food fit for ascetics, or with herbs, roots and fruit."VI-5.	there will be no danger from any(quarter) after he is freed from his body."Ch. VI-40.
"Let him wear a skin or a tattered garment; let him bathe in the evening or in the morning and let him always wear (his hair in) braids the hair on his body, his beard, and his nails (being unclipped)."VI-6.	"Departing from his house fully provided with the means of purification (Pavitra), let him wander about absolutely silent, and caring nothing for enjoyments that may be offered (to him)."Ch. VI-41.
"Let him perform the Bali-offering with such food as he eats and give alms according to his ability; let him honour those who come to his hermitage with alms consisting of water roots and fruit."VI-7.	"Let him always wander alone, without any companion, in order to attain (final liberation) fully understanding that the solitary (man, who) neither forsakes nor is forsaken, gains his end."Ch. VI-42.
"Let him be always industrious in privately reciting the Veda; let him be patient of hardships, friendly (towards all), of collected mind, ever liberal and never a receiver of gifts, and compassionate towards all living creatures."VI-8."Let him offer, according to the law, the Agni-hotra with three sacred fires, never omitting the new-moon and full-moon sacrifices at the proper time."VI-9.	"He shall neither possess a fire, nor a dwelling, he may go to a village for his food, (he shall be) indifferent to everything, firm of purpose, meditating (and) concentrating his mind on Brahman."Ch. VI-43.
"Let him also offer the Nakshatreshti, the Agrayana, and the Katurmasya (sacrifices), as well as the Turayana and likewise the Dakshayana, in due order."VI-10.	"A potsherd (instead of an alms-bowl) the roots of trees (for a dwelling), coarse worn-out garments, life in solitude and indifference towards everything, are the marks of one who has attained liberation. Ch. VI-44."Let him not desire to die, let him not desire to live, let him wait for (his appointed) time, as a

	servant (waits) for the payment of his wages."Ch. VI-45.
"With pure grains, fit for ascetics, which grow in spring and in autumn, and which he himself has collected, let him severally prepare the sacrificial cakes (purodasa) and the boiled messes (karu), as the law directs."VI-1 11.	"Delighting in what refers to the Soul, sitting (in the postures prescribed by the Yoga), independent (of external help) entirely abstaining from sensual enjoyments, with himself for his only companion, he shall live in this world, desiring the bliss (of final liberation."Ch. VI-49.
"Having offered those most pure sacrificial viands, consisting of the produce of the forest, he may use the remainder for himself (mixed with) salt prepared by himself."VI-12.	"Neither by (explaining) prodigies and omens, nor by skill in astrology and palmistry nor by giving advice and by the exposition (of the Sastras) let him, ever seek to obtain alms."Ch. VI-50.
"Let him eat vegetables that grow on dry land or in water, flowers, roots and fruits, the productions of pure trees, and oils extracted from forest-fruits."VI-13.	"Let him not (in order to beg) go near a house filled with hermits, Brahmanas, birds, dogs or other mendicants."Ch. VI-51.
"Let him avoid honey, flesh and mushrooms growing on the ground(or elsewhere, the vegetables called) Bhustrina, and Sigruka, and the Sleshmantaka fruit."VI-14.	"His hair, nails and beards being clipped carrying an alms-bowl, a staff, and a water-pot, let him continually wander 'about controlling himself and not hurting any creature."Ch.VI-52.
"Let him throw away in the month of Asvina the food of ascetics. which he formerly collected, likewise his worn-out clothes and his vegetables, roots, and fruit."VI-15.	"His vessels shall not: be made of metal, they shall be free from fractures it is ordained that they shall be cleansed with water, like(the cups, called) Kamasa, at a sacrifice."Ch. VI-53.
"Let him not eat anything (grown on) ploughed (land), though it may have been thrown away by	"A gourd, a wooden bowl, an earthen (dish), or one made of split cane, Manu the son of

<p>somebody, nor roots and fruit grown in a village, though (he may be) tormented (by hunger).”VI-16.</p>	<p>Svayambhu, has declared (to be) vessels (suitable) for an ascetic.” Ch.VI-54.</p>
<p>“He may eat either what has been cooked with fire, or what has been ripened by time: he either may use a stone for grinding or his teeth his mortar.”VI-17.</p>	<p>“Let him go to beg once (a day), let him not be eager to obtain a large quantity (of alms); for an be ascetic who eagerly seeks, alms, attaches himself also to sensual enjoyments.”Ch. VI-55.</p>
<p>“He may either at once (after his daily meal) cleanse (his vessel for collecting food), or lay up a store sufficient for a month, or gather what suffices for six months or for a year.”VI-18.</p>	<p>“When no smoke ascends from (the kitchen), when the pestle lies motionless, when the embers have been extinguished, when the people have finished their meal, when the remnants in the dishes have been removed, let the ascetic always go to beg.”Ch. VI-56.</p>
<p>“Having collected food according to his ability he may either eat at night (only) or in the daytime (only), or at every fourth mealtime, or at every eighth.”VI-19.</p>	<p>“Let him not be sorry when he obtains nothing, nor rejoice when he obtains (something), let him (accept) so much only as will sustain life, let him not care about the (quality of his) utensils.”Ch. VI-57.</p>
<p>“Or, he may live according to the rule of the lunar penance (Kandrayana), daily diminishing the quality of his food in the bright (half of the month) and (increasing it in the dark (half); or he may eat on the last days of each fortnight once (a day only), boiled barley-gruel.”VI-20.</p>	<p>“Let him disdain all (food) obtained in consequence of humble salutations, (for) even an ascetic who has attained final liberation, is bound (with the fetters of the Samsara) by accepting (food given) in consequence of humble salutations.”Ch. VI-58.</p>
<p>“Or, he may constantly subsist on flowers, roots, and fruit alone, which have been ripened by time and have fallen spontaneously following the rule of the</p>	<p>“By eating little, and by standing and sitting in solitude, let him restrain his senses, if they are attracted by sensual objects.”Ch. VI-59.</p>

(Institutes) of Vikhanas”VI-21.	
** Let him either roll about on the ground, or stand during the day on tiptoe, (or) let him alternately stand and sit down; going at the Savanas (at sunrise, at midday, and at sunset) to water in the forest (in order to bathe).”VI-22.	“By the restraint of his senses, by the destruction of love and hatred, and by the abstention from injuring the creatures, he becomes fit for immortality.”Ch. VI-60.
“In summer let him expose himself to the heat of five fires, during the rainy season live under the open sky, and in winter be dressed in wet clothes, (thus) gradually increasing (the rigour of) his austerities.”VI-23.	"When by the disposition (of his heart) he becomes indifferent to all objects, he obtains eternal happiness both in this world and after death.”Ch. VI-80.
"When he bathes at the three Savanas (Sunrise, midday and Sunset), let him offer libations of water to the manes and the gods, and practising harsher and harsher austerities, let him dry up his bodily frame.”VI-24.	“He who has in this manner gradually given up all attachments and is freed from all the pairs (of opposites), reposes in Brahman alone.”Ch. VI-81.
“Having repositied the three sacred fires in himself, according to the prescribed rule, let him live without a fire, without a house wholly silent, subsisting on roots and fruit.”VI-25.	"All that has been declared (above) depends on meditation; for he who is not proficient in the knowledge of that which refers to the Soul reaps not the full reward of the performance of rites.”Ch. VI-82.
“Making no effort (to procure) things that give pleasure, chaste, sleeping on the bare ground, not caring for any shelter, dwelling at the roots of trees. VI-26.	“Let him constantly recite (those texts) of the Veda which refer to the sacrifice, (those) referring to the deities, and (those) which treat of the Soul and are contained in the concluding portions of the Veda (Vedanta).”Ch. VI-83.
“From Brahmanas (who live as) ascetics let him receive alms,	"That is the refuge of the ignorant, and even that (the

(barely sufficient) to support life, or from other householders of the twice-born (castes) who reside in the forest."VI-27.	refuge) of those who know (the meaning of the Veda); that is (the protection) of those who seek (bliss in) heaven and of those who seek endless (beatitude)."Ch. VI-84.
"Or (the hermit who dwells in the forest) may bring food from a village, receiving it either in a hollow dish (of leaves), in (his naked) hand, or in a broken earthen dish, and may eat eight mouthfuls."VI - 28	"A twice-born man who becomes an ascetic, after the successive performance of the above-mentioned acts, shakes off sin here below and reaches the highest Brahman."Ch. VI-85
"These and other observances must a Brahmana who dwells in the forest diligently practise, and in order to attain complete (union with) the (supreme) Soul, (he must study) the various sacred texts contained in the Upanishads."VI-29.	

Comparing the Vanaprastha with Sannyas and Grahastashram with Vanaprastha one sees some very striking resemblances between them. Comparing Vanaprastha with Sannyas there are only a few differences in the modes of life prescribed for them. Firstly a Vanaprastha does not abandon his wife or his rights over his property. But a Sannyasi must abandon both. Secondly, a Vanaprastha can have a fixed dwelling although it must be in a forest. But a Sannyasi cannot have a fixed dwelling not even in a forest. He must keep on wandering from place to place. Thirdly, a Sannyasi is debarred from expounding the Shastras while the Vanaprastha is not expressly placed under such a disability. As for the rest their mode of life is identical.

The resemblance between Grahastashram and Vanaprastha is also very close. The Vanaprasthi is a Grahastashrami for all essential purposes. Like the Grahastashrami he continues to be a married man. Like the Grahastashrami he continues to be the owner of his property. Like the Grahastashrami he does not renounce the world and like the Grahastashrami he follows the Vedic religion. The only points of

difference between the Vanaprasthi and the Grahastashrami are three. (1) the Grahastashrami is not bound to observe abstinence in his food and clothing to which a Vanaprasthi is subject. (2) The Grahastashrami dwells in the midst of society while the Vanaprasthi is required to live in a forest. (3) The Vanaprasthi is free to study the Vedanta while the Grahastashrami is confined to the study of the Vedas. As for the rest their modes of life are identical.

Having regard to these close resemblances between Grahasthashram and Vanaprastha and between Vanaprastha and Sannyas it is difficult to understand why Manu recognized this third ashram of Vanaprastha in between Grahasthashram and Sannyas as an ashram distinct and separate from both. As a matter of fact, there could be only three ashrams: (1) Bramhacharya, (2) Grahastashram and (3) Sannyas. This seems to be also the view of Shankaracharya who in his Brahma Sutra in defending the validity of Sannyas against the Purva Mimansa School speaks only of three ashramas.

Where did Manu get this idea of Vanaprastha Ashram? What is his source? As has been pointed out above, Grahasthashram was not the next compulsory stage of life after Brahmacharya. A Brahmachari may at once become Sannyasi without entering the stage of Grahasthashram. But there was also another line of life which a Brahmachari who did not wish to marry immediately could adopt namely to become Aranas or Aranamanas. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_29. They were Brahmacharies who wish to continue the life of Study without marrying. These Aranas lived in hermitages in forests outside the villages or centres of population. The forests where these Arana ascetics lived were called Aranyas and the philosophical works of these aranas were called Aranyakas. It is obvious that Manu's Vanaprastha is the original Arana with two differences (1) he has compelled Arana to enter the marital state and (2) the arana stage instead of being the second stage is prescribed as the third stage. The whole scheme of Manu rest in the principle that marriage is compulsory. A Brahmachari if he wishes to become a Sannyasi he must become a Vanaprastha and if he wishes to become a Vanaprastha he must become a Grahastashrami i.e., he must marry. Manu made escape from marriage impossible. Why?

RIDDLE NO.18

MANU'S MADNESS OR THE BRAHMANIC EXPLANATION OF THE ORIGIN OF THE MIXED CASTES

A reader of the Manu Smriti will find that Manu for the purposes of his discussion groups the various castes under certain specific heads namely (1) Aryan Castes, (2) Non-Aryan Castes, (3) Vratya Castes, (4) Fallen Castes and (5) Sankara Castes.

By Aryan Castes he means the four varnas namely Brahmana, Kshatriya, Vaishya and Shudra. In other words, Manu regards the system of Chaturvarna to be the essence of Aryanism. By Non-Aryan Castes he means those communities who do not accept the creed of Chaturvarna and he cites the community called Dasyu as an illustration of those whom he regards as a Non-Aryan

community mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_30. By Vratyas he means those castes who were once believers in the Chaturvarna but who had rebelled against it. The list of Vratyas given by Manu includes the following castes:

Vratya Brahmanas	Vratya Kshatriyas	Vratya Vaishyas
1. Bhrigga Kantaka	1. Jhalla	1. Sudhanvana
2. Avantya	2. Malla	2. Acharya
3. Vatadhana	3. Lacchavi	3. Karusha
4. Phushpada	4. Nata	4. Vijanman
5. Saikha	5. Karana	5. Maitra
	6. Khasa	6. Satvata
	7. Dravida.	

This is about 20-page MS on the origin of the mixed castes '. Through the original typed MS several handwritten pages are inserted by the author and the text has been modified with several amendments pasted on the pages.—Ed.

In the list of Fallen Castes Manu includes those Kshatriyas who have become Shudras by reason of the disuse of Aryan rites and ceremonies and loss of services of the Brahmin priests. They are enumerated by Manu as under:

1. Paundrakas

7. Paradas

- | | |
|--------------|-------------|
| 2. Cholas | 8. Pahlvas |
| 3. Dravidas | 9. Chinas |
| 4. Kambhojas | 10. Kiratas |
| 5. Yavanas | 11. Daradas |
| 6. Sakas | |

By Sankara Castes Manu means Castes the members of which are born of parents who do not belong to the same caste.

These mixed castes he divides into various categories (1) Progeny of different Aryan Castes which he subdivides into two classes (a) Anuloma and (b) Pratiloma, (2) Progeny of Anuloma and Pratiloma Castes and (3) Progeny of Non-Aryan and the Aryan Anuloma and Pratiloma Castes. Those included by Manu under the head of mixed castes are shown below under different categories:

1. 1. PROGENY OF MIXED ARYAN CASTES

Father Pratiloma	Mother	Progeny known as	Anuloma or
Brahman	Kshatriya	?	
Brahman	Vaishya	Ambashta	Anuloma
Brahman	Shudra	Nishad (Parasava)	Anuloma
Kshatriya	Brahman	Suta	Pratiloma
Kshatriya	Vaishya	?	
Kshatriya	Shudra	Ugra	Anuloma
Vaishya	Brahman	Vaidehaka	Pratiloma
Vaishya	Kshatriya	Magadha	Pratiloma
Vaishya	Shudra	Karana	Anuloma
Shudra	Brahman	Chandala	Pratiloma
Shudra	Kshatriya	Ksattri	Pratiloma
Shudra	Vaishya	Ayogava	Pratiloma

2. PROGENY OF ARYAN CASTES WITH ANULOMA-PRATILOMA CASTES

Father	Mother	Progeny Known As
1. Brahman	Ugra	Avrita
2. Brahman	Ambashta	Dhigvana
3. Brahman	Nishada	Kukutaka
4. Shudra	Abhira	Abhira

2. 2. PROGENY OF MIXED MARRIAGES BETWEEN ANULOMA AND PRATILOMA CASTES

Father	Mother	Progeny known as
1. Vaideha	Ayogava	Maitreyaka
2. Nishada	Ayogava	Margava (Das)
		Kaivarta
3. Nishada	Vaideha	Karavara
4. Vaidehaka	Ambashta	Vena
5. Vaidehaka	Karavara	Andhra
6. Vaidehaka	Nishada	Meda
7. Chandala	Vaideha	Pandusopaka
8. Nishada	Vaideha	Ahindaka
9. Chandala	Pukkassa	Sopaka
10. Chandala	Nishada	Antyavasin
11. Kshattari	Ugra	Swapaka

To Manu's list of Sankar (mixed) Castes additions have been made by his successors. Among these are the authors of Aushanas Smriti, Baudhayana Smriti, Vashistha Smriti, Yajnavalkya Smriti and the Suta Sanhita.

Of these additions four have been made by the Aushanas Smriti. They are noted below:

Name of the mixed caste	Father's caste	Mother's caste
1. Pulaksa	Shudra	Kshatriya
2. Yekaj	Pulaksa	Vaishya

3. Charmakarka	Ayogava	Brahmin
4. Venuka	Suta	Brahmin

The following four are added by the Baudhayana Smriti

Name of the mixed caste	Father's caste	Mother's caste
1. Kshatriya	Kshatriya	Vaishya
2. Brahmana	Brahmana	Kshatriya
3. Vaina	Vaidehaka	Ambashta
4. Shvapaka	Ugra	Kshatriya

Vashishta Smriti adds one to the list of Manu, namely:

Name of the Mixed caste	Father's caste	Mother's caste
Vaina	Kshatriya	Shudra

The Yajnavalkya Smriti adds two new castes to Manu's list of mixed castes.

Name of mixed caste	Father's caste	Mother's caste
1. Murdhavasika	Brahmin	Kshatriya
2. Mahisya	Kshatriya	Vaishya

The Additions made by the author of the Suta Sanhita are on a vast scale. They number sixty-three castes.

Name of the mixed caste	Father's caste	Mother's caste
1. Ambashteya	Kshatriya	Vaishya
2. Urdhvanapita	Brahman	Vaishya
3. Katkar	Vaishya	Shudra
4. Kumbhkar	Brahman	Vaishya
5. Kunda	Brahman	Married Brahmin
6. Golaka	Brahman	Brahmin Widow
7. Chakri	Shudra	Vaishya
8. Daushantya	Kshatriya	Shudra
9. Daushantee	Kshatriya	Shudra
10. Pattanshali	Shudra	Vaishya

11. Pulinda	Vaishya	Kshatriya
12. Bahyadas	Shudra	Brahmin
13. Bhoja	Vaishya	Kshatriya
14. Mahikar	Vaishya	Vaishya
15. Manavika	Shudra	Shudra
16. Mleccha	Vaishya	Kshatriya
17 Shalika	Vaishya	Kshatriya
18. Shundika	Brahmin	Shudra
19. Shulikha	Kshatriya	Shudra
20. Saparna	Brahman	Kshatriya
21. Agneyanartaka	Ambashta	Ambashta
22. Apitar	Brahman	Daushanti
23. Ashramaka	Dantakevala	Shudra
24. Udabandha	Sanaka	Kshatriya
25. Karana	Nata	Kshatriya
26. Karma	Karana	Kshatriya
27. Karmakar	Renuka	Kshatriya
28. Karmar	Mahishya	Karana
29. Kukkunda	Magadha	Shudra
30. Guhaka	Swapach	Brahman
31. Charmopajivan	Vaidehika	Brahman
32. Chamakar	Ayogava	Brahmani
33. Charmajivi	Nishad	Karushi
34. Taksha	Mahishya	Karana
35. Takshavriti	Ugra	Brahman
36. Dantakavelaka	Chandala	Vaishya
37. Dasyu	Nishad	Ayogava
38. Drumila	Nishad	Kshatriya
39. Nata	Picchalla	Kshatriya
40. Napita	Nishada	Brahmin
41. Niladivarnavikreta	Ayogava	Chirkari
42. Piccahalla	Malla	Kshatriya
43. Pingala	Brahmin	Ayogava
44. Bhaglabdha	Daushanta	Brahmani
45. Bharusha	Sudhanva	Vaishya
46. Bhairava	Nishada	Shudra
47. Matanga	Vijanma	Vaishya
48. Madhuka	Vaidehika	Ayogava
49. Matarar	Dasyu	Vaishya

50. Maitra	Vijanma	Vaishya
51. Rajaka	Vaideha	Brahman
52. Rathakar	Mahishya	Karana
53. Renuka	Napita	Brahman
54. Lohakar	Mahishya	Brahmani
55. Vardhaki	Mahishya	Brahmani
56. Varya	Sudhanva	Vaishya
57. Vijanma	Bharusha	Vaishya
58. Shilp	Mahishya	Karana
59. Shvapach	Chandala	Brahmani
60. Sanaka	Magadha	Kshatriya
61. Samudra	Takashavrati	Vaishya
62. Satvata	Vijanma	Vaishya
63. Sunishada	Nishad	Vaishya

Of the five categories of castes it is easy to understand the explanation given by Manu as regards the first four. But the same cannot be said in respect of his treatment of the fifth category namely the Sankar (mixed) caste. There are various questions that begin to trouble the mind. In the first place Manu's list of mixed castes is a perfunctory list. It is not an exhaustive list, stating all the possibilities of Sankar.

In discussing the mixed castes born out of the mixture of the Aryan castes with the Anuloma-Pratiloma castes, Manu should have specified the names of castes which are the progeny of each of the four Aryan castes with each of the 12 Anuloma-Pratiloma castes. If he had done so we should have had a list of forty-eight resulting castes. As a matter of fact he states only the names of four castes of mixed marriages of this category.

In discussing the progeny of mixed marriages between Anuloma-Pratiloma castes given the fact that we have 12 of them, Manu should have given the names of 144 resulting castes. As a matter of fact, Manu only gives a list of 11 castes. In the formation of these 11 castes, Manu gives five possible combinations of 5 castes only. Of these one (Vaideha) is outside the Anuloma-Pratiloma list. The case of the 8 are not considered at all.

His account of the Sankar castes born out of the Non-Aryan and the Aryan castes is equally discrepant. We ought to have had first a list of castes resulting from a combination between the Non-Aryans with each of the four Aryan castes. We have none of them. Assuming that there was only one Non-Aryan caste—Dasyu—we ought to have had a list of 12 castes resulting from a conjugation of Dasyus with each of the Anuloma-

Pratiloma castes. As a matter of fact we have in Manu only one conjugation.

In the discussion of this subject of mixed castes Manu does not consider the conjugation between the Vratyas and the Aryan castes, the Vratyas and the Anuloma-Pratiloma castes, the Vratyas and the Non-Aryan castes.

Among these omissions by Manu there are some that are glaring as well as significant. Take the case of Sankar between Brahmins and Kshatriyas. He does not mention the caste born out of the Sankar between these two. Nor does he mention whether the Sankar caste begotten of these two was a Pratiloma or Anuloma. Why did Manu fail to deal with this question. Is it to be supposed that such a Sankar did not occur in his time? Or was he afraid to mention it? If so, of whom was he afraid?

Some of the names of the mixed castes mentioned by Manu and the other Smritikaras appear to be quite fictitious.

For some of the communities mentioned as being of bastard origin have never been heard of before Manu. Nor does any one know what has happened to them since. They are today non-existent without leaving any trace behind. Caste is an insoluble substance and once a caste is formed it maintains its separate existence, unless for any special reason it dies out. This can happen but to a few.

Who are the Ayogava, Dhigvana, Ugra, Pukkasa, Svapaka, Svapacha, Pandusopaka, Ahindaka, Bandika, Malta, Mahikar, Shalika, Shundika, Shulika, Yekaj, Kukunda to mention only a few. Where are they? What has happened to them?

Let us now proceed to compare Manu with the rest of Smritikars. Are they unanimous on the origin of the various mixed castes referred to by them? Far from it compare the following cases.

Smriti	Father's caste	Mother's caste
	1 AYOOGAVA	
1. Manu	Shudra	Vaishya
2. Aushanas	Vaishya	Kshatriya
3. Yajnavalkya	Shudra	Vaishya
4. Baudhayana	Vaishya	Kshatriya
5. Agni Purana	Shudra	Kshatriya
	11 UGRA	
1. Manu	Kshatriya	Shudra
2. Aushanas	Brahman	Shudra
3. Yajnavalkya	Kshatriya	Vaishya
4. Vashishtha	Kshatriya	Vaishya

5. Suta	Vaishya	Shudra
	III NISHADA	
1. Manu	Brahmana	Shudra
2. Aushanas	Brahmana	Shudra
3. Baudhayana	Brahmana	Shudra
4. Yajnavalkya	Brahmana	Shudra
5. Suta Sanhita	Brahmana	Vaishya
6. Suta Sanhita	Brahmana	Shudra
7. Vashishta	Vaishya	Shudra
	IV PUKKASA	
1. Manu	Nishada	Shudra
2. Brihad-Vishnu	Shudra	Kshatriya
3. Brihad-Vishnu	Vaishya	Kshatriya
	V MAGADHA	
1. Manu	Vaishya	Kshatriya
2. Suta	Vaishya	Kshatriya
3. Baudhayana	Shudra	Vaishya
4. Yajnavalkya	Vaishya	Kshatriya
5. Brihad Vishnu	Vaishya	Kshatriya
6. Brihad Vishnu	Shudra	Kshatriya
7. Brihad Vishnu	Vaishya	Brahman
	VI RATHAKAR	
1. Aushanas	Kshatriya	Brahmana
2. Baudhayana	Vaishya	Shudra
3. Suta	Kshatriya	Brahmana
	VII VAIDEHAKA	
1. Manu	Shudra	Vaishya
2. Manu	Vaishya	Brahmana
3. Yajnavalkya	Vaishya	Brahmana

If these different Smritikaras are dealing with facts about the origin and genesis of the mixed castes mentioned above how can such a wide difference of opinion exist among them? The conjugation of two castes can- logically produce a third mixed caste. But how the conjugation of the same two castes produce a number of different castes? But this is exactly what Manu and his followers seem to be asserting. Consider the following cases:

I. Conjugation of Kshatriya father and Vaishya mother.

1. Baudhyayana says that the caste of the progeny is Kshatriya.

2. Yajnavalkya says it is Mahishya.

3. Suta says it is Ambashta.

II. Conjugation of Shudra father and Kshatriya mother—

1. Manu says the Progeny is Ksatri.

2. Aushanas says it is Pullaksa.

3. Vashishta says it is Vaina.

III. Conjugation of Brahmana father and Vaishya mother.

1. Manu says that the progeny is called Ambashta.

2. Suta once says it is called Urdhava Napita but again says it is called Kumbhakar.

IV. Conjugation of Vaishya father and Kshatriya mother— 1. Manu says that the progeny is called Magadha.

2. Suta states that (1) Bhoja, (2) Mleccha, (3) Shalik and (4) Pulinda are the Progenies of this single conjugation.

V. Conjugation of Kshatriya father and Shudra mother—

1. Manu says that the progeny is called Ugra.

2. Suta says that (1) Daushantya, (2) Daushantee and (3) Shulika are the progenies of this single conjugation.

VI. Conjugation of Shudra father and Vaishya mother—

1. Manu says the progeny is called Ayogava.

2. Suta says the progeny is (1) Pattanshali and (2) Chakri. Let us take up another question. Is Manu's explanation of the genesis of the mixed castes historically true?

To begin with the Abhira. According to Manu the Abhiras are the bastards born of Brahmin males and Ambashta females. What does history say about them? History says that the Abhiras (the corrupt form of which is Ahira) were pastoral tribes which inhabited the lower districts of the North-West as far as Sindh. They were a ruling independent Tribe and according to the Vishnu Puranam:[@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_31](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_31) the Abhiras conquered Magadha and reigned there for several years.

The [Ambashtamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_32](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_32) says Manu are the bastards born of Brahmana male and Vaishya female. Patanjali speaks of Ambashtyas as those who are the natives of a country called Ambashta. That the Ambashtas were an independent tribe is beyond dispute. The Ambashtas are mentioned by Megasthenes the Greek Ambassador at the Court of Chandragupta Maurya as one of the tribes living in the Punjab who fought against Alexander

when he invaded India. The Ambashtas are mentioned in the Mahabharata. They were reputed for their political system and for their bravery.

The Andhras mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_33 says Manu are bastards of second degree in so far as they are the progeny of Vaidehaka male and Karavara female both of which belong to bastard castes. The testimony of history is quite different. The Andhras are a people who inhabited that part of the country which forms the eastern part of the Deccan Plateau. The Andhras are mentioned by Megasthenes. Pliny the Elder (77 A.D.) refers to them as a powerful tribe enjoying paramount sway over their land in the Deccan, possessed numerous villages, thirty walled towns defended by moats and lowers and supplies their king with an immense army consisting of 1,00,000 infantry, 2,000 cavalry and 1,000 elephants.

According to Manu the Magadhas mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_34 are bastards born of Vaishya male and Kshatriya female, panini the Grammarian gives quite a different derivation of 'Magadha'. According to him "Magadha" means a person who comes from the country known as Magadha. Magadha corresponds roughly to the present Patna and Gaya districts of Bihar. The Magadhas have been mentioned as independent sovereign people right from the earliest times. They are first mentioned in the Atharva-Veda. The famous Jarasandha was the king of Magadha who was a contemporary of the Pandavas.

According to Manu the Nishadas are the bastards born caste from Brahmin males and Shudra females. History has quite a different tale to tell. The Nishadas were a native tribe with its own independent territory and its own kings. They are a very ancient tribe. The Ramayana mentions Guha as the King of Nishadas whose capital was Sringaverapura and who showed hospitality to Rama when he was undergoing exile in the forest.

As to the Vaidehaka Manu says that they are the bastards born of Vaishya Male and Brahmin female. Etymologically Vaidehaka means a person who is a native of the country called Videha mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_35 Ancient Videha corresponds to the modern districts of Champaran and Darbhanga in Bihar. The country and its people have been known to history from a very remote antiquity. The Yajur-Veda mentions them. Ramayana refers to them. Sita the wife of Rama is the daughter of Janak who was the king of Videha and whose capital was Mithila.

Many more cases could be examined. Those that have been are quite sufficient to show how Manu has perverted history and defamed the most

respectable and powerful tribes into bastards. This wholesale bastardization of huge communities Manu did not apply to the Vratyas. But his successors carried the scheme further and bastardized the Vratyas also. Kama in Manu is Vratya. But the Brahma Vaivarta Purana makes them Bastards and says that they are the progeny of Vaishya father and Shudra mother. Paundraka in Manu is Vratya. But in the Brahmavaivarta Purana he is a bastard born of Vaishya father and Chundi mother. Malla in Manu is Vratya. But in the Brahma Vaivarta Purana he is a bastard horn of Letta father and Tibara mother. The Vharjjakautakas are Vratya Brahmanas according to Manu. But in the Gautama Sanhita they are bastards born from a Brahman father and Vaishya mother. The Yavanas were declared by Manu as Vratya Kshatriya. But in Gautama Sanhita they are shown as bastards born of a Kshatriya father and Shudra mother.

The Kiratas are according to Manu Vratya Kshatriyas. But the Ballalacharitta makes them bastards horn from Vaishya father and Brahmin mother.

It is quite clear that some of the communities mentioned by Manu as being bastard in origin far from being bastard were independent in origin and yet Manu and the rest of the Smratikara's call them Bastards. Why this madness on their part? Is there a method in their madness?

Having regard to all these considerations it is a riddle why Manu at all raised the question of mixed castes and what he wanted to say about them?

It is possible that Manu had realized that the Chaturvarna had failed and that the existence of a large number of castes which should neither be described as Brahmanas, Kshatriyas, Vaishyas and Shudras was the best proof of the break down of the Chaturvarna and that he was therefore called upon to explain how these castes who were outside the Chaturvarna came into existence notwithstanding the rule of Chaturvarnas.

But did Manu realize how terrible is the Explanation which he has given? What does his explanation amount to?

What a reflection on the character of men and particularly of women. It is obvious that the unions of men and women must have been clandestine because prohibited by the rule of Chaturvarna. Such clandestine unions could take place only here and there. They could not have taken place on a wholesale scale. But unless one assumes a wholesale state of promiscuity how can one justify the origin of the Chandals or untouchables as given by Manu.

The caste of Chandala is said by Manu to be the progeny of illegitimate intercourse between a Shudra male and a Brahman female. Can this be true? It means that Brahmin women must have been very lax in their

morality and must have had special sexual attraction for the Shudra'mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_36. This is unbelievable.

So vast is the Chandala population that even if every Brahmin female was a mistress of a Shudra it could not account of the vast number of Chandalas in the country.

Did Manu realize by propounding his theory of the origin of the mixed castes he was assigning an ignoble origin to a vast number of the people of this country leading to their social and moral degradation. Why did he say that the castes were mixed in origin, when as a matter of fact they were independent in their existence?

RIDDLE NO. 19

THE CHANGE FROM PATERNITY TO MATERNITY. WHAT DID THE BRAHMINS WISH TO GAIN BY IT?

Mr. Mayne in his treatise on Hindu law has pointed out some anomalous features of the rules of Kinships. He says:

"No part of the Hindu Law is more anomalous than that which governs the family relations. Not only does there appear to be a complete break of continuity between the ancient system and that which now prevails, but the different parts of the ancient system appear in this respect to be in direct conflict with each other. We find a law of inheritance, which assumes the possibility of tracing male ancestors in an unbroken pedigree extending to fourteen generations; while coupled with it is a family law, in which several admitted forms of marriage are only euphemisms for seduction and rape, and in which twelve sorts of sons are recognized, the majority of whom have no blood relationship to their own father."The existence of this anomaly is a fact and will be quite clear to those who care to study the Hindu Law of marriage and paternity.

The Hindu Law recognizes eight different forms of marriage, namely (1) Brahma, (2) Daiva, (3) Arsha, (4) Prajapatya, (5) Asura, (6) Gandharva, (7) Rakshasa and (8) Paisacha.

The Brahma marriage is the gift of a daughter, clothed and decked to a man learned in the Veda, whom her father voluntarily invites and respectfully receives.

The Daiva marriage consists of the giving of the daughter by father to the family priest attending a sacrifice at the time of the payment of the sacrificial fee and in lieu of it.

Arsha marriage is characterized by the fact that the bridegroom has to pay

a price for the bride to the father of the bride.

Prajapatya form of marriage is marked by the application of a man for a girl to be his wife and the granting of the application by the father of the girl.

(This is an eleven-page typed chapter. Except the title of the chapter no other additions are found in the handwriting of the author.—Ed.)

The difference between *Prajapatya* and *Brahma* marriage lies in the fact that in the latter the gift of the daughter is made by the father voluntarily but has to be applied for. The fifth or the *Asura* form of marriage is that in which the bridegroom having given as much wealth as he can afford to the father and paternal kinsmen and to the girl herself takes her as his wife. There is not much difference between *Arsha* and *Asura* forms of marriage. Both involve sale of the bride. The difference lies in this that in the *Arsha* form the price is fixed while in the *Asura* form it is not.

Gandharva marriage is a marriage by consent contracted from nonreligious and sensual motives. Marriage by seizure of a maiden by force from her house while she weeps and calls for assistance after her kinsmen and friends have been slain in battle or wounded and their houses broken open, is the marriage styled *Rakshasa*.

Paisacha marriage is marriage by rape on a girl either when she is asleep or flushed with strong liquor or disordered in her intellect.

Hindu Law recognized thirteen kinds of sons. (1) *Aurasa*, (2) *Kshetraja*, (3) *Putrikaputra*, (4) *Kanina*, (5) *Gudhaja*, (6) *Punarbhava*, (7) *Sahodhaja*, (8) *Dattaka*, (9) *Kritrima*, (10) *Kritaka*, (II) *Apavidha*, (12) *Svayamdatta* and (13) *Nishada*.

The *Aurasa* is a son begotten by a man himself upon his lawfully wedded wife.

Putrikaputra means a son born to a daughter. Its significance lies in the system under which a man who had a daughter but no son could also have his daughter to cohabit with a man selected or appointed by him. If a daughter gave birth to a son by such sexual intercourse the son became the son of the girl's father. It was because of this that the son was called *Putrikaputra*. Man's right to compel his daughter to submit to sexual intercourse with a man of his choice in order to get a son for himself continued to exist even after the daughter was married. That is why a man was warned not to marry a girl who had no brothers.

Kshetraja literally means son of the field i.e., of the wife. In Hindu ideology the wife is likened to the field and the husband being likened to the master of the field. Where the husband was dead, or alive but impotent or incurably diseased the brother or any other *sapinda* of the deceased was

appointed by the family to procreate a son on the wife. The practice was called *Niyoga* and the son so begotten was called *Ksheiraja*.

If an unmarried daughter living in the house of her father has through illicit intercourse given birth to a son and if she subsequently was married the son before marriage was claimed by her husband as his son. Such a son was called *Kanina*.

The *Gudhaja* was apparently a son born to a woman while the husband had access to her but it is suspected that he is born of an adulterous connection. As there is no proof by an irrebutable presumption so to say the husband is entitled to claim the son as his own. He is called *Gudhaja* because his birth is clouded in suspicious. *Gudha* meaning suspicion.

Sabodhaja is a son born to a woman who was pregnant at the time of her marriage. It is not certain whether he is the son of the husband who had access to the mother before marriage or whether it is the case of a son begotten by a person other than the husband. But it is certain that the *Sabodhaja*, is a son born to a pregnant maiden and claimed as his son by the man who marries her.

Punarbhava is the son of a woman who abandoned by her husband and having lived with others, re-enters his family. It is also used to denote the son of a woman who leaves an impotent, outcaste, or a mad or diseased husband and takes another husband.

Parasava is the son of a Brahmin by his Shudra wife. The rest of the sons are adopted sons as distinguished for those who were claimed as sons.

Dattaka is the son whom his father and mother give in adoption to another whose son he then becomes.

Kratrima is a son adopted with the adoptee's consent only. *Krita* is a son purchased from his parents.

Apaviddha is a boy abandoned by his parents and is then taken in adopted and reckoned as a son.

Svayamdatta is a boy bereft of parents or abandoned by them seeks a man shelter and presents himself saying ' Let me become thy son ' when accepted he becomes his son.

It will be noticed how true it is to say that many forms of marriage are only euphemisms for seduction and rape and how many of the sons have no blood relationship to their father. These different forms of marriage and different kinds of sons were recognized as lawful even up to the time of Manu and even the changes made by Manu are very minor. With regard to the forms of marriage

Manumk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART

II.htm - [_msocom_38](#) does not declare them to be illegal. All that he says that of the eight forms, six, namely, Brahma, Daiva, Arsha, Prajapatya, Asura, Gandharva, Rakshasa and Paisachya are lawful for a Kshatriya, and that three namely Asura, Gandharva and Paisachya are lawful for a Vaishya and a Shudra.

Similarly he does not disaffiliate any of the 12 sons. On the contrary he recognises their kinship. The only change he makes is to alter the rules of inheritance by putting them into two classes (1) heirs and kinsmen and (2) kinsmen but not heirs. He

says [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm -_msocom_39:](#)

159."The legitimate son of the body. the son begotten on a wife. the son adopted, the son made, the son secretly born, and the son east off (are) the six heirs and kinsmen."

160."The son of an unmarried damsel, the son received with the wife, the son bought, the son begotten on a remarried woman: the son self-given and the son of a Sudra female (are) the six (who are) not heirs, (but) kinsmen."

162."If the two heirs of one man be a legitimate son of his body and a son begotten on his wife, each (of the two sons), to the exclusion of the other, shall take the estate of his (natural) father."

163."The legitimate son of the body alone (shall be) the owner of the paternal estate: but. in order to avoid harshness, let him allow a maintenance to the rest."

There is another part of the law of consanguinity which has undergone a profound change but which has hardly been noticed by anybody. It relates to the determination of the Varna of the child. What is to be the Varna of the child? Is it to be the father's Varna or the mother's Varna? According to the law as it prevailed in the days before Manu the Varna of the child was determined by the Varna of the father. The Varna of the mother was of no account. A few illustrations will suffice to prove the thesis.

Father		Mother		Child	
Name	Varna	Name	Varna	Name	Varna
1. Shantanu	Kshtriya	Ganga	Unknown	Bhishma	kshatriya
2 Parashara	Brahman a	Matsyagandh a	Fisherma n	Krish	Dwaya
3 Vashishta	Brahman a	Akshamala	Payan		
4 Shantanu	Kshatriya	Matsyagandh	Fisherma	Vichitraviry	kshatriya

		a	n	a	
5 Vishwamitr a	Kshatriya	Menka	Apsara	Shakuntala	kshatriya
6. Yayati	Kshatriya	Devayani	Brahmin	Yadu	kshatriya
7. Yayati	Kshatriya	Sharmishta	Asuri	Druhya	Kshatriy a
8 Jaratkari	Brahman	Jaratkari	Naga	Astika	Brahmin

What does Manu do? The changes made by Manu in the law of the child's Varna are of a most revolutionary character. Manumk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_40 lays down the following rules:

5."In all castes (varna) those (children) only which are begotten in the direct order on wedded wives, equal (in caste) and married as (virgins) are to be considered as belonging to the same caste (as their fathers)."

6."Sons, begotten by twice-born men on wives of the next lower castes, they declare to be similar (to their fathers, but) blamed on account of the fault (inherent) in their mothers."

14."Those sons of the twice-born, begotten on wives of the next lower castes, who have been enumerated in due order, they call by the name Anantaras (belonging to the next lower caste) on account of the blemish (inherent) in their mothers"

41."Six sons, begotten (by Aryans) on women of equal and the next lower castes (Anantara), have the duties of twice-born men: but ail those born in consequence of a violation of the law are, as regards their duties, equal to Sudras."Manu distinguishes the following cases:

(1) Where the father and mother belong to the same Varna.
 (2) Where the mother belongs to a Varna next lower to that of the father e.g.. Brahman father and Kshatriya mother, Kshatriya father and Vaishya mother, Vaishya father and Shudra mother.

(3) Where the mother belongs to a Varna more than one degree lower to that of the father, e.g.. Brahmin father and Vaishya or Shudra mother, Kshatriya father and Shudra mother. In the first case the Varna of the child is to be the Varna of the father. In the second case also the Varna of the child is to be the Varna of the father. But in the third case the child is not to have the father's Varna. Manu does not expressly say what is to be the Varna of the child if it is not to be that of the father. But all the commentators of Manu Medhatithi. Kalluka Bhatt. Narada and Nandapandit—agree

saying what of the course is obvious that in such cases the Varna of the child shall be the Varna of the mother. In short Manu altered the law of the child's Varna from that of Pitrasavarna—according to father's Varna to Matrasavarna—according to mother's Varna.

This is most revolutionary change. It is a pity few have realized that given the forms of marriage, kinds of sons, the permissibility of Anuloma marriages and the theory of Pitrasavarnya, the Varna system notwithstanding the desire of the Brahmins *to* make it a closed system remained an open system. There were so many holes so to say in the Varna system. Some of the forms of marriage had no relation to the theory of the Varna. Indeed they could not have. The Rakshas and the Paisachya marriages were in all probability marriages in which the males belonged to the lower varnas and the females to the higher varnas. The law of sonship probably left many loopholes for the sons of Shudra to pass as children of the Brahmin. Take for instances sons such as Gudhajas, Sahodhajas, Kanina. Who can say that they were not begotten by Shudra or Brahmin, Kshatriya or Vaishya. Whatever doubts there may be about these the Anuloma system of marriage which was sanctioned by law combined with the law of Pitrasavarnya had the positive effect of keeping the Varna system of allowing the lower Varnas to pass into the higher Varna. A Shudra could not become a Brahmin, a Kshatriya *or* a Vaishya. But the child of a Shudra woman could become a Vaishya if she was married to a Vaishya, a Kshatriya if she was married to a Kshatriya and even a Brahmin if she was married to a Brahmin. The elevation and the incorporation of the lower orders into the higher orders was positive and certain though the way of doing it was indirect. This was one result of the old system. The other result was that a community of a Varna was always a mixed and a composite community. A Brahmin community might conceivably consist of children born of Brahmin women, Kshatriya women, Vaishya women, and Shudra women all entitled to the rights and privileges belonging to the Brahmin community. A Kshatriya community may conceivably consist of children born of Kshatriya women, Vaishya women and Shudra women all recognized as Kshatriya and entitled to the rights and privileges of the Kshatriya community. Similarly the Vaishya community may conceivably consist of children born of Vaishya women and Shudra women all recognized as Vaishyas and entitled to

the rights and privileges of the Vaishya community.

The change made by Manu is opposed to some of the most fundamental notions of Hindu Law. In the first place, it is opposed to the Kshetra-Kshetraja rule of Hindu Law. According to this rule, which deals with the

question of property in a child says that the owner of the child is the *de jure* husband of the mother and not the *de facto* father of the child. Manu is aware of this theory. He puts it in the following terms'mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_41:

"Thus men who have no marital property in women, but sow in the fields owned by others, may raise up fruit to the husbands, but the procreator can have no advantage from it. Unless there be a special agreement between the owners of the land and of the seed, the fruit belongs clearly to the landowner, for the receptacle is more important than the seed."

It is on this that the right to the 12 kinds of sons is founded. This change was also opposed to the rule of Patna Potestas. Hindu family is a Patriarchal family same as the Roman family. In both the father possessed certain authority over members of the family. Manu is aware of this and recognized it in most ample terms. Defining the authority of the Hindu father, Manu says:

"Three persons, a wife, a son, and a slave, are declared by law to have in general no wealth exclusively their own; the wealth which they may earn is regularly acquired for the man to whom they belong."

They belong to the head of the family-namely the father. Under the Patna Potestas the sons earnings are the property of the father. The change in the law of paternity mean a definite loss to the father.

Why did Manu change the law from Pitra-savarnya to Matra-savarnya?

RIDDLE NO. 20

KALI VARJYA OR THE BRAHMANIC ART OF SUSPENDING THE OPERATION OF SIN WITHOUT CALLING IT SIN

Few have heard of the Brahmanic dogma called Kali Varjya. It must not be confused with another Brahmanic Dogma of Kali Yuga. The dogma of Kali Varja prescribes that customs and usages which are valid and good in other yugas are not to be observed in the Kali Age. The references to these instructions are scattered in the different Puranas. But the Adityapurana has codified them and brought them together*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21B.Riddles in Hinduism PART II.htm - _msocom_42. The practices which are Kali Varjya are given below:

- (1) To appoint the husband's brother for procreating a son on a widow.
- (2) The remarriage of a (married) girl (whose marriage is not consummated) and of one (whose marriage was consummated) to another husband (after the death of the first).

(3) The marriage with girls of different Varna among persons of the three twice-born classes.

(4) The killing even in a straight fight of Brahmanas that have become desperadoes.

(5) The acceptance (for all ordinary intercourse such as eating with him) of a twice-born person who is in the habit of voyaging over the sea in a ship even after he has undergone a *pray ascuta*.

(6) The initiation for a *sattra*.

(7) The taking of a *Kamandali* (a jar for water).

(8) Starting on the Great Journey.

(9) The killing of a cow in the sacrifice called *Gomedha*.

(10) The partaking of wine even in the *Srautmani* sacrifice.

This is a nine-page typed copy with several corrections by the author himself. For Notes on all 43 Kali Varjyas, please see Notes to Appendix I of this part.—Ed.

(11-12) Licking the ladle (*sruc*) after the Agnihotra Hoama in order to take off the remains of the offerings and using the ladle in the Agnihotra afterwards when it has been so licked.

(13) Entering into the stage of forest hermit as laid down in sastras about it.

(14) Lessening the periods of impurity (due to death and birth) in accordance with the conduct and Vedic learning of a man.

(15) Prescribing death as the penance (*prayascitta*) for Brahmans.

(16) Expiation (by secretly performed *prayascittas*) of the mortal sins other than theft (of gold) and the sin of contact (with those guilty of Mahapatakas).

(17) The act of offering with Mantras animal flesh to the bridegroom, the guest and the pitras.

(18) The acceptance as sons of those other than the aurasa (natural) and adopted sons.

(19) Ordinary intercourse with those who incurred the sin of (having intercourse with) women of higher castes, even after they had undergone the *prayascitta* for such sin.

(20) The abandonment of the wife of an elderly person or of one who is entitled to respect) when she has had intercourse with one with whom it is severely condemned.

(21) Killing oneself for the sake of another.

(22) Giving up food left after one has partaken of it.

- (23) Resolve to worship a particular idol for life (in return for payment).
- (24) Touching the bodies of persons who are in impurity due to death after the charred bones are collected.
- (25) The actual slaughter by Brahmanas of the sacrificial animal.
- (26) Sale of the Soma plant by Brahmanas.
- (27) Securing food even from a Sudra when a Brahmana had no food for six times of meals (i.e., for three days).
- (28) Permission to (a Brahmana) householder to take cooked food from Sudras if they are his *dasas*, cowherds, hereditary friends, persons cultivating his land on an agreement to pay part of the produce.
- (29) Going on a very distant pilgrimage.
- (30) Behaviour of a pupil towards his teacher's wife as towards a teacher that is declared (in Smritis).
- (31) The maintenance by Brahmanas in adversity (by following unworthy avocations) and the mode of livelihood in which a Brahmana does not care to accumulate for tomorrow.
- (32) The acceptance of *aranis* (two wooden blocks for producing fire) by Brahmanas in the *Homa* at the time of *Jatakarma* in order that all the ceremonies for the child from *Jatakarma* to his marriage may be performed therein.
- (33) Constant journeys by Brahmanas.
- (34) Blowing of fire with the mouth (i.e., without employing a bamboo dhamani).
- (35) Allowing women who have become polluted by rape, etc., to freely mix in the caste (when they have performed prayascitta) as declared in the sastric texts.
- (36) Begging of food by a sannyasin from persons of all Varnas (including Sudra).
- (37) To wait (i.e., not to use) for ten days water that has recently been dug in the grounds.
- (38) Giving fee to the teacher as demanded by him (at the end of study) according to the rules laid down in the sastra.
- (39) The employment of Sudras as cooks for Brahmanas and the rest.
- (40) suicide of old people by falling from a precipice or into fire.
- (41) Performing *acamana* by respectable people in water that would remain even after a cow has drunk it to its heart's content.
- (42) Fining witnesses who depose to a dispute between father and son.
- (43) Sannyasin should stay where he happens to be in the evening.
- The strange thing about this code of Kali-Varjya is that its significance has not been fully appreciated. It is simply referred to as a list of things

forbidden in Kali Yuga. But there is more than this behind this list of don'ts. People are no doubt forbidden to follow the practice listed in the Kali Varjya Code. The question however, is: Are these practices condemned as being immoral, sinful or otherwise harmful to society? The answer is no. One likes to know why these practices if they are forbidden are not condemned? Herein lies the riddle of the Kali Varjya Code. This technique of forbidding a practice without condemning it stands in utter contrast with the procedure followed in earlier ages. To take only one illustration. The Apastambha Dharma Sutra forbids the practice of giving all property to the eldest son. But he condemns it. Why did the Brahmins invent this new technique, forbid but not condemn? There must be some special reason for this departure. What is that reason?

APPENDIX I THE RIDDLE OF THE VARNASHRAM DHARMA

Reference has already been made to the two dogmas of Varna Dharma and Ashram Dharma, which are called by the collective names of Varnashram Dharma and which form so fundamental a part of Hinduism. It cannot but be instructive to know the views expressed by the ancient writers on these strange dogmas.

To begin with Varna Dharma. It would be better to collect together in the first place the views expressed in the Vedas.

The subject is referred to in the Rig-Veda in the 90th Hymn of the 10th Book. It runs as follows:-

“1. Purusha has a thousand heads, a thousand eyes, a thousand feet, on every side enveloping the earth he overpassed (if) by a space of ten fingers. 2. Purusha himself is this whole (universe), whatever has been and whatever shall be. He is also the lord of immortality since (or, when) by food he expands. 3. Such is his greatness, and Purusha is superior to this. All existences are a quarter of him: and three-fourths of him are that which is immortal in the sky. 4. With three quarters Purusha mounted upwards. A quarter of him was again produced here. He was then diffused everywhere over-things which eat and things which do not eat. 5. From him was born Viraj, and from Viraj, Purusha. When born, he extended beyond the earth, both behind and before. 6. When the Gods performed a sacrifice

This is a consolidated version of Riddle No. 16 & 17 entitled 'Varnashram Dharma'. This title does not find place in the original Table of Contents. Hence this is placed as Appendix. It is difficult to identify which

of the two versions is later. Quotations have been retained in both the texts while the interpretation seems to be modified at various places. This is a 55-page typed copy without having any corrections by the author.—Ed

The Atharva-Veda incorporates the Purusha Sukta. But the order of the verses varies from the order in which they stand in the Rig-Veda. But like the Vajasesniya Sanhita and the Taitterriya Sanhita of the Yajur-Veda the Atharva is not content with the Purusha Sukta. It offers other explanations. They are not as complete and as universal as the Purusha Sukta but they are special to it [f.43] :

"The Brahman was born the first, with ten heads and ten faces. He first drank the soma, he made poison powerless".

"The Gods were afraid of the Rajanya when he was in the womb. They bound him with bonds when he was in the womb. Consequently this Rajanya is born bound. If he were unborn unbound he would go on slaying his enemies. In regard to whatever Rajanya any one desires that he should be born unbound, and should go on slaying his enemies, let him offer for him this Aindra-Birhaspatya oblation. A Rajanya has the character of Indra, and a Brahman is Brihaspati. It is through the Brahman that any one releases the Rajanya from his bond. The golden bond, a gift, manifestly releases from the bond that fetters him." Purusha as the origin of the four Varnas is not the only explanation of the origin of the Varna system that is to be found in the Vedas. There is another explanation. It speaks of people being descended from Manu and is to be found referred to in the following passages [f.44]:

"Prayers and hymns were formerly congregated in the Indra, in the ceremony which Atharvan, father Manu, and Dadhyanch celebrated".

Whatever prosperity or succour father Manu obtained by sacrifices, may we gain all that under thy guidance, o Rudra."

"Those pure remedies of yours, O Maruts, those which are most auspicious, ye vigorous gods, those which are beneficent, those which our father Manu chose, those, and the blessing and succour of Rudra, I desire."

"That ancient friend hath been equipped with the powers of the mighty (gods). Father Manu has prepared hymns to him, as portals of success to the gods." "Sacrifice is Manu, our protecting father." "Do ye (gods) deliver, protect, and intercede for us; do not lead us far away from the paternal path of Manu."

"He (Agni) who abides among the offspring of Manu as the invoker (of the gods), is even the lord of these riches."

"Agni, together with the gods, and the children of Manush, celebrating a multiform sacrifice' with hymns etc."

“Ye gods, Vajas, and Ribhukshans, come to our sacrifice by the path travelled by the gods. that ye, pleasing deities, may institute a sacrifice among these people of Manush on auspicious days.”“The people of Manush praise in the sacrifices Agni the invoker.”^Whenever Agni, lord of the people, kindled, abides gratified among the people of Manush, he repels all Rakshasas.”Let us now turn to the writing called the Brahmanas and take note of what they have to say on this question. The explanation given by the Sathapatha Brahmana is as follows [f.45] :

"(Uttering) 'bhuh'. Prajapati generated this earth. (Uttering) 'bhuvah' he generated the air, and (uttering) 'svah'. he generated the sky. This universe is co-extensive with these worlds. (The fire) is placed with the whole. Saying ' bhuh ', Prajapati generated the Brahman (saying) 'bhuvah' he generated the Kshattra; (and saying) 'svah', he generated the Vis. The fire is placed with the whole. (Saying) 'bhuh', Prajapati generated himself; (saying 'bhuvah' he generated offspring; (saying) 'svah' he generated animals. This world is so much as self, offspring, and animals. (The fire) is placed with the whole.”Besides this there is another explanation to be found in this Brahman [f.46]:

"Brahma (here, according to the commentator, existing in the form of Agni, and representing the Brahman caste) was formerly . this (universe), one only. Being one, it did not develope. It energetically created an excellent form, the Kshattra, viz., those among the gods who are powers (kshattrani), Indra, Varuna, Soma, Rudra, Parjanya, Yama, Mrityu, Issana. Hence nothing is superior to the Kshattra. Therefore the Brahman sits below the Kshattriya at the rajasuya-sacrifice: he confers that glory on the kshattra (the royal power). This. the Brahma, is the source of the Kshattra: Hence, although the king attains, supremacy, he at the end resorts to the Brahma as his source. Whoever destroys him (the Brahman) destroys his own source. He becomes most miserable, as one who has injured a superior. 24. He did not develope. he created the Viz-Viz., those classes of gods who are designated by troops. Vasus, Rudras, Adityas. Visvedevas, Maruts; 25. He did not develope. He created the Sudra class, Pushan. This earth is Pushan: for she nourishes all that exists. 26. He did not develope. He energetically created an excellent form, Justice (Dharma). This is the ruler (kshattra) of the ruler (kshattra). namely Justice. hence nothing is with Purush as the oblation, the spring was its butter, the summer its fuel, and the autumn its (accompanying) offering. 7. This victim, Purush, born in the beginning, they immolated on the sacrificial grass. With him the gods, the Sadhyas, and the rishis sacrificed. 8. From that universal sacrifice were provided curds and butter.

It formed those aerial (creatures) and animals both wild and tame. 9. From the universal sacrifice sprang the rich and saman verses, the metres and the yajush. 10. From it sprang horses, and all animals with two rows of teeth; kine sprang from it; from it goats and sheep. 11. When (the Gods) divided Purusha, into how many parts did they cut him up? What was his mouth? What arms (had he)? What (two objects) are said (to have been) the thighs and feet? 12. The Brahmana was his mouth; the Rajanya was made his arms; the being (called) the Vaisya, he was his thighs; the Sudra sprang from his feet. 13. The moon sprang from his soul (manas), the sun from his eye, Indra and Agni from his mouth, and Vayu from his breath. 14. From his navel arose the air, from his head the sky, from his feet the earth, from his ear the (four) quarters; in this manner (the Gods) formed the worlds. 15. When the Gods, performing sacrifice, bound Purusha as a victim, there were seven sticks (struck up) for it (around the fire), and thrice seven pieces of fuel were made. 16. With sacrifice the Gods performed the sacrifice. These were the earliest rites. These great powers have sought the sky, where are the former Sadhyas, gods”.

This hymn is known by its general name Purusha Sukta and is supposed to embody the official doctrine of Varna and Caste.

The first thing to do is to inquire which of the other Vedas accept the theory of the origin of the Varna system as propounded in the Purusha Sukta of the Rig-Veda. Examining the different Vedas from this point of view the result appears to be very striking.

The Sama-Veda has not incorporated the Purusha Sukta among its hymns. Nor does it give any other explanation of the Varna Dharma.

The Yajur-Veda discloses a very great degree of diversity of opinion on this issue. Taking up the case of the White Yajur-Veda separately from that of the Black Yajur-Veda the position as it emerges from a comparison of its three available Sanhitas stands thus. Of the three Sanhitas the Kathaka Sanhita and Maitreyani Sanhita do not make any reference to the Purusha Sukta of the Rig-Veda nor do they make any attempt to give any other explanation of the Varna system. The Vajასeniya Sanhita is the only Sanhita of the Yajur-Veda which incorporates the Purusha Sukta but not without transposition of the verses. But the Vajასaneyya Sanhita gives a new and original explanation of the Varna system quite different from what is given in the Purusha Sukta [f.47] :

“He lauded with one. Living beings were formed; Prajapati was the ruler. He lauded with three: the Brahman (Brahman) was created: Brahmanaspati was the ruler. He lauded with five; existing things were created: Bhutanampati was the ruler. He lauded with seven; the seven

rishis were created : Dhatri was the ruler. He lauded with nine; the Fathers were created: Aditi was the ruler. He lauded with eleven: the seasons were created: The Artavas were the rulers. He lauded with thirteen: the months were created: the year was the ruler. He lauded with fifteen: the Kshattra (the Kshatriya) was created: Indra was the ruler. He lauded with seventeen: animals were created : Brihaspati was the ruler. He lauded with nineteen : the Sudra and the Arya (Vaisya) were created : day and night were the rulers. He lauded with twenty-one: animals with undivided hoofs were created : Varuna was the ruler. He lauded with twenty-three; small animals were created : Pushan was the ruler. He lauded with twenty-five : wild animals were created : Vayu was the ruler (compare R.V. x. 90, 8). He lauded with twentyseven: heaven and earth separated : Vasus, Rudras, and Adityas separated after them : they were the rulers. He lauded with twentynine; trees were created : Soma was the ruler. He lauded with thirty-one : living beings were created : The first and second halves of the month were the rulers. He lauded with thirty one: existing things were tranquillized; Prajapati Parameshthin was the ruler.”

Turning to the Black Yajur-Veda there is only one Sanhita of it which is available. It is called Taitterriya Sanhita. This Sanhita offers two explanations. The first explanation [f.48] is the same which is given in the Vajaseniyā Sanhita as its own original explanation. The second explanation is its own particular explanation and is not to be found in the Vajaseniyā Sanhita. It reads as follows [f.49] :

“He (the Vratya) became filled with passions thence sprang the Rajanya”.

“Let the king to whose house the Vratya who knows this, comes as a guest, cause him to be respected as superior to himself. So doing he does no injury to his royal rank, or to his realm. From him arose the Brahman (Brahman) and the Kshattra (Kshatriya). They said, ' Into whom shall we enter ', etc.”

The important point is that while the Vajaseniyā Sanhita incorporates the Purusha Sukta from the Rig-Veda the Taitterriya Sanhita altogether omits to take any notice of it whatsoever superior to justice. Therefore the weaker seeks (to overcome) the stronger by justice, as by a king. This justice is truth. In consequence they say of a man who speaks truth, ' he speaks justice; ' or of a man who is uttering justice, 'he speaks truth. ' For this is both of these. 27. This is the Brahma, Kshattra, Viz. and Sudra.

"Through Agni it became Brahma among the gods, the Brahman among men, through the (divine) Kshatriya a (human) Kshatriya, through the (divine) Vaisya a (human) Vaisya, through the (divine) Sudra a (human) Sudra. Wherefore it is in Agni among the gods and in a Brahman among

men, that they seek after an abode.”The Taittiriya Brahmana has the following explanations to offer. First is in the following terms [f.50] :

“This entire (universe) has been created by Brahma. Men say that the Vaisya class was produced from rich-verses. They say that the Yajur-Veda is the womb from which the Kshatriya was born. The Sama-Veda is the source from which the Brahmans sprang. This word the ancients declared to the ancients.

“The second refers only two varnas—only Brahman and Sudra and says [f.51] :

“The Brahman caste-, is sprung from the gods; the Sudra from the Asuras”. The third explains the origin of the Sudras in the following terms [f.52]:

“Let him at his will milk out with a wooden dish. But let not a Sudra milk it out. For this Sudra has sprung from non-existence. They say that that which a Sudra milks out is no oblation. Let not a Sudra milk out the Agnihotra. For they do not purify that. When that passes beyond the filter, then it is an oblation”. The next thing would be to see what explanation the Smritis have to offer for the origin of the Varna system. This is what Manu has to say in his Smriti [f.53] :—

“He (the self-existent) having felt desire, and willing to create various living beings from his own body, first created the waters, and threw into them a seed. 9. That seed became a golden egg, of lustre equal to the sun; in it he himself was born as a Brahma, the parent of all the worlds. 10. The waters are called narah, for they are sprung from Nara; and as they were his first sphere of motion he is therefore called Narayana. II. Produced from the imperceptible eternal, existent and non-existent, cause, they male (purusha) is celebrated in the world as Brahma. 12. After dwelling for a year in the egg, the glorious being, himself, by his own contemplation, split it in twain. That the worlds might be peopled, he caused the Brahman, the Kshatriya, the Vaisya, and the Sudra to issue from his mouth, his arms, his thighs, and his feet. 32. Having divided his own body into two parts, the lord (Brahma) became with the half a male (purusha) and with the half, a female; and in her he created Viraj. 33. Know, o most excellent twice-born men, that I, whom that male, (purusha) Viraj, himself created, am the creator of all this world. 34. Desiring to produce living creatures, I performed very arduous devotion, and first created ten Maharshis (great rishis), lords of living beings, (35) viz. Marichi, Atri, Angiras, Pulastya, Pulaha, Kratu, Prachetas, Vasistha, Bhrigu, and Narada. 36. They, endowed with great energy, created other seven Manus, gods, and abodes of gods, and Maharshis of boundless

might; (37) Yakshas, Rakshases, Pishchas, Gandharvas, Apsaras, Asuras, Nagas, Serpents, great Birds, and the different classes of Pitris; (38) lightnings, thunderbolts, clouds, portentous atmospheric sounds, comets, and various luminaries; (39) Kinnars, apes, fishes, different sorts of birds, cattle, deer, men, beasts with two rows of teeth; (40) small and large reptiles, mouths, lice, flies, fleas, all gadflies, and gnats, and motionless things of different sorts. 41. Thus by my appointment, and by the force of devotion, was all. This world Both Motionless and Moving, created by those great beings, according to the (previous) actions of each creature.”

There is also another view expressed by Manu in his Smriti as to the basic reasons for dividing men into four classes [f.54] :

“I shall now declare succinctly in order the states which the soul reaches by means of each of these qualities. 40. Souls endowed with the Sattva quality attain to godhead; those having the rajas quality become men; whilst those characterized by tamas always become beasts— such is the threefold destination. 43. Elephants, horses, Sudras and contemptible Mlechhas, lions, tigers, and boars form the middle dark condition.... 46. Kings, Kshattriyas, a King's priests (purohitah), and men whose chief occupation is the war of words, compose the middle condition of passion.... 48. Devotees, ascetics, Brahmans, the deities borne on aerial cars, constellations, and Daityas, constitute the lowest condition of goodness. 49. Sacrificing priests, rishis, gods, the vedas, the celestial luminaries, years, the fathers the Sadhyas, form the second condition of goodness. 50. Brahma, the creators, righteousness, the Great one (mahat) the Unapparent One (avyakta) compose the highest condition of goodness.”

It is interesting to compare with these views: those contained in the Ramayana and the Mahabharata.

The Ramayana says that the four Varnas are the offspring of Manu, the daughter of Daksha and the wife of Kasyappa [f.55].

"Listen while I declare to you from the commencement all the Prajapatis (lord of creatures) who came into existence in the earliest time. Kardama was the first, then Vokrita, Sessa, Samsraya, the energetic Bahuputra, Sthanu, Marichi, Atri, the strong Kratu, Pulastya, Angiras, Prachetas, Pulaha, Daksha, then Vivasvat, Arishtanemi, and the glorious Kasyapa, who was the last. The Prajapati Daksha is famed to have had sixty daughters. Of these Kasyapa took in marriage eight elegant maidens, Aditi, Diti, Danu, Kalaka, Tamra, Krodhavasa, Manu and Anala. Kasyapa pleased, then to these maids, ' ye shall bring forth sons like to me, preserves of the three worlds '. Aditi, Diti, Danu and Kalaka assented; but the others did not agree. Thirty-three gods were born by Aditi, the

Adityas, Vasus, Rudras, and the two Asvins. Manu (wife) of Kasyapa, produced men, Brahmans, Kshatriyas, Vaisyas, and Sudras. ' Brahmans were born from the mouth, Kshatriyas from the breast, Vaisyas from the thighs, and Sudras from the feet, ' so says the Veda. Anala gave birth to all trees with pure fruits."The Mahabharata gives the following explanation [f.56] :”Born all with splendour, like that of great rishis, the ten sons of Prachetas are reputed to have been virtuous and holy; and by them the glorious beings were formerly burnt up by fire springing from their mouths. From them was born Daksha Prachetas, and from Daksha, the Parent of the world (were produced), these creatures. Cohabiting with Virini, the Muni Daksha begot a thousand sons like himself, famous for their religious observances, to whom Narada taught the doctrine of final liberation, the unequalled knowledge of the Sankhya. Desirous of creating offspring, the Prajapati Daksha next formed fifty daughters of whom he gave ten to Dharma, thirteen to Kasyapa, and twenty-seven, devoted to the regulation of time, to Indu (Soma)..... On Dakshayani, the most excellent of his thirteen wives, Kasyapa, the son of Marichi, begot the Adityas, headed by Indra and distinguished by their energy, and also Vivasvat. To Vivasvat was born a son, the mighty Yama Vaivasvata. To Martanda (i.e. Vivasvat, the sun) was born the wise and mighty Manu, and also the renowned Yama, his (Manu's) younger brother. Righteous was this wise Manu, on whom a race was founded. Hence this (family) of men became known as the race of Manu. Brahmans, Kshatriyas, and other men sprang from this Manu. From him o king, came the Brahman conjoined with the Kshatriya.”

In another place the Mahabharata gives the origin as it is given in the Purusha Sukta:

"The king should appoint to be his royal priest a man who will protect the good, and restrain the wicked. On this subject they relate this following ancient story of a conversation between Pururavas the son of I lla, and Matarisvan (Vayu, the Windgod). Pururavas said : You must explain to me whence the Brahman, and whence the ; (other) three castes were produced, and whence the superiority (of the first) arises. Matarisvan answered : the Brahman was created from Brahman's mouth, the Kshatriya from his arms, the Vaisya from his thighs, while for the purpose of serving these three castes was produced the fourth class, the Sudra, fashioned from his feet. The Brahman, as soon as born. becomes the lord of all beings upon the earth, for the purpose of protecting the treasure of righteousness. Then (the creator) constituted Kshatriya the controller of the earth, a second Yama to bear the rod, for the satisfaction

of the people. And it was Brahma's ordinance that the Vaisya should sustain these three classes with money and grain, and that the Sudra should serve them. The son of Illa then enquired : 'Tell me, Vayu. to whom the earth, with its wealth, rightfully belongs, to the Brahman or the Kshatriyya? Vayu replied : All this, whatever exists in the world, is the Brahman's property by right of primogeniture; this is known to those who are skilled in the laws of duty. It is his own which the Brahman eats, puts on. and bestows. He is the chief of all the castes, the first-born and the most excellent. Just as a woman when she has lost her (first) husband, takes her brother in law for a second: so the Brahman is the first resource in calamity; afterwards another may arise". There is a third view maintained in the Shantiparva of Mahabharata [f.57] :—

"Bhrigu replied: 'Brahma thus formerly created the Prajapatis, Brahmanic, penetrated by his own energy, and in splendour equalling the sun and fire. The lord then formed truth, righteousness austere fervour, and the eternal veda (or sacred science), Virtuous practice, and purity for (the attainment of) heaven. He also formed the gods, Danavas, Gandharvas. Daityas, Asuras, Mahoragas, Yakshas, Rakshasas, Nagas, Pisachas, and men, Brahmans, Kshatriyas, Vaisyas, and Sudras, as well as all other classes (varnah) of beings. The colour (varna) of the Brahmans was white; that of the Kshatriyas red; that of the Vaishyas yellow: and that of the Sudra black."Bharadvaja here rejoins: 'If the caste (varna) of the four classes is distinguished by their colour (varna). then a confusion of all the castes is observable. Desire, anger, fear, cupidity, grief, apprehension, hunger, fatigue, prevail over us all, by what then, is caste discriminated? Sweat, urine, excrement, phlegm, bile and blood (are common to all) the bodies of all decay; by what then is caste discriminated? There are innumerable kinds of things moving and stationary, how is the class (varna) of these various objects to be determined?"

Bhrigu replies: 'There is no difference of castes:"In the same Shantiparva there is a fourth theory [f.58] :

"Bharadvaja again enquires: ' What is that in virtue of which a man is a Brahman, a Kshatriya, a Vaisya, or a Sudra; tell me, o, most eloquent Brahman rishi '. Bhrigu replies: ' He who is pure, consecrated by the natal and other ceremonies, who has completely studied the Veda, lives in the practice of the six ceremonies, performs perfectly the rites of purification, who eats the remains of oblations, is attached to his religious teacher, is constant in religious observances, and devoted to truth is called a Brahman. He in whom are seen truth, liberality, inoffensiveness,

harmlessness, modesty compassion, and austere fervour,—is declared to be a Brahman. He who practises the duty arising out of the kingly office, who is addicted to the study of the Veda, and who delights in giving and receiving, is called a Kshatriya. He who readily occupies himself with cattle, who is devoted to agriculture, and acquisition, who is pure, and is perfect in the study of the Veda,— is denominated a Vaisya. He who is habitually addicted to all kinds of food, performs all kinds of work, who is unclean, who has abandoned the Veda, and does not practise pure observances,— is traditionally called a Sudra. And this (which I have stated) is the mark of a Sudra. and it is not found in a Brahman: (such) a Sudra will remain a Sudra, while the Brahman (who so acts) will be no Brahman".

Let us inquire what the Puranas have to say on the origin of the Varna System.

To ' begin with the Vishnu Purana. There are two theories propounded in the Vishnu Purana on the origin of the Chaturvarna.

According to one ascribes the origin to Manu [f.59] :

" Before the mundane egg existed the divine Brahma Hiranyagarbha, the eternal originator of all worlds, who was the form of essence of Brahma, who consists of the divine Vishnu, who again is identical with Rik, Yajush, Saman and Atharva Vedas. From Brahma's right thumb was born the Prajapati Daksha; Daksha had a daughter Aditi; from her was born Vivasvat; and from him sprang Manu. Manu had sons called Ikshvaku, Nriga, Dhrishta, Saryati, Narishanta, Puramsu, Nabhagandishta, Karusha, and Prishadhra."

"From Karusha the Karushas, Kshatriyas of great power, were descended."

"Nabhaga, the son of Nedishta, became a Vaisya". Of this explanation ascribing the origin to Manu there is another and a different version in the Vishnu Purana:

"Desirous of a son, Manu sacrificed to Mitra and Varuna; but in consequence of a wrong invocation through an irregularity of the hotri-priest, a daughter called Illa was born. Then through the favour of Mitra and Varuna she became to Manu a son called Sudyumna. But being again changed into a female through the wrath of Isvara (Mahadeva) she wandered near the hermitage of Budha the son of Soma (the Moon); who becoming enamoured of her had by her a son called Pururavas. After his birth, the god who is formed of sacrifice, of the Rik, Yajush, Saman, and Atharva-Vedas, of all things, of mind, of nothing, he who is in the form of the sacrificial Male, was worshipped by the rishis of infinite splendour

who desired that Sudyumn should recover his manhood. Through the favour of this god Ila became again Sudhumna.”

"According to the Vishnu Purana, Atri was the son of Brahma, and the father of Soma (the moon), whom Brahma installed as the sovereign of plants, Brahmans and stars. After celebrating the rajasuya sacrifice, Soma became intoxicated with pride, and carried off Tara (Star) the wife of Brihaspati the preceptor of the gods, whom, although admonished and entreated by Brahma, the gods, and rishis, he refused to restore, Soma's part was taken by Usanas; and Rudra, who had studied under Angiras, aided Brihaspati. A fierce conflict ensued between the two sides, supported respectively by the gods and the Daityas, etc. Brahma interposed, and compelled Soma to restore Tara to her husband. She had, however, in the meantime become pregnant, and bore a son Budha (the planet Mercury), of whom, when strongly urged, she acknowledged Soma to be the father. Pururavas, as has been already mentioned, was the son of this Budha by Illa, the daughter of Manu. The loves of Pururavas and the Apsara Urvashi are related in the Satapatha Brahmana, xi. 5, I, I in the Vishnu Purana, iv. 6, 19 ff; in the Bhagavata Purana, ix, 14; and in the Harivamsa, section 26. The Mahabharata, Adip. sect. 75, alludes to Pururavas as having been engaged in a contest with the Brahmanas. This passage will be quoted hereafter. According to the Vishnu Purana, iv, 7, I, Pururavas had six sons, of whom the eldest was Ayus. Ayus had five sons: Nahusha, Kshatra-vriddha, Rambha, Raji, and Anenas." "Kshattravridha had a son Sunahotra, who had three sons, Kasa, Lesa, and Gritsamada. From the last sprang Saunaka, who progenited the system of four castes. Kasa had a son Kasiraja, of whom again Dirghatamas was the son as Dhanvantri was Dirghatamas." The second ascribes the origin to Brahma as the following extract from the Vishnu Purana shows [f.60] :

“Maitreya [f.61] says: You have described to me the Arvaksrotas, or human creation; declare to me, o Brahman, in detail the manner in which Brahma formed it. Tell me how and with what qualities, he created the castes, and what are traditionally reputed to be the functions of the Brahmans and others. Parasara replies: 3. When, true to his design, Brahma became desirous to create the world, creatures in whom goodness (sattva) prevailed sprang from his mouth; 4. Others in whom passion (rajas) predominated came from his breast; others in whom both passion and darkness (tamas) were strong, proceeded from his thigh; (5) others he created from his feet, whose chief characteristic was darkness. Of these was composed the system of four castes, Brahmans, Kshatriyyas, Vaisyas, and Sudras, who had respectively issued from his mouth, breast, thighs, and

feet. 6. Brahma formed this entire fourfold institution of classes for the performance of sacrifices, the gods nourish mankind by discharging rain. Sacrifices, the causes of prosperity, (8) are constantly celebrated by virtuous men, devoted to their duties, who avoid wrong observances, and walk in the right path. 9. Men, in consequence of their humanity, obtain heaven and final liberation; and they proceed to the world which they desire". In the Harivamsa are to be found two theories. It upholds the theory of the origin of the Varnas as being born from one of the descendents of Manu as the stock of descent than the one mentioned by the Vishnu Purana [f.62] :

"The son of Gritsamada was Sunaka, from whom sprang the Saunakas, Brahmanas, Kshatriyas, Vaisyas, and Sudras."

"Vitatha was the father of five sons, Suhotra, Suhotri, Gaya. Garga, and the great Kapila. Suhotra had two sons, the exalted Kasaka. and King Gritsamati. The sons of the latter were Brahmans, Kshatriyas, and Vaisyas."

The other version speaks of their being formed by Vishnu who sprang from Brahma and had become Prajapati Daksha and is as follows [f.63] :

"Janmejaya [f.64] says: I have heard, o Brahman the (description of the) Brahma Yuga, the first of the ages. I desire also to be accurately informed both summarily, and in detail, about the age of the Kshatriyas, with its numerous observances, illustrated as it was by sacrifice, and described, as it has been by men skilled in the art of narration. Vaisamapayana replied: I shall describe to you that age revered for its sacrifices and distinguished for its various works of liberality, as well as for its people. Those Munis of the size of a thumb had been absorbed by the Sun's rays. Following a rule of life leading to final emancipation, practising unobstructed ceremonies. both in action and in abstinence from action constantly intent upon Brahma, united to Brahman as the highest object, Brahmans glorious and sanctified in their conduct, leading a life of continence, disciplined by the knowledge of Brahman, Brahmans complete in their observances, perfect in knowledge, and contemplative, when at the end of a thousand yugas, their majesty was full, these Munis became involved in the dissolution of the world. Then Vishnu sprung from Brahma, removed beyond the sphere of sense, absorbed in contemplation, became the Prajapati Daksha, and formed numerous creatures. The Brahmans, beautiful (or, dear to Soma), were formed from an imperishable (akshara): the Kshatriyas from a perishable (kshara), element: the Vaisyas from alteration: the Sudras from a modification of smoke. While Vishnu was thinking upon the castes (varna) Brahmans were formed with white, red,

yellow, and blue colours (varanaih). Hence in the world men have become divided into castes, being of four descriptions, Brahmans, Kshatriyas, Vaisyas, and Sudras, one in form, distinct in their duties,"two-footed, very wonderful, full of energy(?), skilled in expedients in all their occupations. Rites are declared to be prescribed by the Vedas for the three (highest) castes. By that contemplation practised by the being sprung from Brahma— by that practised in his character as Vishnu—, the Lord Prachetasa (Daksha), i.e. Vishnu the great contemplator (yogin), passed through his wisdom and energy from that state of meditation into the sphere of works. Next the Sudras, produced from extinction, are destitute of rites. Hence they are not entitled to be admitted to the purificatory ceremonies, nor does sacred science belong to them. Just as the cloud of smoke which rises from the fire on the friction of the fuel, and is dissipated, is of no service in the sacrificial rite, so too the Sudras wandering over the earth, are altogether (useless for purposes of sacrifice) owing to their birth, their mode of life devoid of purity and their want of the observances prescribed in the Veda."Lastly the Bhagwat Purana¹:

"At the end of many thousand years the living soul which resides in time, action, and natural quality gave life to that lifeless egg floating on the water. Purusha then having burst the egg, issued from it was a thousand thighs, feet, arms, eyes, faces and heads. With his members the sages fashion the worlds, the seven lower worlds with his loins etc., and the seven upper worlds with his groin, etc. The Brahman (was) the mouth of Purusha, the Kshatriya his arms, the Vaishya was born from the thighs, the Sudra from the feet of the divine being. The earth was formed from his feet, the air from his navel; the heaven by the heart, and the mahaloka by the breast of the mighty one". The Vayu Purana takes up the theory of Manu but says:

"The son of Gritsamada was Sunaka, from whom sprang Saunaka. In his family were born Brahamanas, Kshatriyas, Vaisyas, and Sudras, twice-born men with various functions".

What does this survey show? If it shows anything it show's what a chaotic state has been created by the Brahmans in trying to explain the origin of the Varna system. There is no uniformity or consistency in the explanations they have offered. One and the same authority gives a variety of explanations. One and the same authority gives explanations some of which are mythical, some of which are mystical and rationalistic all intended to serve the same purpose namely to explain the origin of the Varna system.

The Vedas attempt to explain the Varnas as having arisen from Purusha,

from Manu, from Prajapati, from Vratya and from Soma.

The Brahmanas show a marked divergence from the Vedas. They do not acknowledge Purusha, Manu, Vratya or Soma as the originators of the four varnas. They vacillate between Prajapati and Brahma [f.65] which is a new importation. The Taittiriya Brahmana sports with an altogether new theory. It speaks of Brahmins born of Gods and Sudras from Asuras.

The Manu Smriti offers two explanation mythological and rational. •The mythological explanations ascribes the origin to Brahma and the rational ascribes it to the constitutional make up of the individual. The Ramayana, the Mahabharata and the Puranas seem to be in support of the theory of Manu as the progenitor of the four Vamas. In the handling of the theme of Manu they have made a complete mess of him. In the Ramayana this Manu is a female a daughter of Daksha and wife of Kasyappa. In the Mahabharata Manu is a male and not a female. He is the son of Vivasvat who is the son of Kasyappa. In the Mahabharata the wife of Kasyappa is not Manu but is Dakshayani who is also said to be the daughter of Daksha. The Puranas while expounding the theory of Manu as the originator of the four vamas have introduced into it many divergent elements. The Vishnu Purana instead of ascribing the origin to Manu proceeds to ascribe it to his sons. But in hurry explains the origin of the two Vamas only, namely, Brahmins and Sudras from two of Manu's eight sons and forgets to give an explanation of the two other vamas. In another place the same Vishnu Purana expounds another theory by which origin of the four Vamas through Manu in the female line of his daughter Ila. According to the second theory Ila married Pururavas who had six sons the eldest of whom was Ayus. From Ayus to Kshatravidha, from him Sunahotra, from him Gritsamada. The four vamas were originated from Gritsamada. The Vayu Purana does not admit this. It says that the four vamas were born from Saunaka the grandson of Gritsamada. The Harivamsa in one place agrees with the Vishnu Purana that the progenitor was Gritsamada with this difference that the Sudras did not spring but from whom gives no explanation. In another place it says that the four vamas sprang from Sunaka the son of Gritsamada thus differing from itself, from the Vishnu Purana and from the Vayu Purana.

These explanations are like effusions of the imbeciles. They show how hard the Brahmins were put to for the defence of the Varna system. The question is why were the Brahmins not able to give a consistent and uniform unimpeachable, convincing and rational explanation of the Varna system of which they have been such strong protagonists?

Of these numerous explanations there are two on which the Varna

system is defended by the Brahmins of today.

The first is the origin of the four Varnas from Purusha the theory that is propounded in the Purusha Sukta of the Rig-Veda. It is not a historical explanation. It would be something if it were mythological for mythology is history even if it is history in hyperbole. But it is not. The explanation is purely mystic. It is a fantastic dream of a troubled mind. That is why it was never regarded as the explanation and that is why there were so many other rival explanations. That it was treated with scant courtesy even by the Vedic writers is obvious from two circumstances. In the first place it occurs in the miscellaneous portion of the Rig-Veda. In the second place it does not occur in the Kathak and Maitreyani Sanhita of the White Yajur-Veda and the Taittiriya Sanhitas of the Black Yajur-Veda do not adopt it. The Sam-Veda incorporates only 5 Mantras of the Purusha Sukta from the Rig-Veda and what is important is that in adopting these five Mantras omit those which speak of the four Varnas springing from the four parts of the body of the Purusha. It is of course a very late composition and has been interpolated after all the four Vedas had taken their present shape. But apart from that it has all the marks showing its authors were not very sure of their explanation carrying conviction. It is probably an allegory, figurative narration which the Brahmins attempted to convert into a literal statement of hard fact. It does not solve the riddle. On the contrary it creates a riddle—which is, why were the Brahmins interested in supporting the theory of Chaturvarna.

The rational explanation has behind it the authority of the Bhagwat Geeta. Krishna, the God of the Hindus, explains that he created the system of Chaturvarna and propounds the theory that it is a system of difference of Guna: innate virtue. This theory of difference of Guna is derived from the Sankhya Philosophy of Kapila. Krishna offers this explanation of Chaturvarna in a commanding spirit as though it was incontrovertible. The Sankhya Philosophy no doubt asserts as a fundamental proposition that matter has got three Gunas-Raj, Tama and Satva. Matter is not inert. It is instable equilibrium when all the three Gunas are coequal in their power. Matter becomes dynamic when the equilibrium is disturbed when one Guna becomes masterful over others. Krishna was of course very clever in seeking to give scientific explanation of the Varna system by applying the Sankhya Theory of Guna dharma. But in doing so Krishna has really made a fool of himself. He did not realize that there are four Varnas and three Gunas and whatever ingenuity he might claim to have he could not account for the four Varnas with a theory which did not require more than three Gunas. Here again what appears to be a rational explanation is an

absurd explanation. It does not solve the riddle. It creates one. Why were the Brahmins fighting so hard to justify the Chaturvarna?

The Ashram Dharma divides the life of an individual into four stages (1) Brahmcharya, (2) Grahasthashram, (3) Vanaprastha and (4) Sannyas. The state of Brahmacharya has both a de jure and de facto connotation. Its de facto connotation is that it means an unmarried state of life. Its de jure connotation means the stage of study under a teacher. Grahasthashram is the stage of a householder a stage of married family life. The stage of Sannyas is a stage of renunciation of civic rights and responsibilities. It is a stage of civic death. The stage of Vanaprastha is in between Grahasthashram and Sannyas. It is a stage in which one belongs to society but is bound to live away from society. As the name implies it prescribes dwelling in forest.

The Hindus believe that this institution of Ashram Dharma is as old as that of the Varna Dharma. They call the two by a joint name of Varnashram Dharma as though they were one and integral, and the two together form the steelframe of the Hindu Society.

To begin with it would be better to have a full understanding of the Ashram Dharma before inquiring into its origin and its purpose and its peculiarities. The best source for an exposition of the Ashram system is the Manu Smriti from which the following relevant extracts are reproduced:

Ch. 11-36. In the eighth year after conception, one should perform the initiation (upanayana) of a Brahmana, in the eleventh after conception (that) of a Kshatriya, but in the twelfth that of a Vaisya.

Ch. 11-168. A twice-born man who, not having studied the Veda, applies himself to other (and wordly study), soon falls, even while living, to the condition of a Sudra and his descendants (after him).

Ch. Ill-1. The vow of the three Vedas under a teacher must be kept for thirty-six years or for half that time, or for a quarter, or until the (student) has perfectly learnt them.

Ch. Ill-2. Who has studied in due order the three Vedas, or two, or even one only, without breaking the (rule of) studentship, shall enter the order of householder.

Ch. VI-8. The student, the householder, the hermit, and the ascetic, these (constitute) four separate orders, which all spring from (the order of) householders.

Ch. VI-88. But all (or) even (any of) these orders, assumed successively in accordance with the Institutes (of the sacred law). lead the Brahmana who acts by the preceding (rules) to the highest state.

Ch. VI-89. And in accordance with the precepts of the Veda and of the

Smriti. the housekeeper is declared to be superior to all of them, for he supports the other three.

Ch. VI-1. A twice-born Snataka, who has thus lived according to the law in the order of householders, may, taking a firm resolution and keeping his organs in subjection, dwell in the forest, duly (observing the rules given below).

Ch. VI-2. When a householder sees his (skin) wrinkled and (his hair) white, and the sons of his sons, then he may resort to the forest.

Ch. VI-33. But having thus passed the third part of (a man's natural term of) life in the forest, he may live as an ascetic during the fourth part of his existence, after abandoning all attachment to worldly objects.

Ch. VI-34. He who after passing from order to order, after offering sacrifices and subduing his senses, becomes, tired with giving alms and offerings of food, an ascetic, gains bliss after death.

Ch. VI-35. When he has paid the three debts, let him apply his mind to (the attainment of) final liberation; he who seeks it without having paid (his debts) sinks downwards.

Ch. VI-36. Having studied the Vedas in accordance with the rule, having begot sons according to the sacred law, and having offered sacrifices according to his ability, he may direct his mind to (the attainment of) final liberation.

Ch. VI-37. A twice-born man who seeks final liberation, without having studied the Vedas, without having begotten sons and without having offered sacrifices, sinks downwards."For these rules it is clear that according to Manu there are three features of the Ashram Dharma. First is that it is not open to Shudras and Women. The second is Brahmacharya which is compulsory, so is Grahasthashram. Vanaprastha and Sannyas are not compulsory. The third is that one must pass from one stage to another in the order in which they stand namely first Brahmacharya, then Grahasthashram, then Vanaprastha and lastly Sannyas. No one can omit one and enter the next stage.

Judging what Manu says in the light of history there are several questions which arise. Referring to the Vedas the theory of stages in life is quite unknown. The Vedas speak of Brahmachari. But there is nothing to show that Brahmacharya was regarded as an inescapable stage in life. There is reference to ' Yatis ' in the Rig-Veda. That again was not regarded as a stage in life. Indeed unlike the Sannyasi the Yati in the Rig-Vedic times is a hated institution. In fact there are many hymns in the Rig-Veda where Indra is spoken of as having thrown the Yatis to the wolves. Why did the Brahmins formulate this theory of the four Ashramas? This is the first

riddle about the Ashram Dharma.

The second riddle relates to the order of sequence among the four Ashramas. Now there is no doubt that there was a time when it was open to a Brahmachari to enter any of the three Ashrams. He may become a Grahasthashrami or he may at once become a Sannyasi without becoming a Grahasthashrami. Compare what the authors of the Dharma Sutras have to say on the point. Vashishta Dharma Sutra says [f.66]:

"There are four orders, viz. (that of) the student, (that of) the householder, (that of) the hermit, and (that of) the ascetic."

"A man who has studied one, two, or three Vedas without violating the rules of studentship, may enter any of these (orders), whichever he pleases." Gautama Dharma Sutra says [f.67]:

"Some (declare, that) he (who has studied the Veda) may make his choice (which) among the orders (he is going to enter)."

"(The four orders are, that of) the student (that of) the householder, (that of) the ascetic (Bhikshu), (and that of) the hermit in the woods (vaikhanasa).

Why did Manu remove the option and make the married state an obligatory state, why did he make the married state a condition precedent to the stage of hermit and the stage of hermit a condition precedent to the stage of a Sannyasi?

If the four stages of life have been devised to serve some important end it is difficult to understand why the two classes Shudras and women were excluded? The Shudras and women can only be householders according to the scheme of Manu. Why can they not be Brahmachari, Vanaprasthi or Sannyasi? What harm can there be either to them or to society if the Ashram Dharma was open to them? There are other riddles about the system of Ashram Dharma.

First relates to the distinctions which Manu makes among the Brahmacharis.'

Ch. 11-41.. Let students according to the order (of their castes)., wear (as upper dresses) the skins of black antelopes, spotted deer, and he-goats, and (lower garments) made of a hemp, flax or wool. [f.68]'

Ch. 11-42. The girdle of a Brahmana shall consist of a triple cord of Munga grass, smooth and soft; (that) of a Kshatriya, of a bowstring, made of Murva fibres; (that) of a Vaisya, of hempen threads.

Ch. 11-43. If Munga grass (and so forth) be not procurable, (the girdles) may be made of Kusa, Asmantaka, and Balbaga (fibres), with a single threefold knot, or with three or five (knots according to the custom of the family).

Ch. 11-44. The sacrificial string of a Brahmana shall be made of cotton, (shall be) twisted to the right, (and consist) of three threads, that of a Kshatriya of hempen threads, (and) that of a Vaisya of woolen threads.

Ch. 11-45. A Brahmana shall (carry), according to the sacred law, a staff of Bilva or Palasa a Kshatriya, or Vata or Khadira; (and) a Vaisya, of Pilu or Udumbara.

Ch. 11-46. The staff of a Brahmana shall be made of such length as to reach the end of his hair: that of a Kshatriya, to reach his forehead: (and) that of a Vaisya, to reach (the tip of his) nose.

Ch. 11-47. Let all the staves be straight, without a blemish, handsome to look at, not likely to terrify men, with their bark perfect, unhurt by fire.

Ch. 11-48. Having taken a staff according to his choice, having worshipped the sun and walked round the fire, turning his right hand towards it, (the student) should beg alms according to the prescribed rule.

Ch. 11-49. An initiated Brahmana should beg, beginning (his request with the word) lady (bhavati); a Kshatriya, placing (the word) Lady in the middle, but a Vaisya placing it at the end (of the formula). The Brahmacharis all belong to the same class, namely they are twiceborn. Why should it be necessary to make a distinction in the material of their upper garment? Why should it be necessary to make a distinction in the material of their sacred thread? Why should it be necessary to make a distinction in their staves? Why should it be necessary to make a distinction in the syntax of the formula for begging alms? Why should a Brahman Brahmachari say "Bhagvati Bhikshyam Dehi"? Why should a Kshatriya Brahmachari say "Bhikshyam Bhavati Dehi"? Why should a Vaishya Brahmachari say "Bhikshyam dehi bhavati"?

The Ashram Dharma is a peculiar institution of the Hindus and they are very proud of it. It is true that it has no parallel anywhere. But it is equally true that it is without any merit. Compulsory Brahmacharya appears very attractive since it has the look of compulsory education for children. It was certainly not universal. Shudras and women were excluded from it. Having regard to the fact that the Shudras and women form nearly 9/10ths of the Hindu Society it is obvious that the scheme was the result of cunningness rather than wisdom. It certainly was tainted by discrimination against the masses. It was scheme for the education of the governing classes. Compulsory marriage to say the least is a most stupid rule that can be imagined. To compel every one to marry irrespective of money or health is to open the road to ruination both for the individual and the nation unless it is accompanied by a scheme whereby the state undertakes to guarantee subsistence to everybody. The most non-sensical stages are those of

Vanaprastha and the Sannyasi. Let me quote the rules regarding these two. The following is the code prescribed by Manu for the Vanaprastha [f.69] :

Ch. VI-3. Abandoning all food raised by cultivation, and all his belongings, he may depart into the forest, either committing his wife to his sons, or accompanied by her.

Ch. VI-4. Taking with him the sacred fire and the implements required for domestic (sacrifices) he may go forth from the village into the forest and reside there, duly controlling his senses.

Ch. VI-5. Let him offer those five great sacrifices according to the rule, with various kinds of pure food fit for ascetics, or with herbs, roots and fruit.

Ch. VI-6. Let him wear a skin or a tattered garment: let him bathe in the evening or in the morning and let him always wear (his hair in) braids, the hair on his body, his beard, and his nails (being unclipped).

Ch. VI-7. Let him perform the Bali-offering with such food as he eats, and give alms according to his ability: let him honour those who come to his hermitage with alms consisting of water roots and fruit.

Ch. VI-8. Let him be always industrious in privately reciting the Veda: let him be patient of hardships, friendly (towards all), of collected mind, ever liberal and never a receiver of gifts, and compassionate towards all living creatures.

Ch. VI-9. Let him offer, according to the law, the Agni-hotra with three sacred fires, never omitting the new-moon and full-moon sacrifices at the proper time.

Ch. VI-10. Let him also offer the Nakshatreshti, the Agrayana, and the Katurmasya (sacrifices), as well as the Turayana and likewise the Dakshayana, in due order.

Ch. VI-11. With pure grains, fit for ascetics, which grow in spring and in autumn, and which he himself has collected, let him severally prepare the sacrificial cakes (purodasa) and the boiled messes (karu), as the law directs.

Ch. VI-12. Having offered those most pure sacrificial viands, consisting of the produce of the forest, he may use the remainder for himself, (mixed with) salt prepared by himself.

Ch. VI-13. Let him eat vegetables that grow on dry land or in water, flowers, roots and fruits, the productions of pure trees, and oils extracted from forest fruits.

Ch. VI-14. Let him avoid honey, flesh and mushrooms growing on the ground (for elsewhere, the vegetables called) Bhustrina, and Sigruka, and the Sleshmantaka fruit.

Ch. VI-15. Let him throw away in the month of Asvina the food of

ascetics, which he formerly collected, likewise his worn-out clothes and his vegetables, roots, and fruits.

Ch. VI-16. Let him not eat anything (grown on) ploughed (land), though it may have been thrown away by somebody, nor roots and fruit grown in a village, though (he may be) tormented (by hunger).

Ch. VI-17. He may eat either what has been cooked with fire, or what has been ripened by time; he either may use a stone for grinding, or his teeth may be his mortar.

Ch. VI-18. He may either at once (after his daily meal) cleanse (his vessel for collecting food), or lay up a store sufficient for a month, or gather what suffices for six months or for a year.

Ch. VI-19. Having collected food according to his ability he may either eat at night (only) or in the day-time (only), or at every fourth meal-time, or at every eighth.

Ch. VI-20. Or he may live according to the rule of the lunar penance (Kandrayana, daily diminishing the quantity of his food) in the bright (half of the month) and (increasing it) in the dark (half); or he may eat on the last days of each fortnight, once (a day only), boiled barley-gruel.

Ch. VI-21. Or he may constantly subsist on flowers, roots, and fruit alone, which have been ripened by time and have fallen spontaneously, following the rule of the (Institutes) of Vikhanas. Ch. VI-22. Let him either roll about on the ground, or stand during the day on tiptoe, (or) let him alternately stand and sit down; going at the Savanas (at sunrise, at midday, and at sunset) to water in the forest (in order to bathe).

Ch. VI-23. In summer let him expose himself to the heat of five fires, during the rainy season live under the open sky, and in winter be dressed in wet clothes, (thus) gradually increasing (the rigour of) his austerities. ,

Ch. VI-24. When he bathes at the three Savanas (sunrise, midday, and sunset), let him offer libations of water to the manes and the gods and practising harsher and harsher austerities, let him dry up his bodily frame.

Ch. VI-25. Having repositied the three sacred fires in himself, according to the prescribed rule, let him live without a Fire, without a house, wholly silent, subsisting on roots and fruit.

Ch. VI-26. Making no effort (to procure) things that give pleasure, chaste, sleeping on the bare ground, not caring for any shelter, dwelling at the roots of trees.

Ch. V 1-27. From Brahmanas (who live as) ascetics let him receive alms, (barely sufficient) to support life, or from other householders of the twiceborn (castes) who reside in the forest.

Ch: VI-28. Or (the hermit who dwells in the forest may bring food) from

a village, receiving it either in a hollow dish (of leaves), in (his naked) hand, or in a broken earthen dish, and may eat eight mouthfuls.

Ch. VI-29. These and other observances must a Brahmana who dwells in the forest diligently practise, and in order to attain complete (union with) the (supreme) soul, (he must study) the various sacred texts contained in the Upanishadas. The rules for a Sannyasi prescribed in the ManuSmriti are as follows [f.70] :

Ch. V 1-38. Having performed the Ishti, sacred to the Lord of creatures (prajapati) where (he gives) all his property as the sacrificial fee, having repositied the sacred fires in himself, a Brahmana may depart from his house (as an ascetic).

Ch. V 1-39. Worlds, radiant in brilliancy, become (the portion) of him who recites (the texts regarding) Brahman and departs from his house (as an ascetic), after giving a promise of safety to all created beings.

Ch. VI-40. For that twice-born man, by whom not the smallest danger even is caused to created beings, there will be no danger from any (quarter) after he is freed from his body.

Ch. V 1-41. Departing from his house fully provided with the means of purification (Pavitra), let him wander about absolutely silent, and caring nothing for enjoyments that may be offered (to him).

Ch. VI-42. Let him always wander alone, without any companion, in order to attain (final liberation), fully understanding that the solitary (man, who) neither forsakes nor is forsaken, gains his end [f.71] .

Ch. VI-43. He shall neither possess a fire, nor a dwelling, he may go to a village for his food, (he shall be) indiffetent to everything, firm of purpose, meditating (and) concentrating his mind on Brahman.

Ch. VI-44. A potsherd (instead of an alms-bowl), the roots of trees (for a dwelling), coarse worn-out garments, life in solitude and indifference towards, everything, are the marks of one who has attained liberation.

Ch. VI-45. Let him not desire to die, let him not desire to live, let him wait for (his appointed) time, as a servant (waits) for the payment of his wages.

Ch. VI-49. Delighting in what refers to the Soul, sitting (in the postures prescribed by the Yoga), independent (of external help) entirely abstaining from sensual enjoyments, with himself for his only companion, he shall live in this world, desiring the bliss (of final liberation).

Ch. VI-50. Neither by (explaining) prodigies and omens, nor by skill in astrology and palmistry, nor by giving advice and by the exposition (of the Sastras), let him ever seek to obtain alms.

Ch. VI-51. Let him not (in order to beg) go near a house filled with

hermits, Brahmanas, birds, dogs, or other mendicants.

Ch. VI-52. His hair, nails, and beards being clipped, carrying an alms bowl, a staff, and a water-pot let him continually wander about controlling himself and not hurting any creature.

Ch. VI-53. His vessels shall not be made of metal, they shall be free from fractures, it is ordained that they shall be cleansed with water, like (the cups, called) Kamasa, at a sacrifice.

Ch. VI-54. A gourd, a wooden bowl, an earthen (dish), or one made of split cane, Manu, the son of Svayambhu, has declared (to be) vessels (suitable) for an ascetic.

Ch. VI-55. Let him go to beg once (a day), let him not be eager to obtain a large quantity (of alms); for an ascetic who eagerly seeks. alms, attaches himself also to sensual enjoyments.

Ch. VI-56. When no smoke ascends from (the kitchen), when the pestle lies motionless, when the embers have been extinguished, when the people have finished their meal, when the remnants in the dishes have been removed, let the ascetic always go to beg.

Ch. VI-57. Let him not be sorry when he obtains nothing, nor rejoice when he obtains (something), let him (accept) so much only as will sustain life, let him not care about the (quality of his) utensils. Ch. VI-58. Let him disdain all (food) obtained in consequence of humble salutations, (for) even an ascetic who has attained final liberation, is bound (with the fetters of the Samsara) by accepting (food given) in consequence of humble salutations.

Ch. VI-59. By eating little, and by standing and sitting in solitude, let him restrain his senses, if they are attracted by sensual objects.

Ch. VI-60. By the restraint of his senses, by the destruction of love and hatred, and by the abstention from injuring the creatures, he becomes fit for immortality.

Ch. VI-80. [f.72] When by the disposition (of his heart) he becomes indifferent to all objects, he obtains eternal happiness both in this world and after death.

Ch. VI-81. He who has in this manner gradually given up all attachments and is freed from all the pairs (of opposites), reposes in Brahman alone.

Ch. VI-82. All that has been declared (above) depends on meditation: for he who is not proficient in the knowledge of that which refers to the Soul reaps not the full reward of the performance of rites.

Ch. VI-83. Let him constantly recite (those texts of) the Veda which refer to the sacrifice (those) referring to the deities, and (those) which treat of the Soul and are contained in the concluding portions of the Veda (Vedanta).

Ch. VI-84. That is the refuge of the ignorant, and even that (the refuge) of those who know (the meaning of the Veda): that is (the protection) of those who seek (bliss in) heaven and of those who seek. endless (beatitude).

Ch. VI-85. A twice-born man who becomes an ascetic, after the successive performance of the above-mentioned acts, shakes off sin here below and reaches the highest Brahman.

Comparing the Vanaprastha with the Sannyasi the resemblance in this observances is so close that one is led to ask why these two stages are created as separate stages. There appear to be only a few differences. Firstly a Vanaprastha may take his wife with him and a Sannyasi cannot. Secondly a Vanaprastha is required only to leave his property behind, and a Sannyasi has to divest himself of it. Thirdly a Vanaprastha must make his dwelling in a forest and a Sannyasi cannot have a Fixed dwelling but keep on wandering from place to place. As for the rest their mode of life is identical. Why did the Brahmins recognize an additional stage such as that of a Vanaprastha when the stage of Sannyas would have sufficed for both. But the question remains—namely what good these two stages serve. They cannot be cited as examples of self sacrifice. The Vansprastha and Sannyasi cannot but be old men. Manu is very positive as to the period when a Man can become Vanaprastha, The time ripe for it is after wrinkles which is of course quite an advanced age. The Sannyasi must be still more advanced in age. To exhibit such people who have enjoyed all the pleasures of life as instances of self-sacrifice because they choose to give up their pleasures at a stage of life when they are incapable of enjoying them must be nothing short of folly. Admittedly this abandonment of home. and family is not for the purpose of rendering social service to suffering humanity. The purpose is to enable them to perform austerities and to wait peaceful death. It seems to be a height of folly to cut of old and aged men from him and family and die in jungles uncared and unwept for so insignificant and trivial a purpose.

The Ashram system is an ancient attempt of planned economy produced by the Brahmins. It is so stupid that it is a riddle to understand the causes and the motives which have led the Brahmins to devise it.

APPENDIX II COMPULSORY MATRIMONY

Manu prescribes that an individual's life on earth be divided into four stages. The four stages are: (1) Brahmacharya, (2) Grahastashtram, (3)

Vanaprastha and (4) Sanyas. The stage of Brahmacharya is the stage of studentship—a period devoted to the study of the Vedds. ' The stage of Grahasthashram is the stage of married state or as Manu calls it the state of being an householder marrying and rearing a family. In the Vanaprastha stage the Vanaprastha ceases to be an householder in as much as he abandons his house. He, however, does not abandon his wife. He lives in jungle but does not give up his right to his property. He is dead in so far as the religious duties of an householder are concerned but he is not civilly dead. The stage of Sanyas is the stage in which a person breaks his marital tie, abandons his wife, gives up his wordly goods and leaves his household and does not follow the religious injunctions enjoined upon a householder and goes and lives in jungle to meditate upon Brahma. He is deemed to have committed civil death.

The division of man's life into stages is an idea older than Manu. What is important is the changes Manu has made in the scheme.

The first change Manu has made is that he has made marriage compulsory. A Brahmachari after he has finished his study must marry. This is the rule laid down by Manu as may be seen from the following:

HI. 2 (A student) who has studied in due order the three Vedas, or two, or even one only, without breaking (the rules of) studentship shall enter the order of householder."

HI. 4"Having bathed, with the permission of his teacher, and performed according to the rule the Samavartana (the rite on returning home), a twice-born man shall marry a wife of equal caste who is endowed with auspicious marks."

This chapter may be read along with the Riddle on ' The Four Ashramas.'—Ed.

The second change Manu has made is to prohibit entry into the order of Sanyas for a Brahmachari who had not married. Marriage is made by Manu a condition precedent to Sanyas. He declares entry into Sanyas without having undergone the stage of marriage to be a sin.

VI. 35"When he has paid the three debts, let him apply his mind to (the attainment of) final liberation; he who seeks it without having paid (his debts) sinks downwards."

VI. 36"Having studied the Vedas in accordance with the rule, having begot sons according to the sacred law, and having offered sacrifices according to his ability, he may direct his mind to (the attainment of) Final liberation.

VI. 37"A twice-born man who seeks final liberation, without having studied the Vedas, without having begotten sons, and without having

offered sacrifices, sinks downwards.

VI. 38"Having performed the Ishti, sacred to the Lord of creatures (Prajapati), where (he gives) all his property as the sacrificial fee, having repositied the sacred fires in himself, a Brahmana may depart from his house (as an ascetic)."The third change made by Manu is to prohibit an householder from becoming a Sannyasi without first entering the stage of Vanaprastha.

VI., I" A twice-born Snataka, who has thus lived according to the law in the order of householders, may, taking a firm resolution and keeping his organs in subjection, dwell in the forest, duly (observing the rules given below)."

VI. 2."When a householder sees his (skin) wrinkled, and (his hair) white, and the sons of his sons, then he may resort to the forest.

VI. 3."Abandoning all food raised by cultivation, and all his belongings, he may depart into the forest, either committing his wife to his sons or accompanied by her."

These changes made by Manu are of course revolutionary changes as compared with the rules which governed them before the time of Manu. On this point, I will only quote the relevant rules contained in two of the Dharma Shastras, the Vasistha Dharma Sutra and the Gautama Dharma Sutra.

Vasistha Dharma Sutra [f.73] says:

"There are four orders viz., (that of) student, (that of) the householder, (that of) the hermit, and (that of) the ascetic."

"A man who has studied one, two or three Vedas without violating the rules of studentship, may enter any of these (orders) whichever he pleases."

Gautama Dharma Sutra[f.74] says:

"Some (declare, that) he (who has studied the Veda) may make his choice (which) among the orders (he is going to enter)."

.(The four orders are, that) the student (that of) the householder, (that) of the ascetic (bhikshu) (and that of) the hermit in the woods (Vaikhanasa)."As is clear from the two Dharma Shastras what order a person should enter after completing the stage of Brahmacharya is a matter which was left to his choice. If he wished he might marry and become an householder; or without entering into the marital state he might if so inclined straightaway enter into the order of a Sannyasi. That Manu in making matrimony a condition precedent for entry into the order of Vanaprashtha and Sannyas has made a revolutionary change is therefore quite obvious.

There is another change Manu seems to have made. One does not see why to reach Sannyasa after matrimony it was necessary to go through Vanaprastha. Why one could not straightaway become a Sannyasi. After all is there any difference between a Vanaprastha and a Sannyasi which can be called to be fundamental? In an excursus to this Chapter, I have collected together the rules made by Manu for regulating the conduct of the Vanaprastha and the Sannyasi. From a perusal of these rules it will be found that there is hardly any difference. Except the fact that the Vanaprastha is required to perform some of the religious duties and observances which are prescribed for the householders there is in substance no difference between men who have entered the two orders. It is equally true that the ends to be realized by the Vanaprastha and the Sannyasi are the same. How similar are the ends to be achieved by them can be seen by reference to the following texts from Manu.

ENDS TO BE ACHIEVED

Vanaprastha	Sannyasi
VI. 29”These and other observances must a Brahmana who dwells in the forest diligently practise, and in order to attain complete (union with) the Supreme Soul, (he must study) the various sacred texts contained in the Upanishads	VI. 85”A twice-born man who becomes an ascetic after the successive performance of the above mentioned acts, shakes off sin here below and reaches the highest Brahmin.

Why then Manu carved out Vanaprastha as a separate stage from Grahasthashram and from Sannyas? Regarding Vanaprastha it can be said that such a class existed before Manu. They were called Aranas. According to Prof. Radha Kumud Mookerji [f.75] :

"Brahmacharis, who wanted to continue as such, without marrying in pursuit of knowledge, were called Aranas or Aranamans. These Aranas lived in hermitages in the forests outside the villages or centres of population. The forests where these Arana ascetics lived were called Aranyas. The philosophical speculations of these learned ascetics regarding such ultimate problems as Brahma, Creation, Soul, or Immortality are embodied in works called Aranyakas."

To these old Aranas Manu gave the name Vanaprasthas which has the same meaning as Aranas. Manu has not only made a change in names he

has introduced another change of considerable significance. In between Brahmacharya and Vanaprastha he has introduced a married state. While the original Vanaprastha or Arana was an unmarried person, Manu's Vanaprastha was necessarily a married man. In the old system Brahmacharya was followed by Vanaprastha or by Grahastashram depending upon the choice of the individual. Manu changed the order, so that no one could become a Vanaprastha unless he was first married.

The old system, the two stages of Vanaprastha or Sannyasi, did not involve any hardship or cruelty to wives and children. The new system introduced by Manu did. For to force a person to marry and then to permit him to abandon his wife is nothing short of cruelty if it did not involve criminality. But Manu did not care for such considerations. He was bent on making matrimony compulsory for all.

Why did Manu do it? Why did he make Grahastashram compulsory for a Vanaprastha or Sannyasi? Manu recognizes the married state as a superior stage the foundation of all other states. As he says:

VI. 87" The student, the householder, the hermit and the ascetics, these (constitute) four separate orders, which all spring from (the order of) householders.

VI. 88" But all (or even any of) these orders, assumed successively in accordance with the Institutes (of the sacred law), lead the Brahmana who acts by the preceding (rules) to the highest state.

VI. 89" And in accordance with the precepts of the Veda and of the smriti the housekeeper is declared to be superior to all of them, for he supports the other three.

VI. 90" As all rivers, both great and small, find a resting-place in the ocean, even so men of all orders find protection with householders"

Granting the truth of this statement the question still remains why did Manu insist upon marriage as a condition precedent to Vanaprastha or Sannyasi? The only answer is that he wanted to discourage persons, from becoming Sannyasi. Why did Manu dislike the order of Vanaprastha or Sannyasi? The answer is that the religion of Buddha was largely supported and propagated by Sannyasis called Bhikshus. It was easy for unmarried persons to become Bhikshus. Manu was anxious to stop this. Hence the condition of marriage.

EXCURSUS

COMPARATIVE CODE FOR VANAPRASTHA AND SANNYASI

1. 1. Connection with the household on entry into the order Vanaprastha Sannyasi

Vanaprastha	Sannyasi
VI. 3"Abandoning all food raised by cultivation and all his belongings he may depart into the forest, either committing his wife to his sons, or accompanied by her."	VI. 38"Having performed the Ishti, sacred to the Lord of creatures (Prajapati) where (he gives) all his property as the sacrificial fee, having reposed the sacred fires in himself, a Brahmana may depart from his house, (as an ascetic)."

II. Rules Regarding Dwelling

Vanaprastha	Sannyasi
VI. 4"Taking with him the sacred fire and the implements required for domestic (sacrifices) he may go forth from the village into the forest and reside there, duly controlling his senses."	VI. 41"Departing from his house fully provided with the means of purification (Pavitra), let him wander about absolutely silent, and caring nothing for enjoyments that may be offered (to him)."
	VI. 42"Let him always wander alone, without any companion, in order to attain (final liberation) fully understanding that the solitary man who neither forsakes nor is forsaken, gains his end."
	VI. 43"He shall neither possess a fire, nor a dwelling he may go to a village for his food, (he shall be) indifferent to everything, firm of purpose, meditating (and) concentrating his mind on Brahman."

III. Rules as to Mode of Life

Vanaprastha	Sannyasi
VI. 6"Let him wear a skin or a	VI. 44"A potsherd (instead of an alms-bowl) the roots of trees

<p>tattered garment; let him bathe in the evening or in the morning and let him always wear (his hair in) braids, the hair on his body, and his nails (being unclipped)."</p>	<p>(for a dwelling), coarse worn-out garments, life in solitude and indifference towards, everything are the marks of one who has attained liberation." VI. 52"His hair, nails and beard being clipped carrying an alms-bowl, staff, and a water-pot let him continually wander about controlling himself and not hurting any creature." VI. 53"His vessels shall not be made of metal, they shall be free from fractures, it is ordained that they shall be cleansed with water, like (the cups called) Kamasa, at a sacrifice." VI. 54"A gourd, a wooden bowl, an earthen (dish) or one made of split cane, Manu the son of Swa-yambhu, has declared (to be) vessels (suitable) for an ascetic."</p>

PART III POLITICAL

RIDDLE NO. 21 THE THEORY OF MANVANTARA

The Brahmins had a theory of the Government of their country from Heaven. This seems to be the idea underlying what is called a Manvantara.

The idea underlying a *Manvantara* is related to the political Government of the country. It is founded on the belief that the Government of the world is entrusted to a corporation for a fixed period. This corporation consists of an officer called Manu and Saptarishis (seven Rishis) and one Indra conducting the affairs of the country from their seats in Heaven without consulting the people or ascertaining their wishes. The period of the reign by one corporation is called a Manvantara after Manu the premier authority in the ruling set. When the reign of one Manu is over he is succeeded by another Manu and so on. As in the case of the Yugas, the Manvantaras also move in cycles. Fourteen Manvantaras make one cycle.

The Vishnu Purana gives us an idea of these Manvantaras which is as follows:

"Then Brahma created himself the Manu Swayambhuva, born of, and identical with, his original self, for the protection of created beings; and the female portion of himself he constituted Satarupa, whom austerity purified from the sin (of forbidden nuptials), and whom the divine Manu Swayambhuva took to wife. Stopping here for the moment one might ask—What does this mean? Does it mean that Brahma was a hermaphrodite? Does it mean that Manu Swayambhu married his sister. Satarupa? How very strange if this is true as the Vishnu Purana seems to suggest. The Vishnu Purana proceeds to say:

“From these two are born two sons, Priyavrata and Uttanpada, and two daughters, named Prasuti and Akuti graced with loveliness and exalted merit.

(This is an 11-page MS of which last four pages are in the handwriting of the author.—Ed.)

Prasuti he gave to Daksha and gave Akuti to the Patriarch Ruchi, who espoused her. Akuti bore to Ruchi twins, Yajna and Dakshina, who afterwards became husband and wife (again a case of a brother marrying his sister) and had twelve sons, the deities called Yamas, in the Manvantara of Swayambhuva."

"The first Manu was Swayambhuva, then came Swarochisha, then Auttami, then Tamasa, then Raivata, then Chakshusha; these six Manus have passed away. The Manu who presides over the seventh Manvantara, which is the present period, is Vaivaswata the son of the

sun."

"I will now, enumerate, says the author of the Vishnu Purana, the presiding Gods, Rishis, and sons of the Manu Swarochisha. The deities of this period (or the second Manvantara) were called Paravatas and Tushitas; and the King of the gods was the mighty Vipaschit. The seven Rishis were Urja, Stambha, Prana, Dattoli, Rishabha, Nischara, and Arvarivat. And Chaitra, Kimpurusha, and others were the Manu's sons.

"In the third period, or Manwantara of Auttamin, Susanti was the Indra, the king of the gods, the orders of whom were the Sudhamas, Satyas, Sivas, Pradersanas, and Vasavertis; each of the five orders consisting of twelve divinities. The seven sons of Vasishtha were the seven Rishis; and Aja, Parasu, Divya, and others were the sons of Manu.

"In the period of Tamasa, the fourth Manu, the Surupas, Haris, Satyas, and Sudhis were the classes of Gods, each comprising twenty-seven. Sivi was the Indra, also designated by his performance of a hundred sacrifices (or named Satakratu). The seven Rishis were Jyotirdhama, Prithu, Kavya, Chaitra, Agni, Vanaka and Pivara. The sons of Tamasa were the mighty kings Nara, Khyati, Santhaya, Janujangha and others."

"In the fifth interval (Manvantara) the Manu was Raivata; the Indra was Vibhu, the classes of gods, consisting of fourteen each, were the Amitbhas, Abhutarasas, Vaikunthas, and Sumedhas; the seven Rishis were Hiranyaroma, Vedasri, Urddhabahu, Vedabahu, Sudhaman, Parjanya and Mahamuni; the sons of Raivata were Balabandhu, Susambhavya, Satyaka, and other valiant kings."

"These four Manus, Swarochisha, Auttami, Tamasa, and Raivata, were all descended from Priyavrata, who in consequence of propitiating Vishnu by his devotions, obtained these rules of the Manvantaras for his posterity.

"Chakshusha was the Manu of the sixth period in which the Indra was Manojva; the five classes of Gods were the Adyas,

Prastutas, Bhavyas, Prithugas, and the magnanimous Lekhas eight of each Sumedhas, Virajas, Havishmat, Uttama, Madhu, Abhinaman and Sahishnu were the seven sages; the kings of the earth, the sons of Chaksusha, were the powerful Uru, Puru, Satadhumna and others."

"The Manu of the present seventh Manvantara is the wise lord of obsequies, and illustrious offspring of the sun called Manu Vaivaswata and deities are the Adityas, Vasus and Rudras; their sovereign is Purandara; Vasishtha, Kasyapa, Atri, Jamadagni, Gautama, Viswamitra and Bharadwaja are the seven Rishis; and the nine pious sons of Vaivaswata Manu are the kings of Ikshwaku, Nabhanidishtha, Karusha,

Prishadhra, and the celebrated Vasumat." So far the particulars of seven Manvantaras which are given by the Vishnu Purana relate to Manvantaras which had run out at the time when the Vishnu Purana was written. Whether the rule of the Manvantaras was an external one the Brahmins have been silent. But the author of the Vishnu Purana knew that seven more Manvantaras were to come. Below are given the particulars of these seven.

"Sanjana, the daughter of Vishwakarman was the wife of the sun, and bore him, three children, the Manu (Vaivaswata), Yama and the goddess Yami (or the Yamuna river). Unable to endure the fervours of her lord, Sanjana gave him Chhaya as his handmaid, and repaired to the forests to practise devout exercises. The sun, supposing Chhaya to be his wife Sanjana, begot by her three other children Sanaischara (Saturn), another Manu (Savarni) and a daughter Tapati (the Tapti river). Chhaya upon one occasion, being offended with Yama, the son of Sanjana, denounced an imprecation upon him, and thereby revealed to Yama and to the sun that she was not in truth Sanjana, the mother of the former. Being further informed by Chhaya that his wife had gone to the wilderness the sun beheld her by the eye of meditation engaged in austerities, in the figure of a mare (in the region of Uttara Kuru). Metamorphosing himself into a horse, he rejoined his wife, and begot three other children, the two Aswins, and Revanta, and then brought Sanjana back to his own dwelling. To diminish his intensity, Vishwakaraman placed the luminary on his lathe to grind off some of his effulgence; and in this manner reduced it an eighth: for more than that was inseparable. The parts of the divine Vaishnava splendour, residing in the sun, that were filed off by Viswakaraman fell blazing down upon the earth, and the artist constructed of them the discus of Vishnu, the trident of Shiva, the weapon of the god of wealth, the lance of Kartikeya, and the weapons of the other gods: all these Viswakarman fabricated from the superfluous rays of the sun."

"The son of Chhaya, who was called also a Manu was denominated Savarni, from being of the same caste (Savarni) as his elder brother, the Manu Vaivaswata. He presides over the ensuing or eighth Manvantara; the particulars of which and the following, I will now relate. In the period in which Savarni shall be the Manu, the classes of the gods will be Sutapas, Ambitabhas and Mukhyas: twenty-one of each. The seven Rishis will be Diptimat, Galava, Rama, Kripa, Drauni; my son Vyasa will be the sixth and the seventh will be Rishyasringa. The Indra will be Bali, the sinless son of Virochana who through the favour of Vishnu is

actually sovereign of part of Patala. The royal progeny of Savarni will be Virajas, Arvarivas, Nirmoha, and others."

"The ninth Manu will be Dakshasavarni. The Paras, Marichigarbhas and Sudharnas- will be the three classes of divinities; each consisting of twelve, their powerful chief will be the Indra Adbhuta Savana, Dyutimat, Bhavya, Vasu, Medhatithi, Jyotishaman and Satya, will be the seven Rishis. Dhritketu, Driptiket, Panchahasta, Nirmaya, Prithusrava, and others will be the sons of the Manu.

"In the tenth Manwantara the Manu will be Brahma-savarni; the gods will be the Sudhamas, Virudhas, and Satasankhyas; the Indra will be the mighty Santi; the Rishis will be Havishaman, Sukriti, Satya, Appammurthi, Nabhaga, Apratimaujas and Satyaketu; and the ten sons of the Manu will be Sukshetra, Uttamaujas, Harishena and others."

"In the eleventh Manwantara the Manu will be Dharma-savarni; the principal classes of gods will be the Vihangamas, Karnagamas, and the Nirmanaratis, each thirty in number; of whom Vrisha will be the Indra; the Rishis will be Nischara, Agnitejas, Vapushaman, Vishnu, Aruni, Havishaman, and Anagha; the kings of the earth, and sons of the Manu, will be Savarga, Sarvadharmas, Devanika, and others."

"In the twelfth Manvantara the son of Rudra-Savarni, will be the Manu; Ritudhama will be the Indra; and the Haritas, Lohitas; Sumanasas and Sukramas will be the classes of gods, each comprising fifteen Tapaswi, Sutapas, Tapomurti, Taporti, Tapodhriti, Tapodyuti and Tapodhana will be the Rishis; and Devas, Upadeva, Devasreshtha and others will be the man's sons, and mighty monarchs on the earth."

"In the thirteenth Manvantara the Manu will be Rauchya; the classes of gods, thirty-three in each, will be Sudhamanas, Sudharmans and Sukarmanas, their Indra will be Divaspati;

the Rishis will be Nirmoha, Tatwadarsin, Nishprakampa, Nirutsuka, Dhritimat, Avyaya and Sutapas; and Chitrasena, Vichitra, and others will be the kings."

"In the fourteenth Manvantara, Bhautya will be the Manu; Suchi, the Indra; the five classes of gods will be the Chakshushas, the Pavitras, Kanishthas Bhrajiras and Vavridhdhas; the seven Rishis will be Agnibahu, Suchi, Sikra, Magadha, Gridhra, Yukta and Ajita; and the sons of the Manu will be Uru, Gabhir, Gabhira, Bradhna and others who will be kings, and will rule over, the earth." Such is the theory of Manvantaras. We now hear of the Dictatorship of the Proletariat. The Brahmanic theory was just the opposite of it. It was a theory of the Dictatorship over the Proletariat by the Heavenly fathers.

Be that as it may the question that primarily comes to one's mind is: How these fourteen Manus who succeeded one another rule the people? What laws did they make for the governance of the people? The only place where one can get an answer is the Manusmriti.

Referring to the first chapter of Manusmriti we get the following answer:

Ch. I. 1. The great sages approached Manu, who was seated with a collected mind, and, having duly worshipped him spoke as follows:

2. Deign, divine one, do declare to us precisely and in due order the sacred laws of each of the (four chief) castes (Varna) and of the intermediate ones.

3. For thou, O Lord, alone knowest the purport of the rites and knowledge of the Soul taught in this whole ordinance of the Swayambhu (Manu) which is unknowable and unfathomable. Manu replies to them saying:

5. This universe existed in the shape of darkness unperceived, destitute of distinctive marks, unattainable by reasoning, unknowable, wholly immersed as it were in deep sleep.

8. Swayambhu Manu desiring to produce beings of many kinds from his own body, first with a thought created the waters and placed his seed in them.

9. That (Seed) became a golden egg, in brilliancy equal to the sun; in that Egg he himself was born as Brahman, the progenitor of the whole world.

34. Then, I, desiring to produce created beings performed very difficult austerities and thereby called into existence ten great sages, lords of created beings.

35. Marichi, Atri, Angiras, Pulastya, Pulaha, Kratu, Prachetas, Vashishta, Bhrigu and Narada.

58. But he having composed these Institutes of the sacred law, himself taught them, according to rule, to me alone in the beginning: next I taught them to Marichi and the other sages.

59. Bhrigu will fully recite to you these Institutes; for that sage learned the whole in its entirety from me.

From this it appears that the only Manu who made laws was the Swayambhu Manu. According to Vishnu Purana, each Manvantara had its own Manu. Why did they not make laws for their own Manvantara. Or was it the laws made by Swayambhu Manu were to be Eternal. If so, why did the Brahmins have separate Manvantara.

RIDDLE NO. 22

BRAHMA IS NOT DHARMA. WHAT GOOD IS BRAHMA?

There are various forms of Government known to history—Monarchy, Aristocracy and Democracy to which may be added Dictatorship.

The most prevalent form of Government at the present time is Democracy. There is however no unanimity as to what constitutes Democracy. When one examines the question one finds that there are two views about it. One view is that Democracy is a form of Government. According to this view where the Government is chosen by the people that is where Government is a representative Government there is Democracy. According to this view Democracy is just synonymous with Representative Government which means adult suffrage and periodical elections.

According to another view a democracy is more than a form of Government. It is a form of the organization of Society. There are two essential conditions which characterize a democratically constituted society. First is the absence of stratification of society into classes. The Second is a social habit on the part of individuals and groups which is ready for continuous readjustment or recognition of reciprocity of interests. As to the first there can be no doubt that it is the most essential condition of Democracy. As Prof. Dewey mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_1 has observed: [*Quotation referred to by the author is not recorded in the original MS from 'Democracy and Education', by Dewey p. 98.*] The second condition is equally necessary for a democratically constituted society.

This chapter consists about 20 pages out of which first two pages and the concluding six are in the handwriting of the author. The rest are typed pages with all necessary modifications by Dr. Ambedkar.—Ed.

The results of this lack of reciprocity of interests among groups and individuals produce anti-democratic results which have been well described by Prof. Dewey mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_2 when he says: [*Quotation from 'Democracy and Education*

' of page 99 referred to by the author is not recorded in the original MS.]

Of the two views about democracy there is no doubt that the first one is very superficial if not erroneous. There cannot be democratic Government unless the society for which it functions is democratic in its form and structure. Those who hold that democracy need be no more than a mere matter of elections seem to make three mistakes.

One mistake they make is to believe that Government is something which is quite distinct and separate from society. As a matter of fact Government is not something which is distinct and separate from Society. Government is one of the many institutions which Society rears and to which it assigns the function of carrying out some of the duties which are necessary for collective social life.

The Second mistake they make lies in their failure to realize that a Government is to reflect the ultimate purposes, aims, objects and wishes of society and this can happen only where the society in which the Government is rooted is democratic. If society is not democratic, Government can never be. Where society is divided into two classes governing and the governed the Government is bound to be the Government of the governing class.

The third mistake they make is to forget that whether Government would be good or bad democratic or undemocratic depends to a large extent up on the instrumentalities particularly the Civil Service on which every where Government has to depend for administering the Law. It all depends upon the social milieu in which civil servants are nurtured. If the social milieu is undemocratic the Government is bound to be undemocratic.

There is one other mistake which is responsible for the view that for democracy to function it is enough to have a democratic form of Government. To realize this mistake it is necessary to have some idea of what is meant by good Government.

Good Government means good laws and good administration. This is the essence of good Government. Nothing else can be. Now there cannot be good Government in this sense if those who are invested with ruling power seek the advantage of their own class instead of the advantage of the whole people or of those who are downtrodden. Whether the Democratic form of Government will result in good will depend upon the disposition of the individuals composing society. If the mental disposition of the individuals is democratic then the democratic form of Government can be expected to result in good Government. If not, democratic form of Government may easily become a dangerous

form of Government. If the individuals in a society are separated into classes and the classes are isolated from one another and each individual feels that his loyalty to his class must come before his loyalty to every thing else and living in class compartments he becomes class conscious bound to place the interests of his class above the interests of others, uses his authority to pervert law and justice to promote the interests of his class and for this purpose practises systematically discrimination against persons who do not belong to his caste in every sphere of life what can a democratic Government do. In a Society where classes clash and are charged with anti-social feelings and spirit of aggressiveness, the Government can hardly discharge its task of governing with justice and fairplay. In such a society, Government even though it may in form be a government of the people and by the people it can never be a Government for the people. It will be a Government by a class for a class. A Government for the people can be *had* only where the attitude of each individual is democratic which means that each individual is prepared to treat every other individual as his equal and is prepared to give him the same liberty which he claims for himself. This democratic attitude of mind is the result of socialization of the individual in a democratic society. Democratic society is therefore a prerequisite of a democratic Government. Democratic Governments have toppled down in largely due to the fact that the society for which they were set up was not democratic.

Unfortunately to what extent-the task of good Government depends upon the mental and moral disposition of its subjects has seldom been realized. Democracy is more than a political machine. It is even more than a social system. It is an attitude of mind or a philosophy of life.

Some equate Democracy with equality and liberty. Equality and liberty are no doubt the deepest concern of Democracy. But the more important question is what sustains equality and liberty? Some would say that it is the law of the state which sustains equality and liberty. This is not a true answer. What sustains equality and liberty is fellow-felling. What the French Revolutionists called fraternity. The word fraternity is not an adequate expression. The proper term is what the Buddha called, Maitree. Without Fraternity Liberty would destroy equality and equality would destroy liberty. If in Democracy liberty does not destroy equality and equality does not destroy liberty, it is because at the basis of both there is fraternity. Fraternity is therefore the root of Democracy.

The foregoing discussion is merely a preliminary to the main question. That question is—wherein lie the roots of fraternity without which

Democracy is not possible? Beyond dispute, it has its origin in Religion.

In examining the possibilities of the origin of Democracy or its functioning successfully one must go to the Religion of the people and ask—does it teach fraternity or does it not? If it does, the chances for a democratic Government are great. If it does not, the chances are poor. Of course other factors may affect the possibilities. But if fraternity is not there, there is nothing to build democracy on. Why did Democracy not grow in India? That is the main question. The answer is quite simple. The Hindu Religion does not teach fraternity. Instead it teaches division of society into classes or varnas and the maintenance of separate class consciousness. In such a system where is the room for Democracy?

The Hindu social system is undemocratic not by accident. It is designed to be undemocratic. Its division of society into *varnas* and castes, and of castes and outcastes are not theories but are decrees. They are all barricades raised against democracy.

From this it would appear that the doctrine of fraternity was unknown to the Hindu Religious and Philosophic thought. But such a conclusion would not be warranted by the facts of history. The Hindu Religious and Philosophic thought gave rise to an idea which had greater potentialities for producing social democracy *than* the idea of fraternity. It is the doctrine of Brahmaism*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_3.

It would not be surprising if some one asked what is this Brahmaism? It is something new even to Hindus. The Hindus are familiar with Vedanta. They are familiar with Brahmanism. But they are certainly not familiar with Brahmaism. Before proceeding further a few words of explanation are necessary.

There are three strands in the philosophic and religious thought of the Hindus. They may be designaged as (1) *Brahmaism* (2) *Vedanta* and (3) *Brahmanism*. Although they are correlated they stand for three different and distinct ideologies.

The essence of Brahmaism is summed up in a dogma which is stated in three different forms. They are (i) *Sarvam Khalvidam Brahma*— All this is Brahma. (ii) *Aham Brahmasmi*— Atmana (Self) is the same as Brahma.

Therefore I am Brahma. (iii) *Tattvamasi*— Atmana (Self) is the same as Brahma.

Therefore thou art also Brahma.

They are called Mahavakyas which means Great Sayings and they sum

up the essence of Brahmaism.

The following are the dogmas which sum up the teachings of Vedant—

I Brahma is the only reality.

II The world is maya or unreal. III Jiva and Brahma are— (i) according to one school identical; (ii) according to another not identical but are elements of him and not separate from him;

(iii) according to the third school they are distinct and separate.

The creed of *Bramhanism* may be summed up in the following dogmas— (i) Belief in the chaturvarna. (ii) Sanctity and infallibility of the Vedas. (iii) Sacrifices to Gods the only way to salvation. Most people know the distinction between the Vedanta and Brahmanism and the points of controversy between them. But very few people know the distinction between Brahmaism and Vedanta. Even Hindus are not aware of the doctrine of Brahmaism and the distinction between it and Vedanta. But the distinction is obvious. While Brahmaism and Vedanta agree that Atman is the same as Brahma. But the two differ in that Brahmaism does not treat the world as unreal, Vedanta does. This is the fundamental difference between the two.

The essence of Brahmaism is that the world is real and the reality behind the world is Brahma. Everything therefore is of the essence of Brahma.

There are two criticisms which have been levelled against Brahmaism. It is said that Brahmaism is piece of impudence. For a man to say "I am Brahma" is a kind of arrogance. The other criticism levelled against Brahmaism is the inability of man to know Brahma. 'I am Brahma' may appear to be impudence. But it can also be an assertion of one's own worth. In a world where humanity suffers so much from an inferiority complex such an assertion *on* the part of man is to be welcomed. Democracy demands that each individual shall have every opportunity for realizing its worth. It also requites that each individual shall know that he is as good as everybody else. Those who sneer at *Aham Brahmasmi* (I am Brahma) as an impudent Utterance forget the other part of the *Maha Vakya* namely *Tatvamsi* (Thou art also Brahma). If *Aham Brahmasmi* has stood alone without the conjunct of *Tatvamsi* it may not have been possible to sneer at it. But with the conjunct of *Tatvanmsi* the charge of selfish arrogance cannot stand against Brahmaism.

It may well be that Brahma is unknowable. But all the same this theory of Brahma has certain social implications which have a tremendous value as a foundation for Democracy. If all persons are parts of Brahma

then all are equal and all must enjoy the same liberty which is what Democracy means. Looked at from this point of view Brahma may be unknowable. But there cannot be slightest doubt that no doctrine could furnish a stronger foundation for Democracy than the doctrine of Brahma.

To support Democracy because we are all children of God is a very weak foundation for Democracy to rest on. That is why Democracy is so shaky wherever it made to rest on such a foundation. But to recognize and realize that you and I are parts of the same cosmic principle leaves room for no other theory of associated life except democracy. It does not merely preach Democracy. It makes democracy an obligation of one and all.

Western students of Democracy have spread the belief that Democracy has stemmed either from Christianity or from Plato and that there is no other source of inspiration for democracy. If they had known that India too had developed the doctrine of Brahmaism which furnishes a better foundation for Democracy they would not have been so dogmatic. India *too* must be admitted to have a contribution towards a theoretical foundation for Democracy.

The question is what happened to this doctrine of Brahmaism? It is quite obvious that Brahmaism had no social effects. It was not made the basis of Dharma. When asked why this happened the answer is that Brahmaism is only philosophy, as though philosophy arises not out of social life but out of nothing and for nothing. Philosophy is no purely theoretic matter. It has practical potentialities. Philosophy has its roots in the problems of life and whatever theories philosophy propounds must return to society as instruments of re-constructing society. It is not enough to know. Those who know must endeavour to fulfil.

Why then Brahmaism failed to produce a new society? This is a great riddle. It is not that the Brahmins did not recognize the doctrine of Brahmaism. They did. But they did not ask how they could support inequality between the Brahmin and the Shudra, between man and woman, between casteman and outcaste? But they did not. The result is that we have on the one hand the most democratic principle of Brahmaism and on the other hand a society infested with castes, subcastes, outcastes, primitive tribes and criminal tribes. Can there be a greater dilemma than this? What is more ridiculous is the teaching of the Great Shankaracharya. For it was this Shankaracharya who taught that there is Brahma and this Brahma is real and that it pervades all and at the same time upheld all the inequities of the Brahmanic society. Only a

lunatic could be happy with being the propounder of two such contradictions. Truly as the Brahmin is like a cow, he can eat anything and everything as the cow does and remain a Brahmin.

RIDDLE NO. 23 KALI YUGA—WHY HAVE THE BRAHMINS MADE IT UNENDING?

If there is any notion widespread among the Hindus and understood by every man and woman adult or old, mature or immature it is that of the Kali Yuga. They are all aware of the fact that the present Yuga is Kali Yuga and that they are living in the Kali Yuga. The theory of Kali Yuga has a psychological effect upon the mind of the people. It means that it is an unpropitious age. It is an immoral age. It is therefore an age in which human effort will not bear any fruit. It is therefore necessary to inquire as to how such a notion arose. There are really four points which require elucidation. They are (1) What is Kali Yuga?, (2) When did Kali Yuga begin?, (3) When is the Kali Yuga to end? and (4) Why such a notion was spread among the people.

I

To begin with the first point. For the purposes of this inquiry it is better to split the words Kali Yuga and consider them separately. What is meant by Yuga? The word Yuga occurs in the Rig-Veda in the sense of age, generation or tribe as in the expressions *Yuge Yuge* (in every age), *Uttara Yugani* (future ages), *Uttare Yuge* (later ages) and *Purvani Yugani* (former ages) etc. It occurs in connection with Manushy, Manusha, Manushah in which case it denotes generations of men. It just meant ages. Various attempts are made to ascertain the period the Vaidikas intended to be covered by the term 'Yuga'. *Yuga* is derived from the Sanskrit root *Yuj* which means to join and may have had the same meaning as the astronomical term 'conjunction'.

This chapter contains 45 typed pages. Only 9 pages of this chapter at the beginning are numbered. While no other pages are numbered. Howsoever the text of this chapter has been found to be complete and without any loss of material.—Ed.

Prof. Weber suggests that the period of time known as *Yuga* was

connected with four lunar phases.

Following this suggestion Mr. Rangacharya mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_4 has advanced the theory that "in all probability the earliest conception of a Yuga meant the period of a month from new-moon when the Sun and the Moon see each other i.e., they are in conjunction". This view is not accepted by others. For instance, according to Mr. Shamshastry mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_5 the term Yuga is in the sense of a single human year as in the Setumahatmya which is said to form part of the Skanda Purana. According to the same authority it is used in the sense of a Parva or half a lunation, known as a white or dark half of a lunar month.

All these attempts do not help us to know what was the period which the Vaidikas intended to be covered by a Yuga.

While in the literature of the Vaidikas or theologians there is no exactitude regarding the use of the term Yuga in the literature of the astronomers (writers on Vedanga Jyotish) as distinguished from the Vaidikas the word Yuga connotes a definite period. According to them, a Yuga means a cycle of five years which are called (1) Samvatsara, (2) Parivatsara, (3) Idvatsara, (4) Anuvatsara and (5) Vatsara.

Coming to *Kali* it is one of the cycles made up of four *Yugas* : *Krita*, *Treta*, *Dwapar* and *Kali*. What is the origin of the term *Kali*? The terms *Krita*, *Treta*, *Dwapar* and *Kali* are known to have been used in the three different connections. The earliest use of the term *Kali* as well as of other terms is connected with the game of dice.

From the Rig-Veda it appears that the dice piece that was used in the game was made of the brown fruit of the Vibhitaka tree being about the size of a nutmeg, nearly round with five slightly flattened sides. Later on the dice was made of four sides instead of five. Each side was marked with the different numerals 4, 3, 2 and 1. The side marked with 4 was called *Krita*, with 3 *Treta*, with 2 *Dwapara* and with 1 *Kali*. Shamshastry gives an account of how a game of dice formed part of sacrifice and how it was played. The following is his account³:

"Taking a cow belonging to the sacrificer, a number of players used to go along the streets of a town or village, and making the cow the stake, they used to play at dice in different batches with those who deposited grain as their stake. Each player used to throw on the ground a hundred or more *Cowries* (shells), and when the number of the *Cowries* thus cast

and fallen with their face upwards or downwards, as agreed upon, was exactly divisible by four then the sacrificer was declared to have won: but if otherwise he was defeated. With the grain thus won, four Brahmans used to be fed on the day of sacrifice.”

Professor Egging's
 references mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_6 to the Vedic literature leave no doubt about the prevalence of the game of dice almost from the earliest time. It is also clear from his references that the game was played with five dice four of which were called *Krita* while the fifth was called *Kali*. He also points out that there were various modes in which the game was played and says that according to the earliest mode of playing the game, if all the dice fell uniformly with the marked sides either upwards or downwards then the player won the game. The game of dice formed part of the *Rajasuya* and also of the sacrificial ceremony connected with the establishment of the sacred fire.

These terms—*Krita*, *Treta*, *Dwapara* and *Kali*—were also used in Mathematics. This is clear from the following passage from *Abhayadevasuri's Commentary on Bhagvati Sutra* a voluminous work on Jaina religion.

“In mathematical terminology an even number is called 'Yugma', and an odd number 'Ojah'. Here there are, however, two numbers deserving of the name 'Yugma' and two numbers deserving of the name 'Ojah'. Still, by the word 'Yugma' four Yugmas i.e., four numbers are meant. Of them i.e., *Krita-yugma*: *Krita* means accomplished, i.e., complete, for the reason that there is no other number after four, which bears a separate name (i.e., a name different from the four names *Krita* and others). That number which is not incomplete like *Tryoja* and other numbers, and which is a special even number is *Kritayugma*. As to *Tryoja*: that particular odd number which is uneven from above a *Kritayugma* is *Tryoja*. As the *Dwaparayugma*:—That number which is another even number like *Kritayugma*, but different from it and which is measured by two from the beginning or from above a *Kritayugma* is *Dwaparayugma*— *Dwapara* is a special grammatical word. As to *Kalyoja*:—That special uneven number which is odd by *Kali*, i.e., to a *Kritayugma* is called *Kalyoja*. That number etc. which even divided by four, ends in complete division, *Kritayugma*. In the series of numbers, the number four, though it need not be divided by four because it is itself four, is also called *Kritayugma*.”
 Shamshastry mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.

[Riddles in Hinduism PART III.htm - _msocom_7](#) mentions another sense in which these terms are used.

According to him, they are used to mean the Parvas of those names, such as Krita Parva, Treta Parva, Dwapara Parva and Kali Parva. A Parva is a period of 15 tithis or days otherwise called Paksha. For reasons connected with religious ceremonies the exact time when a Parva closed was regarded as important. It was held that the Parvas fell into four classes according to the time of their closing. They were held to close either (1) at Sunrise, (2) at one quarter or Pada of the day, (3) after 2 quarters or Padas of the day or (4) at or after three quarters or Padas of the day. The first was called *Krita* Parva, the second *Treta* Parva, the third *Dwapara* Parva and the fourth *Kali* Parva.

Whatever the meaning in which the words *Kali* and *Yuga* were used at one time, the term *Kali Yuga* has long since been used to designate a unit in the Hindu system of reckoning time. According to the Hindus there is a cycle of time which consists of four Yugas of which the Kali Yuga forms one. The other Yugas are called *Krita*, *Treta* and *Dwapar*.

II

When did the present Kali Yuga begin? There are two different answers to the question.

According to the Aitereya Brahmana it began with Nabhanedishta son of Vaivasvata Manu. According to the Puranas it began on the death of Krishna after the battle of Mahabharata.

The first has been reduced to time term by Dr. Shamshastri'[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_8](#) who says that Kali Yuga began in 3101 B.C. The second has been worked out by Mr. Gopal Aiyer with meticulous care. His view is that the Mahabharat War commenced on the 14th of October and ended on the night of 31st October 1194 B.C. He places the death of Krishna 16 years after the close of the war basing his conclusion on the ground that Parikshit was 16 when he was installed on the throne and reading it with the connected facts namely that the Pandavas went of Mahaprasthan immediately after installing Parikshit on the throne and this they did on the very day Krishna died. This gives 1177 B.C. as the date of the commencement of the Kali Yuga.

We have thus two different dates for the commencement of the Kali Yuga 3101 B.C. and 1177 B.C. This is the first riddle about the Kali Yuga. Two explanations are forthcoming for these two widely separated dates for the commencement of one and the same Yuga. One explanation is 3101 B.C. is the date of the commencement of the Kalpa

and not of Kali and it was a mistake on the part of the copyist who misread Kalpa for Kali and brought about this confusion. The other explanation is that given by Dr. Shamsastry. According to him there were two Kali Yuga Eras which must be distinguished, one beginning in 3101 B.C. and another beginning in 1260 or 1240 B.C. The first lasted about 1840 or 1860 years and was lost.

III

When is the Kali Yuga going to end? On this question the view of the great Indian Astronomer Gargacharya in his *Siddhanta* when speaking of Salisuka Maurya the fourth in succession from Asoka makes the following

important
observationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in
Hinduism PART III.htm - _msocom_9:

"Then the viciously valiant Greeks, after reducing Saketa, Panchala country to Mathura, will reach Kusumadhwaja (Patna): Pushpapura being taken all provinces will undoubtedly be in disorder. The unconquerable Yavanas will not remain in the middle country. There will be cruel and dreadful war among themselves. Then after the destruction of the Greeks at the end of the Yuga, seven powerful Kings reign in Oudha."

The important words are "after the destruction of the Greeks at the end of the Yuga". These words give rise to two questions (1) which Yuga Garga has in mind and (2) when did the defeat and destruction of the Greeks in India take place. Now the answers to these questions are not in doubt. By Yuga he means Kali Yuga and the destruction and defeat of the Greeks took place about 165 B.C. It is not mere matter of inference from facts. There are direct statements in chapters 188 and 190 of the Vanaparva of the Mahabharata that the Barbarian Sakas, Yavanas, Balhikas and many others will devastate Bharatvarsna ' *at the end of the Kali Yuga*'.

The result which follows when the two statements are put together is that the Kali Yuga ended in 165 B.C. There is also another argument which supports this conclusion. According to the Mahabharata, Kali Yuga was to comprise a period of one thousand yearsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_10. If we accept the statement that the Kali Yuga began in 1171 B.C. and deduct one thousand years since then we cannot escape the conclusion that Kali Yuga should have ended by about 171 B.C. which is not very far from the historical fact referred to by Garga as

happening at the close of the Kali Yuga. There can therefore be no doubt that in the opinion of the chief Astronomer mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_11, Kali Yuga came to end by about 165 B.C. What is however the position? The position is that according to the Vaidika Brahmaris Kali Yuga has not ended. It still continues. This is clear from the terms of *Sankalpa* which is a declaration which every Hindu makes even today before undertaking any religious ceremony. The Sankalpa is in the following terms mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_12:

"On the auspicious day and hour, in the second Parardha of First Bramha, which is called the Kalpa of the *White* Boar, in the period of *Vaivasvata* Manu, *in the Kali Yuga*, in the country of Jambudvipa in Bharatavarsha in the country of Bharat, in the luni-solar cycle of the sixty years which begins with Pradhava and ends with Kshaya or Akshaya and which is current, as ordained by Lord Vishnu, in the year (name), of the cycle, in the Southern or the Northern Ayana, as the case may be, in the white or dark half, on the Tithi. I (name) begin to perform the rite (name) the object of pleasing the Almighty."

The question we have to consider is why and how the Vedic Brahmins manage to keep the *Kali Yuga* going on when the astronomer had said it was closed. The first thing to do is to ascertain what is the original period of the *Kali Yuga*? According to the Vishnu Purana:

"The Kritayuga comprises 4000 years, the Treta 3000, the Dwapara 2000 and the Kali 1000. Thus those that know the past have declared."

Thus Kali Yuga originally covered a period of 1000 years only. It is obvious that even on this reckoning the Kali Yuga should have ended long ago even according to the reckoning of the Vedic Brahmins. But it has not. What is the reason? Obviously, because the period originally covered by the Kali Yuga came to be lengthened. This was done in two ways.

Firstly, it was done by adding two periods called Sandhya and Sandhyamsa before and after the commencement and the end of a Yuga. Authority for this can be found in the same passage of the Vishnu Purana already referred to and which reads as follows

"The period that precedes a Yuga is called *Sandhya*..... and the period which comes after a Yuga is called *Sandhyamsa*, which lasts for a like period. The intervals between these Sandhyas and Sandhyamsas are known as the Yugas called Krita, Treta and the like."

What was the period of Sandhya and Sandhyamsa? Was it uniform for all the Yugas or did it differ with the Yuga. Sandhya and Sandhyamsa periods were not uniform. They differed with each Yuga. The following table gives some idea of the four Yugas and their Sandhya and Sandhyamsa—

Yug	Period	Dawn	Twilight	Total
Krita	4000	400	400	4800
Treta	3000	300	300	3600
Dwapara	2000	200	200	2400
Kali	1000	100	100	1200
Maha Yuga				12000

Maha Yuga 12000

The Kali Yuga instead of remaining as before a period of 1,000 years was lengthened to a period of 1,200 years by the addition of Sandhya and Sandhyamsa.

Secondly a new innovation was made. It was declared that the period fixed for the Yugas was really a period of divine years and not human years. According to the Vedic Brahmins one divine day was equal to one human year so that the period of Kali Yuga which was 1,000 years plus 200 years of Sandhya and Sandhamsa i.e. 1,200 years in all became (1200 x 360) equal to 4.32,000 years. In these two ways the Vedic Brahmins instead of declaring the end of Kali Yuga in 165 **B.C.** as the astronomer had said extended its life to 4.32,000 years. No wonder Kali Yuga continues even to-day and will continue for lakhs of years. There is no end to the Kali Yuga.

IV

What does the *Kali Yuga* stand for? The *kali Yuga* means an age of *adhharma*, an age which is demoralized and an age in which the laws made by the King ought not to be obeyed. One question at once arises. Why was the Kali Yuga more demoralized than the preceding Yugas? What was the moral condition of the Aryans in the Yuga or Yugas preceding the present Kali Yuga? Anyone who compares the habits and social practices of the later Aryans with those of the ancient Aryans will find a tremendous improvement almost amounting to a social revolution in

their manners and morals.

The religion of the Vedic Aryans was full of barbaric and obscene observances. Human sacrifice formed a part of their religion and was called Narmedhayagna. Most elaborate descriptions of the rite are found in the Yajur-Veda Samhita. Yajur-Veda Brahmanas, the Sankhyana and Vaitana Sutras. The worship of genitals or what is called Phallus worship was quite prevalent among the ancient Aryans. The cult of the phallus came to be known as Skambha and. 23 recognized as part of Aryan religion as may be seen in the hymn in Atharva-Veda X.7. Another instance of obscenity which disfigured the religion of the Ancient Aryans is connected with the Ashvamedha Yajna or the horse sacrifice. A necessary part of the Ashvamedha was the introduction of the *Sepas* (penis) of the Medha (dead horse) into the Yoni (vagina) of the chief wife of the Yajamana (the sacrificer) accompanied by the recital of long series of Mantras by the Brahmin priests. A Mantra in the Vajasaneya Samhita (xxiii. 18) shows that there used to be a competition among the queens as to who was to receive this high honour of being served by the horse. Those who want to know more about it will find it in the commentary of Mahidhara on the Yajur-Veda where he gives full description of the details of this obscene rite which had formed a part of the Aryan religion.

The morals of the Ancient Aryans were no better than their religion. The Aryans were a race of gamblers. Gambling was developed by them into a science in very early days of the Aryan civilization so much so that they had even devised the dice and given them certain technical terms. The luckiest dice was called Krit and the unluckiest was called Kali. Treta and Dwapara were intermediate between them. Not only was gambling well developed among the ancient Aryans but they did not play without stakes. They gambled with such abandon that there is really no comparison with their spirit of gambling. Kingdoms and even wives were offered as stakes at gambling. King Nala staked his kingdom and lost it. The Pandvas went much beyond. They not only staked their kingdom but they also staked their wife, Draupadi, and lost both. Among the Aryans gambling was not the game of the rich. It was a vice of the many.

The ancient Aryans were also a race of drunkards. Wine formed a most essential part of their religion. The Vedic Gods drank wine. The divine wine was called Soma. Since the Gods of the Aryans drank wine the Aryans had no scruples in the matter of drinking. Indeed to drink it was a part of an Aryan's religious duty. There were so many Soma sacrifices

among the ancient Aryans that there were hardly any days when Soma was not drunk. Soma was restricted to only the three upper classes, namely, the Brahmins, the Kshatriyas and the Vaishyas. That does not mean the Shudras were abstainers. Those who were denied Soma drank Sura which was ordinary, unconsecrated wine sold in the market. Not only the Male Aryans were addicted to drinking but the females also indulged in drinking. The Kaushitaki Grihya Sutra 1.11.12 advises that four or eight women who are not widowed after having been regaled with wine and food should be called to dance for four times on the night previous to the wedding ceremony. This habit of drinking intoxicating liquor was not confined to the Non-Brahmin women. Even Brahmin women were addicted to it. Drinking was not regarded as a sin. It was not even a vice, it was quite a respectable practice. The Rig-Veda says:

"Worshipping the Sun before drinking Madira (wine)." The Yajur-Veda says:

"Oh, Deva Soma! being strengthened and invigorated by Sura (wine), by thy pure spirit please the Devas; give juicy food to the sacrificer and vigour to Brahmanas and Kshatriyas." The Mantra Brahmana says:

"By which women have been made enjoyable by men, and by which water has been transformed into wine (for the enjoyment of men), etc."

That Rama and Sita both drank wine is admitted by the Ramayana. Utter Khand says:

"Like Indra in the case of (his wife) Shachi, Rama Chandra made Sita drink purified honey made wine. Servants brought for Rama Chandra meat and sweet fruits."

4

So did Krishna and Arjuna. In the Udyoga Parva of the Mahabharat Sanjaya says:

"Arjuna and Shri Krishna drinking wine made from honey and being sweet-scented and garlanded, wearing splendid clothes and ornaments, sat on a golden throne studded with various jewels. I saw Shrikrishna's feet on Arjuna's lap, and Arjuna's feet on Draupadi and Satyabhama's lap."

We may next proceed to consider the marital relations of men and women. What does history say? In the beginning there was no law of marriage among the Aryans. It was a state of complete promiscuity both in the higher and lower classes of the society. There was no such thing as a question of prohibited degrees as the following instances will show.

Brahma married his own daughter *Satarupa*. Their son was Manu the

founder of the Pruthu dynasty which preceded the rise of the *Aiksvakas* and the *Ailas*.

Hiranyakashpu married his daughter Rohini. Other cases of father marrying daughters are Vashishtha and Shatrupa, Janhu and Jannhavi, and Surya and U.sha. That such marriages between father and daughters were common is indicated by the usage of recognizing *Kanin* sons. Kanin sons mean sons born to unmarried daughter. They were *in law* the sons of the father of the girl. Obviously they must be sons begotten by the father on his own daughter

There are cases of father and son cohabiting with the same woman, Brahma is the father of Manu and Satarupa is his mother. This Satarupa is also the wife of Manu. Another case is that of *Shradha*. She is the wife of Vivasvat. Their son is Manu. But Shradha is also the wife of Manu thus indicating the practice of father and son sharing a woman. It was open for a person to marry his brother's daughter. Dharma married 10 daughters of Daksha though Daksha and Dharma were brothers. One could also marry his uncle's daughter as did Kasyapa who married 13 wives all of whom were the daughters of Daksha and Daksha was the brother of Kasyapa's father Marichi.

The case of Yama and Yami mentioned in the Rig-Veda is a notorious case, which throws a great deal of light on the question of marriages between brothers and sisters. Because Yama refused to cohabit with Yami it must not be supposed that such marriages did not exist.

The Adi Parva of the Mahabharata gives a geneology which begins from Brahmadeva. According to this geneology Brahma had three sons Marichi, Daksha and Dharma and one daughter whose name the geneology unfortunately does not give. In this very geneology it is stated that Daksha married the daughter of Brahma who was his sister and had a vast number of daughters variously estimated as being between 50 and 60. Other instances of marriages between brothers and sisters could be cited. They are Pushan and his sister Acchoda and Amavasu. Purukutsa and Narmada, Viprachiti and Simhika, Nahusa and Viraja, Sukra-Usanas and Go, Amsumat and Yasoda, Dasaratha and Kausalya, Rama and Sita; Suka and Pivari; Draupadi and Prasti are all cases of brothers marrying sisters.

The following cases show that there was no prohibition against son cohabiting with his mother. There is the case of Pushan and his mother Manu and Satrupa and Manu and Shradha. Attention may also be drawn to two other cases, Arjuna and Urvashi and Arjuna and Uttara. Uttara was married to Abhimanyu son of Arjuna when he was barely 16. Uttara

was associated with Arjuna. He taught her music and dancing. Uttara is described as being in love with Arjuna and the Mahabharata speaks of their getting married as a natural sequel to their love affair. The Mahabharata does not say that they were actually married but if they were, then Abhimanyu can be said to have married his mother. The Arjuna Urvashi episode is more positive in its indication.

Indra was the real father of Arjuna. Urvashi was the mistress of Indra and therefore in the position of a mother to Arjuna. She was a tutor to Arjuna and taught him music and dancing. Urvashi became enamoured of Arjuna and with the consent of his father, Indra, approached Arjuna for sexual intercourse. Arjuna refused to agree on the ground that she was like mother to him. Urvashi's conduct has historically more significance than Arjuna's denial and for two reasons. The very request by Urvashi to Arjuna and the consent by Indra show that Urvashi was following a well established practice. Secondly, Urvashi in her reply to Arjuna tells him in a pointed manner that this was a well recognized custom and that all Arjuna's forefathers had accepted precisely similar invitations without any guilt being attached to them.

Nothing illustrates better than the complete disregard of consanguinity in cohabitation in ancient India than the following story which is related in the second Adhyaya of the Harivamsha. According to it Soma was the son of ten fathers—suggesting the existence of Polyandry—each one of whom was called Pralheta. Soma had a daughter *Marisha*—The ten fathers of *Soma* and *Soma* himself cohabited with *Marisha*. This is a case of ten grand-fathers and father married to a woman who was a grand-daughter and daughter to her husbands. In the same Adhyaya the story of Daksha Prajapati is told. This Daksha Prajapati who is the son of Soma is said to have given his 27 daughters to his father, Soma for procreation. In the third Adhyaya of Harivamsha the author says that Daksha gave his daughter in marriage to his own father Brahma on whom Brahma begot a son who became famous as Narada. All these are cases of cohabitation of Sapinda men, with Sapinda women.

The ancient Aryan women were sold. The sale of daughters is evidenced by the Arsha form of marriage. According to the technical terms used the father of the boy gave *Go-Mithuna* and took the girl. This is another way of saying that the girl was sold for a *Go-Mithuna*. *Go-Mithuna* means one cow and one bull which was regarded as a reasonable price of a girl. Not only daughters were sold by their fathers but wives also were sold by their husbands. The Harivamsha in its 79th Adhyaya describes how a religious rite called *Punyaka-Vrata* should be

the fee that should be offered to the officiating priest. It says that the wives of Brahmins should be purchased from their husbands and given to the officiating priest as his fee. It is quite obvious from this that Brahmins freely sold their wives for a consideration.

That the ancient Aryans let their women on rent for cohabitation to others is also a fact. In the Mahabharata there is an account of the life of Madhavi in Adhyayas 103 to 123. According to this account Madhavi was the daughter of King Yayati. Yayati made a gift of her to Galawa. Galva who was a Rishi as a fee to a priest. Galva rented her

out to three kings in succession but to each for a period necessary to beget a son on her. After the tenancy of the third king terminated Madhavi was surrendered by Galva to his Guru Vishvamitra who made her his wife. Vishvamitra kept her till he begot a son on her and gave her back to Galva. Galva returned her to her father Yayati.

Polygamy and Polyandry were raging in the ancient Aryan society. The fact is so well known that it is unnecessary to record cases which show its existence. But what is probably not well known is the fact of promiscuity. Promiscuity in matters of sex becomes quite apparent if one were only to examine the rules of Niyoga which the Aryan name for a system under which a woman who is wedded can beget on herself a progeny from another who is not her husband. This system resulted in a complete state of promiscuity for it was uncontrolled. In the first place, there was no limit to the number of Niyogas open to a woman. Madhuti had one Niyoga allowed to her. Ambika had one actual Niyoga and another proposed. Saradandayani had three. Pandu allowed his wife Kunti four Niyogas. Vyusistasva was permitted to have 7 and Vali is known to have allowed as many as 17 Niyogas, 11 on one and 6 on his second wife. Just as there was no limit to the number of Niyogas so also there was no definition of cases in which Niyoga was permissible. Niyoga took place in the lifetime of the husband and even in cases where the husband was not overcome by any congenital incapacity to procreate. The initiative was probably taken by the wife. The choice of a man was left to her. She was free to find out with whom she would unite a Niyoga and how many times, if she chose the same man. The Niyogas were another name for illicit intercourse between men and women which might last for one night or twelve years or more with the husband a willing and a sleeping partner in this trade of fornication.

These were the manners and morals of common men in the ancient Aryan Society. What were the morals of the Brahmins? Truth to tell they were no better men than those of the common men. The looseness of

the morals among the Brahmins is evidenced by many instances. But a few will suffice. The cases showing that the Brahmins used to sell their wives has already been referred to. I will give other cases showing looseness. The Utanka is a pupil of Veda (the Purohita of Janmejaya III). The wife of Veda most calmly requests Utanka to take the place of her husband and 'approach' her for the sake of virtue. Another case that may be referred to in this connection is that of Uddalaka's wife. She is free to go to other Brahmins either of her own free will, or in response to invitations. Shwetketu is her son by one of her husband's pupils. These are not mere instances of laxity or adultery. These are cases of recognized latitudes allowed to Brahmin women. Jatila-Gautami' was a Brahmin woman and had 7 husbands who were Rishis. The Mahabharata says that the wives of the citizens admire Draupadi in the company of her five husbands and compare her to Jatila Gautami with her seven husbands. *Mamata* is the wife of *Utathya*. But Brahaspati the brother of *Utathya* had free access to *Mamata* during the life time of *Utathya*. The only objection *Mamata* once raises to him is to ask him to wait on account of her pregnancy but does not say that approaches to her were either improper or unlawful.

Such immoralities were so common among the Brahmins that Draupadi when she was called a cow by Duryodhana for her polyandry is said to have said she was sorry that her husbands were not born as Brahmins.

Let us examine the morality of the rishis. What do we find? The first thing we find is the prevalence of bestiality among the rishis. Take the case of the rishi called *Vibhandaka*. In Adhyaya 100 of the Vana Parva of the Mahabharata it is stated that he cohabited with a female deer and that the female deer bore a son to him who subsequently became known as Rishi Shranga. In Adhyaya I as well as in 118 of the Adi Parva of the Mahabharata there is a narration of how Pandu the father of the Pandavas received his curse from the Rishi by name Dama. Vyas says that the Rishi Dama was once engaged in the act of coitus with a female deer in a jungle. While so engaged Pandu shot him with an arrow before the rishi was spent as a result of it Dama died. But before he died Dama uttered a curse saying that if Pandu ever thought of approaching his wife he would die instantly. Vyas tries to gloss this bestiality of the rishi by saying that the Rishi and his wife had both taken the form of deer in fun and frolic. Other instances of such bestiality by the rishis it will not be difficult to find if a diligent search was made in the ancient religious literature in India.

Another heinous practice which is associated with the rishis is cohabitation with women in the open and within the sight of the public. In Adhyaya 63 of the Adi Parva of the Mahabharata a description is given of how the Rishi Parashara had sexual intercourse with Satyavati, alias Matsya Gandha a fisherman's girl. Vyas says that he cohabited with her in the open and in public. Another similar instance is to be found in Adhyaya 104 of the Adi Parva. It is stated therein that the Rishi Dirgha Tama cohabited with a woman in the sight of the public. There are many such instances mentioned in the Mahabharata. There is, however, no need to encumber the record with them. For the word *Ayonija* is enough to prove the general existence of the practice. Most Hindus know that Sita, Draupadi and other renowned ladies are spoken of *Ayonija*. What they mean by *Ayonija* is a child born by immaculate conception. There is however no warrant from etymological point of view to give such a meaning to the Ayoni. The root meaning of the word Yoni is house. *Yonija* means a child born or conceived in the house. *Ayonija* means a child born or conceived outside the house. If this is the correct etymology of *Ayonija* it testifies to the practice of indulging in sexual intercourse in the open within the sight of the public.

Another practice which evidences the revolting immorality of the rishis in the Chandiyogya Upanishad. According to this Upanishad it appears that the rishis had made a rule that if while they were engaged in performing a *Yajna* if a woman expressed a desire for sexual intercourse with the rishi who was approached should immediately without waiting for the completion of the *Yajna* and without caring to retire in a secluded spot proceeded to commit sexual intercourse with her in the *Yajna* Mandap and in the sight of the public. This immoral performance of the rishi was elevated to the position of a Religious observance and given the technical name of *Vamadev- Vrata* which was later on revived as *Vama- Marga*.

This does not exhaust all that one finds in the ancient sacredotal literature of the Aryans about the morality of the rishis. One phase of their moral life remains to be mentioned.

The ancient Aryans also seem to be possessed with the desire to have better progeny which they accomplished by sending their wives to others and it was mostly to the rishis who were regarded by the Aryas as pedigree cattle. The number of rishis who figure in such cases form quite a formidable number. Indeed the rishis seemed to have made a regular trade in this kind of immorality and they were so lucky that even kings asked them to impregnate the queens. Let us now take the

Devasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_13.

The Devas were a powerful and most licentious community. They even molested the wives of the rishis. The story of how Indra raped Ahalya the wife of Rishi Gautama is well known. But the immoralities they committed on the Aryan women were unspeakable. The Devas as a community appears to have established an overlordship over the Aryan community in very early times. This overlordship had become degenerated that the Aryan women had to prostitute themselves to satisfy the lust of the Devas. The Aryans took pride if his wife was in the keeping of a Deva and was impregnated by him. The mention is in the Mahabharata and in the Harivamsha of sons born to Arya women from Indra. Yama, Nasatya, Agni, Vayu and other Devas is so frequent that one is astounded to note the scale on which such illicit intercourse between the Devas and the Arya women was going on.

In course of time the relations between the Devas and the Aryans became stabilized and appears to have taken the form of feudalism. The Devas exacted two boons'mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_14 from the Aryans.

The first boon was the *Yajna* which were periodic feasts given by the Aryans to the Devas in return for the protection of the Devas in their fight against the Rakshasas, Daityas and Danavas. The Yajnas were nothing but feudal exactions of the Devas. If they have not been so understood it is largely because the word Deva instead of thought to be the name of a community is regarded as a term for expressing the idea of God which is quite wrong at any rate in the early stages of Aryan Society.

The second boon claimed by the Devas against the Aryans was the prior right to enjoy Aryan woman. This was systematized at a very early date. There is a mention of it in the Rig-Veda in X. 85.40. According to it the first right over an Arya female was that of Soma second of Gandharva, third of Agni and lastly of the Aryan. Every Aryan woman was hypothecated to some Deva who had a right to enjoy her first on becoming puber. Before she could be married to an Aryan she had to be redeemed by getting the right of the Deva extinguished by making him a proper payment. The description of the marriage ceremony given in the 7th Khandika of the 1st Adhyaya of the Ashvalayan Grahya Sutra furnish the most cogent proof of the existence of the system. A careful and critical examination of the Sutra reveals that at the marriage three

Devas were present, *Aryaman*, *Varuna* and *Pushan*, obviously because they had a right of prelibation over the bride. The first thing that the bride-groom does, is to bring her near a stone slab and make her stand on it telling her 'Tread on this stone, like a stone be firm. Overcome the enemies; tread the foes down'. This means that the bridegroom does it to liberate the bride from the physical control of the three Devas whom he regards as his enemies. The Devas get angry and march on the bridegroom. The brother of the bride intervenes and tries to settle the dispute. He brings parched gram with a view to offer it the Angry Deva with a view to buy off their rights over the bride. The brother then asks the bride to join her palms and make a hollow. He then fills the hollow of her palm with the parched grain and pours clarified butter on it and asks her to offer it to each Deva three times. This offering is called *Avadana*. While the bride is making this Avadana to the Deva the brother of the bride utters a statement which is very significant. He says "This girl is making this Avadana to Aryaman Deva through Agni. Aryaman should therefore relinquish his right over the girl and should not disturb the possession of the bridegroom". Separate Avadanas are made by the bride to the other two Devas and in their case also the brother alters the same formula. After the Avadan follows the Pradakshana round the Agni which is called SAPTAPADI after which the marriage of the bride and bridegroom becomes complete valid and good. All this of course is very illuminating and throw a flood of light on the utter subjection of the Aryans to the Devas and moral degradation of Devas as well as of the Aryans.

Lawyers know that Saptapadi is the most essential ceremony in a Hindu marriage and that without it there is no marriage at Law. But very few know why Saptapadi has so great an importance. The reason is quite obvious. It is a test whether the Deva who had his right of prelibation over the bride was satisfied with the Avadana and was prepared to release her. If the Deva allowed the bridegroom to take the bride away with him up to a distance covered by the Saptapadi it raised an irrefutable presumption that the Deva was satisfied with the compensation and that his right was extinguished and the girl was free to be the wife of another. The Saptapadi cannot have any other meaning. The fact that Saptapadi is necessary in every marriage shows how universally prevalent this kind of immorality had been among the Devas and the Aryans.

This survey cannot be complete without separate reference to the morals of Krishna. Since the beginning of Kali Yuga which is the same

thing is associated with his death his morals became of considerable importance. How do the morals of Krishna compare with those of the others? Full details are given in another place about the sort of life Krishna led. To that I will add here a few. Krishna belonged to the Vrasni (Yadava family). The Yadavas were polygamous. The Yadava Kings are reported to have innumerable wives and innumerable sons—a stain from which Krishna himself was not free. But this Yadava family and Krishna's own house was not free from the stain of parental incest. The case of a father marrying daughter is reported by the Matsya Purana to have occurred in the Yadav family. According to Matsya Purana, King Taittiri an ancestor of Krishna married his own daughter and begot on her a son, by name Nala. The case of a son cohabiting with his mother is found in the conduct of *Samba* the son of Krishna. The Matsya Purana tells how Samba lived an illicit life with the wives of Krishna his father and how Krishna got angry and cursed Samba and the guilty wives on that account. There is a reference to this in the Mahabharata also. Satyabhama asked Draupadi the secret of her power over her five husbands. According to the Mahabharata Draupadi warned her against talking or staying in private with her step-sons. This corroborates what the Matsya Purana has to say about *Samba*. Samba's is not the only case. His brother Pradyumna married his foster mother *Mayavati* the wife of Sambara.

Such is the state of morals in the Aryan Society before the death of Krishna. It is not possible to divide this history into definite Yugas and to say that what state of morals existed in the Krita, what in Treta and what in Dwapara Yuga which closed at the death of Krishna. If, however, we allow the ancient Aryans a spirit of progressive reform it is possible to say that the worst cases of immorality occurred in earliest age i.e. the Krita age, the less revolting in the Treta and the least revolting in the Dwapara and the best in the Kali age.

This line of thinking does not rest upon mere general development of human society as we see all over the world. That instead of undergoing a moral decay the ancient Aryan society was engaged in removing social evils by undertaking bold reforms is borne out by its story.

Devas and the rishis occupied a very high place in the eyes of the common Aryan and as is usual the inferior always imitate their superior. What the superior class does forms a standard for the inferior. The immoralities which were prevalent in the Aryan Society were largely the result of the imitation by the common man of the immoral acts and deeds of the Devas and the rishis. To stop the spread of immoralities in

society the leaders of the Aryan Society introduced a reform of the greatest significance. They declared that acts and deeds of the Devas and the rishis are not to be cited mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_15 or treated as precedents. In this way one cause and source of immorality was removed by a bold and courageous stroke.

Other reforms were equally drastic. The Mahabharata refers to two reformers Dirghatama and Shwetaketu. It was laid down by Shwetketu that the marriage is indissoluble and there was to be no divorce. Two reforms are attributed to Dirghatama. He stopped polyandry and declared that a woman can have only one husband at a time. The second reform he is said to have carried out. was to lay down conditions for regulating Niyog. The following were the most important of these conditions.

(i) The father or brother of the widow (or of the widow's husband) shall assemble the Gurus who taught or sacrificed for the deceased husband and his relatives and shall appoint her to raise issue for the deceased husband mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_16.

(ii) (1) The husband, whether living or dead, must have no sons; (2) The Gurus in a family council should decide to appoint the widow to raise issue for her husband, (3) The person appointed must be either the husband's brother or a sapinda, or sagotra of the husband or (according to Gautama) a sapravara or a person of the same caste. (4) The person appointed and the widow must be actuated by no lust but only by a sense of duty; (5) The person appointed must be anointed with ghee or oil (Narada Stripurnsa, 82) must not speak with or kiss her or engage in the sportive dalliance with the women; (6) This relationship was to last till one son was born (or two according to some); (7) The widow must be comparatively young, she should not be old or sterile, or past child-bearing or sickly or unwilling or pregnant (Baud. Dh. S. II. 2.70, Narad, Stripumsa 83.84); (8) After the birth of a son they were to regard themselves as father-in-law and daughter-in-law (Manu IX, 62). It is further made clear by the texts that if a brother-in-law has intercourse with his sister-in-law without appointment by elders or if he does so even when appointed by elders but the other circumstances do not exist (e.g., if the husband has a son), he would be guilty of the sin of incest."

There are other reforms carried out by the ancient Aryan Society necessary to improve its morals. One was to establish the rule of prohibited degrees for purposes of marriage to prevent recurrence of

father-daughter, brother-sister, mother-son, grandfather-grand daughter marriages. The other was to declare sexual intercourse between the wife of the Guru and the pupil a heinous sin. Equally clear is the evidence in support of an attempt to control gambling. Every treatise in the series called Dharma Sutras contain references to laws made throwing on the King the duty and urgency of controlling gambling by State authorities under stringent laws.

All these reforms had taken effect long before the Kali Yuga started and it is natural to hold that from the point of view of morality the Kali Yuga was a better age. To call it an age in which morals were declining is not only without foundation but is an utter perversion.

This discussion about the Kali Yuga raised many riddles in the first place. How and when did the idea of mahayuga arise? It is true that all over the world the idea of a golden age lying in the past has been prevalent. But the idea of a Mahayuga is quite satisfied with the idea of a golden past prevalent elsewhere in India. Elsewhere the golden past is deemed to return. It is gone for ever. But in the idea of the Mahayuga the golden past is not gone for ever. It is to return after the cycle is complete.

The second riddle is why was the Kali Yuga not closed in 165 B.C. When according to the astronomer it was due to end why was it continued. Third riddle is the addition of Sandhya and Sandhyamsa periods to the *Kali Yuga*. It is quite obvious that these were later additions. For the Vishnu Purana states them separately. If they were original parts of Kali Yuga they would not have been stated separately why were these additions made. A fourth riddle is the change in the counting of the period. Originally the period of the Kali Yuga was said to be human years. Subsequently it was said to be a period of divine years with the result of the Kali Yuga being confined to 1200 years became extended to 4,32,000 years. That this was an innovation is quite obvious. For the Mahabharata knows nothing about this calculation in term of divine years. Why was this innovation made? What was the object of the Vedic Brahmins in thus indefinitely extending the period of the Kali Yuga? Was it to blackmail some Shudra Kings that the theory of Kali Yuga was invented and made unending so as to destroy his subjects from having any faith in his rule?

RIDDLE NO. 24

THE RIDDLE OF THE KALI YUGA

The Units into which time is broken up for the purposes of reckoning it which are prevalent among the Hindus have not deserved the attention which their extraordinary character call for. This is a matter which forms one of the principal subject matter of the Puranas. There are according to the Puranas five measures of time (1) Varsha, (2) Yuga, (3) Maha Yuga, (4) Manwantara and (5) Kalpa. I will draw upon the Vishnu Purana to show what these units are.

To begin with the Varsha. This is how the Vishnu Purana explains itmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm -_msocom_17:

“Oh best of sages, fifteen twinklings of the eye make a *Kashtha*; thirty Kalas, one

Muhurttas; thirty Muhurttas constitute a day and night of mortals: thirty such days make a month, divided into two half-months: six months form an *Ayana* (the period of the Sun's progress north or south of the ecliptic): and two *Ayanas* compose a year.”

The same is explained in greater details at another place in the Vishnu Puranamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm -_msocom_18

“Fifteen twinklings of the eye (*Nimedhas*) make a *Kashtha*, thirty *Kashthas*, a *Kala*; Thirty Kalas, a *Muhurttas* (forty-eighty minutes); and thirty Muhurttas, a day and night; the portions of the day are longer or shorter, as has been explained; but the Sandhya is always the same in increase or decrease, being only one Muhurttas. From the period that a line may be drawn across the Sun (or that half his orb is visible) to the expiration of three Muhurttas (two hours and twenty-four minutes), that interval is called Pratar (morning), forming a fifth portion of the day.

(This is another version entitled ' The Riddle of the Kali Yuga ' . The copy available with us is a carbon copy having no corrections or modifications by the author. This chapter contains 40 pages.—Ed.)

The next portion, or three Muhurttas from morning, is termed *Sangava* (forenoon): the three next Muhurttas constitute mid-day; the afternoon comprises the next three Muhurttas; the three Muhurttas following are considered as the evening; and the fifteen Muhurttas of the day are thus classed in five portions of three each.”

"Fifteen days of thirty Muhurttas each are called a *Paksha* (a lunar

fortnight); two of these make a month; and two months, a solar season; three seasons a northern or southern declination (*Ayana*), and those two compose a year."

The conception of Yuga is explained by the Vishnu Purana in the following terms: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_19: "Twelve thousand divine years, each composed of (three hundred and sixty) such days, constitute the period of the four Yugas, or ages. They are thus distributed: the Krita age has four thousand divine years; the Treta three thousand; the Dwapara two thousand; and Kali age one thousand; so those acquainted with antiquity have declared.

"The period that precedes a Yuga is called a *Sandhya*, and it is of as many hundred years as there are thousand in the Yuga; and the period that follows a Yuga, termed the *Sandhyansa*, is of similar duration. The interval between the Sandhya and the Sandhyasana is the Yuga, denominated, Krita, Treta, &c."

The term Yuga is also used by the Vishnu Purana to denote a different measure of time.

It says: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_20:

"Years, made up of four kinds of months, are distinguished into five kinds; and an aggregate of all the varieties of time is termed a Yuga, or cycle. The years are severally, called Samvatsara, Idvatsara, Anuvatsara, Parivatsara, and Vatsara.- This is the time called a Yuga."

The measure of Maha Yuga is an extension of the Yuga. As the Vishnu Purana points out: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_21:

"The Krita, Treta, Dwapara, and Kali constitute a great age, or aggregate of four ages: a thousand such aggregates are a day of Brahma,"

The Manwantara is explained by the Vishnu Purana in the following terms: mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_22:

"The interval, called a Manwantara, is equal to seventy-one times, the number of years contained in the four Yugas, with some additional years."

What is Kalpa is stated by the Vishnu Purana in the following brief text:

"Kalpa (or the day) of Brahma."

These are the periods in which time is divided. The time included in

these periods may next be noted. The *Varsha* is simple enough. It is the same as the year or a period of 365 days. The Yuga, Maha Yuga, Manwantara and Kalpa are not so simple for calculating the periods. It would be easier to treat Yuga, Maha Yuga etc., as sub-divisions of a Kalpa rather than treat the Kalpa as a multiple of Yuga.

Proceeding along that line the relation between a Kalpa and a Maha Yuga is that in one Kalpa there are 71 Maha Yugas while one Maha Yuga consists of four Yugas and a Manwantara is equal to 71 Maha Yugas with some additional years.

In computing the periods covered by these units we cannot take Yuga as our base for computation. For the Yuga is a fixed but not uniform period. The basis of computation is the Maha Yuga which consists of a fixed period.

A Maha Yuga consists of a period of four Yugas called (1) Krita, (2) Treta, (3) Dwapara and (4) Kali. Each Yuga has its period fixed. Each Yuga in addition to its period has a dawn and a twilight which have fixed duration. Actual period as well as the period of the dawn and the twilight are different for the different Yugas.

Yug	Period	Dawn	Twilight	Total
Krita	4000	400	400	4800
Treta	3000	300	300	3600
Dwapara	2000	200	200	2400
Kali	1000	100	100	1200
Maha Yuga				12000

This computation of the Maha Yuga is in terms of divine years i.e. 12000 divine years or years of Brahma make up one Maha Yuga at the rate of one year of men being equal to one divine day the Maha Yuga in terms of human or mortal years comes to $(360 \div 12000) 43,20,000$ years.

Seventy-one Maha Yugas make one Kalpa. This means that a Kalpa is equal to $(43,20,000 \times 71) 3,06,72,000$.

Coming to Manwantaras one Manvantara is equal to 71 Maha Yugas plus something more. The period of a manvantara is equal to that of a Kalpa i.e. 3,06,72,000 *plus* something more. The period of a Manvantara is bigger than the period included in a Kalpa. The conception of a *Varsha* is in accord with astronomy and is necessary for the purpose of calculating time. The conception of a Kalpa is both mythological and cosmological and is based upon the belief that the Universe undergoes the process of creation and dissolution at the hands of Brahma and the

period between creation and dissolution is called Kalpa. The first book of the Vishnu Purana is occupied with this. It begins with the details of creation.

Creation is of twofold character, (1) primary (sarga) i.e. the origin of the universe from Prakriti or eternal crude matter; (2) Secondary (Pratisarga) i.e. the manner in which forms of things are developed from elementary substances previously evolved, or the manner in which they reappear after their temporary destruction. Both these creations are periodical, but the termination of the first occurs only at the end of the life of Brahma, when not only all the Gods and all other forms are annihilated, but the elements are again merged into primary substance, besides which one only spiritual being exists; the later takes place at the end of every Kalpa or day of Brahma, and affects only the forms of inferior creatures, and lower worlds, leaving the substance of the universe entire, and sages and Gods unharmed.

Such is the conception underlying Kalpa.

The conception underlying Manvantara is mythological if not historical. It starts with the belief that Brahma gave rise to creation, inanimate as well as animate. But the animates did not multiply themselves. Brahma then created other 9 mind born sons but they were without desire or passion, inspired with holy wisdom, estranged from the universe, and undesirous of progeny. Brahma having perceived this was filled with wrath. Brahma then converted himself into two persons, the first male, or Manu Swayambhuva and the first woman, or Satarupa. Manu Swayambhuva married Satarupa. Thus began the first Manvantara which is called Manvantara Swayambhuva. The fourteen Manvantaras are described as follows¹”Then, Brahma created himself the Manu Swayambhuva, born of, and identical with, -his original self, for the protection of created beings, and the female portion of himself he constituted Satarupa, whom austerity purified from the sin (of forbidden nuptials), and whom the divine Manu Swayambhuva took to wife. From these two were born two sons, Priyavrata and Uttanapada, and two daughters, named Prasuti and Akuti graced with loveliness and exalted merit. Prasuti he gave to Daksha, after giving Akuti to the Patriarch Ruchi, who espoused her. Akuti bore to Ruchi twins, Yajna and Dakshina, who afterwards became husband and wife, and had twelve sons, the deities called Yamas, in the Manwantara of Swayambhuva.”

¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_23The first Manu was Swayambhuva, then came

Swarochisha, the Auttami, then Tamasa, then Raivata, then Chakshusha: these six Manus have passed away. The Manu who presides over the seventh Manwantara, which is the present period, is Vaivaswata, the son of the Sun."

"The period of Swayambhuva Manu, in the beginning of the Kalpa, has already been described by me, together with the gods, Rishis, and other personages, who then flourished. I will now, therefore, enumerate the presiding gods, Rishis, and sons of the Manu, *in the Manwantara of Swarochisha*. The deities of this period (or the second Manvantara) were the classes called Paravatas and Tushitas; and the king of the gods was the mighty Vipaschit. The seven Rishis were Urja, Stambha, Prana, Dattoli, Rishabha, Nischara, and Arvarivat; and Chaitra, Kimpurusha and others, were the Manu's sons.

"In the *third period*, or Manwantara of Auttami, Susanti was the Indra, the king of the gods the orders of whom were the Sudhamas, Satyas, Sivas, Pradersanas, and Vasavertis; each of the five orders consisting of twelve divinities. The seven sons of Vasishtha were the seven Rishis; and Aja, Parasu, Divya and others, were the sons of the Manu.

"The Surupas, Haris, Satyas, and Sudhis were the classes of gods, each comprising twenty-seven, in the period of Tamasa, the *fourth Manu*. Sivi was the Indra, also designated by his performance of a hundred sacrifices (or named Satakratu). The seven Rishis were Jyotirdhama, Prithu, Kavya, Chaitra, Agni, Vanaka, and Pivara. The sons of Tamasa were the mighty kings Nara, Khyati, Santahaya, Janujangha, and others."

"In the *fifth interval* the Manu was Raivata; the Indra was vibhu: the classes of gods, consisting of fourteen each, were the Amitabhas, Abhutarajasas, Vaikunthas, and Sumedhasas; the seven Rishis were Hiranyaroma, Vedasri, Urdohabahu, Vedabahu, Sudhaman, Parjanya and Mahamuni: the sons of Raivata were Balabandhu Susambhavya, Satyaka, and other valiant kings."

"These four Manus, Swarochisha, Auttami, Tamasa, and Raivata, were all descended from Priyavrata, who in consequence of propitiating Vishnu by his devotions, obtained these rulers of the Manwantaras for his posterity.

"Chakshusha was the Manu of the *sixth period* in which the Indra was Janojava; the five classes of gods were the Adya Prastutas, Bhavyas, Prithugas, and the magnanimous Lekhas, eight of each: Sumedhas, Virajas, Havishmat, Uttama, Madhu, Abhinaman, and Sahishnu were the seven sages; the kings of the earth, the sons of Chakshusha, were the powerful Uru, Puru, Satadhumna, and others."

"The Manu of the *present* is the wise lord of obsequies, the illustrious offspring of the sun; the deities are the Adityas, Vasus, and Rudras; their sovereign is Purandra: Vasistha, Kasyapa, Atri, Jamadagni, Gautama, Viswamitra, and Bharadwaja are the seven Rishis; and the nine pious sons of Vaivaswata Manu are the kings Ikshwaku, Nabhaga, Dhrishta, Sanyati, Narishyanata Nabhanidishtha, Karusha, Prishadhra, and the celebrated Vasumat." So far the particulars of seven Manvantaras which are spoken of by the Vishnu Purana as the past Manwantaras. Below are given the particulars of other seven

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_24:

"Sanjana, the daughter of Viswakarman, was the wife of the Sun, and bore him three children, the Manu (Vaivaswata), Yama, and the goddess Yami (or the Yamuna river). Unable to endure the fervours of her lord, Sanjana gave him Chhaya as his handmaid, and repaired to the forests to practise devout exercises. The Sun, supposing Chhaya to be his wife Sanjana, begot by her three other children, Sanaischara (Saturn), another Manu (Savarni), and a daughter Tapati (the Tapti river). Chhaya, upon one occasion, being offended with Yama, the son of Sanjana, denounced an imprecation upon him, and thereby revealed to Yama and to the Sun that she was not in truth Sanjana, the mother of the former. Being further informed by Chhaya that his wife had gone the wilderness, the Sun beheld her by the eye of meditation engaged in austerities, in the figure of a mare (in the region of Uttara Kuru). Metamorphosing himself into a horse, he rejoined his wife, and begot three other children, the two Aswins, and Revanta, and then brought Sanjana back to his own dwelling. To diminish his intensity, Viswakarman placed the luminary on his lathe to grind off some of his effulgence; and in this manner reduced it an eighth, for more than that was inseparable. The parts of the divine Vaishnava splendour, residing in the Sun, that were filed off by Viswakarman, fell blazing down upon the earth, and the artist constructed of them the discus of Vishnu, the trident of Siva, the weapon of the god of wealth, the lance of Kartikeya, and the weapons of the other gods: all these Viswakarman fabricated from the superfluous rays of the sun:

"The son of Chhaya, who was called also a Manu was denominated Savarni, from being of the same caste (Savarni) as his elder brother, the Manu Vaivaswata. He presides over the ensuing or *eighth Manwantara*; the particulars of which, and the following, I will now relate. In the period in which Savarni shall be the Manu, the classes of the gods will be

Sutapas, Amitabhas, and Mukhyas; twentyone of each. The seven Rishis will be Diptimat, Galava, Rama, Kripa, Drauni; my son Vyasa will be the sixth, and the seventh will be Rishyasringa. The Indra will be Bali, the sinless son of Virochan who through the favour of Vishnu is actually sovereign of part of Patala. The royal progeny of Savarni will be Virajas, Arvariva, Nirmoha, and others."

"The *ninth Manu* will be Daksha-Savarni. The Paras, Marichigarbhas, and Sudharmas will be the three classes of divinities, each consisting of twelve; their powerful chief will be the Indra, Abhuta. Savana, Dyutimat, Bhavya, Vasu, Medhatithi, Jyotishaman, and Satya will be the seven Rishis. Dhritketu, Driptiket, Panchahasta, Niramaya, Prithusraya, and others will be the sons of the Manu."

"In the *tenth Manwantara* the Manu will be Brahma-savarni; the gods will be the Sudhamas, Viruddhas, and Satasankhyas; the Indra will be the mighty Santi; the Rishis will be Havishaman, Sukriti, Satya, Appammurti, Nabhaga, Apratimaujas and Satyaketu; and the ten sons of the Manu will be Sukshetra, Uttamaujas, Harishena and others."

"In the *eleventh Manwantara* the Manu will be Dharma-savarni; the principal classes of gods will be the Vihangama Kamagamas, and the Nirmanaratis, each thirty in number; of whom Vrisha will be the Indra: the Rishis will be Nischara, Agnitejas, Vapushaman, Vishnu, Aruni, Havishaman, and Anagha; the kings of the earth, and sons of the Manu, will be Savarga, Sarvadharmas, Devanika, and others."

"In the *twelfth Manwantara* the son of Rudra, Savarni, will be the Manu: Ritudhama will be the Indra; and the Haritas, Lohitas: Sumanasas, and Sukrmas will be the classes of gods, each comprising fifteen Tapaswi, Sutapas, Tapomurti, Taporati, Tapodhriti, Tapodyuti and Tapodhana will be the Rishis; and Devavan, Upadeva, Devasreshtha and others, will be the Manu's sons, and mighty monarchs on the earth."

"In the *thirteenth Manwantara* the Manu will be Rauchya; the classes of gods thirty-three in each will be the Sudhamanas, Sudharmans, and Sukarmanas, their Indra will be Divaspati; the Rishis will be Nirmoha, Tatwadarsin, Nishprakampa, Nirutsuka, Dhritimat, Avyaya, and Sutapas; and Chitrasena, Vichitra, and others, will be the kings."

"In the *fourteenth Manwantara*, Bhautya will be the Manu; Suchi, the Indra: the five classes of gods will be the Chakshushas, the Pavitras, Kanishthas, Bhrajiras, and Vavriddhas; the seven Rishis will be Agnibahu, Suchi, Sukra, Magadha, Gridhra, Yukta and Ajita; and the sons of the Manu will be Uru, Gabhira, Bradhna, and others, who will be kings, and will rule over the earth." The scheme of Manwantaras

seems to be designed to provide a governing body for the universe during the period of a Manwantara. Over every Manwantara there presides a Manu as the legislator, Deities to worship, seven Rishis and a King to administer the affairs. As the Vishnu Purana says mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_25:

"The deities of the different classes receive the sacrifices during the Manwantaras to which they severally belong; and the sons of the Manu themselves, and their descendants, are the sovereigns of the earth for the whole of the same term. The Manu, the seven Rishis, the gods, the sons of the Manu, who are kings, and Indra, are the beings who preside over the world during each Manwantara." But the scheme of chronology called the Maha Yuga is a most perplexing business.

Why Kalpa should have been divided into Maha Yugas and why a Maha Yuga should have been sub-divided into four Yugas, Krita, Treta, Dwapara and Kali is a riddle which needs explanation. It is not based on mythology and unlike the era it has no reference to any real or supposed history of the Hindus.

In the first place why was the period covered by a Yuga so enormously extended as to make the whole chronology appear fabulous and fabricated.

In the Rig-Veda the word *Yuga* occurs at least 38 times. It is used in the sense of age, generation, yoke or tribe. In a few places it appears to refer to a very brief period. In many places it appears to refer to a very brief period and Sayana even goes so far as to render the term *yuge yuge* by *pratidinam* i.e. every day.

In the next place the conception of four Yugas is associated with a deterioration in the moral fibre in society. This conception is well stated in the following extract from the Mahabharata mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_26:

"The Krita is that age in which righteousness is eternal. In the time of that most excellent of Yugas (everything) had been done (Krita) and nothing (remained) to be done, did not then languish, nor did the people decline. Afterwards, through (the influence of) time, this yuga fell into a state of inferiority. In that age there were neither Gods, Danavas, Gandharvas, Yakshas, Rakshasas, nor Pannagas; no buying or selling went on; the Vedas were not classed as Saman, Rich, and Yajush; no efforts were made by men: the fruit (of the earth was obtained) by their mere wish: righteousness and abandonment of the world (prevailed). No

disease or decline of the organs of sense arose through the influence of the age; there was no malice, weeping, pride, or deceit; no contention, and how could there be any lassitude? No hatred, cruelty, fear affliction, jealousy, or envy. Hence the supreme Brahma was the transcendent resort of those Yogins. Then Narayana the soul of all beings, was white, Brahmans, Kshatriyas, Vaishyas and Shudras possessed the characteristics of Krita. In that age were born creatures devoted to their duties. They were alike in the object of their trust, in observances and in their knowledge. At that period the castes, alike in their functions, fulfilled their duties, were unceasingly devoted to one deity, and used one formula (mantra), one rule and one rite. Though they had separate duties, they had but one Veda, and practised one duty. By works connected with the four orders, and dependent on conjunctures of time, but unaffected by desire, or (hope of) reward, they attained to supreme felicity. This complete and eternal righteousness of the four castes during the Krita was marked by the character of that age and sought after union with the supreme soul. The Krita age was free from the three qualities. Understand now the Treta, in which sacrifice commenced, righteousness decreased by a fourth, Vishnu became red; and men adhered to truth, and were devoted to a righteousness dependent on ceremonies. Then sacrifices prevailed, with holy acts and a variety of rites. In the Treta men acted with an object in view, seeking after reward for their rites and their fights, and no longer disposed to austerities and to liberality from (a simple feeling of) duty. In this age, however, they were devoted to their own duties, and to religious ceremonies. In the Dwapara age righteousness was diminished by two quarters, Vishnu became yellow, and the Veda fourfold. Some studied four Vedas, others three, others two, others one, and some none at all. The scriptures being thus divided, ceremonies were celebrated in a great variety of ways; and the people being occupied with austerity and the bestowal of gifts, became full of passion (rajasi). Owing to ignorance of the one Veda, Vedas were multiplied. And now from the decline of goodness (Sattva) few only adhered to truth. When men had fallen away from goodness, many diseases, desires and calamities, caused by destiny, assailed them, by which they were severely afflicted, and driven to practice austerities. Others desiring enjoyment and heavenly bliss, offered sacrifices. Thus, when they had reached the Dwapara, men declined through unrighteousness. In the Kali righteousness remained to the extent of one fourth only. Arrived in that age of darkness, Vishnu became black; practices enjoined by the Vedas, works of righteousness,

and rites of sacrifice, ceased. Calamities, diseases, fatigue, faults, such as anger, etc., distresses, anxiety, hunger, fear, prevailed. As the ages revolve, righteousness again declines. When this takes place the people also decline. When they decay, the impulses which actuate them also decay. The practices generated by this declension of the Yugas frustrate men's aims. Such is the Kali Yuga which has existed for a short time. Those who are long lived act in conformity with the character of the age."

This is undoubtedly very strange. There is reference to these terms in the ancient vedic literature. The words Krita, Treta, Dwapara and Askanda occur in the Taittiriya Sanhita and in the Vajasaneyi Sanhita, in the Aiteriya Brahmana and also in the Satapatha Brahmana. The Satapatha Brahmana refers "to Krita as one who takes advantage of mistakes in the game; to the Treta as one who plays on a regular plan; to the Dwapara as one who plans to over reach his fellow player to Askanda a post of the gaming room". In the Aiteriya Brahmana and the Taittiriya Brahmana the word Kali is used in place of Askanda. The Taittiriya Brahmana speaks of the Krita as the master of the gaming hall, to the Treta as one who takes advantage of mistakes, to the Dwapara as one who sits outside, to the Kali as one who is like a post of the gaming house i.e. never leaves it. The Aiteriya Brahmana says:

There is every success to be hoped; for the unluckiest die, the Kali is lying, two others are slowly moving and half fallen, but the luckiest, the Krita, is in full motion."It is clear that in all these places the words have no other meaning than that of throws or dice in gambling.

The sense in which Manu uses these terms may also be noted. He says [msk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::21C.Riddles in Hinduism PART III.htm - _msocom_27](http://msitstore.c:\important\writing_of_babasaheb.chm::21C.Riddles in Hinduism PART III.htm - _msocom_27):

"The Krita, Treta, Dwapara and Kaliyugas are all modes of a King's action; for a King is called a Yuga; while asleep he is Kali; waking he is the Dwapara age; he is intent upon action he is Treta, moving about he is Krita."

Comparing Manu with his predecessors one has to admit that a definite change in the connotation of these words have taken place—words which formed part of the gamblers jargon have become terms of Politics having reference to the readiness of the King to do his duty and making a distinction between various types of kings, those who are active, those who are intent on action, those who are awake and those who are sleeping i.e. allowing society to go to dogs.

The question is what are the circumstances that forced the Brahmins

to invent the theory of Kali Yuga? Why did the Brahmins make Kali Yuga synonymous with the degraded state of Society? Why Manu calls a sleeping ruler King Kali? Who was the King ruling in Manu's time? Why does he call him a sleeping King? These are some of the riddles which the theory of Kali Yuga gives rise to.

There are other riddles besides these which a close examination of the Kali Yuga theory presents us with. When does the Kali age actually commence?

There are various theories about the precise date when the Kali Yuga began. The Puranas have given two dates. Some say that it commenced about the beginning of the XIV century B.C. Others say that it began on the 18th February 3102 B.C. a date on which the war between the Kauravas and Pandavas is alleged to have been fought. As pointed out by Prof. Iyengar there is no evidence to prove that the Kali era was used earlier than the VII century A.D. anywhere in India. It occurs for the first time in an inscription belonging to the reign of Pulakeshi II who ruled at Badami between 610 and 642 A.D. It records two dates the Saka date 556 and the Kali date 3735. These dates adopt 3102 B.C. as the starting date of Kali Yuga. This is wrong. The date 3102 B.C. is neither the date of the Mahabharata war nor is the date of the commencement of the Kali Yuga. Mr. Kane has conclusively proved. According to the most positive statements regarding the king of different dynasties that have ruled from Parikshit the son of the Pandavas the precise date of the Mahabharata War was 1263 B.C. It cannot be 3102 B.C. Mr. Kane has also shown that the date 3102 B.C. stands for the beginning of the Kalpa and not for the beginning of Kali and that the linking up of Kali with the date 3102 B.C. instead of with the Kalpa was an error due to a misreading or a wrong transcription the term *Kalpadi* into *Kalyadi*. There is thus no precise date which the Brahmins can give for the commencement of the Kali Age. That there should be precise beginning which can be assigned to so remarkable an event is a riddle. But there are other riddles which may be mentioned. There are two dogmas associated with the Kali Age. It is strongly held by the Brahmins that in the Kali Age there are only two Varnas—the first and the last—the Brahmins and the Shudras. The two middle ones Kshatriyas and Vaishyas they say are non-existent. What is the basis of this dogma? What does this dogma mean? Does this mean that these Varnas were lost to Brahmanism or does this mean that they ceased to exist?

Which is the period of India's history which in fact accords with this

dogma?

Does this mean that the loss of these two Varnas to Brahmanism marks the beginning of Kali Yuga?

The second dogma associated with the theory of the Kali Yuga is called Kali Varjya—which means customs and usages which are not to be observed in the Kali Age. They are scattered in the different Puranas. But the Adityapurana has modified them and brought them in one place. The practices which come under Kali Varjya are given below

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_28:

1. To appoint the husband's brother for procreating a son on a widow

"43. Sannyasin should stay where he happened to be in the evening."mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_74

These are the Kali Variyas set out in the adityapurana. The strange

thing about this code of Kali Varjya is that its significance has not been fully appreciated. It is simply referred to as a list of things forbidden in the Kali Yuga. But there is more than this behind this list of don'ts. People are no doubt forbidden to follow the practices listed in the Kali Varjya Code. The question however is: Are these practices condemned as being immoral, sinful or otherwise harmful to society? The answer is no. One likes to know why these practices if they are forbidden are not condemned? Herein lies the riddle of the Kali Varjya Code. This technique of forbidding a practice without condemning it stands in utter contrast with the procedure followed in earlier ages. To take only one illustration. The Apastamba Dharma Sutra forbids the practice of giving all property to the eldest son. But he condemns it. Why did the Brahmins invent this new technics forbid but not condemn? There must be some special reason for this departure. What is that reason?

APPENDIX I

THE RIDDLE OF RAMA AND KRISHNA

Rama is the hero of the Ramayana whose author is Valmiki. The story of the Ramayana is a very short one. Besides it is simple and in itself there is nothing sensational about it.

Rama is the son of Dasharatha the king of Ayodhya the modern Benares. Dasharatha had three wives, Kausalya, Kaikeyi and Sumitra besides several hundred concubines. Kaikeyi had married Dasharatha on terms which were at the time of marriage unspecified and which Dasharatha was bound to fulfil whenever he was called upon by Kaikeyi to do so. Dasharatha was childless for a long time. An heir to the throne was ardently desired by him. Seeing that there was no hope of his begetting a son on any of his three wives he decided to perform a Putreshti Yajna and called the sage Shrung at the sacrifice who prepared pindas and gave the three wives of Dasharatha to eat them. After they ate the pindas three wives became pregnant and gave birth to sons. Kausalya gave birth to Rama, Kaikeyi gave birth to Bharata and Sumitra gave birth to two sons Laxman and Satrughana. In due course Rama was married to Sita. When Rama came of age, Dasharatha thought of resigning the throne in favour of Rama and retiring from kingship. While this was being settled Kaikeyi raised the question of rendering her satisfaction of the terms on which she had married Dasharatha. On being asked to *state* her terms she demanded that her son Bharata should be installed on the throne in preference to I Rama and Rama should live in forest for 12 years. Dasharatha with great reluctance agreed. Bharata became king of Ayodhya and Rama accompanied by his wife Sita and

his step brother Laxman went to live in the forest. While the three living in the forest Ravana the king of Lanka kidnapped Sita and took her away and kept her in his palace intending to make her one of his wives. Rama and Laxman then started search of Sita. On the way they meet Sugriva and Hanuman two leading personages of the Vanara (monkey) race and form friendship with them. With their help the place of the abduction was located and with their help they marched on Lanka, defeated Ravana in the battle and rescued Sita. Rama returns with Laxman and Sita to Ayodhya. By that time twelve years had elapsed and the term prescribed by Kaikeyi was fulfilled with the result that Bharata gave up the throne and in his place Rama became the king of Ayodhya.

(This is a 49-page typed copy placed in a well-bound file along with the MS of 'Symbols of Hinduism'. This riddle does not find place in the original Table of Contents. Hence this is included as an Appendix to this part.—Ed.

Note: Government does not concur with the views expressed in this Chapter.)

Such is in brief the outline of the story of the Ramayana as told by Valmiki.

There is nothing in this story to make Rama the object of worship. He is only a dutiful son. But Valmiki saw something extraordinary in Rama and that is why he undertook to compose the Ramayana. Valmiki asked Narada the following question*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_75:

"Tell me Oh! Narada, who is the most accomplished man on earth at the present time?"

and then goes on to elaborate what he means by accomplished man.

He defines his accomplished man as:

"Powerful, one who knows the secret of religion, one who knows gratitude, truthful, one who is ready to sacrifice his self interest even when in distress to fulfil a religious vow, virtuous in his conduct, eager to safeguard the interests of all, strong pleasing in appearance with power of self-control, able to subdue anger, illustrious, with no jealousy for the prosperity of others, and in war able to strike terror in the hearts of Gods."

Narada then asks for time to consider and after mature deliberation tells him that the only person who can be said to possess these virtues is Rama, the son of Dasharatha.

It is because of his virtues that Rama has come to be deified. But is

Rama a worthy personality of deification? Let those who accept him an object worthy of worship as a God consider the following facts.

Rama's birth is miraculous and it may be that the suggestion that he was born from a pinda prepared by the sage Shrung is an allegorical glass to cover the naked truth that he was begotten upon Kausalya by the sage Shrung although the two did not stand in the relationship of husband and wife. In any case his birth if not disreputable in its origin is certainly unnatural.

There are other incidents connected with the birth of Rama the unsavory character of which it will be difficult to deny.

Valmiki starts his Ramayana by emphasizing the fact that Rama is an Avatar of Vishnu and it is Vishnu who agreed to take birth as Rama and be the son of Dasharatha. The God Brahma came to know of this and felt that in order that this Rama Avatar of Vishnu be a complete success arrangement shall be made that Rama shall have powerful associates to help him and cooperate with him. There were none such existing then.

The Gods agreed to carry out the command of Brahma and engaged themselves in wholesale acts of fornication not only against Apsaras who were prostitutes not only against the unmarried daughters of Yakshas and Nagas but also against the lawfully wedded wives of Ruksha, Vidhyadhar, Gandharvas, Kinnars and Vanaras and produced the Vanaras who became the associates of Rama.

Rama's birth is thus accompanied by general debauchery if not in his case certainly in the case of his associates. His marriage to Sita is not above comment. According to Buddha Ramayana, Sita was the sister of Rama, both were the children of Dasharatha. The Ramayana of Valmiki does not agree with the relationship mentioned in Buddha Ramayana. According to Valmiki Sita was the daughter of the king Janaka of Videha and therefore not a sister of Rama. This is not convincing for even according to Valmiki she is not the natural born daughter of Janaka but a child found by a farmer in his field while ploughing it and presented by him to king Janaka and brought up by Janaka. It was therefore in a superficial sense that Sita could be said to be the daughter of Janaka. The story in the Buddha Ramayana is natural and not inconsistent with the Aryan rules [*mk:@MSITStore:C:\important\writing_of_babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_76](http://msitstore.c:\important\writing_of_babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_76) of marriage. If the story is true, then Rama's marriage to Sita is no ideal to be copied. In another sense Rama's marriage was not an ideal marriage which could be copied. One of the virtues ascribed to Rama is that he was monogamous. It is difficult to understand how such a notion could have become common. For it has

no foundation in fact. Even Valmiki refers*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_77 to the many wives of Rama. These were of course in addition to his many concubines. In this he was the true son of his nominal father Dasharatha who had not only the three wives referred to above but many others.

Let us next consider his character as an individual and as a king. In speaking of him as an individual I will refer to only two incidents one relating to his treatment of Vali and other relating to his treatment of his own wife Sita. First let us consider the incident of Vali.

Vali and Sugriva were two brothers. They belonged to the Vanar race and came from a ruling family which had its own kingdom the capital of which was Kishkindha. At the time when Sita was kidnapped by Ravana, Vali was reigning at Kishkindha. While Vali was on the throne he was engaged in a war with a Rakshasa by name Mayavi. In the personal combat between the two Mayavi ran for his life. Both Vali and Sugriva pursued him. Mayavi entered into a deep cavity in the earth. Vali asked Sugriva to wait at the mouth of the cavity and himself went inside. After sometime a flood of blood came from inside the cavity. Sugriva concluded that Vali must have been killed by Mayavi and came to Kishkindha and got himself declared king in place of Vali and made Hanuman his Prime Minister

As a matter of fact, Vali was not killed. It was Mayavi who was killed by Vali. Vali came out of the cavity but did not find Sugriva there. He proceeded to Kishkindha and to his great surprise he found that Sugriva had proclaimed himself king. Vali naturally became enraged at this act of treachery on the part of his brother Sugriva and he had good ground to be. Sugriva should have ascertained, should not merely have assumed that Vali was dead. Secondly Vali had a son by name Angad whom Sugriva should have made the king as the legitimate heir of Vali. He did neither of the two things. His was a clear case of usurpation. Vali drove out Sugriva and took back the throne. The two brothers became mortal enemies.

This occurred just after Ravana had kidnapped Sita. Rama and Laxman were wandering in search of her. Sugriva and Hanuman were wandering in search of friends who could help them to regain the throne from Vali. The two parties met quite accidentally. After informing each other of their difficulties a compact was arrived at between the two. It was agreed that Rama should help Sugriva to kill Vali and to establish him on the throne of Kishkindha. On the part of Sugriva and Hanuman it was

agreed that they should help Rama to regain Sita. To enable Rama to fulfil his part of the compact it was planned that Sugriva should wear a garland in his neck as to be easily distinguishable to Rama from Vali and that while the dual was going on Rama should conceal himself behind a tree and then shoot an arrow at Vali and kill him. Accordingly a dual was arranged, Sugriva with a garland in his neck and while the dual was on, Rama standing behind a tree shot Vali with his arrow and opened the way to Sugriva to be the king of Kishkindha. This murder of Vali is the greatest blot on the character of Rama. It was a crime which was thoroughly unprovoked, for Vali had no quarrel with Rama. It was most cowardly act for Vali was unarmed. It was a planned and premeditated murder.

Consider his treatment of his own wife Sita. With the army collected for him by Sugriva and Hanuman, Rama invades Lanka. There too he plays the same mean part as he did as between the two brothers Vali and Sugriva. He takes the help of Bibhishana the brother of Ravana promising him to kill Ravana and his son and place him on the vacant throne. Rama kills Ravana and also his son Indrajit. The first thing Rama does after the close of the fight is to give a decent burial to the dead body of Ravana. Thereafter he interests himself in the coronation of Bibhishana and it is after the coronation is over that he sends Hanuman to Sita and that took to inform her that he, Laxman and Sugriva are hale and hearty and that they have killed Ravana.

The first thing he should have done after disposing of Ravana was to have gone to Sita. He does not do so. He finds more interest in the coronation than in Sita. Even when the coronation is over he does not go himself but sends Hanuman. And what is the message he sends? He does not ask Hanuman to bring her. He asks him to inform her that he is hale and hearty. It is Sita who expresses to Hanuman her desire to see Rama. Rama does not go to Sita his own wife who was kidnapped and confined by Ravana for more than 10 months. Sita is brought to him and what does Rama say to Sita when he sees her? It would be difficult to believe any man with ordinary human kindness could address to his wife in such dire distress as Rama did to Sita when he met her in Lanka if there was not the direct authority of Valmiki. This is how Rama addressed her*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_78:

I have got you as a prize in a war after conquering my enemy your captor. I have recovered my honour and punished my enemy. People have witnessed my military prowess and I am glad my labours have been

rewarded. I came here to kill Ravana and wash off the dishonour. I did not take this trouble for your sake.” Could there be anything more cruel than this conduct of Rama towards Sita? He does not stop there. He proceeded to tell her:

“I suspect your conduct. You must have been spoiled by Ravana. Your very sight is revolting to me. On you daughter of Janaka, I allow you to go anywhere you like. I have nothing to do with you. I conquered you back and I am content for that was my object. I cannot think that Ravana would have failed to enjoy a woman as beautiful as you are.”

naturally Sita calls Rama low and mean and tells him quite that she would have committed suicide and saved him all this if when Hanuman first came he had sent her a message that he abandoned her on the ground that she was kidnapped. To give him no excuse Sita undertakes to prove her purity. She enters the fire and comes out unscathed. The Gods satisfied with this evidence proclaim that she is pure. It is then that Rama agrees to take her back to Ayodhya.

And what does he do with her when he brings her back to Ayodhya. Of course, he became king and she became queen. But while Rama remained king, Sita ceased to be a queen very soon. This incident reflects great infamy upon Rama. It is recorded by Valmiki in his Ramayana that some days after the coronation of Rama and Sita as king and queen Sita conceived. Seeing that she was carrying some residents of evil disposition began to calumniate Sita suggesting that she must have conceived from Ravana while she was in Lanka and blaming Rama for taking such a woman back as his wife. This malicious gossip in the town was reported by Bhadra, the Court joker to Rama. Rama evidently was stung by this calumny. He was overwhelmed with a sense of disgrace. This is quite natural. What is quite unnatural is the means he adopts of getting rid of this disgrace. To get rid of this disgrace he takes the shortest cut and the swiftest means—namely to abandon her, a woman in a somewhat advanced state of pregnancy in a jungle, without friends, without provision, without even notice in a most treacherous manner. There is no doubt that the idea of abandoning Sita was not sudden and had not occurred to Rama on the spur of the moment. The genesis of the idea the developing of it and the plan of executing are worth some detailed mention. When Bhadra reports to him the gossip about Sita which had spread in the town Rama calls his brothers and tells them his feelings. He tells them Sita's purity and chastity was proved in Lanka, that Gods had vouched for it and that he absolutely believed in her innocence, purity and chastity.” All the same the public

are calumniating Sita and are blaming me and putting me to shame. No one can tolerate such disgrace. Honour is a great asset, Gods as well as great men strive to maintain it in tact. I cannot bear this dishonour and disgrace. To save myself from such dishonour and disgrace I shall be ready even to abandon you. Don't think I shall hesitate to abandon Sita."

This shows that he had made up his mind to abandon Sita as the easiest way of saving himself from public calumny without waiting to consider whether the way was fair or foul. The life of Sita simply did not count. What counted was his own personal name and fame. He of course does not take the manly course of stopping this gossip, which as a king he could do and which as a husband who was convinced of his wife's innocence he was bound to it. He yielded to the public gossip and there are not wanting Hindus who use this as ground to prove that Rama was a democratic king when others could equally well say that he was a weak and cowardly monarch: Be that as it may that diabolical plan of saving his name and his fame he discloses to his brothers but not to Sita the only person who was affected by it and the only person who was entitled to have notice of it. But she is kept entirely in the dark. Rama keeps it away from Sita as a closely guarded secret and was waiting for an opportunity to put his plan into action. Eventually the cruel fate of Sita gives him the opportunity he was waiting for. Women who are carrying exhibit all sorts of cravings for all sorts of things. Rama knew of this. So one day he asked Sita if there was anything for which she felt a craving. She said yes. Rama said what was it. She replied that she would like to live in the vicinity of the Ashrama of sage on the bank of the river Ganges and live on fruits and roots at least for one night. Rama simply jumped at the suggestion of Sita and said "Be easy my dear I shall see that you are sent there tomorrow". Sita treats this as an honest promise by a loving husband. But what does Rama do? He thinks it is a good opportunity for carrying through his plan of abandoning Sita. Accordingly he called his brothers to a secret conference and disclosed to them his determination to use this desire of Sita as an opportunity to carry out his plan of abandonment of Sita. He tells his brothers not to intercede on behalf of Sita, and warns them that if they came in his way he would look upon them as his enemies. Then he tells Laxman to take Sita in a chariot next day to the Ashram in the jungle on the bank of the river Ganges and to abandon her there. Laxman did not know how he could muster courage to tell Sita what was decided about Sita by Rama. Sensing his difficulty Rama informs Laxman that Sita had already

expressed her desire to spend some time in the vicinity of an Ashrama on the bank of the river and eased the mind of Laxman. This confabulation took place at night. Next morning Laxman asked Sumanta to yoke the horses to the chariot. Sumanta informs Laxman of his having done so. Laxman then goes into the palace and meets Sita and reminds her of her having expressed her desire to pass some days in the vicinity of an Ashrama and Rama having promised to fulfil the same and tells her of his having been charged by Rama to do the needful in the matter. He points to her the chariot waiting there and says 'let us go!' Sita jumps into the chariot with her heart full of gratitude to Rama. With Laxman as her companion and Sumanta as coachman the chariot proceeds to its appointed place. At last they were on the bank of the Ganges and were ferried across by the fishermen. Laxman fell at Sita's feet, and with hot tears issuing from his eyes he said ' Pardon me, O, blameless queen, for what I am doing. My orders are to abandon you here, for the people blame Rama for keeping you in his house."

Sita abandoned by Rama and left to die in a jungle went for shelter in the Ashrama of Valmiki which was near about. Valmiki gave her protection and kept her in his Ashram. There in course of time Sita gave birth to twin sons, called Kusa and Lava. The three lived with Valmiki. Valmiki brought up the boys and taught them to sing the Ramayana which he had composed. For 12 years the boys lived in the forest in the Ashrama of Valmiki not far from Ayodhya where Rama continued to rule. Never once in those 12 years this model husband and loving father cared to inquire what had happened to Sita whether she was living or whether she was dead. Twelve years after Rama meets Sita in a strange manner. Rama decided to perform a Yadna and issued invitation to all the Rishis to attend and take part. For reasons best known to Rama himself no invitation was issued to Valmiki although his Ashram was near to Ayodhya. But Valmiki came to the Yadna of his own accord accompanied by the two sons of Sita introducing them as his disciples. While the Yadna was going on the two boys used to perform recitations of Ramayana in the presence of the Assembly. Rama was very pleased and made inquiries when he was informed that they were the sons of Sita. It was then he remembered Sita and what does he do then? He does not send for Sita. He calls these innocent boys who knew nothing about their parents' sin, who were the only victims of a cruel destiny to tell Valmiki that if Sita was pure and chaste she could present herself in the Assembly to take a vow thereby remove the calumny cast against herself and himself. This is a thing she had once done in Lanka. This is a

thing she could have been asked to do again before she was sent away. There was no promise that after this vindication of her character Rama was prepared to take her back. Valmiki brings her to the Assembly. When she was in front of Rama, Valmiki said, 'O, son of Dasharatha, here is Sita whom you abandoned in consequence of public disapprobation. She will now swear her purity if permitted by you. Here are your twin-born sons bred up by me in my hermitage.' 'I know,' said Rama 'that Sita is pure and that these are my sons. She performed an ordeal in Lanka in proof of her purity and therefore I took her back. But people here have doubts still, and let Sita perform an ordeal here that all these Rishis and people may witness it.'

With eyes cast down on the ground and with hands folded Sita swore "As I never thought of any man except Rama even in my mind. let mother Earth open and bury me. As I always loved Rama in words, in thoughts, and in deed, let mother Earth open and bury me! As she uttered the oath, the earth verily opened and Sita was carried away inside seated on a golden *simhasana* (throne). Heavenly flowers fell on Sita's head while the audience looked on as in a trance.

That means that Sita preferred to die rather than return to Rama who had behaved no better than a brute. Such is the tragedy of Sita and the crime of Rama the God. Let me throw some search light on Rama the King. Rama is held out as an ideal King. But can that conclusion be said to be founded in fact?

As a matter of fact Rama never functions, as a King. He was a nominal King. The administration as Valmiki states were entrusted to Bharata his brother. He had freed himself from the cares and worries about his kingdom and his subjects. Valmiki has very minutely described mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_79 the daily life of Rama after he became King. According to that account the day was divided into two parts. Up to forenoon and afternoon. From morning to forenoon he was engaged in performing religious rites and ceremonies and offering devotion. The afternoon he spent alternately in the company of Court jesters and in the Zenana. When he got tired of the Zenana he joined the company of jesters and when he got tired of jesters he went back to the Zenana mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_80. Valmiki also gives a detailed description of how Rama spent his life in the Zenana. This Zenana was housed in a park called Ashoka Vana. There Rama, used to take his meal. The food according to Valmiki consisted of all kinds of delicious viands. They

included flesh and fruits and liquor. Rama was not a teetotaler. He drank liquor copiously and Valmiki records that Rama saw to it that Sita joined with him in his drinking bouts*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/21C.Riddles in Hinduism PART III.htm - _msocom_81. From the description of the Zenana of Rama as given by Valmiki it was by no means a mean thing. There were Apsaras, Uraga and Kinnari accomplished in dancing and singing. There were other beautiful women brought from different parts. Rama sat in the midst of these women drinking and dancing. They pleased Rama and Rama garlanded them. Valmiki calls Rama as a 'Prince among women's men'. This was not a day's affair. It was a regular course of his life.

As has already been said Rama never attended to public business. He never observed the ancient rule of Indian kings of hearing the wrongs of his subjects and attempting to redress them. Only one occasion has been recorded by Valmiki when he personally heard the grievance of his subjects. But unfortunately the occasion turned out to be a tragic one. He took upon himself to redress the wrong but in doing so committed the worst crime that history has ever recorded. The incident is known as the murder of Sambuka the Shudra. It is said by Valmiki that in Rama's reign there were no premature deaths in his kingdom. It happened, however, that a certain Brahman's son died in a premature death. The bereaved father carried his body to the gate of the king's palace, and placing it there, cried aloud and bitterly reproached Rama for the death of his son, saying that it must be the consequence of some sin committed within his realm, and that the king himself was guilty if he did not punish it: and finally threatened to end his life there by sitting *dharna* (hunger-strike) against Rama unless his son was restored to life. Rama thereupon consulted his council of eight learned Rishis and Narada amongst them told Rama that some Shudra among his subjects must have been performing Tapasya (ascetic exercises), and thereby going against Dharma (sacred law); for according to it the practice of Tapasya was proper to the twice-born alone, while the duty of the Shudras consisted only in the service of the twice-born. Rama was thus convinced that it was the sin committed by a Shudra in transgressing Dharma in that manner, which was responsible for the death of the Brahmin boy. So, Rama mounted his aerial car and scoured the countryside for the culprit. At last, in a wild region far away to the south he espied a man practising rigorous austerities of a certain kind. He approached the man, and with no more ado than to enquire of him and inform himself that he was a Shudra, by name Sambuka who was

practising Tapasya with a view to going to heaven in his own earthly person and without so much as a warning, expostulation or the like addressed to him, cut off his head. And to and behold! that very moment the dead Brahman boy in distant Ayodhya began to breathe again. Here in the wilds the Gods rained flowers on the king from their joy at his having prevented a Shudra from gaining admission to their celestial abode through the power of the Tapasya which he had no right to perform. They also appeared before Rama and congratulated him on his deed. In answer to his prayer to them to revive the dead Brahman boy lying at the palace gate in Ayodhya, they informed him that he had already come to life. They then departed. Rama thence proceeded to the Ashrama which was nearby of the sage +Agastya, who commended the step he had taken with Sambuka, and presented him with a divine bracelet. Rama then returned to his capital. Such is Rama.

II

Now about Krishna.

He is the hero of the Mahabharata. Really speaking the Mahabharata is principally connected with the Kauravas and the Pandavas. It is the story of the war fought by the two for right to the kingdom which belonged to their ancestors. They should be the principal characters. But they are not. It is Krishna who is the hero of the epic. This is a little strange thing. But what is stranger still is the possibility not being a contemporary of the Kauravas and Pandavas. Krishna was the friend of the Pandavas who had their empire. Krishna was the enemy of Kansa who also had his empire. It does not seem possible that two such empires should subsist side by side at once and at the same time. Secondly, in the Mahabharata there is nothing to show that there was any intercourse between the two empires. The two stories of Krishna and the Pandavas have been mixed together at some later date in order to provide Krishna with a larger theater to play a bigger part. The mixture of the two stories is the result of a deliberate design on the part of Vyas to glorify Krishna and to raise him above all.

In the hands of Vyas Krishna is God among men. That is why he is made the hero of the Mahabharata. Does Krishna really deserve to be called God among men? A short sketch of his life alone will help to give a correct answer. Krishna was born at Mathura at midnight on the 8th day of the month of Bhadra. His father was Vasudeva of the Yadu race, and his mother Devaki, daughter of Devaka, the brother of Ugrasen, king of Mathura. Ugrasen's wife had an illicit connection with Drumila

the Danava king of Saubha. From this illicit connection was born Kansa who was in a sense the cousin of Devaki. Kansa imprisoned Ugrasen and usurped the throne of Mathura. Having heard from Narada or *Daiivavani*, a voice from Heaven that Devaki's eighth child would kill him, Kansa imprisoned both Devaki and her husband and killed six of their children as they were born one after another. The seventh child, Balarama, was miraculously transferred from Devaki's womb to that of Rohini, another wife of Vasudeva. When the eighth child, Krishna, was born, he was secretly borne by his father to the other side of the river Yamuna, where Nanda and his wife Yasoda, natives of Vraja, were then living. The Yamuna rolled back her waters to make way for the divine child, the Ananta, the chief of serpents protected him with his ample hood from the heavy torrent of rain that was then falling. By a previous arrangement, Vasudeva exchanged his son for Nanda's newly born daughter. Yogindra or Mahamaya and presented the latter to Kansa as his eighth child, but she flew away, telling him that the child which is being brought up by Nanda and Yasoda would kill him. This led Kansa to make a series of unsuccessful attempts to kill the child Krishna. With this object he sent to Vraja a number of Asuras in various forms. The killing of these Asuras and number of other heroic deeds, impossible for an ordinary human child are the chief staple of the Puranic account of Krishna's early life. Some of them are mentioned in the Mahabharata also. As might be expected, the authorities differ largely in their narration of these facts. I mention only some of them, following chiefly the later authorities.

The first or one of the first of these is the killing of Putana. She was Kansa's nurse and was sent by him to kill Krishna in the form of a female vulture, according to Harivamsa, and of a beautiful woman according to the Bhagavata. As she pretending to suckle Krishna, put her poisoned breast into his mouth, he sucked it so powerfully as to draw out her very life-blood so that she fell down with an yell and died.

Krishna performed another of these feats when he was only three months old. It was the breaking of a *Sakata*, a cart which was used as a cupboard and had several jars and pans, full of milk and curd, ranged on it. According to the Harivamsa Sakata was an Asura sent by Kansa and had entered the cart intending to crush the infant Krishna by its weight. However, Yasoda had placed the boy under the cart and gone to bathe in the Yamuna. On her return she was told that he had kicked against it and broken it to pieces with all that lay on it. This event surprised and frightened Yasoda, and she offered pujas to avert the evils threatened by

it.

When Putana and Sakata's attempts to kill Krishna having failed, Kansa sent another of his emissaries an asura named Trinavarta, to attempt the same task. He came in the form of a bird and carried aloft the divine child, then only a year old. But he soon dropped down dead with the child safe and holding his throat tightly.

The next feat was the breaking of two arjuna trees growing side by side. They are described as the bodies of two Yakshas who were converted into this form by a curse, and who were released by this feat of Krishna. When he had learnt to crawl about and could hardly be kept out of mischief Yasoda tied him with a rope to a wooden mortar and went to mind her household duties. When she was out of sight, Krishna began to drag the mortar after him till it stuck fast between the trees. Still pulling the heavy weight after him, he uprooted the trees and made them fall down with a tremendous noise, himself remaining unhurt by them.

Now these events filled Nanda with fear, and he seriously thought of leaving Vraja and moving to another settlement. While he was thus thinking, the place was infested with wolves which made great havoc among the cattle and made it quite unsafe. This fixed the wavering intention of the nomads and they moved with all their belongings to the pleasant woodland named Vrindavan. Krishna was then only seven years old.

After his removal to this new settlement, Krishna killed quite a large number of Asuras. One of them was Aristha, who came in the form of a bull; another, Kesin, who was disguised as a horse. Five others, Vratrasura, Bakasura, Aghasura, Bhomasura and Sankhasura, the last a Yaksha. More important than these was Kaliya, a snake chief, who lived with his family in a whirlpool of the Yamuna and thus poisoned its water. Krishna one day threw himself on Kaliya's hood and danced so wildly as to make him vomit blood. He would thus have killed him, but on the intervention of the snake's family, he spared him and allowed him to move away to another abode.

The subjugation of Kaliya was followed by Vastra-harana, the carrying away of clothes, a hard nut to crack for worshippers and admirers of the Puranic Krishna. The whole narration is so obscene, that even the merest outlines will, I fear, be felt to be indelicate. But I must give them in as decent a form as is possible, to make my brief account of Krishna's doings as full as I can. Some Gopies had dived into the waters of the Yamuna for a bath, leaving their clothes on the banks, as is said to be

still the custom in some parts of the country. Krishna seized the clothes and with them climbed upon a tree on the riverside. When asked to return them, he refused to do so unless the women approached the tree and each begged her own dress for herself. This they could do only by coming naked out of the water and presenting themselves naked before Krishna. When they did this, Krishna was pleased and he gave them their clothes. This story is found in the Bhagavata.

The next of Krishna's feats was the uplifting of the Govardhan Hill. The Gopas were about to celebrate their annual sacrifices to Indra, the God of rain, and began to make grand preparations for it. Krishna pointed out to them that as they were a pastoral and not an agricultural tribe, their real Gods were kine, hills and woods, and them only they should worship, and not such Gods as the rain-giving Indra. The Gopas were convinced, and giving up their intention of worshipping Indra, celebrated a grand sacrifice to the hill Govardhan, the nourisher of kine, accompanied with feasting and dancing. Indra was as he could not but be greatly enraged at this affront offered to him, and as punishment, he poured rain on the Gopa settlement for seven days and nights continually. Krishna, nothing daunted, uprooted the hill and held it up as an umbrella over the settlement and thus protected the Gopas and their cattle from the ruinous effects of Indra's wrath. As to the jealousy between Indra and the Krishna of the Rig-Veda and that between the former and the Vishnu of the Satapatha Brahmana, I have already spoken in my first lecture.

Krishna's youthful career was full of illicit intimacy with the young women of Brindaban which is called his Rasalila. Rasa is a sort of circular dance in which the hands of the dancers, men and women, are joined together. It is said to be still prevalent among some of the wild tribes of this country. Krishna, it is stated, was in the habit of often enjoying this dance with the young Gopis of Brindaban, who loved him passionately. One of these dances is described in the Vishnu Purana, the Harivamsa and the Bhagavata. All these authorities interpret the Gopi's love for Krishna as piety—love to God, and see nothing wrong in their amorous dealings with him—dealings which, in the case of any other person, would be highly reprehensible according to their own admission. All agree as to the general character of the affair—the scene, the time and season, the drawing of the women with sweet music, the dance, the amorous feelings of the women for Krishna, and their expression in various ways. But while the Vishnu Purana tries—not always successfully—to keep within the limits of decency, the Harivamsa

begins to be plainly indecent, and the Bhagavata throws away all reserve and revels in indecency.

Of all his indecencies the worst is his illicit life with one Gopi by name Radha. Krishna's illicit relations with Radha are portrayed in the Brahmavaivarta Purana. Krishna is married to Rukmani the daughter of King Rukmangad. Radha was married to..... Krishna who abandons his lawfully wedded wife Rukmini and seduces Radha wife of another man and lives with her in sin without remorse.

Krishna was also a warrior and a politician even at a very early age, we are told, when he was in his twelfth year. Every one of his acts whether as a warrior or as a politician was an immoral act. His first act in this sphere was the assassination of his maternal uncle Kamsa. 'Assassination' is not too strong a term for it, for though Kamsa had given him provocation, he was not killed in the course of a battle or even in a single combat. The story is that having heard God Krishna's youthful feats at Brindaban, Kamsa got frightened and determined to secure his death by confronting him with a great athlete in an open exhibition of arms. Accordingly he announced the celebration of a *dhanuryajna* a bow sacrifice, and invited Krishna, Balarama and their Gopa friends to it. Akrura, an adherent of Krishna, but an officer of Kamsa. was deputed by the latter to bring the brothers to Mathura. They came, determined to kill Kamsa. He had provoked not only them, but other Yadavas also, whom his persecution had compelled to leave Mathura. The brothers were therefore supported by a conspiracy against him. Having arrived at Mathura, they desired to change their simple Gopa dress for a more decent one, and asked for clothes from Kamsa's washerman, whom they met in the street. As the man behaved insolently with them, they killed him and took from his stock whatever clothes they liked. They then met Kubja, a hunch-backed woman who served as Kamsa's perfumer. At their request she annointed them with sandal paste and in return was cured by Krishna of her bodily deformity. The Bhagvata makes him visit her on a subsequent occasion and describes his union with her with its characteristic indecency. However, on the present occasion, the brothers annointed by Kubja and garlanded by Sudama, a flower-seller, entered the place of sacrifice and broke the great bow to which the sacrifice was to be offered. The frightened Kamsa sent an elephant named Kuvalayapida to kill them. Krishna killed the elephant and entered the arena. There the brothers encountered Kamsa's chosen athletes, Chanura, Mustika, Toshalaka and Andhra. Krishna killed Chanura and Toshalaka and Balarama the other two.

Frustrated in his plan of securing Krishna's death by stratagem Kamsa ordered the brothers and their Gopa friends to be turned out and banished from his kingdom, - their herds to be confiscated and Vasudeva, Nanda and his own father Ugrasen to be assassinated. At this Krishna got upon the platform on which Kamsa was seated, and seizing him by the hair, threw him down on the ground and killed him. Having consoled Kamsa's weeping wives he ordered a royal cremation for him, and refusing the kingdom offered him by Ugrasen, installed the latter on the throne and invited his banished relatives to return to Mathura.

The next episode is Krishna's fight with Jarasandha, emperor of Magadha, and Kalayavana. Jarasandha was the son-in-law of Kamsa. Enraged by Krishna's assassination of Kamsa, his son-in-law, Jarasandha is said to have invaded Mathura seventeen times and to have been every time repulsed by Krishna. Fearing, however, that an eighteenth invasion would be disastrous to the city, Krishna removed the Yadavas to Dwarka at the west end of Gujarat Peninsula. After the removal of the Yadavas from Mathura, the city was besieged by Kalayavana at the instigation of Jarasandha. While pursuing the unarmed Krishna, however, out of the city, the invader was burnt to ashes, by fire issuing from the eyes of king Muchakunda, who had been sleeping in a mountain cave and whom he had awakened with a kick mistaking him for Krishna. Krishna defeated the army of Kalayavana but while flying to Dwarka with the booty, he was overtaken by Jarasandha. He, however, evaded his enemy by climbing a hill and flying to Dwarka after jumping down from it.

Krishna was now, for the first time, married. He married Rukmini daughter of Bhishmaka, king of Vidarbha. Her father, at Jarasandha's advice, was making preparations to get her married to Sishupala, Krishna's cousin and king of Chedi. But Krishna carried her off on the day before the proposed marriage. The Bhagavata says she had fallen in love with Krishna and had addressed a love letter to him. This does not seem to be true. For Krishna did not remain a true and faithful husband of Rukmini. Rukmini was gradually followed by an enormously vast army of co-wives till the number of Krishna's consorts rose to sixteen thousand one hundred and eight. His children numbered one lakh and eighty-thousand. The chief of his wives were the well-known eight, Rukmini, Satyabhama, Jambavati, Kalindi, Mitrabinda, Satya, Bhadra, and Lakshmana. The remaining sixteen thousand and one hundred were married to him on the same day. They belonged originally to the harem of king Naraka of Pragjyotish whom Krishna defeated and killed at the

invitation of Indra, whose mother's ear-rings had been carried away by Naraka. While paying a visit after the battle to Indra's heaven in company with Satyabhama, this lady took fancy to Indra's famous parijat tree. To oblige his wife, Krishna had to fight with the God whom he had just favoured. Indra, though the chief of the Vedic Gods, and though he was helped by the latter on this occasion was indeed no match for the ' Incarnation of the Supreme Being ' and was forced to part with his favourite flower-tree, which was thus carried to Dwarka and planted there. The story of how he obtained his chief eight wives is very interesting. The story of how he got Rukmini is already told. Satyabhama was the daughter of Satrajit, a Yadava chief who gave her away in marriage to Krishna because he was afraid of him and wished to buy his favour. Jambavati was the daughter of Jambavana, a bear chief, against whom Krishna waged a long war to recover a precious gem he had taken away from a Yadava. Jambavana was defeated and presented his daughter to Krishna, as a peace-offering. Kalindi went through a series of austerities in order to get Krishna as her husband and her devotion was rewarded by the marriage she had sought. Mitrabinda was a cousin of Krishna and was carried off by him from the Svayamvara grounds. Satya was the daughter of Nagnajit, king of Ayodhya and was won by Krishna when he had achieved a brave feat of arms, namely, killing a number of naughty bulls belonging to Nagnajit. Bhadra was another cousin of Krishna and was married by him in the usual way. Lakshmana was the daughter of Brihatsena, king of Madra, and was carried off by him from the Swayamavara grounds.

Krishna's part in Arjuna's marriage with Subhadra, sister of Balarama and Krishna's half sister is noteworthy. In the course of his travels Arjuna arrived at the holy place of Prabhasa, and was received by Krishna on the hill of Raivataka. There he was enamoured of Subhadra and asked Krishna how he could get her. Krishna advised him to carry her off as a brave Kshatriya without depending upon the chances of a Svayamvaram, the usual Kshatriya form of marriage. The Yadavas were at first enraged at this outrage, but when Krishna convinced them that Arjuna would be a very worthy husband for Subhadra. and that by carrying her off he had done nothing unworthy of a hero, they consented to the union. And how could they do otherwise? Krishna did not simply argue like us, poor talkers. He, as we have already seen, had backed his precepts by his example.

It is interesting to note how Krishna disposed of Jarasandha and Sishupala who created trouble at the Rajasuya performed by

Yudhisthira. Jarasandha had imprisoned a large number of kings and intended to sacrifice them to Rudra. Unless he was killed and the imprisoned princes released and given an opportunity to pay homage to Yudhisthira, the latter's claim as emperor could not be established. Krishna therefore proceeded with Bhirna and Arjuna to Rajagriha, Jarasandha's capital, and challenged him to a single combat with anyone of them he might choose. Such a challenge could not be refused by a Kshatriya, and Jarasandha, at the anticipation of death at his opponent's hand, declared his son Sahadev as his heir apparent and chose Bhima as his opponent. The combat lasted thirteen days, and Jarasandha at length met with a painful death at his rival's hand. Having put Sahadev on his father's throne, and invited the released princes to attend Yudhisthira's Rajasuya, Krishna and his friends returned to Indraprastha.

In due course the Rajasuya came off. Of the various functions and duties connected with the ceremony, Krishna is said to have taken charge of washing the feet of the Brahmans. This is a sure indication of the comparative modernness of the Mahabharata, at any rate, of this story. For in ancient times, even when the supremacy of the Brahmans had been established, the Kshatriyas never paid them any servile honour. However when the sacrifice was over, the time came for Yudhisthira to make presents to the assembled princes, priests and other persons deserving honour. To whom must honour be paid first?

Yudhisthira having asked Bhishma's opinion on the matter, the latter replied that Krishna was the person to be honoured first. Accordingly Sahadeva at Yudhishtira's command presented the Arghya, the mark of honour, to Krishna, and the latter accepted it. This upset Sishupala, who made a long speech, challenging Krishna's right to the honour and abusing the Pandavas for paying any honour and Krishna for accepting it. Bhishma made another speech narrating Krishna's exploits and achievements at length, and declaring his divinity. Sishupala rose again, rebutted Bhishma's arguments one after another, and grossly abused him. It is pointed out by Krishna's recent biographers, that of the charges brought against Krishna by Sishupala, there is no mention of his dealings with the Brindaban Gopis, a sure indication, according to them, that when the Mahabharata was composed, the story of these dealings of Krishna, a story made so much of by the writers of the Puranas and the later poets, was not conceived. However, at the end of Sishupala's speech Bhishma, who saw that Yudhishtira was afraid lest Sishupala and his followers might obstruct the completion of the ceremony, said, addressing them that if they were resolved to die they might challenge

the divine Krishna himself to fight. At this Sishupala challenged Krishna, who rose in response and narrated his opponent's numerous misdeeds. Then with the words, "At the request of his mother, my aunt, I have pardoned a hundred of Sishupala's offences. But I cannot pardon the insulting words he has spoken of me before the assembled princes: I kill him before you all". He threw his chakra at him and cut off his head

Actions of Krishna during the Mahabharata War may now be reviewed. The following are some of them:

1. When Satyaki, Krishna's friend, was hard pressed by Bhurishrava, son of Somadatta, Krishna induced Arjuna to cut off his arms, and thereby made it easy for Satyaki to kill him.

2. When Abhimanyu was unfairly surrounded and killed by seven Kaurava warriors, Arjuna vowed the death of the ring leader, Jayadratha, next day before sunset, or, failing that his own death by entering into fire. When the Sun was about to set, and Jayadratha remained unslain, Krishna miraculously hid the Sun, on which Jayadratha, having come out Krishna uncovered the Sun, and Arjuna killed Jayadratha when he was unaware.

3. Despairing of Drona being ever killed by fair means Krishna advised the Pandavas to kill him unfairly. If he could he made to cast down his arms, he could, Krishna said, be killed easily. This could be done if he was told that his son, Asvathama was dead. Bhima tried the suggested device He killed an elephant named after Drona's son and told him that Asvathama was killed. The warrior was somewhat depressed by the news, but did not quite believe it. At this juncture he was hard pressed by a number of sages to cease fighting and prepare himself for heaven with meditations worthy of a Brahmana. This checked the hero still more and he applied to the truthful Yudhisthira for correct information about his son. Finding Yudhisthira unwilling to tell a lie, Krishna overcame his reluctance by a long exhortation, in the course of which he announced his ethics of untruth in the following edifying text from Vasishtha's Smriti.

"In marriage, in amorous dealings, when one's life is in danger, when the whole of one's possession is going to be lost, and when a Brahman's interest is at stake, untruth should be told. The wise have said that speaking untruth on these five occasions is not a sin." Yudhisthir's scruples were stifled, and he said to his preceptor, "Yes, Asvathama is killed" adding in a low voice, "that is, an elephant" which last words, however were not heard by Dron. His depression was complete, and on hearing some bitterly reproachful words from Bhima, he gave up his

arms, and while sitting in a meditative posture, was killed by Dhristhadyumna.

4. When Bhima was unsuccessfully fighting with Duryodhana by the side of the Dvaipayana Lake Krishna reminded him through Arjuna that he had vowed the breaking of his opponent's thighs. Now striking a rival below the navel was unfair, but as Duryodhana could not be killed except by such an unfair means, Krishna advised Bhima to adopt the same and Bhima did."The death of Krishna throws a flood of light on his morals. Krishna died as the Ruler of Dwaraka. What was this Dwaraka like and what sort of death awaited him?

In founding his city of Dwaraka he had taken care to settle thousands of ' unfortunates ' there. As the Harivamsa said: ' O, hero having conquered the abodes of the Daityas (giants) with the help of brave Yadus, the Lord settled thousands of public women in Dwaraka". Dancing, singing and drinking by men and women married and prostitutes filled the city of Dwaraka. We get a description of a seatrip in which these women formed a principal source of enjoyment. Excited by their singing and dancing, the brothers Krishna and Balarama joined in the dancing with their wives. They were followed by the other Yadava chiefs and by Arjuna and Narada. Then a fresh excitement was sought. Men and women all fell into the sea and at Krishna's suggestion, the gentlemen began a jalakrida water sport, with the ladies, Krishna leading one party, and Balarama another, while the courtesans added to the amusement by their music. This was followed by eating and drinking and this again by a special musical performance in which the leaders themselves exhibited their respective skill in handling various musical instruments. It will thus be seen what a jolly people these Yadavas were, and with what contempt they would have treated the objections urged nowadays by the Brahmans and such other purists against notch parties and the native theatres. It was in one of these revels—a drunken revel—that the Yadavas were destroyed. They, it is said, had incurred the displeasure of a number of sages by a childish trick played on the latter by some of their boys. These boys disguised Samba, one of Krishna's sons, as a woman with child, tying an iron pestle below his navel, and asked the sages to say what child the 'woman' would give birth to. The enraged sage said 'she' would produce an iron pestle which would be the ruin of the Yadavas. Fearing the worst consequences from this curse, the boys took the pestle to the sea-side and rubbed it away. But its particles came out in the form of *erakas*, a kind of reeds and its last remaining bit, which had been thrown into the sea, was afterwards

recovered and used by a hunter as the point of an arrow; Now it was with these erakas that the Yadavas killed themselves. They had gone in large parties to the holy place of Prabhasa. They indulged in drinking there and this proved their ruin. The evils of drinking there had been found out at length by Krishna and some other Yadava leaders, and it was prohibited on pain of death by a public notification. But the prohibition had no effect. The drunken Yadavas at first quarrelled and then began to fight and kill one another. When some of Krishna's own sons were killed he himself joined in the fight and killed a large number of his own people. He then went in search of Balarama. He found him in meditative posture and saw his spirit passing out of his body in the form of a large serpent i.e., Sesa Naga, the divine snake whom he had incarnated. Krishna now felt that it was time for him also to pass away. He then bade farewell to his father and his wives, telling them that he had sent for Arjuna, who would take charge of them. Then he seated himself under a tree, hidden by its leafy and outstretching branches, and composed his mind in meditation. While thus sitting, a hunter named Jara mistook him for a deer and hit him with an arrow, one pointed with the last remaining bit of the fatal pestle. Discovering his mistake, the man fell at Krishna's feet and was pardoned and flew away to heaven, illumining all sides by its dazzling light. Arjuna came and proceeded towards Hastinapur with the surviving Yadavas men and women. But his good genius having left him he had lost the power of his hitherto mighty arm and his unrivalled skill as an archer. A number of Ahiras, armed only with lathis, attacked his party and carried off many of the women, and he reached Hastinapur only with a small remnant. After Arjuna's departure the sea engulfed Dwaraka, and nothing was left to speak of the Yadavas, their glories, their domestic broils and their revels.

SMALL HOLDINGS IN INDIA AND THEIR REMEDIES

IMPORTANCE OF AGRICULTURE

A study of the economic ways of getting a living will ever remain important. These ways generally take the form of industries or services. Confining ourselves to industries, they may be divided into primary and secondary. The primary industries are concerned with extracting useful material from the earth, the soil or water and take the form of hunting, fishing, stock raising, lumbering and mining. These primary or extractive industries are fundamental in two ways: (1) They extract from the physical world useful materials which become the original sources of man's subsistence. (2) They provide raw materials for the secondary or manufacturing industries, for, manufactures, in the language of Dr. Franklin, are simply, "substance metamorphosed". From a national point of view as well, the importance of primary industries is beyond question. But important as are the primary industries, farming is by far the most important of them all. It is most ancient and abiding of all industries, primary or secondary : while the fact that it is concerned with 'the production of food is enough to make its problems demand our most serious thought. But when a country, like India, depends almost wholly upon farming its importance cannot be exaggerated. The problems of agricultural economy dealing directly with agricultural production are what to produce, the proper proportion of the factors of production, the size of holdings, the tenures of land etc. In this paper it is attempted to deal only with the problem of the size of holdings as it affects the productivity of

agriculture.

II SMALL HOLDINGS IN INDIA

It may be said that some countries are predominantly countries of small holdings while in others it is the large holdings that prevail. According to Adam Smith it is the adoption of the law of primogeniture chiefly due to the exigencies of a military life that leads to the creation and preservation of large holdings. While it is the adoption of the law of equal sub-division necessitated by the comparatively peaceful career of a nation that gives rise to small holdings. He says :—

“When land like moveables is considered as the means only of subsistence and enjoyment, the natural law of succession divides it like them among all the children of the family; of all of whom the subsistence and enjoyment may be supposed equally dear to the father, [thus tending to have small holdings. But when land was considered as the means, not of subsistence merely, but of power and protection it was thought better that it should descend undivided to one. In those disorderly times.....to divide it was to ruin it, and to expose every part of it to be opposed and swallowed up by its neighbors. The law of primogeniture, therefore came to take place in the succession of landed estates [thus tending to preserve large holdings]

¹mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/11. Small Holdings in India and their Remedies.htm - _msocom_1

England is, therefore, a country of large holdings. Post-Revolutionary France is a country of small holdings. So are Holland and Denmark. Turning to India, we find holdings of the following size held separate and direct for the years 1896-97 and 1900-01:

Average area of holdings in acres

Years	Assam	Bombay	Central Provinces	Madras
1896-97	3.37	24.07	17	7
1900-01	3.02	23.9	48	7

Data, more recent, more exact, though from more restricted area, is available from the Baroda State.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/11. Small Holdings in India and their Remedies.htm - _msocom_2 Statistics of land holdings in the State are summarized

in bighas in the following table :

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/11. Small Holdings in India and their Remedies.htm - _msocom_3

Name of the District	Total Agricultural land	Survey No. into which it is divided	Number of Khatedars	Average under Khatedar	Average area per Survey No.
Baroda	17,17,319	4,30,601	107,638	15—19— 2	4
Kadi	25,13,982	5,89,687	141,145	17—16— 5	4 1/4
Naosari	10,46,176	2,16,748	52,652	19—17— 8	4
Amveli	9,72,040	55,635	17,214	36—9—7	3 1/4
Total ..	82,49,517	12,92,671	318,649	17—10— 10	3 7/8

(8 bighas == 5 acres)

Another investigation conducted by Dr. H. S. Mann and his colleagues indicates more specifically the fact of small holdings in the village of Pimpala Saudagar near Poona. The size of holdings in that village is indicated by the table below

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/11. Small Holdings in India and their Remedies.htm - _msocom_4:

	Over 10 r 20 acre s	10 to 20 acre s	5 to 10 acre s	3 to 5 acre s	2 to 3 acre s	1 to 2 acre s	30 to 40 gunth as	20 to 30 gunth as	15 20 gunth as	10 to 15 gunth as	5 to 10 gunth as	Belo w 5 gunth as
Num ber of plots of each size.	1	7	21	25	67	164	75	136	71	57	59	25

(40 Gunthas == 1 acre)

In this table the modal holding is between 1 and 2 acres. A mode is a statistical average indicating the point of largest frequency in an array of

instances.

From these tables it can be easily seen that the average size of holdings varies from 25.9 acres in the Bombay Presidency to an acre or two in Pimpala Saudagar.

This diminutive size of holdings is said to be greatly harmful to Indian Agriculture. The evils of small holdings no doubt, are many. But it would have been no slight mitigation of them if the small holdings were compact holdings. Unfortunately they are not. A holding of a farmer though compact for purposes of revenue is for purposes of tillage composed of various small strips of land scattered all over the village and interspersed by those belonging to others. How the fields are scattered can only be shown graphically by a map. Herein we shall have to remain content, since we cannot give a map, with knowing how many separate plots are contained in a holding. The number of separate plots in each holding will show how greatly fragmented it is. We have no figures at all for the whole of India bearing on this aspect of the question. But the Hon'ble Mr. G. F. Keatinge in his note5 mk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/11. Small Holdings in India and their Remedies.htm - _msocom_5 submitted to Government in 1916 has collected figures of typical cases from all the districts of the Bombay Presidency. The following table is constructed to present his data in an intelligible form :

Case II V. Shirgaon T. Ratnagiri D. Ratnagiri		Case V V. Badlapur T. Kalyan D. Thana		Case VI V. Kara T. Mawal D. Poona		Case VII V. Althan T. Ghorssi D. Surat		Case IX Surat District		Case X Kaira District		Case XII V. Lhasu T. Koregaon D. Satara

(A==acre g==guntha V==village taluka D==district)

These small and scattered holdings have given a real cause for anxiety regarding our great national industry. Comparative Statistics go to swell this feeling by laying bare two very noteworthy but equally sad facts regarding economic life in India ; (1) that it is largely an agricultural country ;* and (2) that its agricultural productivity is the lowest :—

(1) (1) Occupational Statistics

Percentage of Agricultural Population.

England and Wales	15.3
Australia	44.7
Belgium	60.9
Bulgaria	20.7
Denmark	82.6
Denmark	48.2
France	42.7
Germany	35.2
Holland	30.7
Hungary	69.7

Italy	59.4
Russia	58.3
Russia	30.9
India	71.5
USA	33.3

(2) (2) Produce in Lbs. per acre

Country	Wheat	Maize
UK	1973

Indian Provinces		
UP	850	1100
NWP	555	735
Punjab	555	766
Bombay	510	
U. Burma	322	

Both these truths are painful enough to have startled many people into inquiring the causes of this low productivity. As a result, attention has now been concentrated on the excessive sub-division and fragmentation of agricultural holdings. Enlarge and consolidate the holdings, it is confidently argued, and the increase in agricultural productivity will follow in its wake !!

CONSOLIDATION

Consolidation of holdings is a practical problem while the enlargement of them is a theoretical one, demanding a discussion of the principle which can be said to govern their size. Postponing the consideration of the theoretical question of enlargement, we find that the problem of consolidation raises the following two issues:—(1) how to unite such small and scattered holdings as the existing ones, and (2) once consolidated how to perpetuate them at that size. Let us consider them each in turn. Sub-division of land need not involve what is called the fragmentation of land. But unfortunately it does, for, every heir desires to secure a share from each of the survey numbers composing the entire lands of the deceased instead of so arranging the distribution that each may get as many whole numbers as possible, i.e. the heirs instead of sharing the lands by survey numbers, claim to share in each survey number, thus causing fragmentation. Though fragmentation does subserve the ends of distributive justice it renders farming in India considerably inefficient as it once did in Europe. It involves waste of labour and cattle power, waste in hedges and boundary marks, and waste of manure. It renders impracticable the watching of crops, sinking of wells and the use of labour saving implements. It makes difficult changes in cultivation, the making of roads, water channels, etc., and it increases the cost of production. These disadvantages of fragmentation are to be recounted only to lend their support to the process of restripping or \ consolidation. The methods of "restripping" are many, though all are not equally efficacious. Voluntary exchanges can hardly be relied upon for much. But a restricted sale of the right of occupancy may be expected to go a good deal. For, under it, when survey numbers are put to auction on account of their being relinquished by the holders or taken in attachment for arrears of assessments, only those may be allowed to bid in the auction for the sale of the right of occupancy whose lands are contiguous to the land hammered out. Again as further helping the process of reunion, the right of pre-emption may be given to farmers whose neighbour wishes to sell his land. These methods, it must be admitted, can achieve the desired result in a very small measure. The evils of fragmentation are very great and must be met by a comprehensive scheme of consolidation. It is, therefore, advocated [f.6] that if two-thirds of the Khatedars, dealing more than half of the village lands, apply, Government, should undertake compulsorily to restrip the scattered fields of the village. This

compulsory restripping is to be executed on two principles, (1) of "Economic Unit" and (2) of "Original Ownership". Regarding the merits of these two principles the Baroda Committee observes. [f.7]

"In the first the value of each holding is ascertained, then the original boundaries are removed, roads are marked out, lands required for public purposes are set apart, and the rest of the land is parcelled out into new plots. Each of these new plots must be of such a size as, having regard to the local conditions of soil, tillage etc. to form an economic field, i.e., a parcel of land necessary to keep fully engaged and support one family. These new plots may be sold by auction among the old occupants, restriction being placed on purchase so as to prevent a large number of cultivators from being ousted. The purchase money may then be divided in a certain proportion among the original owners of pieces, a portion being reserved for expenses, in which Government would also contribute a share. Another mode would be to acquire all the land of the village then to sell it in newly constituted plots by auction as is done by City Improvement Trusts or by Government when laying out new roads in Cities or when extending a town. But we do not recommend its adoption in the improvement of agricultural land. It may result in land speculation and the small holders may be ousted in such numbers as to cause a real hardship.

"According to the second method when the restripping has been decided, a list of Khatedars and their holdings is made and the latter are valued at their market price by Panchas. Then the land is redistributed and each Khatedar is given new land in proportion to his original holding and as far as possible of the same value, difference to be adjusted by cash payment. In this method no Khatedar is deprived of his land. Each is accommodated and in the place of his original small and scattered fields gets one plot of almost their aggregate size. It is only a few people whose holding may be very small and whom it would not be expedient to keep on as farmers, that may have to lose their small pieces. But they too would benefit as they would get their full value in money."

The Baroda Committee prefers the second method because:

"It takes as its starting principle, that nobody (except perhaps a few, holding plots of insignificant sizes) is going to be driven off the land. It will give even the smallest man, chance to better his condition. Each land holder receives a new compact piece of land proportionate to the value of his old small and scattered field. In this way the

previous sub-divisions together with their attendant evils totally disappear.”[f.8] Regarding consolidation Prof. H. S. Jevons says:

"The principles which should guide the choice of a method of carrying out the re-organization of villages on the lines above described are the following. In the first place compulsion should be avoided as far as possible and the principle adopted that no charge should be imposed upon any area unless the owners of more than one-half of that area desire the change. Should this condition be satisfied for an area..... it would seem expedient that legal power should be taken to compel the minority to accept the redistribution of holdings under the supervision of Government. In the second place.....the expense of the operation should be kept as low as possible.....In the third place considerable elasticity should be permitted in the methods of carrying through the re-organization in the different places during the first few years, as the whole undertaking would be in an experimental stage so that different methods might be tried, and the best be ultimately selected for a permanent set of regulations. Fourthly, the possible necessity for a considerable change of the existing tenancy law in the re-organised villages must be faced..... For the sake of completeness I may add as a fifth principle the obvious condition that redistribution of land must be made upon the most equitable basis possible, and that liberal compensation should be given to those, if any, who may be excluded from a former cultivating ownership.”[f.9]

As for procedure in the compulsory consolidation of holdings both Prof. Jevons and the Baroda Committee propose the appointment of Commissioners to hear applications for consolidation and to carry it out, leaving to any objector the right to petition the Court to stay the proceedings in case he felt that an injustice was being done to him.

The problem of perpetuating such a consolidated holding will next demand the care of the legislator. It is accepted without question by many that the law of inheritance that prevails among the Hindus and the Mohomedans is responsible for the sub-division of land. On the death of a Hindu or a Mahomedan his heirs are entitled without let or hindrance to equal shares in the property of the deceased. Now a consolidated holding subject to the operation of such a law of inheritance will certainly not endure for long. It will be the task of Sisyphus over again if, after consolidation, the law of inheritance were to remain unaltered.

But how is the existing law of inheritance to be changed? If it is not

to be the law of equal sub-division shall we have the law of primogeniture. The Baroda Committee thanks that,—

“It is not necessary that it should be introduced. All that it wanted is, that there should not be sub-divisions of land beyond a certain limit, which may be fixed for the sake of good agriculture. There is no objection to a holding being sub-divided, so long as by so doing each of the parts does not become less than the limit fixed for the sub-division of land. But when a holding reaches a stage to render further sub-division uneconomic, the other members of the family may not be allowed to force further sub-division of the holding. Instead of being sub-divided, it may be either cultivated in common or be given to one of the members of the family as a whole, and that member made to pay amounts equal to the value of their shares as compensation to the other members.”[f.10]

The principle of not dividing immovable property among the heirs, when division would result in inconveniently small shares, but of giving to the highest bidder among the sharers or in case none of them is willing to have it, to outside bidders, and dividing the money realized in proportion to the recognized shares, has been accepted in the Indian Partition Act, No. 4 of 1893, section 2 of which runs thus:

"Whenever in any suit for partition, in which, if instituted prior to the commencement of this Act, a decree for partition might have been made, it appears to the Court that, by reason of the nature of the property to which the suit relates, or of the number of the shareholders therein or of any other special circumstance, a division of the property cannot reasonably or conveniently be made and that a sale of the property and distribution of proceeds would be more beneficial for all the share-holders, the Court may, if it thinks fit, on the request of any such share-holder interested individually or collectively to the extent of one moiety or upwards direct a sale of the property and a distribution of the proceeds."

Granting the advisability of thus changing the law of inheritance it only requires to amend the Civil Procedure Code so as to make it obligatory on the Courts to refuse partition whenever it would reduce a field beyond the economic limit fixed in advance.

Another method of dealing with the problem is advocated by the Hon. Mr. G. F. Keatinge, Director of Agriculture, Bombay Presidency. In the Statement of Objects and Reasons appended to his draft bill he says:

"4..... The object of this bill is to enable such landowners as

may wish to do so to check: the further sub-division of their lands and to enable them, when it is otherwise possible, to effect a permanent consolidation of their holdings; and also to enable the executive government to secure the same results in respect of unoccupied land. The legislation proposed is purely enabling, and it will be operative in the case of any holding only upon the expressed wish of any person possessing an interest in that holding.

"5. The scheme embodied in this bill for securing these objects is briefly as follows. In order to be constituted an economic holding a plot of land must be entered as such in a register prescribed by rules. If the land is occupied, it will rest with some person having an interest in the land to make an application to the Collector to have the land registered as an economic holding..... Unless the Collector considers that there are sufficient grounds for rejecting the application, he holds a careful enquiry in which he follows a procedure similar to that prescribed in the Land Acquisition Act, 1894. If the proceedings show that all persons interested agree, the land is registered. Land vesting absolutely in Government may be registered without inquiry. The holding must in any case be registered in one name only, and the act of registration annuls all the interest of all other persons, except the registered owner, in the holding. Thereafter the owner cannot divide the plot but must so long as he owns it, keep it entire. He may sell, mortgage or otherwise dispose of it as an entire unit, but not dispose of part of it or do anything that might result in splitting up the holding. On the death of the holder, if he has not disposed of the land by will it will devolve upon a single heir. If the provisions of the bill are contravened (for instance if the holder mortgages a part of his Holding and the mortgagee obtains a decree for possession), the Collector is empowered to send a certificate to the Court, and the Court will set aside its decree or order. The Collector may also evict a person in wrongful possession. When a plot has been once constituted an economic holding, the registration cannot be cancelled except with the consent of the Collector ; the grounds on which cancellation will be allowed, will be laid down by rule and it is proposed that it shall be permitted chiefly in cases where economic considerations indicate that it is expedient."

Summing up this discussion of the two issues of consolidation, it must be said that the problem has not been viewed as a whole by all its advocates. The Baroda Committee alone endeavours to consolidate as well as to preserve the consolidated holding. Prof.

Jevons makes no provision to conserve the results of consolidation. Mr. Keatinge does not deal with consolidation at all. He is concerned only with the prevention of further fragmentation. But fragmentation, there will be in a holding even after it is entered as an economic holding. By his measure he will only succeed in preserving the holdings, as they will be found at the time of registration, i.e., he will not allow them to be reduced in size. But they will be small and scattered all the same. Mr. Keatinge, notwithstanding his legislation, leaves the situation more or less as it exists. Real consolidation is, however, aimed at by Prof. Jevons and the Baroda Committee. The principles they advocate for the purpose are almost the same ; and so are their procedures for carrying it out.

As for the preservation of consolidated holdings Mr. Keatinge as well as the Baroda Committee establish the one-man rule of succession. The Baroda Committee would adopt this rule only when division of land would result in uneconomic holdings and then too would compel the successor to buy off the claims of the other dispossessed heirs. Mr. Keatinge would let the dispossessed heirs off without compensation.

A more serious criticism against these projects of consolidation consists in the fact they have failed to recognize that a consolidated holding must be an enlarged holding as well. If it is said that Indian agriculture suffers from small and scattered holdings we must not only consolidate, but also enlarge them. It must be borne in mind that consolidation may obviate the evils of scattered holdings, but it will not obviate the evils of small holdings unless the consolidated holding is an economic, i.e. an enlarged holding. The Committee as well as Mr. Keatinge have entirely lost sight of this aspect of the question. Prof. Jevons, alone of the advocates, keeps it constantly before his mind that consolidation must bring about in its train the enlargement of holdings.

IV

ENLARGEMENT

Granted that enlargement of holdings is as important as their consolidation we will now turn to the discussion of regulating their size. It is desired by all interested in our agriculture that our holdings should be economic holdings. We would have been more thankful to the inventors of this new, precise and scientific terminology had they given us a precise and scientific definition of an economic holding.

On the other hand, it is believed that a large holding is somehow an economic holding. It may be said that even Prof. Jevons has fallen a victim to this notion. For when discussing what the size of a holding should be he dogmatically states that in the consolidated village the mode should be between 29 and 30 acres. [f.11] But why should the mode be at this point and not at 100 or say 200? We might imagine Prof. Jevons to reply that his model point is placed at that particular acreage because it would produce enough for a farmer to sustain a higher standard of living. Raising the general standard of living in India is the one string on which Prof. Jevons harps even to weariness throughout his pamphlet. [f.12]. The error underlying this doctrine we shall consider later on. It is enough to say that he does not give any sound economic reason for his model farm.

The case with the Baroda Committee is much worse, Prof. Jevons at least sticks to one definition of an ideal economic holding ; but the Report of the Baroda Committee suffers from a plurality of definitions. While cementing on the size of an average holding in the state as is summarized in the above table, it should be noted that the Committee, though it desired consolidation, was perfectly satisfied with the existing size of the holding as is clear, from the following:

“If the average holding of a Khatedar was a compact field of those figures, the situation would be an ideal one and would not leave much to be desired.”[f.13]

But absent-minded as it were, the Committee, without any searching analysis of the question it was appointed to investigate and report upon, lays down that :

“An ideal economic holding would consist of 30 to 50 bighas of fair land in one block with at least one good irrigation well and a house situated in the holding.” [f.14]

If the size of existing holdings is an ideal size why should they be enlarged? To this, the Committee gives no answer. But this is not all. The Committee does not even adhere to the quantitative limit it has already set down to its ideal economic holding. When it comes to discuss the project of re-arrangement of the scattered fields of the village on the principle of “Economic unit” it presents a third ideal of an economic holding. To realize this ideal it says :

"Each of these new plots must be of such a size, as having regard to the local conditions of soil, tillage, etc., to form an Economic field, i.e., a parcel of land necessary to keep fully engaged and support one family.”[f.15]

Thus with perfect equanimity (1) the Baroda Committee holds, not too fast, to three notions of an ideal economic holding. No wonder then that the Report of the Committee is a model of confused reasoning though it is a valuable repository of facts bearing on the subject.

According to the Hon. Mr. Keatinge an economic holding is:—”a holding which allows a man chance of producing sufficient to support himself and his family in reasonable comfort, after paying his necessary expenses.”[f.16]

His definition of an economic holding will be accepted, we may expect, by the Baroda Committee; for, it does not differ from its own, given above as third in order. Assuming they agree, we may now proceed to see how far tenable this definition is

It is plain that these definitions including that of Professor Jevons view an economic holding from the standpoint of consumption rather than of production. In this lies their error; for consumption is not the correct standard by which to judge the economic character of a holding. It would be perverse accounting to condemn a farm as not paying because its total output does not support the family of the farmer though as a pro-rata return for each of his investments it is the highest. The family of a farmer can only be looked upon in the light of so much labour corps at his disposal. It may well be that some portion of this labour corps is superfluous, though it has to be supported merely in obedience to social custom as is the case in India. But if our social custom compels a farmer to support some of his family members even when he cannot effectively make any use of them on his farm we must be careful not to find fault with the produce of the farm because it does not suffice to provide for the workers as well as the dependants that may happen to compose the family. The adoption of such an accounting system will declare many enterprises as failures when they will be the most successful. There can be no true economic relation between the family of the entrepreneur and the total out-turn of his farm or industry. True economic relation can subsist only between the total out-turn and the investments. If the total out-turn pays for all the investments no producer in his senses will ever contemplate closing his industry because the total out-turn does not support his family. This is evident ; for though production is for the purpose of consumption it is for the consumption only of those who help to produce. It follows, then, that if the relation between out-turn and investments is a true

economic relation, we can only speak of a firm as economic, i.e., paying in the sense of production and not in the sense of consumption. Any definition, therefore, that leans on consumption mistakes the nature of an economic holding which is essentially an enterprise in production.

Before going further, we must clear the ground by a few preliminary remarks to facilitate the understanding of an economic holding from the standpoint of production.

It must be premised at the outset that in a competitive society the daily transactions of its members, as consumers or producers, are controlled by a price regime. It is production, then, in a price regime that we have to analyse here for our purpose. In the main the modern process of production is captained by the entrepreneur, is guided and supervised by him and is worked out through him. All employers of labour or hirers of instrumental goods are entrepreneurs. His computations run, as they must, in a pecuniary society, in terms of price-outlay as over against price-product, no matter whether the prospective product is offered for sale or not. The entrepreneur, in producing for gain, apportions his outlays in varieties of investments. These investments, the same as factors of production or costs to the entrepreneur, have by tradition been confined to wages (labour) profits, rent (land) and interest (capital). Industrial facts do not support this classification. There are many other factors, it is contended, which as they share in the distributive process must have functioned in the productive process, in some way immediate or remote. But it is immaterial how many factors there are and whether they differ in kind or degree. What is important for the purpose of production is the process of combining them.

This combination of necessary factors of production is governed by a law called the law of proportion. It lays down that disadvantage is bound to attend upon a wrong proportion among the various factors of production employed in a concern. Enlarged, the principle means that as a certain volume of one factor has the capacity to work only with a certain volume of another to give maximum efficiency to both, an excess or defect in the volume of one in comparison with those of the others will tell on the total output by curtailing the efficiency of all. Having regard then to this interdependence of factors, an economically efficient combination of them compels the producer if he were to vary the one to vary the rest correspondingly. Neither can it be otherwise. For, the chief object of an efficient production

consists in making every factor in the concern contribute its highest ; and it can do that only when it can co-operate with its fellow of the required capacity. Thus, there is an ideal of proportions that ought to subsist among the various factors combined, though the ideal will vary with the changes in the proportions. [f.17]

These proportions it must be acknowledged are affected by the principle of substitution chiefly brought into play owing to variations in the prices of the factors. But this principle of substitution is too limited in its application to invalidate the law of proportion which is the law governing all economic production and which no producer can hope to ignore with impunity. [f.18]

Bringing to bear the above remarks regarding production on the definition of an economic holding, we can postulate that if agriculture is to be treated as an economic enterprise, then, by itself, there could be no such thing as a large or a small holding. To a farmer a holding is too small or too large for the other factors of production at his disposal necessary for carrying on the cultivation of his holding as an economic enterprise. Mere size of land is empty of all economic connotation. Consequently, it cannot possibly be the language of economic science to say that a large holding is economic while a smallholding is uneconomic. It is the right or wrong proportion of other factors of production to a unit of land that renders the latter economic or uneconomic. Thus a small farm may be economic as well as a large farm; for, economic or uneconomic does not depend upon the size of land but upon the due proportion among all the factors including land.

An economic holding, therefore, if it is not to be a hollow concept, consists in a combination of land, capital and labour, etc., in a proportion such that the pro rata contribution of each in conjunction with the rest is the highest. In other words to create an economic holding it will not do for a farmer solely to manipulate his piece of land. He must also have the other instruments of production required for the efficient cultivation of his holding and must maintain a due proportion of all the factors for, without it, there can be no efficient production. If his equipment shrinks, his holding must also shrink. If his equipment augments, his holding must also augment. The point is that his equipment and his holding must not be out of proportion to each other. They must be in proportion and must vary, if need be, in proportion.

The line of argument followed above is not without support from

actual practice. It is happy from an economist's point of view, to find it recognized and adopted in India itself by the fathers of the Survey and Settlement System in the Bombay Presidency. The famous Joint Report (1840) contains an illuminating discussion of the problem. The question before the officers deputed to introduce the Survey System in the Deccan was how to levy the assessment. Was it to be a field assessment or an assessment to be placed on the whole lands of the village or on the entire holdings of individuals or co-parceners, whether proprietors or occupants. That after much deliberation the system of field assessment was finally adopted is known to many. But as the reasons that led to its adoption are known only to a few the following explanatory parts from the Joint report will be found to be both interesting and instructive:

"Para 6. That one manifest advantage of breaking up the assessment of a village into portions so minute [as indicated by a survey number] is the facility it affords to the cultivators of contracting or enlarging his farm from year to year, according to the fluctuating amount of agricultural capital at their disposal which is of incalculable importance to farmers possessed of so limited resources as those of the cultivating classes throughout India.

"Para 7. The loss of a few bullocks by disease or other causes may quite incapacitate a ryot from cultivating profitably the extent of land he had previously in village and, without the privilege of contracting his farm, and consequent liabilities on occasion of such loss, his ruin would be very shortly consummated." [f.19]

Judging in the light of this conclusion the proposal to regulate the size of holdings appears ill considered and futile. For as Prof. Richard T. Ely observes [f.20]:

"Obviously no simple answer can be given to the question [as to what should be the size of a farm]. The value of land or the rent it will bring is perhaps the most important factor.....In addition to the factor of rent the amount of capital that he can command, the kind of farming in which he is most skilled, the character of the labour he can secure, the proximity of markets, and the adequacy of transportation facilities, all must be taken into account by the farmer in determining how large a farm he will attempt to manage and how intensively he will farm it.

"This question is primarily one of private profit which the individual must decide for himself, but the legislator and the scientific student can be of some assistance in helping to develop that most

difficult branch of commercial science—farm accounting—and in keeping the farmer alive to those charges in prices, wages, and transportation charges to which the farm organization must adjust itself."

To those who have the temerity to fix the size of a holding Prof. Ely's well-considered opinion will bring home that in spite of good intentions their vicarious mission will end in disaster ; for none but the cultivator can decide what should be the size of his holding. They would do well to remember that the size of his holdings will vary in time. Consequent to the changes in his equipment with which he has to adjust the size of his farm, at one point in time he will decide in favour of a small, as at another he will decide in favour of a large holding. He would therefore be a poor economist who would legally fix the size of the holding which in the interest of economic production must be left to vary when variation is demanded. By fixing the size of a holding he can only make it a large holding but not an economic holding. For an economic holding is not a matter of the size of land alone but is a matter of the adjustment of a piece of land to the necessary equipment for its efficient cultivation.

V

CRITIQUE OF THE REMEDIES

The proposal to enlarge the existing holdings which is brought forward as a cure to the ills of our agriculture can be entertained only if it is shown that farms have diminished in size while the agricultural stock has increased in amount. Facts regarding the size of farms have already been recorded. It only remains to see if the agricultural stock has increased. Mr. K. L. Datta in his exhaustive survey says[f.21] :

"178. Most of the Indian witnesses, whom we examined, appeared to be under the belief that there has been a decrease in the supply of agricultural products, owing to the inefficient tillage of land. It was said that land is not now cultivated as carefully and efficiently as before, owing to the scarcity and dearness of plough, cattle and labour. In order to effect, a saving in the cost of cultivation, cultivators do not also plough their lands as often as they did before, and manuring and weeding, as also the amount of irrigating where wells are used for the purpose, have all been reduced."

"179. As regards the scarcity of plough cattle. .. (the) figures bear testimony to the deplorable effects of famine, the inevitable result of which has always been to reduce the number of cattle, though the deficiency is generally made good in a few years if otherwise

favourable. The number of plough cattle in the latest year (1908-09) included in the statement was lower than in the commencement (1893-94), in some of the circles namely Assam, Bundelkhund, Agra Provinces—North and West, Gujarat, Deccan, Berar, Madras-North and Madras-West. Although great reliance cannot be placed on these statistics, they can be accepted as showing that in some areas at any rate there has been a dearth of plough cattle."

Regarding the existence of capital Mr. Elliot James says:

"The ryots have a keen eye to the results of a good system of farming as exhibited on model farms, but they cannot derive much good from the knowledge though they may take it in and thoroughly understand that superior tillage and proper manuring mean a greater outturn in crops. Their great want is capital" [f.22]

The farmer knows, says the same author, that his agricultural equipment is inefficient and antiquated but he cannot substitute better ones in its place for:

"A superior class of cattle and superior farm implements mean to him so much outlay of what he has not—Money."

Similar facts for the Baroda State have been collected in another connection by Mr. M. B. Nanavati, Director of Commerce and Indus. But unfortunately he did not bring his knowledge of such facts to bear upon the conclusions of the Committee for the consolidation of holdings in the State of which he was also a member, apparently thinking that the size of a holding bore no relation to the instruments of production. He bemoans that:

"The farmers are not fully equipped with draught-cattle. They have today (1913) 8,34,901 bullocks, etc., for use on farms, that is one pair for 36 bighas of land. On an average a pair of good bullocks can cultivate 25 bighas of land. But the present breed has much deteriorated and one pair is supposed to cultivate 20 bighas at the most, while the present actual averages comes to about 36 bighas. Under the circumstances it is not likely that ploughing can be deep. It must be like scratching the surface. The small cultivators do not possess any draught-cattle or at the most a single one and cultivate land in co-operation with their friends similarly situated. As for farm implements there are 1,54,364 ploughs in the State, i.e., one for two Khatedars. It must be understood here that the number of cultivators and tenants is much more than three lakhs- Every one of them needs full equipment. Therefore actually the average must be much smaller than shown above." [f.23]

In fact the equipment for agricultural production in the State has considerably deteriorated since 1898 as shown by the table below :

Year	Plough	Carts	Plough Cattle	Other
Domestics				
1898	1,75,989	---	4,15,089	5,70,517
1910	1,51,664	68,946	3,34,801	5,09,416

Given, this state of affairs can we not say with more propriety that not only the existing equipment is inadequate for the enlarged holdings but that the existing holdings, small as they are, are too big for the available instruments of production other than land? Facts such as these interpreted in the light of our theory force upon us the conclusion that the existing holdings are uneconomic, not, however, in the sense that they are too small but that they are too large. Shall we therefore argue that the existing holdings should be further reduced in size with a view to render them economic in the sense in which we have used the term? Unwary readers might suppose that this is the -only logical and inevitable conclusion— a conclusion that is in strange contrast with the main trend of opinion in) this country. Contrary, no doubt, the conclusion is ; but it is by no means inevitable. For, from our premises we can with perfect logic and even with more cogency argue for increase in agricultural stock and implements which in turn will necessitate enlarged holdings which will be economic holdings as well.

Consequently the remedy for the ills of agriculture in India does not lie primarily in the matter of enlarging holdings but in the matter of increasing capital and capital goods. That capital arises from saving and that saving is possible where there is surplus is a commonplace of political economy.

Does our agriculture—the main stay of our population—give us any surplus? We agree with the answer which is unanimously in the negative. We also approve of the remedies that are advocated for turning the deficit economy into a surplus economy, namely by enlarging and consolidating the holdings. What we demur to is the method of realizing this object. For we most strongly hold that the evil of small holdings in India is not fundamental but is derived from the parent evil of the mal-adjustment in her social economy. Consequently if we wish to effect a permanent cure we must go to the parent malady.

But before doing that we will show how we suffer by a bad social economy. It has become a tried statement that India is largely an agricultural country. But what is scarcely known is that notwithstanding the vastness of land under tillage, so little land is cultivated in proportion to her population.

Mulhall's figures for the year 1895 clearly demonstrate the point.

Acres per inhabitant in 1895

Great Britain	Ireland	France	Germany	Russia	Austria	Italy	Spain And Portugal	USA	India
0.91	3.30	2.30	1.70	5.60	2.05	1.75	2.90	8.90	1.0

That since 1895 the situation, however, has gone from bad to worse figures eloquently bear out :

	1881	1891	1901	1911
Bengal	1.5	0.8	1.12	
Bombay	1.7	1.6	1.41	1.3
Madras	1.3	0.3	.68	.79
Assam		0.5	.78	.85
Punjab	1.2	1.3	1.05	1.11
Oudh	0.81	0.7}		.75
N. W. P.	-	0.8}	.73	
Burmah	-	1.5	1	1.09
Central P	1.67	2.4	1.8	1.79
B. India	1.04	1.0	0.86	0.88

Now, what does this extraordinary phenomenon mean? A large agricultural population with the lowest proportion of land in actual cultivation means that a large part of the agricultural population is superfluous and idle. How much idle labour there is on, Indian farms it is not possible to know accurately. Sir James Caird who was the first to notice the existence of this idle labour estimated in 1884 that,

"A square mile of land in England cultivated highly gives employment to 50 persons, in the proportion 25 men, young and old, and 25 women and boys. If four times that number, or 200, were allowed for each square mile of cultivated land in India, it would take up only one-third of the population." [f.24]

Out of the total population of 254 millions in 1881 nearly two-thirds were returned as agricultural. Allowing, as per estimate, one-third to be taken up, we can safely say that a population of equal magnitude was lying idle instead of performing any sort of productive labour. With the increasing ruralization of India and a continually decreasing proportion of land under cultivation, the volume of idle labour must have increased to an enormous extent.

The economic effects of this idle labour are two-fold. Firstly, it adds to the tremendous amount of pressure that our agricultural population exerts on land. A quantitative statement will serve to bring home to our mind how high the pressure is:

Mean density per square mile in 1911

	Oudh and N.W. P.	Bengal	Madras	Punjab	Bombay	Assam	Berar and C.P	Cooch berg	British Burma
of Total Area of Cultivated Area	427 829	551 1162	291 785	177 453	145 444	115 766	122 360	111 792	53 575
AreaArea									

Such high pressure of population on land is probably unknown in any other part of the world. The effect of it is, of course, obvious.

Notwithstanding what others have said, this enormous pressure is the chief cause of the subdivision of land. It is the failure to grasp the working of this pressure on land that makes the law of inheritance such a great grievance. To say that the law of inheritance causes subdivision of land is to give a false view by inverting the real situation. The mere existence of the law cannot be complained of as a grievance. The grievance consists in the fact that it is invoked. But why is it invoked even when it is injurious? Simply because it is profitable. There is nothing strange in this. When farming is the only occupation, to get a small piece of land is better than to have none. Thus the grievance lies in the circumstances which put a premium on these small pieces of land. The premium, is no doubt, due to the large population depending solely on agriculture to eke out its living. Naturally a population that has little else to prefer to agriculture will try to invoke every possible cause to get a piece of land however

small. It is not therefore the law of inheritance that is the evil, but it is the high pressure on land which brings it into operation. People cultivate the small piece not because their standard of living is low as Prof. Jevons seems to think [f.25] but because it is the only profitable thing for them to do at present. If they had something more profitable to do they would never prefer the small piece. It is therefore easy to understand how the universal prevalence of the small farms or petit culture is due to this enormous pressure on land.

In spite of the vehement struggle that our agricultural population maintains in trying to engage itself productively as cultivators of a farm however small, it is true that judged by the standard of Sir James Caird a large portion of it is bound to remain idle. Idle labour and idle capital differ in a very important particular. Capital exists, but labour lives. That is to say capital when idle does not earn, but does not also consume much to keep itself. But labour, earning or not consumes in order to live. Idle labour is, therefore, a calamity; for if it cannot live by production as it should, it will live by predation as it must. This idle labour has been the canker of India gnawing at its vitals. Instead of contributing to our national dividend it is eating up what little there is of it. Thus the depression of our national dividend is another important effect of this idle labour. The income of a society as of an individual proceeds (1) from the efforts made, and (2) from possessions used. It may be safely asserted that the aggregate income of any individual or society must be derived either from the proceeds of the current labour or from productive possession already acquired. All that society can have today it must acquire today or must take out of its past product. Judging by this criterion a large portion of our society makes very little current effort ; nor does it have any very extensive possessions from which to derive its sustenance. No doubt then that our economic organization is conspicuous by want of capital. Capital is but crystallized surplus; and surplus depends upon the proceeds of effort. But where there is no effort there is no earning, no surplus, and no capital.

We have thus shown how our bad social economy is responsible for the ills of our agriculture. We have also proved how our entire dependence on agriculture leads to small and scattered farms. How a large portion of our population which our agriculture cannot productively employ is obliged to remain idle has been made clear. We have also shown how the existence of this idle labour makes ours a country without capital. This being our analysis of the problem, it

will be easy to see why the remedies for consolidation and enlargement under the existing social economy are bound to fail.

Those who look on small holdings as the fundamental evil naturally advocate their enlargement. This, however, is a faulty political economy and as Thomas Arnold once said "a faulty political economy is the fruitful parent of crime". Apart from the fact that merely to enlarge the holding is not to make it economic, this project of artificial enlargement is fraught with many social ills. The future in the shape of an army of landless and dispossessed men that it is bound to give rise to is neither cheerful from the individual, nor agreeable from the national, point of view. But even if we enlarged the existing holdings and procured enough capital and capital goods to make them economic, we will not only be not advocating the proper remedy but will end in aggravating the evils by adding to our stock of idle labour ; for capitalistic agriculture will not need as many hands as are now required by our present day methods of cultivation.

But if enlargement is not possible, can we not have consolidation? It can be shown that under the existing social economy even consolidation is not possible. The remedy for preventing sub-division and fragmentation of consolidated holdings cannot be expected to bring real relief. Instead it will only serve to be a legal eyewash. This becomes easy of comprehension if we realize at the start what the one man rule of succession means in actual practice. For this we shall have to note the changes it will introduce in the survey records. At present according to the Bombay Land Revenue Code Chapter I, Section 3, clause (6).

"Survey Number" means a portion of land of which the area and other particulars are separately entered, under an indicative number in the survey records of the village, town or city in which it is situated, and includes a recognized share of a survey number. Again by clause (7).

"Recognized share of a survey number" means a sub-division of a survey number separately assessed and registered.

After the adoption of the one man rule of succession a survey number will be made to cover a piece of land which will be of the size fixed for an ideal economic holding. Secondly, it will be necessary to refuse separate registration to any sub-division of such a survey number; i.e., in order that a piece of land should be registered with a separate and a distinct survey number it must not be below the economic limit. Then too this survey number covering a piece of land

large enough to be styled economic will be registered in the name of one person. This is precisely what will happen if we put into practice the project of the Baroda Committee. Mr. Keatinge instead of having one survey number covering a large and compact holding will have in the name of one person many survey numbers covering a unit of land composed of small and scattered fields. Abandoning Mr. Keatinge's scheme as serving no practical purpose the one man rule of succession to a consolidated holding means in practice refusal to recognize legally a piece of land if it were below a certain size. Now this refusal to recognize smaller pieces of land, it is claimed, will prevent the sub-division of a consolidated holding: Sub-division of land may be due to many causes the operation of which is rendered economic or uneconomic by the nature of the occasion which evokes it. Not to allow sub-division on any ground, as does Mr. Keatinge, is to cause a serious depreciation of the value of land. But if sub-division is needed as when the stock has depleted, not to grant it is to create an uneconomic situation—a result just opposite of what is intended to be achieved, apart from this to prevent sub-division legally is not to prevent it actually, if necessitated by the weight of economic circumstances. Granting the pressure of population on land and the scanty agricultural equipment—evils to which the authors of consolidation and enlargement have paid no attention—we must look forward to the sub-division of holdings. If we legislate in the face of this inevitable tendency and refuse to record on our survey roll holdings below a certain limit required for a separate survey number we will not only fail to cure what we must know we cannot, at least by this means, but will help to create a register that will be false to the true situation.

This being our criticism of the means for preventing sub-division and fragmentation it will not take us long to state our view as regards the project of consolidation. Consolidation and its conservation are so intimately connected that the one cannot be thought of without the other. Now if we cannot conserve a consolidated holding, is it worth our while to consolidate, however feasible the project may be? This work of Sisyphus will not fail to fall to our lot unless we make effective changes in our social economy.

As the evils of this surplus and idle labour which will be added on to by the consolidation and enlargement of holdings are likely to outweigh their advantages, the proposals do not find much favour at the hands of Prof. Gilbert Slater. [f.26]

As against Prof. Slater we hold that the evils are avoidable and it is because we are anxious to avoid them that we wish to advocate different remedies for bringing about the enlargement of holdings. Consequently, we maintain that our efforts should be primarily directed towards this idle labour. [f.27]

If we succeed in sponging off this labour in non-agricultural channels of production we will at one stroke lessen the pressure and destroy the premium that at present weighs heavily on land in India. Besides, this labour when productively employed will cease to live by predation as it does to-day, and will not only earn its keep but will give us surplus: and more surplus is more capital. In short, strange though it may seem, industrialization of India is the soundest remedy for the agricultural problems of India. The cumulative effects of industrialization, namely, a lessening pressure and an increasing amount of capital and capital goods will forcibly create the economic necessity of enlarging the holding. Not only this, but industrialization by destroying the premium on land will give rise to few occasions for its sub-division and fragmentation. Industrialization is a natural and powerful remedy and is to be preferred to such ill-conceived projects as we have considered above. By legislation we will get a sham economic holding at the cost of many social ills. But by industrialization a large economic holding will force itself upon us as a pure gain.

Our remedy for the enlargement as for the consolidation of holdings as well as the preservation of consolidated holdings reduces itself to this: We prefer to cure agriculture by the reflex effects of industrialization. Lest this might be deemed visionary we proceed to give evidence in support of our view. How agriculture improves by the reflex effects of industrialization has been studied in the United States in the year 1883. We shall quote in extenso the summary given by the London Times:

"The statistician of the Agricultural Department of the United States has shown in a recent report that the value of farm lands decreases in exact proportion as the ratio of agriculture to other industries increases. That is, where all the labour is devoted to agriculture, the land is worth less than where only half of the people are farm labourers; and where only a quarter of them are so engaged the farms and their product are still more valuable. It is, in fact, proved by statistics that diversified industries are of the greatest value to a State, and that the presence of a manufactory near a farm

increases the value of the farm and its crops. It is further established that, dividing the United States into four sections or classes, with reference to the ratio of agricultural workers to the whole population, and putting those States having less than 30 per cent, of agriculture and of agricultural labourers in the first class, all having over 30 and less than 50 in the second, those between 50 and 70 in the third, and those having 70 or more in the fourth, the value of farms is in inverse ratio to the agricultural population, and that where as in the purely agricultural section, the fourth class, the value of farms per acre is only \$ 5.28, in the next class it is \$ 13.03, in the third \$ 22.21, and in manufacturing districts \$ 40.91. This shows an enormous advantage for a mixed district. Yet not only is the land more valuable the production per acre is greater, and the wages paid to farm hands larger. Manufactures and varied industries thus not only benefit the manufacturers, but are of equal benefit and advantage to the farmers as well."

This will show that ours is a proven remedy. It can be laid down without fear of challenge that industrialization will foster the enlargement of holdings and that it will be the most effective barrier against sub-division and fragmentation. Agreeing in this, it may be observed that industrialization will not be a sufficient remedy for consolidation. That it will require direct remedies may be true. But it is also true that industrialization, though it may not bring about consolidation, will facilitate consolidation. It is an incontrovertible truth that so long as there is the premium on land consolidation will not be easy, no matter on how equitable principles it is proposed to be carried out. Is it a small service if industrialization lessens the premium as it inevitably must? Certainly not. Consideration of another aspect of consolidation as well points to the same conclusion: That industrialization must precede consolidation. It should never be forgotten that unless we have constructed an effective barrier against the future sub-division and fragmentation of a consolidated holding it is idle to lay out plans for consolidation. Such a barrier can only be found in industrialization ; for it alone can reduce the extreme pressure which, as we have shown, causes sub-division of land. Thus. if small and scattered holdings are the ills from which our agriculture is suffering to cure it of them is undeniably to industrialize.

But just where does India stand as an industrial country?:

	England and Wales		Germany		USA		France		India	
	Rural	Urban	Rural	Urban	Rural	Urban	Rural	Urban	Rural	Urban
1790					87.5					
1840					77.5		75.6	24.4		
1851	49.92	50.08								
1871	38.20	61.80		36	47.6					
1881	32.1	67.9		41	44.3	29.5				
1891	27-95	72.05		47	39.2	36.1			64.4	
1901	23-00	77.00		54	35.7	40.5			67.5	
1911	19-9	78.1			33.3	46.3	57.9	42.1	71.5	

(The figures for the various countries do not correspond with the years. The range of variation is 3 years).

Sir Robert Giffen after a survey of the economic tendencies of various countries concludes that.

“The wants of men increasing with their resources the proportion of people engaged in agriculture and mining and analogous pursuits, in every country is destined to decline, and that of people engaged in miscellaneous industry—in other words in manufactures using the latter phrase in a wide sense to increase.” [f.28]

Figures for India, however, run counter to this dictum illustrating a universal tendency observed by an expert. While other countries like the U.S.A. starting as agricultural are progressively becoming industrial, India has been gradually undergoing the woeful process of de-urbanization and swelling the volume of her rural population beyond all needs. The earlier we stem this ominous tide, the better. For notwithstanding what interested persons might say [f.29] no truer and more wholesome words of caution were ever uttered regarding our national economy than those by Sir Henry Cotton when he said”**There is danger of too much agriculture in India.**”

STATEMENT OF EVIDENCE TO THE ROYAL COMMISSION ON INDIAN CURRENCY

NOTE

The Royal Commission on Indian Currency and Finance visited India in 1924-25 to examine the financial system and to suggest the Reform of the Indian currency. The commission was comprised of the following members.

E. HILTON YOUNG, Chairman
 R. N. MOOKERJEE
 NORCOT WARREN
 R. A. MANT
 M. B. DADABHOY
 HENRY STRAKOSCH
 ALEX R. MURRAY
 PURSHOTAMDAS THAKURDAS
 J. C. COYAJEE
 W. E. PRESTON

G. H. BAXTER } Secretaries
 A. AYANGAR }

Dr. Ambedkar explained his views in the statement submitted in reply to the questionnaire issued by the Commission. The statement and his evidence before the Commission are reproduced here along with the questionnaire.

 Commission

STATEMENT OF

EVIDENCEmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/30.Statement of Evidence to the Royal Commission.htm - _msocom_1

Submitted by Dr. B. R. Ambedkar, Bar-at-Law to the Royal Commission on Indian Currency

1. In reply to the questionnaire issued by the Commission I beg to submit the following statement of my views. In dealing with the questionnaire issued by the Commission I will begin with question No. 4 because I believe that is the principal issue on which the Commission is asked to give a definite finding.

2. I am emphatic in my opinion that the Gold Exchange Standard cannot be continued with any advantage to India and for the following reasons:—

- (1) *It has not the native stability of the Gold Standard.*— A pure Gold Standard is stable because the value of gold in circulation is so large and the new additions to the supply are so small that the stability of the standard is not thereby appreciably affected. But in the case of the Exchange Standard the new additions are dependent upon the will of the issuer and can be augmented to such an extent that the stability of the standard can be appreciably affected thereby.
- (2) *It is discretionary in issue without there being anything in it to regulate the discretion.*—It is sometimes said that the Gold Standard is a hard standard which keeps the changing affairs of mankind tied to the wheel of nature over which human agency can exercise no control and that the Exchange Standard affords an escape from this frigidity. In reply to this it must be said that though a discretionary currency, it is so only when the currency is provided with some means which enables this discretion to be properly exercised. There must be some regulator by which the discretion left to the issuer is regulated. From this point of view an Exchange Standard is inferior to a Convertible Standard. A Convertible Standard and an Exchange Standard are alike in this that they both allow the use of discretion in the issue of currency. But a Convertible Standard is superior to the Exchange standard because the discretion of the issuer in the former is *regulated while* the discretion of the issuer in the latter is *unregulated*. It is true that in the Exchange Standard there is what is called regulation by foreign Exchanges. But such a regulation, though it is better than no regulation at all, is only a loose and indirect way of reaching the end and cannot be depended

upon in all circumstances of reaching it.

- (3) *It is economical. But for that very reason it is insecure.*— There are many writers who are enamoured of the Exchange Standard, because it effects a certain degree of economy in the use of gold. But is the plan secure? Any plan of currency to be sound must be both economical and secure. It will do if it is not economical; but it will certainly not do if it is not secure. Now I submit that the proposition that to *economise gold as a currency is to impair its utility as a standard of value* is as simple and self-evident as the proposition that to use paper or rupee as a medium is more economical than to use gold. For what does this discarding of gold from currency use mean? It simply means this : that by economising the use of gold you thereby directly increase its supply and by increasing its supply you lower its value, i.e. gold by reason of this economy in its use becomes a depreciating commodity and, therefore, unfit to that extent to function as a standard of value. *You cannot therefore both economise gold and also use it as a standard.* If you want to economise gold, then you must abandon gold as a standard of value, in other words the economy of the Exchange Standard is incompatible with its security.

3. The choice therefore can never be between a Gold Standard and an Exchange Standard. If we do not want a Gold Standard we must either go over to a Compensating Standard of Prof. Fisher or to a Tabular Standard of Prof. Jevons. The choice is really between either of them and the Gold Standard. There is no doubt that the Compensating Standard or the Tabular Standard would be better than a Gold Standard. But mankind must become more philosophical than it is before they can be made workable, and

until that happens I think the Gold Standard must be accepted as the only system of currency which is "knave proof" and "fool proof."

4. The next important question is that of the Gold Reserve. Before discussing matters such as location, composition, etc., of the reserve, it is necessary to determine whether we want it. That question in its turn depends upon another question pertaining to the mode in which the Gold Standard is to be introduced. In this connection I do want to say that there are many people who are under the impression that the introduction of a Gold Standard means merely the starting of a mint and the issuing of a gold coin. Nothing can be more erroneous than this. Gold Standard means not the starting of a gold mint but making

provision whereby gold will *become current* For *currency is the standard*. Now in order that gold may be current, it is necessary that other forms of currency must be limited in their volume. There are two ways by which currency may be limited. One way is to make it convertible and the other is to fix a positive limit on its issue. If you choose to adopt convertibility as a method of limitation then there is reason for maintaining a gold reserve. If you choose fixity of issue as a method of limitation then there is no reason for maintaining a gold reserve. As between the two systems I prefer the fixity of issue system. My reasons are two :—

- (1) One of the evils of the Exchange Standard is that it is subject to management. Now a convertible system is also a managed system. Therefore by adopting the convertible system we do not get rid of the evil of management which is really the bane of the present system. Besides a managed currency is to be altogether avoided when the management is to be in the hands of the Government. When the management is by a bank there is less chance of mismanagement. For the penalty for imprudent issue, or mismanagement is visited by disaster directly upon the property of the issuer. But the chance of mismanagement is greater when it is issued by Government because the issue of government money is authorised and conducted by men who are never under any present responsibility for private loss in case of bad judgement or mismanagement.
- (2) A fixed issue system besides eliminating management will make provision for a larger use of gold in currency. The use of gold is an important matter. The whole world is suffering from a continuous rise of prices owing to the depreciation of gold. Anything therefore that will tend to appreciate gold will be to the good; and if gold is to appreciate there must be a larger use of gold as currency. Besides at the present time there is no necessity to economise gold, because there is all over the world such a great plethora of money that the less we economise gold the better. From this point of view the Exchange Standard once a boon, is now a curse. It served a useful purpose for some time. From 1873 the production of gold had fallen off and the economy effected by the Exchange Standard was indeed very welcome because it helped in a period of contraction to expand the money of the countries of the world and thereby maintain the stability of the international price system by preventing the rapid fall in prices, which would have been

inevitable if all the countries which based themselves on gold had also adopted gold as a currency. But after 1910 conditions changed and the production of gold increased, with the result that the continuance of the Exchange Standard thereafter not only did not help the countries to check the rise of prices but became a direct cause of the rise of prices. For the economy in the use of gold rendered gold which was already overproduced redundant. During the war the use of paper money on an unprecedented scale led to a still greater depreciation in the value of gold all of which was practically due to the *economy* of gold in its use as currency. Consequently as observed by Prof. Cannan "in the immediate future gold is not a commodity the use of which it is desirable either to restrict or to economise. From the closing years of last century it has been produced in quantities much too large to enable it to retain its purchasing power and thus be a stable standard of value unless it can constantly be finding existing holders willing to hold larger stocks or fresh holders to hold new stocks of it. Before the war the various central banks in Europe took off a large part of the new supplies and prevented the actual rise of general prices being anything like what it should otherwise have been, though it was serious enough." In the absence of that demand the next best thing would be the introduction of gold currency in India and the East. This introduction of a gold currency can be better accomplished by adopting the fixed issue system rather than the convertible system. For the former will leave a larger margin for the use of gold in actual currency than will the latter.

5. That being my view of the solution of the problem I am necessarily in favour of the abolition of the Gold Standard Reserve as being of no practical use for maintaining the stability of the currency. There is also another reason why I think the Gold Standard Reserve ought to be abolished. The Gold Standard Reserve is peculiar in one respect, namely this; the assets, i.e., the reserve and the liabilities, i.e., the rupees are dangerously correlated by reason of the fact that the reserve cannot increase without an increase in the rupee currency. This ominous situation arises from the fact that the reserve is built out of the profits of rupee coinage. That being its origin, it is obvious that the fund can grow only as a consequence of an *increase* in the volume of rupee coinage. Now as Prof. Cannan remarks "the percentage of administrators and legislators who understand the Gold Standard is painfully small, but it is and is likely to remain ten or twenty times as great as the percentage

which understands the Gold Exchange System. The possibility of a Gold Exchange System being perverted by ignorance or corruption is very considerably greater than the possibility of the simple standard being so perverted. Unfortunately there is abundant proof of such perversion in the history of the currency system in India. Already we have had foolish administrators who had been obsessed with the idea that a reserve was a very essential thing and who had therefore gone in issuing currency without any other consideration but that of augmenting the reserve. Nor has the country been wanting in innumerable foolish business men who have condemned the Exchange Standard without ever knowing anything of currency on the sole ground that Government is not allowing them to use the reserve as though to boom up business was the proper function of a currency reserve. Similarly we have amongst us equally foolish politicians desiring to advertise themselves as friends of the people who want the reserve to be utilised for educating the masses. Any of these three may easily bring about a calamity in the guise of a blessing, and all this in sheer ignorance of the principles of currency. It is therefore much better to introduce a currency system which will do away with the Exchange Standard and also the Gold Standard Reserve the maintenance of which may any day be a source of mischief.

6. The following then are the requirements of my plan for the reform of the Indian currency :—

- (1) Stop the coinage of rupees by absolutely closing the mints to the Government as they are to the public.
- (2) Open a gold mint for the coinage of a suitable gold coin.
- (3) Fix a ratio between the gold coin and the rupee.
- (4) Rupee not to be convertible in gold and *gold not to be convertible in rupees*, but both to circulate as unlimited legal tender at the ratio fixed by law.

7. What is to become of the existing amount of reserve if it is not wanted for currency purposes? I myself would like it to be utilised by Government as ordinary revenue surplus for any public purpose that may seem to be urgent. But there will remain sources of weakness in the reformed currency which it is wise to recognise. Unlike the Fowler Committee, I am firm in my belief that the rupee currency once effectively limited will maintain its value without the necessity of any reserve. But there is just this chance that the existing volume of the rupee currency is so large that when there is a trade depression it may become redundant and may by reason of its excess lose its value. As a

safeguard against such a contingency I propose that the Government should use part of the Gold Standard Reserve for reducing the rupee currency by a substantial margin so that even in times of severe depression it may remain limited to the needs of the occasion. The second source of weakness in the currency arises from the peculiar composition of the Paper Currency Reserve. That weakness lies in the existence of what are called "Created Securities." I should like this portion of the Paper Currency Reserve extinguished as early as possible. For unless this is done the paper currency cannot with safety be made as elastic as it should be. I would therefore recommend that the remainder of the Gold Standard Reserve be utilised in the cancellation of the "Created Securities" in the Paper Currency Reserve.

8. Having given my views on the nature and form of the change I will now discuss the question next in importance, namely, "the ratio between gold and rupee." As a result of war operations there is not a single country with a Gold Standard which was able to keep its pre-war gold parity. Some of them have erred from it by such a large margin that it is now beyond the capacity of many to approach it with any degree of certainty. But howsoever impossible and impolitic the task, the hankering for a return to the pre-war parity seems to be universal. There is but this difference between India and the other countries. The other countries have yet to reach the pre-war parity. India, on the other hand, has in fact overreached the pre-war parity. As a result of the difference the problems before India and the other countries are different. In European countries the problem is one of deflating the currency, i.e., appreciating it; in other words of bringing about a fall in prices. In India the problem becomes one of inflating the currency, i.e., depreciating it; in other words of bringing about a rise in prices. For a change from 1 *s* 6*d.* gold to 1 *s* 4*d.* gold means this and nothing else. Should the currency be inflated to reach back the pre-war parity? There are some people who are under the impression that the restoration of pre-war parity would give justice and would also give us the old price level to which we were so long accustomed. Both these views are fallacious. First : the restoration of pre-war parity is not a restoration of the pre-war price level. For it is to be remembered that 1 *s* 4*d.* gold in 1925 is not the same thing as 1 *s* 4*d.* gold in 1914 if measured in terms of purchasing power. The same ratio of exchange does not necessarily mean the same level of purchasing power. The ratio between two currencies may remain the same though their respective volumes have undergone enormous changes, provided the variations in volumes are equal and in

the same sense. This is exactly the result of a mere nominal restoration of the pre-war parity. If by restoring pre-war parity is meant the restoration of the pre-war level of prices then the ratio instead of being lowered from 1 *s.6d.* in the direction of 1*s. 4d.* must be raised in the direction of 2*s.* gold. In other words instead of an inflation there must be a further deflation of the currency. Second : the restoration of pre-war parity even nominally would be unjust. As a standard of deferred payment a currency should not disturb monetary contracts. If all debts now existing had been contracted in 1914 before the war, ideal justice would clearly require the restoration of the pre-war ratio. On the other hand if all existing contracts had been entered into in 1925 justice would require us to keep to the ratio of 1925. Two things must be borne in mind in this connection. Existing contracts include those made at every stage of preceding depreciations and appreciation's and to deal fairly with all would demand that each one should be treated separately—a task impossible by reason of its complexity and enormity. Existing contracts are no doubt of various ages. But the great bulk of them are of very recent date and probably not more than one year old; so that it may be said that the centre of gravity of the total contractual obligations is always near the present. Given these two facts the best solution would be to strike an average between 1*s. 4d.* and 1*s. 6d.*, and to see that it is nearer 1 *s. 6d.* and away from 1 *s. 4d.* This is substantially the view of Prof. Fisher, who observes: "The problem of a just standard of money looks forward rather than backward : *it must take its starting point from the business now current, and not from imaginary parts before the war.* One might as well talk of restoring the original silver pound or returning to the monetary standards of Greece and Rome." In short, in matters of currency the real is the normal and therefore just.

9. As regards the effects of a rising and falling rupee on trade and industry the point often sought to be made is that low exchange confers a bounty on trade and industry. But this is not the important point. The more important point is, supposing that there is a gain arising from low exchange, whence does this gain arise? It is held out by most business men that it is a gain to the *export trade* and so many people have blindly believed in it that it must be said to have become an article of faith common to all that a low exchange is a source of gain to the *nation as a whole*. Now if it is realised that low exchange means high internal prices, it will at once become clear that this gain is not a gain to the nation coming from outside, but is a gain from one class at the cost of another class in the country. Now the class that suffers is the poor labouring

class, which pays the bounty to the richer or the business class. Such a transference of wealth from the poor to the rich can never be in the general interest of the country. I am therefore strongly opposed to high prices and low exchange, and no righteous Government should be party to such clandestine picking of the pockets of the poorer classes in the country.

10. I now come to the question of providing for the seasonal needs of the money markets in India. A currency system should be stable and elastic, and it is for this reason more than any other that the currency in many countries is a compound of metal and paper. The former is intended to give steadiness and stability and the latter elasticity. Unfortunately in India the plan of the paper currency is not contrived to give it elasticity. In England under a similar paper currency the inelasticity is made good by the development of what is called deposit currency which is issued against good commercial paper. Owing to a variety of causes deposit currency has failed to take root in India and there has been consequently no mitigation of the inelasticity of the paper currency of India. We should therefore make greater provision in our paper currency reserve whereby it could be made possible to convert good commercial paper into currency best suited to the needs of seasonal demands.

COPY OF THE

MEMORANDUM mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/30.

Statement of Evidence to the Royal Commission.htm - _msocom_2 **CIRCULATED TO WITNESSES IN INDIA BY THE COMMISSION**

The following memorandum, indicating the main questions which will come under the consideration of the Royal Commission on Indian Currency and Finance under its terms of reference, is published in order to assist intending witnesses in the preparation of their evidence. It is not to be regarded as exhaustive, nor is it desired that each witness should necessarily attempt to deal with all the questions raised :—

- (1) Is the time ripe for a solution of the problems of Indian Currency and Exchange by measures for stabilisation of the rupee or otherwise?

What is the comparative importance of stability in internal prices and in foreign exchanges?

What are the effects of a rising and a falling rupee, and of a stable

high or low rupee, on trade and industry (including agriculture) on national finance?

- (2) In relation to what standard and what rate should the rupee be stabilised, if at all?

When should any decision as to stabilisation take effect?

- (3) If the rate selected differs materially from the present rate, how should the transition be achieved?

- (4) What measures should be adopted to maintain the rupee at the rate selected?

Should the Gold Exchange Standard system in force before the war be continued, and with what modifications, if any?

What should be the composition, size, location, and employment of a Gold Standard Reserve?

- (5) Who should be charged with the control of the note issue, and on what principles? Should control or management be transferred to the Imperial Banks of India, and, if so, what should be the general terms of the transfer?

- (6) What should be the policy as to the minting of gold in India and the use of gold as currency? Should the obligation be undertaken to give gold for rupees?

- (7) By what method should the remittance operations of the Government of India be conducted? Should they be managed by the Imperial Bank?

- (8) Are any, and, if so, what, measures desirable to secure greater elasticity in meeting seasonal demands for currency?

Should any, and, if so, what, conditions be prescribed with regard to the issue of currency against hundis?

- (9) Should any change be made in existing methods for the purchase of silver?

Note.—The above questions were circulated to witnesses in India. As the result of the oral and written evidence received in India, the relative emphasis to be laid on the various matters dealt with has become clearer, and accordingly the attached memorandum and supplementary list of "Questions to be asked by the Chairman" have been prepared for the information of witnesses.

PREFACE

Soon after it became definite that the framing of the future Constitution of India was to be entrusted to a Constituent Assembly, the Working Committee of the All-India Scheduled Castes Federation asked me to prepare a Memorandum on the Safeguards for the Scheduled Castes for being submitted to the Constituent Assembly on behalf of the Federation. I very gladly undertook the task. The results of my labour are contained in

this brochure.

The Memorandum defines Fundamental Rights; Minority Rights and Safeguards for the Scheduled Castes. Those who hold the view that the Scheduled Castes are not a minority might say that. in this matter I have gone beyond prescribed bounds. The view that the Scheduled Castes are not a minority is a new dispensation issued on behalf of the High and Mighty Hindu Majority which the Scheduled Castes are asked to submit to. The spokesmen of the Majority have not cared to define its scope and its meaning. Anyone with a fresh and free mind, reading it as a general proposition, would be justified in saying that it is capable of double interpretation. I interpret it to mean that the Scheduled Castes are more than a minority and that any protection given to the citizens and to the minorities will not be adequate for the Scheduled Castes. In other words it means that their social, economic and educational condition is so much worse than that of the citizens and other minorities that in addition to protection they would get as citizens and as minorities the Scheduled Castes would require special safeguards against the tyranny and discrimination of the majority. The other interpretation. is that the Scheduled Castes differ from a minority and therefore they are not entitled to the protection which can be claimed by a minority. This interpretation appears to be such unmitigated nonsense that no sane man need pay any attention to it. The Scheduled Castes must be excused if they ignore it. Those who accept my interpretation of the view that the Scheduled Castes are not a minority will, I am sure, agree with me that I am justified in demanding for the Scheduled Castes, all the benefit of the Fundamental Rights of citizens, all the benefit of the Provisions for the Protection of the minorities and in addition special Safeguards.

The memorandum was intended to be submitted to the Constituent Assembly. There was no intention to issue it to the public. But my caste Hindu friends who have had the opportunity to read the typescript have pressed me to give it a wider circulation. Although it is meant for members of the Constituent Assembly, I do not see any breach of decorum in making it available to the general public. I have therefore agreed to fall in line with their wishes.

Instead of setting out my ideas in general terms, I have drafted the Memorandum in the form of Articles of the Constitution. I am sure that for the sake of giving point and precision this method will be found to be more helpful. For the benefit of the Working Committee of the Scheduled Castes Federation, I had prepared certain explanatory notes and other statistical material. As the notes and the statistical material are likely to be

useful to the general reader, I have thought it better to print them along with the Memorandum rather than keep them back.

Among the many problems the Constituent Assembly has to face, there are two which are admittedly most difficult. One is the problem of the Minorities and the other is the problem of the Indian States. I have been a student of the problem, of the Indian States and I hold some very definite and distinct views on the subject. It was my hope that the Constituent Assembly would elect me to the States Committee Evidently, it has found men of superior calibre for the work. It may also be because I am one of those who are outside the tabernacle and therefore undesirable. I am not sorry to find myself left out. My only regret is that I have lost an opportunity to which I was looking forward for placing my views for the consideration of the Committee. I have therefore chosen to do the next best thing—namely, to incorporate them in this brochure along with the Rights of Citizens, of Minorities and of the Scheduled Castes so that a wider public may know what they are, may value them for what they are worth and may make such use of them as it may deem fit.

"Raja Graha"

Dadar, Bombay-14

B. R. AMBEDKAR

15-3-47

CONSTITUTION OF THE UNITED STATES OF INDIA

PROPOSED PREAMBLE

For explanation see Explanatory Notes

We the people of the territories of British India distributed into administrative units called Provinces and Centrally Administered Areas and of the territories of the Indian States with a view to form a more perfect union of these territories do-- *ordain* that the Provinces and the Centrally Administered Areas (to be hereafter designated as States) and the Indian States shall be joined together into a Body Politic for Legislative, Executive and Administrative purposes under the style *The United States of India* and that the union so formed shall be indissoluble

and that with a view :

- (i) to secure the blessings both of self-government and good government throughout the united States of India to ourselves and to out posterity,
- (ii) to maintain the right of every subject to life, liberty and pursuit Of happiness and to free speech and free exercise of religion,

- (iii) to remove social, political and economic inequality by providing better opportunities to the submerged classes,
- (iv) to make it possible for every subject to enjoy freedom from want and freedom from fear, and
- (v) to provide against internal disorder and external aggression, establish this Constitution for the United States of India.

PROPOSED ARTICLE I DETAILED ANALYSIS

Article I, Section I—*Admission of Indian States into the Union* :

Clause 1. Qualified Indian States and their admission into the Union.

Clause 2. Relation of Qualified Indian States which have not entered the Union and of the Disqualified Indian States to the United States of India.

Clause 3. Power of the United States of India to reorganise the territory of the Disqualified Indian States into suitable Administrative Units with a view to qualify them for admission into the Union as States of the Union.

Clause 4. Formation of new States within the Union.

Article I, Section II—*United States of India and New Territory* :

Clause 1. Incorporation of Foreign States into the Union.

Clause 2. Acquisition of new territory by the United States of India and its retention as unincorporated territory of the Union.

ARTICLE I—Section I ADMISSION OF INDIAN STATES INTO THE UNION

Clause I

For explanation see Explanatory Notes

The United States of India may, on application and on fulfilment of the terms prescribed by an Enabling Act of the Union Legislature laying down the form of the Constitution admit an Indian State into the Union provided the Indian State seeking admission is a Qualified State.

For the purposes of this clause a list of Qualified Indian States shall be drawn up. A State shall not be deemed to be a Qualified State unless it is proved that it is of a standard size prescribed by the Union Legislature and is endowed with natural resources capable of supporting a descent

standard of living for its people and can, by reason of its revenues and population function as an autonomous State, protect itself against external aggression, maintain Law and Order against internal disturbance and guarantee to its subjects minimum standards of administration and welfare which are expected from a modern State.

Clause 2

The territory of an Indian State which is a Qualified State but which has not entered the Union and the territory of the Indian States which are disqualified shall be treated as incorporated territories of the United States of India and shall at all times form integral parts thereof and shall be subject to such parts of the Constitution of the United States of India as may be prescribed by the Union Legislature.

Clause 3

The United States of India shall have power to reform, rearrange, redistribute and amalgamate the territories of Disqualified Indian States into suitable Administrative Units for admission into the Union as States of the Union.

Clause 4

After a State has been admitted into the Union as a State no new State shall be formed or created within its jurisdiction nor any new State shall be formed by the junction of two or more States or parts of States without the consent of the Legislatures of the States concerned as well as of the Union Legislature.

ARTICLE I—Section II

Clause 1

For explanation see Explanator

The United States of India may admit into the Union any territory which forms a natural part of India or which is on the border of India on terms and conditions mutually agreed upon. Provided that the terms shall not be inconsistent with the Constitution of the United States (For explanation, see page 406) of India and the admission is recommended by the Legislatures of one half of the States comprising the United States of India in the form of a resolution.

Clause 2

The United States of India may acquire territory and may treat it as unincorporated territory. The provisions of the Constitution of the United States of India shall not apply to the unincorporated territory unless a provision to the contrary is made by the Legislature of the United States of India.

PROPOSED ARTICLE II DETAILED ANALYSIS

Article II, Section I—*Fundamental Rights of Citizens.*

Article II, Section II—*Remedies against Invasion of Fundamental Rights:*

Clause 1. Judicial Protection.

Clause 2. Protection against Unequal Treatment.

Clause 3. Protection against Discrimination.

Clause 4. Protection against Economic Exploitation.

Article II, Section III—*Provisions for the Protection of Minorities:*

Clause 1. Protection against Communal Executive.

Clause 2. Protection against Social and Official Tyranny.

Clause 3. Protection against Social Boycott.

Clause 4. Authority and obligation of the Union and State Governments to spend money for public purposes including purposes beneficial to Minorities.

Article II, Section IV—*Safeguards for the Scheduled Castes.*

Part I—Guarantees :

Clause 1. Right to Representation in the Legislature and in the Local Bodies,

Clause 2. Right to Representation in the Executive. Clause 3. Right to Representation in Services.

Part II—Special Responsibilities:

Clause 1. For Higher Education. Clause 2. For Separate Settlements.

Part III—Sanction for Safeguards and Amendment of Safeguards :

Clause 1. Safeguards to be embodied in the Constitution. Clause 2. Amendment of Safeguards.

Part IV—Protection of Scheduled Castes in Indian States.

Part V—Interpretation.

ARTICLE II—Section I

FUNDAMENTAL RIGHTS OF CITIZENS

The Constitution of the United States of India shall recognize the following as Fundamental Rights of citizenship:

For explanation see Explanatory Notes

1. All persons born or naturalised within its territories are citizens of the

United States of India and of the State wherein they reside. Any privilege or disability arising out of rank, birth, person, family, religion or religious usage and custom is abolished.

2. No State shall make or enforce any law or custom which shall abridge the privileges or immunities of citizens; nor shall any State, deprive any person of life, liberty and property without due process of law; nor deny to any person within its jurisdiction equal protection of law.
3. All citizens are equal before the law and possess equal civic rights. Any existing enactment, regulation, order, custom or interpretation of law by which any penalty, disadvantage or disability is imposed upon or any discrimination is made against any citizen shall, as from the day on which this Constitution comes into operation, cease to have any effect.
4. Whoever denies to any person, except for reasons by law applicable to persons of all classes and regardless of their social status, the full enjoyment of any of the accommodations, advantages, facilities, privileges of inns, educational institutions, roads, paths, streets, tanks, wells and other watering places, public conveyances on land, air or water, theatres or other places of public amusement, resort or convenience, whether they are dedicated to or maintained or licensed for the use of the public, shall be guilty of an offence.
5. All citizens shall have equal access to all institutions, conveniences and amenities maintained by or for the public.
6. No citizen shall be disqualified to hold any public office or exercise any trade or calling by reason of his or her religion, caste, creed, sex or social status.
7. (i) Every citizen has the right to reside in any part of India. No law shall be made abridging the right of a citizen to reside except for consideration of public order and morality.
(ii) Every citizen has the right to settle in any part of India, subject to the production of a certificate of citizenship from the State of his origin. The permission to settle shall not be refused or withdrawn except on grounds specified in sub-clause (iv) of this clause.
(iii) The State in which a citizen wishes to settle may not impose any special charge upon him in respect of such settlement other than the charge imposed upon its own inhabitants. The maximum fees chargeable in respect of permits for settlement shall be determined by laws made by the Union Legislature.
(iv) The permission to settle may be refused or withdrawn by a State from persons—

- (a) (a) who have been habitual criminals;
 - (b) (b) whose intention to settle is to alter the communal balance of the State;
 - (c) who cannot prove to the satisfaction of the State in which they wish to settle that they have an assured means of subsistence and who are likely to become or have become a permanent burden upon public charity;
 - (d) whose State of origin refuses to provide adequate assistance for them when requested to do so,
 - (v) Permission to settle may be made conditional upon the applicant being capable of work and not having been a permanent charge upon public charity in the place of his origin, and able to give security against unemployment. (vi) Every expulsion must be confirmed by the Union Government.
 - (vii) Union Legislature shall define the difference between settlement and residence and at the same time, prescribe regulations governing the political and civil rights of persons during their residence.
8. The Union Government shall guarantee protection against persecution of a community as well as against internal disorder or violence arising in any part of India.
 9. Subjecting a person to forced labour or to involuntary servitude shall be an offence.
 10. The right of the people to be secure in their persons, houses, papers and effects against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.
 11. The right of a citizen to vote shall not be denied or abridged on any account other than immaturity, imprisonment and insanity.
 12. No law shall be made abridging the freedom of Speech, of the Press, of Association and of Assembly except for consideration of public order and morality.
 13. No Bill of attainder or ex post facto law shall be passed.
 14. The State shall guarantee to every Indian citizen liberty of conscience and the free exercise of his religion including the right to profess, to preach and to convert within limits compatible with public order and morality.
 15. No person shall be compelled to become a member of any religious

association, submit to any religious instruction or perform any act of religion. Subject to the foregoing provision, parents and guardians shall be entitled to determine the religious education of children up to the age of 16 years.

16. No person shall incur any penalties of any kind whatsoever by reason of his caste, creed or religion nor shall any person be permitted to refuse to fulfil any obligation of citizenship on the ground of caste, creed or religion.
17. The State shall not recognise any religion as State religion.
18. Persons following a religion shall be guaranteed freedom of association and shall have, if they so desire, the right to call upon the State to pass legislation in terms approved by them making them into a body corporate.
19. Every religious association shall be free to regulate and administer its affairs, within the limits of the laws applicable to all.
20. Religious associations shall be entitled to levy contributions on their members who are willing to pay them if their law of incorporation permits them to do so. No person may be compelled to pay taxes the proceeds of which are specifically appropriated for the use of any religious community of which he is not a member.
21. All offences under this section shall be deemed to be cognizable offences. The Union Legislature shall make laws to give effect to such provisions as require legislation for that purpose and to prescribe punishment for those acts which are declared to be offences.

ARTICLE II-Section II

REMEDIES AGAINST INVASION OF FUNDAMENTAL RIGHTS

The United States of India shall provide :

Clause I

Judicial Protection against Executive tyranny

For explanation see Explanatory Notes

- (1) That the Judicial Power of India shall be vested in a Supreme Court.
- (2) The Supreme Court shall have the power of superintendence over all other Courts or officers exercising the powers of a Court, whether or not such Courts or officers are subject to its appellate or revisional jurisdiction.
- (3) The Supreme Court shall have the power on the application of an

aggrieved party to issue what are called prerogative writs such as *Hebeas Corpus*, *Quo Warranto Prohibition*, *Certiorari* and *Mandamus*, etc. For purposes of such writs the Supreme Court shall be a Court of general jurisdiction throughout India.

(4) The right to apply for a writ shall not be abridged or suspended unless when in cases of rebellion or invasion the public safety may require it.

Clause 2

Protection against Unequal Treatment

For explanation see Explanatory Notes

That the Authority of the Legislature and the Executive of the Union as well as of every State throughout India shall be subject to the following limitations:

It shall not be competent for any Legislature or Executive in India to pass a law or issue an order, rule or regulation so as to violate the following rights of the subjects of the State :

- (1) to make and enforce contracts, to sue, be parties, and give evidence, to inherit, purchase, lease, sell, hold and convey real and personal property.
- (2) to be eligible for entry into the civil and military employ and to all educational institutions except for such conditions and limitations as may be necessary to provide for the due and adequate representation of all classes of the subjects of the State.
- (3) to be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, educational institutions, privileges of inns, rivers, streams, wells, tanks, roads, paths, streets, public conveyances on land, air and water, theatres and other places of public resort or amusement except for such conditions and limitations applicable alike to all subjects of every race, class, caste, colour or creed.
- (4) to be deemed fit for and capable of sharing without distinction the benefits of any religious or charitable trust dedicated to or created, maintained or licensed for the general public or for persons of the same faith and religion.
- (5) to claim full and equal benefit of all laws and proceedings for the security of persons and property as is enjoyed by other subjects regardless of any usage or custom or usage or custom based on religion and be subject to like punishment, pains and penalties and to none other.

Clause 3

Protection against Discrimination.

For explanation see Explanatory Notes

- (1) Discrimination against citizens by Government officers in Public administration or by private employers in factories and (For explanation see page 408) commercial concerns on the ground of race or creed or social status shall be treated as an offence. The jurisdiction to try such cases shall be vested in a tribunal to be created for the purpose.
- (2) The Union Legislature shall have the right as well as the obligation to give effect to this provision by appropriate legislation.

Clause 4

Protection against Economic Exploitation.

For explanation see Explanatory Notes

The United States of India shall declare as a part of the law of its constitution—

- (1) That industries which are key industries or which may be declared to be key industries shall be owned and run by the State ;
- (2) That industries which are not key industries but which are basic industries shall be owned by the State and shall be run by the State or by Corporations established by the State ;
- (3) That Insurance shall be a monopoly of the State and that the State shall compel every adult citizen to take out a life insurance policy commensurate with his wages as may be prescribed by the Legislature;
- (4) That agriculture shall be State Industry;
- (5) That State shall acquire the subsisting rights in such industries, insurance and agricultural land held by private individuals, whether as owners, tenants or mortgagees and pay them compensation in the form of debenture equal to the value of his or her right in the land. Provided that in reckoning the value of land, plant or security no account shall be taken of any rise therein due to emergency, of any potential or unearned value or any value for compulsory acquisition;
- (6) The State shall determine how and when the debenture holder shall be entitled to claim cash payment;
- (7) The debenture shall be transferable and inheritable property but neither the debenture holder nor the transferee from the original holder nor his heir shall be entitled to claim the return of the land or interest in any industrial concern acquired by the State or be entitled to deal with it in any way;
- (8) The debenture-holder shall be entitled to interest on his debenture at such rate as may be defined by law, to be paid by the State in cash or in kind as the State may deem fit;

- (9) Agricultural industry shall be organized on the following basis:
- (i) The State shall divide the land acquired into farms of standard size and let out the farms for cultivation to residents of the village as tenants (made up of group of families) to cultivate on the following conditions:
 - (a) (a) The farm shall be cultivated as a collective farm ;
 - (b) (b) The farm shall be cultivated in accordance with rules and directions issued by Government;
 - (c) The tenants shall share among themselves in the manner prescribed the produce of the farm left after the payment of charges properly leviable on the farm;
 - (ii) The land shall be let out to villagers without distinction of caste or creed and in such manner that there will be no landlord, no tenant and no landless labourer ;
 - (iii) It shall be the obligation of the State to finance the cultivation of the collective farms by the supply of water, draft animals, implements, manure, seeds, etc.;
 - (iv) The State shall be entitled to—
 - (a) (a) to levy the following charges on the produce of the farm:
 - (i) a portion for land revenue; (ii) a portion to pay the debenture-holders ; and (iii) a portion to pay for the use of capital goods supplied; and
 - (b) (b) to prescribe penalties against tenants who break the conditions of tenancy or wilfully neglect to make the best use of the means of cultivation offered by the State or otherwise act prejudicially to the scheme of collective farming;
- (10) The scheme shall be brought into operation as early as possible but in no case shall the period extend beyond the tenth year from the date of the Constitution coming into operation.

ARTICLE II – Section III PROVISIONS FOR THE PROTECTION OF MINORITIES

The Constitution of the United States of India shall provide:

Clause 1

Protection against Communal Executive.

For explanation see Explanatory Notes

- (1) That the Executive-Union or State—shall be non-parliamentary in the sense that it shall not be removable before the term of the Legislature.
- (2) Members of the Executive if they are not members of the Legislature

shall have the right to sit in the Legislature, speak, vote and answer questions.

- (3) The Prime Minister shall be elected by the whole House by single transferable vote.
- (4) The representatives or the different minorities in the Cabinet shall be elected by members of each minority community in the Legislature by single transferable vote.
- (5) The representatives of the majority community in the Executive shall be elected by the whole House by single transferable vote.
- (6) A member of the Cabinet may resign his post on a censure motion or otherwise but shall not be liable to be removed except on impeachment by the House on the ground of corruption or treason.

Clause 2

Protection against social and official tyranny.

For explanation see Explanatory Notes

- (1)(1) That there shall be appointed an Officer to be called the Superintendent of Minority Affairs.
- (2)(2) His status shall be similar to that of the Auditor General appointed under section 166 of the Government of India Act of 1935 and removable in like manner and on the like grounds as a Judge of the Supreme Court,
- (3) it shall be the duty of the Superintendent to prepare an annual report on the treatment of minorities by the public, as well as by the Governments, Union and State and of any transgressions of safeguards or any miscarriage of justice due to communal bias by Governments or their Officers.
- (4) The Annual Report of the Superintendent shall be placed on the Table of the Legislatures—Union and State, and the Governments—Union and State, shall be bound to provide time for the discussion of the Report.

Clause 3

Protection against social boycott.

For explanation see Explanatory Notes

That Social Boycott, Promoting or Instigating a Social Boycott or Threatening a Social Boycott as defined below shall be declared to be an offence :

- (i) Boycott Defined.—A person shall be deemed to boycott another who—

- (a) refuses to let or use or occupy any house or land, or to deal with, work for hire, or do business with another person, or to render to him or receive from him any service, or refuses to do any of the said things on the terms on which such things should commonly be done in the ordinary course of business, or
- (b) abstains from such social, professional or business relations as he would, having regard to such existing customs in the community which are not inconsistent with any fundamental right or other rights Of citizenship declared in the Constitution, ordinarily maintain with such person, or
- (c) in any way injures, annoys or interferes with such other person in the exercise of his lawful rights.

(ii) Offence of Boycotting—Whoever, in consequence of any person having done any act which he was legally entitled to do or of his having omitted to do any act which he was legally entitled to omit to do, or with intent to cause any person to do any act which he is not legally bound to do or to omit to do any act which he is legally entitled to do, or with intent to cause harm to such person in body, mind, reputation or property, or in his business or means of living, boycotts such person or any person in whom such person, is interested, shall be guilty of offence of boycotting
 Provided that no offence shall be deemed to have been committed under this Section, if the Court is satisfied that the accused person has not acted at the instigation of or in collusion with any other person or in pursuance of any conspiracy or of any agreement or combination to boycott.

(iii) Offence of Instigating or Promoting a Boycott—
 Whoever-

- (a) (a) publicly makes or publishes or circulates a proposal for.
or
- (b) (b) makes, publishes or circulates any statement, rumour or report with intent to, or which he has reason to believe to be likely to cause, or
- (c) in any other way instigates or promotes the boycotting of any person or class of persons, shall be guilty of the offence of instigating or promoting a boycott.

Explanation— An offence under this clause shall be deemed to have been committed although the person affected or likely to be affected by any action of the nature referred to herein is not designated by name or class but only by his acting or

abstaining from acting in some specified manner.

- (iv) Offence of Threatening a Boycott—Whoever, in consequence of any person having done any act which he was legally entitled to do or of his having omitted to do any act which he was legally entitled to omit to do, or with intent to cause any person to do any act which he is not legally bound to do, or to omit to do any act which he is legally entitled to do threatens to cause such person or any person in whom such person is interested, to be boycotted shall be guilty of the offence threatening a boycott.

Exception.—It is not boycott—

- (i) (i) to do any act in furtherance of a bona fide labour dispute ;
 (ii) (ii) to do any act in the ordinary course of business competition.
- (2) All these offences shall be deemed to be cognizable offences. The Union Legislature shall make laws prescribing punishment for these offences.

Clause 4

Power of Governments to spend money for any purposes connected with Government of India including purposes beneficial to the Minorities

For explanation see Explanatory Notes

That the Power of the Central and Provincial Governments to make grants for any purpose, notwithstanding that the purpose is not one for which the Union or State Legislature as the case may be make laws, shall not be abridged taken away.

ARTICLE II - Section IV SAFEGUARDS FOR THE SCHEDULED CASTES PART I—Guarantees

Right to Representation in the Legislature.

For explanation see Explanatory Notes

The Constitution of the United States of India shall guarantee to the Scheduled Castes the following Rights :

Clause I

Right to Representation in the Legislature

- (1) (1) Quantum of Representation.—
 (a) (i) The Scheduled Castes shall have minimum representation in the Legislature—Union and State—and if there be a group Constitution

then in the group Legislature equal to the ratio of their population to the total population. Provided that no other minority is allowed to claim more representation than what is due to it on the basis of its population.

- (ii) The Scheduled Castes of Sind and N.W.F. Provinces shall be given their due share of representation.
- (iii) Weightage where it becomes necessary to reduce a huge communal majority to reasonable dimensions shall come out of the share of the majority. In no case shall it be at the cost of another minority community.
- (iv) Weightage carved out from the share of majority shall not be assigned to one community only. But the same shall be divided among all minority communities equally or in inverse proportion to their—
 - (1) economic position,
 - (2) social status, and
 - (3) educational advance.
- (b) There should be no representation to special interests. But if the same is allowed it must be taken out of the share of representation given to that community to which the special interest belongs.

(2) Method of Election—

(A) For Legislative Bodies

- (a) (a) The system of election introduced by the Poona Pact shall be abolished.
- (b) (b) In its place, the system of Separate Electorates shall be substituted.
- (c) (c) Franchise shall be adult franchise.
- (d) (d) The system of voting shall be cumulative.

(B) For Local Bodies

The principles for determining the quantum of representation and the Method of election for Municipalities and Local Boards shall be the same as that adopted for the Union and State Legislatures.

Clause 2

Right to Representation in the Executive.

For explanation see Explanatory Notes

- (1) The Scheduled Castes shall have minimum representation in the Executive—Union and State—and if there, be a group Constitution then in the group Executive equal to the ratio of their population that no minority community is allowed to claim more than its population ratio.
- (2) Weightage where it becomes necessary to reduce a huge majority to

reasonable dimensions shall come out of the share of the majority community. In no case shall it be at the cost of another minority community.

- (3) Weightage carved out from the share of the majority shall not be assigned to one community only. But the same shall be divided among all minorities equally or in inverse proportion to:
- | | | |
|-------|-------|--------------------------|
| (i) | (i) | their economic position. |
| (ii) | (ii) | social status, and |
| (iii) | (iii) | educational advance. |

Clause 3

Right to Representation in the Services

For explanation see Explanatory Notes

- (a) The quantum of representation of the Scheduled Castes in the Services shall be as follows :
- (i) In the Union Services.—In proportion to the ratio of their population to the total population in India or British India as the case may be.
 - (ii) In the State and Group Services.—in proportion to their population in the State or Union.
 - (iii.) In the Municipal and Local Board Services.—In proportion to their population in the Municipal and Local Boards areas :
- Provided that no minority community is allowed to claim more than its population ratio of representation, in the Services.
- (b) Their right to representation in the Services shall not be curtailed except by conditions relating to minimum qualifications, education, age, etc.
 - (c) The conditions prescribed for entry in Services shall not abrogate any of the concessions given to the Scheduled Castes by the Government of India in their Resolutions of 1942 and 1945.
 - (d) The method of filling up the vacancies shall conform to the rules prescribed in the Government of India Resolutions of 1942 and 1946.
 - (e) On every Public Services Commission or a Committee constituted for filling vacancies, the Scheduled Castes shall have at least one representative.

PART II—SPECIAL RESPONSIBILITIES

Provisions for Higher Education

For explanation see Explanatory Notes

That the United States of India shall undertake the following special responsibilities for the betterment of the Scheduled Castes:

Clause I

- (1) Governments—Union and State—shall be required to assume financial responsibility for the of the Scheduled Castes and shall be required to make adequate provisions in their budgets. Such Provisions shall form the first charge on the Education Budget of the Union and State; Government.
- (2) The responsibility for finding money for secondary and college education of the Scheduled Castes in India shall be upon the State Governments and the different States shall make a provision in their annual budgets for the said purpose in proportion to the population of the Scheduled Castes to the total budget of the States.
- (3) The responsibility for finding money for foreign education of the Scheduled Castes shall be the responsibility of the Union Government and the Union Government shall make a provision of rupees 10 lakhs per year in its annual budget in that behalf.
- (4) These special grants shall be without prejudice to the right of the Scheduled Castes to share in the expenditure incurred by the State Government for the advancement of primary education for the people of the State,

Clause 2

provision for New Settlements.

For explanation see Explanatory Notes

1 The following provision shall be made in the Constitution of the Union Government :

- (i) There shall be a Settlement Commission under the new Constitution to hold uncultivated lands belonging to the State in trust for Settlement of the Scheduled Castes in separate villages.
 - (ii) The Union Government shall set apart annually a fund of Rs. 5 crores for the purpose of promoting the scheme of settlement.
 - (iii) That the. Commission shall have the power to purchase any land offered for sale and use it for the said purpose.
2. The Union Government shall from time to time pass such legislation as may be necessary for the Commission to carry out its functions.

PART III—Sanction for Safeguards and Amendment of Safeguards

Clause 1

Sanction for Safeguards

For explanation see Explanatory Notes

The Constitution of the United States shall provide that—

The United States of India undertakes to give the safeguards contained in Article II Section IV a place in the Constitution and make them a part of the Constitutional Law of India.

Clause 2

Mode of Amendment of safeguards

For explanation see Explanatory Notes

The provisions for the Scheduled Castes shall not be altered, amended or abrogated except in the following manner :

Any amendment or abrogation of Section IV of Article II or any part thereof relating to the Scheduled Castes shall only be made by a Resolution passed in the manner prescribed below by the more Popular Chamber of the Union Legislature :

- (i) (i) Any proposal for amendment or abrogation shall be initiated in the form of a Resolution in the more Popular Chamber of the Union Legislature.
- (ii) (ii) No such Resolution shall be moved—
 - (a) unless 25 years have elapsed after the Constitution has come into operation and has been worked; and
 - (b) unless six months' notice has been given to the House by the mover of his intention to move such a Resolution.
- (iii) On the passing of such a Resolution, the Legislature shall be dissolved and a new election held.
- (iv) The original Resolution in the form in which it was passed by the previous Legislature shall be moved afresh in the same House of the newly elected Union Legislature,
- (v) The Resolution shall not be deemed to have been carried unless it is passed by a majority of two-thirds of the members of the House and also two-thirds of members of the Scheduled Castes who have been returned through separate electorates.

PART IV— protection of scheduled castes in the Indian states

Safeguards for in Indian States.

For explanation see Explanatory Notes

The Constitution of the United States shall provide that the admission of

the Indian States into the Union shall be subject to the Scheduled Castes following condition :

“All provisions relating to the Scheduled Castes contained in Section IV of Article II of the Constitution of the United States of India shall be extended to the Scheduled Castes in the Indian States. Such a provision in the Constitution of an Indian States shall be a condition precedent for its admission into the Union.”

PART V—interpretation

Scheduled Castes a Minority

For explanation see Explanatory Notes

I. For the purposes of Article II the Scheduled Castes, as defined in the Government of India Scheduled Caste Order, 1936, issued under the Government of India Act, 1935, shall be deemed to be a minority.

Scheduled Castes and change of Domicile.

For explanation see Explanatory Notes

II. For the purposes of Article II a Caste which is a Scheduled Caste in one State shall be treated as Scheduled Caste in all States of the Union.

EXPLANATORY NOTES

Preamble

The Preamble gives constitutional shape and form to the Resolution on objectives passed by the Constituent Assembly on Wednesday the 22nd January 1947.

ARTICLE I—Section I

Clauses I to 4

The admission of the six hundred and odd Indian States into the Union raises many difficult questions. The most difficult of them is the one which relates to their admission into the Union. Every Indian State is claiming to be a Sovereign State and is demanding to be admitted into the Union in its own right. The Indian States fall into different classes from the view of size, population, revenue and resources. It is obvious that every State admitted into the Union as a State must have the capacity to bear the burden of modern administration to maintain peace within its own borders and to possess the resources necessary for the economic advancement of its people. Otherwise, the United States of India is likely to be encumbered with a large number of weak States which, instead of being a help to the Central Government, will be a burden upon it. The Union Government with such small and weak States as its units will never be able to pull its full weight in an emergency. It is therefore obvious that it would be a grave danger to the future safety of India if every Indian State were admitted into the Union without any scrutiny of its capacity to bear the burden of modern administration and maintaining internal peace. To avoid this danger, the Article proceeds to divide the Indian States into two classes: (1) Qualified Indian States and (2) Unqualified Indian States. It proposes that a list of Qualified Indian States should be drawn up as a first step in the procedure to be followed for the admission of the Indian States into the Union. A Qualified Indian State will be admitted into the Union on an application for admission and the fulfilment of the provisions of the Enabling Act which the Union Legislature is authorised to pass for the purpose of requiring an appropriate form of internal Government set up

within the State which will be in consonance to the principles underlying the Constitution of the United States of India. The territory in the occupation of the Unqualified Indian States will be treated as the territory of the United States of India and will be reorganised into States of suitable sizes by the United States of India. In the meantime those who are rulers of the territory shall continue to administer the territory under the supervision of the United States of India. The Act also declares that the Indian territory whether in the occupation of British Indian Provinces or of the Indian States is one and integral and will be so even though an Indian State has not entered into the Union.

Clause 4 provides that once a State is admitted into the Union, its integrity shall be maintained and it shall not be liable to sub-division except in accordance with the provisions contained in the clause.

ARTICLE I—Section II

Clauses I and 2

Clause 1 permits the United States of India to incorporate States which are independent but which are on the border and which desire to join the Union.

Clause 2 enables the United States of India to acquire territory and to incorporate it or to treat it as separate territory.

ARTICLE II—Section I

The inclusion of Fundamental Rights in the Constitution requires no justification. The necessity of Fundamental Rights is recognised in all Constitutions old and new. The Fundamental Rights included in the Article are borrowed from the Constitutions of various countries particularly from those wherein the conditions are more or less analogous to those existing in India.

ARTICLE II—Section II

Clause 1

Rights are real only if they are accompanied by remedies. It is no use giving rights if the aggrieved person has no legal remedy to which he can resort when his rights are invaded. Consequently when the Constitution guarantees rights it also becomes necessary to make provision to prevent the Legislature and the Executive from overriding them. This function has

been usually assigned to the judiciary and the Courts have been made the special guardians of the rights guaranteed by the Constitution. The clause does no more than this. The clause proposes to give protection to the citizen against Executive tyranny by investing the Judiciary with certain powers of inquisition against the abuse of authority by the Executive. This power takes the form of issue of writs. The High Courts in India possess these powers under the Government of India and under their letters patent. These powers are however subject to two limitations. In the first place the powers given by the Letters Patent are available only to the High Courts in the Presidency Towns and not to all. Secondly these powers are subject to laws made by the Indian Legislature. Thirdly the powers given by the Government of India Act, 1935 are restricted and may prove insufficient for the protection of the aggrieved person. The clause achieves two objectives: (1) to give the fullest power to the Judiciary to issue what under the English Law are called Prerogative Writs and (2) to prevent the Legislature from curtailing these powers in any manner whatsoever.

Clause 2

It is difficult to expect that in a country like India where most persons are communally minded those in authority will give equal treatment to those who do not belong to their community. Unequal treatment has been the inescapable fate of the Untouchables in India. The following extract from the Proceedings of the Board of Revenue of the Government of Madras No. 723 dated 5th November, 1892, illustrates the sort of unequal treatment which is meted out to the Scheduled Castes by Hindu Officers. Says the report:

“134. There are forms of oppression only hitherto hinted at which must be at least cursorily mentioned. To punish disobedience of Pariahs, their masters—

- (a) (a) bring false cases in the village Court or in the criminal Courts ;
- (b) (b) obtain, on application, from Government, waste lands lying all round the paracheri, so as to impound the Pariahs' cattle or obstruct the way to their temple;
- (c) (c) have mirasi names fraudulently entered in the Government account against the paracheri;
- (d) (d) pull down the huts and destroy the growth in the backyards;
- (e) (e) deny occupancy right in immemorial sub-tenancies ;

- (f) (f) forcibly cut the Pariahs' crops, and on being resisted charge them with theft and rioting ;
- (g) under misrepresentations, get them to execute documents by which they are afterwards ruined;
- (h) (h) cut off the flow of water from their fields;
- (i) (i) without legal notice, have the property of sub-tenants attached for the landlords' arrears of revenue."

"135. It will be said there are civil and criminal Courts for the redress of any of these injuries. There are the Courts indeed; but India does not breed village Hampdens. One must have courage to go to the Courts ; money to employ legal knowledge, and meet legal expenses; and means to live during the case and the appeals. Further most cases depend upon the decision of the first Court; and these Courts are presided over by officials who are sometimes corrupt and who generally for other reasons, sympathize with the wealthy and landed classes to which they belong."

"136. The influence of these classes with the official world can hardly be exaggerated, it is extreme with natives and great even with Europeans. Every office, from the highest to the lowest, is stocked with their representatives, and there is no proposal affecting their interests but they can bring a score, of influence to bear upon it in its course from inception to execution."

The Punjab Land Alienation. Act is another illustration of unequal treatment of the Untouchables by the Legislature.

Many other minority communities may be suffering from similar treatment at the hands of the majority community. It is therefore necessary to have such a provision to ensure that all citizens shall have equal benefit of Laws, Rules and Regulations.

The provisions of Clause 2 are borrowed from Civil Rights Protection Act. 1866, and of March 1st, 1875 passed by the Congress of the United States of America to protect the Negroes against unequal treatment.

Clause 3

Discrimination is another menace which must be guarded against if the Fundamental Rights are to be real rights. In a country like India where it is

possible for discrimination to be practised on a vast scale and in a relentless manner Fundamental Rights can have no meaning. The Remedy follows the lines adopted in the Bill which was recently introduced in the Congress of the U.S.A. the aim of which is to prevent discrimination being practised against the Negroes.

Clause 4

The main purpose behind the clause is to put an obligation on the State to plan the economic life of the people on lines which would lead to highest point of productivity without closing every avenue to private enterprise, and also provide for the equitable distribution of wealth. The plan set out in the clause proposes State ownership in agriculture with a collectivised method of cultivation and a modified form of State Socialism in the field of industry. It places squarely on the shoulders of the State the obligation to supply capital necessary for agriculture as well as for industry. Without the supply of capital by the State neither land nor industry can be made to yield better results. It also proposes to nationalise insurance with a double objective. Nationalised Insurance gives the individual greater security than a private Insurance Firm does inasmuch as it pledges the resources of the State as a security for the ultimate payment of his insurance money. It also gives the State the resources necessary for financing its economic planning in the absence of which it would have to resort to borrowing from the money market at a high rate of interest. State Socialism is essential for the rapid industrialisation of India. Private enterprise cannot do it and if it did it would produce those inequalities of wealth which private capitalism has produced in Europe and which should be a warning to Indians. Consolidation of Holdings and Tenancy legislation are worse than useless. They cannot bring about prosperity in agriculture. Neither Consolidation nor Tenancy Legislation can be of any help to the 60 millions of Untouchables who are just landless labourers. Neither Consolidation nor Tenancy Legislation can solve their problem. Only collective farms on the lines set out in the proposal can help them. There is no expropriation of the interests concerned. Consequently there ought to be no objection to the proposal on that account.

The plan has two special features. One is that it proposes State Socialism in important fields of economic life. The second special feature of the plan is that it does not leave the establishment of State Socialism to the will of the Legislature. It establishes State Socialism by the Law of the Constitution and thus makes it unalterable by any act of the Legislature

and the Executive.

Students of Constitutional Law will at once raise a protest. They are sure to ask: Does not the proposal go beyond the scope of the usual type of Fundamental Rights? My answer is that it does not. If it appears to go beyond it is only because the conception of Fundamental Rights on which such criticism is based is a narrow conception. One may go further and say that even from the narrow conception of the scope of the Constitutional Law as comprising no more than Fundamental Rights the proposal can find ample justification. For what is the purpose of prescribing by law the shape and form of the economic structure of society? The purpose is to protect the liberty of the individual from invasion by other individuals which is the object of enacting Fundamental Rights. The connection between individual liberty and the shape and form of the economic structure of society may not be apparent to everyone. None the less the connection between the two is real. It will be apparent if the following considerations are borne in mind.

Political Democracy rests on four premises which may be set out in the following terms:

- (i) The individual is an end in himself.
- (ii) That the individual has certain inalienable rights which must be guaranteed to him by the Constitution.
- (iii) That the individual shall not be required to relinquish any of his constitutional rights as a condition precedent to the receipt of a privilege.
- (iv) That the State shall not delegate powers to private persons to govern others.

Anyone who studies the working of the system of social economy based on private enterprise and pursuit of personal gain will realise how it undermines, if it does not actually violate, the last two premises on which Democracy rests. How many have to relinquish their constitutional rights in order to gain their living? How many have to subject themselves to be governed by private employers?

Ask those who are unemployed whether what are called Fundamental Rights are of any value to them. If a person who is unemployed is offered a choice between a job of some sort, with some sort of wages, with no

fixed hours of labour and with an interdict on joining a union and the exercise of his right to freedom of speech, association, religion, etc., can there be any doubt as to what his choice will be. How can it be otherwise? The fear of starvation, the fear of losing a house, the fear of losing savings if any, the fear of being compelled to take children away from school, the fear of having to be a burden on public charity, the fear of having to be burned or buried at public cost are factors too strong to permit a man to stand out for his Fundamental Rights. The unemployed are thus compelled to relinquish their Fundamental Rights for the sake of securing the privilege to work and to subsist.

What about those who are employed? Constitutional Lawyers assume that the enactment of Fundamental Rights is enough to safeguard their liberty and that nothing more is called for. They argue that where the State refrains from intervention in private affairs—economic and social—the residue is liberty. What is necessary is to make the residue as large as possible and State intervention as small as possible. It is true that where the State refrains from intervention what remains is liberty. But this does not dispels of the matter. One more question remains to be answered. To whom and for whom is this liberty? Obviously this liberty is liberty to the landlords to increase rents, for capitalists to increase hours of work and reduce rate of wages. This must be so. It cannot be otherwise. For in an economic system employing armies of workers, producing goods en masse at regular intervals some one must make rules so that workers will work and the wheels of industry run on. If the State does not do it the private employer will. Life otherwise will become impossible. In other words what is called liberty from the control of the State is another name for the dictatorship of the private employer.

How to prevent such a thing happening? How to protect the unemployed as well as the employed from being cheated out of their Fundamental Rights to life, liberty and pursuit of happiness? The useful remedy adopted by Democratic countries is to limit the power of Government to impose arbitrary restraints in political domain and to invoke the ordinary power of the Legislature to restrain the more powerful individual from imposing arbitrary restraints on the less powerful in the economic field. The inadequacy may the futility of the plan has been well established. The successful invocation by the less powerful of the authority of the Legislature is a doubtful proposition. Having regard to the fact that even under adult suffrage all Legislatures and Governments are controlled by the more powerful an appeal to the legislature to intervene is a very

precarious safeguard against the invasion of the liberty of the less powerful. The plan follows quite a different method. It seeks to limit not only the power of Government to impose arbitrary restraints but also of the more powerful individuals or to be more precise to eliminate the possibility of the more powerful having the power to impose arbitrary restraints on the less powerful by withdrawing from the control he has over the economic life of people. There cannot be slightest doubt that of the two remedies against the invasion by the more powerful of the rights and liberties of the less powerful the one contained in the proposal is undoubtedly the more effective. Considered in the light of these observations the proposal is essentially a proposal for safeguarding the liberty of the individual. No Constitutional Lawyer can therefore object to it on the ground that it goes beyond the usual scope of Constitutional Law.

So far as the plan has been considered purely as a means of safeguarding individual liberty. But there is also another aspect of the plan which is worthy of note. It is an attempt to establish State Socialism without abrogating Parliamentary Democracy and without leaving its establishment to the will of a Parliamentary Democracy. Critics of State Socialism even its friends are bound to ask why make it a part of the Constitutional Law of the land? Why not leave it to the Legislature to bring it into being by the ordinary process of Law. The reason why it cannot be left to the ordinary Law is not difficult to understated. One essential condition for the success of a planned economy is that it must not be liable to suspension or abandonment. It must be permanent. The question is how this permanence can be secured. Obviously it cannot be secured under the form of Government called Parliamentary Democracy under the system of Parliamentary Democracy, the policy of the Legislature and of the Executive is the policy of the majority for the time being. Under the system of Parliamentary Democracy the majority in one election may be in favour of State Socialism in Industry and in Agriculture. At the next election the majority may be against it. The anti-State Socialism, majority will use its Law-making power to undoing the work of the pro-State Socialism majority and the pro-State Socialism majority will use its Law-making power to doing over again what has been undone by their opponents. Those who want the economic structure of society to be modelled on State Socialism must realise that they cannot leave the fulfilment of so fundamental a purpose to the exigencies of ordinary Law which simple majorities—whose political fortunes are never determined by rational causes—have a right to make and unmake. For these reasons

Political Democracy seems to be unsuited for the purpose.

What is the alternative? The alternative is Dictatorship. There is no doubt that Dictatorship can give the permanence which State Socialism requires as an essential condition for its fructification. There is however one fact against Dictatorship which must be faced. Those who believe in individual freedom strongly object to Dictatorship and insists upon Parliamentary Democracy as a proper form of Government for a Free Society. For they feel that freedom of the individual is possible only under Parliamentary Democracy and not under Dictatorship. Consequently those who want freedom are not prepared to give up Parliamentary Democracy as a form of Government. However, much they may be anxious to have State Socialism they will not be ready to exchange Parliamentary Democracy for Dictatorship event though the gain by such an exchange is the achievement of State Socialism. The problem therefore is to have State Socialism without Dictatorship, to have State Socialism with Parliamentary Democracy-The way out seems to be to retain Parliamentary Democracy and to prescribe State Socialism by the Law of the Constitution so that it will be beyond the reach of a Parliamentary majority to suspend, amend or abrogate it. It is only by this that one can achieve the triple object, namely, to establish socialism, retain Parliamentary Democracy and avoid Dictatorship.

The proposal marks a departure from the existing Constitutions whose aim is merely to prescribe the form of the political structure of society leaving the economic structure untouched. The result is that the political structure is completely set at naught by the forces which emerge from the economic structure which is at variance with the political structure. Those who want socialism with Parliamentary Democracy and without Dictatorship should welcome the proposal.

The soul of Democracy is the doctrine of one man, one value. Unfortunately, Democracy has attempted to give effect to this doctrine only so far as the political structure is concerned by adopting the rule of one man, one vote which is supposed to translate into fact the doctrine of one man, one value. It has left the economic structure to take the shape given to it by those who are in a position to mould it. This has happened because Constitutional Lawyers have been dominated by the antiquated conception that all that is necessary for a perfect Constitution for Democracy was to frame a Constitutional Law which would make Government responsible to the people and to prevent tyranny of the

people by the Government. Consequently, almost all Laws of Constitution which relate to countries which are called Democratic stop with Adult Suffrage and Fundamental Right. They have never advanced to the conception that the Constitutional Law of Democracy must go beyond Adult Suffrage and Fundamental Rights. In other words, old time Constitutional Lawyers believed that the scope and function of Constitutional Law was to prescribe the shape and form of the political structure of society. They never realised that it was equally essential to prescribe the shape and form of the economic structure of society, if Democracy is to live up to its principle of one man, one value. Time has come to take a bold step and define both the economic structure as well as the political structure of society by the Law of the Constitution. All countries like India which are latecomers in the field of Constitution-making should not copy the faults of other countries. They should profit by the experience of their predecessors.

ARTICLE II—Section III

Clause I

In the Government of India Acts of 1919 and 1935 the model that was adopted for framing the structure of the Executive in the Provinces and in the Centre was of the British type or what is called by Constitutional Lawyers Parliamentary Executive as opposed to the American type of Executive which in contradistinction of the British type is called Non-Parliamentary Executive. The question is whether the pattern for the Executive adopted in the two Acts should be retained or whether it should be abandoned and if so what model should be adopted in its place. Before giving final opinion on this issue it would be desirable to set out the special features of the British type of the Executive and the consequences that are likely to follow if it was applied to India.

The following may be taken to be the special features of British or the Parliamentary Executive:

- (1) It gives a party which has secured a majority in the Legislature the right to form a Government.
- (2) It gives the majority party the right to exclude from Government persons who do not belong to the Party.
- (3) The Government so formed continues in office only so long as it can command a majority in the Legislature. If it ceases to command a

majority it is bound to resign either in favour of another Government formed out of the existing Legislature or in favour of a new Government formed out of a newly elected Legislature.

As to the consequences that would follow if the British System was applied to India the situation can be summed up in the following proposition :

- (1) The British System of Government by a Cabinet of the majority party rests on the premise that the majority is a political majority. In India the majority is a communal majority. No matter what social and political programme it may have the majority will retain its character of being a communal majority. Nothing can alter this fact. Given this fact it is clear that if the British System was copied it would result in permanently vesting Executive power in a Communal majority.
- (2) The British System of Government imposes no obligation upon the Majority Party to include in its cabinet the representatives of Minority Party. If applied to India the consequence will be obvious. It would make the majority community a governing class and the minority community a subject race. It would mean that a communal majority will be free to run the administration according to its own ideas of what is good for the minorities. Such a state of affairs could not be called democracy. It will have to be called imperialism.

In the light of these consequences it is obvious that the introduction of British type of the Executive will be full of menace to the life, liberty and pursuit of happiness of the minorities in general and of the Untouchables in particular.

The problem of the Untouchables is a formidable one for the Untouchables to face. The Untouchables are surrounded by a vast mass of Hindu population which is hostile to them and which is not ashamed of committing any inequity or atrocity against them. For a redress of these wrongs which are matters of daily occurrence, the Untouchables have to call in the aid of the administration. What is the character and composition of this administration? To be brief, the administration in India, is completely in the hands of the Hindus. It is their monopoly. From top to bottom it is controlled by them. There is no Department which: is not dominated by I them. They dominate the Police, the Magistracy and the Revenue Services, indeed any and every branch of the administration. The next point to

remember is that the Hindus in the administration have the same positive anti-social and inimical attitude to the Untouchables which the Hindus outside the administration have. Their one aim is to discriminate against the Untouchables and to deny and deprive them not only of the benefits of Law, but also of the protection of the Law against tyranny and oppression. The result is that the Untouchables are placed between the Hindu population and the Hindu-ridden administration, the one committing wrong against them and the other protecting the wrongdoer, instead of helping the victims.

Against this background, what can Swaraj mean to the Untouchables? It can only mean one thing, namely, that while today it is only the administration that is in the hands of the Hindus, under Swaraj the Legislature and Executive will also be in the hands of the Hindus, it goes without saying that such a Swaraj would aggravate the sufferings of the Untouchables. For, in addition to an hostile administration, there will be an indifferent Legislature and a callous Executive. The result will be that the administration unbridled in venom and in harshness, uncontrolled by the Legislature and the Executive, may pursue its policy of inequity towards the Untouchables without any curb. To put it differently, under Swaraj the Untouchables will have no way of escape from the destiny of degradation which Hindus and Hinduism have fixed for them.

These are special considerations against the introduction of the British System of Executive which have their origin in the interests of the minorities and the Scheduled Castes. But there is one general consideration which can be urged against the introduction of the British Cabinet System in India. The British Cabinet System has undoubtedly given the British people a very stable system of Government. Question is will it produce a stable Government in India? The chances are very slender. In view of the clashes of castes and creeds there is bound to be a plethora of parties and groups in the Legislature in India. If this happens it is possible, nay certain, that underlie system of Parliamentary executive like the one that prevails in England under which the Executive is bound to resign upon an adverse vote in the legislature, India may suffer from instability of the Executive, For it is the easiest thing for groups to align and realign themselves at frequent intervals and for petty purposes and bring about the downfall of Government. The present solidarity of what are called the Major Parties cannot be expected to continue. Indeed as soon as the Problem of the British in India is solved the cement that holds these parties together will

fail away. Constant overthrow of Government is nothing short of anarchy. The present Constitution has in it Section 93 which provides a remedy against it. But Section 93 would be out of place, in the Constitution of a free India. Some substitute must therefore be found for Section 93.

Taking all these considerations together there is no doubt that the British type of the Executive is entirely unsuited to India.

The form of the Executive proposed in the clause is intended to serve the following purposes:

- (i) To prevent the majority from forming a Government without giving any opportunity to the minorities to have a say in the matter.
- (ii) To prevent the majority from having exclusive control over-administration and thereby make the tyranny of the minority by the majority possible.
- (iii) To prevent the inclusion by the Majority Party in the Executive representatives of the minorities who have no confidence of the minorities.
- (iv) To provide a stable Executive necessary for good and efficient administration.

The clause takes the American form of Executive as a model and adapts it to Indian condition especially to the requirements of minorities. The form of the Executive suggested in the proposal cannot be objected to on the ground that it is against the principle of responsible government. Indians who are used to the English form of Executive forget that this is not the only form of democratic and responsible Government. The American form of Executive is an equally good type of democratic and responsible form of Government. There is also nothing objectionable in the proposal that a person should not be qualified to become, a Minister merely because he is elected to the Legislature. The principle that, a member of the Legislature before he is made a Minister should be chosen by his constituents was fully recognised by the British Constitution for over hundred years. A member of Parliament who was appointed a Minister had to submit himself for election before taking up his appointment. It was only lately given up. There ought therefore to be no objection to it on the ground that the proposals are not compatible with responsible Governments. The actual proposal is an improved edition of the American form of Government, for the reason that under it members

of the Executive can sit in the Legislature and have a right to speak and answer questions.

Clause 2

The proposal cannot be controversial. The best remedy against tyranny and oppression by a majority against the minority is inquiry, publicity and discussion. This is what the safeguard provides for. A similar proposal was also recommended by the Sapru Committee.

Clause 3

Social boycott is always held over the heads of the Untouchables by the Caste Hindus as a sword of Democles. Only the Untouchables know what a terrible weapon it is in the hands of the Hindus. Its effects and forms are well described in the Report made by a Committee appointed by the Government of Bombay in 1928 to investigate the grievances of the Depressed Classes and from which the following extracts are made. It illuminates the situation in a manner so simple that everybody can understand what tyranny the Hindus are able to practise upon the Untouchables. The Committee said:

"Although we have recommended various remedies to secure to the Depressed Classes their rights to all public utilities we fear that there will be difficulties in the way of their exercising them for a long time to come. The first difficulty is the fear of open violence against them by the orthodox classes. It must be noted that the Depressed Classes form a small minority in every village, oppose to which is a great majority of the orthodox who are bent on protecting their interests and dignity from any supposed invasion by the Depressed Classes at any cost. The danger of prosecution by the Police has put a limitation upon the use of violence by the orthodox classes and consequently such cases are rare.

The second difficulty arises from the economic position in which the Depressed Classes are found today. The Depressed Classes have no economic independence in most parts of the Presidency. Some cultivate the lands of the orthodox classes as their tenants at will. Others live on their earnings as farm labourers employed by the orthodox classes and the rest subsist on the food or grain given to them by the orthodox classes in lieu of service rendered to them as village servants. We have heard of numerous instances where the orthodox classes have used their economic power as a weapon against those Depressed Classes in their villages, when

the latter have dared to exercise their rights, and have evicted them from their land, and stopped their employment and discontinued their remuneration as village servants. This boycott is often planned on such an extensive scale as to include the prevention of the Depressed Classes from using the commonly used paths and the stoppage of sale of the necessaries of life by the village Bania. According to the evidence, sometimes small causes suffice for the proclamation of a social boycott against the Depressed Classes. Frequently it follows on the exercise by the Depressed Classes of their right to use the common well, but cases have been by no mean rare where a stringent boycott has been proclaimed simply because a Depressed Class man has put on the sacred thread, has bought a piece of land, has put on good clothes or ornaments, or has carried a marriage procession with a bridegroom on the horse through the public street".

This was said in 1928. Lest it should be regarded as a phase which has now ended I reproduce below a copy of a petition by the Untouchables of the village Kheri Jessore in the Punjab addressed to the Deputy Commissioner of the Rohtak District in February 1947 and a copy of which was sent to me. It reads as follows:

“From

The Scheduled Caste People (Chamars),

Village Kheri Jessore, Tehsil. and District Rohtak.

To

The Deputy Commissioner,

Rohtak District, Rohtak.

Sir,

We, the following Scheduled Caste (Chamars) of the Village Kheri Jessore, beg to invite your kind attention to the hard plight, we are put to, due to the undue pressure and merciless treatment by the Caste Hindu Jats of this village.

It was about four months back that the Jats of the village assembled in the Chopal and told us to work in the fields on a wage in kind of one bundle of crops, containing only about one seer of grains per day per man instead of food at both times and a load of crops, and annas 8 in addition which we used to get before above announcement was made. As it was too

little and insufficient to meet both ends, we refused to go to work. At this they were enraged and declared a Social Boy-cotton us. They made a rule that our cattle would not be allowed to graze in the jungle unless we would agree to pay a tax not leviable under Government for the animals, which they call as "Poochhi" They even do not allow our cattle to drink water in the village pool and have prevented the sweepers from cleaning the streets where we live so that heaps of dust and dirt are lying there which may cause some disease if left unattended to. We are forced to lead a shameful life and they are always ready to beat us and to tear down our honour by behaving indecently towards our wives, sisters and daughters. We are experiencing a lot of trouble of the worst type. While going to the school, the children were even beaten severely and in a merciless manner.

We submitted an application detailing the above facts to yourself but we are sorry that no action has been taken as yet.

It is also for your kind consideration that the Inspector of Police and Tehsildar of Rohtak, whom we approached in this connection, made & careless investigation and in our opinion, no attention was paid to redress the difficulties of the poor and innocent persons.

We, therefore, request your good self to consider over the matter and make some arrangement to stop the merciless treatment and threats which the Jats give us in different ways. We have no other approach except to knock at your kind door and hope your honour will take immediate steps to enable us to lead an honourable and peaceful life which is humanity's birth-right.

We beg to remain, Sir,

Your most obedient servants, Scheduled Caste
People (Chamars), of Village Kheri Jessore,
Tehsil and District Rohtak.

Thumb Impressions.

Copy forwarded to the Hon'ble Dr. B. R. Ambedkar, Western Court,
New Delhi.

Received on 1st February 1947."

This shows that what was true in 1928 is true even today. What is true of Bombay is true of the whole of India. For evidence of the general use of

boycott by the Hindus against the Untouchables one has only to refer to the events that occurred all over India in the last elections to the Provincial Legislatures. Only when boycott is made criminal will the Untouchables be free from being the slaves of the Hindus.

The weapon of boycott is nowadays used against other communities besides the Scheduled Castes. It is therefore in the interests of all minor communities to have this protection.

The provisions relating to boycott are taken bodily from the Burma Anti-Boycott Act, 1922.

Clause 4

Such a provision already exists in Section 150 of the Government of India Act, 1935.

ARTICLE II-Section IV

PART I—clause I

There is nothing new in this clause. The right to representation in the Legislature is conceded by the Poona Pact. The only points that require to be reconsidered relate to (1) Quantum of Representation, (2) Weightage and (3) The System of Electorates.

(1) Quantum

The quantum of representation allowed to the Scheduled Castes by the Poona Pact is set out in Clause I of the Pact. The proportion set out in the Pact was fixed out of the balance of seats which remained after (i) the share of the other communities had been taken out ; (ii) after weightage to other communities had been allotted, and (iii) after seats had been allocated to special interests. This allotment of seats to the Scheduled Castes has resulted in great injustice. The loss due to seats taken out as weightage and seats given to special interests ought not to have been thrown upon the Scheduled Castes. The allotment of those seats had already been made by the Communal Award long before the Poona Pact. It was therefore not possible then to rectify this injustice.

(2) Weightage

There is another injustice from which the Scheduled Castes have been suffering. It relates to their right to a share in weightage.

As one can see the right to weightage has become a matter of double controversy. One controversy is between the majority and the minorities, the other is a matter of controversy between the different minorities.

The first controversy relates to the principle of weightage. The majority insists that the minority has no right to representation in excess of the ratio of its population to the total population. Why this rule is insisted upon by the majority it is difficult to understand. Is it because the majority wants to establish its own claim to population ratio so that it may always remain as a majority and act as a majority? Or is it because of the fact that a minority no matter how much weightage was given to it must remain;— a minority and cannot alter the fact that the majority will always be able to impose its will upon it. The first ground leads to a complete negation of the basic conception of majority rule which if rightly understood means nothing more than a decision of the majority to which the minority has reconciled itself. This cannot be the intention of the majority. One must put a more charitable construction and assume that the argument on which the contention of the majority rests is the second and not the first. That a minority even with weightage will remain a minority has to be accepted in view of the insistence of a Communal Majority to remain a majority and to claim the privileges of a political majority which it is not. But surely there is a difference between a defeat which is a complete rout and a defeat which is almost victory though not a victory. Cricketers know what difference there is between the defeat of a team by a few runs, a defeat by a few wickets and a defeat by one whole innings. The defeat by one whole innings is a complete frustration which a defeat by a few runs is not. Such a frustration when it comes about in the political life of a minority depresses and demoralises and crushes the spirit of the minority. This must be avoided at any price. Looked at from this point of view there is no doubt that the rule of population—ratio—representation insisted upon by the majority is wrong. What a minority needs is not more representation but effective representation.

And what is effective representation? Obviously the effectiveness of representation depends upon its being large enough to give the minority the sense of not being entirely overwhelmed by the majority. Representation according to population to a minority or to the minorities combined maybe effective by reason of the fact that the population of a minority where there is only one or of the combined minorities where there are many is large enough to secure effective minority representation. But there may be cases where the population of a minority or of the

minorities combined is too small to secure such effective representation if the population ratio of a minority is taken as an inflexible standard to determine its quantum of representation. To insist upon such a standard is to make mockery of the protection to the minority which is the purpose behind the right to representation which is accepted as the legitimate claim of a minority. In such cases weightage which is another name for deduction from the quantum of representation which is due to the majority on the basis of its population becomes essential and the majority if it wishes to be fair and honest must concede it. There can therefore be no quarrel over the principle of weightage. On this footing the controversy becomes restricted to the question, how is the magnitude of weightage to be determined? This obviously is a question of adjustment and not of principle.

There can therefore be no manner of objection to the principle of weightage. The demand for weightage is however a general demand of all the minorities and the Scheduled Castes must join them in it where the majority is too big. What is however wrong with the existing weightage is unequal distribution among the various minorities. At present, some minorities have secured a lion's share and some like the Untouchables have none. This wrong must be rectified by a distribution of the weightage on some intelligible principles.

(3) Electorates

1. The method of election to the seats allotted to the Scheduled Castes is set out in clauses (2) to (4) of the Poona Pact. It provides for two elections : (1) Primary election and (2) Final election. The Primary election is by a separate electorate of the Scheduled Castes. It is only a qualifying election and determines who is entitled to stand in the Final election on behalf of the Scheduled Castes for the seats reserved to them. The Final election is by a joint electorate in which both caste Hindus and the Scheduled Castes can vote and the final result is determined by their joint vote.
2. Clause 5 of the Poona Pact has limited the system of Primary election to ten years which means that any election taking place after 1947 will be by a system of joint electorates and reserved seats pure and simple.
3. Even if the Hindus agreed to extend the system of double election for a further period it will not satisfy the Scheduled Castes. There are two objections to the retention of the Primary election. Firstly, it does not

help the Scheduled Castes to elect a man who is their best choice. As will be seen from Appendix III, the Scheduled Caste candidate who tops the poll in the Primary election fails to succeed in the Final election and the Scheduled Caste candidate who fails in the Primary election tops the poll in the Final election. Secondly, the Primary election is for the most part a fiction and not a fact. In the last election, out of 151 seats reserved for the Scheduled Castes there were Primary elections only in 43. This is because it is impossible for the Scheduled Castes to bear the expenses of two elections—Primary and Final. To retain such a system is worse than useless.

4. Things will be much worse under the system of joint electorates and reserved seats which will hereafter become operative under the terms of the Poona Pact. This is no mere speculation. The last election has conclusively proved that the Scheduled Castes can be completely disfranchised in a joint electorate. As will be seen from the figures given in Appendix III, the Scheduled Caste candidates have not only been elected by Hindu votes when the intention was that they should be elected by Scheduled Caste votes but what is more the Hindus have elected those Scheduled Caste candidates who had failed in the Primary election. This is a complete disfranchisement of the Scheduled Castes. The main reason is to be found in the enormous disparity between the voting strength of the Scheduled Castes and the caste Hindus in most of the constituencies as may be seen from figures given in Appendix III. As the Simon Commission has observed, the device of the reserved seats ceases to be workable where the protected community constitutes an exceedingly small fraction of any manageable constituency. This is exactly the case of the Scheduled Castes. This disparity cannot be ignored. It will remain even under adult suffrage. That being the case, a foolproof and a knave-proof method must be found to ensure real representation to the Scheduled Castes. Such a method must involve the abolition of— (i) the Primary election as a needless and heavy encumbrance; and (ii) the substitution of separate electorates.
5. One of the issues which has embittered the relations between the Hindus and the Scheduled Castes in the political field is the issue of electorate. The Scheduled Castes are insisting upon separate electorates. The Hindus are equally insistent on opposing the demand. To arrive at a settlement on this issue—without which there can be no peace and amity between the Hindus and the Scheduled Castes—it is

necessary to determine who is right and who is wrong and whether the opposition is based on rational grounds or is based on mere prejudice.

6. The grounds which are generally urged against the demand of the Scheduled Castes for separate electorates are:

- (i) that the Scheduled Castes are not a minority;
- (ii) that the Scheduled Castes are Hindus and therefore they cannot have separate electorates;
- (iii) that separate electorates will perpetuate untouchability;
- (iv) that separate electorates are anti-national; and
- (v) that separate electorates enables British Imperialism to influence the communities having separate electorates to act against the interests of the country.

7. Are these arguments valid?

- (i) To say that the Scheduled Castes are not a minority is to misunderstand the meaning of the word 'minority'. Separation in religion is not the only test of a minority. Nor is it a good and efficient test. Social discrimination constitutes the real test for determining whether a social group is or is not a minority. Even Mr. Gandhi thought it logical and practical to adopt this test in preference to that of religious separation. Following this test, Mr. Gandhi in an editorial under the heading. * 'The Fiction of Majority' in the Harijan dated 21st October 1939 has given his opinion that the Scheduled Castes are the only real minority in India.
- (ii) To argue that the Scheduled Castes are Hindus and therefore cannot demand separate electorates is to put the same argument in a different form. To make religious affiliation the determining factor for constitutional safeguards is to overlook the fact that the religious affiliation may be accompanied by an intense degree of social separation and discrimination. The belief that separate electorates go with separation in religion arises from the fact that those minorities who have been given separate electorates happen to be religious minorities. This, however, is not correct. Muslims are given separate electorates not because they are different from Hindus in point of religion. They are given separate electorates because—and this is the fundamental fact—

the social relations between the Hindus and the Musalmans are marked by social discrimination. To put the point in a somewhat different manner, the nature of the electorates is determined not by reference to religion but by reference to social considerations. That it is social considerations and not religious affiliation or disaffiliation which is accepted as the basis of determining the nature of the electorates is best illustrated by the arrangements made under the Government of India Act (1935) for the Christian community in India. The Christian community is divided into three sections—Europeans, Anglo-Indians and Indian Christians. In spite of the fact that they all belong to the same religion, each section has a separate electorate. This shows that what is decisive is not religious affiliation but social separation.

- (iii) To urge that separate electorates prevent solidarity between the Untouchables and the Caste Hindus is the result of confused thinking. Elections take place once in five years. Assuming there were joint electorates, it is difficult to understand how social solidarity between the Hindus and the Untouchables can be promoted by their devoting one day for voting together when out of the rest of the five years they are leading severally separate lives? Similarly, assuming that there were separate electorates it is difficult to understand how one day devoted to separate voting in the course of five years can make for greater separation than what already exist? Or contrariwise, how can one day in five years devoted to separate voting prevent those who wish to work for their union from carrying out their purposes. To make it concrete, how can separate electorate for the Untouchables prevent inter-marriage or inter-dining being introduced between them and the Hindus? It is therefore futile to say that separate electorates for the Untouchables will perpetuate separation between them and the Hindus.
- (iv) To insist that separate electorates create anti-national spirit is contrary to experience. The Sikh have separate electorates. But no one can say that the Sikhs are anti-national. The Muslims have had separate electorates right from 1909. Mr. Jinnah had been elected by separate electorates. Yet, Mr. Jinnah was the apostle of Indian Nationalism up to 1935. The Indian Christians have separate electorates. Nonetheless a good lot of them have shown their partiality to the Congress if they have not been actually returned on the Congress ticket. Obviously, nationalism and anti-nationalism have nothing to do with the electoral system. They are the result of extra electoral forces.

- (v) This argument has no force. It is nothing but escapism. Be that as it may, with free India any objection to separate electorates on such a ground must vanish.
8. The reason why the arguments advanced by the opponents of separate electorates do not stand the scrutiny of logic and experience is due entirely to the fact that their approach to the subject is fundamentally wrong. It is wrong in two respects :
- (i) They fail to realise that the system of electorates has nothing to do with the religious nexus or communal nexus. It is nothing but a mechanism to enable a minority to return its true representative to the Legislature. Being a mechanism for the protection of a minority it follows that whether the electorate should be joint or separate must be left to be determined by the minority.
 - (ii) They fail to make any distinction between the demand for separate electorates by a majority community and a similar demand made by a minority community. A majority community has no right to demand separate electorates. The reason is simple. A right by a majority community to demand separate electorates is tantamount to a right to establish the Government of the majority community over the minority community without the consent of the minority. This is contrary to the well-established doctrine of democracy that government must be with the consent of the governed. No such evil consequence follows from the opposite principle namely that a minority community is entitled to determine the nature of the electorates suited to its interests, because there is no possibility of the minority being placed in a position to govern the majority.
9. A correct attitude towards the whole question rests on the following axioms:
- (i) The system of electorates being a device for the protection of the minority, the issue whether the electoral system should be the joint electorate or separate electorate must be left to the wishes of the minority. If it is large enough to influence the majority it will choose joint electorates. If it is too small for the purpose, it will prefer separate electorates for fear of being submerged.
 - (ii) The majority, being in a position to rule can have no voice in the determination of the system of electorates. If the minority wants

joint electorates, the majority must submit itself to joint electorates. If the minority decides to have separate electorates for itself the majority cannot refuse to grant them. In other words, the majority must look to the decision of the minority and abide by it.

PART I—clause 2

This demand may appear to be outside the Poona Pact in as much as the Poona Pact made no provision for it. This would not be correct. As a matter of fact, if no provision was made, it was because there was no need to make such a provision. This was due to two reasons : Firstly, it was due to the fact that at the time when the Poona Pact was made no community was guaranteed by Law a specific quantum of representation in Executive, Secondly, the representation of the communities in the Executive was left to a convention which the Governor by his instrument of instructions was required to see observed. Experience has shown that the quantum of representation of the Scheduled Castes in the Executive should now be fixed.

PART I—clause 3

This is not a new demand. Clause 8 of the Poona Pact guarantees to the Scheduled Castes fair representation in Public Services. It does not, however, define the quantum of representation. The demand has been admitted by the Government of India as legitimate and even the quantum of representation has been defined. All that remains is to give it a statutory basis.

PART II—clause I

This is not a new demand. Clause 9 of Poona Pact guarantees that an adequate sum shall be earmarked for the education of the Scheduled Castes. It does not define the quantum. All that the demand does is to define the quantum of liability the State should take. In this connection reference may be made to Section 83 of the Government of India Act, 1935, which relates to the education of the Anglo-Indians and Europeans and to the grants made to the Aligarh and Benaras Hindu Universities by the Central Government.

PART II—clause 2

This a new demand but is justified by circumstances. At present, the Hindus live in the village and the Untouchables live in the Ghettoes. The

object is to free the Untouchables from the thralldom of the Hindus. So long as the present arrangement continues it is impossible for the Untouchables either to free themselves from the yoke of the Hindus or to get rid of their Untouchability. It is the close knit association of the Untouchables with the Hindus living in the same villages which marks them out as Untouchables and which enables the Hindus to identify them as being Untouchables. India is admittedly a land of villages and so long as the village system provides an easy method of marking out and identifying the Untouchables, the Untouchable has no escape from Untouchability. It is the system of the Village plus the Ghetto which perpetuates Untouchability and the Untouchables therefore demand that the nexus should be broken and the Untouchables who are as a matter of fact socially separate should be made separate geographically and territorially also, and be settled into separate villages exclusively of Untouchables in which the distinction of the high and the low and of Touchable and Untouchable will find no place.

The second reason for demanding separate settlements arises out of the economic position of the Untouchables in the villages. That their condition is most pitiable no one will deny. They are a body of landless labourers who are entirely dependent upon such employment as the Hindus may choose to give them and on such wages as the Hindus may find it profitable to pay. In the villages in which they live they cannot engage in any trade or occupation, for owing to Untouchability no Hindu will deal with them. It is therefore obvious that there is no way of earning a living which is open to the Untouchables so long as they live in a Ghetto as a dependent part of the Hindu village.

This economic dependence has also other consequences besides the condition of poverty and degradation which proceeds from it. The Hindu has a Code of life, which is part of his religion. This Code of life gives him many privileges and heaps upon the Untouchable many indignities which are incompatible with the dignity and sanctity of human life. The Untouchables all over India are fighting against the indignities and injustices which the Hindus in the name of their religion have heaped upon them. A perpetual war is going on every day in every village between the Hindus and the Untouchables. It does not see the light of the day. The Hindu Press is not prepared to give it publicity lest it should injure the cause of their freedom in the eyes of the world. The existence of a grim struggle between the Touchables and the Untouchables is however a fact. Under the village system the Untouchables has found himself greatly

handicapped in his struggle for free and honourable life. It is a contest between the Hindus who are economically and socially strong and the Untouchables who are economically poor and numerically small. That the Hindus most often succeed in suppressing the Untouchables is due to many causes. The Hindus have the Police and the Magistracy on their side. In a quarrel between the Untouchables and the Hindus the Untouchables will never get protection from the Police and justice from the Magistrate. The Police and the Magistracy naturally love their class more than their duty. But the chief weapon in the armoury of the Hindus is economic power which they possess over the poor Untouchables living in the village. The proposal may be dubbed escapism. But the only alternative is perpetual slavery.

PART III—clause 1

No country which has the problem of Communal majority and Communal minority is without some kind of an arrangement whereby they agree to share political power. South Africa has such an understanding. So has Canada. The arrangement for sharing political power between the English and the French in Canada is carried to the minutes office. In referring to this fact Mr. Porritt in his book on the *Evolution of the Dominion of Canada* says:

“Conditions at Ottawa, partly due to race and language, and partly to long-prevailing ideas as to the distribution of all government patronage, have militated against the Westminster precedent of continuing a member in the chair for two or three parliaments, regardless of the fortunes of political parties at general elections. There is a new speaker at Ottawa for each new House of Commons; and it has long been a custom that when one political party continues in power for two or three parliaments, if the speaker in one parliament is of British extraction the next one shall be a French-Canadian.

"It is a rule also that the offices of speaker and of deputy speaker can at no time be held by men of the same race. If the speaker is a French-Canadian, the deputy speaker, who is also Chairman of committees, must be an English-speaking Canadian; for the rule of the House is that the member elected to serve as deputy speaker shall be required to possess the full and practical knowledge of the language which is not that of the speaker for the time being.

The clerkship and the assistant clerkship of the House, and the offices

of sergeant-at-arms and deputy sergeant-at-arms—all appointive as distinct from elective offices—are, by usage, also similarly divided between the two races.

Nearly all the offices, important and unimportant, connected with parliament, with the Senate as well as with the House, are distributed in accordance with these rules or usages. A roll call of the staffs of the two Houses, including even the boys in knicker-bockers who act as pages, would contain the names of almost as many French-Canadians as Canadians of British ancestry.

The rules and usages by virtue of which this distribution of offices is made are older than Confederation. They date back to the early years of the United Provinces, when Quebec and Ontario elected exactly the same number of members to the Legislature, and when these were the only provinces in the union.

Quebec today elects only 65 of the 234 members of the House of Commons. Its population is not one-fourth of the population of the Dominion. Its contribution to Dominion revenues does not exceed one-sixth. But an equal division of the offices of the House of Commons is regarded by Quebec as necessary to the preservation of its rights and privileges; and so long as each political party, when it is in power, is dependent on support from French-Canada, it will be nearly as difficult to ignore the claim of Quebec to these parliamentary honours and offices as it would be to repeal the clause in the British North America Act that safeguards the separate schools system."

Unfortunately for the minorities in India, Indian Nationalism has developed a new doctrine which may be called the Divine Right of the Majority to rule the minorities according to the wishes of the majority. Any claim for the sharing of power by the minority is called communalism while the monopolizing of the whole power by the majority is called Nationalism. Guided by such a political philosophy the majority is not prepared to allow the minorities to share political power nor is it willing «to respect any convention made in that behalf as is evident from their repudiation of the obligation (to include representatives of the minorities in the cabinet) contained in the Instrument of Instructions issued to the Governors in the Government of India Act of 1935. Under these circumstances there is no way left but to have the rights of the Scheduled Castes embodied in the Constitution.

PART III—clause 2

This is not a new demand. It replaces Clause 6 of the Poona Pact which provides that the system of representation for the Scheduled Castes by reserved seats shall continue until determined by mutual consent between the communities concerned in the settlement. Since there is no safe method of ascertaining the will of the Scheduled Castes as to how to amend and alter the safeguards provided for them it is necessary to formulate a plan which will take the place of Clause 6 of the Pact. Provisions having similar objectives to those contained in the proposal exist in the Constitution of Australia, America and South Africa.

In dealing with a matter of this sort two considerations have to be borne in mind. One is that it is not desirable to rule out the possibility of a change in the safeguards being made in the future by the parties concerned. On the other hand it is by no means desirable to incessant struggle over their revision. If the new Union and State Legislatures are to address themselves successfully to their responsibilities set out in the preamble it is desirable that they should not be distracted by the acute contentions between religions and classes which questions of change in the safeguards are bound to raise. Hence a period of twenty-five years has been laid down before any change could be considered.

PART IV

The object of this provision is to see that whatever safeguards are provided for the Scheduled Castes in British India are also provided for the Scheduled Castes in the Indian States. The provision lays down that an Indian State seeking admission to the Union shall have to satisfy that its Constitution contains these safeguards.

PART V—interpretation

Whether the Scheduled Castes are a minority or not has become a matter of controversy. The purpose of First Provision to set this controversy at rest. The Scheduled Castes are in a worst position as compared to any other minority in India. As such they required and deserve much more protection than any other minority does. The least one can do is to treat them as a minority.

The purpose of Second Provision is to remove the provincial bar. There

is no reason why a person who belongs to Scheduled Castes in one Province should lose the benefit of political privileges given by the Constitution merely because he happens to change his domicile.

Appendix II

TEXT OF THE POONA PACT

- (1) There shall be seats reserved for the Depressed Classes out of the general electorates seats in the Provincial Legislatures as follows :

Madras		30
Bombay with Sind		15
Punjab		8
Bihar and Orissa		18
Central Provinces		20
Assam		7
Bengal		30
United Provinces		20
Total		148

These figures are based on total strength of the Provincial councils announced in the Prime Minister's decision.

- (2) Election to these seats shall be by joint electorates, subject however, to the following procedure :

All the members of the Depressed Classes registered in the general electoral roll in a constituency will form an electoral college, which will elect a panel of four candidates belonging to the Depressed Classes for each of such reserved seats, by the method of the single vote; the four getting the highest number of votes in such Primary

- election, shall be candidates for election by the general electorate.
- (3) Representation of the Depressed Classes in the Central Legislature shall likewise be on the principle of joint electorates and reserved seats by the method of Primary election in the manner provided for in clause (2) above, for their representation in the Provincial Legislatures.
 - (4) In the Central Legislature, eighteen percent of seats allotted to the general electorate for British India in the said Legislature shall be reserved for the Depressed Classes.
 - (5) The system of Primary election to a panel of Candidates for election to the Central and Provincial Legislature, as herein before mentioned, shall come to an end after the first ten years, unless terminated sooner by mutual agreement under the provision of clause (6) below.
 - (6) The system of representation of the Depressed Classes by reserved seats in the Provincial and Central Legislatures as provided for in clauses (1) and (4) shall continue until determined by mutual agreement between the communities concerned in the settlement.
 - (7) Franchise for the Central and Provincial Legislatures for the Depressed Classes shall be as indicated in the Lothian Committee Report.
 - (8) There shall be no disabilities attaching to anyone on the ground of his being a member of the Depressed Class in regard to any elections to local bodies or appointment to the Public Services. Every endeavour shall be made to secure fair representation of the Depressed Classes in these respects, subject to such educational qualifications as may be laid down for appointment to the Public Service.
 - (9) In every Province out of the educational grant an adequate sum shall be earmarked for providing educational facilities to the Members of the Depressed Classes.

Appendix III

DISADVANTAGES OF THE POONA PACT

1. 1. The Poona Pact was intended to devise a method whereby the Scheduled Castes would be able to return to the Legislature representatives of their choice. This intention has been completely nullified as will be seen from the following series of statistics. The

series have been constructed from the results of the last elections which took place in February 1946.

2. 2. The statistical data is arranged in four series of tables :

First series show the votes secured by the successful Caste Hindu candidate and the successful Scheduled Caste candidate in the Final election.

Second series show in how many cases did reliance on reservation clause become necessary for the success of the Scheduled Caste candidate in the Final election and in how many he succeeded' without the benefit of reservation.

Third series show the relative voting strength of the Caste Hindus and the Scheduled Castes in constituencies in which seats are reserved for the Scheduled Castes.

Fourth series show the position in the Primary election of the Scheduled Caste Candidates who became successful in the Final elections.

3. The conclusions that follow from these figures will not escape those who care to examine them. The figures prove the following propositions :

(i) That every of the Scheduled Caste candidate who became successful in the Final election owed his success to the votes of the caste Hindus and not of the Scheduled Castes. A great many of them came to the top of the poll and secured votes equal to and in some cases larger than those obtained by Caste Hindu candidates (See Tables in the First Series). Secondly, in very few constituencies was the successful Scheduled Caste candidate required to rely on reservation (See Tables in the Second Series). This is a most unexpected phenomenon. Anyone who compares the voting strength of the Scheduled Castes with the. voting strength of the Caste Hindus in the different constituencies (See Tables in the Third Series) would realise that the voting strength of the Scheduled Castes is so small that such a phenomenon could never have occurred if only the Scheduled Castes voters had voted for the Scheduled Caste candidates. That they have occurred is proof positive that the success of the Scheduled Caste candidate in the Final election is conditioned by the Caste Hindu votes.

(ii) That comparing the results of the Primary election with those of

the Final election (See Tables in the Fourth series) the Scheduled Caste candidate who was elected in the Final election was one who had failed in the Primary election (if the Primary election be treated as a Final election and the constituency be treated as a single-member constituency).

- (iii) Owing to the extreme disparity between the voting strength of the Hindus and the Scheduled Castes—disparity which will not disappear even under adult suffrage—a system of joint electorates will not succeed in giving the Scheduled Castes the chances of returning their true representatives.
- (iv) The Poona Pact has completely disfranchised the Scheduled Castes inasmuch as candidates whom they rejected in the Primary elections—which is a true index of their will—have been returned in the Final election by the votes of the Caste Hindus.

The Poona Pact is thus fought with mischief. It was accepted because of the coercive fast of Mr. Gandhi and because of the assurance given at the time that the Hindus will not interfere in the ejection of the Scheduled Castes.

FIRST SERIES

Votes obtained by the successful Scheduled Caste candidates as compared with the votes secured by the successful Caste Hindu candidates.

Part I—Madras

Part II—Bengal

Part III—Bombay

Part IV—U.P.

Part V—C.P.

Part VI—Assam

Part VII—Orissa

Appendix IV

STATISTICS OF POPULATION

The population of the Scheduled Caste in 1941 is estimated at 48,793,180. Can this figure be accepted as accurate?

In coming to a definite conclusion on this issue the following points must be borne in mind :—

- (i) The population of the Scheduled Castes in 1941 as compared with their population in 1932 shows a decline.
- (ii) The population of all other communities during the same period shows an increase of 15 per cent.

The question is whether there is any special reason why the population of the Scheduled Castes should have declined.

Was the basis for computation of the population of the Scheduled Castes in 1931 the same as in 1941? The answer is in the affirmative. The figures given for 1931 are the result of recasting of the Census of 1931 in the light of the definition of "Untouchables" given by the Lothian Committee. The same basis was adopted in 1941. It cannot therefore be said that the decline in the population of the Scheduled Castes in 1941 was due to an overestimate made in 1931.

It is true that the Census for 1941 does not give any figures for the Scheduled Castes for Ajmer-Merwara and Gwalior State. But even adding to the total for 1941 the figures for these two areas as they stood in 1931 the population comes to only 49,538,145 which still shows a comparative decline.

The want of any proper explanation for the decline of the Scheduled Caste population and an increase in the population of all other communities during the same decade only reinforces the impression which every honest student of Indian census has formed namely that the Census of India has over a number of decades ceased to be an operation in demography. It has become a political affair. Every community seems to be attempting to artificially augment its numbers at the cost of some other community for the sake of capturing greater and greater degree of political power in its own hands. The Scheduled Castes seem to have been made a common victim for the satisfaction of the combined greed of the other communities who through their propagandists or enumerators are able to

control the operation and the results of the Census.

In the light of these circumstances it is fair to demand that an accurate figure for the population of the Scheduler Castes would be the Census figure as corrected by the inclusion of the population for Ajmer-Merwara and Gwalior State plus an increase of 15 per cent to give them the benefit of the general rise in the population.

THE CONSTITUTION OF BRITISH INDIA

1. Introductory : Limits of the Subject.

The Constitution of British India is contained in an enactment called the Government of India Act, 1919. A student of the Constitution of India therefore has not to search for the constitution as the student of the English Constitution has to do. His position is very much like the position of the student of the American Constitution, whose problem is nothing more than to understand and to interpret the statute embodying the Constitution of the United States. From this point of view it would seem unnecessary to raise the question what is Constitutional Law and what are the questions that usually fall within its scope. Secondly assuming that it is necessary to define the limits of the subject of Constitutional Law the question is whether such an inquiry should form a preliminary to the discussion of the subject or whether it should form a concluding part of it. The late Professor Maitland in his Study of the English Constitutional History adopted the latter course. And there is a great deal to be said in favour of such a course. There are reasons however why such a course would not be suitable to the study of the Indian Constitution.

The reasons why the question what is Constitutional Law must be raised at the outset, so that we could be clear as to the limits of our subject and the topics that must fall within it will be obvious from one or two illustrations. The Government of India Act does not say anything about the Writ of Habeas Corpus or the Writ of Mandamus or Certiorari. It does not speak of Martial Law or Administrative Law. It does not speak of the right of Paramountcy, what the Government of India undoubtedly exercises in respect of their dealings with the Indian States. Is it necessary to study these questions or is it not? Are they proper subject to the study of the Indian Constitutional Law or are they not? Judging by the tests of how these subjects have been dealt with in other countries by authorities who have studied the Constitutional Law of these countries there can be no doubt that by common consent all these matters are treated as pertaining to the domain of constitutional law. If therefore these subjects which do not find a place in the Government of India Act but which all the same must form a part of the study of Constitutional Law, the question of the definition of the

subject becomes important.

To the question, what is Constitutional Law, different people have given different answers. One may take Austin and Maitland as types representing two schools of thought. Austin subdivides Public Law or what he calls the Law of Political Conditions into two classes. Constitutional Law and Administrative Law. According to him Constitutional Law determines the persons or the classes of persons who shall bear the sovereign power in the State. He defines the mode in which these persons shall share those powers. Austin's definition of Constitutional Law as is obvious includes only those rules which determine the constitution and composition of the sovereign body. He excludes from the Constitutional Law all rules which deal with the exercise of the sovereignty by the sovereign body. While Austin makes the definition of the Constitutional Law depend upon the logic of his principles, Maitland makes the limits of Constitutional Law a matter of conscience. To Maitland, Constitutional Law includes not only the rules which determine the rules of the composition of the sovereign body, but it would also include the Privy Council, the Departments of the State, the Secretaries of the State, Judges, Justices of the Peace, Poor Law Guardians, Boards of Health and Policemen. These views represent the two extremes and if Austin's is too narrow, Maitland's undoubtedly is too wide.

There is however a middle position which can be founded upon the views of Prof. Holland—expressed in his Jurisprudence. A right is a capacity residing in one person of controlling, with the assent and assistance of the State, the actions of another. Rights which may be conferred by one citizen against another constitute the subject matter of Private Law. The rights which the State claims to itself against the subjects and the rights which it permits against itself constitute Public Law.

Constitutional Law is undoubtedly part of Public Law and as far as it is so it must discuss the rights of the State against the subjects and the rights of the subjects against the State. But Constitutional Law include more than this. It must include the study of the organisation of the state for the State is an artificial person which claims the right to punish, to possess property, to make contracts and to regulate its rights and duties as between itself and the subjects and also as between the subjects themselves. It is necessary to inquire how this artificial person is constituted. The study of the Constitutional Law therefore must include the study of three matters : (1) The organisation of the State, (2) The

rights of the State against the subjects and (3) The rights of the subjects against the State. It is this view of the limits and scope of the Constitutional Law that I propose to follow in these lectures on the Government of India Act and it is the view adopted by Prof. Anson in his Study of the English Constitution.

There is another question which is bound to crop up and which has better be disposed of at the outset. Is the treatment of the subject to be historical or to be descriptive? Some history cannot be avoided in the study of the Government of India Act. The Government of India Act says that all remedies that were available against the East India Company shall continue to be available against the Secretary of State. The Government of India Act also says that His Majesty may establish High Courts by Letters Patent. The Letters Patent say that the High Court shall exercise all the powers of the Supreme Court which they superseded. Many other Sections of similar character in the Government of India Act could be referred to. But the two mentioned are sufficient to illustrate that history cannot be avoided. For, in dealing with the Constitution of India, to understand the remedies available against the Secretary of State one must inquire what were the remedies open to a subject against the East India Company. Nor can one understand the powers of the High Court until one enquires what were the powers with which the Supreme Court was invested. Although some history would be necessary, there can be no justification in a study of the Constitutional Law as it operates today to study every part of it historically. All past is of no moment to the present. Only the part of the present need be adverted to, and that is what I propose to do when any particular question requires historical treatment for its proper understanding.

[We have not received any other essay on this subject—ed.]

BIBLIOGRAPHY

PREFACE

For a long time to come students will be saved the conventional humiliation of making an apology for presenting a study of Indian Finance or Economics. But it will, on the other hand, be necessary, I

fear, for an equally long period, for them to tender an apology for the shortcomings of their respective investigations. Even when the treatment of a subject is analytical, a good analytical study often requires an historical setting. Unfortunately no spade-work has been done in the field of Indian Finance. Consequently the difficulties which beset a pioneer in that field are immense. There is occasionally the difficulty owing to the antecedents of some point not having been quite completely elucidated. Often there is the apprehension of some error having crept in, and, when there is hardly anyone to save the student from it, there is nothing but to smart under a sense of irritating affliction. Not very seldom does it happen that a pioneer student is jubilant over his find of material bearing on his subject, but it is not without a long and wearisome search that he is able to sift the grain from the chaff. Again, sources sometimes prove false guides, so that a perusal of them only ends in a considerable waste of time and energy.

Precisely these have been the difficulties besetting the present task. There are no books to prepare the student for his work and hardly any savant to lighten his labour or set him on the proper track. Notwithstanding such odds, an attempt is made to make this study thorough without being too detailed. This has rendered the undertaking quite a laborious one. But I do not wish to speak of the labour that is involved, nor do I wish to astonish the reader with what might appear to be a formidable list of books and documents consulted in the preparation of this monograph. What I am anxious to speak of are its shortcomings. There are indeed many of them which a well-versed critic may spot out. It is my hope that they are not of such a character as seriously to impair the value which this monograph may otherwise be said to possess. My regrets are with regard to only a few of them. I have specified a date as to when Local Decentralisation of Finance commenced in India; but I feel that that date may not be the earliest and that there may be a date earlier than that one given by me. I wish I had settled that point finally. But that would have been a task analogous to that of searching for a needle in a haystack, and it is doubtful whether the value of that result would have been commensurate with that labour. Besides, although I am not confident of my date, my feeling is that later researches may after all confirm my statement. Another matter which I have not dealt

with, but which I would have liked to have dealt with, was the interrelation of Provincial and Local Finance. This I had originally planned to do, but left pursuing it because I found that the chief subject I was dealing with, namely, the Provincial Decentralisation of Imperial Finance, began to be overlaid by facts and arguments not germane to that topic. These shortcomings will, however, be removed by a supplementary monograph on Local Finance in British India, which is well under way and which I hope to publish before long. Occasional repetitions may also be pointed out as a defect of this monograph. That they should be avoided is all very well. But where economy in the words of explanation are likely to obscure, repetitions such as are I unavoidable must be justified, for the interests of clarification should always outweigh the tedium they involve.

I cannot conclude this preface without thanking Mr. Robinson, the Financial Secretary at the India Office, for many valuable suggestions and for the loan of many important documents bearing on the subject. I am also thankful to Prof. Cannan, of the University of London, who has read the rough draft of a small part of the manuscript. My debt to Prof. Seligman, my teacher at Columbia University, is of course immense : for from him I learned my first lessons in the theory of Public Finance. I am obliged to my friend Mr. C. S. Deole for assistance afforded in the dreary task of reading the proofs.

FOREWORD

The problem discussed by Mr. Ambedkar in his excellent dissertation is one that is arousing a growing interest in all parts of the world. From the very beginning we find fiscal burdens imposed by both central and local governments. As soon as there was a political organisation, the conduct of war on the one hand and the provision of local protection and convenience on the other called for expenditures on the part of both state and local authorities. It was only at a later period that there was interpolated between the local and the central political organisations the intermediate form which Mr. Ambedkar calls the provincial government. The names applied to these various classes of expenditure differ with the authorities themselves. In India, we speak of local, provincial, and imperial

expenditure; in Germany, of local, state, and imperial expenditure; in the United States and Switzerland, of local, state, and federal expenditure; in Australia, of local, state, and commonwealth expenditure; in South Africa and Canada, of local, provincial, and federal expenditure; and in France, of local, departmental, and general expenditure. In some cases, as in the British Empire, there is being developed a still more comprehensive class of expenditures, borne by the empire at large.

The character and importance of these various classes of expenditure and the relations between them are undergoing a continual change, due to an alteration in the functions of government. This is itself largely due to a change in the general economic conditions, resulting in a gradual modification either of political structure or of administrative activity. In some countries, as in Canada, Argentine and Brazil, the provinces are really a creation of the central government; in other countries, as in the United States, Germany, and Switzerland, the federal government is the creation of the originally sovereign states. In some countries the intermediate (provincial or state) government is suffering a loss of importance as compared with the local or central governments; in other countries, the reverse is true.

With the increasing pressure of taxation and the development under modern democracies of augmented governmental functions, the problem of the equitable distribution of burden among these various forms of government is becoming more or less acute. What Mr. Ambedkar calls assignments, assigned revenue, and share revenue, is symptomatic of the choice of methods in all countries. One of three fundamental plans must be pursued. Either the central or the provincial government may be maintained by the other, according to the relative degree of strength : in former times, in the United States, and in Germany the states were supposed to support the central government, either wholly or in large measure; in modern times, in Canada and Australia, the reverse is true. Or, secondly, distinct revenues may be allocated to the separate governments : until recently the federal government in the United States, Germany, and Switzerland was supported primarily by indirect taxes; the state

governments by direct taxes. Or, thirdly, the revenues may be collected by one government and a portion of the proceeds allotted to the other : there are many instances of a state or provincial tax being shared with the federal government, and still more examples of a federal or central tax being shared with the state or provincial government. In the United States at present the proper disposition of the inheritance tax as between state and federal government is fast becoming a burning question; in Germany the fiscal relations of state and federal government are in the forefront of political discussion.

The value of Mr. Ambedkar's contribution to this discussion lies in the objective recitation of the facts and the impartial analysis of the interesting development that has taken place in his native country. The lessons are applicable to other countries as well; nowhere, to my knowledge, has such a detailed study of the underlying principles been made.

It is true that only half of the picture is presented. For the situation has everywhere been complicated by the entrance of the local authorities into the field; and by their claims to fiscal consideration as compared with both state (provincial) and general (federal) demands. In the United States, for instance, the now widely debated problem of financing the schools is largely dependent for its solution on the proper answer to be given to the question of fiscal interrelations. To this question Mr. Ambedkar proposes to devote himself in a subsequent study. If he succeeds in illumining that situation as successfully as he here deals with the initial problem, he will lay us all under still deeper obligations.

EDWIN R. A. SELIGMAN

COLUMBIA UNIVERSITY, NEW YORK,

October, 1924

INTRODUCTION

DEFINITION AND OUTLINE OF THE SUBJECT

A student of Indian Finance has two chief sources of information and guidance open to him. One is the Annual Budget Statement, and the other is the annual volume of Finance and Revenue Accounts. Though separately issued, the two are really companion volumes

inasmuch as the financial Statement forms, so to speak, an exhaustive explanatory memorandum of the annual financial transactions, the details of which are recorded in the volume of Finance and Revenue Accounts.

Helpful as these sources are, they are not without their puzzles. A reference to the latest volume of Finance and Revenue Accounts will show that the accounts therein are classified under four different categories:—(1) Imperial, (2) Provincial, (3) Incorporated Local, and (4) Excluded Local. But this is by no means uniformly so. For instance, a volume of the same series before 1870 will not be found to contain the accounts called "Provincial," nor will the accounts styled "Local" be found in any volume prior to 1863. Similarly, any volume of the Financial Statements before 1870 will be found to divide the financial transactions covered therein into—Imperial and Local only. But a volume of the same series after 1908 curiously enough groups the accounts not under Imperial and Local but under (1) Imperial, and (2) Provincial, while the financial Statements after 1921 cover only the Imperial Transactions. Nothing is more confusing to a beginner than the entrance of the new, and the exit of the old, categories of accounts* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27P. [Evolution of Provincial Finance in British India PREFACE.htm - _msocom_1](#) The natural question that he will ask is, how did these different categories evolve, and how are they related to one another?

In the present study an endeavour is made to explain the rise and growth of one of them, namely, the "Provincial." But in order that there may be no difficulty in following the argument it is deemed advisable to preface this study with an outline defining its subject-matter and indicating the interrelations of the parts into which it is divided. To facilitate a thorough understanding of the subject the study is divided into four parts, *each* one dealing with the Origin, Development and Organisation of Provincial Finance and the final form in which it was cast by the constitutional changes of 1919. In Part I a somewhat thorny, untrodden and yet necessary ground has been covered in order to give a complete idea of the origin of Provincial Finance. While due homage is paid to the adage which

requires students of the present to study the past, nothing more than the past of the present has been dealt with. In Chapter I, Part I, an attempt is made to present a picture of the system of Finance as it existed before the inauguration of the Provincial Finance and to state the causes that called for a change in its organisation. In Chapter II a rival system of Finance proposed during the period of reconstruction is brought to light and shown why it failed of general acceptance. Chapter III is devoted to the discussion of a plan which was a compromise between the existing system and its rival, and the circumstances which forced its reception.

Having explained the Origin in Part I, the Development of Provincial Finance is made the subject of Part II. How far the arrangement followed in Part I is helpful must in the absence of anything to compare with it be left to the opinion of the reader. In regard to Part II, however, it is to be noted that the arrangement is different from what is adopted in the only fragmentary sketch published on the subject of Provincial Finance in 1887 by the late Justice Ranade. As will be seen from a perusal of Part II, that one of the features of Provincial Finance was that the revenues and charges incorporated into the Provincial Budgets were revised every fifth year. Justice Ranade in his pamphlet, which simply covers the ground traversed in Part II of this study, and that too up to 1882 only, has taken this feature as a norm by which to mark off the different stages in the growth of Provincial Finance from one to another. Consequently, each quinquennial period to him becomes a stage, and in his hands the history of Provincial Finance falls into as many stages as the quinquenniums into which it can be divided. It may, however, be submitted that if every revision had changed the fundamentals of Provincial Finance, such an arrangement would not have been illogical. But as a matter of fact, Provincial Finance did not change its hue at every revision. What the revisions did was to temper the wind to the shorn lamb. If the history of the development of Provincial Finance is to be divided into stages according to the changes in the fundamental basis thereof, then emphasis has to be laid on features altogether different in character. Writers on the theory of Public Finance seem to conceive the subject as though it

were primarily a matter of equity in taxation and economy in expenditure. But to a Chancellor of the Exchequer finance is eminently practical with a problem to solve, namely, how to bring about an equilibrium in the Budget. If we scan the history of Provincial Finance in British India with a view to discover the method of meeting the problem of equilibrium in Provincial Budgets and the changes introduced in it from time to time, we shall find that Provincial Finance has evolved through three distinct stages, each with its own mode of supply, namely, Assignments, Assigned Revenues and Shared Revenues. Consequently, instead of following the mechanical plan of Justice Ranade, it is believed to be more logical and instructive to divide the stages in the growth of Provincial finance according to the method of supply to the Provincial Governments adopted by the Government of India. Consequently, Part II, which deals with the Development of Provincial Finance, is divided into three Chapters: (1) Budget by Assignment, (2) Budget by Assigned Revenues, and (3) Budget by Shared Revenues.

This discussion of the Origin and Development of Provincial Finance is followed in Part III by an examination of its Organisation. Chapter VII in Part III is devoted to the analysis of the hitherto neglected rules of limitations on the financial powers of Provincial Governments primarily to bring out the fact that Provincial Finance was not independent in its organisation. The analysis of the true position of Provincial Finance is, however, reserved for Chapter VIII, in which the conclusion is fortified by a reference to the character of these limitations, that, notwithstanding the high-sounding appellation of Provincial Finance, there were neither provincial revenues nor provincial services as separate from Imperial revenues and Imperial services, so that instead of being federal in its organisation the system remained essentially Imperial. Chapter IX discusses how far it was possible to enlarge the scope of Provincial Finance without jeopardy to the constitutional responsibilities of the Government of India under the old law.

Part IV is a discussion of the changes introduced into the mechanism of Provincial Finance by the Reforms Act of 1919. Chapter X of this Part is devoted to the analysis of the causes which

led to these changes. In Chapter XI a full description of the changes effected by the new law is given, while Chapter XII forms a critique of the new regime.

In view of the fact that students of Indian Finance ordinarily content themselves with the phrase "Decentralisation of finance," to indicate Provincial Finance, a word of explanation in justification of what may rather be called the too cumbersome title of this study. No student of Indian Finance, who is sufficiently acquainted with the branching off of the system in different directions, will fail to mark the inadequacy of the phrase Decentralisation of Finance to mean Provincial Finance. If there were in the Indian system only the Provincial Decentralisation there would have been no necessity to labour for a new title. As a matter of fact, the starting points of decentralisation are by no means the same, and the systems evolved through it are quite different in character. For instance, the centre of decentralisation and the systems evolved by the policy of decentralisation brought into operation in 1855 were different from the centre and the systems evolved therefrom by the policy of decentralisation initiated in 1870. Again, the centre which is gradually being decentralised since 1892, be it noted, is different from those affected by the decentralisation of 1855 or 1870. To put it more clearly, the decentralisation of 1855 was the decentralisation of *Indian* Finance resulting in—

(I) the separation of Local from Imperial Finance.

The decentralisation of 1870 was the decentralisation of Imperial Finance resulting in—

(II) the separation of Provincial from Imperial Finance.

And the decentralisation commencing from 1882 is the decentralisation of *Provincial* Finance resulting in—

(III) the separation of Local from Provincial Finance.

Obviously then, "Decentralisation of finance" far from being indicative of Provincial Finance, is a general name for this variegated and multifarious process of decentralisation described above, and it cannot but be confusing to use as a title to the study of one line of decentralisation a phrase which can be generically applied to all the three lines of decentralisation distinguished above. In order,

therefore, that this study may not be taken to pertain to a line of decentralisation other than the one it purports to investigate, it has been thought proper to designate it "The Evolution of Provincial Finance in British India" with a sub-title, "A Study in the Provincial Decentralisation of Imperial Finance," where the words Provincial and Imperial must be read with the emphasis due to them. How careless the phraseology often is may be instanced by the fact that Justice Ranade's pamphlet referred to above is styled "Decentralisation of Provincial Finance." Although it deals with the development of Provincial Finance, it is likely to be passed over by the student, for its title implies that its subject-matter must be the growth of Local Finance. If Justice Ranade had been conscious of the varieties of decentralisation, he would have probably realised that the title of his pamphlet was false to its contents.

PROVINCIAL FINANCE : ITS ORIGIN

CHAPTER I

THE IMPERIAL SYSTEM

ITS GROWTH AND ITS BREAKDOWN

The Imperial system of Government in India dates from the year 1833.

Of the two chief motives which led Parliament to establish it, one was to replace the existing multiplicity in the systems of justice and police by a uniform system of the same, common as far as possible to the whole of India with its varieties classified and systematised. Under the existing system then prevailing such multiplicity was inevitable, for not only the civil and military government and the ordering and management of the revenues of each of the three Presidencies, Bengal, Madras mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - [_msocom_1](#) and Bombay mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_2, were vested in their respective Governors in Council, but each Governor in Council was also empowered to make and issue such rules, ordinances and

regulations for the good order and civil government of the territories he individually commanded, provided that they were just and reasonable and not repugnant to the laws of the British realm. To the codes of law promulgated by these authorities must be added the whole body of English Statute law introduced in India so far as it was applicable, by the charter of George I in 1726 and such other English Acts subsequent to that date as were expressly extended to particular parts of the country.

The work of administering such a diverse body of laws proved so embarrassing that it was the view of the supreme Court of Calcutta that

“no one person can pronounce an opinion or form a judgement... upon any disputed right of persons, respecting which doubt and confusion may not be raised by those who may choose to call it in question; for very few of the public or persons in office at home, not even the Law Officers, can be expected to have so comprehensive and clear a view of the Indian system of law, as to know readily and familiarly the bearings of each part of it on the rest.”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_3

The other motive was to create a strong central government to deal effectively with the European settlers in the country. It is to be noted that if the native population suffered under the uncertainties of law, the British population lived under the most galling restrictions. The revelations of oppressions by Englishmen practised, in the early days of British Rule, contained in the report of the Secret Committee of the House of Commons appointed in 1771 to inquire into the affairs of the East India Company, were followed by very stringent laws governing the entry and residence of private British subjects in India. No British subject of European birth was allowed to reside in India beyond 10 miles from any one of the principal settlements without having previously obtained a special license from the Company or the Governor-General of India or the Governor of the principal settlement in question.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_22

The ruling race had long chafed at these restrictions, under which it was placed, without much avail. They were evidently aimed at keeping out an element dangerous to the stability of the Indian Empire, but, as time went on, and as the Indian Empire was consolidated by successive victories over the native princes, there was raised against these restrictions such a storm of indignant criticism that even those who had acquiesced in their virtue were forced to admit that they had outlived their purpose. While the British Parliament could not help abiding by the sentiments of the time, it refused to disregard the consequences which it thought would inevitably attend upon the free ingress of British subjects of European birth under the then existing system of government. It realised that a harmonious treatment of the immigrants and an effective control over them was absolutely essential. Parliament

was afraid that the different governments armed as they were with co-equal and independent powers of legislation and administration by exercising these powers with regard to the immigrants entering their respective territories, with different views and according to inconsistent principles might integrate the whole mass of them into a disaffected body difficult to be dealt with. Besides the necessity of a harmonious treatment based on uniform principles, the fears of Parliament that the ingress of British immigrants would result in the revival of oppression on the natives were not completely allayed. As its recrudescence was felt to be a likely event, Parliament desired to subject them to a strong and uniform central control, so that the offender in one jurisdiction might not be able to find an asylum in another. Thus, whether considered from the standpoint of bringing about uniformity of laws or securing stringency of control over elements subversive of order, the then existing system of government with its divided jurisdiction was ill-suited for the purpose held in view. An all-powerful Central Government legislating for and controlling the affairs of India as a whole was deemed to be the only solution for the emergency.

Accordingly there came to be enacted in 1833 that

“the Governor-General in Council (at Fort William in Bengal) shall have power to make laws and regulations for repealing, amending, or altering any laws or regulations, whatever, now in force or hereafter to be in force in the said territories or any part thereof, and to make laws and regulations for all persons, whether British or native, foreigners or others, and for all Courts of Justice, whether established by His Majesty's Charters or otherwise and the jurisdictions thereof, and for all places and every part of the said territory, and for all servants of the said Company within the dominions of princes and states in alliance with the said Company.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_23;

A Central government was thus created by vesting the legislative power exclusively in the Governor-General of India in council. But it could not have been all-powerful had the two Presidencies of Madras and Bombay remained as heretofore invested, by law, with the civil and

military government of their respective territories. On the other hand, if Parliament had stopped short of divesting them, there would have ensued the possibility of a conflict between these governing authorities and the sole legislative authority newly created. Being responsible for peace, order and good government, the former could have refused to govern according to laws made by the latter, and all the gain expected to arise from the institution of a central and strong government would have been lost. To eliminate this element of weakness in the Indian politics newly established, Parliament proceeded to divest the presidencies of Bombay and Madras of the high status which they hitherto occupied as *responsible* governments, so that according to the new Constitution

".....the Executive Government of each of the several Presidencies (was to be) *administered by* (not vested in as heretofore) a Governor and three Councillors" mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_24

While

".....the Superintendence, Direction, and Control of the whole civil and military government of all the..... territories and Revenues in India (was) vested in a Governor General and councillors styled the Governor-General of India in Council." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_25

Thus came to be established in India the Imperial system of government. It is true that long before its establishment the Government of Bengal mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_26 had the supreme power, not only of superintending and controlling the government and management of the Presidencies of Madras and Bombay in the matter of commencing hostilities, or declaring or making war against any Indian prince or power, or for negotiating or concluding any treaty of peace or other treaty with them, except in case of emergency, but it also possessed by a later enactment the power of superintendence in all such points as related to the collection or application of revenues, or to the

forces employed, or to the civil or military government of the said presidenciesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_27

But it must not be supposed, as is often done, that before 1833 the two Presidencies were in any real sense subordinate to Bengal in their domestic affairs. The fact that Madras and Bombay were required constantly and diligently to transmit to the Government of Bengal true and exact copies of all orders and resolutions and their acts in Council, and were enjoined to pay due obedience to the orders of the Government of Bengal, must not be construed to mean any subordination in their internal affairs. For, barring the extra territorial authority vested in the Government of Bengal, it must be borne in mind that, equally with Bengalmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_28

the Governments of Madras and Bombay were *vested each*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_29 with the civil and military government and also with the ordering and management of all territorial acquisitions and their revenues. Along with the Government of Bengal they possessed as stated before co-equal and independent powers of legislation within their respective jurisdictions. A truer view therefore seems to be that they forwarded the copies of their proceedings to the Government of Bengal for information rather than for orders. At any rate, such seems to have been the view taken by the Government of Bengal itself, for, though it had the power to issue orders and compel obedience to them it had in practice confined its supervision and control”to pointing out an irregularity and requesting that it be not repeated.”More than this was thought inadvisablemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_30

and it is doubtfulmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_31 whether it would have been constitutional.

The Imperial system of Government was necessarily accompanied by the Imperial system of Finance. Before the inauguration of the Imperial system of Administration the several Presidencies were like separate

clocks each with its own mainspring in itself. Each possessed the powers of sovereignty, such as the legislative, the penal, and the taxing powers. They were independent in their finance. Each was responsible for the maintenance of services essential for peace, order and good government within its jurisdiction and was free to find money by altering or levying taxation or borrowing on credit to meet its obligations. For their ways and means they often drew upon the resources of one another, not, however, because their exchequers were not distinct, but because they were parts of a common exchequer belonging to the East India Company. All this was changed by the Act of 1833, which vested the revenues and the government of the different territories in the Governor-general of India in council. The revenues and the services became by law the revenues and the services of the Government of India. The provinces became the collecting and the spending agencies of the Government of India. They ceased to levy any new taxes or to collect the old ones in their own name. In like manner the services they administered became a charge of the Government of India, which distributed among the various provinces sums from the consolidated fund for the maintenance of the services. It was by law provided that without the previous sanction of the Government of India the provinces were not to spend the fund allowed to them in creating any new office or granting any salary, gratuity, or allowance. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. [Evolution of Provincial Finance in British India PART1.htm - _msocom_32](#). The public debt was no longer a charge upon the revenues of any particular Presidency alone, nor did there remain any question of primary or secondary liability as between the revenues of the other Presidencies. All the provincial debts became the debts of the Government of India and were charged to the revenues of India as a whole. In short, the financial system which was roughly analogous to the system of separation of sources and contributions from the yield was changed into a system of aggregation of sources and distribution of the yield; for, as observed in a Government Resolution by virtue of the Act of 1833,

“British India, though for the sake of convenience subdivided into Presidencies under separate locally controlled governments, (became)

in reality one sole grand Power in dependence on Great Britain, having undivided interests, a single exchequer, and controlled in all essential and general principles by one Government—the Governor- General in Council..... The entire resources of India (were) applicable to one purpose only, the discharge of its engagements and those connected with its management in England, and to whatever section of British India funds (were) wanting, funds (were) supplied, as a matter of course, without any reference to the particular source from which they were derived mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_33 So comprehensive did the system of Imperial Finance become in time that when in 1858 the Crown took over from the Company the government of India it was found that

“no province had any separate power of legislation, any separate financial resources, or practically any power of creating or modifying any appointments in the public service; and the references to the Government of India which this last restriction involved gave that Government the opportunity of interference with all the details of provincial administration mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_34”

Whatever may have been the merits of the Imperial system of Government from the military, political, legislative, or administrative points of view, it is a melancholy fact that as a system of finance it proved unequal to the strain imposed upon it. From its very start it suffered from the fatal disease of financial inadequacy, and it was only occasionally that the efforts of the Finance Ministers were successful in restoring an equilibrium and slaving off the hour of crisis. How chronic the deficits were may be seen from the following 'figures mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_35:—

YEAR	SURPL US	DEFICI T	YEAR	SURPL US	DEFICIT

1834-35		194477	184647		971,322
1835-36	1,441,513		47_48		1,911,986
1836-37	1,248,224		48_49		1,473,225
1837-38	780,318		49_50	354,187	
1838-39		381,787	50_51	415,443	
1839-40		2,138,713	51_52	531,265	
1840-41		1,754,852	52_53	424,257	
1841-42		1,771,603	53_54		2,044,117
1842-43		1,346,011	54_55		1,707,364
1843-44		1,440,259	55_56		972,791
1844-45		743,893	56_57		143,597
1845-46		1,496,865	57_58		7,864,222

Anyone who ponders upon this pitiable story of Indian Finance as revealed by these deficits can hardly fail to wonder with Disraeli who remarked in the House of Commons that—

"able as has ever been the administration of India, considerable and distinguished as have been the men whom that administration had produced, and numerous as have been the great Captains, the clever diplomatists, and able administrators of large districts with whom the Government has abounded, the state of the finances of India has always been involved in perplexity, and India that has produced so many great men, seems never to have produced a Chancellor of the Exchequer." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_36

The causes of this collapse, however, are not far to seek. The inadequacy of Indian Finances is mainly to be ascribed to an unsound fiscal policy. The policy was unsound for various reasons. In matters of state economy it is usual to argue that the expenditure to be incurred should determine the magnitude of revenue to be raised. But experience has shown that this stock maxim has proved ruinous wherever its limitations have failed to receive their due weight. It cannot be too often said that the growing expenditure of the State can only be sustained from the growing wealth of the society. Nor can it be too strongly emphasised that the test of sound finance does not merely consist in being capable of raising the requisite amount of revenue. It must be remembered that the *mode* of raising the revenue is an aspect of the question which is fraught with tremendous consequences for the stability and productivity of the nation. It is too obvious to be denied that a tax system by its unequal incidence may cause social upheavals, just as by its unwise incidence on trade and industry it may impoverish society by setting out of gear its economic mechanism and technique and eventually beggar the State by impairing the productive powers of society. Wisdom therefore requires that those who are entrusted with the financial management of the State should look beyond the more immediate object of raising and spending of money, for the "hows" of finance are very important, and can be seldom neglected in practice with impunity. The wealth of society is the only patrimony on which the State can draw, and the State that damages it cannot but end in damning itself. History abounds with instances of States wrecked by the unwise neglect of these evident truths, but if an illustration be wanted in further

proof thereof, the system of Imperial Finance established in India is matchless for the purpose.

The land tax was the heaviest impost of the Imperial revenue system in operation. The underlying doctrine of the tax in India has been that it is of the nature of rent paid by the cultivator to the State in virtue of the theory that the land in India has from immemorial times been regarded as the property owned by the State. The cultivator is not the proprietor, but is the occupier of the land. The land is let to him and the State is therefore justified in claiming the whole of the economic rent arising from the land. On this assumption the land tax has been imposed irrespective of the question of necessity or justice.

Besides this legal fiction of State landlordism there was also another economic principle, which was, taken to be the justification for the enhancement of the land revenue. There is reason to believe that the Physiocratic doctrine of *produit net* had its influence in the management and fixing of the land tax in India. We find high officials in India arguing in the early stages of the revenue management that "whether or not the principle of the French Economists of laying all the taxes on the land be..... erroneous or otherwise, it is certainly conformable to the prevalent system in India; nor is that theory supported by the French alone, but by respectable authorities in England, who contend that all taxes fall ultimately on the products of the soil, and that in advancing a different doctrine the eminent author of *The Wealth of Nations* is at variance with himself, inasmuch as his previous data lead to that conclusion." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_37 (this footnote is given below) Whatever may have been the reasons for augmenting the land tax, few can deny that a heavy consolidated impost on the first exertions of any species of industry absorbing the whole or nearly the whole of its profits in ruinous and impolitic. It becomes an effectual bar to the creation of that produce on which the future exertions might be profitably employed and through the medium of which individual wealth and public revenue may be increased to an almost inconceivable extent. A land tax of this nature was sure to blast the very production of

that wealth which industry would have otherwise brought into being. the land tax was so heavy that the system of tax prevailing in India might well have been called a near approach to the single tax system.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_37The ratio of the land revenue to the total revenues of India was as given below :—

Year	Ratio	Year	Ratio	Year	Ratio
1792-93 to 1796-97	50.33	1817-18 to 1821-22	66.17	1842-43 to 1846-47	55.85
1797-98 to 1801-02	42.02	1822-23 to 1826-27	61.83	1847-48 to 1851-52	56.06
1802-03 to 1806-07	31.99	1827-28 to 1831-32	60.90	1852-53 to 1855-56	55.40
1807-08 to 1811-12	31.68	1832-33 to 1836-37	57.00	Average for 64 years	54.07
1812-13 to 1816-17	53.33	1837-38 to 1841-42	59.05		

While the land tax prevented the prosperity of the agricultural industry the customs taxes hampered the manufactures of the country. There were internal customs and external customs, and both were equally injurious to trade and industry. The internal customs mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_38 were made up of transit and town duties. For the purposes of transit duties the country was artificially divided into a number of small customs areas. Goods may be manufactured and consumed *ad libitum* within each customs area, but the moment they left their own division they became liable to duty. The injurious effects of this regulation, though concealed, were none the less

real. The transit duties held up trade, which in its turn reacted adversely on the manufacturers of the country. Adam Smith has told us how the growth of industry depends upon the extent of the market. Here for the purposes of the transit duties the whole country was cut up into small bits after the manner of squares on a chess board. What wonder is there if trade, and its handmaid, industry, both languished to a serious extent. The adverse effect on the transit duties was also felt in another way. In every country somewhat industrially advanced there is not only a social division of labour, but there is also a territorial division of labour, otherwise called localisation of industry. Evidence is not wanting to show that the localisation of industry formed a prominent feature of Indian economy mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_39. Under it each locality in India specialised in a particular art or industry; for instance, cotton was grown in one locality, woven in another, and bleached in a third place. But it often happened that these localities were situated in different customs areas, and a raw good might have had to pay the transit duty many a time before it reached its finished stage. To avoid this each locality was obliged to waste its energies along unprofitable lines in order to escape the transit duties.

The town duties, which formed a part of the internal customs, also worked in their effects towards de-urbanisation. Commercial entrepôts are admittedly vast instruments of the trade of a country. The opportunity of ready purchase and sale of almost every kind of commodity in any quantity, accumulated capital, extended credit, general information all meet here as in a centre. They support, encourage and give lift to commerce and to the trade of a country. But the direct effect of the town duty was to distract and drive away trade, for under the system every article which was subject to it had, after the payment of transit duty, to pay on entry, in the town, the town duty and, if it underwent any change of form by manufacture within the town of entry, it could not have been furnished to any neighbouring place without a second impost being paid upon it under the transit duty system, enhanced in proportion to the increase of value it might have acquired from the labour and the skill bestowed upon it, The

consequence was that towns dwindled both in trade and industry owing to the reason that merchants ceased to frequent them and that no manufactures of articles subject to the transit duty were capable of being established in them except for their own supply.

It was in this depressed condition that the Indian industries were called upon to meet foreign competitors. But the external customs cannot be said to have protected, much less fostered them. As a rule commercial tariffs are based upon what is called commodity competition. The import tariffs are designed to check by means of higher duties the importation of such foreign commodities as are likely to interfere in the successful manufacture of the same commodities at home and the export tariffs are framed principally with a view to give bounties to such of the home commodities as have a chance of securing a foothold in foreign markets. But the theory of external customs in India had no connection with the theory of commodity competition. In comparison with the policy actually adopted even a protectionist would have preferred to see trade left perfectly free, for the tariff was based on political rather than economic considerations. The Indian Import Tariff varied not with the nature of the imports but with the origin of the imports and the bottom on which they were shipped. Being political in character it was preferential in design and in its framework. It is to be regretted all the more that the preference involved an unmitigated loss to the people and to the government. It was excusable to have admitted into India goods of English origin and shipped on English bottoms at a rate half of what goods of foreign origin and shipped on foreign bottoms were charged with. But nothing can extenuate the sacrifice imposed upon the Indian industries by letting in British goods at lower rates than what the Indian goods had to pay under the internal customs; and this was done when, be it remembered, England was prohibiting by high tariff the entry of India-made goods and India-built ships! But while the import tariff made it easy for the foreigners to compete successfully with Indian manufactures burdened as they heavily were by the weight of the internal customs, Indian goods found it considerably difficult to compete in foreign markets under the incubus of export duties which formed one of the most lamentable features of the Indian

tariff and which endured long into the nineteenth century. Thus the customs laws internal and external blockaded trade and smothered industry. The comparatively paltry revenues derived from them is the best proof of their ruinous effects.

The following table gives the ratio of the Customs Revenue to the total revenue :—

Year	Ratio	Year	Ratio	Year	Ratio
1792-93 to 1796-97	2.38	1817-18 to 1821-22	8.32	1842-43 to 1846-47	6.02
1797-98 to 1801-02	3.10	1822-23 to 1826-27	7.58	1847-48 to 1851-52	5.40
1802-03 to 1806-07	4.16	1827-28 to 1831-32	8.12	1852-53 to 1855-56	5.52
1807-08 to 1811-12	5.04	1832-33 to 1836-37	7.19	Average for 64 years	6.22
1812-13 to 1816-17	6.68	1837-38 to 1841-42	6.76		

Hendricks, *op. cit.*, p. 286.

When these resources failed the Government resorted to some very questionable means of raising revenue.

On an impartial survey of the revenue system as prevailed under the Imperial regime one is constrained to say that justice in taxation was conspicuous by its absence. It was a cruel satire, or at best an idle maxim, for the lancet was directed not where the blood was thickest but to that part of the body politic which on account of its weakness and poverty most meekly bore the pang. The landlords who passed their

lives in conspicuous consumption and vicarious leisure on the earnings of the poor tenants, or the many European civil servants who fattened themselves on pay and pickings, were supremely exempted from any contribution towards the maintenance of the Government whose main activities were directed towards the maintenance of pomp and privilege. On the other hand, the salt tax[#] and the Moturphamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_41, and other oppressive taxes mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_42 continued to harass the industrious poor.

#The percentage ratio of the salt revenue to the total revenue at different times was as follows:—

Year	Rat io	Year	Rat io	Year	Rat io
1792-93 to 1796-97	14. 13	1817-18 to 1821-22	11. 25	1842-43 to 18 46-47	11. 65
1797-98 to 1801-02	12. 10	1822-23 to 1826-27	11. 87	1847-48 to 1851-52	9.1 4
1802-03 to 1806-07	11. 09	1827-28 to 1831-32	12. 03	1852-53 to 1855-56	9.1 7
1807-08 to 1811 -12	11. 14	1832-33 to 1836-37	9.7 2	Average for 64 years	11. 07
1812-13 to 1816-17	10. 92	1837-38 to 1841-42	12. 37		

Hendricks, *op. cit.*, p. 283.

It is indeed true that many petty and vexatious taxes prevalent under the native rule were abolished; there is, however, enough evidence to show that the revenue thus lost was made up by enhancing those that were continued to be levied, particularly the land tax. The latter charge has always been officially

deniedmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_43, but none the less it remains true that the land tax has been consolidated and increased concurrently with, if not consequently upon, the abolition of such other taxes as being raised from the poor cost the Government more than their yield.

Under the injurious revenue system described above, the taxing capacity of the people decayed so that notwithstanding its numerous resources# from which it derived its revenues the Imperial Government was unable to make both ends meet.

#The following is a conspectus of the taxes levied :—

Source of Revenue	Amount of Revenue raised in Millions	Period		Locality and Date of Commencement
		No. of Years	Dates	
Land Revenue	662.308	64	1792-93 to 1855-56	Throughout the period in Bengal, Bombay and Madras since 1834-5 in N.W.P. and 1849-50 in the Punjab.
Sekyer & Abkary	9.729	20	1836-37 to 1855-56	Throughout the period in Bengal, N.W.P., Madras and Bombay, and since 1849-50 in Punjab.
Excise	4.987	„	„	Bengal accounts exclusively.
Moturpha	6.455	„	„	Madras accounts

Selected Works of Dr BR Ambedkar

				exclusively.
Salt	135.532	64	1792-93 to 1855-56	Bengal since 1792, Madras 1822, Bombay 1822, N.W.P. 1839.

It ought to serve as an object lesson to all financiers to show that when their revenue laws are harmful to the resources of the people they must blame none but themselves for their empty treasury.

Was the money raised by such injurious taxes without reference to their effect on the productive powers of the country spent on such public utilities as were calculated to enrich and elevate the economic life of the tax-paying population? A glance at the following table giving the distribution of the expenditure by decades on the different services will show how the money was spent:—

Distribution of the Expenditure*

Percentage Ratio of Total Expenditure on	in the Year					
	1809 -10	1819 -20	1829- 30	1839- 40	1849- 50	185 7
Military	58.8 77	64.2 90	53.75 4	57.72 1	51.662	45.5 5
Interest on debt	18.0 10	12.8 05	12.12 4	9.756	10.512	7.19
Civil and Political	7.22 1	8.90 0	9.575	12.29 6	8.902	9.62

Judicial	7.52 5	6.80 0	7.107	9.565	7.180	}
Provincial Police	1.99 1	2.09 3	1.535	2.062	2.062	} 9.38
Buildings, Fortifications, etc.	1.63 9	1.75 6	2.810	1.428	1.661	

Prominent among this array of figures are those on the military expenditure and though they have dwindled in years they have invariably consumed more than one half of the total revenues of the country. But the stupendous figures opposite military do not represent the true burden of that expenditure. To them must be added the figures for the interest charge on debt, for the debt incurred was entirely a war debt. India was all throughout this period a battle-ground between the Country Powers and the East India Company. The two Mahratta Wars, the three Mysore Wars, the two Burmese Wars, the two Afghan Wars, and the Carnatic Wars, not to speak of the numerous other minor engagements, were fought in the interests of adding India to the dominions of the Company and of the Crown. While Parliament claimed that the dominions of the East India Company were the dominions of the Crown it must be borne in mind that it refused to pay a farthing of the purchase money. On the other hand, the entire cost of these wars was borne by India as so much dead weight on her scanty resources. The charges shown separately under buildings and fortifications must also be included in the military expenditure, to which category they really belonged. On making these needful additions we find the unparalleled fact of a country wasting between 52 to 80 per cent. of its precious little money on war services. It may, perhaps be argued on the other hand that much of the military expenditure, large though it was, went back into the coffers of the Indians themselves as they formed the bulk of the forces employed in the country. The Indians of course, formed a very large portion of the military# and if the scales of salaries fixed for the European and native forces were equal the result would have been favourable to the natives of the country, though it cannot be said to have excused that huge military expenditure.

#This may be seen from the following figures :—

STRENGTH OF THE INDIAN ARMY BEFORE THE MUTINY*

	Europea	Native	Total
Artillery	6,419	9,138	15,577
Sappers	110	3,043	3,153
Cavalry	3,456	30,533	32,989
Infantry	29,760	188,66	218,42
Total ...	38,745	231,37	270,11

* Report of Major-General Hancock on the Reorganisation of the Indian Army, Parliamentary paper of the year 1859, p. 21.

2 2 But the scales of salaries for the Europeans and natives were so grossly unequal# that one European drew on an average more than the salaries of four natives put together.

3 3 #This is indicated by the following table :—

COST OF AN INFANTRY REGIMENT PER MONTH

It is evident from this table that if we deduct the salary of 26 European officers and command and other allowances shown under the heading "Native" which amounts to Rs. 11,378 7. 3. we shall find that 1,104 Europeans drew Rs. 47,778 10. 7. while 1,160 natives drew only Rs. 11,755 15. 4.

But, as a matter of fact, till after the Mutiny not one of the natives was appointed to any office except such as they were eligible for before this Statute was passed, because the Court of Directors in interpreting it advised the Government of India at the very start that by this enactment

"practically..... no very marked difference of results will be occasioned. The

The Judicial and police charges, which together absorbed something

like 10 per cent. of the total revenue raised, can only be regarded as protective in their distinction between the situations allotted to the covenanted service and all other situations of any official or public nature will remain generally as at present.”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. [Evolution of Provincial Finance in British India PARTI.htm - _msocom_44](Evolution_of_Provincial_Finance_in_British_India_PARTI.htm_-_msocom_44) character. Thus the bulk of the money raised by injurious taxes was spent in unproductive ways. The agencies of war were cultivated in the name of peace, and they adsorbed so much of the total funds that nothing practically was left for the agencies of progress. Education formed no part of the expenditure incurred and useful public works were lamentably few. Railways, canals for navigation or irrigation and other aids to the development of commerce and industry for a long time found no corner in the Imperial budget. For a total area of 837,000 square miles there were constructed a few miles of railways, 2,157 miles of land ways, 580 miles of waterways and 80 miles of telegraph. Or speaking in terms of money spent, we find that for the entire period of fifteen years from 1837-8 to 1851-2 the average expenditure of a productive character amounted only to £ 299,732 a yearmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. [Evolution of Provincial Finance in British India PARTI.htm - _msocom_45](Evolution_of_Provincial_Finance_in_British_India_PARTI.htm_-_msocom_45). There is a principle well known to farmers that constant cropping without manuring ends in the exhaustion of the soil. It is, however, capable of wider application, and had it been observed in the State economy of India the taxing capacity of the country would have grown to the benefit of the treasury and the people. Unfortunately it was lost upon the financiers of India to the detriment of both.

But if the chance of augmenting the resources by judicious taxes and productive expenditure to cover the chronic deficits was forfeited, there was at least the way open for economy in expenditure. As might be supposed, a strong Central Government of the kind established in 1833 was capable of effecting economy wherever possible. As a matter of fact, the centralisation was of the weakest kind. *De jure* there was an Imperial system of administration, but the *de facto* administration was conducted as though the primary units of executive government were the Provinces and that the Government of India was only a co-

ordinating authority. This was obvious from a variety of circumstances. Legislation was, it is true, centred in the Government of India; none the less the laws that were passed by the Government of India were passed *for* the different provinces as though the initiative in legislation still lay in the Provinces and that the Government of India was only a sanctioning authority. Each Province had its own customs, internal as well as external, a survival of their sovereign status. Each Province continued to have its own Army. Notwithstanding centralisation, the account system still remained provincial, sustaining the sense of their financial independence. The work of administration and collection of revenue being still conducted by them, the provinces behaved as though they were the lawful authorities charged with the responsibilities of Government. This spirit of independence bred insubordination, and some of the Provinces, particularly Bombay and Madras, endeavoured to resist the attempts of the Government of India to tax the people under their jurisdiction when the cost of the mutiny compelled it to levy fresh burdens. The point to be borne in mind is that the Act of 1833 made an unfortunate divorce between the legal and administrative responsibility. The Imperial Government were responsible in law but did not administer the country. The Provincial Governments administered the country but had no responsibility in law. This divorce had a fatal effect on the economy in the finances of the country. As was inevitable extravagance in expenditure had become the rule in practice and it was inherent in the Imperial system itself. Economy is begotten of responsibility, and responsibility is obtained where a government has to *find* the resources to meet the charges it desires to incur. Prior to the inauguration of the Imperial system the Provincial Government had the obligation to raise money for the charges included in their budgets. Consequently they had to be economical.

But under the Imperial system, while the budgets for the various services were prepared by the provincial authorities, the responsibility for finding the ways and means rested on the Government of India. Formerly”They knew the limits of the purse they had to draw upon, but under the Imperial system they

“had no means of knowing the measure by which their annual demands upon the Government of India ought to be regulated. They had a purse to draw upon of unlimited because of unknown depth. They saw on every side the necessity for improvements, and their constant and justifiable desire was to obtain for their own provinces as large a share as they could persuade the Government of India to give them out of the general revenues of the Empire. They found by experience that the less economy they practised and the more importunate their demands, the more likely they were to persuade the Government of India of their requirements. In representing these requirements, they felt that they did what was right, and they left to the Government of India, which had taken upon itself, the responsibility of refusing to provide the necessary meansmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_46”.

To these extravagant demands the Government of India had often to yield; for, till very late, it did not possess the machinery to appraise the demands and to control the expenditure on them. It is not usual to expect much efficiency from any Imperial system of administration, much less when it covers not a department, not a province, but a country as big as a continent. Merely from being huge it is slow to move. Much slower would it necessarily be if it were a system as unorganised and unconsolidated as the Indian system was. First of all, the Imperial system in India was without its executive machinery of control. The Act which created it must be said to have grievously erred in uniting into one the Government of Bengal and the Government of India. As a result of this fusion the machinery was over stained. Its duties as the Government of Bengal left it very little time to attend to its duties as the Government of India. There was not only a common executive, but there was also a common Secretariat charged with the work of the two Governments. Overworked as the Secretariat was, its efficiency was considerably lowered by the absence of any officer specially charged with the duty of handling the finance of the country till 1843.

It was in that year that Lord Ellenborough, the then Viceroy of India,

separated the Secretariat of Bengal from that of India' mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_47 and attached to the latter a distinct office called the Financial Secretary to the Government of India mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_48 unencumbered with the details of any other Department of State except that of finance. But while the want of a scrutinising officer was thus made good by this appointment of a distinct Secretary of Finance, it was not possible for him to enforce economy in expenditure in the absence of a centralised system of audit and account and of an appropriation budget. Notwithstanding the establishment of the Imperial system of finance, the officers of audit and account remained attached to the Secretariats of the various Provincial Governments. They were not accountable to the supreme Government on whom the responsibility for the ordering and the management of the revenues of India had by law devolved. Being attached to the provincial Secretariat the Government of India could issue orders with regard to the accounts and the audits not directly but only through, and with the interpretation of, the Local Government concerned. Secondly, the budget system, though good enough for the purposes of mercantile accounts, that is, record, was useless for the first and elementary purpose of all good State accounts, namely, check. There were indeed three estimates (sketch, regular, and budget) prepared for the purposes of the financial administration of the country showing the amount of money required for the carrying on of each of the different services. But this distribution of public money on the different services was not held to mean appropriation. It was only treated as cash requirements. Owing to this fact the grants were never carefully prepared nor was the limit set on them observed in practice. As there was no budget of specific votes or sanctions for each of the services the audit and account was simply concerned with noting whether record was kept of all the money that was received and paid through the public treasury. It is evident that in the absence of an appropriation budget the primary object of all State accounts and audit, namely check on the spending authority to abide by the sanction, was never achieved. The Provincial Governments, extravagant in their

demands, were also careless in the matter of expenditure. So long as the Government of India remained without an appropriation budget and a centralised system of audit and account, it continued to be only a titular authority in the matter of financial control, and the provinces, though by law the weakest of authorities in financial matters, were really the masters of the situation.

To its inability to curb the extravagant habits of the provincial authorities generated by a financial irresponsibility on the part of the Provincial Governments and inefficiency on the part of the Central Government must be added the general spirit of apathy which marked the Executive Council of the Government of India in matters of finance. While it was true that nothing could be spent from the revenues of India without the specific vote of the Executive Council, it does not appear that the Council from its way of working could have taken any keen interest in promoting economy in expenditure. The Council acted collectively, and there was no distribution of executive work among the different members which composed it. With the exception of the Department of War and Legislation the whole work of the Government was brought before the Governor-General and his Councillors. As a result of its collective working

“every case actually passed through the hands of each member of the Council, circulating at a snail's pace in little mahogany boxes from one Councillor's house to another.” mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_49

Under such a system nobody was a Chancellor of the Exchequer to urge economy, because everybody was supposed to be one. The result was that finance in being everybody's business suffered from being nobody's business, so that funds were distributed not according to the genuine needs of the services, but according to the relative claims and persistency of the clamour made for them.

Sufficient evidence has been given to show that the collapse of the Imperial system was due to a faulty fiscal system marked by injurious

taxes and unproductive and extravagant expenditure. It must not, however, be supposed that this faulty fiscal policy commenced with the inauguration of the Imperial system. On the other hand, it was a heritage which descended to the Imperial system from the past. None the less it is obvious that a timely revision of the fiscal policy and the strengthening of central control would have solidified the foundation of the Imperial system. But a much too long continuance thereof undermined its financial foundations, and as it could get no more money to meet its rising expenditure from a people whom it had beggared, the Imperial system succumbed to the shock of the Mutiny, never to rise again in its original garb.

CHAPTER II IMPERIALISM V. FEDERALISM

As the result of the cost of the Mutiny of 1857 the already precarious condition of the Imperial Finance became so grave that no problem during the succeeding decade can be said to have engrossed the attention of responsible authorities as the one relating to the rehabilitation of that tottering system. Although the controversy as to the proper line of reconstruction to be adopted was long drawn out, the causes of the collapse were so patent that all those who had anything to do with Indian Finance unmistakably laid their finger on one supreme defect in the system whose breakdown they had witnessed, namely, the irresponsible extravagance it engendered in the Provincial Governments. To obviate this evil it was sought on the one hand by some responsible authorities

“to make the Local Governments partners in the great joint stock of Indian Finances, and, so to enlist their interest and animated co-operation with the Government of India, instead of keeping them on the footing of agents and servants, who, having no motive for economy and using the means of their masters, think only of enhancing their own demands by comparisons more or less well founded, with the indulgence conceded to others.”

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PART I.htm - _msocom_50

This view gradually led to the formation of a considerable body of well-trained opinion for changing united India into the United States of India, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_51 by making the provinces into separate and sovereign States. The aim was to substitute a Federal system for the Imperial system and to assimilate the financial position of the Central authority in India to that of the Central authority in the United States. For the consummation of the Federal plan it was urged that the revenues of India should not be dealt with as one income, collected into the Imperial Treasury and thence distributed among the different Provincial Governments. According to the plan each province was to be allowed to keep its revenues and meet its charges from them. The Central Government was to have its own separate resources and, if need be, supplemented by contributions from the provinces as their share of the expenditure of the Central Government based on some equitable standard. Thus under the Federal plan the consolidated Imperial Budget with its formal division between Imperial and Provincial was sought to be replaced by the creation of distinctly separate budgets, Central and Provincial, based on a genuine division of services and allocation of revenues.

Many advantages were claimed in favour of the Federal plan. First it was believed that the separation of the revenues and services would lead the ways and means of the Central as well as of the Provincial Governments to be clearly defined, so that each one of them would be responsible for administering its affairs within the funds allotted to it. Heretofore the Provincial Governments sent up their estimates of revenue and expenditure as returns unconnected with each other, and the task of balancing them was left to be done by the Supreme Government upon the aggregate of the different provincial estimates submitted to it. Under the Federal plan the provincial estimates would have to be balanced accounts of receipts and charges made over to them. Though primary it was not the only advantage which the Federalists claimed for their plan, for it was advanced not only as a measure to set bounds to the extravagant expenditure of the Local Governments by limiting the funds on which they were to draw, but

also as a measure for setting bounds to the growing expenditure of the Central Government as well. The Federalists did not conceal the fact that the Central Government, being in a position to draw upon the total resources of India as a whole, was inclined to be extravagant in its own expenditure. They therefore thought that the Federal plan, involving as it did the allocation of revenues and services, would result in enforcing economy on the Central as well as on the Provincial Government.

The Federal plan was not only proposed by its advocates in the interests of economy and responsibility, but also in the interests of plenty. The Federalists denied that India offered few sources of revenue for the growing expenditure of the State. Though the Indian Finance ferry was water-logged, it was their view that there were many sources of taxation with the outpourings of which it could be set afloat. But they argued that these available sources were left untapped, as the Imperial Government, which could tap them, would not do so because of their restricted *locale*, and Provincial Government, which would like to tap them, because of their restricted *locale* could not do so under the existing constitutional law. But if the Provincial Governments were vested or rather re-vested with the powers of taxation as they would be under the Federal plan, such sources of taxation as were given up for being too regional-in character by the Imperial Government would be used by the Provincial Government to the great relief of Indian Finance as a whole.

Not only was Federalism advocated in the interests of economy and plenty, but also in the interests of equity. It was contended that the existing system resulted in an iniquitous treatment of the different provinces. If we take public works of provincial utility and the expenditure incurred upon them in the different provinces as the criterion, the criticism of the Federalists cannot be said to have been unfounded. On the other hand, the following figures go to substantiate a very large part of their arguments :—

OUTLAY ON PUBLIC WORKS

Average for the years 1937-8 to 1845-6

Province	Population in thousands	Area in sq. miles	Revenues in hundreds of Rs.	Expenditure on Public works in hundreds of Rs.
Bengal	40,000,000	1,65,443	10,239,500	1,79,812
N.W. P.	23,200,000	71,985	5,699,200	1,41,450
Madras	22,000,000	1,45,000	5,069,500	30,300

Compiled from *Calcutta Review*, 1851, Vol. XVI, p. 466.

Thus the outlay on public works was in Bengal $1\frac{3}{4}$ per cent.; in North-Western Provinces, $2\frac{1}{2}$ per cent.; and in Madras a little over $1\frac{1}{2}$ per cent./of their respective revenues. This favoured treatment of some provinces as against the others was justified by the Imperial Government, which distributed the funds, on the ground that the favoured provinces showed surpluses in their accounts. But the Federalists pointed out these deficits and surpluses ascribed to the different provinces were grossly fictitious. They were the result of a bad system of accounts. The system was bad for the reason that it continued to show the accounts of the financial transactions of the country not according to Heads of Account but according to the provinces in which they occurred as used to be the case before 1833 when there was no common system of finance. With the passing of the Act of 1833 this system of accounts had become quite out of keeping with the spirit and letter of that Act. This would not have mattered very much if the All-India items were separated from the purely provincial items in the General Heads of Account. In the absence of this the evils of the system were aggravated by entering exclusively into the accounts of a

province the charges for what was really an All-India Service, so that it continued to show deficits, while others which escaped continued to show surpluses and claim in consequence the favoured treatment given to them. The Presidency of Bombay offered to the Federalists a case in point. The demands of the Presidency were invariably received with scant courtesy by the Government of India, for in its history Bombay seldom showed any surplus in her accounts. But, if it had been realised that the deficits were caused by the barbarous system of accounts which kept on charging the Presidency with the cost of the Indian Navy, it undoubtedly would have fared better. Such vicious ways of appointment were not the only evil features of the system of accounts. Under it it was quite common to charge one Presidency with the cost of a service and to credit another with the receipts thereof. How the deficits found in the Madras accounts were inflicted upon it by the erroneous system of accounts may be seen from the following :—

Cost of the Army of Occupation		Revenues derived from the Occupied territory	
Debited to	Amount Rs.	Credited to	Amount Rs.
Madras	79,83,000	Bombay	20,00,000
		Bengal	1,04,22,870

Taking into consideration the iniquities involved in such a system of accounts, it is beyond dispute that the advantage claimed by the Federalists for their plan was neither fictitious nor petty. A division of functions between the Federal and Provincial Governments would have in itself been an advantage by comparison with the existing chaos. And, if it did not result in equity, it had at least the merit of opening a way for it.

When however the Federal plan was put before the authorities in the form of a practical proposal, it gave rise to a determined opposition. The challenge was at once taken up by the supporters of the Imperial system who, be it noted, were mostly military men in civil employ. They opened their attack on the Federal plan from two sides, that of practicability and expediency.

Is it possible, asked the Imperialists, to localise the revenues and charges of India as belonging distinctively to one particular province? They insisted that

"from the commencement of (the British) power (in India)..... the interests and affairs of (the) presidencies and the provinces have been interwoven and interlaced—one often overlapping the other, and vice versa—in a manner from which extrication or disentanglement is now impossible, without making changes which would entail inconveniences greater than any entailed by the existing system..... The army of Bengal Presidency is quartered not in the rich districts of the Lower Ganges, but mainly in the poorer districts of the Punjab. Thus placed, that army defends virtually the whole Presidency. The Madras army is not kept within that Presidency, but holds, besides the Madras country, the Deccan, the Central Provinces, and British Burma. Similarly the Bombay army holds, besides its own Presidency, the State of Rajputana and of Malwa. The Lower Provinces or Bengal proper are in themselves rich; but besides their own revenues they receive large customs receipts, which belong partly to them, but largely also to the other Divisions of the Bengal Presidency. Even Bengal opium does not entirely belong to Bengal, a large portion being raised in the North-Western provinces. In Bombay the opium revenue does not, strictly speaking, belong to that Presidency at all, being raised beyond its limits, in the territories which, if included in any Presidency at all, would pertain to that of Bengal. Some of the Salt Duties, both of Madras and of Bombay, are raised on salt destined for consumption in Central India, and, in strictness, should be credited to the Government of India. Instances might be multiplied; but it becomes instantly evident that, if an adjustment of these matters with a view to complete

localisation of finance were to be attempted, many difficulties, perhaps even disputes, would arise.....”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_52

Arguing in the same strain, Lord Lawrence, the then Viceroy of India, wrote:

“Experience has shown that it is convenient that the resources of British India should be considered in the aggregate and not with reference to the particular province in which it is raised. If the rule were otherwise, we must enter into the question—what are the revenues which each province may fairly claim? What are the items of expenditure which may justly be charged to each? Is the Punjab, for instance, to be charged for all the British troops located in the hills for sanitary considerations? Is the whole of the force ranged against the Northwestern border to be similarly debited? Are the troops quartered in Rajputana to be charged to the Bombay Presidency to which they belong, or in what manner is their cost to be arranged for? On the other hand, we may be asked, why should not Bengal in particular—which, having no foreign neighbours, and a docile and timid population, requires only a minimum garrison—have the benefit of her surplus revenues? Why on the opposite view of the question should not Bengal bear her share of the cost of the troops located in the North-Western Provinces, the Punjab and Central India, which guard her from such invasions as those of the Rohillas, the Mahrattas and the Pindarics of former times? These are all questions which would require solution if each were to have a financial system of its own.”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_53

and in his opinion the question was impossible of solution.

But the Imperialists went further than this and argued that, even if it were possible to distinguish and localise the charges and the revenues into provincial and central, it was inexpedient to do so. Under the existing system of finance, they held that

“the Imperial Government, disposing of financial resources of the whole of India, can carry those resources at once where they are most needed. There are objects which have a truly national importance, though they may appear chiefly beneficial to a particular district. There may be evils, necessities and dangers in particular districts, which it is the duty of the supreme Government to correct and remedy at the charge of the whole. The creation or improvement of a part may have a national importance, though the expenditure on it may seem unfairly beneficial to a particular locality. A road, a canal, a railway from a cotton district or a coffee district, or a tea district, may have a vital significance to the whole people and commerce of India ; and yet the expenditure on such a work be out of all proportion to the present revenue of the district which it is destined to develop..... or the supreme Government may find it necessary to lay out, for moral and social purposes, larger sums on recently conquered, savage, or dissatisfied provinces than the revenues of those provinces seemed to warrant, in order to remove causes of disturbances or dangers, and to force those provinces into some degree of harmony with the long settled, pacified, reclaimed portions of the Empire..... The old provinces of the Empire conquer the new provinces. The old are bound in duty to civilise what they conquer. We have no right to annex a country and then throw it on its own resources. Conquest has its own duties as well as its rights.”

“I venture to demur,” wrote Lord Napier of Merchiston, President of the Council of Madras,”to the policy of those who would restrict the benefits of the supreme Government to its receipts, and who would measure out in a parochial spirit to every province appropriations proportional to its specific returns. On the contrary, it ought to be a satisfaction to the rich to help the poor; to the old to protect the young; to the good to improve the bad; for thus all can co-operate in building up the glorious fabric of a—United India. Such ends can only be attained by a Central Government disposing of the financial resources of a whole Empire

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_54

It is evident that arguments or sermons such as the above by themselves could never have supported the cause of the Imperialists. Notwithstanding the emphasis laid upon the difficulty of separating the revenues and charges into Imperial and Provincial, it must be conceded that the task was by no means so insuperable as the Imperialists made it out to be. The difficulty of apportioning the military charges could have been easily obviated by centralising the military and making it a charge of the Central Government. On the same basis all those services charged to a particular Presidency or Province, but which from their nature benefited the whole Empire, could have been easily incorporated into the budget of the Central Government. Similarly it was possible in practice to allocate the existing sources of revenue between the Central and the Local Governments. The Central Government could have been allowed to retain for its use such sources of revenue the *locale* of which extended beyond the limits of a Presidency or the maximum yield of which depended upon a uniform administration of the same throughout the country. While on the other hand the Provincial Government could have been allowed to appropriate such sources which were restricted in their *locale* or the yield of which depended upon local vigilance. For instance, the customs duties could have been easily made a central resource, not only because their incidence was wider, but because they required a common and uniform policy of legislation and administration. The opium revenue could have been treated as a central source of revenue, and the same treatment could have been granted to the salt revenue. Of course it would have been difficult to effect a separation of the sources of revenue in such a way as would have granted to each of the several Governments concerned resources adequate to meet the charges devolving upon them. A certain adjustment of funds by contributions from the provinces to the Central Government or from the Central Government to the provinces would have been inevitable; neither could it have been possible to obviate the adoption of principles more or less arbitrary in the matter of apportionment of revenues or of charges. But admitting the difficulties and arbitrariness involved in the problem of separating the Imperial Budget into a Central and several Provincial Budgets, it must still be said that it was quite capable of satisfactory solution. Colonel Chesney in

response to the challenge thrown out by the Imperialists had made a notable attempt to distinguish the existing heads of charges into Imperial and Provincial. In his Indian Polity he says :

"The items of Imperial expenditure for which contributions would be required consist apparently of—(1) the Home Establishment and charges disbursed by the Secretary of State ; (2) interest on Indian debt; (3) Establishments of the Government of India ; (4) Diplomatic establishment ; (5) Army ; (6) Imperial Services—Post Office and Telegraph Department ; (7) interest guaranteed on railway capital ; to which must be added (8) grants in aid to some of the poorer provinces (which do not at present pay their expenses)."

This and other efforts convinced the Imperialists that their argument from practicability was bound to fail. Consequently they shifted their emphasis from the argument from practicability to that from expediency. Expediency furnished a better ground for attacking the Federal plan. Can a Federal Government be as efficient as the Imperial Government? Can its credit be as high? Can its prestige be as great as that of the existing Imperial system? It must be premised that it was fresh in the minds of the people that it was the Imperial system with a strong power of control that had saved the country to the British from the hands of the mutineers of 1857. The survival value of the Imperial system had been proved in the struggle. By a clever maneuver the Imperialists turned to the authorities and asked them to consider what had sustained the Imperial system throughout the struggle. They did not fail to emphasise the point that it was because the Imperial system of finance had given into the hands of the Imperial Government the control over the management of the revenues and disbursements of the Empire that the latter, in an emergency like the Mutiny, could stimulate every source of income, close every avenue of outlet, and concentrate all its expenditure on the capital object at stake— the energetic prosecution of hostilities. They showed that, without the Imperial system of finance, the Imperial Government would have had to deal with lukewarm, reluctant, hesitating or even hostile partners, perhaps not directly concerned in the struggle or convinced of its necessity, and solicitous

for exoneration or delay. Further they made out that the Imperial management of finance was vital not only in heightening the efficiency of government, but also in maintaining the high state of credit. Credit, it was argued, depended upon the magnitude of the revenue, and to disintegrate the revenues was tantamount to lowering the credit. The Federal plan was also accused of abrogating the European tradition which has given prestige a very high place in its code for Asian government. It was inconceivable to the Imperialists that the Central Government could maintain its prestige without centralisation in finance, for it was the system of Imperial Finance which, having collected the leading strings in political and administrative matters into the hands of the Imperial Government, enabled that Government to dictate a policy and have it executed to its own satisfaction. But who could uphold the prestige of the Central Government, if it became a pensioner of the Local Governments subordinate to it?

Looked at from the vantage ground of detachment from the time of the controversy one may wonder what strength there was in the argument from expediency which gave the Imperialists such an easy victory over the Federalists. Federal Governments such as those existing in America, Germany or elsewhere do not lend support to the view that in their working there is bound to be a loss of efficiency, credit, or prestige. Their history has belied all these gloomy foreboding. But it should be remembered that at the time the controversy raged in India, much of the history of Federalism was a blank page, for Federalism was itself in its infancy. People, however, sided with the Imperialists, not because they could not draw upon the history of Federalism for arguments in its favour, but because the events of the time had inclined them to support the Imperial system. The Imperial system had saved India from the hands of the Mutiny of 1857, and when their fears of its repetition were not yet allayed it was too soon to expect them to consent to disrupt a machine that had just then proved its worth in the great contest. Conscious though they were of its defects, people recoiled from any attempt to tamper with it. So strong was the partiality of the people for the Imperial system that, notwithstanding the many defects which to their knowledge detracted from the efficiency of the system,

they could give a sympathetic hearing to the Hon'ble Major-General Sir H. M. Durand, who wrote:

“I assert confidently that at present there is absolutely no ground whatever for the allegation that the financial control of the Government of India goes to undue lengths in what it attempts, and miscarries miserably. On the contrary, any partial miscarriage of control is no proof whatever that the rules are faulty, but that their relaxation is highly inexpedient, and that more rigid subordination of them should be enforced both by the Government of India and the Home Government. To subvert the financial control of the Central Government because one out of nine administrations has proved rather refractory, is about as sensible a procedure, to my mind, as to annul the articles of War and the powers of the Commander-in-Chief because a regiment should somewhat happen to misbehave. I venture to doubt the statesmanship of ruling either India or armies in this way.” mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_55

Notwithstanding the victory of the Imperialists, it must be said the Federalists lost a cause which was bound to succeed. For the sentiment of the time, however favourable to the retention of the Imperial system, was powerless to resist the force of events. The Imperial Government had to be extricated from the state of chronic penury in which it had fallen, and if statesmanship did not favour the system of Federal Finance as a means, financiers soon learnt that the system of Imperial Finance was doubtful as an end.

CHAPTER III

THE COMPROMISE

IMPERIAL FINANCE WITHOUT IMPERIAL MANAGEMENT

If the Federalists failed to carry the day, they at least led their opponents to improve the system by removing some of the most radical defects from which it suffered. Attention was mainly directed towards revising the revenue laws and improving the machinery of control so

that more revenues be obtained and less wastefully spent. With the primary object of making the Imperial system strong and prosperous, serious attempts were made about the close of the rule of the East India Company to do away with the oppressive taxes which had so long retarded the prosperity of the people and consequently of the Government. The internal custom duties were done away with, and the country was not only freed from all restrictions which hampered the growth of trade and industry, but positive encouragement was given to them by introducing the element of protection in the import tariff and trade was facilitated by equalising the duties on English and foreign shipping. Articles of export were also relieved from the handicap of export duties and efforts were made to improve the cultivation and pressing of cotton, tea and other staples which commanded a great market in Europe and elsewhere.

The administrative machinery was next subjected to revision. Advantage was taken of the Indian Councils Act of 1861 authorising the Viceroy "to make from time to time rules and orders for the more convenient transaction of business in his Council," to bring legally to an end the system under which the whole Council was supposed to take part collectively in the disposal of all the business of the Government by assigning to each member of the Council the charge of a separate department of administration: the Council was thus virtually converted into a Cabinet of which the Governor-General became the head. In this manner a place for a Chancellor of the Exchequer was created to which was appointed the well-known financier, Mr. James Wilson. The attention of Mr. Wilson was directed first of all to the improvements in the machinery of fiscal administration. The credit of establishing in India a uniform system of accounts, centralisation of civil and military audit, and the introduction of an appropriation budget, rightly belongs to him. With the improvement in the revenue laws and the check on waste through improved and efficient administration was combined the policy of retrenchment in expenditure, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PART I.htm - [_msocom_56](#) and the budget and audit rules were

“so framed as to leave to the head of each Local Government or of each branch of administration a much larger (*sic*) discretionary power than.....heretofore..... allowed in rearranging the details of expenditure" mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_57

if that led to retrenchment. So drastic was the economy practised that, soon after the inauguration of the policy of spreading education throughout the country initiated by the dispatch of the Secretary of State in 1854, a stop was put to any increase of expenditure on education. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_58

But notwithstanding all these efforts at betterment howsoever diligently sustained, they did not improve the finances of India materially; at any rate. Mr. Wilson in his Financial Statement for 1860-1, by way of summing up the financial situation, said:

“we have a deficit in the last three years of £ 30,547,488; we have a prospective deficit in the next year of £ 6,500,000; we have already added to our debt £ 38,410,755.” To meet this huge deficit Mr. Wilson was obliged to augment the stamp duties, double the external customs, and impose an income tax, hitherto unknown to the people. Even the yield of these “three tremendous taxes” did not help Mr. Samuel Laing, the successor of Mr. Wilson, to a prosperous condition, for he too in his Financial Statement for 1861-2 wanted £ 500,000 fairly to weather his deficit and get into smooth waters with a small surplus. A few years of financial prosperity intervened. But Mr. Massey, who relieved Mr. Laing in 1866,

“upon a review of the financial condition of the Empire and the increasing demands made upon its resources..... deemed it expedient to make provision for a permanent addition of a million sterling at the least to the existing revenue” mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_59

Why the efforts of these successive Finance Ministers were not

crowned with success is to be explained chiefly by the fact that the administrative and public needs of the country had grown beyond measure. After the Mutiny

"thousands of Englishmen, not only soldiers, but Englishmen of almost every class, poured into India. Ten thousand things were demanded which India had not got, but which it was felt must be provided. The country (had to be) covered with railways and telegraphs, roads and bridges. Canals (had to be) made to preserve the people from starvation. Barracks (had to be) built for a great European army, and every sort of sanitary arrangement which would benefit the troops (had to be) carried out. This was not only true in regard to matters of Imperial concern. Demands for improvements similar to those which fell upon the Central Government cropped up in every town and in every district controlled by the Local Government. The demands for improved administration also made themselves effective. The police was in a shameful condition throughout India and the inadequacy of the pay given to native judges and other subordinate officers employed in the posts of importance in the courts was declared by Lord Lawrence when he was Viceroy to be a public scandal. Among more than four thousand of these officers in the Bengal Presidency, the highest paid of all, and these were very few, received £180 a year. The great majority received from £12 to £24 a year sums less than those earned in many parts of India by common bricklayers and carpenters. All these had to be put on a completely new footing.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_60

While the needs for expenditure were thus growing, economy in expenditure became difficult of achievement. Comparatively easy at first, each successive measure of economy became directly, as well as relatively, more arduous than its predecessor. The growing needs of improvements, hitherto neglected, and the contracting scope for economy, combined to demand an ever-increasing scale of taxation. The dangers of increased taxation by an alien Government of a people not interested in obtaining the amenities of life, much less at the cost of a tax, were uppermost in the minds of the three great financiers who

were sent out from England in succession to rehabilitate the finances of India on a sound and stable basis. They realised that unless bounds were set to these demands for improved administration and improved material and moral conditions, the immediate benefits of which were enjoyed more by the European than the native population, taxation howsoever high would be inadequate for financial solvency, besides being dangerous to the political stability of the Empire. Under the existing system of barren uniformity and pedantic centralisation their object was thought to be impossible of achievement; for the Local Governments, on which alone the Central Government could depend for economy, rendered at best to that Government not only a cold and languid support in financial vigilance and reform, but too often exhibited a passive resistance, and even countenanced evasions of regulations intended to be conducive to economy. The only way to make Local Governments economical in their ways was to give them the power and responsibility of managing their own affairs. As a matter of administrative experience the financiers had found that while some of the branches of revenue and expenditure were truly imperial, there was a wide field of both of them which was properly local in character, and ought to have been entrusted to Local Governments. They were convinced that there could be no standard of economy until the requirements of the Local Government were made absolutely dependent upon known means, and nothing they thought would serve to make known to the Local Governments the means available for their outlay than to carve out from the Imperial purse a separate purse of definite magnitude for the use of Local Governments and to throw on them the responsibility of meeting their demands and maintaining an equilibrium in their finance. Thus they were led to the same conclusion as the Federalists. However, to make the plan acceptable to the Imperialists, they made certain concessions without seriously compromising the working of the plan. The Federal plan required a change in the constitution of the system of government in India. It necessitated a *legal* partition of the revenues and charges of India between the Central and the several Provincial Governments. While all, including the Imperialists, recognised in the Federal plan a powerful measure for enforcing financial responsibility and economy, the chief

objection to it arose from the fact that it sought *legally and permanently* to divest the Central Government of the resources of India. The financiers as practical politicians soon found out a way to obviate this defect in the Federal plan. By virtue of their experiences of the working of the British Parliament they found that there was no necessity to resort to a constitutional change. Convention was deemed to be as good as law and, once established, can seldom be altered without disturbance. Separation of charges and revenues between the Central and Provincial Governments was therefore proposed to be made a matter of convention which could be upheld so long as it was profitable for the parties concerned to do so. This gave all the advantages of the Federal plan without legally divesting the Central Government of its control over the resources of India. In its nature it was a compromise between constitutional Imperialism and constitutional Federalism. It meant Imperial finance without Imperial management. Under the compromise the revenues and charges remained Imperial in their status, but their management was to be provincialised, so that each of the Provincial Governments was given to administer a part of the Imperial charges incurred in its territory within the limits of a part of the Imperial revenues collected within its territory. This was the essence of the new plan. It differed from the Federal plan in retaining to the Imperial Government the supreme controlling, counselling and regulating authority in all matters pertaining to Indian Finance, without its being actually engaged in the details of the administration of a *part* thereof.

In the essence of the plan as described above all the three finance ministers who were called upon to undertake the task of reconstruction had agreed. They differed, however, in the scale on which it was to be carried out. Whether Mr. Wilson had ever elaborated his own skeleton of the plan is doubtful; but that the idea of it had occurred to him seems pretty certain. The Income Tax Act XXXII of 1860, imposed by him

"was meant to consist of two parts—first, a variable tax, originally fixed at 3 per cent on incomes, which percentage it was intended should be raised or lowered as the general exigencies of the Empire required, and which might if the state of the finance should ever

permit, be entirely remitted; and secondly, a permanent tax of 1 per cent., which was to be at the disposal of the local administration, and to be expended on roads, canals, and other reproductive public works, within the area which paid the tax (*vide* sections 190-4 of the Act). This portion of the tax was never intended to be remitted. It was always to be kept up, not only to meet the charges to which it was applicable, but in order to maintain the machinery of the tax so that at any moment of exigency, after a temporary remission the other portion of the tax, applicable in aid of the general finances, might be re-imposed without agitation, discussion, or trouble." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_61

But, as Mr. Wilson did not live long enough to elaborate his ideas into a scheme, it is difficult to say to what extent he intended to work them out in practice.

Mr. Laing, the successor of Mr. Wilson, put it in a much more definite shape. His budget for 1861-2 was for a deficit caused chiefly by the pressing demands of the Local Governments for useful public works, and his sense of financial safety compelled him

"to curtail roads, canals and other useful works of this description, to the allotment on which they (had) been carried on or rather..... starved, since the Mutiny."

But his anxiety to promote the useful public works, the urgency of which he fully recognised, led him to propose to the Provincial Governments a method of supplementing the scanty Imperial grants made to them. He said to them:

"Take what we are able to give you, and for the residue take certain powers of taxation and raise it yourself.. ...for there are certain subjects which can be dealt with far better by local than by Imperial taxation..."

His object was to enact local budgets "not merely to meet a temporary difficulty but to inaugurate a permanent improvement," to the relief of

the Imperial treasury and the benefit of the Provincial Governments. This scheme involving the management of the public works charges by the Local Government with an allotment from the Imperial revenues supplemented by the power to tax had secured a general approval. But at the time when the scheme was put forward the Local Government was without the requisite machinery for carrying into execution the powers of legislation necessary to impose the taxes proposed to be given to them. The execution of the scheme had therefore to be postponed pending the enactment of local legislative councils then undertaken by Parliament. But, the ensuing years having been years of financial prosperity, the interest in the scheme relaxed and it was consequently dropped *sine die*.

This spell of prosperity, however, proved to be only a passing phase and the stress of returning adversity which beset Mr. Massey compelled him to revive the scheme in a much more enlarged form [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_62](#). He proposed that:

“In considering the ways and means by which the additional amount (of one million sterling) should be raised the most convenient mode of proceeding would be by a partial transfer of charges of a local character from Imperial to local account.”

As the annual produce of local funds applicable to local purposes in India did not much exceed two million sterling, it was proposed to make the moderate addition to this amount of £1,200,000 in round numbers to be raised in rateable proportions in the several Presidencies and Local Governments, and applied in relief of a corresponding amount of charge for local services then borne by the Imperial revenues. The above-mentioned sum of £1,200,000 was arrived at by an assessment of 4 per cent on the estimated revenues of the several Local Governments (except Burma) for the current year, after excluding customs duties and the income tax [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_63](#). The heads of charges to which the proceeds of the new funds were applicable were (1) education, (2)

police, (3) district jails, (4) public works, (5) repairs and maintenance of roads. The list of taxes suggested to provide ways and means included (1) a license tax on trades and professions, (2) a house tax, (3) an octroi duty in towns, and (4) a succession duty on lands which did not pay revenue. The Local Governments were to be left free, subject to the approval of the Government of India in Council, to select the particular tax most suited for being levied in their respective territories so as to yield the full amount required, after deducting the cost of collection, and spend the proceeds on the services mentioned above, on all or any of them, according to their discretion.

The replies of the Local Governments and administrations addressed in connection with this scheme, indicated a general agreement as to the practicability of such a transfer of charges being made and being met by new local taxation, though there was also a general disposition to object to the transfer of charges without a simultaneous transfer of revenue with which to meet the expenditure on them. Under the circumstances the Government of India agreed to reduce the expenditure to be transferred to the Local Governments to £ 800,000 and to transfer to them the proceeds of the license tax as a means for making adequate provision for the same. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_64 The favourable reception accorded to the scheme and the sympathetic criticism to which it was subjected led Mr. Massey to extend and modify it. In his exposition mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_65 of the new and enlarged scheme Mr. Massey wrote:

“my first object has been to select, for the first series of charges to be transferred to local authorities, those items of expenditure which being least susceptible of control by the Government of India, give as a whole, an amount of such dimensions as will not be difficult to manage, and yet will be of sufficient importance to indicate that the measure is intended to be a reality, and a step towards the more complete transfer of the financial administration to the local government. Taking the civil estimates..... it seems to me, plainly, the most convenient method of proceeding to transfer a few entire grants

or section of grants, in preference to selecting special items from several grants..... By adopting the plan..... no change whatever in the system of accounts will be called for; and the only alteration will be, that certain sections of the grants for various purposes, will be provided in a special manner. The only exception to this rule... is in dealing with a head 'Miscellaneous' which..... is rather an incongruous collection of charges.

Among these will be retained, for transfer to local management, all those items which would reasonably be termed local.... and the residue.... could easily be classed under some of the other main heads of charge. The most important of the charges which I should propose to transfer is that for 'Jails' subordinate to 'Law and Justice,' which may... be taken in lump. The charges for 'Registration' and 'Tulubana' also under 'Law and Justice' follow. These are met from special fees credited under the head of 'Law and Justice'. To set off against these charges, a transfer of the revenue under 'Law and Justice' is also proposed... Under 'Education' the 'Miscellaneous' charges are proposed to be transferred to the corresponding transfer of the revenue credited under 'Education'. Next follows the whole of the charges under 'Medical Services' except the fixed 'Medical Establishments and Chemical Examiners'. The entire charge under 'Stationery and Printing' is also taken. Under 'Police' the charges met by contributions from local sources are transferred, including the Railway Police. Against this is set off the receipts under 'Police'. ' Besides the above it is proposed to transfer a portion of the charges, for the collection of the Land Revenue and of the Income Tax and License Tax, which... I have assumed as likely to be levied in future. It has been necessary to assign a sum sufficient to cover the general charges which would be transferred and the propriety of transferring a corresponding portion of the cost of collection seems apparent. Under the designation of charges of collection of the Land Revenue were not included the cost of the Revenue Survey or Settlement as they were exceptional and variable, though the charges under 'Allowances to Village Officers' were included.

* * * *

“The first and principal transfer of revenue will be a portion of the Land Revenue, which I propose to fix at 1/16th or one anna in the rupee. The same rate will govern the proportion of the charges for collection transferred.....

“The next item of revenue which I assume at one-fourth of the Income Tax and License Tax, which I shall suppose to be

raised.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_66

“It is next proposed to transfer the whole of the receipts under the following heads : (1) Law and Justice, (2) Police, (3) Education, (4) Miscellaneous, except items of a financial nature, and also (5) all income under Police Works excepting that derived from Irrigation. The items of expenditure under Public Works proposed to be transferred are (1) Roads, (2) Repairs of Civil Buildings, (3) Miscellaneous works both new and repairs, and (4) Tools and Plant.”

The scheme thus enlarged was discussed at length from various points of view. But though it won the approval of cautious criticsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27A. Evolution of Provincial Finance in British India PARTI.htm - _msocom_67the scheme was too large for the Imperialists. And as the two greatest of them, Lord Lawrence, the Viceroy of India, and Lord Napier of Merchistoun, Governor of Madras, disapproved of it, it failed to materialise in consequence of their opposition.

But unfortunately for the Imperialists, throughout this decade during which they were stubbornly objecting to any surgical operation on their patient—the Imperial system of Finance—it did not show any sign of convalescence. On the other hand, the delay in the operation aggravated its ills. Notwithstanding the constant enhancement in taxation and the reduction in expenditure, the three Chancellors of the Indian Exchequer sent from England could point to only three years of surplus during the decade between 1860 to 1870. On the other hand, to the embarrassments due to constant deficits was added the bewildering breakdown of the budget system created to bring about order and economy in the public finances of the country. Not to speak of its efficiency as an instrument of economy, the budget system under the strain due to excessive centralisation proved useless even as an instrument of order. The finances fell into a chaos. Notwithstanding the elaborate circulars and orders issued with regard to the accuracy in the framing of the budget estimates, it was an extraordinary phenomenon which confronted the Finance Ministers when the budgets, which were begun with large estimated surpluses, strangely enough closed with large actual deficits.

To what extent the actuals erred from the estimates may be seen from

the following table:

Year	Estimate	ACTUAL
	DEFICIT- SURPLUS	DEFICIT- SURPLUS
1866-67	-66,700	-2,307,700
1867-68 ...	1,628,522	-923,720
1868-69 ...	1,893,508	2,542,861
1869-70 ...	48,263	1,650,000(est)

From the above table it is clear that the estimates for 1868-9 and for 1869-70, which were based on the revised estimates of 1868-69, were expected to end with an estimated surplus of £1,893,508 and £48,263 respectively. But when the actuals of the year 1868-69 showed that instead of a surplus there was to be a large deficit, Lord Mayo, who was in the meantime appointed to the Viceroyalty of India, became convinced that if his budget was recast on the basis of these results, it would close with an actual deficit instead of the estimated surplus. This financial surprise threw his budget into confusion, and to restore order he was obliged to adopt the unusual procedure of addition to taxation and the reduction of expenditure in the midst of the fiscal year.

The following is a synopsis of the measures he adopted :—

I. Additional Taxation—		£
(1) Income Tax raised from 1 to 2 1/2 per cent.		320,000
(2) Enhanced Salt Duty (in Madras and Bombay)		180,000

Total 500,000

II. Total Reduction of Expenditure—		
(1)	(1)	Education
350,000		
(2)		Public Works
		800,000
	Total	1,150,000
Estimated Deficit		1,650,000

So grave was the crisis that with all these measures he could do nothing more than close his budget with an estimated deficit of £1,650,000 which would have been inevitable had it not been for certain windfalls such as the recovery of the value of supplies in the Abyssinian War and the adjustment of other large outstanding accounts which enabled him to convert his large deficit into a small surplus. Happy as he was over the immediate results of his efforts, Lord Mayo was convinced that there was something rotten in the system of Imperial Finance and, while anxious not to end it, he courageously set forth to mend it by inaugurating the scheme of Provincial Finance represented by the compromise the growth of which will be the subject-matter of Part II of this study.

Budget By Assignments

PART II
PROVINCIAL FINANCE : ITS DEVELOPMENT
CHAPTER IV
BUDGET BY ASSIGNMENTS
1871-72 TO 1876-77

The origins which led to the formulation of the scheme of Provincial Budget having been presented in the foregoing part of this study, we may now proceed to examine the constitution of the scheme as it was introduced and the changes which it underwent from time to time.

With his sureness of instinct Lord Mayo traced the financial deficits and surprises to the inefficiency of the Imperial and the irresponsibility of the Provincial Governments, and was led to the conclusion that the inauguration of Provincial Budgets was the only remedy equal to the malady. But it must be recalled that the situation was yet dominated by Imperialistic considerations, and while every one in charge of the affairs was desirous, even anxious, to ease the situation by some means or other, few were willing to do so at the cost of Imperial control. Even Lord Mayo was not without his Imperialistic leanings. But the force of the baffling circumstances compelled him to break through the hitherto prevailing spirit of hesitation and indecision, although the steps he took in determining the constitution of the Provincial Budget were slow and cautious.

The scheme which actually came to be introduced from the financial year 1871-2 was first adumbrated in a confidential circular of the Home Department of the Government of India, dated February 21, 1870. Enlarging upon the policy of retrenchment by which the road grant for 1869-70 fixed in the beginning at £ 1,236,000 came to be reduced at the close of the year to £1,021,178 and that estimated for 1870-1 at £ 1,000,000 came to be finally settled at £ 784,839 supplemented by £29,110 for Miscellaneous Public Improvements, the circular gave the Provincial Governments

“to understand that the diminution that has been made in the Imperial grant for communications and roads is not a temporary

diminution caused by present financial pressure. It is the result of a settled policy, deliberately adopted, independently of temporary considerations, and it is far more probable that in future years the special grant for these purposes will be reduced than that it will be increased. It therefore becomes a matter of very urgent necessity that no time should be lost in providing from local sources the funds necessary for the maintenance of the existing provincial and district roads, and for the construction of the new lines of communications which become every day more necessary."

That local wants should be met by local resources had been the ideal of Indian financiers during the entire period of its reconstruction. But that the view had by that time passed beyond the stage of academic discussion is obvious, for the Circular stated that "the Governor-General in Council had fully resolved that he will insist on full effect being given to this principle" in future. Many of the Local Governments took the sentiments of the Government of India conveyed in the Circular in all the seriousness in which they were meant to be taken and had begun to develop their local resources. In the Bombay Presidency a cess of 6 1/4 per cent. on the Land Revenue was levied and two-thirds of it was set aside for roads and works of public utility. The Madras Government under an old Act of 1866 levied a cess of one-half of an anna on every rupee of annual rental equal to 3 1/8 per cent. on the Land Revenue for purposes of district roads. The Bengal Government had declared its intention to follow the Madras Presidency. Encouraged by the steps taken by these Local Governments the Circular urged upon other Local Governments and Administrations in Northern India, namely, North-Western Provinces, Punjab, Oudh and Central Provinces, to consider the expediency of increasing their road cesses on the land revenue to 5 per cent. The object of the move evidently was to relieve the Imperial treasury of the road grant, once the Provincial Governments were in possession of adequate local revenues.

In this way the Circular contemplated a very meagre scheme of Provincial Budget, incorporating only the charges on local public improvements and the revenues derived from local resources to meet

them. But before it could be set into operation the financial difficulties of the Government of India called for a larger measure of relief. Bad as the position already was, there was little confidence to be placed in the stability of the opium revenue; and while there was practised a retrenchment in expenditure, the charges for interest on public debt was found to swell enormously. In the midst of such a precarious situation the Government of India decided to reduce the hitherto prevailing rate of the income tax in order to silence the outcry raised against it by the richer classes. As a possible method of ways and means to meet the additional deficit of £1,000,000 that was expected to arise from the reduction in the income tax rate, the Government of India issued another Confidential Circular, dated August 17, 1870, in which a much wider scope was given to the contemplated scheme of provincial Budgets. It was stated in this Circular that

“If the income tax was to be reduced, the ways and means of government must be otherwise recruited..... preferably..... through the agency of Local Governments, and by adopting such methods of taxation as are considered most suitable to each province and least burdensome to the people.”

The method of throwing the burden on Local Governments consisted in making over to them charges of certain departments of the administration more or less local in character with a net grant on them for 1870-1 reduced by a million sterlingmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B1. Evolution of Provincial Finance in British India PARTII.htm - _msocom_1. It was proposed to distribute this sum among the various provinces in the proportion which the net provincial grant of each bore to the total net grant and leave them free to make up their respective quota of retrenchment either by redistribution, retrenchment, or taxation.

After the concurrence of the Provincial Governments had been obtained to the plan of the Circular, it was announced by the famous Financial Resolution of December 14, 1870, as being adopted for execution from the commencement of the Financial year 1871-2.

We will now proceed to analyse the constitution of the Provincial Budgets as framed by this Resolution. Taking first the expenditure

side of the Provincial Budget, it may be noted that the charges for the following Imperial services were incorporated into it :—

1mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B1. Evolution of Provincial Finance in British India PARTII.htm - _msocom_2. Jails

2. Registration.
3. Police.
4. Education.
5. Medical services (except Medical establishments).
6. Printing.
7. Roads.
8. Miscellaneous, Public Improvements.
9. Civil Buildings.

To provide the Provincial Governments with funds to meet the above charges incorporated into their budgets the Government of India surrendered to them the receipts which accrued from services handed over to them with an additional assignment from the Imperial fisc to bring about an equilibrium. The receipts surrendered and assignments granted to the Local Governments were as follows:—

Assignments made to Provincial Governments for services incorporated into their Budgets by the Financial Resolution No. 3334 dated December 14, 1870.

Constructed on the basis of figures given in the resolution of December 14, 1870.

These would have been the total assignments to the Provincial Governments for meeting the charges on the incorporated services, had it not been for the fact that the Government of India desired to obtain relief by way of retrenchment of the provincial resources to make up for the deficits expected to follow the reduction in the income tax. The relief originally fixed at £1,000,000 was reduced to £350,000, distributed rateably among the various provinces. Taking account of these retrenchments the permanent assignments made to the provinces were as shown below:—

PROVINCES	NEXT ASSIGNMENTS	PROPORTION OF RETRENCHMENTS	PERMANENT ASSIGNMENTS
Oudh	222,459	15,511	206,948

Evolution of Provincial Finance in British India PARTII.htm - _msocom_6, and the additions and withdrawals of services referred to above, the Imperial assignments to Provincial Governments for the year 1871-2 were further altered so that they stood as shown in the table on the preceding page. (Page 117)

Besides these assignments for the fiscal year 1871-2, the Government of India gave the Local Governments a special

donation of £200,000 in the year 1870-1 in order that they may be able to inaugurate the plan successfully, and to have as it were a fair start." Taking round numbers then, the several Provincial Governments had the following resources at their disposal in the year 1871-2 to meet the expenditure incorporated in their budgets:—

Provincial Budget for	Resources		Total
	Receipts surrendered by the Imperial Government	Assignments from the Imperial Treasury	
	£	£	£
Oudh	14,700	211,300	226,000
Central Provinces	24,000	269,600	293,000
Burma	28,600	276,500	305,100
Bengal	264,800	1,197,900	1,462,700
N.W. Provinces	110,000	635,000	745,000
Punjab	67,400	528,800	596,200
Madras	81,890	752,300	834,100
Bombay	55,300	901,200	956,500

Having analysed the constitution of the Provincial Budgets and noted the receipts and charges incorporated into them, we will proceed to inquire into the peculiarity which marks their constitution as framed in 1870-1. No method of ascertaining this peculiarity would be more direct in its approach towards the question raised above than to ask ourselves what problem the framers of the Provincial Budgets were presented with and how it was solved.

From our knowledge of the history of the controversy that raged over the creation of Provincial Budgets we can say that what items of expenditure to incorporate into Provincial Budgets was no longer a prominent question of the time. Long since it was settled that there were charges in the Imperial Budget of a purely local character. By common consent they were regarded as the most unsatisfactory part of the Imperial Budget. It was admitted on all hands that, knowing nothing about these charges, the Government of India was either obliged to sanction an unnecessary charge which may have been carelessly endorsed by the head of a department having no immediate interest in guarding against the waste of public money, or by a too cautious spirit of a random parsimony, or by parsimony regulated only by the state of public revenue, refuse its sanction and check prudent and profitable expenditure. As either procedure was likely to cause mischief, it was commonly agreed that such matters over which the Central Government by its supreme ignorance was powerless to exercise any control, should be transferred from the direct purview of the Imperial Government to the immediate control and responsibility of the Provincial Government. One side of the problem had thus been solved by sheer force of circumstances. The matter on which all attention was mainly concentrated was the problem of providing the Provincial Governments with funds sufficient to meet the charges incorporated into their budgets. It was allowed on all hands to be reasonable that the receipts arising from the incorporated services should be appropriated by the Provincial Governments. Two good reasons were advanced for adopting such a procedure. It is laid down as a canon of good finance that tax administration and tax appropriation should go as far as possible together. On this principle it was but proper to have allowed the Provincial Governments to appropriate the receipts from the services which they administered. But there was also another weighty reason which influenced this decision. The main idea in the inauguration of Provincial Budgets was to interest the Provincial Governments in a judicious and economical management of the finances, and one way of sustaining their interest in the same was to have given them the receipts of the services they managed. The receipts, however, were so

small a portion of the total funds necessary to meet the provincialised expenditure that the problem of balancing the Provincial Budgets remained unsolved notwithstanding. Two possible ways of solution were before the Government of India at the time : either to transfer for provincial uses certain sources of Imperial revenue or to give a lump assignment from the Imperial treasury. It was difficult for a time to decide which was the more suitable of the two, for they were not only of unequal merits, but they made different appeals to the different parties concerned. To the Provincial Government assignment of revenues was preferable to fixed assignments as giving greater elasticity to their finances. To the Government of India, on the other hand, assignment of revenues seemed to be fraught with grave consequences. The past and the existing financial condition of India did not warrant the Central Government to alienate the sources of revenue it then possessed with equanimity and safety for the future. On the other hand, its prospective condition looked as precarious as its past, and it therefore desired to retain its control over the sources the mobilisation of which alone could enable it to stave off any impending crisis. The second alternative, on the other hand, was just such a one as to give the provinces sufficient funds without the Government of India forfeiting its control over its resources. It must not be forgotten that the Government of India by reason of its constitutional position had the sole authority to manage and appropriate the revenues of India. Any solution for financing the provinces had therefore to be in accord with its interests as conceived by itself. This being the situation the method of assignments was adopted in preference to that of assigned revenues in solving the principal problem that arose in connection with the constitution of provincial budgets.

It is because assignment of funds from the Imperial treasury was adopted as a method of supply to balance the Provincial Budgets that the system instituted in 1871-2 has been characterised in this study as a system of Budget by Assignments.

This principle on which the Provincial Budgets were constructed in 1871-2 endured till 1876-7. The assignment made to the Provincial

Governments for the year 1871-2 had been declared to be fixed and recurring. Recurring they were, but fixed they were not: for, every year, since the start, the Government of India kept on adding to and withdrawing from Provincial Budgets items of charge already incorporated in them. In accordance with these modifications in the incorporated charges the Imperial assignments had to be either reduced or augmented as necessity dictated. The progressive changes in the assignments from 1871-2 to 1876-7 with the specific purposes for which they were granted are entered in the following tables :—

This completes the account of the services incorporated from time to time and the assignments made for them by the Imperial exchequer during the period in which the system of budget by assignments remained in force. It now remains to consider whether the system under the assignment plan was a success. What constitutes success is a question, which is always open to discussion, for what may seem successful from one point of view may be the reverse of it from another standpoint. A discussion, however, of this aspect of the question cannot be avoided, for it was on the results of one stage that an advance towards the second was made to depend all throughout the expansion of Provincial Finance. As the definition of success varies with the standpoints, we must first ascertain them for the purpose of our investigation. Let us therefore inquire into the possible parties whose standpoints counted in the moulding of Provincial Finance, and without whose satisfactory opinion about the

results achieved, a new step in advance could not have been taken. The Government of India and the Provincial Governments were obviously the two principal parties. Naturally their standpoints were different, if not antagonistic. The question prominent in the mind of the Government of India was how big was the gain to the imperial treasury on the transfer. On the other hand, the Provincial Governments were concerned to know whether the resources offered by the Government of India were adequate enough for their safely accepting the responsibility of managing the incorporated expenditure. It is obvious the Provincial Governments would not undertake the responsibility of managing the Imperial expenditure within a certain assignment unless they were sure that the assignments were adequate. Similarly, the Imperial Government would see no advantage in making the transfer unless the Provincial Governments undertook to manage the expenditure at a sum less than what it cost under the direct management of the Imperial Government. Adequacy to the provinces and gain to the Imperial treasury were therefore the two chief considerations, which prevailed in the determination of the continuance and expansion of the scheme. The people of the Provinces may also be conceived of as a third possible party whose concurrence may have been deemed a necessary factor in the situation. What their viewpoint would have been is not altogether a matter of guess. On the other hand, anyone sufficiently acquainted with the nature of popular demands for political advancement could easily imagine that the most urgent concern of the taxpayers would have been neither the well-being of the Imperial nor that of the Provincial Governments, but the distribution of the money they paid along the different channels of expenditure; and if their approval of the results of the scheme had been made a necessary condition of advance, it is probable that the development of Provincial Finance would have been along different lines.

There was a suggestion even at that time that the people of the country should have some voice in the financial arrangements of the country. In paragraph 19 of its Resolution of December 14, 1870, announcing the scheme of Provisional finance, the Government laid

down that

“Each local Government will publish its own Provincial Service Estimates and Accounts in the local Gazette, together with a financial exposition (which should, where possible, be made before the local Legislative Council) analogous to that annually made in the Legislative Council of the Governor-General.”

If this suggestion had materialised, the Indian taxpayer would have obtained a voice in determining the financial arrangements between the Government of India and the Provincial Governments. There were, however, certain legal difficulties in the way of giving effect to this suggestion. If the Budget was introduced in the Council and debate had followed upon it, such a proceeding would have offended against Section 38 of the Indian Councils Act (24 and 25 Vic. c. 67) and would have, therefore, been illegal unless the Budget involved some proposal for tax legislation. For, that Act had provided that the activity of the legislative Council should not be called into play except for strictly legislative purposes. If, on the other hand, there was to be no debate, there was no advantage in this mode of giving publicity to the Budget which was not equally secured by its publication in the official Gazette. As a solution of these difficulties, the Government of Madras proposed mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B1. Evolution of Provincial Finance in British India PARTII.htm - _msocom_8 to the Government of India.

“that the Provincial Budget should form a schedule to an Appropriation Bill, the contents of which would, after all the necessary explanation and discussion, be voted section by section.”

But the Government of India, which had first broached the subject, was shocked by this suggestion as being revolutionary. In reply mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B1. Evolution of Provincial Finance in British India PARTII.htm - _msocom_9 it observed:—

“2. His Excellency in Council does not..... consider that the plan proposed..... for bringing the annual financial statement within the terms of the Indian Council's Act, would be appropriate or possible. The passing of the Appropriation Bill in the House of

Commons is a proceeding by which authority is given to carry into effect the Resolutions of the House in Committee of Supply, which till the passing of the Appropriation Bill are not law. The Bill enumerates every grant that has been made during the whole session, and authorises the several sums voted by the Committee of Supply to be issued and applied to each separate service. It also contains a provision that the various aids and supplies shall not be issued or applied to any other uses than those mentioned.

"3. Such a proceeding would, His Excellency in council considers, be out of place in India, and might have the effect of transferring from the Executive to the Legislative Council, the power of disposing of all public moneys. His Excellency, therefore does not consider that the introduction of an Appropriation Bill would be advisable."

Against this ruling the Government of Madras appealed to the Secretary of State mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B1. Evolution of Provincial Finance in British India PARTII.htm - _msocom_10 and pleaded that either the proposal of an Annual Appropriation Act be approved or

“such an alteration in the Council's Act be made as will allow the financial statement to be legally made and discussed in the Local Legislative Council."

But the Secretary of State upheld the decision of the Government of India mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B1. Evolution of Provincial Finance in British India PARTII.htm - _msocom_11 on the ground that

“such mode of procedure is only applicable in a representative assembly, which has full powers of control over the Executive, and any such powers Parliament has advisedly withheld from the Legislative Council of India."

The suggestion was therefore dropped and was not given effect to till 1921. As the voice of the people did not prevail mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B1. Evolution of Provincial Finance in British India PARTII.htm - _msocom_12 in the framing of the financial contracts between the Imperial and Provincial Government, it is of no immediate advantage to seek for results that would have interested them to know, if they had been allowed their say in the

matter. In so far then the results of the past influenced the policy of the future we have only to lay ourselves out to seek for results in which the two remaining parties to the contract were primarily interested, namely, gain to the Imperial treasury and adequacy to the Provincial Governments. Applying ourselves first to the test of adequacy to the provinces the results of the period may be gauged from the annual surpluses and deficits in the finances of each of the different provinces brought within the pale of the system of Provincial Budgets.

Compiled from the annual Finance and Revenue Accounts of the Government of India for the respective years.

It is evident from these figures that the surpluses outnumber the deficits in frequency and magnitude to such an extent that the deficit could have been easily met from the accumulated balances without

seriously exhausting them. Care, however, must be taken in explaining the cause of this apparent prosperity of Provincial Governments. Did the province succeed in building up their balances from the savings from the assignments and receipts made over by the Imperial Government is what we have to find out. The answer to this question cannot be given in a categorical form, for the total resources and changes to which the above figures refer include more than the receipts and assignments set apart for provincial management. Besides Imperial assignments and receipts of incorporated services they include a part of what hitherto were known as Local Funds. It must be recalled that long before the separation of provincial from Imperial Finance there was created since the year 1855 a separation between the Imperial and Local Finance in British India. The Local Funds when separated were under the immediate management of the several Provincial Governments and comprised of two different classes: (a) those which by law or custom were required to be spent within the districts in which they were collected and on the specific objects for which they were collected; and (b) those collected all throughout the province and over the disposal of which the Provincial Government possessed unrestricted discretion. When the scheme of provincial Finance was inaugurated it was deemed natural to merge the second class of Local Funds into the Provincial Funds. The total addition made thereby to the provincial resources it is difficult to ascertain. But it was the opinion of Sir John Strachey, the Finance Minister of the time mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B1. Evolution of Provincial Finance in British India PARTII.htm - _msocom_13, that such addition was "inconsiderable" and could not therefore have affected materially the financial consequences of the new system mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B1. Evolution of Provincial Finance in British India PARTII.htm - _msocom_14

The question of estimating the gain to the Imperial treasury need not detain us very long. The indirect gain due to the economical management of the services by the Provincial Governments will come for discussion when we come to consider the influences that played a prominent part in bringing about the second state in the

evolution of Provincial Finance. The direct gain made by the Imperial treasury was effected throughout the retrenchment in provincial assignments already referred to. It may be recalled that the Government of India had planned to obtain relief to the extent of one million sterling annually on the services transferred,³ but the Government of India soon realised that all this retrenchment would necessitate some taxation by the provincial authorities. The burden had already grown since the Mutiny, and being anxious not to add to it directly by Imperial levy or indirectly through provincial levies, it decided to reduce the relief it sought by lowering the retrenchment on provincial assignments from £1,000,000 to £350,000, or more accurately to £350,801 if we deduct, as we must, the sum of £19,199 restored to Burma, being its quota of relief owing to the special circumstances of that province.

Summing up the results of the period, the Government of India, it must be said, realised full share of the benefits it had contrived to obtain by the annual relief of £330,801, though not without causing an insufficiency, however small, in the Provincial finance. But notwithstanding the burden thrown on the Provinces their position as disclosed by the results cannot by any means be called unhappy.

One unwelcome feature marred the inauguration of Provincial Finance. That feature consisted in the large increase in the levy of rates and cesses for purposes of local improvement.

* Balances recovered from Bengal on account of Road and Government Estates Improvement Fund.

For the new resources of income and cesses given above, refer to *Papers, etc., on the extension of the Financial Powers of the Local Governments*, p. 494.

This shows an increase in 1875-6 over 1870-1 of £488,188, chiefly by raising the cesses in the North-West Provinces, the Punjab and the Madras Presidency to 6 1/4 per cent. on Land Revenue in the two last mentioned, to about 5 per cent. in the North-Western Provinces (after deducting the rural police charge); by a road cess in Bengal and by granting an assignment to Assam, at the Imperial

charge, of 6 1/4, per cent. instead of 3 per cent on Land Revenue pending the levy of a cess of a corresponding amount on the ryots. In the Bombay Presidency the 6 1/4 per cent. was imposed some years before and hence is not included in the above table. The only province which did not levy any additional cess was the Central Province, though a cess of 6V per cent. on the Land Revenue was in 1870 considered practicable but not opportune.

Of what benefit, a cynic may say, was the institution of Provincial Finance if it did not obviate the necessity for further taxation? If further taxation was unavoidable, why did the Imperial Government throw the onus of facing it on the Provincial Government under the garb of Provincial Budgets when it would have done that itself? It must be said in reply that the merits of Provincial Finance are to be looked for in other directions, and it will be shown in its proper place that they justified its institution, even though a certain amount of enhanced taxation followed in its wake. It would indeed be unwise to decry against taxation in general, for no benefit can be obtained without a charge. But it would be equally unjust not to protest against the kind of taxation resorted to, for what really mattered was not the increase of taxation but the inequity of taxation. The method of taxation resorted to make up the deficit in the Provincial Finance was an imposition of rates and cesses on the already over-burdened class of tax-payers, namely the landholders. Now the services incorporated into the Provincial Budgets, for whose support these rates and cesses were levied, though called local, were not more local in the sense of their being beneficial to the particular localities than those retained by the Imperial Government. On the other hand, the former were from the standpoint of the localities as onerous to them as the latter, and yet they were financed by rates and cesses levied from the localities as though they were directly beneficial to them, which as a matter of fact they were not. This is all the more lamentable when it is recalled that the necessity for retrenchment which caused the levy of these rates and cesses was occasioned by the abolition of the income tax. As a matter of justice we should have expected the continuance of the income tax to the relief of the State and the ratepayers. But justice was for a long time absent from the

Financial Secretariat of the Government of India. A few cared for it in the abstract, but none looked upon it as an element worthy of consideration in providing for the exigencies of provincial or local finance; and as it was unrecognised, its violation by the Provincial Governments was no bar to the development of Provincial Finance.

THE EVOLUTION OF PROVINCIAL FINANCE IN BRITISH INDIA

PART II PROVINCIAL FINANCE : ITS DEVELOPMENT CHAPTER V BUDGET BY ASSIGNED REVENUES 1877-78 to 1881-82

Continued...

The scheme of Provincial Budgets, the second stage of which we shall presently study, was launched not without mixed feelings. Boundless hopes were entertained, though not unmingled with a sense of misgiving. Just what was expected of the scheme may be correctly gauged from the remarks of Sir Richard Temple, who, when introducing the scheme in 1870, said :—

"We hope that this concession (of increased control over revenues and expenditure) will give the Local Governments an additional interest in the study and the enforcement of economy in expenditure; will afford them a just inducement to supplement their local receipts from time to time by methods either most acceptable to the people or least fraught with popular objection; will cause a more complete understanding to arise between the executive authorities and the tax-paying classes respecting the development of fiscal resources; will teach the people to take a practical share in the Provincial Finance, and lead them up gradually towards a degree of local self-government; and will thus conduce to administrative as

well as financial improvement." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B2.

[Evolution of Provincial Finance in British India PARTII.htm - _msocom_1](#)

While entertaining these hopes he also took the opportunity of asking the Council to be prepared for disappointment, for he went on to remark:

"the hopes which I am expressing, however sanguinely, or confidently entertained, are after all but hopes, and like all other hopes may or may not be fairly realised. But let all this eventuate as it may, sure I am with certainty free from shade of doubt, that the measure is advantageous to the Imperial Budget of British India. For it will have the direct effect of definitely limiting, for the present, the expenditure from the general Exchequer on certain important branches of civil expenditure, the very branches indeed, where, from the progressive state of the age, the demands for increased outlet have most arisen, and in which from the nature of the case the supreme Central Authority is least able to check the requirements of the local authorities."

The actual results, however, far surpassed these very moderate hopes and were more than necessary to dispel the misgivings that still lingered in the minds of those who looked upon the institution of Provincial Finance as a project of doubtful utility. Confining ourselves to the issues immediately affecting the Government of India or the Provincial Governments, it was abundantly proved that Provincial management was more economical than Imperial management. If we compare the expenditure incurred upon the services while they were an Imperial charge with the expenditure on them after they were provincialised, the superior economy of provincial management is overwhelmingly proved.

Compiled from an official volume of Notes on Imperial, Provincial and Local Finance, 1876.

It was therefore with confirmed belief in its utility and even with a sense of relief that the Government of India proceeded to incorporate into the Provincial Budgets additional services local in character or more amenable to local control. But these additions to the incorporated services made the problem of a supply of funds to Provincial Governments assume greater proportions. In the first period the gap between the receipts of incorporated services and the total charges for them was comparatively smaller than what it was found to be the case on the present occasion. The mode of bridging the gap entirely by assignments was deemed to be ill-fitted for the success of the scheme in its enlarged form. The most radical defect in the system of budget by assignment consisted in its rigidity. The provinces did not favour it as a mode of supply for the reason that

while the outlay on the services under their management continued to expand the assignments made to them remained fixed in amount. Sir John Strachey, to whom belonged the credit of carrying the scheme a stage further, was particularly alive to this weakness of the system. In place of fixed assignments he desired to give the provinces certain sources of revenue, the yield of which largely depended upon good management. His primary object in doing this, no doubt, was to make better and more elastic provision for the growing needs of the provincialised services. But he had also another, and, as he conceived it, a far more important reason in the substitution for assignments of assigned revenues. That economy was the fruit of good management had by that time become a commonplace, but few were sure as to what good management consisted in. It was Sir John Strachey who, for the first time, defined in unmistakable language his notion of good management, which was since his time applied in an ever increasing degree in the development of Provincial Finance. To him good management of finance was to be had

“not by any action which gentlemen of the Financial Department or by any other department of the supreme Government can take whilst sitting hundreds or thousands of miles away in their offices in Calcutta or Simla; not by examining figures or writing circulars, but by giving to the Local Governments... a direct and, so to speak, a personal interest in efficient management”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B2.

[Evolution of Provincial Finance in British India PARTII.htm - _msocom_2](#)

And in this he had the strong support of recent experience; for, taking the results of the past stage the provinces not only managed the services at a lesser cost to the revenue than was the case under the Imperial regime, but the services yielded increased revenue under the more immediate and fostering care of the provinces than they did under the remote, uninformed, and therefore impotent vigilance of the Imperial Government.

Sir John Strachey had long held to the view that so long as the Provinces collected the revenues for the Government of India they did not care to check evasion, which they would have surely done if they had collected them for their immediate benefit, or, as he put it,

"when the Local Governments feel that good administration of branches of revenues will give *them*, and not to the Government of India alone, increased income and increased means of carrying out the improvements which they have at heart, then, and not till then, was to be had the good administration that every one desired."

Compiled from the same source referred to above.

This evidence of the expanding receipts of provincialised services were therefore a pleasant surprise which went a great way in confirming the view he had advocated. It was therefore for a double purpose, of augmenting the revenues and of introducing elasticity in Provincial Finance, that Sir John Strachey substituted assigned revenues for assignments as a mode of supply to the provinces.

The plan adopted by Sir John Strachey was not new, neither was it brought forward for the first time. It was present in the minds of the people who took part in the discussions of Provincial Finance in 1870, and was actually advocated by Sir John Strachey as early as 1872. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B2. Evolution of Provincial Finance in British India PARTII.htm - _msocom_3 That the Government of India did not look upon the plan with favour in 1870 was due to the fact that it was afraid to permanently alienate the sources of revenue on the growth of which its stability depended. By now, however, the financial position of the Government of India had a bit improved, and the six years' trial of provincial management had also engendered a greater confidence in the scheme in the minds of those who had never completely accepted the administrative utility of the project. To this was added the prospect of the plan being a means of increased productivity in their resources as it had been of increased economy in expenditure. The force of all these factors combined to bring a new stage in the evolution of Provincial Finance which, because of the distinct mode of supply adopted, may be well designated as a stage of Budget by Assigned Revenues.

To be sure, assignments still formed a part of the new system. But that was because of the difficulty of assigning such revenues the yield of which would have been precisely equal to the incorporated expenditure. Under any circumstances there was sure to be some difference. It happened that the normal estimated yield of the ceded revenues fell short of the requirements and the margin of difference had to be made up by some adjusting assignment in the case of each province.

The method of fixing the adjusting assignment for the different Provinces was on the whole a little too complicated, and may therefore be conveniently explained before proceeding to examine the constitution of the Provincial Budgets of the different Provinces as laid down under the second stage of their growth. It must be borne in mind that the total resources of the Provinces were made up under this system of (1) the receipts accruing from the incorporated services, (2) the yield of the revenues assigned, and (3) the adjusting assignment. How to fix upon an adjusting assignment

for a particular Province was a question involving nice calculations. Before arriving at a definite figure for the adjusting assignments it was obviously necessary to have settled the normal yield of the receipts of incorporated services and of the revenues made over. The assessment of the normal yield was a contentious matter. As a rough and ready method the Government of India took the average yield of each over a series of years as the normal yield, and made it the basis from which to calculate the assignments. Similarly on the basis of the annual growth of the revenues in the past years it assumed a certain normal rate of increase for each of the sources, so that the normal for the succeeding years exceeded the normal for the preceding year at the normal rate of annual progression assumed. And as the normal yield of the assigned revenues increased at their assumed normal rate of growth the assignments fixed for the subsequent years diminished in like proportion. This normal rate of growth assumed for the assigned revenues was sometimes an assumption unjustified by their past productivity. At all events, as a higher rate of increase meant lessened assignments, the Provinces questioned its magnitude. To pacify the Provinces and to make due allowances for errors of estimating, the Government of India made a very ingenious concession. It agreed that if the actual results showed deviations from the estimated normal yield, either below or above, they should be equally divided between the provincial and Imperial Governments. If the actual yield was greater than the normal the adjusting assignment from the Imperial Government fixed for the year would be reduced by half the excess, and if it were less than the normal the assignment would be increased by half the deficit.

All this very delicate mechanism was adopted primarily for the advantageous manner in which it enabled the Government of India to adjust the assignments without undue hardship being inflicted on either party. But there was also another advantage which, though unperceived at the time, was none the less effective. The consent secured from the Provinces to bear half the burden of a possible deficit in the normal estimate directly put a premium on economical and judicious administration of the ceded revenues. If the Government of India had agreed to bear the whole of the deficit

below the estimated normal, it is doubtful whether the Provinces would have exerted themselves sufficiently to develop their resources to such a degree as to bring their yield to the level of the normal. But the fear that their obligation to bear half the deficit might assume a larger proportion, which would undoubtedly be the case if there was a great falling off in the revenue, compelled them to bestow greater vigilance than they would otherwise have done. Whilst an effectual check on relaxation was thus provided the scheme was not wanting in a stimulus to exertion. The prospect of gaining half the excess over the normal gave a more direct stimulus to the Provinces to develop their resources beyond the normal than would have been the case if the total excess had been entirely appropriated by the Imperial Government. In short, the deterrent effect of a deficit to bear and the stimulating effect of a gain to reap made the mechanism of Provincial Finance as perfect as it could be made from the standpoint of economy in expenditure and productiveness in resources.

Having noted the factors that led to the conception and execution of this new step in Provincial Finance and the features which marked its novelty, we may now proceed to the study of the constitution of Provincial Budgets and the revenue and charges that were incorporated into them. Unfortunately it is impossible to present a conspectus of Provincial Budgets as a whole, for the charges were not uniformly incorporated in all the Provincial Budgets. Each Province was treated individually. This compels us to enter upon the analysis of the Provincial Budgets as they were reconstituted in 1877-8 separately for each of the different provinces.

North-Western Provinces and

Oudhmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B2. Evolution of Provincial Finance in British India PARTII.htm - _msocom_4

The budget of the Province was recast rather than enlarged by additions to the already allocated items, as was the case with regard to some other Provinces. In its new form the budget of the Province incorporated the following heads of expenditure and revenue:—

Heads of Charges	Heads of Revenue
3. Refunds of all Assigned Revenues.	I. Land Revenue—collections from the Terai
4. Land Revenue (excepting settlements, allowances to district and village officers, and Bahbar estates and and special temporary compensations to covenanted civil servants in N.W.P.)	the Dudi estate in Mirzapore and from stone quarries.
6. Excise 10. Stamps.	IV Excise. IX Stamps.
14. Administration (excepting Account and and Currency Officers).	XIII Law and justice.
16. Law and Justice (excepting special temporary allowances to covenanted civil servants in N.W.P.)	
17. Police. 19. Education	XIV Police. XVI Education
21. Medical (excepting the pay of Medical Officers in charge of civil stations).	
22. Stationery and Printing.	
28. Miscellaneous (excepting remittance of treasure and any unenumerated item exceeding Rs. 10,000).	XX Miscellaneous (excepting "Gain by Exchange," "Premium on Bills," unclaimed Bills and unenumerated items exceeding Rs. 10,000 each). Public Works Receipt such as appertained to the Public Works charges incorporated into the Provincial Budget
Public Works Ordinary: Roads	

and miscellaneous public improvements, civil buildings (except opium, post office and telegraph buildings) and tools and plants; also whole of the Public Works establishment of the P.W.D. excepting that in the Military works and irrigation branches; the imperial government paying towards their cost 20 per cent on the outlay from the imperial funds and works and repairs executed by the establishment.	
--	--

In assigning the heads of revenue the Government of India added the proviso that "the Governments of North-Western Provinces and Oudh must surrender to the Imperial treasury half of any sum by which the net revenue from Excise, Stamps, and Law and Justice (omitting Jails and Registration), deducting Refunds under these heads and the charges under 6, Excise and 10, Stamps, exceeded Rs. 83,75,000"

and agreed to reimburse the province with a sum equal to half the deficit if the yield fell below the above sum. This adjustment was effected by operating upon the balances of the Province so that if the expenditure of the North-Western Provinces and Oudh upon the incorporated services exceeded the enumerated revenues plus any Provincial contribution in support of them by less than Rs. 83,75,000, the difference was to be added to; and if such excess expenditure was more than Rs. 83,75,000 the difference was to be deducted from the balances of the Government of the North-western Provinces and Oudh in the Imperial treasury.

Bengal

Items of Expenditure incorporated in the Bengal	Grant as	Retrenchment	Proposed Consolidate
---	----------	--------------	----------------------

Budget	existing in 1877- 8		d Grant
3. Refunds of Revenue from Excise, Stamps, Law and Justice, and of Deposits.	4,91,00 0		4,91,000
4. Land Revenue (Collectors, Deputy Commissioners, etc. Establishments and charges on account of Land Revenue Collections).	22,62,0 00		22,62,000
6. Excise on spirits and drugs	2,92,00 0		2,92,000
8. Customs	6,93,00 0		6,93,000
9. Salt	39,000		39,000
11. Stamps	2,38,00 0		2,38,000
15. Administration (excepting Account Office, Allowances to Presidency Banks, Stationery Office at Presidency and stationery purchased in the country).	12,61,0 00		12,61,000
16. Minor Departments (excepting meteorological and archaeological departments, census and gazeteers).	1,68,00 0		1,68,000

27. Provincial allotment as now existing	1,10,59 ,000	4,40,00 0	1,06,19,00 0
Maintenance of Bishop's Palace, etc.	7,000		7,000
Total	2,45,29 ,000	5,90,00 0	2,39,39,00 0

The budget of the Province of Bengal mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B2. Evolution of Provincial Finance in British India PARTII.htm - _msocom_5 was enlarged rather than recast by additions to the already incorporated heads of revenue and expenditure. For the second stage of the scheme the Government of Bengal was made responsible for the charges shown in the above table.

To meet these charges the following revenues were handed over to Bengal for its use :—

ASSIGNED REVENUES (ooo omitted)

Heads of Revenue	Esti- mate d	Estimated Yield at the assumed Rate of Growth				
	Yiel d	1877 -78	1878- 79	1879- 80	1880- 81	1881- 82
	in 1876- 77	Rs.	Rs.	Rs.	Rs.	Rs.

IV Exercise in spirits and drugs	6,300	6,400	6,500	6,600	6,700	6,800
VI Customs (see, Customs Misc. and Warehouses and Wharf rents).	3,600	3,600	3,600	3,600	3,600	3,600
VII Salt (Rents of Ware houses, fines and forfeitures and misc.).	220	220	220	220	220	220
IX Stamps }	10,300	10,575	10,850	11,125	11,400	11,675
XIII Law and Justice }						
XIV Marine (pilotage receipts, registration and other fees and misc.).	1,091	1,084	1,084	1,084	1,084	1,084
XVI Misc. (all except premium on bills, unclaimed bills, and any unenumerated item exceeding Rs. 10,000).	771	792	792	792	792	792
Total		22,671	23,076	23,421	23,596	24,171

Complied from statements in the *Gazette of India* referred to above.

But as the revenues assigned were not sufficient for meeting the incorporated charges transferred, after taking account of the excesses over normal to be paid to the Government of India, the Government agreed to make the following assignments from the Imperial treasury to the Government of Bengal :—

Year	Assignments
	Rs.
1877-78	48,32,000
1878-79	44,57,000
1879-80	40,82,000
1880-81	37,07,000
1881-82	33,32,000

Central Provinces mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B2.

Evolution of Provincial Finance in British India PARTII.htm - _msocom_6

In the case of the Central Provinces the following additional items were incorporated in its budget :—

Heads of Charge	Grants as already fixed for 1877-78	Retrenchment	Proposed Net Consolidated Grants
	Rs.	Rs.	Rs.
Refunds of Excise, Stamp, Law and Justice and	47,000		47,000
Miscellaneous.			
Excise	52,000		52,000
Stamps	14,000		14,000
Land Revenue exclusive of settlement charges	6,66,000		
Administration (exclusive of Account and Currency Office).	3,39,000		
Minor Departments (exclusive of Meteorology and Archaeology).	4,000		
		90,000	17,74,000

Law and Justice	6,91,000}		
Stationery and Stamps	69,000}		
Miscellaneous (excepting Remittance of	5,000}		
Treasure and Discount on Supply Bills.			
Add—			
Existing allotment for provincial services	27,73,000		27,73,000
Total Grant for Services to be borne upon the Central Provinces Budget.	46,60,000		45,70,000

To meet these charges the Government of Central Provinces was authorised to appropriate the yield of the following sources of revenue :—

Heads of Revenue Assigned	Estimated Yield in	Estimated Yield at the Assumed Rate of Growth in		
		1876-77	1877-78	1878-79
	Rs.	Rs.	Rs.	Rs.
Excise	13,90,000	14,50,000	15,10,000	15,70,000
Stamps	9,70,000	9,75,000	9,80,000	9,85,000
Law and Justice	1,67,000	1,75,000	1,83,000	1,91,000

Miscellaneous (excepting Premium on Bills, undrawn Bills of Exchange and any unenumerated items exceeding Rs. 10,000 each).	7,000	7,000	7,000	7,000
Total		26,07 ,000	26,80,0 00	27,53,00 0

Compiled from the *Gazette* referred to above.

As these revenues were insufficient the Government of India undertook to supplement them by the following assignments from the Imperial exchequer:—

<i>Year</i>	<i>Assignments</i>
Rs.	
1877-78	- 19,63,000
1878-79	- 18,90,000
1879-80	- 18,17,000

These assignments were, however, subject to change because of the proviso applying to the assigned revenues. By virtue of that proviso the Government of India was to claim half the net increase of their combined annual yield over the estimated normal and was to bear half the deficit if their actual combined yield failed short of the normal. If there was an increase above the normal the assignments were to be reduced by a sum equal to half the increase, and if there was a decrease the assignments were to be increased by a sum equal to half the decrease.

Coming to the Bombay Provincial Budget
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B2. Evolution of Provincial Finance in British India PARTII.htm - _msocom_7 of the Bombay Government we find the following charges were incorporated in it :—

Heads of Charge	Grant as already fixed for 1877-8	Retrenchment	Consolidated Grant
	Rs.	Rs.	Rs.
3. Refunds	1,10,000 1		
4. Land Revenue	65,07,00 0 }		
6. Excise	80,000		
7. Customs	8,09,000 }		
8. Salt	5,69,000 }		
14. Administration	11,43,00 01		
15. Minor Departments	1,13,000 }		
16. Law and Justice	43,12,00 0 }	5,67,000	2,13,96, 000
18. Marine	31,000 }		
20. Ecclesiastical	3,25,000 J		
21. Medical	2,68,000 1		
22. Stationery and Stamp	2,29,000 }		
24. Allowances and Assignments	64,81,00 0 }		
26. Superannuation allowances	8,00,000 }.		
28. Miscellaneous	28,000 J		
Add—			
Existing allotment for provincial services.	1,04,54,00		1,04,54, 000

Selected Works of Dr BR Ambedkar

	0		
Total	3,24,17,0 00	5,67,000	3,18,50, 000

Besides the receipts accruing from the already incorporated services the Government of India assigned to the Government of Bombay the following sources of revenue :—

ASSIGNED REVENUES (ooo omitted)

Heads of revenue assigned	Estimated yield in	Estimated Yield at the Assumed Rate of Growth in				
		1876-77	1877-78	1978-79	1979-80	1880-18
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1 Land Revenue (receipts of Inamdari adjustments and service commutations	5,19 9	6,62 4	6,624	6,624	6,62 4	6,6 24
IV. Excise	3,94 6	4,00 0	4,100	4,200	4,30 0	4,4 00
Stamps	4,18 6	4,30 0	4,350	4,500	4,55 0	4,6 00
Law and Justice	277	270	270	270	270	27 0
Total		8,57 0	8,720	8,970	9,12 0	9,2 70
Miscellaneous (excepting gain by exchange, premium on Bills, and on Money	52	70	70	70	70	70

Orders, lapsed Money Orders, Sales, Proceeds of Durbar Presents and unenumerated items—exceeding Rs. 10,000 each).						
Total		15,264	15,414	15,664	15,814	15,964

Compiled from the *Gazette of India*.

The adjusting assignments to cover the difference between the expenditure and revenue incorporated in the Bombay Budget were as follows :—

<i>Year</i>	<i>Assignments</i>
	Rs.
1877-78	- 1,53,20,000
1878-79	- 1,51,70,000
1879-80	- 1,49,20,000
1880-81	- 1,47,70,000
1881-82	- 1,46,20,000

These assignments, it must be noted, were subject to the same proviso as obtained in the case of the Central Provinces.

Punjab

The only remaining Provincial Budget that was framed on the principle of assigned revenues was that of the Punjab.

The heads of charge incorporated in this budget were as hereinafter specified—

Heads of Incorporated Expenditure	Grant as Settled for 1877-8	Retrenchment	Proposed Net Consolidated

			Grant
	Rs.	Rs.	Rs.
Refunds	65,0001		
Land Revenue, excluding settlement charges	16,21,00 0 }		
Excise	58,000}		
Stamps Administration (excluding Account and)	72,000}		
Currency Offices and settlement Secretary	9,74,000 }		
Minor Departments	16,00,00 0}	2,24,00 0	51,38,0 00
Law and Justice	20,94,00 0}		
Superannuation and Retired Allowances,	3,38,000]		
Compassionate Allowances and Gratuities.	}		
Miscellaneous, excluding Remittances of	41,000J		
Treasure.	}		
Stationery and Stamps Add—	83,000 }		
Existing allotments for provincial services	54,22,00 0		54,22,0 00
Total	1,07,84,3 00	2,24,00 0	1,05,60 ,000

To defray these charges it was proposed to assign the following revenues to the Government of the Punjab :—

Heads of Revenues Assigned	Net Revenue in	Estimated Net Yield in

	1876-7			
		1877-78	1878-79	1879-80
	Rs.	Rs.	Rs.	Rs.
Assessed Taxes			12,00,000	12,00,000
Stamps		24,85,000	25,05,000	25,25,000
Law and Justice		4,15,000	4,15,000	4,15,000
Excise		10,30,000	10,50,000	10,70,000
		39,30,000	39,70,000	40,10,000
Miscellaneous (excluding gain by Exchange, premium on Bills, and unclaimed Bills of Exchange).		60,000	60,000	60,000
Total		39,90,000	52,30,000	52,70,000

In making over these revenues the Government of India had reserved to itself a share of the improvement in the net yield from Stamps, Law and Justice, and Excise.

The estimated net yield having fallen short of the estimated expenditure the Government of India agreed to make the following assignments to the Government of the Punjab in order to restore balance in its budget :—

Year	Assignmen	Less Share of Improvement in	Net
------	-----------	------------------------------	-----

	Rs.	Net Revenue from Excise, Stamp, Law and Justice	Rs.	Assignment	Rs.
1877-78	65,70,000		107,000		64,63,000
1878-79	53,40,000		85,000		52,55,000
1879-80	53,10,000				53,10,000

It should be noted that the Government of Madras refused to undertake the responsibility of a provincial Budget based upon the new principle of assigned revenues. It preferred to remain on the old basis. Provincial Budgets of Assam and Burma are not included in this chapter. As the principle involved in their constitution appertains to the study undertaken in the following chapter it is deemed expedient not to include them in the present.

Before closing the study of the second stage in the development of Provincial Budgets it is advisable to take stock of the results achieved during its prevalence from the standpoint of sufficiency to the Provincial Governments and gain to the Imperial exchequer. The following is illustrative of the results of this stage from the standpoint of sufficiency to the provinces:—

Provinces	Annual Surpluses or deficits				
	1877-78	1878-79	1879-80	1880-81	1881-82
	£	£	£	£	£
C.P.	5,992	7,049	— 28,133	2,956	95,221
Bengal	173,380	158,932	82,523	— 11,313	255,189
N.W.P.and	4,469	237,100	320,72	280,790	667,61

Oudh			9		3
Punjab	18,578	48,195	7,017	59,497	135,979
Bombay	—	61,249	—	37,855	418,783
	609,672		11,201		

Compiled from the Finance and Revenue Accounts of the Government of India.

From this it is clear that except in Bombay the funds provided by the Imperial Government proved not only sufficient for the purpose of carrying on the services incorporated in the Provincial Budgets, but were such as to afford a safe margin of revenue over expenditure. That the provinces had enough and to spare is clearly proved by the assistance which they gave without much detriment to their finances to the Imperial Government in the years 1879-80 and 1880-1. In the year 1879 the financial position of the Imperial Government had become rather critical. The fall in the value of the rupee and the commencement of hostilities with the Afghans were expected to bring about a deficit estimated in 1879-80 at £1,395,000. As the first line of defence the Government of India urged on the several Local Governments and Administrations the necessity of reducing the ordinary expenditure of the country within the narrowest possible limits and directed that measures for suspending or postponing all optional expenditure, whether Imperial, Provincial, or Local, should be adopted forthwith and that no proposals for increase of salaries or establishments should be entertained without real necessity.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B2. [Evolution of Provincial Finance in British India PARTII.htm - _msocom_8](#) As a second line of defence the Government of India ordered that until further—

"arrangements could be settled with the Local Governments... no new work estimated to cost more than Rs. 2,500 shall be commenced at the cost of the Imperial or Provincial Funds, even though it may already have received the sanction of the Government"mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B2.

[Evolution of Provincial Finance in British India PARTII.htm - _msocom_9](#)

and decided to make large reductions in the expenditure on

productive public works. When it was discovered that these restraints on expenditure were not enough to bring about an equilibrium in the Imperial Budget the Government of India adopted a plan of levying benevolences on the provincial balances as a better alternative to increased taxation. It was, of course, an abrogation of one of the most fundamental conditions of Provincial Finance that the Provincial Balances, though in possession of the Imperial Government, were a sacred trust to be released only when required by the provinces. But the solvency of India was deemed to be more sacred than the sanctity of the terms of Provincial Finance. Accordingly the following sums were appropriated by the Imperial Government from the balances of the provincial Governments:—

Province	Contributions to the Imperial Government		
	1879-80	1880-81	Total in Lakhs.
	Rs.	Rs.	Rs.
N.W.P.	10	10	20
N.W.P. .	7 ½	7 ½	15
Bombay	4	4	8
Punjab	3	3	6
Burma	3	3	6
Central Provinces	2 1/2	2 1/2	5
Madras	2	2	4
Assam	1 1/2	1 1/2	3
Total	33 1/2	33 1/2	67

These contributions were repaid in 1882-3; but for the time being they were in effect a gain or at least a relief to the Imperial treasury. The real gain to the Imperial treasury consisted in the retrenchments made in assigning allotments for services transferred to provincial management. The amount of retrenchment secured in the case of each

of the provinces may be summarised as follows :—

Province	Rs.	Retrenchment
N.W. Provinces	3,54,000	5 percent of the total allotment.
Oudh	73,000	"
Bengal	5,90,000	"
Central Provinces	90,000	"
Bombay	73,000	"
Punjab	2,41,000	"

This does not exhaust the total gain reaped by the Imperial Government. Two other ways of gain must also be mentioned along with this. It should be borne in mind that by taking the standard yield of the assigned revenues at a level higher than what was justified by their history, the Government of India was able to assign reduced sums for the provincial services than what it would have been required to do if the standard yield had been fixed at a lower level. This reduction in assignments owing to abnormal estimates of the ceded revenues was a direct gain. The excesses above the standard also opened additional possibilities of gain owing to the clause governing the cessation of revenues, although it must be recognised that under the same clause the Government of India stood to lose in the eventuality of the actual revenue falling below the standard. How much it gained from these conditional channels of gain it is difficult to say. On the whole, it cannot be denied that the gain to the Imperial treasury was substantial.

Thus the results show that the scheme of Provincial Finance on the basis of assigned revenues was a success both from the standpoint of the Provincial and Imperial Governments, so that they agreed mutually to make a further move in the development of the scheme

which constitutes its third stage.

THE EVOLUTION OF PROVINCIAL FINANCE IN BRITISH INDIA

PART II: PROVINCIAL FINANCE: ITS DEVELOPMENT

Contents

Budget By Shared Revenues

CHAPTER VI

BUDGET BY SHARED REVENUES

1882-83 to 1920-21

At every step in the direction of enlarging the Provincial Budgets the crucial question, as has already been pointed out, was with regard to the difficulties of balancing the revenues and charges proposed to be incorporated therein. The two steps heretofore taken, one in 1871 and another in 1877, in the direction of the evolution of Provincial Finance, were marked by two distinct methods of balancing the Provincial Budgets. On the former occasion the Imperial Government supplied the Provincial Governments with fixed lump sum assignments from the Imperial treasury. On the latter occasion this mode of supply was partly replaced by assigning certain sources of revenue for the use of provincial Governments. The plan of assigned revenues, though it went a great way to remove the most serious defect of the measures of 1871-2, which transferred to the Local Governments the responsibility of meeting charges which had an undoubted tendency to increase, with income which, although not quite fixed, had little room for development, fell short of the requirements of Provincial Finance from the standpoint of elasticity. Superior to those of 1871 though they were, the measures of 1877 were so short of the fullest requirements of elasticity in finance that the Government of Madras refused to accept the enlarged scheme and preferred to abide by the arrangements of 1871. The scheme of 1877 was not offered to Burma or Assam. But when the Government of India made such an offer in 1879 it was obliged to

turn over a new leaf, for, though the difficulty of meeting expanding charges with fixed assignments was overcome in some of the provinces by economy and good management, it was considerably felt by the province of Burma. The expenditure of the province in the seven years preceding the scheme of Provincial Finance aggregated to Rs. 1,98,45,970, while the assignments for the following seven years, aggregated apart from special additions, Rs. 2,20,22,770, showing an excess of Rs. 21,76,800, in all or about 3 lakhs a year. But the expenditure during the same period amounted to Rs. 2,40,77,885, being an excess of Rs. 42,31,915 in all or about 6 lakhs a year. The difference therefore between the excess assignment of 3 lakhs, and the excess expenditure of 6 lakhs a year, had to be made good by the Imperial Government by special grants averaging 2 3/4 lakhs every year to maintain the solvency of the Province.

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B3. Evolution of Provincial Finance in British India PARTII.htm - _msocom_1](#) The Government of India while making the supplementary assignments was not unconscious of the demoralising effect of such doles. In fact it was admitted that it would have been much better to have augmented the provincial assignments to Burma by 22 1/2 lakhs at the start had it foreseen the necessity for it, than to have been obliged to grant an equal amount in the form of supplementary aids so detrimental to economy and good management. The experience of Burma had driven home the fatuity of assignments as a mode of supply and the Government of India had realised that elasticity in revenues was a vital condition for the success of Provincial Finance. To assign revenues to Burma was therefore inevitable. Being overborne by the needs of the Province and by the fact that the Province yielded a substantial surplus to the Imperial treasury, the Government of India conceded that the Province was "entitled to have its real wants supplied more liberally than heretofore."

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B3. Evolution of Provincial Finance in British India PARTII.htm - _msocom_2](#) It is in the method adopted for the purpose of giving a liberal treatment to the province of Burma that the new step in the method of supply to the Provinces was taken. In the settlements made in 1877-8 with the five Provinces—Central Provinces, N.W.P. and Oudh, the Punjab,

Bombay and Bengal—the Heads of Account under Revenue and Expenditure comprising the Indian Budget were grouped under two distinct categories : (1) wholly Imperial and (2) wholly Provincial. But in the case of Burma the Heads of Account were grouped under three distinct categories : (1) wholly Imperial, (2) wholly Provincial, and (3) jointly Imperial and Provincial³ In so far as items of revenue and expenditure were in the exclusive keeping of the Imperial or the Provincial Government, the settlement did not differ in spirit from that obtaining in other provinces. The difference consisted in carving out a third category of Account to be made of *jointly Imperial and Provincial*. By it certain revenues and charges were marked off from the rest and were shared between the Imperial and the Provincial in some definitely fixed proportion. The object of the arrangement was to replace rigidity in the Provincial revenues by elasticity. In the finances of the other Provinces there was elasticity in so far as their assignments were replaced by assigned sources of revenue. But to the degree in which their revenues were made up of fixed assignments their finances inevitably suffered from rigidity. In the case of Burma, however, the substitution of shares of growing revenues for fixed assignments gave complete elasticity to the Provincial revenues without which it had become so difficult to shoulder the responsibility of meeting expanding charges. - In recasting the framework of the Provincial Budget of Burma on the principle of shared revenues, all the heads of receipts and charges were made wholly Provincial, with the exception of the following, which were treated as wholly Imperial :—

(1) The Army	Receipts and Charges.
(2) Postoffice	“
(3) Telegraph	“
(4) Account Department	“
(5) Meteorological Department...	“
(6) Political	“
(7) Remittance of Treasure and Premium on Bills of Exchange and unclaimed Bills of Exchange.	

The third category of revenues and charges, namely, jointly Imperial and Provincial, covered the following items :—

(1) Land Revenue, including capitation tax, but excluding Fisheries, with such Land Revenue Refunds, charges of collection and settlement as cannot be attributed to Fisheries only.

(2) Forest revenue. Expenditure and Refunds.

(3) Export Duty on rice, and Refunds.

(4) Salt Revenue, Expenditure and Refunds.

Items comprising the third category were divided between the Imperial and Provincial Governments in the proportion of five-sixths to the former and one-sixth to the latter. By adopting this method of supply Burma, unlike other provinces, secured funds of an elastic character, for, even though the shares remained fixed the amount they brought in any one year varied with the variation in the total yield of the revenues assigned or shared. Of course everything depended upon how Burma nursed the revenues delegated to its control. But if it did its duty, unlike the other provinces, its labours were not to be unrequited.

The same principle of shared revenues was applied to the province of Assam, which had hitherto continued on the old basis of 1871. Although the settlement with that Province had been made after that with Burma had been carried out, the principle of shared revenues as a mode of balancing the Provincial Budget was not adopted on any appreciable scale. The reason for this break in the progressive realisation of the principle is not to be attributed to any spirit of hesitation on the part of the Government of India, but is to be ascribed mainly to the necessity of the case. As it was contemplated to reincorporate the province into Bengal it was deemed expedient to frame the Provincial Budget of Assam on the same plan as that of Bengal so that their financial fusion might be as easy as the administrative. Thus the heads of revenue and expenditure which were provincial in Bengal since 1877 were also made provincial in Assam in 1879, including "Law Officers," which for temporary reasons were reserved as Imperial in Bengal. The only point at which the new principle was applied consisted in making the Land Revenue head in Assam a joint head to be shared by the Imperial and the

Provincial Governments in the proportion of four-fifths of its net yield to the former and one-fifth to the latter.

The beneficial results of the new settlement with these two Provinces are easily to be seen from the following comparative table of the estimates of their budgets as prepared on the old basis and as recast on the new :—

000 omitted

	Assam Budget Estimates				Bt. Burma Budget Estimates			
	Old Basis		New Basis		Old Basis		New Basis	
	1878	1879	1878	1879	1878	1879-	1878	1879

								1436

From the Resolution of the Government of India in the Department of Finance and Commerce, No. 1249, dated March 13, 1879.

Once the new principle of shared revenues was established in the case of Burma and Assam it was not possible for the Government of India to withhold its application from the other Provinces. The settlements made in 1877 with the several Provinces were not only of short duration but were also of unequal durations. It was only in the case of Bengal and Bombay that the settlements were made for five years commencing from 1877-8. In the case of the Central Provinces and the Punjab the period fixed was three years, while in the case of the North-Western Provinces it was as short as two years, from

1877-8. It is evident from this that the settlements with some other Provinces were to have expired soon after those with Burma and Assam had been completed, and would have required to be reconstituted on the basis of shared revenues. The Government of India, however, delayed the process, and in that it did wisely, for it was too soon to make the new principle of shared revenues and charges a basis for universal application. It was nothing but prudent to have regarded it as it were in its experimental stage. Secondly, the disadvantages of the *ex-parte* treatment of the Provincial Budget had come to be realised. It then dawned upon the Government of India that the several provincial Budgets were only parts of an organic whole, viz., the Imperial Budget, and it was manifestly inadvisable to frame the Provincial Budgets each by itself without regard to the claims, needs and exigencies of all others. But in order that this comparative and compromising operation of judging the claims of one in the light of the needs of others be performed with the desired effect of treating the different provinces in an equitable manner, it was essential that all the Provincial Budgets be dealt with simultaneously. The importance of this consideration and the desire to gain time in order to profit by the experiences of Burma and Assam led the Government of India with the consent of the Provincial Governments to extend or shorten, as the case may be, the duration of their financial agreements with the Provinces so as to bring about a synchronous expiry of them all on March 31, 1882.

Financial Settlements of 1882-83

The new settlements made with all the provinces with effect from 1882-31 mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/27B3. [Evolution of Provincial Finance in British India PARTII.htm - _msocom_4](#) were marked by an extension of the principle applied to Burma since 1878. Certain heads, as few in number as possible, of revenues and charges were wholly, or with minute local exceptions only, grouped as Imperial. Others were classed as wholly Provincial. The remaining were placed in an intermediate category designated as joint and were in most part shared equally between the Imperial and the Provincial Governments. In those cases, however, where the provincialised

expenditure exceeded the resources from the provincialised as well as the shared revenues, the balance instead of being provided as heretofore by fixed assignments from the Imperial exchequer was rectified for each Province by a fixed percentage on its land revenue—a wholly Imperial head of revenue except in the case of Burma, where the percentage was extended to the Imperial rice export duty and salt revenue as well.

Along with the enlargement of the scheme of Provincial Finance in 1882 the Government of India was also anxious to introduce simplicity and uniformity in the matter of grouping the different heads of revenue and expenditure under the three categories now established. It will be remembered that the agreements effected in 1877 were marked by diversity and intricacy. The same charges were not provincialised in all the Provinces. A charge which was Provincial in one was Imperial in another. Again, in transferring charges a grant was often broken up so that a part was made Provincial and a part reserved as Imperial. On the revenue side the arrangement was not a little intricate. The computations owing to the proviso in respect of the assigned revenues made the calculations far from simple. Both these defects were, however, removed when the settlements were framed in 1882, and it is to indicate what heads of revenue and expenditure were provincialised, what were imperialised, and what were divided and to what extent, that the following attempt is made.

Revenues—.

	Imperial	Provincial
Land Revenue	The whole except as entered in the Provincial Column	In <i>Burma</i> , Fisheries; in the <i>N.W.P. and Oudh</i> collections from the Terai, Bhabar and Dudhi Estates, Rents of Water-Mills and Stone Quarries; in <i>Bombay</i> , Rents of Resumed Service Lands and Service Commutations. In all Provinces, a fixed

		percentage on the Imperial land revenue to cover the difference between Provincial Revenue and Provincial Expenditure
11 Tributes	The whole.	Nil.
III Forest	Half.	Half.
IV Excise	Do.	Do.
V Assessed Taxes	Do.	Do.
VI Provincial Rates	Nil.	The whole.
VII Customs	All except as entered in the Provincial Column	All items other than Customs Duties: and, in <i>Burma</i> only, the same percentage on Export Duties as on the Land Revenue.
VIII Salt	All except as entered in the Provincial Column	All items other than Duty on Salt and sale of Salt; and, in <i>Burma</i> only, the same percentage on the salt Revenue as on the Land Revenue
IX Opium	The whole.	Nil.
X Stamps	Half.	Half.
XI Registration	Do.	Do.
XIII Post Office	Nil.	The whole.

XVI Law and Justice	Do.	Do.
XVII Police	Do.	Do.
XVIII Marine	As at present.	As at present.
XIX Education	Nil.	The whole.
XX Medical	Do.	Do.
XXI Stationery	Nil.	The whole.

and Printing.		
XXII Interest	All except as entered in the Provincial Column.	Interest on Government securities (Provincial).
XXIII Pensions	Book transfers from the Military and Medical Funds and subscriptions to these Funds	The remainder.
XXIV Miscellaneous	Gain by Exchange on Imperial transactions, Premia on Bills and unclaimed Bills of Exchange	The remainder.
XXV Railway	As at present.	Whatever is now provincial in each Province.
XXVI Irrigation and Navigation.	Do.	Do.
XXVII Other Public Works	Receipts from Military Works	The remainder.
XXXI Gain by Exchange on Transactions with London	The whole.	Nil.

Expenditure

1. Interest	The whole except as entered in the Provincial	Interest on local Debenture Loans. 4 1/2 percent, on the capital cost to the commencement of the year, and
-------------	---	--

	Column.	2 1/2 per cent. on the capital cost during the year, of all Public Works, whether classified as Productive Public Works or not, of which Capital and Revenue Accounts are kept: excepting, always, any portion of their cost supplied from the Provincial Revenues or by Local Debenture Loans. The rate of interest on the cost of Protective Public Works will be the subject of a special agreement.
2. Interest on Service Fund's and other Accounts.	Interest on Service Funds and deposits in Savings Banks.	The remainder.
3. Refunds and Drawbacks	Of the Imperial share of revenues.	Of the Provincial share of revenues.
4. Land Revenues	The same percentage on charges for collection of Land Revenue and on the cost of Surveys (including expenditure hitherto charged in the Accounts of the Central Government) and Settlements elsewhere than in <i>Bombay</i> and <i>Madras</i> , as is retained of Land	The remainder.

	Revenue.	
5. Forest	Half	Half. Do. Do. The whole. Do. The remainder.
6. Excise	Do.	Nil. Half. Half. The whole. Do.
7. Assessed Taxes	Do.	"
8. Provincial Rates	Nil	
9. Customs	Do.	
10. Salt	In <i>Madras</i> the whole. Elsewhere the purchase and manufacture of salt; and in <i>Bengal</i> the cost of preventive lines and operations: in <i>Bombay</i> charges connected with the administration of Salt Revenue in Portuguese India.	
11. Opium	The whole	
12. Stamps	Half	
13. Registration	Half	
15. Postoffice	Nil	
16. Telegraph	Do.	
17. Administration	Account and Currency Offices and allowances to Presidency Banks.	The remainder.
18. Minor Depts	Archaeological and Meteorological Depts., Census Gazetteers and Statistical Memoirs.	The remainder.

19. Law and Justice	Nil.	The whole.
20. Police	Frontier Police and Police employed on Imperial State Railways on Salt preventive duties.	The remainder.
21. Marine	Whatever is now Imperial.	Whatever is now Provincial.
22. Education	Do.	Do.
23. Ecclesiastical	The whole.	Nil.
24. Medical	Nil.	The whole.
25. Stationery and Printing	Stationery purchased for Central Stores.	The remainder, including cost of stationery obtained from Central Stores.
26. Political	The whole.	Nil.
27. Allowances and Assignment	The whole except as in the Provincial Column.	In <i>Bombay</i> , items now Provincial
28. Civil Furlough and Absentee Allowances.	The whole.	Nil.
29. Superannuations	Items not provided for in the Al Provincial Column.	pensions and gratuities, except pensions payable from the Military and Medical Funds brought to account in India: each Government being responsible for pensions and gratuities which it now pays, or hereafter grants or recommends, however earned and wherever paid.
30. Miscellaneous	Remittance of treasure, and discount on Supply Bills.	The remainder.
31. Famine Relief	Secondary	Wholly Provincial.

	liability.	
32. Railways	As at present.	Whatever is now Provincial.
33. Irrigation	Do.	Do.
34. Other Public Works	Military Public Works, and except in <i>British Burma</i> , Offices of the Supreme Government; Works in the Salt, Opium, Post Office, Imperial Telegraph and Ecclesiastical Depts. And Mint and Currency Offices; and Bengal Surveyor General's Offices.	The remainder.
38. Loss by Exchange	The whole.	Nil.

On the transactions of 1881-82 the Government expected to gain £ 470,000 a year. Of this sum, however, it returned to the Central Provinces £77,900, for improving the position of the subordinate civil services and other general purposes; to Madras, £ 20,000, for provincial public works; and to the N.W.P. and Oudh, £326,000, of which £ 10,000 was for additional Kanungoes in Oudh, and the remainder, £316,000, for a remission of local taxation. Besides these benefactions the Government of India gave for a favourable start to Bengal, £ 285,000; Burma, £ 20,000; N.W.P., £ 55,000, to be added to their balances before the close of the year 1881-2. These benefactions, which amounted to £496,000 a year, were expected to turn the annual gain of £470,000 into an annual loss of £26,000 to the

Imperial

exchequermk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B3. Evolution of Provincial Finance in British India PARTII.htm - _msocom_5

In this connection it must also be recalled that the Government of India reimbursed the Provincial Governments of the amount of the benevolences it had levied on them in the years 1879-80 and 1880-1. But not long after the revision of 1882 the financial position of the Government of India, which had permitted of such a liberal treatment, suffered a reverse, and the necessity for levying benevolences on the balances of the Provincial governments reappeared in 1886-7. In presenting the financial Statement for that year the Finance Member of the Government of India argued:—

"22. Since the estimates for 1885-6 were presented..... Indian administration and finance have entered on a new phase. The brief period of rest which the country had enjoyed since 1882 had drawn to a close..... By the events of the late years in Central Asia, India finds herself almost in contact with one of the great European Powers, and she cannot hope to escape the necessity which the position imposes on her of increasing her military strength. Events impending have occurred which have changed, as it was known they must change, the face of our estimates, and have thrust us violently out of the peaceful path of internal progress in which we had hoped to have been left undisturbed."

Among the other means employed to weather the storm the Government of India resorted a second time to nibbling at the provincial resources, and gathered a sum of £400,000 in the year 1886-7 by appropriating from their balances the above amount.

The condition of Provincial Finance during this period may be summarised in the following table :—

	Annual Surpluses and Deficits				
Provinces	1882-3	1883-4	1884-5	1885-6	1886-7
	£	£	£	£	£

*No balance left at the dose of the year.

Equilibrium.

**Balance obtained by excess of current revenue over current expenditure of the year.

Compiled from the annual Finance and Revenue Accounts of the Government of India.

The settlements entered into with the Provincial Governments in the year 1882-3 not only differed from the preceding settlements in the replacement of fixed assignments by shares in the Imperial revenues, but they also differed in another important respect, namely, their duration. Though the results of the scheme of provincial Finance have been presented in one Table covering the period 1871-7, it must not be supposed that the settlements with the various Provinces were made for the period of six years. On the other hand, the settlements were only annual and lasted up to 1877 by the process of constant renewals. The results have been presented together for a continuous period not because the settlements were made for that period, but because the principle on which they were based endured for that period. After 1877 the settlements no doubt were made for a longer period. In two cases they were for five years

and for the rest the period ranged between two and three years. The short duration system, like the fixed assignment system, was of immense advantage to the Imperial treasury. The object of these settlements, it will be recalled, was firstly to put a definite limit on the demands of the Provincial Governments on the already too scanty resources of the Imperial Government. Evidently this object would have been better served had the duration of the settlements been longer than it was. But a longer duration would have deprived the Imperial treasury of its right to profit by an early revision of the revenue side of the contract. It was this consideration of not remaining too long out of pocket, that had hitherto prevailed upon the Government of India to shorten the duration of contracts as much as possible. But what was an advantage to the Imperial treasury was from the standpoint of the Provincial Government a serious drawback. Owing to the short durations of the settlements the Provincial Governments were not in a position to distribute the funds at their disposal on the incorporated services so as to open a new page in their financial history. They could not adopt a definite financial policy, for they feared that the new terms on renewal might compel them either to give up the policy or modify it so seriously as to prejudice its results. A single budget may seem nothing more than the conspectus of financial happenings of the year to which it pertains, yet to the financier who frames them year after year they embody a definite policy running towards its consummation. But a policy, however wisely adopted, may be thwarted by an unwise disturbance of the uniformity of conditions on which its fulfilment depends. This was just the flaw that deteriorated the sound working of Provincial Finance. Constant renewals had a general disturbing effect, and the duration between any two of them was indeed too short to give a stable state of conditions. Being impressed by the fact that the advantages of a short-duration-contract to the Imperial treasury were enormously counterbalanced by its disadvantages to Provincial Finance, the Government of India, on the occasion of revising the settlements in 1882-3, made it a definite rule that they shall be quinquennial in duration ; that is, they shall not be subject to revision before the end of the fifth year from their commencement.

Revision of 1887-88

By virtue of this rule the settlements made in 1882-3 expired in 1887. The revision then undertaken, as well as the subsequent ones, left as a rule undisturbed the two categories of revenue and expenditure, namely, those wholly Provincial and wholly Imperial. It became almost a convention to leave them as they were since the separation in 1882, when the constitution of Provincial Budgets was thoroughly overhauled and consolidated. The only heads of revenue and expenditure that were revised, as revision fell due, were those that were grouped under the third category, namely, jointly Imperial and Provincial, otherwise known as "Divided Heads."

In the revision of 1887-8 the decisive factor was the unsatisfactory position of the Imperial Finances already referred to. To improve its financial position the shares in the joint heads were altered so that each Local Government was allowed to appropriate three-fourths of the stamps and one-fourth of the excise revenue, and required to bear the expenditure under those heads in like proportion. The proportions of land revenue were also altered so that three-fourths of it was made Imperial, and one-fourth Provincial. But the needs of the Imperial treasury were so great that the Government of India even revised some of the heads of the other two categories, namely, Salt, Customs, Interest, Irrigation and Railways, to its own advantage. The details of the gain to the Imperial treasury are as given below :—

Revenue	<i>Imperial Share</i>		Net Gain
	Increased —	Decreased	
Land Revenue	437,500		
Stamps (share reduced from 1/2 to 1/4 Excise (share increased from 1/2 to 3/4)	—810,000 } 5,000 290,000 }	947,500 155,000 —	215,000
Salt revenue of Burma imperialised Customs revenue of Burma			

imperialised Assessed taxes—divided in moieties			
State Railways gross earnings— Nagpur Chhattisgarh Patna-Gaya } Cawnpore-Achneyra }	—310,000		
Eastern Bengal, provincialised	—540,000		
Expenditure	Increased — Decreased		Net Gain
Land Revenue, entire provincialization of survey and settlement	145,000		
Salt in Bombay imperialised	— 90,000 {		
Customs in Bombay imperialised	— 50,000		
State Railways—			
Working expenses:—			
Provincialised	305,000 {		395,000
Imperialised ...	— 215,000	}	
Interest—Provincialised	— 70,000		
Imperialised	— 65,000	}	
Irrigation—Provincialised. Bengal	65,000 {		
Irrigation—Provincialised Madras	230,000	}	
Add—Small items of accounts unenumerated			20,000

This gain to the Imperial treasury was distributed in the following proportion among the various Provinces :—

Provinces	Increase of annual resources under the principal Provincial Heads of Revenue as estimated on comparison of 1882 and 1887			Amount by which Annual Provincial Resources were reduced by the Revision of 1887
	Land Revenue	Stamps and Excise	Total	
	£	£	£	£
C.P.	2,200	45,500	47,700	15,600
Burma	4,700	9,200	13,000	
Assam	22,300	21,300	43,600	24,600
Bengal	19,200	171,550 1	190,750	103,600
N.W.P.	8,000	30,150	138,150	100,000
Punjab	32,800	23,100 1	55,900	174,400
Madras	27,750	42,550	150,300	
Bombay	99,000	198,550	297,550	221,900
Total ...	195,950	741,900	937,850	640,100

This would have been the net gain to the Imperial treasury had it not been for the fact that it conceded to Burma the sum of £ 10,000. The net gain was thus reduced to £ 530,100 per annum. The condition of Provincial Finance during the period of 1887-92 may be judged from the following table presenting the annual surplus and deficit of each of the different Provinces :—

	Annual Surpluses and Deficits				
	1887-	1888-89	1889-90	1890-91	1891-

	88				92
	Rs.	Rs.	Rs.	Rs.	Rs.
C.P.	13,148	22,583	— 12,322	—31,573	17,540
Burma	77,028	11,560	64,072	106,216	50,598
Assam	7,751	26,343	20,090	—17,871	31,185
Bengal	131,007	—65,792	102,547	— 120,377	— 11,934
N.W.P. & Oudh .	— 53,900	45,949	102,710	—12,544	— 4,399
Punjab	12,446	32,142	29,264	31,367	— 1,719
Madras	105,371	113,932	144,571	— 136,739	— 241,770
Bombay	— 24,574	18,322	41,361	— 123,887	— 53,189

Compiled from the annual Finance and Revenue Accounts of the Government of India.

Revision of 1892-3

The next revision of provincial settlements under the rule of quinquennial revisions occurred in 1892-3. The new settlements to commence from that year did not differ in principle from those of 1887-8. The shares in the Joint Revenue were so readjusted as to give to the Imperial treasury a larger gain from the growing yield of the provincialised sources. The amount resumed by the Imperial Government at this revision through readjustments of shares was estimated as follows :—

Province	Increase of Revenue in 1891-92 (Revised Est.) as compared with the Estimate for the Contract of 1887-88 to 1891-92	Amount resumed by the Government of India
	Rs.	Rs.
C.P.	119,200	22,700
Lower Burma	334,900	58,900
Bengal	517,700	51,900
N.W.P.&Oudh	53,300	56,900
Punjab	195,400	41,000
Madras	313,200	103,800
Bombay	399,200	131,100
Assam	99,800	
Total	2,042,700	466,300

But this gain to the Imperial treasury seriously disturbed the equilibrium between the expenditure of the Provinces estimated as normal for the ensuing period and the normal estimated yield of revenues left to them. To restore equilibrium between their normal expenditure and normal revenue the Government of India reverted to the discarded method of fixed adjusting assignments, so that while the actual revenues and charges deviated from what was estimated as normal for the period of the settlement, the adjusting entry allowed by the Imperial Government to each of the provinces remained fixed throughout the whole period. The following is a statement of estimated normal expenditure and revenues of the different Provinces with their respective adjusting assignments as fixed for the new period :—

Provinces	Provincial Revenues			Provincial Expenditure
	Ordinary	Adjusting	Total	

	Revenue being a share of certain Receipts	Assignmen ts		re
	Rs.	Rs.	Rs.	Rs.
C.P.	567,600	220,500	788,100	788,100
Lower Burma	1,427,500	414,300	1,841,80 0	1,841,800
Assam	657,700	—112,700	545,000	545,000
Bengal	4,249,300	—143,900	4,105,50 0	4,105,900
N.W.P. & Oudh .	3,403,500	—250,000	3,152,90 0	3,152,900
Punjab	1,370,400	348,500	1,718,90 0	1,718,900
Madras	2,479,300	325,400	2,804,70 0	2,804,700
Bombay	3,123,900	771,400	3,895,30 0	3,895,300

The evil effect of large resumptions and fixed assignments will be clearly seen in the condition of Provincial Finance as indicated by the annual surpluses and deficits over the period of the settlement:—

Province	Annual Surpluses or Deficits				
	1892- 93	1893- 94	1894-95	1895-96	1896-97
	Rs.	Rs.	Rs.	Rs.	Rs.
C.P.	— 21,798	— 60,772	— 105,108	19,653	— 37,408*
Burma	66,642	— 90,653	— 272,319	226,505	780

*No closing balance left.

Compiled from the Annual Finance and Revenue Accounts of the Government of India.

It must, however, be admitted that the financial arrangements of the Provinces during this period were considerably disturbed by the outbreak of plague and famine towards the close of the settlements. The expenditure which the Provinces were obliged to incur to meet these two calamities depleted the resources of all and brought the Central Provinces and the North-West Provinces to the verge of bankruptcy, from which they were rescued by the following contributions made by the Government of India in aid of their balances in the year 1896-7 :—

To Central Provinces ... Rs. 526 lakhs.

To N.W.P. and Oudh ... Rs. 1,609 lakhs.

THE EVOLUTION OF PROVINCIAL FINANCE IN BRITISH INDIA

Continued...

CHAPTER VI BUDGET BY SHARED REVENUES Revision of 1896-97

This depression in Provincial Finance was alleviated to some extent at least in the revised settlements of 1896-7 by allowing a higher standard of expenditure and of revenue to the Provinces than was granted to them in 1892. The following table presents the old and the new standard of expenditure with the percentage difference between them :—

Provinces	Standard Net Expenditure		Increase per cent.
	1892 Rs.	1897 Rs.	
Central provinces	653,300	710,700	8.8
Lower Burma	1,064,600	1,206,100	13.3
Assam	467,600	564,900	20.8
Bengal	2,816,700	3,125,500	10.9
N.W.P.	2,215,400	2,428,700	9.6
Punjab	1,384,600	1,537,300	11.0
Madras	2,054,800	2,238,600	8.9
Bombay	2,049,500	2,544,100	5.6
Total	13,066,500	14,355,900	9.9

This new and enhanced standard of expenditure called for a revision of the shares of the Imperial and Provincial Governments in the joint revenues. But the revision had to be so devised that while it gave larger resources to the Provinces it obviated the necessity of making fixed assignments as much as possible; for the Government

of India had learnt to its cost that fixed assignments on a large scale tended to make the resource side of the Provincial Finance rigid to such an uncomfortable degree that, if the variability of expenditure surpassed the expandability of the revenue incorporated in the Provincial Budgets, it was perforce obliged to distribute benefactions to ease what would otherwise be a difficult situation. Secondly, these fixed assignments also created a certain degree of inequality as between the backward and the more advanced Provinces. In the advanced Provinces the fixed assignments formed a comparatively smaller part of their resources than they did in the case of the relatively backward Provinces, and, as larger expenditure could be undertaken by the Provinces only when their revenues expanded, the advanced Provinces, a larger part of whose resources were of an expanding nature, obtained a more favorable treatment than the relatively backward Provinces, a large part of whose resources were of a frozen character. This was rightly conceived by the Government of India as the reverse of what ought to have been, having regard to the fact that the needs of the backward Provinces were relatively more imperious than those of the advanced Provinces. To obviate this injustice the Government of India enhanced the shares of the backward provinces in the joint revenues by reducing *per contra* the fixed assignments made at the last revision. To the Punjab it gave .4 and to the Central Provinces .5 of the Land Revenue instead of .25 only. The share of Burma in the Land Revenue was raised to .66, and to make provision for the enhanced expenditure due to the addition of Upper Burma, and in lieu of the railway revenue withdrawn from it, Burma was allowed to appropriate .5 of the Excise instead of .25 only. The financial condition of the North-Western Provinces was not very happy. Its revenue had proved so very unprogressive that it advanced only 2 per cent. between 1892 and 1897. The treatment of the North-Western Provinces at the revision of 1892 was also a little unjust. The revision had left its revenues short by 5 lakhs of its standard expenditure, to be made up by reduction of its balances. To make amends for this the Government of India re-distributed the shares in the Land Revenue to the advantage of the North-Western Provinces. In addition to this the Government of India gave to that

Province a grant of 4 lakhs for the year 1897-8, to enable it to establish district funds on a financially independent footing, a result accomplished long ago in every other Province in British India. To give an equitable treatment to the backward as well as to the advanced Provinces, it realised that an unequal treatment was the only proper way. It therefore adopted a less liberal attitude in revising the terms of the settlements with the more advanced Provinces of Bengal, Madras and Bombay. It allowed them a proportionately smaller increase of expenditure than the backward Provinces, as may be seen from the figures given above, and reduced slightly their shares in the revenues.

On the occasion of this revision the gain to the Imperial exchequer was practically negligible. In 1877 its total gain by retrenchment amounted to 40 lakhs a year; in 1882 the Imperial Government was so very prosperous that instead of contriving for a gain it surrendered to the Provinces 26 lakhs of the annual imperial revenue. But in 1887 it resumed 63 lakhs and in 1892, 46 lakhs. On this occasion however its gain was nil, for what it got from the advanced Provinces it gave to the backward ones.

Just and liberal as the terms of the settlement were, the abnormal circumstances which disturbed the entire period of the settlement made such heavy demands on the Provincial resources that, ample though they were, they fell far short of the requirements of the Provinces. The famine of 1896 and 1897 affected all the Provinces, although in unequal degree. In the North-Western Provinces and Oudh, the Central provinces, and Burma the effect was most severely felt. In Madras, Bengal and the Punjab it was serious, and in Burma it was slight. On the other hand, the famine of 1899 and 1900 affected Bombay and the Central Provinces most severely, the Punjab very seriously and the rest of the Provinces slightly. And Assam, though unaffected by either of the two famines, suffered very severely from the great earthquake of June, 1897. Besides famine the plague was also making its ravages and taking its toll. As a result of these unforeseen calamities all the Provinces were forced to incur extraordinary expenditure on preventive measures, for which no provision was made in the standard of revenue fixed for the period

of settlement. The expenditure on these unforeseen calamities being of an extraordinary nature was treated as imperial and defrayed from the Imperial exchequer, but even this much succour did not prove equal to the necessity and the Government of India was obliged to make special grants-in-aid of the Provincial Revenues as shown on page 168.

Thus the Government of India was not only obliged to pay for the cost of the famine, but to grant funds to restore equilibrium and to provide for useful public services held up or curtailed by the Provincial Governments owing to the extraordinary circumstances of the time. All this aid from the Imperial Government was made available because of the very prosperous condition of the Imperial finances throughout this period. While it is better that governments in general should always be in penury, the surpluses in the Imperial Finance proved a timely resource, the utility of which was doubled by the commendable way in which they were spent. Besides giving them grants for useful public works the superfluous funds of the Imperial Government were utilised in carrying out the following additional measures to the relief of the Provinces:

- (1) Remission of Imperial Land Revenue Rs. 50,94,000 and reimbursement to the Provinces for their share remitted Rs. 59,81,000; in all Rs. 1,10,75,000.
 - (2)(1) The abolition of the pandhari tax in the Central Provinces, costing Rs. 7,000 a year.
 - (3) The reduction of the patwari rate in Ajmere, from 10 per cent. on land revenue to 6 1/4 per cent.; the amount of the local revenue remitted was—Rs. 13,000, but the contribution paid to the local fund was Rs. 23,000
- mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/27B4 Evolution of Provincial Finance in British India PARTII.htm - _msocom_1 Taking into account these various contributions in aid of Provincial Revenues, the following table is presented as indicative of the condition of the Provincial Finances during this period of settlement :—

3.For improving district and Other establishments.

A. Allotment for Public Works in Baluchistan, Rajputana and Central India.

B. Amount taken the "India" estimates for subsequent distribution to the provinces.

.. * Compiled from the annual Financial Statements of the Government of India

Revision of 1902-03

Settlements made with the Provinces in 1897 should have ended in the ordinary course of time in 1902-3. The central operation in the periodic revision of the settlements was to arrive at the standard provincial expenditure for the ensuing quinquennium and as a rough and ready method of decision the average expenditure during the expiring quinquennium was taken as a standard expenditure for the opening quinquennium. There is nothing grossly erroneous in such a procedure, provided the preceding and succeeding quinquenniums are equally normal with respect to the course of their events. But as we have seen, the events of the past quinquennium were entirely abnormal and could not have been made the basis of any calculations worthy of trust. To be on the safe side the Government of India thought it desirable to await the return of normal times before undertaking wholesale revisions of provincial settlements. The occasion of 1902-3 for revision was therefore postponed save in the case of Burma. For, the last settlement had become unduly favourable to that Province in comparison with the other Provinces, notwithstanding the very nice and equitable calculations on which the settlements of 1896-7 were based. The extent to which the revenues had exceeded its expenditure is indicated in the following table:—

	Estimated		
	Standard	Estimat	
	for	es	
Burma	the	for	Differenc

	Settlement	1902-03	e
	of 1897-98		
	to		
	1901-02		
	Rs.	Rs.	Rs.
Revenues	2,93,81,000	3,73,86, 000	80,05,000
Expenditure	2,93,81,000	3,31,86, 000	38,05,000
Surplus		42,00,00 0	

The continuance of such an outcome was deemed unfair to the Imperial and unjust to the other Provincial Governments. The financial settlement of the Province of Burma was accordingly revised notwithstanding the established canon of simultaneous revision, when the occasion presented itself in 1902-3. The revision resulted in the resumption by the Government of India of this surplus by readjusting the shares of the Province in the joint revenues. The share in the Land Revenue was reduced from two-thirds to one-half and that in the Excise from one-half to one-third, and a few minor heads were added to the already provincialised heads of expenditure. By these changes the standard revenue and expenditure of Burma for the new settlement of 1903 to 1906 assumed the following totals :—

Adjusti ng	Total	Total	Assign ment
	Reven ues	Expenditu re	
Rs.	Rs.	Rs.	Rs.
2,78,31, 000	53,02, 000	3,31,33,00 0	3,31,3 3,000

Another province whose settlement was revised was the Punjab;

but the reason of it was different. The territory covered by the North-Western Provinces was divided into the North-Western Frontier Provinces and the United Provinces of Agra and Oudh, usually styled U.P. Along with this some of the districts of the Punjab were separated from it and joined to the newly created North-Western Frontier Province. This caused a readjustment of the provincial revenues and expenditure, but not any wholesale revision of the settlement. The changes were confined to the necessary alterations in the adjusting assignment.

Quasi-Permanent Revision 1904-05

With the exceptions noted above the settlements of 1897 were extended up to the end of the year 1904. The primary cause of the postponement of the revision as explained above was the abnormality of the conditions prevailing in the year 1901-2. But there was also another reason why the Government of India was so very anxious for the return of normal conditions before taking any steps towards revision. It was about this time that the Government of India contemplated to introduce permanency in Provincial Finance. The five-year budget system which in 1881 replaced the annual budget system as the basis of Provincial Finance, though a marked improvement in the direction of continuity and stability, was not deemed to be quite sufficient. Under it the Provincial Governments were left free to enjoy the fruits of their economy in expenditure and of the successful nursing of their resources for the period of five years. Beneficial as far as it went, this time-bar was found to exercise a most pernicious influence on Provincial Finance. Under the quinquennial budget system it so happened that the provincial Governments as the result of feeling their way under the new conditions were parsimonious in the first few years lest their expenditure should prove too much for their revenues, and extravagant in the last few years lest their expenditure should shrink below the standard and leave large margins to be cancelled by the Government of India on revision of their settlements. No Local Government could be expected to put into execution any carefully matured and well-thought-out scheme of improvement within the

short span of a quinquennium. All that it could do was to spend the first two or three years in working out a scheme and utilise the last two or three years in rushing it through, as was done by most of the Provinces. This tendency to undertake such schemes, the only merit of which was that they could be carried through before the revision, and mainly in order to reach the standard expenditure, was a direct consequence of the quinquennial budget system. This is by no means an a priori conclusion. A glance at the annual surplus of the provinces will indicate how they tend to rise in the beginning of the quinquennium and fall at the end of it. To obviate these evils of parsimony and extravagance the only remedy was to do away with the principle of quinquennial revision, and this the Government of India courageously undertook to effect. The right to revise was a much cherished right, and the Government of India had not failed to exercise it in the teeth of ail opposition from the Provinces. It was abandoned only because its exercise was deemed to be mischievous.

Taking the year 1903-4 as the normal one, the Government of India decided to revise the provincial settlements of all the different Provinces. The idea was to adjust the revenues between the Imperial and the Provincial Governments on the basis of the total expenditure they respectively controlled. It was found that the aggregate provincial expenditure represented less than one-fourth of the whole, while the Imperial expenditure, which included Army and Home Charges, aggregated in excess of three-fourths. These proportions of expenditure were taken as the basis of the division of revenue between the Imperial and the Provincial, and the following standard shares of revenue and expenditure under the joint heads were agreed upon :—

	Imperial	Provincial
Bengal, U.P., Bombay, Madras	3/4	1/4
Punjab, Burma	5/8	3/8
C.P., Assam	1/2	1/2

The reasons for adopting different standard rates of division in the

case of the Punjab, Burma, C.P. and Assam was to give the backward provinces opportunities of development in the same proportion as lay within the reach of the advanced provinces.

Of the settlements made in 1904-5 the Government of India declared that those made with the Provinces of Bengal, Madras, Assam and U.P. were to be permanent and not subject to revision in future, except when it was found that the financial results were unfair to a Province or to others by comparison, or to the Government of India when it was confronted by an extraordinary calamity. Owing to this proviso their settlements were termed quasi-permanent. To obviate the recrudescence of unfairness during the currency of the settlements the Government of India felt it necessary to enter certain modifications in the standard ratio of division of the joint-heads of revenue and expenditure with regard to the Provinces brought under the quasi-permanent settlement. They were as follows :—

Revenue	Provincial Share			Expenditure	Provincial Share		
	Bengal	Madras	U.P.		Bengal	Madras	U.P.
Excise	7/16	---	---	Excise	7/16	---	---
Stamps	1/2	1/2,	1/2	Stamps	1/2	1/2	1/2
Registration	Wholly	Wholly	---	Registration	Wholly	---	---
Irrigation	---	---	Wholly	Land Revenue	Wholly	Wholly	Wholly

Compiled from the Financial Statement of the Government of India for 1904-5, p. 67.

Besides these modifications the Government of India gave them the following grants :—

Bengal	Madras	Un
1. Addition of 4 lakhs to The assessment to Improve the pay of Ministerial establishments.	1. Grant of 20 lakhs for Survey and settlements	1. I rev gua 40]
2. Further addition not Exceeding 2 1/2 lakhs for For strengthening the staff of Deputy Collector.	2. Grant of Rs. 75,000 a year recurring for relief of certain local bodies.	2. C 1/2 in r boc
	3. Rs. 50,000 a year for agricultural experiment.	3. F yea Dis Fin
	4. Undertaking to bear charges for reorganising district administration	

Compiled from the same Financial Statement of the Government of India, p. 67.

The standard revenues and expenditure of the quasi-permanently settled provinces, after taking into consideration the alterations in their respective shares in the joint revenues, were as follows:—

STANDARD REVENUES AND EXPENDITURE (in thousands of rupees).

Province	Expenditure	Revenue		
		Revenues	Assignments	Total
Madras	3,50,48	2,90,82	5,966	3,50,48

Bengal	4,98,87	4,49,84	4,903	4,98,87
U.P.	3,66,64	3,62,64	400	3,66,64
Assam	72,07	60,07	1,200	72,07

The gain to the Imperial treasury on the revenue side brought about by the revision of the quasi-permanently settled Provinces was Rs. 2,06,000. But the revision also over-burdened the Imperial Government with a total charge of Rs. 36,000 hitherto borne by the Provincial Budget. Thus its net gain was only Rs. 1,70,000 a year on the normal.

As in the beginning of the scheme of Provincial Budgets, the government of India thought it advisable to make to the quasi-permanently settled Provinces the following initial grants so as to give them a fair start :—

To Bengal	Rs. 50 lakhs. (Exclusive of 50 lakhs for Calcutta University.)
To Madras	Rs. 50 lakhs. (Inclusive of 20 lakhs for survey settlement)
To U.P	Rs. 30 lakhs. (Exclusive of 1 1/4 lakhs to compensate for expenditure on the purchase of encumbered estates.)
To Assam,	Rs. 20 lakhs.

Of the remaining Provinces, Bombay and the Punjab were the next to obtain quasi-permanent settlements with effect from 1905-6.

In recasting their settlements the Government of India departed a little from the standard rate of division as applied to the Provinces quasi-permanently settled in 1904-5. With certain exceptions mentioned below the joint heads of revenue and expenditure were divided half and half, including Irrigation in Bombay, instead of three-fourths and one-fourth between the Imperial and the Provincial. The exceptions to this rule were the following :—

Revenue	Provincial Share		Expenditure	Provincial Share	
Heads of			Heads of		
Account	Bombay	Punjab	Account	Bombay	Punjab
Land Revenue	Guaranteed Up to 189 1/4, Lakhs	3/8	Land Revenue	Wholly	Wholly
Registration	Wholly	Wholly			
Irrigation	1/2	3/5 Guaranteed up to 28 lakhs			

Compiled from the Financial Statement of the Government of India

The standard revenue and expenditure of these two provinces under the quasi-permanent settlement was as follows :—

Province	Expenditure	Revenue		
		Revenues	Fixed Assignments	Total
		Rs.	Rs.	Rs.
Bombay	4,91,75,000	4,48,98,000	42,77,000	4,91,75,000
Punjab	2,49,50,000	2,46,50,000	3,00,000	2,49,50,000

The raising of the shares and the fixing of assignments on a liberal scale with respect to these famine and plague-stricken Provinces left the Imperial Government a loser on the transaction. On the basis of the new standard of revenues the Government of India lost Rs.

5,95,000 on the two Provinces together. The corresponding increase in the provincial shares of the joint heads of expenditure, however, lessened the Imperial expenditure by Rs. 2,21,000 a year. On the whole, therefore, the Imperial Government sacrificed a normal gain of Rs. 3,74,000 to give permanency and stability to the finances of these two Provinces. This was over and above the initial grant of Rs. 50,00,000 to each of them in order to enable them to set their sails in smooth waters.

A year after, the settlement of the Central Provinces was made quasi-permanent with effect from April 1, 1906. The shares in the joint heads of revenue and expenditure were raised, as they were in the case of Bombay and the Punjab, and particularly because of the addition of Berar, which was hitherto administered directly by the Imperial Government, from three-fourths and one-fourth to one-half between the Imperial and the Provincial, the share in the land revenue being guaranteed up to 82 1/2 lakhs. The only exception to this rule of even division was the Registration revenue, which was made wholly provincial. To balance the revenue with the expenditure an assignment of Rs. 27,07,007 a year was fixed and an initial grant of Rs. 30,00,000 was given for a fair start.

Along with the settlement of the Central Provinces it became necessary to reorganise the budgets of the quasi-permanently settled Provinces of Bengal and Assam owing to certain administrative changes. The two Provinces were reconstituted into (1) Bengal and (2) Eastern Bengal and Assam. In the revision of its financial settlement the new Province of Bengal was accorded the same proportionate share in the joint revenues as were granted to Bombay and the Punjab—namely, a share of a half in all the joint heads. Registration and that portion of the Land Revenue which was derived from Government Estates under the direct management of the Imperial Government were, however, made wholly provincial. In lieu of this favoured treatment the fixed assignment of the Province was reduced from 49.03 lakhs to 5.72 lakhs.

In the new Province of Eastern Bengal and Assam the principle of even distribution was applied to all joint heads of revenue and expenditure with the exception of Registration, which was made

wholly provincial. This enhancement of shares so greatly augmented the resource side of the Provincial Budget that the balance had to be restored by a negative operation of a fixed adjusting assignment from the Provincial to the Imperial funds. The following figures show the standard expenditure and the standard revenue for the three provinces brought under the quasi-permanent settlements:—

	Revenue			
		Revenues	Assignments	Total
	Rs.	Rs.	Rs.	Rs.
C.P.	1,76,43,000	1,49,36,000	27,07,000	1,76,43,000
Eastern Bengal and Assam	2,12,19,000	2,18,42,000	6,23,000	2,12,19,000
Bengal	4,72,73,000	4,67,01,000	5,72,000	4,72,73,000

Some modifications were later on introduced in the settlement of the Province, so that a positive adjustment had to be made by an assignment from the Imperial to the Provincial of Rs. 60,000 a year.

The only Province which was outside the pale of the quasi permanent system was Burma. The last quinquennial settlement made with it in 1902-3 having expired, the Government of India decided to bring it in uniformity with the other Provinces by giving it a quasi-permanent settlement from April 1, 1907. In a spirit of perfect impartiality it was also given an even share in the principal joint heads of revenue and expenditure, salt being imperialised as in other provinces. It was given an adjusting assignment of Rs. 90,68,000 a year to cover the deficits in its standard expenditure and an initial grant of Rs. 50,00,000.

By the year 1907 all the Provinces were brought within the pale of the quasi-permanent settlement, and we would have expected the scheme of Provincial Finance to run its course undisturbed by any further changes. But it so turned out, as must have been noticed, that the quasi-permanent settlements made with Madras and U.P. in 1904

had become a little unfair to them in comparison with the terms offered to the Provinces subsequently dealt with. To remove this ground of injustice, which was one of those recognised for subjecting the quasi-permanent settlements to revision, the shares of the two Provinces in the joint heads were raised with effect from April 1, 1907, to one-half, with the following exceptions :—

Madras	United Provinces
Revenue	Revenue
I. I. Registration. Wholly Provincial.	I. I. Land Revenue, 3/8 Provincial. Minimum of 240 lakhs guaranteed.
1. 1. Land revenue. Minimum receipt of 308 lakhs guaranteed if the provincial share fell below that amount.	II. II. Irrigation. Minimum receipt of 60 lakhs from major irrigation works guaranteed, if the provincial share fell below that amount.
II. II. Expenditure	
1. Registration. Wholly provincial.	
2. Land Revenue. Wholly provincial.	

The fixed assignments to cover the difference between the excess of standard expenditure over standard revenue were :—

To Madras - Rs. 22,57,000

To U.P. - Rs. 13,89,000

Thus the scheme of Provincial Finance in British India had advanced by gradual but distinct steps of assignment budgets, assigned revenue budgets and shared revenue budgets to a stage the terms of which were regarded by the parties concerned as sufficiently final. How far their expectations were fulfilled may be judged from the annual surpluses and deficits in Provincial Finance and from the range in their deviations as indicated in the following table:—

Compiled from the Annual Finance and Revenue Accounts of the Government of India.

But in taking account of these benefactions it must not be supposed that, barring a solitary case or two, they were necessary in order to preserve the solvency of Provincial finance as it was defined by the terms of the settlement made with the different provinces. Far from being insufficient, the revenues settled upon the different Provinces proved quite ample for their needs if we take the last years, and they are the most typical years, into consideration.

Permanent Settlements of 1912

Soon after the series of quasi-permanent settlements were concluded with the different provinces, the subject of Provincial and Central Finance in British India among others of a like nature was investigated by the Royal Commission on Decentralisation. In its Report issued in 1909 the existing method of allocating revenue and charges between the Imperial and Provincial Governments was upheld in principle. Of the many adverse criticisms passed by witnesses who appeared before the Commission only two were regarded by it as worthy of consideration: (1) The adjusting assignment and (2) Grants-in-aid, or doles as they were cynically termed. It was urged, and with some truth, that the adjusting assignments impaired the elasticity in provincial revenues by reason of the fact that while charges grew, that part of the provincial resource, which was made up by assignments, and in some cases it formed quite an appreciable part, remained unaltered. Secondly, it was argued that doles were demoralising and that it would be better to replace them by shares in growing revenue. The Commission seems to have been completely impressed by the disadvantages of large adjusting assignments, but it demurred, and rightly so, to the criticisms with regard to the doles. Every one extolled the benefits of decentralisation to the Provinces, but few realised the anxieties that it involved to the Government of India. It must have been clear that by the process of decentralisation the Government of India had given the Provinces more or less complete freedom in distributing their funds in any way they liked upon the services delegated to their management, while it had remained responsible for their efficient upkeep by the provisions of the law which governed its constitution. But the freedom which the provinces had obtained in carrying on the financial management of the services made over to their particular control, involved the possibility of their fostering certain services deemed to be of immediate utility to the people of the Provinces, and neglecting others the utility of which, though remote to the Provinces, was nevertheless real to the country as a whole. Neglect of nationally important services such as Education, Sanitation, Police,

was especially to be avoided during periods of plague and famine. But the Government of India could not enforce distribution of provincial funds on such services; for one of the vital conditions of Provincial Finance was freedom of appropriation on provincialised services, which were not distinguished into obligatory and optional as is the case in the continental system of local finance.

The Government of India was indeed not as powerless as the Central Government in England which, as is well known, cannot rectify cases of neglect by local authorities without resort to a writ of *mandamus*. But the way to bring a recalcitrant province to order, if easier, was not pleasant. For, the only way to mend such a situation was to end it by suspending the operation of Provincial finance. Rather than resort to such a grave measure the Government of India happily hit upon grants-in-aid of particular services as a powerful and well-tried mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B4 Evolution of Provincial Finance in British India PARTII.htm - _msocom_2 corrective to the negligence of the Province, and require it to maintain a "national minimum" in those services which it regarded as onerous rather than beneficial. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27B4 Evolution of Provincial Finance in British India PARTII.htm - _msocom_3 Convinced of the virtue of grants-in-aid as a brake on decentralisation degenerating into disintegration, the Commission only recommended that measures be taken to give Provincial Finance the greatest elasticity possible by diminishing the assignments to the smallest magnitude possible.

Following the recommendations of the Commission the Government of India decided to make certain modifications in the existing allocation of revenue and charges and to make the quasipermanent settlements permanent settlements from the year 1912. The permanent settlements did not differ from the quasipermanent settlements which they superseded in any material point so far as the principle of allocation was concerned. The only point of difference between them in that respect was a partial replacement of the fixed adjusting assignments by increased shares in the following joint heads of revenue and expenditure :—

Modifications in Shares

Revenues		Expenditure	
Heads of Account	Provincial Share	Heads of Account	Provincial Share
1. Land Revenue including the portion credited to Irrigation	5/8 to Burma 1/2 Punjab	1. Land Revenue	5/8 Burma 1/2 Punjab
2. Excise	Wholly in Eastern Bengal and Assam, Bombay. In C.P Bengal and U.P.3/4	2. Excise	Same as in revenue Column.
Assessed Taxes			
3. (P.W.D.)	1/2		
4. Forest	Wholly.	4. Forest	Wholly
5. Major Irrigation works (excluding portion of Land Revenue credited to it).	1/2 in Punjab, minimum of 4 lakhs guaranteed.	5. Major Irrigation	1/2
6. Major and Minor Irrigation.	1/2 in Bengal	6. Major and Minor Irrigation.	1/2/ in Bengal

The effect of these modifications in the shares in the joint heads of revenue and expenditure was to reduce the adjusting assignments to the following figures :—

Province	Assignments in Lakhs of Rupees from Imperial to Provincial	From Provincial to Imperial
Central Provinces...	21.40	

Burma...	13.12	
Eastern Bengal and Assam... Bengal...	13.55	18.40
U.P.		19.26
Punjab...	6.77	
Madras...		21.43
Bombay...		9.38

During the permanent as during the quinquennial and quasi-permanent settlements the grants-in-aid of specific services, unobjected to as they were by the Decentralisation Commission, were continued to be given to the different Provinces throughout the period although, as may be seen from the following figures, in a continually diminishing magnitude :—

SPECIAL GRANTS-IN-AID (in rupees)

Compiled from the Annual Finance and Revenue Accounts of the Government of India.

It was natural that the results of the permanent settlement should have been more anxiously awaited for with great interest by the Provinces, for the permanent settlement had the potentiality of a permanent gain or a permanent loss. That their anxiety on that score could not but have been completely allayed is amply supported by the repeated surpluses that meet the eye as it passes over the following figures of annual additions to and deductions from their balances during the period of its currency :—

PROVINCIAL SURPLUSES OR DEFICITS (in rupees)

While the condition of Provincial Finance was thus undoubtedly prosperous, the erratic movements in the provincial balances do not quite bear out the hope of orderly progress that was entertained of the permanent settlement. It should be noted, however, that the period during which the permanent settlement was current was not wholly a normal period. Part of the permanent settlement was no doubt a peace period, but it was not even as long as a quinquennium, and it should not on that account detract from the merits of a permanent settlement if it disclosed the faults of the quinquennial settlements. Most of the period covered by the permanent settlement was, however, a period of the Great War, the abnormal events of which could not have had any but disturbing effects on Provincial Finance.

Whether the permanent settlements would have been adequate for the purpose in view if sufficient length of time had been allowed for conditions to have become settled it is not given to us to say. For, from April 1, 1921, provincial Finance in British India entered on an entirely new phase. That phase of it will be dealt with in another part. Here the study of the growth of Provincial Finance as it developed stage by stage under the old phase comes to an end. But this study will not be complete until we deal with the mechanism which inter-related the finances of the Central and Provincial Governments

under the old phase. But before we proceed to do so it might be of interest as well as of value that the study of the final stage in the development of Provincial Finance were to close with the following retrospect of provincial revenue and expenditure which shows, as nothing else can, the small beginnings, the large strides and the vast proportions that Provincial Finance had reached during the half century over which it had been allowed to run its course.

PROVINCIAL FINANCE: ITS MECHANISM

CHAPTER VII

THE LIMITATIONS OF PROVINCIAL FINANCE

To those who might be expected to have a knowledge of the anomaly—unparalleled in the annals of administration—involving the existence of provincial Government without there being the necessary complement of Provincial Finance, the study could not but have been of profound interest as disclosing the manner in which the anomaly created in 1833 was rectified or seemed to be rectified in 1870 (Footnote#).

(Footnote#) There, however, prevails the idea that Provincial Finance existed long before 1870, But this is undoubtedly an error which may as well be corrected in this place by briefly recalling the history of financial decentralisation prior to 1870.

The year 1855 will always stand pre-eminent in the history of decentralisation of Indian Finance. It is from that year that local Finance dated its origin. It must not, however, be supposed that prior to 1855 there were no local revenues. On the contrary, there were very small funds such as Ferry Funds, Toll Funds, Cesses, etc., in existence and were spent on improvements of local utility, but the important point to note is that the balances from such funds were not carried to a separate account but as a rule merged in the general balances of the country, with the exception probably of Bengal and North-Western Provinces, where it seems that such balances were carried to separate local Fund Accounts (of. *Calcutta Review*, 1851, Vol. 16, pp. 464 and 466). It was by the Financial Resolution of May 11, 1855, that local Funds were completely separated from Imperial Funds and were treated as "Deposits"—a sub-division of the Account Head "Debt" (cf. *Accountant's Manual*, by Y. Venkatramaiah, Part I, Madras, 1866, p. 79) and by the Resolution of September, 1863, local Finance was established on a separate footing by the institution for each of the different provinces of a distinct local Fund Budget as separate from the Imperial Budget. It so happened that in the absence of local authorities the Government of India entrusted the task of the preparation and execution of the local Funds Budget to the respective Provincial Governments as being more in touch with local wants. It is this accident that has betrayed many into the supposition that this was essentially Provincial Finance. But nothing can be a greater blunder. What existed before 1870 was local Finance, pure and simple, although under the supervision of the Provincial Government, in whose hands the local Funds were essentially a kind of trust. The mere bringing together by the Provincial Governments of the receipts and charges pertaining to the local Funds into a local Fund Account for the whole Province can hardly be interpreted to mean the amount to be at their disposal—and that is the only sense in which Provincial Finance can be a

reality—any more than the bringing together of the local Rates levied in the United Kingdom in the budget of the Chancellor of the Exchequer can give an indication of its financial position. The local Funds were not at the disposal of the Provincial Governments, for they could not be disposed of on purposes other than those which attached to them. In this sense they constituted local Finance and not Provincial Finance. Some people mistake it for Provincial Finance probably because the term "local Government" is used as a synonym for Provincial Government. But, while local and Provincial Governments are often used as interchangeable terms, it must be remembered local and Provincial Finance cannot be so used. As a matter of fact, there was a period in the history of Financial organisation in India during which there was local Finance without local Government to be precise, and there was no Provincial Finance, even though there were Provincial Governments. It is probable that, as long as the habit of speaking of Provincial Government as local Government continues, this confusion of ideas will not entirely vanish. While some have insisted that Provincial Finance had its being long before 1870, the Resolution of December 14, 1870, which instituted the scheme of Provincial Finance, is called *Resolution on local Finance" as though it gave rise to local and not Provincial Finance. Such absurdities can be avoided only by insisting upon precision of terminology.

On a purely a priori consideration of the matter, nothing could have been more natural than to suppose that the system of Provincial Finance thus established in British India was independent in its organisation. Indeed it is difficult to imagine how one could emerge from the study of its origin and development without such a faith having silently grown upon him. But if Provincial Finance was independent in its organisation, we should find the Provinces in possession of financial powers which are commonly associated with the functioning of independent States. For the immediate purpose of finding out whether or not Provincial Finance was an independent system of finance, we may take the freedom of budgeting and

everything that is involved in it as an evidence of the existence of these powers. Independent budget powers would involve the power to determine the services which, according to the needs of the country, a good government should undertake, and to decide upon the mode of raising either by taxation or loan sufficient money to meet the expenditure upon those services. Alongside these powers the budget system entails the obligation of keeping accounts and submitting them to independent audit.

Applying these tests to the Provincial Budget, the origin and growth of which have been treated in the foregoing parts of this study, we cannot predicate a title of the independence which characterises the budgets of sovereign States. On the contrary, the budget system introduced into India with regard to the different Provinces was accompanied by the most stringent limitations. They were given a budget *without its powers*, and they bore the obligations of accounts and audit just because they were left free within the limits of their budgets. Why these limitations were imposed will be explained when we come to scrutinise the ways of enlarging the scope of Provincial Finance, it must, however, be emphasised that these limitations formed an integral part of the scheme, and the stringency of the former had grown *pan passu* with the scope and proportions of the latter. In fact they defined the law of the Constitution of Provincial Budgets. A complete comprehension of the operation of Provincial Finance in British India is therefore not possible without a thorough knowledge of its rules of government. Such being the importance of these rules it cannot but be to our advantage to analyse them at this stage.

These rules were laid down on various occasions during the interval between 1870, when the scheme of Provincial Finance came into being, and 1912, when the scheme reached through an evolutionary process its final and permanent stage, in the form of Resolutions of the Government of India in the Department of Finance. The rules framed in 1870 mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_1 were few and simple. Nor was there any necessity for a complex code to govern the operation of the very meagre budgets which were then constituted. Many supplementary rules were issued afterwards to dispose of unforeseen cases of order and

procedure; but it was not till 1877 mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_2 that we come across a most elaborate set of rules and regulations governing the financial transactions of the provincial Government. The Rules of 1877 were the basis of all those that were subsequently issued. With very small addenda or corrigenda they remained in force for a period of fifteen years, when they were superseded by a new series of Rules promulgated in 1892. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_3 But only within a short span of a quinquennium this series was replaced by another issued in 1897, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_4 and the latter formed the governing body of Rules till the year 1912, when a new series was brought out to regulate the working of the permanent settlement made in that year. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_5 The same was reissued in the Financial Department Resolution No. 361 -E-A. dated July 24, 1916. But as the alterations therein were not in any sense consequential, the series of 1912 may be taken as laying down the final regulations of Provincial Finance.

Recognise as we must the necessity for analysing the rules, we must determine beforehand the point or points of view from which to conduct the analysis. It must be premised at the outset that the object of entering upon the examination of the Rules is twofold : (1) to know what limitations there were and (2) why they were placed. Our immediate interest, it is true, is to state what limitations there were, but this is only a preliminary, if not a minor, object. The second is really the more important of the two. It is only as an aid to the proper understanding of the causes of the necessity for these limitations that knowledge of them is to be sought. While keeping in our mind the immediate object of stating the limitations, it will be unimaginative not to foresee that in the following chapter, in which we shall be presently engaged, we will learn that the necessity for these limitations arose from the very peculiar nature of Provincial Finance itself. On the other hand, it is important to anticipate this conclusion, and instead of producing

the Rules *seriatim* as they occur, arrange them in such a way that they shall be an external register of the internal conception of Provincial Finance which particularly pervaded the minds of its promoters. For the consummation of this end, the labours of the officials in charge of Provincial Finance who have laid down these rules are of no avail. To them these rules were only instruments of financial control, and it did not therefore matter in what order they were grouped. On the other hand, to get at the conception behind these rules it is necessary to classify and group them according to the purposes they were calculated to subserve. But the cardinal point in the matter of classification lies in defining the likely purposes which the originators of such an interrelated scheme of Provincial Finance as obtained in India must have had in view. Without being at all dogmatic, it may be said that for a successful working of such a scheme rules would have to be laid down for the purposes of defining (1) the Administrative and (2) Financial Powers of the Provincial Government. Each of the two categories may be further subdivided for a clearer understanding of the nature of Provincial Finance. Thus the Rules relating to Administrative Powers may be further subdivided into those pertaining to (i) Services and (ii) Staff. Similarly the Rules defining the Financial Powers may be conveniently grouped under the following subsidiary categories : Those (i) of a general nature and those pertaining to (ii) Provincial revenues; (iii) Provincial Expenditure, (iv) Budget Sanction and (v) Audit and Account.

Taking purpose as the *fundamental divisions*, the above categories may be supposed to exhaust the possible purposes that the framers of the scheme may be said to have had in mind. On the basis of these categories we may therefore proceed to reduce the amorphous mass of Rules into a digest which, it may be hoped, will be convenient and instructive at the same time.

I. LIMITATIONS ON ADMINISTRATIVE POWERS

(1) (1) *Rules of Inter-Provincial Services*

For regulating the inter-provincial or inter-departmental relations affected by the creation of separate budgets for the different

Provinces, it was ordained that—

- (i) (i) No inter-provincial adjustments were to be allowed.

(ii) (ii) No service previously rendered to other Departments at the charge of the Department made over to the control of the Provincial Governments was to be abolished, and no service previously rendered to these departments at the charge of other departments was to be increased.

(iii) (iii) No line of through communication was to be abandoned or allowed to fall out of repair.

(2) *Rules pertaining to Staff*

As to the staff engaged in the execution of the provincialised services the Provincial Governments were enjoined *not to*—

(i) Create a permanent appointment or augment the pay and allowance of any appointment.

Prior to 1912 this applied to appointments with a pay of Rs. 250 a month and above. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_6 But after 1912 it applied only to appointments ordinarily held by a Gazetted Officer or by an officer of the Imperial Service as defined in Article 29-B of the Civil Service Regulations.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_7

(ii) Create a temporary appointments or deputation for an Officer.

Prior to 1912 this applied to appointments with a pay of Rs. 250 a month and above. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_8 But after 1912 it applied to such of the appointments the remuneration of which exceeded Rs. 2,500 a month, or Rs. 800 a month, if the temporary appointment or deputation was expected to last for more than two years' mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_9

(iii) Abolish a permanent appointment or reduce the pay and allowances of such an appointment.

This rule was in the beginning applied to such appointments the remuneration of which exceeded Rs. 250 a month. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_10 After 1912 it was confined to such appointments as were held by Gazetted Civil Officers recruited in

England or as were defined by Article 29-B of the Civil Service Regulations.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_11

(iv) (iv) Grant to a Civil officer in Government employ or in receipt of a service pension.

(a) *Land*, except where the grant was made under the ordinary revenue rules of the Province concerned without involving any special concession in money or its equivalent beyond the fact that the grantee received the grant in preference to others.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_12

or (b) An assignment of Land Revenue when the amount exceeded Rs. 600 a year, or the assignment, though within that amount was not limited to three lives and reduced by one-half on each succession. All grants as assignments of Land Revenue made by Provincial Governments to civil officers were to be confined to cases in which the services were of a very distinguished and exceptional character.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_13

(v) *Revise* (a) permanent establishments which involved additional expenditure exceeding Rs. 50,000 a year ; or (b) rates of substantive pay of any one branch of the service at a cost to that service alone of more than Rs. 25,000 a year, or (c) the average pay of a service of which the maximum pay exceeded Rs. 500 a month and raise it above the average rate approved at the last revision of the service by the Secretary of State or the Government of India, or (d) the local allowances as compensation for dearness of living or for increase of rents in any locality.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_14

II. LIMITATIONS ON FINANCIAL POWERS

(1) *General*

Before actually detailing with the limitations on the financial powers of the Provincial Governments it is necessary to recall that the financial settlements made with the Provinces consisted in handing over to them certain *heads* of revenue and expenditure. From this accidental feature it is not to be supposed that the settlements were a collection of separate

settlements for each head of revenue and expenditure incorporated into the Provincial Budget. To obviate such a construction by the Provincial Governments and the consequences thereof, it was ruled that—

(1) (1) The Provincial Governments were to understand that the funds assigned to them formed a consolidated grant for all the services *en masse* entrusted to their respective administration and that no claim could therefore lie against the Imperial treasury on the ground that the actual cost of any service exceeded the amount at which it was estimated in the calculations of the consolidated grant.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_15

(2) And they were not to make any extra demands on the Imperial treasury, but were bound to maintain from the funds given to them all the services entrusted to their management in a state of administrative efficiency.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_16

With regard to the powers of the Provincial Governments concerning the custody of their funds it was ruled :—

(3) That the funds allotted for their use were to be lodged in the Imperial treasury, and were not to be removed for investment or deposit elsewhere; nor were the provincial Governments competent to withdraw such money except for expenditure upon the public services.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_17

(2) (2) *Revenue Rules*

Turning from the general limitations to those pertaining to the revenues of the provinces, it should be noted that they were required to maintain themselves within the funds allotted to them by the Central Government at each settlement.

The provinces could not *augment* their resources beyond the yield due to their natural growth by any possible means, for it was provided that Provincial Governments were—

(i) Not to impose any additional taxation or make any change in the existing system of revenue management.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_18

(ii) Not to alter or augment within its area the rates of discount upon the retail of Stamps, Court Fee labels, and duties on spirits and drugs.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_19

(iii) Not to raise *for its own* finances any loans in the open market.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_20

Powerless in the matter of augmenting their resources, the Provincial Governments were not free to will them away to any other authority subordinate to them. To guard against such eventualities it was ruled that Provincial Government were—

(iv) Not to alienate any item credited to the general revenues, Imperial or Provincial, so as to form an asset of a local or Special Fund.

This provision as regards the non-alienation of the resources of revenue made over to the provinces was a little relaxed by the Rules of 1912 so that it was permissible for them to assign to a local body or special fund, as defined in Article 33 of Civil Service Regulations, constituted by law, petty items of Wholly Provincial Revenue of a recurring character, not derived from the proceeds of general taxation and not yielding on an average more than Rs. 25,000 a year.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_21

(v) Not to make grants, subventions or assignments from the funds at their disposal to local or Municipal bodies so as to create a permanent charge on the revenues of India.

This by no means prevented grants, subventions or assignments from being made to local or municipal bodies by the Provincial Governments from their funds although the Government of India had sounded to them a note of warning by declining to bind itself to continue the grants after the expiration of the settlements or to provide for them in the succeeding settlements.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_22By the Rules of 1912, however, the power of making such grants was more clearly circumscribed so that a Provincial Government could not make (1) recurring grants to local bodies from provincial revenues exceeding Rs.

1,00,000 a year in any one case,
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_23](#) or (2) non-recurring grants to local bodies exceeding Rs. 10,00,000 in any one case
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_24](#) or (3) a grant to a charitable or religious institution other than educational, not being outside India, in excess of Rs. 10,000 a year if recurring, and Rs. 50,000 if non-recurring.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_25](#)

(vi) Not to make any grants to non-official (1) on political considerations of (a) land, either free of revenue, or on favourable terms, or (b) of assignment of land revenue, if the value of the land or land revenue exceeded Rs. 1,000 a year.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_26](#) (2) on the consideration of injury to himself or to his family in the event of his death during or in consequence of service rendered to Government, or (3) on the consideration of exceptional services to the Government of a pension exceeding Rs. 1,000 a year or a gratuity. exceeding Rs. 3,000 in any one case.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_27](#)

(3) *Rules of Expenditure*

The powers of sanctioning expenditure granted to the Provincial Government were as limited as their revenue powers. While they were free to spend their funds on the services entrusted to them, certain limitations were laid down for the purposes of expressly ruling out certain objects and subjects of expenditure from the provincial domain.

With regard to the *objects* of their expenditure Provincial Governments were required—

(i) (i) Not to sanction any expenditure from public money on anything outside the category of objects of expenditure recognised by the Government of India.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_28](#)

(ii) (ii) To confine themselves to the carrying on of the services particularly entrusted to them by the terms of the settlement.

Prior to 1912 they could undertake a "new general service or duty" only if they satisfied the Government of India that they could provide the necessary funds temporarily if it was temporary, and permanently if it was permanent. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_29 This provision was altered in 1912 so that a Provincial Government could undertake a new general service or duty provided it was not (a) of an unusual nature, or (b) devoted to objects outside the ordinary work of administration, or (c) likely to involve at a later date expenditure beyond its powers of sanction. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_30 (iii) Not to spend—

(a) On State ceremonies and assemblies, and on the entertainment at the public charge of distinguished visitors to India more than Rs. 1,00,000. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_31

(b) On Railway Carriages especially reserved for the use of high officials otherwise than in connection with the maintenance of the carriage. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_32

(c) On the purchase of a Motor-car or Motor-cycle for the use of an official, or on the maintenance of it otherwise than from the "Contract Grant" with the Head of the province. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_33

(d) On the increase of the "Contract Grant" to the Head of the province. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_34

(e) On the construction or purchase of a vessel required for inland navigation and for use at ports, the cost of which exceeded Rs. 1,00,000. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_35

(f) On an Irrigation or other Public Works projects of which the estimated cost chargeable to the general revenues exceeded Rs. 20,00,000 inclusive of establishments, tools and plants. It was however

competent for a Provincial Government to spend up to an amount 10 per cent. in excess of the original sanctioned estimate provided such excess was not more than Rs. 12 1/2 lakhs inclusive of establishment, tools and plants.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_36

As to the limitations respecting the subjects of provincial expenditure, it was ruled that in virtue of the application of the general condition precedent to the delegation of all authority to disburse public money, that it shall be bona fide for a public purpose, Provincial Governments could not spend from their funds for benefiting—

(i) (i) Any individual or body of private persons unless in accordance with some declared or established rule or principle recognised by the Government of India.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_37 (ii) Native States, directly beyond Rs. 10,000 a year on any one project or Rs. 50,000 if non-recurring.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_38

(4) *Budgetary Rules*

Besides being subject to the ordinary rules of the Budget System introduced into India for the first time by Mr. Wilson in 1860,
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_39 by which they were required to submit their budget estimates for sanction to the Government of India, and to observe the rules of appropriation in the execution of the grants, Provincial Governments were further given to understand that without the previous consent of the Government of India they—

(i) Could not exhaust their balances in the Imperial Treasury.

Prior to 1887 a Provincial Government could propose in its budget estimates to draw upon the whole of its balance. But by the Rules then framed the Provincial Government was required to maintain at all time a certain minimum balance in the Imperial treasury, the amount of which varied with each successive settlement.

(ii) Could not budget for a deficit, that is for provincial expenditure in excess of the provincial revenues of the year.

The stringency of this rule mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_40 was a little softened, so that a Province could after 1912 budget for a deficit, if it satisfied the Government of India that the cause was exceptional and non-recurring mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_41 but it was at the same time provided that, if this drawing upon the balances to make up the deficits resulted in reducing the balance below the prescribed minimum, the budget for a deficit would be sanctioned only if the Government of India was able to allow the Provincial Government in question an overdraft to the extent necessary to restore the balance to the required minimum from the general balances to be repaid in such rates of interest and instalments as may be prescribed. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_42 (iii) Could not exceed during the currency of the year the expenditure on any head of account as finally sanctioned for it, for that year, by the Government of India.

It could increase the expenditure only if the increase was counterbalanced by re-appropriation, that is, reduction by the amount of the excess of the sanctioned grant under some other head of account under its control mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_43 The powers of reappropriation of Provincial Governments were very extensive, for it could sanction re-appropriation between the grants for provincial expenditure included in its budget, whether under a Wholly Provincial or a Divided Major or Minor Head provided that the aggregate grant of provincial expenditure was not exceeded. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_44

(5) *Rules of Audit and Account*

Though the Provinces were allowed considerable powers of reappropriation within their budgets there was imposed upon them the obligation of audit and accounts of the money they spent. The important point to note in this connection is the fact that this obligation

of the keeping of accounts and submitting them to audit was an obligation which the Provinces did not owe to their legislatures, but was an obligation which they owed to the Government of India, who had conferred upon them the financial power they exercised. Moreover, the Government of India did not leave the Provinces to discharge this obligation according to their own sweet will by employing their own audit and account staff. On the contrary the responsibility of realising this obligation was entrusted to the imperial officers of audit and account stationed in the different Provinces, who acted as the critics and guides of Provincial Governments in the matter of administration and interpretation of the Rules discussed above. To facilitate their task Provincial Governments were instructed—

(i) Not to make any alterations in the form of procedure of public accounts mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_45 or direct the division of a charge between two or more heads of account. In all such matters they were to abide by the decision of the Comptroller General—an officer of the Imperial Government. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_46

(ii) To transmit the objection of the Imperial audit officer against its appropriation or sanction with regard to expenditure with the explanation of the Provincial Government concerned to the Government of India for final disposal. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_47

Such were the limitations on the Financial Powers of the Provincial Governments. Apart from these specific limitations the Provincial Governments were not altogether the free architects of their own destiny within the sphere allotted to them; for it was provided that the power of supervision and control in any Department still rested in the Governor-General in Council, and that the Provincial Governments should keep him fully informed of their executive and financial proceedings so as to enable the former to discharge its obligations for peace, order and good government.² Their general effect on the financial freedom of the Provinces could hardly have been concealed. It

must therefore have been a most impervious mind which in face of these paralysing limitations had not lost its faith in the independence of the system of Provincial Finance and had not asked what was after all the nature and advantage of this illusive institution?

CHAPTER VIII

THE NATURE OF PROVINCIAL FINANCE

The study of Provincial Finance cannot be said to be complete unless it furnishes a true answer to the question which is bound to be asked in the end, What was the resulting financial relationship under the old scheme between the Central and Provincial Governments in British India? The question is an important one, for the validity of the criticisms and proposals with regards to Provincial Finance, or any subject for that matter, depends entirely upon a correct understanding of its nature. Unfortunately it had not received the attention that its importance demanded, and consequently we find the rather distressing fact that no subject was so confidently discussed, and yet none was so grossly misunderstood, as that of the nature of the old system of Provincial Finance in British India. It therefore becomes necessary to explain what was the exact nature of the system of Provincial Finance established in British India.

In an inter-related system of politics, such as is composed of Central and Provincial Governments in British India, it is always difficult to grasp the exact nature of their financial relationship; for, what may appear on the surface may be very different from what it may really be. None the less, the view was commonly held that the Indian system was based on a separation of sources between the Provincial and the Central Governments, and contributions from the yield by the former to the latter, much the same as was found in the federal system of finance which obtained in the German Empire. Whether such a view was wrong or right there were various incidents of the relationship between the Central and Provincial Governments in India, which, there can be no doubt, went a long way to strengthen that view. Among such incidents must be mentioned the division of functions between the Central and Provincial Governments. An onlooker could not fail to observe that in this distribution of functions the former controlled matters pertaining to Military Affairs, Foreign Affairs, General Taxation, Currency, Debt,

Tariffs, Posts and Telegraph, Railways and Adult and Accounts; while the latter administered matters of ordinary internal administration, such as Police, Education, Sanitation, Irrigation, Roads and Buildings, Forests, and the control over local Bodies. If this incident encouraged the view that there was a separation of services, there was another incident of the relationship which encouraged the view there was also a separation of revenues between the Central and Provincial Governments in British India. That incident was the collection of most of the taxes in India by the agency of Provincial Governments. As observed by the Royal Commission on Indian Expenditure mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_48

“in the United Kingdom the Revenue Administration is centralised..... under the Chancellor of the Exchequer in London. In India the administration of some branches of revenue is centralised, though not always under the Finance Minister (of the Government of India). That of other branches is decentralised. The Land Revenue is under the control of the Central Department at Calcutta, but that department is subject not to the Finance Minister but to the Minister in charge of the Home and Revenue Departments. The Telegraph Department is under the Minister of Public Works. The Central Government controls the collection of part of the Salt duty and of part of the opium revenue, of Post Office revenue and of other revenues..... The remainder of the revenue is collected by the Provincial Governments.... As regards..... a large portion of the revenue, the Provincial Governments are units of administration and are efficiently equipped for their duties.”

As a third incident supporting the same view, reference must be made to the peculiar mode of presenting Indian Accounts adopted in official Blue Books. As might have been noticed, to the General Accounts of the Government of India is attached a supplementary account professing to show the distribution of the different heads of receipts and expenditure among the various Provinces into which British India has been divided. This mode of showing the accounts is beyond doubt misleading. It appears as if the aim was to show the financial position of the Provinces. But as a matter of fact the figures given in the columns in

which the revenues and charges are shown in their provincial distribution do not represent the respective claims and responsibilities of the different Provinces. Far from showing the financial position of the Provinces, the figures in the columns merely represent the geographical distribution of the different agencies through which the financial business of the Government of India is conducted, and through which the revenues are collected and the expenditure is defrayed. The revenue and expenditure, for instance, shown under "Bombay" represent the income and outgo which pass through the books of the Accountant General of the Government of India stationed at Bombay, and the same is true of entries under the heads of other Provincial Governments. The figures really represent the transactions of the Government of India distributed geographically, and there is nothing provincial about them in the least. However, such a system of account bears the impression that the system of finance in India is primarily Federal.

With these three incidents before one's mind it was easy to fall into a federal line of thinking in reasoning about the financial relationship between the Central and Provincial Governments in British India. So deep seated was the view that the Indian system was one of separation of sources and contributions from the yield, that many witnesses giving evidence before the Royal Commissions on Indian Expenditure (1892) and on Decentralisation in British India (1909) sallied forth to assail the Commissioners with the criticisms on the inequity of the system and proposals for amending it according to what they considered to be the requirements of justice. Nowhere have they stated the reasons for their assumptions in explicit terms.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_49 Yet their proposals are an unmistakable proof that they held that view. Unless they had taken for granted that the Provinces had separate revenues and separate services, they could not be expected to have wasted their energies in directing as they did their efforts to getting redressed what appeared to them as a piece of injustice embodied in the unequal contributions made by the different Provinces from their revenues to the support of the Central Government.

If their view of the financial relationship between the Central and Provincial Governments was acceptable, then a good deal could not but have been conceded in favour of their criticisms and their proposals. Contributions, if the Imperial share could have been conceived of in such a light, as between the different Provinces whether in ratio to their revenues or population, were certainly unequal if calculated on the somewhat questionable but generally accepted hypothesis that all the revenues collected within a Province belonged to the Province.

PROVINCIAL CONTRIBUTIONS TO THE IMPERIAL GOVERNMENT

Province	Ratio of Amount Surrendered to the Government of India to the Total Revenues raised in the Province.					Ratio of Amount Surrendered to the Government of India per Head to the Population of the Province.				
	1871-2	1882-3	1892-3	1904-5	1912-13	1871-72	1882-3	1892-3	1904-5	1912-13

Compiled from the Finance and Revenue Accounts of the Government of India and the Decennial Census Reports.

Similarly, whatever may be said of the relative merits of the proposals mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - [_msocom_50](#) of changing the system of

divided heads of revenue into one of complete separation supplemented in favour of the Central Government by contributions from the Provinces in the form of (1) a fixed sum revisable every few years, or (2) a lump percentage on provincial revenues, or (3) a fluctuating contribution from the provinces on their population, revenues or wealth, there can be no doubt that they were all aimed at reaching some such intelligible basis of distributing the burden of the Imperial exchequer as equality of payment or ability to pay. No one who had cared to scrutinise the true nature of Provincial Finance could have been expected to take these proposals with the same seriousness with which they were offered by their authors. However, strange as it may seem, none of the two Commissions questioned their propriety. The Royal Commission on Decentralisation did make it clear, though not quite forcibly, that equal contributions were not necessarily equitable contributions, but neither it nor the Royal Commission on Indian Expenditure challenged the language which spoke of the Provinces as surrendering *their* revenues to make contributions to the Imperial treasury after paying for their services. It therefore becomes all the more necessary to examine at some length the grounds which supported that view which argued that the system was based on the principle of separation of sources and contributions from the yield. Indeed the question of equity of contributions would hardly be worth discussion until it is settled that the Provinces had revenues which they could call their own and services for the efficient discharge of which they were primarily liable.

What is the criterion by which to judge whether the provinces had revenues and services which they could call their own? There is, of course, the administrative criterion by which it would be possible to say that anything which a Province administered was provincial. But that criterion cannot be a final criterion. For, whatever may be the view regarding the origin of administrative polities or regarding what their position should be in an ideal organisation, yet all regional rights of an administrative polity are in modern times exercised in the main, not in virtue of any social compact or the mere discharge of certain functions, but in virtue of a general law. The question must therefore be decided with reference to the law which defined the status of the Provincial

Governments in British India.

Did the Provinces have a legal title to the revenues? Although it is uncertain whether or not those who spoke of Provincial revenues invested the term provincial with a legal status there is no doubt that it had acquired such a connotation in ordinary parlance. Even the Provincial Governments, who ought to have known better, thought and argued that by the provincialisation of revenue what the Government of India passed on to them was not the mere usufruct but a title to the revenue. But the Government of India had always been prompt in suppressing such pretences. The facts are patent that provincial settlements were revisable every five years, that the usufruct was not perpetual and that the Government of India could resume it at the end of five years if it wanted. This is made quite clear in answer to the pretensions advanced by the Government of Bengal in a letter No. 284 of January 14, 1882, from which the following is extracted :—

“For the sake of diminution of friction and other well-known objects which need not be specified, the Imperial Government delegated a share in its administration to local Governments. It makes a rough calculation that a certain portion of the general income, together with the increment thereon, will suffice to meet the expenditure which it retains under its own control, and it hands the rest over to local Governments, with the obligation to meet out of it certain necessary expenditure.... But it cannot bind itself to this proportion for ever, because the calculation must necessarily be a rough one, and is liable to be vitiated by unforeseen failure of resources, or growths of charges, whether in the share of financial administration which it retains or in that which it delegates. An examination of the appropriation and a readjustment of it in any particular found necessary are indispensable. A surrender of the right to this would be analogous in its nature and effects to the Permanent Settlement of Bengal.”

Although anxiety was expressed for the provinces the revisions were primarily conducted in the interests of the Imperial Government as the resumption incontrovertibly proved, and the Permanent Settlement was delayed because the Government of India did not desire to relinquish its control over its revenues. Under the quinquennial settlement the

usufruct was permitted to be undisturbed for five years only. But how tentative was this surrender, which, even for five years, was looked upon as highly impolitic by the Secretary of State, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_51 was proved by the Government of India, which did not take back to exercise its inherent right to resume the usufruct of its revenues at any time it liked as is indicated by the not too uncommon levies or benevolence, as they were called, which it forced upon the provincial balances. Not even the Permanent Settlement can be interpreted to mean that the revenues settled upon the different Provinces became their revenues in anything like a legal sense, for in the eye of the law all revenues including those provincialised still remained the constitutional possession of the Government of India. Whether the Government could have effected a legal separation by investing itself of the revenues of India in favour of the Provinces is doubtful. The Parliamentary enactment which vests the revenues of India in the Government of India had limited the legislative powers of the Government of India by a clause which prevented it from

“making any laws or Regulations which shall in any way repeal, vary, suspend or affect any of the provisions of this Act (of 1833)... or the Prerogative of the Crown or the Authority of Parliament.”

At least it is significant that it has required an Act of Parliament to do so. But the Government of India had not made any legal separation of the title to the revenues, and if it could have done that by its own law it could have undone it as well. Nor can it be said that the separation of Provincial revenues involved separate possession. If the Provincial Governments had been allowed to establish their own treasuries to receive the collections from Provincialised revenues, then Provincial revenues in the sense of separate possession could have had a meaning. But by the rules, Provincial Governments were not to deposit their funds elsewhere than in the treasury of the Imperial Government. Consequently the possession of the revenues remained in the hands of the Government of India and the disbursement from the provincial revenues was carried out from the Imperial Treasury by the officers of the Imperial Government. None the less, the view was hard to die. But such an erroneous view was never more confidently stated than by the

Honourable Mr. Sayani, and never more forcibly controverted than by Sir James Westland in a passage-at-arms between the two on the occasion of a Budget debate in the Council Hall of the Government of India from which the following is reproduced :—

The Honourable Mr. Sayani said :—

"The whole theory underlying the system (of Provincial Finance) is that the revenues of the country, far from belonging to the Provinces which raise them or being available for their own requirements.... constitute a common fund to be absolutely at the disposal of the Central Government, out of which it is to dole out what amount it pleases for provincial services."

Catching the condemnatory tone of these comments, the Finance Minister, Sir James Westland, rose to say :—

"The Honourable Mr. Sayani, if I correctly followed him, stated that the arrangements of the Government of India were made upon the theory that the revenues were not the revenues of the separate Provinces and were not applicable to the expenditure of the several Provinces, but were the revenues of a common fund, the local Governments being merely the agents of the Government of India for their realisation. I think he mentioned the theory in some words like these, only for the purpose of condemning it. Well, I wish to assert that theory in the most positive manner I can. The revenues are the revenues of the Government of India—its Constitutional Possession. The Government of India is a body created by Act of Parliament, and if reference be made to that Act of Parliament it will be seen that the revenues of India are the revenues of the Government of India and of that Government alone. Every action that the local Government takes in respect of them must be justified by a specific order of the Government of India; the local Governments derive their powers entirely from the Government of India, and apart from that Government they exercise no financial powers whatsoever.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_52

Again, if the financial relationship between the Central and Provincial Governments in India were based upon the principle of separation of sources and contributions from the yield, what ought to have been

shown was the existence of legal responsibility of the Provinces for the services they administered. It is true there was a certain division of functions between the Central and Provincial Governments in India analogous to what existed between the Central and State Governments in most of the federal countries. But it must, however, be remembered that this division of functions had no sanction in law and no legal responsibility attached to the provinces for any of the services, not even for those Provincialised. The entire responsibility by law rested on the shoulders of the Imperial Government and it could not absolve itself of that responsibility by transferring it on to any of the Provinces. That the Provinces accepted the financial responsibility for some of the Imperial services was their choice. That they could not be compelled to undertake them was proved in a singular manner by Madras refusing to accept such responsibility in 1877. By law it was thus the Government of India which was responsible for peace, order and good government in the country. All services were therefore necessarily Imperial in status undertaken by the Government of India in discharge of its constitutional obligations.

It is therefore obvious that the view which posited that the relationship between the Central and Provincial Governments in British India was one of separation of sources and contributions from the yield was an untenable view. The Government of almost every country in these days is carried on by an inter-related group of polities operating in specific areas and discharging specific public functions ; and it may well be that in any two given countries the number of polities engaged in carrying on the work of government is the same. But it is quite erroneous to argue from that fact that the nature of their inter-relationship must have been alike. It is therefore as well to invite attention to the point that the ordered relationship between such inter-related polities depends upon which of them is the law-giving polity. It will be granted that in such group of polities there is one that is supreme in the sense that from a variety of reasons mostly historical it is competent to give law to the other polities. In federal countries it is the State Governments which are the law-giving polities. They occupy a pivotal position. They are the depositories of sovereign powers original as well as residuary. They can claim independent existence, have their

own resources and discharge their own functions. The Federal Government, on the other hand, is the creature of the State Governments. It can have no powers and no functions other than those which the States have been pleased to transfer to it by an act of self-abnegation. It is therefore truthful as well as becoming to speak of the financial relationship between the State and Federal governments as one of separation of sources and contributions from the yield.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_53 For there the States have their separate resources which they lawfully own and can therefore be spoken of as surrendering their revenues to make contributions to the Central Government after paying for their own services. But the same was inconsistent with the position of the Provincial Governments. Far from pivotal, the Provincial Governments formed the weakest entities in the group of administrative polities functioning in India. Up to 1833 the Provinces had separate rights to surrender in a *foedus* and had the government of India been then organised on a federal basis the position of the Provinces would have been very much the same as those of the States in federal countries. But with the establishment of the Imperial system by the Act of 1833 the last chance of creating a federation in India vanished. By that Act the sovereignty of the Provinces was so entirely crushed that no trace was left of it to permit of a truly federal element ever to enter into their relationship with the Central Government. Since that Act the government of the country has been entrusted to a single authority charged with the sole responsibility for the good government of the country. As no single administration could support the Atlantean load of governing such a vast country with the help of central bureaux, great powers were delegated to the Provincial Governments. But this must not obscure the fact that they were literally the "agents of the Government of India." Common usage had elevated the term "Provincial" to a proud position. Along with Provincial Revenues it had been usual to speak of Provincial Services, Provincial Civil Servants, Provincial Courts, etc., as if all these and other things constitutionally belonged to the Provincial Governments. But the usage was full of irony. For, when one recalls the provisions of the constitutional law of the land, so far from thinking of them as Sovereign

authorities one felt inclined to say that notwithstanding their high-sounding apparatus of Governors and Councils it was not appropriate to call them Governments. In any case the Provincial Governments had no legal powers or functions which polities designated as Governments have been known to possess. The fact is the Indian system of polity was diametrically opposed to the federal system of polity. It was a centralised system in which there was nothing Provincial; what appeared to be Provincial was but the regional aspect of the Imperial. It was therefore untruthful and over becoming to speak of the financial relationship between the Provincial and Central Governments in India as being one of separation of sources and contributions from the yield. For here the Provinces had no separate resources which they lawfully owned, and could not therefore be spoken of as surrendering their revenues to make contributions to the Central Government after paying for what may be supposed to have been their own services—a supposition rigorously excluded by the law of the constitution.

If the complex code of limitations discussed in the last chapter had the effect, which it was not unreasonable to expect, of revealing the true nature of Provincial Finance, such a view as the one herein criticised could never have prevailed. That notwithstanding the existence of these limitations there should have been men who instead of wondering as to what remained of Provincial Finance when it was regulated by such limitations, argued with the confidence of the ignorant that the system was independent in its organisation, is itself a proof that in their study of Provincial Finance the study of its limitations formed no part. Otherwise a reference to that code would have shown that if the Provinces had separate revenues and separate services they would have had powers of alienating whatever revenues they liked, of spending on any service they desired, of framing their Budget Estimates with a view to any particular policy they decided to adopt, and of arranging for supplementary grants in any manner they chose. But such powers they never had. Indeed no greater proof could be furnished in support of the view that everything had remained imperial in status after 1870, as it was before 1870, than is afforded by these limitations on the working of Provincial Finance.

If separation of sources and contributions from the yield as a theory of

the financial relationship between the Central and Provincial Government in India was incompatible with the facts of the case, what theory was there which could be said to have been compatible with the position as defined by law? We may at once proceed to state that the only theory of financial relationship between the two governments which accorded with facts and agreed with law was that of *aggregation of the sources and distribution of the yield*.

It may seem fallacious to speak of aggregation of sources when what the Government of India gave to the Provinces was assignment of revenues and shares of revenues. To this the reply is not difficult. It has already been made clear that Provincial Finance did not involve a *de jure* separation of sources. Nor was there a *de facto* separation either. For as has been remarked before, all revenues whether assigned or reserved were collected into the Imperial treasury and were thence paid out on all approved Government transactions. Obviously, when all the revenues are thrown into a common pool, it cannot be said without unduly straining the imagination that what the Provinces were given were revenues.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_54 The collections from all sources of revenue being inextricably mixed up, the only proper view is to say that what was given to the Provinces were funds. The expressions Budget by Assignments, Budget by Assigned or Shared Revenues are in a certain sense all fictitious phrases. In all the stages of Provincial Finance what the Provinces were supplied with were funds. Under the assignment stage the supply granted was a definitely fixed sum and the only difference made as a consequence of the replacement of Assignments by Assigned or Shared Revenues was that the supply, instead of being a fixed sum, was a sum which varied in amount with variations in the yield of the Assigned or Shared Revenues. But all the same it was a supply of funds and nothing more. It is even incorrect to say that the Government of India *gave* funds to the Provincial Governments for meeting the expenditure on the services the responsibility for which was undertaken by them. As a matter of fact, the receiving as well as the disbursing of all public money, including the provincial portion of it, remained in the hands of the Government of India. The only proper expression, if it is to be true to facts, would be to

say that Provincial Finances simply meant that the Government of India opened a Provincial Services Account in its Treasury books which varied with the yield of the Assigned or Shared Revenues and on which and to its extent only the Provincial Governments were permitted to draw.

Thus there was a complete aggregation of the sources of revenue in the hands of the Government of India. From this fact it follows that instead of the Provinces contributing from their funds it was the Government of India which distributed the yield of its taxes among the Provinces. The situation could not be otherwise. For it should be recalled that in virtue of the Act of 1833 the financial responsibility for the services undertaken to subserve the ends of peace, order and good government rested upon the Government of India. While some of the services were administered directly by the Government of India, owing to the well-nigh impossibility of managing directly from a central bureau the affairs of a country as vast as the continent of Europe minus Russia, many of the services attaching to the Imperial Government were left to be administered under its supervision by the Provincial Government. The weak point of the situation, as has been remarked, consisted in the fact that the administrative and financial responsibility did not rest on one and the same authority as should have been the case. On the other hand at the end of every financial year all Provincial Governments sent in their estimates of the charges for the services they administered to the Government of India in the Financial Department, leaving the obligation of refusing, curtailing or granting the supply asked for to the Government of India to discharge as best it could. Not having the obligation to find the money, the Provinces tended to make extravagant demands. And the Government of India, not being in possession of the details, was unable to judge of the true requirements of each service. Being afraid of failure of its responsibility as much by too little trust as by too much trust in the estimates sent to it, it was often obliged to submit to extravagance of the Provinces, which as we saw brought on the crisis of 1859. To avoid this fatality there was instituted the system of Provincial Finance under which the Government of India distributed its funds among the Provinces, and the Provinces in their turn undertook to manage *some* of the services which they administered for

the Government of India *within* the sum which came to them severally out of this distribution.

This being the nature of the financial relationship, the criticisms of the system of Provincial Finance on the ground of inequity were quite inapplicable. Contributions must be according to ability, but distribution must be according to needs in order to make it equitable. If the system of Provincial Finance was to be impeached on the ground of inequity, then it was necessary to have shown that the distribution was unfair. Even here it may perhaps be shown that the different Provinces got different amounts if measured by their population or their area. But it must be remembered that the distribution was not primarily among the Provinces, but among the various departments, whether controlled by the Government of India or by the Provincial Governments. This could make a considerable difference in the equity of the distribution; for, the needs of the areas within the jurisdiction of the different administrative polities must be very different and cannot certainly be held to be coterminous with the needs of the departments maintained under them. The distribution of funds by the Government of India was not based upon the principle of each Province according to its needs but upon the principle of each department according to its needs. It was therefore futile to criticise the equity of the system on any other principle.

Thus interpreted, the system of Provincial Finance must strike as of the nature of what may be called Departmental Finance, something quite different from Decentralised Finance or Federal Finance. This view cannot be far wrong from the true view as supported by the facts of the case. As in the case of Departmental Finance every Department of the State has a certain grant fixed for it in the Budget and it then draws upon the Treasury to the extent of the grant. In the same manner Provincial Governments were given a certain consolidated grant for the departments they managed and for the expense of which they were to draw upon the Imperial Treasury to the extent of the grant. Notwithstanding Provincial Finance, nothing was provincial in its status. The revenues, the services, the Civil Service, were as strictly Imperial in status after 1870, when Provincial Finance came into being, as they were before 1870, when there was no such thing as Provincial Finance in existence. It is therefore no exaggeration to say that

Provincial Finance, instead of being an independent system of Finance involving freedom to tax and freedom to spend, was only a matter of accounts, the operations on the debit and credit side of which were subject to stringent control on the part of the Government of India.

This means that there was no change in the nature of the financial relationship between the Central and Provincial Governments as a result of the introduction of the scheme of Provincial Finance. The relationship of aggregation of sources and distribution of the yield was not a new one but was as old as 1833. It was a financial counterpart of the Imperial system then established. It was because there was no alteration in the relationship that Provincial Governments, even with Provincial Finance, far from becoming separate clocks, each with its own mainsprings in itself, remained as before the departments of the Government of India. Such a conclusion is bound to be regarded as somewhat of a startling character. There can, however, be no doubt that it is true and that no other conclusion is possible, given the legal relationship of the Provincial and Central Governments in British India. But if Provincial Finance is only a matter of accounts then, were there no changes that followed in its wake, in the financial organisation of the Imperial system? It would be idle to deny that any change took place in the financial organisation of Imperial system owing to the introduction of the scheme of Provincial Finance, and equally idle to assert that some fundamental change had taken place in consequence thereof. To be just, only two changes worth speaking of may be said to have resulted from the introduction of Provincial Finance :—

(1) Before 1870 balances on *all* services lapsed to the Government of India at the close of the financial year. After 1870 all unspent balances on the services delegated to the management of Provincial Governments remained at their disposal and formed a part of their resources for the ensuing year.

(2) Before 1870 Budget estimates on all services had to be sanctioned by the Government of India and the Provinces could not undertake any reappropriations between the different grants for the year, even if it was found necessary, without the previous sanction of the Government of India. After 1870 the Provinces were left to a greater extent free to distribute their expenditure in any way they thought

proper among the various services delegated to their management, provided their total expenditure did not exceed the funds lying in the Imperial treasury to their credit respectively.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_55 But by the rules they were required to maintain all the services under their management in a state of administrative efficiency. Similarly after 1870 the Provincial Government had complete freedom which they never enjoyed before to carry on reappropriations between the grants under their management without the sanction of the Government of India, provided their total expenditure did not exceed the amount budgeted for the year.

For the purposes of visualisation the financial relationship between the Provinces and the Government of India may be likened to the Hindu Joint Family System with the Patria Potestas vested in the latter. Before 1870 the similarity between the two was more or less exact. Like the family property of the Hindus the revenues of India were jointly enjoyed by all the departments whether under Central or Provincial management without metes and bounds being fixed to the shares of any one of them. After 1870 the only change that took place consisted in the cesser of commensality and the fixing of metes and bounds to the shares of each in the common property according to their respective needs. The system remained a joint family system, although separate accounts were opened by the head of the family, namely the Government of India, to guard against any member overdrawing the amount placed to his credit.

Were these results worth striving for? On the results achieved in consequence of Provincial Finance a variety of opinion has been expressed. But if we judge of the results as we ought to in the light of the antecedents that gave rise to the system in 1870, it cannot be said that the hopes entertained were in any way belied. It is only when critics, solely because of their misunderstanding of the nature of Provincial Finance, sought for results which were never intended by its promoters that an adverse pronouncement came to be made. But if we keep clear of these misunderstandings and never lose sight of the fact that in 1870 what the Provinces wanted was freedom and the Government of India

stability, none can assert that this compromise between Imperialism and Federalism was tried in vain. How great was the freedom gained by the provinces can be appreciated only when it is realised that before 1870 the Governor of Bengal could make

“no alteration in the allowances of the public servants... establish a new school or augment the pay of a daroga (watchman) to the extent of a Rupee”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_56

nor could the Governor of Bombay have. a lock mademk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_57 without a vote of the Council of India. Nor can the importance of the large measure of stability derived from it be fully realised unless it is borne in mind how before 1870 the Government of India was left between the devil and the deep sea by having to refuse or to accept the bewildering demands ranging from dustbins for a Department to education for the people made by the Provinces on its not too large resources. The Provincial Governments had been saved the delay and the indignity in having to depend upon the Government of India for sanction of the meanest of their wants. The Imperial Government on the other hand was saved the fumbling task of scrutinising the most trivial of demands and grant or reject it, but always under the apprehension of having done wrong by acting either way. The system not only gave freedom to the Provinces and stability to the Government of India, but had replaced the irresponsibility and extravagance which had proved the bane of the Imperial System by economy and responsibility, for by setting bounds to the funds of the Provincial Governments the Government of India had ended in setting bounds to itself. These results, it is true, did not satisfy the critics of Provincial Finance. More in other directions was expected of it, but that could have been possible only if Provincial Finance was a system independent in its organisation. So long as Provincial Finance was a part of Imperial Finance, inseparably linked to it, it could have yielded no greater results than have followed from it, and those that have followed are by no means slight.

There, however, remains the question that, although it was not possible to alter the nature of Provincial Finance, whether it would not

have been feasible to enlarge its scope by relaxing the limitations imposed upon it by the Government of India without in any way interfering with the due discharge by it of its own responsibilities. That aspect of the question will be examined in the next chapter.

CHAPTER IX

THE ENLARGEMENT OF THE SCOPE OF PROVINCIAL FINANCE

It used to be made a matter of complaint that the system of Provincial Finance was unjust in that under it the Government of India conscripted, at every revision of the financial settlement, the increases in the revenues given over to the management of the Provinces, either for its own benefit on the pretext of meeting the requirements of the Central Exchequer or for the benefit of such of the Provinces as had by inertia not cared to improve their resources on the pretext of tempering the wind to the shorn lamb. There was a good deal of truth in this complaint in the early period of Provincial Finance. Being the custodian of the funds, the Government of India did often put the consideration of Imperial Services above that for the Provincialised Services. In the early period of Provincial Finance the prevailing ideamk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_58 in the distribution of funds was not how much of the revenues assigned under the expiring settlement could be continued to be usefully spent on heads of expenditure controlled by Provincial Governments, but how much of the general revenues consistently with its obligations, and having regard to the growth of demands upon its resources during the currency of the settlement, could the Government of India surrender for a further period to the Provincial Governments in order to enable them to meet whatever expenditure was essential to the conduct of their administration. This attitude of the Government of India, justifiable as it was by the financial stringency of the period, changed as the financial condition became easy, so that in the latter period

"the distribution of revenues between the Provincial and Central Governments was made, except on occasions of grave emergency, with direct reference not to the needs of the Central Government, but to the outlay which each Province might reasonably claim to incur

upon the services which it administered. The first step taken in concluding a settlement was to ascertain the needs of the Province and assign revenue to meet them; the residue only of the income of the Province coming into the Imperial Exchequer." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_59

With the shifting of emphasis on the competing needs of the Central and Provincial Governments the complaints on the score of unfair distribution of funds ceased, and no fear of an adverse revision remained when the settlements were declared permanent. There, however, remained the other main objection to the system of Provincial Finance, namely, that the limitations imposed upon it tended to reduce the Provincial Government to a nonentity by restricting the scope of their activity within the field allotted to it.

It was said that if the system of Provincial Finance was inaugurated on the understanding by which the Government of India said to the Provinces

“Take what we are able to give you, and for the residue take certain powers of taxation and raise it yourself... for there are subjects which can be dealt with far better by local than by imperial taxation,”

there was no reason why the Provinces should not have been allowed the freedom to tax. Again, if certain resources had been made over to the Provinces, what justification was there in not allowing them to raise loans for promoting purposes of local utility? This restriction was particularly resented; for, it was pointed out that even the humblest local Authority in India enjoyed the power to raise loans to effect improvements in its respective jurisdiction, while such an important polity as a Provincial Government was deemed unworthy of shouldering such a responsibility. Indeed it was felt as a most galling restriction, for under it it happened that a Provincial Government which was deemed to have enough credit to be accepted as security by the Government of India against loans to other local bodies subordinate to it, was ruled to have no credit to pledge in its own behalf!

What, again, was the justification for limitations on the spending powers of the Provincial Governments in the matter of staff and establishments? If the administration of certain services had been

entrusted to the Provincial Governments, why should they have been circumscribed in the matter of creating new or abolishing old appointments or revising the establishments of their departments? If under the system of Provincial Finance the Provinces were responsible for the services they managed, why should they not have been trusted with powers to make needful changes in the agencies which carried out those services?

Further, it was asked, what justification was there for the limitations on the preparation and execution of the Provincial Budgets? If separate Budgets had been carved for each of the Provinces out of what once formed an Imperial Budget for the whole of India, why should the Provinces have been required to submit their Budgets to the Government of India? Merely as a matter of conveying information the requirement was comparatively of a trifling character. But why should the Government of India have claimed to alter their estimates and compel them to abide by the grants as fixed by it? Was such a scrutiny of Provincial Budgets a cover for dictating a policy to the Provincial Governments? If this was so, what was the scope for initiative and freedom left to the Provinces which it was the primary object of Provincial Finance to promote and of the permanent settlements to ensure? Again, why should a Provincial Government have been required to come to the Government of India for a supplementary grant as it had to do where the excess over estimates could not be met by reappropriations, even when it had balances to its credit so sufficient as not to be reduced below the required minimum by a draft to meet the excess?

For each of these limitations which fettered the Provincial Governments and contracted the scope of Provincial Finance, the Government of India was of course ready with abundant excuses.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_60 In the matter of revenue restrictions it urged that the revenues of India were its constitutional possession for the proper disposal of which it was responsible to the Secretary of State and Parliament. That being the case it was fair that the Government of India should require that the sources assigned to the Provinces should not be alienated nor spent on unauthorised grants or

unapproved services. Again, being responsible for all services it followed that the Government of India could not have afforded to weaken its position as to managing the resources of the country by partitioning the taxing or borrowing powers. The field for taxation in India being considerably limited, an indiscriminate levy of taxes by a competing authority, it was feared, would have led either to discontent by additionsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_61 to the Imperial imposts or to a retrenchment of the field for Imperial taxation. The concentration of borrowing powers in its hands, the Government of India urged, was a natural corollary of the statutory hypothecation of all India revenues to all-India needs. The Government of India could not allow its revenues to be mortgaged by a Provincial Government for its own needs. Besides it was afraid

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_62 that if this freedom to borrow were granted

"the temptation to hypothecate revenues in advance might become inconveniently strong, and the future administration of a Province might be starved because a former Government had been in a hurry to proceed with some costly ambitions and non-productive project."

Moreover, the loan market in India, it was said, was as limited as the taxable capacity of the country. Therefore

"if many buckets are dipping into one well and drought cuts short the supply of water, obviously the chief proprietor of the well must take it upon himself to regulate the drawings."mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_63

In the matter of specific restrictions on spending powers with respect to staff and establishments, the defence of the Government of India was that such restrictions were necessary in the interest of uniformity and economy. It was urged that if each province was allowed the freedom to regulate the remuneration of the Public Service which carried on the actual work of administration the result would probably have been unequal pay for equal work. Such a consequence would have engendered discontent in the servants of the State which it was desirable to prevent in the interest of good administration. Again, if the Provinces

had been given full freedom to revise establishments it might have resulted in considerable additions to the recurring expenditure of the Provinces, thereby jeopardising the stability of the Provincial as well as of the Imperial finance, for in the last resort the Government of India was responsible for maintaining the Provincial Governments.

In the matter of control over the preparation and execution of Provincial Budgets the Government of India urged that the scrutiny was not motivated by a desire to control an unwelcome policy, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_64 but was inevitable because of the three important ties by which the Provincial Budgets were bound up with the Budget of the Government of India. These were (1) the incorporation of the income and expenditure of the Provincial Governments into the Budget and the Annual Accounts of the Government of India as an integral part thereof; (2) the system of divided heads of revenue and expenditure, and (3) a common treasury involving a combined "ways and means" for the transaction of the Central and Provincial Governments. The first two points of inter-relation required that the Government of India should examine the Budget Estimates of the Provincial Governments. It was urged mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_65 that the power to make such alterations was rendered specially necessary by the inveterate tendency of local Governments to over-estimate their expenditure and under-estimate their revenue. Estimates which departed widely from actuals meant bad finance and also a provision of larger ways and means for the working of the Treasury. But even if this tendency was absent it was incumbent on the Government of India to scrutinise the Provincial Estimates in order to preserve accuracy in the combined accounts. Besides the interests of accuracy, the Government of India had to ascertain by a scrutiny of their estimates that a Province did not impair the stability of its finances by (1) including in its budget expenditure on schemes which had not received due administrative sanction, or was not likely to receive such sanction in time to be incurred during the year; or (2) by entering on an enhanced scale of expenditure a Province was not unduly depleting its balances. But by far the strongest reason why the

Government of India needed to scrutinise the Provincial Estimates consisted in the fact that in so far as some of the Heads of Accounts were shared, the ultimate result of the Central Budget, whether there was to be a surplus or deficit, depended upon the accuracy of the estimates. The Government of India, it was urged, was thus directly interested in the Provincial Budgets, and could not have abandoned its right to scrutinise them without exposing its budgetary system to serious derangement. The third point of inter-relationship necessitated that the Provincial Governments should work within the grants as fixed finally by the Government of India. To have allowed the Provincial Governments the liberty to exceed the grants because they had ample balances to their credit would have been incompatible with the responsibility of the Imperial Government to provide the ways and means for the whole administration of the country. A provincial balance, it was pointed out, was not a separate balance locked up in a separate provincial chest. It was a part of the general balances on which the Government of India operated daily. If a sudden demand un contemplated in the Budget were to be made upon these balances, as would have been the case if the Provincial Governments had exceeded their budget grants, it would have disturbed the ways and means transaction and would have involved the Government into insolvency by causing insufficiency of cash.

All these defences of the restrictions on Provincial Governments were plausible defences and could have been decisive if the centralised system of administration in favour of which they were urged could be deemed to have satisfied the ends of good government. But it was not unreasonable to argue as was done by the Provincial Governments that modern tendencies were all moving in the direction of forms of government which placed fullest powers as tow down in the administrative scale (i.e. as near the section of population immediately affected) as could be safely arranged. It is reasonable to centralise such powers as could not be efficiently exercised otherwise. But it is equally unreasonable to centralise powers

where central control or uniformity is not clearly essential or is impracticable. By centralisation all progress tends to be retarded, all initiative liable to be checked and the sense of responsibility of local Authorities greatly impaired. Besides, centralisation involves and must involve a serious sacrifice of elasticity, for it is naturally disagreeable to a central department to have to deal with half a dozen different ways of managing the same branch of administration, and which therefore aims at reducing all types to one. Further centralisation conflicts with what may be regarded as a cardinal principle of good government, namely, that when administrative business reached an authority fully competent to deal with it, that authority should deal with it finally. Even when there is a higher authority equally competent, to pass the business on to it would at best help to transfer power to the hands of the lower ranks of the official hierarchy, by causing congestion of business in the Central Department. Thus centralisation, unless greatly circumscribed, must lead to inefficiency. This was sure to occur even in homogeneous states, and above all in a country like India where there are to be found more diversities of race, language, religion, customs and economic conditions than in the whole continent of Europe. In such circumstances there must come a point at which the higher authority must be less competent than the lower, because it cannot by any possibility possess the requisite knowledge of all local conditions. It was therefore obvious that a Central Government for the whole of India could not be said to possess knowledge and experience of all various conditions prevailing in the different Provinces under it. It, therefore, necessarily became an authority less competent to deal with matters of provincial administration than the Provincial Governments, the members of which could not be said to be markedly inferior, and must generally be equal in ability to those of the Central Government, while necessarily superior as a body in point of knowledge.

To these arguments the only reply the Government of India could make was that it concentrated all power in its hands, not from principle but from necessity. That necessity arose out of its constitutional obligations. The law had invested it with the superintendence, direction,

and control of the civil and military government and the ordering and management of the revenues of the country. It could not therefore relax its control over the powers it had delegated to the Provincial Governments. It was, of course, impossible to deny the force of this argument. So long as the Government of India remained the authority solely responsible to Parliament it was reasonable to hold that it should be the controlling authority in all matters pertaining to the administration of the country. But it was equally reasonable to ask whether it would not have been possible in the interests of cordiality between the Central and Provincial Governments to have relaxed such of the restrictions on the financial powers of the Provinces as would not have been incompatible with the due discharge by the former of its own responsibilities. That it was possible so to enlarge the scope of Provincial Finance by a relaxation of the limitations without injury to the position of the Government of India must be said to be evident from the following analysis of the suggestions made by the Provincial Governments. These suggestions were

- (i) Power of taxation and borrowing on the security of Provincial Revenues.
- (ii) Power of sanctioning expenditure on Staff and Establishments up to a limit higher than that allowed by the Government of India.
- (iii) Separation of Provincial Estimates from the Imperial Budget and Accounts.
- (iv) Abolition of the system of divided heads of revenue and expenditure and the replacement of it by a system of separation of sources and contributions from the yield.
- (v) Power to spend part of their balances up to a defined amount, without the previous sanction of the Government of India in meeting an excess of expenditure over Budget Estimates.

What objections were there, from the standpoint of the constitutional responsibilities of the Government of India, to the grant of these demands? Clearly it was possible for the Government of India to have marked off certain sources of taxation best suited for provincial levy and unconnected with the imperial imposts. Similarly it was possible to

have permitted the Provincial Governments to borrow to a limited extent on the security of the revenues assigned to them. To suggest as did the Government of India, that the Provincial Governments would abuse these powers to the extent of causing discontent or jeopardising the stability of their financial system, was to believe that such legally recognised polities as the Provincial Governments were run by incompetent administrators unmindful of their obligations. The second demand could have been granted with greater ease. It is to be noted that the Civil Service of the country which deals with revenue and general administration has been divided into

- (i) (i) The "Indian Civil service" recruited in England by competitive examination, at which natives of India, like other subjects of His Majesty, can compete; and
- (ii) (ii) The "Provincial" and "Subordinate" Civil Services, recruited in India, and, as a rule, only open to persons who are natives of the country or domiciled therein.

Each Province has had its own separate "Provincial" and "Subordinate" Services, but while it has a free hand in recruiting for the latter, appointments to the former have been regulated by rules laid down by the Government of India. That being the case it would have been only logical that the Government which had the power of recruiting for an appointment should also have the power of regulating the salary. There can be no reason why the salaries of posts of similar grades should be equal in all Provinces; nor can they be equal having regard to the differences in the economic conditions of the Provinces. A local Government knows better the economic value of a local man, and should therefore have been trusted with powers up to a limit covered by the Provincial and Subordinate Services. The suggestion of the Government of India that the grant of such powers would have resulted in heavy additions to the recurring expenditure of a Province must be said to be too ungracious to be taken seriously.

The acceptance of the third recommendation could not have in any conceivable way affected the responsibility of the Government of India. The only objection which the Government of India urged was that such a separation would have been unwise. To have published accounts or estimates of the Imperial Government which excluded the accounts of

the Provincial Governments, when the items excluded covered such a large magnitude, would have misled the public and rendered a wholly incomplete idea of the financial position of the Government of India.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_69](#) Now it must be granted that if such a separation of accounts could have avoided the scrutiny and the consequent restraint on budget-making by the Provinces, not to have done so was to have put the supposed convenience of the student of Accounts above the administrative convenience of the Provincial Governments. Besides, it is to be pointed out that the suggestion was not a novel one. It was only a revival of the old practice which obtained between 1871 and 1877. During that period of financial decentralisation Provincial figures did not appear in the Imperial Budget.

The Provincial Budget as framed by the Accountant General was passed by the Provincial Government and no more reference was required to the Government of India except to inform it that the estimate was a probable one and that it was within the limits of the revenues assigned to the Province. It is therefore obvious that there could not have been any constitutional objection to the granting of the demand for a separation of accounts.

The fourth recommendation was of the same class as the third, in that it too could not be said to have involved any infringement of the constitutional responsibilities of the Government of India. The abolition of the divided heads of revenue would have clearly eliminated the interference of the Government of India in the preparation of the Budget Estimates by the Provinces. Similarly the abolition of the divided heads of expenditure would have given the Provinces greater
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_70](#) freedom in the matter of spending the revenues assigned to them. Under that system a Provincial Government could not spend more on a particular service if it was a divided head unless the Government of India consented to increase its figure for expenditure under that service. If the Government of India reduced its figure the Provincial Government was perforce obliged to reduce its own. The substitution of a system of separation of sources and contributions from the yield for the system of divided heads would

have clearly resulted in a greater freedom to the Provincial Governments, without any evil consequence to the Government of India. The objections which the Government of India was able to oppose to this demand was far from convincing. It was urged mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_71 that the Provincial Governments under complete separation may cease to take such interest as it took in respect of revenues which were divided. But it is evidently a mistaken view that a Provincial Government could not have been trusted to administer a tax efficiently unless it had a financial interest in the result. This view supposed that the people engaged in the collection of revenue really knew whether it went to the Imperial or the Provincial credit. As a matter of fact the ultimate credit could in no way have affected the collection of the revenue. And even if that view were true the difficulty could easily have been met by each government having its own staff to collect its own revenues. The employing by one Government to execute its functions the agencies of another, as has been the case in India, is obviously a complicated and awkward system. If separation of agencies had resulted from the separation of sources it would have been a reform all to the good. Besides it was overlooked that the fact that the divided heads gave a personal interest to the Provincial Governments was indeed a point against the system rather than in favour of it. A system which created a vested interest in a revenue apart from the interest of the public was a bad system, for such an interest was sure to lead to harshness and rigidity in collection. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_72 As an instance of this may be cited the notorious unwillingness of Provincial Governments in the matters of remitting taxation. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_73 If humanising the Provincial Governments was a desirable end, then the abolition of divided heads was a good means. The other objection which the Government of India was able to oppose was that such a change would have given the share of the Government of India from the revenues raised in the provinces the character of a tribute, and the Government of India would have

appeared to be the pensioner of the Provincial Governments, depending upon them rather than controlling them. This objection must be ruled out as being sentimental.

The fifth and the last suggestion for the enlargement of the scope of Provincial Finance was least obnoxious to the responsibility of the Government of India. There is no reason why there should have been a single-treasury system for both the Governments, Provincial and Central. It is true that a common treasury permits a high state of economy in the cash balances of the country, which it is the duty of every Government to effect, just as any business firm looks upon it as its duty to economise its till money or floating cash. But if a common treasury hindered the use of the balances the gain in freedom would have more than compensated the loss involved by the increase in the cash balances that would have followed the institution of separate treasuries and separate ways and means. But the demand of the Provincial Governments did not ask for a complete separation of Provincial balances from the balances of the Central Government involving separate treasury system and separate ways and means, probably because they anticipated that as such a proposal meant separate possession of provincial revenues the Government of India would raise a constitutional objection to such a demand. All they asked for was a power to spend part of their balances up to a defined amount without reference to the Government of India. The suggestion was accepted mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27C. Evolution of Provincial Finance in British India PARTIII.htm - _msocom_74 as "reasonable," for its consequences, provided it was not a big amount, would have been not a deprivation of the Government of India's power of control over nor a disturbance in the ways and means, but only a slight increase in the cash balances of the country.

Thus it is clear that the scope of Provincial Finance was unduly restricted by a too narrow and too legalistic an interpretation of the constitutional obligations of the Government of India. From the above analysis of the suggestions made by the Provincial Governments it is clear that without making any breach in the constitutional position of the Government of India it would have been possible, with a more charitable view of their sense of responsibility, to effect the changes

they desired. Such concessions would have made Provincial Finance as self-sufficient and as autonomous as it was capable of being made. The system would no doubt have rested on pure convention: none the less its benefits would have been as real as though it was based on law.

But the time had arrived when the financial arrangements could no longer be looked upon as a matter which concerned the Central and Provincial Governments. There arose a third party whose counsels were rejected in 1870 but which now insisted on having a voice in the disposition of the financial resources of the country. It was the Indian taxpayer, and his clamour had grown so strong that it compelled the powers that be to alter the system so as to permit him to take the part he claimed to play.

The changes that followed upon this event will form the subject-matter of Part IV.

PART IV

THE EVOLUTION OF PROVINCIAL FINANCE IN BRITISH INDIA

PART IV: PROVINCIAL FINANCE UNDER THE GOVERNMENT OF INDIA ACT OF 1919

Contents

The Necessity For A Change

The Nature Of A change

PART IV

PROVINCIAL FINANCE UNDER THE GOVERNMENT OF

INDIA ACT OF 1919

CHAPTER X

THE NECESSITY FOR A CHANGE

As two types of governmental systems, the Presidential and Parliamentary are often contrasted mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_1 to the advantage of the latter. For the Parliamentary type of government it has been claimed mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_2 that no other arrangement seems able quite so effectively to place the centre of authority under the control of those who are supposed to represent the popular will : that it means government by consent : that it ensures the exercise of the functions of government by a body of persons who are amenable to and whose views are in accord with those of the majority of the Legislature : that it is the only form of government which provides for a powerful Executive so very necessary for a stable government without rendering it so irresponsible as to endanger the essentials of a good government: that it throws upon the holders of high office the onus of vindicating their acts or, failing, suffer dismissal : it renders the Legislature supreme both in legislation and administration so that it forms a government not only to make life possible but also to make life good. No other form of government, it is urged, can so effectively prevent order degenerating into tyranny or progress blocked in the name of peace. So eminently has Parliamentary Government demonstrated its supreme virtue in securing orderly progress that, though originally developed as an accident in the evolution of the British Constitution, it has been most eagerly adopted as the most fundamental institution by many countries whose political convulsions have required them to prepare anew or alter the existing

framework of their governmental systems.

If the fact of the Executive being a part of the Legislature be a sufficient indication of the Parliamentary type of government, then the system of government in India since 1853 may be said to be analogous to the Parliamentary system. Indeed it would hardly be possible to deny this characteristic to the Indian constitution, for the provision of the constitutional law has since then been that the additional (i.e. the Legislative) members *and* the ordinary (i.e. the Executive) members shall *together form* the Legislature for the making of the laws and regulation for the peace, order and good government of British India. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_3 But judged in the light of its *de facto* consequences the Indian system falls lamentably below the *de jure* connotation of the class of governmental systems to which it belonged. If in other countries the record of Parliamentary government is one of submission of the Executive to the Legislature, in India it had been one of the Executive thwarting, often of flouting, the legislature. In vain may one search the proceedings of the Legislature to find the Executive ever paying deference to the wishes of the people¹ Reforms have been incessantly, asked for by the legislature only to be denied with equal tenacity by the Executive.

¹The following table from N. C. Kelkar's *The Case for Indian Home Rule*, p. 81, is illustrative of the fact :—

Legislative Council	No. of Resolutions moved	No. of Resolutions withdrawn	No. of Resolutions rejected	No. of Resolutions accepted
Supreme	3	2	1	0
Madras	32	26	6	0
Bengal	38	26	12	0
U.P.	22	10	12	0

Bihar and Orissa	5	5	0	0
C.P.	4	2	2	0

The reason why the Indian parliamentary system was but an empty form is to be found in the fact that it was a Parliamentary system without a Parliamentary Executive. In other words, the Executive under the system was not responsible to the legislature and was not removable by it. The Indian Legislature could neither make nor unmake the Indian Executive. The Indian Executive made peace or war as it liked without being afraid of dismissal by the Legislature. It taxed as it pleased and spent as it liked, without the slightest compunction as to the wishes of the Legislature, it undertook acts or refused to undertake them according to its own sweet will, but had no fear of a vote of censure from the legislature. The nearest approach to the Indian system of parliamentary Government is to be found in the position of the Irish Parliament which existed from 1782 to 1800. The peculiarity of the case lay mainly in the fact that while this Irish Parliament, commonly known as Grattan's Parliament, was during the period it lasted admittedly a sovereign Legislature, the Irish Executive of the time was as regards the Irish Parliament in no sense a Parliamentary Executive. The Irish Executive, instead of being appointed and dismissed by the Irish Legislature, was in reality appointed and dismissed by the Crown on the advice of the English Ministry. In the same manner the Indian Executive was appointed and dismissed by the Crown on the advice of the Secretary of State for India who is a member of the English Ministry and was in no way responsible to the Indian Legislature.

It is true that the Executive in India was ultimately responsible to the Secretary of State for India and through him to the British Parliament. But it must not be forgotten, said Mr. Fisher,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. [Evolution of Provincial Finance in British India PARTIV.htm - _msocom_4](#) that

"the affairs of India are in the hands of the Government of India....

Proposals may come from the Indian Government to London and be vetoed by the Imperial Government. The large lines of Indian policy may be shaped by a Secretary of State in the India Office, and a powerful Secretary of State may make his influence felt strongly on the direction of Indian affairs if he encounters no serious opposition from the Government of India. But in reality the last word lies with the Indian official opinion (i.e. the Executive in India), that a measure would not be forced upon India against the united opposition of the Indian bureaucracy."

As a matter of fact neither was the Secretary, though all-powerful in Indian affairs, inclined to restrain the Executive in India from doing what the people regarded as evil nor to constrain it to do what he thought to be for the good of the people.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_5 Hardly can it be said that the British Parliament, wherein every member has been supposed to be a member for India, has made the acts of the Indian Executive a matter of anxious scrutiny#.

#The salary of the Secretary of State for India being paid out of the revenues of India, Parliament, had no occasion, as it had in the case of the Colonial Secretary, to annually review his actions in the full activity of the parliamentary Session. At the end, generally after the Appropriation Bill had been read a second time, the Indian Budget used to be submitted to Parliament which, after a somewhat desultory discussion, used to pass a Resolution proclaiming in solemn terms that the Indian Accounts show certain totals of income and expenditure ! Many attempts were made to improve the control of Parliament on Indian affairs. But Parliament never cared to increase its control. In 1873 Mr. R. N. Fowler moved "that in the opinion of this House it is desirable that the Statement of the financial affairs of India should be made at a period of the Sessions when it can be fully discussed." Again in 1883 the same motion was brought forward by Mr. Fowler. Both of these attempts to furnish the House with a better opportunity to review Indian affairs fell to the ground. In 1899 the same Resolution was

moved by Mr. Cladwell, M.P., with the addition that the Salary of the Secretary of State for India be placed on the British Estimates. It was opposed by Mr. Fowler, who was then the Secretary of State for India, and was in consequence lost. By the provision of the Government of India Act of 1919 the House has a better opportunity to criticise Indian affairs owing to the salary of the Secretary of State having been placed on the British Estimates.

On the other hand, its interference in Indian affairs has on some occasion been positively harmful to the interests of the Indian people.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_6 Indeed, there can be no doubt that the interest of Parliament in Indian affairs since the assumption of the Government of the country by the Crown instead of increasing has considerably diminished as compared with the interest it took when the affairs of the country were in charge of the Company.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_7 Nay, the influence of the British Parliament over Indian affairs, it may be said, has undergone a decided change for the worse,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_8 inasmuch as all its influence is exerted to strengthen the Executive in India against popular clamour rather than restraining it from flying in the face of public opinion.

It is therefore evident that the control of the Secretary of State and of Parliament over the Executive in India was only a nominal control, and the Indian Executive was in reality an uncontrolled body of bureaucrats in the exclusive charge of Indian affairs. How was this trust discharged by this irresponsible Executive?

The answer to this question may be summed up in the statement that the Indian Executive has sacrificed progress to order. Whether we examine its actions in the field of legislation or finance, the truth of this statement becomes painfully evident.

There are very few countries in the world where there may be said to prevail so many social evils as has been the case in India. Law is a means by which society from time to time repairs its ills in order to effect its conservation. But with very few

exceptions [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_9](#) the rule of *personal* law of a most pernicious character has been allowed to govern the social relations of the citizens, notwithstanding the fact that enlightened public opinion has long since raised its voice of protest against its perpetuation. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_10](#) So religious has been the regard of the Executive for the preservation of the personal law, notwithstanding the fact that it has disabled millions of its subjects from enjoying the most elementary rights of citizenship, that it has been careful not to allow in cases of conflict the rational provisions of the civil law to override or chasten the irrational rulings of that archaic *code*. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_11](#) Judged by the modern standard of legislation the Executive must be pronounced to be extremely conservative. In the matter of securing economic rights its response was of a very halting character, and the legislation it has been persuaded to undertake for giving security or fixity of tenure to the agricultural [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_12](#) or ease and comfort to the industrial [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_13](#) population sank in comparison to what it refused to undertake for liberating the rest from a species of industrial slavery notwithstanding incessant demands for its abolition. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_14](#)

Its financial system was similarly characterised by the desire to preserve peace and order by taxing the masses and exempting the classes. It has been urged that the revenue system be so altered as to give relief to the poorer classes. Indirect taxes are justified as a method of making the poorer classes pay their share of the burden

of the State without their being sensible of the fact. But there is a limiting principle which forbids the imposition of certain kinds of indirect taxes. It may be said to be agreed by students of public finance that indirect taxes be such that the poor on whom they impinge rather heavily relatively speaking, must be able to adjust the burden of such taxes to their means. When such indirect taxes fall on luxuries it is possible for them to apportion for themselves the burden they need must bear by regulating their purchases. But in those cases where they fall on necessities of life this elasticity is not possible. The pernicious character of the salt tax in India was urged as a sufficient ground for its elimination from the revenue system of India. But not only did the Executive refuse to accept the demand, it actually increased the salt tax whenever a deficit has occurred instead of tapping some other source of revenue, which it could have done with equal ease and greater justice. In 1886, to cite one example, it was admitted mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_15 that

"There can, after all is said and done, be no manner of doubt, but that one great fact remains established, one great blot not only unremoved but aggravated by the course of events in recent years.... It is that.... the classes in (India) which derive the greatest security and benefit from the British Government are those who contribute the least towards it." But in the Budget of 1887-8 the Executive eschewed its own conviction and increased the salt duty to make up for the deficit caused not by any extraordinary measure of internal improvement but by an enormous act of external aggression, namely the conquest of Burma, as though the income tax of 1886 which left untouched the incomes of the Bengal zamindars, the Assam Tea planters and the Talukdars of Oudh, in making the richer classes pay, made them pay, at the very moderate rates it levied, all they could be made to pay.

But the salt tax is not the only instance of inequity under which the masses paid for the classes. The land revenue as it has been levied in India may be cited as another example of inequity in the Indian Tax

System. The sources of inequity are various. There is first of all the glaring fact that in some cases the amount of the tax is permanently fixed, while in other cases the amount of the tax payable in respect of land revenue is periodically revised. Now there is no justifying circumstance why some citizens should be exempted from contributing their quota to the growing needs of the State when the same is rigorously exacted from their fellows. This is, however, only one point of injustice to those whose taxable capacity in respect of land revenue is subject to periodical revisions. There is another which consists in the adoption of a wrong measure of capacity to pay. The cardinal feature of this revisable part of the land tax in India is to be found in the basis of the tax which, as is well known to every student of Indian Finance, is a certain unit of land. Now nobody has ever suspected the pernicious effect of the system which bases the tax on a unit of land held ; but surely there can hardly be a system more mistaken in thought or more mischievous in practice. It ignores the commonplace of economists which asserts that taxes are paid not by things but by persons smk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. [Evolution of Provincial Finance in British India PARTIV.htm - _msocom_16](#) and if it is persons who ultimately pay the taxes then it is manifest that they must be required to contribute not according to the land they hold but in proportion to the total income derived. On the contrary the system, in undertaking to tax per unit of land, taxes the poor peasant with only one acre to cultivate and the landlord owing hundreds of acres at a *uniform* rate without realising that as the total incomes of the two must be vastly different this uniformity of taxation must produce a glaring inequity of treatment as between the rich and the poor.

If the revenue thus raised by sacrificing equity to the dictates of order had been spent on services promoting progress there would have been some compensation. But such was not the case.

All the revenue that was collected was spent on Services such as Police, Military and Administration which are calculated to maintain order. Such services as Education, State aid to industries, hardly found any place in the scheme of public expenditure as managed by this

irresponsible Executive. But it may be asked as to why the Executive, sovereign as it was, should have stood for order and against progress?

From the statistics of British India, Vol. II, Financial Statistics, 1920,
p. 7.

The answer is that an irresponsible government, however sovereign, is incapable of progress, for in the exercise of its sovereign powers it is hampered by two very serious limitations. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. [Evolution of Provincial Finance in British India PARTIV.htm - _msocom_17](#) There is first of all the internal limitation which arises from the character, motives and interests of those who are in power. If the Sultan does not abolish Mahomedanism, Pope ban Catholicism, the Brahmin condemn caste, or the British Parliament declare the preservation of blue-eyed babies illegal, it is not because they *cannot do* things, but it is because they will not do these things. In the same way if the Executive in India did not do certain things most conducive to progress it was because by reason of its being impersonal** and also by reason of its character, motives and interests it could not sympathise with the living forces operating in the Indian Society, was not charged with its wants, its pains, its cravings and its desires, was inimical to its aspirations, did not advance Education, disfavoured Swadeshi or snapped at anything that smacked of nationalism, it was because all these things went against its grain. But an irresponsible government is powerless to do even such things as it may like to do. For its authority is limited by the possibility of external resistance. There are things which it would do but dare not do for the fear of provoking thereby resistance to its authority. Caesar dare not subvert the worship of the Roman people, a modern parliament dare

not tax the Colonies, however much they would. For the same reason the Government of India dared not abolish the caste system, prescribe monogamy, alter the laws of succession, legalise intermarriage or venture to tax the tea planters. Progress involves interference with the existing code of social life and interference is likely to cause resistance.

**Impersonal because the higher and controlling grades of public services are devoid of Indian element. Although the eligibility of the natives of India for employment in public services was proclaimed as far back as 1833, the regulations made by the Secretary of State for admission to the Public Services in India has had the tendency to exclude them from the employment of the right granted to them by statute. Under the regulations made by the Secretary of State for War, candidates for Commission in the Army were to be of pure European descent and a similar regulation was adopted by the Admiralty for cadetship in the Navy, thereby excluding Indians. As to the Civil Service the Statute (Government of India Act, 1858, s. 32) laid down that all "natural-born subjects" of the Crown be admitted for examination, thereby including the natives of India. But the ruling of the Secretary of State that that examination should be held only in London had indirectly debarred many natives of the country from benefiting themselves under the statute. Regulations for admission to other public services varied. For the Indian Medical Service, candidates were to be natural-born subjects of European or East Indian descent ; for the Indian Police Service they were to be British subjects of European descent ; for the Forest Service they were to be natural-born British subjects ; for Public Works Department one-tenth might be natives of India who are British subjects.—Cf. in this connection Halsbury, *Laws of England*, Vol. X, pp. 588-9.

None the less a government which is of the people and is not detached from them can venture on the path of progress, because it is in a position to know where obedience will end and resistance will begin. But the Indian Executive not being of the people could not feel the pulse of the people. The gist of the matter is that the irresponsible

Executive which had been in power in India was paralysed between these two limitations on its authority and much of what went to make life good was held up. Part of the programme it would not undertake and the other part it could not undertake. As a result of this, so far as the moral and social life of the people was concerned, the change of government by the Moghuls to a government by the British was only a change of rulers rather than a change of system. Owing to the adoption of the principle of non-interference partly by preference and partly by necessity by the British

“the natives of India found themselves under a government distinguished in no vital respect from those under which they had toiled and worshipped, lived and died through all their weary and forgotten history. From a political standpoint, the change was but the replacement of one despotism by another. It accepted the arrangements as it found them mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_18 and preserved them faithfully in the manner of the Chinese tailor who, when given an old coat as a pattern, produced with pride an exact replica, rents, patches and all." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_19

That there was some advancement in material progress is not to be denied. But no people in the world can long remain contented with the benefits of peace and order, for they are not dumb brutes. It is foolish to suppose that a people will indefinitely favour a bureaucracy because it has improved their roads, constructed canals on more scientific principles, effected their transportation by rail, carried their letters by penny post, flashed their messages by lightning, improved their currency, regulated their weights and measures, corrected their notions of geography, astronomy and medicine and stopped their internal quarrels. Any people, however patient, will sooner or later demand a government that will be more than a mere engine of efficiency. Under the influence of Western ideas of representative government the Indian people had for some time been demanding a change in the form of the government. A Parliamentary form of government with a Parliamentary

Executive was the goal they had laid before themselves.

The popular agitation for achieving this end assumed such proportions that, in the course of time, there was presented a serious issue for the consideration of the Executive in India. How was the government of the country to be carried on? By force or by consent, Power seldom commits suicide of its own accord. Rather, when it fails to secure the willing compliance of the people, it resorts to force. That was the resource adopted by the Executive in India. Not satisfied with the aid of the power with which the Executive was endowed by the provisions of the Criminal and Penal Codes to anticipate offences by preventive acts, it besmeared the Indian Statute Book with a set of repressive laws hardly paralleled in any other part of the world. The Criminal Law Amendment Act XIV of 1908 empowered a magistrate with special sanction of the Government to hold an *ex-parte* inquiry without the presence of the accused or of his legal representative and commit him for trial to be conducted without a jury. Under another provision of the same Act the Executive could declare unlawful any association which in its view interfered with the maintenance of law and order. The State Prisoners Regulationsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_20 and Actsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_21 authorising the Executive to place under restraint any person whom it suspected but against whom it had no proof, constituted by themselves a perpetual suspension of the Habeas Corpus Act :mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_22 while under another Actmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_23the Executive was empowered to proclaim”a State of Siege”or martial law in any area and suspend therein the jurisdiction of the civil courts in favour of the military courts. The Indian Press Act of 1910 put a complete muzzle on the Press. So wide were its provisions that in the opinion of a learned judgemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_24 of one of the Indian High Courts it was”difficult to see to what length its operation might not be plausibly

extended by an ingenious mind”and”that they would certainly apply to writings that might even command approval”and”much that is regarded as standard literature might undoubtedly be caught.”The right of public meeting was suppressed in the same manner and with the same sternness as was the right to personal freedom and the right to freedom of discussion; for, over and above the restrictive provisions contained in the ordinary law of the land,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_25 the executive armed itself with discretionary powers under a special enactment to prohibit any public meeting on the excuse of what it regarded as the interest of the public.

The rigour of this regime of *lettre de cachet* and the *Bastille* was quite untempered by any fear of responsibility on the part of the Executive for any excesses committed in putting these repressive laws into operation. For it is to be noted that the Executive had, coupled with the large grants of these discretionary powers to suppress the liberties of the people in order to preserve law and order, the gift of an equally generous measure of immunity to its agents in carrying out those powers. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_26 The Police Acts and the Press Act *all* contained provisions which barred all action in a civil court against these agents for damages to be done in pursuance of these Acts. Officers and soldiers taking part in the suppression of riots were not criminally responsible for acts done in good faith and were not to be prosecuted for other acts without the sanction of the government.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_27 In like manner superior Executive officers could not be prosecuted for crimes committed in discharge of public functions except with the permission of the government and then only in the manner prescribed by government.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_28 There is no wonder then if such discretionary powers, exercised extra-judicially, substituted a reign of terror in place of a regime of peace.

But it was soon found out that force was not a sure means of carrying on the government of a country. The verdict of history was well summed up by Burke mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_29 when he said :

"The use of force alone is but temporary. It may subdue for a moment, but it does not remove the necessity of subduing again: a nation is not governed which is perpetually to be conquered. (The) next objection to force is its uncertainty. Terror is not always the effect of force, and an armament is not a victory. If you do not succeed, you are without resource ; for conciliation failing, force remains, but force failing, no further hope of reconciliation is left. Power and authority are sometimes bought by kindness, but they can never be begged as alms by an impoverished and defeated violence. A further objection to force is, that you impair the object by your very endeavours to preserve it. The thing you fought for (to wit the loyalty of the people) is not the thing which you recover, but depreciated, sunk, wasted and consumed in the contest....."

Government by consent was indeed long ago accepted by the Indian Executive as a principle of political wisdom, and the changes introduced from time to time in the constitution of the Indian Legislature were avowedly for the purpose of making it reflect the popular will. The result for a time was an astonishing degree of accord between the Indian Executive and the Indian Legislature ; so much so that the regime of *lettre de cachet* and the *Bastille* had the sanction of the majority of the *Indian legislature*. But all this government by consent or conciliation was a camouflage. On the other hand, an analysis of the changes introduced from time to time into the constitution of the Indian Legislature clearly shows that the motive behind these changes was to make it an impotent body or a willing tool in the hands of the Executive. A Legislature as distinct from the Executive was first mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_30 inaugurated in 1853. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_31 But in 1861 mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance

in British India PARTIV.htm - [_msocom_32](#) the constitution of the Legislature then established was altered. The ground urged was that that Legislature was not a body representative of the Indian people. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_33](#) Its members were drawn from the official class representing the several Provincial Governments. In order to make the Legislature representative of the people, the Act of 1861 directed that it should be composed of *nominated* members chosen by the Governor-General from among the public, of course on the advice of the Executive. Again, by the Act of 1892 the Governor-General was directed to nominate such persons to the Legislature as were selected by public bodies in the country. These changes in the constitution of the Legislature appear to be aimed at liberalising it. But was this tendency towards making the Legislature representative accompanied with a tendency to make it more powerful as regards the Executive? Quite the reverse. As the legislature gained in its representative character it lost in its controlling power. The powers exercised by the Legislature under the Act of 1853 were far vaster than anything possessed by the Legislature under the Act of 1861. Under the former the Indian Legislature modelled itself on the procedure of the House of Commons in England, and not only dealt with matters of legislation, pure and simple, but also with matters of administration. In the words of Sir C. Ilbert, it showed an inconvenient degree of independence by asking questions as to and discussing the propriety of the measures of the Executive Government—deeming itself competent to inquire into abuses and grievances, calling for reports and returns from local administrations, debating long on questions of public interest and introducing motions and resolutions independent of the Executive Government. In a despatch of Lord Canning at the time, he pointed out that the Legislature had become invested with forms and modes of procedure closely imitating those of the House of Commons, that there were 136 standing orders to regulate the procedure of a dozen gentlemen assembled in council, that in short, in the words of Sir Lawrence Peel, they had assumed jurisdiction in the nature of that of a grand inquest of the nation. This was deemed to be a very grave defect (!!) in the Legislature as constituted by the Act of 1853. Its reform was therefore

looked upon as very necessary for maintaining the supremacy of the Executive, and its non-popular character was made the ostensible excuse for its reconstruction. Under the pseudo representative system introduced in 1861 the Legislature was a meek body entirely in the hands of the Executive. Being composed of *nominated* members, division in the Legislature was directly influenced by that fact. In every legislative body a man must sit, unless he has a hereditary right, by what in modern parlance is called a mandate. That mandate usually proceeds from the authority to whom he owes his seat. The nominated members, official as well as non-official, owed their elevation to the legislature to the pleasure of the Executive, and as such were bound to support the Executive on any measure on which a division was taken. The Executive had always at its command the official block of nominated members, who gave implicit obedience to its mandates either because of its convictions or by reason of its being a part of the same. The nominated non-officials, who may be said to be opposed by conviction to the Executive, were not men of independent character and were largely concerned to make themselves agreeable to the Executive rather than make themselves reckoned with. But had they been men of independent character they could not have made themselves masters of the Executive, for by the provisions of the Constitutional law and the rules of procedure made under it, the Legislature was rendered entirely powerless to compel the Executive to do anything against its wishes. From 1853 to 1861 the Legislature dealt with both legislative and administrative questions. From 1861 the legislature met only for legislative purposes. As a consequence of this limitation the Legislature was debarred from asking a question, moving a resolution or dividing on the Budget. During the first thirty years of its existence the legislature did not even discuss the annual budget on more than sixteen occasions, and that too because some new tax legislation had been called for, and which the Executive could always carry through with the help of the nominated official block as it did every other kind of legislation it deemed necessary. The right of discussing the annual financial statement and the right of asking questions in regard to matters were first conceded to the legislature by the Rules of Procedure framed under the Indian Councils Act of 1892. But it may be doubted whether

these concessions of powers to the Legislature amount to a restoration of the position which it occupied and dominance it exercised under the Act of 1853.

Even the reforms of Lord Morley fell short in the matter of according a real measure of independence and power to the Legislature over the Executive. In the reforms which he introduced in 1909 nomination, directly or after selection, was in principle replaced by election as a basis for the constitution of the legislature. At the same time the procedure of the legislature was liberalised so as to give power to the members to put supplementary questions along with interpellations, to move resolutions on the Financial Statement and on matters of general public interest. But a little analysis is enough to show that even this attempt was of a piece with the old endeavour of liberalising the Legislature without impairing the supremacy of the Executive.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_34 This supremacy of the Executive was maintained (1) by means of a permanent majority of officials of the government nominated to the legislature, and (2) by controlling the rules of procedure. Although

election mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_35 was admitted by the Act of 1892 as a basis of the composition of the Legislature, the elected members were in a minority, so that they could not give effect to the wishes of the people whom they represented. They were entitled to move resolutions if permitted by the Executive

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_36 but the Executive was not bound to carry them out. They served only as recommendations, and were not binding upon the Executive. This direct thwarting produced irritation between the Executive and the elected members of the Legislature. In a certain sense the reforms of 1909 were a bad piece of engineering. Before 1909 whatever conflict there was manifested outside the Legislature. For by the rules of election and procedure the Legislature was entirely muzzled : it could do no mischief. By the reforms of 1909, however, an attempt was made to make the Legislature

independent and at the same time to muzzle it. This attempt, ingenious as it was, only served to bring to the surface the deep-seated conflict between the Executive and the forces agitating the minds of the people. Election procedure or business procedure governing a legislature is, in the words of Prof. Redlich, as it were a political pressure gauge, indicating the tension in the parliamentary machine and thence in the whole organism of the State.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_37 It is possible that this pressure gauge in the first instance may either be badly constructed or may become worn out so as to give a false reading of the actual tension. But there can be no doubt that in the case of India the Executive, in the alterations which it introduced from time to time and particularly in 1909 in the election and business procedure of the legislature, had all along constructed it badly of purpose and had attempted to conceal thereby dangerous pressure of the steam in the political machine, so as to cause it to give a false reading of the situation. So long as the members of the legislature derived their mandates from the Executive, owing to the fact that all of them were nominated members, such an artifice worked well, with the entry of the elected members holding their mandates from the people, the weakness of the artifice became evident. The mortification of the elected members led them to obstruct and challenge the great fundamental principles recognised as the theoretical basis of procedure. Now if a party complained of inequality among members, of the rules of conducting proceedings, of freedom of speech or of the majority principle, it is a danger signal indicative of the existence of some serious defects in the life of the State. When such a conflict arises it is for a political statesman to judge whether he has to face a reform of the procedure of the representative assembly or a reform in the constitution of the State.

While inside the Legislative Assembly there were signs of hardening opposition and weariness which comes from sterile efforts, outside the Legislature the tide of feeling was rising more quickly, for, all the time the sense of national consciousness and the desire for political power were growing rapidly in the minds of educated Indians, no doubt,

because the Legislature with its limited powers was found to be an insufficient safety valve. As a result of the realisation of this fact those who had given their thoughts to the political reconstruction of the country agreed that a mere reform of the procedure will not do. Only a reform of the constitution will save the state from anarchy.

There was, however, a considerable diversity in the reforms suggested for effecting an alteration in the constitution of India. One scheme may here be noted in passing and that was the scheme propounded by the Indian National Congress and the Moslem League, shortly known as the Congress-League-

Scheme.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1](mailto:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1). [Evolution of Provincial Finance in British India PARTIV.htm - _msocom_38](#) The scheme demanded a four-fifths majority of elected members in the Central Legislature. As to the Executive, it demanded that one-half of the total number of the Executive members should be Indians and that they should be elected by the elected members of the Legislature. The Legislature was to have complete financial and legislative powers. Nay, its recommendations, passed in the form of resolutions, were to be binding on the Executive. Such”was the latest, most complete and most authoritative presentation of the claims of the leading Indian political organisations”on behalf of the Indian people. But when we come to analyse the scheme it speaks poorly of the political genius of the Indian politicians. The scheme was formulated as a fulfilment of *responsible* government in British India. But in practice it was not only not a measure of responsible government, but it was deficient even to subserve the ends of good government. The scheme did not ask that the legislature should have the power to make or unmake an Executive as it pleased. If it had asked that, then the scheme would have been a scheme for responsible government. But what it asked for was to compel an Executive, which was irremovable, to conduct the administration of the country according to the orders of the Legislature. The Scheme was of a piece with that of Lord Morley in an enlarged form. He had introduced an Indian element into the Government so that Indian opinion and Indian advice might have some weight with the Executive in addition to what it exercised through the legislative organ of the Government. Those who framed the Congress-

League-Scheme merely increased the Indian element in the Executive and the Legislature, and added provisions aimed at converting advice into control without realising what was to happen if the Executive refused to be bound by the wishes of the Legislature. The essence of the project was an Executive with a divided mandate legally responsible to Parliament, and practically to an elected Legislature. Such a separation of mandates, it was obvious, would have enabled the Legislature to paralyse the Executive without having power to remove it. Being without any constitutional means to change the Legislature in cases of conflict by an appeal to the Electorate it would have been obliged to carry on the Government even where it did not respect the wishes of the Legislature. The scheme was unsound, like all previous attempts at the reform of the Indian Constitution, because in it the Executive and the legislature derived their mandates from and were responsible to different powers. It was unsound because it overlooked the possibility that two mandates may not agree, in which case there would be a conflict. That conflict is inherent in a non-parliamentary executive. Some form of a Parliamentary government with a Parliamentary executive was the only way of avoiding it.

It is from this standpoint that the announcement of August 20, 1917, forms a landmark in the annals of the development of the Indian Constitution. On that date the Secretary of State for India announced in the House of Commons that—

"The policy of His Majesty's Government, with which the Government of India are in complete accord, is that of the increasing association of Indians in every branch of the administration and the gradual development of self-governing institutions, with a view to the progressive realisation of responsible government in India as an integral part of the British Empire. They have decided that substantial steps in this direction should be taken as soon as possible....."

"I would add that progress in this policy can only be achieved by successive stages. The British Government and the Government of India, on whom the responsibility lies for the welfare and advancement of the Indian peoples, must be judges of the time and

measure of each advance, and they must be guided by the co-operation received from those upon whom new opportunities of service will thus be conferred and by the extent to which it is found that confidence can be reposed in their sense of responsibility.”

This momentous announcement marks the end of one epoch and the beginning of a new one. It definitely abandoned the old conception under which the Executive might, as it saw fit, consult the wishes of the legislature, which were only given an increasing share in the administration of the country and increasing opportunities for influencing and criticising, but never for controlling, the Government. Under the new conception the aim was to endow the Legislature with the power to make or unmake the government, so that it would be not only a government of the people and for the people, but by the people. The adoption of such a change of policy in the basis of the political institutions of the country involved far-reaching changes in their relations with one another, administrative, legislative and financial. The changes in the system of Provincial Finance introduced in consequence of the Reforms Act of 1919 were not caused by any inherent defects in the system as it stood at that date. On the other hand, the system was eminently workable. They were effected because the system as a whole was inconsistent with the great revolution which that Act had sought to effect in the governmental system of that country.

The nature of the changes, their extent and their adequacy will form the subject-matter of the two following chapters.

CHAPTER XI

THE NATURE OF A CHANGE

The announcement of August 20, 1917, spoke of progressive realisation of responsible government as the goal of the future British

policy in India, and the Montague-Chelmsford Report on Constitutional Reforms surveyed the ways of giving effect to that announcement. One of the merits of that Report consisted in showing that the Congress-League-Scheme of political reforms did not embody the principle for the recognition of which they were agitating so long. Instead of inaugurating a responsible government in India, the scheme would have saddled the country with a non-parliamentary executive under a parliamentary system of government. Being convinced of their error the Congress-League politicians, be it said to their credit, abandoned their scheme in favour of the proposals contained in the Joint Report. But in their turn they demanded the introduction of a more or less complete responsible government in most of the political institutions at one stroke. But the framers of the new constitution pointed out that the emphasis on the word progressive in the announcement was as great if not greater than the emphasis laid on the word responsible.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. [Evolution of Provincial Finance in British India PARTIV.htm - _msocom_39](#)

In consonance with this view it was decided to introduce, as a substantial step in the progress towards the realisation of the goal laid down in the announcement, a responsible government of a limited character in the Provincial Governments. The Provincial Governments in India, like the Central Government, were irresponsible governments. The changes made in the constitution of Provincial Legislatures were of the same nature as the changes in the Central Legislature, in that both were calculated to enable the Executive to consult the Legislature without being amenable to its control. Only on one occasion were the frame-works of the two machines of governments, the Provincial and the Central, constructed on a slightly different basis, and that was in the Morley-Minto Reforms of 1909. Under those reforms the Central Legislature was dominated by *official* members who with the members of the Executive formed a standing majority in the chamber. In the Provincial Legislatures this principle of a standing majority of official members was dispensed with. The second point of departure in the constitution of the Provincial Legislatures as compared with that of the Central Legislature consisted in the Budget procedures in the two

governments. In the Central legislature the Finance Member early in each calendar year presented to the Legislature his preliminary estimates accompanied by an explanatory memorandum. On a subsequent day he made such further explanations as he thought necessary. Members of the Legislature could thereupon move resolutions regarding (a) any proposed alteration in taxation, (b) any proposed loan, or (c) any additional grant to a Local Government. The first stage in the discussion of the Budget of the Government of India was over when once these resolutions were voted upon. The second stage commenced when the estimates were taken into consideration by groups. At this stage also it was open for members to move resolutions on any heads of revenue and expenditure, except those that were declared by rules of procedure to be not open for discussion to the legislature. After the resolutions had been moved and voted upon the Finance Member took the whole discussion into consideration and made such changes as were agreeable to him and then presented his final Budget. At this, the third stage, the Finance Member explained his reasons for the acceptance of some and the non-acceptance of other suggestions made during the course of the Budget debate. A general discussion of the Budget then followed, but no resolution was allowed to be moved upon the final Budget or a vote taken. The Budget procedure in the Provincial Legislatures was a little different. There the first stage commenced with the preparation of a rough draft of the provincial estimates, accompanied by a schedule including in it all projects involving an expenditure of over 5,000 rupees, divided into two parts, the first containing all allotted, i.e. obligatory, items of expenditure and the second containing unallotted, i.e. non-obligatory, items of expenditure. The Government of India to whom this draft Budget was submitted corrected the estimate of the revenue and determined in consultation with the Provincial government the aggregate expenditure for which the latter should provide, and if need be, altered or added to the items in the first part of the schedule. When the figures of the altered revenue and the aggregate expenditure as fixed by the Government of India were communicated to the Provincial Government it marked the close of the first stage of a Provincial Budget. The second stage commenced when this draft Budget was submitted by the Provincial Government to a

committee of the Provincial Legislature. The Committee was composed of officials and non-officials in equal number, the former nominated by Government and the latter elected by their fellows. It was presided over by the member of the Executive in charge of Provincial Finance; the proceedings of the committee were informal and private and decisions were by majority votes. The Committee concerned itself only with the second part of the Schedule containing non-obligatory items of expenditure and, provided it did not exceed the aggregate expenditure fixed by the Government of India, it was free to make variations and even to insert new items occasionally. On the conclusion of its labours the Committee reported the changes it made to its Government. With this ended the second stage in the Provincial Budget. The third stage began when the Provincial Estimates as a whole were presented to the Provincial Legislature by the member in charge of finance. The Budget was then considered in a committee of the whole House and resolutions moved on each group of estimates discussed. When all resolutions were debated and voted upon the result of the discussions was communicated to the Provincial Government. But the resolutions were not binding. The fourth stage commenced when the Provincial government introduced the final budget and explained its reasons for the acceptance of some and the non-acceptance of the rest of the suggestions made by the Legislature. A debate followed, but no resolutions were in order at this stage ; nor did the Legislature divide upon the Budget. It was adopted as passed by the Executive.

From these differences in the constitution and procedure of the Central and Provincial Governments, it must not be supposed that the provincial Governments were less irresponsible with regard to their Legislatures than the Central Government was with regard to its own Legislature. The fact that since 1909 there was no majority of official members in the Provincial Legislature as there was in the Central Legislature was a matter of no moment so far as its practical consequences to the Executive were concerned ; for it is to be remembered that in practice the difference between nominated members from among the non-officials and the official members was only superficial. Both had their mandate from the government who gave

them their seats in the Legislature, and as nominees of the Government they voted for the Government, so that, though not in theory, in practice the Provincial Government had as much a standing majority in Legislatures as the Central Government had in theory as well as in practice. Nor did the budget procedure of the Provincial Government mark any decided improvement over that adopted in the Central Government in the matter of giving greater control to the Legislature over the Executive. In both cases the aim was to give the members of the Legislature the privilege of discussing *beforehand* the question of such alteration with reference to the necessities of the Budget, only in the case of the Provincial Budget this privilege was allowed to be exercised at an earlier stage than in the case of the Imperial Budget. But in view of the fact that the Resolutions of the Legislature on the Provincial Budget, as those of the Central Legislature on the Imperial, were only recommendations to their respective Executives, this difference between the Budget procedure of the two Governments did not impose any greater control over the one Executive than it did on the other. Again, the provision that a committee of the Provincial Legislature had been allowed the privilege of framing the non-obligatory portion of the Provincial Budget did not give the Legislature any appreciable control over the Executive. First of all, the Provincial Government could always restrict the scope of this Budget Committee by transferring any head from the class of non-obligatory expenditure to the class of obligatory expenditure. Besides this, the operation of certain other rules of Budget procedure based upon general principles of public finance tended directly to restrict the powers of the committee to put forth schemes of alternative or additional expenditure. It was rightly provided that schemes involving recurring expenditure could only be proposed with due regard to the rate of growth of recurring revenues and recurring expenditure. Owing to this rule, the committee had to drop proposals which involved recurring expenditure, but which were desirable from its standpoint. On the other hand, similar proposals made by the Executive could be easily carried through by the device freely adopted of obtaining previous sanction of the Government of India. The consequence was that in all the Provincial Budgets presented under the new rules the amount of this "unallotted" fund left to the discretion of the committee

bore too insignificant a proportion to the total expenditure in the budget to make the Provincial Executive in any real degree amenable to the Provincial legislature.

No really responsible government could, however, be introduced in the provinces without first of all making a complete change in the mutual relations between the Central Government and the different Provincial Governments in India. The relation between the two which existed before the passing of the Act of 1919 was one of complete subordination of provincial Governments to the Central Government. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_40 In this bond of subordination we can discern three strands—legislative, financial, and administrative. Of these three we have seen how tight was the financial strand. The Government of India's control over revenues and expenditure was derived from Parliamentary Statutes which treated the revenues of India as one and applied them to the purposes of the Government of India as a whole. It is true that this provision was not so strictly construed as absolutely to prevent the appropriation of particular sources of income to specific purposes all-India or provincial. Or else the development of the provincial system of finance would have been impossible. But it certainly had the effect of denying to Provincial Governments any inherent legal right to the revenues which they raised. The Government of India completely controlled taxation imposed in British India, apart from the local taxes which were raised by local bodies. Taxation could only be levied by law, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_41 but the law had forbidden a Provincial Legislature, without the previous sanction of the Government of India, to consider

“any law affecting the public debt of India or the customs duties or any other tax or duty for the time being in force and imposed by the authority of the Governor-General in Council for the general purposes of the Government of India.”

This is the natural corollary of the statutory hypothecation of all-India revenues to all-India needs. The law would not inhibit a provincial

legislature from exploiting for provincial purposes any new source of taxation which it had the ingenuity to discover. But even in that case the project would, before being translated into action, have to secure the assent of the Finance Department of the Government of India, which would not give its sanction without considering closely if it trespassed on the Central Government's sources of taxation. Again, the provision of the law which required that

“no governor or governor in council (of a province) shall have the power of creating any new office or granting any salary, gratuity or allowance without the previous sanction of the Governor General of India in Council” had given the Government of India a right of control over expenditure in the Provinces which was exercised through the instrumentality of a series of codes of instructions, such as the Civil Service Regulations, the Civil Account Code, the Public Works Code and the like. These codes partly dealt with the mechanism of finance such as the maintenance of a uniform system of audit and accounts, the custody of public money, remittances, economy, and such matters ; but they also imposed definite restraints upon the powers of Provincial Governments, to create new appointments or raise emoluments and other matter such as recruitment, promotions, leave, foreign service and pensions upon which the codes really constitute a digest of the case-law laid down from time to time by the Government of India which the Provincial Governments must strictly obey. If their powers of taxation and expenditure were strictly controlled the power of borrowing was never conceded to the provinces. It will be recalled that Port Trusts and Municipalities might raise loans within defined limits, but because the revenues of India were legally one and indivisible and were liable for all debts incurred for the purposes of the Government of India, Provincial Governments possessed no separate resources on the security of which they could borrow.

Even within the prescribed limits of Provincial Finance the Provincial Governments were not free from the control of the Central Government. Because the provincial settlements were based not on provincial revenues but on provincial needs, a central control was

inevitable. The Government of India could not allow a Province to go bankrupt. But if the Government of India were responsible for provincial solvency they must be in a position to control provincial expenditure. Again, as regards revenues, so long as the Government of India took a share in the proceeds they had a strong motive not only in interfering in the Budget estimates of the provinces, but also in interfering in details of administration. Their interest in land revenue, for example, inevitably led them to close supervision over revenue settlements, and the control tended to become tighter in cases where expansion and development of a source of revenue, such as irrigation, depended on capital outlay.

The legislative powers of the Provincial Governments had in the same manner been made subject to statutory restrictions. There was no doubt an extensive field in which, so far as the substantive provisions of the Statute were concerned, the legislative competence of the provincial Legislatures was legally unfettered. Actually, however, the power of the local legislatures was curtailed in two ways. In the first place, owing to the fact that in their existence all the Provincial Legislatures were younger, and most of them much younger, institutions than the Central Legislature of the Governor-General, a great part of the field that would have otherwise been open to them was covered by acts of that body, which had always retained a concurrent power of legislation for the country at large. But the field yet remaining open for Provincial Governments in the matter of legislation was further restricted by the fact that the power of the Secretary of State and Parliament to control all-Indian legislation was made operative by means of executive directions, which had made it incumbent on Provincial Governments to submit for the previous sanction of the Government of India and the Secretary of State all their projects for legislation before introduction. It is true that these directions did not apply to private members' Bills ; but inasmuch as a Bill could only be introduced with the leave of the Legislature, and the Provincial Government was in most cases in a position if it chose to do so to oppose such a motion successfully, the Government of India by directions to the Provincial Governments were in a position to control all private provincial legislation almost as

effectively as the Provincial Government's Bills.

In carrying on the actual work of administration every Provincial Government was by law required to obey the orders of the Government of India and keep that Government constantly and diligently informed of its proceedings and of all matters which ought, in its opinion, to be reported to that Government, or as to which that Government required information. That was because in law every Provincial Government was placed under the superintendence, direction and control in all matters relating to the Government of its Province. This administrative control of the Government of India was exercised by that Government in the interest of uniformity. It is obvious that in many respects India is one single and undivided country, in which much work had to be carried on on uniform lines. The Civil servants who executed the orders of Provincial governments having been recruited from England on terms guaranteed by the Secretary of State, many questions affecting them could not be determined by any Provincial Government. Again, the development of trade, industry and science throughout India similarly favoured the formulation and pursuit of uniform policies by the Government of India. Even with one law for the whole of India business and industry might have been left to their discretion to administer such matters as statistics, patents, copyright, insurance, income tax, explosives and mining, etc. Not only were the provincial Governments subordinated to the Central Government to follow established lines in the matters of administration, but they were not free to initiate any new policy. It was the Government of India which regarded itself as distinctly charged with the duty of framing policy and inspiring reforms for the whole of India by issuing new orders. To make them effective these orders were often accompanied by handsome grants to Provincial Governments strictly earmarked for the purpose of pushing on some particular feature of the new policy. Not seldom did the Government of India appoint new advising or inspecting officers whose task it was to see that the new energy suddenly infused into the system was well maintained and well directed to the chosen ends.

So long as the provincial Governments continued to be bound by such

strands to the Government of India there could be no responsible government in the Provinces. No government can be made to serve two masters at one and the same time. To keep the Provincial Governments subordinate to the Government of India and also to make them responsible to popular Legislature would have been inconsistent in theory and vicious in practice. It is quite conceivable that under such a double government the wishes of the Provincial Legislature on certain matters may not coincide with those of the Government of India. On such occasions a Provincial Government may not know whom to obey. If it deferred to the wishes of the Legislature it would be failing in its duty towards the Government of India. Indeed there is on record a case of such a conflict. There was an occasion during the currency of the Morley-Minto Reforms when the Government of Bombay were unsuccessful in their endeavours to persuade the Government of India to sanction certain charges affecting the educational staff. The proposals were locally popular and were again put forward for adoption in a resolution moved in the Bombay Legislature by an elected member. The Bombay Government thereupon accepted the resolution which was carried unanimously, and once more put forward their proposals to the Government of India on the ground that they had the Legislature's entire support. But the Government of India and the Secretary of State held that these tactics were out of order and that it was

"the duty of the Local Government in dealing with the resolutions to uphold with all their authority the decision of the Government of India,"

i.e. to have opposed the resolution even if it agreed with the Legislature in the principle thereof.

The strong ties of subordination which bound the Provinces to the Central Government were therefore the chief obstacles in the path of Provincial autonomy. In order that the Provincial Government be made

subject to Provincial Legislatures, the first thing to do was to curtail the powers which the Government of India possessed of interference in provincial finance, provincial legislation, and provincial administration. As was well observed by the authors of the Report mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_44 on Constitutional Reforms:

"We have to demolish the existing structure, at least in part, before we can build the new. Our business is one of devolution, of drawing lines of demarcation, of cutting long-standing ties. The Government of India must give and the Provinces must receive ; for only so can the growing organism of self-government in the Provinces draw air into its lungs and live."

The path to provincial independence therefore lay through a satisfactory division of functions and finances between the Provincial and Central Governments. Of the two, the task of dividing the functions was comparatively an easier one. For facilitating the necessary division of functions the following principles were laid down by the Government of India. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_45

"7. There are certain subjects which are at present under the direct administration of the Government of India. The Government of India maintain separate staffs for their administration and the Provincial Governments have no share in it. The category is easily recognisable, and for the most part there will not be much room for doubt as to the subjects to be included in it. At the other end of the line are matters of predominantly local interest which, however much conditions must vary between Provinces, will, generally speaking be recognised as proper subjects for provincialisation.

"8. Between these extreme categories, however, lies a large indeterminable field which requires further examination before the principles determining its classification can be settled. It comprises all the matters in which the Government of India at present retain ultimate control, legislative and administrative, but in practice share

the actual administration in varying degrees with the Provincial Governments. In many cases the extent of delegation practised is already very wide. The criterion which the Government of India apply to these is whether in any given case the Provincial Governments are to be strictly the agents of the Government of India, or are to have (subject to what is said below as to the reservation of powers of intervention) acknowledged authority of their own. In applying this criterion the main determining factor will be not the degree of delegation already practised, which may depend on mere convenience, but the consideration whether the interests of India as a whole (or at all events interests larger than those of one Province), or on the other hand the interests of the Province essentially preponderate.

"The point is that delegation to an agent may be already extensive, but that circumstance should not obscure the fact of agency or lead to the agent being regarded as having inherent powers of his own."

These principles, in which it was stated that "where extra provincial interests predominate the subject should be treated as central," while

"all subjects in which the interests of the provinces essentially predominate should be provincial, and in respect of (which) the Provincial governments (to) have acknowledged authority of their own,"

were accepted by the Functions Committee appointed to make a division between all-India and Provincial subjects. The recommendations made by the Committee were with minor amendments embodied in what are called Devolution Rules under section 45A of the Government of India Act of 1919, which gave effect to the policy of responsible government and are made a part of the constitutional law of the land, so that the subjects thereby devolving upon the Provinces became the services over which the Provinces gained an *acknowledged authority of their own* such as they never had before 1833. According to these Devolution Rules the following were declared to be

PROVINCIAL SUBJECTS

1. Local Self-government, that is to say, matters relating to the constitution and powers of municipal corporations, improvement trusts, district boards, mining boards of health and other local authorities established in a Province for the purpose of local self-government, exclusive of matters arising under the Cantonments Act, 1910 ; subject to legislation by the Indian Legislature as regards—

(a) The powers of such authorities to borrow otherwise than from a Provincial Government, and

(b) the levying by such authorities of taxation not included in schedule II to the scheduled Taxes Rules.

2. Medical administration, including hospitals, dispensaries and asylums, and provision for medical education.

3. Public Health and Sanitation and Vital Statistics; subject to legislation by the Indian Legislature in respect of infectious and contagious diseases to such extent as may be declared by any Act of the Indian Legislature.

4. Pilgrims within British India.

5. Education, provided that—

(a) (a) The following subjects shall be excluded, viz. :

(i) The Benares Hindu University, and Aligarh Muslim University, and such other universities constituted after the commencement of these rules, as may be declared by the Governor-General in Council to be Central subjects, and

(ii) Chiefs' Colleges and any institution maintained by the Governor-General in Council for the benefit of members of His Majesty's Forces or of other public servants or of the children of such members of servants; and

(b) (b) the following subjects shall be subject to legislation by the Indian Legislature, namely:

- (i) The control of the establishment, and the regulation of the constitutions and functions, of universities constituted after the commencement of these rules ; and
- (ii) The definition of the jurisdiction of any university outside the Province in which it is situated, and
- (iii) For a period of five years from the date of the commencement of these rules, the Calcutta University, and the control and organisation of secondary education in the presidency of Bengal.

6. Public Works included under the following heads, namely :

- (a) Construction and maintenance of provincial buildings used or intended for any purpose in connection with the administration of the Province; and care of historical monuments, with the exception of ancient monuments as defined in Section 2(i) of the Ancient Monuments Preservation Act, 1904, which are for the time being declared to be protected monuments under Section 3(i) of that Act; provided that the Governor-General in Council may by notification in the *Gazette of India*, remove any such monuments from the operation of this exception ;
- (b) roads, bridges, ferries, tunnels, ropeways, and causeways, and other means of communication, subject to such conditions as regards control over construction and maintenance of means of communication declared by the Governor-General in Council to be of military importance, and as regards incidence of special expenditure connected therewith, as the Governor-General in Council may prescribe;
- (c) tramways within municipal areas; and
- (d) light and feeder railways and extra-municipal tramways in so far as provision for their construction and management is made by provincial legislation ; subject to legislation by the Indian Legislature in the case of any such railway or tramway which is in physical connection with a main line or is built on the same gauge as an adjacent main line.

7. Water Supplies, irrigation and canals, drainage and embankments, water storage and water power ; subject to legislation by the Indian Legislature with regard to matters of inter provincial concern or affecting the relations of a Province with any other territory.

8. Land Revenue administration, as described under the following heads, namely:

- (a) (a) Assessment and collection of land revenue;
- (b) (b) Maintenance of land records, survey for revenue purposes, records of right ;
- (c) (c) Laws regarding land tenures, relations of landlords and tenants, collection of rents ;
- (d) (d) Courts of wards, incumbered and attached estates;
- (e) (e) Land improvement and agricultural loans;
- (f) (f) Colonisation and disposal of Crown lands and alienation of land revenue ; and
- (g) (g) Management of Government estates.

9. Famine relief

10. Agriculture, including research institutes, experimental and demonstration farms, introduction of improved methods, provision for agricultural education, protection against destructive insects and pests and prevention of plant diseases ; subject to legislation by the Indian Legislature in respect of destructive insects and pests and plant diseases, to such extent as may be declared by any Act of the Indian Legislature.

11. Civil Veterinary Department, including provision for veterinary training, improvement of stock, and prevention of animal diseases ; subject to legislation by the Indian Legislature in respect to animal diseases to such extent as may be declared by any Act of the Indian Legislature.

12. Fisheries.

13. Co-operative Societies.

14. Forests, including preservation of game therein ; subject to legislation by the Indian Legislature as regards disforestation of reserved

forests.

15. **Land acquisition;** subject to legislation by the Indian Legislature.

16. **Excise,** that is to say, the control of production, manufacture, possession, transport, purchase and sale of alcoholic liquor and intoxicating drugs, and the levying of Excise duties and licence fees on or in relation to such articles, but excluding in the case of opium, control of cultivation, manufacture and sale for export.

17. **Administration of Justice,** including constitution, powers, maintenance and organisation of courts of civil and criminal jurisdiction within the Province; subject to legislation by the Indian Legislature as regards High Courts, Chief Courts, and Courts of Judicial Commissioners, and any courts of criminal jurisdiction.

18. Provincial Law Reports.

19. **Administrators-General and Official Trustees ;** subject to legislation by the Indian Legislature.

20. **Non-Judicial Stamps,** subject to legislation by the Indian Legislature, and **Judicial Stamps,** subject to legislation by the Indian Legislature as regards amount of court fees levied in relation to suits and proceedings in the High Courts under their original jurisdiction.

21. **Registration of deeds and documents;** subject to legislation by the Indian Legislature.

22. **Registration of births, deaths, and marriages ;** subject to legislation by the Indian Legislature for such classes as the Indian Legislature may determine. 23. **Religious and Charitable endowments.**

24. **Development of Mineral resources which are Government property;** subject to rules made or sanctioned by the Secretary of State, but not including the regulation of mines.

25. **Development of Industries,** including industrial research and technical education.

26. **Industrial matters** included under the following heads, namely:—

(a) Factories;

(b) Settlement of labour disputes;

(c) Electricity;

(d) Boilers;

(e) Gas;

(f) Smoke nuisance ; and

(g) Welfare of labour, including provident funds, industrial insurance (general health and accident) and housing : subject as to heads (a), (b), (c), (d), and (g) to legislation by the Indian Legislature.

27. **Stores and Stationery** ; subject in the case of imported stores and stationery to such rules as may be prescribed by the Secretary of State in Council.

28. **Adulteration of food-stuffs and other articles** ; subject to legislation by the Indian Legislature as regards import and export trade.

29. **Weights and Measures**; subject to legislation by the Indian Legislature as regards standard.

30. **Ports**, except such ports as may be declared by rule made by the Governor-General in Council or by or under Indian legislation to be major ports.

31. **Inland Waterways**; including shipping and navigation thereon so far as not declared by the Governor-General in Council to be Central subjects, but subject as regards inland steam-vessels to legislation by the Indian Legislature.

32. **Police**; including railway police ; subject in the case of railway police to such conditions as regards limits of jurisdiction and railway contributions to cost of maintenance as the Governor-General in Council may determine :

- a) a) Regulation of betting and gambling ;
- b) b) prevention of cruelty to animals;
- c) c) protection of wild birds and animals;
- d) d) control of poisons, subject to legislation by the Indian Legislature;
- e) e) control of motor vehicles, subject to legislation by the Indian Legislature as regards licences valid throughout British India; and
- f) f) control of dramatic performances and cinematographs, subject to legislation by the Indian Legislature in regard to sanction of films for exhibition.

34. **Control of Newspapers, Books, and Printing Presses** ; subject to legislation by the Indian Legislature.

35. **Coroners.**

36. **Excluded Areas.**

37. **Criminal tribes** ; subject to legislation by the Indian Legislature.

38. **European vagrancy** ; subject to legislation by the Indian Legislature.

39. **Prisons** ; prisoners (except State prisoners) and reformatories ; subject to legislation by the Indian Legislature.

40. **Pounds** and prevention of cattle trespass.

41. **Treasure Trove.**

42. Libraries (except the Imperial Library) and **Museums** (except the Indian Museum, the Imperial War Museum and the Victoria Memorial, Calcutta) and **Zoological Gardens.**

43. **Provincial Government Presses.**

44. **Elections** for Indian and provincial legislature, subject to rules framed under section 64 (i) and 72A (4) of the Act.

45. **Regulations of medical and other professional qualifications**

and standards; subject to legislation by the Indian Legislature.

46. Local Fund audit, that is to say, the audit by Government agency of income and expenditure controlled by local bodies.

47. **Control** as defined by rule 10, **of members of all-India and Provincial Services** serving within the Province, and control, subject to legislation by the Indian Legislature, of public services within the province, other than all-India services.

48. **Sources of Provincial revenue**, not included under previous heads, whether—

(a) Taxes included in the schedules to the scheduled

taxes Rules, or

(b) Taxes, not included in those schedules, which are imposed by or under provincial legislation which has received the previous sanction of the Governor-General.

49. **Borrowing of money** on the sole credit of the Province, subject to the provisions of the Local Government (Borrowing) Rules.

50. **Imposition** by legislation of punishment by **fine, penalty, or imprisonment**, for enforcing any law of the Province relating to any provincial subject; subject to legislation by the Indian Legislature in the case of any subject in respect of which such a limitation is imposed under these rules.

51. **Any matter** which, though falling within a Central subject, is declared by the **Governor-General in Council to be of a merely local or private nature within the province.**

52. **Matters pertaining to a Central subject in respect of which powers have been conferred by or under any law upon a Local Government.**

The second task that of allocating the revenue resources between the Central and provincial Governments was a comparatively difficult one.

As the problem was conceived in the main as one of making the Provinces independent of the Government of India in matters in which it was proposed that they should acquire an authority of their own acknowledged by law it was natural for the authors of the Report on constitutional Reforms to hold that

“Our first aim..... has been to find some means of entirely separating the resources of the Central Government from those of the Provinces.”

The first step in that direction was therefore to abolish the system of “divided heads” or budget by shared revenues, for there was a consensus of opinion that this coparcenary system, in so far as it gave a handle to the Central Government to interfere in the domestic affairs of the Provinces, was a source of friction and was incompatible with provincial independence. But such a system of complete separation was fraught with two main difficulties. The first difficulty was in connection with the disposal of dividend heads. To whom should they be handed over? At the time the scheme of complete separation was contemplated the heads of revenue which were divided in all or some of the Provinces were land revenue, stamps, excise, income tax and irrigation. The authors of the Report on Constitutional Reforms proposed mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_46

“.....that the revenue from stamp duty should be discriminated under the already well-marked sub-heads *General* and *Judicial* ; and that the former should be made an Indian and the latter a provincial receipt. This arrangement will preserve uniformity in the case of commercial stamps where it is obviously desirable to avoid discrepancies of rates ; and it will also give the provinces a free hand in dealing with court-fee stamps and thus provide them with an additional means of augmenting their resources. Excise is at present entirely a provincial head in Bombay, Bengal, and Assam, and we see no valid reason why it should not now be made provincial throughout India..... Land revenue, which is far the biggest head of all, is at present equally shared between the Indian and all the provincial

Governments, except that Burma gets rather more than one-half and the United Provinces get rather less..... Now land revenue assessment and collection is so intimately concerned with the whole administration in rural areas that the advantages of making it a provincial receipt are obvious..... Moreover, famine expenditure and expenditure on major irrigation works are for obvious reasons closely connected with land revenue, and if the receipts from that head are made provincial it logically follows that the Provinces should take over the very heavy liability for famine relief and protective works..... We were told that in the days of dawning popular government in the Provinces it would be well that the provincial government should be able to fall back on the support of the Government of India (as, if the head were still divided, it would be able to do) when its land revenue policy was attacked.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1.Evolution of Provincial Finance in British India PARTIV.htm - _msocom_47 But it is just because divided heads are not regarded as merely a financial expedient but are, and so long as they survive will be, viewed as a means of going behind the provincial government to the Government of India, that we feel sure that they should be abolished. We propose therefore to make land revenue together with irrigation wholly provincial receipts. It follows that the Provinces will become entirely liable for expenditure on famine relief and protective irrigation works..... The one remaining head is income tax. We see two very strong reasons for making this an Indian receipt. First, there is the necessity of maintaining a uniform rate throughout the country. The inconveniences, particularly to the commercial world, of having different rates in different Provinces are manifest. Secondly, in the case of ramifying enterprises with their business centre in some big city, the Province in which the tax is paid is not necessarily the Province in which income is earned. We have indeed been told that income tax is merely the industrial or professional complement of the land revenue ; and that to provincialise the latter, while Indianising the former, means giving those provinces whose wealth is more prominently agricultural, such as the United Provinces and Madras, an initial advantage over a Province like Bombay, which has very large commercial and industrial interests. Another very practical argument

is that the tax is collected by provincial agency and that if Provincial Governments are given no inducement, such as a share of the receipts or a commission on the collections which is only such a share in disguise, there will be a tendency to slackness in collection and a consequent falling off in receipts. We admit that these arguments have force ; but we are not prepared to let them stand in the way of a complete separation of revenues. Equality of treatment as between one Province and another must be reached so far as it is possible in the settlements as a whole, and it is not possible to extend the principle of equality to individual heads of revenue. If it should be found that receipts fall off, it may be necessary to create an all-India agency for the collection of the tax, but this we should clearly prefer to retaining it as a divided head. To sum up : we propose to retain the Indian and Provincial heads as at present, but to add to the former income tax and general stamps, and to the latter land revenue, irrigation, excise and judicial stamps. No head will then remain divided."

However, when all the existing sources of revenue were completely distributed between the Central and Provincial Governments as proposed, it was inevitable that there should be a deficit in the Budget of the Government of India. How to make up this deficit was therefore the second difficulty that was involved in replacing the system of divided heads by a system of separate heads of revenue. The authors of the Report on Constitutional Reforms were presented with many a plan for the solution of this knotty problem. In the course of their survey they observed : mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_48

“One way of meeting it would be to maintain the basis of the present settlements, but to allot to the Government of India a certain proportion of growing revenue instead of its share of the divided heads. But this device would stereotype all the existing inequalities between the Provinces which by reason of the permanent settlement in some of them are considerable ; while it would also introduce an element of great uncertainty into the Indian Government's finance. A second was that we should take an all-round contribution on a *per*

capita basis. But this expedient also would not obviate very undesirable variations between Provinces in the rate of levy owing to the inequality of provincial resources and of provincial needs. A third plan was to take an all-round percentage contribution based on gross provincial revenue. This is open, *inter alia*, to the objection that it would leave several of the Provinces with large deficits. Fourthly, we considered but rejected the proposal that Provinces which had a surplus should temporarily help others as being cumbrous and impracticable."

The plan recommended by the authors of the Report

was mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_49

"to assess the contribution from each Province to the Government of India as a percentage of the difference between the gross provincial revenue and the gross provincial expenditure";

in other words, a levy on the surplus of the estimated gross revenue of the Province when all divided heads are separately allotted over its estimated normal expenditure, including expenditure on famine relief and protective irrigation. On the basis of the Budget figures for 1917-18 it was found that it would require a levy of 87 per cent mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_50 on the provincial surpluses to make up the deficit of Rs. 1363 lakhs in the Budget of the Government of India found likely to be caused by the abolition of the system of divided heads##.

The way in which the proposed plan would have worked out in practice can be gathered from the following figures given in the Report, Cal. Ed. (p. 134), and based on the Budget figures for 1917-18—

(In Lakhs of Rupees)

Province	Gross	Gross	Gross	Contrib	Net Prov.

Selected Works of Dr BR Ambedkar

	Prov. Revenue	Prov. Expendit ure	Prov. Surplus	ution (87 per cent. of Col. 4)	Surplus
1	2	3	4	5	6
Madras	13,31	8,40	4,91	4,28	63
Bombay	10,01	9,00	1,01	88	13
Bengal	7,54	6,75	79	69	10
United Provinces	11,22	7,47	3,75	3,27	48
Punjab	8,64	6,14	2,50	2,18	32
Burma	7,69	6,08	1,61	1,40	21
Bihar and Orissa	4,04	3,59	45	39	6
Central Provinces	4,12	3,71	41	36	5
Assam	1,71	1,50	21	18	3
	68,28	52,64	15,64	13,63	2,01

N.B—The Punjab figures in column 5 should be reduced and those in column 6 raised by 3 1/2 lakhs in each case to allow for the continued compensation which the province is entitled to receive for the cession of a crore of its balances to the Government of India in 1914.

In making these recommendations the authors of the Report were

careful to observe mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1.Evolution of Provincial Finance in British India PARTIV.htm - _msocom_51

"One caveat we are bound to make. Emergencies may arise which cannot be provided for by immediate raising Government of India taxation ; and in that case it must be open to the Central Government to make a special supplementary levy upon the provisions. We must add that inasmuch as our proposals are based on war figures they should be open to revision hereafter, but not subject to change for a period of say six years, and to avoid intermediate discussion the scheme should in the meantime be regarded as part of the constitutional agreement with the Provinces. It should also be one of the duties of the periodic commission which we propose should be appointed to examine the development of constitutional changes after ten years' experience of their working or of some similar body at that time, to re-investigate the question of the provincial contributions to the Government of India."

These proposals were put before the Provincial Governments, for their opinion. The objections to a plan which appeared to make some Provinces bear a greater burden of the cost of the Central Government than others readily suggested themselves. Madras and the United Provinces seemed to pay 47.4 per cent. and 41.1 per cent. of their surpluses to the Government of India, while Bombay and Bengal appeared to escape with a sacrifice of no more than 9.6 per cent. and 10.1 per cent. of their respective surpluses. The inequity of this treatment seemed to be so very apparent that the Provinces against which a greater burden was set down raised loud protests. So impressed was the Government of India with the justice of this clamour that in its letter mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1.Evolution of Provincial Finance in British India PARTIV.htm - _msocom_52 to the Secretary of State it observed :

"We recommended that the initial contributions should be recognised as temporary and provisional, and that steps should be taken as soon as possible to fix a standard and equitable scale of contributions..... The whole question..... requires skilled investigation ;

(the difficulty of the position was foreseen in the Report and investigation by the first statutory commission was promised, but) we propose that a Committee on Financial Relations be appointed, either by you or by us, to advise fully upon the subject, so that each province may know exactly how it stands before the new regime starts." And this recommendation was endorsed mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_53 by the Joint Select Committee of Parliament which sat on the Reform Bill. Accordingly the Secretary of State appointed a Committee under the chairmanship of Lord Meston to advise on:

- a) a) The contributions to be paid by the various provinces to the Central Government for the financial year 1921-22;
- b) b) The modifications to be made in the provincial contributions thereafter with a view to their equitable distribution until there ceases to be an all-India deficit ;
- c) c) The future financing of the provincial loan accounts and
- d) d) Whether the Government of Bombay should retain any share of the revenue derived from income tax.

After about seven weeks of investigation the Committee produced its Report mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_54 In advising on clause (a) of its terms of reference the Committee expressed its dissatisfaction of the plan set forth in the Joint Report of taking from the Provinces a fixed uniform proportion of their respective surpluses as their contributions to the Central Exchequer. The principal objection urged against the plan was that in some Provinces it left no surplus and in others no adequate surplus after the payment of their respective quotas of contributions. The Committee held, and rightly too, that

“in no case may a contribution be such as would force the province to embark on new taxation *ad hoc*, which to our minds would be an unthinkable sequel to a purely administrative rearrangement of abundant general resources.”

The Committee felt itself bound by a limiting consideration in

providing the contribution, as a result of which it felt itself obliged

“to leave each Province with a reasonable working surplus”— a surplus which it preferred—to calculate, so far as possible, with some relation to the general financial position of the Province and the more imminent claims upon its resources.”

“To be able to comply with the requirements of leaving each Province with a surplus, and of inaugurating the new Councils without the necessity of resort to fresh taxation,” the Committee deemed that the most equitable plan to be to take, not *equal* contributions as the Joint Report advised, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_55](#) but *unequal* contributions from the surpluses of the Provinces liable to make them.

For the consummation of its plan the Committee held that the augmentation of Provincial Surpluses was an essential step. Without it, it deemed its task to be futile. The only way to augment the provincial surplus was to allocate some other source of Imperial revenue in addition to those already provincialised. To the provincialisation of the income tax, a matter which was included in clause (d) of its terms of reference so far as Bombay was concerned, the Committee being impressed by the reasoning of the Joint Report, felt bound to oppose. As an alternative it recommended that *General Stamps* should be provincialised, as means of augmenting provincial surpluses, along with *Judicial Stamps*. The effect of this transfer of *General Stamps* from the all-India list to the provincial list was to increase the provincial resources and diminish those of the Central Government. That deficit the Committee accepted as amounting in the year 1921-2 to ten crore, composed of six crores previously estimated by the Government of India [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_56](#) plus four crores for the loss of *General Stamps*, the revenue from which the Committee gave to the Provinces. This amount subject to certain adjustments, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_57](#) which when made resulted in a clear deficit of 9,83.06 lakhs net. In strict adherence to the limiting

consideration which it felt bound to respect, the Committee proceeded to fix the following ratios in which each of the nine Provinces were to contribute to make up this amount of 9,83 lakhs in the year 1921-2 —

INITIAL CONTRIBUTIONS (IN LAKHS OF RUPEES)

Provinces	Increased spending power under new distribution of Revenue	Contributions as recommended by the Committee	Increased spending power left after Contributions are paid
Madras	5,76	3,48	2,28
Bombay	93	56	37
Bengal	1,04	63	41
United Provinces	3,97	2,40	1,57
Punjab	2,89	1,75	1,14
Burma	2,46	64	1,82
Bihar and Orissa	51	<i>nil</i>	51
Central Provinces	52	22	30
Assam	42	15	27
	18,50	9,83	8,67

This ratio of initial contributions was not intended in any manner by the Committee "to represent the ideal scale on which the Provinces should have in equity to be called upon to contribute." Indeed in making

its recommendations as to initial contributions the Committee paid less attention to equity of contributions and more to

“established programmes of taxation and expenditure and legislative and administrative expectations and habits, that cannot without serious mischief be suddenly adjusted to a new and more equitable ratio of contributions widely different (as an equitable ratio must admittedly be) from that of the past. It is accordingly inevitable, if such mischief is to be avoided, that the ratio for initial contributions should bear little relation to that which would be ideally equitable.” But the Committee also recognised that “an initial ratio of this nature can only be defended as a measure of transition. It is necessary, but it is necessary only in order to give time to the provinces to adjust their budgets to a new state of affairs; and we are clearly of opinion that no scheme of contribution can be satisfactory that does not provide for a more equitable distribution of the burden of the deficit within a reasonable time.”

The Committee therefore proceeded next to consider the question of *standard* contributions as distinguished from *initial* contributions, which were only transitional. As to what should be the ideal basis for such an equitable distribution of the burden the Committee felt quite certain ; for it stated that

“to do equity between the provinces it is necessary that the total contribution of each to the purse of the Government of India should be proportionate to its capacity to contribute.”

Two questions were involved in translating this principle into practice. What is the total contribution of a province to the purse of the Government of India? Secondly, what is the measure of the capacity of a Province to contribute? With regard to the first the Committee observed that

“the total contribution of a Province to the purse of the Government of India will consist in future of its direct contributions towards the deficit, together with its indirect contribution (as at present) through the channels of customs, income tax, duties on salt, etc.”;

in other words, the pressure of the taxes from within its jurisdiction

for the benefit of the Central Government. With regard to the second the Committee held that

"the capacity of a Province to contribute is its taxable capacity, which is the sum of the incomes of its taxpayers, or the average income of its taxpayers multiplied by their number."

The Committee was frank in its avowal of the fact that the data available was not sufficient for a direct quantitative evaluation either of the total net contribution which a Province made to the Government of India or of its capacity to contribute, and held that it was

“useless to attempt to state a formula, to serve as a basis for a standard ratio of contributions, capable of automatic application from year to year by reference to ascertained statistics.”

None the less the Committee did not abandon the ideal basis it had selected for fixing the standard contributions. For it observed :

"We are able, after surveying such figures as are available and after close inquiry into the circumstances of each Province, to recommend a fixed ratio of contributions which in our opinion represents a standard and equitable distribution of the burden of any deficit. In arriving at this ratio we have taken into consideration the indirect contributions of the Provinces to the purse of the Government of India, and in particular the incidence of customs duties and of income tax. We have inquired into the relative taxable capacities of the Provinces, in the light of their agricultural and industrial wealth and of all other relevant incidents of their economic positions, including particularly their liability to famine. It should be observed that we have considered their taxable capacities not only as they are at the present time, or as they will be in the immediate future, but from the point of view also of the capacity of each Province for expansion and development agriculturally and industrially, and in respect of imperfectly developed assets such as minerals and forests. We have also given consideration to the elasticity of the existing heads of revenue which will be secured to each Province, and to the availability of its wealth for taxation."

After estimating, to the best of its ability, the weight which should be given to each of these circumstances, the Committee recommended the following fixed ratio as representing an equitable basis for the relative contributions of the Provinces to meet the deficit in the Budget of the Government of India:—

STANDARD CONTRIBUTIONS

Province	Per cent. Contribution to Deficit.
Madras	17
Bombay	13
Bengal	19
United Provinces	18
Punjab	9
Burma	6 1/2
Bihar and Orissa	10
Central Provinces	5
Assam	2 1/2
	100

The Committee agreed that there should be an interval of time sufficient to enable the Provinces to adjust their budgets to the new conditions before they should in equity be called upon to contribute according to this standard ratio.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_58](http://MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_58) But the Committee thought that the interval allowed for adjustment should not be unduly prolonged.

"The initial ratio which," the Committee said, "we have proposed is a practical necessity, but the Provinces which will be called upon to pay thereunder more than they should pay in equity, ought not to be required to bear that burden for a longer period or to a greater extent than is required to prevent dislocation of the provincial budgets."

The Committee therefore proposed

"that contributions should be made on the standard ratio to any deficit that there may be in the seventh year of contribution, and that the process of transition from the initial to the standard ratio should be continuous beginning in the second year of contribution, and proceeding in six equal annual steps."

The following table shows the initial, intermediate, and ultimate ratios of contributions for the seven years in accordance with the recommendations of the Committee :—

PERCENT. CONTRIBUTIONS TO DEFICIT IN SEVEN
CONSECUTIVE YEARS BEGINNING WITH THE FIRST YEAR
OF CONTRIBUTION

(rounded off to even halves)

	1 st	2nd	3rd	4th	5th	6th	7th
Province	Year	Year	Year	Year	Year	Year	Year
Madras	35 ½	32 ½	29½	26 ½	23	20	17
Bombay	5 ½	7	8	9½	10½	12	13
Bengal	6 ½	8½,	10½,	12 ½,	15	17	19
United Provinces	24 ½	23 ½,	22 ½,	21	20	19	18
Punjab	18	16½,	15	13½,	12	10½	9
Burma	6 ½	6½,	6½,	6½	6 ½	6½	6½

Bihar and Orissa	<i>nil</i>	1 ½	3	5	7	8 ½	10
Central Provinces	2	2½	3	3½	4	4½	5
Assam	1 ½	1 ½	2	2	2	2	2 ½
Total	100 %	100 %	100 %	100 %	100 %	100 %	100 %

These recommendations were accepted by the Government of India and the Secretary of State. But when the rules in which they were embodied came before the Joint Select Committee of Parliament appointed to revise the draft rules made under the Government of India Act, for consideration, the Committee made some important alterations in the allocation of revenues and contributions from the Provinces. In its Report mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_59 the Joint Committee recognised

"the intricacy of the problem with which the Financial Relations Committee had to deal, and the difficulty, amounting almost to impossibility, of arriving at any solution which was likely to be acceptable to all Local Governments..... They believe that such dissatisfaction as the proposals have aroused is inevitable in distributing resources between a Central and Provincial Governments, and that the impossibility of removing by a stroke of the pen inequalities which are the result of long-standing and historical causes have been overlooked." "None the less," the Committee desired, "on grounds of policy, to alleviate the disappointment caused by the restraints which the system of contribution laid on the employment by the provinces of their revenues. As a means of alleviating the burden the Committee suggested:

"(1) That there should be granted to all provinces some share in the growth of revenue from taxation on incomes so far as that growth is attributable to an increase in the amount of income

assessed.”

- (2) That in no case should the initial contribution payable by any province be increased, but that the gradual reduction of the aggregate contribution should be the sole means of attaining the theoretical standards recommended by the Financial Relations Committee.”Accordingly it is provided in the Devolution Rules that:
- (15) There shall be allocated to each Local Government a share in the income tax collected under the Indian Income Tax Act, 1918, within its jurisdiction. The share so allocated shall be three pies on each rupee brought under assessment under the said Act, in respect of which the income tax assessed has been collected. The number of pies to be specified shall be so calculated as to yield at the outset to the Local Governments collectively a sum amounting as near as may be to 400 lakhs.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/27D1](mailto:MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/27D1). [Evolution of Provincial Finance in British India PARTIV.htm - _msocom_60](#)and that
- (17) In the financial year 1921-2 contributions shall be paid to the Governor-General in Council by the Local Governments mentioned below according to the following scale:—

Name of the Province	Contributions (in lakhs of rupees)
of the Province	
Madras	3,48
Bombay	56
Bengal	63
United Provinces	2,40
Punjab	1,75

Burma	64
Central Provinces and Berar	22
Assam	15

(18) From the financial year 1922-3 onwards a total contribution of 9,83 lakhs, or such smaller sum as may be determined by the Governor-General in Council, shall be paid to the Governor-General in Council by the Local governments mentioned in the preceding rule. When for any year the Governor-General in Council determines as the total amount of the contribution a smaller sum than that payable for the preceding year, a reduction shall be made in the contributions of those Local Governments only whose last previous annual contribution exceeds the proportion specified below of the smaller sum so determined as the total contribution ; and any reduction so made shall be proportionate to such excess:

Madras	17/90 ths
Bombay	13/90 ths
Bengal	19/90 ths
United Provinces	18/90 ths
Punjab	9/90 ths
Burma	6 ½ /90 ths
Central Provinces and Berar	5/90ths
Assam	2 ½ /90 ths

(19) In cases of emergency the Local Government of any Province may be required by the Governor-General in Council, with the sanction of the Secretary of State, to pay to the Governor-General in Council a contribution for any financial year in excess of the amount required by the preceding rules in the case of that year. Two more matters had to be settled in order to make the separation between Provincial and Central Finance as complete as possible. Both were connected with capital transactions. One was the question of the Provincial Loan Account. This Account represented the fund from which a Provincial Government advanced agricultural loans, loans to indebted landholders, to municipalities and other local bodies, etc. The capital was provided by the Government of India as required and was returned to it as it was repaid. The province paid the Government of India interest on the average capital outstanding in each year, recouping itself by higher rates of interest which were supposed to compensate it for bad debts. It was commonly agreed that it was the natural result of the Reforms Scheme that the Provinces should for the future finance their own loan transactions, and that joint accounts of this nature between them and the Government of India should be wound up as quickly as possible. The matter was referred to the Financial Relations Committee and on the basis of its recommendations in that behalf it was provided by Rule 23 of the Devolution Rules that :

“Any moneys which, on the 1st day of April 1921, are owed to the Governor-General in Council on account of advances made from the provincial loan account of any Province shall be treated as an advance to the Local Government from the revenues of India, and shall carry interest at a rate calculated on the average rate carried by the total amount owed to the Governor-General in Council on this account on the 31st March 1921. The interest shall be payable upon such dates as the Governor-General in Council may fix. In addition, the Local Government shall pay to the Governor-General in Council in each year an instalment in repayment of the principal amount of the advance, and this instalment shall be so fixed that the total advance shall except where for special reasons the Governor-General in Council may otherwise direct, be repaid before the expiry of twelve years.”

It shall be open to any Local Government to repay in any year an amount in excess to the fixed instalment."

The other was the question of responsibility for capital expenditure on irrigation works. In this as in the matter of Provincial Loan Account it was agreed that it would be incompatible with the scheme of complete separation of Provincial Finance to hand over to the former the control of irrigation works and to make the latter responsible for the capital transaction incurred thereon. Hence the rulemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_61 that:

- (1) The capital sums spent by the Governor-General in Council upon the construction in the various Provinces of productive and protective irrigation works and of such other works financed from loan funds as may from time to time be handed over to the management of Local Governments shall be treated as advances made to the Local Governments from the revenues of India. Such advances shall carry interest at the following rates, namely: (a) In the case of outlay up to the end of the financial year 1916-17, at the rate of 3.3252 *per centum*. (b) In the case of outlay incurred after the financial year 1916-17, at the average rate of interest paid by the Governor-General in Council on loans raised in the open market since the end of that year.
- (2) The interest shall be payable upon such dates as the Governor-General in Council may fix.

Thus was broken the financial and administrative strand which tied the Provincial Governments to the Central Government and prevented the introduction into them of responsible government. As the Provinces thereby acquired "an acknowledged authority of their own" over the services and sources allocated to them it followed that they should have the freedom to borrow in their own name, which was denied to them heretofore. Consequently the Local Government Borrowing Rulesmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_62 made under the Reforms Act provided that subject to certain conditions:

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_63

"A Local Government may raise loans on the security of the revenues allocated to it for any of the following purposes, namely:

- a) a) To meet capital expenditure on the construction or acquisition (including the acquisition of land, maintenance during construction and equipment) of any work or permanent asset of a material character in connection with a project of lasting public utility, provided that :
 - I. I. the proposed expenditure is so large that it cannot reasonably be met from current revenues, and
 - II. II. if the project appears to the Governor-General in Council unlikely to yield a return of not less than such percentage as he may from time to time by order prescribe, arrangements are made for the amortisation of the debt;
- b) b) to meet any classes of expenditure on irrigation which have under rules in force before the passing of the Act been met from loan funds;
- c) c) for the giving of relief and the establishment and maintenance of relief works in times of famine or scarcity ;
- d) d) for the financing of the Provincial Loan Account ; and
- e) e) for the repayment or consolidation of loans raised in accordance with these rules or the repayment of advance made by the Governor-General in Council."

With the cutting off of the financial and administrative strand there remained only the legislative strand which had so far debarred the growth of provincial autonomy. This legislative strand, as was pointed out before, operated through the principle of requiring previous sanction and subsequent assent of the Government of India. By the rules made under the Reforms Act a field has been marked off for the free exercise of the Legislative powers of the Provinces in which that principle has been dispensed with. So far as the field of tax legislation was concerned it was provided mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_64 that:

"The Legislative Council of a Province may, without the previous sanction of the Governor-General, make and take into consideration any law for imposing for the purposes of the Local Government any tax included in Schedule I."

This schedule comprises the following heads of taxation: —

1. A tax on land put to uses other than agricultural.
2. A tax on succession or acquisition by survivorship in a joint family.
3. A tax on any form of betting or gambling permitted by law.
4. A tax on advertisements.
5. A tax on amusements.
6. A tax on any specified luxury.
7. A registration fee.
8. A stamp-duty other than duties of which the amount is fixed by Indian legislation.

In the matter of non-tax legislation the procedure adopted by the rules has been slightly different. In tax legislation the rules stated in what cases previous sanction was not necessary. In non-tax legislation the rules required in what cases previous sanction was necessary. The effect of this difference in the requirements of the rules of previous sanctionmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_65 was that while in matters of tax legislation a Provincial Government could only levy certain named taxes, in the matter of non-tax legislation it could do anything provided it did not infringe certain laws. The reasons for this difference are obvious. A widening of the basis of provincial taxation means a narrowing field for imperial taxation. Such a detrimental effect could not flow to the Government in the matter of non-tax legislation, be the non-tax legislative powers of the Provinces howsoever large. The taxing power to be granted to the Provinces had therefore to be more strictly

circumscribed than the grant of legislative power. None the less it cannot be denied that the rules regarding previous sanction sufficiently loosened the legislative strand as to permit of the Provinces being autonomous in theory as well as in practice.

This autonomy is well reflected in the new Budget Procedure in the Provinces. Under the old regime the Provincial Budgets had to be passed by the Finance Department of the Government of India, the Provincial Accounts to be supervised by the Accountant-General and audited by the Controller and Auditor-General of the Government of India and appropriation reports submitted to the Finance Department of the Government of India. All this is changed under the new regime. The Provincial Budget, instead of being passed by the Finance Department of the Government of India, is framed by the Finance Department constituted in each Province under the Reforms Act. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_66](#) and is voted item by item by the Provincial Legislature. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_67](#) The accounts of the Provinces still continue [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D1. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_68](#) to be supervised and audited by the officers of the Government of India, but the important point under the new regime which is the hall-mark of provincial independence is that the appropriation reports, instead of being sent to the Government of India for action, are now sent to the Committee of Public Accounts constituted from amongst the members of the Provincial Legislature which sanctioned the Budget for report that the money voted by the Legislature was spent within the scope of the grants made by the Legislature.

Thus is effected the demarcation of the field for the governance of India into Central and Provincial. Such a demarcation of administrative and financial matters was the dream of many an Indian politician and statesman. It was urged before the Royal Commission on Decentralisation and was also urged by the late Mr. Gokhale in his

political testament which he left before he died. But all these projects were ill timed and could not be given effect to until the law of the Indian constitution had been altered. Now that such an alteration has been made the ideal of Provincial autonomy bids fair to become real. But before closing this study it may be useful to evaluate the changes of its successful working.

THE EVOLUTION OF PROVINCIAL FINANCE IN BRITISH INDIA

Contents

Part IV: Provincial Finance Under The Government Of India Act Of 1919

A Critique of the Change

Review in the Economic Journal

CHAPTER XII

A CRITIQUE OF THE CHANGE

It is obvious that good administration depends upon good finance; for finance is "the fuel of the whole administrative machine." No aspect of the scheme of Reforms therefore demands a closer and more anxious study than the financial arrangements with which the new system of administration starts. The necessity for such an examination is all the greater because this aspect of the Reforms Scheme has received

comparatively little intelligent criticism at the hands either of the public or the expert.

The first question to consider is, can the new financial arrangements be said to be *administratively* workable? To make administrative polities independent by requiring them to finance themselves entirely out of their own respective resources without having to depend upon one another must always be regarded as a very important end to be kept in view in devising a new financial arrangement. It is true that it is not always possible to realise this end, and it may in some cases be actually helpful to their working that the polities should be made mutually dependent; for interdependence, at least in matters of public finance, instead of being an impediment might conceivably furnish a basis for co-operation and strength. None the less independence in finance for each administrative policy is to be sought for wherever possible. There can be no doubt that from this standpoint the system of contributions is better than the system of divided heads. This is not to condemn the system of divided heads. The existence of several concurrent or overlapping tax jurisdictions must always be a source of difficulty whenever an attempt is to be made to distribute the different sources of revenue among the competing tax jurisdictions so as to allow each a sufficiency of funds. The reason is that this distribution of the sources of revenue must not only be governed by considerations of adequacy, but must also be governed by considerations of suitability.”The problem of efficiency of taxation,”as Prof. Seligman observes,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_1

"is naturally of vital importance. No matter how well intentioned a scheme may be, or how completely it may harmonise with the abstract principles of justice, if the tax does not work administratively it is doomed to failure.”

Whether among the sources of revenue to be partitioned there are any which are naturally more suitable for utilisation by one tax jurisdiction rather than by another depends upon what is the basis of the tax. If the basis of the tax is narrow then the argument in favour of its utilisation

by a narrower tax jurisdiction will be correspondingly stronger. If its basis is wide then the scales would weigh in favour of its utilisation by the broader tax jurisdiction. But as a result of following the dictates of suitability it is not always possible to make a partition such as to give each administrative polity revenues adequate for its purposes. For it may happen that a particular tax is suitable for one jurisdiction while its yield, instead of being necessary for that jurisdiction, may be required for another jurisdiction which is unfit to levy it, or may be partially necessary for both. In such a case, how are the ends of adequacy to be subserved? Two remedies suggest themselves. One is the adoption of the system of divided heads, and the second is to apportion the deficiency among the several component states and require them to make a definite contribution towards meeting it.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_2

The system of divided heads was by no means peculiar to the Indian fiscal system. It has been adopted in some form or other by many other countries. In England, for instance, the inheritance tax is assessed by the Central Government, but a part of the proceeds is allotted to the Local Government. The same is true of some other taxes in England. In Germany, under the Empire, the proceeds of certain indirect taxes were divided between the federal and state governments. In Canada it is well known that a large part of the provincial revenues is derived from proceeds of taxes that are levied by the federal government.

The prejudice in India against the system of divided heads of revenue is particularly regrettable because it is founded on the view that it is opposed to the principle of separation of revenues. People who opposed it said mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_3 that it involved divided heads of expenditure which fettered the spending powers of the Provinces and enabled the Government of India directly to interfere in their Budget estimates and "to have its finger in every pie" of theirs. The system of divided heads was no doubt characterised by these objectionable features. But division of expenditure is not a necessary accompaniment of division of revenue. Nor is it a necessary incident of

it that a polity which shared in the yield of a tax but did not administer it should interfere in calculating the estimates of the yield. Chipped of its evil features, the system of divided heads of revenue is simply another name for what Prof. Seligman calls mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_4 the system of segregation of source and the division of the yield. The essence of the system consists in the exclusive assessment of a particular source of revenue by one tax jurisdiction, coupled, however, with an apportionment of a part of the proceeds to another tax jurisdiction. The system of divided heads of revenue does not cease to be a system of separation of sources merely because there is the division of the yield. In such a system of divided heads there is a separation because the assessment of the tax is segregated—which is the essence of separation—exclusively in the hands of one tax jurisdiction, and the division of the yield can be so regulated that it need not be incompatible with real separation.

The system of contributions does what the system of divided heads aims to do. Like the system of divided heads it answers the tests of suitability as well as of adequacy by allowing the tax to be administered by the jurisdiction most competent to do it, and also of adequacy by making the taxing jurisdiction hand over a sum to the non-taxing jurisdiction. Essentially the system of divided heads and the system of contributions are alike. The only difference between the two is that so far as the apportionment of proceeds are concerned the one is an itemised arrangement while the other is a lump-sum arrangement. There is therefore really nothing much to choose between them. But this is not altogether a case of merely giving a different name to a discredited system in the hope that it might smell more sweet. For the system of contributions has one real point of superiority as compared with the system of divided heads. It does not merely permit of separation of assessment, but it also makes for a greater separation than does the system of divided heads. Under the system of divided heads the receiving party has still an anxious concern in the assessment and collection of the tax for any laxity in the administration of a divided head of revenues is bound to affect its interests adversely, and may

therefore claim a hand in the administration of the tax. But under the system of contributions there is no room for such a possibility. Its quota being assured it is out of the business of assessing and collecting the tax. There is thus a greater separation under the system of contributions than there can be under the system of divided heads.

When we come to analyse the equity of the new financial arrangements we find that great objections are raised to the system of contributions. But many of these objections are misconceived. It will be recalled that the contributions from the Provinces to the Central Government in India are regulated according to their spending powers. In other words, it is the apportionment by expenditure method of dealing with the deficit. That the method subserves the ends of adequacy is of course obvious. But what does not seem to be so obvious, but which all the same is a great virtue of the system of contributions, is that it promotes economy in the giving as well as in the receiving tax jurisdiction; for extravagance in the contributing tax jurisdiction immediately increases its burden, while extravagance in the receiving tax jurisdiction is directly reflected in enhancing the contributions. None the less, the contributions, it is protested, are iniquitous, for they are held to be based not on population, nor on area, nor on wealth, nor on the capacity of the Provinces. It is also complained that the system of contributions according to spending powers is unwise, for it tends to check desirable expenditures in the more progressive Provinces. The latter is, of course, a real objection to the apportionment by expenditure method of contributions in its general form. But it may be said, on the other hand, that in the first place if a jurisdiction is willing to undertake the burdens of a larger expenditure for desirable aims, it will scarcely be deterred by the slight additional burden which might result from the increase in the contribution. Secondly, if it were found that the contribution did produce such a result it would be possible to obviate it by adopting the simple expedient of exempting certain kinds of expenditure which might be deemed to be necessary. What these expenditures should be would be a matter of adjustment, which might differ in different provinces. The virtues of the system of apportionment by expenditure

method of levying contributions would still be conserved intact, and its automatic features would work equally well if certain expenditures only, instead of all expenditures, were selected as the basis of calculations.

This objection cannot, however, be urged against the Indian system of contributions. In the first place, the contribution is not a varying sum as is the case in the financial systems of other countries. Because the Provinces are made contributory towards the deficit of the Central Government it is to be remembered that they are not liable to the whole of the central deficit whatsoever it may be from year to year. On the other hand, in ordinary years the Provinces are only liable to make contributions towards meeting what is called the Standard Central Deficit of Rs. 9.83 lakhs. That being the case the contributions do not form an element of uncertainty in the Provincial Budgets. Secondly, the contributions are not a permanent feature of the financial arrangements between the Central and Provincial Governments. The levy of the contributions is contemplated to be only transitional, to allow the Government of India to work out its financial salvation, and the Government of India has promised that they will adopt such a policy as to bring about the extinction of the contributions in as short a time as possible. Lastly, the ratio of the contributions to the standard revenues or expenditure of any of the Provinces is not so great as to place a heavy incubus on their financial system, and not being a varying quantity cannot be said to check useful expenditures by Provinces which propose to incur them.

As a matter of fact whatever may be said against the flaws in the apportionment by expenditure method of levying contributions it would be difficult to deny that the system eminently answers the requirements of equity. It certainly brings about a more equitable mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_5 distribution of the burden than is possible under other systems. For it may fairly be assumed that expenditures very nearly correspond to the actual abilities of the communities concerned more than do population mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of

[Provincial Finance in British India PARTIV.htm - _msocom_6](#) or area. Not only is the principle equitable in itself, but care has been taken to do equity in its application as between the different Provinces. For we know that the contributions are so regulated as to leave to the Provinces, rich as well as poor, a reserve of spending power in order to enable them to meet such of their pressing needs as may not have been covered by the figure for standard expenditure. The main purpose of rejecting equal in favour of unequal contributions was to see that the burden of the contributions did not prevent any of the Provinces from meeting such extra expenditure as may be absolutely necessary. Indeed, no system of contributions can be said to be calculated to produce greater equity than the Indian system.

So far we have examined whether the new financial arrangement is administratively workable and equitable. What we have now to see is: Has the arrangement proved itself to be financially adequate? It will be recalled that the Financial Relations Committee held that the general resources of the country were abundant, and that it required only a wise plan of distribution in order to leave each Province with a sufficiently large "spending power" or surplus.

(In Thousands of Rupees)

That the plan recommended by the Committee was calculated to bring about such a result must of course be taken for granted. But when we analyse the Budgets of the different Provinces since the introduction of the Reforms the result appears to be entirely disappointing (*see* Table, p. 287).

Thus, taking the estimated revenue and expenditure of the nine Provinces for 1922-3, equilibrium between current revenue and expenditure is only to be found in two of them, Burma and Bengal, and in the latter this result could not have been attained but for the temporary remission of its annual contribution to the Central Government, and a programme of taxation calculated to bring in Rs. 140 lakhs. In the rest of the Provinces the deficits of the year aggregated to the large figure of Rs. 7,74 lakhs. This huge deficit was financed by taxation to the extent of Rs. 3,52 lakhs, and for the rest by drawing on balances and by raising loans from the public and from the Central Government. But as the Secretary of State in his despatch pointed out, this

“process of financing provincial deficits in part from the

accumulated revenue balances of the past will now practically come to an end, as such balances will be generally exhausted by the end of the current financial year..... If the financial stability of the Provinces is not to be undermined, with ultimate jeopardy to the Government of India itself, it is impossible to contemplate the continuance of a series of Provincial deficits financed by borrowing either direct from the public or from the Central Government."

What is to be the remedy? At the Conference held in Simla in April, 1922,"to consider various matters connected with the financial arrangements between the Central Government and the Provinces,"it was disclosed mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_10 that the Government of India and the Provinces were divided as to the proper solution for the rehabilitation of Provincial Finance on a stable and secure footing. The Provinces proposed an increase in their resources by revising the financial arrangements made by the Reforms Act. On the other hand, the Secretary of State as a mouthpiece of the Government of India urged that

"Equilibrium can only be achieved by reduction of expenditure and the adoption of measures which will lead to an increase of revenue" mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_11

The Provinces were not, however, unanimous in the suggestions they made for the revision of the arrangements effected by the Act. Some like the Government of Bombay suggested a return to the system of "divided heads" while others were opposed to it. But the majority was for securing relief through the abolition of contributions. This attitude of the Provinces towards the new financial arrangements is on the face of it a very unreasonable attitude. They are opposed both to the system of divided heads and the system of contributions as well. This is to have things both ways, and they could certainly have had it if the existing resources of the country had been properly husbanded. Inadequacy of finance is not always the result of a paucity of revenue resources. National prosperity may be great and growing and the increase of

national wealth may be proceeding unchecked. If under such circumstances enough revenue is not obtained the fault does not lie with the social income. Rather it is a fault of the government which must be said to have failed to organise and marshal the national resources for fiscal purposes. The same is to some extent true of the Indian Government.

Surveying the national resources of the country, it becomes evident that there are two sources which the Government has not been able to marshal properly. One is the land revenue. It is notorious that land revenue has been the biggest resource to the Government of India. In the collection of the land revenue every landholder is laid under contribution, but the rate of assessment is not periodically enhanced for every one of them. On the other hand, in Bengal and in other parts of India the rate of assessment is permanently settled. Consequently in such parts of India which by the long period of settled government enjoyed by them, and by the consequent influx of capital, have attained to a greater advance in prosperity than any others, the land revenue yields practically no increase; the land-owners, with enormously increased incomes, contribute nothing to the increase in the financial burdens of the State. Permanent Settlement has ever since the days of Lord Canning been suggested as a panacea for improving the financial condition of the people. After the severe famine of 1860, Lord Canning, then Viceroy and Governor-General of India, recommended the extension of the Permanent Settlement to all parts of India. Sir John (afterwards Lord) Lawrence supported the recommendation, and the two Secretaries of State for India, Sir Charles Wood and Sir Stafford Northcote, approved of the proposal. Fortunately for the country the proposal for making the Permanent Settlement universal was finally rejected in 1883. Some no doubt regarded the decision as unfortunate, and continued the agitation in favour of the permanent Settlement long after. But the real force, if there was any in the agitation, was derived from the motive of putting a limit on the financial resources of an alien and an irresponsible bureaucracy. Those who then agitated in favour of the Permanent Settlement probably did not realise that some day this irresponsible bureaucracy would give place to a responsible government

of the people and the Permanent Settlement which it was desired to be instituted as a curb on the unchartered licence of a bureaucracy would result in placing a fetter on the freedom of a popular government to enter upon the path of orderly progress. A bad government may abuse its financial powers, but a government cannot be a good government if there is a serious limitation on its financial powers. It was therefore a good thing that this evil of a permanent settlement was not allowed to spread to the whole of India. But it would have been better if the new financial arrangements had contrived to replace the permanent settlement system of land revenue by a periodical settlement system. That was one important way of augmenting the general resources of the country and thereby giving adequacy to all the governments concerned. Instead of this the financial arrangements were so conceived as not to

"subject the permanently settled provinces to financial pressure which would have the practical result of forcing them to reconsider the permanent settlement." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_12 If this had been done it would have augmented the general resources to the benefit of all. As it was, not only provision was made favouring the retention of the Permanent Settlement, but the Bengal Government, which has the largest number of permanently settled holders of land, was later on exempted from contributing to the Government of India which was compelled to meet its deficit in other ways.

Land Revenue therefore is one source which the Government could have marshalled in the interest of giving adequacy to the new financial arrangements. The other source which the Government refuses to tap is the customs revenue. The kind of fiscal policy that was adopted during the pre-Mutiny days, was, as we know it to be, of a suicidal character. The same is true of the post-Mutiny fiscal policy. From the Mutiny up to the present time, the Government of India has never looked upon the customs revenue as a resource to be used to meet the exigencies of the State, and when it has used it, it is only very reluctantly, and never to the fullest, not to mention the circumstances when it has actually

reduced its revenue from this source in spite of the crying needs of the exchequer. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. [Evolution of Provincial Finance in British India PARTIV.htm - _msocom_13](#) While the ostensible reason given in favour of such a fiscal policy is that the customs revenue is wrong in principle, everybody knows that the customs revenue is not raised in India because it is feared that under it Indian industries would be protected against English industries. That the whole policy of India has been dictated by the interests of English manufactures is beyond dispute, and the reason for it is not far to seek. The Secretary of State for India, the supreme executive for India, is directly amenable to the English voters, whose primary concern has been to see that their markets are not closed against them. Whether a protectionist policy is good or bad is another question. For the present it is sufficient to note that the Government of India has been subjected to a pernicious kind of limitation on its fiscal powers which prevents it from using a source of revenue which has everywhere else proved to be most elastic and abundant of financial resources. If these limitations were not there the present financial inadequacy in all probability might not have ensued at all, and there would have been no necessity either for adopting the system of divided heads or for imposing contributions. As it is, owing to these limitations on the taxable resources of the country, a deficit in the Budget of the Central Government is inevitable. Given this fact, the adoption of some method of meeting that deficit was imperative, and there is no doubt that the system adopted is better than the system it replaced. In the present circumstances of the finances of the Central Government, contributions must be taken as a settled issue. Nor can it be said that the abolition of contributions would restore stability to Provincial Finance. Such no doubt is the prevalent view of the Provincial Governments and also of non-official politicians. The Resolution moved in the Indian Legislative Assembly on the 14th September, 1922, rested on the same view that if the Government of India were only to dispense with the contributions it would immediately restore equilibrium in the financial position of the Provinces. This belief was strengthened by the assumption that the aggregate estimated deficit of all the Provinces disclosed itself to be 352 lakhs of rupees for the financial year 1922-3; and as the total contribution to the Imperial

Government by the Provinces aggregated to the sum of 983 lakhs, a remission of this amount would more than wipe off the deficit in the Provincial Budgets. It must, however, be said that the deficit of 352 lakhs of rupees does not disclose the true position of the Provinces as derived from the financial arrangements made by the Act. If we are to deduce the true position of the Provinces as following from the new arrangement we must take note of the new taxation imposed and of the gain to Bengal through the remission of its contribution to the Imperial exchequer. Making adjustments for these, the position of the Provinces as it would have been without contributions may be seen from the following :—

FINANCIAL POSITION OF THE PROVINCES 1922-23

(In thousands of rupees)

Provinces	Revenue	Expenditure	Surplus or Deficit
	Rs.	Rs.	Rs.
Madras	15,99,00	17,18,55	—1,19,55
Bombay	14,32,06	15,42,17	—1,10,11
Bengal	9,15,86	10,99,90	—1,84,04
U.P.	13,58,67	13,85,65	—26,98
Punjab	11,38,26	12,68,44	—1,30,18
Burma	10,00,57	11,90,70	—1,90,13
Bihar and Orissa	4,62,65	5,13,80	—51,15

Central Provinces		5,35,23	5,72,17	—36,94
Assam		2,05,06	2,22,58	—17,52
	Total deficit			—8,66,60

According to this calculation the aggregate deficit of the Provinces would have been about 867 lakhs. But we must make some further adjustments to this account. It has not been possible to deduct from the revenues of the Central Provinces the sum derived from the enhancement of the Excise duty in the Provinces. Secondly, the revenues of the Central Provinces for the year 1922-3 include collections of suspended revenue of previous years. If these adjustments were made the aggregate deficit of the Provinces would give rise to a figure which would be barely covered by the remission of contributions. We must therefore conclude that remission of contributions would have at best been a very inadequate measure for removing the financial stringency of the Provinces, even if the problem of financing the extra deficit caused by such remission in the budget of the Central Government were to be ignored.

But if remission of contributions cannot improve the difficult situation that has arisen with regard to Provincial Finance, we must go to the root of the matter and inquire what are the causes which have brought on that situation. Is it due to the normal expenditure of the Provinces being under-rated? Or is it due to the normal revenues of the Provinces being over-estimated? For this purpose we must first ascertain whether the resources allocated to the Provinces were really inadequate to their normal needs. The following table compares the standard receipts and expenditure and shows the margin left between them for covering a probable advance in expenditure.

STANDARD REVENUE AND STANDARD EXPENDITURE

Provinces	Standard Revenue	Standard Expenditure	Excess or Defect of Standard Revenue over Standard Expenditure
	Rs.	Rs.	Rs.
Madras	14,98,02	14,07,20	90,82
Bombay	12,09,70	11,55,03	54,67
Bengal	8,55,28	8,61,13	—5,85
U.P.	12,29,88	11,06,56	1,23,32
Punjab	9,73,51	9,10,69	62,82
Burma	8,24,28	7,84,78	39,50
Bihar and Orissa	4,30,39	4,20,70	9,69
C. P.	4,35,37	4,38,80	—3,43
Assam	1,81,46	1,78,25	3,21

From this it is obvious that except in the case of two Provinces the standard revenue has left a sufficient margin over standard expenditure. Only in Bengal and Central Provinces there was no margin, owing to the fact that the standard expenditure was slightly in excess of the standard revenue. But this defect was more than remedied in the case of Bengal by the remission of the contributions to the Central Government, and the excess of standard expenditure over standard revenue in the case of Central Provinces was indeed very small. Barring this, in the rest of the Provinces the margin allowed was substantial. Let us now turn to the actual figures and compare them, with the standard figures. First of all, let us take the revenue side of the Provincial Budgets. Has the realised revenue fallen short of the standard revenue?

The following table compares the realised receipts of the Provinces with the standard figure assumed to be the normal in the financial allocation made under the new Act :—

PROVINCIAL

REVENUESmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_14

Provinces	Standard Revenues	Increase over Standard : — Decrease from Standard.	
		For 1921-22	For 1922-23
	Rs.	Rs.	Rs.
Madras	14,98,02	60,57	40,41
Bombay	12,09,70	1,57,47	2,22,36
Bengal	8,55,28	31,25	60,58
U.P.	12,29,88	1,04,43	1,28,79
Punjab	9,73,51	1,00,15	1,64,75
Burma	8,24,28	1,75,05	1,76,29
Bihar and Orissa	4,30,39	15,76	32,26
C. P.	4,35,37	79,43	99,86
Assam	1,81,46	22,60	23,60

The above table brings out very clearly the fact, not readily admitted, namely that the realised revenue has in no case fallen short of the standard revenue. It may, however, be asked : Has the increase in the realised revenue been equal to the margin allowed under the allocation between the standard revenue and of the Provinces?

As throwing some light on that aspect of the question the following table is interesting:-

EXPANSION OF PROVINCIAL REVENUES

Provinces	Standard Margin	Excess or Defect of Realised Margin over Standard Margin	
		For 1921-22	For 1922-23
Madras	90,82	—30,25	—50,41
Bombay	54,67	1,02,80	1,68,19
Bengal	—5,85	25,40	54,73
U.P.	1,23,32	—18,89	5,47
Punjab	62,82	37,33	1,01,93
Burma	39,50	1,35,55	1,36,79
Bihar and Orissa	9,69	6,07	22,57
C. P.	3,43	76,00	96,43
Assam	3,21	19,39	20,39

From these figures it is obvious that except in the case of Madras the realised margin has in no case fallen below the standard margin. The excess of the realised over the standard margin is enormous. It cannot, therefore, be said that the financial deficit in the Provinces is due to provincial revenue having failed to reach the assumed normal. On the other hand, the revenues were more than necessary to cover the normal expenditure of the Provinces. The only conclusion that can fairly be drawn from the facts of the case is that the provincial deficits are due to

an extraordinary
increasemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of
[Provincial Finance in British India PARTIV.htm - _msocom_15](#) in the expenditure of the
 Provinces. The following figures furnish enough evidence in support of
 this view:—

Provinces	Standard Expenditure	+ Increase over Standard :	
		— Decrease from Standard.	
		For 1921- 22	For 1922- 23
Madras	14,07,20	3,08,73	3,11,35
Bombay	11,55,03	2,97,77	3,87,14
Bengal	8,61,13	2,49,47	1,75,77
U.P.	11,06,56	3,43,31	2,79,09
Punjab	9,10,69	3,12,55	3,57,75
Burma	7,81,78	2,42,73	4,05,92
Bihar and Orissa	4,20,70	65,27	93,10
C. P.	4,38,80	1,02,96	1,23,37
Assam	1,78,25	41,20	44,33

We are, therefore, led to the view held by the Secretary of State that reduction of expenditure and increase of taxation is the only remedy for placing provincial finance on a sound footing.

What chances are there that the Provinces will undertake the reduction of expenditure and increase of taxation so very necessary for their safety? In this connection it is well to recall the dictum of that great financier, Mr. James Wilson, who once said:

“Finance is not mere arithmetic; finance is a great policy. Without sound finance no sound government is possible: without sound government no sound finance is possible.”If there is any truth in this, then whether or not the Provincial Governments will undertake economy or face increase of taxation depends upon whether or not the system of government established in the Provinces by the Reforms Act is a sound system. Now, what is the nature of the government that is established in the Provinces under the Reforms Act? In common parlance the system is known as dyarchy. Under it the Executive of the Province, instead of being composed of the Governor in Council as before, is now divided into the Governor in Council and the Governor in Ministry. Under it the subjects marked off as Provincial from the Central are further divided into “Reserved” and “Transferred” subjects. The former are in charge of the Governor in Council, and the latter in that of the Governor in Ministry. Of these parts of the Provincial Executive the Council in charge of the “reserved” subjects still remains as before irresponsible to the Provincial Legislature, is unremovable by it, and in that sense is a non-parliamentary executive. The other part of the Provincial Executive, namely the Ministry in charge of the “transferred” subjects, is recruited from the elected members of the Provincial Legislature, which is made responsible to the Provincial Legislature which is based on a more or less popular franchise, and is removable by it, and in that sense is a Parliamentary Executive.

The Provincial Legislature is supreme with regard to both the parts of the Provincial Executive. It has not only full powers of legislation, but has also full and unfettered powers of interpellation. Its powers of sanctioning and voting upon the Provincial Budget are complete, although provision is made in the Reforms

Act, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_16 which allows that

“the Local Government shall have power in relation to any such demand (for a money grant) to act as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount therein referred to (by the Provincial Legislature), if the demand relates to a reserved subject (which is assigned to the charge of the Governor in Council) and the Governor certified that the Expenditure provided for by the demand is essential to the discharge of his responsibility for the subject.”

Can such a government tackle the problems of sound finance? It is obvious that of the two parts of this dyarchical Executive, one, i.e. the Governor in Council, need have very little anxiety for reduction of expenditure or for the increase of taxation. It derives its mandate from Parliament, and as such is free to adopt any policy—backed up as it is by the certification power of the Governor without any regard for the best interests of the taxpayer. The authors of the Joint Report had seen that this certifying power to override the wishes of the Legislature might lead to irresponsible extravagance on the part of the Governor in Council, and had proposed to endow the Governor in Ministry with a countervailing power which was to act as a curb on the former. That power was to have consisted in the Proviso which laid down that no taxation even in the interests of the “reserved” subjects should be imposed in any Province without the consent of the ministry. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_17 The Extremists—a class of politicians in India who were bent upon minimising the reforms as being inadequate—disliked the proviso as calculated to make scapegoats of ministers and to bring them into discredit with the people. But their rivals, the “Moderates,” now calling themselves “Liberals”—one does not know why—saw clearly what the proviso meant. If this had materialised, there can be no doubt that the ministry would not have been a mere outsider tendering advice to the Council which might be accepted or rejected, but would have obtained a powerful voice in the

settlement of the budget.

*Having regard to the fact that no minister unless he was in a position to justify the budget proposals, including even those which pertained to the reserved subjects, would have hoped to persuade the Legislature to agree to a proposal of new taxation, the influence of the ministry on the "reserved" subjects, i.e. on the Council, would have inevitably been in the direction of thrift and retrenchment. The moderates were entirely right in their interpretation of the proviso and also in their insistence upon acquiring power, even at the cost of burdening the country with new taxation*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_18. *But in the heat of the controversy and their desire to convince the public of the substantiality of the Reforms, they drew some very amusing pictures of how the ministers working under the aegis of the proviso would be able to hold the Council at bay. This alarmed the bureaucracy, which raised the cry that it was dangerous to leave the provision for the "reserved" subjects to the tender mercy of ministers who bore no responsibility for the consequences of refusing adequate Budget provision for those subjects. The authors of the Joint Report*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_19 *had realised the force of this argument, and had confessed that the success of the arrangements depended upon their being worked by reasonable men who would conduct themselves in a reasonable manner. They were probably right in refusing to assume that the ministers would not cooperate, either by reducing their own claims or by imposing taxation, in order to meet expenditure which the Council considered essential for the proper administration of the "reserved" subjects. But the bureaucracy, which had been frightened by the tactless jubilations of the Moderates, insisted that even reasonable men would at times, in all good faith, differ vitally from other reasonable men when it was a question of providing supply for work which one party was responsible for safeguarding and developing, while the other was only concerned in getting a share of the money. In its opinion circumstances could well be imagined in which reasonableness might not prevail. Let us suppose, it was argued, that the Governor in Council finds new and heavy expenditure imperative on some reserved subject, but that he cannot induce ministers to consent to accept less for their subjects or impose taxation for it. The Governor then, under his exceptional powers, insists on the expenditure being provided for in the next budget, and the result is to leave ministers with inadequate funds for their transferred subjects. What is to happen? Are ministers to be compelled*

to raise a tax which is apparently for their own need, but a need which has been created against their will by the Council refusing to curtail their demands? Such a procedure, it was pointed out, would be tortuous, provocative, and indefensible. Again, let us suppose that ministers consented to raise the necessary money, but the legislature refused to pass their revenue measures. Are the ministers to resign as having lost its confidence? The bureaucracy placed another dilemma before the authors of the Joint Report. Ministers have raised a new tax for some purpose of their own. In the next budget the Governor finds himself compelled to add substantially to the reserved provision for some new necessity, and thus to curtail the provision for "transferred" subjects. Ministers virtually see their new taxation receipts going to finance some development for which they are not responsible, and of which indeed they may disapprove. What are they to do? To avoid these difficulties the proviso was dropped and in its place the following changes were made in the Devolution Rules:—

TAXATION AND BORROWING

30. All proposals for raising taxation or for the borrowing of money on the revenues of a Province shall in the case of a Governor's Province be considered by the Governor with his Executive Council and ministers sitting together, but the decision shall thereafter be arrived at by the Governor in Council, or by the Governor and Minister or Ministers, according as the proposal originates with the Governor in Council or the Governor and Ministers.

ALLOCATION OF REVENUES FOR THE ADMINISTRATION OF TRANSFERRED SUBJECTS

31. Expenditure for the purpose of the administration of both reserved and transferred subjects shall, in the first instance, be a charge on the general revenues and balances of each Province, and the framing of proposals for expenditure in regard to transferred and reserved subjects will be a matter for agreement between that part of the government which is responsible for the administration of transferred subjects and that part of the government which is responsible for the administration of reserved subjects.

PROCEDURE IN EVENT OF FAILURE TO AGREE

32. (1) If at the time of the preparation of the budget the Governor is satisfied that there is no hope of agreement within a reasonable time between the members of his Executive Council on the one hand and Ministers on the other as to the apportionment of funds between reserved and transferred departments respectively, he may, by order in writing, allocate the revenue and balances of the Province between reserved and transferred subjects, by specifying the fractional proportions of the revenues and balances which shall be assigned to each class of subjects.

(2) An order of allocation under this rule may be made by the Governor either in accordance with his own discretion or in accordance with the report of an authority to be appointed by the Governor-General in this behalf on the application of the Governor.

PERIOD OF ORDER OF ALLOCATION

33. Every such order shall (unless it is sooner revoked) remain in force for a period to be specified in the order, which shall be not less than the duration of the then existing Legislative Council, and shall not exceed by more than one year the duration thereof : Provided that the Governor may at any time, if his Executive Council and Ministers so desire, revoke an order of allocation or make such other allocation as has been agreed upon by them : Provided, further, that if the order which it is proposed to revoke was passed in accordance with the report of an authority appointed by the Governor-General, the Governor shall obtain the consent of the Governor-General before revoking the same.

CONDITION OF ORDER OF ALLOCATION

34. Every order of allocation made under these rules shall provide that, if any increase of revenue accrues during the period of the order on

account of the imposition of fresh taxation that increase, unless the legislature otherwise directs, shall be allocated in aid of that part of the Government by which the taxation is initiated.

PREPARATION OF BUDGET IN DEFAULT OF AGREEMENT OF ORDER OF ALLOCATION

35. If at the time of the preparation of any budget no agreement or allocation such as is contemplated by these rules has been arrived at, the budget shall be prepared on the basis of the aggregate grants respectively provided for the reserved and transferred subjects in the budget of the year about to expire.

Thus rather than depend too implicitly on reasonableness when circumstances must often be provocative effective precaution is taken by these rules against the ministry disapproving the allocation of funds to the "reserved" subjects by allowing the Governor to make such an allocation which is to be binding on both parts of the executive and also by arming him with the power of veto over the Provincial Legislature by allowing the Governor, should he deem it necessary, to restore a Budget grant on a reserved subject if it were refused or reduced by the Provincial Legislature which has the right to determine the Provincial Budget, and thirdly by allowing the Governor in Council equally with the Governor in Ministry to raise new taxation or new loans for the development of the subjects in its own charge. The result is that one part of this dyarchical Executive, namely the Governor in Council, can have little reason to be interested in economy or be over-weighed by considerations of taxation. Its supply being assured its concern in the stability of provincial finance must be deemed to be somewhat remote. The whole burden of meeting the problem of restoring sound finance, therefore, falls upon the Governor in Ministry in charge of the "transferred" subjects. For, under the distribution and certification powers it is the "transferred" subjects which must go without the funds they need, and it is those in charge of them, namely the Ministers, who must bear the brunt of economy or resort to new taxation to bring

about an equilibrium in the finances of the Provinces. For it is doubtful that the Governor in Council will choose the onerous task of raising new taxes or practise economy when there are open to them other ways of amply providing themselves for the subjects they have under their control. Will the other half of the Government, namely the Governor in Ministry, consent to practise economy, or if need be undertake the burden of new taxation? That obviously depends upon the temper of the Legislature.

At the outset it is to be noted that the Legislature will not readily favour projects of increased taxation. It is true, as Burke remarks, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. [Evolution of Provincial Finance in British India PARTIV.htm - _msocom_20](#) that

“To tell the people that they are relieved by the dilapidation of their public estate, is a cruel and insolent imposition. Statesmen, before they valued themselves on the relief given to the people by the destruction of their revenue, ought first to have carefully attended to the solution of the problem: Whether it be more advantageous to the people to pay considerably, and to gain in proportion; or to gain little or nothing, and to be disburthened of all contribution?”

Whatever may be the philosophers' answer to this question, there can be no doubt that in a poor country like India with a very low capacity for bearing the burden of taxation, it is always very unpleasant, if not cruel, to propose an augmentation of that burden. Besides, any proposals for extra taxation would be shunned as likely to prejudice the chances of the legislators at the polls. So long as nomination was the general mode of obtaining a seat in the Legislature it was unnecessary to mind the prejudices of the electors. But when a seat is in the gift of the elector a candidate to the Legislature who proposes to touch his pocket has a small chance of success, even though the new taxes are to result in more than proportionate benefit. Besides, a political party which has won power from a bureaucracy by accusing it of heavy taxation cannot easily consent to disgrace itself by continuing the same policy. This innate aversion to taxation on the part of the Legislature is strengthened by the peculiar attitude of the Legislature towards

the "reserved" and "transferred" subjects. The reserved subjects are those which mostly pertain to peace and order, while the transferred subjects are those which largely pertain to progress. But as has already been pointed out, the policy of the bureaucracy before the Reforms was calculated to sacrifice progress to order. It is therefore obvious that under the revised constitution the popular Legislatures should aim at turning the scales in favour of subjects tending towards progress. Their aversion to increase of taxation and their partiality for the transferred subjects will favour them to welcome proposals on the part of ministers making drastic reduction in the funds allotted to the reserved subjects. Their attitude towards the ministers will be largely governed by the amount of economy they will be able to effect in the reserved subjects for the benefit of the transferred subjects. Thus in the absence of any very large chances of increase of revenue the two halves of the Executive, the Governor in Council backed by the distribution and certification power and the Governor in Ministry backed by the general Budget powers of, a popular Legislature, will compete in the matter of developing their subjects by forcing economy on each other. The Legislature being unwilling to tax, the Governor in Council being in a position to resist retrenchment and the Governor in Ministry anxious to expand, the chances of an early equilibrium in Provincial finance are very small.

It is, therefore, evident that if there is no sound finance in the Provinces it is because dyarchy is not a good form of government. Now, why is dyarchy not a good form of government? The answer to this question is very simple. Dyarchy is a bad form of government because it is opposed to the principle of collective responsibility. An administrative machine must work smoothly and harmoniously. But in order that it may do so it must recognise the principle of impartibility of governmental work and a collective responsibility of the administrators in the execution thereof. That the work of government is by its nature impartible may not seem to accord with facts : for, in practice the functions of government can be and commonly are partitioned, as they are between local bodies and between departments. Nevertheless it is true that a common thread runs through them all : that no function of

government acts *in vacuo* ; that each reacts on some other function, and that the various functions cannot act at all to produce orderly progress unless there is some force to harmonise them. Otherwise a policy enunciated in one department may fail to fructify for want of helpful action on behalf of other departments. That harmonising force can only be found in the principle of collective responsibility. This is so because under it, as Hearn points out mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_21

“Each minister acts in his own department as the recognised agent of his colleagues in that particular department, subject, however, to inquiry and control by the whole body. But in all cases on which any difficulty is likely to arise each minister, from motives not merely of prudence but of honour, takes the opinion of the Cabinet. When the precaution is taken the measure becomes the common act of the Ministry.”

Right or wrong there is a common co-ordinated policy which guides a unified government based on collective responsibility. But having made a partition of governmental work, dyarchy must be said to have introduced an element of divided responsibility in the Executive. It is true that the partition is not horizontal but vertical. It is also true that in setting the two parts to work it has not been provided that there should be two separate Legislatures for two separate executives ; or that each should make its own laws, control its own finance, frame its own budget, impose its own taxation, and raise its own loans ; or that each should have its separate staff for the administration of subjects allotted to it and have its own methods of recruitment, pay and pension for its services ; so that the two authorities might in fact have clearly defined spheres of their own exclusively within them. The Government of India had indeed suggested that some, if not all, of these concomitants of a typically dual executive should also be made a part of the dyarchical system adopted to carry on the government of the Provinces. Fortunately for the country the framers of the new constitution held mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_22

"that wisdom lies not in equipping each of the different elements with a complete paraphernalia of its own, and trusting to their orbits lying sufficiently apart for collision to be avoided; but in taking every opportunity of bringing the two elements into contact so as to induce the habits of joint action." "It is our intention," wrote the authors of the Joint Report; mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2.Evolution of Provincial Finance in British India PARTIV.htm - _msocom_23 "that the Government thus composed and with this distinction of functions shall discharge them as one Government," and that "the Provincial budget should be framed by the Executive Government as a whole." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2.Evolution of Provincial Finance in British India PARTIV.htm - _msocom_24

It was no doubt well to have modified the working of dyarchy by subjecting it to the interplay of two principles, one of division in order to give as clear a definition as possible of the several responsibilities of the two parts of the government and of union, in order to get association in aims and policy between those parts. For to have equipped each part of the Executive with a separate paraphernalia would have been nothing short of a calamity. But because there is an understanding that when ministers will act in matters of transferred subjects the councillors will advise them, and that when councillors will act in matters of reserved subjects the ministers will advise them, it does not alter the fact that dyarchy is a system of divided responsibility. It is not a system which ensures the work of government being conducted in harmony and in accordance with a common policy. On the other hand, it is a system fraught with organised quarrel. The dividing line between dyarchy and anarchy is very narrow. If such a system is not rent in practice it is because of two transient circumstances. One such circumstance consists in the Provincial Legislature being a weakling sapped of its vitality by political dissensions. The other consists in the tenure of the Ministers not being at the will of the Legislature, but for the duration of the Legislature's existence, and are to hold office during the pleasure of the governor. To allow a governor to choose ministers from among the elected members of the Legislature instead of requiring him to accept ministers who are elected by the Legislature is a grave

derogation from the principle of responsible government which was avowedly the object of the Reforms Act. A minister who has the confidence of the governor, and a minister who has the confidence of the Legislature, are two entirely different things. How great is the difference between the two in so far as good government is concerned is writ large in the pages of English political history of the eighteenth and the nineteenth centuries. That such a system should have been adopted against which the whole English constitutional history is a grand protest cannot of course be without some reason. The ostensible reason advanced mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_25 is that the Legislature

“had had no experience of the power of dismissing Ministers, or the results attending the exercise of such power. Nobody in India is yet familiar with the obligations imposed by tenure of office at the will of a representative assembly. It is only by actual experience that these lessons can be learned..... By the device of appointing the ministers from the elected members of the (Legislature) and making their tenure of office conditional on the retention of their seats (there is) established at once some measure of responsibility, in the form of responsibility to their constituents and thus (is) put an end to the condition of affairs in which those entrusted with the administration are wholly irresponsible to the constituents who elect the (Legislature).”

It is difficult to believe in the cogency of this piece of reasoning. To argue that nothing can be learned without experience is simply absurd. What is necessary for a proper conduct on the part of an individual or a group is to understand the meanings and values of things. For that it is unnecessary to undergo actual trial. A Legislature composed of responsible persons may be trusted to know the consequences of dismissing a Minister at the start without having to wait to learn it by experience. Again, to argue that the system is not the less responsible because ministers are responsible to their constituents is a shallow piece of pedantry. It was no doubt argued by [Austin](Austinmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial

[Finance in British India PARTIV.htm - _msocom_26](#) in connection with the English Constitution, that the House of Commons was "merely trustee for the body by which they are elected and appointed." It is true that in a political sense the electors are the most important part of, we may even say, are actually, the Sovereign power, since their will is under every representative system of government sure to obtain ultimate obedience. But as Prof. Dicey points out, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_27](#)

"any expressions which attribute to Parliamentary electors a legal part in the process of law-making are quite inconsistent with the view taken by the law of the position of an elector. The sole legal right of electors under the English constitution (and the same is true under the Indian constitution) is to elect members of Parliament. Electors have no legal means of initiating, of sanctioning, or of repealing the legislation of parliament. No court will consider for a moment the argument that a law is invalid as being opposed to the opinion of the electorate":

and this exactly defines the status of the Indian electors. To make the minister responsible to such a nonentity is to make him virtually irresponsible. That the framers of the constitution were not alive to these considerations in suggesting this particular mode of appointing Ministers it is hard to believe. What is more probable is that this particular mode of appointing ministers was adopted because it permitted to select a man who was more likely to co-operate with those in charge of the reserved subjects and who being irremovable by the Legislature would be less swayed by its wishes. But the Ministers cannot remain altogether immune from the axe of the Legislature. The dangers of the position of a minister who has cultivated friendship with the councillor and has failed to ingratiate himself into the favour of the Legislature, cannot fail to come home to him on budget occasions. The proposals of the minister as embodied in the budget will be liable to be reversed by a vote of the majority of the Legislature, but neither he himself nor the governor will be able to intervene. The minister's only remedy will be to resign.

Anyhow these circumstances which have, so to say, saved dyarchy from failure are only transitory. The political dissensions may be no more than a passing phase, and the ministers from the second term of the reformed Legislature will become amenable to it : so that before long the forces may be organised better than they are, when dyarchy is sure to fail.

Hybrid executives, divided responsibility, division of functions, reservation of powers, can not make for a good system of government, and where there is no good system of government there can be little hope for a sound system of finance. The primary solution is that there should be an undivided government with a collective responsibility. That, however, can be achieved only when the whole of government derives its mandate from a common source. That such a consummation should take place as early as possible is devoutly to be wished. In that behalf it is encouraging to know that dyarchy is but a transitional system. The only question is how long and protracted will the period of transition be. The justification for introducing a dyarchical form of government rests on the supposition that India is at present ill-prepared to sustain a system of responsible government in anything like completeness, for owing to the lack of education and political experience, the Indian electorate will for some time be unable either to formulate their requirements intelligently or effectively impose a mandate upon their representatives, and that owing to the inveterate social prejudices of the educated classes there is a great danger of their abusing the political power to exploit the masses. This cardinal fact, it was held, must differentiate the degree and the kind of responsibility which can be introduced at the outset from that which will be the eventual resultant of the new system, and must impose the obligation of ensuring that the forces which now hold the people together are not completely withdrawn before satisfactory substitutes are ready to take their place. On the other hand, it has been urged mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/27D2. Evolution of Provincial Finance in British India PARTIV.htm - _msocom_28 that there is no necessity to wait till the cardinal fact disappears ; for

"in all countries responsibility in the beginning has been entrusted to a very small section of the people, and government has been in the hands of a small educated minority, who have naturally cared for the interests of the uneducated masses pending the spread of education and the consequent extension of the franchise." This is of course a familiar line of argument which is usually put forth in India by the political radicals and social Tories. If we put aside the painful story of the harsh, cruel and inhuman treatment which the classes in India have accorded to the masses, truth is on their side, for in every country there have been downtrodden communities suffering from social oppression and social injustice, and yet no country has had to be without political power on that account. But those who use this argument forget that if other countries like America with her Negroes and Japan with her Hitas are in possession of political power without having first destroyed social inequality, it is due to the fact of their having been in possession of military power. Military force and moral force are the two chief means to political freedom, and a country which cannot generate the former must cultivate the latter. Thus in India the political problem is entirely a social problem, and a postponement of its solution virtually postpones the day when India can have a free government subject to the mandate of none but her own people.

THE ECONOMIC JOURNAL
THE JOURNAL OF THE ROYAL
ECONOMIC SOCIETY

Edited By : J. M. KEYNES AND D. H. MACGREGOR

London, MACMILLAN AND CO., Limited,

New York, The macmillan Company, 1926

Of this group only two pretend to add anything new to our knowledge

of India, the rest are rather text-books for Indian students. Mr. Ambedkar has the facility of making forbidding subjects attractive and has produced a very readable book. Provincial finance in India has so far been almost entirely neglected by writers on finance and little or nothing has been published apart from Government Blue Books and memoranda. The Evolution of Provincial Finance in British India is a useful introduction written rather from the historical point of view. It does not pretend to be exhaustive and is essentially a piece of pioneer work. There are four parts. Part I traces the history from 1833 up to 1873, when a new regime was begun. Centralisation having proved a failure, the opponents of the system wished "to make the Local Governments partners in the great joint stock of Indian Finances..... instead of keeping them on the footing of agents and servants," thus anticipating the present reforms. Opposition, however, was too strong, and as usual the solution was a compromise, details of which are given in Part II. Various methods are described, such as "Budget by Assignments", "Budget by Assigned Revenues," and "Budget by Shared Revenue." None succeeded in giving the desired results. Part III is analytical, and is an attempt to that, whatever the financial relationship between the Provincial and Central Governments, the former were never in law or fact independent but were closely regulated. It is an interesting piece of work, but does not appear to be so fundamentally important as the author seems to think. Part IV is devoted to finance since the introduction of the new reforms. The treatment here is not so good, probably because the space allotted to it is too small and the subject very complex. The conclusion drawn is that good finance cannot be expected under the present dyarchical system of government. Certainly it will be difficult.

The author is to be congratulated upon the impartial way in which he has discussed an eminently controversial subject.

THE PRESENT PROBLEM IN INDIAN CURRENCY-I

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/32. The Present Problem in Indian
Currency-I.htm - _msocom_1

2 Shillings *Versus* 1s. 4d. *Ratio*

The Great European War was the most abnormal event within living memory. During its disastrous course it touched nothing which it did not upset. But of all the things it touched none received a more violent shock than did the currency system that today one finds that the German mark, the Austrian crown, the Russian rouble, the French franc and the Italian lira, to mention only a few of the world's chief units of account, have lost their moorings and travelled far and wide from their original parity. Even the British pound succumbed and the rupee which was never in the thick of the war escaped the fasteners contrived by its guardian to keep it steady.

In the course of reconstruction which has followed the close of the War it is natural to find people desirous of a return to the pre-war conditions of currency. In sympathy with this universal demand there has arisen in India a party with a definite program in that behalf. In the opinion of this party Indian currency should be stabilised at the ratio of 1s. 4d. to the rupee which was the pre-war ratio of Indian currency. To this demand the Government of India seems to be opposed, not because that ratio is not good but because in its opinion it is not better. It wants or rather aims at having a 2 shilling ratio for the Indian currency. As every one is aware many Governments in Europe, apart from the wisdom of doing so, would indeed be thankful if they could only restore their currencies to their pre-war ratios—so far are they away from them. Indian currency on the other hand has already reached its pre-war ratio: In view of this the attitude of the Government of India in not being satisfied with a return to the pre-war conditions seems to be that of a naughty child always asking for more.

It is this controversy that I wish to make the subject matter of this paper. At the outset it is necessary to realise that this controversy involves two distinct questions : (i) Should we stabilise our exchange and (ii) What should be the ratio at which we should stabilise? These two questions are distinct questions. But when one reads what the two parties have to say one sees that neither the Government nor its opponents have made it clear whether their aim is to alter the worth of our unit of account, i.e. to put a new value on it or to stabilise it at its existing value. I am afraid there can be very little advance in the

direction of rehabilitation of our currency until these two questions are completely separated. For, not only is the aim of altering the worth of a currency distinct from that of stabilising true that those who want to alter the worth of the currency wish in the end to stabilise it when the worth desired is attained.

But so far as the transit period is concerned, to say that we are stabilising the currency when we are altering its worth is to create confusion. For, the latter involves a deliberate policy of changing the ratio while the former means a deliberate policy of keeping it steady.

Before I enter upon the discussion of these two distinct questions it is, I think, necessary to make sure that we understand exactly how an exchange ratio is determined. For unless we grasp this, we can never intelligently follow the bearings and implications of the two questions that arise out of this controversy. To put it simply, an exchange ratio between two currencies or units of account means the value of one in terms of the other. Now, a unit of account is value in terms of another unit of account not for its own sake, unless it is wanted as a curio, but for what it will buy so that we can say, for the purpose of introducing the subject in a concrete form, that Englishmen will value Indian rupees in as much as and in so far as those rupees will buy Indian goods. On the other hand, Indians will value English pounds in as much as and in so far as those pounds will buy English goods. It, therefore, follows that if rupees in India rise in purchasing power or remain stationary or rise less rapidly while pounds in England fall in purchasing power (i.e. if the Indian price level falls relatively to the English price level) fewer rupees would be worth as much as a pound. In other words when rupee prices in India will fall the exchange value of the rupee in terms of the pound will rise. Contrariwise if rupees in India fall in purchasing power while pounds in England rise in purchasing power or remain stationary or fall less rapidly (i.e. if the Indian price level rises relatively to the English price level) fewer pounds would be worth as much a rupee. In other words, when rupee prices in India will rise the exchange value of the rupee will fall. From this we can lay down as a general proposition that the exchange ratio of two units of account is on a par with the exchange ratio of their purchasing powers. This is in short the doctrine of Purchasing Power Parity as an explanation of a particular exchange ratio between two currencies or units of account. I insist upon a firm grasp of this doctrine because I find some of our leading lights seem to hold that a particular exchange ratio is the result of the balance of trade. This view is somewhat difficult to understand. For as a matter of fact, in

international trade, wherein exports pay for imports, there is never such a thing left as an unpaid balance. It is true that a part of the trade dues are paid for by money ; but there is no reason why the part liquidated by money should be spoken of as a balance. All that it means is that money enters into international trade just as other commodities do. There is nothing peculiar about money in that. Nor is there anything peculiar in the variation in the extent to which money enters into international transactions. The extent to which money enters into trading transactions of a country is governed by the same law of relative value as is the case with any other commodity. The commodity which is relatively the cheapest tends most to go out of the country. At one time it may be cutlery and at another it may be oranges and at a third time it may be money. If no one speaks, as one may very well do, of a balance of trade in terms of cutlery or oranges when after a stage of normal equilibrium more of them go out of the country than they did before, there is neither rhyme nor reason in speaking of a balance of trade in terms of money when after a stage of normal equilibrium more money goes out of the country than it did before. This usage is, however, pardonable as being a harmless survival of the mercantilist days. But what is grossly absurd and foolish is the view that the exchange ratio of a unit of account is determined not by its purchasing power but by the balance of trade. This view is a pure inversion of cause and effect. It is true that a fall in the exchange value is accompanied by an adverse balance of trade and a rise in the exchange value by a favourable balance of trade. But an adverse balance of trade in the sense that commodity exports are falling off while commodity imports are rising evidently means that the particular country has become a market which is good to sell in but bad to buy from. Similarly, a favourable balance of trade in the sense that commodity exports are rising while commodity imports are falling off evidently means that the particular country has become a market which is good to buy from but bad to sell in. Now a market is good to sell in but bad to buy from (typified by the case of a fall in the exchange value accompanied by an adverse balance of trade) when the level or prices ruling in that market is higher than the level of prices ruling outside it. in the same way a market is good to buy from but bad to sell in (typified by the case of a rise in the exchange value accompanied by a favourable balance of trade) when the level of prices ruling in that market is lower than the level of prices ruling outside. This simply is another way of stating that lower prices means a high exchange value and a favourable balance of trade and that higher prices mean low exchange value and

adverse balance of trade. The balance of trade is thus the result of the changes in the exchange value and not vice versa, and exchanges in the exchange value are the result of changes in the price level, i.e. changes in the purchasing power of units of account. This is the most fundamental fact and although some might resent the digression as feeding the baby I think it was necessary. For many people talk hopeless nonsense about stabilisation of exchange and fixing the exchange at choice ratios as though it had nothing to do with the question of prices. On the other hand changes in exchange are ultimately changes in the price level and as much have profound bearing upon the economic welfare of the people. Remembering then that regulating exchange is the same thing as regulating the purchasing power of the currency, we may proceed to discuss the two questions that arise out of this controversy.

Firstly, should we stabilise the exchange value of our unit of account? As I have said above, foreign exchanges compare in value of the currency of one country with that of others. It follows that exchange values of two currencies are important only to merchants who do not buy and sell in the same country. Again, it is of no consequence to them what the exchange value is, i.e. whether the rupee is worth 1s. or 2s. provided the figure is always the same and is known in advance. It is only changes or fluctuations in the given exchange value that is of any moment to the merchant. What he wants is this invariability of exchange; to ensure this invariability is the problem of stabilisation. Under the present circumstances can we guarantee this invariability of exchange ratio to our merchants? To answer this question we must recall the basic conception of the purchasing power parity as an explanation of the exchange ratio. From that doctrine it is clear that if you want to stabilise exchange you must control the purchasing powers of the two currencies concerned so that their movements will be alike in depth as well as in direction. To stabilise exchange we must have therefore some controlling instrument which would act as a common regulator bringing about proportionate changes in the two currencies in the same direction. Hitherto one such good instrument had been found and that was a common gold standard. That standard has now been destroyed all over the world except in the United States. Consequently an automatic stable exchange on the basis of a gold standard is impossible for the present, except with the United States.

Hitherto one such good instrument had been found and that was a common gold standard. That standard has now been destroyed all over the world except in the United States. Consequently an automatic stable

exchange on the basis of a gold standard is impossible for the present, except with the United States. As regards countries which are on a paper basis, stabilisation of exchange can be secured only on two terms (i) Since we cannot control the currencies of other countries we must be prepared to manipulate our currency in sympathy with theirs and be ready to appreciate it when they depreciate theirs, (ii) Without manipulating the whole of our currency we should be prepared to sell and buy foreign exchange at a fixed ratio. Both these projects for securing invariability of exchange must, I think, be rejected as injurious as well as hazardous. There is no doubt that stabilisation will promote, as nothing else can, the revival of international credit and the movement of capital to where it is most required. One of the most vital parts of pre-war organisation would thereby be restored and an element of uncertainty would vanish. Markets given up as lost would be again nursed, which would give an impetus to trade and industry. But there is no doubt that the benefit to be derived will not be worth the cost involved. Our external transactions are infinitesimal as compared to our internal transactions. To dislocate our internal arrangements by constant changes in our price level to preserve external parity is too big a price for a gain which is after all paltry. For, our merchants must remember that though fixity is a great advantage, yet its absence is not an absolute bar to the carrying on of international trade. We have an instance of this in the history of our own currency. For two full decades between 1872-1892 there were the greatest oscillations in Indian currency. Then as now our merchants did clamour against the instability of exchange being an hindrance to trade. But our history shows that even under fluctuating exchange they did thrive and prosper and it may be hoped that their sons may instinctively know how to do the same. Should this fail to carry consolidation, one would recommend the movement of our price level even if it involved the management of our currency, had the Governments of the European countries not been in such an impecunious condition. As it is, by consenting to move our price level in sympathy with theirs we would be committing our welfare to the care of bankrupt governments and their desperate ministers. A currency which is managed on a basis approved by science would no doubt do the best. To be linked up with a currency which is managed solely to meet the exigencies of trade would be tolerable. But it would be an intolerable management of our currency to join hands with a partner who is living on his currency to keep himself going.

THE PRESENT PROBLEM IN INDIAN CURRENCY- II

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/33. The Present Problem in Indian
Currency-II.htm - _msocom_1

2 Shillings *Versus* 1s. 4d. *Ratio*

So far for the first question. Now I turn to the another question arising out of this controversy, namely, at what rate should we stabilise our currency? Interpreted in terms of purchasing power, the question reduces itself to this : Shall we bring about a fall in the existing price level, i.e. raise the purchasing power and thereby the exchange value of the rupee? Now, changes in the value of money, if they affect all transactions and all classes equally, would be of no consequence and such questions as the above would not be worth any discussion. But as we all know, when the value of money changes it does not change in a uniform proportion for all purposes so as to affect a man's incomes and out goings to the same extent. Consequently before we fix upon the direction in which to move our price level we must make sure whether the incidence on the welfare of the different classes of our society would be such as would be just and proper.

In the present organisation of society a triple classification into the Investing Class, the Business Class and the Earning Class corresponds to a real social cleavage and an actual divergence of interest. As it is, the business class is the centre of all economic activity; on the one hand it borrows money from the investing class and on the other it employs the earning class. There are money contracts, agreements to pay so much money. If after these money contracts have been entered into, the value of money changes one way or the other, it is obvious that the contracts will be falsified. If the value of money decreases, i.e. if prices rise then the investing and the earning classes are injured and the business class is benefited. The investing class and the earning class, it is true, do get from the business class the amount of money contracted for, But it will be seen that when owing to the rise of prices the business man is getting more money for his product than he would have got if the value of money had remained stable, he is not only paying to the other classes, the same amount of money but he also is payable them in money of smaller worth. In the same way if the value of money increases i.e. if prices fall then the business class is injured and the investing and the earning classes are benefited. As before the business man no doubt pays to the investing and earning classes the same amount of money contracted with them. But it will be seen that when owing to the fall of

prices the businessman is getting less money for his product than he would have got if the value of money had remained stable, he is not only paying to the other two classes the same amount of money but he is also paying them in money of greater worth.

Clearly then if we move down towards 2s. ratio, i.e. bring about a fall in our prices we shall be favouring the investing and the earning classes of our society. On the other hand if we move up towards 1s. 4d. ratio we shall be favouring the business class of our society. To be just, an exhaustive estimate ought therefore to be made of the volume of outstanding money contracts entered into by the business class including the Governments with the investing and earning classes classified according to their age. It will then be found that the contracts outstanding at any given time include those made at any and every stage of preceding depreciations and appreciations for the last 100 years. To do justice to each and every one of them it would be necessary to fix upon different standards according to the value of money prevailing at the time when they were made. But it would be a physical impossibility to make separate standards, for separate contracts. If all contracts now existing had been entered into in 1914, then ideal justice would clearly require us to restore the pre-war par of currencies by such deviations as would reduce the general level of prices to exactly that of 1914. If, on the other hand, it was found that all contracts now existing happened to have been entered into in 1924, justice would require that we should retain the level of 1924. Undoubtedly the best we can do is to move between these two extremes. Now the two extremes of the exchange value of our rupee during the period are 1s. 3 7/8d. and 1s. 6d. This may be surprising to some. For it is well-known that at one time the rupee had gone to 3 shillings and our statute recognises the rupee as equivalent to 2s. gold. But in my opinion we must disregard that together. It may at once be said that among the reports published by the various committees, that were appointed from time to time to investigate into Indian currency none was so stupid as the report of the Babington Smith Committee on whose recommendations the statute was framed. It was such an ignorant Committee that it could not understand the problem it was appointed to investigate and consequently it ended by making a mess of things. As is well-known the Committee reported that the value of the rupee should be raised to 2s. gold. That was tantamount to saying that the rupee had appreciated ; that in other words prices in India had fallen. How did the facts stand? The following table conveniently sums up the whole story.

Date	Price of Bar Gold in India (Bombay) per Tola of 180 gr.	Price of silver in India (Bombay) per 100 tolas	Index number for prices in India 1913 = 100
	Rs. As.	Rs. As.	
1914	24—10	65—11	
1915	24—14	61— 2	112
1916	27— 2	78—10	125
1917	27—11	94—10	142
1918 (July)	34— 0	117—2	178
1918(Augu st)	30— 0		
1918 (September)	32— 4		
1919 (March)	32— 3	113—0	200

From the table it is evident that, far from having appreciated, the rupee had tremendously depreciated. The price of silver had no doubt risen beyond conception and the Committee adopted without much ado the conclusion that the rupee had therefore risen in value. As a matter of fact this very circumstance was proof positive that the rupee had gone down in value in terms of silver as well as in terms of commodities in general. If in 1920 more rupees were wanted to purchase the same amount of silver than in 1913 it meant that the rupee had fallen in value. The Committee blundered because it failed to separate the rupee as a currency and measure of value from the rupee as an ingot of silver. The 2s. gold exchange value of the rupee as a measure of value was never a fact and we are therefore perfectly justified in not taking that limit into account in the solution of our present problem. The only justification if it can be held to be a valid justification, that could be urged in favour of 2s. gold ratio consists in this. Some of those who ask for 1 s. 4d. ratio do so because in their opinion it means a return to the pre-war conditions. Now if it is a return to the pre-war conditions that is desired then Government may well say that measured in terms of prices 1s. 4d. in 1924 is not the same thing as 1s. 4d. in 1914. Many people do not seem to realise this. But it is an incontrovertible fact. Both in 1924 as

well as in 1914 exchange was 1 s. 4d. But the index number of sale prices in India was 176 in December 1924 while in July 1914 it was only 100. It therefore follows that if we want a return to the pre-war conditions then it will not do to have 1s. 4d. as the exchange value of the rupee. For a return to the pre-war conditions, meaning thereby pre-war price, we must reduce our existing prices by 76% i.e. raising the value of the rupee by 76%. This of course ultimately means a ratio of 2s. But it may well be asked why should we return to the pre-war conditions? There is no necessity to do that. It must be remembered that old contracts are no longer in force. Most of them have been executed and whatever wrong was done to them in their execution cannot now be remedied. Besides, it must not be forgotten that though the monetary contracts outstanding at any given time are of various ages,—some are a day old, some a month old, some a few years old, some a decade old and some even a century old—yet most are of a very recent date. That being so, we must choose our starting point for a new standard from the level of current business and not from the levels operative before the war. To do otherwise simply because it would give us a low level of prices is to dislocate our trade and industry and thereby jeopardise our prosperity. To raise the value of our money by 76% above its present value will mean to every merchant and every manufacturer not only that his product will fetch 76% less, but that he will have to give 76% more to the investing class from whom he borrowed and to the earning class whom he employed. The burden thus imposed upon the active and working elements of society would be intolerable. I must however guard against a possible misunderstanding. No one should imagine that because I am against lower prices I am for higher prices. All I insist upon is that we must not complain against high prices once that level is established. For things having adjusted themselves they are our normal level. A pre-war level would be abnormal and must therefore be rejected. We must therefore choose between 1s. 3 7/8d. and 1s. 6d. As

for choosing one or the other of the two we should be guided by what is fair and just. We want that enterprise be helped against accumulation and we probably wish that the rich should go richer. But I am sure none of us wants that the instinct of having, which is the foundation of capital, should be discounted or that poor should go poorer. But this would exactly be the result of a swing towards 1s. 6d. On the other hand, though we want capital to grow and the poor to fare better yet

none of us wants that industry be set at naught. And yet this would be the result of keeping to 1 s. 6d.

I for myself would choose 1s. 6d. as the ratio at which we should stabilise if we can and for the following reasons, (i) It will conserve the position of the investing and the earning classes ; (2) It does not jeopardise our trade and prosperity by putting any extra burden upon the business class ; and (3) being the most recent in point of time, it is likely to give greater justice to the greatest number of monetary contracts most of which must be recent in time.

Fortunately for us we are not dependent upon other countries for the stabilisation of our price level, as we must necessarily be for the stabilisation of our exchange. In exchange stabilisation we could not even if we would. But in the stabilisation of our prices we could if we would. It would indeed be better if we can stabilise our prices as well as our exchange. But because other countries cannot, stabilise their price levels there is no reason why we should not adopt measures that will give us stable prices at home which is really the most that is to be got out of a currency medium. In my opinion we should stabilise our prices forthwith by linking the rupee to gold at 1s. 6d. sterling. European countries will soon realise that it is insane to reach back to pre-war parities with gold and will learn that in matters of currency the real at any given time is the natural and normal. If they learn this earlier than we expect, we would find them stabilising their currencies in terms of gold at the existing levels. In that case gold will again begin to function as an international standard of value and we shall have a stable exchange. But if before that we have stable prices in terms of gold it certainly cannot do us any harm.

During the course of this controversy there has arisen a new standpoint which would want us to do nothing in the matter of rehabilitation of our currency until we first took measures which should substitute the prevalent system of managed currency by a new system of automatic currency. I have great sympathy with this standpoint, not because I am sure that an automatic currency will always be more stable than a managed currency but because it reminds us that the question ' how can we most nearly maintain stability after we have attained it 'is more worthy of our consideration than the question of attaining stability. But to suggest that we must do nothing to stabilise our price level till we have decided between a managed system and an automatic one, is to make hell of the earth because the angels do not consent to make a heaven of it. That was the reason why I thought it was a different matter

altogether. Some comments on that might be useful at another time. But not now.

THE PROBLEM OF POLITICAL SUPPRESSION

The introduction of the principle of political liberty in India has been very tardy & gradual. It began in the year 1892 when the principle of popular representation in the Constitution of the Legislatures was introduced. It was expanded in 1909. There were two defects in the popular representation as it stood in 1909. The first defect was the franchise was very high. It was so high that a large mass of people were excluded. Those to whom it reached were the aristocracy of the Hindus and the Muslims. The second defect was that the scheme of popular representation was confined to the Legislature. It did not extend to the Executive. The Executive continued to be independent. The Legislature could neither make or unmake the Executive. The next was taken in 1919. Curiously enough, in the scheme of 1919 the principle of popular representation was applied to the Executive without applying it in commensurate degree to the Legislature. This happened because the political movement in India was led largely by the higher classes. They have always been more anxious for Executive power than for extension of franchise. It is natural. For they stood to gain by executive power. While those who would gain by franchise were the masses.

The higher classes having the ear of the British authorities pressed for executive power and succeeded getting it without the extension of franchise.

The franchise was no doubt extended much beyond the bounds fixed in 1909. But it did not touch the Untouchables. Indeed they are so poor that nothing except adult franchise would bring the Untouchables on the electoral roll.

The Government of India was very much perturbed. They could do very little. But they did express their anxiety about placing the Untouchables under the political domination of the high caste Hindus without giving the Untouchables the right to vote in the election. In their despatch of 19th March 1919 the Government of India observed— [Quote]

The situation was altered in 1935 under the scheme proposed by the British Government under what is called the Communal Award.

(i) The Untouchables were to have a differential franchise so as to enfranchise about ten per cent of their population.

(ii) The Untouchables were not only to have a differential franchise, they were to have certain number of seats reserved for

them in the Provincial and Central Legislatures.

(iii) The seats reserved for them were to be filled by separate Electorates formed exclusively of voters belonging to the Untouchable Community.

(iv) In addition to having a vote in the Separate Electorates the Untouchables were to have a second or additional vote in the general election for seats open to Hindus other than the Untouchables.

Mr. Gandhi who had been objecting to separate representation of the Untouchables raised a protest against the proposal of the British Government and threatened to fast unto death if these concessions were not withdrawn. Mr. Gandhi's objection was mainly to Separate Electorates and as the British Government refused to withdraw their proposals unless there was an agreement between the Untouchables and the Hindus. There upon Mr. Gandhi started his fast. Eventually an agreement was arrived at between the Hindus and the Untouchables in September 1932. That agreement is known as the Poona Pact. Its terms are reproduced below:

POONA PACT mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/61. The problem of Political Suppression.htm - _msocom_2

(1) There shall be seats reserved for the Depressed Classes out of the general electorate seats in the Provincial Legislatures as follows:

Madras	30
Bombay with Sind	15
Punjab	8
Bihar and Orissa	18
Central Provinces	20
Assam	7
United Provinces	20
Total	148

These figures are based on the total strength of the Provincial Councils, announced in the Prime Minister's decision.

(2) Election to these seats shall be by joint electorates subject, however, to the following procedure:

All the members of the Depressed Classes registered in the fengral electoral roll in a constituency will form an electoral college, which will elect a panel of four candidates belonging to the Depressed Classes for each of such reserved seats, by the method of the single vote; the four

persons getting the highest number of votes in such primary election, shall be candidates for election by the general electorate.

(3) Representation of the Depressed Classes in the Central Legislature shall likewise be on the principal of joint electorates and reserved seats by the method of primary election in the manner provided for in Clause two above, for their representation in the Provincial Legislatures.

(4) In the Central Legislatures, eighteen per cent of the seats allotted to the general electorate for British India in the said legislature shall be reserved for the Depressed Classes.

(5) The system of primary election to a panel of candidates for election to the Central and Provincial Legislatures, as here in before mentioned, shall come to an end after the first ten years, unless terminated sooner by mutual agreement under the provision of Clause six below.

(6) The system of representation of the Depressed Classes by reserved seats in the Provincial and Central Legislature as provided *for* in Clauses I and 4 shall continue until determined by mutual agreement between the communities concerned in the settlement.

(7) Franchise for the Central and Provincial Legislatures for the Depressed Classes shall be as indicated in the Lothian Committee Report.

(8) There shall be no disabilities attaching to any one on the ground of his being a member of the Depressed Classes in regard to any elections to local bodies or appointment to the Public Services. Every endeavour shall be made to secure fair representation of the Depressed Classes in these respects, subject to such educational qualifications as may be laid down for appointment to the Public Services.

(9) In every province out of the educational grant, an adequate sum shall be earmarked for providing educational facilities to the members of the Depressed .Classes.

This pact forms the charter of the political liberty of the Untouchables. The first election.....

PREFACE TO THE SECOND IMPRESSION

THE PROBLEM OF THE RUPEE was first published in 1923. Ever since its publication it has had a great demand : so great that within a

year or two the book went out of print. The demand for the book has continued, but unfortunately I could not bring out a second edition of the book for the reason that my change-over from economics to law and politics left me no time to undertake such a task. I have, therefore, devised another plan : it is to bring out an up-to-date edition of the History of Indian Currency and Banking in two volumes, of which *The Problem of the Rupee* forms volume one. Volume two will contain the History of Indian Currency and Banking from 1923 onwards. What is therefore issued to the public now is a mere reprint of *The Problem of the Rupee* under a different name. I am glad to say that some of my friends who are engaged in the field of teaching economics have assured me that nothing has been said or written since 1923 in the field of Indian Currency which calls for any alteration in the text of *The Problem of the Rupee* as it stood in 1923. I hope this reprint will satisfy the public partially if not wholly. I can give them an assurance that they will not have to wait long for volume two. I am determined to bring it out with the least possible delay.

B. R. AMBEDKAR

Rajagraha,
Bombay,

PREFACE TO THE FIRST EDITION

In the following pages I have attempted an exposition of the events leading to the establishment of the exchange standard and an examination of its theoretical basis.

In endeavouring to treat the historical side of the matter, I have carefully avoided repeating what has already been said by others. For instance, in treating of the actual working of the exchange standard, I have contented myself with a general treatment just sufficiently detailed to enable the reader to follow the criticism I have offered. If more details are desired they are given in all their amplitude in other treatises. To have reproduced them would have been a work of supererogation; besides it would have only obscured the general trend of my argument. But in other respects, I have been obliged to take a wider historical sweep than has been done by other writers. The existing treatises on Indian currency do not give any idea, at least an adequate idea, of the circumstances which led to the reforms of 1893. I think that a treatment of the early history is quite essential to furnish the reader with a perspective in order to enable him to judge for himself the issues

involved in the currency crisis and also of the solutions offered. In view of this, I have gone into that most neglected period of Indian currency extending from 1800 to 1893. Not only have other writers begun abruptly the story of the exchange standard, but they have popularised the notion that the exchange standard is the standard originally contemplated by the Government of India. I find that this is a gross error. Indeed, the most interesting point about Indian currency is the way in which the gold standard came to be transformed into a gold exchange standard. Some old, but by now forgotten, facts had therefore, to be recounted to expose this error.

On the theoretical side, there is no book but that of Professor Keynes which makes any attempt to examine its scientific basis. But the conclusions he has arrived at are in sharp conflict with those of mine. Our differences extended to almost every proposition he has advanced in favour of the exchange standard. This difference proceeds from the fundamental fact, which seems to be quite overlooked by Professor Keynes, that nothing will stabilise the rupee unless we stabilise its general purchasing power. That the exchange standard does not do. That standard concerns itself only with symptoms and does not go to the disease : indeed, on my showing, if anything, it aggravates the disease.

When I come to the remedy, I again find myself in conflict with the majority of those who like myself are opposed to the exchange standard. It is said that the best way to stabilise the rupee is to provide for effective convertibility into gold. I do not deny that this is one way of doing it. But, I think, a far better way would be to have an inconvertible rupee with a fixed limit of issue. Indeed, if I had any say in the matter, I would propose that the Government of India should melt the rupees, sell them as bullion and use the proceeds for revenue purposes and fill the void by an inconvertible paper. But that may be too radical a proposal, and I do not therefore press for it, although I regard it as essentially sound. In any case, the vital point is to close the Mints, not merely to the public, as they have been, but to the Government as well. Once that is done, I venture to say that the Indian currency, based on gold as legal tender with a rupee currency fixed in issue, will conform to the principles embodied in the English currency system.

It will be noticed that I do not propose to go back to the recommendations of the Fowler Committee. All those, who have regretted the transformation of the Indian currency from a gold standard to a gold exchange standard, have held that everything would

have been all right if the Government had carried out *in toto* the recommendations of that Committee. I do not share that view. On the other hand, I find that the Indian currency underwent that transformation *because* the Government carried out those recommendations. While some people regard that Report as classical for its wisdom, I regard it as classical for its nonsense. For I find that it was this Committee which, while recommending a gold standard, also recommended and thereby perpetuated the folly of the Herschell Committee, that Government should coin rupees on its own account according to that most naive of currency principles, the requirements of the public, without realising that the latter recommendation was destructive of the former. Indeed, as I argue, the principles of the Fowler Committee must be given up, if we are to place the Indian currency on a stable basis.

I am conscious of the somewhat lengthy discussions on currency principles into which I have entered in treating the subject. My justification of this procedure is two-fold. First of all, as I have differed so widely from other writers on Indian currency, I have deemed it necessary to substantiate my view-point, even at the cost of being charged with over-elaboration. But it is my second justification, which affords me a greater excuse. It consists in the fact that I have written primarily for the benefit of the Indian public, and as their grasp of currency principles does not seem to be as good as one would wish it to be, an over-statement, it will be agreed, is better than an understatement of the argument on which I have based my conclusions.

Up to 1913, the Gold Exchange Standard was not the avowed goal of the Government of India in the matter of Indian Currency, and although the Chamberlain Commission appointed in that year had reported in favour of its continuance, the Government of India had promised not to carry its recommendations into practice till the war was over and an opportunity had been given to the public to criticize them. When, however, the Exchange Standard was shaken to its foundations during the late war, the Government of India went back on its word and restricted, notwithstanding repeated protests, the terms of reference to the Smith Committee to recommending such measures as were calculated to ensure the stability of the Exchange Standard, as though that standard had been accepted as the last word in the matter of Indian Currency. Now that the measures of the Smith Committee have not ensured the stability of the Exchange Standard, it is given to understand that the Government, as well as the public, desire to place the Indian

Currency System on a sounder footing. My object in publishing this study at this juncture is to suggest a basis for the consummation of this purpose.

I cannot conclude this preface without acknowledging my deep sense of gratitude to my teacher, Prof. Edwin Cannan, of the University of London (School of Economics). His sympathy towards me and his keen interest in my undertaking have placed me under obligations which I can never repay. I feel happy to be able to say that this work has undergone close supervision at his hands, and although he is in no way responsible for the views I have expressed. I can say that his severe examination of my theoretic discussions has saved me from many an error. To Professor Wadia, of Wilson College, I am thankful for cheerfully undertaking the dry task of correcting the proofs.

FOREWORD BY PROFESSOR EDWIN CANNAN

I am glad that Mr. Ambedkar has given me the opportunity of saying a few words about his book.

As he is aware, I disagree with a good deal of his criticism. In 1893, I was one of the few economists, who believed that the rupee could be kept at a fixed ratio with gold by the method then proposed, and I did not fall away from the faith when some years elapsed without the desired fruit appearing (see *Economic Review*, July 1898, pp. 400—403). I do not share Mr. Ambedkar's hostility to the system, nor accept most of his arguments against it and its advocates. But he hits some nails very squarely on the head, and even when I have thought him quite wrong, I have found a stimulating freshness in his views and reasons. An old teacher like myself learns to tolerate the vagaries of originality, even when they resist "severe examination" such as that of which Mr. Ambedkar speaks.

In his practical conclusion, I am inclined to think, he is right. The single advantage, offered to a country by the adoption of the gold-exchange system instead of the simple gold standard, is that it is cheaper, in the sense of requiring a little less value in the shape of metallic currency than the gold standard. But all that can be saved in this way is a trifling amount, almost infinitesimal, beside the advantage of having a currency more difficult for administrators and legislators to tamper with. The recent experience both of belligerents and neutrals certainly shows that the simple gold standard, as we understood it

before the war, is not fool-proof, but it is far nearer being fool-proof and knave-proof than the gold-exchange standard. The percentage of administrators and legislators who understand the gold standard is painfully small, but it is and is likely to remain ten or twenty times as great as the percentage which understands the gold-exchange system. The possibility of a gold-exchange system being perverted to suit some corrupt purpose is very considerably greater than the possibility of the simple gold standard being so perverted.

The plan for the adoption of which Mr. Ambedkar pleads, namely that all further enlargement of the rupee issue should be permanently prohibited, and that the mints should be open at a fixed price to importers or other sellers of gold, so that in course of time India would have, in addition to the fixed stock of rupees, a currency of meltable and exportable gold coins, follows European precedents. In eighteenth-century England the gold standard introduced itself because the legislature allowed the ratio to remain unfavourable to the coinage of silver: in nineteenth-century France and other countries it came in because the legislatures definitely closed the mints to silver, when the ratio was favourable to the coinage of silver. The continuance of a mass of full legal tender silver coins beside the gold would be nothing novel in principle, as the same thing, though on a somewhat smaller scale, took place in France, Germany, and the United States.

It is alleged sometimes that India does not want gold coins. I feel considerable difficulty in believing that gold coins of suitable size would not be convenient in a country with the climate and other circumstances of India. The allegation is suspiciously like the old allegation that the "Englishman prefers gold coins to paper," which had no other foundation than the fact that the law prohibited the issue of notes for less than £ 5 in England and Wales, while in Scotland, Ireland, and almost all other English-speaking countries, notes for £ 1 or Less were allowed and circulated freely. It seems much more likely that silver owes its position in India to the decision, which the Company made before the system of standard gold and token silver was accidentally evolved in 1816 in England, and long before it was understood, and that the position has been maintained, not because Indians dislike gold, but because Europeans like it so well that they cannot bear to part with any of it.

This reluctance to allow gold to go to the East is not only despicable from an ethical point of view. It is also contrary to the economic interest not only of the world at large, but even of the countries, which had a

gold standard before the war and have it still or expect soon to restore it. In the immediate future, gold is not a commodity, the use of which it is desirable for these countries either to restrict or to economize. From the closing years of last century it has been produced in quantities much too large to enable it to retain its purchasing power and thus be a stable standard of value, unless it can constantly be finding existing holders willing to hold larger stocks, or fresh holders to hold new stocks of it. Before the war, the accumulation of hoards by various central banks in Europe took off a large part of the new supplies and prevented the actual rise of general prices being anything like what it would otherwise have been, though it was serious enough. Since the war, the Federal Reserve Board, supported by all Americans who do not wish to see a rise of prices, has taken on the new "White Man's Burden" of absorbing the products of the gold mines, but just as the United States failed to keep up the value of silver by purchasing it, so she will eventually fail to keep up the value of gold. in spite of the opinion of some high authorities, it is not at all likely that a renewed demand for gold reserves by the central banks of Europe will come to her assistance. Experience must gradually be teaching even the densest of financiers that the value of paper currencies is not kept up by stories of "cover" or "backing" locked up in cellars, but by due limitation of the supply of the paper. With proper limitation, enforced by absolute convertibility into gold coin which may be freely melted or exported, it has been proved by theory and experience that small holdings of gold are perfectly sufficient to meet all internal and international demands. There is really more chance of a great demand from individuals than from the banks. It is conceivable that the people of some of the countries, which have reduced their paper currency to a laughing stock, may refuse all paper and insist on having gold coins. But it seems more probable that they will be pleased enough to get better paper than they have recently been accustomed to, and will not ask for hard coin with sufficient insistence to get it. On the whole, it seems fairly certain that the demand of Europe and European-colonised lands for gold will be less rather than greater than before the war, and that it will increase very slowly or not at all.

Thus, on the whole, there is reason to fear a fall in the value of gold and a rise of general prices rather than the contrary.

One obvious remedy would be to restrict the production of gold by international agreement, thus conserving the world's resources in mineral for future generations. Another is to set up an international

commission to issue an international paper currency so regulated in amount as to preserve an approximately stable value. Excellent suggestions for the professor's classroom, but not, at present at any rate nor probably for some considerable period of time, practical politics.

A much more practical way out of the difficulty is to be found in the introduction of gold currency into the East. If the East will take a large part of the production of gold in the coming years it will tide us over the period which must elapse before the most prolific of the existing sources are worked out. After that we may be able to carry on without change or we may have reached the possibility of some better arrangement.

This argument will not appeal to those who can think of nothing but the extra profits which can be acquired during a rise of prices, but I hope it will to those who have some feeling for the great majority of the population, who suffer from these extra and wholly unearned profits being extracted from them. Stability is best in the long run for the community.

EDWIN CANNAN.

THE PROBLEM OF THE RUPEE:

ITS ORIGIN AND ITS SOLUTION

**(HISTORY OF INDIAN
CURRENCY & BANKING)**

**CHAPTER I
FROM A DOUBLE STANDARD TO A SILVER
STANDARD**

Trade is an important apparatus in a society, based on private property and pursuit of individual gain ; without it, it would be difficult for its members to distribute the specialised products of their labour. Surely a lottery or an administrative device would be incompatible with its nature. Indeed, if it is to preserve its character, the only mode for the necessary distribution of the products of separate industry is that of private trading. But a trading society is unavoidably a pecuniary society, a society which of necessity carries on its transactions in terms of money. In fact, the distribution is not primarily an exchange of products against products, but products against money. In such a society, money therefore necessarily becomes the pivot on which everything revolves. With money as the focusing-point of all human efforts, interests, desires and ambitions, a trading society is bound to function in a regime of price, where successes and failures are results of nice calculations of price-outlay as against price-product.

Economists have no doubt insisted that "there cannot... be intrinsically a more significant thing than money," which at best is only "a great wheel by means of which every individual in society has his subsistence, conveniences and amusements regularly distributed to him in their proper proportions." Whether or not money values are the definitive terms of economic endeavour may well be open to discussion.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_1 But this much is certain, that without the use of money this "distribution of subsistence, conveniences and amusements," far from being a matter of course, will be distressingly hampered, if not altogether suspended. How can this trading of products take place without money? The difficulties of barter have ever formed an unfailing theme with all economists, including those who have insisted that money is only a cloak. Money is not only necessary to facilitate trade by obviating the difficulties of barter, but is also necessary to sustain production by permitting specialisation. For, who would care to specialise if he could not trade his products for those of others which he wanted? Trade is the handmaid of production, and where the former cannot flourish the latter must languish. It is therefore evident that if a trading society is not to be out of gear and is not to forego the measureless advantages of its automatic adjustments in the great give-and-take of specialised industry, it must provide itself with a sound system of money.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_2

At the close of the Moghul Empire, India, judged by the standards of the time, was economically an advanced country. Her trade was large, her banking institutions were well developed, and credit played an appreciable part in her transactions. But a medium of exchange and a common standard of value were among others the most supreme desiderata in the economy of the Indian people when they came, in the middle of the eighteenth century, under the sway of the British. Before the occurrence of this event, the money of India consisted of both gold and silver. Under the Hindu emperors the emphasis was laid on gold, while under the Mussalmans silver formed a large part of the circulating medium.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_3](#) Since the time of Akbar, the founder of the economic system of the Moghul Empire in India, the units of currency had been the gold *mohur* and the silver *rupee*. Both coins, the mohur and the rupee, were identical in weight, i.e., 175 grs. Troy.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_4](#) and were "supposed to have been coined without any alloy, or at least intended to be so."
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_5](#) But whether they constituted a single standard of value or not is a matter of some doubt. It is believed that the mohur and the rupee, which at the time were the common measure of value, circulated without any fixed ratio of exchange between them. The standard, therefore, was more of the nature of what Jevons called a parallel standard.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_6](#) than a double standard.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_7](#) That this want of ratio could not have worked without some detriment in practice is obvious. But it must be noted that there existed an alleviating circumstance in the curious contrivance by which the mohur and the rupee, though unrelated to each other, bore a fixed ratio to the *dam*, the copper coin of the Empire.
[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_8](#) So that it is permissible to hold that, as a consequence of being fixed to the same thing, the two, the mohur and the rupee, circulated at a fixed ratio.

In Southern India, to which part the influence of the Moghuls had not extended, silver as a part of the currency system was quite unknown. The pagoda, the gold coin of the ancient Hindu kings, was the standard

of value and also the medium of exchange, and continued to be so till the time of the East India Company.

The right of coinage, which the Moghuls always held as *Inter jura Majestatis*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_9 be it said to their credit, was exercised with due sense of responsibility. Never did the Moghul Emperors stoop to debase their coinage. Making allowance for the imperfect technology of coinage, the coins issued from the various Mints, situated even in the most distant parts of their Empiremk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_10, did not materially deviate from the standard. The table below of the assays of the Moghul rupees shows how the coinage throughout the period of the Empire adhered to the standard weight of 175 grs. pure.*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. So long as the Empire retained unabated sway, there was advantage rather than danger in the plurality of Mints, for they were so many branches of a single department governed by a single authority. But with the disruption of the Moghul Empire into separate kingdoms these branches of the Imperial Mint located at different centres became independent factories for purposes of coinage. In the general scramble for independence which followed the fall of the Empire, the right to coinage, as one of the most unmistakable insignia of sovereignty, became the right most cherished by the political adventurers of the time. It was also the last privilege to which the falling dynasties clung, and was also the first to which the adventurers rising to power aspired. The result was that the right, which was at one time so religiously exercised, came to be most wantonly abused. Everywhere the Mints were kept in full swing, and soon the country was filled with diverse coins which, while they proclaimed the incessant rise and fall of dynasties, also presented bewildering media of exchange. If these money-mongering sovereigns had kept up their issues to the original standard of the Moghul Emperors, the multiplicity of coins of the same denomination would not have been a matter of much concern. But they seemed to have held that as the money used by their subjects was made by them, they could do what they liked with their own, and proceeded to debase their coinage to the extent each chose without altering the denominations. Given the different degrees of debasement, the currency necessarily lost its primary quality of general and ready acceptability.

The evils consequent upon such a situation may well be imagined. When the contents of the coins belied the value indicated by their denomination they became mere merchandise, and there was no more a currency by tale to act as a ready means of exchange. The bullion value of each coin had to be ascertained before it could be accepted as a final discharge of obligations.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_12 The opportunity for defrauding the poor and the ignorant thus provided could not have been less.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER

[l.htm - _msocom_13](#) than that known to have obtained in England before the great re-coinage of 1696. This constant weighing, valuing, and assaying the bullion contents of coins was, however, only one aspect in which the evils of the situation made themselves felt. They also presented another formidable aspect. With the vanishing of the Empire there ceased to be such a thing as an Imperial legal tender current all through India. In its place there grew up local tenders current only within the different principalities into which the Empire was broken up. Under such circumstances exchange was not liquidated by obtaining in return for wares the requisite bullion value from the coins tendered in payment. Traders had to be certain that the coins were also legal tender of their domicile. The Preamble to the Bengal Currency Regulation XXXV, of 1793, is illuminating on this point. It says :—

"The principal districts in Bengal, Bihar and Orissa, have each a distinct silver currency..... which are the standard measure of value in all transactions in the districts in which they respectively circulate.

“In consequence of the Ryots being required to pay their rent in a particular sort of rupee they of course demanded it from manufacturers in payment of their grain, or raw materials, whilst the manufacturers, actuated by similar principles with the Ryots, required the same species of rupee from the traders who came to purchase their cloth or their commodities.

“The various sorts of old rupees, accordingly, soon became the established currency of particular districts, and as a necessary consequence the value of each rupee was enhanced in the district in which it was current, for being in demand for all transactions. As a further consequence, every sort of rupee brought into the district was rejected from being a different measure of value from that by which the inhabitants had become accustomed to estimate their property, or, if it was received, a discount was exacted upon it, equal to what the receiver would have been obliged to pay upon exchanging it at the house of a shroff for the rupee current in the district, or to allow discount upon passing it in payment to any other individual.

“From this rejection of the coin current in one district when tendered in payment in another, the merchants and traders and the proprietors and cultivators of land in different parts of the country, are

subjected in their commercial dealings with each other to the same losses by exchange, and all other inconveniences that would necessarily result were the several districts under separate and independent governments, each having a different coin."

Here was a situation where trade was reduced to barter, whether one looks upon barter as characterised by the absence of a common medium of exchange or by the presence of a plurality of the media of exchange ; for in any case, it is obvious that the want of a "double coincidence" must have been felt by people engaged in trade. One is likely to think that such could not have been the case as the medium was composed of metallic counters. But it is to be remembered that the circulating coins on India, by reason of the circumstance attendant upon the diversity in their fineness and legal tender, formed so many different species that an exchange against a particular species did not necessarily close the transaction; the coin must, in certain circumstances, have been only an intermediate to be further bartered against another, and so on till the one of the requisite species was obtained. This is sufficient indication that society had sunk into a state of barter. If this alone was the flaw in the situation, it would have been only as bad as that of international trade under diversity of coinages. But it was further complicated by the fact that although the denomination of the coins was the same, their metallic contents differed considerably. Owing to this, one coin bore a discount or a premium in relation to another of the same name. In the absence of knowledge as to the amount of premium or discount, every one cared to receive a coin of the species known to him and current in his territory. On the whole, the obstacles to commerce arising from such a situation could not have been less than those emanating from the mandate of Lycurgus, who compelled the Lacedaemonians to use iron money in order that its weight might prevent them from overmuch trading. The situation, besides being irritating, was aggravated by the presence of an element of gall in it. Capital invested in providing a currency is a tax upon the productive resources of the community. Nevertheless, wrote James Wilson mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_14 no one would question "that the time and labour which are saved by the interposition of coin, as compared with a system of barter, form an ample remuneration for the portion of capital withdrawn from productive sources, to act as a single circulator of commodities, by rendering the remainder of the capital of the country so much the more

productive."What is, then, to be said of a monetary system which did not obviate the evil consequences of barter, although enormous capital was withdrawn from productive sources, to act as a single circulator of commodities? Diseased money is worse than want of money. The latter at least saves the cost. But society must have money, and it must be good money, too. The task, therefore, of evolving good money out of bad money fell upon the shoulders, of the English East India Company, who had in the meanwhile succeeded to the Empire of the Moghuls in India.

The lines of reform were first laid down by the Directors of the Company in their famous Dispatch, dated April 25, 1806, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER 1.htm - _msocom_15 to the authorities administering their territories in India. In this historic document they observed :—

"17. It is an opinion supported by the best authorities, and proved by experience, that coins of gold and silver cannot circulate as legal tenders of payment at fixed relative values..... without loss; this loss is occasioned by the fluctuating value of the metals of which the coins are formed. A proportion between the gold and silver coin is fixed by law, according to the value of the metals, and it may be on the justest principles, but owing to the change of circumstances gold may become of greater value in relation to silver than at the time the proportion was fixed, it therefore becomes profitable to exchange silver or gold, so the coin of that metal is withdrawn from circulation; and if silver should increase in its value in relation to gold, the same circumstances would tend to reduce the quantity of silver coin in circulation. As it is impossible to prevent the fluctuation in the value of the metals, so it is also equally impracticable to prevent the consequences thereof on the coins made from these metals..... To adjust the relative values of gold and silver coin according to the fluctuations in the values of the metals would create continual difficulties, and the establishment of such a principle would of itself tend to perpetuate inconvenience and loss."

They therefore declared themselves in favour of monometalism as the ideal for the Indian currency of the future, and prescribed:—

"21. that silver should be the universal money of account (in India), and that all accounts should be kept in the same denominations of rupees, annas and pice....."

The rupee was not, however, to be the same as that of the Moghul

Emperors in weight and fineness The proposal that

"9.the new rupee be of the gross weight of—

Troy grains	...	180
Deduct one-twelfth alloy	...	15
And contain of fine silver troy grs.		165"

Such were the proposals put forth by the Court of Directors for the reform of Indian currency.

The choice of a rupee weighing 180 grs. troy and containing 165 grs. pure silver as the unit for the future currency system of India was a well-reasoned choice.

The primary reason for selecting this particular weight for the rupee seems to have been the desire to make it as little of a departure as possible from the existing practice. In their attempts to reduce to some kind of order the disorderly currencies bequeathed to them by the Moghuls by placing them on a bimetallic basis, the Governments of the three Presidencies had already made a great advance by selecting out of the innumerable coins then circulating in the country a species of gold and silver coin as the exclusive media of exchange for their respective territories. The weights and fineness of the coins selected as the principal units of currency, with other particulars, may be noted from the summary table 1. (Page 344)

To reduce these principal units of the different Presidencies to a single principal unit, the nearest and the least inconvenient magnitude of weight which would at the same time be an integral number was obviously 180 grs., for in no case did it differ from the weights of any of the prevailing units in any marked degree. Besides, it was believed that 180, or rather 179.5511, grs. was the standard weight of the rupee coin originally issued from the Moghul Mints, so that the adoption of it was really a restoration of the old unit and not the introduction of a new one.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_16 Another advantage claimed in favour of a unit of 180 grs. was that such a unit of currency would again become what it had ceased to be, the unit of weight also. It was agreed
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_17 that the unit of weight in India had at all times previously

been linked up with that of the principal coin, so that the seer and the *manual* weights were simply multiples of the rupee, which originally weighed 179.6 grs. troy. Now, if the weight of the principal coin to be established was to be different from 180 grs. troy, it was believed there would be an unhappy deviation from the ancient practice which made the weight of the coin the basis of other weights and measures.

Besides, a unit of 180 grs. weight was not only suitable from this point of view, but had also in its favour the added convenience of assimilating the Indian with the English units of weight. **#Ibid. para. 28. How the English and the Indian systems of weights were made to correspond to each other may be seen from the following:—**

Indian		English
8 ruttees	= 1 massas	= 15 troy grs.
12 massas	= 1 tola (or sicca)	= 180 troy grs.
80 tolas	= 1 seer	= 2.5 troy ponds
40 seers	= 1 mound (mun)	= 100 troy pounds.

While these were the reasons in favour of fixing the weight of the principal unit of currency at 180 grs. troy, the project of making it 165 grs. fine was not without its justification. The ruling consideration in selecting 165 grs. as the standard of fineness was, as in the matter of selecting the standard weight, to cause the least possible disturbance in existing arrangements.

That this standard of fineness was not very different from those of the silver coins, recognised by the different Governments in India as the principal units of their currency, may be seen from the following comparative statement.

TABLE II
DEVIATIONS OF THE PROPOSED STANDARD OF
FINENESS FROM THAT OF THE PRINCIPAL
RECOGNISED RUPEES

Silver Coins recognised as Principal Units and their Fineness		Standard Fineness of the proposed Silver Rupee Troy Grs.	More valuable than the proposed Rupee		Less valuable proposed Rupee	
Name of the Coin	Its Pure Contents Troy Grs.		In Grs.	By p.c.	In Grs.	By p.c.
Surat Rupee	164.74	165			.26	.157
Arcot Rupee	166.477	165	1.477	.887		
Sicca Rupee	175.927	165	10.927	6.211		
Farrukabad R.	166.135	165	1.135	.683		
Benares Rupee	169.251	165	4.251	2.511		

It will thus be seen that, with the exception of the Sicca and the Benares rupees, the proposed standard of fineness agreed so closely with those of the other rupees that the interest of obtaining a complete

uniformity without considerable dislocation overruled all possible objections to its adoption. Another consideration that seemed to have prevailed upon the Court of Directors in selecting 165 grs. as the standard of fineness was that, in conjunction with 180 grs. as the standard weight, the arrangement was calculated to make the rupee eleven-twelfths fine. To determine upon a particular fineness was too technical a matter for the Court of Directors. It was, however, the opinion of the British Committee on Mint and Coinage, appointed in 1803, that mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_19 “one-twelfth alloy and eleven-twelfths fine is by a variety of extensive experiments proved to be the best proportion, or at least as good as any which could have been chosen.” This standard, so authoritatively upheld, the Court desired to incorporate in their new scheme of Indian currency. They therefore desired to make the rupee eleven-twelfths fine. But to do so was also to make the rupee 165 grs. pure—a content which they desired, from the point of view stated above, the rupee to possess.

Reviewing the preference of the Court of Directors for monometallism from the vantage-ground of latter-day events, one might be inclined to look upon it as a little too short-sighted. At the time, however, the preference was well founded. One of the first measures, the three Presidencies, into which the country was divided for purposes of administration, had adopted on their assuming the government of the country, was to change the parallel standard of the Moghuls into a double standard by establishing a legal ratio of exchange between the mohur, the pagoda, and the rupee. But in none of the Presidencies was the experiment a complete success.

In Bengal mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_20 the Government, on June 2, 1766, determined upon the issue of a gold mohur weighing 179.66 grs. troy, and containing 149.92 grs., troy of pure metal, as legal tender at 14 Sicca rupees, to relieve the currency stringency caused largely by its own act of locking up the revenue collections in its treasuries, to the disadvantage of commerce. This was a legal ratio of 16.45 to 1, and as it widely deviated from the market ratio of 14.81 to 1, this attempt to secure a concurrent circulation of the two coins was foredoomed to failure. Owing to the drain of silver on Bengal from China, Madras, and Bombay, the currency stringency grew worse, so much so that another gold mohur was issued by the Government on March 20, 1769,

weighing 190.773 grs. troy and containing 190.086 grs. pure gold with a value fixed at 16 Sicca rupees. This was a legal ratio of 14.81 to 1. But, as it was higher than the market ratio of the time both in India (14 to 1) and in Europe (14.61 to 1), this second effort to bring about a concurrent circulation fared no better than the first. So perplexing seemed to be the task of accurate rating that the Government reverted to monometallism by stopping the coinage of gold on December 3, 1788, and when the monetary stringency again compelled it to resume in 1790 the coinage of gold, it preferred to let the mohur and the rupee circulate at their market value without making any attempt to link them by a fixed ratio. It was not until 1793 that a third attempt was made to forge a double standard in Bengal. A new mohur was issued in that year, weighing 190.895 grs. troy and containing 189.4037 grs. of pure gold, and made legal tender at 16 Sicca rupees. This was a ratio of 14.86 to 1, but, as it did not conform to the ratio then prevalent in the market this third attempt to establish bimetallism in Bengal failed as did those made in 1766 and 1769.

The like endeavors of the Government of Madras mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_21 proved more futile than those of Bengal. The first attempt at bimetalism under the British in that Presidency was made in the year 1749, when 350 Arcot rupees were legally rated at 100 Star pagodas. As compared with the then market ratio this rating involved an under-valuation of the pagoda, the gold coin of the Presidency. The disappearance of the pagoda caused a monetary stringency, and the Government in December, 1750, was obliged to restore it to currency. This it did by adopting the twofold plan of causing an import of gold on Government account, so as to equalise the mint ratio to the market ratio, and of compelling the receipts and payments of Government treasuries to be exclusively in pagodas. The latter device proved of small value ; but the former by its magnitude was efficacious enough to ease the situation. Unluckily, the case was only temporary. Between 1756 and 1771 the market ratio of the rupee and the pagoda again underwent a considerable change. In 1756 it was 364 to 100, and in 1768 it was 370 to 100. It was not till after 1768 that the market ratio became equal to the legal ratio fixed in 1749 and remained steady for about twelve years. But the increased imports of silver, rendered necessary for the prosecution of the second Mysore war, once more disturbed the ratio, which at the close of the war stood at 400 Arcot rupees to 100 Star

pagodas. After the end of the war, the Government of Madras made another attempt to bring about a concurrent circulation between the rupee and the pagoda. But instead of making the market ratio of 400 to 100 the legal ratio, it was led by the then increasing imports of gold into the Presidency to hope that the market ratio would in time rise to that legally established in 1749. In an expectant mood so induced it decided, in 1790, to anticipate the event by fixing the ratio first at 365 to 100. The result was bound to be different from that desired, for it was an under-valuation of the pagoda. But instead of rectifying the error, the Government proceeded to aggravate it by raising the ratio still further to 350 to 100 in 1797, with the effect that the pagoda entirely went out of circulation, and the final attempt at bimetallism thus ended in a miserable failure.

The Government of Bombay seemed better instructed in the mechanics of bimetallism, although that did not help it to overcome the practical difficulties of the system. On the first occasion when bimetallism was introduced in the Presidency, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_22 the mohur and the rupee were rated 'at the ratio of 15.70 to 1. But at this ratio the mohur was found to be over-rated, and accordingly, in August, 1774, the Mint Master was directed to coin gold mohur of the fineness of a Venetian and of the weight of the silver rupee. This change brought down the legal ratio to 14.83 to 1, very nearly, though not exactly, to the then prevailing market ratio of 15 to 1, and had nothing untoward happened, bimetallism would have had a greater success in Bombay than it actually had in the other two Presidencies. But this was not to be, for the situation was completely altered by the dishonesty of the Nawab of Surat, who allowed his rupees, which were of the same weight and fineness as the Bombay rupees, to be debased to the extent of 10, 12, and even 15 per cent. This act of debasement could not have had any disturbing effect on the bimetallic system prevalent in the Bombay Presidency, had it not been for the fact that the Nawab's (or Surat) rupees were by agreement admitted to circulation in the Company's territories at par with the Bombay rupees. As a result of their being legal tender the Surat rupees, once they were debased, not only drove out the Bombay rupees from circulation, but also the mohur, for as rated to the debased Surat rupees the ratio became unfavourable to gold, and the one chance for a successful bimetallic system vanished away. The question of fixing up a

bimetallic ratio between the mohur and the rupee again cropped up when the Government of Bombay permitted the coinage of Surat rupees at its Mint. To have continued the coinage of the gold mohur according to the Regulation of 1774 was out of the question. One Bombay mohur contained 177.38 grs. of pure gold, and 15 Surat rupees of the standard of 1800 contained 247.11 grs. of silver. By this Regulation the proportion of silver to gold would have been $247.11 / 177.38$ i.e. 13.9 to 1. Here the mohur would have under-valued. It was therefore resolved to alter the standard of the mohur to that of the Surat rupee, so as to give a ratio of 14.9 to 1. But as the market ratio was inclined towards 15.5 to 1, the experiment was not altogether a success.

In the light of this experience before them, the Court of Directors of the East India Company did well in fixing upon a monometallic standard as the basis of the future currency system of India. The principal object of all currency regulations is that the different units of money should bear a fixed relation of value to one another. Without this fixity of value, the currency would be in a state of confusion, and no precaution would be too great against even a temporary disturbance of that fixity. Fixity of value between the various components of the currency is so essential a requisite in a well-regulated monetary system that we need hardly be surprised if the Court of Directors attached special importance to it, as they may well have done, particularly when they were engaged in the task of placing the currency on a sound and permanent footing. Nor can it be said that their choice of monometallism was ill-advised, for it must be admitted that a single standard better guarantees this fixity than does the double standard. Under the former it is spontaneous, under the latter it is forced.

These recommendations of the Court of Directors were left to the different Governments in India to be carried into effect at their discretion as to the time and manner of doing it. But it was some time before steps were taken in consonance with these orders, and even then, it was on the realisation of those parts of the program of the Court which pertained to the establishment of a uniform currency that the efforts of the different Governments were first concentrated.

The task of reducing the existing units of currency to that proposed by the Court was first accomplished in Madras. On January 7, 1818, the Government issued a Proclamation mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of

		t	-				
	nation		ne ss	nation		ness	
Ben gal	Sicca Rupee	192	17 6 or 11 /1 2	Mohur	204. 710	187. 651	1 to 1 5
	Furruk abad Rupee	180	16 5 or 11 /1 2				
Bom bay	Silver Rupee	180	16 5 or 11 /1 2	Gold Rupee	180	165 or 11/ 12	1 to 1 5
Mad ras	Silver Rupee	180	16 5 or 11 /1 2		180	165 or 11/ 12	1 to 1 5

Taking stock of the position as it was at the end of 1833, we find that with the exception of the Sicca rupee and the gold mohur of Bengal, that part of the scheme of the Directors which pertained to the uniformity of coinage was an accomplished fact. Nothing more remained to carry it to completion than to discontinue the Sicca rupee and to demonetise gold. At this point, however, arose a conflict between the Court of Directors and the three Governments in India. Considerable reluctance was shown to the demagnetisation of gold. The Government of Madras, which was the first to undertake the reform of its currency according to the plan of the Court, not only insisted upon

continuing the coinage of gold along with that of the rupee,[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_26](#) but stoutly refused to deviate from the system of double legal tender at a fixed ratio prevalent in its territories,

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_27](#) notwithstanding the repeated remonstrance's addressed by the Court.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_28](#) The Government of Bengal clung to the bimetallic standard with equal tenacity. Rather than demonetise the gold mohur, it took steps to alter its standard[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_29](#) by reducing its pure contents[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_30](#) from 189.4037 to 187.651 troy grs., so as to re-establish a bimetallic system on the basis of the ratio adopted by Madras in 1818. So great was its adherence to the bimetallic standard that in 1833 it undertook to alter[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_31](#) the weight and fineness of the Sicca rupee to 196 grs. troy and 176 grs. fine, probably to rectify a likely divergence between the legal and the market ratios of the mohur to the rupee[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_32](#)

But in another direction the Government in India wanted to go further than the Court desired. The Court thought a uniform currency (i.e. a currency composed of like but independent units) was all that India needed. Indeed, they had given the Governments to understand that they did not wish for more in the matter of simplification of currency and were perfectly willing to allow the Sicca and the mohur to remain as they were, unassimilated.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_33](#) A uniform currency was no doubt a great advance on the order of things such as was left by the successors of the Moghuls. But that was not enough, and the needs of the situation demanded a common currency based on a single unit in place of a uniform currency. Under the system of uniform currency each Presidency coined its own money, and the money coined at the Mints of the other Presidencies was not legal tender in its territories except at the Mint. This monetary independence would not have been very harmful if

there had existed also financial independence between the three Presidencies. As a matter of fact, although each Presidency had its own fiscal system, yet they depended upon one another for the finance of their deficits. There was a regular system of "supply" between them, and the surplus in one was being constantly drawn upon to meet the deficits in others. In the absence of a common currency this resource operation was considerably hampered. The difficulties caused by the absence of a common currency in the way of the "supply" operation made themselves felt in two different ways. Not being able to use as legal tender the money of other Presidencies, each was obliged to lock up, to the disadvantage of commerce, large working balances in order to be self-sufficient. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_34 The very system which imposed the necessity of large balances also rendered relief from other Presidencies less efficacious. For the supply was of necessity in the form of the currency of the Presidency which granted, it, and before it could be utilised it had to be re-coined into the currency of the needy Presidency. Besides the loss on recoinage, such a system obviously involved inconvenience to merchants and embarrassment to the Government. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_35

At the end of 1833, therefore, the position was that the Court desired to have a uniform currency with a single standard of silver, while the authorities in India wished for a common currency with a bimetallic standard. Notwithstanding these divergent views, the actual state of the currency might have continued as it was without any substantial alteration either way. But the year 1833 saw an important constitutional change in the administrative relations between the three Presidential Governments in India. In that year by an Act of Parliament mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_36 there was set up an Imperial system of administration with a centralisation of all legislative and executive authority over the whole of India. This change in the administrative system, perforce, called forth a change in the prevailing monetary systems. It required local coinages to be replaced by Imperial coinage. In other words, it favoured the cause of a common currency as against that of a mere uniform currency. The authorities in India were not slow to realise the force of events. The Imperial Government set up by Parliament was not content to act the part of the Dewans or agents of

the Moghuls, as the British had theretofore done, and did not like that coins should be issued in the name of the defunct Moghul emperors who had ceased to govern. It was anxious to throw off the false garbmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_37 and issue an Imperial coinage in its own name, which being common to the whole of India would convey its common sway. Accordingly, an early opportunity was taken to give effect to this policy. By an Act of the Imperial Government (XVII of 1835) a common currency was introduced for the whole of India, as the sole legal tender. But the Imperial Government went beyond and, as if by way of concession to the Court—for the Court did most vehemently protest against this common currency in so far as it superseded the Sicca rupeemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_38—legislated”*that no gold coin shall henceforward be a legal tender of payment in any of the territories of the East India Company.* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_39

That an Imperial Administration should have been by force of necessity led to the establishment of a common currency for the whole of India is quite conceivable. But it is not clear why it should have abrogated the bimetallic system after having maintained it for so long. Indeed, when it is recalled how the authorities had previously set their faces against the destruction of the bimetallic system, and how careful they were not to allow their coinage reforms to disturb it any more violently than they could help, the provision of the Act demonetising gold was a grim surprise. However, for the sudden volte-face displayed therein, the Currency Act (XVII of 1835) will ever remain memorable in the annals of the Indian history. It marked the culminating-point of a long and arduous process of monetary reform and placed India on a silver monometallic basis, with a rupee weighing 180 grs. troy and containing 165 grs. fine as the common currency and sole legal tender throughout the country.

No piece of British India legislation has led to a greater discontent in later years than this Act XVII of 1835. In so far as the Act abrogated the bimetallic system, it has been viewed with a surprising degree of equanimity. Not all its critics, however, are awaremk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_40 that what the Act primarily decreed was a substitution of bimetallicism by monometallicism. The commonly entertained view of the Act seems to be that it replaced a gold standard by a silver standard. But even if the truth were more generally known, it would not justify any hostile attitude towards the measure on that score. For, what would have been the consequences to India of the gold discoveries of California and Australia in the middle of the nineteenth century, if she had preserved

her bimetallic system? It is well known how this increase in the production of gold relatively to that of silver led to a divergence in the mint and the market ratios of the two metals after the year 1850. The under-valuation of silver, though not very great, was great enough to confront the bimetallic countries with a serious situation in which the silver currency, including the small change, was rapidly passing out of circulation. The United States mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_41 was obliged by the law of 1853 to reduce the standard of its small silver coins sufficiently to keep them, dollar for dollar, below their gold value in order to keep them in circulation. France, Belgium, Switzerland, and Italy, which had a uniform currency based on the bimetallic model of the French with reciprocal legal tender*, were faced with similar difficulties.

*The cultural influence of France had led the other countries of Latin origin to adopt the French monetary system. The political independence acquired by Belgium in 1831 was followed by a change in her monetary system. By the law of 1832, Belgium from a monetary point of view, became a satellite of France. By that law she adopted in its entirety the monetary system of France, and even went so far as to give the French gold pieces of 20 and 40 francs and to the French silver 5-franc pieces the power of legal tender in Belgium. In Switzerland, Art. 36 of the Constitution of 1848 had vested in the Federal Government the authority to coin money. The law of May 7, 1850, adopted the French monetary system for Switzerland : Art. 8 declared "that such foreign silver coins as were minted in sufficiently close proximity with the French system might be granted a legal status as regular media for the payment of debts in Switzerland." The various Italian States, prior to unification, had, like the Swiss Cantons, each its own currency. But with the desire for uniformity of coinage consequent upon unification, there arose a problem either of selecting one of the old systems or of adopting a new one which would be common to the whole country. Some form of a grateful memorial to France was uppermost in the minds of the Italians for the help the French gave in the matter of their independence, and the adoption of the French monetary system for Italy was deemed to serve the purpose. Fortunately, Sardinia already possessed the French system, and the law of August 24, 1862, extended it to the whole of Italy, with the lire as the unit, and also conferred legal-tender power on the coins of France, Belgium, and Switzerland, Cf. H.-P. Willis, History of the Latin monetary Union, Chicago, 1910, pp. 15, 27, 36, 37.

Lest a separatist policy on the part of each nation, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_42 to protect their silver currency and particularly the small change, should disrupt the monetary harmony prevailing among them all, they were compelled to meet in a convention, dated November 20, 1865, which required the parties, since

collectively called the Latin Union, to lower, in the order to maintain them in circulation, the silver pieces of 2 francs, 1 franc, 50 centimes and 20 centimes from a standard of 900 / 1000 fine to 835 / 1000 and to make them subsidiary coins. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_43](#) *It is true that the Government of India also came in for trouble as a result of this disturbance in the relative value of gold and silver, but that trouble was due to its own silly act.* [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_44](#) *The currency law of 1835 had not closed the Mints to the free coinage of gold, probably because the seignorage on the coinage of gold was a source of revenue which the Government did not like to forego. But as gold was not legal tender, no gold was brought to the Mint for coinage, and the Government revenue from seignorage fell off. To avoid this loss of revenue, the Government began to take steps to encourage the coinage of gold. In the first place, it reduced the seignorage* [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_45](#) *in 1837 from 2 per cent. to 1 per cent. But even this measure was not sufficient to induce people to bring gold to the Mint, and consequently the revenue from seignorage failed to increase. As a further step in the same direction, the Government issued a Proclamation on January 13, 1841, authorising the officers in charge of public treasuries to receive the gold coins at the rate of 1 gold mohur equal to 15 silver rupees. For some time no gold was received, as at the rate prescribed by the Proclamation gold was undervalued* [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_46](#) *But the Australian and Californian gold discoveries altered the situation entirely. The gold mohur, which was undervalued at Rs. 15, became overvalued, and the Government which was at one time eager to receive gold, was alarmed at its influx. By adopting the course it did of declaring gold no longer legal tender, and yet undertaking to receive it in liquidation of Government demands, it laid itself under the disadvantage of being open to be embarrassed with a coin which was of no use and must ordinarily have been paid for above its value. Realising its position, it left aside all considerations of augmenting revenue by increased coinage, and promptly issued on December 25, 1852, another Proclamation withdrawing that of 1841. Whether it would not have been better to have escaped the embarrassment by making gold general legal tender than depriving it of its partial legal-tender power is another matter. But, in so far as India was saved the trials and tribulations undergone by the bimetallic countries to preserve the silver part of their currency, the abrogation of bimetallism was by no means a small advantage. For, the measure had the virtue of fore-arming the country against changes which, though not seen at the time, soon made themselves felt.*

The abrogation of bimetallism in India, accomplished by the Act of 1835, cannot therefore be made a ground for censure. But it is open to argument that a

condemnation of bimetallism is not per se a justification of silver monometallism. If it was to be monometallism it might well have been gold monometallism. In fact, the preference for silver monometallism is not a little odd when it is recalled that Lord Liverpool, the advocate of monometallism, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_47](#) whose doctrines the Court had sought to apply to India, had prescribed gold monometallism for similar currency evils then prevalent in England. That the Court should have deviated from their guide in this particular has naturally excited a great deal of hostile comment as to the propriety of this grave departure. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_48](#) At the outset any appeal to ulterior motives must be baseless, for Lord Liverpool was not a "gold bug," nor was the Court composed of "silver men." As a matter of fact, neither of them at all considered the question from the standpoint as to which was a better standard of value, gold or silver. Indeed, in so far as that was at all a consideration worth attending to, the choice of the Court, according to the opinion of the time, was undoubtedly a better one than that of Lord Liverpool. Not only were all the theorists, such as Locke, Harris, and Petty, in favour of silver as the standard of value, but the practice of the whole world was also in favour of silver. No doubt, England had placed herself on a gold basis in 1816. But that Act, far from closing the English Mint to the free coinage of silver, left it to be opened by a Royal Proclamation [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_49](#) The Proclamation, it is true, was never issued, but it is not to be supposed that therefore Englishmen of the time had regarded the question of the standard as a settled issue. The crisis of 1825 showed that the gold standard furnished too narrow a basis for the English currency system to work smoothly, and, in the expert opinion of the time. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_50](#) the gold standard, far from being the cause of England's commercial superiority, was rather a hindrance to her prosperity, as it cut her off from the rest of the world, which was mostly on a silver basis. Even the British statesmen of the time had no decided preference for the gold standard. In 1826, Huskisson actually proposed that Government should issue silver certificates of full legal tender. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_51](#) Even as late as 1844 the question of the standard was far from being settled, for we find Peel, in his Memorandum [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_52](#) to the Cabinet, discussing the possibility of abandoning the gold standard in favour of the silver or a bimetallic standard without any compunction or predilection one way or the other. The difficulties of fiscal isolation

were evidently not so insuperable as to compel a change of the standard, but they were great enough to force Peel to introduce his famous proviso embodying the Huskisson plan in part in the Bank Charter Act of 1844, permitting the issue of notes against silver to the extent of one-fourth of the total issues mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_53. Indeed, so great was the universal faith in the stability of silver that Holland changed in 1847 from what was practically a gold monometallism mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_54 to silver monometallism because her statesmen believed that

“it had proved disastrous to the commercial and industrial interests of Holland to have a monetary system identical with that of England, whose financial revulsion’s, after its adoption of the gold standard, had been more frequent and more severe than in any other country, and whose injurious effects were felt in Holland scarcely less than in England. They maintained that the adoption of the silver standard would prevent England from disturbing the internal trade of Holland by draining off its money during such revulsion’s, and would secure immunity from evils which did not originate in and for which Holland was not responsible.” mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_55

But stability was not the ground on which either the Court or Lord Liverpool made their choice of a standard metal to rest. If that had been the case, both probably would have selected silver. As it was, the difference in the choice of the two parties was only superficial. Indeed, the Court differed from Lord Liverpool, not because of any ulterior motives, but because they were both agreed on a fundamental proposition that not stability but popular preference should be the deciding factor in the choice of a standard metal. Their differences proceeded logically from the agreement. For, on analysing the composition of the currency it was found that in England it was largely composed of gold and in India it was largely composed of silver. Granting their common premise, it is easy to account why gold was selected for England by Lord Liverpool and silver for India by the Court. Whether the actual composition of the currency is an evidence of popular preference cannot, of course, be so dogmatically asserted as was done by the Court and Lord Liverpool. So far as England is concerned, the interpretation of Lord Liverpool has been questioned by the great economist David Ricardo. In his *High Price of Bullion*, Ricardo wrote:—

“For many reasons given by Lord Liverpool, it appears proved beyond dispute that gold coin has been for near a century the principal measure of value; but this is, I think, to be attributed to the inaccurate determination of the mint proportions. Gold has been valued too high; no silver can therefore remain in circulation which is of its standard

weight. If a new regulation were to take place, and silver be valued too high..... gold would then disappear, and silver become the standard money."mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_56

And it is possible that mint proportions rather than popular preferencemk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_57 could have equally well accounted for the preponderance of silver in India.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_58

Whether any other criterion besides popular; preference could have led the Court to adopt gold monometallism is a moot question. Suffice it to say that the adoption of silver monometallism, though well supported at the time when the Act was passed, soon after proved to be a measure quite inadequate to the needs of the country. It is noteworthy that just about this time great changes were taking place in the economy of the Indian people. Such a one was a change from kind economy to cash economy. Among the chief causes contributory to this transformation the first place must be given to the British system of revenue and finance. Its effects in shifting Indian society on to a cash nexus have not been sufficiently realisedmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_59 although they have been very real. Under the native rulers most payments were in kind. The standing military force kept and regularly paid by the Government was small. The bulk of the troops consisted of a kind of militia furnished by Jageerdars and other landlords, and the troops or retainers of these feudatories were in great measure maintained on the grain, forage, and other supplies furnished by the districts in which they were located. The hereditary revenue and police officers were generally paid by grants of land on tenure of service. Wages of farm servants and labourers were in their turn distributed in grain. Most of its officers being paid in kind, the State collected very little of its taxes in cash. The innovations made by the British in this rude revenue and fiscal system were of the most sweeping character. As territory after territory passed under the sway of the British, the first step taken was to substitute in place of the rural militia of the feudatories a regularly constituted and a well-disciplined standing army located at different military stations, paid in cash ; in civil employ, as in military, the former revenue and police officers with their followers, who paid themselves by perquisites and other indirect gains

received in kind, were replaced by a host of revenue collectors and magistrates with their extensive staff, all paid in current coin. The payments to the army, police, and other officials were not the only payments which the British Government had placed on a money basis. Besides these charges, there were others which were quite unknown to the native Governments, such as the "Home Charges" and "Interest on Public Debt," all on a cash basis. The State, having undertaken to pay in cash, was compelled to realise all its taxes in cash, and as each citizen was bound to pay in cash, he in his turn stipulated to receive nothing but cash, so that the entire structure of the society underwent a complete transformation.

Another important change that took place in the economy of the Indian people about this time was the enormous increase of trade. For a considerable period, the British tariff policy and the navigation laws had put a virtual check on the expansion of Indian trade. England compelled India to receive her cotton and other manufactures at nearly nominal (.2 1/2 per cent.) duties, while at the same time she prohibited the entry of such Indian goods as competed with hers within her territories by prohibitory duties ranging from 50 to 500 per cent. Not only was no reciprocity shown by England to India, but she made a discrimination in favour of her colonies in the case of such goods as competed with theirs. A great agitation was carried on against this unfair treatment, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_60 and finally Sir Robert Peel admitted Indian produce to the low duties levied by the reformed tariff of 1842. The repeal of the navigation laws gave further impetus to the expansion of Indian commerce. Along with this, the demand for Indian produce had also been growing. The Crimean War of 1854 cut off the Russian supplies, the place of which was taken by Indian produce, and the failure of the silk crop in 1853 throughout Europe led to the demand for Asiatic, including Indian, silks.

The effect of these two changes on the currency situation is obvious. Both called forth an increased demand for cash. But cash was the one thing most difficult to obtain. India does not produce precious metals in any considerable quantity. She has had to depend upon her trade for obtaining them. Since the advent of the European Powers, however, the country was not able to draw enough for the precious metals. Owing to the prohibitions on the export of precious metals then prevalent in Europe, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee

CHAPTER I.htm - [_msocom_61](#) one avenue for obtaining them was closed. But there was little chance of obtaining precious metals from Europe, even in the absence of such prohibition ; indeed, precious metals did not flow to India when such prohibitions were withdrawn. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_62](#) The reason of the check to the inflow of precious metals was well pointed out by Mr. Petrie in his Minute of November, 1799, to the Madras Committee of Reform. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_63](#) According to Mr. Petrie, the Europeans before they acquired their territorial possessions

“purchased the manufactures of India with the metals of Europe: but they were henceforward to make these purchases with gold and silver of India, the revenues supplied the place of foreign bullion and paid the native the price of his industry with his own money. At first this revolution in the principles of commerce was but little felt, but when opulent and extensive dominions were acquired by the English, when the success of war and commercial rivalship had given them so decided a superiority over the other European nations as to engross the whole of the commerce of the East, when a revenue amounting to millions per annum was to be remitted to Europe in the manufactures of the East, then were the effects of this revolution severely felt in every part of India. Deprived of so copious a stream, the river rapidly retired from its banks and ceased to fertilise the adjacent fields with overflowing water.”

The only way open, when the prohibitions were withdrawn to obtain precious metals, was to send more goods than this amount of tribute, so that the balance might bring them in. This became possible when Peel admitted Indian goods to low tariff, and the country was for the first time able to draw in a sufficient quantity of precious metals to sustain her growing needs. But this ease in the supply of precious metals to serve as currency was short-lived. The difficulties after 1850, however, were not due to any hindrance in the way of India's obtaining the precious metals. Far from being hindered, the export and import of precious metals was entirely free, and India's ability to procure them was equally great. Neither were the difficulties due to any want of precious metals ; for, as a matter of fact, the increase in the precious metals after 1850 was far from being small. The difficulty was of India's own making, and was due to her not having based her currency on that

precious metal, which it was easy to obtain. The Act of 1835 had placed India on an exclusive silver basis. But, unfortunately, it so happened that after 1850, though the total production of the precious metals had increased that of silver had not kept pace with the needs of the world, a greater part of which was then on a silver basis, so that as a result of her currency law India found herself in an embarrassing position of an expanding trade with a contracting currency, as is shown in the Table IV on page 364.

On the face of it, it seems that there need have been no monetary stringency. The import of silver was large, and so was the coinage of it. Why then should there have been any stringency at all? The answer to this question is not far to seek. If the amount of silver coined had been retained in circulation it is possible that the stringency could not have arisen. India has long been notoriously the sink of the precious metals. But in interpreting this phenomenon, it is necessary to bear in mind the caution given by Mr. Cassels that

"its silver coinage has not only had to satisfy the requirements of commerce as the medium of exchange, but it has to supply a sufficiency of material to the silversmith and the jeweller. The Mint has been pitted against the smelting-pot, and the coin produced by so much patience and skill by the one has been rapidly reduced into bangles by the other." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B.Problem of Rupee CHAPTER I.htm - _msocom_64

TABLE IV mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B.Problem of Rupee CHAPTER I.htm - _msocom_65

Now it will be seen from the figures given that all the import of silver was coined and used up for currency purposes. Very little or nothing was left over for the industrial and social consumption of the people. That being the case, it is obvious that a large part of the coined silver must have been abstracted from monetary to non-monetary purposes. The hidden source of this monetary stringency thus becomes evident. To men of the time it was as clear as daylight that it was the rate of absorption of currency from monetary to non-monetary purposes that was responsible as to why (to quote from the same authority)

"notwithstanding such large importation's the demand for money has so far exceeded..... that serious embarrassment has ensued and business has almost come to a stand from the scarcity of circulating medium. As fast as rupees have been coined they have been taken into the interior and have there disappeared from circulation, either in the Indian substitute for stocking-foot or in the smelting-pot into bangles." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_66

The one way open was to have caused such additional imports of silver as would have sufficed both for the monetary as well as the non-monetary needs of the country. But the imports of silver were probably already at their highest. For, as was argued by Mr. Cassels,

"the annual production of silver of the whole world does not exceed ten million sterling. During the last few years, therefore, India alone has annually taken, and to a great extent absorbed, more of the metal than has been produced by the whole world. It is clear that this cannot long continue without producing serious embarrassment. Either the European markets will be unable or unwilling to supply us, or the value of silver will rise to an extravagant extent. Under such circumstances it is not difficult to foresee that the present crisis must continually recur, and the commerce in this country must be periodically, if not permanently, crippled by the scarcity of the circulating medium." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_67

Had there been any credit media the contraction of currency might not have been felt as severely as it was. But there was no credit money worth the name. The Government issued interest-bearing Treasury

notes, which formed a part of the circulating medium of the country. But, apart from being insignificant in

amount, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_68 these Treasury notes had

"proved a failure, owing, firstly, to the condition that they would not be received in payment of revenue for twelve months; secondly, they would be paid off or received only where issued, so that as the issues were confined to Calcutta, Madras and Bombay, their use and employment for purposes of circulation were limited to those cities..... and lastly, because their amounts were too large and their period of running at interest too short." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_69

Nor was banking so widely developed as to satisfy the currency needs of commerce. The chief hindrance to its growth was the attitude of the Court. Being itself a commercial body largely dealing in exchange, the Court was averse to the development of banking institutions lest they should prove rivals. As this traditional policy of hostility continued even after the Court had ceased to be a body of merchant princes, banks did not grow with the growth of trade. Indeed, as late as 1856 banks in India numbered few and their issues were small, as shown in the table on page 367. (Table V).

The insufficiency of silver and the want of credit currency caused such an embarrassment to trade that there grew up a change in the attitude toward the Currency Act of 1835, and people for once, began to ask whether, although it was well to have changed from bimetallism to monometallism, it would not have been better to have preferred gold monometallism to silver monometallism. As more and more of gold was imported and coined, the stronger grew the demand for giving it a legal status in the existing system of Indian currency. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. All were agreed on the principle of a gold currency: whatever difference there was, was confined to the method of its adoption. The introduction of gold on a bimetallic basis was out of the question, for the Government refused to make what it deemed to be the "hopeless attempt" to fix the value of gold and silver and compel their acceptance at that value. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_72 *The projects which the Government was willing to consider* mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_73 *were : (1) to introduce the "sovereign" or some other gold coin and to let it circulate at its market price from day to day as measured in silver; (2) to issue a new gold coin, bearing the exact value of a given number of rupees, and make it a legal tender for a limited period, when it might be readjusted and again valued, and made a legal tender for a similar period at the new rate ; (3) to introduce the English sovereign as a legal tender for Rs. 10, but limited in legal tender to the amount of Rs. 20 or two sovereigns ; or (4) to substitute a gold standard for the silver standard.*

Of these projects, the first three were evidently unsafe as currency expedients. Fixity of value between the various components of the currency is an essential requisite in a well-regulated monetary system. Each coin must define a fixed value, in terms of the others realisable by the most untutored intellect. When it ceases to do so, it becomes a mere commodity, the value of which fluctuates with the fluctuations of the market. This criterion ruled out the first two projects. To have introduced a coin as money, the value of which could not be vouched for— as would have been the case under the first project—from one day to another, apart from the trouble of computing and ascertaining the fluctuations, would have been a source of such embarrassment that the Government, it must be said, acted wisely in not adopting it. There was no saving grace in the second project to recommend its adoption in preference to the first. If it had been adopted the result would have been that during the period when a rate remained fixed, gold would have

been forced into circulation supposing that its market value was lower, and at the end of the year, if it was known that the rate would be revised and the value of the coin be reduced in conformity with the fall of gold, a general struggle to get rid of the overrated gold coin and shift the inevitable loss to the shoulders of others would have certainly ensued. The third was a somewhat strange proposal. It is possible with a low-priced metal to strike coins of less than full value for the purposes of small payments and limit their tender. But this is not possible with a high-priced metal, the *raison d'etre* of which is to facilitate large transactions. The objections to the plan could hardly be concealed. So long as gold was undervalued, it would not circulate at all. But once it became overvalued owing to changes in the market ratio, the rupee would go out of circulation, and shopkeepers and traders would remain possessed of a coin which would be of no use in liquidating large transactions.

The only project free from these faults was the adoption of a gold standard, with silver as a subsidiary currency. The strongest argument, the Government could advance against this demand was that "in a country where all obligations have been contracted to be paid in silver, to make a law by which they could forcibly be paid in anything else would simply be to defraud the creditor for the advantage of the debtor, and to break public faith." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_74 However sound the argument might have been, it was hopelessly inadequate to meet the growing demand to place the Indian currency on an expanding basis. Indeed, it cannot be said that the Government was really serious in its opposition to a gold currency. For the strength of its position, it relied not so much on the soundness of its arguments against gold, but on its discovery that a better solution than a gold currency existed at hand. If what was wanted was a supplement to the existing currency, then the remedy proposed by the Government was unassailable. Gold would have been uneconomical and inconvenient. Silver backed by paper would make the currency economical, convenient, and expansive. Indeed, the advantages were so much in favour of the official alternative that this first attempt against the silver standard resulted not in the establishment of a gold standard, but in the introduction of a Government paper currency to supplement the existing silver standard.

None the less, the desire for a gold standard on the part of the people

was too great to be altogether ignored, though the demand for it was supposed to have been met by the alternative measure. The paper currency, as originally conceived by Mr. Wilson, was a complete counterblast to the gold agitation. But his successor, Mr. Laing, differed from him in what he regarded as the "barbarous" exclusion of gold from Indian currency. He therefore introduced two important provisos in the original Bill, when the task of carrying it through fell upon him, owing to the untimely death of Mr. Wilson. One was to raise the lowest denomination of notes from Rs. 5 to Rs. 20. The other was

"to authorise the governor-general in Council from time to time to direct by order to be published in the Gazettes of Calcutta, Madras and Bombay, that notes to an extent not exceeding one-fourth of the total amount of issues represented by coin and bullion..... be issued in exchange for gold coin..... or bullion computed at rates to be fixed by such order....."

The Act, which afterwards embodied the Bill, adopted the second proviso *in toto*, and the first after being modified so as to fix Rs. 10 as the lowest denomination of notes to be issued. Although its general tenor is clear, the immediate aim of the second proviso does not become quite clear from a perusal of the official papers. The Select Committee on the Paper Currency Bill seem to have held that the proviso was innocuous, if not good. It thought

"that on special occasions and in particular transactions it might be a great advantage to the mercantile community to know that gold could be made available as money at a fixed rate. If, on the other hand, at the rate fixed gold did not enter into circulation it would prove that silver, with a secure and convertible paper currency, gave perfect confidence and answered all the wants of the trade and of the community, and the enactment would remain a dead letter and be perfectly harmless."

But there is no doubt that Mr. Laing looked upon it as an easy means of making a transition to the gold standard. In his Minute on Currency and Banking, dated May 7, 1862, he wrote :

"The object of this proviso was simply to leave the door open for cautious and tentative experiments with regard to the future use of gold. The importation of gold already exists and is increasing, and the metal is much appreciated by the native population as generally to command a premium..... Thus, after a time, if the use of gold becomes more general, and its value more fixed, some further step might be taken." And such seems to have been the impression of the Secretary of State at the

*time, for he understood the force of the recommendation in favour of issuing notes against gold was that it would "effectively contribute to the introduction of a gold currency in India."*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_75

But whether conceived as a relief to the mercantile community or as an avenue for introducing a gold currency the proviso was not put into effect. The Secretary of State objectedmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_76 to any action being taken with regard thereto. In the meantime the paper currency did not prove the panacea, it was avowed to be. The extent it reached and the economy it effected were comparatively insignificant.

TABLE VI

EXTENT AND ECONOMY OF PAPER CURRENCY

Presidencies	Bullion	Coin	Government Securities	Value of Notes in Circulation
Calcutta on Oct. 31, 1863	---	1,84,55,922	1,10,44,078	2,95,00,000
Madras on Oct. 31, 1863	---	73,00,000	---	73,00,000
Bombay on Jan. 4, 1864	1,17,00,000	1,19,00,000	---	2,36,00,000

As was pointed out by Mr. Casselsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_77the currency notes, after three years, had been taken only to the extent of about 6 per cent. of the whole metallic currency, which was then estimated by Mr. Wilson to be £100,000,000 in sterling, and that they had actually fulfilled their primary object of releasing the reproductive capital of the country only to the extent of a million sterling or 1 per cent. of the whole. Owing to the demand for Indian cotton in the Liverpool market to take the place of American cotton, the export of which was stopped during the Civil War, the growing foreign trade assumed enormous proportions. And as the paper

currency gave no relief, the entire stress fell upon silver. The production of silver, however, was not increasing much faster than it did previously, and its absorption by India had not slackened. The inadequacy of a currency medium therefore continued to be felt as acutely as before, notwithstanding the introduction of a paper currency. Not only was gold imported in large quantities, but was employed for monetary purposes, although it was not legal tender. The fact was brought to the notice of the government of India by the Bombay Chamber of Commerce mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_78 in a memorial praying for the introduction of a gold currency in India, in which it was pointed out

“that there is an increasing tendency to the creation of a gold ingot currency, but the natives of this country, as a rude remedy for the defects of the existing silver one,”

and

“that gold bars, stamped with the mark of Bombay banks, are for this purpose circulated in several parts of the country.” This led to an agitation for requiring the Government to give effect to the proviso in the Paper Currency Act, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_79 and the movement assumed such dimensions that it forced the hands of the Government. On this occasion, the plan for effecting the change was boldly conceived. Sir Charles Trevelyan saw through the weak point of the proviso on which the Government was called upon to act. He argued that the currency notes were payable only in the current coin of the country, which in India was the silver rupee, and to hold a portion of the reserve gold which could not be tendered in payment of the notes was seriously to endanger their convertibility in times of political distrust or commercial panic. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_80

He therefore ventured beyond the scope of the agitation, and pronounced that instead of allowing gold a backdoor entry into the currency system it ought to be made the standard of value in India. He did not agree with Mr. Wilson that the substitution of gold for the silver standard would be "to break faith with the creditor." Nor was he much deterred by the fact that before the silver currency could be reduced to a subsidiary position, the introduction of gold in India would give rise to a double standard for the time being ; for he argued that "all nations must pass through a transition stage of a double standard before they arrive at a single standard." Accordingly he proposed that (1) sovereigns and half-sovereigns of British or Australian standard should be legal tender in India, at the rate of one sovereign for Rs. 10, and that (2) Government currency notes should be exchangeable either for rupees or sovereigns at the rate of one sovereign for Rs. 10, but that they should not be exchangeable for bullion.

His proposals were accepted by the Government of India and were communicated to the Secretary of State, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_82 for his sanction. But the Secretary of State, impatient and intolerant of any deviation from a monometallic system, whittled down the whole project with scant courtesy. His reply mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_83 is a grotesque piece of reasoning and terribly shallow. He was unwilling to allow the measure, because he felt satisfied that the rate of Rs. 10 to a sovereign underrated the sovereign too much to permit its circulation. Here he was on solid ground. The cost of producing a sovereign at a Mint in India was estimated mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_84 at the time to be Rs. 10-4-8; while the cost of importing it to

Calcutta from England was estimated at Rs. 10-4-10, and from Australia at Rs. 10-2-9. Whichever was the proper rate, it was certain that sovereigns could not circulate at the rate of Rs. 10 to 1. It was a pity that Sir Charles Trevelyan did not propose a higher ratio mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_85 so as to make the circulation of the sovereign an assured event. But the Secretary of State would have been averse to the measure just the same, even if the ratio had been favourable to the sovereign. To the Secretary of State, the measure, based as it was on an unfavourable ratio, was useless. But if based on a favourable ratio it was none the less pernicious, for, it portended the possibility of what he considered as the most vicious system of double standard, however temporary it might have been. The mere contingency of giving rise to a bimetallic system was enough to frighten the Secretary of State into opposition to the whole measure, for he refused to admit that "it may be for the public advantage to pass through a period of double standard in order to change the basis of the currency from silver to gold."

The only concession that the Secretary of State was willing to make was to permit "that gold coin should be received into public treasuries at a rate to be fixed by Government and publicly announced by Proclamation" without making it a general legal tender in India. It will be recalled that this was a revival of that foolish measure which was abandoned in 1852 for having embarrassed the Government. To offer to receive coin which you cannot pay back is to court trouble, and it was to obviate the too-well-known danger inherent in the project that this more complete measure was proposed. But the currency stringency was so great that the Government of India, rather than obstinately cling to their view, consented to avail themselves of the suggestion of the Secretary of State, and issued a Government Notification in November, 1864, which proclaimed that

"sovereign and half-sovereigns coined at any authorised Royal Mint in England or Australia of current weight, shall until further notice be received in all the Treasuries of British India and its dependencies in payment of sums due to Government, as the equivalent of 10 and 5 Rs. respectively ; and that such sovereigns and half-sovereigns shall, whenever available at any Government Treasury, be paid at the same rates to any person willing to receive them in payment of claims against the Government."

The real par, however, was somewhat above Rs. 10 to the sovereign, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_86 and the notification was therefore inoperative. The currency situation, on the other hand, continued to be as acute as ever, and the Government of India was again moved in 1866 by the Bengal Chamber of Commerce to take steps to make the circulation of gold effective. This time the Chamber insisted on the institution of a Commission of Inquiry "as to the expediency of introducing gold into the monetary system of India." But the Government of India held mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_87 that "instead of a gold a paper currency has been introduced, in the expectation that it would prove a more convenient and acceptable circulating medium than either of the precious metals," and consequently "it must be shown that paper has not proved and is not likely to prove a circulating medium adequate to the wants and suitable to the habits of the country, before an endeavour is made to introduce gold in suppression of, or in addition to, paper." A commission was therefore appointed to inquire into the "operation of the existing currency arrangements which were established under Act XIX of 1861," and to report as to "what may be the advantage, as based on expediency, of the introduction of the legal tender of gold into India, in addition to that of silver." After an exhaustive investigation, the Commission came to the conclusion mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_88 that owing to several causes the paper currency had failed to establish itself among the circulating media of the country, but that gold was finding a larger place in the transactions of the people. The Commission ended by urging upon the Government "to cause a legal tender of gold to be a part of the currency arrangements of India." Now it was the turn of the Government to give effect to the recommendation. But, curiously enough, it did not go to the extent of adopting the recommendation of the Commission which it had itself appointed. Instead of making gold legal tender, as advised by the Commission, the only action the Government took was to issue another Notification on October 28, 1868, which simply altered the rate of the sovereign to Rs. 10-8, without doing anything further to avoid the evil consequence attendant upon that one-sided measure. Fortunately for the Government, even this correction of the rate did not induce any flow of gold into the circulation of the country. The currency troubles had by then subsided, and as no new pressure was exerted upon the

Government, this proved the last of two abortive attempts the Government made to introduce gold into India.

For the time being, the problem was solved by the natural course of events. But, as subsequent events showed, the change to a gold standard would have been better for India.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_89 and would have been welcomedmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_90 in the interests of Europe, which was then suffering from high prices due to the superfluity of gold. At this particular juncture, the Government of India was really at the crossing of ways, and could have averted the misfortunes that were to befall it and its people if it had sided with the forces of change and replaced the silver standard by a gold standard, as it could most easily have done. That those in charge of Indian affairs should have thrown the weight of their authority against the change was no dishonest act deserving of reproach,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_91 but it does furnish one more illustration of those disastrous human ways, which often lead people to regard the situation in which they live as most secure, just when it is most precarious. So secure did they feel about the currency situation that in 1870, when the Mint Law came to be revised and consolidated, they were content, as though nothing had happened or was likely to happen, to allow the silver standard of 1835 to continue pure and unsullied by any admixture of gold.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_92 *

Alas ! those, who then said mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28B. Problem of Rupee CHAPTER I.htm - _msocom_93 that they were not called upon to take more than a "juridical" view of the Indian currency question, knew very little what was in store for them.

Chapter II

THE PROBLEM OF THE RUPEE:
ITS ORIGIN AND ITS SOLUTION

(HISTORY OF INDIAN
CURRENCY & BANKING)

CHAPTER II

THE SILVER STANDARD AND THE DISLOCATION OF
ITS PARITY

It is clear how the evolutionary process with respect to the Indian currency culminated in the establishment of a silver standard and how the agitation for a gold currency ended in the silver standard being supplemented by a paper currency. Before proceeding to inquire into the working of such a mixed system, it would be useful to review briefly the nature of its framework.

The metallic part of it was regulated by Act XXIII of 1870. The coins authorised and legalised thereunder were as shown on p. 379. (Table VIII)

The Act made no innovations either in regard to the number of coins issued by the Mints or their legal-tender powers. Identical though it was with the earlier enactment's in the matter of coins, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_1 its juridical provisions were designed to perfect the monetary law of the country as had never been done before. The former Acts which it repealed were very sparing in their recognition of the principle of mint "remedy" or "toleration," as it is called. The point has been largely deemed to be one of mere mint technique. That is so ; but it is not without its monetary significance. When the precious metals were current by weight the question of a mint toleration could not possibly have arisen, for it was open to every one to ascertain the same by weighing the value of his return. But since the invention of coinage, when currency came to be by tale, every one has trusted that the coins contained the value they were certified to contain.

TABLE VIII

Denomination of Coins issued by the Mint.	Gross Wt Troy Grs.	Remedy in Weight.	Fineness. Troy Grs.	Remedy in Fineness.	Legal-tender Power.
1. <i>Gold Coins</i> (a)					
(i) Mohur	180	2/1000ths	165	2/1000ths	
(ii) Third of a Mohur . (iii) Two-thirds of a Mohur	60 120	„ „	65 110	„ „	Not Legal Tender at all.
(iv) Double Mohur	360	„	330	„	
11. <i>Silver Coins</i> (b)					
(i) (i) Rupee (ii) (ii) Half-rupee	180 90	5/1000ths	165 82.5	2/1000ths	Unlimited Legal Tender.
(iii) Quarter-rupee	45	7/1000ths	41.25	3/1000ths	Legal Tender for Fractions of
(iv) Eighth of a Rupee	22.5	10/1000ths	20.625		a Rupee only.
III. <i>Copper Coins</i> (c)					
(i) Pice	100	1/40 th	—	—	Legal Tender for 1/64th

					part of a Rupee
(ii) Double Pice	200	„	—	—	Legal Tender for 1/32nd part of a Rupee
(iii) Half-pice	50	„	—	—	Legal Tender for 1/128th part of a Rupee
(iv) Pie	33.3	„	—	—	Legal Tender for 1/192nd part of a Rupee

The actual value of the coin cannot, however, always be in exact agreement with its certified value. Such differences are bound to exist, and even with all the improvements in the art of coinage it would be difficult to avoid them. What matters is the extent of the deviation from the true mint standard. The mint laws of all countries, therefore contain provisions which declare that coins shall not be legal tender at their certified value if they err from their legal standard beyond a certain margin. Indeed to make coins legal tender without prescribing a limit to their toleration is to open a way to fraud. In so far as the Act laid down a limit of toleration to the coins it authorised to be issued from the Mint, it was a salutary measure. It is to be regretted, however, that the Act instituted no machinery with which to ascertain that the coinage conformed to the law.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_2 Another important improvement made by the Act was the recognition of the principle of free coinage. The principle, though it

has not received the attention it deserves, is the very basis of a sound currency in that it has an important bearing on the cardinal question of the quantity of currency necessary for the transactions of the community. Two ways may be said to be open by which this quantity can be regulated. One way is to close the Mint and to leave it to the discretion of the Government to manipulate the currency to suit the needs. The other is to keep the Mint open and to leave it to the self-interest of individuals to determine the amount of currency they require. In the absence of unfailing tests to guide the exercise of discretion necessary in the case of closed Mints, the principle of open Mints has been agreed upon as the superior of the two plans. When every individual can obtain coin for bullion and convert coin into bullion, as would be the case under open Mints, the quantity is automatically regulated. If the increasing demands of commerce require a large amount of circulating medium, it is for the interest of the community to divert a larger quantity of its capital for this purpose; if, on the contrary, the state of trade is such as to require less, a portion of the coin is withdrawn, and applied as any other commodity for purposes other than those of currency. Because the Act of 1870 expressly recognised the principle of open Mint, it is not to be supposed that the Mints were closed before that date. As a matter of fact they were open to the free coinage of both gold and silver, although the latter alone was legal tender. But, strange as it may seem, none of the earlier Acts contained a word as to the obligation of the Mint Master to coin *all* the metal presented to him—a condition which is of the essence of the open mint system. The provisions of the Act on this point are unmistakable. It required:—

"Section 19. Subject to the Mint-rules for the time being in force, the Mint Master shall receive all gold and silver bullion and coin brought to the Mint:"Provided that such bullion and coin be fit for coinage:"Provided also that the quantity so bought at one time by one person is not less, in case of gold, than fifty tolas, and, in the case of silver, than one thousand tolas.

"Section 20. A duty shall be levied at the rate of one rupee per cent. at the Mint on the produce of all gold bullion and on all gold coin brought for coinage to the mint in accordance with the said Mint-rules.

"Section 21. All silver bullion or coin brought for coinage to the Mint, in accordance with the said Mint-rules, shall be subject to a duty

at the rate of 2 per cent. on the produce of such from the return to be made to the proprietor.

"Section 22. A charge of one-fourth per mile on gold bullion and coin, and of one per mile on silver bullion and coin, shall also be levied for melting or cutting such bullion and coin so as to render the same fit for receipt into the Mint.

Section 23. All gold and silver bullion and coin brought to the Mint for coinage, and which is inferior to the standard fineness prescribed by this Act, or which, from brittleness or other cause, is unfit for coinage, shall, in case it is refined, be subject, in addition to the duty and charge aforesaid, to such charge on account of the loss and expense of refining as the Governor-General in Council prescribes in this behalf.

"Section 24. The Mint Master, on the delivery of gold or silver bullion or coin into the Mint for coinage, shall grant to the proprietor a receipt which shall entitle him to a certificate from the Assay Master for the net produce of such bullion or coin payable at the General Treasury.

"Section 25. For all gold bullion and coin, in respect of which the Assay Master has granted a certificate, payment shall be made, as nearly as may be, in gold coins coined under this Act or Act No. XVII of 1835; and the balance (if any) due to the proprietor shall be paid in silver, or in silver and copper, coins, in British India."

In the matter of paper currency the Government, it is to be noted, did not proceed upon the principle of freedom of issue, which then obtained in the country. There prevails the erroneous view that before the introduction of the Government paper currency the right of note issue was confined to the three Presidency banks of India. As a matter of fact there existed in India what is called the free banking system, in which every bank was at liberty to issue its notes. It is true that notes of the Presidency banks enjoyed a status slightly superior to that enjoyed by the notes of other banks in that they were received by the Government to some extent in payment of revenue mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_3— a privilege for which the Presidency banks had to submit to a stringent legislative control on their business#, from which other banks whose issues were not so privileged were immune.

#The reasons for such control are to be found in the peculiar relationship that subsisted between the Government and the Presidency banks. Prior to 1862, as a safeguard against their insolvency,"the Presidency Bank Charters restricted the kind of business in which they were to engage themselves. Put very briefly the principal restrictions imposed prohibited the banks from conducting foreign-exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage, or on the security of immovable property, or upon promissory notes bearing less than two independent names, or upon goods unless the goods or title to them were deposited with the banks as security. The Government held shares in the banks and appointed a part of the Directorate. In 1862, when the right of note issue was withdrawn, these statutory limitations on the business of the banks were greatly relaxed, though the Government power of control remained unchanged. But, the banks having in some cases abused their liberty, nearly all the old restrictions of the earlier period were reimposed in 1876 by the Presidency Banks Act, Government, however, abandoning direct interference in the management, ceasing to appoint official directors, and disposing of its shares in the banks. Some of these limitations have been incorporated in Act XLVII of 1920, which amalgamated the three Presidency banks into the Imperial Bank of India. Banks other than Presidency banks have been entirely immune from any legislative control whatsoever, except in so far as they are made amenable to the provisions of the Indian Companies Act. Cf. in this connection Minutes by Sir Henry Maine, No. 47, and the accompanying note by W. Stokes. The control of these banks is one of the important problems of banking legislation in India.

But this disadvantage was not sufficient to discourage other banks from indulging in the right of issue which was left open to them by law. However, this freedom of issue does not seem to have been exercised by any of the banks on any very large scale, not even by the Presidency Banks**, and was taken away from all in 1861, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_4 when there was established a national issue for the whole of India entrusted to the management of a Government Department called

the Department of Paper Currency.

**It should however, be noted that in 1860 the circulation of notes of the three Presidency banks was larger than their current accounts, as is evident from the following :—

<i>Name of the Bank</i>	<i>Accounts current</i>	<i>Notes in circulation</i>
Bank of Bengal	£ 1,254,875	£ 1,283,946
Bank of Bombay	438,459	765,234
Bank of Madras	161,959	192,291

(Bankers' Magazine, April, 1893, p. 547)

But if private interest was not allowed to play the same part in determining the quantity of paper currency as was the case with regard to metallic currency, neither was any discretion left to the Government Department in the regulation of the paper currency. The Department of Paper Currency had no more discretion in the matter of paper currency than the Mint Master had in the matter of metallic currency.

The Department's duty was confined by [lawmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_5](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_5) to the issue of notes in exchange for the amount thereof : (1) in current silver coin of the Government of India; (2) in standard silver bullion or foreign silver coin computed according to standard at the rate of 979 rupees per 1,000 tolas of standard silver fit for coinage ; (3) in other notes of the Government of India, payable to bearer on demand of other amounts issued within the same circle ; and (4) in gold coin of the Government of India, or for foreign gold coin or bullion, computed at such ratio and according to such rules and conditions as may be fixed by the Governor-General, provided that the notes issued against gold did not exceed one-fourth of the total amount of issues represented by coin and bullion. The whole of this amount was required

by law to be retained as reserve for the payment of notes issued with the exception of a fixed amount which was invested in Government securities, the interest thereon being the only source of profit to the Government. The limit to the sum to be so invested was governed by the lowest amount to be estimated to which according to all reasonable experience, the paper currency might be expected to fall." [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_6](#) Estimating on this basis, the limit to the investment portion was fixed at 4 crores in 1861, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_7](#) at 6 crores in 1871, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_8](#) and at 8 crores in 1890. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_9](#) But notwithstanding the growing increase in the investment portion, never was the fiduciary issue based thereon so great as to abrogate the essential principle of the Indian Paper Currency Law, the object of which was to so regulate the volume of paper currency that it should always preserve its value by contracting and expanding in the same manner and to the same extent as its metallic counterpart.

The following table shows the distribution of the paper currency reserve at three different periods:

	Note	Composition of the Reserve				Percentage of each Component of the Reserve to the Total		
Period	Circulation					Circulation		
		Silver	Gold	Securities	Total	Silver	Gold	Securities
1862-1871	7.63	4.80	0.03	2.80	7.63	63		37
1872-1881	11.82	5.98		5.84	11.82	51		49

1882-1891	15.74	9.64		6.10	15.74	61		39
-----------	-------	------	--	------	-------	----	--	----

Such was the organisation of the mixed currency that existed in India before it underwent a profound change during the closing years of the nineteenth century. Though of a mixed character, the paper portion formed a comparatively small part of the total. The principal reasons why the paper currency did not assume a large proportion are to be found in the organisation of the paper currency itself.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_10 One such reason was that the lowest denomination of the notes was too large to displace the metallic currency. By the law of 1861 the denomination of notes ranged upwards from Rs. 10 as the lowest to Rs. 20, 50, 100, 500, and 1,000. In a country where the average range of transactions did not exceed R. 1 and were as low as 1 anna or even lower, it is impossible to expect that paper currency could, to any great extent, figure in the dealings of the people. Even Rs. 5 notes, the issue of which was first sanctioned in the year 1871,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_11 were not low enough to penetrate into the economic life of the people. The other impediment to the increase of paper currency was the difficulty of encashing notes. One of the infelicitous incidents of the paper currency in India consisted in the fact that they were made legal tender everywhere within a circle, but encashable only at the office of issue. For such a peculiar organisation of the paper currency in India, what was largely responsible was the prevalence of internal exchange** in the country.

**It may be pointed out that although the Presidency banks had ceased to issue notes, yet under the agreements made with the Government in virtue of Act XXIV of 1861 the banks were employed by the Government "for superintending, managing and becoming agents for the issue, payment and exchange of promissory notes of the Government of India, and for carrying on the business of an agency of issue" on a remuneration of 3/4, per cent. per annum "on the daily average amount of Government currency notes outstanding and in circulation through the agency of the bank." In the conflict that ensued between the Government of India and the Secretary of State because it believed that it would

help the extension and popularization of the notes as to the propriety of thus employing the banks, the former was in favour of the plan, while the latter disliked the arrangement because it seemed to him to compromise the principle of complete separation between the business of issue and the business of banking. Neither of the two, however, grasped the fact that the profit on remittances on different centres owing to the prevalence of internal exchange was so great that the commission allowed to the banks was an insufficient inducement to cause them to promote the circulation of notes by providing facilities at their branches for the free encashment of them. So high was the internal exchange, and so reluctant seemed the banks to popularise the notes, that Government finally discharged them from being their agents for paper currency from January 2, 1866. *See* House of Commons Return, East Indian (Paper Money) 215 of 1862.

It raised a serious problem for the Government to cope with. If notes were to be made universally encashable it was feared that merchants, instead of using notes as currency, might use them as remittance on different centres to avoid internal exchange, and the Government be obliged to move funds between different centres to and fro, lest it should have to suspend cash payments. To undertake resource operations on such a vast scale between such distant centres when facilities for quick transport were so few, was obviously impossible, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_12 and the Government therefore decided to curtail the encashment facilities of notes it issued. For the purposes of the paper currency, the Government divided the country into a number of circles of issue, and each currency circle was further subdivided into sub-circles, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_13 and the notes issued bore on their face the name of the circle or sub-circle from which they originated. Notes issued from any agency of issue situated in the territory comprised within a circle of issue were not legal tender in the territory of any other currency circle, nor were they encashable outside their own circle. Nay more, the notes issued from sub-circles subject to the same chief circle were legal tender in one another's territory, but were not encashable except at their office of issue or at the issue office of their chief circle. The sub-circle notes could thus be cashed at two places, but the notes of

the issue office of the chief circle, though legal tender in the entire territory covered by it, were encashable nowhere except at its own counter, not even at any of its own sub-circles.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_14](#) This want of universal encashability, though it saved the Government from the possibility of embarrassment, proved so great a hindrance to the popularity of the notes that it may be doubted whether the paper currency could have made a progress greater than it did even if the lowest denomination of the notes had been lower than it actually was.

It must, however, be borne in mind that it was not the intention of the Indian Legislature to make the Indian currency as economical[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_15](#) as was desired by the Executive Government. The Legislature was no doubt appealed to by the original author of the paper currency to turn India into a new Peru, where as much currency could be had with as little cost,[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_16](#) but the Legislature showed a rather prudent reserve on the matter of aiding the consummation of such a policy. As the centres of encashment were so few, and the area included within each so large as to separate the furthest point in a circle by a distance of about 700 miles from the centre of encashment of the circle, it viewed with dread the authorising of notes of smaller denomination which the poor could not refuse and yet could not cash.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_17](#) Besides the hardship involved in the want of encashability in the notes, the Legislature feared they would prove a "fugitive treasure" in the hands of the Indian peasant. Not being able to preserve them from rain and ants, he might have had to pay a heavy discount to be rid of the notes he could have been forced to accept.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_18](#) So opposed was the Legislature to the economising clauses of the Paper Currency Bill as contrived to drive out metallic currency that it gave the Government an option to choose between legal-tender notes but of higher denomination and lower-denomination notes but of no legal-tender power.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_19](#) And as the Government chose to have legal-

tender notes, the Legislature in its turn insisted on their being of higher denomination. At first it adhered to notes of Rs. 20 as the lowest denomination, though it later on yielded to bring it down to 10, which was the lowest limit it could tolerate in 1861. Not till ten years after that, did the legislature consent to the issue of Rs. 5 notes, and that, too, only when the Government had promised to give extra legal facilities for their encashment. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_20 On the whole, the desire of the Indian Legislature was to make the Indian currency safer, rather than economical, and such it undoubtedly was.

How did the currency system thus constituted work? Stability of value is one of the prime requisites of a good currency system. But if we judge the Indian currency from this point of view, we find that there existed such variations in its value that it is difficult to escape the conclusion that the system was a failure.

Taking the rate of discount as an evidence of the adequacy of currency for internal commerce, it was the opinion of such a high financial authority as Mr. Van Den Berg that the unexpected contortions and sudden transitions in the Indian money market were unparalleled in the annals of any other money market in any other part of the world. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_21 India is pre-eminently a country subject to seasonal swings**.

****It should be noted that the slack and the busy seasons are not uniformly distributed over the whole surface of the country. The distribution is roughly as follows :—**

	Eastern India		Weste rn	Northern India		
Months			India			South ern

Midsummer is naturally a period of diminished activity, while autumn brings renewed vigour in all activities of social and economic life. Not production alone is affected by seasons. On the side of consumption, Indian social life is also subject to seasonal variations. There are marriage season, holiday seasons and holy seasons. Even distribution has assumed in India quite a seasonal character. The practice of paying rents, wages, dividends, and settling accounts at stated intervals has been gaining ground as a result of contact with Western economic organisation. All these generate a kind of rhythm in the social demand for money, rising at certain periods of the year and falling at others. Having regard to the seasonal character of the economic and social life, the fluctuations caused by the discount rate soaring high during busy months when it should have been low enough to liquidate the transactions, and falling low during slack months when it should have been high enough to prevent the market from being demoralised, are unavoidable. But what made the contortions of the Indian money market so obnoxious was the circumstance that the seasonal fluctuations in the discount rate were so abnormal.##The rate of discount of the Bank of Bengal for private paper running thirty days and after was altered—

In 1876 16 times, with 6 1/2 percent, as minimum and 13 1/2, percent, as maximum.
In 1877 21 times, with 7 1/2 percent, as minimum and 14 1/2 percent, as maximum
In 1878 10 times, with 5 1/2 percent, as minimum and 11 1/2 percent, as maximum
In 1879 15 times, with 6 1/ percent, as minimum and 11 1/2 percent, as maximum
In 1880 8 times, with 5 1/ percent, as minimum and

9 1/2 percent, as maximum
In 1881 9 times, with 5 1/2 percent, as minimum and 10 1/2 percent, as maximum
In 1882 9 times, with 6 1/2 percent, as minimum and 12 1/2 percent, as maximum
In 1883 times, with 7 1/2 percent, as minimum and 10 1/2 percent, as maximum

(*Van Den Berg, loc. cit.*)

The explanation for such a market phenomenon is to be sought in the irregularity of the money supply of the country. In order that money may be had at a uniform price, its supply should be regulated according to the variations in the demand for it. It is well to recognise that the demand for money is never fixed. But it will avail nothing until it is realised that the changes in the demand for money which take place from year to year with the growth of population, trade, etc., belong essentially to a different category from the fluctuations in the demand for money which occur within the course of a year owing to seasonal influences. In any well-regulated currency it is necessary to distinguish these two categories of changes in monetary demand, the one requiring steadiness and expandability and the other elasticity. On a comparative view it seems more than plausible that a metallic money is as especially adapted to furnish this element of steadiness and stability as paper money is to furnish that of elasticity. Indeed, so appropriate seem to be their respective functions that it has been insisted mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_22 that in an ideal system, these two forms of money cannot interchange their functions without making the currency burdensome or dangerous. The proof of the soundness of this view, it may be said, is found in the fact that, excluding the small transactions which take place by direct barter, the purchasing medium of any commercially advanced country is always a compound of money and credit.

On the face of it, the Indian currency is also a compound of money and credit, and as such it may be supposed that it contained provisions for expandability as well as elasticity. But when we come to analyse it we

find that it makes no provision whatever for elasticity. Far from allowing the credit part of it to expand and contract with the seasonal demands, the Paper Currency Act placed a rigid limit upon the volume of its issue regardless of any changes in the volume of the demand. Here, then, is to be found one of the causes for the "convulsions" in the discount rates prevalent in the Indian money market. As was pointed out by Mr. Van Den Berg —

"The paper currency established by the Indian legislator fully answers the purpose, so far as business requires an easier means of exchange than gold or silver coin ; but no connection whatever exists between the issue of the fiduciary currency and the wants of the public to have their bills or other commodities converted into a current medium of exchange..... and this is the sole cause of the unexpected convulsions and sudden transitions in the money market so utterly detrimental to business to which the British Indian trade is constantly exposed.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_23

It may, however, be objected that such a view is only superficial. The Indian Paper Currency Act is a replica of the English Bank Act of 1844 in all its essentials. Like the English Bank Act, it set a definite limit to the fiduciary issue of notes. Like it, it separated the Issue Business from the Banking Business,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_24 and if it made the banks in India mere banks of discount, it is because it copied the Bank Charter Act, which deprived banks in England, including the Bank of England, from being banks of issue. And yet, it cannot be said that the English money market is affected by such "convulsions and sudden transitions" as has been the case with the Indian money market. On the other hand, it was the considered opinion of Jevonsmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_25 that "the Bank of England and bankers generally have just the same latitude in increasing or diminishing their advances now (i.e. under the Act of 1884) as they would have under a [nun] restricted system"; for, as he elsewhere argued, if the limitation on fiduciary issue is arbitrary, and if people want more money, "it is always open to them to use metallic money instead. The limitation is imposed not upon money itself, but upon the representative part."mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_26 What, then, is the reason that the Indian Paper

Currency Act should produce the evils which its English prototype did not? *A priori* there need be no such convulsions in a money market subject to such law. The Act, by limiting the issue of notes, did seem to leave no choice but to use metallic money even for seasonal demand. This would be true if notes were the only form in which credit could be used. As a matter of fact, this is not so. Credit could take the form of a promise to pay, issued by a bank, as well as it could take the form of an order on the bank to pay, without making any difference to the social economy of the people who used them. Consequently, if under the provisions of the Act banks are restricted from issuing promises to pay, it does not follow that the only way open to them is a resort "to use metallic money instead," for they are equally free to consent to honour as many orders to pay as they like. Indeed, the success or failure of the Act depends upon which of the two alternatives the banks adopt. It is obvious that those who will submit to the ruling of the Act and resort to metallic money will have to bear the "convulsions," and those who will circumvent the Act by utilising other forms of credit will escape them. The chief reason, then, why the Act has worked so well in England and so badly in India, is due to the fact that, whereas English banks have succeeded in implanting the order or cheque system of using credit in place of the note system, Indian banks have unfortunately failed. That they should have failed was however, inevitable. A cheque system presupposes a literate population, and a banking system which conducts its business in the vernacular of the people. Neither of these two conditions obtains in India. The population is mostly illiterate, and even were it otherwise it could not have availed itself of the cheque system, because Indian banks refuse to conduct their business in any other medium but English. Besides, the growth of the cheque system presupposes a widespread network of banks, a condition which is far from being fulfilled in India. In the absence of banking, a cheque is the worst instrument that could be handled. If not presented within a certain time, a cheque may become stale and valueless, and is therefore inferior to a note as a store of wealth. In such circumstances as these, it is no wonder that in India cheques did not come into being on a sufficiently large scale to amend the inelasticity of the notes.

But even if Indian banks had succeeded in making use of credit in a form other than that of notes, they could not have eased the money market to the same extent as the English banks have been able to do. One of the incidents of banking consists in the liability of banks to pay

cash on demand. If all their deposits were received in cash this liability would involve no risk. As a matter of fact, a larger part of their deposits consists of bills which they make it their business to undertake to pay in cash. One of the first things, therefore, that a banker has to look to is the proportion which his cash deposits bear to his credit deposits. Now, this proportion may be adversely affected either by an increase in his credit deposits or by diminution in his cash deposits. In either case his ability to pay cash is *pro tanto* weakened by lowering the ratio of his total cash to his total liabilities. Against an undue expansion of credit a banker may effectually guard himself. But, notwithstanding the development of the cheque system, there is always lurking the possibility of withdrawal of some cash at some time or other. A banker must, therefore, provide by keeping on hand a certain minimum reserve. How large should be the reserve depends upon what the possibilities for the withdrawal of cash are. The point is that to the extent of the reserve the power of the bank to grant credit is curtailed. If the reserve of the bank is already at the minimum it must stop discounting or must strengthen its position by recovering the cash withdrawn from its coffers. Now, it is obvious that if the amount of money withdrawn is kept in the current of business where the banks can get at it, they of course can strengthen their position again immediately, and not only always keep themselves well away from the danger line of minimum reserve, but be always prepared to meet the needs of the money market. What was the position of the Indian banks from this point of view? Owing to the absence of a cheque system the possibilities for the withdrawal of cash are great, and the reserve was required to be large in consequence thereof. A large part of their funds being thus held for a reserve, their resources for discounting were small. But there was a further weakening of their position as lenders by reason of the fact that the cash withdrawn did not speedily return to them. The result was that the Indian banks were obliged to curtail their discounts to a far greater extent than were the English banks, in order to preserve a due proportion between their cash and their credits. The absence of branch banking was an important desideratum in this regard. But, even if there were branch banks, the money withdrawn could not have returned, for it was not left in the current channels of business. It was locked up in Government treasuries, whose operations were independent of the banking transactions of the country. Of course, there could be nothing inherently wrong in the maintenance by a Government of an Independent Treasury, and if its operations were to have a resultant

connection with the operations of the business community no harm need arise. But the operations of the Indian Treasury ran counter to the needs of business. It locked up when it should have released its hoards, and released its hoards when it should have locked them up.

The causes that "convulsed" the Indian money market had therefore been the inelasticity of the credit media and the working of the Independent Treasury System in so far as they were the prime factors affecting the money supply of the country (*see* Chart 1). The evil effects of such convulsions of the discount rate can hardly be exaggerated. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_27](#) In an economy in which almost every business man must rely, at certain seasons, if not all the year round, on borrowed capital, the margin of profit may be wiped out by a sudden rise or augmented by a sudden fall in the rate of discount leading to under-trading or over-trading. Such fluctuations increase business risks, lead to higher business expenses and a greater cost to the consumer. They bring about swings in prices, promote speculation, and prepare for panics.

CHART I

DISCOUNT RATE IN INDIA

Evils such as these would have in any other country compelled the authorities to take proper steps to deal with them. But it is a curious fact that in India no serious attempts were made to alleviate the sufferings they inflicted upon the trading community. A reform of the paper currency or the abolition of the Independent Treasury System would have eased the situation, though a reform of both would have been better. The general community, however, was not desirous for a change of the paper currency [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_28](#) but was anxious for the abolition of the Independent Treasury. The Government, on the other hand, refused to do away with its Independent Treasury System *** and repudiated even its moral obligation to help the business community on the somewhat pedantic plea that in locking up currency it did not lock up capital ###

*** It should, however, be noted that between 1862 and 1876, at some centres comprising the head offices and branch offices of the Presidency banks, the Independent Treasury System was suspended. By way of compensation for the loss of their right of note issue, the Presidency banks were given certain concession by the Government under agreements entered into in accordance with Act XXIV of 1861. Among the concessions one was the use by the banks of Government balances. The first agreement, that of 1862, conceded to the banks the following privileges in regard to the Government balances : (1) The unrestricted use for banking purposes”of all moneys and balances which but for the agreement would have been received or held at the General Treasury”up to the limit of 70 lakhs in the case of the Bank of Bengal, 40 lakhs in the case of the Bank of Bombay, and 15 lakhs in the case of the Bank of Madras. (2) The option of setting aside the excess over these sums in a separate strong room for production when demanded, or of investing it in Government paper or other authorised securities, the power of investment being subject to the condition that the banks should be”at all times answerable and accountable to Government for the surplus cash balance for the time being.”(3) The right to interest from Government on the difference between the actual balance and 50 lakhs in the case of the Bank of Bengal, 30 lakhs in the case of the Bank of Bombay, and 10 lakhs in the case of the Bank of Madras, whenever the balances at these banks fell below these minima. (4) Permission to the banks to use the Government balances at their branches on similar terms, suitable limits being fixed in each case, as in the head office agreements.

A year after the agreements were executed, difficulties arose with the Bank of Bengal, which had locked up the funds to such an extent that it was unable to meet the demands of the Government on the public balances it held. Negotiations were therefore opened in 1863 for the revision of the agreements, and the revised agreements came into force on January 2, 1866.

They contained the following provisions regarding the public balances : (1) Undertaking by Government to maintain in the hands of the banks at their head offices an "average cash balance" of 70 lakhs at the Bank of Bengal, 40 lakhs at the Bank of Bombay, and 25 lakhs at the Bank of Madras, "so far as the same may conveniently be done." (2) Permission to the banks to use the whole balances for the time being deposited with them for banking purposes. (3) The right to interest from Government when the Government balance at the head offices of the Bank of Bengal, Bank of Bombay, and Bank of Madras fell below the minima of 45 lakhs, 25 lakhs, and 20 lakhs respectively. (4) Permission to employ "the whole of the balances (at branches) however large for the time being" for banking purposes, subject to the condition that each branch should "at all times be ready to meet the drafts of the Government" to the extent of the Government balances at the branch.

These revised agreements were to remain in force till March, 1, 1874. In 1874 the question of the revision of the charters of the Presidency banks was under consideration, and it was the aim of the Government to continue to the banks the right to use the whole Government balances. Just at this time (1874) difficulties occurred with the Bank of Bombay and the government could not draw upon their balances. This led to a reconsideration of the policy of merging the Government balances with the bank balances and leaving them in the custody of the banks. After a somewhat lengthy discussion the Government of India reverted to the system of Independent Treasury by instituting what were called Reserve Treasuries at the headquarters of the Presidencies which held the Government balances previously held by the Presidency banks. For a history of this episode see House of Commons Returns 109 and 505 of 1864 ; also J. B. Brunyate, *An Account of the Presidency Banks*, Chap. VII.

In the dispatch of May 6, 1875, sanctioning the re-establishment of the Independent Treasury System, the banks were admonished by the Secretary of State thus : "Capital supplied by Government, and not representing the savings of the community, is a resource on whose permanence no reliance can be placed, and which therefore tends to lead traders into dangerous commitments. It gives

ease for a time, and produces prosperity which is at the mercy of an accident. A political exigency suddenly withdraws the adventitious resources, and the commerce which trusted to it finds itself pledged beyond what its own resources can make good."Under the arrangements of 1876 leading to the establishment of the Reserve Treasuries, the Government agreed as before to pay interest to the banks when their balances at the banks fell below certain minima. The Government entered into no formal undertaking as regards maxima, and gave the banks to understand"that the Government will ordinarily not leave with the headquarters of the banks, otherwise than temporarily, more than the following sums : Bank of Bengal 100 lakhs, Bank of Madras 30 lakhs, and Bank of Bombay 50 lakhs. But this condition will not be inserted in the contract, which will impose no obligation upon the Government to leave any balances whatever with the banks..... The Government will not undertake to give to the banks the exclusive custody of all the public balances where the Government banks with the banks."The question of the amount of balances which the Government would have with the banks in the ordinary course being thus settled, the only way left open to give help to the banks to meet seasonal demands was to grant loans to the Presidency banks for its balances held in the Reserve Treasuries. After 1900 it agreed to make such loans of a limited amount at the bank rate. Up to 1913 only six loans were made, which shows that the terms of such loans were rather onerous. The Chamberlain Commission of 1913 recommended loans rather than the abolition of the Independent Treasury system. The war, however, hastened the course of events. It proved the necessity of co-operation between the Presidency banks and the Government, and also the need of a large and powerful Banking Institution. This was accomplished by the amalgamation of the Presidency banks into an Imperial Bank of India (Act XLVI I of 1920), with the inauguration of which the Independent Treasury system is again in the process of abolition. For a history of episodes of the Independent Treasury after 1876, see Appendices to the *Interim Report of the Chamberlain Commission*, Vol. I, Cd. 7070 of 1913, Nos. I and II.

Nor is it possible to say, since it was not called upon to enunciate a policy, how far it would have gone to modify the Paper Currency Act so as to relieve the situation. Before, however, this controversy could end

in a satisfactory solution for imparting to the currency system that element of elasticity which it needed, there developed another and a greater evil, which affected its metallic counterpart in a degree sufficient to destroy its most vital element of steadiness and stability of value, which it was its virtue to furnish. So enormous did the evil grow, and so pervasive were its effects, that it absorbed all attention to the exclusion of everything else.

What fixity of value between the different units of its currency is to the internal transactions of a country, a par of exchange is to its internal transactions. A par of exchange between any two countries expresses the relative exchange values of their respective currencies in terms of each other. It is obvious from this that the par of exchange between any two countries will be stable if they employ the same metal functioning as their standard money, freely convertible into and exportable as bullion, for in that case they would have as a measure of value a common medium, the value of which could not differ, given freedom of commerce, in the two countries by more than the cost of its transshipment, i.e., within specie points. On the other hand, there can be no fixed par of exchange between two countries, having different metals as their currency standards of value. In that case, their exchange is governed by the relative values of gold and silver, and must necessarily fluctuate with changes in their value relation. The limit to the exchange fluctuations between them will be as wide or as narrow as the limit to fluctuations in the relative values of the two metals may happen to be. When, therefore, two countries such as England and India are separated by differences in their metallic standards, theoretically there could be no possibility for a stable par of exchange between them. But, as a matter of fact, notwithstanding the difference in their metallic standards, the rate of exchange between England and India seldom deviated from the normal rate of 1 s. 10 1/2 d. for R. 1. So steady was the rate up to 1873 that few people were conscious of the fact that the two countries had different currency standards. After 1873, however, the rupee-sterling exchange suddenly broke loose from this normal parity, and the dislocation it caused was so great and so disorderly (Chart II) that no one knew where it would stop.

CHART II : FALL OF THE RUPEE-STERLING EXCHANGE

The rupee-sterling exchange was in reality a reflection of the gold-silver exchange. When, therefore, it is said that the rupee-sterling before 1873 was stable at 1s. 10 1/2 d., it merely meant that the gold-silver exchange before 1873 was stable at the ratio of 1 to 15 1/2; and that the rupee-sterling exchange was dislocated after 1873 meant that the gold-silver exchange lost its old moorings. The question which therefore arises is why was the ratio of exchange between gold and silver disturbed after 1873, as it never was before that year? Two factors have been appealed to as affording a sufficient explanation of what then appeared as a strange phenomenon. One was the demagnetisation of silver as the standard money medium by the principal countries of the

world. This movement in favour of demagnetisation of silver was the outcome of an innocent agitation for uniformity of weights, measures, and coinages. In so far as the agitation was aimed at such uniformity, it was in every way beneficial. But it also exemplifies how the pursuit of good sometimes leaves behind a legacy of evils. At the Great Exhibition held in London in 1851 the great difficulty of comparing the different exhibits, owing to the differences of weights, measures, and coinages as between the countries of their origin and other countries, was amply demonstrated to the representatives of the different nations assembled at that exhibition.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_31 The question of international uniformity in weights, measures, and coins was discussed by the various scientific assemblies gathered at this exhibition, and although nothing tangible came out of it, the question was not allowed to be dropped : it was taken up at the Brussels International Statistical Congress held two years after. Opinion had so far advanced that the next Statistical Congress, held at Paris, issued a declaration, which was confirmed by the Vienna Statistical Congress of 1859, strongly urging the necessity of bringing about the desired uniformity in the weights, measures, and coinages of different countries.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_32 Encouraged by the action of England, which had made in 1862 the metric system of weights and measures optional, the 1863 International Statistical Congress of Berlin resolved to invite the different Governments "to send to a special Congress delegates authorised to consider and report what should be the relative weights in the gold and silver coins, and to arrange the details by which the monetary systems of the different countries might be fixed, upon a single unit decimally subdivided."

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_33 The significance of this Congress can hardly be overlooked. It made a departure. At the former Congresses the question debated was largely one of uniformity in weights and measures. But at this Congress "that phase of it was subordinated to uniform coinage and was well-nigh laid aside,"

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_34 Though the resolution was a

departure, it should not have been fraught with serious consequences if the reform had been confined to the question of uniformity of coinage. But there occurred a circumstance which extended its application to the question of currency. When this agitation for uniform coinage grew apace, the French quite naturally wished that their coinage system, which had already been extended over the area comprised by the Latin Union, should be taken as a model to be copied by other countries outside the Union in the interest of uniformity. With this end in view the French Government approached the British Government of the time, but was told in reply that the British Government could not consider the suggestion until France adopted the single gold standard.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_35 Far from being taken aback, the French Government, then so anxious to cultivate the goodwill of England, proved so complacent that it felt no compunction in conceding to the British the pre-requisite it demanded, and indeed went so far out of the way, when the Conference met in Paris in 1867, that it actually manoeuvredmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_36 the Assembly into passing a resolution”that for uniform international coinage it was necessary that gold alone should be the principal currency of the world.”So much importance was attached to the question of uniformity of coinage that those who passed the resolution seemed not to have noticed what sacrifice they were called upon to make for its achievement. Perhaps it would be more correct to say that they did not know that they were affecting by their decision the currency system of the world. All they thought they were doing at the time was to promote uniformity of coinage and nothing more.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_37 But whatever the extenuating circumstances, the result was disastrous, for when the resolution came to be acted upon by the different countries assembled, the real end of the Conference, namely uniformity of coinage, was completely lost sight of, and the proposed means eventually became the virtual end.

The ball once set rolling, the work of demonetising silver began to grow apace. First in the field was Germany. Having vanquished

France in the war of 1870, she utilised the war indemnity in the reform of her chaotic currency mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_38 by hastening to adopt a gold currency for the United Empire of Germany. The law of December 4, 1871, authorised the change, with the mark as the unit of currency. Silver was demonetised by this enactment; but the existing silver coins continued to be legal tender though their further coinage was stopped, along with the new gold coins at the legal ratio of 15 to 1/2 to 1. This full legal-tender power of the silver coins was taken away from them by the law of June, 9, 1873, which reduced them to the position of a subsidiary currency. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_39 This policy was immediately copied by other countries of Germanic culture. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_40 In 1872 Norway, Sweden, and Denmark formed a Scandinavian Monetary Union, analogous to the Latin Monetary Union, by which they agreed to demonetise silver as was done by Germany. This treaty, which established a gold standard and reduced the existing silver currency to a subsidiary status, was ratified by Sweden and Denmark in 1873 and by Norway in 1875. Holland also followed the same course. Till 1872 she had a pure silver standard. In that year she closed her Mint to the free coinage of silver, although the old silver money continued to be legal tender to any amount. In 1875 she went a step further and opened her Mints to the free coinage of gold. Her policy differed from that of the Germanic countries in that she only suspended the free coinage of silver, while the latter had demonetised it. Even the Latin Union was unable to resist this tide against silver. As a consequence of this exclusion of silver, the Latin Union, enlarged as it was by additional members, naturally desired to take precautionary measures against being flooded by the influx of this depreciated silver. Nor was this fear unfounded, for the silver tendered for coinage at the Belgian Mint in 1873 was three times greater than what was tendered in 1871. Rather than be embarrassed, Belgium, by the law of December 8, 1873, suspended the free coinage of her silver five-franc pieces. This action of Belgium forced the hands of the other members of the Union to adopt similar measures. The delegates of the Union met

in Paris in January, 1874, and

“agreed to a treaty supplementary to that originally framed in 1865, and determined on withdrawing from individuals the full power of free coinage by limiting to a moderate sum the silver five-franc pieces which should be coined by each State of the Union during the year 1874.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_41

The respective quotas fixed for 1874 were slightly increased in 1875, but were reduced in 1876@@.

@@The quotas fixed at the conferences for the several members of the Union were-

	1874	1875	1876
France	60	75	54
Belgium	12	50	36
Italy	40	15	10
Switzerland	8	10	7
Greece
Total	120	150	110

In 1874 Italy was allotted an extra 20 million francs. *Ibid.*, p. 155.

But the actual coinage did not even reach these small quotas. So greatly was the Union perturbed by the silver situation that during 1877 the coinage of silver five-franc pieces was, with the exception of Italy, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_42 entirely suspended. This action was, however, only a preliminary to the treaty of November 5, 1878, by which the Latin Union agreed to close its Mints to the free coinage of silver till further action. Though at first *sine die*, the closure

proved in the end perpetual. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_43 Simultaneously with the precautionary measures of the Latin Union, Russia suspended, in 1876, the free coinage of silver except to such an amount as was necessary for the purposes of her trade with China, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_44 and the Imperial Decree of November 22, 1878, directed that all customs duties above 5 roubles and 15 copecks should be payable in gold. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_45 Austria in like manner suspended the free coinage of silver in 1879. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_46

On the other side of the Atlantic, an important event had taken place in the United States. In 1870 that Government resolved to consolidate the Mint laws, which had not been revised since 1837, in a comprehensive statute. Since the legislation of 1853, the silver dollar was the only coin which the United States Mints coined freely. But in the new consolidated Mint Statute of 1873, the silver dollar was deleted from the list of coins to be issued from the Mint, so that it virtually amounted to suspension of the free coinage of silver in the United States. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_47 The silver dollars previously coined continued to circulate as full legal tender, but that power was taken away by the law of June, 1874, which declared that "the silver coins of the United States shall be a legal tender at their nominal value for any amount not exceeding five dollars in any one payment."

The other factor appealed to in explanation of the dislocation of the relative values of gold and silver was the great increase in the production of silver as compared to gold.

TABLE IX
RELATIVE PRODUCTION OF GOLD AND SILVER
(OUNCES)

Period	Total Production		Annual Average Production		Index Number for Average Annual Production	
	Gold	Silver	Gold	Silver	Gold	Silver
1493-1600	24,266,620	734,125,960	224,693	6,797,463	100	100
1601-1700	29,330,445	1,197,073,100	293,304	11,970,731	130.5	176.1
1701-1800	61,066,215	1,633,672,035	610,662	16,336,720	271.6	269.7
1801-1840	20,466,552	601,155,495	512,217	20,026,667	227.9	293.1
1641-1870	143,166,224	931,091,326	4,772,676	31,036,376	2,124.1	456.6
1671-1690	106,950,602	1,715,039,955	5,347,545	65,751,996	2,375.4	1,261.5

The history of the production of the precious metals in modern times begins from the year 1493, a date which marks the discovery of the American continent. Reviewing the results of the production from 1493 to 1893, a period in all of 400 years, we find that during the first hundred years the production of gold and silver rises at a uniform rate of progression. Assuming the annual average production of each during the first century (1493-1600) in the modern history of their production to be 100, it will be seen that in the next century (1601-1700) the index number for the production of gold rises to 130 and that of silver to 176. This

rate of progression is also kept up in the succeeding century (1700-1800), during which the figure for both gold and silver approximates to 270, and continues without much disturbance up to 1840, when the respective index numbers stood at 228 for gold and 293 for silver. From this point onwards, the relative production of the two metals underwent a complete revolution. During the next thirty years (1841-70) the production of gold reached unprecedented heights, while that of silver lagged behind, relatively speaking. The index number for silver production advanced only to 450, but that for gold went up to 2,124. This revolution was followed by a counter-revolution, as a result of which the position as it stood at the end of 1870 was well-nigh reversed. The production of gold received a sudden check, and though it had increased enormously between 1840-70 it remained stationary between 1870-93. On the other hand, the production of silver, which was steady between 1841-70, increased threefold between 1870-93, so that the index number for its average annual production during the latter period stood at 1,260.

In the controversy which arose over the reasons, which brought about this dislocation and decline in the value of silver in terms of gold, there were parties to whom one of these two factors was a sufficient cause. One side argued that had suspension or demonetisation of silver not taken place, its value could never have fallen. This position was vehemently challenged by the other side, which believed in the over-supply of silver as the primary cause of its depreciation. Now, was the argument from relative over-supply sufficient to account for the fall in the gold value of silver? On the face of it, the explanation has the plausibility of a simple proposition. It is one of the elementary theorems of political economy that the value of a thing varies inversely with its supply, and if the supply of silver had largely increased, what could be more natural than that its value in terms of gold should fall? The following were the relevant facts which formed the basis of the argument:—

CHART III

RELATIVE VALUES AND RELATIVE PRODUCTION OF GOLD AND SILVER

The facts thus presented led to two conclusions. The first is that the supposed enormous increase in the relative production of

silver was an assumption which had no foundation in reality. On the contrary, a glance at the figures for relative production discloses the curious fact that since the beginning of the eighteenth century silver, instead of rising, has been falling in proportion. With the exception of the first quarter of the nineteenth century, silver had formed, throughout the two centuries covered by the table, a diminishing proportion as compared with gold.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_49 Indeed, never was the proportion of silver so low as it was in the latter half of the nineteenth century, and even when after 1873 it began to grow it did not reach half the magnitude it had reached in the beginning of the eighteenth century. The second conclusion which these facts were claimed to sustain was that the value of silver in terms of gold did not move in sympathy with its supply relative to that of gold. According to theory, the value of silver should have been rising because the relative volume of its production had been diminishing. On the other hand, a closer examination of the figures of relative values and relative productions, as given in the foregoing table, instead of showing any close correlation (*see* Chart III) between them, pointed to the contrary. Instead of supply and value being inverse in proportion, it showed that as its supply was falling there was also a fall in its value. Such being the facts of history, it was contended that they gave no support to those who rested their case on over-supply rather than on demagnetisation as a sufficient explanation for the depreciation of silver.

Apart from such minor points, the issue was considerably narrowed by the peculiarity of the events of the twenty years preceding and following the year 1873 mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_50 Compare, it was said, the period commencing with 1848 and ending with the year 1870 with the period following 1870, and there emerges the arresting fact that these two periods, though they have been the opposite of each other with reference to the relative values of the two metals, were alike with reference to the changes in their relative supply. The period between 1870 and 1893 on the side of relative production was marked by the preponderance of silver. The period between

1848 and 1870 is an exact parallel to the above period with respect to changes in the relative supply of the two precious metals, only in this case it was gold that had increased in volume. Now, if it is over-supply that governed the value relations of the two metals in the second period (1870-93) the same should be true of their value relations in the first period (1848-70). Was there, then, a disturbance in the relative values of the two metals in the first period anything like what took place in the second period? It was insisted that the disturbance in the ratios of production of the two metals in the first period was enormously greater than that which occurred in the second period. Indeed, comparatively speaking, the disturbance in the second period was nothing to speak of. And yet their relative value during the first period was well-nigh constant at the ratio of 1 to 15 1/2, while in the second it fluctuated between 16.10 and 26.75. Those, who argued that the value of silver fell after 1873 because of its over-supply, were thus faced with the problem as to why the value of gold did not fall when its supply had become so abundant before 1873. The whole controversy was therefore centred into the question as to what could have made this difference in the two situations? If the colossal increase in the production of gold in the first period did not raise the value of silver by more than 2 per cent., how was it that a comparatively insignificant rise in the relative production of silver in the second period led to such an enormous rise in the price of gold? What was the controlling influence present in the one case which was absent in the other? Those who held that it was demonetisation of silver that was responsible for its depreciation argued that, though alike in every way, the two periods differed in one important particular. What distinguished them was the fact that in the former it was a common practice to define the standard money of a country as a certain quantity of gold *or* a certain quantity of silver. Prior to 1803 the two metals were rated differently in different countries, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_51 but since that date the rating of 1 to 15 1/2 became more uniform, with the result that the monetary standard throughout that period was either 1 gr. of gold *or* 15 1/2 grs. of silver. On the other hand, during the second period, the *or* which characterised the first period was deleted by the silver-demonetising and suspending decrees. In other words, the

first period was characterised by the prevalence of bimetallism under which the two metals could be used inter-changeably at a fixed given ratio. In the second period they could not be so used owing to the fact that the fixed ratio necessary for interchange had been abrogated. Now, could the existence or non-existence of a fixed ratio be said to be such a powerful influence as to make the whole difference that set the two periods in such marked contrast? That this was the factor which made the whole difference was the view of the bimetallists. It was said that, by virtue of the monetary system prevalent during the first period, gold and silver were rendered substitutes and were regarded as "one commodity of two different strengths." So related, the conditions of supply had no effect upon their ratio of exchange, as would have been the case in respect of a commodity without a substitute. In the case of commodities which are substitutes, the relative scarcity of one can give it no greater value in terms of the other than that defined by their ratio of exchange, because by reason of the freedom of substitution the scarcity can be made good by the abundance of the other. On the other hand, the relative abundance of one cannot depreciate its value in terms of the other below the ratio of exchange, because its superfluity can be absorbed by the void created in consequence of a paucity of the other. So long as they remain substitutes with a fixed ratio of substitution, nothing originating in demand or supply could disturb their ratio. The two being one commodity, whatever changes take place in the demand or supply of either system beyond the needs of commerce express themselves in the price level exactly as though one of them alone was the money medium; but their ratio of exchange will be preserved intact in any case

In support of this was cited the authority of Jevons, who said [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_52:—](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_52:)

“Whenever different commodities are thus applicable to the same purposes their conditions of demand and exchange are not independent. Their mutual ratio of exchange cannot vary much for it will be closely defined by the ratio of their utilities. Beef and mutton differ so slightly that people eat them almost indifferently. But the wholesale price of mutton, on an average, exceeds that of beef in the ratio of 9 to 8, and we must therefore conclude that

people generally esteem mutton more than beef in this proportion, otherwise they would not buy the dear meat..... So long as the equation of utility holds true, the ratio of exchange between mutton and beef will not diverge from that of 8 to 9. If the supply of beef falls off people will not pay a higher price for it, but will eat more mutton; and if the supply of mutton falls off, they will eat more beef..... We must, in fact, treat beef and mutton as one commodity of two different strengths—just as gold at 18 carats and gold at 20 carats are hardly considered as two but rather as one commodity, of which twenty parts of one are equivalent to eighteen of the other.

“It is upon this principle that we must explain, in harmony with Cairnes' views, the extraordinary permanence of the ratio of exchange of gold and silver, which from the commencement of the eighteenth century up to recent years never diverged much from 15 to 1. That this fixedness of ratio did not depend entirely upon the amount or cost of production is proved by the very slight effect of the Australian and Californian gold discoveries, which never raised the gold price of silver more than about $4\frac{2}{3}$ per cent., and failed to have more than a permanent effect of $1\frac{1}{2}$ per cent. This permanence of relative values may have been partially due to the fact that gold and silver can be employed for exactly the same purposes, but that the superior brilliancy of gold occasions it to be preferred, unless it be about 15 or $15\frac{1}{2}$ times as costly as silver. Much more probably, however, the explanation of the fact is to be found in the fixed ratio of $15\frac{1}{2}$ to 1, according to which these metals are exchanged in the currency Of France and some other continental countries. The French Currency Law of the year XI established an artificial equation—

$$\text{Utility of gold} = 15\frac{1}{2} \times \text{utility of silver}$$

and it is probably not without some reason that Wolowski and other recent French economists attributed to this law of replacement an important effect in preventing disturbance in the relations of gold and silver."

##It is this artificiality of the bimetallic system which unfortunately befogs the minds of some people and prejudices

those of others. Some do not understand why the price determination of two commodities used as money should be so different from the price determination of any other two commodities as to be governed by a ratio fixed by law. Others are puzzled as to why, if gold and silver are a pair of substitutes, should they require a legal ratio while other pairs of substitutes circulate without a legal ratio, merely on the basis of the ratio of their utility. These difficulties are well explained away by Prof. Fisher thus:

“.... ..two forms of money differ from a random pair of commodities in being substitutes. Two substitutes proper are regarded by the consumer as a single commodity. Thus lumping together of the two commodities reduces the number of demand conditions, but does not introduce any indeterminateness into the problem because the missing conditions are at once supplied by a *fixed ratio of substitution*. Thus if ten pounds of cane sugar serve the same purpose as eleven pounds of beet-root sugar, their fixed ratio of substitution is ten to eleven..... In these cases the fixed ratio is based on the relative capacities of the two commodities to fill a common need, and is quite antecedent to their prices..... The substitution ratio is fixed by nature, and in turn fixes the price ratio.

“In the single case of money, however, there is no fixed ratio of substitution..... We have here to deal not with relative sweetening power, nor relative nourishing power, nor with any other capacity to satisfy wants—no capacity inherent in the metals and independent of their prices. We have instead to deal only with relative *purchasing* power. We do not reckon a utility in the metal itself, but in the commodities it will buy. We assign their respective desirabilities or utilities to the sugars..... before we know their prices, but we must inquire the relative circulating value of gold and silver before we can know at what ratio we ourselves prize them. To us the ratio of substitution is incidentally the price ratio. The case of the two forms of money is unique. They are substitutes, but have no natural ratio of substitution, dependent on consumers' preferences.

“The foregoing considerations..... are overlooked by those who imagine that a fixed legal ratio is merely superimposed upon a system of supply and demand already determinate, and who seek to prove thereby that such a ratio is foredoomed to failure..... the analogy is unsound..... Gold and silver are not completely analogous even to two substitutes because for two forms of money there is no consumers' natural ratio of substitution. There seems, therefore, room for an artificial ratio.....” —*Purchasing Power of Money*, 1911, pp. 376-77

pp. 228-29. In the illustrations given by Prof. Fisher he appears, although he does not mean it, to make the success or failure of bimetallism hang upon the question whether or not the two metals are maintained in circulation. For in the illustration which he gives to show the failure of bimetallism—Fig. 14 (b)—his film /shows gold to be entirely thrown out of circulation ; while in the illustration he gives to show the success of bimetallism—Fig. 15 (b)—his film shows gold to be only partially thrown out of circulation. But there seems to be no reason to suppose that there cannot be a third possibility, namely, that while the position of the film is as in Fig. 14 (b)—a possibility in which bimetallism succeeds although one of the two metals is entirely pushed out of circulation. For the success of bimetallism it is not necessary that both the metals should remain in circulation. Its success depends upon whether or not the compensatory action succeeds in restoring the relative values of the two bullions to that legally established between the two coins. If it succeeds in achieving that, the ratio would be preserved even if the compensatory action drives one metal entirely out of circulation.

But granting that before 1873 the ratio was preserved owing to the compensatory action of the bimetallic law, can it be said that it would have been maintained after 1873 if the law had not been suspended? To give an uncompromising affirmative as the bimetallists did is to suppose that bimetallism can work under all conditions. As a matter of fact, though it is workable under certain conditions it is not workable under other conditions. These conditions are well described by Prof. Fisher.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_53 The question under bimetallism is whether the market ratio between gold and silver bullion will always be the same as the legal ratio between gold and silver coins freely minted and possessing unlimited legal-tender power. Now supposing the supply of silver bullion has increased relatively to that of gold bullion, the result will obviously be a divergence in the mint and the market ratio. Will the compensatory action of the bimetallic law restore the equilibrium? It may succeed in doing it

or it may not. If the increase in the supply of silver bullion and the decrease in that of gold bullion are such that a decrease in that of silver caused by its inflow into the currency and an increase in that of gold caused by its outflow from currency can restore them to their old levels as bullion, bimetallism would succeed ; in other words, the market ratio of the two bullion's would tend to return to the mint ratio. But if the increase in the supply of silver bullion and the decrease in that of gold is such that the outflow of silver bullion into currency reduces the level of the silver bullion to the old level, but the outflow of gold bullion from currency does not suffice to raise the level of the gold bullion to the old level, or if the outflow of gold from currency raises the level of the gold bullion to the old level, but the inflow of silver into currency does not result in the reduction of the level of silver bullion to its old level, bimetallism must fail; in other words, the market ratio of the two bullion's will remain diverted from the mint ratio legally established between their coins.

Under which of these two possibilities could the circumstances arising after 1873 have fallen? That is a question about which no one can say anything definitely. Even Jevons, who admitted the success of the bimetallic law in the earlier period, was not very sanguine about its success in the latter period. It was he who observed mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/28C.Problem of Rupee CHAPTER II.htm - _msocom_54

"that the question of bimetallism is one which does not admit of any precise and simple answer. It is essentially an indeterminate problem. It involves several variable quantities and many constant quantities, the latter being either inaccurately known or, in many cases, altogether unknown....."

Nonetheless, it is certain that the divergence between the mint ratio and the market ratio under a bimetallic system must be smaller than may be the case where there is no bimetallic system. Whenever the market ratio diverges from the mint ratio the compensatory action under the bimetallic law tends to restore the equilibrium, and even where it fails in restoring it, it does succeed in abridging the gulf between the two ratios. That being the case, it is safe to argue that had there been no demonetisation of silver after 1873 the ratio between gold and silver would have probably

been preserved as it was during the monetary disturbances of the earlier period. At any rate, this much is certain, that the market ratio between the two metals could not have diverged from the mint ratio to the extent it actually did.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28C.Problem of Rupee CHAPTER II.htm - _msocom_55

It is therefore a sad commentary on the monetary legislation of the seventies that if it did not actually help to create, for no purpose, a problem unknown before, it certainly helped to make worse a bad situation. Prior to 1870, not all countries had a common currency. There were India and countries of Western Europe which were exclusively on a silver basis, and others, like England and Portugal, which were exclusively on a gold basis, and yet none of them felt the want of a common standard of value in their mutual dealings. So long as there existed the fixed-ratio system in France and the Latin Union the problem was really provided for, for under it the two metals behaved as one and thereby furnished a common standard, although all countries did not use the same metal as their standard money. It was therefore a matter of comparative indifference to most countries which metal they used so long as there was some one country which used either at a certain defined ratio. With the destruction of this fixed ratio what was thus a matter of comparative indifference became a matter of supreme concern. Every country which had before enjoyed the benefits of a common international standard without having a common currency was faced with a crisis in which the choice lay between sacrificing its currency to securing a common standard or hugging its currency and foregoing the benefits of a common standard. That exigencies of a common standard ultimately led to its accomplishment was as it should have been, but it was not a fact before a great deal of harm and some heavy burdens had brought home to people what the want of it really meant to them.

Chapter III

THE PROBLEM OF THE RUPEE:
ITS ORIGIN AND ITS SOLUTION
(HISTORY OF INDIAN
CURRENCY & BANKING)

CHAPTER III
THE SILVER STANDARD AND THE EVILS OF ITS
INSTABILITY

The economic consequences of this rupture of the par of exchange were of the most far-reaching character. It divided the commercial world into two sharply defined groups, one using gold and the other using silver as their standard money. When so much gold was always equal to so much silver, as was the case previous to 1873, it mattered very little, for the purposes of international transactions, whether a country was on a gold or on a silver standard ; nor did it make any difference in which of the two currencies its obligations were stipulated and realised. But when, owing to the dislocation of the fixed par, it was not possible to define how much silver was equal to how much gold from year to year or even from month to month, this precision of value, the very soul of pecuniary exchange, gave place to the uncertainties of gambling. Of course, all countries were not drawn into this vortex of perplexities in the same degree and to the same extent, yet it was impossible for any country which participated in international commerce to escape from being dragged into it. This was true of India as it was of no other country. She was a silver-standard country intimately bound to a gold-standard country, so that her economic and financial life was at the mercy of blind forces operating upon the relative values of gold and silver which governed the rupee-sterling exchange.

The fall increased the burden of those who were under an obligation to make gold payments. Amongst such, the most heavily charged was the Government of India. Owing to the exigencies of its political

constitution, that Government has been under the necessity of making certain payments in England to meet : (1) interest on debt and on the stock of the guaranteed railway companies ; (2) expenses on account of the European troops maintained in India; (3) pensions and non-effective allowances payable in England; (4) cost of the home administrationmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_1; and (5) stores purchased in England for use or consumption in India. England being a gold-standard country, these payments were necessarily gold payments. But the revenues of the Government of India out of which these payments were met were received in silver, which was the sole legal-tender money of the country. It is evident that even if the gold payments were a fixed quantity their burden must increase *pan passu* with the fall in the gold value of silver. But the gold payments were not a fixed quantity. They have ever been on the increase, so that the rupee cost of the gold payments grew both by reason of the growth in their magnitude, and also by reason of the contraction of the medium, i.e. the appreciation of gold, in which they were payable. How greatly this double levy diminished the revenues of India, the figures in Table XI give a convincing testimony.

1890-91	1 6.090	9,06,11,857	4,65,48,302	4,40,63,555
1891-92	1 4.733	10,44,44,52 9	6,54,52,999	3,89,91,530

The effect of such a growing burden on the finance of the Government may well be imagined; the condition of the Government, embarrassing at first, later became quite desperate under this continuously increasing burden. It enforced a policy of high taxation and rigid economy in the finances of the Government. Analysing the resource side of the Indian Budgets from the year 1872-73, we find that there was hardly any year which did not expire without making an addition to the existing imposts of the country. In 1872-73, there commenced the levy of what were called Provincial Rates. The fiscal year 1875-76 witnessed the addition of R. 1 per gallon in the excise duty on spirits. In 1877-78 the Pass Duty on Malwa opium was raised from Rs. 600 to Rs. 650 per chest. An addition of a License Tax and Local Rates was made in the year 1878-79, and an increase of Rs. 50 per chest took place in the Malwa Opium Duty in the following year. With the help of these imposts the Government expected to place its finances on an adequate basis. By the end of 1882, it felt quite secure and even went so far as to remit some of the taxes, which it did by lowering the customs duties and the Patwari Cess in the North-Western Provinces. But the rapid pace in the fall of the exchange soon showed that a resort to further taxation was necessary to make up for the increased cost of the sterling payments. To the existing burdens, therefore, was added in 1886 an Income Tax, a duty of 5 per cent. on imported and also on non-illuminating petroleum. The Salt Duty was raised in 1888 in India from Rs. 2 to Rs. 2 1/2 and in Burma from 3

annas to R. 1 per maund. The Patwari Cess of the North-Western Provinces, repealed in 1882, was re-imposed in 1888. The rates of duty on imported spirit and the excise duties on spirits were not only raised in 1890, but were afterwards added to in every province. An excise duty on malt liquor was levied in 1893, and another on salted fish at the rate of 6 annas per maund. The yield of the taxes and duties levied from 1882-83 wasmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_3 as follows:—

Sources	1882-83	1892-93
	Rs.	Rs.
Salt	5,67,50,0 00	8,14,90,0 000
Excise	3,47,50,0 00	4,97,90,0 00
Customs	1,08,90,0 00	1,41,80,0 00
Assessed Taxes	48,40,000	1,63,60,0 00

All this additional burden was due to the enhanced cost of meeting the gold payments, and”would not have been necessary but for the fall in the exchange."mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_4

Along with this increase of resources the Government of India also exercised the virtue of economy in the cost of administration. For the first time in its history, the Government turned to the alternative of employing the comparatively cheaper agency of the natives of the country in place of the imported Englishmen. Prior to 1870, the scope of effecting economy along this line was very limited. By the Civil Service Reforms of 1853mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_5 the way was cleared for the appointment of Indians to the posts reserved by the Statute of 1793mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_6 for the members of the covenanted Civil Service. But this reform did not conduce to any economy in the cost of the administration,

because the Indian members carried the same high scale of salaries as did the English members of the Civil Service. It was when the Statute of 1870 (33 Vic. c. 3) was passed permitting the appointment by nomination of non-covenanted Indians to places reserved for the covenanted Civil Service on a lower scale of salary, that a real scope for economy presented itself to the Government of India. Hard pressed, the Government of India availed itself of the possibilities for economy held out by this statute. So great was the need for economy and so powerful was the interest of the Government in reducing its expenditure that it proceeded, notwithstanding increased demands for efficient administration, to substitute the less expensive agency of non-covenanted civilians in place of the more expensive agency of the covenanted civilians. The scale on which this substitution was effected was by no means small, for we find that between 1874 and 1889 the strength of the covenanted service recruited in England was reduced by more than 22 per cent., and was further expected to be reduced by about 12 per cent., by the employment of unconvenanted Indians to the posts usually reserved for covenanted civilians mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_7. Besides substituting a cheap for a dear agency in the administration, the Government also sought to obtain relief by applying the pruning knife to the rank growth in departmental extravagances.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_8 Even with such heroic efforts to increase the revenue and reduce the expenditure the finances of the Government throughout the period of the falling exchange were never in a flourishing state, as is shown in Table XII.

Much more regrettable was the inability of the Government, owing to its financial difficulties, to find money for useful public works. The welfare of the Indian people depends upon turning to best account the resources which the country possesses. But the people have had very little of the necessary spirit of enterprise in them. The task, therefore, has fallen upon the Government of India to provide the country with the two prime requisites of a sustained economic life, namely a system of transport and a network of irrigation. With this object in view the Government had inaugurated a policy of developing what were called "Extraordinary Public Works," financed by capital borrowings. For such borrowings India, as was to be expected, hardly offered any market, the people being too poor and their savings too scanty to furnish a modicum of the required capital outlay. Like all governments of poor

peoples, the Government of India had therefore to turn to wealthier countries that had surplus capital to lend. All these countries unfortunately happened to be on the gold standard. As long as it was possible to say that so much gold was equal to so much silver, the English investor was indifferent whether the securities of the Government of India were rupee securities or sterling securities. But the fall in the gold value of silver was also a fall in the gold value of the rupee securities, and what was once a secure investment ceased to be so any more. This placed the Government in a difficult position in the matter of financing its extraordinary public works. Figures in Table XIII are worth study.

The English investor would not invest in the rupee securities. An important customer for the Indian rupee securities was thus lost. The response of the Indian money market was inadequate.

1891-92	16.73 3	50,023,1 42	27,013,61 8	23,009, 524	15,716,7 80	6,825,9 09	467,535

To issue sterling securities was the only alternative to enable the Government to tap a bigger and a more constant reservoir for the drawing of capital to India; but as it was bound to increase the burden of the gold payments, which it was the strongest interest of the Government to reduce, the resort to the London money market, unavoidable as it became, was somewhat restrained# with the result that the expansion of extraordinary public works did not proceed at a pace demanded by the needs of the country.

#During the period of falling exchange the distribution of the debt of India was as follows:—

	<i>Sterling Debt</i>	<i>Rupee Debt</i>
End of 1873-74	41,117,617	66,41,72,900
End of 1898-99	124,268,605	1,12,65,04,340

Indian Currency Committee (1898), Appendix II p. 179

The effects of this financial derangement, consequent on the fall of the exchange, were not confined to the Government, of India. They were immediately felt by the municipalities and other local bodies who were dependent upon the Government for financial aid. So long as the cash

balances were overflowing in the treasury of the Government," one of the most useful ways" to employ them was found in lending a portion of them to these local institutions. As they had just then been inaugurated under the local self-government policy of Lord Ripon's regime, and were looked upon only as an experiment, their taxing and borrowing powers were rigidly limited. Consequently, this financial aid from the Central Government by way of temporary advances was a resource of inestimable value to them. When, however, the cash balances of the Central Government began to diminish owing to the continued losses by exchange, these facilities were severely curtailed, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_9 so that the very vitality of these institutions was threatened just at the moment when they needed all help to foster their growth and strengthen their foundations.

Addressing the Secretary of State, the Government of India, in a dispatch of February 2, 1886, observed mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_10 —

"10. We do not hesitate to repeat that the facts set forth in the preceding paragraphs are, from the point of Indian interests, intolerable ; and the evils which we have enumerated do not exhaust the catalogue. Uncertainty regarding the future of silver discourages the investment of capital in India, and we find it impossible to borrow in silver except at an excessive cost.

"On the other hand, the Frontier and Famine Railways which we propose to construct, and the Coast and Frontier defences which we have planned, are imperatively required and cannot be postponed indefinitely.

"We are forced, therefore, either to increase our sterling liabilities, to which course there are so many objections, or to do without the railways required for the commercial development of the country, and its protection against invasion and the effects of famine.

"11. Nor can the difficulties which local bodies experience in borrowing in India be overlooked. The Municipalities of Bombay and Calcutta require large sums for sanitary improvements, but the high rate

of interest which they must pay for silver loans operates to deter them from undertaking expensive works, and we need hardly remind your Lordship that it has quite recently been found necessary for Government to undertake to lend the money required for the construction of docks at Calcutta and Bombay, and that when the Port Commissioners of Calcutta attempted to raise a loan of 75 lakhs of rupees in September, 1885, guaranteed by the Government of India, the total amount of tenders was only Rs. 40,200, and no portion of this insignificant amount was offered at par....."

The importation of capital on private account was hampered for similar reasons, to the great detriment of the country. It was urged on all hands, and was even recommended by a Royal Commission, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_12 that one avenue of escape from the ravages of recurring famines, to which India so pitifully succumbed at such frequent intervals, was the diversification of her industries. To be of any permanent benefit, such diversified industrial life could be based on a capitalistic basis alone. But that depended upon the flow of capital into the country as freely as the needs of the country required. As matters then stood, the English investor, the largest purveyor of capital, looked upon the investment of capital in India as a risky proposition. It was feared that once the capital was spread out in a silver country every fall in the price of silver would not only make the return uncertain when drawn in gold, but would also reduce the capital value of his investment in terms of gold, which was naturally the unit in which he measured all his returns and his outlays. This check to the free inflow of capital was undoubtedly the most serious evil arising out of the rupture of the par of exchange.

Another group of people, who suffered from the fall of exchange because of their obligation to make gold payments, was composed of the European members of the Civil Service in India. Like the Government to which they belonged, they received their salaries in silver, but had to make gold remittances in support of their families, who were often left behind in England. Before 1873, when the price of silver in terms of gold was fixed, this circumstance was of no moment to them. But as the rupee began to fall the face of the situation was completely altered. With every fall in the value of silver they had to pay more rupees out of their fixed salaries to obtain the same amount of gold. Some relief was no doubt given to them in the matter of their remittances. The Civil Servants were permitted, at a sacrifice to the Government, to make their remittances at

what was called the Official Rate of Exchange.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_13](#) It is true the difference between the market rate and the official rate was not very considerable. None the less, it was appreciable enough for the Civil Servants to have gained by 2 1/2 per cent. on the average of the years 1862-90.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_14](#) at the cost of the Government. The Military Servants obtained a similar relief to a greater degree, but in a different way. Their salary was fixed in sterling, though payable in rupees. It is true the Royal Warrant which fixed their salary also fixed the rate of exchange between the sterling and the rupee for that purpose. But as it invariably happened that the rate of exchange fixed by the Warrant was higher than the market rate, the Military Servants were compensated to the extent of the difference at the cost of the Indian Exchequer##.

##Cf. F. S. 1887-8, pp. 39-40.

This cost was as follows —

1847 – 75	Rs. 6,40,000
1885 – 86	Rs. 4,00,000
1884 – 85	Rs. 18,43,000
1886 – 87	Rs. 5,15,000

This relief was, comparatively speaking, no relief to them. The official or the warrant rates of exchange, though better than the market rates of exchange, were much lower than the rate at which they were used to make their remittances before 1873. Their burden, like that of the Government, grew with the fall of silver, and as their burden increased their attitude became alarmist. Many were the memorialists who demanded from the Government adequate compensation for their losses on exchange.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_15](#) The Government was warned[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_16](#)that

"the ignorant folk who think India would be benefited by lowering

present salaries are seemingly unable to comprehend that such a step would render existence on this reduced pay simply impossible, and that recourse would of necessity be had to other methods of raising money.”

Such, no doubt, was the case in the earlier days of the East India Company, when the Civil Servants fattened on pickings because their pay was small,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_17 and it was to put a stop to their extortion's that their salaries were raised to what appears an extra-ordinary level. That such former instances of extortion's should have been held out as monitions showed too well how discontented the Civil Service was owing to its losses through exchange.

Quite a different effect the fall had on the trade and industry of the country. It was in a flourishing state as compared with the affairs of the Government or with the trade and industry of a gold-standard country like England. Throughout the period of falling silver there was said to be a progressive decline relatively to population in the employment afforded by various trades and industries in England. The textile manufactures and the iron and coal trade were depressed as well as the other important trades, including the hardware manufactures of Birmingham and Sheffield, the sugar-refining of Greenock, Liverpool, and London, the manufactures of earthenware, glass, leather, paper, and a multitude of minor industries. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_18 The depression in English agriculture was so widespread that the Commissioners of 1892 were "unable to point to any part of the country in which [the effects of the depression] can be said to be entirely absent," and this notwithstanding the fact that the seasons since 1882 "were on the whole satisfactory from an agricultural point of view." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D1. Problem of Rupee CHAPTER III.htm - _msocom_19 Just the reverse was the case with Indian trade and industry. The foreign trade of the country, which had bounced up during the American Civil War, showed greater buoyancy after 1870, and continued to grow throughout the period of the falling exchange at a rapid pace. During the short space of twenty years the total imports and exports of the country more than doubled in their magnitude, as is shown by Table XIV.

	Manufactured	Raw	Manufactured	Raw
	Rs.	Rs.	Rs.	Rs.
1879	25,98,65,827	13,75,55,837	5,27,80,340	59,67,27,991
1892	36,22,31,872	26,38,18,431	16,42,47,566	85,52,09,499
Percentage of increase	39	91	211	43
Total Annual	2.8	6.5	15	3

Not only had the trade of India been increasing, but the nature of her industries was also at the same time undergoing a profound change. Prior to 1870, India and England were, so to say, non-competing groups. Owing to the protectionist policy of the Navigation Laws, and owing also to the substitution of man by machinery in the field of production, India

had become exclusively an agricultural and a raw-material-producing country, while England had transformed herself into a country which devoted all her energy and her resources to the manufacturing of raw materials imported from abroad into finished goods. How marked was the contrast in the industrial pursuits in the two countries is well revealed by the analysis of their respective exports in Table XV.

After 1870, the distribution of their industrial pursuits was greatly altered, and India once again began to assume the role of a manufacturing country. Analyzing the figures for Indian imports and exports for the twenty years succeeding 1870, (*see Table XVI*) we find that the progress in the direction of manufactures formed one of the most significant features of the period.

This change in the industrial evolution was marked by the growth of two principal manufactures. One of them was the manufacture of cotton. The cotton industry was one of the oldest industries of India, but during 100 years between 1750 and 1850 it had failed into a complete state of decrepitude. Attempts were made to resuscitate the industry on a capitalistic basis in the sixties of the nineteenth century and soon showed signs of rapid advance. The story of its progress is graphically illustrated in the following summary in Table XVII :—

TABLE XVII
THE DEVELOPMENT OF INDIA COTTON TRADE AND
INDUSTRY

	Growth of Trade (Average Annual Quantities				
	in each Quinquennium)				
	1870-71	1875-76	1880-81	1885-86	1890-91
	to	to	to	to	to

	1874-75	1879-80	1884-85	1889-90	1894-95
Imports of raw cotton—thousands of cwts.	23	52	51	74	89
Imports of raw cotton—thousands of cwts.	5236	3988	5477	5330	4660
Imports of twist and yarn	33.55	33.55	44.34	49.09	44.79
	Growth of Industry (at end of each fifth year)				
Number of mills	48	58	81	114	143
Number of spindles—000—omitted	1,000	1,471	2,037	2,935	3,712
Number of looms—000—omitted	10	13	16	22	34
Number of persons employed		39,537	61,836	99,224	

Another industry which figured largely in this expansion of Indian manufactures was jute. Unlike the cotton industry of India, the jute industry was of a comparatively recent origin. Its growth, different from that of the cotton industry, was fostered by the application of European capital, European management, and European skill, and it soon took as deep roots as the cotton industry and flourished as well as the latter did, if not better. Its history was one of continued progress as will be seen from Table XVIII.

This increasing trend towards manufactures was not without its indirect effects on the course of Indian agriculture. Prior to 1870 the Indian farmer, it may be said, had no commercial outlook. He cultivated not so much for profit as for individual self-sufficiency. After 1870 farming

tended to become a business and crops came more and more to be determined by the course of market prices than by the household needs of the farmer. This is well illustrated by figures in Table XIX.

Such was the contrast in the economic conditions prevalent in the two countries. This peculiar phenomenon of a silver-standard country steadily progressing, and a gold-standard country tending to a standstill, exercised the minds of many of its observers.

THE PROBLEM OF THE RUPEE:
ITS ORIGIN AND ITS SOLUTION
(HISTORY OF INDIAN
CURRENCY & BANKING)

CHAPTER III Continued---
TABLE XVIII

DEVELOPMENT OF JUTE INDUSTRY AND TRADE

Growth	Average Annual of each Quinquennium				
	1870-71 to 1874-75	1875-76 to 1879-80	1880-81 to 1884-85	1885-86 to 1889-90	1890-91 to 1894-95
Exports—

Spindles, 000 omitted		88	88	138.4	172.4
Persons employed, in thousands		38.8	38.8	52.7	64.3

The chief cause was said to be the inability of the English manufacturers to hold out in international competition. This inability to compete with the European rivals was attributed to the prevalence of protective tariffs and subsidies which formed an essential part of the industrial and commercial code of the European countries.

TABLE XIX

GROWTH OF AGRICULTURAL EXPORTS OF INDIA

	1868-69	1873-74	1877-78	1882-83	1887-88	1891-92
Wheat	100	637.41	2,313.47	5,152.36	4,914.37	11,001.44
Opium	100	118.38	123.83	122.47	120.20	116.82

				5		
Coffee	100	86.04	69.98	85.31	64.59	74.11

Nothing of the kind then existed in India, where trade was as free and industry as unprotected as any could have been, and yet the Lancashire cotton-spinner, the Dundee jute manufacturer and the English wheat-grower complained that they could not compete with their rivals in India. The cause, in this case, was supposed to be the falling exchange. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D2. Problem of Rupee CHAPTER III.htm - _msocom_1](#) So much were some people impressed by this view that even the extension of the Indian trade to the Far East was attributed to this cause. Already, it was alleged, the dislocation of the par of exchange between gold and silver had produced a kind of segregation of gold-using countries and silver-using countries to the exclusion of each other. In a transaction between two countries using the same metal as standard it was said the element of uncertainty arising from the use of two metals varying in terms of each other was eliminated. Trade between two such countries could be carried on with less risk and less inconvenience than between two countries using different standards, as in the latter case the uncertainty entered into every transaction and added to the expense of the machinery by which trade was carried on. That the Indian trade should have been deflected to other quarters [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D2. Problem of Rupee CHAPTER III.htm - _msocom_2](#) where, owing to the existence of a common standard the situation trade had to deal with was immune from uncertainties, was readily admitted. But it was contended that there was no reason why, as a part of the segregation of commerce, it should have been possible for the Indian manufacturer to oust his English rival from the Eastern markets to the extent he was able to do (see Table XX, p. 432).

The causes which effected such trade disturbances formed the subject of a heated controversy. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D2. Problem of Rupee CHAPTER III.htm - _msocom_3](#) The point in dispute was whether the changes in international trade, such as they were, were attributable to the monetary disturbances of the time. Those who held to the affirmative explained their position by arguing that the falling exchange gave a bounty to the Indian producer and imposed a penalty on the English producer.

The existence of this bounty, which was said to be responsible for the shifting of the position of established competitors in the field of international commerce, was based on a simple calculation. It was said that if the gold value of silver fell the Indian exporter got more rupees for his produce and was therefore better off, while by reason of the same fact the English producer got fewer sovereigns and was therefore worse off. Put in this naive form, the argument that the falling exchange gave a bounty to the Indian exporters and imposed a penalty on the English exporters had all the finality of a rule of arithmetic. Indeed, so axiomatic was the formula regarded by its authors that some important inferences as to its bearing on the trade and industrial situation of the time were drawn from it. One such inference was that it stimulated exports from and hindered imports into the silver-using countries. The second inference was that the fall of exchange exposed some English producers more than others to competition from their rivals in silver-using countries. Now, can such results be said to follow from the fall of exchange? If we go behind the bald statement of a fall of exchange and inquire as to what determined the gold price of silver the above inferences appear quite untenable. That the ratio between gold and silver was simply the inverse of the ratio between gold prices and silver prices must be taken to be an unquestionable proposition. If therefore the gold price of silver was falling it was a counterpart of the more general phenomenon of the fall of the English prices which were measured in gold, and the rise of the Indian prices which were measured in silver. Given such an interpretation of the event of the falling exchange, it is difficult to understand how it can help to increase exports and diminish imports. International trade is governed by the relative advantages which one country has over another, and the terms on which it is carried on are regulated by the comparative cost of articles that enter into it. It is, therefore, obvious that there cannot be a change in the real terms of trade between countries except as a result of changes in the comparative cost of these goods. Given a fall in gold prices *all round*, accompanied by a rise in silver prices *all round*, there was hardly anything in the monetary disturbance that could be said to have enabled India to increase her exportation of anything except by diminishing her exportation or increasing her importation of something else. From the same view of the question of the falling exchange it follows that such a monetary disturbance could not depress one trade more than another. If the falling or rising exchange was simply an expression of the level of *general* prices, then the producers of all articles were equally affected. There was no reason why the cotton trade or the

wheat trade should have been more affected by the fall of exchange than the cutlery trade.

Not only was there nothing in the exchange disturbance to disestablish existing trade relations in general or in respect of particular commodities, but there was nothing in it to cause benefit to the Indian producer and injury to the English producer. Given the fact that the exchange was a ratio of the two price-levels, it is difficult to see in what sense the English producer, who got fewer sovereigns but of high purchasing power, was worse off than the Indian producer, who got more rupees but of low purchasing power. The analogy of Prof. Marshall was very apt. To suppose that a fall of exchange resulted in a loss to the former and a gain to the latter was to suppose that, if a man was in the cabin of a ship only ten feet high, his head would be broken if the ship sank down twelve feet into a trough. The fallacy consisted in isolating the man from the ship when, as a matter of fact, the same force, acting upon the ship and the passenger at one and the same time, produced like movements in both. In like manner, the same force acted upon the Indian producer and the English producer together, for the change in the exchange was itself a part of the more sweeping change in the general price-levels of the two countries. Thus stated, the position of the English and Indian producer was equally good or equally bad, and the only difference was that the former used fewer counters and the latter a larger number in their respective dealings.

A bounty to the Indian producer and a penalty to the English producer, it is obvious, could have arisen only if the fall of silver in England in terms of gold was greater than the fall of silver in terms of commodities in India. In that case the Indian producer would have obtained a clear benefit by exchanging his wares for silver in England and thus securing a medium which had a greater command over goods and services in India. But *a priori* there could be no justification for such an assumption. There was no reason why gold price of silver should have fallen at a different rate from the gold price of commodities in general, or that there should have been a great difference between the silver prices in England and in India. Statistics show that such *a priori* assumptions were not groundless. (See Table XXI).

It is obvious that if silver was falling faster than commodities, and if silver prices in India were lower than silver prices in England, we should have found it evidenced by an inflow of silver from England to India. What were the facts? Not only was there no extraordinary flow of silver to India, but the imports of silver during 1871-93 were much smaller than in the twenty years previous to that period.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D2. [Problem of Rupee CHAPTER III.htm - _msocom_5](#) This is as complete a demonstration as could be had of the fact that the silver prices in India were the same as they were outside, and consequently the Indian producer had very little chance of a bounty on his trade.

Although such must be said to be the *a priori* view of the question, the Indian producer was convinced that his prosperity was due to the bounty he received. Holding such a position he was naturally opposed to any reform of the Indian currency, for the falling exchange which the Government regarded a curse he considered a boon. But however plausible was the view of the Indian producer, much sympathy would not have been felt for it had it not been coupled with a notion, most commonly held, that the bounty arose from the *export trade*, so that it became an article of popular faith that the fall of exchange was a source of gain to the *nation as a whole*. Now was it true that the bounty arose from the export trade? If it were so, then every fall of exchange ought to give a bounty. But supposing that the depreciation of silver had taken place in India *before* it had taken place in Europe could the fall of exchange thus brought about have given a bounty to the Indian exporter? As was explained above, the Indian exporter stood a chance of getting a bounty only if with the silver he obtained for his produce he was able to buy more goods and services in India. To put the same in simpler language, his bounty was the difference between the price of his product and the price of his outlay. Bearing this in mind, we can confidently assert that in the supposed case of depreciation of silver having taken place in India first, such a fall in the Indian exchange would have been accompanied by a penalty instead of a bounty on his trade. In that case, the exporter from India would have found that though the Indian exchange, i.e. the gold price of silver, had fallen, yet the ratio which gold prices in England bore to silver prices in India had fallen more, i.e. the price he received for his product was smaller than the outlay he had incurred. It is not quite established whether silver had fallen in Europe before it had fallen in

India.*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D2. Problem of Rupee CHAPTER III.htm - _msocom_6 But even if that were so the possibility of a penalty through the fall of exchange proves that the bounty, if there was any, was not a bounty on the export trade as such, but was an outcome of the disharmony between the general level of prices and the prices of particular goods and services within the country, and *would have existed* even if the country had no export *trade*.

Thus the bounty was but an incident of the general depreciation of the currency. Its existence was felt because prices of *all* goods and services in India did not move in the same uniform manner. It is well known that at any one time prices of certain commodities will be rising, while the general price level is falling. On the other hand, certain goods will decline in price at the same time that the general price-level is rising. But such opposite movements are rare. What most often happens is that prices of some goods and services, though they move in the same direction, do not move at the same pace as the general price level. It is notorious that when general prices fall wages and other fixed incomes, which form the largest item in the total outlay of every employer, do not fall in the same proportion; and when general prices rise they do not rise as fast as general prices, but generally lag behind. And this was just what was happening in a silver-standard country like India and a gold-standard country like England during the period of 1873-93 (*see* Chart IV).

CHART IV

PRICES AND WAGES IN INDIA AND ENGLAND, 1873-93

Prices had fallen in England, but wages had not fallen to the same extent. Prices had risen in India, but wages had not risen to the same extent. The English manufacturer was penalised, if at all, not by any act on the part of his Indian rival, but by reason of the wages of the former's employees having remained the same, although the price of his products had fallen. The Indian producer got a bounty, if any, not because he had an English rival to feed upon, but because he did not have to pay higher wages, although the price of his product had risen.

The conclusion, therefore, is that the failing exchange could not have disturbed established trade relations or displaced the commodities that entered into international trade. The utmost that could be attributed to it is its incidence in economic incentive. But in so far as it supplied a motive force or took away the incentive, it did so by bringing about changes in the social distribution of wealth. In the case of England, where prices were falling, it was the employer who suffered ; in the case of India, where prices were rising, it was the wage-earner who suffered. In both cases there was

an injustice done to a part of the community and an easy case for the reform of currency was made out. The need for a currency reform was recognised in England ; but in India many people seemed averse to it. To some the stability of the silver standard had made a powerful appeal, for they failed to find any evidence of Indian prices having risen above the level of 1873. To others the bounty of the falling exchange was too great a boon to be easily given away by stabilising the exchange. The falsity of both the views is patent. Prices in India did rise and that, too, considerably. Bounty perhaps there was, but it was a penalty on the wage-earner. Thus viewed, the need for the reform of Indian currency was far more urgent than could have been said of the English currency. From a purely psychological point of view there is probably much to choose between rising prices and falling prices. But from the point of view of their incidence on the distribution of wealth, very little can be said in favour of a standard which changes in its value and which becomes the *via media* of transferring wealth from the relatively poor to the relatively rich. Scope said: "Without stability of value money is a fraud." Surely, having regard to the magnitude of the interests affected, depreciated money must be regarded as a greater fraud. That being so, the prosperity of Indian trade and industry, far from being evidence of a sound currency, was sustained by reason of the fact that the currency was a diseased currency. The fall of exchange, in so far as it was a gain, registered a loss to a large section of the Indian people with fixed incomes who suffered from the instability of the silver standard equally with the Government and its European officers.

So much for the fall of silver. But the financial difficulties and social injustices it caused did not sum up the evil effects produced by it. Far more disturbing than the fall were the fluctuations which accompanied the fall (*see* Chart V).

CHART V

MONTHLY FLUCTUATIONS OF THE RUPEE-STEHLING EXCHANGE

The fluctuations greatly aggravated the embarrassment of the Government of India caused by the fall in the exchange value of the rupee. In the opinion of the Hon. Mr. Baring (afterwards Lord Cromer), mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D2. Problem of Rupee CHAPTER III.htm - _msocom_7

“It is not the fact that the value of the rupee is, comparatively speaking, low that causes inconvenience. It would be possible, although it might be exceedingly troublesome, to adjust the Indian fiscal system to a rupee of any value. What causes inconvenience alike to Government and to trade is that the value of the rupee is unstable. It is impossible to state accurately in Indian currency what the annual liabilities of the Government of India are. These liabilities have to be calculated afresh every year according to the variations which take place in the relative value of gold and silver, and a calculation which will hold good for even one year is exceedingly difficult to make.”

Owing to such fluctuations, no rate could be assumed in the Budget which was likely to turn out to be the true market rate. As matters stood, the rate realised on an average during a particular

year differed so widely from the Budget rate that the finances of the Government became, to employ the phraseology of a finance minister, a "veritable gamble." How greatly the annual Budget must have been deranged by the sudden and unprovided for changes in the rupee cost of the sterling payments Table XXII on page 442 may help to give some idea.

If Government finance was subjected to such uncertainties as a result of exchange fluctuations, private trade also became more or less a matter of speculation. Fluctuations in exchange are, of course, a common incident of international trade. But if they are not to produce discontinuity in trade and industry there must be definite limits to such fluctuations. If the limits are ascertainable, trade would be reasonably certain in its calculation, and speculation in exchange would be limited within the known limits of deviations from an established par. Where, on the other hand, the limits are unknown, all calculations of trade are frustrated and speculation in exchange takes the place of legitimate trading. Now, it is obvious that fluctuations in the exchange between two countries will be limited in extent if the two countries have the same standard of value.

1891-92	1 5.25	1 4- 733	80,09,366	—

Where there is no such common standard of value the limits, though they exist, are too indefinite to be of much practical use. The rupture of the fixed par of exchange, having destroyed a common standard of value between gold and silver countries, removed the limits on the exchange fluctuations between such countries. As a result of such variations in the value of the standard measure, trade advanced by "rushes and pauses," and speculation became feverishly

active
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D2. Problem of Rupee CHAPTER III.htm - _msocom_9

That progress of trade depends on stability is a truism which seldom comes home until it is denied in fact. It is difficult to appreciate its importance to healthy enterprise when government is stable, credit is secure, and conditions are uniform. And yet so great is the handicap of instability that everywhere businessmen have been led by a variety of devices to produce stability in domains enveloped by uncertainty. Everywhere there have grown up business barometers forewarning business men of impending changes and so enabling them to forearm against them by timely changes in their operations. The whole of insurance business is aimed at giving stability to economic life. The necessity which compelled all regularly established Governments to maintain standard measures by which the true proportion between things as to their quantities might be ascertained and dealings in them regulated with certainty was motivated by the same purpose. The

meticulous precision with which every civilised country defines its standard measures, and the large machinery it maintains to preserve them from deviation, are only evidences of the great importance that an economic society must continue to attach to the matter of providing precision of expression and assurance of fulfilment with regard to the contracts entered into by its members in their individual or corporate capacities.

Important as are the standard measures of a community, its measures of a community, its measure of value is by far the most important of them all. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D2. Problem of Rupee CHAPTER III.htm - _msocom_10](#) The measures of weight, extension, or volume enter only into particular transactions. If the pound, the bushel, or the yard were altered the evils would be comparatively restricted in scope. But the measure of value is all-pervading.

"There is no contract," Peel declared. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28D2. Problem of Rupee CHAPTER III.htm - _msocom_11](#) "public or private, no engagement national or individual, which is unaffected by it. The enterprises of commerce, the profits of trade, the arrangements made in all domestic relations of society, the wages, of labour, pecuniary transactions of the highest amount and of the lowest, the payment of national debt, the provision for national expenditure, the command which the coin of the smallest denomination has over the necessities of life, are all affected"

by changes in the measure of value. This is because every contract, though ultimately a contract in goods, is primarily a contract in value. It is, therefore, not enough to maintain constancy in the measures of weight, capacity, or volume. A contract as one of goods may remain exact to the measure stipulated, but may nevertheless be vitiated as a contract in values by reason of changes in the measure of values. The necessity of preserving stability in its measure of value falls on the shoulders of every Government of an orderly society. But its importance grows beyond disputes as society advances from status to contract. The conservation of the contractual basis of society then becomes tantamount to the conservation of an invariable measure of value.

The work of reconstituting a common measure of value in some

form or other, which those misguided legislators of the seventies helped to destroy, it was found, could not be long delayed with impunity. The consequences that followed in the wake of that legislation, as recounted before, were too severe to allow the situation to remain unrectified. That efforts for reconstruction should have been launched before much mischief was done only shows that a world linked by ties of trade will insist, if it can, that its currency systems must be laid on a common gauge.

Chapter IV

THE PROBLEM OF THE RUPEE: ITS ORIGIN AND ITS SOLUTION

(HISTORY OF INDIAN CURRENCY & BANKING)

CHAPTER IV

TOWARDS A GOLD STANDARD

The establishment of stable monetary conditions was naturally enough dependent upon the restoration of a common standard of value. Plain as was the aim, its accomplishment was by no means an easy matter. Two ways seemed at first to be open for carrying it out in practice. One was to adopt a common metal as currency, and since all important countries of the world had gone over to the gold standard it meant the silver-standard countries should abandon their standard in favour of gold. The other was to let the gold and silver standard countries keep to their currencies and to establish between them a fixed ratio of exchange so as to make the two metals into a common standard of value.

The history of the agitation for the reform of the Indian currency is a history of these two movements. The movement for the introduction of a gold standard was, however, the first to occupy the field. The failure of the notification of 1868 may be said to have marked the failure of a policy, but the movement for a gold currency in India started in the

sixties was not altogether stamped out of the country. That the movement still had life in it is shown by the fact that it was revived four years later by Sir R. Temple, when he became the Finance Minister of India, in a memorandum mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_1 dated May 15, 1872. The important particular in which he differed from his predecessors consisted in the fact that while they all aimed to make the British sovereign the principal unit of the gold currency in India, he desired to give that place to the Indian gold coin, the "mohur." Why his predecessors did not do the same when the problem of correctly rating the sovereign was said to have baffled them so much is a little surprising when it is recalled that the Indian Mints had been since long past issuing the "mohur", which, as it was possible to rate it correctly, could as well have been made the principal unit of the gold currency in India. That they did not can only be explained on the assumption that they were anxious to kill two birds with one stone. The adoption of the sovereign, besides supporting a gold currency in India, was also calculated to promote the movement of international uniformity of coinage then in vogue. The utility of the "mohur" was in this respect comparatively inferior to that of the sovereign. But when Sir Richard Temple came upon the scene the prospect of some universal coin being internationally adopted seemed to be fast vanishing. At all events the Report of the English Commission on International Coinage, presided over by Lord Halifax, had pronounced adversely as to any change in the standard of the English sovereign. Untrammelled by any considerations for such a wider issue, Sir R. Temple was free to recommend the adoption of the "mohur" as the unit of currency in place of the sovereign. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_2

"We have," he wrote, "gold pieces representing fifteen, ten and five rupees respectively; and believed to represent these several sums very correctly, as regards the relative value of gold and silver that.... we should take the first opportunity to declare the gold coins legal tender to unlimited amount; that gold pieces should continue to bear the fixed relation to the rupee; that for a time it might be necessary to permit the rupee to remain legal tender to an unlimited amount, which would involve temporarily the difficulty of a double standard; that the transition period of double standard should be as short as possible, silver being reduced to a token coinage, and being made legal tender up

to a small amount only; and that gold should be ultimately the one legal standard."

He proposed the ratio of 10 rupees for 120 grs. of standard i.e. 110 grs. of fine gold, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_3 but he did not share the temerity of Sir Charles Trevelyan.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_4 So intent was he on the project of a gold currency that he was prepared to alter the ratio so as to make it favourable to gold. The question of ratio, he observed, was one which

"the Government of India ought to be able to determine. These are questions which have been determined by every nation that has adopted a gold currency. No doubt it is a difficult and important problem, but it cannot be insoluble, and it ought to be solved."

Such in outline was the first proposal for a gold currency. It was projected before the fall in the value of silver had commenced, and was therefore more a culmination of the past policy than a remedy against the ensuing depreciation of silver. In that consisted, probably, the chief strength of the proposal. It was in good time to avoid the cost of hauling up the currency which later on proved so very deterrent and caused the defeat of so many other projects. Besides, it cannot be said that at the time the memorandum was presented the Government was not warned of the impending crisis; for the wave of demonetising silver had already commenced two years before.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_5

But, for some reason not known to the public, no action was taken on the proposal.

The second plan for the introduction of a gold currency was that of Colonel J. T. Smith, the able Mint Master of India. His plan was avowedly a remedy for the falling exchange.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_6 The plan was set forth in the first essay in the brochure, *Silver and the Indian Exchanges*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_7 and may be described in his own words as follows:—

"6. Although it cannot be denied that the difficulty of effecting this

object of restoring the Indian exchange to its normal condition is much greater now than it would have been some years ago, owing to the decline which has already taken place, yet there seems to be sufficient ground for belief that, even now, if decided measures were adopted, it would not be too late to restore the currency to its former value for home (India) payments; and that, too, without any shock or disturbance; the principal step being that of putting a stop to the coinage of silver on private account, at the same time taking measures to discourage the importation, or at the least the circulation, of foreign-made, silver coins, and opening the Mints for the receipt of gold bullion for coinage.

“7. To explain how this would operate, I must observe that

"8. ... the internal trade of the Empire of India has increased and is increasing...

“9. Whatever may be the cause, the internal trade of India has, ever since the beginning of this century, required constant and steady additions to her currency, averaging during the last thirty-eight years upwards of five millions of pounds sterling per annum in value. Besides this, the returns show that the balance of imports over exports of gold bullion, during the same period, exceeded an average of two and a half millions sterling annually, having been, during the last twenty years, more than four millions per annum.

“10. Such being the case, it appears to be a necessary consequence that, if the supply of rupees were put a stop to, the remainder must increase in local value, as compared with commodities, till they resumed the position which they held on a par with gold, at the rate of 10 rupees to a sovereign, for the fifteen years previous to 1870.

"11. After that point had been attained, it would be the interest of merchants to take gold into the Indian Mints for coinage; and they would do so, indeed, before the attainment of this improvement of the exchanges, owing to the premium or 'batta' which would at first be obtained for the gold coins.

“12. By this means gold would gradually be brought into India; and, as it has been shown that an addition to the circulating medium of at least five million sterling per annum is necessary, and no more silver coins being admitted (into the currency), it will slowly accumulate

there....

“13. The proposal therefore is that, after due notice, the coinage of silver on behalf of private individuals and advances upon silver bullion should be suspended; that part of the Act 23 of 1870, which makes it incumbent on the Government to receive and coin it, being repealed; the Government retaining in their own hands the power of replenishing the silver currency whenever they may deem it expedient. That gold bullion should be received by the Government at the mint rate of 38 rupees 14 annas per standard ounce, and coined into sovereigns and half-sovereigns (representing 38 rupees 15 annas), or ten or five rupee-pieces of the same value, which should be declared legal tender, but not demandable, the present silver rupees continuing to be legal tender, as before.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_8

At the time the Smith plan was presented, the fall of silver had made itself felt so that a considerable support in favour of the plan was forthcoming. The support of the trading community was embodied in the resolution, dated July 15, 1876, of the Bengal Chamber of Commerce, which urged “that it was expedient, in view of any ultimate measures that the Government may adopt, that Clause 19 of Act XXIII of 1870, making it obligatory on the Mints in India to receive all silver tendered for coinage, and also Section II, Clause (b) of Act III of 1871, making it obligatory on the Currency Department to issue notes against silver bullion sent in, be temporarily suspended, at the discretion of Government, and that during each such suspension or till further notice it be not lawful to import coined rupees from any foreign port.” A similar feeling was voiced by the Calcutta Trades Association. By this time the fall of exchange had also commenced to tell upon the finances of the Government of India, so much so that Sir William Muir, in his Financial Statement for 1876-77, was led to observe —

“The sudden depreciation of silver and the consequent enhancement of charge to the Government of India in laying down yearly the sum required in England of about fifteen millions sterling, without doubt cast a grave shadow on the future. In truth, it may be said that the danger, from whatever point of view considered, is the gravest which has yet threatened the finances of India. War, famine, and drought have often inflicted losses on the Exchequer far greater than the

charge which threatens us in the present year. But such calamities pass away; the loss is limited: and when It has been provided for the finances are again on sure and stable ground. This is not the case with the present cause of anxiety. Its immediate effects are serious enough. But that which adds significance to it is that the end cannot be seen; the future is involved in uncertainty.' mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_9

In the face of such a situation nothing would have been more natural than to expect the Government precipitating into some kind of action to save itself, if not others, from an impending calamity. Far from taking immediate steps, the Government not only failed to take any initiative, but showed, when pressed by the Bengal Chamber of Commerce to act upon the foregoing resolution, a surprising degree of academic somnolence only to be expected from an uninterested spectator. No doubt the proposal of the Bengal Chamber was defective in that it did not suggest the opening of the Incyan Mints to the coinage of gold. The Government of India was sharp enough to fasten upon this defect. It made plain to the Chamber that if it had proposed the free coinage of gold.

"such a recommendation would not have been open to the objections that appear fatal, *in limine*, to the adoption of the resolution actually adopted..... viz. to close the Mints temporarily to the free coinage of the one metal into legal-tender money, without simultaneously opening them to the free coinage of the other into legal tender money.'

Did it, then, adopt the proposal of Colonel Smith, which contained such a recommendation? Not at all ! Why did it not, then, adopt a remedy to which it saw no objections? The reason was that it had arrived at a different diagnosis of the causes of the monetary disturbances. To the Government the possibilities of explaining "the disturbance in the equilibrium of the precious metals" seemed to be many and varied. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_10

(1) The value of gold being unchanged, the value of silver had fallen ; (2) the value of silver being unchanged, the value of gold had risen; (3) the value of gold had risen, and

the value of silver had fallen ; (4) the value of both metals had risen, but the value of gold more than that of silver; (5) the value of both metals had fallen, but the value of silver more than that of gold. In the midst of such possibilities, marked, more by pedantry than logic, the Government warned the currency reformers that

“the character of the remedies indicated, if the disturbance is found to be due to a rise in the value of gold, will obviously differ from what would be suitable in the case of a fall in the value of silver.”
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_11

Out of these possibilities what seemed to it to be proven was that “gold had risen in value since March, 1872,”
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_12 and therefore if any reform was to be effected it should fall upon the gold-standard countries to undertake it. Situated as the Government of India then was, it could have suffered itself without incurring much blame to be hurried into some kind of currency reform that promised to bring relief. To have refused to allow the exigencies of a crisis to rule its decisions on such a momentous issue as the reform of currency, need not imply a spirit of obstinacy. On the other hand, it bespeaks a spirit of caution which no reader of that illuminating dispatch of October 13, 1876, conveying to the Secretary of State its decision to wait and watch, can fail to admire. But it is hardly possible to speak in a similar commendatory manner of the underlying attitude of the Government of India. Whether it is possible to hold that gold had appreciated but that silver had not depreciated may be left for logician to decide upon. But for a silver-standard country to refuse to undertake the reform of her currency system on the plea that it was gold that had appreciated was no doubt a tactical error. In military matters there is probably such a thing as depending on a position; but in currency matters there cannot be such a thing. The reason is that in the former strength sometimes lies in the weakness of the other. But in the case of the latter the weakness of one becomes the weakness of all. There can be no doubt, therefore, that the Government, in discarding its responsibility to do the needful in the matter, committed the same kind of mistake as a man who, in the words of Prof. Nicholson,
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_13 “should suppose that the ship cannot sink because there is no leak in the particular cabin in which he happens to sleep.”

That the attitude of inaction was unwise was soon brought home to the Government of India. Within a short space of two years it was obliged to reconsider the position taken in 1876. In a dispatch dated November 9, 1878,

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_14 the Government of India observed:—

"5. It was to have been expected that a subject so encompassed with difficulties should not receive any early settlement, and it was probably the wisest, as it was certainly the most natural course, to allow further time to elapse before attempting any final solution of the grave problem it involved. The improvement that took place in the value of silver in the year 1877 favoured this policy in action; and it is only now, when a fresh fall has brought down the rupee to a value hardly greater than that which it had in July, 1876, that the serious nature of the risk which our existing currency law entails on us is once more forced on our attention by its practical effects on the Home remittances.

"21. The uncertainty that has now for some years prevailed with reference to the value of silver, and the consequent disturbances in the exchange, have..... been causes of continued financial difficulty to the Government..... and it is not possible to doubt that similar results must have been produced by these disturbances in the trade transactions of the country, or that investments of foreign capital in India, either for trading or other purposes, must have been very seriously interfered with by their influence.

"23. Such we hold to be a true statement of the present difficulties and prospective risks of maintaining the existing Currency Law, and we feel assured that they have not been in any way overstated. It remains for us to inquire whether any practical remedy could be devised that should not be open to serious objections, or the risks attending the adoption of which should not be so great as to prohibit it. We feel most fully the heavy responsibility that will rest on us in dealing with the currency of India ; but it is plain that the responsibility for doing nothing is no less great. Whether the law is left as it is, or whether it is changed.. the result will be equally due to our action, and we cannot, if we would, avoid facing this grave question.

"24. To obtain fixity of exchange by the adoption of a gold standard, and the substitution of a gold for a silver currency through the direct

action of Government, has, we think, been conclusively shown to be impracticable by the dispatch of the Government of India of October last, and this plan therefore calls for no further notice. The increase in the weight of the rupee, also noticed in that dispatch, is equally undeserving of attention, as in fact, it would give no security for the future, and would entail a heavy charge without accomplishing the essential point to be aimed at. There remains the simpler, and first proposed suggestion, the limitation of the coinage of silver, which, though rejected in 1876 by the Government of India...; appears to us to call now for a closer examination.

"25. This suggestion in its main features is, that the Coinage Act shall be so far modified as to withdraw the free right of the public to take silver bullion to the Mint for coinage, and either to suspend it entirely in future, or limit it for a time.

"26. It is obviously an essential part of any such scheme, if it is to have the effect of fixing the exchange value of the rupee, that the power of obtaining that coin in future shall be regulated in some manner by a gold payment, and that the relation between sterling and rupee currency shall thus be fixed irrespective of the fluctuations in the relative value of the metals of which the coins are formed.

"27. It is not, on the other hand, an essential part of such a plan that any particular relation of value should be thus fixed at two shillings..... or at any smaller or larger proportion. All that is necessary is that the rate, being once fixed, shall remain for the future unchanged.

"33. Probably the most important question is..... whether or not it is practicable to maintain a silver coinage as the principal element in our currency, with a very limited gold coinage, or without a legal-tender gold coinage at all. The Government of India, in its dispatch of 1876, expressed an opinion adverse to the possibility of maintaining such a system..... On a full reconsideration of this point, we are led to take the opposite view, and to think that such a system would be perfectly practicable and would lead to no material difficulty. It is true that there is no country in which such a condition of things actually exists. But those countries, and there are many of them, in which an inconvertible paper currency exists or has existed, give proof that the far greater anomaly of a currency devoid of any intrinsic value whatever is capable

of performing the work of a metallic currency satisfactorily, and of maintaining its local exchange value, so long as an excessive issue is only guarded against.

"37. (Such) instances (as the British shilling and the French five franc piece) seem to show that neither in the way of surreptitious coinage, nor of discredit from depreciation of intrinsic value, it is probable that there would be any serious difficulty in keeping the rupee in circulation at its present weight, at a nominal value of two shillings, with a gold standard and a partial gold coinage.

"46. We are thus led to the general conclusion that it will be practicable, without present injury to the community as a whole, or risk of future difficulties, to adopt a gold standard, while retaining the present silver currency of India, and that we may thereby in the future fully protect ourselves from the very real and serious dangers impending over us so long as the present system is maintained. We consequently desire to recommend to Her Majesty's Government the adoption of such a change at the earliest moment possible, and we shall proceed to explain, in all necessary detail, the measures by which we advise that it should be effected.

* * *

"50. It has to be borne in mind that it is not the object of our action to force on India a gold currency, or to displace the silver currency, but rather to avoid such a result, or to check the tendency in that direction, so far as it can be done consistently with the adoption of the gold standard. We are consequently led to the conclusion that, while we give certain facilities for the introduction of gold coins into India, we should not yet go so far as to declare them a general legal tender; and that we should at the same time, make provision for the coining of silver, without limit as to quantity, but on terms that will give no advantage to the introduction of silver in relation to gold.

"51. These objects we propose to attain as follows:—We first take power to receive British or British Indian gold coin in payment for any demands of the Government, at rates to be fixed from time to time by the Government, till the exchange has settled itself sufficiently to

enable us to fix the rupee value in relation to the pound sterling, permanently at two shillings. Simultaneously with this, the seignorage on the coining of silver would be raised to such a rate as would virtually make the cost of a rupee, to persons importing bullion, equal in amount to the value given to the rupee in comparison with the gold coins above spoken of. We should thus obtain a self-acting system under which silver would be admitted for coinage, at the fixed gold rate, as the wants of the country required; while a certain limited scope would be given for the introduction and use of gold coin, so far as it was found convenient or profitable.”

Such was the scheme outlined by the Government of India. The reason why it rejected the Smith plan, although it was simple, economical, and secure, was because it contemplated a demand by India on the world's dwindling stock of gold. Now, in the circumstances then existing, this was a fatal defect, and the powers-that-be had already decided that at all cost India must be kept out of what was called the "scramble for gold." Therefore, to have proposed an effective gold standard was to have courted defeat. A mild and diluted edition of a gold standard such as was proposed by the Government was all that stood any chance of success. But even this timid attempt did not fare well at the hands of the Committee

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_15](#) appointed jointly by the Secretary of State and the Chancellor of the Exchequer to examine and report upon the proposals. The members of the Committee were "unanimously of opinion that they cannot recommend them for the sanction of Her Majesty's Government." [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_16](#) The reasons which led to the rejection of the proposals we are not permitted to know. Although the Report of the Committee was made public, the proceedings have never seen the light of day. Indeed, there has been a most stern and obstinate refusal on the part of the officials to allow a peep into them. Why they should be regarded as confidential after a lapse of nearly half a century it is difficult to imagine. Enough, however, was revealed by Sir Robert Giffen, who was a member of this Committee, in evidence before the Indian Currency Committee of 1898 [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_17](#) for us to know the contents of this closely guarded document. It seems that the Committee declared against the

proposals because it thought they were calculated to make the Indian currency a "managed" currency. At the time when the Committee delivered its opinion the current prejudice was unanimously against such a system. All acknowledged writers on currency were pronounced opponents of an artificially regulated system. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_18](#) A naturally automatic currency was their ideal. In addition to being misled by this prejudice, the Committee felt convinced that the situation would soon ease itself by the natural working of economic forces without necessitating a reform of the Indian currency. This conviction on the part of the Committee was founded on the high authority of the late Mr. Walter Bagehot. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_19](#) that the disturbance could not but be temporary. His argument was that the depreciation would encourage exports from India, and discourage imports, and the unfavourable balance of trade thus brought about would induce a flow of silver to India, tending to raise its price. He was also of opinion that increased demand for silver would also arise from outside India. He argued that the reduction of demand caused by the demonetisation of silver by some countries would be more than compensated for by the adoption of silver by other countries then on a paper basis for their impending resumption's of specie payment.

Whatever might be said with regard to the Committee's preference of a natural to an artificial system of currency, there can be no doubt that in turning down the proposals of the Government, in the hope that silver would recover, it was grossly deceived. The basic assumptions on which the Committee was led to act failed to come true. To the surprise of everybody India refused to absorb this "white dirt." Indeed, it was one of the puzzles of the time to know why, if silver had fallen so much in Europe, it did not go to India in larger quantities. Many blamed the Secretary of State for the sale of his Council Bills.

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_20](#) These bills, it was said, presented an alternative mode of remittance so much better as to prevent the sending of silver to India, and thereby caused a diminution in the demand for it. That this was not a correct view is obvious. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee](#)

[CHAPTER IV.htm - _msocom_21](#) Silver could not have gone to India more than it did even if Council Bills had been abolished. Council Bills must be regarded as ordinary trade bills drawn against services and commodities, and could not be said to have competed with the transmission of bullion in any special manner different to that attributable to the trade bills. The only bearing the Council Bills may be said to have had upon the issue in question lies in the fact that to the extent they figured in the transactions they prevented India from buying other commodities. But there was nothing to prevent her residual buying power left over after paying for the Council Bills from being utilised in the purchase of silver in preference to other commodities. That this buying power would be used in purchasing silver because it was depreciated in Europe was theoretically an unsound assumption on the part of Mr. Bagehot. The deciding factor which could have caused such a diversion of this residual buying power to the purchase of silver was whether it was *appreciated in India*. Only on that condition could there have been a flow of it to India. But as matters then stood, it was the opinion of Prof. Piersonmk:@MSITStore:C:\important\Writing_Of_Babasaheb.chm::/28E. [Problem of Rupee CHAPTER IV.htm - _msocom_22](#) that when the general depreciation of silver commenced all over the world, it had been forestalled in that part of the globe in which India lies. India was already glutted with silver. Under ordinary circumstances India would have sent back a large portion of its silver to Europe. But the general depreciation prevented her from doing so; and now there were two opposing forces, one tending to produce an export of silver from India to Europe and the other tending to produce an export of silver from Europe to India; and, although the latter was the stronger of the two, the former was sufficiently powerful to prevent any considerable quantity of silver from being exported from Europe to India. If the Committee was deceived in one part of its assumptions, it was also disappointed in others. Far from resuming specie payments in terms of silver, as Mr. Bagehot expected the countries then on paper basis to do, they one and all demonetised silver to the great disappointment of all those who adhered to the policy of "wait and see."

The falsification by India and other countries of such anticipations led to a change in the angle of vision of most of the European countries who had theretofore shown no inclination to do anything by way of reducing the chaotic currencies to some kind of order. They were advised by eminent authorities not to hurry. Jevons said

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_23 :—

“We only need a little patience and a little common sense to surmount the practical difficulties. Within the next few years good harvests in India will, in all probability, enable that country to buy up all our surplus silver, as it has been in the habit of doing, with rare exceptions, since the time of Pliny..... In future years any amount of silver could be got rid of without loss, if it be sold gradually and cautiously.” When, however, it was found that the waiting period would be more painful if not longer than what it pleased the proverbial peasant to undergo, in order to let the stream run dry so as to permit of his forbidding it without wetting his feet, there grew up an agitation in Europe to undertake the necessary reform to prevent the depreciation of silver.

Far from being sentimental, the agitation was real and derived its force from the evils which arose out of the existing currency conditions. The monetary condition of most of these countries was very unhealthy. Their schemes of an effective gold standard with silver as token currency were arrested in the midst of their progress. Germany, when she demonetised silver, had retained her silver thalers as full legal tender at the old ratio with gold, only to get time to be rid of them to the extent necessary to reduce them to a truly subsidiary position. But, before she could do so, her policy of demonetisation had commenced to tell upon the value of silver, and the continued fall thereof compelled Germany to retain the thalers as legal tender at their old value, despite the fact that their metallic value was fast sinking. Precisely the same was the result of the action of the Latin Union on their system of currency. They had stopped their further coinage of the silver five-franc pieces ; but they could do nothing with those that were already coined except to permit them to circulate at the old mint par, although the metallic par continued to change with changes in the market values of gold and silver. The United States was also involved in similar evils, although they arose from choice rather than from necessity. Yielding to an agitation of the silver men, it passed in 1878 a law called the Bland Allison Act, requiring the Secretary of the Treasury to purchase and coin each month not less than \$2,000,000 and not more than \$4,000,000 worth of silver bullion into standard silver dollars, which were to be full legal tender for all debts public and private,” except where otherwise expressly stipulated in the contract,”

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_24 As the metallic value of these dollars fell with every fall, while their legal value remained as before, they became, like the thalers and the francs, overvalued coins. It is clearmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_25 that when the stock of a country's currency is not equally good for all purposes it is relatively speaking in an unsatisfactory condition. Though good for internal purposes, these coins were useless for international payments. Besides making the whole currency system unstable and top-heavy, they could not be made to serve the purpose of banking reserves, which it is the *prime* function of a metallic currency to perform in modern times. The possibilities they opened for illicit coinage were immense. But what made their existence such a source of menace was the fact that a large proportion of the total metallic money of these countries was of this sort. The figures given by Ottomar Haupt in Table XXIII (*see* p. 461) prove sufficiently the difficulties that these countries had to face in regulating and controlling such a mass of token currency.

If a gold-standard country like England had escaped these difficulties it was only to meet others equally embarrassing. As has been pointed out before, the continued fall of prices, the reflex part of the appreciation of gold, had produced a depression in the trade and industry of the country never known before in its history. Apart from this, the monetary disturbances affected the yield on capital investment, the mainstay of so many of her people, by reducing the field for its employment. Said the American Commission :—

"Within twenty years from 1877 to 1897, it could probably be correctly stated that the power of money to earn dividends was reduced to one-half, or in nearly that proportion. That reduction of the earning power of capital affected injuriously everybody who depended upon investments for a living. It affected also the profits and enterprises of the captains of industry and the kings of finance. In England and in France the price of Government securities rose to a point which made it no longer possible for the man of small means to invest in them and acquire an adequate support during his declining years."

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_26

It is, of course, open to doubt whether the conclusion drawn is the right one. But the fact remains that owing to monetary disturbances the field for the investment of English capital had become considerably restricted. And, as a way of getting a living, capital investment was an important resource to the English people.

To mend such a situation there were convened one after another three International Monetary Conferences to establish a bimetallic par between gold and silver. The first International Monetary Conference was convened at Paris in the year 1878 at the invitation of the United States. The second met at the same place in 1881 at the joint call of France and the United States. The third and the last assembled by the wish of United States in Brussels during the year 1892.

From the gravity of the situation nothing could have been more natural than to expect these Conferences to fructify into an agreement upon the consummation of the project for which they were called into being. But, far from reaching any agreement, the deliberations of these Conferences proved to be entirely futile. Only the second Conference showed any sign of agreement. The first and the third marked a strong deviation in the opposite direction. The advance, if any, that was made, as a result of these deliberations, was summed up in the pious opinion that it was necessary to retain and enlarge the monetary use of silver. But so weak on the whole was the response that practice failed to testify as to the sincerity of this solemn declaration.

TABLE XXIII

DISTRIBUTION OF THE STOCK OF MONEY IN DIFFERENT COUNTRIES

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_27

Countries		Monetary Circulation at the <i>Beginning</i> of 1892.				
		Gold.	Silver.	Uncovered Notes	Fractional Currency.	Billon Money.
Austria	fl.	65,000,000	197,000,00	601,000,00 0	40,000,00 0	14,000,0 00

England	.£	118,000,000	—	10,000,000	26,000,000	1,900,000
France	fr.	3,900,000,000	3,200,000,000	572,000,000	280,000,000	280,000,000
Germany	m.	2,500,000,000	430,000,000	450,000,000	457,000,000	57,000,000
Holland	fl.	64,000,000	135,000,000	98,000,000	7,600,000	1,800,000
Italy	. li	485,000,000	81,000,000	847,000,000	150,000,000	75,000,000
Russia	. £	59,500,000	—	51,200,000	8,200,000	1,000,000
Spain	. pes.	160,000,000	646,000,000	548,000,000	190,000,000	157,000,000
U.S.A.	doll.	671,000,000	458,000,000	419,000,000	77,000,000	18,000,000

The reasons for the failure of these Conferences to reach a bimetallic agreement have not been properly understood. One cannot read the debates on bimetallism at these Conferences without observing that the opposing parties approached the subject with different objectives. To one the principal objective was the maintenance of a stable ratio of exchange between gold and silver irrespective of the question whether one or both remained in circulation; to the other it was the maintenance of the two metals in concurrent circulation. As a consequence of this difference in the lines of their approach an agreement on a bimetallic project became well-nigh impossible.

The workability of bimetallism in the sense of maintaining a stable ratio between gold and silver is necessarily an indefinite proposition. Nonetheless, it cannot be said, if the debates at these Conferences are taken as a guide, that the possibility of a successful bimetallic system in the stable-ratio sense of the term had been denied by the majority of economic theorists, or by the Governments who met at these

Conferences. On the other hand, the Conference of 1881, the most important of the three, was remarkable for its confession regarding the workability of the system. All Governments, barring a few minor ones, were in favour of it. Even the British Government, in consenting to bring into operation the silver clause of the Bank Charter Act, must be said to have given its word of approval.

But what did bimetallism promise, as a piece of mechanism, to maintain the two metals in concurrent circulation? The bimetallists used to cite the example of France in support of the stability of the double standard. But was there a concurrent circulation of two metals in France under the bimetallic system? Far from it. For, although it was a virtue of the system that changes in the production of the two metals made no appreciable variations in the fixed ratio of exchange, yet the slightest of such as did occur were sufficient to effect the greatest revolution in the relative circulation of the two metals, as the following table clearly brings out:—

TABLE XXIV
MINTAGE OF GOLD AND SILVER IN FRANCE

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_28

Period	Gold Million Francs	Silver Million Francs	Ratio of Value
1803 to 1820	868	1,091	1: 15.58
1821 to 1847	301	2,778	1: 15.80
1848 to 1852	448	543	1: 15.67
1853 to 1856	1,795	102	1: 15.35
1857 to 1866	3,516	55	1; 15.33
1867 to 1873	876	587	1: 15.62

In mitigation of this, the bimetallists had nothing to offer. There were, no doubt, such schemes as the one proposed by Prof. Marshall, consisting of paper based on a linked bar of gold and silver in certain fixed proportions,

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_29 having the object of converting this "either-metallism" into double-metallism. But such schemes apart, the free-mintage-cum-fixed-ratio plan of bimetallism gave no guarantee against alternation in the circulation. Indeed, under that plan the alternation is the very soul of the mechanism which keeps the ratio from being disturbed. The only thing the bimetallists could say in mitigation of this was that mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_30 the alternation in currency would confine itself to bank reserves and would not be extended to the pockets of the people. This was only an eyewash, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_31 for how could the banks arrange their reserves except in conformity with the prejudices of the people? Even international agreement to use gold and silver at a fixed ratio was no guarantee that this concurrent circulation would be maintained. Stability of ratio did depend to a large extent upon an international agreement, for, although it could be maintained by the action of one nation, the deviations of the ratio in that case would probably be greater. But mere international agreement has no virtue of itself to prevent one metal driving out the other. To suppose that Gresham's Law is powerless under international agreement is a gross mistake. Gresham's Law is governed by the relative production of the two metals to the total currency needs of the movement. Supposing the production of one metal relatively to the other was so enormous as to more than suffice for the currency needs, how could international agreement prevent the former from driving the latter entirely out of circulation? On the other hand, international agreement, far from discouraging, would encourage the process.

In adopting bimetallism, therefore, the nations had to make a choice between a stable ratio and a concurrent circulation, for there might arise a situation in which there was a stable ratio but no concurrent circulation of both the metals. If the Conferences broke down, it was not because they did not recognise the possibility, which was unanimously upheld by such an impartial tribunal as the Gold and Silver

Commission of 1886, of a stable ratio being maintained under a bimetallic regime. They broke down because the bimetallic system did not guarantee the concurrent circulation of the two metals. However, it is certain the impossibility of concurrent circulation could not have been such a drawback if the immediate effect of bimetallism would have been a flow of gold into circulation. But as matters then stood the immediate effect would have been to bring silver into circulation. It was this more than anything else which scared away most of the nations from the adoption of the bimetallic system. Now, it is a curious thing that nations which had assembled together to bring about a stable ratio between gold and silver should have rejected a system which gave a promise of such a stability on the comparatively less significant ground that it had the effect of altering the composition of the circulation from gold to silver. But the fact must be recognised that at the time the question of reconstituting the bimetallic system was agitating the public mind, in most of the European countries gold and silver had ceased to be regarded as equally good for currency purposes. The superiority of gold to silver as a carrier of large value in small bulk was coming more and more to be appreciated in the latter part of the nineteenth century, and no plan of stabilisation which did not provide for the unhindered circulation of gold was likely to meet with common approval. This prejudice was in no way confined to a gold-standard country like England. The closing of the Mints by the Latin Union is a proof positive of the change in the attitude of the bimetallic countries. As Jevons argued mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_32

:—

"So long as its operation resulted in substituting a beautiful coinage of napoleons, half-napoleons, and five-franc pieces in gold for the old heavy silver ecus, there was no complaint, and the French people admired the action of their compensatory system. But when [after 1873] it became evident that the heavy silver currency was coming back again..... the matter assumed a different form."

So great was the prejudice in favour of gold that the interests of the chief Powers in the various Conferences, it may be truly said, waxed and waned with the changes in the volume of their gold reserves.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_33 In 1878, the United States took the lead in calling the

Conference because the working of the Bland Allison Act checked the inflow of gold necessary for its cash payments. Germany was indifferent because she had enough gold and was confident of selling off her demonetised silver without loss. In 1881 France and Germany showed more anxiety for reform because the former had lost all her gold and the latter was unable to palm off her silver. By 1892 none was so poorly supplied with gold as was the United States, largely as a result of a reckless policy which did her harm without doing good to anyone else, and she was therefore left alone to support the cause of silver.

Possessed as almost every Government was by this prejudice for gold, it was not an ineradicable prejudice. What the countries wanted was a lead from an influential nation. Throughout the debates at these Conferences one thing stood out very clearly. If England could have brought herself to adopt a bimetallic system, others, like sheep, would have followed suit. But she was too much wedded to her system to make a change, with the result that bimetallism, as a way out of the currency difficulties, became a dead project. The vanishing of the prospect of re-establishing the bimetallic system as a result of her obstinacy was a small matter to the European countries. They had virtually made gold, the international form of money, as the basis of their currency, and were therefore quite indifferent as to the issue ; but it was a terrible blow to the hopes of India. After the proposal of 1878 had been turned down, bimetallism was considered by the Government of India as the remedy, and its advent looked forward to for salvation. It is true that in the beginning of bimetallic discussions the attitude of the Indian Government was rather lukewarm. In a dispatch dated June 10, 1881, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_34

to the Secretary of State, it was revealed that the Government of the time was divided in its opinion regarding the merits of bimetallism. The Viceroy and another member of Council refused their support on the ground that bimetallism was unsound in principle,*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_35 and even the majority who thought differently on this aspect of the question were not then prepared to go to the length of joining a bimetallic union, although they did not see any objection to doing so”if a sufficiently large number of other Governments were prepared to join”in it. With the growth of their financial difficulties, however, this slender faith in bimetallism

considerably deepened, so much so that in 1886 the Government addressed to the Secretary of State a dispatch mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_36 urging him to take the initiative in calling an International Monetary Conference to establish a stable ratio between gold and silver. So intense was its interest in the consummation of bimetallism that it did not hesitate to administer a sharp rebuke to the Treasury when they negated its suggestion referred to them for consideration by the Secretary of State. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_37 With such feelings of faith and hope the Government of India entered these international Conferences and watched their fortunes. But no Government could have been treated with such suspicion and injustice as was the Government of India. Its admission to the bimetallic union was desired by none of the Powers, not even by England. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_38 It was treated as a villain whose advances were nothing but maneuvers to pounce upon the already dwindling stock of gold. Not only was it planned to keep India out of the bimetallic union, but she was to be required to pledge herself not to take a mean advantage of the union after its efforts had succeeded in establishing a stable ratio by making gold legal tender. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_39 All these guarantees the Government of India had offered in a pathetic faithfulness to the cause of bimetallism, on the success of which it had depended so much. Consequently, when the attempt failed, the disappointment caused to the Government of India almost broke its heart. It is not too severe to say that the part played by the British authorities in causing this disappointment was highly irresponsible—one might almost say wicked. They forced India against her declared wishes to keep to the silver standard, partly to trail her off from making any demand for gold, and partly to silence the criticisms of other nations that Britain was not taking her share in the matter of rehabilitating silver. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_40 This was not the only advantage exacted from a country bound to obey. On the one hand it restrained the Government of India from taking any independent line of action in the matter of currency reform, and on the other such means as were calculated to make good the losses which arose from a depreciating currency were subjected to Parliamentary censure. The House of

Commons was twice moved, once in 1877 and again in 1879, to resolve that the Government of India should lower its tariff, ostensibly in the interest of free trade, but really in the interests of relief to the depressed condition of Lancashire. The consequence was that the Government could not tap one important source of its revenue in times of its greatest adversity. The only adequate recompense, the British authorities could have made to a Government so completely paralysed by their dictations, and of whose interests they so loudly claimed to be the lawful trustees, was to have consented to join the bimetallic union, the consummation of which only waited upon their grace. But, as is well known, they did nothing of the kind, so that, after a period of enforced waiting and by no means unavoidable suffering, the Government of India, at the end of 1893, found itself just where it was at the beginning of 1878.

Like all common-sense people who pray and yet do not fail to keep their powder dry, this interval was utilised by the silver-ridden countries, with the exception of the United States, in strengthening their gold basis no less than in attending the deliberation of the Monetary Conferences on the amusing plans for extending the use of silver.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_41 Mr. Goschen, at the Conference of 1878, had quite philosophically remarked that States feared to employ silver because of its depreciation and the depreciation continued because the States feared to employ it. Now, if the first part of the diagnosis was correct, we should have found the States seriously engaged in the task of rehabilitating silver when its price was propped up by the silver legislation of the United States. On the other hand, just so far as the monthly purchases of silver, under the Bland Allison Act of 1878, or the Sherman Act of 1890, held up the price of silver, not only did they not feel anxious to take steps to restore it to its former position, but they actually took advantage of the rise to discard it.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_42 And it is not possible to blame them either, for with the prospect of a bimetallic union vanishing into thin air the accumulation of this dead weight would have only ended in a gratuitous embarrassment. India alone refused to profit by the squeeze, which the United States took vicariously for other nations, and allowed precious time to slip by, with the result that it was thrown back upon the same remedy, the adoption of which was negated in 1878.

If it was to be a gold standard it would have been better if it had been done in 1878. The plan then outlined by the Government of India was no doubt too complicated and too flimsy to be practicable. But its rejection should not have altogether suspended the introduction of a gold standard. If it was to be one of an orthodox kind on the English pattern, it would have no doubt involved some cost to the Government in being obliged to sell at a reduced price a part of the silver stock of the country in order to give the rupee a subsidiary position and to fill the void by a gold currency. The cost of this conversion in 1878 would have been inconsiderable, for the fall of silver from its normal gold price was only 12 1/2 per cent. On the other hand, if it was to be on such an unorthodox plan as that of Colonel Smith, it would have involved no cost at all to the Government beyond that involved in the installation of new machinery for the coinage of gold at the Mint. But in 1893 both these processes of bringing about a gold standard seemed quite hopeless. The impossibility of the plan of conversion was quite out of the question. The fall in the value of silver in 1893 was nearly 35 per cent. Even the prospect of the Smith plan did not appear very bright owing to the enormous addition of rupees to the circulation of the country. If it had been adopted in 1878, all the subsequent additions to the currency would have been in gold, with the result that by 1893 the proportion of gold to silver would have been large enough to have endowed the whole currency system with the desired stability in relation to countries on a purely gold basis. In 1893 the mass of silver currency had grown to enormous proportions, so that it looked certain that it would take decades before the stoppage of silver coinage could make the rupee a stable and secure form of currency.

The plans showing a way out of an *impasse* such as this were legion. One was the issue of heavier rupees.

The second was to make silver limited legal tender and to authorise the Secretary of State to sell in London gold or silver Indian stock to the extent of his gold payments, to be liquidated by the Government of India by the issue of unlimited legal-tender notes called "bons."

The third was that England and India should, as between them, adopt a bimetallic standard on a new

basis, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_46](#) or to admit the rupee as full legal tender in the United Kingdom. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_47](#) The fourth was to regulate the opening and closing of Mints to coinage on the basis of deviations of actual exchange rates from the rate of exchange fixed at the opening of each year for the Council drafts of the Secretary of State. Under this scheme, so long as the actual rate did not exceed the fixed rate by less than 5 per cent., the free coinage of silver was to be suspended. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_48](#). The fifth was to provide that on the one hand the Secretary of State should fix a minimum rate for his drafts, and that the Government of India on the other should levy a duty on all imports of silver equal to the difference between the daily official quotations of bar silver in London and the price of silver corresponding to the rate fixed for the Council drafts. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_49](#) The sixth was to introduce a bimetallic coin, to be called the imperial florin or rupee, made of the value of 2s. and containing 4 per cent. weight in gold and the balance in silver. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_50](#). The seventh was to establish independent gold and silver standards without any fixed ratio of exchange between them, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_51](#) or with some slight inducement for the use of gold in transactions of larger denominations. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_52](#) Although the Government of India was not in agreement with these clever if not crazy plans of currency reforms, it agreed in the aim they had in view, namely, to place India on a gold basis without involving the actual use of gold in place of the existing rupees in circulation. With this aim in view it revived for adoption the more simple and more scientific plan of Colonel Smith. As a preliminary, the Government reverted to the policy of the resolution of the Bengal Chamber of Commerce, to the adoption of which it saw such "fatal objections" in 1876. In the dispatch dated June 21, 1892, which contained the proposals, the Government of India asked for nothing more. In the words of their author [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_53](#) they proposed

".....That the Indian Mints should be closed to the unlimited coinage of silver, and *no further steps taken* until the effect of closing the Mints had been ascertained.

"The ratio at which the change from silver to the gold standard should be made was subsequently to be settled and it was said that a ratio based on the average price of silver during a limited period before the Mints had been closed would probably be the safest and most equitable. When this ratio had been settled, the Mints were to be opened to the coinage of gold at that ratio, and gold coins were to be made legal tender to any amount."

These proposals were submitted for examination to a Departmental Committee, commonly known as the Herschell Committee. They were said to be defective in one important particular, and that was the absence of due recognition of the necessity of a gold reserve for the maintenance of the value of the rupee. Many people felt doubtful of the success of the proposals unless backed by an adequate gold reserve. But the Herschell Committee, after an extended investigation into the working of the currency systems of different countries, reported

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_54—

"It is impossible..... to review foreign systems of currency, without feeling that, however admirable may be the precautions of our own [English] currency system, other nations have adopted different systems which appear to have worked without difficulty, and enabled them to maintain for their respective currencies a gold standard and a substantial parity of exchange with the gold-using countries of the world"with little or no gold. The Committee, therefore, was completely satisfied with the proposals of the Government of India, and not only sanctioned their adoption,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_55

but added, by way of introducing a modification in them, that

"The closing of the Mints against the free coinage of silver should be accompanied by an announcement that, though closed to the public, they will be used by the Government for the coinage of rupees in exchange for gold at a ratio to be then fixed, say 1s. *4d.* per rupee, and that at the Government Treasuries gold will be received in satisfaction

of public dues at the same ratio.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_56

These recommendations were carried into effect on June 26, 1893, which forms as great a landmark in the history of Indian currency as did the year 1835. On that date were promulgated one legislative enactment and three executive notifications, together calculated to accomplish the object in view. The Act (VIII) of 1893 was only a repealing Act. It repealed:—

(i) The Indian Coinage Act, XXIII of 1870. Sections 19 to 26 (both inclusive), requiring the Mint Masters to coin all silver brought to their Mints for coinage.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_57

(ii) The Indian Paper Currency, 1882.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_58 (a) Section 11, Clause (b), requiring the Paper Currency Department to issue notes against silver coin made under the Portuguese Convention Act, 1881.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_59 (b) Section 11, Clause (d), requiring the Paper Currency Department to issue notes against silver bullion or foreign silver coin.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_60

(c) Section 13. Only the proviso limiting the gold portion of the Paper Currency Reserve to one-fourth of the Total Reserve.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_61

These repeals by the Act were supplemented by an executive Notification No.. 2663, announcing in conformity with the suggestion of the Herschell Committee that the Government Treasuries would receive sovereigns and half-sovereigns of current weight in payment of public dues at the rate of 15 rupees and 7 rupees 8 annas respectively.

Since gold was not made general legal tender by any *of* the above

measures, it was feared that the Government might be embarrassed by the accumulation in its Treasuries of a stock money which it could not pay out in discharge of its obligations. To enable Government to rid the Treasuries of gold, should it accumulate in them to an inconvenient extent, there followed another Notification, No. 2564, requiring that the Currency Department should issue, on the requisition of the Controller-General, currency notes in exchange for gold coin or gold bullion, at the rate of one Government rupee for 7.53344 grs, troy of fine gold, or sovereigns or half-sovereigns at the rate of 15 rupees and 7 rupees 8 annas respectively.

To give effect to the second modification introduced by the Herschell Committee, there was issued a third Notification, No. 2662, to the effect that

"The Governor-General in Council hereby announces that, until further orders, gold coins and gold bullion will be received by the Mint Masters of the Calcutta and Bombay Mints respectively, in exchange for Government rupees, at the rate of 7.53344 grs. troy of fine gold for one rupee on the following conditions

- (1) Such coins or bullion must be fit for coinage.
- (2) The quantity tendered at one time must not be less than 50 tolas.
- (3) A charge of one-fourth per mille will be made on all gold coin or bullion which is melted or cut so as to render the same fit for receipt into the Mint.
- (4) The Mint Master, on receipt of gold coin or bullion into the Mint, shall grant to the proprietor a receipt which shall entitle him to a certificate from the Mint and Assay Masters for the amount of the rupees to be given in exchange for such coin or bullion payable at the General (Reserve) Treasury, Calcutta or Bombay. Such certificates shall be payable at the General Treasury after such lapse of time from the issue thereof as the Comptroller-General may fix, from time to time."

Before the policy adumbrated by these measures was carried to completion there came up a move for the undoing of it. After the failure of the International Monetary Conference of 1892 the United States and France, two countries most heavily burdened with an overvalued stock

of silver, opened negotiation with the British Government, asking the latter to agree to certain conditions on the grant of which they were to open their Mints to the free coinage of silver at the ratio of 15 1/2 to 1. These conditions included :

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_62

- (1) Opening of the Indian Mints, which had been closed to the free coinage of silver, and an undertaking not to make gold legal tender in India.
- (2) Placing one-fifth of the bullion in the Issue Department of the Bank of England in silver.
- (3) (a) Raising the legal-tender limit of silver in England to £10.
 (b) Issuing the 20s. notes based on silver, which shall be legal tender.
 (c) Retirement, gradual or otherwise, of the 10s. gold pieces, and substitution of paper based on silver.
- (4) Agreement to coin annually a certain quantity of silver.
- (5) Opening of English Mints to the coinage of rupees and for coinage of British dollars, which shall be full legal tender in Straits Settlements and other silver-standard Colonies, and tender in the United Kingdom to the limit of silver legal tender.
- (6) Colonial action, and coinage of silver in Egypt.
- (7) Something having the general scope of the Huskisson plan.

In these negotiations the Treasury again reverted to its old pose. It refused to discuss the conditions requiring a change in the British currency, but argued that the opening of the Indian Mints, if brought about, should be regarded as an adequate contribution which could be made by the British Empire towards any international agreement with the object of securing a stable monetary par of exchange between gold and silver mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_63

and the representatives of the United States and France seemed to have concurred in that view. The negotiations, however, failed, because of the

firm stand taken by the Government of India. The Government had suffered too long to be the scapegoat of the Treasury. Nor did it see any reason why it should be called upon to pull the chestnuts off the fire for the benefit of France and the United States, in a letter commenting upon the proposals, the Government of India observed mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_64:—

"The changes which are involved in the arrangements proposed to Her Majesty's Government are the following: France and the United States are to open their Mints to the free coinage of silver, continuing the free coinage of gold and the unlimited legal tender of coins of both metals, the ratio remaining unchanged in France and being altered in the French ratio of 15 1/2 to 1 in the United States. *India is to open her Mints to silver to keep them closed to gold, and to undertake not to make gold legal tender. France and the United States would thus be bimetallic; India would be monometallic (silver), whilst most of the other important countries of the world would be monometallic (gold).*

"The first result of the suggested measures, if they even temporarily succeed in their object, would be an immense disturbance of Indian trade and industry, by the sudden rise from about 16d. to about 23d. the rupee. Such a rise is enough to kill our export trade, for the time at least..... such an arrangement as is proposed is an infinitely more serious question for India than for either of the other two countries, for it seems clear that practically the whole risk of disaster from failure would fall on India alone. What would' happen in each of the three countries if the agreement broke down and came to an end? France possesses a large stock of gold, and the United States are at present in much the same situation as France, though the stock of that metal is not so large. It may be admitted that if no precautions were taken these gold reserves might disappear under the operation of the agreement, and in that case, if the experiment ultimately failed, the two countries concerned would suffer great loss. But it is inconceivable that precautions would not be taken, at all events, so soon as the danger of the depletion of the gold reserves manifested itself, and, therefore, it is probable that no particular change would take place in the monetary system of France or the United States, the only effect of the agreement being a coinage of silver which would terminate with the termination

of the agreement. Thus the whole cost of the failure, if the experiment should fail, would be borne by India. Here the rupee would rise with great swiftness, it would keep steady for a time, and then, when the collapse came, it would fall headlong. What course could we then adopt to prevent the fluctuation of the exchange value of our standard of value with the fluctuations in the price of silver? We do not think that any remedy would be open to us, for if the Indian Mints were reopened to silver now, it would..... be practically impossible for the Government of India to close them again, and even if they were closed it would only be after very large additions had been made to the amount of silver in circulation.”

But soon after it had refused to be diverted from the goal it had placed before itself, namely the introduction of a gold standard, it was faced with a crucial problem in its existing monetary arrangements. The rupee stock, the addition to which was stopped since 1893 by the closure of the Mints, was large enough to meet the needs of the people for some considerable time. In the first few years after the closure, the rupee currency was not only abundant but was also redundant. Soon it ceased to be redundant, and indeed by the end of 1898 it became scarce, so much so that the discount rate in the Indian money market rose to 16 per cent., and continued at that pitch during the larger part of the year. Such was the outcry against what was called the policy of “starving” the currency, that the Government was obliged to pass an Act (No. II) of 1898 to permit currency notes issued in India against gold tendered in London to the Secretary of State. The Act was doubly easeful to the then starved condition of the Indian money market. By the measures adopted in 1893 gold was not general legal tender, so it could not be used when the rupee currency fell short of the needs of the time. The new Act, it is true, did not make gold general tender, but permitted it to be used on behalf of the general public

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_65 as a backing for the issue of currency notes which were general legal tender. The Act, however, could have required that gold be laid down *in India* before notes could be issued. But as the remittance of gold to India took some three or four weeks, it was feared mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_66 that the remedy might “prove too tardy to be effective” unless the interval was done away with by providing that gold

with the Secretary of State in London was lawfully tantamount to gold with the Paper Currency Department in India for the purposes of note issue.

In doing this the Act only testified to the urgency of the situation. A sound currency system must be capable of expansion as well as contraction. The Government, by the closure of the Mints in 1893, had contracted the currency to the point of danger. In 1898 it was called upon to undertake measures to provide for its expansion. Now, there were two methods open to bring about this desired result. One was to keep the Mints closed and to permit additions to currency through the use of the gold by making the sovereign general legal tender. This was the plan proposed by the Government of India. In their dispatch dated March 8, 1898

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_67 they argued :—

“Our present Intention is rather to trust to the automatic operations of trade. The amount of coin required for the needs of commerce increases every year: and as we print no increase in the amount of silver coin, we may reasonably expect that the effect of the increasing demand for coin will raise exchange to a point at which gold will flow into the country, and remain in circulation. The position will thus become stronger and stronger as time goes on, but at the beginning at least, gold will not be in circulation in the country to more than the extent necessary to secure stability of exchange. The mass of the circulation will be a silver circulation, maintained at an appreciated value (just as it is at present), and we can be content to see gold coin remain little more than a margin, retained in circulation by the fact that its remittance out of the country could create a scarcity of coin which would have the effect of raising the exchange value of the silver rupee in such manner as to bring it back, or, at the very best, stop the outward current of remittance. We shall have attained a gold standard under conditions not dissimilar from those prevailing in France, though not a gold circulation in the English sense; and this last may possibly not be necessary at all.”

Besides expanding the currency through the use of gold, there was also another mode of effecting the same object. It was urged that this increase of currency might as well take place by Government coining rupees whenever there arose a need for additional currency. Though the

Mints were closed, the Government, by Notification No. 2662, had undertaken to give rupees to anyone desiring to have them at the rate of 7.53344 grs. troy of fine gold per rupee.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_68

The Government had only to give effect to that notification to augment the currency to any extent desired. Prominent in the advocacy of this plan of expanding the currency were Mr. Probyn and Mr. A. M. Lindsay. Both claimed that the plan of the Government of India was defective because, although it provided for the expansion of currency by making gold legal tender, it made the rupee entirely inconvertible, and thereby likely to defeat the policy of stabilising its exchange value. On the other hand, they deemed their plans to be superior to that of the Government of India because they recognised the obligation to provide for the conversion of the rupee currency on certain terms. Although the plans of both of them had contemplated some kind of convertibility, yet they materially differed in the particular mode in which conversion was to be effected.

Mr. Probyn proposed
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_69

1. That legislative effect should be given to the notification of 1893, under which the public can obtain rupees at the Indian Mints and Reserve Treasuries in exchange for gold, at the rate of 1s. 4d.

2. That the gold so received should be part of the paper currency reserve, and should be held either in the form of full legal-tender gold coins of the United Kingdom, or gold bars representing not less than Rs. 1,000 each.

3. That in order to give the rupee currency automatic power of contraction. Government should be empowered (though not required) so soon as the portion of the paper currency reserve has continuously for one year been less than that held in gold, to give gold in exchange for rupees or rupee notes at the rate of 1s. 4d., if presented for the purpose in quantities of Rs. 10,000.

4. That the existing Rs. 10,000 notes should be called in. and, in future, notes of Rs. 10,000, payable at the option of the holder either, in gold or in silver rupees, should be issued in exchange for gold alone, gold in the form of bars being specially reserved to meet any such

notes outstanding.

Mr. Lindsay, on the other hand, followed on lines quite different from those adopted by Mr. Probyn. He proposed

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_70 that the Government should offer to sell, without limit on the one hand, rupee drafts on India at the exchange of 16 1/16d. the rupee, and on the other hand, sterling drafts on London at the rate of exchange of 15 3/4d. the rupee. The funds necessary for the transactions were to be kept separate from the ordinary Government balances in "Gold Standard" Offices in London and in India. The London Office was to be kept in funds to meet drafts drawn on it—

- (1) by borrowing in gold to the extent of five or ten million sterling;
- (2) by the receipts realised by the sale of drafts on India:
- (3) by the receipts realised by the sale of silver bullion in rupee melted down;

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_71 and

- (4) when necessary, by further gold borrowing.

The Indian Gold Standard Office was to be kept in funds to meet the drafts drawn on them—

- (1) by the receipts realised by the sale of drafts on London ; and
- (2) by the coinage when necessary of new rupees from bullion, purchased by the London Gold Standard Office and sent to India.

The principal point of difference between the scheme of currency advocated by the Government of India on the one hand and that put forth by Messrs. Probyn and Lindsay consisted in the fact that the former proposed to establish a gold standard *with* a gold currency, while the latter proposed to establish a gold standard *without* a gold currency.

To adjudicate upon the relative merits of a gold standard with a gold currency and a gold standard without a gold currency, the Secretary of State appointed another departmental Committee, under the chairmanship of Sir Henry Fowler. After taking a mass of important evidence, the Committee observed

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm -
_msocom_72:—

“50. On this scheme [of Mr. Probyn] we remark that, while bullion may be regarded as the international medium of exchange, there is no precedent for its permanent adoption for purposes of internal currency; nor does it accord with either European or Indian usage that the standard metal should not pass from hand to hand in the convenient form of current coin. No real support for such a scheme is to be drawn from the purely temporary provisions of ‘Peel’s Act’ of 1819, whereby, for a limited period, the Bank of England, as a first step to the resumption of cash payments, was authorised to cash, in stamped gold bars, its notes, when presented in parcels of over £ 200. Little or no demand for gold bullion appears to have been made on the Bank itself in 1821.

“53. It is evident that the arguments which tell against the permanent adoption of Mr. Probyn’s bullion scheme, and in favour of a gold currency for India, tell more strongly against Mr. Lindsay’s ingenious scheme for what has been termed ‘an exchange standard.’ We have been impressed by the evidence of Lord Rothschild, Sir John Lubbock, Sir Samuel Montagu and others, that any system without a visible gold currency would be looked upon with distrust. In face of this expression of opinion, it is difficult to avoid the conclusion that the adoption of Lindsay’s scheme would check that flow of capital to India upon which her economic future so greatly depends. We are not prepared to recommend Mr. Lindsay’s scheme, or the analogous schemes proposed by the late Mr. Raphael and by Major Darwin, for adoption as a permanent arrangement; and existing circumstances do not suggest the necessity for adopting any of these schemes as a provisional measure for fixing the sterling exchange.”

The Committee preferred the scheme of the Government of India, and outlined a course of action to be adopted for placing it on a permanent footing, which may be stated in the Committee’s own language as follows:—

"54. We are in favour of making the British sovereign a legal tender and a current coin in India. We also consider that, at the same time, the Indian Mints should be thrown open to the unrestricted coinage of

gold on terms and conditions such as govern the three Australian branches of the Royal Mint. The result would be that, under identical conditions, the sovereign would be coined and would circulate both at home and in India. Looking forward, as we do, to the effective establishment in India of a gold standard and currency, based on the principles of the free inflow and outflow of gold, we recommend these measures for adoption." These recommendations were accepted by the Secretary of State,

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_73](#) who decided that—

"the policy of keeping the Indian Mints closed to the unrestricted coinage of silver shall be maintained," and called upon the Government of India as soon as it deemed expedient to

"take the necessary steps for making the British sovereign a legal tender and a current coin. and make preparations for the coinage of gold under the conditions suggested by the Committee."

The first recommendation of the Committee was given effect to by the Government passing an Act commonly called the Indian Coinage and Paper Currency Act (XXII) of 1399. That Act made the sovereign and half-sovereign legal tender throughout India at the rate of Rs. 15 and Rs. 7 1/2 respectively, and authorised the issue of currency notes in exchange for them.

Along with placing the Indian currency on a gold basis, the Government was anxious to open a Mint for the free coinage of gold. But as the coin to be Issued from the Mint was the English "sovereign" the Government of India was entirely in the hands of the British Treasury. According to the provisions of the English Coinage Act of 1870, it was necessary to issue a Royal Proclamation in order to constitute an Indian Mint a branch of the Royal Mint, a matter entirely dependent on the consent of the Treasury. It was the intention of the Government of India to announce the Proclamation simultaneously with the passing of the Act making the sovereign legal tender. Indeed it held back the legislation pending the arrival of the proclamation,

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_74](#) and proceeded with it reluctantly when it was advised

that there was likely to be "some further delay over the Proclamation owing to legal and technical questions." The objections raised by the Treasury, though merely technical, at first seemed to be quite insuperable, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_75 and had it not been for the conciliatory attitude of the India Office the negotiations would have broken down. But the Treasury was not willing to give the project a chance. Just when a compromise was arrived at on the technical side of the question, the Treasury turned round and raised the question whether a Mint for gold coinage was at all necessary in India. The Treasury argued :—

"While expressing their satisfaction that an agreement has now been reached, my Lords think it desirable, before practical steps are taken to carry out the scheme, to invite Lord George Hamilton to review the arguments originally advanced in favour of the coinage of the sovereign in India, and to consider whether the course of events, in the two years which have elapsed since the proposal was made, has not tended to diminish their force, and to render such advantages as are likely to accrue from the establishment of a branch Mint wholly incommensurate with the expense to be incurred... The gold standard is now firmly established, and the public requires no proof of the intention of the Indian Government not to go back on their policy, which is beyond controversy. Sovereigns are readily attracted to India when required under existing conditions... On the other hand the estimates of the Government of India of gold available for coinage in that country are less than was anticipated, nor is any considerable increase expected, at any rate for some time.....

The staff would have to be maintained in idleness for a large part of the year, at a considerable cost to the Indian Exchequer... It is, of course, for Lord George Hamilton to decide whether, in spite of these objections, the scheme is to be proceeded with."

The India Office replied :—

"The establishment of a Mint for the coinage of gold in India is the clearest outward sign that can be given of the consummation of the new currency system; and to abandon the proposal now must attract attention and provoke criticism and unrest..... His Lordship is not inclined to abandon the scheme at the stage which it has now reached." The Treasury sent a trenchant rejoinder, in which it remarked:—

' Indian currency needs are provided from other sources, and there is no real demand for the local coinage of sovereigns..... My Lords cannot believe that the position of the Gold Standard in India will be strengthened, or public confidence in the intention of the Government confirmed, by providing machines for obtaining gold coin..... The large measure of confidence already established is sufficiently indicated by the course of exchange since the Committee's Report and still more by the readiness with which gold has been shipped to India....."

That the Treasury acted "in a spirit of scarcely veiled hostility to the whole proposal" is unmistakable. But it cannot be denied that the Treasury used arguments that were perfectly sound. It was inconsequential to the working of the gold standard whence the coined sovereigns came. So long as a Mint was open to the free coinage of sovereigns the Indian gold standard would have been complete irrespective of the location of the Mint. Indeed, to have obtained coined sovereigns from London would have not only sufficed, but would have been economical.

The anxiety displayed by the government was not, however, on account of the want of a gold Mint. Indeed, so slight was its faith in the necessity of it that in view of the opposition of the Treasury it gracefully consented to drop the proposal. What troubled it most was the peculiar position of the rupee in the new system of currency. Throughout the dispatch of the Government of India there ran a strain of regret that it could not see its way to demonetise the rupee and to assimilate the Indian currency to that prevailing in England. A general perusal of the dispatch leaves the impression that though it recommended the assimilation of the Indian currency to that of France and the United States, it did so not because it thought that their systems furnished the best model, but because it believed that a better one was not within reach. Having regard to the accepted view of the French and the United States currency systems, it was natural that the Government of India did not feel very jubilant about its own. According to that view of the currency systems of these two countries, the position of the five-franc piece and the silver dollar has always been presented as being very anomalous. Even so great an authority as Prof. Pierson was unable to assign them a place intelligible in the orthodox scheme of classifying different forms of

money.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee
CHAPTER IV.htm - _msocom_76

In a well-ordered system of gold standard of the orthodox type, gold is the only metal freely coined and the only one metal having full legal-tender power ; silver, though coined, is coined only on Government account in limited amounts, and being of less intrinsic value than its nominal value, is a limited legal tender. The former type of coins are called standard coins and the latter subsidiary coins, and the two together make up the ideal of a monometallic gold standard such as has been established in England since 1816. In a scheme of things like this, writers have found it difficult to fit in the dollar or the five-franc piece. Their peculiarity consists in the fact that although their intrinsic value is less than their nominal value they have been inconvertible and are also unlimited legal tender. It is owing to this anomaly that the title of gold standard has been refused to the American and French currency systems. Few can have confidence in what is called the limping standard, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_77 in which it is said that somehow "the silver coin, though intrinsically of less value than the gold, hobbles along, maintained at equality by being coupled with its stronger associate." mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_78

But was the French system of currency so very different from the English as to create doubt as to its stability? Whatever may have been the differences between the two systems a closer analysis shows that they are fundamentally identical. If we read together the French bimetallic law of 1803 and the Mint Suspension Decree of 1878 on the one hand, and on the other the provisions of the English Gold Standard Act of 1816, together with the Bank Charter Act of 1844, and compare, do we find any substantial difference between the French and English systems of currency? Prior to 1878 there was an unlimited issue in France of both gold and silver coins of unlimited legal tender. Prior to 1844 there was an unlimited issue in England of both gold sovereigns and Bank of England notes, both of unlimited legal tender. In 1844 England put a limit on the issue of bank notes, but did not deprive the issues of their legal-tender power.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28E. Problem of Rupee CHAPTER IV.htm - _msocom_79 In 1878 France did precisely the same thing as England did with her notes in 1844. By the decree of mint suspension, France virtually, though indirectly, put a limit on the silver five-franc coins without depriving them of their legal-tender power. If we regard the

French five-franc coins as notes printed on silver, it is difficult to see what constitutes the difference between the two systems which leads economists to call one a gold standard and the other a limping standard. If the silver franc limps or hobbles along, so does the bank note, and the former can hobble better than the latter because of the two it has a comparatively greater intrinsic value. If, however, it is argued that the bank note is convertible into gold, while the five-franc piece is not, the reply is that the comparison must be made with the fiduciary notes of the bank of England. Those notes are practically inconvertible. For, at any given time, with the gold the Bank of England has in its Issue Department the fiduciary portion of the notes remains uncovered, and may, therefore, be regarded as inconvertible as the delimited issue of the five francs. But even if it is insisted that the fiduciary notes cannot be regarded as inconvertible as the five franc pieces, it must be pointed out that the similarity of the two is not to be determined by considerations of convertibility or inconvertibility. The attribute of convertibility with which the fiduciary notes of the Bank of England are endowed is a superfluous attribute which in no way improves their position as compared with the five-franc pieces. What makes them identical is the fact that they are both subjected to a fixed limit of issue. Thus viewed, the French limping standard and the English gold standard are nothing but two different illustrations of the "currency principle" in so far as a fixed limit of issue on a fiduciary currency is a cardinal feature of that principle.

Not only is the French monetary system identical with the English in its organisation, but the design in both cases was identical. In the controversy which raged over the Bank Charter Act of 1844, the motives of Lord Overstone were not quite clearly grasped by his opponents of the banking school of thought. Lord Overstone was not very much interested in providing a method for preventing the depreciation of the note issue, as his opponents thought him to be. His supreme concern was to prevent gold disappearing from circulation. Starting from a chain of reasoning the solidity of which can hardly be said to be open to question, he came to the conclusion that gold would be driven out of circulation by an increase in the issue of notes. To keep gold in circulation the only remedy was to put a limit on the issue of notes, and this was the purpose of the Bank Charter Act of 1844. Now, precisely the same was the object of France in suspending the coinage of silver. As has already been pointed out, owing to the fall in the value of

silver after 1873, gold was being rapidly driven out of circulation by the substitution of this depreciated metal. To prevent this result from assuming a vast proportion, the French adopted the same remedy as that of Lord Overstone, and through their suspension of silver coinage protected their gold from going out of circulation, which would have certainly been the case if no limit had been put on silver issues.

It would not, therefore, be amiss to argue that the plan contemplated by the Government of India, and approved of by the Fowler Committee in being similar to the French system, was based on the same principles as governed the English currency system, which, according to Jevons, were a "monument of sound financial legislation."

CHAPTER V

THE PROBLEM OF THE RUPEE: ITS ORIGIN AND ITS SOLUTION

(HISTORY OF INDIAN CURRENCY & BANKING)

CHAPTER V

FROM A GOLD STANDARD TO A GOLD EXCHANGE STANDARD

For once it seemed that the problem of a depreciating rupee was satisfactorily solved. The anxieties and difficulties that extended over a long period of a quarter of a century could not but have been fully compensated by the adoption of a remedy like the one described in the last chapter. But by an unkind turn of events, the system originally contemplated failed to come into being. In its place there grew up a system of currency in India which was in every way the very reverse of it. Some thirteen years after legislative sanction had been given to the recommendations of the Fowler

Committee, the Chamberlain Commission on Indian Finance and Currency reported that

“in spite of the fact the Government adopted and intended to carry out the recommendations of the Committee of 1898, the Indian currency system to-day differs considerably from that contemplated by the Committee, whilst the mechanism for maintaining the exchange has some important features in common with the suggestions made to the Committee by Mr. A. M. Lindsay.” mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_1

It will be recalled mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_2 that in Mr. Lindsay's scheme Indian currency was to be entirely a rupee currency; the Government was to give rupees in every case in return for gold, and gold for rupees only in case of foreign remittances. The scheme was to be worked through the instrumentality of two offices, one located in London and the other located in India, the former to sell drafts on the latter when rupees were wanted and the latter to sell drafts on the former when gold was wanted. Surprisingly similar is the system prevailing in India to-day. Corresponding to Mr. Lindsay's proposals, which, be it noted, were rejected in 1898, the Government of India has built up two reserves, one of gold and the other of rupees, out of the cash balances, the paper currency, and the gold-standard reserve. Each of these is, by the nature of the currency system, composite. The cash balances, which are fed from revenue receipts, gather in their net rupees as well as sovereigns, both being legal tender. Notes being issuable against both, the paper-currency reserve always contains sovereigns and rupees. Up to August, 1915, the gold-standard reserve was also held partly in gold and partly in rupees. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_3 By a system of sorting, technically called “transfers,” the Government secures the command over rupees and sovereigns necessary for discharging the obligations it has undertaken. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_4 The location of these funds is also very much as designed by Mr. Lindsay. The cash balances, being the till-money of the Government, are necessarily distributed between the Government of India in India and the Secretary of State in London, the portion held by the latter being entirely in gold and that held by the former being in silver. The gold-standard reserve, like the cash balances, is not a

statutory reserve. Consequently its location is perfectly within the competence of the Executive. That being so, it has been so arranged that the gold portion of the fund shall be held by the Secretary of State in London, and the rupee portion, so long as it was maintained, by the Government of India in India. The only reserve which did not easily lend itself to currency manipulation was the paper-currency reserve, for the reason that its disposition and location were governed by law. In that behalf, legal power has been taken to alter the location of the gold part of that reserve by making permanent the provision of the temporary Act II of 1896, which authorised the issue of notes in India against gold tendered to the Secretary of State in London. Thus the Secretary of State and the Government of India, under the new system of currency, hold two reserves, one of gold, mainly in the possession of the former and located in London, and the other of rupees, entirely in the possession of the latter and held in India. But the similarity of the existing system to that of Mr. Lindsay is not confined to the maintenance of these funds and their location. It extends even to the modes of operating these two funds, For, as suggested by Mr. Lindsay, when rupees are wanted in India the Secretary of State sells what are called "Council Bills," encashable into rupees at the Government Treasuries in India, thereby providing the rupee currency in India. When gold is wanted the Government of India sells what are called "Reverse Councils" on the home Treasury in London, which are encashed by the Secretary of State, thereby providing gold for foreign remittances. The result of the sale of "Council Bills" and of the "Reverse Councils" on the two funds has been to transform the Indian currency from being a gold standard with a gold currency, as desired by the Fowler Committee, into what is called a gold standard without a gold currency, as wished for by Mr. Lindsay.

This system which has grown up in place of the system originally contemplated by the Government of India is called the gold-exchange standard. Whatever that designation may mean it was not the plan originally contemplated by the Government of India in 1898. How the departure came about we shall deal with in another place. Here it is enough to state—one may also say necessary, for many writers seem to have fallen into an error on this point—that *the Government did not start to establish a gold-exchange standard*. Rather it was contemplating the establishing of a true gold standard, which, however inadequately understood by the men who framed it, was in essential agreement with

the principles governing the English Bank Charter Act of 1844.

What are we to say about the new system? The Chamberlain Commission, while reporting that there was a departure from the ideal of a gold standard with a gold currency, observed mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_5 :—

“But to state there has been this departure is by no means to condemn the action taken, or the system actually in force.....”

Now why not? Is not the system the same as that proposed by the Government in India in 1878 and condemned by the Committee of 1879? it is true the arguments urged against that plan by the Committee of 1879 were not of much weight. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_6 Nonetheless the plan was essentially unsound. The material point in the introduction of a gold standard must be said to be one of limitation on the volume of rupees, and it is from this point of view that we must judge the plan. But there was nothing in the plan of 1878 that could be said to have been calculated to bring that about. Far from putting any limitation on the volume of rupees, the plan had deliberately left the Mints open to the free coinage of silver. A matter of some interest in the plan was the projection of a system of seignorage so arranged so to make the bullion value of the rupee equal to the gold value given to it. But as a means of limiting the coinage of rupees it was futile. The mere levy of a seignorage cannot be regarded as sufficient in all circumstances to effect a limitation of coinage. Everything would have depended upon how closely the seignorage corresponded with the difference between the mint and market price of silver in terms of gold. If the seignorage fell short of the difference it would have given a direct impetus to increased coinage of rupees until their redundancy had driven them to a discount. In this respect the plan was a reproduction in a worse form of the English Gold Standard Act of 1816. Like the Government of India's plan of 1878, that Act, while purporting to introduce a gold standard, had authorised the opening of the Mint, which was closed, to the free coinage of silver with a seignorage charge. It is not generally recognised how stupid were the provisions of that Act, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_7 the ideal of all orthodox gold monometallists, in so far as they contemplated the free coinage of silver. Fortunately for England

the Royal Proclamation, compelling the Mint Master to coin all silver brought to the mint, was never issued. Otherwise the working of the gold standard would have been considerably jeopardized.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_8 The Act of 1816 had at least taken one precaution, and that was a limit on the legal-tender power of silver. In the scheme of the Government of India, not only free coinage of silver was permitted, but silver was conceded the right of full legal tender. In so far, therefore, as the plan did not provide for controlling the volume of rupees it was subversive of the gold standard it had in view.

The only difference between this plan of 1878 and the system now in operation in India is that under the former the Mints were open to the public, while under the latter they are open to the Government alone. In other words, in the one case rupees were coined on behalf of the public, and in the other they are being coined on behalf of the Government. It is not to be supposed that the plan of closing the Mints to the public was not thought of by the Government in 1878. On the other hand, the Government of India had then considered the feasibility of taking over into its hands the coinage of rupees, and had rejected it on some very excellent grounds. In their dispatch outlining the scheme the Government of the day observed:—

"48. The first point to be guarded in attempting to carry out the proposed change, is to provide for complete freedom for any expansion of the currency which the trade requirements of the country demand. This, we think could not be properly secured if the Mints were wholly closed for the coining of silver for the public. If this measure were adopted, the responsibility for supplying the silver demand would be thrown on the Government, and in the present position of the market for gold and silver bullion in India it would not be possible to accept such a duty.

"49. What might at first sight appear the simplest, and therefore the best way of allowing for the expansion of the Indian silver currency with a gold standard, would be for the Government to undertake to give silver coin in exchange for gold coin to all comers, at the rates fixed by the new system, and to open the Mints for the coinage of gold, while they were closed for silver. But in the absence of any supply of silver in india from which to obtain the necessary material for coinage, such an obligation could not be accepted, without

involving the Government in complicated transactions in the purchase and storing of bullion which it would be very inexpedient to enter on."

With these reasons, interesting in so far as they were prophetic of the scandals connected with the recent silver purchases by the India Office, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_9 we are not directly concerned. What is of importance is whether this difference in the mode of issue makes any vital difference to the question of an effective limit on the volume of rupees. Now, there is a great deal of confused thinking as to the precise virtue of the closing of the Mints to the private coinage of silver. It was generally believed, the closing of the Mints having given a monopoly to the Government in the matter of issuing rupees, that this monopoly would somehow sustain the value of the rupees in terms of gold by preventing their over-issue. The closing of the Mints, it must be admitted, has given the Government the position of a monopolist. But how a monopoly prevents an over-issue is not easy to grasp. The closing of the Mints to the free coinage of silver is the same as depriving banks of the liberty of issuing notes and giving it exclusively to a central bank. But nobody has ever argued that because a central bank has a monopoly of issue it cannot therefore over-issue. Similarly, because the Government of India is a monopolist it would be absurd to argue that it cannot therefore over-issue. Indeed, a monopolist can issue as much as private people put together, if not more. Again, from the standpoint of influence of profits on coinage the present plan is much inferior to that of 1878. It is true in both cases profits depend upon the volume of coinage. But in the former the amount of profit was no incentive to coinage, either to the Government, because it had no power to coin, or to the people who determined the volume of coinage, because the regulation of seignorage practically controlled it by making it unprofitable to bring additional bullion to the Mint. In the present case, the coinage being entirely in the hands of the Government, a hankering after profits, generated by the silly notion of the necessity of a "backing" to the currency, might create an impulse to undertake additional coinage, especially if the price of silver fell very low and produced a wide margin between the Mint and the market price of the rupee. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_10

If it is argued, as it well may be, that the will of the Government of India as a monopolist, i.e. its desire to see that its currency is not

depreciated, may bring about a limitation on the issue of rupees which could not have been possible had the Mints remained open to the public in general, the reply is that this will to limit could be effective only if the Government had the power to refuse to issue. Central banks limit their currencies so far as will is concerned, because they are not obligated to issue to anyone and everyone. But the position of the Government of India is lamentably weak in this respect. It is bound to issue currency when asked for. It is true that every issue does not involve a net addition to the existing volume of currency; for a portion of the new issue is a re-issue of what is returned from circulation. Nonetheless, it cannot be said that the Government by reason of its monopoly has put an effective limit on the volume of rupee currency. On the other hand, having no escape from the liability to issue currency, the exercise of this cherished privilege has recoiled on the Government, so much so that this monopoly of issue, instead of strengthening the position of the Government, has weakened it considerably.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_11The view of the Chamberlain Commission.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_12

“that while the Government are very large dealers in the exchange market, they are not monopolists (!) and it seems doubtful if they could successfully stand out for any such [fixed minimum rate] at all times of the year,”

is therefore interesting as a confession that the closing of the Mints has not had the virtue of so limiting the coinage of rupees as to enable the Government to dictate at all times the price of the rupee, which none but it alone can manufacture.

Thus the present standard is different from the standard proposed in 1878 only in name. If this one is characterised by the adoption of the rate of exchange as an index for regulating the volume of currency, the same must be said of the former. But as Mr. Hawtrey remarks,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_13 whatever means are adopted for the manipulation of the currency,

“the value of the rupee will be determined by the quantity in circulation.”

in other words, what must be said to be essential for the safety of a gold standard is a provision against over-issue of rupees. But, as we saw, neither the plan of 1878 nor the present one can be said to be free from that danger. Consequently we must conclude that, being essentially alike, the arguments that are valid against the former are also valid against the latter.

But the Chamberlain Commission will not allow that the exchange standard is a resuscitation of a condemned plan. On the other hand, it has sought to inspire confidence in that standard by holding out

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_14

"that the present Indian system has close affinities with other currency systems in some of the great European countries and elsewhere....."

To get an idea as to what these affinities are, or rather were, we must look into Chapter II of Mr. Keynes's interesting treatise on *Indian Currency and Finance*. In that treatise of his, Mr. Keynes has attempted to show that there is a fundamental likeness between the operations of the Indian currency system and the operations as they used to be of the central banks of some of the important countries of Europe. He found that it used to be the practice of these banks to hold foreign bills of exchange for the purpose of making remittances to foreign countries. Between the selling of such foreign bills and selling of reverse councils by the Government of India he observed a close fundamental likeness, inasmuch as both involved

"the use of a local currency mainly not of gold, some degree of unwillingness to supply gold locally in exchange for the local currency, but a high degree of willingness to sell foreign exchange for payment in local currency at a certain maximum rate."

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_15

But, as Prof. Kemmerer points out,

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_16 it is difficult to see what likeness there is between the Government of India selling reverse councils and the European banks holding foreign bills. Far from being alike, the two practices must be regarded as the opposite of each other. In selling reverse councils

“the Government sells drafts against its foreign gold credit (i.e. its gold reserve), when money at home is relatively redundant, as evidenced by exchange having reached the gold export point. Thereby it relieves the redundancy through the withdrawing from circulation and locking up the local money received in payment for the drafts. Under the practice of holding foreign bills to protect the money market, the central bank sells its foreign bills, when money at home is relatively scarce, as means of securing gold for importation or preventing its exportation. In the former case, the sale of drafts takes the place of an exportation of gold, and the resulting withdrawal of local money from circulation is in essentials an exportation ; in the latter case the sale of the drafts abroad is part of a process for securing gold for importation, or for preventing its exportation.”

The Indian currency system therefore bears no analogy to the European currency systems, as Mr. Keynes would have us believe. But if a parallel is needed, then the true parallel to the Indian system of currency is that system which prevailed in England during the Bank Suspension period (1797-1821). The fundamental likeness between the two systems becomes quite unmistakable if we keep aside for the moment the remittance operations of the Government of India and the Secretary of State, which becloud the true features of the Indian currency system. If we tear this veil and take a close view, the following appear to be the prominent features of the Indian system :—

- (1) The gold sovereign is full legal tender.
- (2) The silver rupee is also full legal tender.
- (3) The Government undertakes to give rupees for sovereigns, but does not undertake to give sovereigns for rupees, i.e. the rupee is an inconvertible currency unlimited in issue.

Turning to the English system of currency during the period of the Bank Suspension, we find:—

- (1) The gold sovereign was full legal tender.
 - (2) The paper notes of the Bank of England circulated as money of general acceptability by common custom if not by law.
- [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_17](http://msitstore.c:\important\writing_of_babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_17)

(3) The Bank of England undertook to give notes for gold or mercantile bills or any other kind of good equivalent, but did not give gold for notes, i.e. the notes formed an inconvertible currency unlimited in issue.

Only in one respect can the analogy be said to be imperfect. The Indian Government has undertaken—not, be it noted, as a statutory obligation, but merely as a matter subject to the will of the executive, to convert the rupee into gold at a fixed rate for foreign remittances if the exchange falls below par. This, it must be allowed, the bank of England did not do during the suspension period. Everything, therefore, turns upon the question whether this much convertibility is a sufficient distinction to mark off the Indian currency from the English currency of the suspension period into a separate category and invalidate the analogy herein said to exist between the two systems. To be able to decide one way or the other we must firmly grasp what is the true import of convertibility. Prejudice against an inconvertible currency is so strong that people are easily satisfied with a system which provides some kind of convertibility, however small. But to assume this attitude is to trifle with a very crucial question. We must keep dear in our mind what it is that essentially marks off a convertible from an inconvertible currency. The distinction commonly drawn, that the one is an automatic and the other is a managed currency, must be discarded as a gross error. For, if by a managed currency we mean a currency the issue of which depends upon the discretion of the issuer, then a convertible currency is as much a managed currency as an inconvertible currency is. The only point of contrast lies in the fact that in the management of a convertible currency the discretion as to issue is regulated, while in an inconvertible currency it is unregulated. But even if regulated the issue remains discretionary and to that extent a convertible currency is not so safe as to mark it off from an inconvertible currency. The enlargement of its issue being discretionary and the effect of such issues being to drive specie out of circulation, a convertible currency may easily become inconvertible. The difference between a convertible and an inconvertible currency is therefore ultimately a distinction between a prudent and an imprudent management of the right to issue currency. In other words, convertibility is a brake on the power of issue. Bearing this in mind, and also the fact that a convertible currency by reason of mismanagement has the tendency to become inconvertible, it is possible for us to imagine how severe must be the obligations as to convertibility in order

to prevent prudent management of currency from degenerating into an imprudent management resulting in over-issue. If, therefore, it is true that in countries having a convertible currency the affairs were so prudently managed that when specie left the country the paper money not only did not increase to take its place, but actually diminished, and that usually by a greater absolute amount than the gold currency, it was because the obligations as to convertibility were those of 'effective absolute immediate convertibility.' mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_18 We can now appreciate why Prof. Sumner said mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_19 that

"convertibility in the currency is like conscientiousness in a man : it has many grades and is valuable in proportion as it is strict and pure."

That being so, it would be foolish to assume that we are immune from the consequences of an inconvertible currency until we know what is the grade of the convertibility that is provided. Now, what is the character of the convertibility of the rupee in India? It is a deferred, delegatised, delocalised, and therefore a devitalised kind of convertibility. Indeed, really speaking it is not a convertibility, but rather it is a moratorium which is a negation of convertibility, for what does the provision for convertibility for foreign remittances mean in practice? It simply means that *until* a fall of exchange takes place there is a moratorium or inconvertibility in respect of the rupee. Not only is there a moratorium as long as exchange does not fall, but there is no guarantee that the moratorium will be lifted when a fall does occur. it may not be lifted, for it is a matter of conscience and not of law. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_20 Is such a grade of convertibility, if one has a predilection for that term, very far removed from the inconvertibility of the bank notes during the suspension period? Let those who will say so. For a person not endowed with high and subtle imagination the distinction between such a convertibility and absolute inconvertibility is too thin to persuade him that the two systems are radically different; indeed, when we come to analyse the problem of prices in India and outside India we shall find another piece of evidence to show that they are not different, and that the analogy between the two is perfect

enough for all practical purposes.

It may, however, he said that an inconvertible currency may be so well managed as not to give rise to a premium on gold, so that there may be little to choose between it and a perfectly convertible currency. But whether an inconvertible currency will be so well managed is a question of practical working. Again, whether the absence of premium on gold suffices to place an inconvertible currency on par with a convertible currency, so far as the price problem is concerned, is also a matter depending on circumstances. All these questions will be considered in their proper places.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F.Problem of Rupee CHAPTER V.htm - _msocom_21 What we are considering at this stage are the inherent potentialities of an inconvertible currency. Suffice it to say here that the name Gold Exchange Standard cannot conceal the true nature of the Indian Monetary Standard. Its essence consists in the fact that although gold is unlimited legal tender there is alongside an unlimited issue of another form of fiduciary currency well-nigh inconvertible, and also possessing the quality of unlimited legal tender.

It needs no acute power of penetration to see that, so interpreted, the existing currency system in India is the opposite of the system outlined by the Government in 1898 and passed by the Fowler Committee. The two are opposites of each other for the same reason for which the Bank Charter Act was the opposite of the Bank Suspension Act in England. Under both the Acts the currency in England was a mixed currency, partly gold and partly paper. The difference was that by the Bank Suspension Act the issue of gold became limited and that of paper unlimited, while under the Bank Charter Act the process was reversed, so that the issue of paper became limited and that of gold unlimited. In the same manner, under the original scheme of the Government of India, the issue of rupees was to be limited and that of gold unlimited. Under the existing system the issue of gold has become limited while that of rupee has become unlimited.

Was this an improvement on the plan originally contemplated by the Government of India? The only objection to that plan was that it made the rupee an inconvertible rupee.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F.Problem of Rupee CHAPTER V.htm - _msocom_22 But is convertibility such a necessary condition, and, if so, when? The idea that convertibility is necessary to maintain the value of a currency is, on the face of it, a preposterous idea. No one wants the conversion of bananas into apples to maintain the value of bananas. Bananas maintain their value by reason of

the fact that there is a demand for them and their supply is limited. There is no reason to suppose that currency forms an exception to this rule. Only we are more concerned to maintain the value of currency at a stable level than we are of bananas because currency forms a common measure of value. What is wanted to maintain the value of currency, or of any other thing for the matter of that, is an effective limit on its supply. Convertibility is useful, not because it directly maintains the value of a currency, which is nonsense, but because it has the effect of putting a limit on the supply of currency. But convertibility is not the only way of achieving that object. A plan which lays down an absolute limit on issue has the same effect—indeed, a far more powerful effect—on the supply of currency. Now, had the Mints remained entirely closed to the coinage of rupees there would have been placed an absolute limit on the issue of currency, and all the purposes of convertibility would have been served by such an inconvertible rupee. Nay, more ; such an inconvertible rupee currency would have been infinitely superior to the kind of pseudo-convertible rupee which we have in India to-day. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_23](#) *With an absolute limit there could have been no danger of a fall in the value of the rupee. If anything there would have been a danger of an indefinite appreciation of the rupee, but that was effectually guarded against by gold having been made general legal tender. A second effect of an absolute limit on the currency would have been to free it from management by reason of the fact that all question regarding the volume of issues had been settled once for all.*

In these respects, therefore, the gold-exchange standard is an impairment of the original plan of an inconvertible rupee with fixed limit of issue supplemented by gold. Again, from the standpoint of controlling the price-level, the exchange standard cannot be said to have been an improvement on the original plan. Of course, it is possible to say that such a perversion of the original system is no matter for regret. Whether gold is a standard of value, or whether fiduciary money is a standard of value, is a matter of indifference, for neither can be said to have furnished a stable standard of value. A gold standard has proved to be as unstable as a paper standard, because both are susceptible of contraction as well as expansion. All this, no doubt, is true. Nevertheless it is to be noted that in any monetary system there is no danger of indefinite contraction. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F. Problem of Rupee CHAPTER V.htm - _msocom_24](#) What is to be guarded against is the possibility of indefinite expansion. The possibility of indefinite expansion, however, varies with the nature of money. When the standard of value is standard metallic money the expansion cannot be very great, for the cost of production acts as a sufficient limiting influence. When a standard of value is a convertible paper money the

provisions as to reserve act as a check on its expansion. But when a standard of value consists of a money the value of which is greater than its cost and is inconvertible, the currency must be said to be fraught with the fatal facility of indefinite expansion, which is another name for depreciation or rise of prices. It cannot, therefore, be said that the Bank Charter Act made no improvement on the Bank Restriction Act. indeed, it was a great improvement, for it substituted a currency less liable to expansion in place of a currency far more liable to expansion. Now the rupee is a debased coin, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28F.Problem of Rupee CHAPTER V.htm - _msocom_25 inconvertible, and is unlimited legal tender. As such, it belongs to that order of money which has inherent in it the potentiality of indefinite expansion, i.e. depreciation and rise of prices. As a safeguard against this the better plan was no doubt the one originally designed, namely of putting a limit on the issue of rupees, so as to make the Indian currency system analogous to the English system governed by the Bank Charter Act of 1844.

If there is any force in the line of reasoning adopted above, then it is not easy to agree with the opinion entertained by the Chamberlain Commission of the Exchange Standard. Indeed, it raises a query whether for all that the Commission said there is not somewhere some weakness in the system likely to bring about its breakdown. It therefore becomes incumbent to examine the foundations of that standard from a fresh point of view.

Chapter VI

THE PROBLEM OF THE RUPEE:
ITS ORIGIN AND ITS SOLUTION
(HISTORY OF INDIAN
CURRENCY & BANKING)

CHAPTER VI

STABILITY OF THE EXCHANGE STANDARD

It will be recalled that at the time the Indian Mints were closed to the free coinage of silver there were two parties in the country, one in favour of and the other opposed to the closure. Being placed in an embarrassing position by the fall of the rupee, the Government of the day was anxious to close the Mints and raise its value with a view to obtaining relief from the burden of its gold payments. On the other hand it was urged, on behalf of the producing interest of the country, that a rise in the exchange value of the rupee would cause a disaster to Indian trade and industry. One of the reasons, it was argued, why Indian industry had advanced by such leaps and bounds as it did during the period of 1873-1893 was to be found in the bounty given to the Indian export trade by the falling exchange. If the fall of the rupee was arrested by the Mint closure, it was feared that such an event was bound to cut Indian trade both ways. It would give the silver-using countries a bounty as over against India, and would deprive India of the bounty which it obtained from the falling exchange as over against gold-using countries.

Theory had already scoffed at these fears. It is therefore interesting to see that later history has also confirmed the verdict of theory. Indian trade with a gold-standard country like England or a silver-standard country like China did not suffer a setback, notwithstanding an arrest in the fall of the rupee. The following figures furnish sufficient evidence to support the contrary:—

TABLE XXV

That the arrest in the fall of the rupee should have lifted the burden from Indian finances was just as was expected to follow from the closure of the Mints. Notwithstanding important reductions in taxation and large expenditure of social utility, the annual budgets since the mint closure have shown few deficits (*see* p. 506).

Now there is a tendency among some writers to interpret these facts as unmistakable proofs of the soundness of the currency system. It is argued that if the trade of the country has not received a setback,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_1 and if the finances of the country have improved,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_2 then the implication is that the currency of which such results can be predicated must be good. It is not necessary to warn students of currency that such easy views on the soundness of the currency system, however plausible, are devoid of the logic necessary to carry conviction. Trade no doubt is dependent on good money, but the growth of trade is not a conclusive proof that the money is good. It should be noted that during the periods of debased coinages so common at one time the social misery and nuisance arising therefrom were intolerable, yet during the same periods it was possible for countries to make great advance in trade. Speaking of seventeenth-century England, when that country was afflicted with debased and constantly changing coinage and when there was, besides, a long period of civil war and confusion, Lord Liverpool, who was above all statement of his day most alive to the evils of a bad currency, remarks:—

“It is certain, however, that during the whole of this period, when our coins were in so great a state of confusion, the commerce of the kingdom was progressively improving and the balance of trade almost always in favour of this country.”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_3 That commerce can increase even when currency is bad is easily supported from the experience of India herself. In no period did Indian trade make such strides as it did between 1873 and 1893. Was the Indian currency of that period good? On the other hand, it is possible to hold that if trade is good it may be *because* the currency is bad. The trade of India between 1873 and 1893 flourished because it received a bounty. But the bounty was a mulcting of the Indian labourer, whose wages did not rise as fast as prices, so that the Indian prosperity of that period was founded not upon production, but upon depredation made possible by the inflation of currency.

TABLE XXVII
FINANCES OF THE GOVERNMENT

Year	Surplu s + Deficit	Yea rs.	Surplu s + Deficit	Yea rs.	Surplu s + Deficit	Year	Surplu s + Deficit	Year	Surplu s + Deficit
	Rs		£		£		£		£

Similarly it cannot be granted without reserve that the new currency system must be good because it has obviated the burden of the gold payments and given relief to the Indian taxpayer. Such a view involves a misconception of the precise source of the burden of India's gold payments during the period of falling exchange. It has been widely held that the burden of gold payments was caused by the fall in the gold value of silver, a view which carried with it the necessary implication that if India had been a gold-standard country she would have escaped that

heavy burden. That it is an erroneous view hardly needs demonstration.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_4 It is not to be denied that India bore an extra burden arising from the increased value of the gold payments. But what is not sufficiently realised is that it was a burden which weighed on all gold debtors irrespective of the question whether their standard was gold or silver. In this respect the position of a gold-standard country like Australia was not different from a silver-standard country like India. In so far as they were gold debtors they suffered each in the same way from the same cause, namely the appreciation of the standard in which their debts were measured. The fact that one discharged her debts in gold and the other in Silver made no difference in their condition, except that the use of silver by India to discharge her debts served as a refractory medium through which it was possible to see the magnitude of the burden she bore. The fall of silver measured and not caused the burden of India's gold payments. The arrest in the fall of the rupee cannot be accepted as a *prima fade* proof of a relief to the taxpayer and therefore an evidence of the soundness of the currency system. It is possible that the benefit may have been too dearly paid for.

Although favourably impressed by the increase of trade and the buoyancy of Government finances under the exchange standard, the Chamberlain Commission did not care to found its case for it on the basis of such arguments. The chief ground on which it rested was that the currency system was capable of maintaining the exchange value of the rupee at a fixed par with gold.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_5 We must therefore proceed to examine this claim made by the Commission on behalf of the exchange standard. The table No. XXVIII presents the requisite data for an elucidation of the question.

Assuming, for the moment, the criterion laid down by the Commission to be correct, can it be said from the data given above that the rupee has maintained its gold value? It would be over-confident if not rash to say that the system, even from the narrow point of view of the Commission, has been an unquestioned success.

Between June, 1893, and January, 1917, the rupee was rated to gold at the rate of 1 rupee equal to 7.53344 troy grs. of fine gold. At that rate the sovereign should be equal to 15 rupees, the mint price of gold should be Rs. 23-14-4 per tola (i.e. 180 grs.) of bar gold 100 touch, and the exchange on London should be 1s. 4d., and should have varied within 1s. 4.125 d., the import point, and 1s. 3.906 d., the export point, for gold.

Taking a general survey of the stability of the rupee with regard to its value in terms of gold, it will be noticed that from the date of the Mint closure up to 1898 the rupee was far below par. The depreciation of the rupee, measured in terms of exchange or price of gold or sovereign, ranged somewhere between 25 to 30 per cent. So great was the depreciation that it redoubled the difficulties confronting the Government when the rupee was not fixed to gold. The financing the Home Treasury by the usual means of selling Council Bills became well-nigh impossible. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_6 The Secretary of State found himself in an embarrassing position. Offering to sell below par involved the obloquy of having led the way to the defeat of the policy of stabilising exchange. Refusing to sell at market rates involved the danger of a dry Treasury. The Government of India suggested that the Secretary should lay down a minimum rate for or a maximum amount of the bills that he put upon the market. The Secretary of State agreed to neither, but consented to reduce his drawings so as not to unduly depress the exchange rate. The drawings of the secretary of State during the first fiscal year since the Mint closure have been the smallest on record:—

TABLE XXIX Council Drawings

Date of drawing	Amount of Drawings 1.000 omitted	Rate at which drawn (Pence per Rupee)
1893. June	2,478	15.039
July	25	15.974
August	78	15.243

September	7	15.350
October	5	15.334
November	617	15.251
December	14	15.242
1894. January	98	14.408
February	1,023	13.787
March	1,915	13.870
April	1,368	13.626

The curtailment of drawings to save the rate of exchange from being lowered was not an unmitigated good, for it imposed the necessity of a resort to the by no means inexpensive method of sterling borrowings to finance the Home Treasury.

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_7](#) The remittances by drawings fell short of the net disbursements of the Home Treasury in 1893-94 by £6,588,000, which deficit was met by permanent sterling borrowings to the extent of £7,430,000, the interest on which added to the already overheavy burden of the gold payments. Rather than incur such a penalty the Secretary of State gave up the attempt to dominate the market and preferred to follow it. But this let-go policy was not without its cost. The drop in the exchange below 1s. 4d. added to the burden of remittances to the Home Treasury, and also compelled the Government to grant exchange compensation allowance to its European officers, civil and military—an aid which it had so far withheld. The cost to the Government involved by the fall of the rupee below par was quite a considerable sum.

[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_8](#)

TABLE XXX

Cost of the Fall of the Rupee

	Loss on	Loss by	Loss by		Total on all Counts for	
Years	Council Bills	Exchange	Increase of	Total on each	three Years	
	being sold	Compensation	Pay of	Account in		
	below par	Allowance	British Troops	each Year	In Rupees	In Sterling
						at 1s. 4d.
					Rs.	£
1894-95	3,74,15,000	78,02,000	37,84,000	4,90,01,000		
1895-96	3,05,91,000	87,18,000	49,38,000	4,42,47,000	11,91,86,000	7,945,733
1896-97	1,66,48,000	48,95,000	44,25,000	2,59,38,000		

In the midst of such a situation it is no wonder if the faith of the Government in the ultimate stability of the rupee had given way, for we find that in October, 1896, the Financial Member of the Council had personally come to the conclusion that it would be better in the interest of stability to substitute 15d. for 16d. as the par of exchange between the rupee and gold. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_9 But the suggestion was dropped as the rupee showed signs of reaching the gold par, which it did in January, 1898, after a period of full five years of depreciation from the established par.

Between January, 1898, and January, 1917, twice did the rupee fall below its gold par. The year 1907-8 records the second occasion when the parity of the rupee under the exchange standard broke down. The actual rates of exchange prevailing in the market were as follows:—

TABLE XXXI

RATES OF EXCHANGE, LONDON ON INDIA (FROM THE

TIMES")

Par R. = 1s. 4d.

December	1 3 15/16	1 3 29/32	1 3 31/32	1 3 1/8

After a crisis lasting over a year the rupee recovered to its old gold par and remained fixed at it, though by no means firmly, for another seven years, only to suffer another fall from its parity during the year 1914-15 (*see* table, p. XXXII).

After 1916 the stability of the exchange standard was threatened by a danger arising from quite unsuspected quarters. The Indian exchange standard was based upon the view that the gold value of silver was bound to fall or at least not likely to rise to a level at which the intrinsic value of the rupee became higher than its nominal value. The price of silver at which the intrinsic value of the rupee equalled its nominal value was 43d. per ounce.

TABLE XXXII

RATES OF EXCHANGE, LONDON ON CALCUTTA (FROM THE NATIONAL BANK OF INDIA)

Month	1914		1915	
	Highest	Lowest	Highest	Lowest
January			1 3 15/16	1 3 15/16
February			1 4 1/32	1 3 29/32
March			1 4	1 3 15/16
April			1 3 15/16	1 3 29/32

May	1 4 1/4	1 3 15/16	1 3 15/16	1 3 7/8
June	1 3 31/32	1 3 15/16	1 3 7/8	1 3 27/32
July	1 3 31/32	1 3 13/16	1 3 22/32	1 3 23/32
August	1 3 7/8	1 3 13/16	1 3 15/16	1 3 27/32
September	1 3 15/16	1 3 13/16	1 4	1 3 15/16
October	1 3 15/16	1 3 15/16		
November	1 3 15/16	1 3 15/16		
December	1 3 15/16	1 3 15/16		

So long as the intrinsic value of the rupee remained below its nominal value, i.e. the price of silver did not rise above 43d., there was no danger of the rupee circulating as currency. Once the price of silver rose above that point the danger of the rupee passing from currency to the melting-pot was imminent. Now, with the exception of a brief period from September, 1904, to December, 1907, the gold price of silver had since 1872 showed a marked tendency to fall. The decline in its price was so continuous and so steady as to create the general impression that the low price had come to stay. Indeed, so firm was the impression that the framers of the exchange standard had never taken into account the contingency of a rise in the price of silver above 43d. So little was it anticipated, that the system was not criticised on this ground by any of the witnesses who deposed before the successive Committees and Commission on Indian currency. But the unexpected may happen, and unfortunately did happen after 1916, and happened suddenly. On February 10, 1914, the cash price in London of silver per ounce of standard fineness was 26 5/8d. It fell to 22 11/16d. on February 10, 1915,

and though it jumped to 27d. on the same date in 1916, yet it was below the rupee melting-point. After the last-mentioned date its rise was meteoric. On February 9, 1917, it rose to 37 5/8 d.; on February 8, 1918, to 43d.; and on the same date in 1919 to 48 7/16d., thereby quite overshooting the rupee melting-point. But the price of silver broke all record when on February 11, 1920, it reached the colossal figure of 89 1/2d. per standard ounce.

The rise in the intrinsic value of the rupee above the nominal value at once raised a problem as to how the rupee could be preserved in circulation. Two ways seemed open for the solution of the problem. One was to scale down the fineness of the rupee, and the other to raise its gold parity. All other countries which had been confronted by a similar problem adopted the former method of dealing with their silver coinage—a method which was successfully tried in the Philippines and the Straits Settlements and Mexico in 1904-7, when a rise in those years in the price of silver had created a similar problem in those countries.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_10 The Secretary of State for India adopted the second course of action and kept on altering the rupee par with every rise in the price of silver. The alterations of the rupee par following upon the variations in the price of silver are given below:—

TABLE XXXIII

Date of Alteration of the Rupee Par.	Pitch of the Par.	
	s.	d.
January 3, 1917	1	4 1/4
August 28, 1917	1	5
April 12, 1918	1	6
May 13, 1919	1	8
August 12, 1919	1	10
September 15, 1919	2	0
November 22, 1919	2	2

December 12, 1919	2 4
-------------------	-----

After having played with the rupee par, for two years, in this manner, as though such alterations involved no social consequences, the Secretary of State, on May 30, 1919, appointed a new Currency Committee under the chairmanship of Babington Smith, to recommend measures "to ensure a stable gold exchange standard." The majority of the Committee, after half a year of cogitation, reported to the effect

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_11 that

"(i) The object should be to restore stability to the rupee, and to re-establish the automatic working of the currency system at as early a date as practicable.

"(ii) The stable relation to be established should be with gold and not with sterling.

"(iii) The gold equivalent of the rupee should be sufficiently high to give assurance, so far as is practicable, that the rupee, while retaining its present weight and fineness, will remain a token coin, or in other words, that the bullion value of the silver it contains will not exceed its exchange value.

"After most careful consideration" (the Committee said) "we are unanimous (with the exception of one of our members who signs a separate report) in recommending that the stable relation to be established between the rupee and gold should be at the rate of one rupee to 11.30016 grs. of fine gold both for foreign exchange and internal circulation." i.e. the rupee to be equal to 2s. (gold).

The minority report, which harped on the old cry of a stimulus of low exchange and penalty of high exchange, stood out for the maintenance of the old rate of 15 rupees to the gold sovereign or 1 13.0016 grs. troy of pure gold, and recommended the issue of a two-rupee silver coin of reduced fineness compared with the old rupee, so long as the price of silver in New York was over 92 cents.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_12

By the announcements of February 2, 1920, the recommendations of the majority of the Committee were accepted by the Secretary of State and also by the Government of India, which abandoned the old parity of

7.53344 grs. per rupee for the new parity of 11.30016 grs. troy. Now, has the rupee maintained its new parity with gold?

In the matter of ascertaining this fact the exchange quotation on London is no guide, for the value of the rupee was 2s. *gold* and not 2s. sterling. Had gold and sterling been identical the case would have been otherwise. But during the war, owing to the issue of virtually inconvertible money, the pound sterling had depreciated in terms of gold. We must therefore take as our standard a currency which had kept its par with gold. Such a currency was the American dollar, and the exchange quotation on New York is therefore more directly helpful in measuring the gold value of the rupee than is the sterling quotation on London. We can also employ the actual rupee-sterling quotation as a measure by comparing it with the amount of sterling the rupee should have purchased, as an equivalent of 11.30016 grs. of fine gold, when corrected by the prevailing cross-rate between New York and London.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_13

Compared with the par of exchange, the actual exchange, either on New York or on London, indicates a fall of the rupee which is simply staggering (*See* table XXXIV).

Consider, along with the external gold value of the rupee, its internal value in terms of sovereigns and bar gold (*see* table XXXV).

The tables need no comment. The rupee is not only far away from 2s. (gold), but is not even 1s. 4d. (sterling).

Do not the facts furnish an incontrovertible proof of the futility of the exchange standard? How can a system which fails to maintain its value in terms of gold, which it is supposed to do, be regarded as a sound system of currency? There must be somewhere some weakness in the mechanism of a system which is liable to such occasional breakdowns. The rupee fell or rather was below par in 1893, and did not reach its parity to any real degree of firmness until 1900. After an interval of seven years the rupee again falls below par in 1907. The year 1914 witnesses another fall of the rupee. A meteoric rise since 1917, and again a fall after 1920. This curious phenomenon naturally raises the question : Why did the rupee fail to maintain its gold parity on these occasions? A proper reply to this question will reveal wherein lies the weakness of the exchange standard.

The only scientific explanation sufficient to account for the fall of the rupee would be to say that the rupee had lost its general purchasing power. It is an established proposition that a currency or unit of account

will be valued in terms of another currency or unit of account for what it is worth, i.e. for the goods which it will buy. To take a concrete example, Englishmen and others value Indian rupees inasmuch and in so far as those rupees will buy Indian goods. On the other hand, Indians value English pounds (and other units of account, for that matter) inasmuch and in so far as those pounds will buy English goods. If rupees in India rise in purchasing power (i.e. if the Indian price-level falls) while pounds fall in purchasing power or remain stationary or rise less rapidly (i.e. if the English price level rises relative to the Indian price-level), fewer rupees would be worth as much as a pound, i.e. the exchange value of the rupee in terms of the pound will rise. On the other hand, if rupees in India fall in purchasing power (i.e. if the Indian price-level rises) while pounds rise in purchasing power or remain stationary or fall less rapidly (i.e. if the English price-level falls relative to the Indian price-level), it will take more rupees to be worth as much as a pound, i.e. the exchange value of the rupee in terms of the pound will fall.

On the basis of this theory the real explanation for a fall in the Indian exchange should be sought for in the movement of the Indian price-level. Lest there be any doubt regarding the validity of the proposition let us take each of the occasions of the fall and find out whether or not the fall was coincident with the fall in the purchasing power of the rupee.

Now do these tables confirm, or do they not, the argument that the fall in the gold value of the rupee is coincident with a fall in the general purchasing power of the rupee? What was the general purchasing power of the rupee when a fall in its gold value occurred? if we scrutinise the facts given in the above tables in the light of this query there can be no doubt as to the validity of this argument. From the tables it will be seen that the gold value of the rupee improved between 1893-1898 because there was a steady, if not unbroken, improvement in its general purchasing power. Again, on the subsequent occasions when the exchange fell, as it did in 1908, 1914, and 1920, it will be observed that these were the years which marked the peaks in the rising price-level in India ; in other words, those were the years in which there was the greatest depreciation in the general purchasing power of the rupee. A further proof, if it be needed, of the argument that the exchange value of the rupee must ultimately be governed by its general purchasing power is afforded by the movements of the rupee-sterling exchange since 1920 (*see* Table XL).

But, although such is the theoretical view confirmed by statistical evidence of the causes which bring about these periodic falls in the gold value of the rupee (otherwise spoken of as the fall of exchange), it is not shared by the Government of India. The official explanation is that a fall in the gold value of the rupee is due to an adverse balance of trade. Such is also the view of eminent supporters of the exchange standard like Mr. Keynes mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_17 and Mr. Shirras. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_18

No doubt, some such line of reasoning is responsible for the currency fiasco of 1920. How is it possible otherwise to explain the policy of

raising the exchange value of the rupee? Both the Smith Committee on Indian Currency*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_19 and the Government of India mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_20 were aware of the fact that the rupee was heavily depreciated, as evidenced by the rise of prices in India.

Given this fact, any question of raising the gold value of the rupee to 2s. gold when the rupee had scarcely the power to purchase 1s. 4d. sterling was out of the question. The Committee indulged in loose talk about stabilising the Indian exchange. But even from this standpoint the Committee's insistence on linking the rupee to gold

must be regarded as little grotesque. Stable exchange, to use Prof. Marshall's language, is something like bringing the railway gauges of the world in unison with the main line. If that is what is expected from a stable exchange, then what was the use of linking the rupee to gold which had ceased to be the "main line"? What people wanted was a stable exchange in terms of the standard in which prices were measured. Linking to gold involved unlinking to sterling, and it is sterling which mattered and not gold. Given this importance of sterling over gold, was any policy of exchange stabilisation called for? First of all it should have been grasped that such a policy could succeed only if it was possible to make sterling and rupee prices move in unison, for then alone could the ratio of interchange between them be the same. What control had the Government of India over the sterling? They might have so controlled the rupee as to produce the effect desired, but all that might have been frustrated by an adverse move in the sterling. The success of the policy of linking to sterling would have been highly problematical although highly desirable. But was it called for?

Now the problem of stabilisation is primarily a problem of controlling abnormal deviations from the purchasing-power parity between two currencies. In the case of India there were no abnormal deviations from the rupee-sterling purchasing-power parity. On the other hand, the Indian exchange was moving in a more or less close correspondence with it. There was therefore no ground for originating any policy of exchange stabilisation. But, supposing there were abnormal deviations and that, owing to some reasons known to it, the Committee believed that the exchange value of the rupee was not likely to return to the point justified by its general purchasing power, in that case the Committee should have fixed the exchange value well within the range of the purchasing power of the rupee. As it was, the value of the rupee fixed by the Committee the rupee never had. In giving a value to the rupee so much above its purchasing-power parity, it is obvious the Committee originated a solution for the simple problem of stabilising the rupee which involved the much bigger and quite a different problem of deflation or raising the absolute value of the rupee. How was the object to be attained? The Committee never considered that problem. And why? Was it because the price of silver had gone up? May be. But it is doubtful whether the Committee could have believed firmly that the value of silver was going to be permanently so high as to require a modification of the gold par. Anyone who cared to scrutinise the rise in the price of silver could have

found that the rise was largely speculative and could not have been permanent.

TABLE XLI

PRICE OF SILVER IN STERLING

(PENCE) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee

CHAPTER VI.htm - _msocom_21

Year	Highest	Lowest	Average	Range of Variation
1913	29 3/8	25 15/16	27 9/16	3 7/16
1914	27 3/4	22 1/8	25 5/16	5 5/8
1915	27 1/4	22 5/16	23 11/16	4 15/16
1916	37 1/8	26 11/16	31 5/16	10 7/16
1917	55	35 11/16	40 7/8	19 11/16
1918	49 1/2	42 1/2	47 9/16	7
1919	79 1/8	47 3/4	57 1/16	31 3/8
1920	89 1/2	38 7/8	61 7/16	50 5/8
1921	43 3/8	30 5/8	37	12 3/4

But supposing that the rise in the price of silver was not speculative, did it follow that the rupee was appreciated? The diagnosis of the Committee was an egregious blunder. With the facts laid before the Committee it is difficult to understand how anyone with a mere smattering of the knowledge of price movements could have concluded that because silver had appreciated the rupee had therefore appreciated. On the other hand, what had happened was that the rupee had depreciated in terms of

general commodities, including gold and silver. indeed, the appreciation of silver was a depreciation of the rupee. The following (Table XLII) is conclusive evidence of that fact —

TABLE XLII
DEPRECIATION OF THE RUPEE

Date	Price of Bar Gold in India (Bombay) per Tola of 180 grs.	Price of Silver in India (Bombay) per 100 Tolas	Index Number for Prices in India 1913=100
	Rs. A.	Rs. A.	
1914	24 10	65 11	
1915	24 14	61 2	112
1916	27 2	78 10	125
1917	27 11	94 10	142
1918	(July) 34 0	(May 16) 117 2	178
1918		(Nov. 28) 82 10	
1918 August	30 0		
1918 Sept.	32 4		
1919 March	32 0	113 0	200

Thus, the rise in the price of silver was a part of the general rise of prices of the depreciation of the rupee. The Committee desired to raise the gold value of the rupee to 10 rupees per sovereign when it cost twice that number of rupees to purchase a sovereign in the market. So marked was the depreciation of the rupee in terms of gold that a few months before the Committee submitted its report the *Statesman* (a Calcutta

paper) wrote —

“If you land in the country with a sovereign the Government will take it away from you and give you eleven rupees three annas in return. If you are in the country and happen to have a sovereign and take it to the currency office you will get fifteen rupees for it. On the other hand, if you take it to the bazar you will find purchasers at twenty-one rupees.” These facts were admitted by the Finance Department of the Government of India to be substantially correct, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_22 and yet in the face of them the Committee recommended the 2s. gold parity for the rupee. The Committee confused the rupee with the silver, and thus failed to distinguish the problem of retaining the rupee in circulation and raising its exchange value in terms of gold. The latter solution was applicable only if the *rupee* had appreciated. But as it was silver that had appreciated in terms of the rupee, the only feasible solution was to have proposed the reduction of the fineness of the rupee. Had the Committee regarded silver as a commodity distinct from the rupee like any other commodity to be measured in terms of the rupee as a unit of account, probably it might have avoided committing the blunder which it did. But what is more than probable is that the Committee did not think that the general purchasing power of the rupee was a factor of any moment in the consideration of the matter it was asked to report upon. What was of prime importance in its eyes for the maintenance of the exchange value of the rupee was a favourable balance of trade, and that India had at the time the Committee drafted its Report. For the Committee, in the course of its general observations on the exchange standard, remarked:

“that the system had proved effectual in preventing the fall in the value of the rupee below 1s. 4d., and unless there should have been profound modifications in India's position as an exporting country with a favourable trade balance, there was no reason to apprehend any breakdown in this respect.” mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_23

Proceeding on this view of the question it was quite natural for the Committee to have argued that if a favourable balance of trade sustained 1s. gold exchange, why should a similar balance of trade not sustain 2s. gold exchange?

Again, it is only on some such hypothesis that one can explain why the recommendations of the Committee were adopted at all when the necessity for their adoption had passed away. Even if the intrinsic value of the rupee exceeded its nominal value, there was no danger of a wholesale disappearance of the rupee from circulation in view of the enormous volume of rupees in India.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_24. What would have taken place was not a wholesale melting of rupees, but a constant dribble of an irregular and illegal character leading to the contravention of the orders then issued by the Government of India against the melting or exportation of the rupee coin. At the time when the Committee reported (December, 1919) the price of silver was no doubt high, but it was certainly falling during 1920 when the Government took action on the Report. Indeed, on August 31, 1920, when the Bill to alter the gold value of the rupee was introduced into the Council, gold was selling at 23 1/4 rupees to the tola, while if the sovereign was to be equal to 10 rupees, the market price of gold should have been Rs. 15-14-0 per tola, so that there was a difference of Rs. 7 1/2 or 33 per cent. between the market ratio of gold to the rupee and the new mint ratio. Moreover, the price of silver had also gone down in the neighbourhood of 44d., so that there was no danger of the rupee being melted out of circulation.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_25 But, notwithstanding such a disparity, the Government rushed to fix a higher gold parity for the rupee. The financial reason for this rash act was of course obvious. The impending constitutional changes were to bring about a complete separation between provincial and imperial finance in British India. Under the old system of finance it was open for the central Government to levy "benevolences" in the form of contributions on the Provincial Governments to meet such of its imperious wants as remained unsatisfied with the help of its own resources, apart from the lion's share it used to take at every settlement of the provincial finance. Under the new constitution it was to be deprived of this power. The Central Government was therefore in search of some resource to obtain relief without appearing to tax anybody in particular. A high exchange seemed to be just the happy means of doing it, for it was calculated to effect a great saving on the "home charges." But how was this high exchange to be maintained, supposing it was desirable to have a high exchange from the financial point of view?

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_26 Not only had the price and silver

gone down and the rupee shown evident marks of depreciation in terms of gold, but the balance of trade had also become adverse to India at the time when the government proceeded to take action on the Report of the Committee. But this enactment, so singular in its rashness, was none the less founded upon the hope that the balance of trade would become favourable in time and thus help to maintain the 2s. gold value of the rupee. That this is a correct interpretation of the Government's calculations is borne out by the following extract from the letter which it addressed to the Bengal Chamber of Commerce in explanation of the currency fiasco.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_27 After speaking of the necessity for granting international credits to revive commerce, the letter goes on to say:—

“But for the rest they [i.e. the Government of India] can now only rely on the natural course of events and the return of favourable export conditions, combined with the reduction of imports... to strengthen the exchange. Experience has demonstrated that in the present condition of the world trade stability is at present unattainable, but the Government of India see no reason why the operation of natural conditions should not allow of the eventual fixation of exchange at the level advocated in the report of the Currency Committee.”

Which of the two views is correct? Is it the low purchasing power of the rupee which is responsible for its fall, or is it due to an adverse balance of trade? Now, it must at once be pointed out that an adverse balance of trade, as an explanation of the fall of exchange, is something new in Indian official literature. A fall of exchange was a common occurrence between 1873 and 1893, but no official ever offered the adverse balance of trade as an explanation. Again, can the doctrine of the adverse balance of trade furnish an ultimate explanation for the fall that occurred in 1907, 1914, and 1920? First of all, taking into consideration all the items visible and invisible, the balance-sheet of the trade of a country must balance, indeed, the disquisitions attached to the Indian Paper Currency Reports, wherein this doctrine of adverse balance as a cause of fall in exchange is usually to be found, never fail to insist that there is no such thing as a “drain” from India by showing item by item how the exports of India are paid for by the imports, even in those years in which the exchange has fallen. The queer thing is, the same Reports persist in speaking of an adverse balance of trade. Given the admission that all Indian exports are paid for, it is difficult to see what remains to speak of as a balance. Why should that part of trade liquidated by money be spoken of as a “balance”?

One might as well speak of a balance of trade in terms of cutlery or any other commodity that enters into the trading operations of the country. The extent to which money enters into the trading transactions of two countries is governed by the same law of relative values as is the case with any other commodity. If more money goes out of a country than did previously, it simply means that relatively to other commodities it has become cheaper. But if there is such a thing as an adverse balance in the sense that commodity imports exceed commodity exports, then there arises the further question : Why do exports fall off and imports mount up? In other words, given a normal equilibrium of trade, what causes an adverse balance of trade? For this there is no official explanation. Indeed, the possibility of such a query is not even anticipated in the official literature. But the question is a fundamental one. An adverse balance of trade in the above sense is only another way of stating that the country has become a market which is good to sell in and bad to buy from. Now a market is good to sell in and bad to buy from when the level of prices ruling in that market is higher than the level of prices ruling outside. Therefore, if an adverse balance of trade is the cause of the fall of exchange, and if the adverse balance of trade is caused by internal prices being higher than external prices, then it follows that the fall of exchange is nothing but the currency's fall in purchasing power, which is the same thing as the rise of prices. The adverse balance of trade is an explanation a step short of the final explanation. Try to circumvent the issue as one may, it is impossible to escape the conclusion that the fall in the exchange value of the rupee is a resultant of the fall in the purchasing power of the rupee.

Now what is the cause of the fall in the purchasing power of the rupee? in that confused, if not absurd, document, the Report of Price Inquiry Committee, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_28](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1.Problem of Rupee CHAPTER VI.htm - _msocom_28) one cause of the rise of prices in India was assigned, among others, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_29](mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1.Problem of Rupee CHAPTER VI.htm - _msocom_29) to the decline in supplies relatively to population. In view of the more or less generally accepted theory of quantity of a currency as the chief determinant of its value, the line of reasoning adopted by the Committee is somewhat surprising. But there is enough reason to imagine why the Committee preferred this particular explanation of the rise of prices. The position of the Government with regard to the management of the Indian currency is somewhat delicate. Already the issue of paper currency was in the hands of the Government.

By the Mint closure it took over the management of the rupee currency as well. Having the entire control over the issue of currency, rupee and paper, the Government becomes directly responsible for whatever consequences the currency might be said to produce. It must not, also, be forgotten that the Government is constantly under fire from an Opposition by no means over-scrupulous in the selection of its counts. As a result of this situation the Government walks very warily, and is careful as to what it admits. Lord Castlereagh, in the debate on Homer's resolution of 1811 stating that bank notes were depreciated by over-issue, asked the House of Commons to consider what Napoleon would do if he found the House admitting the depreciation even if it was a fact. The Government of India is in the same position, and had to think what the Opposition would do if it admitted this or that principle. The reason why the Government of India adheres to the adverse balance of trade as an explanation of the fall of exchange is the same which led the Committee to ascribe the rise of prices to the shortage of goods. Both the doctrines have the virtue of placing the events beyond the control of the Government and thus materially absolving the Government from any blame that might be otherwise cast upon it. What can the Government do if the balance of trade goes wrong? Again, is it a fault of the Government if the supply of commodities declines? The Government can move safely under the cover of such a heavy armour!

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_30 But does the explanation offered by the Committee invalidate the explanation that the cause of the rise of prices in India was excess of currency? The value of money is a resultant of an equation (of exchange) mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm:/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_31 between money and goods. To that equation there are obviously two sides, the money side and the commodity side. It is an age-worn dispute among economists as to which of the two is the decisive factor when the result of the equation of exchange undergoes a change, i.e. when the general price-level changes. There are economists who when discussing the value or the general purchasing power of money emphasise the commodity side in preference to the money side of the equation as the chief determinant of it. To them if prices in general fall it may not be due to scarcity of money ; on the other hand, it may be due to an increase in the volume of commodities. Again, if prices in general rise they prefer to ascribe it to a decrease in the volume of commodities rather than to an increase in the quantity of money. It is possible to take this position, as some economists choose to

do, but to imagine that the quantity theory of money is thereby overthrown is a mistake. As a matter of fact, in taking that position they are not damaging the quantity theory in the least. They are merely stating it differently. The weakness of the position consists in failing to take note of what the effect on the general price-level would be if in speaking of increase or decrease of commodities they *included* a corresponding increase or decrease of currency. If the volume of commodities increases, including the volume of currency, then there is no reason why general prices should fall. Similarly, if the volume of commodities decreases, including the volume of currency, then there is no reason why general prices should fall. Similarly, if the volume of commodities decreases, including the volume of currency, then there is no reason why general prices should rise. The commodity explanation is but the reverse side of the quantity explanation of the value of money. Recasting the argument of the Committee in the light of what is said above, we can say without departing from its language that the rise of prices in India was due to the supply of currency not having diminished along with the diminution in the supply of goods. In short, the rupee fell in purchasing power because of currency being issued in excess, and there is scarcely any doubt that there has been a profuse issue of money in India since the closing of the Mints in 1893.

The first period, from 1893-98 was comparatively speaking the only period marked by a rather halting and cautious policy in respect of currency expansion. The reason no doubt was the well-known fact that at the time the Mints were closed the currency was already redundant. Yet the period was not immune from currency expansion.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_32 At the time the Mints were closed the silver bullion then in the hands of the people was depreciated as a result of the fall in its value due to the closure. An agitation was set up by interested parties to compel the Government to make good the loss. Ultimately, the Government was prevailed upon by Sir James Mackay (now Lord Inchcape), the very man who forced Government to close the Mints, to take the silver from the banks. The Government proposed to the Secretary of State that they be allowed to sell the silver even at a loss rather than coin and add to the already redundant volume of currency. The Secretary of State having refused, the silver was coined and added to the currency. The stoppage of Council Bills in 1893-94 had temporarily accumulated a large number of rupees in their Treasuries, a transaction

which practically amounted to a contraction of currency. But the Government later decided to spend them on railway construction—a policy tantamount to an addition to currency. The resumption of Council Bills after 1894 had also the same effect, for a sale of bills involves an addition to currency. In view of the heavy cost of financing the Home Treasury by gold borrowings, the resumption of sale was a pardonable act. But what was absolutely unpardonable was the increase in the fiduciary portion of the paper-currency reserve from 8 to 10 crores.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_33 thereby putting 2 crores of coined rupees into circulation, particularly so because the Finance Minister refused to pay any heed to its incidence on the currency policy, arguing:—

“I am a little doubtful whether, in discussing the question of the investment of the currency reserve, we are at liberty to look at outside considerations of that kind.”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_34 All told, the additions to the currency during the first period were negligible as compared to what took place in the second period, 1900-1908. This period was characterised by a phenomenal increase in the volume of currency poured by the Government into circulation. Speaking of the coinage of rupees during this period, Mr. Keynes, anything but an unfriendly critic of the Government's policy observedmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_35 —

“The coinage of rupees recommenced on a significant scale in 1900 a steady annual demand for fresh coinage (low in 1901-2, high in 1903-4, but at no time abnormal), and the Mints were able to meet it with time to spare, though there was some slight difficulty in 1903-4. In 1905-6 the demand quickened, and from July 1905 it quite outstripped the new supplies arising from the mintage of the uncoined silver... This slight scare, however, was more than sufficient to make the Government lose their heads. Having once started on a career of furious coinage, they continued to do so with little regard to considerations of ordinary prudence... without waiting to see how the busy seasons of 1906-7 would turn out, they coined heavily throughout the summer months... During the summer of 1907, as in the summer of 1908, they continued to coin without waiting until the prosperity of the season 1907-8 was assured.”

Evidently, in this period the Government framed their policy "as though a community consumed currency with the same steady appetite with which some communities consume beer." The period also witnessed a material expansion of the paper currency. Up to 1903 the use of the currency notes was limited by reason of the fact that they were not only legal tender outside their circle of issue, but also because their encashability was restricted to the offices of the circles of their issue. This was a serious limitation on the extension of paper currency in India. By Act VI of 1903 the Rs. 5 was made universal in British India excepting Burma, i.e. was made legal tender in all circles, and also encashable at all offices of issue. Along with this the fiduciary portion of the paper-currency reserve was increased to Rs. 12 crores by Act III of 1905. The first event was only calculated to enlarge the circulation of the notes, but the second event had the direct effect of lowering the value of the rupee currency.

The third period (1909-14) was comparatively a moderate but by no means a slack period from the standpoint of currency expansion in India. The first three years of the period were, so to say, years of subdued emotion with regard to the rupee coinage. With the exception of the year 1910, when there was no net addition to rupee coinage, and 1911, when the addition was a small one, the coinage in the years 1909 and 1912 ranged from 24 to 30 lakhs. But during the last two years of this period there was a sudden burst of rupee coinage, when the total reached 26 1/2 crores. The expansion of paper currency took place also on a great scale during this period. In 1909 the Rs. 5 were universalised in Burma as they had previously been in other parts of India. This process of universalisation was carried further during this period, when, under the authority granted by the Paper Currency Act (II of 1910), the Government universalised notes of Rs. 5 and Rs. 50 in 1910, of Rs. 100 in 1911. Along with the stimulus thus given to the increase of paper currency, the Government actually expanded the fiduciary portion of the issue from 12 to 14 crores by Act VII of 1911, thereby throwing into circulation 2 crores of additional rupees.

During the fourth period (1915-1920) all prudential restraints were thrown overboard. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G1. Problem of Rupee CHAPTER VI.htm - _msocom_36 The period coincided with the Great War, which created a great demand for Indian produce and also imposed upon the Government the necessity for meeting large expenditure on behalf of H. M. Government. Both these events necessitated a great increase in the

current means of purchase. There were three sources open to the Government to provide for the need: (1) importation of gold; (2) increase of rupee coinage; and (3) increase of paper currency. It must not be supposed that the Government of India had no adequate means to provide the necessary currency. Whatever expenditure the Government of India incurred in India, the Secretary of State was reimbursed in London. So the means were ample. The difficulty was that of converting them to proper account. Ordinarily, the Secretary of State purchases silver out of the gold at his command to be coined in India into rupees. This usual mode was followed for the first two years of the period, and the currency was augmented by that means. But the rise in the price of silver made that resource less available. The Secretary of State had therefore to choose between sending out gold or issuing paper. Of the two, the former was deemed to be too unpatriotic. Indeed, the Secretary of State believed that from an Imperial point of view it was entirely ungracious even to " earmark " the gold he received in London as belonging to India. But how was demand for additional currency in India to be met? As a result of deliberation it was agreed that to provide currency in India without employing gold the best plan was for the Secretary of State to invest at one end the gold he received on India's behalf in the purchase of British Treasury bills, and the Indian Government to issue currency notes at the other end on the security of these bills. Such a procedure, it will be observed, involved a profound modification in the basic theory of Indian paper currency. That theory was to increase the fiduciary issue by investing a portion of the metallic reserves only when the proportion of the latter to the total of the notes in active circulation had shown, over a considerable period, a position sufficiently strong to warrant an extension of the invested reserves and a corresponding diminution of the metallic reserves. The main effect of the principle was that the extent of the paper currency was strictly governed by the habits of the people, for whatever the amount of fiduciary issue at any given moment it represented metallic reserves which were once in existence. Under the new scheme the old principle was abandoned and paper currency was issued without any metallic backing, and what is more important is that its magnitude instead of being determined by the habits of the people, was determined by the necessity of the Government and the amount of security it possessed. This fatal and facile procedure was adopted by the Government of India with such avidity that within four years it passed one after another eight Acts, increasing the volume of notes issuable against securities. The following table gives the changes in the limits fixed by the Acts and the

total issues actually made under them :—

THE PROBLEM OF THE RUPEE:
ITS ORIGIN AND ITS SOLUTION
(HISTORY OF INDIAN
CURRENCY & BANKING)

CHAPTER VI Continued---

TABLE XLIII

ISSUE OF CURRENCY NOTES Acts prescribing the Fiduciary Issue
of Currency Notes

1. Limits to judiciary issues	Act	Act	Act	Act	Act	Act	Act
	V of	IX of	XI of	XIX of	VI of	11 of	XX VI
	1915	191 6	191 7	191 7	1918	1919	191 9

11. Total issues of currency notes	61.6 3	67.7 3	86,38		99,79	153,46	179, 67* mk:@

							MSITS tore:C :\Imp ortant \Writi ng_Of _Baba saheb .chm:: /28G2 . Probl em of Rupee CHAP TER VI.ht m - _mso com_ 1
III. Reserve	Silver	32,3 4	23,5 7	19,22	10,79	37,39	47,4 4
	Gold	15,2 9	24,1 6	18,67	27,52	17,49	32,7 0
	Secur ities	14,0 0	20,0 0	48,49	61,48	98,58	99,5 3

But this facile procedure could not be carried on *ad infinitum* except by jeopardising the convertibility of the notes. Consequently the very increase of paper money, added to the increased demand for currency, compelled the Government to go in for the provision of metallic money for providing current means of purchase and also give a backing to the watered paper issues. The rising price of silver naturally made the Government go in for gold. An Ordinance was issued on June 29, 1917,

requiring all gold imported into India to be sold to Government at a price based on the sterling exchange, and opened a gold Mint at Bombay for the coinage of it into mohursmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_2. Frantic efforts were made to acquire gold from various quarters. The removal of the embargo on the export of gold by the U.S.A. on June 9, 1917, and the freeing of the market for South African and Australian gold, enabled the Government to obtain some supply of that metal. From July 18, 1919, immediate telegraphic transfers on India were offered against deposit at the Ottawa Mint in Canada of gold coin or bullion at a rate corresponding to the prevailing exchange rate, and at New York at competitive tenders from August 22, 1919. Arrangements were also made for the direct purchase of gold in London and U.S.A. Finally, to encourage the private import of gold, the acquisition rate was altered from September 15, 1919, so as to make allowance for the depreciation of the sterling. But the gold thus obtained was a negligible quantity. Besides, the issue of gold did not serve the purpose the Government had in mind—namely its retention in circulation. In the nature of things it was impossible. The rupee was depreciated in terms of gold to an enormous extent, and consequently at the rate of exchange gold passed out of circulation as quickly as it was issued by the Government. What the Government could do was to make the use of gold and silver coins illegal for other than currency purposes and to prevent their exportation, which it did by the Notifications of June 29 and September 3, 1917. Realising that it could not rely upon gold the Government renewed its efforts to enlarge the rupee coinage. To facilitate the purchase of that metal the import of silver on private account into India was prohibited on September 3, 1917. This measure, however, removed only a few of the smaller competitors for the world's diminished supply of silver, and the world-demand remained so heavy that the Secretary of State was unable to obtain sufficient supply notwithstanding the great conservation effected in the use of silver by substituting nickel coinage for silver coins of subsidiary order,mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_3 and by the issue of notes of denominations as low as that of R. 1 mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_4 and of R. 2-8.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_5 The Government of the United States was therefore approached on the subject of releasing a portion of the silver dollars held

in their reserve. The American Government consented and passed the Pittman Act, under which the Government of India acquired a substantial volume at 101 1/2 cents per fine ounce. The total silver purchased during this period was as follows :—

TABLE XLIV
RUPEE COINAGE, 1915—20

Year	Silver purchased in Open Market, Standard Ounces.	Silver purchased from U. S. A Standard Ounces.	Total Standard Ounces.
1915-16	8,636,000		
1916-17	124,535,000		
1917-18	70,923,000		
1918-19	106,410,000	152,518,000	
1919-20	14,108,000	60,875,000	
Total	324,612,000	213,393,000	538,005,000

Now, recalling the fact that from 1900 to 1914 the Government had coined about 532 million standard ounces of silver, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_6 it means that the coinage of silver by Government during these five years exceeded the amount coined in the fourteen preceding years by five million ounces.

Thus the fall in the gold value of the rupee is an inevitable consequence of the exercise of the power to issue inconvertible currency in unlimited quantities. This is the fate of all inconvertible currencies known to history. But it is said that an exception must be made in the case of the rupee currency, for if the Government has the liberty of issuing it in

unlimited quantities it has also resources to counteract the effects of a fall when it does occur. We must therefore turn to an examination of these resources.

The basis of the reasoning is that the rupee is a token currency, and that if the value of a token currency is maintained at par with gold by applying to it the principle of redemption into goldmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_7 it should be possible to maintain the value of the rupee at par with gold by adopting a similar mechanism. What is wanted is an adequate gold fund, and so long as the Government has it, we are assured that we need have no anxiety on the score of a possible fall in the value of the rupee. Such a fund the Government of India has, and on all the three occasions when the gold value of the rupee fell below par that fund was operated upon. The process of redemption is carried on chiefly in three ways : (1) The sale of what are called reverse councils, by which the Government receives rupees in India in return for gold in London; (2) the release of gold internally in receipt for rupees in India ; and (3) the stoppage of the Secretary of State's council bills to prevent further rupees from going into circulation. The cumulative effect of these, it is said, is to contract the currency and raise its value to par. Although all the three may be employed, the first is by far the most important means adopted by the Government in carrying through this process of redemption. The extent of the redemption effected on the three occasions when it was employed may be seen from the three following tables :—

During 1920 no council bills were drawn by the Secretary of State on the Government of India.

The success of this mechanism on the two previous occasions had strengthened the belief that it had the virtue of restoring the value of the rupee. But the failure of this mechanism in the crisis of 1920 compels one to adopt an attitude of reserve towards its general efficacy. It cannot be said that exchange gave way because this mechanism was not brought

into operation. On the other hand, the view of the Government regarding the sale of reverse councils in 1920 had undergone a profound modification as compared with the view it held during the crisis of 1907-8. In that crisis the Government behaved like a miser, sitting tight on its gold reserve and refusing to use it for the very purpose which it was designed to serve. An Accountant-General had "to go on his knees" to persuade the Government of India to release its gold. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_8 It was probably because it was rebuked by the Chamberlain Commission for failing to make use of its gold reserve in 1907 that in the crisis of 1920 the policy of selling reverse councils was so boldly conceived. There was a great deal of ignorant criticism of that policy from the general public that it was an "organised loot." But the Finance Minister was undaunted, and argued mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_9—

"It is an essential feature of our exchange policy... that we should not only provide for remittances from London to India through council bills at approximately gold point, but from India to London in time of exchange weakness also at gold point, through the sale of sterling remittance known as reverse councils. It is simply an alternative to the export of gold. This is no new matter—we have been selling reverse councils for years..... and unless we do so the exchange policy does not become effective..... This is the reason, and the only reason, why we have sold reverse councils... It is an effort in fact to maintain exchange as near as possible to the gold point.... What would be the consequence if we yielded to the pressure placed on us and ceased to sell reverse councils at all? I can understand a demand that reverse councils should be sold by some different method, or at rates different from those at present in force, but I must confess that I cannot understand the demand that the facilities for the exchange of rupees into external currency should be entirely withdrawn. I see that in Bombay it is urged that we should let exchange find its 'natural level.' That is a catchword which does not impress me. Used in the sense in which that phrase has been recently used, there is no such thing as a 'natural level' in exchange, for, when one translates the internal currency into another currency, there must be some sort of common denominator to which both currencies can be brought; it may be gold, it may be silver, it may be sterling or it may be Spanish pesetas, which we take as our basis. The

rupee must be linked on to *something*mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_10 and if it is so linked, then it must be at some definite rate, and this necessarily involves that we must sometimes be prepared to sell reverse councils in order to maintain that rate. If reverse councils be withdrawn entirely, then we should have neither a gold standard, nor a gold-exchange standard, nor any kind of standard at all."

But that only raises the question: If the sale of reverse councils is efficacious in righting the exchange, why was its effect such a disastrous failure? The Finance Minister answered the point tersely and cogently when he said:—

"If we have failed in narrowing the gap between the market price and the theoretical gold part of the rupee..... it is not because we have sold too many reverse councils; it is because we have sold too few. I put it to any member of the commercial community here, and I put it without fear of contradiction, that if our resources had enabled us..... to sell straight away 20, 30, or 40 millions of reverse councils, we should probably have had no gap between the market price of the rupee and the theoretical gold price of the rupee at all. One of our difficulties has been, not that we have sold too many reverse councils, but that we have been obliged to sell too few."mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_11

There would have been some force in this argument if the smount of reverse bills sold were "too few." Not 20, 30, or 40 millions, but 55 1/2 millions of reverse councils were sold, besides the large issue of gold internally, and the complete stoppage of council bills, and yet the rupee did not rise above 1s. 4d. sterling, let alone reaching 2s. gold. Why did not the sale of reverse councils suffice to rectify the exchange? This leads us to examine the whole question of the efficacy of this redemption.

It is necessary to premise at the outset that redemption may result in mere substitution of one form of currency by another, or it may result in the retirement of currency. In so far as it results in substitution it is of no consequence at all, for substitution of currency is not a shrinkage of currency. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_12 To the restoration of the value of a currency what is essential is its shrinkage, i.e. its retirement, cancellation. The important question with regard to this mechanism is not to what extent the currency

can be redeemed, but to what extent it can be retired. In the prevalent view of this question it seems to be accepted without question that this extent is determined by the magnitude of the gold resources of the Government of India and the Secretary of State. Let us first make it clear how these gold resources are located and distributed. It will be recalled that these gold resources are distributed between (1) the paper-currency reserve, (2) the gold-standard reserve, and (3) the cash balances of the Secretary of State. It has been the habit to speak of these resources as being three "lines of defence" on which the Government can safely rely when an exchange crisis takes place. But are they? They can be, for the purposes of retirement, only if they were all "free" resources; in other words, if they were not appropriated resources. To what extent are they unappropriated? Can the Secretary of State take gold from the paper-currency reserve? He can, but then he must replace it by something else, or must cancel notes to that extent. Can the Secretary of State take gold out of his cash balances? He can, but then he must either borrow to fill his Treasury or draw upon the Government of India if there is anyone to buy his bills, which is tantamount to issuing rupee currency. The gold in the paper-currency reserve and that in the cash balances is of no use at all, for it does not permit of the cancellation of the rupee currency, which is what is wanted in restoring its value when it suffers a fall. It is therefore sheer nonsense to speak of the effectiveness of redemption as being commensurate with the gold resources of the Secretary of State. The matter is important, and an illustration may not be out of place. Suppose A, a holder of rupees, wants to get gold for them. He can go to three counters; (1) that of the controller in charge of cash balances ; (2) that of the controller of currency in charge of the paper-currency reserve ; or (3) that of the custodian of the gold-standard reserve. If A goes to the first, what is the result? The cash balance is *pro tanto* reduced. On the assumption that the cash balance is at its minimum, as it should be, the controller must reimburse himself immediately to maintain his solvency by drawing a bill on India and thereby releasing rupees received for gold again in circulation, so that in this case there is no shrinkage of currency. If A goes to the controller of currency, what happens? The controller gives him gold, but on the assumption that the paper-currency account is a separate statutory account he must put the rupees received from A in place of the gold issued from his reserve, so that here again what happens is that the composition of the reserve undergoes a change, but the total paper currency remains the same. It must therefore be borne in mind that to the extent the gold in the paper-currency reserve and the cash balances

are operated upon the result is not a retirement of currency. To speak of them as "lines of defences," as is so often done, is to overlook the fact that these two are not free resources but are appropriated resources.

What is, then, the resource left to the Government to *retire* the rupee currency? Only the gold-standard reserve. That is the only reserve the amount of which is unappropriated for any particular use. It is free cash, and only to that extent is it possible for the Government to restore the rupee currency when a fall in its gold value eventuates. Of course it is important to bear in mind that this is the extent to which it can retire the currency. Not that it will, for it may not, and there is no want of cases in which it has not. Two instances will suffice. During the first period of the Mint closure, 1893-98, it will be recalled how a large number of rupees had accumulated in the hands of the Government, and in the interest of raising the value of the rupee they should have been locked away. Instead the Government of India released that money in circulation in extending railways and other public works, as though the spending of rupees by itself produced an effect different to what would have been produced had they been spent by the public. Similarly irresponsible conduct marked the sale of reverse councils in 1920. To meet these reverse councils the Secretary of State took the gold from the paper-currency reserve. But instead of cancelling notes to the extent of the gold that was taken out of the reserve, the Government took powers under an Act XXI of 1920 to fill the gap by manufacturing securities *ad hoc*, so that although there was redemption there was no retirement, and so much gold was merely wasted, for it produced no effect on prices or the exchange. This Act, passed in March, 1920, was of temporary duration, and would have obliged the Government to retire the currency by October, 1920, when it was to expire. Rather than do this the Government altered the paper-currency law, not temporarily but permanently (Act XLV of 1920), changing the provisions in such a manner as to require the Government to cancel the currency to the smallest degree possible by retiring their "created securities." Even this was not done, owing to deficits in the Government Budget.

But even if such indiscretions were not repeated the fact remains that Government cannot effect a greater retirement than is permitted by the gold-standard reserve. If that reserve fails Government has only two resources left: (1) to melt down the rupees and sell them as bullion for gold and to go on further contracting the currency, in this way till its value is restored: or (2) to borrow gold. Both these are evidently costly

methods. To sell rupees as bullion is bound to result in loss unless the bullion in the rupee fetched more at the time of sale than what it cost when it was purchased for manufacturing it into bullion. The second process, that of borrowing, cannot be lightly resorted to for the purpose of creating a reserve fund to retire the currency. Indeed, so costly are such methods, and so complete would be the proof they would afford of the instability of the exchange standard if they were resorted to, that Government has never contemplated them as possible lines of defence in an exchange crisis. It seems certain, however, that Government does recognise that the gold-standard reserve by itself cannot suffice for the maintenance of exchange. For we find that from the year 1907-8 dates a complete change in the distribution of Government balances between London and India. Up to that period it was the policy of the Secretary of State to draw only as much as necessary to finance his Home Treasury. After that date the practice was originated of drawing as much as the Government of India could provide, and as the Government of India has been supreme in financial matters it provided large sums for council drawings by increased taxation and budgeting for surpluses. The effect of this was to swell the cash balances of the Secretary of State.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_13 No official explanation of a satisfactory character has ever been given for this novel way of financing the Home Treasury.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_14 but we shall not be very far wrong if we say that the object in accumulating these balances is to provide a second gold reserve to supplement the true gold-standard reserve. Whatever strength the Government may derive for the time being from this adventitious resource, it is obvious that it cannot be permanent. Under a more popular control of Government finances the cash balances will have to be kept down to a minimum necessary to work the Treasury, and the gold-standard reserve will be the only reserve on which the Government will have to depend.

The gold-standard reserve is to the rupee what the paper-currency reserve is to the notes. The purport of both is to prevent the respective currencies they support from falling or going to discount. But the treatment accorded by the Government to the rupee and the paper in respect of reserve shows a remarkable degree of contrast. In the case of the paper, as has been previously noted, the reserve is a statutory reserve, and even when the whole basis of Indian paper currency has been

changed the provisions as to reserve are none the less strict and cannot be disregarded by the Government without infringing the law. Now, the rupee is nothing but a note printed on silver.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_15](#) As such, the provisions as to reserve should be analogous to those governing the paper currency. Strange as it may seem, any regulation is conspicuous by its absence in regard to the gold-standard reserve.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_16](#) Not only is it not obligatory on the Government to redeem the rupee, but it does not seem that the Government is even bound to maintain the reserve. And that it has maintained such a reserve is no guarantee that it will replace it supposing that the reserve was dissipated.[mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_17](#) Such differences apart, is the gold-standard reserve an adequate reserve? Figures of the magnitude of the gold-standard reserve, as usually given in official publications, are a meaningless array. What is the use of displaying assets without at the same time exhibiting the liabilities? To be able to judge of the adequacy of that reserve we must know what is the total circulation of rupees. When, however, we compare the circulation of the rupees with the reserve, the proportion between the two is not sufficiently large so as to inspire confidence in the stability of the system (*see* Table XLIX).

How can a reserve so small as this carry through the process of retirement to any sufficient extent? That it will not always do it the crisis of 1920 gives abundant proof. But the supporters of the exchange standard maintain that the smallness of the reserve is a matter of no consequence, for the reserve is kept only for the purpose of foreign remittances. That being the case, it is said the reserve need not be large. Granting that it is so, what must govern the magnitude of the reserve in order that it may prove adequate in any and every case? The only attempt made to enunciate a rule of guidance is that by Prof. Keynes. That rule he finds [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_18](#) in the possible variations in the balance of trade of India.. Now, does this make the problem of regulating the reserve more definite? As has been explained previously, the adverse balance of trade would be due to the depreciation of the currency, so that Mr. Keynes's statement amounts to this, that the reserve should vary with the depth of the depreciation. But how is a Government to do this? Only by adverting to

the movement of the price level.

But in all its currency management the Government of India never pays any attention to the price problem. Indeed, as was pointed out above, its conception of the underlying causes of the fall of exchange is totally at variance with the only true conception, nothing but a firm grasp of which can enable it to avert a crisis. Being ignorant of the true conception it blindly goes on issuing currency until there occurs what is called an adverse balance of trade. All it aims at is to maintain a gold reserve, and so long as it has that reserve it does not stop to think how much currency it issues. The proportion of the issues and the reserve not being correlated the stability of the exchange standard, in so far as it depends upon the reserve, must always remain in the region of vagueness, far too problematical to inspire confidence of the system. Nay, the liability of redemption for foreign remittances, small as it appears, may become so indefinite as entirely to jeopardize the restoration of stability to the exchange standard.

But is a gold reserve such an important thing for the maintenance of the value of a currency? All supporters of the exchange standard must be said to be believers in that theory. But the view cannot stand a moment's criticism. To look upon a gold reserve as an efficient cause why all kinds of money remain at par with gold is a gross fallacy.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2 Problem of Rupee
 CHAPTER VI.htm - _msocom_20 To take such a view is to invert the casual order.

It is not the gold reserve which maintains the value of the circulating medium, but it is the limitation on its volume which not only suffices to maintain its own value, but also makes possible the accumulation and retention of whatever gold reserve there is in the country. Remove the limit on the volume of currency, and not only will it fail to maintain its value, but will prevent the accumulation of any gold reserve whatever. So little indeed is the importance of a gold reserve to the cause of the preservation of the value of currency that provided there is a rigid limit on its issue the gold reserve may be entirely done away with without impairing in the least the value of the currency. The Chamberlain Commission recommended that the Government of India should accumulate a reserve to maintain the value of the rupee because it was by means of their reserves that European banks maintained the value of their currencies. Nothing can be a greater perversion of the truth. What the European banks did was just the opposite of what the Commission recommended. Whenever their gold tended to disappear they reduced their currencies not only relatively but absolutely. It was by limitation of their currencies that they protected the value of the currencies and also their gold reserves.

The existence of a reserve, therefore cannot lend any strength to the gold-exchange standard. On the other hand, if we inquire into the genesis of the reserve, its existence is an enormous source of weakness to that standard. For how does the Government obtain its gold-standard reserve? Does it increase its reserve in the same way as the banks do, by reducing their issues? Quite the contrary. So peculiar is the constitution of the Indian gold-standard reserve that in it the assets, i.e., the reserve, and the liabilities, i.e., the rupee, are dangerously concomitant. In other words, the reserve cannot increase without an increase in the rupee currency. This ominous situation arises from the fact that the reserve is built out of the profits of rupee coinage. That being its origin, it is obvious that the fund can grow only as a consequence of increased rupee coinage. What profit the rupee coinage yields depends upon how great is the difference between the cost price of the rupee and its exchange value. Barring the minting charges, which are more or less fixed, the most important factor in the situation is the price of silver. Whether there shall be any profit to be credited to the reserve depends upon the price paid for the silver to be manufactured into

rupees.
into
rupees.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee
CHAPTER VI.htm - _msocom_21

Not only is the reserve an evil by the nature of its origin, but having regard to its documentary character the reserve cannot be said to be absolutely dependable in a time of crisis. There is no doubt that the intention of the Government in investing the reserve is to promote its increase by adding to it the interest accruing from the securities in which it is invested. The critics of the Government want a *large* and at the same time a *metallic* reserve. But they do not realise that having regard to the origin of the reserve the two demands are incompatible. If the reserve needs to be large then it must be invested. Indeed, if the reserve had not been invested it would have remained distressingly meagre.

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_22 But is there no danger in a reserve of this kind?

The source of a danger in a reserve such as this was well pointed out by Jevons when he said mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2.Problem of Rupee CHAPTER VI.htm - _msocom_24:

"..... good government funds and good bills can always be sold at some price so that a banking firm with a strong reserve of this kind might always maintain their solvency. But the remedy might be worse for the community than the disease, and the forced sale of the reserve might create such a disturbance in the money market as would do more harm than the suspension of payment,....." in the same manner, who can say that all the increase of reserve from interest will not be wiped out by a slump in the value of the securities if put upon the market for conversion into gold at a time when there takes place an exchange crisis? Supposing, however, the full value of the securities, is realised, the number of rupees the reserve will "sink" when occasion for redemption arrives depends upon what is the price at which the rupees are bought back. If the fall of the rupee is small, it may help to retire a large volume of currency and thus restore its value. On the other hand, if the fall is great, it will suffice to retire only a small part of the currency and may fail to restore its value as it did in 1920, so that what may appear to be a big reserve may turn out to be very inadequate. But, apart from considerations of the relative magnitude of the reserve that can be built up, the point that seems to have been entirely overlooked is *that the process of building up the reserves directly involves the process of augmenting the currency.* The Chamberlain Commission was cognisant of the fact that the gold-standard reserve could not be built up except by coining rupees. Indeed, it cautioned those desirous of a gold currency to remember that if gold took the place of "new rupees which it would be necessary otherwise to mint, the effect is to diminish the strength of the gold-standard reserve by the amount of the profit which would have been made from new coinage."

mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_25 Rather than recommend a policy which "would bring to an end the natural growth of the gold-standard reserve," the Committee permitted the Government to coin rupees. But is there no danger involved in such a reserve? What is the use of a reserve which creates the very evil which it is supposed afterwards to mitigate? Indeed, those who have been agitating for an increase in the Indian gold-standard reserve cannot be said to have been alive to the dangers involved in the existence of such a reserve.

The smaller the gold-standard reserve the better it would be, for there would be no inflation, no fall in the purchasing power of the rupee, and no necessity for its retirement.

Having regard to its origin, the gold-standard reserve, instead of acting as a brake upon reckless issue of rupee currency, is the direct cause of it and tends to aggravate the effects of an inconvertible currency rather than counteract them. Perversity cannot go further. If the fact that a mechanism like that of the gold-standard reserve, set up for the purpose of limiting the currency, cannot be made to function without adding to the currency, does not render the system an unsound currency, one begins to wonder what would. Great names have been invoked in support of the exchange standard. After trying hard to find authoritative precedents for his plan, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_26](#) Mr. Lindsay claimed before the Fowler Committee that it was founded upon the Report of the Parliamentary Committee on Irish Exchange. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_27](#) There he was on firm ground. Among other things, the Committee did recommend that for stabilising the exchange between England and Ireland the Bank of Ireland should open credit at the Bank of England and sell drafts on London at a fixed price. In so far as the exchange standard rests on gold reserve in London, Lindsay must be said to have faithfully copied the plan of the Irish Committee on exchange. But he totally neglected to give prominence to another and the most vital recommendation of the Committee, in which it is observed: [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_28](#) “*But all the benefits proposed by this Mode of Remedies would be of little Avail and very limited Duration if it (i.e. Bank of Ireland) did not promise at the same time to cure the Depreciation of Paper in Ireland by diminishing its over issue.*” Indeed, so great was the stress laid on the limitation of issue that when Parnell, in his resolution in the House of Commons on the reform of the Irish currency, regretted the non-adoption of the recommendations of the Committee, [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_29](#) Thornton in his reply pointed out that nothing would help to stabilise Irish exchange so long as the vital condition laid down by the Committee was disregarded. The recent experience in pegging the exchanges well illustrates the importance of that vital condition. Pegging the exchange is primarily a device to prevent the external value of the currency falling along with its internal value. The way in which pegging effects this divorce is important to note. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_30](#) The primary effect of the peg is to permit the purchases of foreign goods by procuring foreign currency for home

currency at a fixed price, which is higher than would be the case if it were determined by the general purchasing power parity of the two currencies. By enabling people to buy foreign goods with foreign currency obtained at a cheaper price the peg virtually raises foreign prices more to the level of the home prices, so that if the exchange is stable it is not because there is a peg, but because the price-levels in the two countries have reached a new equilibrium. Essentially the exchange is stable because it is an artificial purchasing-power parity. Whether it will continue to be so depends upon the movements in the home prices. If the home prices rise more than the rise brought about by the peg in the foreign prices the mechanism must break. It is from this point of view that the condition laid down by the Irish Committee on exchange regarding the limitation on issue must be held as one of vital character. In omitting to advert to that condition the Indian currency contradicts what is best in that Report of the Irish Committee.

The reason why Mr. Lindsay paid no attention to the question of limitation in setting up his exchange standard is largely that, notwithstanding the great reputation he has achieved as an author of a new system, he was profoundly ignorant of the true doctrine regarding the value of a currency. Neither he nor the hosts of currency-mongers who during the nineties exercised their ingenuity to devise plans for remedying Indian exchange troubles, understood that to stabilise the exchange was essentially a problem of stabilising the purchasing power of currency by controlling its volume. The gold-exchange standard ignores the fact that in the long run it is the general purchasing power of a currency that will ultimately govern its exchange value. Its aim is to stabilise exchange and allow the problem of purchasing power to go hang. The true policy should be to stabilise the purchasing power of the currency and let exchange take care of itself. Had the Chamberlain Commission considered the exchange standard from this point of view it could not have called it a sound standard when in its fundamentals it was the very reverse of it.

Now any one who remains unconvinced of this weakness of the exchange standard may say that in examining its stability we have taken only those occasions on which the standard has broken down. Thinking such a treatment to be unfair, he might say: How about the years during

which stability was maintained? Is there nothing to be said in favour of a system that maintained the gold value of the rupee from 1901 to 1907, or from 1909 to 1914? The question is a pertinent one, and the position that underlies it is supposed to be so strong that those who hold it have asked the opponents of the exchange standard either to admit that it is a stable standard or to show that under that standard the rupee has *invariably* failed to maintain its gold value.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_33

The validity of this position depends upon assumptions so plausible and so widespread that the argument urged so far against the exchange standard will not be of full effect until their futility is fully demonstrated. The first assumption is that there cannot be a depreciation of a currency unless it has depreciated in terms of gold. In other words, if the excess has not produced a fall in the value of a currency in terms of a particular commodity such as gold, then there has been no excess at all in terms of commodities in general. Now there was a time, particularly during the discussion on the Bullion Report, when the conception of a change in the value of the currency in relation to things in general was not quite clear even to the most informed minds,
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_34 and was even pronounced invalid by high authorities.
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_35 In view of the absence of the system of index numbers, this simple faith in the summary method of ascertaining depreciation by some one typical article, gold for instance, as a measure of value, was excusable. But the same view is without any foundation today. No one now requires to be shown that the price of each commodity has varied to the same extent and in the same direction as prices of commodities in general before admitting that there has been a change in the value of a currency. Why assume a single commodity like gold as a measure of depreciation? It would be allowable, although it is short-sighted to do so, if the depreciation of gold was an accurate measure of the depreciation of a currency in terms of all other commodities. But such is not the case. Commenting upon the experience of the United States with the greenbacks during the Civil War, Prof. W. C. Mitchell observes
mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_36

"The fluctuations in the price of gold which attracted so much

attention were much more moderate than the extreme fluctuations in the prices of commodities. The gold quotations lay all the time well within the outer limits of the field covered by the variations of commodity prices..... During the war gold moved up or down in price more quickly than the mass of commodities..... When gold was rising in price the majority of the commodities followed, but more slowly..... When gold was failing in price the majority of commodities stood still or followed more slowly..... This more sluggish movement of commodity prices appears still more clearly after the war. Rapid as was the fall of prices it was not so rapid as the fall in gold. A more curious fact is that the price-level for commodities continued for ten years to be higher than the price-level for gold."

This shows that the test sought to be applied by the adherents of the exchange standard is a false one and gives an inaccurate reading of the value of a currency. There can be no doubt that people who have urged its application to that standard would not have pressed for it so much as they have done if they had taken proper care to distinguish between *specific* depreciation of a currency in terms of gold and its *general* depreciation in terms of commodities.mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2.Problem of Rupee CHAPTER VI.htm - _msocom_37 The experience of the Bank of England during the suspension period is a capital instance of the phenomenon where a currency is generally depreciated, although it showed no sign of specific depreciation:—

1818	104.6	135

Which kind of depreciation is the greater evil we will discuss in the next chapter. Dealing for the present with this experience of the Bank of England, we have the fact that there can be a general depreciation without a specific depreciation. In view of this, the upholders of the exchange standard have no reason to be proud of the fact that the rupee has not shown signs of specific depreciation over periods of long duration. That a bank note absolutely inconvertible and unregulated as to issue should have maintained its par for very nearly thirteen years may speak far more in favour of the suspension system than the experience of the rupee can in favour of the exchange standard. There is a greater wonder in the former than there is in the latter, for the value of the rupee is sustained, apart from the fact that gold in terms of which it was measured was itself undergoing a depreciation, as is evident from the foregoing figures of general prices in England, and by a hope in some kind of convertibility, however slight or however remote but which had no place in the case of the Bank of England notes. Yet no one is known to have admired or justified the currency system of the suspension period, although it had not given rise to a specific depreciation for a long time.

This mode of measuring depreciation in terms of gold would be, relatively speaking, a harmless idea if it was not made the basis of another assumption on which the exchange standard is made to rest, that the general and specific depreciations of a currency are unrelated phenomena. As against this it is necessary to urge that the chief lesson to be drawn from this experience of the Bank of England for the benefit of the upholders of the exchange standard consists in demonstrating that although their movements are not perfectly harmonious, yet they are essentially inter-related. That lesson may be summed up in the statement that when the general depreciation of currency has taken place the occurrence of a specific depreciation, other things being equal, is only a matter of time, if the general depreciation proceeds beyond a certain limit. What will be the interval before specific depreciation will supervene upon general depreciation depends upon a variety of circumstances. Like the surface of a rising lake, general depreciation touches different commodities at different times according as they are located in the general scheme of things as determined by the relative strength of demand for them. If there is no demand for gold for currency purposes or for industrial purposes, the depreciation of the currency in terms of gold may be delayed. It is only to make foreign remittances that the demand for gold first makes itself felt, and it is there that specific

depreciation primarily arises. But there again it need not, for everything depends upon whether other commodities equally good, which the foreigner would take as readily as gold, are forthcoming or not. Now, in the case of India all these three factors tending to postpone specific depreciation are more or less operative. The rupee is a full legal-tender currency and can effectively discharge debts without compelling resort to gold. The industrial demand for gold in a poor country like India cannot be very great. [mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_39](#) Consequently, the generally depreciated rupee does not show immediate signs of depreciation in the internal trade of the country. As for foreign payments, the position of India is equally strong, not because, as is absurdly supposed, she has a favourable balance of trade, but because she has certain *essential* commodities which a foreigner is obliged to

Accept mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_41 in place of gold. Specific depreciation of the rupee will occur chiefly when the general depreciation has overtaken the commodities that enter into India's foreign trade. That the depreciation should extend to them is inevitable, for, as is well said, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28G2. Problem of Rupee CHAPTER VI.htm - _msocom_42

"in a modern community the prices of different goods constitute a completely organised system, in which the various parts are continually being adjusted to each other by intricate business process. Any marked change in the price of important goods disturbs the equilibrium of this system, and business processes at once set going a series of readjustments in the prices of other goods to restore it." It is true that in the case of India the interconnection between production for internal trade and production for external trade is not so closely knit as in the case of other countries. The only difference that this can make in the situation is to moderate the pace of general depreciation so that it does not affect foreign trade commodities too soon. But it cannot prevent its effect from ultimately raising their price, and once their price is risen the foreigner will not accept them, however essential. A demand for gold must arise, resulting in the specific depreciation of the currency. This statement of the case agrees closely with the experience of the Bank of England and that of India as well. In the case of the Bank of England the "great evil," i.e. the specific depreciation of the bank notes, of which Homer complained so much, made its appearance in 1809, some thirteen years after the suspension was declared. Similarly, we find in the case of India specific depreciation tends to appear at different intervals, thereby completely demonstrating that, even for the purpose of avoiding specific depreciation, it is necessary to pay attention to the general depreciation of a currency.

Having regard to these facts, supported as they are by theory as well as history, the incident that the rupee has maintained its gold value over periods of some duration need not frighten anyone into an admission that the exchange standard is therefore a stable standard. Indeed, a recognition of that fact cannot in the least discredit what has been said above. For our

position is that in the *long run* general depreciation of a currency will bring about its specific depreciation in terms of gold. That being our position, even if we are confronted with the absence of specific depreciation of the rupee, we are not driven to retract from the opinion that the best currency system is one which provides a brake on the general depreciation of the unit of account. The exchange standard provides no such controlling influence; indeed, its gold rescue, the instrument which controls the depreciation, is the direct cause of such depreciation. The absence of specific depreciation for the time being is not more than a noteworthy and an interesting incident. To read into it an evidence of the security of the exchange standard is to expose oneself, sooner or later, to the consequences that befall all those who choose to live in a fool's paradise.

Chapter VII

THE PROBLEM OF THE RUPEE:
ITS ORIGIN AND ITS SOLUTION
(HISTORY OF INDIAN
CURRENCY & BANKING)

CHAPTER VII A RETURN TO THE GOLD STANDARD

We have examined the exchange standard in the light of the claim made on behalf of it, that it is capable of maintaining the gold parity of the rupee. This was the criterion laid down by the Chamberlain Commission as a fitting one by which to judge the merits or demerits of that standard. But is the adequacy of that criterion beyond dispute? In other words, supposing the rupee has maintained its gold parity, which it has only as often as not, does it follow that all the purposes of a good monetary system are therefore subserved?

In the exchange standard,"as the system is now operated, the coinage is manipulated to keep it at par with

gold”mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_1 as though money is only important for the amount of gold it will procure. But what really concerns those who use money is not how much gold that money is worth, but how much of things in general (of which gold is an infinitesimal part) that money is worth. Everywhere, therefore, the attempt is to keep money stable in terms of commodities in general, and that is but proper, for what ministers to the welfare of people is not so much the precious metals as commodities and services of more direct utility. Stability of a currency in terms of gold is of importance only to the dealers in gold, but its stability in terms of commodities in general affects all, including the bullion-dealers. Even Prof. Keynes, in his testimony before the Indian Currency Committee of 1919, observedmk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_2—

"I should aim always... at keeping Indian prices stable in relation to commodities rather than in relation to any particular metallic or particular foreign currency. That seems to me of far greater importance to India." It is, of course, a little difficult to understand how the remedy of high exchange which he supported was calculated to achieve that object. Raising the exchange was a futile project, in so far as it was not in keeping with the purchasing power of the rupee. As an influence governing prices it could hardly be said to possess the virtue he attributed to it. The existing price-level it could affect in no way; nor could a high exchange prevent a future rise of prices. It could only change the base from which to measure prices. Future prices could vary as easily from the new high base-line as prices did in the past from the old baseline. In other words, Mr. Keynes seems to have overlooked the fact that exchange was only an index of the price-level, and to control it, it was necessary to control the price-level and not merely give it another name which it cannot bear and will not endure, as was proved in 1920 when the rupee was given in law the value of 2s. (gold) when in practice it could not fetch even 1s. 4d. sterling, with the result that the rupee exchange sank to the level determined by its purchasing power. But, apart from this question, we have the admission of the ablest supporter of the exchange standard that the real merit of a currency system lies in maintaining the standard of value stable in terms of commodities in general.

Given that this is the proper criterion by which to judge a currency

system, we must ask what has been the course of prices in India since the Mint closure in 1893? This is a fundamental question, and yet not one among the many who have praised the virtues of the exchange standard has paid any attention to it. In vain may one search the pages of Prof. Keynes, Prof. Kemmerer, or Mr. Shirras for what they have to say of the exchange standard from this point of view. The Chamberlain Commission or the Smith Committee on Indian currency never troubled about the problem of prices in India, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_3 and yet without being satisfied on that score it is really difficult to understand how anyone can give an opinion of any value as to the soundness or otherwise of that standard.

In proceeding to consider the exchange standard from the standpoint of prices, it is as well to premise that one of the important reasons why the Indian Mints were closed to the free coinage of silver was that the rupee was a depreciating currency resulting in high prices. mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_4 The closing of the Mints, therefore, should have been followed by a fall of prices in India; for, to adopt the phraseology of Prof. Fisher, mk:@MSITStore:C:\Important\Writing_Of_Babasaheb.chm::/28H. Problem of Rupee CHAPTER VII.htm - _msocom_5 the pipe-connection between the money reservoir and the silver-bullion reservoir was owing to the Mint closure cut off or stopped, thereby preventing the passage of silver from the bullion reservoir to the money reservoir. In other words, the newly mined silver could not become money after the Mint closure and lower the purchasing power of the rupees in circulation. If this is so, then how very disappointing has been the effect of the Mint closure ! From the standpoint of prices the rupee has become a problem as it had never been before. The rise of prices in India since the Mint closure (*See Chart VI*) has been quite unprecedented in the history of the country.

Indeed, the rise of prices in India before the Mint closure, when the pipe-connection between the silver-bullion reservoir and the rupee-currency reservoir was intact, must be regarded as very trifling compared with the rise of prices after the Mint closure when the pipe-connection was cut off. From the standpoint of prices the Mint closure has therefore turned out to be a curse rather than a blessing, and literally so, for, under an ever-rising price-level, life in India is rendered quite unbearable. No people have undergone so much misery owing to high prices as the Indian people have done. During the war period the price-level reached such a giddy height that the reports of suicide by men and women who were unable to buy food and clothing were in no way few and far between. It may, however, be argued that the rise of prices in India would have been greater if the Mints had not been closed and India had remained a purely silver-standard country. A good deal, no doubt, can be said in favour of this view. It is absolutely true that silver, being universally discarded, has become unfit for functioning as a standard of value. To that extent an

exchange standard is better than a pure-silver standard. But is it as good as a gold standard?
